The aim of the graduate program is to train scholars in the discipline of political science, while also providing the additional professional skills relevant to their particular career objectives. The department ordinarily accepts only students who are seeking the Ph.D. degree (a master's degree may be earned as part of the process of completing the requirements for the Ph.D.).

The program, unless you choose the M.A. thesis option, consists of three fields of study (two major fields in political science and a minor field which may be outside the department). You take coursework in these fields during the first two years of the program, at the end of which you take qualifying examinations in your two major fields. If you qualify for the Ph.D. on the basis of these examinations, you take an examination the following year in your minor field and complete the course requirements for the Ph.D. You also prepare a research design for your dissertation and, finally, complete the dissertation.

You are eligible to receive a master's degree when you qualify for the Ph.D. If you do not qualify for the Ph.D., you still receive a master's degree if your qualifying examinations merit it and you have completed the course-

work required for the first two years. If you choose the thesis program, you do not have a minor field and write a thesis at the end of two years instead of taking examinations. You receive a master's degree after successfully completing the program.

Admission

In addition to University minimum requirements, the department requires three letters of recommendation, scores of the General Test of the Graduate Record Examination (GRE), and a sample of your analytical writing skills (e.g., senior or M.A. thesis, term paper). Applicants are selected on the basis of perceived promise irrespective of their preference for the M.A. or Ph.D. degree. Prospective students may write for departmental brochures to the Graduate Studies Office, Department of Political Science, 4289 Bunche Hall, UCLA, Los Angeles, CA 90024. The department does not have an application form in addition to the one used by the Graduate Admissions Office. The deadline for receipt of all application materials is December 31 prior to the Fall Quarter in which you plan to register.

Fields of Study

Seven fields of study are offered to graduate students in the department: political theory; international relations; politics; comparative politics; public law; public administration and local government; and methodology.

Foreign Language or Research Methodology Requirement

There is no foreign language requirement for the M.A. degree.

For the Ph.D., you must fulfill one of the following requirements:

(1) Foreign language proficiency may be demonstrated by passing the Educational Testing Service (ETS) examination with a minimum score of 550. In languages for which no ETS examination is given, you must take a department examination to test your proficiency at a level comparable to an ETS score of 550. You may also satisfy the requirement by having completed, with a grade of B or better, the final course in a two-year sequence of college courses in a foreign language.

(2) Research methodology proficiency may be demonstrated by completing three courses (normally Political Science 204A, 204B, 204C) with grades of B or better. Comparable courses in quantitative methodology may be substituted for courses 204A and 204B by petition, but you are expected to take course 204C to complete the requirement.

You are required to pass the foreign language or methodology requirement before you can be advanced to candidacy for the Ph.D., but you may pass the requirement after the University Oral Qualifying Examination.

Course Requirements

During the first two years of the program you are required to take a minimum of 12 substantive courses (exclusive of Political Science 597 and 598), of which eight must be in two major fields in political science. If methodology is one of your major fields, one of the courses may be taken outside the department. The 12 courses must be distributed as follows:

(1) A minimum of four graduate courses is required in each of your two major fields. Each field designates the core courses needed to fulfill a major in that field. Where approved by a field, you may take one designated concepts and methods (CAM) course (Political Science 203A or 203B) to satisfy one of the four course requirements in either of the two major fields, but not in both fields.

(2) In addition, you are required to take one course in statistics (normally course 204A). Graduate statistics courses in other departments may be substituted by petition.

(3) Unless you select the thesis plan, you must take a minimum of two courses in a minor field, of which at least one must be at the graduate level. The minor field may be taken in one of the seven fields of political science, in the CAM series offered by the department, or in an outside discipline, area studies program, or professional school. If the minor is outside the Political Science Department, your plan of study must be approved by the graduate studies committee. If methodology is a major field, the minor must be taken within the department.

(4) If you select the M.A. thesis plan, you must take two courses related to your thesis in lieu of the minor field requirements.

(5) All students must take an additional graduate course as an elective, selected from within or outside the department. If your minor is taken outside the department, the elective must be in one of the seven fields, excluding the two major fields. It may not be course 596.

(6) A maximum of three 596 courses may be applied toward the requirement of 12 substantive courses, but no more than two 596 courses may be taken in any of the two major fields.

Transfer Students: With the approval of the relevant field committee and the dean of the Graduate Division, a maximum of two graduate courses taken at another institution may be applied toward the 12-course requirement in the first two years of the program. If the courses were taken at another UC campus, the number is increased to four, and if you already have an M.A. in Political Science, to six. Although you may have a master's degree at entrance, you must go through the qualifying examination process to qualify for the Ph.D.

After the two-year program is completed and you have qualified to pursue the Ph.D. as a result of the qualifying examinations, you select your individual research adviser and chart the plan of study to be followed. You must be in residence for a minimum of two quarters, during which time you are to satisfy the following minimum requirements:

(1) **Minor Field:** You must complete your third course in the minor field and take a written examination or submit a paper appropriate for determining proficiency in the minor field. In case of failure you may retake the examination once.

(2) **Elective:** With the approval of your research adviser and graduate adviser, you take one elective course within or outside the department. The elective should be relevant to the dissertation topic and may be a 596 course provided it is a substantive course.

(3) **Directed Reading and Research:** You must take Political Science 590A to research your proposed dissertation topic and 590B to prepare your research design for the dissertation. Normally, course 590B is taken preceding or during the quarter in which the oral examination is taken. With the approval of your research adviser, you may take more than one elective or 590A or 590B course.

Teaching Experience

All graduate students in the Department of Political Science, before being granted the Ph.D., are required to have formal teaching experience in an institution of higher learning. Waiver of this requirement is possible in exceptional circumstances by petition to the graduate studies committee.

Thesis Plan

If you select the thesis plan, you qualify solely for the M.A. degree. The two courses you take instead of a minor field are under the direction of your thesis adviser. They usually are Political Science 596 which is normally taken in the Fall and Winter Quarters of the second year, followed by course 598 in Spring Quarter.

You must decide on the thesis plan by the middle of the Spring Quarter of your first year and must form a thesis committee. You begin researching and writing the thesis by the Fall Quarter of your second year, working closely with members of the committee. The final version of the thesis must be submitted to the committee no later than the sixth week of the Spring Quarter so that the M.A. degree can be conferred by the end of that quarter, provided all requirements have been met and the thesis has been approved.

If the committee does not receive or does not approve the thesis, you are considered to have failed the requirement and are not allowed to resubmit the thesis. If you have received the M.A. on the thesis plan, you may register for the Ph.D. program without reapplying, but you must take the qualifying examinations in the two major and one minor fields by the Spring Quarter of your third year at UCLA.

Qualifying Examinations

You must take the qualifying examinations in your two major fields by the Spring Quarter of your second year unless you have selected the M.A. thesis plan. Retake examinations are taken in the Fall Quarter of the subsequent year. The outcome of the spring examinations determines whether you (1) qualify for the Ph.D. and obtain an M.A.; (2) obtain an M.A. degree but do not qualify for the Ph.D.; (3) obtain an M.A. but must retake an examination in one or both fields to qualify for the Ph.D.; or (4) fail to obtain an M.A. and are terminated from the program.

Written examinations are given in each of the major fields. Each field committee provides assessments of the examinations as to whether (1) your performance is sufficient for the M.A. degree and (2) also qualifies you to begin work at the Ph.D. level. The following two-tier grading system is used for each examination: for the M.A., grades are pass and not pass; for the Ph.D., grades are not qualified, marginal, qualified, and qualified with distinction. To obtain an M.A. degree only, you must receive a grade of pass on at least one field examination. If you obtain a pass on both field examinations, you receive a departmental letter certifying qualification in both fields.

To qualify for the Ph.D., you must (1) receive grades of pass on both field examinations and (2) receive a grade of qualified or qualified with distinction in both examinations. If grades of marginal are received on both examinations, an ad hoc committee is formed to determine whether you will be allowed to retake the examinations.

There are no retake examinations for the M.A. degree. Retake examinations are given to determine whether you qualify for the Ph.D. track. They may be retaken once only, provided you receive a grade of qualified in one field and not qualified or marginal in the second field.

Once you have successfully completed all course and examination requirements and have prepared a formal research design for the proposed dissertation acceptable to the research adviser, you may proceed to the University Oral Qualifying Examination. The research design must be submitted to the oral examination committee at least two weeks before the examination. The purpose of the oral examination is to assess the adequacy of your preparation in undertaking the proposed dissertation, to suggest ways in which the research design may be strengthened, and to determine whether the proposed dissertation is feasible and can be completed successfully. After successful completion of the University Oral Qualifying Examination and the language or methodological requirement, you are advanced to candidacy.

Approval of a written dissertation by your doctoral committee constitutes the final requirement for the Ph.D. degree in Political Science.

Candidate in Philosophy Degree

You are eligible to receive the C.Phil. degree on advancement to candidacy for the Ph.D.

Final Oral Examination

The doctoral committee for each candidate decides whether or not a final oral examination should be required.

Lower Division Courses

1. Introduction to American Government. Lecture, three hours; discussion, one hour. An introduction to the principles and problems of government, with particular emphasis on national government in the United States. Fulfills the American History and Institutions requirement but does not fulfill a "Preparation for the Major" requirement.

6. Introduction to Quantitative Research. An introduction to the collection and analysis of political data, with emphasis on the application of statistical reasoning to the study of relationships among political variables. Use of the computer as an aid in analyzing data from various fields of political science, among them comparative politics, international relations, American politics, and public administration.
Ms. Geddes

10. Introduction to Political Theory. (Formerly numbered 110.) Lecture, three hours; discussion, one hour. Meets the Political Science 110 requirement for all students who need 110 for the major. An exposition and analysis of selected political theorists and concepts from Plato to the present.
Mr. Ashcraft, Mr. Campbell, Mr. Rapoport, Mr. Smith

20. World Politics: Problems of Power Politics. (Formerly numbered 2A.) Lecture, three hours; discussion, one hour. Required of all students concentrating in Field II. Introduction to problems of world politics. Mr. Wilkinson (F,W,Sp)

40. Introduction to Politics. The basic institutions and processes of democratic politics. A treatment of themes such as constitutionalism, representation, participation, and leadership coupled with particular emphasis on the American case.

50. Introduction to Comparative Politics. (Formerly numbered 3.) Lecture, three hours; discussion, one hour. A comparative study of constitutional principles, governmental institutions, and political processes in selected contemporary states, with emphasis on the major European governments.

70. The Supreme Court. (Formerly numbered 171.) Lecture, four hours; discussion, one hour. Required of all students concentrating in Field V. An introduction to American constitutional development and the role of the Supreme Court as interpreter of the U.S. Constitution. Reading of Supreme Court cases as well as various historical and current commentaries.
Mr. Hobbs

80. Introduction to Public Administration. (Formerly numbered 181.) An introduction to the role of the bureaucracy in the modern state. Particular attention to the performance of American administrative systems. Mr. Fried, Mr. Ries

Upper Division Courses

Prerequisite for all upper division courses: upper division standing or consent of instructor.

102. The Statistical Analysis of Political Data. (Formerly numbered C102.) Prerequisite: course 6. An introduction to statistical inference. Topics include measures of central tendency, elementary probability theory, common probability distributions, least-squares and maximum likelihood estimation, confidence intervals and statistical tests, comparison of means, the analysis of variance, and multiple regression and correlation. Statistical techniques and topics illustrated with applications to a variety of political data. Mr. Marvick, Mr. Petrocik

104A-104B. Introduction to Survey Research. Prerequisite: course 6. Courses in the fundamentals of survey research as a method. **104A.** Sampling theory and methods, the writing of questions, questionnaire construction, and interviewing. Attitudes, attitude measurement, and attitude change. Participation in the formulation of a research problem. **104B.** Prerequisite: course 104A. Conducting a survey. Development of a survey questionnaire, designing a sample, collecting interviews, maintaining quality control, and coding the interviews for machine tabulation. Performance of a computer-aided analysis of some part of the data and submission of a written report of that research. Both quarters must be taken to receive credit.

M105. Economic Models of Public Choice. (Formerly numbered M103A.) (Same as Economics M135.) Prerequisites: Economics 101A, any lower division political science course other than Political Science 1, and junior/senior standing, or consent of instructor. Analysis of the methods and consequences of arriving at collective decisions through political mechanisms. Topics include the free-rider problem, voting and majority choice, demand revelation, and political bargaining. Mr. Hirshleifer, Mr. Rogowski, Mr. Stein, Mr. Wallerstein

M106. Economic Models of Political Conflict and Conflict Resolution. (Formerly numbered M103B.) (Same as Economics M136.) Prerequisites: Economics 101A, any lower division political science course other than Political Science 1, and junior/senior standing, or consent of instructor. Biological, cultural, and organizational sources of political conflict. The role of threats, promises, commitments. Models of the onset and termination of conflict. The conduct of war: strategy and tactics. Mr. Hirshleifer, Mr. Stein

Field I: Political Theory

111A. History of Political Thought: Ancient and Medieval Political Theory. An exposition and critical analysis of the major political philosophers and schools from Plato to Machiavelli. Mr. Campbell

111B. History of Political Thought: Early Modern Political Theory. An exposition and critical analysis of the major political philosophers and schools from Hobbes to Bentham. Mr. Ashcraft, Mr. Campbell

111C. History of Political Thought: Late Modern and Contemporary Political Theory. An exposition and critical analysis of the major political philosophers and schools from Hegel to the present.
Mr. Ashcraft, Mr. Nixon, Mr. Wolfenstein

112. Nature of the State. A systematic analysis of modern concepts and problems of political association. Mr. Nixon

113. Problems in 20th-Century Political Theory. A study and interpretation of theorists who have focused their analyses on the social and political problems of the 20th century. Mr. Rocco

114A-114B. American Political Thought:

114A. An exposition and critical analysis of American political thinkers from the Puritan period to 1865.
Mr. Smith

114B. Prerequisite: course 114A or consent of instructor. An exposition and critical analysis of American political thinkers from 1865 to the present.
Mr. Smith

115. Theories of Political Change. A critical examination of theories of political change, the relation of political change to changes in economic and social systems, and the relevance of such theories for the experience of both Western and non-Western societies. May be applied toward either Field I or IV.
Mr. Lofchie

116. Marxism. A critical analysis of the origins, nature, and development of Marxist political theory.
Mr. Ashcraft, Mr. Wolfenstein

117. Jurisprudence. Development of law and legal systems; consideration of fundamental legal concepts; contributions and influence of modern schools of legal philosophy in relation to law and government. May be applied toward either Field I or V.
Mr. Gerstein

119A-119Z. Special Studies in Political Theory. Prerequisites: course 10, one additional course in Field I, consent of instructor. Intensive examination of one or more special problems appropriate to political theory. Sections offered on a regular basis, with topics announced in the preceding quarter. Courses 119, 139, 149, 169, 179, and 189 may be applied no more than twice toward the field concentration requirement. No more than three of these courses may be applied toward the major.

Field II: International Relations

120. Foreign Relations of the United States. Lecture, three hours; discussion, one hour. A survey of the factors and forces entering into the formation and implementation of American foreign policy, with special emphasis on contemporary problems.
Mr. Frieden, Mr. Spiegel, Mr. Stein

121. Studies in Formulation of American Foreign Policy. A study of the formation of American foreign policy with respect to individual cases. Specific topics announced in the *Schedule of Classes* each quarter.
Mr. Spiegel

122. World Order. (Formerly numbered 21.) Lecture, three hours; discussion, one hour. Prerequisite: course 20. A study of the problems of the international system seen as a community capable of cooperation and development. Mr. Wilkinson

124. International Political Economy. Prerequisite: course 20. A study of the political aspects of international economic issues. Mr. Frieden, Mr. Lake

125. Arms Control and International Security. Arms control in the context of international security in the nuclear age. The nuclear arms race; the relationship between deterrence doctrines and nuclear war; the roles of technology and ideology; nuclear proliferation; outer space. Mr. Zoppo

126. Peace and War. Prerequisites: courses 6, 20. Theory and research on the causes of war and the conditions of peace. Mr. Wilkinson

127A-127B. The Atlantic Area in World Politics. (Formerly numbered 127.):

127A. Western Europe. The external relations of the United Kingdom, West Germany, France, Italy, and other European members of NATO, in regard to European security in the context of the Atlantic Alliance.
Mr. Zoppo

127B. U.S. and Europe. Prerequisite: course 127A or consent of instructor. Relations between the United States and Western European members of the Atlantic Alliance, in the context of U.S.-Soviet relations.
Mr. Zoppo

128A-128B. The Soviet Sphere in World Politics. Prerequisite: course 20. Course 128A or consent of instructor is prerequisite to 128B. A contemporary survey of the foreign policies and aspirations of the Soviet Union and other states in the Soviet bloc; analysis of content and effects of Communist doctrine affecting relations between the Soviet and democratic spheres.
Mr. Cattell, Mr. Kolkowicz, Mr. Korbonski

129. Comparative Foreign Economic Policy. An examination of the foreign trade, monetary, and investment policies of the United States, Japan, France, and the Federal Republic of Germany since 1945. Mr. Lake

130. Politics of Latin American Economic Development. The interaction of international and domestic factors in the political and economic evolution of Latin America. Mr. Frieden

131. Latin American International Relations. Prerequisite: course 20. The major problems of Latin American international relations and organization in recent decades. Mr. Gonzalez

132A-132B. International Relations of the Middle East:

132A. Prerequisite: course 20. Contemporary regional issues and conflicts, with particular attention to inter-Arab politics, the Arab-Israeli problem, and the Persian Gulf area. Mr. Binder

132B. Role of the great powers in the Middle East, with emphasis on American, Soviet, and West European policies since 1945. Mr. Binder

133. International Relations of Sub-Saharan Africa. Contemporary regional issues and conflicts; foreign policies of African states; the role of external powers. Mr. Lofchie, Mr. Sklar

135. International Relations of China. Prerequisite: course 20. The relations of China with its neighbors and the other powers, with emphasis on contemporary interests and policies of China vis-à-vis the United States and the Soviet Union. Mr. Baum

136. International Relations of Japan. Prerequisite: course 20. The foreign policies of Japan and the interests and policies of other countries, particularly the United States, as they relate to Japan.
Mr. Baerwald

C137A-137B. International Relations Theory. (Formerly numbered 137.):

C137A. An examination of various theoretical approaches to international relations. May be concurrently scheduled with course C201. Mr. Lake

137B. Alternative approaches to the analysis of international politics and their application to historical and contemporary cases. Mr. Stein

138A-138B-138C. Defense Studies. Prerequisite: course 20:

138A. Defense Strategy and Policies. Analysis of national and international security problems in the nuclear era, with special emphasis on the United States.

138B. The Conduct of Modern War. A study of recent and contemporary wars, with special emphasis on political and strategic problems.

138C. Military Policy and Organization. A study of the institutional and policy framework in the national military field. May be applied toward either Field II or VI.
Mr. Ries

139A-139Z. Special Studies in International Relations. Prerequisites: two courses in Field II, or course 20 and one course in Field II, and consent of instructor. Intensive examination of one or more special problems appropriate to international relations. Sections offered on a regular basis, with topics announced in the preceding quarter. Courses 119, 139, 149, 169, 179, and 189 may be applied no more than twice toward the field concentration requirement. No more than three of these courses may be applied toward the major.

M139A. Political and Economic Issues in the Proliferation of Nuclear Weapons. (Formerly numbered M139.) (Same as Economics M103A.) An interdisciplinary approach to the problem of nuclear proliferation. Economic aspects of the acquisition of nuclear weapons and economic aspects of nuclear energy treating technological, bargaining, and stability issues. Mr. Intriligator (alternate years)

Also see courses 175A-175B

Field III: Politics

M140. Political Psychology. (Same as Psychology M138.) Prerequisite: Psychology 10. Examination of political behavior, political socialization, personality and politics, racial conflict, and the psychological analysis of public opinion on these issues.
Mr. Sears

141. Public Opinion and Voting Behavior. Lecture, three hours; discussion, one hour. A study of the character and formation of political attitudes and public opinion. The role of public opinion in elections, the relationship of political attitudes to the vote decision, and the influence of public opinion on public policy formulation. Mr. Petrocik

142. The Politics of Interest Groups. A systematic investigation of the role of political interest groups in the governmental process, with attention to the internal organization, leadership, and politics of such groups to the goals and functions of various types of groups and to the strategy and tactics of influence.
Ms. Orren

143. Legislative Politics. A study of those factors which affect the character of the legislative process and the capacity of representative institutions to govern in contemporary society.
Mr. Marvick, Mr. Snowiss

144. The American Presidency. A study of the nature and problems of presidential leadership, emphasizing the impact of the bureacracy, congress, public opinion, interest groups, and the party system on the presidency and national policy-making.
Ms. Orren, Mr. Snowiss

145. Political Parties. The organization and activities of political parties in the United States. Attention to the historical development of the parties, the nature of party change, campaign functions and the electoral role of the parties, membership problems and party activists, political finance, and policy formulation practices. Mr. Marvick, Mr. Petrocik

146. Political Behavior Analysis. Prerequisite: course 141. The use of quantitative methods in the study of political behavior, especially in relation to voting patterns, political participation, and techniques of political action.
Mr. Marvick, Mr. Petrocik

M147. Minority Group Politics. (Formerly numbered 147.) (Same as Chicano Studies M147.) Lecture, three hours; discussion, one hour. Prerequisites: course 1 plus one of the following: one additional 140-level course or one upper division course on race or ethnicity from history, psychology, or sociology, or consent of instructor. A systematic evaluation of the functioning of the American polity related to problems of race and ethnicity. Topics include leadership, organization, ideology, conventional versus unconventional political behavior, inter-minority relations, cooptation, symbolism, and repression. Mr. Rocco

149A-149Z. Special Studies in Politics. Prerequisites: two courses in Field III, consent of instructor. Intensive examination of one or more special problems appropriate to politics. Sections offered on a regular basis, with topics announced in the preceding quarter. Courses 119, 139, 149, 169, 179, and 189 may be applied no more than twice toward the field concentration requirement. No more than three of these courses may be applied toward the major.

Also see course 182A

Field IV: Comparative Politics

152. British Government. The government and politics of the United Kingdom; the British constitution, parliament, parties and elections, foreign policies, administrative problems, and local governments.
Mr. Freedman

153. Governments of Western Europe. The constitutional and political structure and development of France and other states of continental Western Europe, with particular attention to contemporary problems. Mr. Dogan, Mr. Rogowski

154. Governments of Central Europe. The constitutional and political structure and development of Germany and other Central European states, with particular attention to contemporary problems.
Mr. Rogowski

156. The Government of the Soviet Union. An intensive study of the political and institutional organization of the Soviet Union and its component parts, with special attention to contemporary political issues, as well as party and governmental structures.
Mr. Cattell, Mr. Kolkowicz, Mr. Korbonski

157. Governments of Eastern Europe. A study of the political and governmental organization of the Communist countries of Eastern and Central Europe (exclusive of the U.S.S.R.), with special reference to the institutions, practices, and ideologies including interregional relations. Mr. Korbonski

159. Chinese Government and Politics. Organization and structure of Chinese government, with particular attention to the policies, doctrines, and institutions of Chinese Communism; political problems of contemporary China. Mr. Baum

160. Japanese Government and Politics. The structure and operation of the contemporary Japanese political system, with special attention to domestic political forces and problems.
Mr. Baerwald

161. Government and Politics in Southeast Asia. The institutional and political processes and problems of states in Southeast Asia (Burma, Thailand, Malaya, Laos, Cambodia, Vietnam, Indonesia, and the Philippines).

162. Government and Politics in South Asia. A comparative study of political change and the development and performance of public institutions in Southern Asia, with special emphasis on India, Pakistan, and Bangladesh. Mr. Sisson

163A-163B. Government and Politics in Latin America:

163A. A comparative study of governmental and political development, organization, and practices in the states of Middle America. Mr. Gonzalez

163B. A comparative study of governmental and political development, organization, and practices in the states of South America.
Ms. Geddes, Mr. Gonzalez

164. Government and Politics in the Middle East. A comparative study of government in the Arab States, Turkey, Israel, and Iran. Mr. Binder

165. Government and Politics in North Africa. A comparative study of the government and politics of the North African states, including the relationship between political development, political organization, and social structure.

166A-166B-166C. Government and Politics in Sub-Saharan Africa. Patterns of political change in Africa south of the Sahara, with special reference to nationalism, nation building, and the problems of development: **166A.** Western Africa; **166B.** Eastern Africa; **166C.** Southern Africa.
Mr. Lofchie, Mr. Sklar

167. Ideology and Development in World Politics. A comparative study of the major modes of political and economic development in the world today. Relations between industrial and nonindustrial societies in light of the current debate about imperialism.
Mr. Sklar

168L. Comparative Political Analysis. Lecture. Prerequisites: two courses in Field IV, or course 50 and one course in Field IV. Either course 168L or 168S is required of all students concentrating in Field IV (students with credit for course 168S will not receive credit for this course). Conducted as a lecture course. Major approaches to the study of comparative politics. Concepts and methodology of comparative analysis. Mr. Baum

168S. Comparative Political Analysis. Seminar. Prerequisites: two courses in Field IV, or course 50 and one course in Field IV, and consent of instructor. Either course 168L or 168S is required of all students concentrating in Field IV (students with credit for course 168L will not receive credit for this course). Conducted as a seminar. Major approaches to the study of comparative politics. Concepts and methodology of comparative analysis. Mr. Dogan

169A-169Z. Special Studies in Comparative Politics. (Formerly numbered M169A-M169Z.) Prerequisites: two courses in Field IV, consent of instructor. Intensive examination of one or more special problems appropriate to comparative politics. Sections offered on a regular basis, with topics announced in the preceding quarter. Courses 119, 139, 149, 169, 179, and 189 may be applied no more than twice toward the field concentration requirement. No more than three of these courses may be applied toward the major.

Also see courses 115, 188A, 188B

Field V: Public Law

170. The Anglo-American Legal System. Lecture, four hours; discussion, one hour. Required of all students concentrating in Field V. Evolution of the English common law courts and their legal system, with emphasis on the development of the basic concepts of law which were received from that system in the United States and remain relevant today.
Mr. Gerstein

172A-172B. American Constitutional Law. Prerequisite: course 70:

172A. Constitutional questions concerning the separation of powers, federalism, and the relationship between government and property.
Mr. Gerstein, Mr. Hobbs

172B. The protection of civil and political rights and liberties under the constitution.
Mr. Gerstein, Mr. Hobbs

173. Government and Business. The nature of the corporation; the regulation of competition; government promotion of economic interests; regulation of industries clothed with a public interest; government ownership and operation. May be applied toward either Field V or VI. Mr. Bernstein, Ms. Orren

174. Government and Labor. The labor force and the nature of the trade union; regulation of labor relations; programs to encourage full employment and to mitigate unemployment; protective labor legislation. May be applied toward either Field V or VI.
Mr. Bernstein

175A-175B. International Law. A study of the nature and place of international law in the conduct of international relations. May be offered in consecutive terms or simultaneously. If offered consecutively, course 175A is prerequisite to 175B, and a student may take 175A alone for four units credit. If offered simultaneously, a student must take both courses for eight units. A maximum of four units may be applied toward Field II.

179A-179Z. Special Studies in Public Law. Prerequisites: course 70, one additional course in Field V, any special requirements, consent of instructor. Intensive examination of one or more special problems appropriate to public law. Sections offered on a regular basis, with topics announced in the preceding quarter. Courses 119, 139, 149, 169, 179, and 189 may be applied no more than twice toward the field concentration requirement. No more than three of these courses may be applied toward the major.

Also see courses 117, 187

Field VI: Public Administration and Local Government

180. State and Local Government. A study of state political systems, including their administrative and local subsystems; intergovernmental relationships; their policy outputs, with specific attention to California. Mr. D. Wilson

182A. Metropolitan Area Government and Politics. An overview of the political and social organization, decision-making processes, policy problems, and conflicts of metropolitan areas and their central cities and suburbs. Attention to the impact on these areas of the national and state political systems and racial, ethnic, and protest movements. May be applied toward either Field III or VI.

182B. City Government and Politics. Prerequisite: course 182A or consent of instructor. Intensive analysis of contemporary urban governance in the United States. Emphasis on such student participatory activities as fieldwork, research, and gaming of urban politics and policy problems. Mr. Fried

183. Administration of International Agencies and Programs. An examination of the administrative patterns and practices of the United Nations agencies and overseas development programs, including distinctive characteristics of organization and management selection of personnel, and methods of financing.

185. Public Personnel Administration. The process of formulating and administering public personnel policies; concepts and principles utilized in selected governmental personnel systems. Focus on governmental systems in the United States (national, state, local, foreign service, military), but comparisons also made with other selected governmental systems.

186. National Policy and Administration. A study of the major policies and programs of the national government and their administration as illustrated in such areas as national defense, social welfare, agriculture, etc. Particular attention to the role of the President and other administrators in formulating public policy and in maintaining a responsible bureaucracy. Mr. Fried

187. Law and Administration. Legal controls of administration action. Substantive and procedural limits on administrative discretion imposed by legislation, executive and judicial agencies, and the sources of legal powers of administrative bodies within these limits. May be applied toward either Field V or VI.
Mr. Hobbs

188A. Comparative Public Administration. An analysis of bureaucratic structures and function in the United States, other industrialized, and less developed countries, primarily at the national level. Special attention to methods of comparative analysis and the utility of various models. May be applied toward either Field IV or VI. Mr. Fried

188B. Comparative Urban Government. A cross-cultural examination of the forms and processes of urban government. Particular attention to the role of urbanization in political development. May be applied toward either Field IV or VI. Mr. Fried

189A-189Z. Special Studies in Public Administration. Prerequisites: two courses in Field VI, consent of instructor. Intensive examination of one or more special problems appropriate to public administration. Sections offered on a regular basis, with topics announced in the preceding quarter. Courses 119, 139, 149, 169, 179, and 189 may be applied no more than twice toward the field concentration requirement. No more than three of these courses may be applied toward the major.

190. Theories of Organization. An examination of the theoretical frameworks for studying public and private bureaucracies, with emphasis on ideologies, values, behavioral patterns, and concepts of organization.

191. Urban and Regional Planning and Development. A comparative study of governmental policies, procedures, and agencies involved in the planning and development of urban and regional communities and areas.

Also see courses 138C, 173, 174

Special Studies

195A-195B-195C. Honors Seminar and Thesis. Prerequisites: one course in the C197 series, a 3.5 GPA in upper division political science courses, eligibility for Letters and Science honors status. Course 195A is prerequisite to 195B, which is prerequisite to 195C. A one-year honors seminar and thesis-writing sequence. Students entering course 195A are expected to have some experience in writing research papers and to have in mind a research topic suitable for treatment at length and in depth:

195A. Students define their research topic, select a suitable research method, determine appropriate sources of information, prepare a research proposal, find a thesis director, begin their research, and submit progress reports or preliminary drafts. Class sessions emphasize critical and constructive discussions of students' topics, methods, and problems in research, as well as general consideration of political science research topics and methods of current or continuing interest. Students also meet privately with the instructor to discuss the progress of their research.

195B-195C. Writing of an honors thesis under the direction of a faculty member. The thesis is read by the appropriate field committee and graded high honors, honors, or no honors.

C197A-C197F. Seminars for Majors. Prerequisites: political science major, upper division standing, a 3.25 GPA in upper division political science courses, two upper division courses in the field in which the seminar is offered. May be applied toward the distribution or concentration requirement. May be concurrently scheduled with various graduate courses.

199. Readings in Political Science (2 to 4 units). Prerequisites: upper division standing, 3.0 overall GPA, consent of instructor and department chair. Individual study. May not be applied toward the concentration or distribution requirement. May be repeated for a maximum of 16 units.

Graduate Courses

C201. International Relations. An examination of various theoretical approaches to international relations. May be concurrently scheduled with course C137A. Mr. Lake, Mr. Stein

203A-203B. Introduction to Political Inquiry. (Formerly numbered 203A-203B-C203C.):

203A. Problems of Scientific Inquiry and Normative Discourse. Mr. Nixon

203B. Major Conceptual Frameworks and Approaches to Political Science. Prerequisite: course 203A or equivalent.

204A. Quantitative Applications. An introduction to the quantitative analysis of political data. Problems of measurement, the logic of analysis and hypothesis testing, basic statistical techniques, and the use of the computer and standard data analysis programs. Mr. Petrocik

204B. Statistical Analysis. Prerequisite: course 204A. Statistical techniques and their applications to political science data. Ms. Geddes

204C. Problems in Statistical Analysis of Political Data. Lecture, three hours. Prerequisites: courses 204A, 204B. A practicum in which students examine particular techniques and their applications to contemporary research issues in political science.

210A-210B. An Introduction to Political Theory. Lecture, three hours:

210A. Classical and Medieval Formulations. An exploration of major texts and issues in political theory from Plato through Aquinas.

210B. The Early Modern Period. An exploration of major texts and issues in political theory from Machiavelli through the Enlightenment.

211. Political Theory. An analysis of the central problems of political inquiry and their relation to political philosophy.

212A-212B. International Relations Theory. (Formerly numbered 212.) Discussion, three hours. Approaches to and central problems of international relations theory:

212A. Major Theorists and Approaches.

212B. A Survey of the Major Theories. Mr. Stein

214A-214B. Survey Courses in American Politics. Students taking M.A. or Ph.D. examinations in the politics field will ordinarily have completed these courses before the examination sequence:

214A. Political Parties and the Electoral Process. Mr. Marvick, Mr. Petrocik

214B. American Political Institutions. Mr. Orren, Mr. Snowiss

215A-215B. Comparative Politics. Course 215A or consent of instructor is prerequisite to 215B. Approaches to the study of comparative politics and problems of comparative political analysis. Mr. Cattell, Mr. Lofchie, Mr. Rogowski, Mr. Sisson

C216. Public Law. A systematic analysis of the scope and nature of public law, with particular attention to its materials and methods as illustrated in concepts and doctrines drawn from various of its subject fields. May be concurrently scheduled with course C197E. Mr. Gerstein, Mr. Hobbs

C218A. Public Administration and Democratic Government. An analysis of the nature and scope of public administration and its role in modern political systems. May be concurrently scheduled with course C197F.

C218B. Approaches to Organizational Analysis. Analysis of several of the major conceptual alternatives for the study of organizations, with emphasis on public administrative organizations. Topics include structural-functional and systemic approaches to organization, rational-choice models, and social psychological analyses. Each alternative critically evaluated for its strengths and weaknesses as a guide to understanding organizational analysis. May be concurrently scheduled with course C197F. Mr. Ries

C218C. Public Administration and Public Policy. Discussion, three hours. A systematic analysis of the nature and scope of public policy and its programmatic implications. Special emphasis on government organizations and process, as well as types of government intervention and stages of the policy process. Substantive focus primarily on American public policy and analysis. May be concurrently scheduled with course C197F. Mr. D. Wilson

C221. Selected Texts in Political Theory. A critical examination of major texts in political theory, with particular attention to their philosophic system, their relations to the contemporary political and intellectual currents, and the importance of the system for present-day political analysis. May be concurrently scheduled with course C197A.

C222. Selected Topics in Political Theory. A critical examination of a major problem in political theory. May be concurrently scheduled with course C197A.

224A-224K. Studies in Politics:

224A. Politics and Economy. An analysis of the theoretical and practical relationships between economic organization and governmental institutions. The development and political implications of the market system, banking and finance, corporate enterprise, and organized labor. Ms. Orren

C224B. Political Recruitment. A critical evaluation of the literature concerned with the backgrounds of public figures and with the screening and sponsoring mechanisms affecting their careers and political perspectives. May be concurrently scheduled with course C197C. Mr. Marvick

C224C. Politics and Society. The application of selected classical and contemporary sociological theories to politics. May be concurrently scheduled with course C197C. Ms. Orren

224D. Group Theories of Politics. Critical appraisal of "group theory" approaches to the study of political decision making, with special attention to empirical research problems and findings. Ms. Orren

C224E. Legislative Behavior. The analysis of the major approaches to the study of representative institutions, with special emphasis on the assumptions, concepts, methods, and theoretical implications associated with each approach. May be concurrently scheduled with course C197C. Mr. Marvick, Mr. Snowiss

C224F. Executive Politics and the Presidency. An analysis of executive organization and leadership, with emphasis on the American Presidency. Special attention to theories of organization and personality and the relationship between the executive and other institutions and groups. May be concurrently scheduled with course C197C. Ms. Orren, Mr. Snowiss

M224G. Political Psychology. (Same as Psychology M228.) Discussion, three hours. Prerequisite: course 214A or Psychology 220A. Examination of political behavior, political socialization, personality and politics, racial conflict, and the analysis of public opinion on these issues. Mr. Sears

C224H. Mass Attitudes and Behavior. Prerequisite: course 141 or 214A or consent of instructor. An analysis of the development and change of political attitudes in mass publics and their relationship to voting, protest, and violence. May be concurrently scheduled with course C197B. Mr. Petrocik

C224I. Political Parties. A critical examination of the literature on party systems and organization. Special attention to political functions, electoral campaigns, and party cadres. May be concurrently scheduled with course C197C. Mr. Marvick, Mr. Petrocik

228A. Personnel and Human Relations. An analysis of the policies, processes, organizations, and interrelationships involved in manning the public services.

C228B. Public Planning, Programming, and Budgeting. Public budgeting processes within a political and organizational framework. Special emphasis on the federal program/budgeting system and the interplay between contemporary bureaucratic and decision theory of rational allocation of resources. May be concurrently scheduled with course C197F. Mr. Ries

228C. Political and Administrative Aspects of Planning. A study of the political constraints on and support for effective planning. Topics include the relationships between planning performance on the one hand, and forms of government, distribution of power, political culture, law, and social structure on the other. Mr. Fried

C228D. The Federal Bureaucracy. Seminar, three hours; discussion, one hour. An examination of the formulation and implementation of policy at the federal level. The consequences of administrative performance for American political and social life. May be concurrently scheduled with course C197F.

C228E. State Administrative Systems. An analysis of state administrative systems, their local subsystems, and their outputs. May be concurrently scheduled with course C197F. Mr. Fried

CM229. Urban Government. (Same as Architecture and Urban Planning M205C.) An analysis of the policies, processes, interrelations, and organization of governments in heavily populated areas. May be concurrently scheduled with course C197F.

C230. Comparative Development Administration. Seminar, three hours; discussion, one hour. An analysis of the administration of development programs and the development of administrative institutions, with special attention to ecology. Comparisons made both between countries and within countries. May be concurrently scheduled with course C197F.

C231A-C231D. Studies in International Relations:

C231A. Contemporary Problems in United States Foreign Policy. An intensive analysis of the policy formulation process and the substance of selected contemporary problems in foreign policy. Political and institutional factors affecting foreign policies; the analysis of policy options. May be concurrently scheduled with course C197B. Mr. Spiegel

C231B. Politics and Strategies of Modern War. Seminar, three hours; discussion, one hour. Analysis of various national security problems in both their military/technical and political dimensions. Development in some depth of issues likely to be raised in course 138A (not a prerequisite). May be concurrently scheduled with course C197B. Mr. Kolkowicz

C231C. The Foreign Policy Process. (Formerly numbered 231C.) Discussion, three hours. Prerequisites: courses 120, and C201 or 212A or 212B, or consent of instructor. Political science and policy science approaches to the national foreign policy process, with primary focus on the formulation and implementation of American foreign policy. May be concurrently scheduled with course C197B. Mr. Zoppo

C231D. International Relations Theory. An introduction to contemporary problems in international relations theory. May be concurrently scheduled with course C197B. Mr. Stein, Mr. Wilkinson

232A-232B. International Political Economy. (Formerly numbered 232.) Discussion, three hours:

232A. International Trade and Advanced Industrialized Nations. An intensive examination of various theoretical approaches to international political economy, particularly as they relate to international trade and the study of advanced industrialized nations.
Mr. Lake

232B. International Capital and International Relations. The interaction of international lending and investment and the domestic political economics of both industrialized and industrializing societies.
Mr. Frieden

233A-233B-233C. Political Economy Workshop. Discussion, two hours. Open only to graduate students who have successfully completed the major field examinations. Workshop for those students writing or preparing to write dissertations. Reading and discussion of research and progress presented by UCLA faculty, visiting scholars, and advanced graduate students. A research paper of publishable length and quality required. Mr. Frieden, Mr. Lake

235. Selected Topics in Comparative Politics. Lecture, three hours. A critical examination of a major problem in comparative politics.

236A-236B. The Foundations of Representative Government. An analysis of the factors affecting the development and functions of representative institutions in the United States, Europe, and selected political systems of Africa, Asia, and Latin America. Politics or comparative politics field credit:

236A. An introduction to the literature on the development of elective institutions and their performance. An interdisciplinary approach, emphasizing historical as well as contemporary cases and modes of analysis.

236B. Prerequisite: course 236A or consent of instructor. A research seminar devoted to the analysis of particular problems and countries.
Mr. Sisson, Mr. Snowiss

C238A-C238D. Studies in Public Law:

C238A. Evolution of Anglo-American Law Books. Surviving early records. Case reporting, from the year books to the modern reports. Legal treatises from Glanvill to today. Statutes and how to find them. The language of the law. The entire English-speaking world, with emphasis on American materials. May be concurrently scheduled with course C197E.
Mr. Gerstein

C238B. Making of the Constitution. An examination of the development of constitutional law during selected periods of American history, such as founding, the Marshall and Taney eras, and the New Deal. Emphasis on both judicial and nonjudicial materials. May be concurrently scheduled with course C197E.
Mr. Hobbs

C238C. The Bill of Rights and the States. An examination of the problems surrounding the application to the states of Amendments 1 through 9. May be concurrently scheduled with course C197E.
Mr. Hobbs

C238D. Current Problems in Public Law. A discussion of selected contemporary problems in jurisprudence, the judicial process, judicial behavior, and legal controls on social conduct. May be concurrently scheduled with course C197E. Mr. Gerstein

M241. Topics in Applied Game Theory. (Same as Economics M205.) Lecture, three hours. Prerequisites: calculus or introductory probability, and graduate standing in economics or consent of instructor. Survey and application of the major solution concepts to models of bargaining, oligopoly, cost allocation, voting power, etc. Course paper consists of a substantial game-theoretic model on a topic in the student's particular field of interest. Mr. Shapley

M242A-M242B. Game Theory. (Same as Economics M242A-M242B.) Lecture, three hours. Prerequisites: Economics 245A or suitable mathematics courses. Elements of the theory of cooperative and noncooperative games, with applications to economic models. Strategic and coalitional games, minimax, Nash-Cournot equilibrium, bargaining theory, the core, value, and other solution concepts; applications to oligopoly, general exchange and production economies, allocation of joint costs. Mr. Shapley

M247. Multivariate Analysis with Latent Variables. (Same as Psychology M257.) Prerequisite: consent of instructor. Introduction to models and methods for the analysis of data hypothesized to be generated by unmeasured latent variables, including latent variable analogues of traditional methods in multivariate analysis. Causal modeling: theory testing via the analysis of moment structures. Measurement models such as confirmatory, higher order, and structured-means factory analytic models. Structural equation models, including path and simultaneous equation models. Parameter estimation, hypthesis testing, and other statistical issues. Computer implementation. Applications. Mr. Bentler

M249. Special Topics in Econometrics. (Same as Economics M249.) Prerequisites: Economics 247, 248. A seminar on one of several special topics such as Bayesian inference, time-series methods, nonlinear estimation, or qualitative variables, depending on the particular interests of the instructor.
Mr. Leamer

Prerequisite for graduate seminars (C250A through C271) is advance consent of instructor.

C250A-C250L. Seminars in Regional and Area Political Studies:

C250A. Latin American Studies. Seminar, three hours; discussion, one hour. May be concurrently scheduled with course C197D.
Ms. Geddes, Mr. Gonzalez

C250B. Russian and Slavic Studies. May be concurrently scheduled with course C197C.
Mr. Cattell, Mr. Kolkowicz, Mr. Korbonski

C250C. Chinese and East Asian Studies. May be concurrently scheduled with course C197D.
Mr. Baum

C250D. Japanese and Western Pacific Studies. May be concurrently scheduled with course C197D.
Mr. Baerwald

C250E. African Studies. May be concurrently scheduled with course C197D. Mr. Lofchie, Mr. Sklar

C250F. Middle Eastern Studies. May be concurrently scheduled with course C197D. Mr. Binder

250G. Commonwealth Studies.

C250H. Western European Studies. Seminar, three hours; discussion, one hour. May be concurrently scheduled with course C197D. Mr. Rogowski

C250J. Southeast Asian Studies. May be concurrently scheduled with course C197D.

250K. North African Studies.

C250L. South Asian Studies. May be concurrently scheduled with course C197D. Mr. Sisson

C252. Seminar in Public Law. May be concurrently scheduled with course C197E.

C253. Seminar in International Relations. May be concurrently scheduled with course C197B.

C254. Seminar in Public Administration. May be concurrently scheduled with course C197F.

257. Seminar in Political Theory. (Formerly numbered 257A-257B.) Discussion, three hours.
Mr. Ashcraft, Mr. Binder

259. Seminar in Political and Electoral Problems. Prerequisites: two graduate courses in politics.

C262. Seminar in Municipal Government. May be concurrently scheduled with course C197F.

C271. Seminar in Political Change. An interdisciplinary seminar directed toward the analysis of political change. May be concurrently scheduled with course C197D. Mr. Binder

280A-280B. Advanced Practicum in Administrative Research. Prerequisites: at least five courses (20 units) at the graduate and upper division levels in political science, consent of instructor. An advanced laboratory/seminar in applied research on public agency operational and service delivery problems. An integrated case-study approach to task-force studies dealing with such problems as legislative and policy issues in mandated and nonmandated public functions; program and management organization; budget and finance performance measures; information systems; evaluation of outcomes; political impact analysis; and related problems in administrative decision making.

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. A teaching apprenticeship under the active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

495. Teaching Political Science. A workshop in teaching techniques, including evaluation of each student's own performance as a teaching assistant. Normally to be taken by all new teaching assistants in the first quarter of their assistantships. May be taken only in a quarter in which students are teaching assistants. May not be applied toward M.A. or Ph.D. course requirements. S/U grading.

501. Cooperative Program (2 to 8 units). Prerequisite: consent of UCLA graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Course is used to record the enrollment of UCLA students in courses taken under cooperative arrangements with neighboring institutions. S/U grading.

590A. Directed Reading for Ph.D. Dissertation Proposal. Required of all Ph.D. students. Must be taken under the supervision of the research adviser prior to the quarter in which the oral examination is taken. Research for the proposed dissertation topic and submission of a bibliographic essay on that topic. May be repeated with consent of research adviser and graduate adviser.

590B. Directed Research for Ph.D. Dissertation Proposal. Prerequisite: course 590A. Required of all Ph.D. students. Must be taken under the supervision of the research adviser prior to or during the quarter in which the oral examination is taken. Development and writing of the research design for the Ph.D. dissertation. May be repeated with consent of research adviser and graduate adviser.

596. Directed Individual Study or Research (2 to 4 units). May be applied only three times toward the minimum course requirement in the first two years. May be repeated.

597. Preparation for Ph.D. Qualifying Examinations (2 to 12 units). May be repeated. S/U grading.

598. Research for and Preparation of M.A. Thesis (2 to 12 units). Course is rarely taken because students normally receive the M.A. degree under the comprehensive examination plan. S/U grading.

599. Research for and Preparation of Ph.D. Dissertation (2 to 12 units). May be repeated. S/U grading.

Nancy M. Henley, Ph.D.
Eric W. Holman, Ph.D.
Keith Holyoak, Ph.D.
John P. Houston, Ph.D.
Wendell E. Jeffrey, Ph.D.
Harry J. Jerison, Ph.D., *in Residence*
Harold H. Kelley, Ph.D.
Franklin B. Krasne, Ph.D.
John C. Liebeskind, Ph.D.
O. Ivar Lovaas, Ph.D., Litt.D.
John H. Lyman, Ph.D.
Donald G. MacKay, Ph.D.
Irving Maltzman, Ph.D.
Albert Mehrabian, Ph.D.
Charles Y. Nakamura, Ph.D.
Donald Novin, Ph.D.
Amado M. Padilla, Ph.D.
Allen Parducci, Ph.D.
L. Anne Peplau, Ph.D.
Bertram H. Raven, Ph.D., *Chair*
David O. Sears, Ph.D.
David Shapiro, Ph.D.
Edwin S. Shneidman, Ph.D., *in Residence*
Gerald H. Shure, Ph.D.
Stanley Sue, Ph.D.
Shelley E. Taylor, Ph.D.
James P. Thomas, Ph.D.
Bernard Weiner, Ph.D.
J. Arthur Woodward, Ph.D.
Eran Zaidel, Ph.D.

Emeritus Professors

Richard P. Barthol, Ph.D.
James C. Coleman, Ph.D.
Joseph A. Gengerelli, Ph.D.
Milton E. Hahn, Ph.D.
F. Nowell Jones, Ph.D.
George F. J. Lehner, Ph.D.
Donald B. Lindsley, Ph.D., Sc.D.
Jessie L. Rhulman, Ed.D.
Eliot H. Rodnick, Ph.D.

Associate Professors

Paul R. Abramson, Ph.D.
Andrew Christensen, Ph.D.
Patrice L. French, Ph.D.
Ralph E. Geiselman, Ph.D.
Gerald M. Goodman, Ph.D.
George E. Mount, Ph.D.
Hector F. Myers, Ph.D.
Thomas D. Wickens, Ph.D.

Assistant Professors

Duane Buhrmester, Ph.D.
Felipe Castro, Ph.D.
Patricia Cheng, Ph.D.
Christine A. Dunkel-Schetter, Ph.D.
Halford H. Fairchild, Ph.D.
Carlos V. Grijalva, Ph.D.
Stephen P. Hinshaw, Ph.D.
Daniel B. Kaye, Ph.D.
Vickie M. Mays, Ph.D.

Marie A. Morell, Ph.D.
D. Dean Richards, Ph.D.

Adjunct Professors

Joseph Bogen, Ph.D.
Marion Jacobs, Ph.D.
Claire Kopp, Ph.D.
James G. Miller, Ph.D.

Adjunct Associate Professors

M. Douglas Anglin, Ph.D.
Jacqueline D. Goodchilds, Ph.D.
Morris K. Holland, Ph.D.
Dennis McGinty, Ph.D.
Jill Waterman, Ph.D.

Adjunct Lecturers

Darrell C. Dearmore, M.A.
Kenneth R. Pfeiffer, Ph.D.

Scope and Objectives

We all practice some form of intuitive psychology to understand ourselves and the world around us. In contrast, the psychology curriculum at UCLA focuses on psychology as a scientific discipline that uses systematic methods of investigation to understand general principles of human behavior, cognition, and emotion.

The curriculum treats psychology as a biosocial science; human behavior is viewed from both biological and social viewpoints. The biosocial perspective allows students to study a broad range of topics such as psychobiology, animal behavior, learning, motivation, perception, cognition, measurement, memory, social psychology, personality, and clinical, developmental, community, and health psychology.

According to recent surveys, the UCLA Psychology Department is ranked as one of the top departments of its kind in the country in terms of faculty quality. The curriculum is both wide in terms of range of courses, and deep in terms of quality of the faculty.

The undergraduate curriculum provides a basic liberal arts foundation. It does not focus on training students to be only professional psychologists, but rather helps them to understand the world and our place in it. A choice of three majors, leading to either the B.A. or B.S. degree, is offered; several specializations are also offered.

At the graduate level, the department offers training leading to the Ph.D. degree with emphases in various fields. The program is designed to prepare psychologists to function effectively as scientific investigators, college and university teachers, and professional psychologists.

Undergraduate Study

To meet the diverse needs of students, there are three different major curricula: the psychology major, the cognitive science major, and the psychobiology major. The first two lead to a Bachelor of Arts degree; the third culminates in a Bachelor of Science degree.

All courses required for these majors (which include lower division courses and major courses) must be taken for a letter grade.

Bachelor of Arts in Psychology

The general psychology major emphasizes the experimental and research aspects of the field. It is a good choice for students with an interest in human behavior who wish to receive a general education in the liberal arts and sciences. For additional information, contact the Psychology Undergraduate Office, 1531 Franz Hall, early in your career.

Preparation for the Major

You are identified as a pre-psychology major until the preparation for the major requirements have been satisfied. The following required courses must be completed for a letter grade (a C– or better in each course and a 2.3 overall grade-point average in the preparation courses) before you reach 135 total units: Anthropology 11 or 1 or 2; Biology 2 or 5; Chemistry 2 (if you have completed one year of high

school chemistry with a C or better, this requirement will be waived) or 11A; Mathematics 2 or two quarters of calculus; Physics 10 or 3A or 6A or 8A; one course from Philosophy 1, 3, 4, 6, 7, 8, 9, 10, 21, 22; Psychology 10, 42; Psychology 41 (recommended) or Mathematics 50 or Economics 40. Psychology 41 and 42 should be taken early in your career.

These are minimum requirements in preparing for the major. More advanced courses in science and statistics would provide stronger preparation.

The Major

After completing the preparation courses, you must petition to enter the major at the Psychology Undergraduate Office. You must have a 2.0 grade-point average in your upper division major courses, and each must be taken for a letter grade.

Required: (1) Psychology 110, 115, 120, 125, 135; (2) one course from 111, 116, 121, 126, 136A, C136B, 143, M155, 170B, 174, 176, M181A, M181B, 186; (3) an additional four upper division elective courses (16 units) in psychology.

Developmental Disabilities Immersion Program Specialization

This specialization combines a general education in the liberal arts and sciences with research and fieldwork experience in the area of developmental disabilities. Students participate in courses and research under the Mental Retardation and Child Psychology Program at Lanterman State Hospital and Developmental Center. A complete description of the Developmental Disabilities Immersion Program (DDIP) is given below.

Admission is limited. In addition to the courses listed above under "Preparation for the Major," you must take Communication Studies 10 and Sociology 1. You also may take Psychology M182A and M182B instead of course 42. All preparation courses must be completed for a letter grade (a C – or better in each course and a 2.5 overall grade-point average).

After completing the preparation courses, you must petition to enter the major and specialization at the Psychology Undergraduate Office. You must have a 2.0 grade-point average in your upper division major courses, and each must be taken for a letter grade.

The following upper division courses are required: (1) Psychology 110, 115 or M183, 120 or M182C, 125, 127, 130, 135, M180A, M180B, M181A-M181B, 193 (two quarters required); (2) one laboratory course from 111, 116, 121, 126, 136A, C136B, 143, M155, 170B, 174, 176, M181A, M181B, 186; (3) four courses from M133B, 133E, 170A, M182A, M182B, M182D, M184.

Bachelor of Arts in Cognitive Science

This major focuses on the study and implementation of intelligent systems, both human and artificial. Cognitive science involves the study of cognitive psychology, computer science, mathematics, and related disciplines. For additional information, contact the Psychology Undergraduate Office, 1531 Franz Hall, early in your career.

Preparation for the Major

Admission to the major is limited. You are identified as a pre-cognitive science major until the preparation for the major requirements have been satisfied. The following required courses must be completed for a letter grade (a C or better in each course and a 2.5 overall grade-point average in the preparation courses): Anthropology 11 or 1 or 2; Biology 2 or 5; Chemistry 2 (if you have completed one year of high school chemistry with a C or better, this requirement will be waived) or 11A; Mathematics 31A, 31B, 61; Philosophy 7 or 9; Physics 10 or 3A or 6A or 8A; Program in Computing 10A, 10B, 60; Psychology 10, 42; Psychology 41 (recommended) or Mathematics 50 or Economics 40. Psychology 41 and 42 should be taken early in your career.

The Major

After completing the preparation courses, you must petition to enter the major at the Psychology Undergraduate Office. You must have a 2.0 grade-point average in your upper division major courses, and each must be taken for a letter grade.

Required: (1) Psychology 110, 115, 120, 121, 125 or 135, 185, 186, 188; (2) an additional three upper division elective courses (12 units) from Psychology 102 through 124B, M153, Computer Science 111 through 199, Linguistics 100 through 199, Mathematics 104 through 199, Philosophy 126A through 136.

Quantitative Methods Specialization

This specialization is intended to give students more extensive preparation in statistics. The following additional courses are required: Mathematics 32A, 33A, and either 150A-150B-150C or 152A-152B. Psychology 41 is not required if you select this specialization.

Bachelor of Science in Psychobiology

This major is designed for students who plan to go on to postgraduate work in psychobiology or the health sciences. Psychobiology involves the study of brain-behavior relations and laboratory training in standard brain research techniques. For additional information, contact the Psychology Undergraduate Office, 1531 Franz Hall, early in your career.

Preparation for the Major

You are identified as a pre-psychobiology major until the preparation for the major requirements have been satisified. The following required courses must be completed for a letter grade (a C – or better in each course and a 2.0 overall grade-point average in the preparation courses): Biology 5, 6, 7, 8; Chemistry 11A, 11B/11BL, 11C/11CL, 21, 23, 25; Mathematics 3A, 3B, and 3C, or 31A, 31B, and 32A; Physics 6A, 6B, and 6C, or 3A, 3B, and 3C, or 8A/8AL, 8B/8BL, and 8C/8CL; Psychology 10, 42; Psychology 41 (recommended) or Mathematics 50 or Economics 40. Psychology 41 and 42 should be taken early in your career.

The Major

After completing the preparation courses, you must petition to enter the major at the Psychology Undergraduate Office. You must have a 2.0 grade-point average in your upper division major courses, and each must be taken for a letter grade.

Required: (1) Biology 129 or Psychology 118A or Anthropology 128A and 128B, and Psychology 110, 115, 116, 120; (2) one course from Psychology 125, 127, 130, 135; (3) four courses from the following list: Psychology 117 (only one section may be used); Biology 107, 112, 113, 114 (no more than one from this group); Psychology 118B, 118C, 118D, 118E, M118F, M119, 128, 143, M153, 190 (one course only), 199 or Biology 199 (one course only), Biology 102, 105, 110, 111, 120, 122, 124, 131, 135, 138, 139, 143, 144, 145A, 145B, 145C, 153, CM156, 158, 164, 166, 167, 168, 169, 171, 172A, 172B, 173, 177, 179, Kinesiology 140, Chemistry 152.

Honors

Honors Courses

Each year the department offers a selection of honors courses, designated with an H suffix. The courses provide close contact with faculty, emphasize readings in the original literature, student oral and written reports, and field or research experience. All such courses offer credit toward departmental honors and College Honors.

Departmental Honors

Psychology majors intending to continue study at the graduate level are encouraged to apply for departmental honors. In addition to the regular requirements for your major, you must take at least two honors-designated courses. Different courses are designated for honors each year, and you may choose among them. You also must engage in advanced research and study leading to a formal bachelor's thesis under the tutorial guidance of a faculty member while enrolled in Psychology 190A-190B-190C. If your thesis is judged acceptable by the honors committee, you are awarded the degree with honors or highest honors. Consult

the Psychology Undergraduate Office early in your educational planning for further information and application forms.

Developmental Disabilities Immersion Program

The Developmental Disabilities Immersion Program is cosponsored by the Department of Psychology and the Department of Psychiatry and Biobehavioral Sciences and by the Office of Instructional Development — Field Studies Development. Each year a group of 28 students is selected for the program which runs during the Winter/Spring Quarters. Students participate in courses and research at Lanterman State Hospital and Developmental Center, a facility for mentally retarded citizens in Pomona, and do related fieldwork while living at the site.

During each quarter of the program up to 20 units of coursework related to developmental disabilities are offered. Most of the courses are in the Psychology/Psychiatry M180 through M184 series, but courses from other departments (such as Biology) may supplement these offerings. Many of the courses fulfill psychology undergraduate major requirements (consult the Psychology Undergraduate Office for details). Student individualized research projects are also part of the immersion experience.

To supplement their academic activities, students spend 10 hours a week working with the developmentally disabled by assisting teachers in the special education classes in nearby public schools or by helping supervise at sheltered workshops. For more information, contact the Psychology Undergraduate Office or Field Studies Development (70 Powell Library).

Preparation for Graduate Study

Although requirements for admission to graduate programs in psychology in most universities are satisfied by the above major requirements, both admission to graduate work and progress toward the degree may be impeded in certain areas of psychology if additional preparation is not obtained at the undergraduate level. For this reason, if you plan to do graduate work in psychology, you are advised to take additional work in methodology and statistics and to take advantage of the many advanced undergraduate courses in specific fields offered both by the Psychology Department and related departments. Consult the Psychology Undergraduate Office for more information.

Ph.D. Degree

The graduate program in psychology leads to the Ph.D. degree. Although you may obtain the M.A. degree en route to the Ph.D., the department does not admit candidates for the M.A. degree only. For the Ph.D. degree, a thorough background in research methodology and psychological theory is required. Major specialized training is available in the areas of psychology listed below under "Major Fields or Subdisciplines."

A departmental brochure describing the graduate program in psychology is available in 3453 Franz Hall.

Admission

Admission to the Ph.D. program normally requires an undergraduate degree in psychology. However, students from other areas (particularly the mathematical, physical, biological, and social sciences) may be admitted. Admission is for Fall Quarter only and on a full-time basis only. Applicants must mail the following documents directly to the Psychology Department, 3453 Franz Hall, UCLA, Los Angeles, CA 90024, by December 30 to be considered for admission the following Fall Quarter:

(1) The departmental Application for Admission to the Doctoral Program, available in 3453 Franz Hall.

(2) Three letters of recommendation.

(3) One official transcript from each college attended.

(4) Scores from the Graduate Record Examination (GRE) Aptitude Test and the Advanced Test in Psychology (taken within the last three years).

(5) An official score report of the Miller Analogies Test. International students or U.S. students currently overseas are exempt from this requirement.

(6) The Test of English as a Foreign Language (TOEFL), required of all international applicants whose native language is not English.

Students who are being considered as finalists for the clinical program may be required to meet with the clinical faculty for an interview.

Incoming students are expected to have had courses equivalent to the following: (1) Psychology 41; (2) two courses from Psychology 110, 115, 120; and (3) two courses from the following alternatives: (a) Psychology 125 or 127; (b) 130; and (c) 135. If you have not had training in these areas, you have to take appropriate coursework or examinations. In addition, it is recommended that you have adequate preparation in mathematics, physics, chemistry, and the biological and social sciences, at least to the extent of a quarter's work at the college level in each. Continuation in the Ph.D. program is contingent on successfully clearing undergraduate deficiencies by the end of your fourth quarter in residence.

Major Fields or Subdisciplines

You may major in clinical, cognitive, developmental, learning and behavior, measurement and psychometrics, personality, physiological, or social psychology. With the exception of clinical, you may minor in any of the areas listed above, as well as in health psychology and industrial. You may petition for individualized minors or a minor in experimental psychopathology. Training is also available in community psychology.

Course Requirements

General Course Requirements: All students, regardless of area, must fulfill the requirements listed below.

The core program must be completed within your first two years in residence. The core program includes four core courses, plus Psychology 250A, 250B, 251A-251B (and 251C, if an additional quarter is needed to complete the course).

Nine graduate courses (36 units), including Psychology 250A, 250B, 251A-251B (research project must be complete), and three of the four core courses are required for the M.A. degree. One 596 course (four units) may be applied. Courses in the 400 series may not be applied. All undergraduate deficiencies must be cleared.

By the end of the second year, you must complete at least one individual research course (596) and at least three second-year graduate courses, including one quantitative course from Psychology 238, 247A, 249, 252, 253, 254, 255, 256, M257, 258, 259, 287, 299.

During the third year, you must enroll in a minimum of three graduate-level courses, plus one quarter of course 596. At least one quarter of course 596 or 599 should be taken during the fourth year and each remaining year in the graduate program.

Major Area Course Requirements: Each area has its own specific requirements. A course may not be applied toward requirements in more than one major or minor area unless no other course options are designated. Requirements are as follows: *clinical:* Psychology 270A-270B-270C, 271A-271B-271C, two courses in the 272 series, at least two other advanced clinical courses outside the 272 series, and the area's two-quarter assessment course (277); *cognitive:* courses 260A-260B, plus two courses from 261, 262, 263, 266; *developmental:* courses 240A-240B, one course from 220A, 235, 286, one course from 200B, 205A, 261, 262, 263, 264, 266, three courses from 242A through 242F, 243A, 243B, 244, one of the quantitative courses listed under second-year requirements, and 299; *learning and behavior:* courses 200A, 200B, plus two courses from 204A, 204B, 204C, 208, 210, 281, 290, 293, and Psychiatry 271; *measurement and psychometrics:* five courses from 249, 252, 253, 254, 255, 256, M257, 258; *personality:* courses 232, 235, M239, 278; *physiological:* courses 205A-205B, three quarters of course 212, two approved physiological seminars, and Anatomy M206A, M206B; *social:*

courses 220A-220B, C223A or 224, three social seminars taught by three different faculty members, and course 226 each quarter for the first three years of the program.

Minor Area Course Requirements: You must select two minor areas. These minors are normally satisfied by taking three to four specified courses. See departmental bulletins for further details.

Qualifying Examinations

The qualifying examination consists of three separate portions. The first is an examination administered by the major area, which examines in breadth your knowledge of the major field. The second part is an individualized examination which examines in depth your knowledge of your area of specialization within the major field. The third part is the University Oral Qualifying Examination. All Ph.D. requirements listed above must be completed before this portion can be taken. After successful completion of the oral examination, you are advanced to candidacy and may begin work on the dissertation.

Contact the department for the specific examination requirements of the various areas of specialization.

Practicum and Internship Requirements for Clinical Students

(1) At least six quarters of approved supervised preinternship practicum (Psychology 401 — 12 to 15 hours per week) are required and are usually taken in the second and third years.

(2) The equivalent of one calendar year of supervised internship (Psychology 451) in an acceptable setting approved by the faculty, taken either full-time in one year or half-time in two years in one or two settings, is required. This is usually taken in the fourth or fifth year. Contact the department for further information on internship assignments.

Candidate in Philosophy Degree

You are eligible to receive the C.Phil. degree on advancement to candidacy for the Ph.D.

Final Oral Examination

The final oral examination is required of all candidates for the Ph.D. degree.

Psychology Clinic

The Psychology Clinic in the Department of Psychology is a major training center for clinical psychology students in the Ph.D. program. It provides a broad range of psychological services to clients, including assessment and individual, family, couples, and group therapy. Clients cover the entire age range and represent diverse populations in the community. Student therapists receive very close supervision and are encouraged to relate their case material to academic learning and current research. Students and faculty members are also involved in a variety of clinical research projects.

Infant Development Program

The Infant Development Program is designed as a teaching and research facility for the department and is set up to accommodate both cross-sectional and longitudinal investigation of infants, toddlers, and their parents. In addition, the program provides an opportunity for students in developmental psychology and other areas to acquire firsthand experience working with infants and toddlers on an individual basis or in a group setting. The program is located in Franz Hall and provides child care for 13 infants ranging in age from four months to two and one-half years.

Spanish Speaking Mental Health Research Center

The Spanish Speaking Mental Health Research Center (SSMHRC) promotes basic and applied research on the mental health needs of the Hispanic population. SSMHRC provides an interdisciplinary research environment for scholars, students, and professionals interested in Hispanic mental health. Previous research projects have included studies on acculturation and ethnicity, bilingualism, community studies, health and behavior, personality assessment, and psychosocial issues. In January 1984 the National Institute of Mental Health's Center for the Studies of Minority Group Mental Health awarded the SSMHRC a five-year grant to study the effects of stress on Mexican Americans.

Lower Division Courses

10. Introductory Psychology. A general introduction including topics in cognitive, experimental, personality, developmental, social, and clinical psychology; six hours of psychological research.

15. Introductory Psychobiology. Designed for nonmajors. A survey of genetic, evolutionary, physiological, pharmacological, and experiential factors affecting behavior. Using the comparative approach where appropriate, emphasis on the relevance of biological mechanisms to an understanding of man and his interaction with his environment.

41. Psychological Statistics. Lecture, five hours. Prerequisites: course 10, Mathematics 2, and psychology premajor standing or consent of instructor. Basic statistical procedures and their application to research and practice in various areas of psychology.

42. Research Methods in Psychology. Lecture, two hours; laboratory, four hours. Prerequisites: courses 10, 41 with grades of C – or better. Introduction to research methods and critical analysis in psychology. Lecture and lab topics include experimental and nonexperimental research methods, statistical design and analysis as applied to a broad range of basic and applied research issues.

95. Lower Division Seminars. Prerequisite: course 10. Limited to freshmen and sophomores. Intensive analysis in seminar situations of selected topics of current psychological interest. See the *Schedule of Classes* for current topics and instructors. May be repeated for credit.

Upper Division Courses

102. History and Systems of Psychology. Prerequisite: senior standing or consent of instructor. A historical and systematic analysis of psychological thought and points of view.

M107. Asian American Personality and Mental Health. (Formerly numbered M195.) (Same as Asian American Studies M107.) Lecture, three hours. Prerequisite: course 10. Foundations of personality development and mental health among Asian Americans. Topics include culture, family patterns, achievements, stressors/resources, and immigrant and minority group status. Mr. Sue

110. Fundamentals of Learning. Lecture, three hours; discussion, one hour. Prerequisites: courses 10, 41, junior standing. Experimental findings on animal and human conditioning; retention and transfer of training; the relation of learning and motivation. Intended to provide an empirical basis for theory and research in this area.

111. Learning Laboratory. Lecture, two hours; laboratory, three hours. Prerequisites: courses 41, 42, 110 (may be taken concurrently), psychology major standing. Laboratory experience with techniques in the study of learning, especially with animals.

112A. Human Learning. Prerequisite: course 110. Acquisition, retention, and transfer of verbal and nonverbal human learning.

112B. Theories of Learning. Prerequisite: course 110. Critical discussion of the major theories in the light of experimental evidence.

112C. Thinking. Prerequisite: course 110. An analysis of experimental studies of problem solving, reasoning, insight, concept formation, and related topics.

112E. Current Topics in Learning. Prerequisite: course 110. A study of related issues in the psychology of learning. Topics vary with the interests of the instructor and class. May be repeated for credit with consent of instructor.

114. Alcoholism. Prerequisite: upper division standing. Theories and research on the impact, causes, characteristics, and treatment of alcoholism considered from a biobehavioral point of view.

115. Physiological Psychology. Lecture, three hours; discussion, one hour. Prerequisites for majors: course 41, Biology 2, junior standing; for nonmajors: Biology 5, 7, consent of instructor. Integrative activities, receptor and effector processes in relation to neuromuscular structure and function. Facts, problems, and methods.

116. Physiological Psychology Laboratory. Lecture, one hour; laboratory, three hours. Prerequisites: courses 41, 42, 115 (may be taken concurrently), psychology major standing. Laboratory experience with various topics in physiological psychology.

117. Seminar in Psychobiology. Prerequisite: course 115. Advanced topics in brain and behavior. Only one section of course 117 may be applied as an elective toward the psychobiology major. May be repeated for credit with consent of instructor.

118A. Comparative Psychobiology. Prerequisite: course 115. A survey of the determinants of species-specific behavior, including genetic influences and learning.

118B. Behavioral Pharmacology. Prerequisite: course 115. Experimental and theoretical treatment of drug-behavior relationships. Particular emphasis on behavior and pharmacological mechanisms of drug action and drug interaction with neuronal function; drugs as tools to investigate various behavior processes such as mood, aggression, learning, and motivation, experimental studies of addiction.

118C. Psychophysiology of Motivation. Prerequisite: course 115. The basic psychophysiology, including brain and endocrine mechanism, involved in the control of motivation. Discussion of homeostatic drives such as hunger and thirst and nonhomeostatic drives such as reproductive behavior.

118D. Experimental Neuropsychology. Prerequisite: course 115. The experimental analysis of higher brain functions. Special emphasis on attention, memory, perception, and language.

118E. Current Topics in Physiological Psychology. Lecture, three hours. Prerequisite: course 115 or consent of instructor. Advanced topics of current interest in physiological psychology presented in depth. Emphasis on bringing students to a point where they can appreciate and evaluate current research papers on the topics covered. May be repeated for credit with consent of instructor.

M118F. Ethology: Physiology of Behavior and Learning in Animals. (Same as Psychiatry M190.) Lecture, four hours; laboratory, one hour. Basic course for undergraduate students which integrates a systematic overview of common forms of behavioral plasticity and standard training procedures in laboratory animals (in behavioral, neurophysiological, and pharmacological studies) with a broad biological, evolutionary perspective. (W)

118G. Neuron Circuitry and Behavior. Prerequisite: course 115, Biology 171, or consent of instructor. A presentation of current data and theory concerning how neuron circuits produce behavior. Mechanisms of perception, response selection, motor pattern generation, learning, and motivation, with emphasis on the operation of these processes in well-defined neural circuits.

M119. Evolution of Intelligence. (Formerly numbered 119.) (Same as Psychiatry M119.) Lecture, two hours; discussion, two hours. Prerequisites: course 15 or 115, an introductory statistics course, junior or senior standing, consent of instructor. Intelligence treated as neural information-processing capacity; its evolution in vertebrates correlated with the evolution of enlarged brains. Quantitative approaches in evolutionary biology and the neurosciences.

120. Human Information Processing. Lecture, three hours; discussion, one hour. Prerequisites: courses 10, 41, junior standing. A survey of how people acquire and retain nonverbal and verbal information. Perception, attention, memory, and representation of knowledge.

121. Laboratory in Human Information Processing. Prerequisites: courses 10, 41, 42, 120 (may be taken concurrently). Laboratory experience with methods and phenomena drawn from research on human perception, memory, and cognition.

122. Language and Communication. Prerequisite: course 41 or consent of instructor. A survey of language behavior, communication, and speech perception, including acquisition, sequential structure, and semantic aspects. Recent developments in linguistics, theory of information transfer, analysis and synthesis of speech. Social communication. Aphasia and speech pathology. Animal communication.

123. Psycholinguistics. A survey of current theory and research in psycholinguistics: the description of language in generative grammars; the acquisition of language by children; experiments on speech recognition, production, and comprehension; errors in speech perception and production; speech physiology and pathology.

124A. Current Topics in Human Information Processing. Lecture, two hours; discussion, one hour. Prerequisites: courses 10, 41, 120. Advanced consideration of special topics in human information processing. May be repeated for credit with consent of instructor.

124B. Current Topics in Psycholinguistics. Prerequisite: course 123. Advanced consideration of special topics in the psychology of language. May be repeated for credit with consent of instructor.

125. Personality. Lecture, three hours; discussion, one hour. Prerequisites: courses 10, 41, junior standing. A survey of the major topics in the field of personality, including personality theory, personality assessment, and the physiological, behavioral, and cultural role of perception, learning, and motivation in personality.

126. Personality Laboratory. Discussion, three hours; laboratory, three hours. Prerequisites: courses 41, 42, 125 (may be taken concurrently), psychology major standing. Laboratory experience with various topics in personality.

126H. Personality Laboratory: Emotions (Honors). Discussion, three hours; laboratory, three hours. Prerequisites: courses 10, 41, 42, psychology major standing. Presentations of the major approaches to emotion and experimentation of some hypotheses from the theories. Use of different (basic) statistical techniques and experimental methodologies.

127. Abnormal Psychology. Lecture, three hours. Prerequisite: course 10. Study of the dynamics and prevention of abnormal behavior, including neuroses, psychoses, character disorders, psychosomatic reactions, and other abnormal personality patterns.

127H. Abnormal Psychology (Honors). Lecture, three hours; discussion, one hour. Prerequisite: course 10. An honors course parallel to course 127.

128. Behavioral Medicine. Lecture, two hours; discussion, one hour. Prerequisites: courses 10, 127, junior or senior standing. Psychophysiological (psychosomatic) disorders approached via a biopsychosocial model of disease, with emphasis on the interrelationships between physiology, personality/behavior, and social/environmental factors. Major focus on behavioral assessment and treatment approaches (e.g., modifying Type A behavior, treatment of anorexia and enuresis).

129A. Personality Measurement. Prerequisite: course 125. The rationale, methods, and content of studies dealing with the problems of describing persons in terms of a limited set of dimensions. Detailed consideration of research literature dealing with a few representative personality dimensions.

129B. Personality Dynamics. Prerequisite: course 125. Detailed conceptual examination of one or two areas of personality in which the main and interactive effects of personality and situational variables have been investigated. Personality as related to the study of psychological processes, particularly motivation. Examination of current research literature.

129C. Personality and Cognition. Prerequisite: course 125. Theoretical and experimental analyses of cognitive processes such as imagery, attention, language, and memory and their implication for theories of personality.

129D. Special Topics in Personality. Prerequisite: course 125. Study of selected topics in the psychology of personality. Topics vary with the interests of instructor and class. May be repeated for credit with consent of instructor.

129E. Human Sexuality. Lecture, three hours. Prerequisite: senior psychology major standing. An overview of the psychology of human sexuality. Psychological research, assessment, and therapy described in a format which highlights their significance for understanding human sexual functioning. The psychological mechanisms underlying the expression of human sexuality.

130. Developmental Psychology. Lecture, three hours. Prerequisite: course 10. An elaboration of the developmental aspects of physical, mental, social, and emotional growth from birth to adolescence.

132. Learning Disabilities. (Formerly numbered 132A.) Lecture, three hours. Prerequisite: upper division standing. Exploration of different orientations to persons with learning problems, emphasizing assessment and intervention approaches and the psychological impact of such approaches. Topics include the interaction of learner and environment, the sociopolitical nature of the classroom, the psychological impact of schooling, grades, and evaluations, process vs. goal focus in learning.

133A. Adolescent Development. Lecture, three hours. Prerequisite: course 130. An examination of the cognitive, social, physical, and physiological development of the adolescent.

M133B. Exceptional Children. (Formerly numbered 133B.) (Same as Psychiatry M133.) Prerequisite: course 130. Study of the issues and research problems in the areas of mental retardation, giftedness, learning disorders, emotional disorders, and childhood psychosis.

133C. Psychological Development in the Adult Years. Prerequisite: course 130 or consent of instructor. Theory and research on changes in motivation, aptitudes, and abilities as related to genetics, age, sex, and sociocultural variables.

133D. Social and Personality Development. Lecture, two hours; discussion, one hour. Prerequisites: courses 10, 41, 130. An advanced course that surveys theory and research on social and personality development during childhood. Topics include parent-child attachment, temperament, self-control, aggression, sex-typing, self-concept, moral reasoning and behavior, social status and social skills, and peer group relations.

133E. Current Issues in Developmental Psychology. Prerequisites: course 130, upper division psychology standing. A critical examination of current issues in developmental psychology. Specific topics vary depending on the interests of the class and instructor. May be repeated with consent of instructor.

134. Psychology and Education. Lecture, three hours. Prerequisites: courses 10, 130. Application of principles of cognitive development, learning, and perception to educational problems. Topics include general instructional issues, psychology of reading and mathematics, exceptional children, early childhood education, and education of the disadvantaged.

135. Social Psychology. Lecture, three hours; discussion, one hour. Prerequisites: courses 10, 41, junior standing. The interrelationships between the individual and his social environment. Social influences on motivation, perception, and behavior. The development and change of attitudes and opinions. Psychological analysis of small groups, social stratification, and mass phenomena.

136A. Social Psychology Laboratory. Lecture, two hours; laboratory, two hours. Prerequisites: courses 41, 42, 135 (may be taken concurrently), psychology major standing. Laboratory experience with such topics as small group behavior, attitude measurement, and interpersonal influence.

C136B. Survey Methods in Psychology. Lecture, two hours; laboratory, two hours. Prerequisites: courses 41, 42, psychology major standing. The nature of attitudes and opinions and their measurement by means of attitude scales and public opinion surveys. Class projects and fieldwork. Concurrently scheduled with course C223.

137A. Group Behavior. Lecture, three hours. Prerequisites: courses 10, 41, 135. Psychology of interdependence, group membership, leadership, and social influence.

137B. Attitude Formation and Change. Lecture, three hours. Prerequisites: courses 10, 41, 135. Effects of propaganda, personal influence, socialization, and social structure on private attitudes and public opinion.

137C. Interpersonal Relations. Lecture, three hours. Prerequisites: courses 10, 41, 135, consent of instructor. A study of the psychological facts, principles, problems, and theories concerned with interactions and relationships between persons. Focus on such phenomena as interpersonal attraction, exchange, aggression, conflict, control, power relations, and the initiation, development, and dissolution of relationships.

137D. Introduction to Health Psychology. Prerequisite: course 10. The areas of health, illness, treatment, and delivery of treatment that can be elucidated by an understanding of psychological concepts and research, the psychological perspective on these problems, and how the psychological perspective might be enlarged and extended in the medical area.

M137E. Work Behavior of Women and Men. (Same as Women's Studies M137E.) Prerequisites: course 10 or Women's Studies 100, junior or senior standing. Examination of work behavior of men and women. Topics include antecedents of career choice, job finding, leadership, performance evaluation, discrimination and evaluation bias, job satisfaction, and interdependence of work and family roles.

137F. Special Topics in Social Psychology. Prerequisite: course 135. Study of selected topics in social psychology. May be repeated for credit with consent of instructor.

M138. Political Psychology. (Same as Political Science M140.) Prerequisite: course 10. Examination of political behavior, political socialization, personality and politics, racial conflict, and the psychological analysis of public opinion on these issues.

139. Psychology of Social Issues. Prerequisite: course 10. An analysis of the contribution of current psychological theory and research to the understanding of selected historical, social, and political problems.

M142. Advanced Statistical Methods in Psychology. (Formerly numbered 142.) (Same as Psychiatry M142.) Lecture, two hours; discussion, two hours. Prerequisite: course 41. Chi square, special correlation methods, multiple regression, nonparametric methods, analysis of variance, reliability and validity.

143. Foundations of Psychological Investigation. Prerequisites: courses 41, 42, psychology major standing. Outline and examination of concepts associated with psychological investigation and the interpretation of results. Readings, discussions, and reports; individual and class projects.

144. Psychological Tests and Evaluation. Prerequisite: course 41. Further study of the principles of measurement, stressing basic concepts. Application to problems of test construction, administration, and interpretation.

147. Elements of Psychology of Sport. The application of psychological theories, principles, and techniques to recreation, games, and sport. Current theories of the role of the brain in learning and performance of skills and the utilization of Oriental philosophies and the martial arts in Western sport.

148. Industrial and Organizational Psychology. Lecture, three hours. Prerequisite: course 10. Introduction to the applications of psychology in industrial and other organizations.

150. Mathematical Models in Psychology. Prerequisites: Mathematics 3C or 31B, Computer Science 10C or 10F, or consent of instructor. Review of theoretical models and the experimental evidence for these models in various areas of psychology. Topics include mathematical computer models of learning, perception, cognition, and personality.

151. Computer Applications in Psychology. Prerequisites: Computer Science 10C or 10F, consent of instructor. Topics include hardware and software computer problems in the design, control, and analysis of experiments; programming problems arising in the evaluation of models of psychological processes of the various content areas such as learning, perception, social, personality, and clinical.

M153. Principles of Biotechnology. (Same as Materials Science and Engineering M107A.) Prerequisite: upper division standing. The principles of biological science developed in an engineering design context. Emphasis on how physiological, psychological, and sociological factors affect the integration of man into environmental, informational, and managerial systems through engineering design.

(F,W,Sp)

M155. A Laboratory for Naturalistic Observations: Developing Skills and Techniques. (Same as Anthropology M136Q and Psychiatry M112.) Prerequisite: consent of instructor. The skill of observing and recording behavior in natural settings, with emphasis on field training and practice in observing behavior. Group and individual projects. Discussion of some of the uses of observations and their implications for research in the social sciences. (W)

162. The Personological System of Henry A. Murray: An Undergraduate Seminar. Lecture, two hours; discussion, one hour. Prerequisite: consent of instructor. The study of lives and the personality theory of Henry A. Murray, touching on autobiographical writings and biographical materials; personality as a dynamic system of growth and change. Creative, proactive, normal, and supernormal aspects of personality; the roles of values in the study of personality, society, and culture.

M163. Death and Suicide: Psychological and Sociological Aspects. (Same as Sociology M158.) Lecture, three hours. Prerequisite: junior standing. The definition and taxonomy of death; the new permissiveness and taboos relating to death; the romanticization of death; the role of the individual in his own demise; the modes of death; development of ideas of death through the life span; ways in which ideas of death influence the conduct of lives; the impact of dying on the social structure surrounding the individual; preventive, interventive, and postventive practices in relation to death and suicide; partial death; megadeath; lethality; the psychological autopsy; the death of institutions and cultures. P/NP grading recommended (letter grading required if course is to be applied toward the psychology or sociology major).

M165. The Psychology of Gender. (Same as Women's Studies M165.) Lecture, two hours; discussion, one hour. Consideration of psychological literature relevant to understanding contemporary sex differences. Topics include sex-role development and role conflict, physiological and personality differences between men and women, sex differences in intellectual abilities and achievement, and the impact of gender on social interaction.

168. Environmental Psychology. Prerequisites: courses 41, 125. A research-oriented course which surveys theoretical and methodological issues which comprise the area of environmental psychology. Discussion of basic dimensions of emotional response to physical and social environments, measurement of information of rate of situations, and personality variables that are relevant to environmental theory. Residential, therapeutic, work, and recreational environments within a unified framework.

170A. Behavior Modification. Lecture, three hours. Prerequisites: course 10, upper division standing. Applied behavior theory; a study of the application of principles derived from learning theory, especially modeling and reinforcement, to behavior problems of retarded and autistic children, adult psychotic disorders, reading disorders, etc. Lectures, discussions, and demonstrations.

170B. Fieldwork in Behavior Modification. Discussion, two hours; fieldwork, eight hours. Prerequisites: courses 41, 42, 170A, psychology major standing, consent of instructor. Advanced fieldwork in applied behavior theory, especially to problems of retarded and autistic children, adult psychotic disorders, etc. May be repeated once for credit.

170C. Practicum: Design and Implementation of Behavioral Interventions. Lecture, one hour; discussion, one hour; fieldwork, six hours. Prerequisites: courses 170A or 110, 170B (two quarters), upper division psychology or psychobiology major standing, consent of instructor. The design and evaluation of behavioral interventions with developmentally delayed children. Topics include goal selection; ethical considerations; behavioral contracting; client right and human use procedures; home and community management; parent and staff training; working with schools; and clinical issues. May be repeated once for credit.

M172. The Afro-American Woman in the U.S. (Same as Afro-American Studies M172 and Women's Studies M172.) Prerequisite: upper division standing. The impact of the social, psychological, political, and economic forces which impact on the interpersonal relationships of Afro-American women as members of a large society and as members of their biological and ethnic group.

174. Interpersonal Process Analysis. Discussion, two hours; laboratory, three hours. Prerequisites: courses 41, 42, 127, psychology major standing. An introduction to the conceptual tools for analyzing interpersonal structures and functions in goal-oriented human interaction such as psychotherapy, persuasion, courtship, etc. Small group exercises integrated with lecture and discussion (additional laboratory work to be arranged).

175. Community Psychology. Prerequisites: junior or senior psychology major standing, consent of instructor. The application of psychological principles to the understanding and solution of community problems. Topics include community development, community mental health problems, drugs, racism, and rehabilitation of prisoners.

176. Experimental Community Psychology. Lecture, three hours. Prerequisites: courses 42, 127, 175, psychology major standing, consent of instructor. Examination and experimental application of concepts drawn from interpersonal and community psychology for understanding the behavior of individuals in structured social systems (communities, schools, mental hospitals, prisons, etc.).

177. Counseling Relationships. Prerequisites: courses 10, 41, 127, junior or senior standing, and consent of instructor, or junior or senior psychology major standing. Conceptual and empirical foundations of psychological counseling; comparison of alternative models of counseling processes. Emphasis on counseling approaches in community mental health areas such as drug abuse, suicide prevention, and crisis intervention.

178. Human Motivation. Prerequisite: upper division standing. Examination of current theories of human motivation, the experimental findings supporting the theories, and their applied value. Emphasis on motivation in the classroom, particularly the effects of success and failure on performance. Other topics include stress, conflict, frustration, and perceptions of control.

179. Health Promotion in Minority Populations. Lecture, three hours. Prerequisite: course 10 or consent of instructor. Designed for undergraduates interested in or considering a career in a health or mental health profession (medicine, clinical psychology, social work, nursing, public health, etc.) and for those who would deliver such health services to ethnic minority peoples.

M180A. Contemporary Problems in Mental Retardation. (Same as Psychiatry M180A.) Prerequisites: courses 10, 41, and 127 or 130. Corequisites: courses M181A-M181B. Limited to Immersion Program students. Presentation of the concepts, issues, and research techniques in the area of mental retardation. Biological, psychological, and community questions concerning the causes and treatment of developmental disabilities, as well as systems for the care and training of retarded individuals. Lectures, directed reading, and discussion.

M180B. Contemporary Issues in Mental Retardation. (Same as Psychiatry M180B.) Prerequisite: course M180A. Limited to Immersion Program students. Psychoeducational issues in mental retardation relating literature to ongoing field experiences through lectures, discussions, media, and six student papers.

M181A-M181B. Research in Contemporary Problems in Mental Retardation. (Same as Psychiatry M181A-M181B.) Corequisites: courses M180A, M180B. Research experience. In Progress grading.

M182A. Advanced Statistical Methods in Mental Retardation. (Same as Psychiatry M182A.) Prerequisite: course 41. Limited to Immersion Program students. Introduction of statistical method and design in experimentation principles of statistical inference and appropriate testing methods. Introduction to the use of computers and various software packages.

M182B. Advanced Design and Statistics. (Same as Psychiatry M182B.) Prerequisite: course M182A. Continuation of course M182A.

M182C. Perception. (Same as Psychiatry M182C.) Limited to Immersion Program students. Human information processing, both physical and psychological, with special emphasis on pathologies in the mentally retarded.

M182D. Current Issues in Mental Retardation. (Same as Psychiatry M182D.) Limited to Immersion Program students. Advanced topics in mental retardation. May be repeated for credit with consent of instructor.

M183. Introduction to Neuroscience. (Same as Psychiatry M183.) Limited to Immersion Program students. Gross anatomy of the human brain and spinal cord.

M184. Human Genetics. (Same as Psychiatry M184.) Lecture, two hours; discussion, two hours. Limited to Immersion Program students. Application of genetic principles in human populations, with emphasis on cytogenetics, biochemical and population genetics, and family studies. Lectures and readings on the methodologies appropriate to answer current questions in the fields of medical and human genetics. Mr. Fluharty

185. Cognitive Science. Lecture, three hours. Prerequisites: courses 10, 41, 42, and 120, or consent of instructor. Survey of theories and methods in the study of cognition. Topics include perception, attention, mental imagery, representation, elaboration and reconstruction of information in memory: schemata and prototypes; cognitive skills, problem solving and reasoning; comprehension, construction, and transformation of natural language; neuropsychology and models of brain function; artificial intelligence, knowledge representation, programming, and thinking.

186. Cognitive Science Laboratory. Lecture, one hour; laboratory, three hours. Prerequisites: courses 10, 41, 42, 120, 185 (may be taken concurrently). Individual and group computer-based projects: information processing methods and analyses; experimental tests of cognitive theories and models; simulation of cognitive processes.

187. Legalistic Psychology. Discussion, two hours; seminar, one hour. Prerequisite: junior standing. A study of new topics on legal psychology, including suspect identification, witness reports, and police procedures. Outside speakers utilized in the presentation of these materials. Students participate in presentations and/or discussions.

187H. Legalistic Psychology (Honors). Discussion, two hours; seminar, one hour. Prerequisite: junior standing. An honors course parallel to course 187.

188. Fieldwork in Cognitive Science. Lecture, two hours; fieldwork (approved community setting), six hours. Prerequisites: cognitive science major standing, department consent. Fieldwork in applications of cognitive science. The Psychology Undergraduate Office, 1531 Franz Hall, should be consulted for contracts and further information. P/NP grading.

189. Human Factors. Lecture, two hours; discussion, one hour. Prerequisites: courses 10, 110, sophomore standing. The principal objective of human factors psychology is the optimization of human-machine productivity and efficiency while ensuring human safety. Research from engineering, computer science, and psychology combined for the design of systems for human use. Contemporary applications include health care, safety systems, pollution control, transportation, and urban design.

190A-190B-190C. Honors Course. Lecture, three hours. Prerequisite: psychology honors program standing. Opportunity for the development and analysis of creative ideas through conceptual or experimental research and their implementation by experimental research. Information and applications may be obtained from the Psychology Undergraduate Office, 1531 Franz Hall. Only one 190 course may be applied toward the elective course requirement for the psychology major.

192. Practicum in the Teaching of Psychology. Prerequisites: upper division psychology major, department consent. Training and supervised practicum for advanced undergraduates in the teaching of psychology. Students serve as junior teaching assistants and assist in the preparation of materials and the development of innovative programs. The Psychology Undergraduate Office, 1531 Franz Hall, should be consulted for contracts and further information. Only 12 units from courses 192, 193, and 194 may be applied toward the undergraduate degree. May not be applied toward course requirements for any of the psychology majors. P/NP grading.

193. Fieldwork in Psychology. Seminar, two hours; fieldwork (approved community setting), six hours. Prerequisites: sophomore pre-psychology or psychology major standing, department consent. Fieldwork in applications of psychology. The Psychology Undergraduate Office, 1531 Franz Hall, should be consulted for contracts and further information. Only 12 units from courses 192, 193, and 194 may be applied toward the undergraduate degree. May not be applied toward course requirements for any of the psychology majors. P/NP grading.

194. Research in Psychology. Seminar, one hour; internship (approved research setting), seven hours. Prerequisites: sophomore pre-psychology or psychology major standing, department consent. Practical applications of psychology through research. The Psychology Undergraduate Office, 1531 Franz Hall, should be consulted for contracts and further information. Only 12 units from courses 192, 193, and 194 may be applied toward the undergraduate degree. May not be applied toward course requirements for any of the psychology majors. P/NP grading.

195. Current Issues in Psychology. Lecture, three hours. Prerequisite: junior or senior psychology major standing (some sections may require consent of instructor). A study of selected current topics of psychological interest. See *Schedule of Classes* for topics and instructors. May be repeated for credit with consent of instructor and may be applied as an elective toward the psychology major. May not be applied as an elective toward the psychobiology major.

199. Directed Individual Research and Study. Prerequisites: senior psychology major standing or junior psychology major standing with at least a 3.0 GPA in the major, consent of instructor and vice chair for Undergraduate Affairs (based on a written proposal outlining the course of study). Students should consult the Psychology Undergraduate Office, 1531 Franz Hall, for further information and approval forms. Only one four-unit 199 course in psychology may be taken per quarter and only one for a letter grade (additional 199 courses may be taken in the department). Only four units may be applied toward the elective course requirement for the psychology major.

Graduate Courses

200A. Animal Learning and Behavior. Basic principles and characteristics of learning and behavior, including Pavlovian conditioning, instrumental learning, and species-specific behavior.

200B. Human Learning and Behavior. Topics include human learning and conditioning and the application of learning principles in the etiology and treatment of a variety of socially significant problems. Special emphasis on systematic desensitization of anxiety states, behavior modification programs for schizophrenic children and adults, behavioral pharmacology, control of autonomic behavior, among others.

204A-204B. Seminar in Critical Problems in Learning. Each course may be taken independently and in any order. Critical problems drawn from the following:

204A. Psychophysiology of Attention and Learning. The study of research and theories concerned with the psychophysiology of attention and learning primarily in humans. Concepts and areas include the orientating reflex, dominant focus, classical conditioning, and their implications for the psychophysiology of psychopathology and psychotherapy. Mr. Maltzman

204B. Theories of Learning. Prerequisite: course 200A or equivalent. Critical discussion of the major theories in learning and their current status.

204C. Applied Learning. Lecture, three hours. Prerequisites: graduate standing in psychology, consent of instructor. Lectures and discussion on current research in application of learning principles to clinical and social problems such as alcohol and drug abuse, aggression, fear management, mental retardation, behavioral medicine, autism/schizophrenia, etc. Mr. Garcia, Mr. Lovaas

205A-205B. Physiological Correlates of Behavior. Lecture, three hours. The physiological substrate of behavior and the neural and endocrine mechanisms which underlie psychological phenomena and behavior. New concepts of structural and functional organization in the nervous system and the ways these relate to behavioral and neurological dysfunction.

206. Psychophysiology of Brain Function. Modern concepts of the functional organization of the brain, with particular reference to psychological phenomena and behavior. Recent advances in neurophysiology and electroencephalography bearing on perception, attention, drive, sleep-wakefulness, levels of consciousness, etc. Some emphasis on pathology of behavior resulting from brain injury. Mr. Beatty

207A-207B-207C. Seminar in Physiological Psychology. Prerequisite: course 115 or equivalent. Mr. Butcher, Mr. Ellison, Mr. Krasne

208. Seminar in Comparative Psychobiology. Mr. Arnold

210. Comparative Psychobiology. Prerequisites: course 115 or equivalent, consent of instructor. A survey of the determinants of species-specific behavior, including genetic influences and learning. Mr. Arnold

212. Evaluation of Research Literature in Physiological Psychology (1 unit). Discussion, 90 minutes. Prerequisite: consent of instructor. Papers of current interest presented by members of the seminar and their significance and methodology discussed and criticized in depth. May be repeated for credit. S/U grading.

218A-218B. Advanced Industrial Psychology. Selection and training of employees, factors influencing efficiency of work. Mr. Barthol

219. Special Problems in Industrial Psychology. Mr. Barthol

220A-220B. Social Psychology. Prerequisite: course 135 or equivalent. An intensive consideration of the concepts, theories, and major problems in social psychology.

221. Seminar in Attitude Formation and Change. Discussion, three hours. Prerequisites: courses 220A-220B or consent of instructor. Social psychological research and theories on opinions and attitudes. Effects of mass communication, social factors in assimilation of information and influence. Mr. Gerard

222A. Seminar in Group Behavior. Discussion, three hours. Prerequisites: courses 220A-220B or consent of instructor. Special topics in interpersonal relations and group dynamics. Power control, structure and organization, group functioning. Mr. Kelley, Mr. Raven

222B. Interpersonal Influence, Social Power, and Health. Lecture, two hours; discussion, two hours. Prerequisites: courses 220A-220B or consent of instructor. A review of theory and research on interpersonal influence and social power, with particular application to health issues such as the doctor/patient, doctor/nurse, and counselor/client relationships. Supervisor/worker, parent/child, wife/husband, and teacher/student applications also considered.
Mr. Raven

C223A. Survey Research in Psychology. (Formerly numbered C223.) Lecture, three hours. A critical review of the theory and practice of large-scale sampling, measurement, and analysis of beliefs, attitudes, and other psychological variables. Concurrently scheduled with course C136B. Mr. Shure

224. Experimental Methods in Social Psychology. Lecture, three hours. Prerequisites: courses 220A-220B or consent of instructor. A critical review of laboratory techniques and problems of experimental control and measurement encountered in research on social psychological phenomena. Mr. Collins

225. Seminar: Critical Problems in Social Psychology. Discussion, three hours. Prerequisites: courses 220A-220B or consent of instructor. May be repeated for credit with consent of instructor.

226. Current Literature in Social Psychology (2 units). Recent and current research papers in social psychology presented by members of the seminar and their significance and methodology discussed and criticized in depth. May be repeated for credit. S/U grading.

227. Health Psychology. Lecture, two hours; discussion, one hour. Prerequisite: undergraduate degree or training in psychology. The psychological and social factors involved in the etiology of illness, the treatment and course of illness, the long-term care and adjustment of the chronically ill or disabled, and the practice of institutional health care and self-care.
Ms. Taylor

M228. Political Psychology. (Same as Political Science M224G.) Discussion, three hours. Prerequisites: course 220A or Political Science 214A. Examination of political behavior, political socialization, personality and politics, racial conflict, and the analysis of public opinion on these issues. Mr. Sears

229. Social Cognition. Lecture, one hour; discussion, two hours. Social cognition is concerned with how people organize and interpret social information in their environment. Seminar provides a broad background in the field and also gives depth and focus on particular research topics in the field. Weekly papers, as well as a lengthy final paper, required.
Ms. Taylor

M230A-M230B. Seminar in Behavioral Biology. (Same as Anthropology M228A-M228B, Biology M252A-M252B, Education M229A-M229B, Physiology M252A-M252B, and Psychiatry M291A-M291B.) Discussion, six hours. Prerequisite: consent of instructor. Basic seminar for graduates interested in behavioral biology. An interdisciplinary course dealing with behavioral research in anthropology, biology, psychology, and the medical sciences. Proximate causation, development, and evolution in animal behavior. Physiology and the organization of behavior. Vertebrate social organization. Animal communication. The application of natural selection theory to human social behavior. In Progress grading.

231. The Psychology of Gender. Seminar, three hours. Prerequisite: one prior course on gender/women's studies or consent of instructor. A critical evaluation of current research and theory concerning the psychology of gender, drawing on work from various areas of psychology to understand the sources of gender differentiation and its consequences for human behavior and social interaction.
Ms. Henley, Ms. Peplau

232. Human Sexuality. Lecture, three hours. Prerequisite: graduate standing. Designed to teach students how to carry out research on human sexual behavior. Contents include theory construction, scale development, physiological and endocrinological implications, radio-immunoassay (measuring hormones in blood sample), ethical issues, methodological and statistical considerations, the measurement of sexual arousal, fantasy, and sexual dysfunction therapy. Discussion-oriented, with emphasis on operationalizing predictions concerning human sexual functioning.
Mr. Abramson

233. Seminar in Environmental Psychology. Prerequisites: courses 235, 250A, 250B. Critical review of work in environmental psychology designed to identify basic dimensions for the analysis of man-environment relationships. Use of human emotional responses to environments as intervening variables linking specific stimulus qualities to a variety of approach-avoidance behaviors. Individual differences and drug-induced states as these relate to the emotional response dimensions used to explain within-individual differences in response to the same environment over time or between-individual differences to the same situation. Review of literature relating information rate from environments to arousal and preferences for those environments.
Mr. Mehrabian

M234. Social Psychological Aspects of Competitive Youth Sport. (Same as Kinesiology M273.) Prerequisite: Kinesiology 120 or consent of instructor. Review of research concerning the social psychological aspects of competitive sport for children. Sport is presented as a major achievement domain for young participants. Topics include sources and consequences of competitive stress, significant adult influences and interactions, predictors of performance, determinants of participation and dropping out, and socialization through sport. Ms. Scanlan

235. Personality. A survey of cognitive, analytic, and learning theory approaches to the study of personality. Emphasis on the intensive exploration of selected concepts and related research.

238. Seminar in Mental Measurements.
Mr. Woodward

M239. Personality, Motivation, and Attribution. (Same as Education M215.) Current research and theory relating personality variables (e.g., attributional styles, self-esteem) to motivational concerns such as persistence and intensity of behavior. Perceived causes of outcomes in achievement and affiliative domains.

240A-240B. Developmental Psychology. (Formerly numbered 240.) Lecture, three hours. Prerequisites: one undergraduate course in developmental psychology, graduate standing. Consideration of variables influencing the cognitive social and emotional development of the human organism from conception through adolescence. Emphasis on research methodology and the research base for current theories of development.

242A-242F. Seminar in Developmental Psychology. Seminar, three hours. Prerequisites: courses 240A-240B or equivalent, consent of instructor. Each course may be taken independently and may be repeated for credit:

242A. Perceptual Development.

242B. Cognitive Development.
Ms. Greenfield, Mr. Jeffrey

242C. Socialization.

242E. Cognitive Factors in Learning Disorder.
Mr. Adelman

242F. The Development of Language and Communication. Ms. Greenfield, Mr. Padilla

243A-243B. Seminar in Practical and Societal Issues in Developmental Psychology. Lecture, three hours. Prerequisites: courses 240A-240B or equivalent, consent of instructor. Socialization processes in human development and implication for social-political, educational, research issues, values, and societal change. In Progress grading. Mr. Nakamura

244. Critical Problems in Developmental Psychology. Lecture, three hours. Prerequisites: courses 240A-240B or equivalent, consent of instructor. Current problems; content varies depending on the interest of the class and instructor. May be repeated for credit with consent of instructor.

M245. Personality Development and Education. (Same as Education M217C.) Review of research and theory of critical content areas in personality development that bear on school performance: achievement motivation, self-concept, aggression, sex differences, empathy, and other social behaviors; review of the status of emotional behavior in personality theory and development. Ms. Feshbach

M246. Psychological Aspects of Mental Retardation. (Same as Psychiatry M246.) Prerequisite: consent of instructor. Discussion of the psychological aspects of mental retardation, including classification, description, etiology, theory, prevention, treatment, assessment, modern and future developments, and input from other disciplines (ethics, law, religion, welfare systems). Mr. Tymchuk (F)

247A-247B. Theory and Methods of Computing in the Behavioral Sciences:

247A. Acquisition and analysis of data, on-line analysis of behavior, and control of experiments in the diverse content areas of psychology (e.g., perception, social, clinical, personality, and physiological).
Mr. Carterette

247B. Prerequisite: course 247A or consent of instructor. Topics in human problem solving, information processing, automata, language cognition, and problems arising in computer simulation of behavior. Each student undertakes a substantial project.
Mr. Carterette

249. Evaluation Research. Prerequisites: courses 250A, 250B. Introduction to evaluation research in psychology, with emphasis on clinical, community, and social psychology applications. Survey includes policy and strategy issues, design of evaluative studies, data analysis, and utilization of findings.
Mr. Woodward

250A. Advanced Psychological Statistics. Review of fundamental concepts. Basic statistical techniques as applied to the design and interpretation of experimental and observational research.
Mr. Wickens, Mr. Woodward

250B. Advanced Psychological Statistics. Advanced experimental design and planning of investigations. Mr. Wickens, Mr. Woodward

251A-251B-251C. Research Methods. Limited to psychology graduate students. Students design and conduct original research projects under the supervision of the instructor in charge. It is anticipated that many students will complete their project in two quarters (normally three quarters are allowed). S/U grading (course 251A only).

252. Multivariate Analysis. Prerequisites: courses 250A, 250B. Introduction to the analysis of data having multiple dependent measures. Topics include multivariate distributions, principal components analysis, multiple regression, canonical correlation, discriminant analysis, and the multivariate analysis of variance. Example applications from a variety of psychological areas of research, including clinical, cognitive, physiological, and social. Computer implementation includes APL and standard statistical packages. Mr. Woodward

253. Factor Analysis. Theory and practice of factor analysis in psychological research. Methods of factor exaction and rotation. Applications of computers to computations in factor analysis. Mr. Comrey

254. Seminar in Psychological Scaling. Theory of measurement, law of comparative judgment, methods of unidimensional scaling, multidimensional scaling, and related topics of current interest.
Mr. Holman

255. Quantitative Aspects of Assessment. Fundamental assumptions and equations of test theory. Current problems in assessment. Mr. Woodward

256. Seminar in Critical Problems in Psychological Measurement. Critical examination of issues in the major approaches to psychological measurement; relation in psychological methods and data to a general theory of measurement. Mr. Mount

M257. Multivariate Analysis with Latent Variables. (Formerly numbered 257.) (Same as Political Science M247.) Prerequisite: consent of instructor. Introduction to models and methods for the analysis of data hypothesized to be generated by unmeasured latent variables, including latent variable analogues of traditional methods in multivariate analysis. Causal modeling: theory testing via the analysis of moment structures. Measurement models such as confirmatory, higher order, and structured-means factory analytic models. Structural equation models, including path and simultaneous equation models. Parameter estimation, hypothesis testing, and other statistical issues. Computer implementation. Applications. Mr. Bentler

258. Special Problems in Psychological Statistics. Prerequisites: courses 250A and 250B, or consent of instructor. Special problems in psychological statistics and data analysis. Mr. Wickens

259. Quantitative Methods in Cognitive Psychology. Prerequisites: courses 250A and 250B, or consent of instructor. A number of nonstatistical mathematical methods and techniques commonly used in cognitive psychology. Topics include Markov chains, other stochastic processes, queueing theory, information theory, frequency analysis, etc. Mr. Wickens

260A-260B. Proseminar in Cognitive Psychology. Presentation of research topics by students, faculty, and visiting scholars. May be repeated for credit. S/U grading.

261. Perception. Lecture, three hours. Prerequisite: consent of instructor. Concepts, theories, and research in the study of perception. Considers the questions: Why do things look, sound, smell, taste, or feel as they do? What is the nature of perceptual systems? How do these systems process information? Mr. Thomas

262. Human Learning and Memory. Lecture, three hours. Prerequisite: consent of instructor. Contemporary theory and research in human verbal learning and memory; verbal and nonverbal learning and memory processes, the structure and organization of short- and long-term memory. Mr. Bjork

263. Psycholinguistics. Lecture, three hours. Prerequisite: consent of instructor. Contemporary theory and research in psycholinguistics: coding and decoding, psycholinguistic parameters of language learning, speech recognition and perception. Ms. French, Mr. MacKay

264. Judgment and Decision Processes. Lecture, three hours. Prerequisite: consent of instructor. Contemporary theory and research in judgment and decision processes: psychophysical scaling, contextual effects on rating scales, models for the analysis of value decisions. Mr. Parducci

265. Thinking. Lecture, three hours. Contemporary theory and research in thinking, problem solving, inference, semantic memory, internal representation of knowledge, imagery, concepts.

266. Cognitive Science. Lecture, three hours. Prerequisite: consent of instructor. Major issues in cognitive science. The representation of cognitive structures and higher-level processes. Specific areas include perception, learning and memory, problem solving, and reasoning. Relationships to artificial intelligence. Mr. Richards, Mr. Wickens

268A-268E. Seminar in Human Information Processing. Seminar, three hours. Prerequisite: consent of instructor. Topics vary with the interests of the instructor. Each course may be taken independently and may be repeated for credit:

268A. Perception. Mr. Thomas

268B. Human Learning and Memory. Mr. Bjork

268C. Judgment and Decision Processes. Mr. Parducci

268D. Language and Thought. Mr. MacKay

268E. Human Performance. Mr. Beatty, Mr. Carterette

269. Seminar in Cognitive Psychology. Seminar, three hours. Prerequisite: consent of instructor. A discussion of problems in cognitive psychology that encompass more than a single subfield of the area. May be repeated for credit.

270A-270B-270C. Foundations of Clinical Psychology. Corequisites: courses 271A-271B-271C. Limited to graduate students in clinical psychology:

270A. Analysis of phenomenological, theoretical, and research issues regarding the etiology and mediating mechanisms in neurotic, affective, schizophrenic spectrum, and other personality disturbances.

270B. Principles and methods of psychological assessment and evaluation.

270C. Principles and methods of psychological intervention in individuals, families, and community settings.

271A-271B-271C. Clinical Psychological Methods (2 units each). Corequisites: courses 270A-270B-270C. Procedures in clinical psychology as applied in clinical and community settings. Supervised exposure to the psychological attributes of psychopathology and the procedures for psychological assessment, intervention, and research with clinical populations. Experience closely coordinated with the content in courses 270A-270B-270C. S/U grading.

271D. Clinical Research Laboratory (2 units). Discussion, one hour; laboratory, one hour. Corequisites: courses 270A or 270B or 270C, and 271A or 271B or 271C. Limited to graduate students in clinical psychology. Acquaints students with faculty research interests and involves them in their course 251 research at an early stage to insure completion. S/U grading. Mr. Christensen

272A-272F. Advanced Clinical Psychological Methods. Seminar, three hours. Prerequisite or corequisite: course 401 or 451. Each course may be taken independently for credit:

272A. Behavior Modification with Children. Prerequisites: courses 271A-271B-271C or consent of instructor. A course in the series of clinical intervention and assessment offerings for second- and third-year clinical students that covers behavior modification research and practice in clinic, school, institution, and home settings. Mr. Baker

272B. Psychotherapy with Adults.

272C. Clinical Interventions for Psychological Problems of Children.

272D. Family Therapy and Family Dynamics.

272E. Special Problems.

272F. Behavior Modification with Adults. Prerequisite: second-year graduate standing in clinical psychology. Current cognitive behavior modification principles and techniques. Major conceptual issues; specific techniques demonstrated and practiced by students to cover a range of adult problems such as depression, stress and anxiety, anger management, assertion problems. Ms. Hammen, Ms. Mays

273. Interpersonal Communication Seminar. Prerequisite: course 282 or consent of instructor. Development of a design for studying help-oriented interchange in community and clinical settings. Initial focus on measuring interpersonal deficit, response styles, and training effects. Mr. Goodman

274A-274B. Group Therapy Dynamics.

M275. Family Process: Psychological and Social Perspectives on the Family. (Same as Social Welfare M275.) Various theoretical perpectives applicable to the analysis of family structure and dynamics. Critical issues in the application of family constructs to clinical problems. Mr. Cohen, Mr. Goldstein

276. Clinical Approaches to Children with Learning and Related Behavior Problems. Lecture, three hours; discussion, one hour. Prerequisite: doctoral standing. Theoretical and research issues and problems related to purposes of and practices involved in assessment and correction approaches for children with learning and behavior problems. Practicum experiences to illustrate course content and provide opportunities to improve research and clinical competence. Mr. Adelman

277. Advanced Clinical Assessment. Projective techniques, clinical interpretation, case studies, the psychological test battery, psychopathology, and application of assessment to problems in psychotherapy.

278. Seminar in Motivation, Conflict, and Neurosis. Mr. Feshbach

279. Seminar in Research in Psychopathology.

281. Seminar in Behavior Therapy. Mr. Lovass

282. Interpersonal Forms Analysis of Human Interaction Structures. Conceptual and experimental study of six response modalities common to psychotherapy and everyday interaction: questions, silences, advisement, interpretation, self-disclosure, and reflection. Laboratory work performed in conjunction with lecture and seminar sessions. Mr. Goodman

283. Psychopathology. A survey of the dominant psychological attributes of particular forms of psychopathology, including an analysis of the status of various theories concerned with the etiology and mediating mechanisms of personality, neurotic, schizophrenic spectrum, and affective disturbances.

284. Seminar in Clinical Psychology and Communication.

286. Issues and Concepts of Clinical Psychology. Open to graduate students in majors other than clinical psychology. Survey of major issues and alternatives in current practice. Emphasis on assessment and intervention, with consideration of historical, theoretical, and research bases for current trends. Mr. Broen

287. Critical Problems in Clinical Research Methodology. Prerequisites: courses 250A, 250B. Special problems of measurement and design in clinical research. Mr. Christensen

288. Seminar in Research in Personality (1 unit). Prerequisite: graduate standing in personality. Required of all students majoring in personality. Current research, theory, and professional issues within the area of personality. A brown-bag format utilized to foster intellectual exchange and discussion. Students make at least one presentation per quarter and participate in discussions with faculty and guest lecturers.

290. History of Psychology. Philosophical and historical context of contemporary psychology. Major trends from the 19th century to contemporary issues. Mr. Maltzman

291. Principles of Behavioral Pharmacology. Prerequisite: consent of instructor. Intensive analysis of drug, brain, and behavior relationships. Discussion of the nature and source of drugs, general aspects of pharmacology, neurotransmitters and basic neuropharmacology, principles of behavioral pharmacology, categories of psychopharmacological agents, and pharmacological approaches to the study of drug addiction, schizophrenia, and other behavioral processes, both normal and pathological. Mr. Butcher

292. Biobehavioral Mechanisms of Stress and Disease. Lecture, three hours. Prerequisite: graduate standing in psychology or consent of instructor. The behavior-physiology interactions of some major bodily systems: the nervous, cardiovascular, gastrointestinal, and endocrine systems. Usual and altered states of these systems (e.g., stress) as these can promote permanent tissue injuries, disease, or improved bodily function, health enhancement. Mr. Castro, Mr. Grijalva, Ms. Morell

293. Behavioral and Psychophysiological Problems of Alcoholism. Prerequisite: consent of instructor. Behavioral and psychophysiological characteristics of alcoholism, along with theories concerning their etiology and treatment. Experimental approaches. Mr. Maltzman

M294A-M294D. Seminars in Neural and Behavioral Endocrinology (3 units, 2 units, 3 units, 2 units). (Same as Anatomy M255A-M255D.) Lecture, three hours. Topics include hormonal biochemistry and pharmacology. Hypothalamic-hypophyseal interactions, both hormonal and neural. Structure and function of the hypothalamus. Hormonal control of reproductive and other behaviors. Sexual differentiation of brain and behavior. Stress: hormonal, behavioral, and neural aspects. Aging of reproductive behaviors and function. Mr. Arnold
(W, M294A, M294C; Sp, M294B, M294D)

297. Issues in the Social Development of the Minority Child. (Formerly numbered 229A.) Seminar, three hours. Prerequisites: graduate standing, consent of instructor. A critical evaluation and integration of existing research on the social psychological development of the minority child. Emphasis on the socialization of cognitive and personality style, with the goal of empirically clarifying the issues raised in this area of developmental study. Mr. Myers

298. Special Problems in Psychology. Content depends on the interests of the particular instructor. May be repeated for credit.

299. Developmental Methodology. Coverage of both theory and methods in measuring age-related changes in behavior. Experimental designs and data-analytic solutions to problems in the measurement of change. Some experience in analysis of actual data sets. Mr. Kaye

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. A teaching apprenticeship under the active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

401. Fieldwork in Clinical Psychology (4 or 8 units). Prerequisites: courses 271A-271B-271C. Students on practicum assignments are required to register for this course each quarter (except by consent of clinical program committee).

402. Fieldwork in Speech Pathology (4 or 8 units). Prerequisite: consent of instructor. Practical work in hospitals and clinics in diagnostic testing and psychotherapy with speech disorders.

410A-410B-410C. Clinical Teaching and Supervision. Prerequisites: completion of Ph.D. comprehensive examinations, advancement to candidacy or preparation for dissertation research actively underway, consent of instructor and clinic steering committee. Study and practice of the knowledge, concepts, and theories on teaching and supervision of applied clinical psychology. Ms. Jacobs, Mr. Nakamura

420A-420B. Health Psychology Practicum (2 units each). Prerequisite: graduate standing. Determination of what areas of health, illness, treatment, and delivery of treatment can be elucidated by an understanding of psychological concepts and research; the psychological perspective on these problems; how the psychological perspective might be enlarged and extended in the medical area. Through a practical field placement helps students apply the knowledge acquired in class to research observation and/or clinical work in the field. Ms. Taylor

425. Health Psychology Lecture Series (2 units). Clinicians and researchers in health psychology from the Los Angeles area present their research, programs, and/or clinical work as part of a training program in health psychology. May be repeated for credit. S/U grading. Ms. Taylor

451. Internship in Clinical Psychology (6 to 12 units). Prerequisite: course 401. Limited to students who have successfully completed departmental qualifying examinations. May be repeated for credit. S/U grading.

454. Internship in Industrial Psychology (2 to 4 units). Mr. Barthol

490. Scientific Writing for Psychologists (2 units). Lecture, two hours; laboratory, two hours. Prerequisite: consent of instructor. Gives graduate students the opportunity to improve their effectiveness in writing scientific papers for publication and proposals for dissertations or grants. May not be applied toward graduate degree requirements. S/U grading.

495. Presentation of Psychological Materials. Supervised practicum in undergraduate teaching. Students serve as discussion section leaders in selected undergraduate courses. S/U grading.

501. Cooperative Program (2 to 8 units). Prerequisite: consent of UCLA graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Course is used to record the enrollment of UCLA students in courses taken under cooperative arrangements with neighboring institutions. S/U grading.

596. Directed Individual Research and Study in Psychology (2 to 12 units). One 596 course is required during the second year of graduate study, and one 596 or 599 course is required during each succeeding year of graduate study. (Terminal M.A. candidates are exempt from this requirement.)

597. Individual Studies (2 to 12 units). Intended primarily as preparation for Ph.D. qualifying examinations. May be required by some area committees as a prerequisite for taking the examinations.

599. Research for Ph.D. Dissertation (2 to 12 units). Prerequisite: successful completion of qualifying examinations. One 599 course is required during each year following completion of qualifying examinations.

Scope and Objectives

The UCLA major in the study of religion has a twofold purpose. In the first place it is designed to give students a broad humanistic perspective. It introduces students to several religious traditions and thus to an appreciation of the very nucleus of civilization in various periods of history and various parts of the world, as well as to an understanding of fundamental human orientations. In the second place, the program asks the student to select one particular religious tradition for study in greater depth. Cohesion and integrity in the program are furthered by courses dealing with philosophical problems in religion and with general anthropological reflections.

The program requires one year of language study which should be related to the major tradition of concern. This minimum requirement allows every student to develop some idea of the basic problems in understanding religious texts. Students contemplating graduate study will generally do more than fulfill the minimum requirement.

Bachelor of Arts Degree

Preparation for the Major

Required: Anthropology 22; History 4; Philosophy 2; two courses from History 1A, 1B, 1C, 9A, 9B, 9C, 9D, 10A, 10B.

The Major

Required: A minimum of 13 upper division courses and three related courses in foreign language. These must include History 193A or 193E; Anthropology 133R or 156; two courses from Philosophy 175, 177B or 195, 193.

In addition, you must select one of the nine groups below as your main area of study and take three courses in that main area and three related courses in foreign language as indicated. (The language courses may be either upper or lower division. If any requirements have been satisfied prior to admission to the program, they will be honored on the recommendation of the appropriate instructor. Another language pertinent to your main area may be substituted with the consent of the committee in charge of the major. Among these languages are Hittite, Ugaritic, Syriac, Coptic, Persian, Armenian, French, German, Irish, Welsh.)

You must also select six courses in traditions chosen from at least two groups outside your main area of study, excluding foreign language courses.

Group 1: Ancient Near East and Eastern Europe — Three courses from History 193D, Ancient Near East 130, 150A, 150B, 150C, 170, Indo-European Studies 131, 132, Iranian 170; three courses in either Ancient Egyptian or Akkadian.

Group 2: Indo-European Traditions — Three courses from English M111D, M111E, History 193B, Old Norse Studies 140, Iranian 170, Slavic M179; three courses in Sanskrit, Latin, or Greek.

Group 3: Greece and Rome — Three courses from Classics 161, 162, 166A, 166B, History 197 (Roman History: Christianity and Imperial Rome); three courses in either Latin or Greek.

Group 4: Israel and Judaism — Three courses from English 108A, History M191A, M191B, 192A, 192B, Hebrew 120, 130, 135, 220, Jewish Studies 110, M150A, 150B, 151A, 151B, 199, Ancient Near East 170; three courses in Hebrew.

Group 5: Christianity — Three courses from Philosophy 105, 106, 107, English 108B, History 116A, 116B, 119, 120, 121A, 121B, 125B, 150A, 150B, 150C, 194A, 194B, Ancient Near East 170, Classics M170A; three courses in either Latin or Greek.

Group 6: Islam — Three courses from Philosophy 104, History 106A, 107A, 107B, Arabic 150A, 150B, Iranian 150A, 150B; three courses in Arabic.

Group 7: South Asia — Three courses from History 188A, 193B, 193C, 197 (South Asian Religions), East Asian Languages and Cultures 167, Iranian 170; three courses in Sanskrit.

Group 8: Far East — Three courses from History 193C, East Asian Languages and Cultures 172, 173, 174; three courses in Sanskrit, Chinese, or Japanese.

Group 9: Traditional and Nonliterate Cultures — Three courses from Anthropology 171, 174P, 177, Folklore and Mythology M111, M123A, M125, M129, 130, History 157A, 157B, 157C, Linguistics M150; three courses in a language selected in consultation with an instructor in these areas.

Honors Program

The honors program provides exceptional students with an opportunity to do independent research under the tutorial guidance of a faculty member. If you are admitted to honors, you should take three 199 courses under the guidance of the sponsoring professor. These courses are taken in the senior year and count as part of the regular requirement of 13 upper division courses. The program culminates in an honors thesis.

In order to qualify for admission, you should have a minimum grade-point average of 3.4. The 199 courses designed for the program and the thesis topic should be approved by the committee in charge of the major.

For further information, contact Professor Robert M. Adams at the program address.

Upper Division Course

100. Undergraduate Seminar in the Study of Religion. Prerequisite: consent of instructor. Limited to 20 students. An interdisciplinary approach to some major topics in the study of religion, such as religion and politics, mysticism, ideas of revelation, myth and religion, worship and ritual. May be repeated for credit with consent of instructor. Mr. Nagy

Timothy A. Stowell, Ph.D. *(Linguistics)*

Scope and Objectives

The Romance Linguistics and Literature Program emphasizes modern linguistic and literary theories in the study of Romance languages. Linguistic and literary theories can be pursued independently or jointly; however, the integration of linguistic and literary knowledge is taken to be one of the highest aims of this interdepartmental graduate program.

Master of Arts Degree

Admission

The UCLA Bachelor of Arts degree in French, Italian, Portuguese, or Spanish, or the equivalent, is required. Applicants are expected to have a grade-point average of at least 3.4 in upper division courses, especially in those judged germane to their proposed program. Three letters of recommendation and the Aptitude Test of the Graduate Record Examination (GRE) are also required and should be submitted to the Chair, Romance Linguistics and Literature Program, 359 Royce Hall, UCLA, Los Angeles, CA 90024. Students admitted from elsewhere whose preparation is considered deficient in view of their intended specialization are required to take specified upper division courses. Such courses may be taken concurrently with graduate courses, but they may not be applied toward the course requirements for the M.A. degree. Before enrolling for the first quarter in the program, new students must consult the program chair concerning the formation of their guidance committee. Students who know only the language of their major should prepare in at least one other Romance language during the first graduate year so they can take courses in their minor no later than the second year of graduate study.

Foreign Language Requirement

In addition to the Romance language of major interest and that of minor interest, you are required to take either Latin 3 or the equivalent, or Italian 3 or the equivalent (provided Italian is not your major), whether you specialize in linguistics or in literature. The language requirement must be completed no later than the quarter before you expect to receive your degree.

Course Requirements

Twelve courses are the minimum requirement, of which six courses (at least five of them graduate) must be in your major language, with specialization either in linguistics or in literature. One course in the history or development of the major language is highly recommended. At least three courses would be in the minor language, also with specialization in either linguistics or literature. The remaining three courses should be selected in consultation with the guidance committee so as to be logically supportive of your major field of study. Linguistics 100 is required as a prerequisite of all students majoring in the linguistics field. Up to eight units of Romance Linguistics and Literature 596 may be applied toward the M.A. Courses 597 and 598 may not be applied toward the degree.

Teaching Experience

Teaching experience is not required but is desirable. Consult the chair regarding the availability of teaching assistantships.

Thesis Plan

The program favors the comprehensive examination plan but will approve M.A. theses for exceptionally well-qualified students under special circumstances. You may petition for authorization to write an M.A. thesis only after completion of six courses applicable toward the degree. It is your responsibility to select an appropriate topic and find a professor to direct the thesis. After completion of the thesis, you must pass a two-hour oral examination testing your knowledge of the field of the thesis and your general competence. Only those students who attain a high pass on the examination are encouraged to proceed to candidacy for the Ph.D. degree.

Comprehensive Examination Plan

The comprehensive examination is administered by three members of the guidance committee, appointed by the chair. The written examination, consisting of one four-hour examination in the major field, one two-hour examination in the minor field, and one oral examination not to exceed one hour, is given each quarter two weeks prior to final examinations. If you fail the examination or any part thereof, you may retake the failed portions once when the examination is next regularly offered. Only those students who attain a high pass grade on the master's examination are automatically eligible for the Ph.D. program.

Ph.D. Degree

Admission

The UCLA Master of Arts degree in Romance Linguistics and Literature or the UCLA M.A. in French, Italian, Portuguese, or Spanish, or the equivalent, is required. A strong academic record (normally a GPA of 3.4 or better), three letters of recommendation, and the Graduate Record Examination (GRE) Aptitude Test (normally with a combined verbal/quantitative score of 1,100 or better) are also required.

Formal application is required of all students. Entering students who have completed the UCLA M.A. in Romance Linguistics and Literature with a high pass grade are automatically eligible for admission to the Ph.D. program; those who received a middle pass are reviewed like candidates from other institutions; those who received a low pass grade are ineligible for admission. Students whose M.A. program registers deficiencies in scope or quality may be admitted but are required to complete three graduate courses with grades of B or better) approved by the chair.

Following your formal admission, you form your guidance committee in consultation with the chair. You then meet as soon as possible with your committee to work out your program of courses and set a tentative date for the qualifying examinations. The guidance committee has final authority to prescribe the course of study. Until you have met with this committee and placed yourself under its direction, you are not officially in the Ph.D. program.

Major Fields or Subdisciplines

The program recognizes two fields of specialization: linguistics and literature.

Linguistics: Major fields include (1) the present-day grammar of the Romance language of your major interest and its relation to the grammar of its sister languages and to language in general; (2) the development of the Romance language of your major interest in relation to its sister languages (and possibly other interrelated cultural aspects) from the perspective of historical linguistics; (3) the genetic and typological relationships of the Romance languages to other Indo-European languages and to language in general. The two minors may be other Romance languages, or one other Romance language plus a field of Romance literature.

Literature: Major fields include one of the following in the literatures of at least two Romance languages: (1) early Romance literature and philology; (2) Renaissance and baroque; (3) modern literature, preferably with emphasis in one century. The first minor may be one of the preceding fields not selected for the major. The second minor may be the same field or a new field in another Romance language, or some other related field in the major language or in Romance linguistics.

Foreign Language Requirement

In addition to the minimum of two Romance languages, Latin 3 or Italian 3 or the equivalent is required of all students in the program. Students selecting option 2 or 3 in linguistics or option 1 in literature must also take German, whereas those selecting option 1 in linguistics or option 2 or 3 in literature must take another foreign language to be determined by the guidance committee. In non-Romance languages, you must pass the Educational Testing Service (ETS) test. In languages where there is no such test, passing a departmental examination fulfills the requirement. This requirement may also be met by completing two years of college-level courses in the language with a grade of B or better or by fulfilling the foreign language requirement in connection with an M.A. obtained elsewhere. The foreign language requirement must be satisfied no later than the quarter before the qualifying examinations are taken.

Course Requirements

In each of the two specializations (linguistics or literature) the Ph.D. program consists of a major and two minors. These courses (a minimum program) are distributed as follows: major — five courses, first minor — three courses, second minor — two courses. At least one seminar is required in each of the three fields. In addition to those required for the master's degree (or equivalent) at least 10 other graduate courses (of which no more than two 596 courses may be applied), as well as such courses as the guidance committee may prescribe, are required. Linguistics 100 is required as a prerequisite of all students majoring in the linguistics field.

Teaching Experience

Teaching experience is not required but is desirable. Consult the chair regarding the availability of teaching assistantships.

Qualifying Examinations

The qualifying examinations, given by the doctoral committee during the Fall, Winter, and Spring Quarters, consist of (1) a three-hour written examination in the major field; (2) a two-hour examination in the first minor; (3) a one-hour examination in the second minor; and (4) a two-hour University Oral Qualifying Examination in the three fields, at which time your prospectus for the dissertation is also discussed and approved. Failed portions of the examination may be repeated once after any remedial preparation the committee may specify.

The dissertation may be on any subject within the general area of Romance linguistics and literature. If more than five calendar years elapse between advancement to candidacy and the presentation of the dissertation, the program may require revalidation of the qualifying examinations.

Candidate in Philosophy Degree

You are eligible to receive the C.Phil. degree on advancement to candidacy for the Ph.D.

Graduate Courses

211. Comparative Romance Syntax. Lecture, three hours. Prerequisite: French 204A, Portuguese 204A, Spanish 204A, or consent of instructor. Comparative study of syntactic processes in Romance languages. Investigation of the parameters underlying linguistic variation. Mr. Otero, Mr. Quícoli

596. Directed Individual Study or Research (4 to 8 units). Prerequisite: consent of instructor and program chair. Study or research in areas or on subjects not offered as regular courses. Eight units may be applied toward the M.A. degree requirements. S/U grading.

597. Preparation for Graduate Examinations (4 to 8 units). Prerequisite: consent of graduate adviser. Individual preparation for M.A. comprehensive examination or Ph.D. qualifying examinations. May be taken only once for each degree examination and only in the quarter that comprehensive or qualifying examinations are to be taken. S/U grading.

598. Research for M.A. Thesis (2 to 12 units). Prerequisite: consent of guidance committee. Research in preparation of M.A. thesis. S/U grading.

599. Research for Ph.D. Dissertation (2 to 12 units). Prerequisite: successful completion of Ph.D. qualifying examinations. Research for and preparation of Ph.D. dissertation. S/U grading.

Romance Linguistics and Literature Course List

In consultation with the appropriate adviser(s), courses should be selected with an eye to the organic relationship between them, preferably among those listed below and/or their prerequisites:

Introductory Courses

Italian 201. Bibliography and Methods of Research

Spanish M200. Research Resources

Linguistics Courses

Grammatical Theory: Linguistics 201A. Phonological Theory: Current Issues

201B. Phonological Theory in the 20th Century

206A. Syntactic Theory: Current Issues in Formal Syntax

206B. Syntactic Theory: Current Issues in Functional and Typological Approaches to Syntax

Development of the Romance Languages

Hispano-Romance: Spanish M205A-M205B. The Development of the Portuguese and Spanish Languages

Indo-European: Indo-European Studies 210. Indo-European Linguistics: Advanced Course

280A-280B. Seminar in Indo-European Linguistics

Italic Dialects: Latin 242. Italic Dialects and Latin Historical Grammar

Italo-Romance: Italian 259A. History of the Italian Language

Latin History: Latin 240. History of the Latin Language

Medieval Latin: Latin 231A-231B. Seminar in Medieval Latin

Northern Gallo-Romance: French 204A. Phonology and Morphology from Vulgar Latin to French Classicism

204B. Syntax and Semantics from Vulgar Latin to French Classicism

Paleography: History 219A. Paleography I

219B. Paleography II

Romance Dialectology: Italian 259C. Italian Dialectology

Spanish 209. Dialectology

Romance Linguistics: Linguistics 225G. Linguistic Structures

ROTC Programs

In accordance with the National Defense Act of 1920 and with the concurrence of The Regents of the University, a unit of the Senior Division Reserve Officer Training Corps (ROTC) was established on the Los Angeles campus of the University in July 1920.

This voluntary training allows you to qualify for an officer's commission in the Army, Navy, Air Force, or Marine Corps while completing your college education. ROTC courses are offered by three departments within the College of Letters and Science: Aerospace Studies (Air Force), Military Science (Army), and Naval Science (Navy and Marine Corps). They are not considered academic majors, but ROTC courses may be taken as free electives and applied toward the total course requirements of your major. The ROTC program is also available through UCLA Extension.

All three ROTC departments offer voluntary four-year programs for incoming freshmen and two-year programs for students entering their junior year of undergraduate study. All have leadership laboratories which help to build management skills.

Scholarships

Students in all three departments are eligible to compete for scholarships based on merit and achievement. Scholarships, available for up to four years of study, normally cover the full cost of tuition, a book allowance, fees, and educational expenses and provide a living allowance of $100 per month during the academic year. For further information, contact the specific department in which you are interested.

Aerospace Studies

210 Men's Gym, (213) 825-1742

Professor
Richard L. Folks, M.A., Colonel, *Chair*

Adjunct Assistant Professors
Dean S. Allred, M.S., Captain
Ronald J. Calloway, M.S., Captain
Murray D. Johannsen, M.B.A., M.A., Captain

Air Force ROTC Scope and Objectives

Air Force ROTC provides selected students the opportunity to develop those attributes essential to positions of high responsibility as commissioned officers in the U.S. Air Force. This includes understanding Air Force history, doctrine, and operating principles and national security policies, demonstrating ability to apply modern principles of management and human relations in the Air Force environment, and mastery of leadership theory and techniques. Students must demonstrate dedication to their assignments, willingness to accept responsibility, and the ability to think critically and communicate with clarity and precision.

Four-Year Program

The four-year program is available to first-quarter freshmen and those full-time students with at least four years of undergraduate and/or graduate study remaining and consists of an initial two-year General Military Course, or GMC (Aerospace Studies 1A-1B-1C and 20A-20B-20C), followed by a two-year Professional Officer Course (POC) described under "Two-Year Program." GMC participation requires two hours of academic class every other week and two hours of leadership laboratory on alternating weeks during the academic year. Students incur no military obligation for GMC participation unless they qualify and accept an Air Force ROTC scholarship during or after their sophomore year.

Students who complete GMC and wish to enter POC attend a four-week field training course the summer following GMC completion. At field training, students are provided meals, quarters, clothing, and travel expenses and are paid about $450 to cover incidental expenses. Subjects covered at field training include junior officer training, aircraft and aircrew orientation, career orientation, survival training, base functions, Air Force environment, and physical training.

Two-Year Program

The two-year program is known as the Professional Officer Course (POC) and consists of Aerospace Studies 130A-130B-130C and 140A, 140B, 140C. POC participation requires two hours of leadership laboratory every other week and two or four hours of academic class (each week that laboratory does not meet) during the academic year.

A prerequisite for the two-year program is successful completion of the GMC and a four-week field training course (see "Four-Year Program" above) or successful completion of a six-week field training program on an Air Force base during the summer preceding enrollment in the program.

Students interested in this program are encouraged to apply to the department chair early during the Fall Quarter preceding the six-week summer field training course. The application deadline normally is March 1, and U.S. citizenship is required. There is no obligation to apply. Students are selected on a competitive basis with consideration given to academic major, grade-point average, aptitude examination scores, medical examination results, and performance during an officer board interview.

Students selected for the six-week summer field training are provided meals, quarters, clothing, travel expenses, and approximately $675 to cover incidental expenses. Subjects are the same as those in the four-week course plus the academic portion of the GMC (see "Four-Year Program" above).

Students enrolled in POC incur a military obligation and are paid $100 per month during the academic year. Graduation and successful completion of POC leads to a commission as a second lieutenant. Cadets then report to one of the challenging assignments in the Air Force.

Freshman-Year Courses

1A-1B-1C. U.S. Military Forces in the Contemporary World (1 unit each). Lecture, one hour; discussion, one hour. Air Force ROTC students should complete all three courses, preferably in sequence. Willingness to participate in class discussion is required. **1A.** A "threat assessment" of the U.S.S.R./Warsaw Pact; summary of the United States agencies and armed services which specifically counter that "threat," comparing and contrasting the U.S.S.R. and the U.S. in numerous areas. **1B.** Discussion of doctrine and policy, giving students an opportunity to role play and create problems/solutions. Defense contracting and the attached and specialized units of the Air Force; civilian influence and Air Force contributions to industry. **1C.** The major commands of the Air Force, their contributions to civilian industry/economy, and the special programs/challenges of the future. More technical in nature, covering basic improvements in Air Force weapon systems, humanitarian efforts, and the importance of current events. Pros and cons. Capt. Johannsen (F,W,Sp)

Sophomore-Year Courses

20A-20B-20C. The Developmental Growth of Air Power (1 unit each). Prerequisites: courses 1A-1B-1C. The development of air power over the past 60 years. The development of various concepts of employment of air power, with emphasis on factors which have prompted research and technological change. Key events and elements in the history of air power, especially where these provide significant examples of the impact of air power on strategic thought.
Col. Folks (F,W,Sp)

Upper Division Courses

130A-130B-130C. Concepts of Air Force Management and Leadership (3 units each). Course 130A is prerequisite to 130B, which is prerequisite to 130C. An analysis of the principles and functions of management, leadership, and organizational behavior, with special reference to the Air Force as a model. Problem solving, information systems and models, quantitative methods, and computer systems. Group discussions, case studies, films, and role-playing used as teaching devices. Communicative skills strengthened through preparation of written reports and oral presentations. Capt. Calloway (F,W,Sp)

140A. Military Judicial System (3 units). Seminar. Prerequisite: course 130C. An introduction to the military justice system, international laws of armed conflict relating to air operations, and the foundations of military professionalism. Oral and written reports to strengthen communicative skills. Capt. Allred (F)

140B. The Military in American Society (3 units). Seminar. Prerequisite: course 140A. Forces and issues in the social context of the American military. The influence of social norms, societal pressures, and cultural factors on the functions and role of the military professional in the United States. Communicative skills strengthened through extensive classroom presentations. Capt. Allred (W)

140C. American Defense Policy (3 units). Seminar. Prerequisite: course 140B. U.S. security policy with respect to factors that influence its formulation, the bureaucracy that formulates and implements it, and the forms it has taken and may take in the future. Communication techniques strengthened, and communication abilities oriented to Air Force requirements through preparation of papers and classroom presentation and discussion. Capt. Allred (Sp)

199. Special Studies in Aerospace Studies (1 or 3 units). Prerequisite: consent of instructor. A course of study for undergraduates who wish to engage in independent research under the direct supervision of a department faculty member. Col. Folks

Military Science

J.L. Steuber, M.B.A., Captain

Army ROTC Scope and Objectives

Army ROTC prepares selected students for leadership as commissioned officers in the United States Army, Army Reserve, or National Guard. This training includes an in-depth study of the military establishment, military history, doctrine, leadership principles, management, and many other basic skills necessary to build motivated, effective leaders.

Programs

The military science curriculum is divided into two parts: (1) the Basic Course, two years of lower division study during which students must complete 12 units of coursework and (2) the Advanced Course, two years of upper division study consisting of 13 units of coursework and a six-week summer camp.

Transfer students and others who were unable to enroll in the Basic Course can receive equivalent credit in several different ways (see "Two-Year Program" below).

Admission to the Advanced Course is limited to selected students who meet all academic and physical requirements. Students in this course receive a subsistence allowance of $100 a month for 10 months during each of the two academic years, plus military science books and uniforms. After completion of the Advanced Course, students are commissioned as second lieutenants in one of the Army's 17 specialty areas in either the Army National Guard, Reserves, or Active Army. Students' desires are a major factor in determining which service is selected.

Students selected for Advanced ROTC must attend a six-week Advanced Camp between their Military Science III and IV years. Cadets receive an allowance for travel expenses and are paid for attendance.

The active duty obligation for those students selected to enter the Reserves or National Guard is only three months. Students accepting ROTC scholarships, a commission in the Regular Army, or who are selected to enter the Active Army serve longer terms. ROTC students wishing to obtain advanced degrees may be granted a delay in reporting to their initial assignment.

Four-Year Program

Students are enrolled in the Basic Course (freshman and sophomore years) on a voluntary basis. After completion of the Basic Course and entrance into the Advanced Course (junior and senior years), students are required to execute a contract with the Department of the Army agreeing to complete the Advanced Course, enlist in the United States Army Reserve for eight years, and accept a commission if offered.

Two-Year Program

This program is designed for students who receive placement credit for two years of ROTC and directly enter the Advanced Course. Placement credit may be given for completing three years of high school Junior ROTC, attending a paid ROTC summer camp, joining the Army Reserve or National Guard (veterans may receive VA benefits concurrently with Advanced Course subsistence allowances), completing two years of college-level Air Force or Navy ROTC, completing an ROTC compression course, or previous military service.

Commissioning

Successful completion of the Advanced Course leads to a commission as a second lieutenant in the Army Reserve, National Guard, or Active Army. Distinguished graduates may qualify for a commission in the Regular Army.

Lower Division Courses

ROTC students may satisfy military history requirements by completing History 7B, 148A, 148B, 148C, 152A, or 152B in lieu of courses 22 and 23, with consent of the ROTC adviser.

000. Leadership Laboratory (No credit). Laboratory, two hours. Cadets must be concurrently enrolled in a military science course and actively pursuing a commission through the ROTC program. Required of all Army ROTC students each quarter. Designed to allow cadets to apply the leadership techniques and military skills taught in the classroom and to develop the confidence needed to cope with the challenges associated with being an officer.

11. U.S. Defense Establishment (2 units). A study of the evolution of the U.S. Department of Defense, including a study of the military services, with emphasis on the U.S. Army. (F)

12. U.S. Defense Establishment (2 units). A study of the military institution and other elements of national power as instruments of national policy and strategy in conditions of peace and war. (W)

13. Theory of Warfare (2 units). Inquiry into the theory, nature, causes, and elements of warfare, with attention also to the evolution of weapons and warfare. (F)

14. Principles of Land Navigation Applicable in Maneuver (2 units). (Formerly numbered 114.) Lecture, one hour; laboratory, one hour. Limited to military science students. Introduction to topographic maps and aerial photographs and their relation to land navigation; conceptual linkage to basic military tactics. Topics include map coordinate systems, scale and distance relationships, intersection and resection, photo interpretation, squad and platoon operations, and resource planning techniques. Introduction to new technologies, including Global Positioning Systems (GPS). (Sp)

18. Modern Guerrilla Warfare (2 units). Lecture, one hour; discussion, one hour. Prerequisite: undergraduate standing. Introduction to low intensity conflict and guerrilla strategies; explanation/discussion of political, economic, religious, and social factors contributing to civil unrest and/or insurgencies. Topics include nonmilitary responses, military tactics, interrelationship of the military and government, psychological warfare, and civic actions. (Sp)

22. United States Military History, 1860-1919 (2 units). A survey of American military history during the period from 1860 to 1919. The causes of war, strategy, tactics, and technological developments. Economic, political, diplomatic, and social history is woven into the fabric of war, and a special effort is made to reveal the character and personalities of the leading political and military figures of the period. (W)

23. United States Military History, 1919-1986 (2 units). Survey of American military history which examines American involvement in World War II, Korea, and Vietnam. Causes of war, strategy, tactics, and technology set against economic, political, and diplomatic concerns. The impact of warfare on society. (Sp)

Upper Division Courses

111. The Psychology of Leadership I (2 units). Limited to military science students. The basis for understanding the relationship of individual differences and the leadership process, group dynamics and their relationship to the leadership process, formal organizational constraints on the leadership process, and the impact of society on the leadership process. Introduction to the external environment in which a leader functions and the pressures that exist on a leader. The psychology of the individual as a follower, examined in the areas of motivation, peer pressure/conformity, and group norms to determine how they influence an individual. (F)

112. The Psychology of Leadership II (3 units). Lecture, two hours. Limited to military science students. Introduction to various individual leadership styles and personalities to assist students in development of their own individual style. Different philosophies of leadership, along with the dimensions of leader behavior. Special consideration to counseling, management, and communication techniques that must be mastered to be an effective leader. (W)

113. Theory of Learning Applied to Teaching (2 units). Limited to military science students. A study of instructional processes, lesson content planning procedures, techniques of applicatory education, role of testing (including evaluation and analysis). Emphasis on improvement of teaching and group process. (Sp)

123. Military Legal Systems (2 units). Limited to military science students. An introduction to the theory and application of military law and legal systems, with emphasis on the Uniform Code of Military Justice and the rights of the accused under the constitution. (F)

125. Decision Making (2 units). Limited to military science students. Designed to present students who will become commissioned officers with a new insight into the modern methods of managerial decision making and into the various steps involved in the process. Introduction to the various components of leadership and the functions of management in order to understand where the areas of problem analysis and decision making impact and how they fit into leadership and management. The various steps which comprise the problem analysis and decision-making processes. (Sp)

126. Military Professionalism and Ethics (2 units). Lecture, 90 minutes; discussion, 30 minutes. Limited to military science students. The ethical concepts held by America's military institution. The classification of the military as a profession, the special social responsibilities of those in the military, values related to and accepted by military society, and an ethical reasoning/decision-making process and model. (W)

199. Supervised Independent Study (1 to 3 units). Prerequisites: upper division standing, consent of instructor. Supervised independent study and research for undergraduate students who desire to pursue topics of their own selection.

Naval Science

123 Men's Gym, (213) 825-9075

Professor

Allen L. Shapero, M.S., Captain, U.S. Navy, *Chair*

Assistant Professor

Michael P. Jonas, M.S., Commander, U.S. Navy, *Vice Chair*

Adjunct Assistant Professors

Kevin W. Alt, B.S., Lieutenant, U.S. Navy
John M. Misiewicz, M.S., Captain, U.S. Marine Corps
Peter A. Shaner II, M.S., Lieutenant, U.S. Navy

Navy ROTC Scope and Objectives

Navy ROTC at UCLA offers subsidized and nonsubsidized programs for college students who wish to serve their country as commissioned officers in the U.S. Navy or Marine Corps. The primary objectives of NROTC are to provide students with an understanding of the fundamental concepts and principles of naval science; a basic understanding of associated professional knowledge; an appreciation of the requirements for national security; and a strong sense of personal integrity, honor, and individual responsibility.

NROTC enables college graduates to use their education in such military fields as marine engineering, nuclear propulsion engineering, aviation, and Marine Corps infantry and aviation. It also provides an opportunity to develop leadership and management skills in a challenging environment of high responsibility.

The Department of Naval Science offers several programs for which U.S. citizenship is required.

College Program

This is a four-year program open to physically qualified men and women between the ages of 17 and 21. Students receive $100 per month in their junior and senior years and complete one summer training cruise after their third year. After graduation, students are commissioned as Ensign, U.S. Naval Reserve or Second Lieutenant, U.S. Marine Corps Reserve. A three-year active duty obligation is incurred.

Two-Year Program

Applications are accepted from UCLA students as well as incoming junior college transfers. After a six-week summer training period, students enroll in NROTC as juniors, with the same obligations and privileges as in the College Program described above. The age limit is 27½ years at the time of graduation. Applicants should contact the department no later than March 1 of their sophomore year.

Freshman-Year Courses

1A. Introduction to Naval Science (1 unit). An introduction to the structure of the Department of the Navy and its legal framework. Relationships in the Department of Defense. Components of the Naval Service. Shipboard organization. Lt. Alt

1B. Naval Ship Systems I. An introduction to the principles of ship hull and superstructure design. The concepts of ship structural integrity, stability, and buoyancy examined in detail. Basic thermodynamic principles inherent in ship propulsion and salt water distillation systems. Lt. Alt

Sophomore-Year Courses

20A. Naval Ship Systems II. (Formerly numbered 20B.) A study of naval weapon systems, with emphasis on target designation and acquisition, methods of solving fire control problem and target detection systems. Analysis of transfer and feedback functions inherent in weapon systems. Infrared, radar, and sonar principles. Lt. Alt

20B. Seapower and Maritime Affairs (2 units). (Formerly numbered 20A.) A conceptual study of seapower, emphasizing the historical development of naval and commercial power. Seapower examined in relation to economic, political, and cultural strengths, focusing on current abilities of specific nations to use the oceans to attain national objectives. Capt. Shapero

Junior-Year Courses

101A. Navigation I. A study of principles of piloting, rules of the road, shiphandling, and basic concepts of multiple ship formations in ocean transit. In-depth discussion of problems associated with high seas and inland water, applying to small craft and supertankers alike. Lt. Shaner

101B. Navigation II. Prerequisite: course 101A or consent of instructor. A detailed study of electronic and celestial navigation employed in the determination of a ship's position at sea, including spherical trigonometry, mathematical analysis, sextant sights, and the use of navigational aids. Lt. Shaner

***103. Evolution of Warfare.** A study of the evolution of warfare, including historical and comparative consideration of the influence that leadership, political, economic, and sociological and technological development factors have had on warfare and the influence they continue to exert in the age of limited warfare. Capt. Misiewicz

*Course to be taken by candidates for commissions in the Marine Corps or Marine Corps Reserve in lieu of courses 101A, 101B, 102B, 102C.

Senior-Year Courses

102B. Naval Leadership and Management I. An examination of current and classical leadership and management theories and their application to the military environment. Interpersonal communication, counseling theory, moral and professional ethics, conflict resolution, and management of change. The leadership problems created by racism, sexism, alcoholism, and drug abuse. Capt. Misiewicz

102C. Naval Leadership and Management II (2 units). Prerequisite: course 102B. Current leadership and management in the U.S. Navy. Areas include human resources management, personnel management, material management, and performance and career evaluation. Cdr. Jonas

***104. Amphibious Operations.** A study of the art of amphibious operations, including the historical development of techniques used to project military power from sea to land. The evolution of amphibious doctrine and techniques, examined through study of the U.S. landings during World War II, the Korean Conflict, and the Vietnam War. Capt. Misiewicz

*Course to be taken by candidates for commissions in the Marine Corps or Marine Corps Reserve in lieu of courses 101A, 101B, 102B, 102C.

Slavic Languages and Literatures

115 Kinsey Hall, (213) 825-2676

Professors

Aleksandar Albijanić, Ph.D. *(South Slavic Languages and Literatures)*
Henrik Birnbaum, Ph.D. *(Slavic Languages and Literatures)*
Thomas Eekman, Ph.D. *(Slavic Literatures)*
Michael S. Flier, Ph.D. *(Slavic Languages and Literatures)*
Marija Gimbutas, Ph.D. *(European Archaeology)*
Vladimir Markov, Ph.D. *(Russian Literature)*
Alan H. Timberlake, Ph.D. *(Slavic Languages), Chair*
Dean S. Worth, Ph.D. *(Slavic Languages)*

Associate Professors

Michael Heim, Ph.D. *(Czech and Russian Literature)*
Peter Hodgson, Ph.D. *(Russian Literature)*
Rochelle Stone, Ph.D. *(Polish and Russian Literature)*

Assistant Professor

Irina Paperno, Ph.D. *(Russian Literature)*

Lecturer

Edward Denzler, M.A. *(Russian)*

Scope and Objectives

The undergraduate program, leading to a Bachelor of Arts degree in Slavic Languages and Literatures, is designed to provide students with a basic mastery of the Russian language, a familiarity with the classics of Russian literature, and a general background in the cultural, political, and social history of the Slavic peoples.

The program presents a considerable range of options to students with specialized interests. Besides the traditional major in Slavic languages and literatures, the program also offers B.A. degrees in Russian Civilization (language, literature, history, economics, political science, geography, art, music, film) and Russian Linguistics (language, literature, Russian and Slavic linguistics, general linguistics, psychology).

The graduate program provides advanced training in Slavic linguistics and literature leading to the master's degree and the Ph.D. The primary task of the department faculty is to develop and refine the critical and analytic skills of its students in preparation for productive careers in college teaching and research in the Slavic field. Alternative careers include secondary language teaching, translation, interpreting, librarianship, and government service.

Undergraduate Study

The department offers three majors: (1) Slavic languages and literatures, (2) Russian civilization, and (3) Russian linguistics. The major in Slavic languages and literatures is normally required for admission to the department's graduate program and is used to determine the number of courses in Russian literature and/or linguistics that students majoring in Russian civilization or Russian linguistics are expected to make up in order to receive graduate degrees in the department. Students who do not choose the major in Slavic languages and literatures but who intend to pursue graduate study in the department are strongly encouraged to take courses in Russian literature and linguistics during their undergraduate years to reduce the number of makeup courses required. Qualified seniors may also take several graduate courses numbered below 220 with consent of the instructor and the graduate adviser.

Work completed in the University's summer or semester Russian programs at Leningrad State University may be applied toward fulfillment of the Russian 101- and 111-series requirements in any of the following majors.

Bachelor of Arts in Slavic Languages and Literatures

Preparation for the Major

Required: Slavic 99, Russian 1, 2, 3, 4, 5, 6, 99.

The Major

Required: Russian 101A-101B-101C, 111A-111B-111C, 118, 119, 120, 121, 122, 123; three courses from 130A, 130B, 130C, 134, 140A, 140B, 140C, 140D, M150; one course from 124A through 124F; any two electives from Russian 102A, 102B, 102C (when taken in conjunction with Russian 112A, 112B, 112C), 124A through 124F, 125, 126, 130A, 130B, 130C, 134, 140A, 140B, 140C, 140D, M150, 193, Czech 155A, 155B, Polish 152A, 152B, Serbo-Croatian 154A, 154B. Note: Russian 118, 119, and 120 may be taken in the sophomore year.

Bachelor of Arts in Russian Civilization

Preparation for the Major

Required: Russian 1, 2, 3, 4, 5, 6, 99.

The Major

Required: Russian 101A-101B-101C, 111A-111B-111C, 119, 120, three additional courses in Russian literature, seven courses from Russian M170, Economics 182, Geography 184, History 131A, 131B, 131C, 131D, Political Science 128A, 128B, 156, or special courses in the Departments of Art, Design, and Art History, Music, Theater, Film, and Television, and Slavic Languages and Literatures approved by the undergraduate adviser.

Bachelor of Arts in Russian Linguistics

Preparation for the Major

Required: Russian 1, 2, 3, 4, 5, 6.

The Major

Required: Russian 101A-101B-101C, 111A-111B-111C, 121, 122, 123, Linguistics 100, 103, 110, 120A, 120B, five courses from Russian 102A, 102B, 102C (when taken in conjunction with Russian 112A, 112B, 112C), 130A, 130B, 130C, 134, 140A, 140B, 140C, 140D, M150, Slavic 201, 202, Linguistics 125, 127, M150, 164, C165A, C165B, Psychology 123. Students majoring in Russian linguistics who intend to pursue graduate study in the department are strongly encouraged to take at least three of the Russian literature courses enumerated above.

Graduate Study

The Department of Slavic Languages and Literatures at UCLA offers M.A. and Ph.D. degrees in Slavic Languages and Literatures.

Admission

In addition to the University minimum requirements, the department requires the equivalent of a UCLA B.A. in Slavic Languages and Literatures, or three years of Russian language and a sufficient number of Russian history, literature, and linguistics courses so that you will not need more than one year (nine courses) to make up deficiencies. For application to the Ph.D. program, the department requires a UCLA M.A. in Slavic Languages and Literatures or its equivalent. If you do not hold a UCLA M.A. in Slavic Languages and Literatures, you are required to take the M.A. comprehensive examination as a screening examination within your first year and to make up any deficiencies in your background compared with that of a UCLA master's degree recipient.

For all applicants, three letters of recommendation are required from persons capable of judging your academic potential. No departmental admission tests are necessary, but the Graduate Record Examination (GRE) is required.

A department brochure describing the curriculum in some detail (graduate and undergraduate) is available from the Graduate Adviser, Slavic Languages and Literatures, 115 Kinsey Hall, UCLA, Los Angeles, CA 90024.

Major Fields or Subdisciplines

Candidates for the M.A. and Ph.D. degrees select a specialization in either literature or linguistics, with Russian as the principal lan-

guage and literature. On the Ph.D. level, students may specialize in a language or literature other than Russian by special arrangement.

Master of Arts Degree

Foreign Language Requirement

There are two foreign language requirements which must be completed at least one quarter before the M.A. comprehensive examination: (1) you must pass a departmental Russian language proficiency examination which tests your ability to translate from Russian to English and vice versa. This examination may be retaken each quarter until a pass grade is achieved; (2) you must demonstrate an ability to read scholarly literature in either French or German by one of three options: (a) passing the appropriate Educational Testing Service (ETS) reading examination with a score of 500 or better, (b) passing the departmental reading examination, or (c) completing level five at UCLA in one of the languages with a grade of B or better (equivalent university-level coursework in French or German taken within two years before admittance may satisfy this requirement at the discretion of the graduate adviser).

Course Requirements

Slavic 201, Russian 102A-102B-102C, 112A-112B-112C, and 204 are required of all M.A. students.

Literature students must also take Russian 211, 212, 213, and one other literature course in the department.

Linguistics students must also take Slavic 202, Russian 221, 222, 225, and two courses from 211, 212, 213.

Courses in the 500 series may not be applied toward the M.A. course requirements.

Comprehensive Examination Plan

Application for advancement to candidacy must be made no later than the second week of the quarter in which the M.A. examinations are to be taken and is accepted only if you have satisfied the foreign language requirement in French or German and have passed the Russian Language Proficiency Examination. Examinations are offered at the end of each quarter. After you have declared your intention to take the examination in a given quarter, a committee consisting of three members is appointed by the chair and the graduate adviser. The comprehensive examination has two parts — written (three hours) and oral (two hours) — and is based on coursework and the departmental reading list. The examination covers either linguistics or literature. If you receive a pass grade on the written examination, you are admitted to a two-hour oral examination which is designed to test the fields of major interest and general background. It is conducted partly in Russian.

Your combined performance in the written and oral examinations is graded high pass, pass, or fail. A grade of high pass or pass is necessary to receive the M.A. degree; the grade of high pass is necessary to enter the Ph.D. program. Examinations may be repeated once, no later than one calendar year after the first attempt.

Ph.D. Degree

Admission

You are formally admitted to the Ph.D. program after (1) passing the UCLA M.A. comprehensive examination with a grade of high pass; (2) passing the reading examination in both French and German (see "Foreign Language Requirement"); (3) taking one year (or the equivalent) of a second Slavic language.

The comprehensive examination serves as a screening examination for admission to the doctoral program if you are entering UCLA with an M.A. from another institution. You may retake the examination once in order to achieve the necessary high pass grade.

Foreign Language Requirement

You must demonstrate an ability to read scholarly literature in both French and German by completing one of the three options listed under the master's degree. With departmental consent, students specializing in linguistics may substitute a reading knowledge in another language important to the study of Slavic linguistics (Finnish, Hungarian, Lithuanian, Latvian, Romanian, or a Turkic language relevant to East or South Slavic historical linguistics) and a score of 450 on the Educational Testing Service (ETS) examination in either French or German. Reading knowledge of two such languages may, by the same procedure, be substituted for the entire French or (more rarely) German examination.

Course Requirements

Before the formation of a doctoral committee, you must have been officially admitted to the doctoral program and have taken the following required courses.

Linguistics students must take Slavic 221, 222, 223, and four other advanced linguistics courses or seminars (numbered above 220).

Recommended preparation for linguists includes Linguistics 100, 103, 110, 120A, 120B, M150.

Literature students must take two courses from Slavic 230A-230B-230C; Russian 251A; and three additional seminars.

Candidates specializing in literature are advised to acquire a sound general knowledge of modern Western European literature.

Qualifying Examinations

Candidates are required to submit to the examination committee a serious research paper of publishable quality. The paper must be received and approved no later than one quarter preceding the comprehensive written examination.

All students are expected to have a sound general knowledge of both Slavic philology and Russian literary history equivalent to that required for the M.A. at UCLA. For linguistics students, there is one written three-hour qualifying examination given at the end of each quarter. For literature students, there are two written three-hour qualifying examinations given one week apart at the end of each quarter.

If you receive a grade of pass on the written examination(s), you are admitted to a two-hour University Oral Qualifying Examination, which is designed to test the fields of major interest and general background, and which typically includes discussion of the dissertation topic.

After considering your overall performance in both the oral and written examinations, the committee assigns a cumulative grade. A pass grade entitles you to write a dissertation in order to receive the Ph.D. degree. At the committee's discretion, you may be required to retake any or all portions of the Ph.D. examinations within one calendar year after the first attempt.

Within two quarters (or one quarter and a summer) after passing the qualifying examinations, you must prepare a prospectus of the dissertation.

You are required to deliver a formal lecture in the Slavic colloquium no later than two calendar years after advancement to candidacy.

Candidate in Philosophy Degree

You are eligible to receive the C.Phil. degree on advancement to candidacy for the Ph.D.

Final Oral Examination

A final oral examination is required except in case of geographically imposed hardship.

Slavic

Lower Division Course

99. Introduction to Slavic Civilization. Lecture, three hours. An introductory survey of the social and cultural institutions of the Slavic peoples and their historical background.

Upper Division Courses

177. Baltic Languages and Cultures (2 units). A general survey of the peoples speaking Old Prussian, Lithuanian, and Latvian; their linguistic, historical, and ethnic affiliations. Mrs. Gimbutas

M179. Baltic and Slavic Folklore and Mythology. (Same as Folklore M126.) Lecture, three hours. A general course for students interested in folklore and mythology and for those interested in Indo-European mythic antiquities. Mrs. Gimbutas

199. Special Studies (2 to 8 units). Prerequisites: senior standing, consent of instructor.

Graduate Courses

Linguistics

201. Introduction to Old Church Slavic. Lecture, three hours. Required for the M.A. (linguistics, literature). Introduction to phonology and grammar; readings.

202. Introduction to Comparative Slavic Linguistics. Lecture, three hours. Required for the M.A. (linguistics). Introduction to the comparative phonology and grammar of the Slavic languages.

221. Introduction to East Slavic Languages. Lecture, three hours. Prerequisite: course 202. Recommended: Russian 102A-102B-102C or Ukrainian 101A-101B-101C. Required for the Ph.D. (linguistics). Introduction to the structure and history of the East Slavic languages.

222. Introduction to West Slavic Languages. Lecture, three hours. Prerequisite: course 202. Recommended: Czech 102A-102B-102C or Polish 102A-102B-102C. Required for the Ph.D. (linguistics). Introduction to the structure and history of the West Slavic languages.

223. Introduction to South Slavic Languages. Lecture, three hours. Prerequisite: course 202. Recommended: Serbo-Croatian 103A-103B-103C or Bulgarian 103A-103B-103C. Required for the Ph.D. (linguistics). Introduction to the structure and history of the South Slavic languages.

224. Introduction to Ukrainian and Belorussian. Lecture, three hours. Prerequisite: course 202. Introduction to the history and structure of Ukrainian and Belorussian.

241A-241B. Advanced Old Church Slavic. Lecture, three hours. Prerequisite: course 201. **241A.** Advanced Readings in Canonical Texts; **241B.** East, West, and South Slavic Recensions of Church Slavic.

242. Comparative Slavic Linguistics. Lecture, three hours. Prerequisite: course 202. Selected topics in the development of Common Slavic.

251. Introduction to Baltic Linguistics. Lecture, three hours. Prerequisite: course 202. Introduction to Baltic linguistics, with special attention to the relationship between Baltic and Slavic.

261. Slavic Paleography. Lecture, three hours. Prerequisite: course 201. Introduction to Slavic paleography: inscriptions, birchbark letters, Glagolitic and Cyrillic texts.

262A-262B. West Slavic Linguistics. Lecture, three hours. Prerequisite: course 222. **262A.** Lekhitic; **262B.** Czechoslovak, Sorbian.

263A-263B. South Slavic Linguistics. Lecture, three hours. Prerequisite: course 223. **263A.** Serbo-Croatian, Slovene; **263B.** Bulgarian, Macedonian.

281. Seminar in Slavic Linguistics. Seminar, three hours. Selected topics in comparative and historical Slavic linguistics. May be repeated for credit with consent of instructor and graduate adviser.

282. Seminar in Structural Analysis. Seminar, three hours. Selected topics. May be repeated for credit with consent of instructor and graduate adviser.

Literature

230A-230B-230C. Comparative Slavic Literature. Lecture, three hours. Recommended prerequisites: upper division courses in Czech, Polish, Russian, and Yugoslav literatures. Two quarters required for the Ph.D. (literature). **230A.** Middle Ages through Baroque; **230B.** Classicism to Romanticism; **230C.** Realism to Modernism.

290. Seminar in Comparative Slavic Literature. Seminar, three hours. Prerequisites: courses 230A-230B-230C. Recommended: reading knowledge of one Slavic language in addition to Russian. Selected topics involving more than one Slavic literature or Slavic and Western literatures. May be repeated for credit with consent of instructor and graduate adviser.

295. Seminar in Literary Analysis. Seminar, three hours. Recommended prerequisite: reading knowledge of one Slavic language in addition to Russian. Selected topics from various Slavic literatures or Slavic and Western literatures, with emphasis on analytic methods. May be repeated for credit with consent of instructor and graduate adviser.

Special Studies

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. A teaching apprenticeship under the active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

596. Directed Individual Study or Research (2 to 8 units). Prerequisite: consent of instructor and graduate adviser.

597. Preparation for M.A. Comprehensive Examination or Ph.D. Qualifying Examinations (2 to 8 units). Prerequisite: consent of instructor and graduate adviser.

599. Research for Ph.D. Dissertation (2 to 12 units).

Bulgarian

Lower Division Course

99. Introduction to Bulgarian Civilization. Lecture, three hours. An introductory survey of the social and cultural institutions of the Bulgarian people and their historical background.

Upper Division Courses

103A-103B-103C. Elementary Bulgarian. Recitation, five hours. Basic course in the Bulgarian language.

154. Survey of Bulgarian Literature. Lecture, three hours. Prerequisite: upper division standing. Lectures and readings in English. A survey of Bulgarian literature from the Middle Ages to the present.

Czech

Upper Division Courses

102A-102B-102C. Elementary Czech. Recitation, five hours. Basic course in the Czech language.

102D-102E-102F. Advanced Czech. Recitation, three hours. Prerequisite: course 102C.

155A-155B. Czech Literature. Lecture, three hours. Lectures and readings in English. **155A.** Survey of Czech Literature from the Middle Ages to the Present; **155B.** Selected Topics.

Polish

Upper Division Courses

102A-102B-102C. Elementary Polish. Recitation, five hours. Basic course in the Polish language.

102D-102E-102F. Advanced Polish. Recitation, three hours. Prerequisite: course 102C.

152A-152B. Survey of Polish Literature. Lecture, three hours. Lectures and readings in English. **152A.** From the Middle Ages to Romanticism; **152B.** From Realism to the Present.

160. Polish Romanticism. Lecture, three hours. Lectures and readings in English. Comparison of Polish Romanticism with that of other Slavic and Western European countries.

Graduate Course

280. Seminar in Polish Literature. Seminar, three hours. Selected topics in Polish prose, poetry, and drama. May be repeated for credit with consent of instructor and graduate adviser.

Russian

Language Courses

1. Elementary Russian. Recitation, five hours; laboratory, one hour.

2. Elementary Russian. Recitation, five hours; laboratory, one hour.

3. Elementary Russian. Recitation, five hours; laboratory, one hour.

4. Intermediate Russian. Recitation, four hours; laboratory, one hour.

5. Intermediate Russian. Recitation, four hours; laboratory, one hour.

6. Intermediate Russian. Recitation, four hours; laboratory, one hour.

10A-10B-10C. Russian Conversation (2 units each). Prerequisite: course 3 or consent of instructor. Russian conversation designed to supplement the grammar and readings of courses 4, 5, 6.

11A-11B-12A-12B-13A-13B. Self-Paced Program in Russian (2 to 12 units). Basic course in the Russian language. Each two-unit course in the sequence requires 30 minutes of laboratory session per week and 30 minutes of discussion session per week, plus individual instruction as required by the staff. Courses 11B and higher require the completion of or simultaneous enrollment in all courses lower in the sequence.

101A-101B-101C. Advanced Russian (3 units each). Prerequisite: course 6. Advanced grammar and reading.

102A-102B-102C. Advanced Grammar and Reading (3 units each). Prerequisite: course 101C or consent of instructor. Required for the M.A. (linguistics, literature). Advanced grammatical analysis; reading of difficult texts.

107A-107B-108A-108B-109A-109B. Russian for Social Scientists (2 to 12 units). Lecture, one hour (per each two units); discussion, one hour (per each two units). Prerequisite: course 3 or equivalent. Reading, oral practice, and translation of the Russian that is relevant for students of social sciences. May be repeated for credit.

111A-111B-111C. Conversation and Composition (1 unit each). Recitation, two hours. Prerequisites: courses 6 and 10C, or consent of instructor. Required of majors. Conversation and composition. Conducted in Russian.

112A-112B-112C. Advanced Conversation and Composition (1 unit each). Recitation, two hours. Prerequisite: course 111C or consent of instructor. Required for the M.A. (linguistics, literature). Advanced conversation and composition. Conducted in Russian.

Linguistics Courses

121. Russian Phonology. Lecture, three hours. Prerequisite: course 6. Introduction to transliteration and transcription, articulatory phonetics, phonemics.

122. Russian Morphology. Lecture, three hours. Prerequisite: course 121. Introduction to morphophonemics, inflection, derivation.

123. Historical Commentary on Modern Russian. Lecture, three hours. Prerequisites: courses 121, 122. Historical explanation of the phonological and morphological anomalies of modern Russian.

Literature and Civilization Courses

99. Introduction to Russian Civilization. Lecture, three hours. An introductory survey of the social and cultural institutions of the Russian people and their historical background.

100. The Russian Novel in Translation. Lecture, three hours. Designed for nonmajors. A study of major works by the great 19th-century Russian novelists.

118. Survey of Russian Literature to Pushkin. Lecture, three hours. Prerequisite: upper division standing. Slavic majors should take this course during their sophomore year. Lectures and readings in English.

119. Survey of 19th-Century Russian Literature. Lecture, three hours. Prerequisite: upper division standing. Slavic majors should take this course during their sophomore year. Lectures and readings in English.

120. Survey of 20th-Century Russian Literature. Lecture, three hours. Prerequisite: upper division standing. Slavic majors should take this course during their sophomore year. Lectures and readings in English.

124A-124F. Studies in Russian Literature. Lecture, three hours. Lectures and readings in English. The following writers are alternately discussed: **124A.** Pushkin; **124B.** Gogol; **124C.** Turgenev; **124D.** Dostoevsky; **124E.** Tolstoy; **124F.** Chekhov.

125. The Russian Novel in its European Setting. Lecture, three hours. Prerequisite: upper division standing. Emphasis on 19th- and 20th-century novelists. Lectures and readings in English.

126. Survey of Russian Drama. Lecture, three hours. Prerequisite: upper division standing. Major Russian plays from the 18th to 20th century. Lectures and readings in English.

130A-130B-130C. Russian Poetry. Lecture, three hours. Prerequisite: course 6. Lectures and readings in Russian. **130A.** Introduction to Analysis of Poetic Texts; **130B.** From Mid-18th Century through Precursors of Symbolism; **130C.** From Late-19th Century through Contemporary Soviet Verse.

134. Pushkin. Lecture, three hours. Prerequisite: course 6. Major poetical works. Lectures and readings in Russian.

140A-140D. Russian Prose. Lecture, three hours. Prerequisite: course 6. Lectures and readings in Russian. **140A.** Major Writers from Karamzin to Turgenev; **140B.** Dostoevsky to Gorky; **140C.** Contemporary Writers; **140D.** Advanced Readings in Russian Prose.

M150. Russian Folk Literature. (Same as Folklore M150.) Lecture, three hours. Lectures and readings in Russian.

M170. Russian Folklore. (Same as Folklore M170.) Lecture, three hours. A general introduction to Russian folklore, including a survey of genres and related folkloric phenomena. Lectures and readings in English.

180. Russian Art. Lecture, three hours. Recommended prerequisites: Art History 51, 54, 57. Knowledge of Russian is not required. A survey of the art and architecture of Russia to the present day. Emphasis on the development of Russian art in its religious, social, and political context.

193. Seminar in Russian Literature. Lecture, three hours. Prerequisite: course 6 or consent of instructor. Recommended: course 101C. Reading and discussion of selected authors; written seminar papers usually required.

Graduate Courses

Linguistics

203. Higher Course in Russian (2 units). Prerequisite: course 102C. Two quarters per year required of Ph.D. students. Reading of advanced texts; advanced composition, conversation; stylistics. May be repeated for credit. S/U grading.

204. Introduction to the History of the Russian Literary Language. Lecture, three hours. Prerequisites: course 123, Slavic 99. Required for the M.A. (linguistics, literature). Survey of literary Russian in its cultural and historical setting.

210. Readings in Russian Historical Texts. Lecture, three hours. Prerequisite: Slavic 201 or consent of instructor. Readings in early Russian chronicles and other documents of historical interest.

221. Advanced Russian Phonology (2 units). Prerequisites: courses 102A-102B-102C, 121 (may be taken concurrently). Required for the M.A. (linguistics). Advanced study and analysis of problems in Russian phonology.

222. Advanced Russian Morphology (2 units). Prerequisites: courses 102A-102B-102C, 122 (may be taken concurrently). Required for the M.A. (linguistics). Advanced study and analysis of problems in Russian inflection and derivation.

225. Russian Syntax. Lecture, three hours. Prerequisites or corequisites: courses 102A-102B-102C. Required for the M.A. (linguistics). Survey of Russian syntax and grammatical categories.

241. Topics in Russian Phonology. Lecture, three hours. Prerequisite: course 221. Selected topics in Russian phonology.

242. Topics in Russian Morphology. Lecture, three hours. Prerequisite: course 222. Selected topics in Russian inflection and derivation.

243. Topics in Historical Russian Grammar. Lecture, three hours. Prerequisites: course 123, Slavic 221. Selected topics in Russian historical phonology, morphology, and syntax.

263. Russian Dialectology. Lecture, three hours. Prerequisite: Slavic 221. Phonology and grammar of modern Great Russian dialects.

264. The History of the Russian Literary Language. Lecture, three hours. Prerequisites: course 204, Slavic 201. The evolution of literary Russian from the 11th to 20th century. Lectures and analysis of texts.

265. Advanced Russian Syntax. Lecture, three hours. Prerequisite: course 225. Traditional and generative approaches to Russian syntax.

266. Russian Lexicology. Lecture, three hours. Examination of the formal and semantic structure of the Russian lexicon.

Literature and Civilization

211. 18th-Century Russian Literature. Lecture, three hours. Required for the M.A. (literature). Lectures and readings in major and secondary writers. Analysis of selected literary works.

212. 19th-Century Russian Literature. Lecture, three hours. Required for the M.A. (literature). Lectures and readings in major and secondary writers.

213. 20th-Century Russian Literature. Lecture, three hours. Required for the M.A. (literature). Lectures and readings in major and secondary writers.

251A-251B. Old Russian Literature. Lecture, three hours. **251A.** Required for the Ph.D. (literature). Survey of Old Russian literature from the beginnings through the Kievan and the Muscovite periods up to the end of the 17th century. **251B.** Detailed discussion of specific writers, periods, or genres.

270. Russian Poetics. Lecture, three hours. Prerequisites: courses 130A-130B-130C. Introduction to the technical study of Russian poetics and versification, with attention to metrics, stanza forms, rhyme, and the development of various verse types from the 18th into the 20th century.

290. Seminar in Russian Poetry. Seminar, three hours. Prerequisites: courses 130A-130B-130C. Recommended: course 270. Detailed study of a single author, period, or work. May be repeated for credit with consent of instructor and graduate adviser.

291A. Seminar in Old Russian Literature. Seminar, three hours. Prerequisite: course 251A. Selected topics from the 11th through the 17th century. May be repeated for credit with consent of instructor and graduate adviser.

291B. Seminar in 18th-Century Russian Literature. Seminar, three hours. Prerequisite: course 211. Selected authors and works from 18th-century poetry, prose, and drama. May be repeated for credit with consent of instructor and graduate adviser.

292. Seminar in 19th-Century Russian Literature. Seminar, three hours. Prerequisite: course 212. Selected authors and works from 19th-century poetry, prose, and drama. May be repeated for credit with consent of instructor and graduate adviser.

293. Seminar in 20th-Century Russian Literature. Seminar, three hours. Prerequisite: course 213. Selected authors and works from 20th-century poetry, prose, and drama. May be repeated for credit with consent of instructor and graduate adviser.

294. Seminar in Russian Literary Criticism. Seminar, three hours. Prerequisites: courses 211, 212, 213. Detailed study of a specific school of literary criticism, a single literary critic, or a period in Russian literary history as reflected in literary criticism. Simultaneous or similar phenomena in literary criticism in the West. May be repeated for credit with consent of instructor and graduate adviser.

296. Seminar in Russian History and Culture. Reading and discussion on selected topics in the history of Russian Culture.

Serbo-Croatian

Upper Division Courses

103A-103B-103C. Elementary Serbo-Croatian. Recitation, five hours. Basic course in the Serbo-Croatian language.

103D-103E-103F. Advanced Serbo-Croatian. Recitation, three hours. Prerequisite: course 103C.

113A-113B-113C. Advanced Reading and Composition. Recitation, three hours. Prerequisite: course 103F or consent of instructor. Reading and translation of difficult texts; advanced composition.

154A-154B. Yugoslav Literature. Lecture, three hours. Lectures and readings in English. **154A.** Survey of Yugoslav Literature from the Middle Ages to the Present; **154B.** Selected Topics.

Slovak

Graduate Course

222. The Structure of Slovak. Lecture, three hours. Prerequisite: Slavic 202. Recommended: Slavic 222. Introduction to the phonological and morphological structure of the Slovak language, especially as contrasted with Czech.

Ukrainian

Upper Division Courses

101A-101B-101C. Elementary Ukrainian. Recitation, five hours. Basic course in the Ukrainian language.

152. Ukrainian Literature. Lecture, three hours. A survey of writers, literary trends, and issues in Ukrainian literature from the late 18th century to the present. Special attention to the works of such major figures as I. Kotlyarevsky, T. Shevchenko, I. Franko, L. Ukrainka, and P. Tychyna. Lectures and readings in English.

Non-Slavic Languages of Eastern Europe

Lithuanian

Upper Division Courses

101A-101B-101C. Elementary Lithuanian. Recitation, five hours. Basic course in the Lithuanian language.

Romanian

Lower Division Course

99. Introduction to Romanian Civilization. Lecture, three hours. An introductory survey of the social and cultural institutions of the Romanian people and their historical background.

Upper Division Courses

101A-101B-101C. Elementary Romanian. Recitation, five hours. Basic course in the Romanian language.

152. Survey of Romanian Literature. Lecture, three hours. Lectures and readings in English. A survey of Romanian literature from the Middle Ages to the present.

Graduate Course

201. Romanian as a Romance Language. Lecture, three hours. A survey of the structure and development of the Romanian language, with special emphasis on the relationship of Romanian to other members of the Romance group.

Related Courses in Other Departments

Dance 74B, 184B; **Economics** 182; **Geography** 184; **Linguistics** 100, 103, 110, 120A, 120B, M150, as well as several of the graduate courses in linguistics; **Music** 81C, 142A-142B; **Political Science** 128A-128B, 156, 157.

Visiting Lecturers

Steven J. Loza, Ph.D. *(Music)*
Nora Yeh, Ph.D. in Music

There is no major in social sciences; however, the following undergraduate course is offered for interested students.

Lower Division Course

20. Racial Minorities in the United States. (Formerly numbered Afro-American Studies M20, American Indian Studies M20, Asian American Studies M20, Chicano Studies M20.) Lecture, three hours; discussion, one hour. A multidisciplinary examination of the history and culture of Afro-Americans, Asian Americans, Chicanos, and Native Americans in the U.S. Topics include origins and maintenance of inequality, ethnic images in literature and art, psychosocial dimensions of racism, social movements, and minorities in California.

Sociology

264 Haines Hall, (213) 825-1313

Professors

Jeffrey Alexander, Ph.D.
Rodolfo Alvarez, Ph.D.
Judith Blake, Ph.D.
Phillip Bonacich, Ph.D., *Chair*
Lucie Cheng, Ph.D.
Burton R. Clark, Ph.D.
Robert M. Emerson, Ph.D.
Howard E. Freeman, Ph.D.
Harold Garfinkel, Ph.D.
Oscar Grusky, Ph.D.
Harry H. L. Kitano, Ph.D.
Gene N. Levine, Ph.D.
Ivan H. Light, Ph.D.
Valerie K. Oppenheimer, Ph.D.
Georges Sabagh, Ph.D.
Emanuel A. Schegloff, Ph.D.
Melvin Seeman, Ph.D.
Edwin S. Shneidman, Ph.D.
Gerald H. Shure, Ph.D.
Warren D. TenHouten, Ph.D.
Donald J. Treiman, Ph.D.
Ralph H. Turner, Ph.D.
Maurice Zeitlin, Ph.D.
C. Wayne Gordon, Ph.D., *Emeritus*
Leo J. Kuper, Ph.D., *Emeritus*

Associate Professors

Kenneth D. Bailey, Ph.D.
Michael S. Goldstein, Ph.D.
John E. Horton, Ph.D.
Jack Katz, Ph.D.
David E. López, Ph.D.
David D. McFarland, Ph.D.
Melvin Oliver, Ph.D.
David O'Shea, Ph.D.
Melvin Pollner, Ph.D.
Jeffrey Prager, Ph.D.
Jerome Rabow, Ph.D.
William G. Roy, Ph.D.
Samuel J. Surace, Ph.D.
Julia C. Wrigley, Ph.D.
Lynne G. Zucker, Ph.D.

Assistant Professors

Duane Champagne, Ph.D.
Clarence Lo, Ph.D.
Kazuo Yamaguchi, Ph.D.

Adjunct Assistant Professors

Bonnie Berry, Ph.D.
Lee Clarke, Ph.D.
Christine Grella, Ph.D.
Margaret Spanish, Ph.D.

Scope and Objectives

Variety is the special characteristic both of the field of sociology and of the UCLA Department of Sociology, which was judged among the 10 best in the nation in a recent survey conducted by the Conference Board of the Associated Research Councils.

Sociology will have a particular appeal to those students whose interests are broad and unspecialized. At both undergraduate and graduate levels, students study history, politics, statistics and mathematics, race relations, demography, psychology, language, and many other topics. A sociology student becomes a member of an intellectual community in which all these interests are represented.

The primary purpose of the major in sociology is to enhance the student's capacity for critical analysis and understanding of social phenomena. It is intended, at the same time, to serve as preparation for careers in high school or junior college teaching, social work, architecture and urban planning, law, public health, and government service, among others. It also provides training for advanced graduate work in sociology and social psychology.

The Ph.D. in Sociology usually leads to a career in research and/or teaching. Although most sociologists are employed by universities, there are increasing career opportunities in government and other nonuniversity research centers.

Bachelor of Arts Degree

Preparation for the Major

Required: Sociology 1, 18 (or Mathematics 50, Psychology 41, Economics 40, or Public Health 100A), one course from Group A (Mathematics 2, 3A), one course from Group B (Philosophy 8, 9, 31), one course from Group C

(Anthropology 5, 6, 22, Economics, 1, 2, Geography 3, History 1A, 1B, 1C, Political Science 1, Psychology 10).

All courses required for the major in sociology, including lower division and allied field courses, must be taken for a letter grade. A 2.0 grade-point average is required for the preparation and for the major.

The Major

Required: Ten upper division sociology courses, not including former course 101. The 10 courses (40 units) must include the following:

(1) Sociology 109 and 112 or 113. These courses, devoted to the systematic exploration of sociological methods and theories, should be completed as early as possible in your junior year.

(2) Four upper division courses as required by one of the specialized "Concentrations for the Major" listed below.

(3) Any four additional upper division sociology courses.

(4) Four upper division allied field courses (16 units) in other departments to complete the major. The allied fields are anthropology, economics, geography, history, political science, and psychology.

(5) English 100W.

Concentrations for the Major

By the end of the junior year and no later than the beginning of the senior year, you are required to declare your specific concentration by filing a statement with the undergraduate counselor. The purpose of the concentration requirement is to expose you to systematic, in-depth work within a specific area of sociology. Completion of a concentration requires four upper division sociology courses. You must take a concentration's required course (if any) before declaring that concentration. You must select one of the following concentrations and meet its course requirements:

(1) *Comparative and Historical Sociology*

Required: 138
Two of the following: 120, 125, 126, 140, 141
One of the following: 130, 131, 132, 133, 134, 135, 136, 137

(2) *Organizations*

Required: 121
Three of the following: 120, 123, 128, 140, 141, 147, 152

(3) *Political Sociology*

Required: 140
Three of the following: 114, 120, 124, 136, M143, 147, 150

(4) *Quantitative Sociology*

Consult the faculty adviser for premajor requirements for this concentration.
Required: 116
Three of the following: 123, 126, 152, 154
Recommended: Mathematics 152A-152B instead of Sociology 18 on the preparation

(5) *Race and Ethnicity*

Required: 124
Two of the following: 120, 123, 125, 151, 155
One of the following: 130, 131, 132, 133, 134, 135, 136, 137

(6) *Social Change and Modern Society*

Required: 120
Two of the following: 123, 140, 150
One of the following: 124, 125, 136, 141

(7) *Social Demography*

Required: 126
Three of the following: 116, 123, 127, 132, 160

(8) *Social Organization and Language, Thought, and Experience*
Four of the following: 117, C144A, C144B, 146, 148, 149, 153, 157, 159

(9) *Social Psychology*

Required: 154
Three of the following: 115, 150, 151, 152, 153, 155, 156

(10) *Social Stratification*

Required: 123
Three of the following: 114, 116, 124, 128, 136, 140, 155, 160

(11) *Social Policies and Social Programs*

Required: 110, 129
One of the following: 120, 121, 124, 136
One of the following: M143, 146, 147, 157, 161, 162

A psychology course taken to fulfill the breadth requirement cannot also be used for the allied field requirement. Only eight units of Sociology 199 are allowed. At least six of the sociology courses must be taken while in residence in the College of Letters and Science at UCLA.

Courses 109, 210A, and 210B are recommended for students who intend to pursue graduate work in sociology.

Specialization in Computing

Majors in sociology may select a specialization in computing by (1) satisfying all the requirements for a bachelor's degree in the major, (2) completing Program in Computing 10A, 10B, 10C, (3) completing two courses from Sociology 9, 116, 118. You graduate with a bachelor's degree in sociology and a specialization in computing.

Honors Program

The honors program in sociology provides an opportunity for outstanding students to undertake an independent year-long research project under the guidance of a faculty member. The project culminates with an honors thesis or paper. Students intending to obtain advanced degrees will find this program especially useful. If you are selected, you enroll in Sociology 199HA-199HB-199HC in your senior year. These courses may be applied toward the 10 upper division courses required of all sociology majors. After completing the program, you graduate either with departmental honors or highest honors.

Qualifications: You must have a 3.5 overall grade-point average, have completed the sociology preparation requirements and, in most cases, have completed the required theory course. Applications are available in the Undergraduate Counselor's Office, 254A Haines Hall. You should apply in the last quarter of your junior year.

M.A. and Ph.D. Degrees

The graduate program of the department takes as its primary aim the training of scholars who will conduct original research contributing to the advancement of sociological knowledge. For this reason, the department ordinarily accepts only students who are seeking the Ph.D. degree. A master's degree may be earned as part of the process of completing the requirements for the Ph.D.

Admission

In addition to the minimum University requirements, the department requires (1) three letters of recommendation, preferably from professors of sociology who are familiar with your written work and research experiences; (2) transcripts from all colleges where you have studied; (3) a statement of purpose, outlining reasons for pursuing graduate work, interests within sociology, career objectives, and any personal experiences bearing on these; (4) copies of one or two term papers or research reports you have written; (5) an official statement of scores on the Graduate Record Examination (GRE); and (6) for applicants whose native language is not English, the Test of English as a Foreign Language (TOEFL).

Although background preparation in sociology is highly desirable, it is not mandatory for admission to the department.

In addition to relatively formal criteria (such as analytic proficiency and articulateness), the department pays particular attention to applicants who seem likely to contribute considerable intellectual, social, or cultural diversity to its student body. Women and minorities are therefore encouraged to apply. The deadline for receipt of applications is January 15. Appli-

cation forms and more detailed information are available from the Graduate Affairs Assistant, Department of Sociology, 254C Haines Hall, UCLA, Los Angeles, CA 90024.

Major Fields or Subdisciplines

In the first two years you usually satisfy the course requirements for the M.A. degree and write a master's paper that is evaluated by the department in your sixth quarter of residence. During the first year of graduate study, and no later than the first quarter of the second year, you are expected to form a two-person master's committee to help you prepare the master's paper.

In the quarter following acceptance of your master's paper, usually at the beginning of the third year, you must affiliate with one of the department's five area programs in order to pursue more specialized, advanced study and research toward the Ph.D. The area programs represent the special strengths of the department in research and graduate instruction:

(1) **Ethnomethodological, Phenomenological, and Observational Sociologies:** Studies of work especially in the sciences and professions, sociology of knowledge, sociology of law, deviance, social control, conversational and other forms of ordinary interaction, and historical studies of everyday interaction and consciousness.

(2) **Macrosociology:** Political sociology, economy and society, historical and comparative sociology, macrosociological theory, and comparative stratification.

(3) **Methods and Models:** Survey research methods, methods of applied and evaluation research, formal demography, advanced social statistics, and mathematical sociology.

(4) **Social Organization and Institutions:** Social demography, stratification, and mobility, work and occupations; social change and class analysis; complex/formal organizations; crime, deviance, and social control; sociologies of education and cognitive development; sociologies of knowledge, science, and technology; mass media and mass communication; medical sociology; biosociology; social and ethnic communities; intergroup relations; urban studies.

(5) **Social Psychology:** Attitudes and social structure, collective behavior, socialization, social interaction and small group behavior, and organizational social psychology.

Foreign Language Requirement

Master's Degree: There is no foreign language requirement for the master's degree.

Ph.D. Degree: The foreign language requirement for the Ph.D. is one language or a substitute program approved by the executive committee. Students who plan to study toward the Ph.D. degree should complete the foreign language requirement as early as possible, so as to make use of foreign language sociological publications throughout graduate study. In any case, the foreign language requirement must be fulfilled before the doctoral committee is nominated and the oral examination is taken. Reading knowledge of one language, as demonstrated either by acceptable performance on a standardized test or by completing level five of that language (or the equivalent), with at least a grade of C, is required. You must submit your selected language to your area governing committee for approval.

With the approval of the department, an international student may offer English as a foreign language if the native language is other than English. Proficiency in English is evaluated by the level of performance on the UCLA entrance examination in English for international students, together with achievement in graduate work.

A second alternative is to study sources in an allied field such as history, political science, linguistics, psychology, economics, philosophy, or mathematics. You would be permitted to substitute for the language requirement a set of three upper division or graduate courses offered at UCLA and passed with a grade of at least B. Contact the department for further information and guidelines for language substitutions.

Course Requirements

In addition to the departmental requirements, area programs and some subareas have their own course requirements for affiliated students.

Before the Master's Paper Review: Nine courses (36 units) are required.

(1) Sociology 202A-202B (must be taken in the first year).

(2) A two-quarter graduate-level methodology sequence of which there are several alternatives (e.g., the survey methods course, the demographic methods course, etc.). The methodology series is presently numbered 211A through 218B.

In choosing a methodology sequence, you should note that some of the Ph.D. area programs and subprograms require particular methodology sequences.

(3) Five 200-level courses in sociology, excluding Sociology 202A-202B, 211A through 218B, and the 289, 290, 292, 293, 294, and 295 series.

Because four of the five area programs require successful completion of Sociology 210A-210B, you would ordinarily take these courses in your first two years and are strongly urged to do so in your first year.

Students intending to affiliate with an area would do well to satisfy some of its requirements in the first two years. Contact the department for information about entering the area programs.

After the Master's Paper Review: Two courses (eight units) are required. An additional methodology sequence (from courses 211A through 218B) must be completed before the awarding of the Ph.D. degree.

Course requirements for the five area programs are listed below. Contact the graduate affairs assistant or area directors for more specific details and for other requirements such as special papers.

(1) *Ethnomethodological, Phenomenological, and Observational Sociologies:* Sociology 222; at least three courses from 223, 229, 251, 252, 266, 267, 284; an additional methods sequence selected from courses 217A-217B, 218A-218B, or C244A/C244B (two of these sequences must be completed before the oral qualifying examination); courses 293A-293B-293C. If you plan to take one field examination in this area, you should take at least three additional courses significantly related to this field; if you plan to take two field examinations in this area, you should take six additional courses (courses 223, 229, 251, 252, 266, 267, and 284 may be applied toward this requirement).

(2) *Macrosociology:* Sociology 211A-211B, 228A-228B, 294A-294B-294C, and three relevant graduate courses in any department approved by the director and your adviser.

(3) *Methods and Models:* Sociology 232 and 295A-295B-295C.

Advanced Statistics Specialty: Courses in calculus, linear algebra, and mathematical statistics (preferably taken as an undergraduate) and a program of coursework and supervised individual study, selected in consultation with the area faculty, designed to provide suitable depth of coverage of an appropriate range of statistical techniques.

Applied Sociology and Evaluation Research Specialty: Sociology 210C, 280, and courses in calculus and linear algebra (preferably taken as an undergraduate).

Formal Demography Specialty: Sociology 210C, 213A-213B, 240, and courses in calculus and linear algebra (preferably taken as an undergraduate).

Mathematical Sociology Specialty: Sociology 281, courses equivalent to Mathematics 115A, and other mathematics courses that may be required for particular specialties.

Survey Research Method Specialty: Sociology 216A-216B and a graduate-level course in sampling, such as Public Health 201H or Management 215E.

(4) *Social Organization and Institutions:* Sociology 290A-290B-290C and a second methods sequence selected from courses 212A-212B, 213A-213B, 214A-214B, 215A-215B, 216A-216B, or 217A-217B.

(5) *Social Psychology:* Completion of an undergraduate program equivalent to at least two courses from Sociology 150 through 157 and at least two courses in psychology, selected from the fields of learning, language and communication, personality, social psychology, and abnormal psychology; Sociology 224A-224B, 289A-289B-289C; a second methods sequence, in addition to the one required for the M.A., selected from courses 214A-214B, 215A-215B, 216A-216B, or 217A-217B.

Courses in the 500 series (596, 597, 599) are normally taken in preparation for the master's paper review, the field examinations, and for dissertation research. They may not be applied toward the course requirements for the degree.

Master's Paper Review

By the end of your second year of study, you must submit an acceptable master's paper for approval by the general faculty. The paper must demonstrate a general competence in sociological theory, methodology, and selected substantive areas and in intellectual attainment.

The paper should demonstrate that you (1) have an accurate grasp of the intellectual traditions of sociology, (2) can bring evidence to bear on theoretical problems, (3) can describe how some aspect of the social order works, and (4) can adequately handle research and methodological issues. The main concern is with your capacity to do Ph.D.-level work.

After review of the paper, any of the following options may be recommended:

(1) The paper is passed. You are granted the M.A. and permitted to proceed to the Ph.D.

(2) The paper is passed conditionally. You are granted the M.A. and permitted to proceed to the Ph.D. after completion of specified revisions of the paper.

(3) You are granted a terminal M.A.

(4) The paper is not acceptable (you may resubmit at a later time or be asked to withdraw).

If you enter UCLA with an M.A. degree in Sociology from another institution, you normally come up for a master's paper review in your first quarter of residence at UCLA, and under no circumstances later than the third quarter of residence. In this review, the department determines whether you may proceed directly to preparation for the field examinations or whether additional work must be done, and if the methodology sequence requirement has been adequately satisfied. In addition to a paper, which can be an M.A. thesis written at another university, you should submit for the master's paper review a transcript from the university at which the M.A. degree was earned.

Contact the department for further details on master's paper review.

Field and Qualifying Examinations

The department requires you to pass two field examinations before taking the University Oral Qualifying Examination for the Ph.D. The emphasis here is on mastery and depth of understanding in two areas of specialized study. Field examinations are administered and evaluated under guidelines established by area programs. You may take both or just one of your field examinations in the area with which you are affiliated. Each area program also has procedures enabling unaffiliated students to take field examinations in that area. Details are available from area directors and from the graduate affairs assistant.

If the performance on the field examination is satisfactory and the foreign language requirement has been fulfilled, you may nominate a doctoral committee and take the University Oral Qualifying Examination. You must prepare a two-page abstract of the dissertation proposal for distribution to the entire departmental faculty no later than one week before the examination.

Candidate in Philosophy Degree

You are eligible to receive the C.Phil. degree on advancement to candidacy for the Ph.D.

Final Oral Examination

The optional final oral examination for the Ph.D. degree is given by the doctoral committee no later than six months after the completion of the dissertation. A decision to waive the final examination is optional on the part of the Ph.D. committee.

Lower Division Courses

1. Introductory Sociology. Not open for credit to students with credit for former course 101. Survey of the characteristics of social life, the processes of social interaction, and the tools of sociological investigation.

9. Computers and Social Change. Lecture, two hours; laboratory, three hours. The impact of technological change from computers and computing on people, jobs, business firms, industries, and educational and legal institutions. Whenever needed for an adequate understanding of those topics, the course also provides information on selected aspects of contemporary computers and the history of computing. In addition to reading assignments and lectures, the course involves direct experience in a computing laboratory. Mr. McFarland

18. Interpretation of Quantitative Data. Prerequisite or corequisite: course 1. Satisfies the statistics requirement for the major in sociology. Reading graphs and tables; statistical description using indices of central tendency, dispersion, and association; simple linear regression. Probability; the binomial, normal, t, and chi-square distributions and hypothesis testing based on them. Examples from recent issues of *American Sociological Review* or other leading sociological journals.

20. Fates and Forecasts. Lecture, two and one-half hours. The utility of trend and other data in making social forecasts for the year 2000, with emphasis on the United States and Japan. In addition, consideration of Mexico for contrast as an example of a developing country. Popular treatments of future social and technological possibilities. Class discussion on reading and lecture materials. Mr. Levine

31. Dilemmas of Third World Development. Lecture, three hours; discussion, one hour. An introduction to understanding the dilemmas of Third World social development and the prospects for progress in the future. Mr. Lopez, Mr. Zeitlin

Upper Division Courses

102A-102Z. Special Topics in Sociology. Prerequisite: upper division standing (some sections may require prior coursework or consent of instructor). A study of selected current topics of sociological interest. See *Schedule of Classes* for topics and instructors. May be repeated for credit and may be applied as elective units toward the sociology major.

M102A. Sex Roles and Society. (Formerly numbered 102A.) (Same as Women's Studies M102.) Lecture, three hours; discussion, one hour. Prerequisite: course 1 or Women's Studies 100 or consent of instructor. Consideration of sociological literature pertaining to the development and functions of sex roles in society from a critical perspective. Topics include socialization and gender norms, contemporary sex role strain, and the challenge to traditional notions of sex roles posed by feminist critique.

109. Introduction to Sociological Research Methods. A systematic treatment and semiquantitative skills of use in sociological research (e.g., classification, questionnaire and schedule design, content analysis, critical analysis of studies, conceptual analysis of case materials). Fieldwork may be required. Mr. Bailey, Mr. Freeman, Mr. TenHouten

110. Research Methods in Policy Analysis and Evaluation. Prerequisite: course 129 or consent of instructor. Recommended: course 109. Approaches for identifying and analyzing social problems and for the assessment of policies and interventions for their control and management. Mr. Freeman, Ms. Zucker

112. Development of Sociological Theory. A comparative survey of basic concepts and theories in sociology from 1850 to 1920; the codification of analytic schemes; a critical analysis of trends in theory construction. Mr. Alexander, Mr. Horton, Mr. López

113. Contemporary Sociological Theory. A critical examination of significant theoretical formulations from 1920 to the present; an analysis of the relation between theoretical development and current research emphasis. Mr. Alexander, Mr. Champagne, Mr. TenHouten

114. Marxist Sociology. The fundamentals of Marxist theory and method and their historical development. Attention to continuing debates within Marxism and to differences between Marxism and other schools of sociological thought. May not be applied toward the theory requirement for the major. Mr. Horton

115. Experimentation and Laboratory Methodology in Sociology. Prerequisites: course 18 or equivalent introductory statistics and introductory social psychology. Provides opportunities for students to participate as observers, subjects, and experimenters in a variety of laboratory simulations of social and political settings and to use a number of computer-supported techniques as aids in conducting, analyzing, and interpreting their experiences in these settings. Mr. Shure

116. Introduction to Mathematical Sociology. Prerequisites: course 18, Mathematics 2, 3A (a course whose content includes introductions to probability theory, matrix algebra, and differential and integral calculus), or equivalent. Mathematical treatments of several sociological phenomena, such as occupational mobility, population growth, organizational structure, and friendship patterns, each covered in some detail, including initial development and subsequent evaluation and modification (emphasizing both the deductive and computational aspects of mathematics). Mr. McFarland

117. Field Research Methods. Lecture, two hours; discussion, one hour. Prerequisites: upper division standing, consent of instructor. Fieldwork and extensive field notes required. Theory and practice of field research, with particular emphasis on the interrelations between fieldwork role and substantive findings.
Mr. Emerson, Mr. Rabow

118. Statistical and Computer Methods for Social Research. Lecture, three hours; laboratory, one hour. Prerequisite: course 18. A continuation of course 18, covering more advanced statistical techniques such as multiple regression, analysis of variance, or factor analysis. Content varies. Students learn how to use the computer and write papers analyzing prepared data sets. Mr. Bonacich, Mr. TenHouten

120. Social Change. A study of patterns of social change, resistance to change, and change-producing agencies and processes.
Mr. Alexander, Mr. Surace

121. Organizations and Society. Sociological analysis of organizations and their social environment. An introduction to basic theories, concepts, methods, and research on the behavior of organizations in society. Mr. Alvarez, Mr. Grusky, Mr. Surace

122. Mass Communications. Lecture, three hours. Fieldwork may be required. Development, functions, and organization of the mass media in industrialized societies; social theory and social research in mass communications; short-term effects of the media; the media and socialization; mass media and the shaping of public opinion; prospects for media in the Third World. Technological innovations and their effects on future social systems. Mr. Levine

123. Social Stratification. An analysis of American social structure in terms of evaluational differentiation. Topics include criteria for differentiation, bases for evaluation, types of stratification, the composition of strata and status systems, mobility, consequences of stratification, and problems of methodology.
Mr. López, Mr. McFarland, Mr. Yamaguchi

124. Ethnic and Status Groups. The characteristics of the "visible" ethnic groups (e.g., Japanese, Mexican, and black); their organization, acculturation, and differentiation. The development, operation, and effects of selective immigration and population mobility. The status of the chief minorities in the continental U.S., with comparative materials drawn from Jamaica, Hawaii, and other areas.
Mr. Alvarez, Mr. Kitano, Mr. Prager

125. Urban Sociology. Lecture, three hours. Description and analysis of urbanization and urbanism in the United States and the world.
Mr. Bailey, Mr. Light, Mr. Oliver

126. Social Demography. Studies of past, present, and future trends in population growth. Sociological theories of causes and consequences of population growth and redistribution. Emphasis on the correlates of fertility, mortality, and migration.
Mr. Bailey, Ms. Oppenheimer, Mr. Sabagh

127. Sociology of Family Demographic and Economic Behavior. An examination of demographic behavior associated with the social organization of the family and its relationship to the society's economic system. American and European historical studies of family socioeconomic and demographic characteristics and behavior in the first half of course; the U.S. experience since the 1930s in the second half. Ms. Oppenheimer

128. Occupations and Professions. Description and analysis of representative occupations and professions, with emphasis on the contemporary United States.

129. Social Policies and Social Programs. Lecture, three hours; discussion, one hour. Prerequisites: junior standing and course 1, or consent of instructor. Analysis of problems of social disorganization, with emphasis on social structural explanations. Consideration of social policies and intervention strategies related to control and management of social problems. Mr. Freeman, Ms. Zucker

130. Social Processes in Africa. A course in comparative sociology. A study of selected processes in African societies, primarily in the fields of urban sociology, social structure, and social change, involving an interdisciplinary approach.

131. Latin American Societies. A descriptive survey of the major Latin American societies, emphasizing their historical backgrounds and their emergent characteristics, with special attention to the relations between rural and urban life.
Mr. López, Mr. Zeitlin

132. Population and Society in the Middle East. Prerequisites: upper division standing, consent of instructor. A survey of the Middle Eastern societies; their historic and environmental bases; the contemporary demographic and cultural situation.
Mr. Sabagh

133. Comparative Sociology of the Middle East. Prerequisites: upper division standing, consent of instructor. A review of the unity of Middle Eastern societies in Islam and their diversity exemplified by such nomadic peoples considered throughout.

134. Comparative Social Institutions of East Asia. Analysis of selected social institutions of China, Japan, and Korea. Emphasis on continuity and change in East Asian societies. Ms. Cheng

135. Comparative American Indian Societies. Lecture, three hours. Prerequisite: course 1. The comparative and historical study of political, economic, and cultural change in indigenous North American societies. Several theories of social change, applied to selected case studies. Mr. Champagne

136. American Society. Analysis of major institutions in the U.S. in historical and international perspective, with emphasis on topics such as industrialization, work, the state, politics, community, the family, religion, and American culture. Theories of social change, conflict, and order applied to the case of the U.S. Mr. Lo, Mr. Roy, Mr. Zeitlin

137. Comparative Studies of Jewish Communities in the U.S. and Abroad. The history, distribution, structure, and functioning of major Jewish communities, with particular focus on North America and Israel. Interrelationships and sources of conflict between Jews and Gentiles in Western countries. More generally, the economic and social integration of Diaspora Jewish communities. Fieldwork may be required. Mr. Levine

138. Comparative and Historical Sociology. Prerequisite: course 1. A survey of the central themes of comparative and historical studies in sociology. The various aspects of the development of modern society, including the development of nation-state, the emergence of capitalism, industrialization, and population growth. Variation in contemporary society, viewed from a variety of theoretical perspectives.
Mr. Champagne, Mr. Lo, Mr. Roy

139. Japanese Society. Lecture, two and one-half hours; discussion, two hours. Prerequisite: course 1 or consent of instructor. Analysis of social-structural characteristics and functioning of contemporary Japanese society, with focus on (1) forms of social interaction and social structure, (2) work, family, and the life course, and (3) education and opportunity. Emphasis on structural perspectives, more than cultural perspectives. Mr. Yamaguchi

140. Political Sociology. The contributions of sociology to the study of politics, including the analysis of political aspects of social systems, the social context of action, and the social bases of power.
Mr. Prager, Mr. Roy, Mr. Zeitlin

141. Economy and Society. The sociology of economic life, with emphasis on principal economic institutions of the United States.
Mr. Light, Mr. Lo, Mr. Zeitlin

142. Sociology of the Family. Theory and research dealing with the modern family, its structure, and functions, including historical changes, variant family patterns, family as an institution, and the influence of the contemporary society on the family.

M143. Sociology of Education. (Same as Education M108.) Prerequisite: course 1. Study of social processes and interaction patterns in educational organizations; the relationship of such organizations to aspects of society, social class, and power; social relations within the school, college, and university; formal and informal groups, subcultures in educational systems; roles of teachers, students, and administrators.
Mr. O'Shea, Mr. Rabow, Ms. Wrigley

C144A. Conversational Structures I. (Formerly numbered 144A.) Lecture, three hours. An introduction to some of the structures which are employed in the organization of conversational interaction, such as turn-taking organization, the organization of repair, and some basic sequence structures with limited expansions. May be concurrently scheduled with course C244A. Mr. Schegloff

C144B. Conversational Structures II. (Formerly numbered 144B.) Lecture, three hours. Prerequisite: course C144A. A consideration of some of the more expanded sequence structures, story structures, topical sequences, and the overall structural organization of single conversations. May be concurrently scheduled with course C244B. Mr. Schegloff

145. Sociology of Deviant Behavior. An examination of the leading sociological approaches to the study of deviation and a general survey of the major types of deviation in American society.
Mr. Horton, Mr. Surace

146. Criminology. Theories of the genesis of crime; factors in the organization of criminal behavior from the points of view of the person and group; criminal behavior systems. Mr. Katz, Mr. Rabow

147. Control of Crime. Theories of punishment; methods of dealing with convicts; social organization of police, courts, prisons, probation, and parole. Fieldwork required. Mr. Emerson, Mr. Rabow

148. Normal Environments. Structural interpretation of the concerted production, management, and alteration of perceivedly normal interpersonal environments. Fieldwork required.
Mr. Garfinkel, Mr. Pollner

149. A Study of Norms. Properties of norms, of normatively governed conduct, of lay and professional methods for describing, producing, using, and validating norms in contrasting settings of socially organized activities; relevance of these properties for the programmatic problems of analytic sociology. Fieldwork required. Mr. Garfinkel, Mr. Pollner

150. Collective Behavior. Prerequisites: courses 1, 18, or equivalent, upper division standing. Characteristics of crowds, mobs, publics, social movements, and revolutions; their relation to social unrest and their role in developing and changing social organization. Mr. Seeman, Mr. Turner

151. Culture and Personality. Prerequisites: courses 1, 18, or equivalent, upper division standing. Theories of the relation of variations in personality to culture and group life, in primitive and modern societies, and the influence of social role on behavior.
Mr. Turner

152. Group Processes. Systematic study of the formation, structure, and functioning of groups; analysis of group processes and group products from a variety of theoretical viewpoints; implications of various research techniques. Mr. Bonacich, Ms. Zucker

153. Process and Socialization in the Family. Prerequisites: courses 1, 18, or equivalent, upper division standing. Examination of the processes of interaction, decision making, role differentiation, conflict, integration, and socialization within the family and their interrelations with society.

154. Social Psychology: Sociological Approaches. A survey of the contribution of sociologists to theory and research in social psychology, including theories of social control; conformity and deviation; reference groups; and interaction process.
Mr. Bonacich, Mr. Rabow, Ms. Zucker

155. Intergroup Conflict and Prejudice. A study of the causes and consequences of group conflict, with emphasis on majority-minority relations, prejudice, and discrimination. Special attention to alternative sociological and psychological theories of prejudice; the effects of minority status on the individual; and the possibilities for attitude and behavior change.
Mr. Oliver, Mr. Seeman

156. Psychoanalytic Sociology. Prerequisites: courses 1, 18. Recommended: a course in theory (course 112 or 113) and in social psychology. Designed to review the models of integration between psychoanalysis and sociology. Application of this analytical perspective to selected substantive areas and social processes, including but not limited to, group development, delinquency, deviance, socialization, identity and self formation, role taking and role making. Mr. Rabow

157. Sociology of Mental Illness. Analysis of the major sociological and social psychological models of madness. Study of the social processes involved in the production, recognition, labeling, and treatment of "mental illness."
Mr. Emerson, Mr. Goldstein, Mr. Pollner

M158. Death and Suicide: Psychological and Sociological Aspects. (Same as Psychology M163.) Lecture, three hours. Prerequisite: junior standing. The definition and taxonomy of death; the new permissiveness and taboos relating to death; the romanticization of death; the role of the individual in his own demise; the modes of death; development of ideas of death through the life span; ways in which ideas of death influence the conduct of lives; the impact of dying on the social structure surrounding the individual; preventive, interventive, and postventive practices in relation to death and suicide; partial death; megadeath; lethality; the psychological autopsy; the death of institutions and cultures. P/NP grading recommended (letter grading required if course is to be applied toward the psychology or sociology major).
Mr. Shneidman

159. The Sociology of Knowledge. Prerequisite: course 1 or equivalent. A study of the social production of modes of thought and forms of knowledge. The study of ways in which bodies of knowledge and cognitive styles are produced, used, and transformed in every day, organizational, and extraordinary contexts. Mr. Pollner, Mr. TenHouten

160. The Demography and Sociology of Women's Economic Roles. Prerequisites: courses 1 and 18 or Mathematics 50 or Psychology 41 or Economics 40 or Public Health 100A, or consent of instructor. A demographic and sociological analysis of the factors affecting women's economic roles in the world of work and the family. Topics include demographic determinants of women's socioeconomic roles, women's changing place in the occupational structure, men's and women's contribution to the socioeconomic status of the family, the socioeconomic position of women without men to support them, future trends, and social policy affecting women's status.
Ms. Oppenheimer, Mr. Treiman

161. The Social Organization of Psychiatric Treatment. Strongly recommended prerequisite: course 157. Review of current research and theory on psychiatric treatment processes and treatment organizations, including mental hospitals and community mental health organizations.
Mr. Emerson, Mr. Grusky

162 Sociology of Law. The political impact of court decisions; legalization of social relations in modern institutions; social movements toward equal justice; the judicial role; experience of participants in legal processes; common sense conceptions of justice.
Mr. Katz

163. Medical Sociology. Prerequisite: course 1 or consent of instructor. Provides majors in sociology and other social sciences, as well as students preparing for health science careers, with an understanding of health-seeking behavior and the interpersonal and organizational relations that are involved in the receipt and delivery of health services.
Mr. Goldstein

164. White-Collar Criminality. Lecture, three hours. Prerequisite: course 146 or consent of instructor. Theories of the genesis of crime applied to criminal behavior by business and political elites, including a history and evaluation of criminal law enforcement against white-collar illegalities. Mr. Katz

165. Entrepreneurship. Lecture, three hours; discussion, one hour. Prerequisite: course 1. Description and analysis of entrepreneurship, with special reference to historical origins, ideology, international comparisons, women and ethnic minority participation, legal and illegal forms, public and private auspices.
Mr. Light

197. Undergraduate Seminar. Prerequisites: upper division standing, major in sociology, consent of instructor.

199. Special Studies (2 to 8 units). Prerequisites: senior standing, 3.0 GPA in major, courses 1 and 18 or equivalent, consent of instructor and department chair. A course of independent study designed for graduate or senior undergraduate students who (1) desire a more advanced or specialized treatment of an area covered in the regular course list and who present that course as a prerequisite or (2) desire work in an area of sociological analysis currently not covered by an upper division course. Only eight units are allowed. See undergraduate counselor for course contract.

199HA-199HB-199HC. Special Study for Honors. Prerequisite: honors program standing:

199HA. Design of a research project to serve as the student's honors thesis. A research proposal, detailed bibliography, and regular meetings with the sponsoring faculty member required.

199HB. Continuation of work initiated in course 199HA. A series of progress reports are prepared in consultation with instructor.

199HC. Completion of the written report or honors thesis.

Graduate Courses

201A-201B. Proseminar in Sociology. Prerequisite: graduate standing. Designed primarily for graduate students in the first year of residence. A comprehensive survey of basic concepts and theories in the major fields of sociology. Mr. Alexander, Mr. López

202A-202B. Sociological Analysis. Lecture, two hours; discussion, one hour. Prerequisite: graduate standing. Required of first-year sociology graduate students. Consideration of a number of exemplary works in contemporary sociology in terms of the interplay of theory, method, and empirical substance to familiarize entering students with a broad range of sociological practice and to illuminate through critical reading and analysis how various kinds of sociological inquiry work. Course is team taught and mixes lectures and discussion. In Progress grading.
Mr. Alexander, Mr. Schegloff

203A. Social Survey Practicum. Lecture, one hour; discussion, one hour; laboratory, two hours. Prerequisite: graduate standing or consent of instructor. Training through practice in the basic techniques of survey research.

203B. Social Survey Research Seminar. Lecture, one hour; discussion, one hour; laboratory, two hours. Prerequisite: graduate standing or consent of instructor. Development of individual survey research projects under faculty supervision.

210A-210B. Intermediate Quantitative Methods I, II. Prerequisite: course 18 or equivalent. An intermediate-level treatment of fundamentals of statistical theory and procedures: probability theory, basic distributions (normal, binomial, t, chi-square, F, etc.), their interrelations, and statistical procedures based on them; analysis of contingency tables; multiple and partial correlation and regression; analysis of variance and experimental designs; the general linear model; systems of equations. Additional special topics include use of computers; log-linear models; factor analysis, discriminant function analysis; scaling and measurement; sampling design; nonparametric techniques and measures; matrix algebra if used in coverage of listed topics. In Progress grading.
Mr. Bonacich, Mr. McFarland, Mr. TenHouten

210C. Intermediate Quantitative Methods III. Prerequisite: course 210B. Not required for the M.A. or Ph.D. degree. Additional and more advanced multivariate techniques of particular value to sociologists.
Mr. Bonacich, Mr. Yamaguchi

211A-211B. Comparative and Historical Methods:

211A. Strategies of Research and Conceptualization. Prerequisite: consent of instructor. Topics include relationship of theory and fact to the social sciences, the logic of comparative and historical analysis, and substantive paradigms of comparative and historical analysis. Reading involves methodological examination of basic works in representative problem areas. In Progress grading.

211B. Research Techniques. Prerequisite: course 211A. Topics include the problem of evidence, quantitative and qualitative data. Techniques of data analysis, including use of manuscript census, content analysis, collective biography, and secondary analysis.
Mr. Light, Mr. Lo, Mr. Prager, Mr. Roy

212A-212B. Marxist Methodology. Prerequisite: course 112 or consent of instructor. Practice in the dialectical method of attaining scientific knowledge about society as a process and mode of production. A critical examination of methodological issues and techniques and practical field research.
Mr. Horton

213A-213B. Techniques of Demographic and Ecological Analysis. Prerequisite: course 210A or equivalent. Procedures and techniques for the collection, evaluation, and analysis of demographic and ecological data; models of population and ecological structure and change; applications to the study of social structure and social change. Mr. Sabagh

214A-214B. The Measurement of Sociological Variables. Prerequisites: courses 210A-210B, consent of instructor. Theory and technique of measurement in sociology and social psychology; construction, application, and evaluation of measurement techniques, especially the forms of scaling. In Progress grading. Mr. TenHouten

215A-215B. Experimental Sociology. Prerequisites: course 210A or equivalent, consent of instructor. The basic fundamentals of the experimental method, particularly as it is used in social psychology. In Progress grading.
Mr. Grusky, Mr. Rabow, Mr. Shure

216A-216B. Survey Research Methods. Course in methodology and techniques: formulation of research problem; study design; hypotheses; sampling; measurement; questionnaire and schedule construction; interviewing and data collection; processing and tabulation; analysis and interpretation; presentation of findings; cross-national, replicative, panel, and other complex survey designs. Students participate in survey research project. In Progress grading.
Mr. Levine, Mr. TenHouten, Mr. Treiman

217A-217B. Ethnographic Fieldwork. Prerequisite: consent of instructor. Theories and techniques of ethnographic fieldwork. The kinds of problems amenable to ethnographic approaches, methods, and techniques for doing fieldwork, and ethnical problems involved in such research. In Progress grading.
Mr. Emerson, Mr. Katz, Mr. Pollner

218A-218B. Ethnomethodological Methods. Prerequisite: consent of instructor. Examination of techniques used in ethnomethodological research, practice in the critical evaluation of research, and directed experience in the conduct of an extended investigation employing ethnomethodological procedures. In Progress grading. Mr. Garfinkel

220. Role Theory. Prerequisites: graduate standing, consent of instructor. A review of theories and research dealing with social roles, with special emphasis on roles in social interaction and in formation of the social self. Mr. Turner

221. Social Ecology. Prerequisites: courses 18, 126, or equivalent, and graduate standing, or consent of instructor. An examination of the various approaches to both microecology and macroecology, including classical and neoclassical ecology, social area analysis, sociocultural ecology, city-size distributions, effects of population density on animals and humans, proxemics, territoriality, and the effects of the physical environment on humans. Mr. Bailey

222. Foundations of Ethnomethodological, Phenomenological, and Analytic Sociologies. Lecture, three hours. Prerequisite: graduate standing or consent of instructor. Basic issues, methods, and topics of ethnomethodological, phenomenological, conversation-analytic, and related varieties of inquiry. Central themes such as the world of everyday life, the problem of rationality, rules/norms and tacit knowledge, the problem of social order, speaking and discourse, constitutive practices, and the production of ordinary interaction in the first part; guest presentations by affiliated faculty in the second part.

223. Phenomenological and Interactionist Perspectives on Selected Topics. Lecture, three hours. Comparison of phenomenological and symbolic interactionist perspectives by examining a particular body of live or currently unresolved substantive issues. Topics vary; attention on development of phenomenological and interactionist thought on the topic of concern, with special concern for ambiguities and divergences both within and between the two approaches. When relevant, attention to the logical and historical relations of phenomenology and interactionism of pragmatist, existentialist, and ordinary language philosophies. Mr. Katz

224A-224B. Problems in Social Psychology. Prerequisites: course 210A, consent of instructor. Basic course for graduate students intending to specialize in social psychology. **224A.** Major theoretical contributions to the field. **224B.** Current work being done in the department in several subfields.

225A-225B. Demographic Perspectives on the Relationship of Family and Economic Systems. Prerequisites: courses 210A-210B or consent of instructor. An examination of the interrelationship of family and economic systems in societies at different levels of economic development, focusing particularly on the U.S. experience. Central to the course: (1) an analysis of how demographic factors affect economic and family systems; (2) how these systems, and changes in them, affect demographic variables; and (3) how this two-way process influences the relationship of family and economic systems over time. **225A.** Lectures and readings. **225B.** Individual research projects involving a term paper and classroom reports of results.
Ms. Oppenheimer

227. The Sociology of Knowledge. Prerequisite: graduate standing or consent of instructor. A survey of theories and research concerning social determinants of systems of knowledge and the role of intellectual and artistic elites in Western societies.
Mr. Horton

228A-228B. Critical Issues in Macrosociology. Seminar, three hours. Prerequisite: graduate standing. A conceptual introduction to the area of macrosociology in which exemplary works are read, studied for substance and methods, and critiqued in seminar and in written papers. Usually team taught by faculty of varying orientations.

229. Processes of Social Control. Prerequisite: graduate standing or consent of instructor. Current theory and research on social control processes. Specific topics include conceptual issues, informal social control mechanisms, the relation between informal and formal control systems, typification and practical concerns in the processing of social control cases, and problems of "rationality" in social control decision making. Mr. Emerson

230. Theories of Deviance. An examination of various sociological approaches to the study of deviant behavior, with emphasis on anomie theory as the major orientation today. Special attention to the problems of defining deviance and the articulation of sociological and psychological levels of explanation.
Mr. Emerson, Mr. Rabow, Mr. Surace

M231. The Structure of Occupations. (Same as Education M231.) Lecture, two hours; discussion, two hours. Shifts in the occupational structure of the United States, changing skill requirements for jobs, the effects of automation on work environments, and the role of formal and informal education in preparing people for occupations. Mr. O'Shea, Ms. Wrigley

232. Survey Data Acquisition. Lecture, three hours. Prerequisites: courses 210A-210B. Traditional topics on survey research practice in study design, instrument design, sampling, interviewing, and data management. Parallel coverage of research literature on various sources of nonsampling response bias that influence survey results. An ongoing survey that employs Computer-Assisted Telephone Interviewing is available as a resource for the course. Mr. Shure

233. Foundations of Political Sociology. Lecture, three hours. Prerequisite: graduate standing or consent of instructor. A survey of the field of political sociology, oriented around critical themes in the major theoretical traditions and contemporary exemplars. Special attention to competing perspectives on power, the theory of the state, and the relationship of class structure to politics.
Mr. Lo, Mr. Prager, Mr. Roy

234. Sociology of Community Organization. Prerequisites: graduate standing, consent of instructor. A survey of recent and classical research and literature dealing with predominantly political institutions, the problem of order, and the organization of communal life in the village and the metropolis.

236. Social Change in the Middle East. An analysis of the sources, extent, and types of social change in the Middle East, with emphasis on the origin and consequences of industrialization and urbanization.
Mr. Sabagh

237. Social Stratification in the Middle East. Modes of social differentiation in traditional Middle Eastern societies, localism and tribalism, the counter influence of processes leading to the recurrent emergence of societies of large scale and their distinctive structural characteristics. Mr. Sabagh

238A-238B. Fieldwork in Minority Communities. Seminar, two hours. Prerequisites: graduate standing, consent of instructor. Designed to supply graduate students with conceptual and methodological skills for studying minority communities. Greater Los Angeles is the laboratory. Emphasis on both ethnographic and survey research techniques. In Progress grading. Mr. Levine

240. Mathematics of Population. Prerequisite: prior knowledge of matrices, calculus, and probability theory. Discrete and continuous deterministic and probabilistic models of the growth and composition of a one-sexed population classified by age, plus selected topics on more complicated population models.
Mr. McFarland

C244A. Conversational Structures I. Lecture, three hours; discussion, one hour. An introduction to some of the structures which are employed in the organization of conversational interaction, such as turn-taking organization, the organization of repair, and some basic sequence structures with limited expansions. May be concurrently scheduled with course C144A. Graduate students have additional assignments and/or meet as a group one additional hour each week. Mr. Schegloff

C244B. Conversational Structures II. Lecture, three hours; discussion, one hour. Prerequisite: course C244A. A consideration of some of the more expanded sequence structures, story structures, topical sequences, and the overall structural organization of single conversations. May be concurrently scheduled with course C144B. Graduate students have additional assignments and/or meet as a group one additional hour each week. Mr. Schegloff

245. Cultural Studies. Discussion, three hours. Prerequisite: consent of instructor. Allows graduate students to become familiar with the range of contemporary studies of culture. Taking as its assumption that symbolic patterns have relative autonomy vis-a-vis social structure and personality, it examines hermeneutical, structuralist, and functionalist versions of this general argument, proceeding subsequently to contemporary versions of "interpretive" techniques: structuralist, functionalist, Weberian, Durkheimian, and semiotic. Theory, method, and substantive empirical issues. Mr. Alexander

247. Neurosociology. Prerequisites: graduate standing, consent of instructor. Relations between aspects of social structure and higher cortical functions.
Mr. TenHouten

248. The Sociology of Cognitive Development. Prerequisite: graduate standing or consent of instructor. Analysis of ways in which mental processes are structured and organized by positions and practices in the social world, and by change and development in society. Mr. TenHouten

M249A. Sociocultural Aspects of Health and Illness: Health Professions. (Formerly numbered M249B.) (Same as Public Health M283F.) Lecture, three hours. Prerequisites: Public Health 182, three courses in psychology, sociology, or anthropology, or equivalent, consent of instructor. Sociological examination of the concepts "health" and "illness" and role of various health professionals, especially physicians. Attention to the meaning of professionalization and professional-client relationships within a range of organization settings. Mr. Goldstein

M249B. Sociocultural Aspects of Health and Illness: Health Behavior. (Formerly numbered M249C.) (Same as Public Health M283G.) Seminar, three hours. Prerequisites: Public Health 182, three courses in psychology, sociology, or anthropology, or equivalent, consent of instructor. Sociocultural factors affecting differential patterns of health behavior, illness behavior, and sick role behavior.
Mr. Berkanovic

250. Methodological Problems.
Mr. Bailey, Mr. TenHouten

251. Topics in the Problem of Social Order.
Mr. Garfinkel

252. Criminology. Mr. Katz, Mr. Rabow

253. Quantitative Methods in Sociology.
Mr. Bailey, Mr. Bonacich, Mr. Freeman

254. Sociology of Law. (Formerly numbered 254B.) Social control functions of law and legal institutions, with particular attention to the contrast between lawways of stateless and tribal societies and contemporary American legal processes and institutions, primarily those of criminal law.
Mr. Emerson, Mr. Katz, Mr. Prager

255A-255B. Selected Issues in Sociological Theory. Seminar. Prerequisite: consent of instructor. Course 255A is not ordinarily prerequisite to 255B. Examination of selected issues and problems in classical or contemporary sociological theory and in the history of the development of sociological theory.
Mr. Champagne

256. Demography. Mr. Bailey, Mr. Sabagh

258. Sociology of Religion.

259. Social Structure and Economic Change: Historical and Comparative Perspectives.
Ms. Cheng, Mr. Surace, Mr. Zeitlin

260. Economy and Society. Discussion, two hours. Prerequisite: graduate standing or consent of instructor. Review and critique of major analytical traditions in economy and society. Mr. Light, Mr. Zeitlin

261. Ethnic Minorities. Mr. Levine, Mr. Seeman

M262. Selected Problems in Urban Sociology. (Same as Afro-American Studies M200C.) Seminar. Prerequisite: consent of instructor. Mr. Light, Mr. Oliver

263. Social Stratification. Mr. Treiman

264. Professions in the American Society. Ms. Oppenheimer

265. Problems in Organization Theory. Mr. Grusky, Ms. Zucker

266. Selected Problems in the Analysis of Conversation. Prerequisite: course C144A or consent of instructor. Mr. Schegloff

267. Selected Problems in Communication. Mr. Pollner, Mr. Schegloff

268. Selected Problems in Psychoanalytic Sociology. Discussion, three hours. Recommended prerequisite: at least one year of methods courses. Selected problems in the interpretation of sociology and psychoanalysis, which may be substantive (group development, socialization, culture, deviance, collective behavior) or methodological; the latter focuses on clinical fieldwork and experimental use of psychoanalytic and sociological techniques. Mr. Rabow

269. Collective Behavior. Mr. Turner

270. Selected Problems in Socialization. Mr. Turner

271. Ethnomethodology. Mr. Garfinkel

272. Topics in Political Sociology. Mr. Roy, Mr. Surace, Mr. Zeitlin

273. Attitudes and Social Structure. Mr. Seeman

274. Selected Problems in the Sociology of Africa. Prerequisites: graduate standing, consent of instructor. Selection of problems in the sociology of Africa from among the following fields: urbanization, racial and ethnic relations, national integration, and political change.

276. Selected Topics in the Sociology of East Asia. Prerequisites: graduate standing, consent of instructor. Selected problems in China, or in China and Japan comparatively. Possible topics include: (1) China's Great Proletarian Cultural Revolution; (2) internal contradictions in Chinese society: male-female relations, the city and the countryside, minority nationalities, class struggle under socialism, etc.; (3) China and Japan: two models of development. Ms. Cheng

278. Selected Problems and Issues in Mass Media Research. Seminar, two hours. Prerequisites: graduate standing, consent of instructor. Foci include methodological problems (surveys, panel studies, content analysis); research on audiences; problems of comparative, international media research; exposure and socialization; social, psychological, and political effects of technological innovation. Mr. Levine

280. Seminar in Evaluation Research. Prerequisite: graduate standing. The technical and political aspects of implementing evaluation research studies. The role of evaluation research in social policy development, as well as procedures for undertaking process and impact evaluations. S/U or letter grading. Mr. Freeman

281. Selected Problems in Mathematical Sociology. Prerequisite: consent of instructor. An exploration of some mathematical models of sociological processes. Possible topics include models of small groups, social mobility, kinship relations, organizations, social interaction. Mr. Bonacich, Mr. McFarland

282. Organizations and the Professions.

284. Topics in Mental Health and Illness. Prerequisites: course 157 or equivalent, graduate standing. Mr. Emerson, Mr. Grusky, Mr. Pollner

285A-285Z. Special Topics in Sociology. Seminar, three hours. Prerequisite: graduate standing. A seminar on selected current topics of sociological interest. See *Schedule of Classes* for topics and instructors. May be repeated for credit.

M287A-M287B. Population Policy and Fertility. (Same as Public Health M274A-M274B.) Lecture, three hours; discussion, one hour. Prerequisites: Public Health 100A, 112, 171A, 171B, or equivalent, graduate standing, consent of instructor. Course M287A is prerequisite to M287B. Analysis of research concerning major issues in population policy, with special emphasis on human fertility. Ms. Blake

M287C. Seminar in Population Policy and Fertility. (Same as Public Health M274C.) Seminar, three hours; discussion, one hour. Prerequisites: courses M287A-M287B or equivalent, graduate standing, consent of instructor. Review of current literature in population policy and fertility in conjunction with student research reports. May not be repeated for credit. Ms. Blake

289A-289B-289C. Social Psychology Seminar (2 units each). Lecture, one hour; discussion, one hour. Prerequisite: graduate standing. Required of students in the social psychology area program, but open to all graduate students in good standing. A forum for the presentation of advanced work in social psychology designed to develop an ability to understand, critically evaluate, and present research in fields relevant to the study of social psychology. May be repeated for credit. S/U grading.

290A-290B-290C. Social Organization and Institutions Seminar (2 units each). Lecture, one hour; discussion, one hour. Prerequisite: graduate standing. Required of students in the social organization and institutions area program, but open to all graduate students in good standing in the department. A seminar for the presentation of advanced work in social organization and institutions designed to contribute to the theoretical and methodological comprehension of work in this area program and to critically evaluate avenues for further research advancements. May be repeated for credit. In Progress and S/U grading. Mr. Oliver

291. Moral Solidarity in Communities. Comparative analysis of social solidarity and the collapse of social solidarity in voluntary and traditional communities. Contrasts more and less solidarity types, with special reference to utopian communities and developmental processes. Mr. Light

292A-292B-292C. Research Development.

293A-293B-293C. Colloquium in Ethnomethodological, Phenomenological, and Observational Sociologies (2 units each). Prerequisites: courses C144A and C144B or 217A-217B or 218A-218B and 222, or consent of instructor. Participants present ongoing work and read and discuss exemplary past work of common interest. A continuing colloquium in which participation is expected of faculty and graduate students affiliated with the ethnomethodological, phenomenological, and observational sociologies area program (students taking a minor field examination may be exempt on request). S/U grading.

294A-294B-294C. Research Seminar in Macrosociology. Discussion, two hours. Prerequisite: consent of instructor. Required of students in the macrosociology area program. Training in the conduct, presentation, and critical evaluation of original research and analysis of substantive and methodological questions in macrosociology. In Progress and S/U grading. Mr. Zeitlin

295A-295B-295C. Seminar in Methods and Models (2 units each). Ongoing seminar in the methods and models area program. A forum in which faculty, students, and visitors make presentations and obtain feedback on research being planned or conducted or recently completed, including didactic presentations on important developments in the area. Students are required to make a presentation each quarter they are enrolled for credit. S/U grading.

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. A teaching apprenticeship under the active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

495A-495B. Supervised Teaching of Sociology (2 units each). Prerequisite: appointment as a teaching assistant in the Sociology Department or equivalent. A special course for teaching assistants designed to deal with the problems and techniques of teaching introductory sociology. S/U grading.

501. Cooperative Program (2 to 8 units). Prerequisite: consent of UCLA graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Course is used to record the enrollment of UCLA students in courses taken under cooperative arrangements with neighboring institutions. S/U grading.

596. Directed Individual Study and Research in Sociology (2 to 12 units).

597. Individual Study for Examinations (4 to 12 units). Preparation for M.A. degree paper or Ph.D. qualifying examinations.

599. Research in Sociology for Ph.D. Candidates (4 to 12 units).

Enrique Rodríguez-Cepeda, Ph.D. *(Spanish)*
A. John Skirius, Ph.D. *(Spanish)*
Paul C. Smith, Ph.D. *(Spanish)*

Assistant Professor

Guillermo Hernández, Ph.D. *(Spanish)*

Lecturers

José M. Cruz-Salvadores, M.A. *(Spanish)*
George L. Voyt, J.D. *(Spanish)*

Scope and Objectives

The Department of Spanish and Portuguese is dedicated to the study and teaching of the languages, literatures, and cultures of the Hispanic heritage in all areas of the world, particularly on the continents of Europe and America. It maintains a strong commitment to the value of original research and professional instruction at all levels of its activities.

Whether studying for the B.A., M.A., or Ph.D. degree, students are given careful guidance in the choice of courses and in the preparation of a study program. The richness of Hispanic culture is amply represented in the extensive range of courses in language, linguistics, and literature. Although the literatures of Spain, Portugal, Brazil, and Spanish America predominate, courses are also offered in Chicano literature. The breadth of courses offered by the department allows undergraduate students to pursue many possible interests and enables graduate students to concentrate in depth in several areas of specialization.

The department's courses are primarily designed to serve the four B.A. programs: the B.A. in Spanish (Plan A), the B.A. in Spanish and Linguistics (Plan B), the B.A. in Portuguese, and the B.A. in Spanish and Portuguese, as well as to prepare students for its three graduate programs: the M.A. in Spanish, the M.A. in Portuguese, and the Ph.D. in Hispanic Languages and Literatures. The courses are also functionally supportive of such interdepartmental programs as the Teaching Credential in Spanish, the B.A. and M.A. programs in Latin American Studies, the M.A. program in Folklore and Mythology, and the M.A. and Ph.D. programs in Comparative Literature and Romance Linguistics and Literature.

Bachelor of Arts in Spanish and in Spanish and Linguistics

Students who have taken Spanish elsewhere and wish to enroll in UCLA Spanish classes for the first time must take the placement test given each quarter during the week before classes begin. Consult the *Schedule of Classes.*

Preparation for the Majors

Required: Spanish 25 or equivalent as determined by the placement test; courses M35, M42, M44, or equivalent.

The Major, Plan A (Spanish Language and Literature)

Required: Fifteen upper division courses, including Spanish 100A, 100B, 105A, 105B, 119A, 119B, 120A-120B, 136A-136B, and five elective courses in the department (one in Spanish literature, one in Spanish-American literature, and three others not including courses 160A, 160B, 160C).

The Major, Plan B (Spanish and Linguistics)

Required: Completion of six quarters of study in one other foreign language or three quarters in each of two other foreign languages, in addition to the preparation for the major courses. Portuguese is recommended.

The major consists of 15 upper division courses, including Spanish 100A, 100B, 105A, 105B, 115, M118A, M118B, Linguistics 100, 103, 110, 120A, 120B, and three electives in Spanish, at least one of which must be in literature.

Honors Program

To qualify for graduation with departmental honors, you must achieve a 3.0 overall grade-point average and a 3.5 grade-point average in the major and have completed two of the three senior honors seminars (Spanish 170A, 170B, 170C) with appropriate grades.

Bachelor of Arts in Portuguese

Preparation for the Major

Required: Portuguese 3, 25, M35, M42, M44, or equivalent.

The Major (Portuguese Language and Literature)

Required: Thirteen upper division courses, including Portuguese 100A, 100B, 105, 120A-120B, 130A-130B, and six elective courses in Portuguese, or four electives in Portuguese plus two courses from areas that complement your program approved by the undergraduate adviser in Portuguese.

Portuguese and Linguistics Concentration

Required: Completion of six quarters of study in one other foreign language or three quarters in each of two other foreign languages, in addition to the preparation for the major courses listed above. Spanish is recommended.

The concentration consists of 13 upper division courses, including Portuguese 100A, 100B, 105, M118A, M118B, Linguistics 100, 103, 110, 120A, 120B, and three electives, two of which must be in Luso-Brazilian literature.

Double Majors

Through judicious use of electives, students may find it possible to secure the B.A. degree with two complete majors (e.g., Portuguese/Spanish, Portuguese/History, Portuguese/Sociology, etc.). Interested students should consult the undergraduate adviser in Portuguese as early as possible in their B.A. program.

Study in a Portuguese-Speaking Country

You are encouraged to spend up to one year in a Portuguese-speaking country to study in a university or conduct research. Appropriate credit may be granted in accordance with your individual program, arranged in consultation with the undergraduate faculty adviser in Portuguese. Proposals must be submitted in advance in writing and must be approved by the department.

Bachelor of Arts in Spanish and Portuguese

Preparation for the Major

Required: Spanish 25, Portuguese 25, M35, M42, M44, or equivalent.

The Major

Required: Six upper division courses in language and linguistics, including Spanish 100A, 100B, Portuguese 100A, 100B, M118A or M118B, and either Spanish 105A or Portuguese 105; nine upper division courses in literature selected from one of the following groups: *group A* (peninsular literature to 1700) — Spanish 123, 124, 127, Portuguese C124, C125, C126, and three other literature courses, one of which must be in Spanish and one in Portuguese; *group B* (peninsular literature from 1700 to the present) — Spanish 128, 130, 133, Portuguese C127, C128, C129, and three other literature courses, one of which must be in Spanish and one in Portuguese; *group C* (Spanish-American and Brazilian literature to 1900) — Spanish 137, 139, 140, Portuguese C131, C132, C133, and three other literature courses, one of which must be in Spanish and one in Portuguese; *group D* (Spanish-American and Brazilian literature from 1900 to the present) — Spanish 142, 143, Portuguese C134, C135, and five other literature courses, two of which must be in Spanish and two in Portuguese.

Master of Arts in Spanish

Admission

Admission to the M.A. program is based on a careful review of your academic record by the graduate admissions committee. Minimum requirements include a B.A. in Spanish or the equivalent from UCLA or another recognized university, a satisfactory score on the Graduate Record Examination (GRE) Aptitude Test, and three letters of recommendation, preferably from professors with whom you have studied in the major field, who can comment on your potential as a graduate student. For admissions information, write to the Department of Spanish and Portuguese, 5303 Rolfe Hall, UCLA, Los Angeles, CA 90024.

You may be required to take one or more complementary courses (which may not be applied toward the M.A.) if the committee determines that some area of your preparation in language or literature is deficient.

Foreign Language Requirement

You are required to study one of the following languages: French, German, Italian, Latin, Portuguese, or another language approved by your guidance committee. The requirement may be fulfilled by (1) passing the Educational Testing Service (ETS) language examination with a score of 500 or better, (2) passing the University reading examination in one of these languages when no ETS examination is available, or (3) passing at least a level three course at UCLA.

Course Requirements

Eleven graduate Spanish courses are required, at least one of which must be a seminar taken only after the appropriate preseminar. Course 596 may be included once; courses 597 and 598 may not be applied toward the degree.

Three plans of study for the M.A. in Spanish are offered: Plan A, Linguistics; Plan B, Literature; Plan C, Linguistics and Literature.

Plan A (Linguistics): Spanish M200, one graduate course in literature offered by the department, and nine elective graduate courses are required. You must select one major field (five courses) and one minor field (three courses) from the following areas of specialization: phonology and morphology; syntax; diachronic or synchronic language variation. One additional course must be selected from an area outside your major and minor fields.

Plan B (Literature): Spanish M200, one course from 202 through 209, and nine elective graduate courses are required. You must select one major field (four courses) and one minor field (three courses) from the following areas of specialization: Spanish literature from its beginnings to 1700; Spanish literature from 1700 to the present; Spanish-American literature from its beginnings to 1900; Spanish-American literature from 1900 to the present. One additional course must be selected from each of the two areas outside your major and minor fields.

Plan C (Linguistics and Literature): Spanish M200 and 10 elective graduate courses, five in literature and five in linguistics, are required. The five literature courses are to be selected from three of the fields specified in Plan B, two courses from each of two areas and one from another. Of the five courses in linguistics, one must be in phonology and morphology, one in syntax, and one in diachronic or synchronic language variation.

Comprehensive Examination Plan

One quarter before you propose to take the comprehensive examination, you must present to your guidance committee reading lists which constitute the basis for your examination. Students in Plan A receive a list of essential reading when they enter the plan and must present one reading list for the major field and one for the minor field. If you are in Plan B, you also must present for approval one reading list in your major field and one in your minor field. Plan C students must present for approval reading lists representing the literature fields (the reading list for linguistics is established by the guidance committee).

Thesis Plan

You may petition to present a thesis in lieu of taking the comprehensive examination only after you complete five graduate courses. The graduate adviser and your committee will approve your petition only if they find evidence of exceptional ability and promise in your term papers and coursework.

Master of Arts in Portuguese

Admission

The UCLA Bachelor of Arts in Portuguese or the equivalent is required. Other admission requirements are the same as those for the M.A. in Spanish.

Major Fields

You must select one major field and two minor fields from the following specialization areas: Portuguese literature; Brazilian literature; Portuguese linguistics.

Foreign Language Requirement

You are required to study one of the following languages: French, German, Italian, Latin, Spanish, or another language approved by your guidance committee. The requirement may be fulfilled by (1) passing the Educational Testing Service (ETS) language examination with a score of 500 or better, (2) passing the University reading examination in one of these languages when no ETS examination is available, or (3) passing at least a level three course at UCLA.

Course Requirements

Portuguese M200, M201, and eight elective graduate courses in Portuguese are required, at least one of which must be a seminar. You must select four courses in your major field and two courses in each of your two minor fields. Course 596 may be included once; courses 597 and 598 may not be applied toward the degree.

Comprehensive Examination Plan

The examination consists of (1) a three-hour written test in your major field and (2) a 90-minute written test in each of your two minor fields. One quarter before you propose to take the comprehensive examination, you must present for approval to your guidance committee one reading list for your major field in literature (approximately 15 authors and 30 works) and one reading list for your minor field in literature (approximately six authors and 15 works). The reading lists form the basis of the literature section of the examination (the reading list for linguistics is established by the guidance committee).

Thesis Plan

You may petition to present a thesis in lieu of taking the comprehensive examination only after you complete five graduate courses, one of which must be a seminar. The graduate adviser and your committee will approve your petition only if they find evidence of exceptional ability and promise in your term papers and coursework.

Ph.D. in Hispanic Languages and Literatures

Admission

The UCLA Master of Arts in Spanish or in Portuguese, or the equivalent, is required. Three letters of recommendation are also required from professors familiar with your work as a graduate student, to be addressed to your capacity for research-oriented doctoral studies and possible entry into the profession. The Graduate Record Examination (GRE) Aptitude Test is also required. A combined score of 1,000 is preferred; the verbal score is considered more important than the quantitative.

Students who hold the M.A. in Spanish or in Portuguese from UCLA fall into one of three categories and are so notified on receipt of the degree. The categories are (1) *low pass* (terminal M.A.) — not eligible for admission into the Ph.D. program; (2) *mid pass* — may continue toward the Ph.D. on a probationary basis; (3) *high pass* — automatically eligible to enter the Ph.D. program.

Major Fields or Subdisciplines

The department recognizes the following areas of specialization, from which you select one major field and two minor fields, together with an optional complementary support area: (1) Spanish linguistics; (2) Portuguese linguistics; (3) diachronic Hispanic linguistics and philology; (4) medieval Spanish literature; (5) Renaissance and Golden Age Spanish literature; (6) 18th- and 19th-century Spanish literature; (7) 20th-century Spanish literature; (8) colonial and 19th-century Spanish-American literature; (9) 20th-century Spanish-American literature; (10) early Portuguese literature;

(11) modern Portuguese literature; (12) Brazilian literature; (13) Spanish and Luso-Brazilian folklore.

Foreign Language Requirement

Reading knowledge of two foreign languages in addition to both Spanish and Portuguese is required. The languages are selected in consultation with your guidance committee. The requirement may be fulfilled by (1) passing the Educational Testing Service (ETS) language examination with a score of 500 or better, (2) passing the University reading examination in the language when no ETS examination is available, or (3) passing at least a level three course at UCLA. You must fulfill the requirement in one of the languages no later than the sixth quarter of graduate study.

Course Requirements

After the B.A., a minimum of 20 graduate courses is required. Spanish or Portuguese M201 may be required if you do not have prior credit for it. You normally take a minimum of six graduate courses in your major field, of which at least two must be seminars. In each of the minor fields, you normally take a minimum of four graduate courses, of which at least one must be a seminar.

Qualifying Examinations

The qualifying examinations, given during the fifth and sixth weeks of the Fall, Winter, and Spring Quarters, consist of (1) a four-hour written examination in the major field; (2) a two-hour written examination in each minor field; (3) a two-hour University Oral Qualifying Examination on the three fields and at which your prospectus for the dissertation is discussed and approved. The written examinations are normally taken no later than nine quarters after receiving the B.A. and six quarters after receiving the M.A. Only students who pass the qualifying examinations are advanced to candidacy for the Ph.D.

Candidate in Philosophy Degree

You are eligible to receive the C.Phil. degree on advancement to candidacy for the Ph.D.

Final Oral Examination

The final oral examination is optional at the committee's discretion.

Spanish

Lower Division Courses

Spanish 1 through 3 use Shumway and Forbes' *Español en español*. The method is inductive. Selected examples are given to enable students to inductively grasp the rules and develop their own grammar. This enables students to use language effectively and creatively. The courses are taught entirely in Spanish — students simultaneously learn to understand, speak, read, and write Spanish.

No credit is allowed for completing a less advanced course after successful completion of a more advanced course in grammar and/or composition.

1. Elementary Spanish. Discussion, five hours; laboratory, one hour. Not open for credit to students who have completed two years of high school Spanish or equivalent with grades of C or better. Students are, however, credited with four units toward the minimum progress requirement. Course is equivalent to the first year of high school Spanish.

1G. Reading Course for Graduate Students. Lecture, three hours. Knowledge of Spanish is not required. May not be applied toward degree requirements. S/U grading.

2. Elementary Spanish. Discussion, five hours; laboratory, one hour. Prerequisite: course 1 or equivalent as determined by the placement test. Not open for credit to students who have completed two years of high school Spanish or equivalent. Students are, however, credited with four units toward the minimum progress requirement.

2G. Reading Course for Graduate Students. Lecture, three hours. Prerequisite: course 1G or equivalent. May not be applied toward degree requirements. S/U grading.

3. Elementary Spanish. Discussion, five hours; laboratory, one hour. Prerequisite: course 2 or equivalent as determined by the placement test. The main grammatical topics include relative clauses; direct vs. indirect speech; imperatives; impersonal constructions; subjunctive: present, imperfect; idioms. Vocabulary of about 400 items and idioms dealing with everyday experience and some selected readings of good authors.

4. Intermediate Spanish. Discussion, five hours; laboratory, one hour. Prerequisite: course 3 or equivalent as determined by the placement test. Grammar review. Also, conditional; imperative and conditional; indicative vs. subjunctive; past perfect of subjunctive; infinitive. Vocabulary of about 400 items and idioms dealing with everyday experience and some literary pieces.

5. Intermediate Spanish. Discussion, five hours; laboratory, one hour. Prerequisite: course 4 or equivalent as determined by the placement test.

8A-8B. Spanish Conversation (2 units each). Discussion, three hours. Course 8A is open to students with credit for course 4 or equivalent. Students who have completed course 3 with a grade of B or better may be admitted. (F,W,Sp)

9A-9B. Advanced Conversation (2 units each). Discussion, three hours. Prerequisite: course 8B or equivalent. (F,W,Sp)

25. Advanced Spanish. Prerequisite: course 5 or equivalent. Concentration on the building of vocabulary and the attainment of a high degree of comprehension in preparation for the courses in literature.

26. Composition for Spanish Speakers. Lecture, three hours. Prerequisites: course 5 or equivalent, consent of instructor. Practice in the reading and writing of Spanish for students with oral proficiency in Spanish (in lieu of Spanish 25).

M35. Spanish, Portuguese, and the Nature of Language. (Same as Portuguese M35.) Lecture, three hours. An introduction to language study within the context of Romance languages, focusing on Spanish and Portuguese. The nature of language: its structure, its diversity, its evolution, its social and cultural settings, its literary uses. The study of language and its relation to other areas of human knowledge.

M42. Civilization of Spain and Portugal. (Same as Portuguese M42.) Required of majors. Highlights of the civilization of Spain and Portugal, with emphasis on their artistic, economic, social, and historical development as background for upper division courses. Conducted in English. Mr. Cruz-Salvadores

M44. Civilization of Spanish America and Brazil. (Same as Portuguese M44.) Required of majors. Highlights of the civilization of Spanish America and Brazil, with emphasis on their artistic, economic, social, and historical development as background for upper division courses. Conducted in English.
Mr. Reeve, Mr. Skirius

Upper Division Courses

Prerequisite to all upper division courses except Spanish 160A-160B-160C is Spanish 25 or equivalent as determined by the placement test.

100A. Introduction to the Study of Spanish Grammar: Phonology and Morphology. (Formerly numbered 100.) Lecture, three hours. Prerequisite: course M35. Analysis of the phonemic and morphological systems of Spanish. Ms. Plann

100B. Introduction to the Study of Spanish Grammar: Syntax. (Formerly numbered 103.) Lecture, three hours. Prerequisite: course M35. A study of the syntactical systems of Spanish.
Mr. Otero, Ms. Plann

105A. Intermediate Composition. (Formerly numbered 105.) Lecture, three hours. Practice in writing Spanish with appropriate vocabulary, syntactical structures, and stylistic patterns.

105B. Advanced Composition. (Formerly numbered 109.) Lecture, three hours. Practice in writing Spanish with appropriate vocabulary, syntactical structures, and stylistic patterns.

107. The Spanish of Southern California. (Formerly numbered 117.) Lecture, three hours. Prerequisites: courses M35, 100A, and 100B, or consent of instructor. Analysis of pronunciation, word formation, syntax, and lexicon of the Spanish of Southern California, with attention to regional features, social and age levels of speech, and interference from English.

115. Applied Linguistics. Lecture, three hours. Prerequisites: courses M35, 100B. Survey of the major linguistic problems faced by the teacher of Spanish.
Ms. Plann

M118A. The History of Portuguese and Spanish: Phonology. (Formerly numbered 118A.) (Same as Portuguese M118A.) Lecture, three hours. Prerequisites: courses M35, 100A. Major features of the development of the Portuguese and Spanish languages from their origins in Vulgar Latin to modern times. Ms. Plann, Mr. Quícoli, Mr. Smith

M118B. The History of Portuguese and Spanish: Morphology and Syntax. (Formerly numbered 118B.) (Same as Portuguese M118B.) Lecture, three hours. Prerequisites: courses M35, 100B. Major features of the development of the Portuguese and Spanish languages from their origins in Vulgar Latin to modern times. Mr. Otero, Ms. Plann, Mr. Quícoli

119A. Introduction to the Study of Literature: Prose. (Formerly numbered 119.) Lecture, three hours. An introduction to the study of literary devices, figures of speech, and distinctive stylistic features in the prose literature of Spain and Spanish America, particularly in the novel and essay.

119B. Introduction to the Study of Literature: Poetry and Drama. (Formerly numbered 119.) Lecture, three hours. An introduction to the study of literary devices, figures of speech, versification, and distinctive stylistic features in the poetry and drama of Spain and Spanish America.

120A-120B. Survey of Spanish Literature. Lecture, three hours. An introduction to the principle periods, currents, and authors of Spanish literature.
Mr. Gimeno, Mr. Johnson, Mr. Rodríguez-Cepeda

122. Medieval Literature: Prose. Lecture, three hours. Recommended prerequisite: course 120A. A study of the main genres through representative works. Mr. Gimeno

123. Medieval Literature: Poetry. (Formerly numbered 122.) Lecture, three hours. Recommended prerequisite: course 120A. A study of the main genres through representative works. Mr. Gimeno

124. The Golden Age: Poetry and Drama. Lecture, three hours. Recommended prerequisite: course 120A. A study, through representative works, of the Golden Age poetry and drama.
Mr. Johnson, Mr. Rodríguez-Cepeda

127. The Golden Age: *Don Quijote.* Lecture, three hours. Recommended prerequisite: course 120A. The development of the novel in the Golden Age, with particular reference to *Don Quijote.*
Mr. Johnson, Mr. Rodríguez-Cepeda

128. The Enlightenment and Romanticism in Spain. Lecture, three hours. Recommended prerequisite: course 120B. A study, through representative works, of the main manifestations of thought and literature from 1700 to 1850.
Mr. Benítez, Mr. Rodríguez-Cepeda

130. Post-Romanticism, Realism, and Naturalism in Spain. Lecture, three hours. Recommended prerequisite: course 120B. The development of the main trends of Spanish literature from 1850 to 1898.
Mr. Benítez, Mr. Smith

132. 20th-Century Spanish Prose. (Formerly numbered 132B.) Lecture, three hours. Recommended prerequisite: course 120B. A study of several representative works of Spanish prose literature since 1898. Mr. Morris

133. 20th-Century Spanish Poetry and Drama. (Formerly numbered 132A.) Lecture, three hours. Recommended prerequisite: course 120B. A study of several representative works of Spanish poetry and drama since 1898. Mr. Morris

136A-136B. Survey of Spanish-American Literature. (Formerly numbered 121A-121B.) Lecture, three hours. An introduction to the principal periods, currents, and authors of Spanish-American literature.
Ms. Arora, Mr. Luzuriaga, Mr. Oviedo, Mr. Reeve, Mr. Skirius

137. The Literature of Colonial Spanish America. Lecture, three hours. Recommended prerequisite: course 136A. A study of the most important genres and authors from the Conquest to 1810.
Ms. Arora, Mr. Oviedo

139. Romanticism and Realism in Spanish-American Literature. Lecture, three hours. Recommended prerequisite: course 136A. A study, through representative literary works, of the most important currents of thought and literary trends from 1810 to 1880.
Mr. Luzuriaga, Mr. Oviedo, Mr. Reeve, Mr. Skirius

140. *Modernismo.* Lecture, three hours. Recommended prerequisite: course 136A. A study, through representative works, of the principal characteristics of *modernismo* in Spanish-American literature.
Mr. Luzuriaga

142. 20th-Century Spanish-American Literature: Fiction and the Essay. (Formerly numbered 142B.) Lecture, three hours. Recommended prerequisite: course 136B. A study, through representative novels, short stories, and essays, of Spanish-American prose literature since 1910.
Mr. Luzuriaga, Mr. Reeve, Mr. Skirius

143. 20th-Century Spanish-American Literature: Poetry and Drama. (Formerly numbered 142A.) Lecture, three hours. Recommended prerequisite: course 136B. A study of the principal poets, dramatists, and dramatic movements in Spanish-American literature since 1910. Mr. Reeve, Mr. Skirius

144. Mexican Literature. (Formerly numbered 141.) Lecture, three hours. Recommended prerequisite: course 136B. A study of the major movements and authors of Mexican literature.
Mr. Reeve, Mr. Skirius

M145. Introduction to Chicano Literature. (Same as Chicano Studies M145.) Lecture, three hours. Prerequisite: course 25 or 26. Recommended: course 136B. Introduction to texts representative of the Chicano literary heritage. A sampling of genres, as well as historical and geographical settings and points of view characteristic of work written by Chicanos during the 20th century. Most of the required reading is in Spanish. Bilingual and English works are included and discussed. Reading and analysis of a number of important scholarly and critical statements pertaining to the characteristics and development of the Chicano literary corpus. Mr. Hernández

M149. Folk Literature of the Hispanic World. (Same as Folklore M149.) Lecture, three hours. A study of the history and present dissemination of the principal forms of folk literature throughout the Hispanic countries. Ms. Arora

160A-160B-160C. Hispanic Literatures in Translation. Lecture, three hours. Class readings and analysis of selected works in translation. Classroom discussion, papers, and examinations in English:

160A. Spain and Portugal.

160B. Spanish America and Brazil.

160C. *Don Quijote* in English Translation. Class reading and analysis of Cervantes' *Don Quijote.*
Mr. Johnson

161. Film and Literature of the Spanish-Speaking World. Lecture, three hours. A topical analysis (conducted in English) of the main literary and historical themes of Hispanic culture through films and literary texts. Course 197 may not be taken concurrently for credit. Ms. Morris

170A. Senior Honors Seminar: Topics in Spanish Literature. Lecture, three hours. Prerequisite: senior Spanish major with a 3.5 GPA in the major. Directed research on topics within the general area of Spanish literature. Two senior seminars required for departmental honors. (F)

170B. Senior Honors Seminar: Topics in Spanish-American Literature. Lecture, three hours. Prerequisite: senior Spanish major with a 3.5 GPA in the major. Directed research on topics within the general area of Spanish-American literature. Two senior seminars required for departmental honors. (W)

170C. Senior Honors Seminar: Topics in Hispanic Linguistics. Lecture, three hours. Prerequisite: senior Spanish major with a 3.5 GPA in the major. Directed research on topics within the general area of Hispanic linguistics. Two senior seminars required for departmental honors. (Sp)

197. Undergraduate Seminar. Lecture, three hours. Prerequisites: upper division Spanish major, consent of instructor. Limited to 15 students. A variable topics course with readings, discussions, and papers; consult the *Schedule of Classes* or department counselor for topic to be offered in a specific quarter.

197A. Studies in Hispanic Culture and Civilization. Lecture, three hours. Required of students preparing for a California state teaching credential in Spanish. An advanced course that studies diverse aspects of Hispanic culture, civilization, and history. Classroom discussions, papers, and examinations in Spanish.

199. Special Studies (2 to 4 units). Prerequisite: consent of adviser and instructor. Eight units may be applied toward the major requirements.

Graduate Courses

M200. Research Resources. (Same as Portuguese M200.) Lecture, three hours. Identification and use of research resources for graduate students.
Mr. Benítez, Mr. Smith

M201. Literary Theory and Criticism. (Same as Portuguese M201.) Lecture, three hours. Definition, discussion, and application of the main currents of contemporary literary theory and criticism.
Mr. Benítez, Mr. Otero

202. Phonology and Morphology. (Formerly numbered 206.) Lecture, three hours. The phonological and morphological systems of Spanish and their interaction. Mr. Otero, Ms. Plann

204A-204B. Generative Grammar. Lecture, three hours. Prerequisite: consent of instructor. Course 204A or consent of instructor is prerequisite to 204B. A generative approach to the Spanish language, with some consideration of the bearing of syntax, semiology, and phonology on style, metaphor, and meter.
Mr. Otero

M205A-M205B. The Development of the Portuguese and Spanish Languages. (Formerly numbered M203A-M203B.) (Same as Portuguese M205A-M205B.) Lecture, three hours. Intensive study of the historical development of the Portuguese and Spanish languages from their origin in spoken Latin.
Mr. Otero, Mr. Smith

209. Dialectology. Lecture, three hours. The major dialect areas of peninsular and American Spanish, with the distinguishing features of each. Influence and contribution of cultural and historical features, including indigenous languages, to their formation.

221. Medieval Lyric Poetry. (Formerly numbered 222.) Lecture, three hours. Readings of and lectures on Spanish lyric poetry from the beginning to 1500.
Mr. Gimeno

222. Medieval Epic and Narrative Poetry. (Not the same as course 222 prior to Fall Quarter 1984.) Lecture, three hours. Readings of and lectures on Spanish epic and narrative poetry from the beginning to 1500. Mr. Gimeno

223. Medieval Prose. Lecture, three hours. Readings of and lectures on Spanish prose from the beginning to 1500. Mr. Gimeno

224. Poetry of the Golden Age. Lecture, three hours. Readings of and lectures on Spanish poetry from 1500 to 1700.
Mr. Morris, Mr. Rodríguez-Cepeda

225. Drama of the Golden Age. Lecture, three hours. Readings of and lectures on the *comedia.*
Mr. Rodríguez-Cepeda

226. Prose of the Golden Age. Lecture, three hours. Readings of and lectures on fictional, didactic, religious, and historial writings. Mr. Johnson

227. Cervantes. Lecture, three hours. Readings of and lectures on the works of Cervantes.
Mr. Johnson

228. The Enlightenment. Lecture, three hours. Readings of and lectures on representative works of the period. Mr. Benítez

229. Romanticism. (Formerly numbered 230.) Lecture, three hours. Readings of and lectures on representative works of the period. Mr. Benítez

230. Realism and Naturalism. (Formerly numbered 231.) Lecture, three hours. Readings of and lectures on literary works, principally novels, from 1850 to 1898. Mr. Benítez, Mr. Smith

231. Major Currents in Modern Spanish Literature. Lecture, three hours. An introduction to major literary currents, including symbolism, Parnassianism, and the Generation of 1898. Mr. Morris

232. Spanish Prose Literature from 1898 to the Civil War. Lecture, three hours. Readings of and lectures on representative essays, novels, and short stories of the period. Mr. Morris

233. Spanish Prose Literature after the Civil War. (Formerly numbered 235.) Lecture, three hours. Readings of and lectures on representative essays, novels, and short stories of the period. Mr. Morris

234. Spanish Drama and Poetry from 1898 to the Civil War. Lecture, three hours. Readings of and lectures on representative plays and poems.
Mr. Morris

235. Spanish Drama and Poetry after the Civil War. (Formerly numbered 233 and 234.) Lecture, three hours. Readings of and lectures on representative plays and poems of the period. Mr. Morris

237. Literature of the Spanish Conquest. Lecture, three hours. Readings of and lectures on chronicles, poems, and indigenous accounts of the Spanish Conquest. Ms. Arora

238. Baroque, Enlightenment, and Neoclassicism in Colonial Literature. Lecture, three hours. Readings of and lectures on representative texts. Ms. Arora, Mr. Oviedo

239. Romanticism and Realism in Spanish-American Literature. Lecture, three hours. Intensive study of Romanticism and realism in Spanish-American literature. Mr. Oviedo, Mr. Skirius

240. Major Currents in Modern Spanish-American Literature. Lecture, three hours. A study of principal trends in modern Spanish-American literature, particularly *naturalismo* and *modernismo*. Mr. Luzuriaga

241A-241B. Contemporary Spanish-American Short Story. (Formerly numbered 244.) Lecture, three hours. A study of the important short story writers from modernism to the present. Mr. Oviedo, Mr. Reeve

243A-243B. Contemporary Spanish-American Poetry. (Formerly numbered 243.) Lecture, three hours. Intensive study of the important poets of Spanish America from modernism to the present. Mr. Oviedo

244A-244B. Contemporary Spanish-American Novel. (Formerly numbered 244.) Lecture, three hours. A study of the important novelists from modernism to the present. Mr. Oviedo, Mr. Reeve

245. Contemporary Spanish-American Essay. Lecture, three hours. A study of the important Spanish-American essayists of the 20th century. Mr. Skirius

246. Contemporary Spanish-American Drama. Lecture, three hours. A study of the principal Spanish-American dramatists and theater movements in the 20th century. Mr. Luzuriaga

247. Chicano Literature. Lecture, three hours. A study of the major movements and authors of Mexican-American literature. Mr. Hernández

M249. Folk Literature of the Spanish and Portuguese Worlds. (Same as Folklore M249 and Portuguese M249.) Lecture, three hours. An intensive study of the folk literature of the Spanish and Portuguese cultures as represented in (1) ballad and poetry, (2) narrative and drama, (3) speech. Ms. Arora

Seminar courses (M251A through M286B) may be taken for a maximum of eight units each with consent of the appropriate guidance committee and with topic change.

M251A-M251B. Studies in Galegan-Portuguese and Old Spanish. (Formerly numbered M251.) (Same as Portuguese M251A-M251B.) Lecture, two hours. A study of the problems related to the historical development of Galegan-Portuguese and Old Spanish. Mr. Otero, Mr. Smith

256A-256B. Studies in Spanish Linguistics. (Formerly numbered 256A.) Lecture, two hours. A study of problems in the analysis and description of the contemporary Spanish language. Mr. Otero

257. Studies in Dialectology. (Formerly numbered 256B.) Lecture, two hours.

262A-262B. Studies in Medieval Spanish Literature. (Formerly numbered 262A-262B-262C.) Lecture, two hours. Mr. Gimeno

264A-264B. Studies in Golden Age Spanish Literature. (Formerly numbered 264A-264D.) Lecture, two hours. Mr. Johnson, Mr. Morris, Mr. Rodríguez-Cepeda

265. Cervantes. (Formerly numbered 264D.) Lecture, two hours. Mr. Johnson

270A-270B. Studies in 18th-Century Spanish Literature. (Not the same as courses 270A-270B prior to Fall Quarter 1984.) Lecture, two hours. Mr. Benítez

271A-271B. Studies in 19th-Century Spanish Literature. (Formerly numbered 270A-270B.) Lecture, two hours. Mr. Benítez, Mr. Smith

272A-272B. Studies in 20th-Century Spanish Literature. (Formerly numbered 272A-272D.) Lecture, two hours. Mr. Morris

277A-277B. Studies in Colonial Spanish-American Literature. (Formerly numbered 277.) Lecture, two hours. Ms. Arora

278A-278B. Studies in 19th-Century Spanish-American Literature. (Formerly numbered 278.) Lecture, two hours. Mr. Oviedo

280A-280B. Studies in Contemporary Spanish-American Literature. (Formerly numbered 280A-280D.) Lecture, two hours. Mr. Luzuriaga, Mr. Oviedo

281. Studies in Chicano Literature. Discussion, two hours. Mr. Hernández

M286A-M286B. Studies in Hispanic Folk Literature. (Formerly numbered M286A-M286B-M286C.) (Same as Folklore M286A-M286B.) Lecture, two hours. Ms. Arora

290. Special Topics. Lecture, two hours. Variable topics; consult the *Schedule of Classes* or department counselor for topics to be offered in a specific quarter.

310. The Teaching of Spanish in the Elementary School. Lecture, three hours.

370. The Teaching of Spanish in the Secondary School. Lecture, three hours.

373. The Teaching of Composition (2 units). Prerequisites: graduate standing, consent of instructor. Seminar on teaching writing in Spanish language courses. Introduction to composition theory. Instruction and practice in integrating writing into the curriculum, setting goals and standards, designing and sequencing course materials, evaluating and commenting on papers. May not be repeated for credit. S/U grading.

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. A teaching apprenticeship under the active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

495. The Teaching of Spanish at the College Level. Prerequisite: graduate standing in department. Basic concepts of modern theories of language and language acquisition which underlie modern methods of second language teaching. S/U grading.

596. Directed Individual Study or Research (4 to 8 units). Prerequisite: consent of graduate adviser and chair. Study or research in areas or subjects not offered as regular courses. No more than four units may be applied toward the M.A. course requirements.

597. Preparation for Graduate Examinations (4 to 8 units). Prerequisites: successful completion of all coursework for the degree, consent of graduate adviser. Individual preparation for M.A. comprehensive examination or Ph.D. qualifying examinations. May be taken only once for each degree examination and only in the quarter that comprehensive or qualifying examinations are to be taken. S/U grading.

598. Research for M.A. Thesis (4 to 8 units). Prerequisite: consent of guidance committee. Research in preparation of M.A. thesis. S/U grading.

599. Research for Ph.D. Dissertation (4 to 8 units). Limited to students who have passed the Ph.D. qualifying examinations. Research for and preparation of Ph.D. dissertation. S/U grading.

Portuguese

Lower Division Courses

No credit is allowed for completing a less advanced course after completion of a more advanced course in grammar and/or composition.

1. Elementary Portuguese. Discussion, five hours; laboratory, one hour.

2. Elementary Portuguese. Discussion, five hours; laboratory, one hour. Prerequisite: course 1 or equivalent.

3. Intermediate Portuguese. Discussion, five hours; laboratory, one hour. Prerequisite: course 2 or equivalent.

8A-8B. Portuguese Conversation (2 units each). Discussion, three hours. Prerequisite: course 3 with a grade of B or better.

25. Advanced Portuguese. Prerequisite: course 3 or equivalent.

M35. Spanish, Portuguese, and the Nature of Language. (Same as Spanish M35.) Lecture, three hours. An introduction to language study within the context of Romance languages, focusing on Spanish and Portuguese. The nature of language: its structure, its diversity, its evolution, its social and cultural settings, its literary uses. The study of language and its relation to other areas of human knowledge.

M42. Civilization of Spain and Portugal. (Same as Spanish M42.) Required of majors. Highlights of the civilization of Spain and Portugal, with emphasis on their artistic, economic, social, and historical development as background for upper division courses. Conducted in English. Mr. Cruz-Salvadores

M44. Civilization of Spanish America and Brazil. (Same as Spanish M44.) Required of majors. Highlights of the civilization of Spanish America and Brazil, with emphasis on their artistic, economic, social, and historical development as background for upper division courses. Conducted in English. Mr. Reeve, Mr. Skirius

Upper Division Courses

100A. Phonology and Morphology. (Formerly numbered 100.) Lecture, three hours. Analysis of the phonetic, phonemic, and morphological systems of Portuguese. Mr. Quícoli

100B. Syntax. (Formerly numbered 103.) Lecture, three hours. A review of the patterns of the Portuguese language. Mr. Quícoli

101A. Advanced Reading and Conversation. Lecture, three hours. Reading and discussion of writings by modern Brazilian and Portuguese authors.

102A-102B. Intensive Portuguese. Prerequisite: foreign language experience (other than Portuguese) or consent of instructor. Development of speaking and reading skills equivalent to those covered in the three quarters of the traditional pattern and to meet the special needs of advanced undergraduate and graduate students.

105. Advanced Composition and Style. (Formerly numbered 101B.) Practice in writing Portuguese with appropriate vocabulary, syntactical structures, and stylistic patterns.

M118A. The History of Portuguese and Spanish: Phonology. (Formerly numbered 118.) (Same as Spanish M118A.) Lecture, three hours. Prerequisites: courses M35, 100A. Major features of the development of the Portuguese and Spanish languages from their origins in Vulgar Latin to modern times. Ms. Plann, Mr. Quícoli, Mr. Smith

M118B. The History of Portuguese and Spanish: Morphology and Syntax. (Formerly numbered 118.) (Same as Spanish M118B.) Lecture, three hours. Prerequisites: courses M35, 100B. Major features of the development of the Portuguese and Spanish languages from their origins in Vulgar Latin to modern times. Ms. Plann, Mr. Quícoli, Mr. Smith

120A-120B. Survey of Portuguese Literature. Lecture, three hours. An introduction to the principal periods, currents, and authors of Portuguese literature. Mr. Dias

C124. Medieval Portuguese Literature. Lecture, three hours. A study of the main genres of medieval Portuguese and Galician literature through representative works. May be concurrently scheduled with course C224. Mr. Dias

C125. Renaissance Portuguese Literature. (Formerly numbered C126.) Lecture, three hours. A study of the main genres of Renaissance Portuguese literature, with particular emphasis on the works of Luis de Camoens. May be concurrently scheduled with course C225. Mr. Dias

C126. Baroque and Neoclassical Portuguese Literature. (Not the same as course C126 prior to Fall Quarter 1985.) Lecture, three hours. A study of the main genres of baroque and neoclassical Portuguese literature through representative works. May be concurrently scheduled with course C226. Mr. Dias

C127. Romanticism and Realism in Portuguese Literature. (Formerly numbered C128.) Lecture, three hours. A study of the principal features through representative works. May be concurrently scheduled with course C227. Mr. Dias

C128. Post-Romanticism and Naturalism in Portuguese Literature. (Not the same as course C128 prior to Fall Quarter 1985.) Lecture, three hours. A study of the principal features through representative works. May be concurrently scheduled with course C228. Mr. Dias

C129. 20th-Century Portuguese Literature. (Formerly numbered C136.) Lecture, three hours. A study of representative trends and authors. May be concurrently scheduled with course C229. Mr. Dias

130A-130B. Survey of Brazilian Literature. (Formerly numbered 121A, 121B.) Lecture, three hours. An introduction to the principal periods, currents, and authors of Brazilian literature. Mr. Hulet

C131. Colonial Brazilian Literature. (Formerly numbered C127.) Lecture, three hours. A study of the most important authors to 1830. May be concurrently scheduled with course C231. Mr. Hulet

C132. Romanticism in Brazilian Literature. (Formerly numbered C129.) Lecture, three hours. A study of representative trends and authors. May be concurrently scheduled with course C232. Mr. Hulet

C133. Naturalism, Realism, and Symbolism in Brazilian Literature. (Formerly numbered C135.) Lecture, three hours. A study of representative trends and authors. May be concurrently scheduled with course C233. Mr. Hulet

C134. 20th-Century Brazilian Literature: Poetry and Drama. (Formerly numbered C137.) Lecture, three hours. A study of representative trends and authors. May be concurrently scheduled with course C234. Mr. Hulet

C135. 20th-Century Brazilian Literature: Novel. (Formerly numbered C137.) Lecture, three hours. A study of the most important Brazilian novelists. May be concurrently scheduled with course C235. Mr. Hulet

140. Portuguese, Brazilian, and African Literature in Translation. (Formerly numbered 140A-140B.) Lecture, three hours. Reading and discussion of selected works in translation. Papers and examinations in English. Mr. Dias, Mr. Hulet

141. Film and Literature of the Portuguese-Speaking World. (Formerly numbered 141B.) Lecture, three hours. Not open for credit to students with credit for course 197. A topical analysis (conducted in English) of the main literary and historical themes of Brazilian culture, through films and literary texts, from colonial beginnings to the present day.

197. Undergraduate Seminar. Lecture, three hours. A variable topics course with readings, discussions, and papers; consult the *Schedule of Classes* or department counselor for topic to be offered in a specific quarter.

199. Special Studies (2 to 4 units). Prerequisite: consent of adviser and instructor. Eight units may be applied toward the major requirements.

Graduate Courses

M200. Research Resources. (Same as Spanish M200.) Lecture, three hours. Identification and use of research resources for graduate students. Mr. Benítez, Mr. Smith

M201. Literary Theory and Criticism. (Same as Spanish M201.) Lecture, three hours. Definition, discussion, and application of the main currents of contemporary literary theory and criticism. Mr. Benítez, Mr. Otero

202. Synchronic Morphology and Phonology. (Formerly numbered 206.) Lecture, three hours. A study of theoretical synchronic linguistics as applied to Portuguese. Mr. Quícoli

204A-204B. Generative Grammar. Lecture, three hours. Prerequisite: consent of instructor. Course 204A or consent of instructor is prerequisite to 204B. A generative approach to the Portuguese language, with some consideration of the bearing of syntax, semiology, and phonology on style, metaphor, and meter. Mr. Quícoli

M205A-M205B. The Development of the Portuguese and Spanish Languages. (Formerly numbered M203A-M203B.) (Same as Spanish M205A-M205B.) Lecture, three hours. Intensive study of the historical development of the Portuguese and Spanish languages from their origin in spoken Latin. Mr. Otero, Mr. Smith

C224. Medieval Portuguese Literature. (Formerly numbered C242A.) Lecture, three hours. A study of the main genres of medieval Portuguese and Galician literature through representative works. May be concurrently scheduled with course C124. Mr. Dias

C225. Renaissance Portuguese Literature. (Formerly numbered C242B.) Lecture, three hours. A study of the main genres of Renaissance Portuguese literature, with particular emphasis on the works of Luis de Camoens. May be concurrently scheduled with course C125. Mr. Dias

C226. Baroque and Neoclassical Portuguese Literature. (Formerly numbered C242B). Lecture, three hours. A study of the main genres of baroque and neoclassical Portuguese literature through representative works. May be concurrently scheduled with course C126. Mr. Dias

C227. Romanticism and Realism in Portuguese Literature. (Formerly numbered C242C.) Lecture, three hours. A study of the principal features through representative works. May be concurrently scheduled with course C127. Mr. Dias

C228. Post-Romanticism and Naturalism in Portuguese Literature. (Formerly numbered C242C.) Lecture, three hours. A study of the principal features through representative works. May be concurrently scheduled with course C128. Mr. Dias

C229. 20th-Century Portuguese Literature. (Formerly numbered C242D.) Lecture, three hours. A study of representative trends and authors. May be concurrently scheduled with course C129. Mr. Dias

C231. Colonial Brazilian Literature. (Formerly numbered C243A.) Lecture, three hours. A study of the most important authors to 1830. May be concurrently scheduled with course C131. Mr. Hulet

C232. Romanticism in Brazilian Literature. (Formerly numbered C243B.) Lecture, three hours. A study of representative trends and authors. May be concurrently scheduled with course C132. Mr. Hulet

C233. Naturalism, Realism, and Symbolism in Brazilian Literature. (Formerly numbered C243C.) Lecture, three hours. A study of representative trends and authors. May be concurrently scheduled with course C133. Mr. Hulet

C234. 20th-Century Brazilian Literature: Poetry and Drama. (Formerly numbered C243D.) Lecture, three hours. A study of representative trends and authors. May be concurrently scheduled with course C134. Mr. Hulet

C235. 20th-Century Brazilian Literature: Novel. (Formerly numbered C243D.) Lecture, three hours. A study of the most important Brazilian novelists. May be concurrently scheduled with course C135. Mr. Hulet

M249. Folk Literature of the Spanish and Portuguese Worlds. (Same as Folklore M249 and Spanish M249.) Lecture, three hours. An intensive study of the folk literature of the Spanish and Portuguese cultures as represented in (1) ballad and poetry, (2) narrative and drama, (3) speech. Ms. Arora

M251A-M251B. Studies in Galegan-Portuguese and Old Spanish. (Formerly numbered M251.) (Same as Spanish M251A-M251B.) Lecture, two hours. A study of the problems related to the historical development of Galegan-Portuguese and Old Spanish. Mr. Otero, Mr. Smith

252. Studies in Early Portuguese Literature. (Formerly numbered 252A-252B-252C.) Lecture, two hours. Mr. Dias

253. Studies in Modern Portuguese Literature. (Formerly numbered 252A-252B-252C.) Lecture, two hours. Mr. Dias

254. Studies in Early Brazilian Literature. (Formerly numbered 253A-253B-253C.) Lecture, two hours. Mr. Hulet

255. Studies in Modern Brazilian Literature. (Formerly numbered 253A-253B-253C.) Lecture, two hours. Mr. Hulet

370. The Teaching of Portuguese in the Secondary School. For future teachers in this field. Mr. Hulet

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. A teaching apprenticeship under the active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading. Mr. Quícoli

596. Directed Individual Study or Research (4 to 8 units). Prerequisite: consent of graduate adviser and chair. Study or research in areas or subjects not offered as regular courses. No more than eight units may be applied toward the M.A. course requirements.

597. Preparation for Graduate Examinations (4 to 8 units). Prerequisites: official acceptance of candidacy by the department, consent of graduate adviser. Individual preparation for M.A. comprehensive examination or Ph.D. qualifying examinations. May be taken only once for each degree examination and only in the quarter that comprehensive or qualifying examinations are to be taken. S/U grading.

598. Research for M.A. Thesis (4 to 8 units). Prerequisite: consent of guidance committee. Research in preparation of M.A. thesis. S/U grading.

599. Research for Ph.D. Dissertation (4 to 8 units). Limited to students who have passed the Ph.D. qualifying examinations. Research for and preparation of Ph.D. dissertation. S/U grading.

Speech

Professors
Donald E. Hargis, Ph.D., *Emeritus*
Charles W. Lomas, Ph.D., *Emeritus*

Associate Professors
Neil M. Malamuth, Ph.D. *(Communication Studies), Chair*
Paul Irwin Rosenthal, Ph.D. *(Communication Studies)*
Ralph Richardson, Ph.D., *Emeritus*

Lecturers
Dale V. Atkins, Ph.D.
Dee A. Bridgewater, Ph.D.
Stephen A. Doyle
Eugenie Dye, Ph.D.
Marde S. Gregory
Thomas E. Miller
Sonya H. Packer

There is no major in speech; however, the following undergraduate courses are offered for interested students:

Lower Division Courses

1. Principles of Oral Communication. Prerequisite: satisfaction of Subject A requirement. Theory and practice of informal public speaking, including selection of content, organization of ideas, language, and delivery; practice in extemporaneous and manuscript speaking; training in critical analysis through reading and listening to contemporary speeches.

2. Public Speaking and Discussion. Prerequisite: course 1. A continuation of course 1, with special emphasis on group discussions, panels, symposia, debates, and formal public speaking. Critical analysis of speeches in both contemporary and historical settings.

Upper Division Courses

107. Principles of Argumentation. Analysis of propositions, tests of evidence, briefing. Study of hindrances to clear thinking, ambiguity of terms, and prejudices. The critical analysis of selected argumentative speeches. Mr. Miller

144. Speech and Community Action. Prerequisite: consent of instructor. An intensive laboratory-based, observation-oriented study of speech and communication practices of action groups, protest groups, and public officials involved with the metropolitan Los Angeles urban crises. Mr. Richardson

175. The Speeches of Abraham Lincoln. Introduction to the full span of Lincoln's speaking career. His methods of preparation, the influence of associates, his style, his delivery, and lastly, his effect on the nation. Mr. Richardson (W)

190A-190B. Forensics (2 units each). Prerequisite: consent of instructor. May be repeated once for credit. Mr. Miller

191. Analysis and Briefing (2 units). Intensive study of selected political or social issues; preparation of bibliography; analysis and evaluation of issues and arguments. May be repeated once for credit. Mr. Miller

197. Proseminar in Rhetoric. Prerequisite: senior standing or consent of instructor. A variable topics course involving intensive study of discourse associated with a single major issue or personality.

199. Special Studies (2 to 4 units). Prerequisites: senior standing, consent of instructor.

Study of Religion

See Religion, Study of

Teacher Education

The College of Letters and Science offers a program of courses through which you may receive credit toward a credential to teach in California elementary schools. For details, see "Diversified Liberal Arts" earlier in this chapter.

Urban Studies or Organizational Studies
(Interdepartmental)

4289 Bunche Hall, (213) 825-4331

Scope and Objectives

Cities and organizations are multifaceted and can usefully be explored from more than one disciplinary perspective. The Special Program in Urban Studies or Organizational Studies brings together students and faculty from the Departments of History, Political Science, Economics, Sociology, Psychology, and Geography who share an interest in the modern city or in modern organizations. The programs give students a solid grounding in the urban or organizational perspectives and methods of at least two departments. Each of the programs must be taken in conjunction with a major in the social sciences.

Special Undergraduate Programs

You may elect to combine one of these programs with a departmental major and may petition to have the area of specialization recognized with the bachelor's degree.

The option of completing an individual major in urban studies or organizational studies is also open to qualified students. For more information on individual majors, see the beginning of Chapter 5.

If you have a departmental major, you should seek advising in your major department. If you are interested in the individual major, consult a Letters and Science counselor.

Courses within each specialization must be taken for a letter grade. The specializations must be taken in conjunction with a major in the division of social sciences.

Preparation for the Programs

Required: At least five of the following courses appropriate to the courses to be taken in the specialization: Economics 1 and 2; Sociology 18 and 109 or equivalent; Political Science 40 (urban studies), 80 (organizational studies); Psychology 10; Sociology 1; Geography 4.

Consult the Political Science departmental counselor regarding pending changes in the following programs.

Urban Studies Specialization

Required: (1) At least three courses outside the major department selected from Political Science 182A, Sociology 125, Economics 120, Geography 150, Anthropology 167, Psychology 168; (2) a minimum of three courses selected from the following suites outside the major department: Political Science 180, 182B, 188B; Economics 121, 130, 133; Sociology 124, 154, 155; Geography 145, 146, 150, 151, 152, 156; History 154A, 154B, 154C, 154D; Psychology 127, 135, 137A; (3) internship experience in an urban governmental or community service organization.

Organizational Studies Specialization

Required: (1) At least three courses outside the major department selected from Political Science 190, Sociology 121, 141, Management 190; (2) a minimum of three courses selected from the following suites outside the major department: Political Science 142, 145, 146, 186; Economics 101A, 147A, 147B, 170, 171; Sociology 124, 140, 152, 154; Geography 146, 148, 149; Psychology 135, 137A, 148; (3) internship experience in a governmental or service organization.

For further information, contact Professor Robert Fried at the program address.

Sylvia Rodríguez, Ph.D. *(Anthropology)*

Scope and Objectives

The Women's Studies Program, established in 1975, is an interdisciplinary academic program offering an undergraduate specialization. Students completing a bachelor's degree in the College of Letters and Science may petition to receive a women's studies specialization in addition to a major in their chosen discipline.

The program spans departments, disciplines, and ideologies. It integrates the study of women — their social contributions and cultural experiences — into traditional academic fields, drawing on new research and theories. Women's studies offer tools for personal growth, new knowledge about women and men, and new perspectives for understanding the past and present and influencing the future.

The core faculty members who teach women's studies courses come from various UCLA departments and professional schools. Many professionals within and outside the University contribute their time, expertise, and enthusiasm. The program sponsors a Student Association for Women's Studies and assists other student groups with extracurricular programming on feminist issues. Research in women's studies is sponsored in cooperation with the recently established Center for the Study of Women. A library of information related to women's studies is housed in the program office.

While no formal graduate program exists at UCLA at this time, graduate students are invited to use the program's resources, attend lectures and events, and participate in the faculty seminar on women, culture, and theory.

Special Undergraduate Program

Admission

A women's studies committee composed of the director, faculty members, and a student representative sets program policies and curricula. To be admitted to the specialization, you must have a grade-point average of 2.0 or better and must formally register with the program. You are encouraged to declare your specialization in women's studies as early as possible and to discuss your proposed course of study with the director or undergraduate adviser.

Requirements for the Specialization

Students participating in this program are required to complete both a departmental major and the women's studies specialization. There are no lower division prerequisites. You must take two core courses (Women's Studies 100 and M197), plus six upper division courses from the "Supporting Courses" lists. At least two of the six courses must be taken in departments other than the major department, and two may be experimental courses offered by the Council on Educational Development (CED). No more than four units of course 199 may be applied.

You are encouraged to draw on the University's diverse resources in creating your specialization program. You may pursue traditional and/or innovative subjects in fields ranging from the humanities and fine arts to the social and life sciences. You may petition to have diverse courses accepted, including courses outside the College of Letters and Science, independent studies, or field study courses.

All courses applied to the specialization must be taken for a letter grade, and you must have a GPA of 2.5 or higher in women's studies courses to receive credit for completing the program. Courses in which you receive a grade below C may not be applied toward the specialization.

Upper Division Core Courses

100. Introduction to Women's Studies. Lecture, three hours. Intended for sophomores and first-quarter juniors; required of students who wish to graduate with a specialization in women's studies. Introduction to the interdisciplinary and cross-cultural study of women in preparation for further investigation within traditional disciplines. (W)

M197. Senior Seminar in Women's Studies. (Same as Education M197.) Discussion, three hours; laboratory, one hour. Prerequisites: course 100 plus two other women's studies courses; for seniors and juniors: consent of instructor. Designed for students completing work in women's studies. Each student pursues research on a specific topic concerning women, explores frameworks for understanding female experience (biological, economic, historical, and psychological), and refines methods for research. (Sp)

Supporting Upper Division Courses

M102. Sex Roles and Society. (Same as Sociology M102A.) Lecture, three hours; discussion, one hour. Prerequisite: course 100 or Sociology 1 or consent of instructor. Consideration of sociological literature pertaining to the development and functions of sex roles in society from a critical perspective. Topics include socialization and gender norms, contemporary sex role strain, and the challenge to traditional notions of sex roles posed by feminist critique.

M107. Women in Literature. (Same as English M107.) Prerequisite: satisfaction of Subject A requirement. A survey of literary works by and about women. The delineation of women in English and American literature, studies in historical and contemporary themes, and the evolution of forms and techniques in poetry, fiction, and biography.
Ms. Brienza, Ms. Mellor, Ms. Rowe, Ms. Yeazell

M137E. Work Behavior of Women and Men. (Same as Psychology M137E.) Prerequisites: course 100 or Psychology 10, junior or senior standing. Examination of work behavior of men and women. Topics include antecedents of career choice, job finding, leadership, performance evaluation, discrimination and evaluation bias, job satisfaction, and interdependence of work and family roles.

M148. Women in Higher Education. (Same as Education M148.) Prerequisite: upper division standing. The education and career development of women in higher education. Specifically, emphasis on undergraduate and graduate women; women faculty and administrators; curricula, programs, and counseling services designed to enhance women's educational and career development, affirmative action, and other recent legislation. Ms. Astin

M158. Women in Italian Culture. (Same as Italian M158.) Lecture, three hours. Designed with the intent of examining the role that women have played in Italian society. Concentration alternatively on the world of the medieval and Renaissance "matriarch" and on the "liberated" women of our times. Historical and political documents and social and religious taboos presented and discussed, together with other data derived from literature and art. Italian majors are required to read texts in Italian and to prepare papers written in Italian.

M163. Women in Culture and Society. (Same as Anthropology M163.) Prerequisite: Anthropology 5 or 22. A systematic approach to the study of sex roles from an anthropological perspective. A critical review of relevant theoretical issues supported by ethnographic material from traditional cultures and contemporary American culture.
Ms. Joe, Ms. Levine, Ms. Rodríguez

M165. The Psychology of Gender. (Same as Psychology M165.) Lecture, two hours; discussion, one hour. Consideration of psychological literature relevant to understanding contemporary sex differences. Topics include sex-role development and role conflict, physiological and personality differences between men and women, sex differences in intellectual abilities and achievement, and the impact of gender on social interaction. Ms. Peplau

170. Jurisprudence of Sexual Equality. Prerequisite: course 100 or Political Science 10 or Philosophy 6 or 9 or consent of instructor. Models of equality described and/or advocated by legal theorists — equality of opportunity, equality of outcome, equality of respect, etc. — using specific problems of women (e.g., sexual harassment or pregnancy leave policy) for purposes of comparison and critique.
Ms. Littleton

M172. The Afro-American Woman in the U.S. (Same as Afro-American Studies M172 and Psychology M172.) Prerequisite: upper division standing. The impact of the social, psychological, political, and economic forces which impact on the interpersonal relationships of Afro-American women as members of a large society and as members of their biological and ethnic group. Ms. Mays

185. Special Topics in Women's Studies. Prerequisites: upper division standing, one prior course in women's studies. Specialized or advanced study in an area within women's studies.

199. Special Studies in Women's Studies. Prerequisites: at least two upper division women's studies courses, minimum 3.0 GPA, consent of instructor and program director. A directed program of independent readings and/or research on a specific topic within women's studies. No more than four units may be applied toward the women's studies specialization.

Supporting Courses in Other Departments

Check with the program office for additional course listings.

Anthropology 151. Marriage, Family, and Kinship

Asian American Studies 105. Asian American Women

Classics 150A. Origins of the Western View of Women: The Female in Greek Thought

150B. Origins of the Western View of Women: The Female in Roman and Early Christian Thought

Communication Studies 153. The Media and Aggression Against Women

English 180X. Specialized Studies in Literature

French 145. Topics in French Literature: From Nature (Female?) to Culture (Male?)

158. Woman in French Literature

History 136I. Topics in European History: Prostitution in the Western World, 1550 to the Present

136J-136K-136L. History of Women in Europe

156C-156D-156E. Social History of American Women

197. Undergraduate Seminars

Philosophy 192. Philosophical Analysis of Issues in Women's Liberation

Political Science 149A-149Z. Special Studies in Politics: Women and the Political Process

C197A-C197F. Seminars for Majors

Psychology 137C. Interpersonal Relations

137F. Special Topics in Social Psychology: Gender and Close Relationships

Public Health 176E. Family and Sexual Violence

Sociology 102A-102Z. Special Topics in Sociology: Sociology of Women

160. The Demography and Sociology of Women's Economic Roles

197. Undergraduate Seminar

World Arts and Cultures
(Interdepartmental)

An intercollege, interdepartmental major in world arts and cultures is open to students in both the College of Letters and Science and the College of Fine Arts. You enroll in the college of your choice and fulfill the general education requirements of that college. For details on this undergraduate major, see Chapter 6 on the College of Fine Arts.

College of Fine Arts

Robert H. Gray, Dean

6

UCLA's College of Fine Arts, the only undergraduate college of its kind in the University of California system, is a young, dynamic center for higher education in the arts. Its distinguished faculty of more than 200 includes visiting artists and scholars who bring a variety of exciting viewpoints to enrich the study of the arts. Its goal is to educate the artist who is connected to society.

The College of Fine Arts consists of four departments: Art, Design, and Art History; Dance; Music; and Theater, Film, and Television. The curriculum is designed to provide fine arts students with intensive training in their major within the broader liberal arts education of the University. The creative or performing artist, as well as the historian or critic, is provided an outstanding academic program.

Fine arts majors explore, through research and practice, the unique creativity of world cultures. Nonmajors are offered an educational program intended to foster a better understanding of the visual and performing arts. The college continues to support extracurricular programs in the arts for the benefit not only of the University community, but for the public as well. Such efforts include art gallery and museum exhibits, plays, films, and music and dance concerts.

Photo: Anna Mahler's impressive Tower of Masks dominates the Macgowan Hall courtyard.

College of Fine Arts

A265 Murphy Hall, (213) 206-6465

The four departments of the College of Fine Arts both borrow from and add to the rich and varied cultural life of the campus. Students in the Department of Art, Design, and Art History are taught to understand the broad panorama of the visual arts, while those in the Dance Department have an opportunity to study ballet, modern, and ethnic dance forms. The Music Department offers specializations in composition and theory, music education, ethnomusicology, history and literature, performance, and systematic musicology. Students in the Theater, Film, and Television Department major in either theater or motion picture/television.

History/art history is a new undergraduate interdisciplinary major offered jointly by the College of Fine Arts and the College of Letters and Science.

World arts and cultures (formerly ethnic arts) is an undergraduate major which integrates art, dance, music, theater, anthropology, and folklore and mythology into one unique program. This interdisciplinary major is offered jointly by the College of Fine Arts and the College of Letters and Science.

An informative brochure on the UCLA College of Fine Arts is available from the Student Services Office, A239 Murphy Hall, UCLA, Los Angeles, CA 90024.

If you are interested in obtaining teaching credentials for California elementary and secondary schools, consult the Graduate School of Education, 201 Moore Hall.

Bachelor of Arts Degrees

Admission

In addition to the University of California Undergraduate Application, departments in the College of Fine Arts require auditions, portfolios, or evidence of creativity. Detailed information on departmental requirements will be mailed to you on receipt of the application. Deadline date for applications is November 30, 1986, for admission in Fall Quarter 1987.

The Study List

Each quarter the student Study List must include from 12 to 17 units. The college has no provision for part-time enrollment. After your first quarter, you may petition to carry more than 17 units (up to 20 units maximum) if you have an overall grade-point average of 3.0 (B) or better and have attained at least a B average in the preceding quarter with all courses passed. The petitions must be filed and approved by the dean of the college by the end of the fourth week of instruction.

If you have not filed your Study List by the end of the second week of classes, you must obtain the consent of the dean of the college to continue for that quarter.

Graduate Courses

Undergraduate students who wish to take courses numbered in the 200 series for credit toward the degree must petition for advance approval of the department chair and the dean of the college and must meet the specific qualifications. Courses numbered in the 400 and 500 series may not be applied toward the degree.

Majors and Degrees Offered

Art	B.A., M.A., M.F.A.
Art History	B.A., M.A., Ph.D.
Dance	B.A., M.A.
Dance/Movement Therapy	M.A.
Design	B.A., M.A., M.F.A.
History/Art History	B.A.
Motion Picture/Television	B.A.
Music	B.A., M.A., M.F.A., Ph.D.
Theater	B.A.
Theater Arts (Motion Picture/Television, Theater)	M.A., M.F.A., Ph.D.
World Arts and Cultures	B.A.

Concurrent Enrollment

Enrollment at another institution or University Extension while enrolled at UCLA is not permitted.

Degree Requirements

Each student must meet six kinds of requirements for the B.A. degree: University, college, and unit requirements, as well as residence, major, and scholarship requirements. The requirements are as follows.

University Requirements

For information on the Subject A or English as a Second Language (ESL) and American History and Institutions requirements, see "Undergraduate Degree Requirements" in Chapter 2 of this catalog.

College of Fine Arts students enrolled in English (ESL) 33A, 33B, 33C must take the courses for a letter grade.

College Requirements

The general requirements of the College of Fine Arts must be completed with a grade-point average of 2.0 or better.

For specific courses that fulfill the general college requirements and for courses preceded by M or C, consult the college office before enrolling. Courses listed below are used only as a guideline for 1986-87. Note: Courses that include the review of film or television may not be applied toward any general college requirements.

English Composition and Rhetoric (4 Units)

English 3 with a grade of C (2.0) or better must be completed by the end of the freshman year and may not be taken on a Passed/Not Passed basis.

Critical Reading and Writing (4 Units)

One course from English 4, *Humanities 2A, 2B, or 2C with a grade of C (2.0) or better must be completed by the end of the sophomore year and may not be taken on a Passed/Not Passed basis.

*If Humanities 2A, 2B, or 2C is taken to meet the critical reading and writing requirement, it may not also satisfy the literature requirement; English 4 may never be applied toward the literature requirement.

Foreign Language (12 Units)

Three quarters of one foreign language through level three are required. This requirement must be completed by the end of your sophomore year. If at least four quarter units of

level three are completed without taking level one or two, an additional eight units must be completed from courses listed below in science, social science, or humanities. International students whose entire secondary education has been taken in a language other than English may petition to be exempt from the foreign language requirement.

Proficiency examinations may not be used to complete the foreign language requirement. Some majors may require completion of the language prior to entry into the major.

Science/Mathematics (8 Units)

One course in physical or biological science and one course in natural science, mathematics, or another physical/biological science are required.

Physical and Biological Science Courses: Astronomy 3, 4, 81, 82; Atmospheric Sciences 2, 3, 10H, 11; biology (except Biology 10, 30, 35); chemistry (except Chemistry 2 for students with high school chemistry); earth and space sciences (except Earth and Space Sciences 8, 20, 115); Honors Collegium 44; Kinesiology 12A, 12B, 13, 14; microbiology; physics (except Physics 10).

Other Natural Science and Mathematics Courses: Anthropology 1, 2, 11, 124, 127P; Atmospheric Sciences 1, 5, 6, 8; Biology 10, 35; Earth and Space Sciences 8, 20, 115; Geography 1, 2, 5; Honors Collegium 40, 41, 45; mathematics (no remedial, historical, or statistical); Physics 10; Psychology 15, 115, 116.

Social Science (12 Units)

Two courses from the Department of History (one in any period prior to 1600, one in any period after 1600) and one other social science course are required. Note: Survey courses in history which cover "antiquity to present" may be applied only on history after 1600 or on other social science courses.

Other Social Science Courses: Anthropology (except Anthropology 1, 2, 11, 124, 127P, 156); economics (principles, history, and theory only); geography (except Geography 1, 2, 5); history (except medical or geological); Honors Collegium 42, 56, 60, 61, 63, 64, 65; Near Eastern languages (Ancient Near East 163A, 163B, Jewish Studies 140A, 140B, 141, 142); political science (except courses dealing with civil rights and law); psychology (except Psychology 15, 115, 116, education, counseling, family life, or child care); sociology (except mass communications, civil rights, education, law, criminology, marriage, family life, or child care).

Humanities (12 Units)

One course in the arts, one course in literature, and one course in philosophy and/or religion are required. Performance, studio, or film/television courses and those in your major department do not meet this requirement.

The Arts Courses: Art History 50 series or 101A through 121B; Classics 151A, 151B, 151C, 151D (except art history majors); Dance 134A, 134B, 180A through 187A; Folklore and Mythology 118, 124; Motion Picture/Television 189; Music 2A, 2B, 113A, 113B, 130 through 135C, 138 through 148, 151A through 153C, 157 through 159, 188A through 188F, 189; Theater 5A, 5B, 5C, 102A through 103B, 104D through 105.

Literature Courses: Selected courses in English, ethnic, American, or foreign literature, including works in translation; Classics 10, 20; East Asian Languages and Cultures 129; Folklore and Mythology 15, 101, 108, 113, 130, 131; German 119A through 119F; Honors Collegium 51, 52, 54; humanities, except those that are M or C courses; Near Eastern languages (Hebrew 120, Iranian 140, Jewish Studies 150B, 151A, 151B).

Philosophy/Religion Courses: Anthropology 156; Classics 166A, 166B; East Asian Languages and Cultures 139, 172, 173, 174, 183, 184, 185; Honors Collegium 50, 57; Near Eastern languages (Ancient Near East 130, Iranian 170, Islamics 110); Philosophy 1 through 32 and selected upper division courses.

A few course areas that may NOT be applied toward the general college requirements are cross-listed courses (M or C), business, communications, creative writing, criminology, education, engineering, family life, marriage and child care, field studies, home economics, independent studies, interdisciplinary studies, journalism, law, mass media, public health, and speech. Also no 198, 199, or CED courses and no seminars, proseminars, or freshman seminars may be applied toward the general requirements of the college.

Additional Nonmajor Department Requirements

Three upper division courses (12 units) must be completed outside your major department. These courses may not be applied toward the general college requirements. Studio, performance, activity, independent study, debate courses, children's theater, creative dramatics, internships, and field studies courses may not be applied as additional nonmajor courses.

Unit Requirements

You must complete for credit, with a passing grade, no less than 180 units and no more than 208 units, of which at least 64 units must be upper division courses (numbered 100 through 199). No more than 16 units of CED courses and eight units of freshman seminars may be applied toward the degree. Credit for 199 courses is limited to 16 units, eight of which may be applied to the major. All 199 courses must be taken for a letter grade.

University Extension courses with the prefix X on those numbered in the 1 through 199, 200, 300, 400, or 800 series may not be applied toward the degree.

Credit earned through the College Entrance Examination Board (CEEB) Advanced Placement Tests may be applied toward the general college requirements. Portions of Advanced Placement Test credit may be evaluated by corresponding UCLA course numbers (e.g., History 1C). If you take the equivalent UCLA course, unit credit for such duplication is deducted before graduation.

Residence Requirements

You are "in residence" while enrolled and attending classes at UCLA as a major in the College of Fine Arts. Of the last 45 units completed for the bachelor's degree, 35 must be earned in residence in the College of Fine Arts (28 units must be upper division — 16 of which must be in the major department). No more than 18 of the 35 units may be completed in UCLA Summer Sessions.

Courses in University Extension (either class or correspondence) may not be applied toward any part of the residence requirements.

Major Requirements

A major is composed of not less than 14 courses (56 units), including at least nine upper division courses (36 units). Most majors include both lower and upper division courses. Those listed under "Preparation for the Major" (lower division) must be completed before upper division major work is undertaken.

You must complete your major with a scholarship average of at least a 2.0 (C) in all courses in order to remain in the major and must be recommended by the chair of your major department. All courses in your major department must be taken for a letter grade.

As changes in major requirements occur, you are expected to satisfy the new requirements insofar as possible. Hardship cases should be discussed with the departmental adviser, and petitions for adjustment should be submitted to the dean of the college when necessary.

Any department offering a major in the College of Fine Arts may require a general final examination.

Scholarship and Minimum Progress

A 2.0 (C) average is required in all work attempted at the University of California, exclusive of courses in University Extension and those graded Passed/Not Passed. A C average is also required in all upper division courses in the major taken at the University, as well as in all courses applying to the general college and University requirements.

Minimum Progress: You are expected to complete satisfactorily at least 36 units during any three consecutive quarters in residence; you are placed on probation if you fail to pass these units. You are subject to dismissal if you fail to pass at least 32 units in three consecutive regular quarters in residence.

History/Art History and World Arts and Cultures

Intercollege, interdepartmental majors in history/art history and world arts and cultures are open to students in both the College of Fine Arts and the College of Letters and Science. You enroll in the college of your choice and fulfill the general education requirements of that college. Counseling is available in the department of your concentration. For details on the majors, see the respective sections later in this chapter.

Honors

To receive **Dean's Honors** in the College of Fine Arts, you must have at least 12 graded units per quarter with a grade-point average of 3.8 for less than 16 units of work (3.7 GPA for 16 or more units). The honor is posted on your transcript for the appropriate quarter. You are not eligible for Dean's Honors in any given quarter if you receive an Incomplete or a Not Passed (NP) grade, change a grade, or repeat a course.

Honors with the Bachelor's Degree are awarded to students with superior grade-point averages. To be eligible, you must have completed 90 or more units for a letter grade at the University of California. The levels of honors and the requirements for each level are: *Cum laude*, an overall average of 3.55; *Magna cum laude*, 3.65; *Summa cum laude*, 3.77.

Counseling and Program Planning

The College of Fine Arts offers preadmission advising, program planning in the major and general degree requirements, and individual meetings with departmental counselors and faculty, including a yearly degree check sent to each student. Prior to registration and enrollment in classes, each new student is assigned to a counselor in the major department. For further counseling information, contact the Student Services Office, College of Fine Arts, A239 Murphy Hall (825-9705).

Graduate Study

The advanced degree programs offered in the College of Fine Arts provide graduate students with unique research opportunities when combined with special resources, such as the Film, Television, and Radio Archives, the University Research Library, the special collections of the Art, Music, and Theater Arts Libraries, and the University's exhibition and performance halls.

The College of Fine Arts cooperates with UCLA's Graduate School of Management in offering a Master of Business Administration (M.B.A.) in Arts Management. Participating students serve quarter-long internships with such professional arts organizations as the Los Angeles County Museum of Art, the Mark Taper Forum, and the Los Angeles Philharmonic Orchestra.

The Producers Program is a relatively new M.F.A. management program in the Department of Theater, Film, and Television, with options in either theater or motion picture/television.

A program in teaching is offered by the Graduate School of Education in each of the fine arts areas.

Fellowships, grants, and assistantships are available through the dean of the Graduate Division. The Graduate Affirmative Affairs Office provides counseling, academic support, and financial assistance to ethnic minority students.

Admission

In addition to requiring that applicants hold a bachelor's degree from an accredited U.S. institution or an equivalent degree of professional title from an international institution, each department in the college has limitations and additional requirements. In general, samples of your work (dance audition, art portfolio, playwriting sample, etc.) are required. Detailed information can be found in the departmental listings which follow.

For information on the proficiency in English requirements for international graduate students, refer to "Graduate Admission" in Chapter 3.

Other Requirements

Requirements to fulfill each degree objective vary according to the degree and the department. See the departmental listings which follow for specific requirements and procedures.

Scope and Objectives

As the department name indicates, art, design, and art history are largely autonomous divisions. Scope and objectives are different for each, although all fields lead to Bachelor of Arts and Master of Arts degrees and all benefit from the rich and varied art resources at UCLA and in the Los Angeles community. Also offered are a Master of Fine Arts in Art and a Ph.D. in Art History.

Art courses include painting and drawing, sculpture, printmaking, photography, and new forms and concepts (which include perfor-

mance, installation, and video). Students are introduced to diverse media and ideas in lower division courses and have the opportunity to specialize in upper division. Individual expression is encouraged in a general way for those who wish careers requiring art-related knowledge and in a specific sense for those who go on to careers as professional artists.

Art history courses survey Western and non-Western art from earliest human history to the present. Students learn to treat artistic monuments and trends from a historical point of view, analytically rather than subjectively. This curriculum prepares students for careers in which a broad knowledge of art is important and provides students preparing for graduate study with a foundation for research requiring independent critical judgment.

Design courses teach skills and organizational concepts necessary to application of art in contemporary life, including studies in visual communication (graphics, video, electronic imagery), ceramics, textiles, fiber, industrial, product, and interior space design.

Bachelor of Arts in Art

Preparation for the Major

Required: Art 5A, 5B, 5C, 15A, 15B, 22, and one course from Art History 50, 51, 54, 55, 56, 57.

The Major

Required: A minimum of 14 upper division courses, including Art 130, 133, 137, 140, 145, 147, 148, and 149, one course from Art History 101A through 121B, and five courses of art electives. It is recommended that you have each quarter's program approved by a departmental adviser.

Bachelor of Arts in Art History

Preparation for the Major

Required: Art History 50, 51, 54, 55, 56, 57.

The Major

Required: Eleven courses of upper division art history as follows:

(1) A total of eight courses (32 units) from the following 13 areas (at least one course in six of the 13 areas, with at least three from Group A and three from Group B):

Group A: (1) 101A, 101B, 101C, 102, (2) 103A, 103B, 103C, 103D, 103E, (3) 105A, 105B, 105C, 105D, 105E, (4) 106A, 106B, 106C, 108A, 108B, (5) 109A, 109B, 109C, 109D, (6) 110A, 110B, 110C, 110D, 110E, 110F, (7) 112A, 112B, 112C, (8) 120A, 120B, 120C, 121A, 121B.

Group B: (9) 104A, 104B, C104C, (10) 114A, 114D, C115A, (11) 114B, 114C, C115B, C115C, C115D, C115E, C115F, (12) C117A, C117B, C117C, 118B, 118D, (13) 118A, 118C, C119A, C119B.

(2) Three art history electives which may include courses 125, 197, 199 (design or studio courses do not apply as electives), and no more than four units of Classics 151A, 151B, 151C, 151D.

(3) Two quarters of one foreign language or equivalent. The language is in addition to the college foreign language requirements.

It is recommended that you have each quarter's program approved by a departmental adviser.

Bachelor of Arts in Design

Preparation for the Major

Required: Design 30A, 30B, 31A, 31B, 32A, 32B, four courses from 33A through 33G, and one course from Art History 50, 51, 54, 55, 56, 57.

The Major

Required: A minimum of 12 upper division courses, including eight courses from Design 161A through 172B and four courses of art electives.

It is recommended that you have each quarter's program approved by a departmental adviser.

Note: Check the *Schedule of Classes* for courses restricted to majors only.

Master of Arts in Art

Art Specialty

Admission

Students are admitted in Fall Quarter only. Regular admission requires a B.A. or equivalent and faculty consent following the annual review of creative work in February. Applicants must submit slides (maximum 20) or videotape (if applying to the video field) to the Graduate Assistant, Department of Art, Design, and Art History, 1300 Dickson, UCLA, Los Angeles, CA 90024.

Provisional admission may be granted for work with faculty sponsors for three quarters, pending reconsideration of regular admission.

Major Fields or Subdisciplines

Drawing, painting, sculpture, printmaking, photography, video, new forms and concepts. No limit to the variations, extent, or value of these designations is intended.

Course Requirements

A minimum of 36 quarter units in the department in courses 101A through 295 is required, with a B average or better.

Within those 36 units, a minimum of 20 quarter units in the 200 series must be taken in the field of specialization.

An additional 36 quarter units of art history, theory, and criticism in undergraduate and/or graduate study are required (for students with little or no art history in undergraduate work, some or all of these units may be taken as electives beyond the 20 units of graduate coursework required). Subjects related to your special interest may be substituted by petition.

A total of eight units of Art 596 may be applied toward the 36 units required for the degree; four units may be applied toward the graduate course requirement.

Comprehensive Examination Plan

Each degree is granted on the basis of the quality of work as demonstrated in the exhibition which accompanies the final comprehensive examination. The number of units of credit attained is irrelevant to this judgment.

A preconcluding review of work precedes the final comprehensive examination. The examination, usually oral, includes a formal exhibition of work and a document of vita, photo records of works, and a statement of the artist. The document is retained as property of the University.

Design Specialty

Admission

Students are admitted in Fall, Winter, and Spring Quarters. An acceptable portfolio is required, in the form of slides (maximum 20) or videotape (if applying to the electronic imagery field). Acceptance is by a majority vote of the design faculty.

Applicants who have a B.A. degree or equivalent may be admitted on an unconditional basis or on a provisional basis. If you are admitted on an unconditional basis, an initial advisory committee is formed to guide you in your studies. Provisional admission is recommended for two quarters when you show great promise, but your grade-point average is below 3.0, preparation for the graduate area of specialization is insufficient as demonstrated in your portfolio, or undergraduate preparation is inadequate as indicated in transcripts. An advisory committee is formed to outline a program of study that will allow you to continue on an unconditional basis.

Major Fields or Subdisciplines

Communication imagery, image transfer, electronic imagery, computer imagery, ceramics, fiber structures, textiles, industrial design, exhibition design.

Course Requirements

A minimum of 36 quarter units in the department (or nondepartmental courses with the graduate adviser's consent) in courses 101A through 295 (and possibly 596) is required, with a B average. These must include a minimum of 20 quarter units of design courses numbered above 200, of which at least eight units must be from Design 290A-290B-290C and of which at least eight units must be devoted to a comprehensive project in your area of

study. In addition, eight quarter units of art history are required (if you have a B.A. or B.F.A. in Art which includes a background in the history of art, you may substitute eight units in other courses that are germane to your graduate pursuit).

A total of eight units of course 596 may be applied toward the 36 units required for the degree; four units may be applied toward the graduate course requirement.

Comprehensive Examination Plan

The comprehensive examination (offered each quarter) consists of an oral examination and a concentrated body of work which is presented as the master's statement. Also required is an accompanying record of the project, consisting of documentation in the form of slides of physical work, research material, and other visual material, and which may include a written statement as determined by the graduate guidance committee.

Master of Arts in Art History

Admission

A minimum grade-point average of 3.25 overall and 3.5 in upper division art history courses is required. The Graduate Record Examination (GRE) is required, although no minimum score has been established. Three letters of recommendation (preferably from art historians) are required. The statement of purpose submitted with the application is given weight in the evaluation and should be as specific as possible about your interests in art history. In addition, you must have completed six full courses in the history of art (grades of B or better and not including studio courses), with at least two courses in each group noted below. Specific areas may not be offered in satisfaction of more than one requirement.

Group A: (1) Egyptian, (2) ancient Near East, (3) classical, (4) medieval, (5) Renaissance, (6) baroque, (7) modern, and (8) American.

Group B: (1) African, (2) oceanic, (3) Native North American, (4) pre-Columbian, (5) Islamic, (6) Indian, (7) Chinese, and (8) Japanese.

Applicants demonstrating exceptional promise but lacking some or all of the six required courses may, at the discretion of the graduate review committee, be admitted on condition that they make up those courses. Deficiencies must be made up during the first two quarters in residence and may not be applied toward the 10 courses required for the degree. Instead of taking a course, you may substitute a competency examination in the deficient area.

Prospective students may contact the Graduate Assistant, Department of Art, Design, and Art History, 1300 Dickson, UCLA, Los Angeles, CA 90024, for brochures and information. The department has no special departmental application.

Major Fields or Subdisciplines

Sixteen fields in two groups, as noted under "Admission" above.

Foreign Language Requirement

Reading knowledge of French and German is required of all students except those intending to major in an Asian (i.e., Chinese, Japanese, South Asian), pre-Columbian, or Islamic art history area. Students majoring in Chinese or Japanese art history must substitute either Chinese or Japanese respectively for either French or German. Those majoring in a South Asian or Islamic art history area must substitute, for either French or German, an appropriate classical research language of South Asia or Islamic culture respectively. In all cases, the final decisions regarding choice must be made in consultation with, and with the consent of, the major adviser. Students majoring in pre-Columbian art history must substitute Spanish for French.

With the exception of Asian and Islamic art history majors, all students must demonstrate reading fluency in both foreign languages in any of the following ways: (1) by passing the department language examination, (2) by passing the Educational Testing Service (ETS) examination with a minimum score of 600, (3) by enrolling in and completing with a minimum grade of B, UCLA's French 5, German 6, and/or Spanish 25. One of these language requirements must be satisfied by the end of the second quarter in residence and the other by the end of the fifth.

Students majoring in an Asian or Islamic art history area must satisfy their European language requirement by the end of the fifth quarter in residence and may do so in any of the three ways listed above. The Asian or Islamic language requirement, however, is normally satisfied by enrolling in an appropriate course sequence for six consecutive quarters (normally beginning with the first quarter of graduate study) and by maintaining a grade of B or better in those courses. Details and/or exceptions must be worked out with the major adviser.

Course Requirements

The M.A. degree requires the completion of a major and two minors. You must select an unrelated minor from the group (A or B) which does not include your major area, and you are required to take a minimum of 10 graduate and upper division courses, of which at least eight must be in art history and of which at least six must be graduate courses (in the 200 and 500 series). At least four of these must be in the 200 series. No more than two 596 courses may be applied toward the graduate or elective course requirement. You must take Art History 201, four courses in the major, and two courses in each minor.

Thesis Plan

The thesis committee is established after completion of all course requirements. At the same time, you select a thesis topic in your major field. The thesis should deal succinctly with the topic in an independent, critical, and original fashion while taking fully into account the present state of research on the problem.

Master of Fine Arts in Art

Art Specialty

Admission

Students are admitted in Fall Quarter only. See "Admission" under the Master of Arts degree in Art (art specialty) above.

The M.A. is not prerequisite to the M.F.A. but may be elected as your stated degree objective. Usually, however, students proceed directly to the M.F.A. as a terminal degree. The unit requirements applied to the M.A. do not apply to the M.F.A., with the exception of the accumulative art history units.

Major Fields or Subdisciplines

Drawing, painting, sculpture, printmaking, photography, video, new forms and concepts. No limit to the variations, extent, or value of these designations is intended.

Course Requirements

A minimum of 72 quarter units in the department in courses 101A through 295 is required, with a B average or better.

Within those 72 units, a minimum of 40 quarter units in the 200 series must be taken in the field of specialization.

An additional 40 quarter units of art history, theory, and criticism in undergraduate and/or graduate study are required (for students with little or no art history in undergraduate work, some or all of these units may be taken as electives beyond the 40 units of graduate coursework required). Subjects related to your special interest may be substituted by petition.

A total of 12 units of Art 596 may be applied toward the 72 units required for the degree; four units may be applied toward the graduate course requirement.

Comprehensive Examination Plan

Same as the plan offered for the Master of Arts degree in Art (art specialty), as noted above.

Design Specialty

Admission

Admission requirements and procedures are essentially the same as for the M.A. (design specialty), except that the M.F.A. degree is the highest academic degree awarded in the studio disciplines of art and is conferred on the basis of outstanding achievement and consistent demonstration of quality throughout an

original body of creative work. A higher standard of demonstrated ability and preparation in the area of intended study is usually applied in the portfolio review. M.F.A. applicants are not admitted on a provisional basis when there are deficiencies in the portfolio, preparation, or academic record.

Major Fields or Subdisciplines

Communication imagery, image transfer, electronic imagery, computer imagery, ceramics, fiber structures, textiles, industrial design, exhibition design.

Course Requirements

A minimum of 72 quarter units of upper division and graduate design courses is required, of which at least eight units must be from Design 290A-290B-290C and of which at least 12 units must be devoted to a comprehensive project in your area of study.

Within those 72 units, a minimum of 52 quarter units in the 200 series must be taken in the field of specialization.

A minimum of 40 quarter units of art history in undergraduate or graduate study is also required. For students with little or no art history in undergraduate work, some or all of these units may be taken as electives beyond the 40 units of graduate coursework required. You may substitute a maximum of 12 units in other courses that are germane to your graduate pursuit, with the faculty adviser's consent.

A total of 12 units of course 596 may be applied toward the graduate and elective course requirements for the degree.

Comprehensive Examination Plan

Same as the plan offered for the Master of Arts degree in Art (design specialty), as noted above.

Ph.D. in Art History

Admission

The M.A. in Art History is required for admission to the Ph.D. degree program. An M.A. in Art History from another institution may be accepted as equivalent to that from UCLA or the holder may be accepted into the program at a stage determined by the graduate review committee. All incoming Ph.D. students must have taken and passed with a grade of B or better at least two courses (upper division and/or graduate) in areas not related to the proposed major (as outlined in the M.A. in Art History course requirements). Deficiencies must be made up during the first two quarters in residence and may not be applied toward the eight courses required for the Ph.D.

The application must include, in addition to official transcripts and Graduate Record Examination (GRE) scores, all of the following:

(1) A standard statement of purpose (approximately 400 words).

(2) A copy of the M.A. thesis or, if no thesis was written, one major research paper written at the M.A. level in the major (or intended major) field.

(3) Three or more letters of recommendation from individuals familiar with your scholarly work, one of which must be a detailed letter of assessment and endorsement from your major adviser for the M.A.

(4) A written statement from the intended Ph.D. major adviser of willingness to supervise your Ph.D. work.

(5) Evidence of reading fluency in two appropriate foreign languages.

Students applying directly to the Ph.D. program from the M.A. in Art History program at UCLA follow a slightly modified procedure. For details, see the graduate assistant.

Reading knowledge of French and German is requisite for admission at the Ph.D. level for those majoring in all areas except Asian, Islamic, or pre-Columbian. You may demonstrate this knowledge by submitting an Educational Testing Service (ETS) score of 600 or better, taking and passing the relevant department language examination(s), or completing UCLA's German 6 and/or French 5 with a grade of B or better.

Students intending to major in an Asian or Islamic art history area must demonstrate, by the means outlined above, reading fluency in either French or German. In addition, they must complete with a grade of B or better six consecutive quarter courses (or equivalent) in an appropriate Asian or Islamic language. Determination of the appropriate language and acceptable equivalencies should be worked out in advance with the intended major adviser.

Students intending to major in pre-Columbian art history must demonstrate, by the means outlined above, reading fluency in German and Spanish. In the latter case, UCLA's Spanish 25, passed with a grade of B or better, fulfills the requirement.

Students who have passed a required foreign language at another institution should consult the chair of the department's language committee to determine if their previous examination is acceptable.

Prospective students may contact the Graduate Assistant, Department of Art, Design, and Art History, 1300 Dickson, UCLA, Los Angeles, CA 90024, for brochures and information. The department has no special departmental application.

Major Fields or Subdisciplines

See "Admission" under the Master of Arts degree in Art History above.

Foreign Language Requirement

You are normally required to demonstrate, no later than the time of your University Oral Qualifying Examination, reading fluency in one or more foreign languages in addition to those required for admission. Among those fields requiring such reading fluency are Egypt, ancient Near East, classical, medieval, Renaissance, Islamic, pre-Columbian, and all Asian areas. The applicability of this requirement, the language(s) required, and the exact means of satisfying the requirement are determined in consultation with the major adviser.

Course Requirements

The Ph.D. requires demonstrated competence in a major and two minors. If you choose two art history minors, one must be selected from the group (A or B) which does not include the major area (see group listings under Master of Arts in Art History above). If you choose one extra-departmental minor, it must be related to the major field in art history. The other minor may or may not be related to the major area.

You must have taken a minimum of four courses (at least one a graduate course) in one or more unrelated areas during the M.A. and/or Ph.D. program. Credit may be given for coursework at another institution.

In all, a minimum of eight graduate and upper division courses are required, of which at least three must be art history courses on the graduate (200 and 500) level. Of this total, you must take at least three, and may take up to five, extra-departmental upper division and/or graduate courses, which have to be approved by the major adviser.

Qualifying Examinations

After completion of coursework and language study, you must take the Ph.D. written comprehensive examination to test your breadth and depth of knowledge in the major and both minor fields of study. If you fail the examination, or any part thereof, that portion may be repeated during the subsequent quarter in residence. No further repetition is allowed.

A dissertation topic is selected after you pass the written comprehensive examination; the members of your doctoral committee are then nominated, and the committee is appointed by the dean of the Graduate Division.

After having submitted a dissertation proposal, you then take the University Oral Qualifying Examination, given by your doctoral committee. Assuming there is no more than one no pass vote, you may initiate the procedure to advance to candidacy.

Final Oral Examination

The doctoral committee may decide, by unanimous agreement, to waive the final oral examination (not normally required). If a final oral examination is required, it is held after the final draft of the dissertation has been circulated among the committee members. In case of failure, the doctoral committee decides, by unanimous agreement, whether or not you may be reexamined.

Art

Lower Division Courses

5A. Introduction to Art. Studio, eight hours; five hours arranged. Creative work in fine arts related to historical and contemporary issues selected from media such as drawing, painting, sculpture, printmaking, photography, and new forms and concepts (performance, video, nonobject art).

5B. Introduction to Art. Studio, eight hours; five hours arranged. *Prerequisite: course 5A.* Continuation of course 5A.

5C. Introduction to Art. Studio, eight hours; five hours arranged. Prerequisites: courses 5A, 5B. Continuation of courses 5A, 5B.

15A. Intermediate Art. (Formerly numbered 15.) Studio, eight hours; five hours arranged. Prerequisites: courses 5A, 5B, 5C. Continuation of courses 5A, 5B, 5C, with increased emphasis on individual creative development.

15B. Intermediate Art. Studio, eight hours; five hours arranged. Prerequisites: courses 5A, 5B, 5C, 15A. Continuation of courses 5A, 5B, 5C, 15A, with increased emphasis on individual creative development.

22. Art and Artists/History and Theory. Lecture/discussion, three hours. Discussion and analysis of artists and art, historical and contemporary.

Upper Division Courses

130. Drawing. Studio, eight hours; five hours arranged. Prerequisites: courses 5A, 5B, 5C, 15, and 21, or consent of instructor. Varied media and subject; drawing as an intrinsically expressive mode. May be repeated for a maximum of 16 units.
Mr. Elgart, Mr. Stussy, and the Staff (F,W,Sp)

133. Painting. Studio, eight hours; five hours arranged. Prerequisites: courses 5A, 5B, 5C, 15, and 21, or consent of instructor. Varied media, purposes, subjects, structures, presentation, meaning. May be repeated for a maximum of 16 units.
Mr. Amato and the Staff (F,W,Sp)

137. New Forms and Concepts. Studio, eight hours; five hours arranged. Prerequisites: courses 5A, 5B, 5C, 15, and 21, or consent of instructor. Varied purposes, forms, processes, post-concept, other approaches to art and nonart, objects, events, installations, and non-studio pieces, film, and video. May be repeated for a maximum of 16 units.
Mr. Burden and the Staff (F,W,Sp)

140. Printmaking. Studio, eight hours; five hours arranged. Prerequisites: courses 5A, 5B, 5C, 15, and 21, or consent of instructor. Selected studies in fine printmaking, historical and contemporary: woodcut, etching and engraving, lithography, silk screen, mixed media. May be repeated for a maximum of 16 units. Mr. R.B. Brown and the Staff (F,W,Sp)

145. Sculpture. Studio, eight hours; five hours arranged. Prerequisites: courses 5A, 5B, 5C, 15, and 21, or consent of instructor. Selected studies in sculpture, historical and contemporary: modeling, carving, casting, welding, and other media; forms in space, including installations and non-studio pieces. May be repeated for a maximum of 16 units.
Mr. Ray and the Staff (F,W,Sp)

147. Photography. Studio, eight hours; five hours arranged. Prerequisites: courses 5A, 5B, 5C, 15, and 21, or consent of instructor. Selected studies in photography, historical and contemporary: documentation, non-silver methods, extended forms, color, mixed media. Photography as a medium of artistic expression. May be repeated for a maximum of 16 units. Mr. Heinecken and the Staff (F,W,Sp)

148. Advanced Analysis and Criticism. Discussion, four hours; studio, nine hours arranged. Prerequisites: courses 5A, 5B, 5C, 15, and 21, or consent of instructor. Analysis and criticism of individual creative work and ideas. May be repeated for a maximum of 16 units. (F,W,Sp)

149. Advanced Art and Artists/History and Theory. Lecture/discussion, three hours. Prerequisite: consent of instructor. Discussion and analysis of artists and art, historical and contemporary. May be repeated twice for credit. (F,W,Sp)

197. Honors Course. Hours to be arranged. Prerequisites: 3.0 GPA overall, 3.5 in major, consent of instructor, junior or senior standing. Individual studies for majors. May be repeated once for credit.

199. Special Studies in Art (2 to 8 units). Hours to be arranged. Prerequisites: 3.0 GPA in major, consent of instructor, senior standing. Individual studies for majors. May be taken for a maximum of eight units.

Graduate Courses

Prerequisite for all courses: consent of instructor. All courses may be repeated for credit (unless otherwise noted) on recommendation of the adviser; they are not open to undergraduate students.

271. Graduate Painting (2 to 8 units). Hours to be arranged. Tutorial studies in traditional and new forms and concepts media, as well as in our media specializations. Independent development and original research.

272. Graduate Printmaking (2 to 8 units). Tutorial studies in traditional and experimental printmaking. Selected studies in intaglio, lithograph, woodcut, silk screen, photo printmaking, and mixed media.
Mr. R.B. Brown

273. Graduate Sculpture (2 to 8 units). Tutorial studies with specific attention to the ongoing nature, specificity, and approach to the student's particular discipline. Individual studio visits and consultation.
Mr. Ray

274. Graduate Photography (2 to 8 units). A tutorial or tutorial/seminar course concerned with the particular artistic development of each student's personal photographic artwork. Emphasis on the expressive, original, humanistic values of individual art. Adjacent projects in the history and theory of the photographic medium. Mr. Heinecken

279. Seminar in Art. Aspects of current and historic art. Being an artist. Sources, ideas, processes, development, individualization, evaluation. Art and nonart. Art in society. Content, formal and aesthetic issues. Language, perception, reference structures, media.

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. A teaching apprenticeship under the active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

501. Cooperative Program (2 to 8 units). Prerequisite: consent of UCLA graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Course is used to record the enrollment of UCLA students in courses taken under cooperative arrangements with neighboring institutions. S/U grading.

596. Directed Individual Study or Research (2 to 8 units). Prerequisite: consent of instructor.

Art History

Lower Division Courses

50. Ancient Art. (Formerly numbered Art 50.) Lecture, three hours; quiz, one hour. Prehistoric, Egyptian, Mesopotamian, Aegean, Greek, Hellenistic, and Roman art and architecture. Ms. Downey

51. Medieval Art. (Formerly numbered Art 51.) Lecture, three hours; quiz, one hour. Early Christian, Byzantine, Islamic, Carolingian, Ottomian, Romanesque, and Gothic art and architecture.
Ms. Kalavrezou-Maxeiner

54. Modern Art. (Formerly numbered Art 54.) Lecture, three hours; quiz, one hour. Art and architecture from 1800 to the present in Europe and the United States. Mr. Boime, Mr. Kunzle

55. Africa, Oceania, and Native America. (Formerly numbered Art 55.) Lecture, three hours; quiz, one hour. Comparative approach, emphasizing economic, cultural, and historical aspects of selected artistic traditions which developed outside the spheres of influence of the major European and Asiatic civilizations. Mr. Rubin

56. Asian Art. (Formerly numbered Art 56.) Lecture, three hours; discussion, one hour. A survey of the major artistic monuments of the Indo-Iranian, Southeast and Central Asian, and East Asian cultures, concentrating on formal and iconographical problems, as well as the social and political conditions under which artworks were patronized and produced.
Mr. R.L. Brown, Mr. Powers

57. Renaissance and Baroque Art. (Formerly numbered Art 57.) Lecture, three hours; discussion, one hour. History of art and architecture in Western Europe from 1400 to 1750.
Ms. Weisz, Ms. Woods-Marsden

Upper Division Courses

101A. Egyptian Art and Archaeology. (Formerly numbered Art 101A.) Lecture, three hours. A study of architecture, sculpture, painting, and minor arts during the Predynastic period and Old Kingdom.
Mr. Preziosi

101B. Egyptian Art and Archaeology. (Formerly numbered Art 101B.) Lecture, three hours. A study of architecture, sculpture, painting, and minor arts during the First Intermediate period, Middle Kingdom, and Second Intermediate period. Mr. Preziosi

101C. Egyptian Art and Archaeology. (Formerly numbered Art 101C.) Lecture, three hours. A study of architecture, sculpture, painting, and minor arts during the Empire (or New Kingdom). Mr. Preziosi

102. Art of the Ancient Near East. (Formerly numbered Art 102.) A study of architecture, sculpture, painting, and minor arts in Mesopotamia, Asia Minor, North Syria, Phoenicia, Palestine, Persia, and Cyprus from the origins to the 5th century B.C.
Mr. Preziosi

103A. Greek Art. (Formerly numbered Art 103A.) Lecture, three hours. Prerequisite: course 50. A survey of the art and architecture of Greece from the Archaic period through the 5th century B.C.
Ms. Downey, Mr. Preziosi

103B. Hellenistic Art. (Formerly numbered Art 103B.) Lecture, three hours. Prerequisites: courses 50, 103A. The art and architecture of the Greek world from the 4th through the 1st century B.C., including the transmittal of Greek art forms to the Roman world.
Ms. Downey

103C. Roman Art. (Formerly numbered Art 103C.) Lecture, three hours. Prerequisite: course 50. The art and architecture of Rome and its Empire from ca. 300 B.C. to A.D. 300. Ms. Downey

103D. Etruscan Art. (Formerly numbered Art 103D.) Lecture, three hours. Prerequisite: course 50. The arts of the Italic peninsula from ca. 1000 B.C. to the end of the Roman Republic. Ms. Downey

103E. Late Roman Art. (Formerly numbered Art 103E.) Lecture, three hours. Prerequisites: courses 50, 103C. The art of the Roman Empire from the 2nd through the 4th century (A.D.).
Ms. Downey, Ms. Kalavrezou-Maxeiner

104A. Western Islamic Art. (Formerly numbered Art 104A.) Lecture, three hours. Not open for credit to students with credit for former course 104B. From the Tigres and Euphrates Rivers to Spain, 7th to 16th century. Ms. Bierman

104B. Eastern Islamic Art. (Formerly numbered Art 104B.) Lecture, three hours. Not open for credit to students with credit for former course 104C. From the Tigres and Euphrates Rivers through Afghanistan and parts of central Asia; the Ottoman Empire.
Ms. Bierman

C104C. Problems in Islamic Art. (Formerly numbered Art C104C.) Lecture, three hours. Not open for credit to students with credit for former course 104D. Monuments or theoretical problems related to Islamic culture and artistic production. Concurrently scheduled with course C214. Ms. Bierman

105A. Early Christian Art. (Formerly numbered Art 105A.) Lecture, three hours. Prerequisite: course 51 or consent of instructor. The origins and development of the architecture, sculpture, and painting of early Christianity to the iconoclastic controversy.
Ms. Kalavrezou-Maxeiner

105B. Early Medieval Art. (Formerly numbered Art 105B.) Lecture, three hours. Prerequisite: course 51 or consent of instructor. Art and architecture of Western Europe from the Migration period until A.D. 1000.

105C. Romanesque Art. (Formerly numbered Art 105C.) Prerequisite: course 51. Art and architecture of Western Europe in the 11th and 12th centuries.

105D. Gothic Art. (Formerly numbered Art 105D.) Lecture, three hours. Prerequisite: course 51. Art and architecture of Europe in the 13th century.

105E. Byzantine Art. (Formerly numbered Art 105E.) Lecture, three hours. Prerequisite: course 51 or consent of instructor. The theory and development of Byzantine art from the iconoclastic controversy to 1453 and the diffusion of Byzantine art in Armenia, Georgia, the Caucasus, and Russia.
Ms. Kalavrezou-Maxeiner

106A. Italian Art of the Trecento. (Formerly numbered Art 106A.) Lecture, three hours. Prerequisite: course 57 or consent of instructor. Art and architecture of the 14th century. Ms. Weisz

106B. Italian Art of the Quattrocento. (Formerly numbered Art 106B.) Lecture, three hours. Prerequisite: course 57. Art and architecture of the 15th century. Ms. Weisz, Ms. Woods-Marsden

106C. Italian Art of the Cinquecento. (Formerly numbered Art 106C.) Lecture, three hours. Prerequisite: course 57. Art and architecture of the 16th century. Ms. Weisz, Ms. Woods-Marsden

108A. Northern Renaissance Art. (Formerly numbered Art 108A.) Lecture, three hours. Prerequisite: course 57. Painting and sculpture in the Northern Renaissance.

108B. Northern Renaissance Art. (Formerly numbered Art 108B.) Lecture, three hours. Prerequisite: course 108A. Painting and sculpture in the Northern Renaissance.

109A. Baroque Art. (Formerly numbered Art 109A.) Lecture, three hours. Prerequisite: course 57. Art and architecture of Italy and Spain, 16th to late 17th century. Ms. Weisz

109B. Baroque Art. (Formerly numbered Art 109B.) Lecture, three hours. Prerequisite: course 109A. Art and architecture of Northern Europe, 16th to late 17th century. Mr. Kunzle

109C. European Art of the 18th Century. (Formerly numbered Art 109C.) Lecture, three hours. Prerequisite: course 57. Painting, architecture, and sculpture of the 18th century examined in the light of political and intellectual developments. Special emphasis on the effect of the rise of democratic institutions, especially the French Revolution. Mr. Kunzle

109D. Art and Architecture of Georgian England. (Formerly numbered Art 109D.) Lecture, three hours.
Ms. Bennett

110A. European Art of the 19th Century. (Formerly numbered Art 110A.) Lecture, three hours. Prerequisite: course 54. Neoclassicism and Romanticism, with emphasis on France — the development and influence of David, Ingres, and Delacroix.
Mr. Boime, Mr. Kunzle

110B. European Art of the 19th Century: Realism and Impressionism. (Formerly numbered Art 110B.) Lecture, three hours. Prerequisite: course 54. An inquiry into the problem of realism, with emphasis on French art, but including developments in England and Germany. Mr. Boime, Mr. Kunzle

110C. European Art of the 19th and 20th Centuries: Postimpressionism to Surrealism. (Formerly numbered Art 110C.) Lecture, three hours. Prerequisite: course 54. A study of the major developments in modern art, 1880s to 1930, including Seurat, Cezanne, Gauguin, Van Gogh, Art Nouveau, Fauvism, German expressionism. Mr. Kunzle

110D. Contemporary Art. (Formerly numbered Art 110D.) Lecture, three hours. Prerequisite: course 54. European and American art since World War II.
Mr. Boime, Mr. Kunzle

110E. Political Perspectives on Contemporary Art (Post-World War II). (Formerly numbered Art 110E.) Prerequisite: course 54. Vanguard painting in the U.S. (Picasso, abstract expressionism, and pop art, etc.) and the popular media of posters, comic strips, and murals, all of which are analyzed according to the dominant values under capitalism: alienation, consumerism, racism, imperialism, and sexism. Antidotal emphasis on protest art and women's art in the U.S. and the art of the socialist cultures of Cuba since 1959 and Chile from 1970 to 1973.
Mr. Kunzle

110F. Selected Topics in Modern Art. Lecture, three hours. Prerequisite: course 54. Changing topics in modern art (post-1780) which reflect the interests of individual regular and visiting faculty members.

112A. American Art. (Formerly numbered Art 112A.) Lecture, three hours. Architecture in the United States from the Colonial period to the 19th century.

112B. American Art. (Formerly numbered Art 112B.) Lecture, three hours. Painting and sculpture in the United States from the Colonial period to the 19th century.

112C. American Art. (Formerly numbered Art 112C.) Lecture, three hours. Art and architecture in the United States in the 20th century.

114A. The Early Art of India. (Formerly numbered Art 114A.) Lecture, three hours. Not open to freshmen. Survey of Indian art from the Indus Valley cultures to the 10th century. Emphasis on the Buddhist and Hindu backgrounds of the arts.
Mr. R.L. Brown

114B. Chinese Art. (Formerly numbered Art 114B.) Lecture, three hours. Not open to freshmen. Survey of the arts of China from the Neolithic times to the 18th century. The various arts, related to the developing historical background of the country.
Mr. Powers

114C. Japanese Art. (Formerly numbered Art 114C.) Lecture, three hours. Not open to freshmen. Japanese art from its beginning in prehistory through the 19th century. Emphasis on the development of Buddhist art and its relationship with the culture.
Mr. McCallum

114D. The Later Art of India. (Formerly numbered Art 114D.) Lecture, three hours. Prerequisite: course 114A or consent of instructor. Survey of Indian art from the 10th to the 19th century. The decline of Buddhist art, the last efflorescence of Hindu architecture, Muslim painting and architecture, and Rajput painting. Mr. R.L. Brown

C115A. Advanced Indian Art. (Formerly numbered Art C115A.) Lecture, three hours. Prerequisite: course 114A. Study in Indian sculpture and architecture. Concurrently scheduled with course C257.
Mr. R.L. Brown

C115B. Advanced Chinese Art. (Formerly numbered Art C115B.) Lecture, three hours. Prerequisite: course 114B. Study in Chinese painting and sculpture. Concurrently scheduled with course C258.
Mr. Powers

C115C. Advanced Japanese Art. (Formerly numbered Art C115C.) Lecture, three hours. Prerequisite: course 114C. Study in Japanese painting and sculpture. Concurrently scheduled with course C259.
Mr. McCallum

C115D. Art of Early China, Neolithic to A.D. 906. Lecture, three hours. Prerequisite: course 114B or consent of instructor. The period generally known as "early China," ranging from the earliest Neolithic artifacts to the end of the T'ang dynasty (618-906). Concurrently scheduled with course C261A.
Mr. Powers

C115E. Chinese Art of the Sung and Yuan Dynasties, 906-1368. Lecture, three hours. Prerequisite: course 114B or consent of instructor. The evolution of Chinese painting and some of the sculpture from the Sung through Yuan dynasties (906-1368). Concurrently scheduled with course C261B. Mr. Powers

C115F. Chinese Art from the Ming Dynasty to the People's Republic, 1368 to the Present. Lecture, three hours. Prerequisite: course 114B or consent of instructor. The evolution of Chinese painting and graphic art from the Ming dynasty through the late 1970s. Concurrently scheduled with course C261C.
Mr. Powers

C117A. Advanced Studies in Pre-Columbian Art: Mexico. (Formerly numbered Art C117A.) Lecture, three hours. Prerequisite: course 118B or consent of instructor. A study of the art of selected cultures of northern Mesoamerica from ca. 1200 B.C. to the Conquest, with emphasis on historical and iconographic problems. Concurrently scheduled with course C218A. Ms. Klein

C117B. Advanced Studies in Pre-Columbian Art: Central America. (Formerly numbered Art C117B.) Lecture, three hours. Prerequisite: course 118B or consent of instructor. A study of the art of selected cultures of southern Mesoamerica and the remainder of Central America from ca. 2000 B.C. to the Conquest, with particular emphasis on the history and iconography of the art of the Maya. Concurrently scheduled with course C218B. Ms. Klein

C117C. Advanced Studies in Pre-Columbian Art: The Andes. (Formerly numbered Art C117C.) Lecture, three hours. Prerequisite: course 118B or consent of instructor. A study of the art of selected cultures of Colombia, Ecuador, Peru, and Bolivia from ca. 4000 B.C. to the Conquest, with particular emphasis on the history and iconography of the art of Peru. Concurrently scheduled with course C218C.
Ms. Klein

118A. The Arts of Oceania. (Formerly numbered Art 118A.) Lecture, three hours. Prerequisite: course 55 or consent of instructor. Survey of the arts of the major island groupings of the Pacific, emphasizing style-regions and broad historical relationships.
Ms. Klein, Mr. Rubin

118B. The Arts of Pre-Columbian America. (Formerly numbered Art 118B.) Lecture, three hours. Prerequisite: course 55 or consent of instructor. Survey of the sequence of cultures which developed in the area between (and including) Mexico and Peru from ca. 1000 B.C. to the Conquest. Ms. Klein

118C. The Arts of Sub-Saharan Africa. (Formerly numbered Art 118C.) Lecture, three hours. Prerequisite: course 55 or consent of instructor. The early arts of Nigeria and a selection of other traditions, emphasizing sculpture. Mr. Rubin

118D. The Arts of Native North America. (Formerly numbered Art 118D.) Lecture, three hours. Prerequisite: course 55 or consent of instructor. Survey of painting, sculpture, and other arts from the Eskimo to the peoples of the Caribbean and the Southwestern United States. Ms. Klein, Mr. Rubin

C119A. Advanced Studies in African Art: Western Africa. (Formerly numbered Art C119A.) Lecture, three hours. Prerequisite: course 118C or consent of instructor. Consideration of the network of stylistic, historical, and cultural relationships existing among the peoples of the upper Niger River Valley and adjacent portions of the Western Guinea Coast. Concurrently scheduled with course C216A. Mr. Rubin

C119B. Advanced Studies in African Art: Central Africa. (Formerly numbered Art C119B.) Lecture, three hours. Prerequisite: course 118C or consent of instructor. Northern and Eastern Nigeria, Cameroun, and the Ogowe River Basin. Concurrently scheduled with course C216B. Mr. Rubin

120A. History of Prints. (Formerly numbered Art 120A.) Lecture, three hours. Development of style and techniques of expression in the graphic arts from the 15th to the early 16th century. Mr. Cuno

120B. History of Prints. (Formerly numbered Art 120B.) Lecture, three hours. Development of style and techniques of expression in the graphic arts from the 16th to the early 19th century. Mr. Cuno

120C. History of Prints. (Formerly numbered Art 120C.) Lecture, three hours. Development of style and techniques of expression in the graphic arts of the later 19th and 20th centuries. Mr. Cuno

121A. Critical and Historical Studies in Drawing. (Formerly numbered Art 121A.) Lecture, three hours. Development of style and means of expression in drawing from the late Middle Ages to the early Renaissance. Mr. Cuno

121B. Critical and Historical Studies in Drawing. (Formerly numbered Art 121B.) Lecture, three hours. Development of style and means of expression in drawing from the late Renaissance to the present. Mr. Cuno

125. Tutorial Conferences. (Formerly numbered Art 125.) Discussion, two hours. Prerequisites: courses 50, 51, 54, 57. Limited to undergraduate art history majors. Discussion of selected art topics, with emphasis on related readings in music, literature, history, and philosophy. Oral reports. P/NP grading.

127. Undergraduate Seminar. Lecture, three hours. Prerequisite: junior standing or consent of instructor. Selected aspects of art history explored through readings, discussion, research papers, and oral presentations. May be repeated twice.

197. Honors Course. Hours to be arranged. Prerequisites: 3.0 GPA overall, 3.5 in major, consent of instructor, junior or senior standing. Individual studies for majors. May be repeated once for credit.

199. Special Studies in Art (2 to 8 units). Hours to be arranged. Prerequisites: 3.0 GPA in major, consent of instructor, senior standing. Individual studies for majors. May be taken for a maximum of eight units.

Graduate Courses

Prerequisite for all courses: consent of instructor. All courses may be repeated for credit (unless otherwise noted) on recommendation of the adviser; they are not open to undergraduate students.

201. Historiography of Art History. (Formerly numbered Art 201.) Seminar, two hours. A critical study of the various approaches to art history through the centuries, concentrating on one time period, on the work of one or more authors, or on a particular methodology.

202. Methodology of Art History (2 to 8 units). (Formerly numbered Art 202.) Sections oriented to the development and refinement of specialized research skills appropriate to particular periods and areas in the history of art.

203. Museum Studies. (Formerly numbered Art 203.) Seminar, two hours. Various aspects of museum activities: concepts and historical evolution of art museums and collecting; methodology of exhibitions; problems involved in acquisition and evaluation of works of art.

204. Restoration, Preservation, and Conservation. (Formerly numbered Art 204.) Seminar, two hours. May not be repeated.

205. Studies in Prints. (Formerly numbered Art 205.) Seminar, two hours. Critical studies in the history and connoisseurship of the graphic arts in the Western world. Group or individual studies often culminate in professionally directed exhibitions produced by the Grunwald Center for the Graphic Arts.

206. Studies in Drawings. (Formerly numbered Art 206.) Seminar, two hours. Critical studies in the history and connoisseurship of draughtsmanship in the Western world. Individual studies emphasizing professional presentation. Group studies may culminate in exhibitions sponsored by the Grunwald Center for the Graphic Arts.

210. Egyptian Art. (Formerly numbered Art 210.) Seminar, two hours. Prerequisites: courses 101A, 101B, 101C, 102. Art in Egypt during the Late period and the Greco-Roman period. Students should be ready to prepare for every meeting a briefing of a topic from archaeological memoirs, not to exceed 10 minutes. Some lectures.

211. Topics in Aegean Art. Seminar, two hours. Prerequisites: courses 102A and 102B, or consent of instructor. The art and architecture of the Aegean Bronze Age (3000-1000 B.C.). The monuments or theoretical problems related to the art and culture of Crete, Greece, the Cyclades, or Western Anatolia. Mr. Preziosi

213. Problems in Islamic Art. (Formerly numbered Art 213.) Seminar, two hours. The art and architecture of the Islamic world (Spain to Iran) from the 7th to the 17th century. Monuments or theoretical problems related to Islamic culture and artistic production.

C214. Problems in Islamic Art. (Formerly numbered Art C214.) Lecture, three hours. Prerequisite: consent of instructor. Monuments or theoretical problems related to Islamic culture and artistic production. Concurrently scheduled with course C104C. Ms. Bierman

C216A. Advanced Studies in African Art: Western Africa. (Formerly numbered Art C216A.) Lecture, three hours. Selected topics in the arts of peoples living west and north of Cameroun, with emphasis on special problems of theory and method. Concurrently scheduled with course C119A. Mr. Rubin

C216B. Advanced Studies in African Art: Central Africa. (Formerly numbered Art C216B.) Lecture, three hours. Selected topics in the arts of peoples of equatorial, southern, and eastern Africa, with emphasis on special problems of theory and method. Concurrently scheduled with course C119B. Mr. Rubin

C218A. Advanced Studies in Pre-Columbian Art: Mexico. (Formerly numbered Art C218A.) Lecture, three hours. Prerequisite: course 118B or consent of instructor. A study of the art of selected cultures of northern Mesoamerica from ca. 1200 B.C. to the Conquest, with emphasis on historical and iconographic problems. Concurrently scheduled with course C117A. Ms. Klein

C218B. Advanced Studies in Pre-Columbian Art: Central America. (Formerly numbered Art C218B.) Lecture, three hours. Prerequisite: course 118B or consent of instructor. A study of the art of selected cultures of southern Mesoamerica and the remainder of Central America from ca. 2000 B.C. to the Conquest, with particular emphasis on the history and iconography of the art of the Maya. Concurrently scheduled with course C117B. Ms. Klein

C218C. Advanced Studies in Pre-Columbian Art: The Andes. (Formerly numbered Art C218C.) Lecture, three hours. Prerequisite: course 118B or consent of instructor. A study of the art of selected cultures of Colombia, Ecuador, Peru, and Bolivia from ca. 4000 B.C. to the Conquest, with particular emphasis on the history and iconography of the art of Peru. Concurrently scheduled with course C117C. Ms. Klein

219A. Oceanic Art. Discussion, two hours. Prerequisite: consent of instructor. Studies in selected topics in the art of the Pacific islands. Ms. Klein, Mr. Rubin

219B. Pre-Columbian Art. Discussion, two hours. Prerequisite: consent of instructor. Studies in selected topics in the art of pre-Hispanic Latin America. Ms. Klein

219C. African Art. Discussion, two hours. Prerequisite: consent of instructor. Studies in selected topics in the art of sub-Saharan Africa. Mr. Rubin

219D. Native North American Art. Discussion, two hours. Prerequisite: consent of instructor. Studies in selected topics in the art of the American Indian. Ms. Klein, Mr. Rubin

220. Oceanic, Pre-Columbian, African, and Native North American Art. (Formerly numbered Art 220.) Discussion, two hours. Prerequisite: consent of instructor. Studies in selected topics comparing the arts of Oceania, Africa, and pre-Columbian and Native North America. Ms. Klein, Mr. Rubin

221. Topics in Classical Art. (Formerly numbered Art 221.) Lecture, two to three hours. Studies in Parthian art. A site-by-site survey of the Near East (Afghanistan, Iran, Iraq, Syria) during the period of Greek and Parthian control. Ms. Downey

223. Classical Art. (Formerly numbered Art 223.) Seminar, two hours. Studies in Greco-Roman art and archaeology. Studies of specific periods, sites, or artistic media. Ms. Downey

225. Medieval Art. (Formerly numbered Art 225.) Seminar, two hours. Studies in selected topics in Byzantine and European medieval art. Ms. Kalavrezou-Maxeiner

226A-226B. Medieval Art and Architecture. (Formerly numbered Art 226A-226B.) Studies in selected topics in Byzantine and European medieval art. Seminar extends over two consecutive quarters. Ms. Kalavrezou-Maxeiner

229. Renaissance and Baroque Paleography. (Formerly numbered Art 229.) Seminar. Prerequisites: Italian, working knowledge of Latin. A workshop approach to documents pertaining to artistic commissions from the 15th to the 17th century in Italy to study various aspects of handwriting in official and private deeds, correspondence, treatises, and inscriptions. Mr. Pedretti

230. Italian Renaissance Art. (Formerly numbered Art 230.) Seminar, two hours. Prerequisite: knowledge of Italian. A study of various aspects of Leonardo's theoretical approach to art in terms of sources and the impact on followers. Mr. Pedretti, Ms. Weisz, Ms. Woods-Marsden

231. Leonardo and Renaissance Theory of Art. (Formerly numbered Art 231.) Seminar, two hours. Prerequisite: knowledge of Italian. A study of various aspects of Leonardo's theoretical approach to art in terms of sources and the impact on followers. Mr. Pedretti

235. Northern Renaissance Art. (Formerly numbered Art 235.) Seminar, two hours. Prerequisite: knowledge of German. Emphasis on a selected topic (e.g., a particular artist, trend, or problem). Research papers and oral reports required.

240. Baroque Art. (Formerly numbered Art 240.) Seminar, two hours. Emphasis on a selected topic (e.g., a particular artist, trend, or problem). Research papers and oral reports required. Language requirements depend on area of focus.

244. Topics in European Art from 1700 to 1900. (Formerly numbered Art 244.) Lecture, two to three hours.

245. European Art from 1700 to 1900. (Formerly numbered Art 245.) Seminar, two hours.

246. Art and Architecture of Georgian England. (Formerly numbered Art 246.) Seminar, two hours. Ms. Bennett

253. Modern Art. (Formerly numbered Art 253.) Seminar, two hours. Changing topics in modern art (including illustration and other popular forms) which reflect the interests of particular faculty members. Political and economic factors affecting the arts of France and Germany at various times. Mr. Boime, Mr. Kunzle, Ms. Tonelli

255. American Art. (Formerly numbered Art 255.) Seminar, two hours. Advanced studies in the evolution of American art, chiefly architecture and painting from the 18th to the early 20th century. Criticism and evaluation of scholarship in the field with innovative research directed toward professional presentation. Ms. Tonelli

C257. Advanced Indian Art. (Formerly numbered Art C257.) Lecture, three hours. Prerequisite: course 114A. Study in Indian sculpture and architecture. Concurrently scheduled with course C115A.

C258. Advanced Chinese Art. (Formerly numbered Art C258.) Lecture, three hours. Prerequisite: course 114B. Study in Chinese painting and sculpture. Concurrently scheduled with course C115B. Mr. Powers

C259. Advanced Japanese Art. Formerly numbered Art C259.) Lecture, three hours. Prerequisite: course 114C. Study in Japanese painting and sculpture. Concurrently scheduled with course C115C. Mr. McCallum

260. Asian Art. (Formerly numbered Art 260.) Seminar, two hours. Advanced studies in the secular and religious artistic traditions of India, China, Japan, and adjacent regions. Topics and geographical areas vary each term. Mr. McCallum, Mr. Powers

C261A. Art of Early China, Neolithic to A.D. 906. Lecture, three hours. Prerequisite: course 114B or consent of instructor. The period generally known as "early China," ranging from the earliest Neolithic artifacts to the end of the T'ang dynasty (618-906). Concurrently scheduled with course C115D. Mr. Powers

C261B. Chinese Art of the Sung and Yuan Dynasties, 906-1368. Lecture, three hours. Prerequisite: course 114B or consent of instructor. The evolution of Chinese painting and some of the sculpture from the Sung through Yuan dynasties (906-1368). Concurrently scheduled with course C115E. Mr. Powers

C261C. Chinese Art from the Ming Dynasty to the People's Republic, 1368 to the Present. Lecture, three hours. Prerequisite: course 114B or consent of instructor. The evolution of Chinese painting and graphic art from the Ming dynasty through the late 1970s. Concurrently scheduled with course C115F. Mr. Powers

265. Fieldwork in Archaeology (2 to 8 units). (Formerly numbered Art 265.) Participation in archaeological excavations or other archaeological research under supervision of the staff.

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. A teaching apprenticeship under the active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

596. Directed Individual Study or Research (2 to 8 units). Prerequisite: consent of instructor.

597. Preparation for Master's Comprehensive Examination or Ph.D. Qualifying Examinations (2 to 12 units). (Formerly numbered Art 597.) Prerequisite: consent of instructor. S/U grading.

598. Research for and Preparation of Master's Thesis (2 to 12 units). (Formerly numbered Art 598.) Prerequisite: consent of instructor. S/U grading.

599. Research for and Preparation of Ph.D. Dissertation (2 to 12 units). (Formerly numbered Art 599.) Prerequisite: consent of instructor. S/U grading.

Design

Lower Division Courses

30A. Nature of Design. (Formerly numbered Art 30A.) Lecture, three hours; discussion, one hour. Open to nonmajors. Understanding the design process, with emphasis on development of a visual language; a study of historic, scientific, technological, economic, and cultural factors influencing design in our physical environment.

30B. Design Resources. (Formerly numbered Art 30B.) Lecture/discussion, three hours. Prerequisite: course 30A. Investigation of resources for creativity as an introduction to research.

31A. Fundamentals of Design: Color. (Formerly numbered Art 31A.) Lecture, two hours; laboratory, four hours. Course 32A may be taken concurrently. Exploration of color in theory and practice. Development and articulation of sensory concepts. Mr. Vasa in charge

31B. Fundamentals of Design: Form. (Formerly numbered Art 31B.) Lecture, two hours; laboratory, four hours. Course 32B may be taken concurrently. Interrelation of three-dimensional form concepts as a foundation for creativity; origination and solution of problems. Mr. Vasa in charge

32A. Perceptual Drawing. (Formerly numbered Art 32A.) Demonstration/discussion/laboratory, eight hours. Course 31A may be taken concurrently. Translation of perception through delineation, drawing, and other descriptive media. Mr. Vasa in charge

32B. Visual Presentation. (Formerly numbered Art 32B.) Demonstration/discussion/laboratory, eight hours. Prerequisite: course 32A. Course 31B may be taken concurrently. Translation of perception through delineation, drawing, and other descriptive media. Mr. Vasa in charge

33A. Materials and Processes: Ceramics (2 units). (Formerly numbered Art 33A.) Demonstration/discussion/laboratory, four hours. Introduction to processes and media in design. Forming and processing techniques in traditional and contemporary ceramics. May be repeated once. Mr. Saxe in charge

33B. Materials and Processes: Visual Representation (2 units). (Formerly numbered Art 33B.) Demonstration/discussion/laboratory, four hours. Introduction to processes and media in design. Use of drafting instruments. Measuring and construction methods. Orthographic and isometric projection. Information analysis and visualization necessary to support the design task. May be repeated once.

33C. Materials and Processes: Graphic Processes (2 units). (Formerly numbered Art 33C.) Demonstration/discussion/laboratory, four hours. Introduction to processes and media in design. Photography as a means of depicting and recording design concepts. Introduction to photomechanical techniques and photographic generation of images; introduction to graphic presentation production. May be repeated once.

33D. Materials and Processes: Production Processes (2 units). (Formerly numbered Art 33D.) Demonstration/discussion/laboratory, four hours. Introduction to media and processes in design. Introduction to the use of industrial technology. Processes covering the methods of production and handforming. Emphasis on finishing with industrial materials and systems, including plastics, metal, woods, cardboards, and other materials. May be repeated once. Mr. Shapira in charge

33F. Materials and Processes: Textiles (2 units). (Formerly numbered Art 33F.) Demonstration/discussion/laboratory, four hours. Introduction to media and processes in design. Fundamental methods of textile structure and design. May be repeated once. Mr. Kester in charge

33G. Materials and Processes: Design Photography (2 units). (Formerly numbered Art 33G.) Demonstration/discussion/laboratory, four hours. Introduction to media and processes in design. Photography as a means to visualize design concepts. Introduction to camera operation, the processing of photographic materials, laboratory and lighting procedures. Use of the design area laboratory. May be repeated once. Mr. Vasa in charge

34A-34B. History of Design. (Formerly numbered Art 34A-34B.) Lecture, three hours; discussion, one hour. Course 34A is prerequisite to 34B. Analysis of significant concepts of form in relation to social, technological, and historical developments.

Upper Division Courses

(I) Comparative Studies in Design

161A. Ceramics. (Formerly numbered Art 161A.) Lecture, three hours; laboratory, to be arranged. The evolution of ceramic form through geographic, social, and technological influences. Mr. Saxe

161B. World Costume. (Formerly numbered Art 161B.) Lecture, three hours; laboratory, to be arranged. Costume and body ornamentation; symbolic significance and evolving forms within their social, cultural, and geographic context. Ms. McCloskey

161C. Graphics. (Formerly numbered Art 161C.) Lecture, three hours; laboratory, to be arranged. Symbols, signs, and images, within social, cultural, and historical contexts. Mr. W. Brown

161E. Industrialization. (Formerly numbered Art 161E.) Lecture, three hours; laboratory, to be arranged. Industry, design, and society: their evolution and changing relationships.

161G. Shelter. (Formerly numbered Art 161G.) Lecture, three hours; laboratory, to be arranged. The development of interior spaces in relation to structure, visual quality, function, human needs, and behavior.

161H. Textiles. (Formerly numbered Art 161H.) Lecture, three hours. The development of textile forms through geographic, cultural, stylistic, and technological influences. Mr. Kester

161J. Video Imagery. (Formerly numbered Art 161J.) Lecture, three hours; laboratory, to be arranged. Analysis of videographic form. Mr. Kataoka

161K. Historic Fashions. (Formerly numbered Art 161K.) Lecture, three hours; discussion, two hours. Fashions and stylistic changes in Western dress from the late medieval period to the present time, studied in relationship to the social and cultural background of each era. Ms. McCloskey

(II) Concept and Form in Design

162A. Ceramics. (Formerly numbered Art 162A.) Lecture, two hours; laboratory, four hours. Prerequisites: courses 30A, 30B, 31A, 31B, 32A, 32B, or equivalent. Creative development of ceramic materials and processes, with emphasis on handbuilding methods; investigation and analysis of formal and expressive content. May be repeated once. Mr. Saxe

162B. Ceramics. (Formerly numbered Art 162B.) Lecture, two hours; laboratory, four hours. Prerequisites: courses 30A, 30B, 31A, 31B, 32A, 32B, 162A, or equivalent. Emphasis on wheelforming methods and materials science as sources of aesthetic content. May be repeated once. Mr. Saxe

163A. Costume. (Formerly numbered Art 163A.) Lecture, two hours; laboratory, four hours. Prerequisites: courses 30A, 30B, 31A, 31B, 32A, 32B, or equivalent. Introduction to the creative process in designing contemporary costume. May be repeated once. Ms. McCloskey

163B. Costume. (Formerly numbered Art 163B.) Lecture, two hours; laboratory, four hours. Prerequisites: courses 30A, 30B, 31A, 31B, 32A, 32B, 163A, or equivalent. Further development of the design process, with emphasis on the symbolic aspect of contemporary costume. May be repeated once. Ms. McCloskey

164A. Fiber Structure. (Formerly numbered Art 164A.) Lecture, two hours; laboratory, four hours. Prerequisites: courses 30A, 30B, 31A, 31B, 32A, 32B, or equivalent. Design and construction of woven forms. May be repeated once. Mr. Bassler, Mr. Kester

164B. Fiber Structure. (Formerly numbered Art 164B.) Lecture, two hours; laboratory, four hours. Prerequisites: courses 30A, 30B, 31A, 31B, 32A, 32B, or equivalent. The derivation of non-loom methods of fabric construction using pliable elements. May be repeated once. Mr. Bassler, Mr. Kester

165A. Graphics. (Formerly numbered Art 165A.) Lecture, two hours; laboratory, four hours. Prerequisites: courses 30A, 30B, 31A, 31B, 32A, 32B, or equivalent. The development of letterforms, typography, and reproduction technology. May be repeated once. Mr. W. Brown

165B. Graphics. (Formerly numbered Art 165B.) Lecture, two hours; laboratory, four hours. Prerequisites: courses 30A, 30B, 31A, 31B, 32A, 32B, 165A, or equivalent. Empiric and systematic graphic concepts, including methods, symbols, and media technology. May be repeated once. Mr. W. Brown

167A-167B. Form in Industrialized Materials. (Formerly numbered Art 167A-167B.) Lecture, two hours; laboratory, four hours. Prerequisites: courses 30A, 30B, 31A, 31B, 32A, 32B, or equivalent. Course 167A is prerequisite to 167B. Theories and applications of technological materials. Each course may be repeated once.

169A-169B. Product. (Formerly numbered Art 169A-169B.) Lecture, two hours; laboratory, four hours. Prerequisites: courses 30A, 30B, 31A, 31B, 32A, 32B, or equivalent. Course 169A is prerequisite to 169B. Product development in industry; function, aesthetics, and material properties as they relate to human needs. Each course may be repeated once. Mr. Shapira

170A-170B. Interior Spaces. (Formerly numbered Art 170A-170B.) Lecture, two hours; laboratory, four hours. Prerequisites: courses 30A, 30B, 31A, 31B, 32A, 32B, or equivalent. Course 170A is prerequisite to 170B. The definition of structure and space in relation to human needs. Each course may be repeated once. Mr. Shapira

171A. Textiles. (Formerly numbered Art 171A.) Lecture, two hours; laboratory, four hours. Prerequisites: courses 30A, 30B, 31A, 31B, 32A, 32B, or equivalent. Systems of fabric surface organization, including the study of color, pattern, and methods of printing. May be repeated once.

171B. Textiles. (Formerly numbered Art 171B.) Lecture, two hours; laboratory, four hours. Prerequisites: courses 30A, 30B, 31A, 31B, 32A, 32B, or equivalent. Dye systems and theories, including methods of application to fabrics. May be repeated once. Mr. Bassler

172A. Video Imagery. (Formerly numbered Art 172A.) Lecture, two hours; laboratory, four hours. Prerequisites: courses 30A, 30B, 31A, 31B, 32A, 32B, or equivalent. Introduction to electronic image making; videotape and "live" representation. May be repeated once. Mr. W. Brown, Mr. Kataoka

172B. Video Imagery. (Formerly numbered Art 172B.) Lecture, two hours; laboratory, four hours. Prerequisites: courses 30A, 30B, 31A, 31B, 32A, 32B, 172A, or equivalent. Electronic audiographic recording explored for its sensory potential; videotape as record of process and content levels. May be repeated once. Mr. W. Brown, Mr. Kataoka

(III) Proseminars in Design

189. Topics in Design. (Formerly numbered Art 189.) Lecture/discussion, three hours; laboratory, to be arranged. Prerequisite: consent of adviser and instructor. Examination by faculty members of specific problems relevant to design theory and performance. Topics announced in advance. May be repeated for a maximum of 16 units.

193. Proseminar in Design: Senior Studies. (Formerly numbered Art 193.) Proseminar, three hours. Prerequisite: consent of adviser. Open to senior and advanced students through design faculty advisers. Examination by faculty members of specific problems relevant to design theory and performance. Topics announced in advance. May be repeated twice.

197. Honors Course. Hours to be arranged. Prerequisites: 3.0 GPA overall, 3.5 in major, consent of instructor, junior or senior standing. Individual studies for majors. May be repeated once for credit.

199. Special Studies in Art (2 to 8 units). Hours to be arranged. Prerequisites: 3.0 GPA in major, consent of instructor, senior standing. Individual studies for majors. May be taken for a maximum of eight units.

Graduate Courses

Prerequisite for all courses: consent of instructor. All courses may be repeated for credit (unless otherwise noted) on recommendation of the adviser; they are not open to undergraduate students.

280. Communication Imagery (2 to 8 units). (Formerly numbered Art 280.) Laboratory, two to four hours. Exploration of graphic processes in visual systems. Design theory and procedures related to typography, letterform, photography, and the graphic film as they communicate visually (i.e., poster, brochure, book, film, and exhibition).

281. Image Transfer (2 to 8 units). (Formerly numbered Art 281.) Laboratory, two to four hours. Advanced experimental work in print processes. Employment of the fixed image, such as offset lithography, offset or letter press, screen printing, and emulsion printing, through photo/mechanical means.

282. Electronic Imagery (2 to 8 units). (Formerly numbered Art 282.) Laboratory, two to four hours. Development of expressive and design applications in video and computer-generated forms. The manipulation of visual, time, motion, and aural characteristics of electronic imagery, developed with video cameras, VTR, and electronic synthesizers experienced and viewed on television monitors or in print forms; images stored on videotapes for later analysis. Mr. Kataoka

283. Costume (2 to 8 units). (Formerly numbered Art 283.) Seminar, two hours; laboratory, two hours. Advanced formulation and development of design ideas for contemporary fashion, dance, drama, or ritual. Research on the evolution of style and modes of expression in historical and modern costumes. Ms. McCloskey

284. Ceramics (2 to 8 units). (Formerly numbered Art 284.) Seminar, two hours; laboratory, two hours. Advanced research and application of ceramic theory and methodology. Emphasis on the development of a responsible personal aesthetic. Includes, but not limited to, investigations of clay and glaze design technology, design for industry, clay as medium, and the historical importance of ceramics as a socially responsible discipline. Mr. Saxe

287. Design and Structure (2 to 8 units). (Formerly numbered Art 287.) Laboratory, two to four hours. Emphasis on developing methods of critical evaluation. Work of a subjective and expressive nature in areas of fiber, ceramics, graphics, and visual presentation. Exploration of form, with emphasis on experimentation with materials and processes. Mr. Vasa

288. Fiber Structure (2 to 8 units). (Formerly numbered Art 288.) Laboratory, two to four hours. Advanced formative work in traditional and experimental processes of fabric construction utilizing fiber media. Mr. Bassler, Mr. Kester

289. Textiles (2 to 8 units). (Formerly numbered Art 289.) Laboratory, two to four hours. Advanced experimental work with the elements of fabric design, including surface manipulation and methods of fabrication, which may include but are not limited to dye and printing processes.

290A-290B-290C. Design Seminar: A Collaborative View. (Formerly numbered Art 290A-290B-290C.) Seminar, three hours:

290A. Formalization Processes. Critical examination of theoretical concepts underlying the design process, including the initiation of an idea, its interpretation, and execution by the designer.

290B. Design Programming. Critical examination of idea development into model or procedural form for execution and/or production by others.

290C. Visual Communication. Critical examination of imagery in its social context.

292. Shelter (2 to 8 units). (Formerly numbered Art 292.) Development of individual projects to investigate concepts of shelter. Exploration of traditional and contemporary forms, methods, and materials. Mr. Shapira

293. Interior Space Design (2 to 8 units). (Formerly numbered Art 293.) The concept and practice of designing interior spaces. Evaluation of visual and functional needs for interior spaces (ranging from personal to social spaces) in two- and three-dimensional projects involving color, light, surface, materials, equipment, furniture, etc. Mr. Kester, Mr. Shapira

294. Industrial Design (2 to 8 units). (Formerly numbered Art 294.) Laboratory, two to four hours. In-depth studies in topics such as design and management, person-object compatibility, visual identity programs, containing systems, transportation, design for developing countries, ergonomics, urban components, area studies, materials, and processes. Mr. Shapira

295. Exhibition Design (2 to 8 units). (Formerly numbered Art 295.) Laboratory, two to four hours. Interpretation and presentation of materials for exhibition. Students may elect to work with instructor and gallery staff on regularly scheduled productions or they may outline their own project and proceed by producing studies, renderings, or schematics or by fabricating models. Mr. Carter

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. A teaching apprenticeship under the active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

596. Directed Individual Study or Research (2 to 8 units). Prerequisite: consent of instructor.

Professors
Elsie Dunin, M.A.
Carol Scothorn, M.A., *Chair*
Marion Scott
Doris Siegel
Allegra Snyder, M.A.
Emma Lewis Thomas, Ph.D.
Pia Gilbert, *Emeritus*
Alma M. Hawkins, Ed.D., *Emeritus*

Associate Professors
Erma Dosamantes-Alperson, Ph.D.
Judy Mitoma, M.A.

Assistant Professor
Angelia Leung-Fisher, M.A.

Lecturer
Suenobu Togi

Visiting Lecturers
Judithe Gantz, M.A.
Margaret Hills
Martha Kalman, M.A.
Margalit Oved Marshall
Emilio Pulido-Huizar, B.A.C.
Stephanie Schoelzel, M.F.A.
Wendy Wyman, Ph.D.
Medha Yodh, M.S.

Scope and Objectives

Bodily skill, artistry, and deep understanding are necessary for an intelligent and creative artist. Dancers at UCLA receive extensive movement experience in contemporary dance, ballet, improvisation, and ethnic forms through practical work in studios, workshops, and performances. The art of dance is explored in costume design, lighting and scenic design, music and sound, and video. The development and relevance of dance is studied through courses in dance history, ethnology, notation, therapy, kinesiology, and education. Modern choreography is the basis of the UCLA program in dance.

UCLA offers the Bachelor of Arts degree in Dance combining preprofessional training with the liberal study essential to the development of each dancer's own creative potential.

The graduate program awards the Master of Arts degree in Dance, designed for students preparing to continue professionally as choreographers, performers, designers, teachers, researchers, and therapists, with specific areas of focus in choreography/performance, dance ethnology, and dance education, and the Master of Arts degree in Dance/Movement Therapy. The therapy program is approved by the American Dance Therapy Association.

Bachelor of Arts Degree

The dance major offered through the College of Fine Arts leads to the Bachelor of Arts degree. Students who wish to confer with the departmental counselor regarding program planning and major requirements should see Wendy Urfrig in the department office.

Preparation for the Major

Required: Twenty-six units of lower division coursework, including Dance 6F-6W-6S, 7F-7W-7S, 11A-11F, 20, 25A, 25B, 48 (must be taken twice), 70.

The Major

Required: A total of 58 units of upper division coursework, including Dance 100A-100B-100C, 113A-113B-113C, C120, 123A, 123B, 132A-132B, 134A, 134B, 141, 144, 148, 149, and eight units selected from upper division dance electives.

Admission to the upper division major is determined by a screening and evaluation conducted during Spring Quarter of your sophomore year. All entering transfer students are auditioned for placement in technique and choreography classes.

Master of Arts in Dance

Admission

A bachelor's degree with an undergraduate major in dance or equivalent experience is required. Some of this experience may have been gained outside the academic setting through such avenues as studio work. The department has its own application form (in addition to that used by the Graduate Admissions Office); three letters of recommendation and an audition are also required.

The audition looks at your technical proficiency and creative potential, which is expected to be no lower than the level of the UCLA undergraduate junior. Special attention is given to the creative aspects of dance. Because the department recognizes the importance of diversity and specialization at the graduate level, you are evaluated according to your primary focus (i.e., performance-choreography, education, therapy, or ethnology).

Prospective students may write to the Department of Dance, 124 Dance Building, UCLA, Los Angeles, CA 90024, for departmental brochures which give additional information on the graduate program.

Foreign Language Requirement

There is no foreign language requirement at the graduate level. However, if you specialize in dance ethnology and plan to do fieldwork, it is recommended that, during your graduate study or before, you gain working knowledge of the language of your research area.

Course Requirements

Nine courses (or more depending on your specialization) are required, distributed as follows: (1) Dance 230; (2) four courses (16 units) in the department at the graduate level (200 series); (3) four courses (16 units) in or outside the department at the upper division or graduate level. These may not be classes taken to fulfill deficiencies nor technique or ethnic performance classes.

These requirements are to be partially fulfilled by one of the following patterns: (1) Dance 151, 211A through 211F (choreography/performance); (2) courses 151, 211A-211B-211C, 251A-251B (dance education); (3) courses 280A-280B-280C, 280E (dance ethnology).

Eight units of 500-series courses (596A, 596R, 598) may be applied toward the total course requirement; four units may be applied toward the minimum graduate course requirement.

The following upper division courses may be applied toward the M.A. degree: Dance 103, 114, 123C, 126, 142, 151, 152, 153, 160, 181A, 181B, 181C, 181D, 182A, 183A, 184B, 187A, 190, 191.

Other areas such as dance history, philosophy and criticism, dance kinesiology, dance production, dance and media, music for dance, and dance notation may be pursued on the advice of the chair or an adviser after you have been in the graduate program for several quarters and have identified a unique interest and competence in one of these areas.

While fieldwork is not a requirement for those specializing in the area of dance ethnology, it is strongly suggested as part of that program.

Teaching Experience

Teaching experience is not a requirement for the degree. It is highly recommended, however, for those graduating with a focus in dance education.

Thesis Plan

If you select the thesis plan, you prepare a report of the results of your original research or creative work. Before beginning work on the thesis, you must obtain approval of the subject and general plan from the graduate faculty committee. If the thesis plan is accepted, a thesis committee is formed. Conditions for reexamination in case you fail the first presentation are based on the support of several faculty members.

Comprehensive Examination Plan

You must declare your intention to take the comprehensive examination plan in your third or fourth quarter by preparing a written proposal of the plan, which is to be presented and defended before a panel of faculty. The examination, administered by a committee of your choice selected from faculty in your specialization, Dance Department faculty outside your

specialization, and faculty outside the department, consists of three written questions and an oral test and takes approximately three days to complete. Each committee member grades each question pass, pass with honors, or fail. In order to pass, each question must be graded pass or better by two of the three committee members. If any questions are failed, you may retake the failed portion(s) once only.

Master of Arts in Dance/ Movement Therapy

An M.A. in Dance/Movement Therapy is required for registry as a therapist with the American Dance Therapy Association (ADTA).

Admission

In addition to the requirements listed above under the M.A. in Dance, an undergraduate course in abnormal psychology is required, and other courses in psychology (developmental, personality, and group dynamics) are highly recommended.

Course Requirements

Dance 230, 260A-260B-260C, 261A-261B-261C, 262A-262B-262C, 460A-460B-460C, 596A, 596R are required.

The program in dance therapy requires field experience or internship to provide an orientation to the hospital setting and experience as a movement therapist. The second year is designed as an intensive experience: two full days each week, with an opportunity to work with different populations and to assume a broad range of responsibilities in a therapeutic setting.

Thesis Plan

You must prepare a written research thesis on a topic related to your internship. Your thesis is supervised by senior faculty members in your major field and one faculty member from another department.

Comprehensive Examination Plan

You must declare your intention to take the comprehensive examination plan in your third or fourth quarter by preparing a written proposal of the plan, which is to be presented and defended before a panel of faculty. The examination, administered by a committee of your choice selected from faculty in your specialization, Dance Department faculty outside your specialization, and faculty outside the department, consists of three written questions and an oral test and takes approximately three days to complete. Each committee member grades each question pass, pass with honors, or fail. In order to pass, each question must be graded pass or better by two of the three committee members. If any questions are failed, you may retake the failed portion(s) once only.

Lower Division Courses

1A-1F. Fundamentals of Modern Dance (2 units each). (Formerly numbered 10A-10B-10C and 11A-11B-11C.) Studio, three hours. Designed for non-dance majors. Courses must be taken in sequence. Study of dance technique, improvisation, and choreography. Critical viewing, reading, and discussion of modern dance artists' historical/aesthetic styles. (F,W,Sp)

6F-6W-6S. Fundamentals of Ballet (2 units per year). (Formerly numbered 30AF-30AW-30AS.) Laboratory, four hours. Prerequisite: dance major or consent of instructor. Students admitted in Fall Quarter only. Study of ballet techniques and principles, including dance terminology. In Progress grading (credit to be given only on completion of course 6S). Ms. Hills (F,W,Sp)

7F-7W-7S. Fundamentals of Ballet (2 units per year). (Formerly numbered 30BF-30BW-30BS.) Laboratory, four hours. Prerequisite: dance major or consent of instructor. Students admitted in Fall Quarter only. Study of ballet techniques and principles, including dance terminology. In Progress grading (credit to be given only on completion of course 7S). Ms. Hills (F,W,Sp)

10. Introduction to Dance (2 units). (Formerly numbered 50.) An introduction to the many and varied theoretical aspects of dance as a discipline. Mrs. Snyder

11A-11F. Modern Dance Technique and Choreography (2 units each). (Formerly numbered 36A-36B-36C and 37A-37B-37C.) Lecture, one hour; studio, three hours. Limited to dance majors. Experiences designed to achieve beginning to intermediate levels of kinesthetic awareness and technical and improvisational skills, as well as an understanding of the creative process of structure and form in dance compositions. Ms. Kalman, Ms. Leung-Fisher (F,W,Sp)

20. Music Analysis for Dance (2 units). (Formerly numbered 35.) Lecture, two hours; laboratory, one hour. Study of the elements of music, music structures, and their relationship to dance, with emphasis on rhythmic analysis, dance accompaniment, and teacher-accompanist roles. (F)

25A. Beginning Labanotation (2 units). (Formerly numbered 38A.) Lecture, two hours; laboratory, one hour. Introduction to writing dance/movement in Labanotation. Basic skills in reading dances from the notated score. Mrs. Dunin, Ms. Leung-Fisher, Mrs. Scothorn (F,W)

25B. Intermediate Labanotation (2 units). (Formerly numbered 38B.) Lecture, two hours; laboratory, one hour. Prerequisite: course 25A. Continued studies in Labanotation. Experiences in recording dance/movement and interpreting the notated score. Ms. Leung-Fisher, Mrs. Scothorn (W,Sp)

40. Introduction to Dance Theater (2 units). (Formerly numbered 52.) Lecture, two hours; laboratory, two hours. Prerequisite: course 11A or consent of instructor. Study of the creative elements of choreography, sound score, and design and how they interact with the practical elements of personnel, materials, and procedures in presenting dance theater. Mrs. Siegel (W)

48. Laboratory in Dance Production (1 unit). (Formerly numbered 92.) Laboratory, two hours. Realization of concepts of lighting, sound, costume, scene design, and stage practices in departmental dance productions. Must be repeated once in another year. P/NP grading. (Sp)

70. Survey of Dancing in Selected Cultures (2 units). Studio, three hours. Introduction to dances and their movement characteristics in Western and non-Western cultures. Mrs. Dunin (F,Sp)

71B. Dance of Indonesia (2 units). (Formerly numbered 71A and 71H.) Studio, three hours. Dance experience is not required. Introduction to the technique and repertory of dance traditions (e.g., Java, Bali, Sunda). Ms. Mitoma (F,W,Sp)

71C. Dance of Japan (2 units). (Formerly numbered 71G.) Studio, three hours. Dance experience is not required. Technique and repertory from the court dance tradition (e.g., Gagaku). Mr. Togi (F,W,Sp)

71D. Dance of India (2 units). (Formerly numbered 71E.) Studio, three hours. Dance experience is not required. Introduction to dance in India, with emphasis on a particular tradition (e.g., Bharata Natyam). Ms. Yodh (F,W,Sp)

71E. Dance of Korea (2 units). (Formerly numbered 71Q.) Studio, three hours. Dance experience is not required. Technique and repertoire of a selected dance tradition (e.g., Korean classical and folk).

72B. Dance of Ghana (2 units). (Formerly numbered 71B.) Studio, three hours. Dance experience is not required. Introduction to the technique and repertory of a selected region.

73B. Dance of Mexico (2 units). (Formerly numbered 71J.) Studio, three hours. Dance experience is not required. Introduction to forms and styles in dances of several ethnographic regions. Emphasis on identifying dance characteristics through actual dancing. Mr. Pulido-Huizar (F,W,Sp)

74B. Dance of Yugoslavia (2 units). (Formerly numbered 71P.) Studio, three hours. Dance experience is not required. Introduction to forms and styles in dances of several ethnographic regions. Emphasis on identifying dance characteristics through actual dancing. Mrs. Dunin (F,W)

74C. Dance of Spain (2 units). (Formerly numbered 71M.) Studio, three hours. Dance experience is not required. Technique and repertory of dances from selected ethnographic regions.

76B. Dance of Israel (2 units). (Formerly numbered 71F.) Studio, three hours. Dance experience is not required. Technique and repertory from selected ethnographic regions. Ms. Marshall (F,W,Sp)

79A-79Z. Dance of a Selected Culture (2 units each). Studio, three hours. Introduction to forms and styles in dance of a selected culture area.

80A-80B. Movement as Cultural Behavior (2 units each). (Formerly numbered 46A-46B.) Studio, three hours. Prerequisite: world arts and cultures major or consent of instructor. Studio/laboratory examination of the individual and cultural factors which affect expressive movement in cultures. Experimental classes which enhance kinesthetic and movement awareness of self and others through cultural perspective. Ms. Mitoma (W,Sp)

Upper Division Courses

100A-100B-100C. Modern Dance: Intermediate Technique and Choreography. (Formerly numbered 150A-150B-150C.) Lecture, three hours; laboratory, four hours. Prerequisite: course 11F. Limited to dance majors. Intermediate to advanced levels of technical skill emphasizing musicality, spatial awareness, and movement complexity. Choreographic assignments include use of composed music, group forms, and the stage space. Mrs. Scothorn (F,W,Sp)

101A-101B-101C. Intermediate Modern Dance Technique (2 units each). (Formerly numbered 112A-112B-112C.) Lecture, two hours; laboratory, two hours. Technique levels II and III. Emphasis on increasing technical skill. Each course may be repeated once. Mr. Brown, Mr. Ganado, Ms. Kalman, Ms. Leung-Fisher (F,W,Sp)

102A-102B-102C. Advanced Modern Dance Technique (2 units each). (Formerly numbered 114A-114B-114C.) Lecture, one hour; studio, five hours. Technique levels IV and V. Studies in advanced technique, with emphasis on performing skills. Each course may be repeated once. Mr. Brown, Mr. Ganado, Ms. Kalman (F,W,Sp)

103. Improvisation in Dance (2 units). (Formerly numbered 116.) Studio, four hours. Prerequisite: dance major or consent of instructor. Development of an aesthetic perspective through the use of imagery, sound, and other art. Concentration and projection.
Ms. Kalman (W)

106A-106B-106C. Intermediate Ballet (2 units each). (Formerly numbered 131A-131B-131C.) Lecture, one hour; laboratory, three hours. Prerequisites: courses 7F-7W-7S or consent of instructor. Courses must be taken in sequence. Study of techniques and principles of classical ballet, including phrasing, combinations, and repertory. Ms. Hills (F,W,Sp)

107A-107B-107C. Advanced Ballet (2 units each). (Formerly numbered 132A-132B-132C.) Lecture, two hours; laboratory, six hours. Prerequisite: course 106C. Advanced technique in classical ballet, with emphasis on performing skills. Each course may be repeated once. Ms. Hills (F,W,Sp)

113A-113B-113C. Advanced Modern Dance: Technique, Choreography, and Performance (2 units each). (Formerly numbered 153A-153B-153C.) Lecture, three hours; laboratory, four hours. Prerequisite: course 100C. Advanced technique studies, with emphasis on developing performance qualities: dynamics, focus, projection, expressive range. Independent work in solo and group choreography culminating in a final performance project. (F,W,Sp)

114. Form and Structure in Choreography. (Formerly numbered 155.) Lecture, one hour; laboratory, three hours. Prerequisite: dance major or consent of instructor. A study of the craft of choreography. Emphasis on breath movement, phrasing, ABA, theme and variations, rondo. Learning to discipline and shape the creative impulse into specific forms, with emphasis on staging. Ms. Scott (Sp)

C120. Music as Dance Accompaniment. (Formerly numbered C154.) Prerequisite: course 20 or consent of instructor. Piano and percussion improvisation for dance. Choreographer-composer relationships. History of music for dance, with emphasis on contemporary trends. Music for the dance performance. May be concurrently scheduled with course C220. (W)

123A. Anatomy for the Dancer. (Formerly numbered 111A.) Prerequisite: course 11F or consent of instructor. A study of the human muscular-skeletal system as related to dance. Ms. Gantz (F,W)

123B. Applied Principles of Conditioning and Correctives for the Dancer. (Formerly numbered 111B.) Prerequisite: course 123A. Study and application of the biological and physical principles of human movement as related to dance. Prevention and care of dance injuries. Ms. Gantz (W,Sp)

123C. Projects in Dance Kinesiology. (Formerly numbered 111C.) Prerequisite: course 123B. In-depth study of selected topics introduced in courses 123A and 123B. Ms. Gantz (Sp)

125. Principles of Movement Analysis: Laban Analysis. (Formerly numbered 138.) Lecture, two hours; laboratory, two hours. Prerequisite: dance major or consent of instructor. Basic principles of Laban analysis. Emphasis on experiential understanding of movement through the study of motion factors and elementary concepts of spatial dynamics. Focus on the qualitative area of movement to further comprehension of dance as a creative art form.
Ms. Gantz

126. Advanced Labanotation. (Formerly numbered 159.) Lecture, two hours; laboratory, two hours. Prerequisite: course 25B. Skills in reading and writing complex movement; reconstruction and score preparation in modern dance, ballet, and ethnic dance.
Mrs. Dunin, Mrs. Scothorn (Sp)

132A-132B. Philosophical Bases and Trends in Dance (4 units, 2 units). (Formerly numbered 158A-158B.) Course 132A is prerequisite to 132B. Critical analysis of dance as a creative experience and the role of professional and educational dance in our society. Study of selected approaches to current development in dance. (W,Sp)

134A. History of Dance in Western Culture, Origins to 1600. (Formerly numbered 151A.) The development of dance styles in Western culture; function in society and relationship to contemporary artistic expression; ancient Egypt through European Renaissance. Mrs. Thomas (F)

134B. History of Dance in Western Culture, 1600 to the Present. (Formerly numbered 151B.) Prerequisite: course 134A or consent of instructor. Survey of dance styles in European and American cultures from early baroque to the present. Mrs. Thomas (W)

141. Lighting Design for Dance Theater (2 units). (Formerly numbered 152A.) Lecture, two hours; laboratory, two hours. Prerequisite: course 11F or consent of instructor. Lighting for dance: examination of aesthetics, principles, and technical elements. Application to selected choreographies to be publicly performed. Mrs. Siegel (F,Sp)

142. Advanced Studies in Dance Theater Lighting (2 or 4 units). (Formerly numbered 152C.) Lecture, four hours; laboratory, four or more hours. Prerequisite: course 141 or consent of instructor. Analysis of diverse dance theater lighting problems at an advanced level and individual development of creative solutions. May be taken for a maximum of four units.
Mrs. Siegel (W,Sp)

144. Costume and Scenic Design Concepts for Dance Theater (2 units). (Formerly numbered 152B.) Lecture, two hours; laboratory, two hours. Prerequisite: course 11F or consent of instructor. General study of costume history, selected historical styles, and introductory drawing as a conceptual basis for visual awareness in theatrical dance design. Designer-choreographer relationships.
Ms. Schoelzel (F,Sp)

148. Advanced Laboratory in Dance Production (1 unit). (Formerly numbered 192.) Laboratory, two hours. Prerequisites or corequisites: courses 141 and 144, or consent of instructor. Further development and application of concepts of lighting, sound, costume, scene design, and stage practices in departmental dance productions. May be repeated once. P/NP grading. (Sp)

149. Dance Performance Practicum (1 unit). (Formerly numbered 193.) Laboratory, four hours. Dancing in selected choreography in public performance. P/NP grading. (Sp)

151. Foundations of Dance Education. (Formerly numbered 127.) Lecture, two hours; laboratory, three hours. Prerequisite: dance major or consent of instructor. Introduction to movement concepts, skills, and teaching principles for modern dance instruction. Supervised teaching practicum included.
Ms. Leung-Fisher (F,W)

152. Dance as Culture in Education. (Formerly numbered 128.) Lecture, two hours; laboratory, two hours. Prerequisite: course 70 or consent of instructor. Theoretical and practical aspects of teaching ethnic dance, especially in higher education.
Mrs. Dunin (F)

153. Creative Dance for Children. (Formerly numbered 160.) Lecture, three hours; laboratory, one hour. Prerequisite: dance major or consent of instructor. Introduction to movement concepts, skills, and principles for teaching children's dance; emphasis on dance as a creative medium of expression.
Ms. Leung-Fisher (Sp)

160. Introduction to Dance/Movement Therapy (2 units). (Formerly numbered 160A.) Lecture, one hour; laboratory, three hours. Prerequisite: course 100C or consent of instructor. Group processes and dynamics in both nonverbal (movement) and verbal modes of experience, so students achieve a significant level of psychological insight to assist in functioning professionally as effective dance/movement therapists. Ms. Wyman (F)

171B. Dance of Indonesia (2 units). (Formerly numbered 171A and 171H.) Studio, three hours. Prerequisite: course 71B or consent of instructor. Technique and repertoire of a selected dance tradition (e.g., Java, Bali, or Sunda). Dance in relation to music, aesthetic principles, and cultural context. May be repeated once. Ms. Mitoma (W,Sp)

171C. Dance of Japan (2 units). (Formerly numbered 171G.) Studio, three hours. Prerequisite: course 71C. Technique and repertoire of a selected tradition. Dance in relation to music, aesthetic principles, and cultural context. May be repeated once.
Mr. Togi (F,W,Sp)

171D. Dance of India (2 units). (Formerly numbered 171E.) Studio, three hours. Prerequisite: course 71D. Technique and repertoire of a selected tradition. Dance in relation to music, aesthetic principles, and cultural context. May be repeated once.
Ms. Yodh (F,W,Sp)

171E. Dance of Korea (2 units). (Formerly numbered 171Q.) Studio, three hours. Prerequisite: course 71E. Technique and repertoire of a selected tradition. Dance in relation to music, aesthetic principles, and cultural context. May be repeated once.

172B. Dance of Ghana (2 units). (Formerly numbered 171B.) Studio, three hours. Prerequisite: course 72B. Technique and repertoire. Dance in relation to music, aesthetic principles, and cultural context. May be repeated once.

173B. Dance of Mexico (2 units). (Formerly numbered 171J.) Studio, three hours. Prerequisite: course 73B. Dance techniques of selected ethnographic regions. May be repeated once.
Mr. Pulido-Huizar (F,W,Sp)

174B. Dance of Yugoslavia (2 units). (Formerly numbered 171P.) Studio, three hours. Prerequisite: course 74B. Dance techniques of selected ethnographic regions. May be repeated once.
Mrs. Dunin (W,Sp)

174C. Dance of Spain (2 units). (Formerly numbered 171M.) Studio, three hours. Prerequisite: course 74C. Techniques and repertoire of a selected tradition. Dance in relation to music, aesthetic principles, and cultural context. May be repeated once.

176B. Dance of Israel (2 units). (Formerly numbered 171F.) Studio, three hours. Prerequisite: course 76B. Technique and repertory from selected ethnographic regions. May be repeated once.
Ms. Marshall (F,W,Sp)

179A-179Z. Dance of a Selected Culture (2 units each). Studio, three hours. Prerequisite: course 79 (in corresponding culture area). The dance technique of a selected culture area. May be repeated for a maximum of four units.

180A-180B. Introduction to Dance Ethnography. (Formerly numbered 141A-141B.) A study of the physical, environmental, and cultural influences on ritual and social dance forms. Basic observational and recording techniques, including beginning Labanotation. Mrs. Dunin (W,Sp)

181A. Dance Cultures of Asia. (Formerly numbered 140B.) An introduction to the dance cultures of Asia. How the theories and practices of dance are influenced by historical and social factors and by ideological and aesthetic systems. Lectures illustrated with demonstrations, films, and slides.
Ms. Mitoma (F)

181B. Dance in Southeast Asia. (Formerly numbered 144.) Prerequisite: course 181A or consent of instructor. A survey of selected ritual, social, and court dances of Indonesia, Cambodia, Thailand, and the Philippines. Social, historical, and aesthetic factors. Lectures illustrated with demonstrations, films, and slides. Ms. Mitoma

181C. Dance in East Asia. (Formerly numbered 145.) Prerequisite: course 181A or consent of instructor. A survey of the dances of Japan, China, and Korea and the factors which have influenced their development and social function. Consideration of the relationship of dance to other art forms. Lectures illustrated with demonstrations, films, and slides.

181D. Dance in South Asia. (Formerly numbered 143.) Prerequisite: course 181A or consent of instructor. A survey of dance forms in India and Sri Lanka. Factors influencing the development of dance, its social function, and its relationship to other art forms. Lectures illustrated with demonstrations, films, and slides. Ms. Yodh

182A. Dance Cultures of Africa. (Formerly numbered 140A.) An illustrated survey of dance in sub-Saharan cultures, the role of dance in society, historical background, and related folklore.
Mrs. Snyder (F)

183A. Dance in Latin America. (Formerly numbered 146.) Prerequisite: course 73B, 173B, or consent of instructor. An introduction to the dances of Latin America, factors influencing their development and social function, consideration of the relationship of dance to other art forms. Lectures illustrated with demonstrations, films, and slides.

184B. Dance in the Balkans. (Formerly numbered 142.) Prerequisite: course 74B. An illustrated survey of dance, with attention to cultural and social contexts: Albania, Bulgaria, Greece, Romania, Yugoslavia.
Mrs. Dunin

187A. Dance Cultures of Native American Indians. (Formerly numbered 140C.) An illustrated survey of Native American Indian dance, the role of dance in society, historical background, and related folklore. Mrs. Snyder (Sp)

190. Advanced Dance Performance (2 units). (Formerly numbered 190A-190B-190C.) Lecture, one hour; laboratory, three hours. The study and performance of major choreography. May be repeated twice. (F,W,Sp)

191. Repertory Dance Tour (2 to 4 units). Prerequisite: dance major or consent of instructor. Creation and performance of dance concerts in the community, with special emphasis on the problems of the touring dance company with a variable repertoire.
Ms. Kalman (F)

197A-197B. Proseminar: Dance Perspectives (2 units each). Prerequisite: upper division standing or consent of instructor. Consideration of the aesthetics evolving from the work of the great artists of our time.

199. Special Studies in Dance (2 to 8 units). Prerequisites: senior standing, consent of instructor.

Graduate Courses

211A-211F. Advanced Choreography. (Formerly numbered 204A-204B-204C and 204D-204E-204F.) Lecture, two hours; laboratory, two hours. Prerequisite: course 113C or equivalent. Theoretical aspects of advanced choreography for students who have reached the level of self-initiation of substantial creative works. Refinement and realistic self-evaluation; critical counsel by acknowledged choreographers.
Mrs. Scothorn, Ms. Scott (F,W,Sp)

C220. Music as Dance Accompaniment. (Formerly numbered C254.) Prerequisite: course 20 or consent of instructor. Piano and percussion improvisation for dance. Choreographer-composer relationships. History of music for dance, with emphasis on contemporary trends. Music for the dance performance. May be concurrently scheduled with course C120. Graduate students must complete two additional assignments. May not be applied toward the M.A. degree requirements. (W)

221. Music for Dance. (Formerly numbered 206.) Prerequisite: course C120. Theory of the aesthetic and functional relationship of music to dance.
Mrs. Gilbert (W)

223. Principles of Dance Kinesiology. (Formerly numbered 211A.) Prerequisite: consent of instructor. The scientific basis for movement for dance. A study of the anatomical, kinesiological, and physical principles and demands of dance. Ms. Gantz (F)

225A-225B. Theories of Movement: Laban Analysis. (Formerly numbered 238A-238B.) Lecture, two hours; laboratory, two hours. Theories of Laban movement analysis as a means for analyzing and describing human movement. Use of Laban movement analysis to increase movement observation skills and a theoretical understanding of the role of movement in dance, nonverbal behavior, and cross-cultural dance studies. Focus on complex movement patterns and timing.
Ms. Gantz (F, 225B; Sp, 225A)

226. Advanced Studies in Notation (2 units). (Formerly numbered 200.) Prerequisite: course 126. Selected problems in directing from the notated repertoire; principles of teaching, comparative notation systems, writing projects. Mrs. Scothorn

230. Research Methods and Bibliography in Dance. (Formerly numbered 202.) Survey of methods for scholarly analysis of dance materials using systems from the social sciences, physical sciences, and humanities. Mrs. Thomas (F,Sp)

231A-231B. Philosophical Bases and Trends in Dance (4 units, 2 units). (Formerly numbered 258A-258B.) Lecture, three hours. Prerequisite: course 100C. Critical analysis of dance as a creative experience and the role of professional and educational dance in our society. Research and extensive reading in contemporary philosophic literature. Study of present-day concepts and their relationship to other art forms and cultures. Evaluations of graduate students based on extended reading list and term papers. May be applied toward the M.A. degree requirements. Mrs. Gilbert (W,Sp)

232. Aesthetics of Dance. (Formerly numbered 210.) Analysis of aesthetic concepts and critical methods used in writing about dance.
Mrs. Thomas

234. Renaissance Dance: Analysis and Re-creation. (Formerly numbered 223.) Lecture, two hours; studio, two hours. Prerequisites: courses 134A and 134B, or consent of instructor. Analysis and re-creation of the study of 15th- and 16th-century dance styles from Domenico da Piacenza through Cesare Negri. Mrs. Thomas

235. The History of Ballet. (Formerly numbered 221.) Prerequisites: courses 134A and 134B, or consent of instructor. Development of ballet from 19th-century Romanticism to the present. Stylistic differences in Italy, France, England, Denmark, and Russia. Mrs. Thomas

236. Dance in the 20th Century. (Formerly numbered 220.) Prerequisites: courses 134A and 134B, or consent of instructor. Seminar in historical development of 20th-century dance. Mrs. Thomas

240. Principles of Dance Theater. (Formerly numbered 208.) Relationship of architecture, technology, and history of the theater to choreography. Directing theories for choreographers. Role of choreography in drama, opera, and other forms of theater.
Mrs. Scothorn (W)

251A-251B. Advanced Studies in Dance Education. (Formerly numbered 227A-227B.) **251A.** Prerequisite: consent of instructor. Survey of conceptual and methodological foundations of dance education. **251B.** Prerequisite: course 251A. Design of dance curriculum using theories of movement, creativity, and learning.
Ms. Leung-Fisher (F, 251B; Sp, 251A)

260A-260B-260C. Group Dynamics and Process (2 units each). Discussion, two hours; laboratory, two hours. Prerequisite: candidate in dance/movement therapy program. An experiential-didactic exploration of unfolding group dynamics and process within an ongoing movement therapy group.
Mrs. Dosamantes-Alperson (F,W,Sp)

261A-261B-261C. Dance Movement Therapy. (Formerly numbered 251A-251B-251C.) Lecture, two hours; laboratory, two hours. Prerequisite: consent of instructor. **261A.** Theory and practice: historical overview of the field; introduction to basic theoretical concepts and their translation into practice. **261B.** Kinetic imagery: contribution of creative process and receptive knowing to therapy; unique functions served by movement and image modes explored theoretically and experientially. **261C.** Theory and method: assumptions and methods of current clinical approaches; students are expected to develop their own theoretical model. Ms. Wyman (F,W,Sp)

262A-262B-262C. Seminar in Dance/Movement Therapy. (Formerly numbered 252A-252B-252C.) Lecture, two hours; laboratory, two hours. Prerequisites: courses 261A-261B-261C. **262A.** Developmental Perspective. Information of life-span approach to human development and object relationships established from infancy through senescence; concepts applied to individual clients demonstrated by clinical specialists. **262B.** Individual Psychodynamics and Therapeutic Intervention. Relationships between individual psychodynamics and therapeutic objectives. **262C.** Systems Perspective. System theory concepts applied to dyads, groups, families, and cultures.
Mrs. Dosamantes-Alperson (F,W,Sp)

280A-280E. Advanced Studies in Dance Ethnology. (Formerly numbered 226A-226E.) Prerequisite: consent of instructor. Dance viewed as an aspect of culture and human behavior. **280A.** Survey of literature. **280B.** Concepts of fieldwork. **280C.** Objectives and goals of the discipline in relation to anthropology and behavioral sciences. **280D.** Methodologies and training techniques for fieldwork. **280E.** Ethics and problems, field projects.
Mrs. Dunin, Mrs. Snyder (F,W,Sp)

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. A teaching apprenticeship under the active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading. (F,W,Sp)

451. Teaching Assistant Seminar (2 units). (Formerly numbered 495.) Lecture, one hour; laboratory, three hours. Required of all Dance Department teaching assistants. Lectures, discussion, readings, and practice teaching. May be repeated once for credit. S/U grading. (F,W)

452. Directed Field Study in Dance Education (2 to 8 units). (Formerly numbered 496.) Seminar, one hour; field study, two hours minimum. Prerequisite: consent of instructor. Directed field study to provide teaching experience in the community school or other approved site. No more than four units may be applied toward the M.A. degree requirements. S/U grading. (F,W,Sp)

460A-460B-460C. Clinical Internship Supervision. (Formerly numbered 497A-497B-497C.) Lecture, two hours; discussion, two hours. Corequisites: courses 262A-262B-262C, 596R. Practicum dealing with student internship: movement/observation, therapeutic goals, therapeutic process, and other clinical uses. S/U grading. Ms. Wyman (F,W,Sp)

460D-460E-460F. Clinical Internship Supervision (2 units each). (Formerly numbered 497D-497E-497F.) Lecture, one hour; discussion, two hours. Prerequisites: courses 460A-460B-460C. Practicum dealing with student internship: movement/observation, therapeutic goals, therapeutic process, and other clinical uses. S/U grading.
Ms. Wyman (F,W,Sp)

596A. Directed Individual Study or Research (2 to 8 units).

596R. Directed Study or Research in a Hospital or Clinic (2 to 8 units). S/U grading.

597. Preparation for M.A. Comprehensive Examination (2 to 8 units). S/U grading.

598. Research for and Preparation of M.A. Thesis (2 to 8 units). S/U grading.

History/Art History
(Interdepartmental)

1300 Dickson Art Center, (213) 825-3077

Scope and Objectives

The interdisciplinary major in history/art history is available to students in both the College of Letters and Science and the College of Fine Arts. It allows students to study the relationship between art history and general history.

Bachelor of Arts Degree

General College Requirements

All applicants are processed through the College of Fine Arts and screened by the Art History Department. After admission you may petition to transfer to the College of Letters and Science. You must satisfy the general college requirements of the college in which you are registered (Fine Arts or Letters and Science).

History courses taken by students in the College of Fine Arts may be applied toward the general education requirements, as may art history courses taken by College of Letters and Science students.

A course taken to satisfy the American History and Institutions requirement may be applied toward the history section of the interdepartmental major.

No course for the major may be taken on a P/NP grading basis except Art History 125.

If you wish to confer with a counselor regarding program planning and major requirements, contact the art history counselor at 825-3077.

Preparation for the Major

Required: History 1A, 1B, 1C; two courses from Art History 50, 51, 54, 57; one course from Art History 55, 56.

The Major

Required: History 100 or 101; 197 or 199; and courses as indicated in the following groups:

Group A: Two non-Western history courses from History 105, 106A, 106B, 107A, 107B, 108A, 108B, 109A, 109B, 110A, 110B, 111A, 111B, 112A through C112D, 115A, M122A, M122B, 123A, 123B, 157A, 157B, 157C, 165A, 165B, 165C, 166, 167A, 167B, 167C, 169, 170A, 170B, 171, 173, 174, 175A, 175B, 175C, 176A, 176B, 177, 178A, 178B, 179A, 179B, 182A, 182B, 182C, 183, 184, 186, 187A, 187B, 187C, 188A, 188B, 190A, 190B, 193D.

Group B: Two U.S. history courses from History 145A, 145B, 146A, 146B, 147A, 147B, 148A, 148B, 148C, 149A, 149B, 150A, 150B, 150C, 151A, 151B, 152A, 152B, 153, 154A through 154D, 155A, 155B, 156A through 156E, 157A, 157B, 157C, 158A through 158E, M159A, M159B, 161, 162, 163.

Group C: Two European history courses from History 121A through 121D, 125A through 125F, 126A through 126E, 127A, 127B, 128A through 128D, 129A, 129B, 129C, 131A through 131D, 132A, 132B, 133A, 133B, 134A, 134B, 135A, 135B, 136A through 136Z, 137A, 137B, 138A, 138B, 139, 140A, 140B, 141A, 141B, 142A, 142B, 143, 144.

Group D: Three Western art history courses from Art History 101A, 101B, 101C, 102, 103A through 103E, 106A, 106B, 106C, 108A, 108B, 109A through 109D, 110A through 110F, 112A, 112B, 112C, 120A, 120B, 120C, 121A, 121B.

Group E: Three non-Western art history courses from Art History 104A, 104B, C104C, 114A through 114D, C115A through C115F, C117A, C117B, C117C, 118A through 118D, C119A, C119B.

Group F: Two elective courses from Art History 125, 127, 197, 199, or any other upper division lecture course.

Scope and Objectives

The four-year Bachelor of Arts curriculum in Music is a classically oriented, balanced program of practical, theoretical, and historical studies, with related performance and academic studies in non-Western music. The major, designed for students who want to combine fine musicianship with academic excellence, is based on a core curriculum of theory, history, analysis, and individual and group performance. Given in the context of a liberal education, this provides a foundation for an academic or professional career and affords a valuable cultural background.

At the graduate level, specialized studies leading to the degrees of Master of Arts and Doctor of Philosophy are offered in composition, ethnomusicology, historical musicology, music education, and systematic musicology; specialized studies leading to the degree of Master of Fine Arts (performance practices) are offered in all classical solo instruments, voice, opera, and conducting.

Bachelor of Arts Degree

Admission

All applicants for admission and change of major are required to pass an audition in their principal performing medium.

Aptitude and achievement tests are required for enrollment in Music 20A. These examinations are administered during registration week only; dates are published in the *Schedule of Classes.* Students planning to complete a major in music, whether or not they have taken courses elsewhere, are required to pass a piano skills test (those without keyboard background may take courses 4A-4B-4C concurrently with 20A, 20B, 20C). The test must be passed by the end of course 20C or the first year as a music major, whichever comes first. Students with exceptional ability and achievement are placed into courses 20A, 20B, and/or 20C. Further information may be obtained from the Music Department Student Services Office, 2539 Schoenberg Hall Annex.

General Requirements

All music majors must enroll in one performance organization (Music 90A-90N, 91A-91Z) each quarter in residence and must participate in a minimum of two different organizations over the course of their stay at UCLA, one of which must be from courses 90A-90H or 91A-91Z. Note: Check with the undergraduate adviser, as curriculum changes are under consideration.

Preparation for the Major

Required: Music 20A, 20B, 20C, 26A-26B-26C, two courses from 60A through 65, and one college year of French, German, Italian, or Spanish or at least one course at level three (you may use this to fulfill the college language requirement). If you plan to specialize in history and literature or systematic musicology, you are encouraged to take six quarters (or the equivalent) of German.

The Major

Required: A minimum of 10 courses in upper division, including Music 120A, 120B, 126A-126B-126C, one course from 102, 105, 120C (individual specializations may specify a given course), five courses selected from one of the specializations listed below, and one free elective course for all areas except music education.

(1) *Composition and Theory:* Music 106B-106C, 107A-107B-107C, 120C. You are encouraged to select your free elective course from 101, 103A, 103B, 104A, 104B, 108, 109A, 109B, 109C, 116, 117A, 117B, 118A, 118B, 140A through 149, 156, C176, 199. You must have an original work completed and ready for rehearsal and performance on campus during your senior year.

(2) *History and Literature:* One course from Music C127A, C127B, C127C, one course from C127D, C127E, C127F, one course from 140A, 140B, 140C, and two elective courses from 104A, 104B, 108, C127A through C127F, 130, 131A, 131B, 133, 134, 135A, 135B, 135C, 151A, 151B, 156, 157, C176, 187, 188A through 188F, 199 (four units only).

(3) *Ethnomusicology:* Music 140A-140B-140C and two courses from 108, C127A through C127F, 131A, 131B, 132A, 132B, 141, 142A, 142B, 143A, 143B, 145 through 149, 152, 153A, 153B, 153C, 157, 158, C190A, C190B, 199.

(4) *Performance:* Twelve units in performance instruction courses 160A through 165 (including junior and senior recital requirements), four units of chamber ensembles (Music 175), and four units of elective courses from 101, 106B, 106C, 108, 112A, 112B, 116, 117A, 117B, 118A, 118B, C127A through C127F, 130 through 135C, 139, 140A, 140B, 140C, 151A, 151B, 187, 199.

(5) *Music Education:* Music 100A-100B-100C, 116, 117A, 117B, 120C, 193, 195, eight units from 115A through 115E. You are encouraged to select your free elective course from 112A, 112B, 118A, 118B, 140A, 140B, 140C, C185, 187, 199. If you are considering a music education specialization, you are encouraged to meet with a music education adviser during your freshman year.

(6) *Systematic Musicology:* Five courses from Music 103A, 103B, 108, 137B, 140A, 140B, 140C, 149, 184, 187, 199, Anthropology 133R (you may apply only one course from the Music 140A-140B-140C series).

Graduate Study

Admission

Application for admission/fellowship is due ..... December 30

Supplementary application materials are due ..... January 15

Assessment examination ... end of January

Notice of acceptance or denial is sent ..... by March 1

Late applicants must meet the following deadlines:

Late applications (from addresses in the U.S. only) are accepted until .. March 1

Supplementary application materials are due ..... April 1

Assessment examination ..... early April

Notice of acceptance or denial is sent ..... by May 15

Failure to meet any deadline may result in a delay in action on an application for admission, as well as that for a fellowship or assistantship.

Applicants for the M.A. and M.F.A. must have completed a Bachelor of Arts degree, or the equivalent, in Music or other fields of study, provided they have the musical training and musicianship necessary to pursue graduate work. Transcripts must show at least 52 quarter units of work outside music, including one college year (or its high school equivalent) of French, German, Italian, or Spanish and an average grade of at least B in the basic areas that normally constitute the undergraduate core curriculum in music (harmony, counterpoint, music history, analysis, and musicianship).

Those applying for the Ph.D. must have completed a Master of Arts degree in Music (or an equivalent degree). The degree normally will have been taken in the same field of concentration as the proposed doctorate. If you wish to obtain a doctorate in a field other than that of the M.A., additional coursework, as prescribed by the department, must be completed.

Applicants for all degrees (M.A., M.F.A., and Ph.D.) are also required to (1) take a departmental assessment examination (details are automatically sent after the application has been received); (2) submit a letter describing their background of study and stating their reasons for wishing to pursue graduate studies in music; (3) submit three letters of recommendation from former instructors and/or professionals with whom they have worked; and (4) submit written examples of their work. For all branches of musicology and music education, a paper on an appropriate subject should be submitted; for composition, musical scores; for M.F.A. applicants, a repertoire list and sample concert or recital programs. Ph.D. applicants should submit the M.A. thesis or composition, if possible. M.F.A. applicants also are required to demonstrate by audition their general musical proficiency in their area of specialization. No application can be considered until the examination has been taken and all of the above materials have been received.

The application and all supplementary materials should be submitted to the Department of Music, 2539 Schoenberg Hall Annex, UCLA, Los Angeles, CA 90024.

Major Fields

The Music Department offers the degrees of Master of Arts and Doctor of Philosophy in the fields of historical musicology, ethnomusicology, systematic musicology, composition, and music education, and Master of Fine Arts (performance practices) in all classical solo instruments, voice, opera, and conducting.

Teaching Credential in Music

You may earn credentials for teaching music and other subjects in California elementary and secondary schools in conjunction with the Graduate School of Education; completion of the teacher credential program in the Teacher Education Laboratory is required. Interested applicants should consult the Graduate School of Education (201 Moore Hall) and the faculty adviser in music education for information.

Master of Arts Degree

Foreign Language Requirement

Reading knowledge of German or French is required in ethnomusicology and systematic musicology; of French, German, or Italian in composition; of German, French, Italian, or Spanish in music education; and of German and a choice of French, Italian, or Latin in historical musicology. If you lack this proficiency when you enter the program, you must begin language study during your first year in residence.

Course Requirements

You are required to complete a minimum of nine courses, five of which must be at the 200 level. Only four units of Music 596A, 596B, or 596C and four units of course 597 or 598 may be applied toward the total course requirement. No more than four units of all types of 500-series courses may be applied toward the minimum graduate course requirement. Upper division courses that may be applied toward the minimum of nine courses include 103A, 103B, 104A, 104B, 106B*, 106C*, 107A*, 107B*, 107C*, 108, 109A, 109B, 109C, 112A, 112B, 116, 117A, 117B, 118A, 118B, 140A, 140B, 140C, 141, 142A, 142B, 143A, 143B, 145, 146A, 146B, 146C, 147A, 147B, 148, 149, 151A, 151B, 152, 153A, 153B, 153C, 156, 157, 175 (four units only), M180, M181, 184, 187. Course 598 serves to guide the preparation of the thesis and should normally be taken during your last quarter in residence.

*Does not apply to students whose emphasis is composition.

Course requirements for each field are as follows:

Historical Musicology: Music 200A, 201A-201B-201C, either 210 or 211 (students planning to enter the Ph.D. program are strongly advised to take both courses 210 and 211 in the first year of residence), 250A or 250B, two quarters of 260A through 260F, and one elective on the recommendation of the graduate adviser.

Systematic Musicology: Music 200A, 200B, three quarters of 272, one course from 255, 269, 273, or 275, and three electives on the recommendation of the graduate adviser.

Ethnomusicology: Music 140A-140B-140C, 200A, 200B, C290A-C290B, and two 200-level electives on the recommendation of the graduate adviser.

Composition: Music 200A, one course from 251A through 251D, 252A, 252B, and 252C in sequence (with the option of substituting course 596A for 252C), 266A or 266B, and three electives on the recommendation of the graduate adviser. In addition to the thesis, you are expected to produce other works involving both instrumental and vocal music for both solo and ensemble forces. You are also responsible for the campus presentation of one original work during each year of residency.

Music Education: You may choose either the thesis or comprehensive examination plan. Within each plan you must select a course of study that covers a special field of interest — choral, instrumental, or general topics — as listed below. For the thesis plan, Music 200A, 200B, C225, three courses from 118A, 118B, 270A through 270G (required in the special fields), and three elective courses from one of the special fields below are required. For the comprehensive examination plan, Music 200A, C225, four courses from 118A, 118B, 270A through 270G (required in the special fields), and three elective courses from one of the special fields below are required.

Course requirements for the special fields are as follows: *choral:* Music 118A (four units), 270E, and elective courses selected from 112B, 135A, 135B, 135C, 137B, 174A through 174D (four units only), 187, C227A through C227F, 596A, 596B, 596C, 598; *instrumental:* Music 118B (four units), 270F, and elective courses selected from 106A, 106B, 106C, 108, 112A, 137B, 175 (four units only), 187, C227A through C227F, 261A through 261F, 596A, 596B, 596C, 598; and *general topics:* two courses selected under advisement from Music 270A through 270G and elective courses selected from 137B, 140A, 140B, 140C, 175 (four units only), 187, C227A through C227F, 596A, 596B, 596C, 598.

Thesis Plan

All M.A. students must use the thesis plan, except those specializing in music education who may follow either the thesis or comprehensive examination plan.

In all areas except composition, the thesis is an extended essay. In composition, the thesis is a work proposed by the student and approved by the composers' council.

The thesis topic is first approved by the area council; the topic and the composition of the master's committee are then taken up by the graduate committee.

Comprehensive Examination Plan

You may use the comprehensive examination plan in lieu of the thesis plan only if you are specializing in music education and are not going on to the Ph.D. The plan has three components: (1) the realization in performance of a creative project appropriate to elementary, secondary, or higher education (e.g., choral or instrumental ensemble performance, original

curricular design, original compositions or transcriptions); (2) a paper equivalent to a graduate seminar paper, including research, description of procedures, and analysis of the selected project; and (3) a final conference and evaluation.

Final Examination

The final examination is oral and includes discussion of both the thesis and related matters. This examination does not apply to music education students electing the comprehensive examination plan.

Master of Fine Arts Degree

Foreign Language Requirement

Reading knowledge of French, German, or Italian is required. Candidates in the opera speciality must also be fluent in speaking one of these languages. The language requirement should be satisifed by the end of your first year in residence.

All M.F.A. students are required to pass a departmental terminology examination covering standard musical performance terminology (expression, dynamics, interpretation, performance practices, instrumentation, style, tempo) in French, German, and Italian. The terminology requirement should be satisfied by the end of your second year in residence.

Course Requirements

You are required to complete a minimum of 18 courses, including at least six at the 200 level and six or more in the 400 series. Only four units of Music 596A, 596B, or 596C and eight units of course 598 may be applied toward the total course requirement. No more than four units of all types of 500-series courses may be applied toward the minimum graduate course requirement. The minimum residence requirement for the M.F.A. is two years.

Course requirements are as follows: Music 200A, three quarters of 261A through 261F, six quarters of 400-level performance instruction, two quarters (eight units) of 598, and six elective courses. Conducting students declare either a choral or instrumental specialization. Six quarters of course 475 are required in the area of specialization (i.e., choral or instrumental) and at least two quarters in the other specialization. (On a two-year program, the ratio would be four to one.) Recommended electives include courses 108, 140A, 140B, 140C, 175, 187, 596A, 596B, 596C, and additional courses from the 200 and 400 series. A maximum of four units of chamber ensembles (course 175) may be applied toward the minimum 18 courses. Course 598 serves to guide the preparation of the final project and should normally be taken during your last two quarters in residence.

With the exception of your first quarter in residence, you must participate in a public performance of a soloistic nature each quarter for the first two years. One of the required performances each year must be a complete solo recital on campus (preferably a noon concert) with a faculty committee in attendance to evaluate the performance. Conducting students present a program, or a substantial portion thereof, approved by the conducting faculty, either on or off campus.

The other performances (either on or off campus) must simply feature the student in a soloistic capacity (joint recital, soloing with a performance organization, accompanying, etc.) and may be only a portion of the program. Conducting students present a minimum of one work, or a substantial movement of a longer work, in a public concert.

The final project is to be completed during your last year in residence. A solo recital and appropriate scholarly paper are required in all areas. In addition, a major operatic performance is required in the area of opera. Conducting students present an on-campus program, or a substantial portion thereof, with one of the department's performance organizations. The scholarly paper should be equivalent to a graduate seminar paper (15 to 25 pages in length) and should be concerned with performance problems which can be elucidated through research and analysis. The final version of the scholarly paper, with the accompanying recital program, must be submitted to the department in the format of a thesis.

The terminology examination, language requirement, and a majority of the coursework must be completed before you submit the final project proposal and request for an M.F.A. committee. The proposal, which is to include the complete recital program and an abstract of the scholarly paper, should be submitted by the Fall Quarter of your last year in residence.

Ph.D. Degree

Admission

See "Admission" under Graduate Study above. In addition, applicants for the Ph.D. in music education must have two years of teaching experience at the elementary or secondary level to be considered for admission.

Foreign Language Requirement

Reading knowledge of French and German is required in systematic musicology, ethnomusicology, and music education; reading knowledge of French, German, and a choice of Italian, Latin, or another language approved by the council on historical musicology is required in that area. In the field of composition, two languages are required, one of which must be German or French; the other may be selected from German, French, Latin, Italian, or Russian.

Course Requirements

You may petition to your area council, on the advice of your graduate adviser, for exemption from specific requirements on the basis of equivalent work done at the M.A. level.

Course requirements for each field of study are listed below. In each area, you may complete the residence requirement by electing courses (with consent of the graduate adviser) from the 200 series or the list of 100-level courses under "Course Requirements" for the M.A.

Historical Musicology: Music 200A, 201A-201B-201C, 210, 211, 250A or 250B, and five quarters of 260A through 260F. If you received the M.A. in historical musicology from UCLA, you normally take a minimum of three quarters of courses 260A through 260F in the Ph.D. program.

Systematic Musicology: Music 200A, 200B, five quarters of 272, and one quarter of 255, 269, 273, or 275. If you received the M.A. in systematic musicology from UCLA, you normally take a minimum of two quarters of course 272 in the Ph.D. program.

Ethnomusicology: Music 140A-140B-140C, 200A, 200B, C290A-C290B, and six seminars, at least three of which must be course 280; the others are to be selected from courses 248, 253, 254A, 254B, 255. You are also expected to complete two area studies courses. Parts of these requirements, but not the 280 seminars, may be completed at the M.A. level.

Composition: Music 200A, one course from 251A through 251D, six quarters of 252A, 252B, 252C in sequence (with the option of substituting course 596A for 252C), and 266A or 266B. If you received the M.A. in composition from UCLA, you normally take a minimum of three quarters of course 252 in the Ph.D. program. If you received the M.A. in composition elsewhere, you normally take six quarters of courses 252A, 252B, 252C in sequence, with the option of substituting course 596A for either or both 252Cs. In addition to the dissertation, you are expected to produce other works involving both instrumental and vocal music for both solo and ensemble forces. You are also responsible for the campus presentation of one original work during each year of residency.

Music Education: Music 200A, 200B, C225, and five quarters of 270A through 270F. If you received the M.A. in music education from UCLA, you normally take a minimum of three quarters of courses 270A through 270F in the Ph.D. program. Under advisement, two of the three quarters of 270A through 270F may be completed under special studies (course 596C). If you wish to pursue the Ph.D. in music education with a minor in ethnomusicology, you are required to take courses 200A, 200B, C225, C290A-C290B, three quarters of 270A through 270F, and two courses from 141 through 143B, 145 through 149, 152, 153A,

153B, 153C, 281A through 288. Electives are to be selected from courses 140A, 140B, 140C, M180, M181, 187, 254A, 254B, 255, 280.

Qualifying Examinations

When you and your guidance committee believe you are ready to take the qualifying examinations, you should submit a schedule to the Student Services Office and the committee members listing the order in which the examinations are to be taken. The Student Services Office acts as proctor for the tests. Normally the six written examinations are spread over a two-week period but should be completed within three weeks. Repeat examinations may be scheduled in consultation with the guidance committee and after a stipulated period of time. Contact the Student Services Office for details on the written examinations.

When you successfully complete the written examinations, the departmental oral qualifying examination can be scheduled. After passing this oral examination, you may submit your dissertation proposal and request for a doctoral committee; this committee administers the University Oral Qualifying Examination.

In all fields but composition, the dissertation is an extended monograph. In composition, the dissertation consists of (1) an extended composition accompanied by a short description of the style and techniques of the work and (2) an analytical monograph dealing with some aspect of 20th-century music.

Candidate in Philosophy Degree

You are eligible to receive the C.Phil. degree on advancement to candidacy for the Ph.D.

Final Oral Examination

A final oral examination is required by the department.

Lower Division Courses

1A-1B. Fundamentals of Music. Lecture, three hours; laboratory, two hours. **1A.** Sight-singing, ear training, reading music, and harmonization of simple melodies. **1B.** Prerequisite: course 1A or consent of instructor. Diatonic harmony; four-part writing, including inversions, sevenths, secondary dominants, and modulation; organization of melody and accompaniment; simple analysis; advanced sight-singing and ear training. Mr. Henderson, Mr. Kendall

2A-2B. Introduction to the Literature of Music. Lecture, four hours; laboratory, one hour. Course 2A is not prerequisite to 2B. Designed for nonmusic majors. **2A.** The technical and formal principles of music literature through the mid-18th century. **2B.** Music literature from the mid-18th century to the present. Ms. Perloff

3A-3B. Preparatory Theory for Music Majors (2 units each). Lecture, two hours; discussion, one hour. Prerequisite: music major or consent of instructor. Course 3A is not open for credit to students with credit for course 1A; course 3B is not open for credit to students with credit for course 1B. A course for music majors in music fundamentals, including musicianship, theory, and terminology. Mr. Anderson

4A-4B-4C. Basic Musicianship (2 units each). Laboratory, three hours. Class instruction in elementary ear training and keyboard skills. Miss Sheffield

5A-5B-5C. Fundamentals of Sound and Music of the World (2 units each). Prerequisite: consent of instructor. The acoustical makeup of sound (pitch, tone quality); tuning systems; modes and scales; harmony and polyphony, rhythm and meter; notational systems; relationships of music to culture. Laboratory includes ear training and instrumental techniques. Mr. Hutchinson, Mr. Racy

6GA-6GB. Graduate Review of Music History and Analysis (2 units each). Prerequisite: graduate standing. Designed to help entering graduate students remedy entrance deficiencies, to be cleared by examination. May be repeated for credit. S/U grading.

8G. Graduate Piano Sight-Reading (2 units). Prerequisite: graduate standing. Designed to help entering graduate students remedy entrance deficiencies, to be cleared by examination. May be repeated. S/U grading. Miss Sheffield

10. Computer-Assisted Sight-Singing Laboratory (2 units). Lecture, two hours; laboratory, one hour. Prerequisites: course 1A or equivalent, consent of instructor. An individualized, self-instructional approach for the development of sight-singing skills through the use of a music computer, keyboard instrument, and linear program learning.

11A-11F. Musicianship (2 units each). Laboratory, four hours. Prerequisites: aptitude, achievement, and piano skills tests. Series (A-F) must be taken in sequence. For courses 11B-11F, a grade of C (2.0) or better in the previous course in the series is required. Corequisites: courses in the 12A-12B or 14A through 14D series. **11A.** Sight-singing of diatonic melodies, dictation of intervals and diatonic melodies, keyboard score reading with two lines in various clefs, and elementary rhythmic exercises. **11B.** Sight-singing of melodies with simple modulations, diatonic harmonic dictation of triads and seventh chords, keyboard playing of cadences, score reading up to three parts, and rhythmic exercises. **11C.** Sight-singing of more difficult melodies, two-part dictation, elementary figured bass playing, keyboard score reading up to four parts, and rhythmic exercises. **11D.** Sight-singing, two-part dictation, figured bass playing, score reading of chamber scores, and rhythmic exercises. **11E.** Sight-singing, two-part dictation, figured bass playing, score reading of passages with transposing instruments, and rhythmic exercises. **11F.** Sight-singing of chromatic melodies, two-part dictation, chromatic figured bass playing, keyboard reading of orchestral scores, and rhythmic exercises.

12A-12B. Counterpoint (2 units each). Lecture, four hours. Corequisites: courses in the 11A-11F series. **12A.** Prerequisites: aptitude, achievement, and piano skills tests. 16th-century modal counterpoint in two parts, including the writing of motets. **12B.** Prerequisites: courses 12A, 14B. 18th-century tonal counterpoint in two parts, including the writing of inventions.

14A-14B-14C. Common Practice Harmony (2 units each). Lecture, four hours. Series (14A through 14D) must be taken in sequence. Corequisites: courses in the 11A-11F series. **14A.** Prerequisites: aptitude, achievement, and piano skills tests. Common practice harmony using triads, inversions, dominants and secondary dominants, and simple modulations. **14B.** Prerequisite: course 14A with a grade of C (2.0) or better. Common practice harmony through extended dominants and diminished sevenths in all inversions, along with modulations to all diatonic keys. **14C.** Prerequisite: course 14B with a grade of C (2.0) or better. Chromatic harmony, including augmented sixth chords, Neapolitan sixths, and altered chords, along with complex modulations.

14D. Modern Harmony (2 units). Lecture, four hours. Prerequisite: course 14C with a grade of C (2.0) or better. Corequisite: course in the 11A-11F series. 20th-century practices, including nonfunctional harmony, pan-diatonicism, polytonality, and serialism.

20A. Music Theory I. Lecture, two hours; discussion, six hours. Prerequisite: passing score on departmental examination. Not open for credit to students with credit for courses 11A, 12A. Theory: species counterpoint through the fifth species; description of triads and inversions. Musicianship: interval recognition; fixed-do solfege of diatonic melodies; one-part dictation of diatonic melodies; two-part dictation of small-compass, note-against-note melodies; simple rhythmic dictation; use of treble, alto, and bass clefs. Mr. Ashforth and the Staff

20B. Music Theory II. Lecture, four hours; discussion, four hours. Prerequisites: course 20A with a grade of C (2.0) or better, consent of instructor. Not open for credit to students with credit for courses 11B, 14A. Theory: diatonic harmony through secondary dominants and diminished sevenths; modulations to the dominant and relative keys; writing of four-part chorales; style composition in baroque dance forms; introduction to figured bass notation. Musicianship: harmonic dictation, including secondary dominants and diminished sevenths, but not modulations; more advanced two-part dictation; chromatic one-part dictation; more advanced sight-singing; keyboard (three-part open score in homophonic textures, introduction to tenor clef). Mr. Ashforth and the Staff

20C. Music Theory III. Lecture, four hours; discussion, four hours. Prerequisites: course 20B with a grade of C (2.0) or better, consent of instructor. Not open for credit to students with credit for courses 11C, 12B. Theory: baroque counterpoint including chorale prelude; two-part invention; exposition and first modulation of a three-part invention; canonic principles; analysis of inventions, canons, and fugues. Musicianship: advanced sight-singing; two-part contrapuntal dictation; keyboard harmony (harmonic sequences in major and minor keys); reading in open score of four homophonic parts in four clefs. Mr. Ashforth and the Staff

26A-26B-26C. History and Analysis of Music I. Lecture, four hours; laboratory, one hour. Prerequisites: courses 11A-11B-11C, 12A, 14A-14B. Courses 11C and 12A may be taken concurrently with course 26A. Course 26A is prerequisite to 26B, which is prerequisite to 26C. The history and literature of music from the beginning of the Christian era to 1750, with emphasis on analysis of representative works of each style period. Materials selected illustrate the history of style and changing techniques of composition.

60A-65. Undergraduate Instruction in Performance. Limited to music majors (all lower division majors, and upper division majors not in the performance specialization). Individual instruction of one hour per week. Students must perform in a practicum once during the academic year. Units are distributed on the basis of one unit each for Fall and Winter Quarters and two units for Spring Quarter. Grades are assigned by the applied instructor in Fall and Winter and by jury examination in Spring. May be repeated for credit:

60A. Violin.	Ms. Kamei, Mr. Treger
60B. Viola.	Ms. Kamei
60C. Cello.	Mr. Oliver
60D. String Bass.	Mr. Zibits
60E. Harp.	Ms. Neill
60F. Classical Guitar.	Mr. Norman, Mr. Yates
60G. Viola da gamba.	Ms. Marcus
60K. Lute.	
61A. Flute.	Mr. Stokes
61B. Oboe.	Ms. Northcutt
61C. Clarinet.	Mr. Gray
61D. Bassoon.	Mr. Steinmetz
61E. Saxophone.	Mr. Gray
62A. Trumpet.	Mr. Guarneri
62B. French Horn.	Mr. Todd
62C. Trombone.	Mr. Main
62D. Tuba.	Mr. Johnson
63. Percussion.	Mr. Peters

64A. Piano.
Mrs. Harris-Heggie, Mr. Tzerko, and the Staff

64B. Organ. Mr. Harmon

64C. Harpsichord. Ms. Karp

65. Voice. Mr. Mussard and the Staff

80A-80N. Performance Organizations (1 unit each). Performance, three hours. Prerequisite: audition. Limited to nonmusic majors (courses 90A-90N are for music majors). May be repeated for credit. P/NP grading. **80A.** A Cappella Choir; **80B.** University Chorus; **80C.** Madrigal Singers; **80D.** Opera Workshop; **80E.** Symphony Orchestra; **80F.** Concert Band; **80G.** Symphonic Wind Ensemble; **80H.** Collegium Musicum; **80J.** Men's Glee Club; **80K.** Women's Glee Club; **80L.** Musical Comedy Workshop; **80M.** Marching and Varsity Bands; **80N.** Jazz Ensemble.

81A-81Z. Ethnomusicology Performance Organizations (1 unit each). Performance, three hours. Prerequisite: consent of instructor. Limited to nonmusic majors (courses 91A-91Z are for music majors). May be repeated for credit. P/NP grading. **81A.** Music and Dance of the American Indian; **81B.** Music and Dance of Bali; **81C.** Music and Dance of Bulgaria; **81D.** Music and Dance of China; **81E.** Music and Dance of Ghana; **81F.** Music and Dance of India; **81G.** Music and Dance of Japan; **81H.** Music of Java; **81J.** Music of Korea; **81K.** Music of Mexico; **81L.** Music of Persia; **81M.** Music of Thailand; **81N.** Music of the Near East; **81P.** Music of Afro-Americans; **81Z.** Open Ensemble.

90A-90N. Performance Organizations (No credit). Performance, three hours. Prerequisite: audition. Limited to music majors (courses 80A-80N are for nonmusic majors). Music majors may enroll in only one performance organization per quarter. May be repeated. **90A.** A Cappella Choir; **90B.** University Chorus; **90C.** Madrigal Singers; **90D.** Opera Workshop; **90E.** Symphony Orchestra; **90F.** Concert Band; **90G.** Symphonic Wind Ensemble; **90H.** Collegium Musicum; **90J.** Men's Glee Club; **90K.** Women's Glee Club; **90L.** Musical Comedy Workshop; **90M.** Marching and Varsity Bands; **90N.** Jazz Ensemble.

91A-91Z. Ethnomusicology Performance Organizations (No credit). Performance, three hours. Prerequisite: consent of instructor. Limited to music majors (courses 81A-81Z are for nonmusic majors). Music majors may enroll in only one performance organization per quarter. May be repeated. **91A.** Music and Dance of the American Indian; **91B.** Music and Dance of Bali; **91C.** Music and Dance of Bulgaria; **91D.** Music and Dance of China; **91E.** Music and Dance of Ghana; **91F.** Music and Dance of India; **91G.** Music and Dance of Japan; **91H.** Music of Java; **91J.** Music of Korea; **91K.** Music of Mexico; **91L.** Music of Persia; **91M.** Music of Thailand; **91N.** Music of the Near East; **91P.** Music of Afro-Americans; **91Z.** Open Ensemble.

Upper Division Courses

100A-100B-100C. Music in American Education (2 units each). Lecture, three hours; laboratory, one hour. Prerequisites: courses 11A-11F, 12A-12B, 14A-14C, 14D, 26A-26B-26C, 193, 195. Course 110A is prerequisite to 100B; course 111A is prerequisite to 100C. A critical study of principles and practices in music education, historical and current, at elementary and secondary levels. Each course may be taken independently for credit. **100A.** General Music; **100B.** Choral Music; **100C.** Instrumental Music.
Mr. Anderson, Mr. Hatcher, Miss Hooper

101. Advanced Keyboard Harmony and Score Reading. Prerequisite: course 11F or consent of instructor. Intensive individual work in keyboard harmony and the reading of chamber and orchestral scores. May be repeated once for credit.

102. Instrumentation. Lecture, three hours. Prerequisite: course 120B with a grade of C (2.0) or better. Not open for credit to students with credit for course 106A. Intended for music majors in specializations other than composition. Ranges and characteristics of instruments, exercises in scoring.
Mr. Ashforth and the Staff

103A-103B. Advanced Theory. Discussion, three hours. Prerequisites: courses 11A-11F, 12A-12B, 14A-14C, 14D. Course 103A or consent of instructor is prerequisite to 103B. Techniques of tonal coherence studied through analysis and compositional exercises in the styles of given periods.

104A-104B. Advanced Counterpoint. Discussion, three hours. Prerequisites: courses 11A-11F, 12A-12B, 14A-14C, 14D. Course 104A or consent of instructor is prerequisite to 104B. Comparative contrapuntal practices and forms from all periods studied through analysis and compositional exercises in the styles of the given periods.

105. Introduction to Composition. Lecture, three hours. Prerequisites: courses 11A-11F, 12A-12B, 14A-14C, 14D. Intended for music majors in specializations other than composition. The nature of the compositional process, with selected exercises in specific techniques and styles. Mr. Lazarof

106A. Instrumentation. Discussion, three hours. Prerequisites: courses 11A-11F, 12A-12B, 14A-14C, 14D. Not open to students with credit for course 106A prior to Fall Quarter 1984. Ranges and characteristics of instruments, exercises in scoring.
Mr. Ashforth, Mr. Travis

106B-106C. Advanced Orchestration. (Formerly numbered 106A-106B.) Discussion, three hours. Prerequisite: course 106A. Course 106B is prerequisite to 106C and is not open for credit to students with credit for course 106A prior to Fall Quarter 1984. Scoring and analysis for ensembles and full orchestra. Mr. Ashforth, Mr. Travis

107A-107B-107C. Composition. Lecture, three hours. Prerequisites: courses 11A-11F, 12A-12B, 14A-14C, 14D. Course 107A is prerequisite to 107B, which is prerequisite to 107C. Designed for students specializing in composition and theory. Vocal and instrumental composition in the smaller forms, including style composition and 20th-century techniques.
Ms. Barkin and the Staff

108. Acoustics. Lecture, three hours. Prerequisite: consent of instructor. The interrelationship of acoustical and musical phenomena. Tuning systems, consonance and dissonance, tonal quality. Lecture, demonstration, discussion, and tours of instrumental collections and acoustical research facilities.
Mr. Hutchinson

109A-109B-109C. Composition for Motion Pictures and Television (2 units each). Prerequisites: courses 11A-11F, 12A-12B, 14A-14C, and 14D, or consent of instructor. Course 109A is prerequisite to 109B, which is prerequisite to 109C. Composition of music for the dramatic and documentary film in cinema and television. Techniques used in recording and editing. Mr. Raksin

112A-112B. Practical Scoring. Lecture, two hours; laboratory, two hours. Prerequisites: courses 11A-11F, 12A-12B, 14A-14C, 14D, and 26A-26B-26C, or consent of instructor. Emphasis on practical problems in scoring for small and large ensembles at various educational levels. **112A.** Band Scoring; **112B.** Choral Scoring. Mr. Henderson, Mr. Weiss

113A-113B. Music Literature for Children. Lecture, three hours; laboratory, one hour. Prerequisites: courses 1A and 2A, or consent of instructor. Course 113A is not prerequisite to 113B. Designed for the nonmusic major, particularly the elementary education student. A study of music literature applicable to elementary school programs. **113A.** Emphasis on listening analysis, movement, and improvisation. **113B.** Emphasis on class performance — music reading, singing, and folk instruments. Miss Hooper

115A-115E. Study of Instrumental and Vocal Techniques (1 unit each). Laboratory, three hours. Prerequisites or corequisites: courses 11A, 193, consent of instructor. Applied studies in basic performance techniques and tutorial materials. Each of courses 115A-115D may be repeated once for credit. **115A.** Strings; **115B.** Woodwinds; **115C.** Brass; **115D.** Percussion; **115E.** Voice. Mr. Anderson, Mr. Mussard

116. Introduction to Conducting (2 units). Lecture, three hours. Prerequisites: courses 11A-11D, 14A-14B. Fundamentals of conducting, including basic skills, techniques, analysis and repertoire.
Mr. Henderson

117A-117B. Study and Conducting of Choral and Instrumental Literature (2 units each). Lecture, three hours. Prerequisite: course 116 or consent of instructor. The study and practice of conducting as related to the study of choral and instrumental music. **117A.** Choral; **117B.** Instrumental.
Mr. Hatcher, Mr. Lee

118A-118B. Advanced Study and Conducting of Choral and Instrumental Literature (2 units each). (Formerly numbered 118.) Lecture, one hour; laboratory, two hours. Prerequisites: courses 116 and 117A-117B, or consent of instructor. Detailed investigation of musical styles, performance practices, and rehearsal techniques. Each course may be repeated once for credit. **118A.** Choral; **118B.** Instrumental.
Mr. Hatcher, Mr. Lee

120A. Music Theory IV. Lecture, four hours; discussion, four hours. Prerequisites: course 20C with a grade of C (2.0) or better, passing score on departmental first-year examination. Not open for credit to students with credit for courses 11D, 14B. Theory: chromatic harmony including development of tonality, 1800 to 1850; appropriate analysis and style composition. Musicianship: sight-singing or extended chromatic melodies; advanced harmonic dictation (diatonic and chromatic); keyboard (harmonization of modulating melodies); elementary score reading.
Mr. Ashforth and the Staff

120B. Music Thoery V. Lecture, four hours; discussion, four hours. Prerequisites: course 120A with a grade of C (2.0) or better, consent of instructor. Not open for credit to students with credit for courses 11E, 14C. Theory: advanced chromatic harmony including development of harmony from 1850; analytical projects; style composition. Musicianship: advanced score reading; advanced harmonic dictation; preparation for the departmental examination.
Mr. Ashforth and the Staff

120C. Music Theory VI. Prerequisites: course 120B with a grade of C (2.0) or better, consent of instructor. Not open for credit to students with credit for courses 11F, 14D. 20th-century harmonic language, including nonfunctional harmony, polytonality, free atonality, serialism, and minimalism.
Mr. Ashforth and the Staff

126A-126B-126C. History and Analysis of Music II. Lecture, four hours; laboratory, one hour. Prerequisites: courses 11A-11F, 12A-12B, 14A-14C, 14D, 26A-26B-26C. Course 11F may be taken concurrently with course 126A. Course 126A is prerequisite to 126B, which is prerequisite to 126C. The history and literature of music from 1750 to the present, with emphasis on analysis of representative works of each style period. Materials selected illustrate the history of style and changing techniques of composition.

C127A-C127F. Selected Topics in the History of Music. (Formerly numbered 127A-127F.) Lecture, three hours. Prerequisites to all courses: courses 11A-11F, 12A-12B, 14A-14C, 14D, 26A-26B-26C; in addition, 126A is prerequisite to C127D, 126B is prerequisite to C127E, and 126C is prerequisite to C127F. Designed as a proseminar for undergraduates in preparation for graduate work. Special aspects of the music of each period studied in depth. May be concurrently scheduled with courses C227A-C227F. **C127A.** Middle Ages; **C127B.** Renaissance; **C127C.** Baroque; **C127D.** Classic; **C127E.** Romantic; **C127F.** 20th Century.

130. Music of the United States. Prerequisite: course 2A or consent of instructor. A survey of art music from Colonial times to the present. Mr. Stevenson

131A-131B. Music of Hispanic America. Prerequisite: consent of instructor. Course 131A is not prerequisite to 131B. Survey of art music, including attention to ethnic developments and peninsular background. **131A.** Mexico, Central America, and the Caribbean Isles; **131B.** Hispanic South America.
Mr. Loza

132A-132B. Development of Jazz. Lecture, three hours; laboratory, one hour. Prerequisite: course 2A or consent of instructor. Course 132A is prerequisite to 132B. An introduction to jazz; its historical background and its development in the United States.
Mr. Pinckney

133. Bach. Lecture, two hours; laboratory, two hours. The life and works of Johann Sebastian Bach.
Mr. Harmon

134. Beethoven. Lecture, two hours; laboratory, two hours. The life and works of Ludwig van Beethoven.
Mr. Winter

135A-135B-135C. History of the Opera. Lecture, four hours; laboratory, one hour. **135A.** Opera of the Baroque and Classical Periods; **135B.** Opera of the Romantic Period; **135C.** Opera of the 20th Century.

137A-137B. Psychology of Music. 137A. Designed for nonmajors. An introduction to the psychology of music; historical background and the broad field of study, including the use of music as a stimulus, tests and measurements, and related modes of musical behavior. **137B.** Prerequisites: courses 11A-11B-11C, 12A, 14A-14B, and 26A-26B-26C, or consent of instructor. A study of the psychological factors and problems in music from the points of view of the listener, performer, and composer. Mr. Kendall

138. Aesthetics of Music. Lecture, three hours. Designed for nonmajors. A historical survey of musical aesthetic thought and practice. Selected readings and musical examples. Mr. Schwadron

139. History and Literature of Church Music. Prerequisite: course 2A or consent of instructor. A study of the forms and liturgies of Western church music.

140A-140B-140C. Musical Cultures of the World. Prerequisite: consent of instructor. Course 140A is not prerequisite to 140B, which is not prerequisite to 140C. A survey of the musical cultures of the world (excluding Western art music), the role of music in society and its relationship to other arts; consideration also to scale structure, instruments, musical forms, and performance standards. **140A.** The musical cultures of Europe and the Americas; **140B.** Those of the Near East and Africa; **140C.** Those of South Asia, Southeast Asia, and the Far East.

141. Survey of Music in Japan. Lecture, three hours. A survey of the main genres of Japanese traditional music, including Gagaku, Buddhist chant, Biwa music, Koto music, Shamisen music, and the music used in various theatrical forms.

142A-142B. Folk Music of Eastern Europe and the Mediterranean. Prerequisite: consent of instructor. Course 142A is not prerequisite to 142B. **142A.** The forms and styles of traditional music in Eastern Europe (including the Balkans). Historical and ethnological aspects of the music illustrated by numerous recorded examples from the major cultural subdivisions of the area. **142B.** The forms and styles of traditional music in the Mediterranean basin, particularly those in which interaction between European and Oriental styles is apparent.
Mr. Porter, Mr. Racy

143A-143B. Music of Africa. Lecture, three hours; laboratory, two hours. Prerequisites: courses 140A-140B-140C or consent of instructor. Course 143A is prerequisite to 143B. An investigation of the historical aspects, social functions, and relationships of music to other art forms in selected areas of Africa.
Ms. DjeDje

144. American Popular Music. Lecture, three hours; laboratory, two hours. Recommended prerequisite: course 1A or equivalent. A survey of the history and characteristics of American popular music and its relationship to American culture, with emphasis on 20th-century popular music and its major composers, including a comparison between traditional pre-1950 popular music and trends in post-1950 popular music.

145. History of Chinese Opera. Prerequisite: consent of instructor. A survey of dramatic elements in Chinese operas, incorporating singing, dance, and acrobatics. Emphasis on traditional and modern Peking opera and its relation to Cantonese and other genres. Mr. Lui

146A-146B-146C. Studies in Chinese Instrumental Music. Lecture, three hours; laboratory, one hour. Prerequisite: consent of instructor. Course 146A is not prerequisite to 146B, which is not prerequisite to 146C. **146A.** A study of the literature, major sources, paleography, theory, and philosophy of the Ch'in and P'i P'a, including transcription and analysis. **146B.** A comprehensive study of Chinese musical instruments, classification system, specific musical notation, and use in the context of Chinese society. **146C.** A study of the rules of improvisation, particularly as related to the Shanghai style, as realized on the P'i P'a, Ti, Er Hu, San Shien, Sheo, and related instruments. Mr. Lui

147A-147B. Music of China. Lecture, three hours; laboratory, two hours. Prerequisites: courses 140A-140B-140C or consent of instructor. **147A.** History and theory of the music of China, including a survey of various provinces. Instrumental techniques. **147B.** Prerequisite: course 147A. Introduction to various notational systems. Analysis of representative styles.
Mr. Lui

148. Folk Music of South Asia. Prerequisite: consent of instructor. An illustrated survey of some of the regional genres, styles, and musical instruments found in India and Pakistan, with special reference to the religious, social, economic, and cultural context of their occurrence. Mr. Jairazbhoy

149. The Anthropology of Music. A cross-cultural examination of music in the context of social behavior and how musical patterns reflect patterns exhibited in other cultural systems, including economic, political, religious, and social structure.

151A-151B. History of Musical Performance Practices. Prerequisites: courses 11A-11F, 12A-12B, 14A-14C, 14D, 26A-26B-26C. A general survey of musical interpretation and re-creation from the viewpoint of stylistic authenticity. **151A.** Medieval through Baroque; **151B.** Classic through 20th Century.

152. Survey of Music in India. A consideration of the main music genres in India, with particular reference to the religious, sociocultural, and historical background of the country. Mr. Jairazbhoy

153A-153B-153C. Music of the American Indians. American Indian music studied within the broader context of styles, cultural values, and sources. Films, recordings, lectures, and limited group singing and dancing, relating the music to the culture producing it. **153A.** Musics of the Eastern, California-Yuman, Great Basin, and Northwest Coast Areas; **153B.** Musics of the Athabascan, Pueblo, Plains, and Modern Pan-Indian Trends; **153C.** Sociology of American Indian music, with specific reference to the manner in which cultural values, prescriptions, oral traditions, language, and technological advances have affected music of various tribes. Ms. Heth

M154A-M154B. The Afro-American Musical Heritage. (Same as Folklore M154A-M154B.) Prerequisite: course 1A or consent of instructor. Course M154A is prerequisite to M154B. A study of Afro-American rhythm, dance, music, field hollers, work songs, spirituals, blues, and jazz; the contrast between West African, Afro-American, and Afro-Brazilian musical traditions. Ms. DjeDje

155. Audio Technology for Musicians. Lecture, two hours; laboratory, three hours. Prerequisites: courses 11C, 14B, consent of instructor. The theory and practice of sound engineering in relation to concert and studio recording techniques. Mr. Ashforth

156. Electronic Music: Theory and Techniques. (Formerly numbered 156A.) Lecture, three hours; laboratory, three hours. Prerequisites: course 107A or equivalent, consent of instructor. Not open for credit to students with credit for former course 156A. Designed for students specializing in composition. Applicable acoustical and electronic theory, history of technological and compositional development of classical electronic music. Analysis, manipulation of analog and digital synthesizers and ancillary equipment, invention and realization of materials.
Mr. Bourland

157. Music of Brazil. Prerequisites: consent of instructor, some knowledge of Portuguese. History of ethnic and art music in Brazil, with some reference to Portuguese antecedents. Mr. Stevenson

158. New Orleans Jazz. Lecture, three hours; discussion, two hours. Major Black and Creole figures in the origin and development of jazz in New Orleans from the turn of the 20th century through the 1960s, with emphasis on polycultural roots, local municipal traditions, and stylistic analysis. Mr. Ashforth

159. The Development of Rock. Prerequisite: consent of instructor. The history of rock from the 1950s to the 1970s. An in-depth survey of stylistic trends illustrated by pertinent examples and accompanied by extensive musical analysis. Mr. Stevenson

160A-165. Undergraduate Instruction in Performance for the Performance Specialist. Limited to upper division music majors who have been accepted by audition into the performance specialization. Individual instruction of one hour per week. Students must perform in a noon concert once during their junior year and must present a full recital in their senior year. Units are distributed on the basis of one unit each for Fall and Winter Quarters and four units for Spring Quarter. Grades are assigned by the applied instructor in Fall and Winter and by jury examination in Spring. May be repeated for credit:

160A. Violin.	Ms. Kamei, Mr. Treger
160B. Viola.	Ms. Kamei
160C. Cello.	Mr. Oliver
160D. String Bass.	Mr. Zibits
160E. Harp.	Ms. Neill
160F. Classical Guitar.	Mr. Norman, Mr. Yates
160G. Viola da gamba.	Ms. Marcus
160K. Lute.	
161A. Flute.	Mr. Stokes
161B. Oboe.	Ms. Northcutt
161C. Clarinet.	Mr. Gray
161D. Bassoon.	Mr. Steinmetz
161E. Saxophone.	Mr. Gray
162A. Trumpet.	Mr. Guarneri
162B. French Horn.	Mr. Todd
162C. Trombone.	Mr. Main
162D. Tuba.	Mr. Johnson
163. Percussion.	Mr. Peters
164A. Piano.	Mrs. Harris-Heggie, Mr. Tzerko, and the Staff
164B. Organ.	Mr. Harmon
164C. Harpsichord.	Ms. Karp
165. Voice.	Mr. Mussard and the Staff

174A-174E. Musical Terminology and Diction for Musicians (1 unit each). (Formerly numbered 174A-174D.) Prerequisite: music major or consent of instructor. Recommended for music students in any area and at any level. Specialized work in pronunciation, diction, and musical terminology as applied to the performance and interpretation of vocal and instrumental scores to enable students to function in today's multinational world of music. Students may enroll in two sections per quarter; a total of four units may be applied toward the degree requirements. Each course may be repeated once for credit. **174A.** German; **174B.** French; **174C.** Spanish; **174D.** Italian; **174E.** English. Mrs. Hast

175. Chamber Ensembles (2 units). Prerequisite: audition. Students must be at the advanced level of their instrument to participate. Applied study of the performance practices of literature appropriate to the ensemble. Students may enroll in two sections per quarter; a total of 12 units may be applied toward the degree requirements. May be repeated for credit.

C176. Electronic Music Composition. (Formerly numbered C156B.) Lecture, three hours; studio, three hours. Prerequisites: course 156, advanced experience and accomplishment in serious composition (art music), consent of instructor. Not open for credit to students with credit for former course C156B. Limited enrollment. Analog and digital realizations of original compositional materials culminating in a composition at least five minutes in duration. May be concurrently scheduled with course C226.
Mr. Bourland

M180. Analytical Approaches to Folk Music. (Same as Folklore M180.) Prerequisites: courses 5A-5B-5C or consent of instructor. An intensive study of the methods and techniques necessary to the understanding of Western folk music. Mr. Porter

M181. Folk Music of Western Europe. (Same as Folklore M181.) Prerequisite: consent of instructor. Introduction to the forms and styles of traditional music in Western Europe. Historical and ethnological perspectives on this music combined with numerous recorded examples from the major cultural subdivisions of the region. Mr. Porter

184. Experimental Research in Music. Lecture, three hours. Prerequisites: courses 11A-11F, 12A-12B, 14A-14C, 14D, and 26A-26B-26C, or consent of instructor. Recommended for music majors in all specializations. Theories and processes in various modes of musical experimentation: physical, perceptual, psychological, pedagogical, quantificational, statistical procedures. Mr. Kendall

C185. Historical and Philosophical Foundations of Music Education. (Formerly numbered 185.) Lecture, three hours. Prerequisite: completion of the undergraduate music education specialization or consent of instructor. The development of music education in the United States according to established schools of thought. May be concurrently scheduled with course C225. Mr. Schwadron

187. Problems in Musical Aesthetics. Lecture, three hours. Prerequisites: courses 11A-11F, 12A-12B, 14A-14C, 14D, 26A-26B-26C. Recommended for students in all music specializations. Critical approach to musical problems of aesthetic analysis, description, values, theories, including both Western and non-Western considerations.
Mr. Schwadron

188A-188F. The Master Composer. (Formerly numbered 188A-188Z.) Lecture, three hours; laboratory, one hour. A survey of the works of an outstanding composer in Western art music, considered within the context of his age. Each course may be repeated for a maximum of 16 units. **188A.** Middle Ages; **188B.** Renaissance; **188C.** Baroque; **188D.** Classic; **188E.** Romantic; **188F.** 20th Century.

189. The Symphony. Lecture, three hours; laboratory, one hour. A survey of symphonic literature from Haydn through the 20th century, with special emphasis on the current symphonic programs of the Los Angeles Philharmonic Orchestra and other performing groups in the Los Angeles area.

C190A-C190B. Proseminar in Ethnomusicology. (Formerly numbered 190A-190B.) Lecture, three hours. Prerequisites: courses 140A-140B-140C. May be concurrently scheduled with courses C290A-C290B. Mr. Loza, Mr. Racy

193. Proseminar in Music Education (2 units). Prerequisites or corequisites: course 11A, sophomore standing. A historical and philosophical introduction to the field. Mr. Schwadron

195. Field Studies in Music Education (2 units). Discussion, two hours; laboratory, two hours. Prerequisite: course 193. Discussion and observation of current practices. Mr. Anderson, Miss Hooper

199. Special Studies in Music (2 or 4 units). Hours to be arranged. Prerequisites: senior standing, consent of instructor and department chair, 3.0 GPA. Individual studies in music resulting in a research project. May be repeated for a maximum of eight units.
Mr. Harmon and the Staff

Graduate Courses

200A. Research Methods and Bibliography (6 units). Lecture, three hours. Prerequisite: graduate standing. A survey of general bibliographic material in music.

200B. Research Methods and Bibliography (6 units). Lecture, three hours. Prerequisite: course 200A. Guided writing, utilizing specific bibliography, in systematic musicology, ethnomusicology, and music education.

201A-201B-201C. Introductory Seminar in Historical Musicology (6 units each). Lecture, three hours. Course 201A is prerequisite to 201B, which is prerequisite to 201C. An introduction at the graduate level to the central questions and problems in the history of Western music designed to give beginning graduate students a unified background for the remainder of their studies and to employ their developing skills in research and bibliography.

210. Medieval Notation (6 units). Lecture, three hours. Prerequisite: consent of instructor. Vocal and instrumental notation; paleography of the period.
Ms. Gollner

211. Renaissance Notation (6 units). Lecture, three hours. Prerequisite: consent of instructor. Vocal and instrumental notation; paleography of the period.
Mr. D'Accone

C225. Historical and Philosophical Foundations of Music Education. Lecture, three hours. Prerequisites: graduate standing, consent of instructor. The development of music education in the United States according to established schools of thought. May be concurrently scheduled with course C185. Additional assignments, as well as evidence of a greater depth of study, required of graduate students.
Mr. Schwadron

C226. Electronic Music Composition. Lecture, three hours; studio, three hours. Prerequisites: course 156, graduate standing, advanced experience and accomplishment in serious composition (art music), consent of instructor. Limited enrollment. Analog and digital realizations of original compositional materials culminating in a composition of major proportions at least seven minutes in duration. May be concurrently scheduled with course C176. Mr. Bourland

C227A-C227F. Selected Topics in the History of Music. Lecture, three hours. Prerequisite: graduate standing. Special aspects of the music of each period studied in depth. Each course may be repeated once for credit. May be concurrently scheduled with courses C127A-C127F. Additional assignments, as well as evidence of a greater depth of study, required of graduate students. **C227A.** Middle Ages; **C227B.** Renaissance; **C227C.** Baroque; **C227D.** Classic; **C227E.** Romantic; **C227F.** 20th Century.

248. Seminar in Comparative Music Theory (6 units). Lecture, three hours. Prerequisite: consent of instructor. The comparative study of the codified music theories of select cultures—Western and non-Western—considered in themselves and as expressions of their societies. Theory considered as a science of music; its place between cultural values and artistic practice in different civilizations.

250A-250B. Seminar in the History of Music Theory (6 units each). Lecture, three hours. Prerequisite: course 200A. Course 250A is not prerequisite to 250B. **250A.** Music Theory from Antiquity through Zarlino; **250B.** Music Theory from Rameau to the Present. Mr. D'Accone, Ms. Gollner

251A-251D. Seminar in Special Topics in Composition and Theory. Seminar, three hours. An intensive exploration of specialized aspects of composition. May be repeated for credit. **251A.** Orchestration; **251B.** Specific Media; **251C.** Specific Styles; **251D.** Compositional Analysis.

252A-252B-252C. Seminar in Composition (6 units each). Lecture, three hours. Prerequisites: courses 106B, 107C. Course 252A is prerequisite to 252B, which is prerequisite to 252C. Courses may be taken out of sequence only with consent of instructor. May be repeated for credit.
Mr. Des Marais, Mr. Travis

253. Seminar in Notation and Transcription in Ethnomusicology (6 units). Lecture, three hours. Prerequisites: courses 140A-140B-140C and C190A-C190B, or consent of instructor.

254A-254B. Seminar in Field and Laboratory Methods in Ethnomusicology (6 units each). Lecture, three hours. Prerequisites: courses C190A-C190B or consent of instructor. Training includes experience in handling of technical apparatus, films, recording, processing, and editing; field projects.
Mr. Jairazbhoy

255. Seminar in Musical Instruments of the Non-Western World (6 units). Lecture, three hours. Prerequisites: courses 140A-140B-140C and C190A-C190B, or consent of instructor. Ms. De Vale

256. Seminar in Musical Form (6 units). Lecture, three hours. Prerequisites: courses 126A-126B-126C. The analysis of structural organizations in music. Mr. Cole

257. Seminar in Music of the United States and Canada. Seminar, three hours. Prerequisite: course 130.

M258. Seminar in Folk Music. (Same as Folklore M258.) Seminar, three hours. Prerequisite: consent of instructor. Mr. Porter, Mr. Wilgus

260A-260F. Seminar in Historical Musicology (6 units each). Lecture, three hours. Prerequisites: courses 200A, 201A-201B-201C, and 210 or 211 (either may be taken concurrently). May be repeated for credit. **260A.** Medieval Music; **260B.** Renaissance; **260C.** Baroque; **260D.** Classical; **260E.** Romantic; **260F.** General Topics.

261A-261F. Problems in Performance Practices. Seminar, three hours. Prerequisites: courses 151A-151B or consent of instructor. An investigation of primary source readings in performance practices as related to the period; analytical reports and practical applications in class demonstrations. May be repeated for credit. **261A.** Medieval; **261B.** Renaissance; **261C.** Baroque; **261D.** Classical; **261E.** Romantic; **261F.** Contemporary.

266A-266B. Seminar in Music of the 20th Century. Seminar, three hours. Prerequisites: courses 126A-126B-126C. **266A.** Discussion and analysis of the major works of the 20th century before World War II. Emphasis on the study of groups of works written at the same time in history. **266B.** Discussion and analysis of composers and their works from 1945 to the present. Ms. Barkin

269. Seminar in the History of European Instruments. Seminar, three hours. Mr. Hammond

270A-270G. Seminar in Music Education (6 units each). (Formerly numbered 270A-270F.) Lecture, three hours. Prerequisite: consent of instructor. May be repeated for credit. **270A.** History; **270B.** Non-Western Musics; **270C.** Curriculum Innovations; **270D.** Tests and Measurements; **270E.** Choral Literature; **270F.** Instrumental Literature; **270G.** General Topics.

272. Seminar in Systematic Musicology. Seminar, three hours. Prerequisites: course 108, consent of instructor. May be repeated for credit.

273. Seminar in Acoustics of Music (6 units). Lecture, three hours. Prerequisite: course 108 or consent of instructor. May be repeated once for credit.
Mr. Hutchinson

275. Seminar in Aesthetics of Music (6 units). Lecture, three hours. Prerequisite: course 187 or consent of instructor. May be repeated once for credit.
Mr. Schwadron

276. Seminar in the Psychology of Music (6 units). Lecture, three hours. Prerequisite: course 184 or consent of instructor. Selected topics in the psychology of music, including recent findings in brain research, musical perception, learning, cognition, memory, therapy, affect, meaning, and measurement. May be repeated for credit. Mr. Kendall

280. Seminar in Ethnomusicology (6 units). Lecture, three hours. Prerequisites: courses 140A-140B-140C, C190A-C190B, 200A, 200B. May be repeated for credit.

281A-281B. Music of Indonesia. Lecture, three hours. Prerequisite: consent of instructor. During the first quarter, emphasis on the music and related performing arts of Java. Focus on the music and performing arts of Bali and other Indonesian islands during the second quarter. Concurrent participation in one of the Indonesian performance groups required.
Ms. De Vale

282. Music of Iran and Other Non-Arabic-Speaking Communities. Seminar, three hours. Prerequisite: consent of instructor. A comparative study of the music of Iran and other related areas, including Turkey, with particular reference to their historical and cultural background, sources on music theory and aesthetics, instruments, style, technique of improvisation, and contemporary practice. Concurrent participation in the Near East performance group required. Mr. Racy

284. Music of the Arabic-Speaking Near East. Lecture, three hours. Prerequisite: consent of instructor. An investigation of the historical and cultural backgrounds, the main musical styles, the relationship between theory and practice and emphasis on mode and improvisation, and 20th-century trends. Concurrent participation in the Near East performance group required. Mr. Racy

285. Music of Tibet. Seminar, three hours. Prerequisite: consent of instructor. A study of the traditional music of ethnic Tibet as ritual, art, and folklore in its cultural matrix and its relationship with other arts. Topics include traditional instruments and ensembles and studies in formal and stylistic analysis.

286A-286B. Classical Music of India. Seminar, three hours. Prerequisite: consent of instructor. A study of the history, theory, and practice of north and south Indian classical music. During the first quarter, emphasis on music history and traditional theory; the second quarter, analysis of present-day forms, styles, techniques, and musical instruments. Concurrent participation in the Indian performance group required. Mr. Jairazbhoy

287. Seminar in African Music. Seminar, three hours. Prerequisites: courses 140A-140B-140C, 143A-143B, 200A, 200B. Intensive investigation of musical style, historical, social, and cultural aspects of indigenous musical traditions and related art forms. Ms. DjeDje

288. Seminar in North American Indian Music. Seminar, three hours. Prerequisite: consent of instructor. A survey of representative musical styles of Native North American Indians, including problems of transcription, methods of analysis, symbolic implications of song texts. Emphasis on interrelationship between music and cultural context. The influence of Western music in acculturative contexts.
Ms. Heth

289. Seminar in Afro-American Music. Seminar, three hours. Prerequisites: courses M154A-M154B or consent of instructor, graduate standing. Intensive investigation of the problems, theories, and methods of research related to the study of Afro-American music. Emphasis on the relationship of problems to representative styles of Afro-American music. S/U or letter grading. Ms. DjeDje

C290A-C290B. Proseminar in Ethnomusicology. Lecture, three hours. Prerequisites: graduate standing, consent of instructor. Basic literature and schools of thought in the field of ethnomusicology from the late 19th century to the present. May be concurrently scheduled with courses C190A-C190B. Additional assignments, as well as evidence of a greater depth of study, required of graduate students.
Mr. Loza, Mr. Racy

370. Music in General Education (2 units). Prerequisite: graduate standing in the Graduate School of Education teacher training program (all music students must take course 370 concurrently with Education 100A, 100B, 112, 312, 315A, 315B, and supervised teaching). Critical discussions related to supervised teaching in progress. May be repeated twice for credit. Mr. Anderson, Miss Hooper

371. The Marching Band in Secondary Education (2 units). Prerequisites: courses 193 and 195, or consent of instructor. The study of the contemporary marching band as a component of the music curriculum in secondary education, including current approaches, practices, and problems associated with the marching band, as well as historical perspective.

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. A teaching apprenticeship under the active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

460A-465. Graduate Instruction in Performance (6 units each). Limited to M.F.A. students. Individual instruction of one hour per week, with performance laboratory at discretion of instructor. Intensive study and preparation of musical literature in the area of specialization. May be repeated for credit. **460A.** Violin; **460B.** Viola; **460C.** Cello; **460D.** String Bass; **460E.** Harp; **460F.** Classical Guitar; **460G.** Viola da gamba; **460K.** Lute; **461A.** Flute; **461B.** Oboe; **461C.** Clarinet; **461D.** Bassoon; **461E.** Saxophone; **462A.** Trumpet; **462B.** French Horn; **462C.** Trombone; **462D.** Tuba; **463.** Percussion; **464A.** Piano; **464B.** Organ; **464C.** Harpsichord; **465.** Voice.

472. Master Class in Opera (6 units). Laboratory, three hours. Limited to M.F.A. students. Intensive study and preparation of opera literature. May be repeated for credit. Mr. Krachmalnick

475. Master Class in Conducting (6 units). Laboratory, three hours. Limited to M.F.A. students. Intensive study and preparation of musical literature in the specialized field of conducting. May be repeated for credit.

495. Introductory Practicum for Teaching Apprentices in Music (2 units). Eight weekly two-hour sessions, plus intensive training session during Fall Quarter registration week. Prerequisite: appointment as a teaching apprentice in the Music Department. Required of all new teaching apprentices. A special course dealing with the problems and practices of teaching music at the college level. May not be applied toward degree requirements. S/U grading.
Miss Hooper

596A. Directed Individual Studies in Orchestration and Composition (2, 4, or 6 units). Only four units may be applied toward the M.A. or M.F.A. degree requirements. May be repeated for credit.

596B. Directed Individual Studies in Musicology (2, 4, or 6 units). Only four units may be applied toward the M.A. or M.F.A. course requirements.

596C. Directed Individual Studies in Music Education (2, 4, or 6 units). Only four units may be applied toward the M.A. or M.F.A. course requirements.

596D. Directed Individual Studies in Performance Practices (2 to 12 units). Prerequisite: graduate standing. Only four units may be applied toward the M.A. or M.F.A. degree requirements. May be repeated for credit.

597. Preparation for Master's Comprehensive Examination or Ph.D. Qualifying Examinations (2 or 4 units). S/U grading.

598. Guidance of M.A. Thesis or M.F.A. Final Project (4, 8, or 12 units). M.A. candidates may apply four units toward degree requirements; M.F.A. candidates may apply eight units toward degree requirements. May be repeated for credit. S/U grading.

599. Guidance of Ph.D. Dissertation (4, 8, or 12 units). May be repeated for credit. S/U grading.

Scope and Objectives

The UCLA Department of Theater, Film, and Television is considered among the finest of its kind in the country and is the only one that combines theater, motion picture, and television in a single department.

The department bases its work on a solid foundation in the liberal arts. The purpose of the curriculum is to develop in its students a scholarly, creative, and professional approach to the theater arts. The aim of the department is to train graduates who will eventually make original contributions in the field of their work.

Each of the department's two divisions, Theater and Motion Picture/Television, offers an undergraduate program leading to the Bachelor of Arts degree, as well as graduate programs leading to the Master of Arts, Master of Fine Arts, and Ph.D. degrees.

Bachelor of Arts in Motion Picture/Television

Preparation for the Major

Admission to this major is not automatic. You may not apply until just prior to achieving full standing as a junior at the University. You must have at least 84 quarter units (56 semester units) of credit and have completed the general University and College of Fine Arts requirements before entering the major. You must also obtain departmental consent by (1) filing a letter of intention, (2) giving evidence of creative or critical ability when requested, and (3) providing additional material as determined by the department.

The Major

The major in motion picture/television consists of 68 upper division units taken in the junior and senior years. These include Motion Picture/Television 109, 134A, 166 (eight units), 185 (eight units); one of the following writing courses: 131, 133, 135 (eight units), 181B; two of the following film history courses: 106A, 106B, 106C, 106D, 106E, 108, 110A; two of the following film criticism courses: 107, 110B, 112, 113, 114, 116; two motion picture/television elective area courses; and four upper division adviser-approved cognate courses pertinent to your study in at least two other departments, including the theater area of the department (these courses may not be used to satisfy College of Fine Arts or University requirements). It is recommended that the majority of the required courses be completed during the junior year.

You should be mindful of the exigencies inherent in filmmaking and be prepared to meet the additional demands of time and costs.

Note: Students are required to perform assignments on each other's projects. In addition, the department reserves the right to hold for its own purposes examples of any work done in classes and to retain for distribution such examples as may be selected.

Check the *Schedule of Classes* for courses limited to majors only.

Bachelor of Arts in Theater

Preparation for the Major

Required: Theater 5A, 5B, 5C, 10, 20, English 90.

The Major

Required: A total of 60 upper division units, including Theater 130A, 140A, 141A, 142A, 143, 160 or 161A*, 170, C172 (eight units); one course from 122, 144A, C146, 149A, 174, C190A, C190B; 22 units of approved upper division theater electives. Through certain of these required courses, you are responsible for completing specific production assignments related to production activity of the theater curriculum during each quarter in residence.

*If course 161A is used to complete the requirement, 24 units of electives are required.

Graduate Study

The department offers the Master of Arts (M.A.), Master of Fine Arts (M.F.A.), and Doctor of Philosophy (Ph.D.) degrees in the following specializations: (1) motion picture/television and (2) theater.

Admission

Students are generally admitted in the Fall Quarter only. Applicants for another quarter should consult the Student Affairs Office, Theater, Film, and Television, 1327 Macgowan Hall, UCLA, Los Angeles, CA 90024. Admission is competitive, and only a limited number of students are accepted each year in each program. The department does not have an application in addition to the one used by the Graduate Admissions Office, and no screening examination prior to admission is required.

In addition to satisfying minimum University requirements for graduate admission, you must:

(1) Have completed an undergraduate major in theater or motion picture/television comparable to that offered at UCLA. Students whose theater arts preparation is determined to be deficient are required to make up those deficiencies.

(2) Provide the department with at least three letters of reference and a statement of purpose.

Additional admission requirements are noted under each specific program.

Master of Arts Degree

Motion Picture/Television Specialty

Admission

If you do not have an undergraduate major comparable to that of the department, you must submit for consideration film and television work done at other institutions (confirmed as your work by the instructors originally involved), as well as evidence of your production and scriptwriting competence. Alternatively, you may be required to take such courses at UCLA as will fulfill these requirements, though these courses may not be applied toward the minimum of nine courses required for the M.A. degree.

Major Fields or Subdisciplines

The program requires that you be conversant in both film and television, as you are tested on each in the comprehensive examination.

Foreign Language Requirement

You may be required to demonstrate competence in a foreign language if necessary to support the research in your area of specialization.

Course Requirements

A minimum of nine courses is required, five of which must be 200-level courses in film and/or television history, theory, and criticism. In addition, Motion Picture/Television 200 is required of all students. All six of the graduate-level courses must be completed with a grade of B or better.

Only eight units of courses 596A, 596B, 596C, and 598 may be applied toward the total course requirement; however, none of these courses may be applied toward the minimum graduate course requirement.

Thesis Plan

Before beginning work on the thesis, you must obtain approval of a subject dealing with history, aesthetics, or criticism in motion picture/television and a general plan of investigation from the film/television studies committee. You must present the adviser and the committee with a prospectus of the thesis and a petition to advance to candidacy. Both are used as the basis for approval. A thesis committee is formed when you are within one quarter of completing the coursework, at which time you are eligible to advance to candidacy.

If your thesis fails to pass the committee, you may present a rewritten version for approval. The number of times a thesis may be presented depends on assessments made by the committee.

Comprehensive Examination Plan

The written examination consists of three days of testing, four hours each day, and examines a broad range of knowledge in motion picture/television. After completion, your committee grades you either pass or fail. You may repeat any failed portions of the examination once in the following quarter.

Theater Specialty

Admission

Requirements include a sample of scholarly or critical writing, statement of purpose, and other information (resume, portfolio, script interview, etc.) that may be required to establish the quality of work in the specialization.

Major Fields or Subdisciplines

The program leads to a general graduate degree, though there are opportunities, through your electives and thesis or research paper topic, to stress a particular interest such as acting, children's theater, design, directing, playwriting, puppet theater, theater history and criticism, theater management, and theater technology.

Foreign Language Requirement

The program does not require a foreign language, but you are urged to develop a proficiency in either French, German, Spanish, or Italian.

Course Requirements

You are required to complete a minimum of 10½ courses (42 units), five of which must be at the graduate level, in at least one year of intensive study, laboratory exercises, and research leading to the successful completion of either the thesis or comprehensive examination plan. You are required to take an active part in the production program of the department as partial fulfillment of the degree requirements.

The required courses are Theater 200, 245A-245B, and C272 (a two-unit course to be taken three times). After consultation with your adviser, you select five courses, including one graduate course in theater history and another in theater production theory, as well as three other courses which emphasize production practice or historical study. Students accepted for joint M.A. and Ph.D. programs are required to take courses 205A, 205B, and 205C.

Only eight units from the 596 series may be applied toward the total course requirement, and only four of these units may be applied toward the minimum graduate course requirement. No 598 courses may be applied toward the total course requirement.

Thesis Plan

Before beginning work on the thesis, you must obtain approval of a subject dealing with the history, aesthetics, criticism, or techniques of the theater and a general plan of investigation from the M.A. committee. A thesis committee is formed when you are within one quarter of completing the coursework, at which time you are eligible to advance to candidacy. You must present the adviser and the committee with a prospectus of the thesis and a petition to advance to candidacy. Both are used as the basis for approval.

If your thesis fails to pass the committee, you may present a rewritten version for approval. The number of times a thesis may be presented depends on assessments made by the committee.

Comprehensive Examination Plan

If you elect this plan, you must complete an examination consisting of a 50-page research paper which may be associated with four units of Theater 596A, a one-hour oral defense of the paper, and a two-part, six-hour written examination covering theater history and production practice. The examination normally occurs during the final quarter of residency, at which time you should have advanced to candidacy.

Master of Fine Arts Degree

Motion Picture/Television Specialty

NOTE: The department's motion picture/television M.F.A. production programs are currently being revised, and students admitted for the 1986-87 academic year and thereafter are advised to check with the department for descriptions of such changes.

Admission

Applicants with diverse backgrounds and undergraduate majors in areas other than theater arts are encouraged. You must state clearly your degree objective (M.F.A.) and the area of specialization desired within the program: animation, filmmaking, screenwriting, producers program, or television production.

If you intend to concentrate in film or television production, a description of a film or television project designed to be undertaken during graduate residence at UCLA is required. This should be in proposal, script, or treatment form.

If you intend to concentrate in writing, a finished full-length feature script in dramatic form is desirable; however, other forms of creative writing may be submitted.

If you intend to concentrate in animation, a description of an animation project to be undertaken during graduate study must be submitted, preferably in storyboard form. Other creative work may be submitted.

If you intend to concentrate in the producers program, you must submit a comprehensive statement detailing your reasons for pursuing a career as a producer/executive in motion picture/television.

Major Fields or Subdisciplines

The program includes specializations in animation, filmmaking (fictional, documentary, education), screenwriting, and television production. Ethnographic film is a subdiscipline.

Foreign Language Requirement

There is no foreign language requirement for the M.F.A. degree.

Course Requirements

A total of 18 courses is required for the degree, five of which must be graduate level. At least three courses must be in the 200 series in film history, aesthetics, or structure. Course requirements for each specialization are available in the Student Affairs Office, 1327 Macgowan Hall.

Only 16 units of Motion Picture/Television 596 may be applied toward the total course requirement, and only eight of these units may be applied toward the minimum graduate course requirement. Only four units of course

596A and four units of course 596B may be taken prior to advancement to candidacy. Courses 596C through 596F may be taken only after advancement to candidacy.

Fieldwork and internships are not required but may be taken as courses which may be applied toward the degree.

Comprehensive Examination Plan

The comprehensive plan is satisfied by fulfilling projects appropriate to your specialization. No later than the beginning of your final quarter in residence, you must submit for approval to the M.F.A. committee the appropriate documents for advancement to candidacy and a list of at least three faculty members who will serve on your committee. Consult the Student Affairs Office, 1327 Macgowan Hall, for further information.

M.A.-African Area Studies/M.F.A.

The Motion Picture/Television Division of the Department of Theater, Film, and Television and the African Area Studies Program have an articulated degree program which allows students to combine study for the M.A. in African Area Studies and the M.F.A., with a specialization in motion picture/television. Articulated programs do not allow course credit to be applied toward more than one degree. Interested students should write to the Graduate Adviser, Graduate Student Affairs Office, Motion Picture/Television Division, UCLA Theater, Film, and Television Department, and to the Graduate Adviser, African Area Studies Program, UCLA African Studies Center.

Theater Specialty

Admission

Evidence of creative ability and professional intent is required. At the time of application to the Graduate Division, you must clearly state the degree objective (M.F.A.) and one of the following areas of specialization within the M.F.A. (Theater) program.

Acting: Submit strong letters of recommendation from directors familiar with your work, a complete resume of your experience, and photographs; audition for the M.F.A. faculty committee.

Design (scenic, costume, or both): Submit examples of creative work such as a portfolio of designs, sketches, working drawings, and photographs.

Directing: Submit evidence of motivation and talent through production and prompt books, reviews, critical commentaries, and strong letters of recommendation. An interview may be requested by the department.

Playwriting: Submit examples of creative writing such as full-length plays, one-act plays, and screenplays.

Producers Program: Submit a comprehensive statement detailing your reasons for pursuing a career as a producer/executive in theater.

Puppet Theater: Submit actual puppets and photographs; audition for the M.F.A. committee or its representative.

Theater Technology: Submit evidence of ability demonstrated through production books, working drawings, lighting plots, photographs, and strong letters of recommendation.

Major Fields or Subdisciplines

The areas of specialization for the M.F.A. program are as specified above.

Foreign Language Requirement

There is no foreign language requirement for the M.F.A. degree.

Course Requirements

A total of 18 courses (72 units) is required, five of which must be graduate level. Only 16 units of Theater 596 may be applied toward the total course requirement and the minimum graduate course requirement.

Specific course requirements for each specialization are available in the Student Affairs Office, 1327 Macgowan Hall.

Fieldwork: Occasionally, students fulfill project requirements in the field. As an example, a student might complete a directing or design project with a community or church organization or a municipal division such as the Parks and Recreation Department.

Internship: Some specializations, such as the producers program and puppet theater, may take advantage of opportunities offered by professional organizations.

Comprehensive Examination Plan

The plan is satisfied by fulfilling a series of creative projects appropriate to your specialization. On completion of the final creative project or last quarter of residency, whichever is last, you must file for advancement to candidacy. The committee then reviews and evaluates your record for a degree. Your participation in the final review is at the discretion of the committee.

Ph.D. Degree

Motion Picture/Television Specialty

Admission

Completion of a master's degree (M.A. or M.F.A.) equivalent to those offered by the UCLA Department of Theater, Film, and Television is required. In exceptional cases, students with an M.A. outside the field will be considered for direct admission to the program. Evidence of potential as a practicing scholar is indicated by (1) breadth and depth of advanced coursework in history, theory, and criticism; (2) imagination and quality of scholarly writing; (3) academic achievements and potential as indicated by the grade-point average, Graduate Record Examination (GRE) scores, awards, scholarships, teaching assistantships, etc.

The dossier submitted for admission must contain a letter describing your reasons for wishing to earn the Ph.D., plus the master's thesis or writing samples that demonstrate a high level of ability to write criticism or historical narrative.

Note: Supporting material will be returned only if accompanied by postage, envelope, and shipping instructions. Further information is available from the Student Affairs Office, Theater, Film, and Television, 1327 Macgowan Hall, UCLA, Los Angeles, CA 90024.

Major Fields or Subdisciplines

You are expected to understand film and television within their social contexts as significant forms of art and communication, and to achieve by disciplined study a mastery of their history, theory, and criticism.

Foreign Language Requirement

Mastery of one foreign language is required and must be demonstrated in one of the following ways: (1) passing the Educational Testing Service (ETS) examination in French, Spanish, German, or Russian with a score of 500 or better; (2) completing level five or equivalent, with a minimum grade of C, in any foreign language; (3) passing a UCLA language examination given in any foreign language department. When mastery of more than one foreign language is necessary for your dissertation study, you are required to take courses or pass examinations in the additional language(s). Normally, the required foreign language examinations must be passed by the end of your first year in residence.

In certain cases with committee approval, a research tool such as statistics or computer science may be substituted for the foreign language.

Course Requirements

During the first six quarters in the motion picture/television specialization, you must take 13½ courses. During your first year in residence, Motion Picture/Television 211B, 215, and 273 must be completed, while course 274 is required in your last quarter in residence. In addition to this core sequence, course 496 is also required. Further, you must select nine graduate elective courses, at least six of which must be drawn from film and television studies offerings.

You must select from these elective courses three areas of concentration, chosen to broaden your familiarity and competence with various and diverse subject matters. A suggested list of concentrations is as follows: film theory, criticism, narrative studies, film and the other

arts, authors, genres, documentary, film history, American film, European film, non-Western film/television, television studies, media and society, film/television as a business enterprise, and film/television production. It is expected that the dissertation topic will emerge from one of the concentrations.

Teaching Experience

Every student must complete Motion Picture/Television 495A or 496, depending on program requirements.

Qualifying Examinations

At the end of your second quarter in residence, you must take a preliminary oral examination to be conducted by a representative committee of the faculty of your specialization. The committee specifies the areas of review, tests your background preparation and progress to date, and determines your general fitness to continue in the doctoral program.

After completing all language and course requirements, approval of a dissertation prospectus, and appointment of a dissertation committee, you are required to pass a written qualifying examination administered in three-hour segments during two successive days. Information regarding the examination is available from the divisional Ph.D. committee. You may be reexamined on any failed parts of the examination.

After you pass the written examination, a doctoral committee is formed to administer the University Oral Qualifying Examination. You are advanced to candidacy only on successful completion of this examination.

A dissertation demonstrating your ability to carry out independent and significant inquiry in a historical, theoretical, or critical field of theater arts is required. Final award of the Ph.D. depends on successful completion of the dissertation.

Candidate in Philosophy Degree

You are eligible to receive the C.Phil. degree on advancement to candidacy for the Ph.D.

Final Oral Examination

A final oral examination, held after the completion of the dissertation, may be required at the option of the dissertation committee.

Theater Specialty

Admission

See admission requirements for the Ph.D. (motion picture/television specialty) above. In addition, theater applicants must submit evidence of artistic competence in some facet of theater production.

Simultaneous application may be made to both the M.A. and Ph.D. programs in theater.

Major Fields or Subdisciplines

The Ph.D. student in theater is expected to be knowledgeable regarding theater history and theory, critical methods, theatrical production, and dramatic literature.

Foreign Language Requirement

See foreign language requirements for the Ph.D. (motion picture/television specialty) above.

Course Requirements

During the first six quarters (two academic years), you must complete a minimum of 12 graduate courses (200 or 500 level) and two professional courses (Theater 495A and 495B). Courses 216A, 216B, 216C are required. The remaining nine courses are elective graduate courses, seminars, or tutorials. Of these electives, no more than four may be taken outside the division and no more than two may be tutorials. In addition, the distribution of electives must include at least one each in the areas of Western or non-Western theater study. These electives must augment the required courses so as to constitute a definable area of study associated with the dissertation topic. The dissertation is a historical, critical, analytical, or experimental study of a theater topic.

Teaching Experience

Every student must complete Theater 495A or 496, depending on program requirements.

Qualifying Examinations

See the description of qualifying examinations under the Ph.D. (motion picture/television specialty) above.

Candidate in Philosophy Degree

You are eligible to receive the C.Phil. degree on advancement to candidacy for the Ph.D.

Final Oral Examination

A final oral examination, held after the completion of the dissertation, may be required at the option of the dissertation committee.

Motion Picture/Television

Upper Division Courses

106A. History of the American Motion Picture. (Formerly numbered Theater Arts 106A.) Lecture/screenings, eight hours; discussion, one hour. A historical and critical survey, with examples, of the American motion picture both as a developing art form and as a medium of mass communication. May be repeated once for credit with departmental consent and with topic change.

106B. History of the European Motion Picture. (Formerly numbered Theater Arts 106B.) Lecture/screenings, eight hours; discussion, one hour. A historical and critical survey, with examples, of the European motion picture both as a developing art form and as a medium of mass communication. May be repeated once for credit with departmental consent and with topic change.

106C. History of African, Asian, and Latin American Film. (Formerly numbered Theater Arts 106C.) Lecture/screenings, eight hours; discussion, one hour. A critical, historical, aesthetic, and social study — together with an exploration of the ethnic significance — of Asian, African, Latin American, and Mexican films.

106D. The Development of Film in Europe and the United States from WWI through the Depression. (Formerly numbered Theater Arts 106D.) Lecture/screenings, eight hours; discussion, one hour. An interdisciplinary and comparative approach to the development of film in Europe and the United States from the silent era through the Depression. Particular emphasis on the interrelationship of film with its historical context and the social dimensions of film structure, aesthetics, and language.

106E. The Development of Film in Europe and the United States from WWII to the Present. (Formerly numbered Theater Arts 106E.) Lecture/screenings, eight hours; discussion, one hour. Course 106D is not prerequisite to 106E. An interdisciplinary and comparative approach to the development of film in Europe and the United States from the end of the 1930s to the present. Particular emphasis on the interrelationship of film with its historical context and the social dimensions of film structure, aesthetics, and language.

107. Experimental Film. (Formerly numbered Theater Arts 107.) Lecture/screenings, eight hours; discussion, one hour. A study and analysis of unconventional developments in the motion picture.

108. History of Documentary Film. (Formerly numbered Theater Arts 108.) Lecture/screenings, eight hours; discussion, one hour. Prerequisite: consent of instructor. The philosophy of the documentary approach in the motion picture. The development of critical standards and an examination of the techniques of teaching and persuasion used in selected documentary, educational, and propaganda films.

109. Introduction to Film and Television Study. (Formerly numbered Theater Arts 109.) Lecture, three hours; discussion, one hour. Prerequisite: consent of instructor. Required of motion picture/television majors in the first quarter in residence and recommended as a prerequisite to other motion picture/television history and criticism courses. Introduction to the major principles and concepts that organize film and television studies, including author, work, style, genre, structure, and ideology, with special attention to the approaches and procedures involved in a critical reading of a work.

110A. History of Broadcasting. (Formerly numbered Theater Arts 110A.) Lecture/viewing, six hours; discussion, one hour. Prerequisite: consent of instructor. Critical survey of broadcasting here and abroad. Consideration of the social responsibilities and educational implications of broadcasting.

110B. Problems and Issues in Broadcast Media. (Formerly numbered Theater Arts 110B.) Lecture, four hours; discussion, two hours; laboratory, to be arranged. Prerequisite: consent of instructor. Study of the current issues and problems related to public and commercial broadcast programming and management, including analysis of contemporary criticism of the broadcast media.

111. Film Distribution and Exhibition. (Formerly numbered Theater Arts 111.) Lecture, three hours; laboratory, to be arranged. Prerequisite: consent of instructor. History and theory of organization of theatrical and nontheatrical distribution and exhibition of motion pictures and analysis of their interrelationships with production practices.

112. Film and Social Change. (Formerly numbered Theater Arts 112.) Lecture/screenings, eight hours; discussion, one hour. The development of documentary and dramatic films in relation to and as a force in social development.

113. Film Authors. (Formerly numbered Theater Arts 113.) Lecture/screenings, eight hours; discussion, one hour. An in-depth study of a specific film author (director or writer). May be repeated once for credit with departmental consent and with topic change.

114. Film Genres. (Formerly numbered Theater Arts 114.) Lecture/screenings, eight hours; discussion, one hour. Study of a specific film genre (e.g., the Western, the gangster cycle, the musical, the silent epic, the comedy, the social drama). May be repeated once for credit with departmental consent and with topic change.

115. Producers and Their Films. (Formerly numbered Theater Arts 115.) Lecture/screenings, eight hours; discussion, one hour. A consideration of the individual or corporate producers as they have affected the art and industry of the motion picture. Content varies; consideration of the work of a studio such as Paramount, Metro-Goldwyn-Mayer, Warner Brothers, etc. or of an individual such as Samuel Goldwyn, Stanley Kramer, Hal Wallis, etc. May be repeated once for credit.

116. Criticism. (Formerly numbered Theater Arts 116.) Lecture, four hours; laboratory, to be arranged. Study of and practice in criticism for the theater, motion pictures, and television. May be repeated once for credit with departmental consent and with topic change.

126A. Advanced Acting for Television and Motion Pictures. (Formerly numbered Theater Arts 126A.) Laboratory, six hours. Prerequisite: Theater 20 or consent of instructor. Projects in acting for television and motion pictures. Videotape recording of selected acting exercises and readings. May be repeated twice for credit.

126C. Sportscasting. (Formerly numbered Theater Arts 126C.) Lecture, two hours; laboratory, four hours. Prerequisite: consent of instructor. Intensive study of sportscasting; laboratory emphasis on studio and field training; videotaping and playback of straight sportscasts, play by play, color, interviews, commentary, and editorials. Students are required to write original material for all exercises. Extensive training re handheld field equipment; use of the remote truck. Field exercises. Students rotate in production positions. May be repeated twice for credit.

127. The Film Image. (Formerly numbered Theater Arts 127.) Lecture, one hour; discussion, two hours; laboratory, one hour. Prerequisite: consent of instructor. Proseminar in the craft of film aesthetics. The visual revolution. Biophysical nature of perception. Lenses, perspective, graphic styles. Principles of composition, screenwriting, sound, editing. Problems of time and movement. How a director views his work and his world.

128. Media and Ethnicity. (Formerly numbered Theater Arts 128.) Prerequisite: consent of instructor. Utilizing the Asian American experience, exploration of the impact and uses of media on contemporary American ethnic communities. Role and techniques of media influence besides community utilization and production.

131. Nontheatrical Motion Picture/Television Writing. (Formerly numbered Theater Arts 131.) Discussion, three hours. Prerequisite: consent of instructor. A course in the research and writing of documentary, technical, educational, industrial, and propaganda scripts. May be repeated twice for credit.

133. Script Analysis. (Formerly numbered Theater Arts 133.) Lecture, three hours; discussion, one hour. Prerequisite: consent of instructor. Limited to motion picture/television majors. The considerations and practices in the evaluation of scripts written for motion picture or television production.

134A. Motion Picture/Television Writing. (Formerly numbered Theater Arts 134A.) Discussion, three hours. Prerequisite: consent of instructor. Not open for credit to students with credit for former course 134. Problems in motion picture/television writing.

134B. Fundamentals for Motion Picture/Television Writing (2 units). (Formerly numbered Theater Arts 134B.) Lecture, one hour. Corequisite for graduate students enrolled in course 134A. An examination of screenwriting fundamentals: structure, character and scene development, conflict, locale, theme, history of drama. Review of authors such as Aristotle, Egri, Bentley.

135. Advanced Motion Picture/Television Writing (8 units). (Formerly numbered Theater Arts 135.) Discussion, three hours. Prerequisites: course 134A and/or consent of instructor. A course in motion picture/television writing. Original motion picture/television material to be developed. May be repeated twice for credit. (F,W,Sp)

150. Basic Motion Picture Photography. (Formerly numbered Theater Arts 150.) Lecture, three hours; laboratory, four hours. Prerequisites: course 166, consent of instructor. Limited to motion picture/television majors. Introduction to image control in motion picture photography through exposure, lighting, and selection of film, camera, and lens. Supervised projects in photography to complement material covered in the lecture.

151. Design for Motion Pictures and Television. (Formerly numbered Theater Arts 151.) Lecture, three hours; laboratory, to be arranged. Prerequisite: consent of instructor. Limited to motion picture/television majors. The techniques of art direction. May be repeated twice for credit (if repeated, students are required to design and complete a short film).

152. Motion Picture/Television Sound Recording. (Formerly numbered Theater Arts 152.) Lecture, three hours; laboratory, to be arranged. Prerequisite: course 166. Limited to motion picture/television majors. Introduction to principles and practices of motion picture and television sound recording, including supervised exercises.

153C. Color Cinematography. (Formerly numbered Theater Arts 153C.) Lecture, three hours. Prerequisite: consent of instructor. History and theories of color photography, with emphasis on present-day methods in motion picture and television production. A comparative study of additive and subtractive systems as employed by Technicolor, Ansco, Kodak, and others.

154. Motion Picture Editing. (Formerly numbered Theater Arts 154.) Lecture, three hours; laboratory, to be arranged. Prerequisites: course 166, consent of instructor. Limited to motion picture/television majors. Introduction to the artistic and technical problems of film editing, with practical experience in the editing of image and synchronous sound.

164. Direction for Motion Pictures. (Formerly numbered Theater Arts 164.) Laboratory, to be arranged. Prerequisites: course 166, consent of instructor. A study of the problems faced by a motion picture director and various approaches to their solution. May be repeated twice for credit.

165. Direction for Television. (Formerly numbered Theater Arts 165.) Laboratory, six hours. Prerequisites: courses 134A, 166, 185, consent of instructor. Instruction and supervised exercises in television direction, with emphasis on the creative use of cameras, sound, composition, and communication with those in front of and behind the camera. May be repeated twice for credit.

166. Undergraduate Production I (8 units). (Formerly numbered Theater Arts 166.) Lecture/discussion, four hours; laboratory, eight hours; other, four hours. Prerequisite: consent of instructor. Limited to and required of motion picture/television majors. The completion of one or more short films, including their writing, production, and editing. May not be repeated.

176A-176B. Undergraduate Production II (8 units each). (Formerly numbered Theater Arts 176A-176B.) Discussion, three hours; laboratory, to be arranged. Prerequisites: course 166, consent of production faculty. Limited to motion picture/television majors. The completion of a motion picture, television, or video production, including its writing, production, and editing. May not be repeated.

177. Motion Picture/Television Acting Workshop (2 or 4 units). (Formerly numbered Theater Arts 177.) Laboratory, to be arranged. Prerequisite: consent of instructor. A workshop providing opportunities for students to rehearse, perform, and evaluate their scenes under the supervision and criticism of the instructor.

178. Technical Motion Picture/Television Laboratory (2 or 4 units). (Formerly numbered Theater Arts 178.) Laboratory, to be arranged. Prerequisite: consent of instructor. Limited to motion picture/television majors. A laboratory on various aspects of motion picture/television production. May be repeated for a maximum of 12 units, but only eight units may be applied toward the motion picture/television major.

180A-180B-180C. Workshop in Broadcast News and Documentary. (Formerly numbered Theater Arts 180A-180B-180C.) Discussion, three hours; laboratory, five hours. Prerequisite: consent of instructor. Instruction and supervised exercises in writing, reporting, editing, and producing radio and television news, public affairs, and documentary programs.

181A. Animation Design in Theater Arts. (Formerly numbered Theater Arts 181A.) Lecture, three hours; laboratory, three hours. Prerequisite: consent of instructor. History and use of speech, rhythm, and graphic design to form effective communication on film.

181B. Writing for Animation (4 or 8 units). (Formerly numbered Theater Arts 181B.) Lecture, six hours; laboratory, to be arranged. Prerequisites: course 181A, consent of instructor, a storyboard at the first class meeting. Research and practice in creative writing and planning for the animated film. May be repeated for a maximum of 16 units.

181C. Animation Workshop (4 or 8 units). (Formerly numbered Theater Arts 181C.) Lecture, six hours; laboratory, to be arranged. Prerequisites: course 181A, consent of instructor, a storyboard at the first class meeting. Organization and integration of the various creative arts used in animation to form a complete study of a selected topic. May be repeated for a maximum of 16 units.

182. Introduction to Video Production (8 units). (Formerly numbered Theater Arts 182.) Lecture, four hours; discussion, four hours; laboratory, to be arranged. Prerequisite: consent of instructor. Limited to motion picture/television majors. An introduction to the techniques, processes, and equipment used in video production, culminating in a short project each student originates.

185. Beginning Television and Video Production (8 units). (Formerly numbered Theater Arts 185.) Laboratory, 16 hours. Prerequisite: consent of instructor. Limited to and required of motion picture/television majors. Instruction and exercises in the basic techniques of television and video production, including class participation in campus broadcasts.

187A-187B-187C. Remote Television Broadcasting. (Formerly numbered Theater Arts 187A-187B-187C.) Laboratory, three hours (additional hours to be arranged). Prerequisites: course 185, consent of instructor. Instruction and supervised exercises in the planning and production of remote on-location television programs.

189. Overview of the Motion Picture Industry. (Formerly numbered Theater Arts 189.) Discussion, three hours. Prerequisite: consent of instructor. Evolution of economic and business structure of motion pictures from early beginnings to present, stressing methods of operation and the influence of social and economic pressures that contributed to the changing financial, distribution, and exhibition practices.

192. Motion Picture, Television, and Theater Internship (2, 4, or 8 units). (Formerly numbered Theater Arts 192.) Field experience, eight, 16, or 24 hours; individual conferences, to be arranged. Prerequisite: consent of instructor. Limited to senior Department of Theater, Film, and Television majors. An internship at various studios or theaters accentuating the creative contribution, organization, and work of professionals in their various specialties. May be taken for a maximum of eight units.

193A. Film Curatorship. (Formerly numbered Theater Arts 193A.) Lecture, two hours; discussion, two hours; laboratory, four hours. Prerequisite: consent of instructor. Study of the principles and techniques of film curatorship and research, including but not limited to acquisitions, cataloging, storage, and retrieval systems. Special attention to the application of new technology, equipment, and program materials to film archival-library design for research and teaching.

193B. Television Curatorship. (Formerly numbered Theater Arts 193B.) Lecture, two hours; discussion, two hours; laboratory, four hours. Prerequisite: consent of instructor. Study of the principles and techniques of television curatorship and research, including but not limited to acquisitions, cataloging, storage, and retrieval systems. Special attention to the application of new technology, equipment, and program materials to television archival-library design for research and teaching.

195A-195B-195C. Independent Production of Feature Films and/or Television Programming. (Formerly numbered Theater Arts 195A-195B-195C.) Lecture, three hours. Prerequisites: course 189, consent of instructor. Survey of financial and business aspects involved in packaging, distributing, and exhibiting motion pictures and/or television programming from the various perspectives of prominent industry leaders. May be taken in any sequence for a maximum of eight units with different letter designations and different instructors.

196. Senior Colloquium. (Formerly numbered Theater Arts 196.) Lecture, three hours. Prerequisites: consent of instructor, senior standing. An advanced seminar investigating special topics in film and television studies (i.e., style, modes of adaptation, media and social effects, etc.).

199. Special Studies in Theater Arts (2 to 8 units). (Formerly numbered Theater Arts 199.) Hours to be arranged. Prerequisites: senior standing, 3.0 GPA in major, consent of instructor. May be taken for a maximum of eight units.

Graduate Courses

Certain graduate courses concerned with individual student projects may be repeated for credit on recommendation of the departmental graduate adviser. Graduate courses are not open to undergraduate students.

200. Bibliography and Methods of Research in Theater Arts. (Formerly numbered Theater Arts 200.):

Section 1. Motion Pictures.

Section 2. Television/Radio.

203. Seminar in Film and the Other Arts. (Formerly numbered Theater Arts 203.) Discussion, three hours (additional hours as required). Prerequisites: graduate standing, consent of instructor. Studies in the interrelationships between film and the fine arts, or performing arts, or literature, with emphasis on the ways these other arts have influenced film. May be repeated twice for credit.

206A. Seminar in European Motion Picture History. (Formerly numbered Theater Arts 206A.) Discussion, three hours (additional hours as required). Prerequisites: course 106B, graduate standing, consent of instructor. Studies in selected historical movements such as expressionism, socialist realism, surrealism, neorealism, New Wave, etc. May be repeated twice for credit.

206C. Seminar in American Motion Picture History. (Formerly numbered Theater Arts 206C.) Discussion, three hours (additional hours as required). Prerequisites: course 106A, graduate standing, consent of instructor. Study of central topics in American film history. May be repeated twice for credit.

208A. Seminar in Film Structure. (Formerly numbered Theater Arts 208A.) Discussion, three hours (additional hours as required). Prerequisites: graduate standing, consent of instructor. An examination of various film conventions, both fictional and nonfictional, and of the role of structure in the motion picture.

208B. Seminar in Classical Film Theory. (Formerly numbered Theater Arts 208B.) Discussion, three hours (additional hours as required). Prerequisites: graduate standing, consent of instructor. A study of the principal topics and lines of inquiry that characterize the theoretical writings of Arnheim, Eisenstein, Bazin, Mitry, etc.

208C. Seminar in Contemporary Film Theory. (Formerly numbered Theater Arts 208C.) Discussion, three hours (additional hours as required). Prerequisites: course 208B, graduate standing, consent of instructor. A study of the redefinition of the aims and methods of film theory through contemporary writings.

209A. Seminar in Documentary Film. (Formerly numbered Theater Arts 209A.) Discussion, three hours (additional hours as required). Prerequisites: graduate standing, consent of instructor. The nonfictional film and its relation to contemporary culture.

209B. Seminar in Fictional Film. (Formerly numbered Theater Arts 209B.) Discussion, three hours (additional hours as required). Prerequisites: graduate standing, consent of instructor. Film as fiction and its relation to contemporary culture. May be repeated once for credit.

M209C. Ethnographic Film. (Formerly numbered Theater Arts M209C.) (Same as Anthropology M247A.) Lecture/discussion, four hours; laboratory, to be arranged. Prerequisites: graduate standing, consent of instructor. Discussion of the history, methods, and criteria for the use of film as a medium for the preservation and communication of human cultures. Filming assignments are given to increase the understanding of the theoretical and practical aspects of ethnographic filming. Consideration of the potential of both film and video for fieldwork. (F)

209D. Seminar in the Animated Film. (Formerly numbered Theater Arts 209D.) Discussion, three hours; laboratory, three hours. Prerequisite: consent of instructor. A critical study of the animated film: its historical development and its structure, style, and use.

210. Seminar in Contemporary Broadcast Media. (Formerly numbered Theater Arts 210.) Discussion, three hours (additional hours as required). Prerequisites: graduate standing, consent of instructor. Consideration of issues raised by recent developments in television and radio, commercial and public, associated with innovations in satellite, cable, and cartridge systems.

211A. Seminar in Historiography. (Formerly numbered Theater Arts 211A.) Discussion, three hours. Prerequisites: graduate standing, consent of instructor. Limited to motion picture/television M.A. candidates. Beginning examination of the function and methods of writing film and television history as seen in the works of key historians in the United States and Europe.

211B. Seminar in Historiography. (Formerly numbered Theater Arts 211B.) Discussion, three hours. Prerequisites: graduate standing, consent of instructor. Limited to motion picture/television Ph.D. candidates. Examination of the function and methods of writing film and television history as exemplified by key works in this tradition, with attention to central issues of historical thought on the media.

215. Seminar in Theory and Method. (Formerly numbered Theater Arts 215.) Discussion, three hours. Limited to motion picture/television Ph.D. candidates. An examination of the major modes of theoretical reflection that bear on film and television through study of central texts of such traditions as phenomenology, auteurism, semiology, psychoanalysis, sociology, etc.

219. Seminar in Film and Society. (Formerly numbered Theater Arts 219.) Discussion, three hours (additional hours as required). Prerequisites: graduate standing, consent of instructor. Study of the ways film affects and is affected by social behavior, belief, and value systems; considered in relation to the role of media in society. May be repeated once for credit.

220. Seminar in Television and Society. (Formerly numbered Theater Arts 220.) Discussion, three hours (additional hours as required). Prerequisites: graduate standing, consent of instructor. Study of the ways television forms affect and are affected by social behavior, belief, and value systems; study of the technological and economic aspects of the medium. May be repeated once for credit.

221. Seminar in Film Authors. (Formerly numbered Theater Arts 221.) Discussion, three hours (additional hours as required). Prerequisites: graduate standing, consent of instructor. Intensive examination of the works of outstanding creators of films. May be repeated twice for credit.

222. Seminar in Film Genres. (Formerly numbered Theater Arts 222.) Discussion, three hours (additional hours as required). Prerequisites: graduate standing, consent of instructor. Studies of patterns, styles, and themes of such genres as the Western, gangster, war, science fiction, comedy, etc. May be repeated twice for credit.

223. Seminar in Visual Perception. (Formerly numbered Theater Arts 223.) Discussion, three hours (additional hours as required). Prerequisites: graduate standing, consent of instructor. The aesthetic, psychological, and physiological principles of vision as they relate to the ways in which man "sees" film and television, with emphasis on the ways in which these are different from other visual experiences.

247. Production Planning in Motion Pictures/Television. (Formerly numbered Theater Arts 247.) Discussion, three hours. Prerequisite: consent of instructor. Analysis of procedures and problems in preparing a script for film or television production, with emphasis on role of production manager in breaking down scripts, setting up shooting schedule, planning postproduction, and preparing budgets.

M265A-M265B. Ethnographic Film Direction (4 or 8 units each). (Formerly numbered Theater Arts M265A-M265B.) (Same as Anthropology M267B-M267C.) Lecture, four hours; laboratory, to be arranged. Prerequisites: course M209C, graduate standing, consent of instructor. Further consideration of the methods and criteria for the use of film as a medium for the preservation and communication of human cultures. Production of films and videotapes on topics selected by students.

(W, M265A; Sp, M265B)

268. Seminar in the Short Film. (Formerly numbered Theater Arts 268.) Lecture, two hours; discussion, two hours. Prerequisites: graduate standing, consent of instructor. A study of the problems presented by the conceptualization of the form and structure of the short film, with classical and student examples.

270. Seminar in Film Criticism. (Formerly numbered Theater Arts 270.) Discussion, three hours (additional hours as required). Prerequisites: graduate standing, consent of instructor. A study of key aesthetic questions of analysis and evaluation in relation to central works of motion picture criticism. May be repeated once for credit.

271. Seminar in Television Criticism. (Formerly numbered Theater Arts 271.) Discussion, three hours (additional hours as required). Prerequisites: graduate standing, consent of instructor. An analysis of major forms of television production and the criticism it has elicited. May be repeated once for credit.

273. Seminar in Contemporary Film and Television Criticism. (Formerly numbered Theater Arts 273.) Discussion, three hours (additional hours as required). Limited to motion picture/television Ph.D. candidates. Study and practice of the analytic and critical response, with emphasis on contemporary film and television.

274. Seminar in Research Design. (Formerly numbered Theater Arts 274.) Discussion, three hours. Prerequisite: second-year standing in the motion picture/television Ph.D. program. An examination of the general principles that govern the formulation of major research projects and the preparation of a prospectus for the Ph.D. dissertation.

276. Seminar in Non-Western Films. (Formerly numbered Theater Arts 276.) Discussion, three hours (additional hours as required). Prerequisites: graduate standing, consent of instructor. Study of the aesthetic and ideological impulses of selected films from Asia, Africa, and Latin America.

277. Seminar in Narrative Studies. (Formerly numbered Theater Arts 277.) Discussion, three hours (additional hours as required). Prerequisites: graduate standing, consent of instructor. A study of the writings on the theory of narrative structure and their significance for analysis of film forms.

288. Seminar in Instructional Television. (Formerly numbered Theater Arts 288.) Discussion, three hours (additional hours as required). Prerequisites: graduate standing, consent of instructor. A historical survey and critical analysis of public, educational, and instructional television. A laboratory course requiring the preparation of a program plan.

289A-289B-289C. Current Business Practices in Motion Pictures/Television. (Formerly numbered Theater Arts 289A-289B-289C.) Prerequisites: course 247, graduate standing, consent of instructor. Examination of current status of financing-production-distribution agreements, union agreements, music, copyright, etc., necessary to an understanding of the motion picture/television industry. May be taken in any sequence.

291A-291B-291C. The Role of Management in the Entertainment Industry. (Formerly numbered Theater Arts 291A-291B-291C.) Prerequisites: course 247, graduate standing, consent of instructor. A study of the artistic, social, and economic criteria for decision making in the production and distribution of motion pictures and entertainment programs. May be taken in any sequence.

292A-292B-292C. Network Television Management and Decision Making. (Formerly numbered Theater Arts 292.) Lecture, two hours; discussion, two hours. Prerequisites: course 247, graduate standing, consent of instructor. A study of the business structure and the economic, social, and artistic criteria currently utilized by network television management. May be taken for a maximum of eight units.

293. Seminar in Film and Television Curatorship. (Formerly numbered Theater Arts 293.) Discussion, three hours (additional hours as required). Prerequisites: graduate standing, consent of instructor. Study and practice of issues in archival research and administration.

298A-298B. Special Studies in Theater Arts (2 to 4 units each). (Formerly numbered Theater Arts 298A-298B.) Lecture/discussion. Prerequisites: graduate standing, consent of instructor. Seminar study of problems in theater arts, organized on a topic basis. May be repeated once for credit.

375. Teaching Apprentice Practicum (1 to 4 units). (Formerly numbered Theater Arts 375.) Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. A teaching apprenticeship under the active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

401A-401B-401C. Graduate Experimental Workshop (12 units each.) (Formerly numbered Theater Arts 401A-401B-401C.) Lecture/discussion/laboratory, 18 hours (additional hours as required). Prerequisite: consent of instructor. An experimental workshop integrating production in film, television, and video with screenwriting and critical studies in a comprehensive manner that combines a cultural context of media with its sensitive, imaginative expression and with an ethical responsibility.

423. Direction of Actors for Motion Pictures/Television. (Formerly numbered Theater Arts 423.) Lecture/laboratory. Prerequisites: first film project, consent of instructor. Exercise in analysis of script and character for the purpose of directing actors in motion picture and television productions. Emphasis on eliciting the best possible performance from the actor. May be repeated twice for credit.

434. Advanced Motion Picture/Television Writing (8 units). (Formerly numbered Theater Arts 434.) Discussion, three hours. Prerequisites: course 135, consent of instructor. Advanced problems in the writing of original motion picture/television material. May be repeated twice for credit.

435A. Writing Scenes for Production. (Formerly numbered Theater Arts 435A.) Discussion, three hours; laboratory, six hours. Prerequisites: graduate standing, consent of instructor. In coordination with direction and photography courses, students write, cast, rehearse, and produce scenes on videotape.

435B. Writing for the Short Film. (Formerly numbered Theater Arts 435B.) Discussion, three hours. Prerequisites: graduate standing, consent of instructor. The writing and revisions of a script, or scripts, for a short film (approximately 10 to 60 minutes in length).

436. Script to Film. (Formerly numbered Theater Arts 436.) Discussion, three hours. Prerequisites: graduate standing, consent of instructor. Examination of all written material involved in creating a script of a major production and comparing these with the completed film.

437. Nontheatrical Writing for Motion Pictures/Television. (Formerly numbered Theater Arts 437.) Discussion, three hours. Prerequisite: consent of instructor. Advanced problems in the field of documentary and special feature programs, with emphasis on research and preproduction.

450A. Cinematography. (Formerly numbered Theater Arts 450A.) Lecture, two hours; discussion, one hour. Prerequisites: graduate standing, consent of instructor. Not open for credit to students with credit for course 450A prior to Fall Quarter 1983. Advanced study of the principles of cinematography, with emphasis on exposure, lighting, and selection of film, camera, and lens.

450B. Lighting for Motion Pictures and Television. (Formerly numbered Theater Arts 450B.) Lecture, three hours; discussion, one hour; laboratory, four hours. Prerequisites: graduate standing, consent of instructor. Not open for credit to students with credit for course 450A prior to Fall Quarter 1983. Supervised exercises in studio and location film photography to develop skill in lighting and management of the photographic process as applied to motion pictures and films for television. May be repeated twice for credit.

450C. Advanced Motion Picture/Television Directing and Photography (8 units). (Formerly numbered Theater Arts 450C.) Lecture, three hours; discussion, two hours; laboratory, eight hours. Prerequisites: graduate standing, consent of instructor. Not open for credit to students with credit for course 450B prior to Fall Quarter 1983. Supervised filming of a short dramatic project on locations that explore the complexity of the process, emphasizing the balance essential to both directing and photographing in its varied technical and production aspects.

451. Advanced Design for Motion Pictures (2 to 4 units). (Formerly numbered Theater Arts 451.) Laboratory, to be arranged. Prerequisite: consent of instructor. Advanced study and practice of techniques and methods of design for motion pictures. Art direction for advanced workshop productions. May be repeated for a maximum of 12 units.

452A. Motion Picture/Television Sound Recording. (Formerly numbered Theater Arts 452A.) Lecture, three hours; laboratory, four hours. Prerequisites: graduate standing, consent of instructor. Principles and practices of motion picture and television sound recording, including supervised exercises.

452B. Music Recording Workshop. (Formerly numbered Theater Arts 452B.) Lecture, four hours; laboratory, eight hours. Prerequisites: course 452A and/or consent of instructor. Supervised exercises in studio music recording techniques, with emphasis on special requirements for motion pictures and television.

452C. Motion Picture/Television Sound Rerecording. (Formerly numbered Theater Arts 452C.) Laboratory, eight hours. Prerequisites: course 152 or 452A, graduate standing, consent of instructor. Techniques of preparation and execution of rerecording using multitrack pickup recording technology, including supervised operational experience.

454A. Motion Picture Editing. (Formerly numbered Theater Arts 454A.) Lecture, three hours; laboratory, to be arranged. Prerequisites: graduate standing, consent of instructor. Limited to motion picture/television majors. A study of the role of editing the fictional and nonfictional production, with emphasis on the techniques and procedures used in manipulation of the sound track in sync dialogue cutting, post syncing, and music and sound effects cutting, including offscreen narration, dialogue substitution, and playback tracks.

454B. Motion Picture Editing. (Formerly numbered Theater Arts 454B.) Lecture, three hours; laboratory, to be arranged. Prerequisites: graduate standing, consent of instructor. Limited to motion picture/television majors. A study of the role of editing the fictional and nonfictional production, with emphasis on the finishing stages, including title preparation. The use of optical effects and blowups, preparation for the supervision of the mix, and the cutting of originals for single strand and A&B printing.

464A-464B. Motion Picture Direction (4 or 8 units each). (Formerly numbered Theater Arts 464A-464B.) Hours to be arranged. Prerequisite: consent of instructor. Limited to motion picture/television graduate students. Special problems in the direction of fictional and documentary motion pictures.

466A-466B. Television Direction (4 or 8 units each). (Formerly numbered Theater Arts 466A-466B.) Lecture, two hours; laboratory, six hours. Prerequisites: graduate standing, consent of instructor. Special problems in the direction of dramatic and documentary television programs.

475. Film I (8 units). (Formerly numbered Theater Arts 475.) Discussion, three hours; laboratory, to be arranged. Prerequisites: graduate standing, consent of instructor. A study of the basic techniques of film production, including the preproduction planning and production of a short film.

476. Video I (8 units). (Formerly numbered Theater Arts 476.) Discussion, three hours; laboratory, to be arranged. Prerequisites: graduate standing, consent of instructor. A study of the basic techniques of television and video production, including the completion of one or more projects.

477. Film II (8 units). (Formerly numbered Theater Arts 477.) Discussion, three hours; laboratory, to be arranged. Prerequisites: course 166 or 475, graduate standing, consent of instructor. Group experience in film production with each member rotating on crew work in the production of individual or collective projects.

478. Video II (8 units). (Formerly numbered Theater Arts 478.) Discussion, three hours; laboratory, to be arranged. Prerequisites: course 185 or 476, graduate standing, consent of instructor. Group experience in video production with each member rotating on crew work in the production of individual or collective projects.

479A-479B-479C. Film III (4 or 8 units each). (Formerly numbered Theater Arts 479A-479B-479C.) Laboratory, to be arranged. Prerequisites: course 475 or 166, graduate standing, consent of instructor. Course 178 may be taken concurrently. The completion of a film (no longer than 10 minutes), including its writing, design, production, and editing.

480A-480B-480C. Workshop in Broadcast Journalism. (Formerly numbered Theater Arts 480A-480B-480C.) Laboratory, eight hours. Prerequisites: graduate standing, consent of instructor. The practice of reporting, writing, editing, and producing news, public affairs, and documentary programs for broadcast.

482A-482B. Advanced Animation Workshop (4 or 8 units each). (Formerly numbered Theater Arts 482A-482B.) Lecture, three hours; laboratory, to be arranged. Prerequisites: courses 181A, 181B, 181C, consent of instructor. Organization and integration of various creative arts used in animation, resulting in the production of a complete animated film.

483. Video Editing (4 or 8 units). (Formerly numbered Theater Arts 483.) Discussion, four hours; laboratory, to be arranged. Prerequisites: course 476, graduate standing, consent of instructor. Individual instruction in electronic editing.

485A-485B-485C. Video III (4 or 8 units each). (Formerly numbered Theater Arts 485A-485B-485C.) Laboratory, 16 hours. Prerequisites: course 478, graduate standing, consent of instructor. Creation, preparation, and production each quarter of one advanced television program (no longer than 10 minutes).

488A-488B-488C. Educational Television Workshop. (Formerly numbered Theater Arts 488A-488B-488C.) Laboratory, eight hours. Prerequisite: consent of instructor. Instruction and supervised exercises in directing and producing television programs for educational purposes.

489A. Computer Animation in Film and Video (8 units). (Formerly numbered Theater Arts 489A.) Lecture, three hours; laboratory, eight hours; other, to be arranged. Prerequisites: courses 181A, 181C, a complete animated film, consent of instructor. Instruction in and supervised production of computer animation. May be repeated once.

495A. Problems in the Teaching of Theater Arts. (Formerly numbered Theater Arts 495A.) Lecture/laboratory, to be arranged. Prerequisites: graduate standing, consent of instructor. Study of and practice in the teaching of theater arts at the college and university level.

495B. Problems in the Teaching of Theater Arts (2 or 4 units.) (Formerly numbered Theater Arts 495B.) Laboratory, to be arranged. Prerequisites: graduate standing, consent of instructor. Not open for credit to students with credit for former courses 495C-495D. Demonstration of competence in theater production through successful completion of a major teaching production assignment. May be repeated for a maximum of 12 units.

496. The Practice of Teaching Theater Arts (2 units.) (Formerly numbered Theater Arts 496.) Discussion. Required once of all teaching assistants or associates in the department. Orientation and preparation of graduate students who have the responsibility to assist in the teaching of undergraduate courses in the department; discussion of problems common to the teaching experience. May not be applied toward the M.A., M.F.A., or Ph.D. May be repeated. S/U grading.

498. Professional Internship in Theater Arts (4, 8, or 12 units). (Formerly numbered Theater Arts 498.) Full- or part-time at a studio or on a professional project. Prerequisites: graduate standing, advanced standing in M.F.A. program, consent of instructor. An internship at various film, television, or theater facilities accentuating the creative contribution, the organization, and the work of professionals in their various specialties. Given only when projects can be scheduled.

501. Cooperative Program (2 to 8 units). (Formerly numbered Theater Arts 501.) Prerequisite: consent of graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Course is used to record the enrollment of UCLA students in courses taken under cooperative arrangements with neighboring institutions. S/U grading.

596A. Directed Individual Studies: Research (2 to 12 units). (Formerly numbered Theater Arts 596A.) Hours to be arranged. Prerequisite: graduate standing. May be repeated with consent of instructor.

596B. Directed Individual Studies: Writing (2 to 12 units). (Formerly numbered Theater Arts 596B.) Hours to be arranged. Prerequisite: graduate standing. May be repeated with consent of instructor.

596C. Directed Individual Studies: Directing (2 to 12 units). (Formerly numbered Theater Arts 596C.) Hours to be arranged. Prerequisite: graduate standing. May be repeated with consent of instructor.

596D. Directed Individual Studies: Design (2 to 12 units). (Formerly numbered Theater Arts 596D.) Hours to be arranged. Prerequisite: graduate standing. May be repeated with consent of instructor.

596E. Directed Individual Studies: Acting (2 to 12 units). (Formerly numbered Theater Arts 596E.) Hours to be arranged. Prerequisite: graduate standing. May be repeated with consent of instructor.

596F. Directed Individual Studies: Production (2 to 12 units). (Formerly numbered Theater Arts 596F.) Hours to be arranged. Prerequisite: graduate standing. May be repeated with consent of instructor.

597. Preparation for Ph.D. Qualifying Examinations in Theater Arts (2 to 8 units.) (Formerly numbered Theater Arts 597.) May be repeated for a maximum of 12 units.

598. M.A. Thesis in Theater Arts (2 to 8 units). (Formerly numbered Theater Arts 598.) Prerequisite: advancement to M.A. candidacy. Research and writing for M.A. thesis. May be repeated for a maximum of 12 units.

599. Ph.D. Dissertation in Theater Arts (2 to 8 units). (Formerly numbered Theater Arts 599.) Prerequisite: advancement to Ph.D. candidacy. Research and writing for Ph.D. dissertation. May be repeated for a maximum of 12 units.

Theater

Lower Division Courses

5A. History and Drama of the Theater from Primitive Times to 1640. (Formerly numbered Theater Arts 5A.) Lecture, three hours; discussion, one hour. Required of theater majors. The history of the influence of different cultures, traditions, and technologies on the development of theater as a social institution.

5B. History and Drama of the Theater from 1640 to 1900. (Formerly numbered Theater Arts 5B.) Lecture, three hours; discussion, one hour. Required of theater majors. The history of the influence of different cultures, traditions, and technologies on the development of theater as a social institution.

5C. History and Drama of the Theater from 1900 to the Present. (Formerly numbered Theater Arts 5C.) Lecture, three hours; discussion, one hour. Required of theater majors. The history of the influence of different cultures, traditions, and technologies on the development of theater as a social institution.

10. Fundamentals of Theater Production. (Formerly numbered Theater Arts 10.) Lecture, three hours; laboratory, three hours. Required of theater majors in the first quarter in residence. A basic study of the relationship of acting, stage management, scenery, lighting, costume, and sound to the production of the play. Emphasis on the planning, procedures, materials, equipment, and disciplines of theater production.

20. Acting Fundamentals. (Formerly numbered Theater Arts 20.) Lecture/laboratory. Required of theater majors. An introduction to the interpretation of drama through the art of the actor. Development of individual insights, skills, and disciplines in the presentation of dramatic material to an audience.

Upper Division Courses

100. The Teaching of Theater. (Formerly numbered Theater Arts 100.) Lecture, three hours. Prerequisites: courses 160 or 161A, and 162A, or consent of instructor. Highly recommended for students pursuing a secondary teaching credential. Study of current methods and problems of production as related to the secondary level.

102A. Selected Topics on the History of the European Theater. (Formerly numbered Theater Arts 102A.) Lecture, three hours. Prerequisites: course 5A or equivalent, consent of instructor. An investigation in depth of a selected area of study in theater history from the Greeks through the Renaissance. May be repeated twice for credit.

102B. Selected Topics on the History of the European Theater. (Formerly numbered Theater Arts 102B.) Lecture, three hours. Prerequisites: course 5B or equivalent and/or consent of instructor. An investigation in depth of a selected area of study in theater history from the baroque to the present. May be repeated twice for credit.

102D. History of the European Theater. (Formerly numbered Theater Arts 102D.) Lecture, three hours. Prerequisite: consent of instructor. Not open for credit to students with credit for more than one course from the 5A, 5B, 5C series. A survey of the development of the theater from the Greeks to the present.

102E. Theater of the Non-European World. (Formerly numbered Theater Arts 102E.) Lecture, three hours; discussion, one hour. A survey of theater forms of the non-European world in which primary attention is concentrated on an examination and analysis of the traditional dance-drama and puppet theaters of East Asia, Southeast Asia, South Asia, the Middle East, and Africa. Analogous forms from European theater included for comparative purposes.

103A. Black People's Theater in America: Slavery to Mid-1800s. (Formerly numbered Theater Arts 103A.) Lecture, three hours. Prerequisites: upper division standing, consent of instructor. Not open for credit to students with credit for course 103A prior to Spring Quarter 1986. An exploration of extant materials on the history and literature of the theater as developed and performed by black artists in America from slavery to the mid-1800s. (F)

103B. Black People's Theater in America: Minstrel Stage to the Rise of the American Musical. (Formerly numbered Theater Arts 103B.) Lecture, three hours. Prerequisites: upper division standing, consent of instructor. Not open for credit to students with credit for course 103B prior to Spring Quarter 1986. An exploration of extant materials on the history and literature of the theater as developed and performed by black artists in America from the minstrel stage to the rise of the American musical. (W)

M103C. The Origins and Evolution of Chicano Theater. (Formerly numbered Theater Arts M103C.) (Same as Chicano Studies M103C.) Lecture, three hours. Prerequisite: upper division standing. An exploration of the development of Chicano theater from its beginnings in the legends and rituals of ancient Mexico to the work of Luis Valdez (late 1960s).
Mr. Zamora

M103D. Contemporary Chicano Theater. (Formerly numbered Theater Arts M103D.) (Same as Chicano Studies M103D.) Lecture, three hours. Prerequisite: upper division standing. A study of recent trends in Chicano theater as reflected in the works of contemporary Chicano dramatists and theater artists.
Mr. Zamora

103E. Black People's Theater in America: The Depression to the Present. Lecture, three hours. Prerequisites: upper division standing, consent of instructor. An exploration of extant materials on the history and literature of the theater as developed and performed by black artists in America from the Depression to the present. (Sp)

103F. Native American Theater. (Formerly numbered Theater Arts 198N.) Prerequisite: consent of instructor. A study of American Indian theater as an evolving art form. (Sp)

104D. History of the American Theater. (Formerly numbered Theater Arts 104D.) Lecture, three hours. The history of the American theater from the Revolutionary War to the Civil War.

104E. History of the American Theater. (Formerly numbered Theater Arts 104E.) Lecture, three hours. The history of the American theater from the Civil War to WWI.

104F. History of the American Theater. (Formerly numbered Theater Arts 104F.) Lecture, three hours. The history of the American theater from WWI to the present.

105. Main Currents in Theater. (Formerly numbered Theater Arts 105.) Lecture, three hours. Critical examination of the leading theories of theater from 1887 to the present. Study and discussion of modern styles of production.

C117. The Puppet Theater (2 units). (Formerly numbered Theater Arts C117.) Lecture/laboratory, four hours. Prerequisite: consent of instructor. Not open for credit to students with credit for former course 117. Study of the history and practice of the art of puppetry. An examination of the materials and methods of construction. Staging of puppet productions as laboratory practice. May be repeated twice for credit. Concurrently scheduled with course C217A.

118A. Creative Dramatics. (Formerly numbered Theater Arts 118A.) Lecture/laboratory. Studies of the principles and procedures of the improvisational approach to drama as done with children from nursery school to junior high.

118B. Advanced Creative Dramatics (2 units). (Formerly numbered Theater Arts 118B.) Discussion, one hour; laboratory, two hours. Prerequisite: course 118A or consent of instructor. Practical application of the methods and principles introduced in course 118A. May be repeated twice for credit.

119A. Theater for the Child Audience: Theory and Criticism. (Formerly numbered Theater Arts 119A.) Lecture/laboratory. Not open for credit to students with credit for former course 119. Principles of production and performance for the child audience.

119B. Theater for the Child Audience: Performance. (Formerly numbered Theater Arts 119B.) Lecture, two hours; laboratory, four hours. Prerequisites: audition and consent of instructor prior to first class meeting. Designed to provide an opportunity for students to work together as an ensemble, creating through improvisation a theater presentation for a young audience. Emphasis on testing theoretical concepts through the ensemble work, rehearsal, pretesting, and evaluation of an original production for possible presentation outside the classroom.

121. Acting Workshop (2 units). (Formerly numbered Theater Arts 121.) Laboratory, to be arranged. Prerequisites: course 20, consent of instructor. Courses 160, 161A, 161B, and 161C may be taken concurrently. A workshop which provides students with an opportunity to rehearse, perform, and criticize scenes. May be repeated once for credit.

122. Makeup for the Stage (2 units). (Formerly numbered Theater Arts 122.) Prerequisite: consent of instructor. The art of makeup and its relation to the production as a whole. History, aesthetics, materials, and procedures of makeup.

123. Intermediate Acting for the Stage. (Formerly numbered Theater Arts 123.) Lecture/laboratory. Prerequisites: course 20, consent of instructor. Study and practice of the art of acting through the perfecting of techniques and application of those techniques to acting problems.

124A. Voice for the Stage. (Formerly numbered Theater Arts 124A.) Lecture/laboratory. Prerequisites: course 20, consent of instructor. Not open for credit to students with credit for former course 124. Development of voice techniques for the stage. Includes work in relaxation, limbering, breathing, articulators, and resonators.

124B. Speech for the Stage. (Formerly numbered Theater Arts 124B.) Lecture, four hours; laboratory, two hours. Prerequisites: courses 20, 123, 124A (with demonstration of high skills level), 125A, consent of instructor. Open for credit to students with credit for former course 124. Designed to acquaint students with the international phonetic alphabet and its uses and to exercise students' skills in pronunciation, enunciation, and the development of diction versatility.

125A. Movement for the Actor. (Formerly numbered Theater Arts 125A.) Lecture/laboratory. Prerequisites: course 20, consent of instructor. Physical awareness for the actor, concentrating on warming up the body, relaxation, control, stunts, and gymnastics.

125B. Advanced Movement for the Actor. (Formerly numbered Theater Arts 125B.) Lecture/laboratory. Prerequisites: course 125A, consent of instructor. An advanced and contemporary approach to classical and modern movement for the stage actor.

130A. Fundamentals of Playwriting I. (Formerly numbered Theater Arts 130A.) Lecture, three hours. Prerequisite: consent of instructor. Required of theater majors. Designed to stimulate students' critical and creative faculties through the preparation of original material for the theater. Guidance in the completion of a one-act play.

130B. Fundamentals of Playwriting II. (Formerly numbered Theater Arts 130B.) Lecture, three hours plus conference. Prerequisites: course 130A, consent of instructor. Study in original material for the theater, its preparation and development. Designed to give further insight into the critical and creating aspects of the short and full-length play and guidance in the completion of the one-act and full-length play. May be repeated twice for credit.

130C. Writing for the American Musical Theater. (Formerly numbered Theater Arts 130C.) Lecture/laboratory, three hours. Prerequisite: consent of instructor. Study of the practice and techniques used in writing a libretto for musical theater: opening numbers, romance, subplots, and comedy. May be repeated once for credit.

132. Manuscript Evaluation for Theater. (Formerly numbered Theater Arts 132.) Lecture, three hours. Prerequisites: course 130A, consent of instructor. Principles and practices in the evaluation of manuscripts for theater. May be repeated once for credit.

136. Advanced Acting for the Stage. (Formerly numbered Theater Arts 136.) Lecture/laboratory. Prerequisites: courses 123, 124A, 125A, consent of instructor. Study and practice of the art of acting through a progression to more advanced acting problems. May be repeated twice for credit. Consecutive enrollment with the same instructor is not permitted. The total units for courses 136, 137A, 137B, and 137C may not exceed 12 units.

137A-137B-137C. Continuum Study in Acting for the Stage. (Formerly numbered Theater Arts 137A-137B-137C.) Lecture/laboratory. Prerequisites: courses 123, 124A, 125A, consent of instructor. The technique of characterization and performance in advanced and complex acting styles. The total units for courses 136, 137A, 137B, and 137C may not exceed 12 units.

138. Special Problems in Performance Techniques. (Formerly numbered Theater Arts 138.) Lecture/laboratory. Prerequisites: courses 123, 124A, 125A, consent of instructor. Study of complex problems in voice, movement, and acting. May be repeated twice for credit.

140A. Scenic Techniques for the Stage. (Formerly numbered Theater Arts 140A.) Lecture, three hours; laboratory, six hours. Prerequisites: course 10, consent of instructor. Required of theater majors. An intensive study of scenic materials, construction techniques, production organization, and the rigging of scenery. Courses 140A, 141A, and 142A may be taken in any sequence, but not concurrently.

140B. Advanced Scenery for the Stage. (Formerly numbered Theater Arts 140B.) Lecture/laboratory. Prerequisite: course 140A. Advanced study of technical problems in staging theater productions, including design analysis and planning related to rigging, shifting, and construction techniques.

141A. Lighting Techniques for the Stage. (Formerly numbered Theater Arts 141A.) Lecture, three hours; laboratory, six hours. Prerequisites: course 10, consent of instructor. Required of theater majors. An intensive study of theater lighting, with emphasis on the relationship of lighting instruments and control equipment to lighting design. Courses 141A, 140A, and 142A may be taken in any sequence, but not concurrently.

141B. Advanced Lighting for the Stage. (Formerly numbered Theater Arts 141B.) Lecture/laboratory. Prerequisite: course 141A. The detailed study of stage lighting as an art, with emphasis on design concepts. The interpretation of a script or score through the control of light and color in relation to actor and audience.

142A. Theater Costuming Techniques. (Formerly numbered Theater Arts 142A.) Lecture, three hours; laboratory, six hours. Prerequisites: course 10, consent of instructor. Required of theater majors. The study of costume analysis and the interpretation of theatrical costume design through the use of patterns, fabrics, and related costume materials. Courses 142A, 140A, and 141A may be taken in any sequence, but not concurrently.

142B. Advanced Costuming for the Stage. (Formerly numbered Theater Arts 142B.) Lecture, three hours; laboratory, four hours. Prerequisites: course 142A, consent of instructor. Special problems in the procuring, designing, construction, and management of costumes used in theatrical productions.

143. Scenic Design for the Theater. (Formerly numbered Theater Arts 143.) Prerequisites: course 10, consent of instructor. Required of theater majors. Basic principles of design as applied to the interpretation and presentation of the visual aspects of dramaturgy. Study of styles, techniques, and methods of design for the theater arts. The translation of ideas into visual forms.

144A. Theater Sound Techniques (2 units). (Formerly numbered Theater Arts 144A.) Lecture, two hours; laboratory, two hours. Prerequisite: course 10 or an approved equivalent. A study of the equipment and techniques utilized in the recording and reproduction of sound for the theater.

144B. Advanced Theater Sound. (Formerly numbered Theater Arts 144B.) Lecture, three hours; laboratory, four hours. Prerequisite: course 144A or consent of instructor. A detailed study of theater sound, with emphasis on the composition and execution of theater sound tracks, recording techniques, and acoustic reinforcement.

145. Costume Design for the Theater. (Formerly numbered Theater Arts 145.) Lecture/laboratory. Prerequisite: consent of instructor. Design of costumes for theatrical presentations. The study of the use of silhouette, fabrics, color, and decoration as related to theatrical characterizations. May be repeated once for credit.

C146. Scene Painting Techniques (2 units). (Formerly numbered Theater Arts C146.) Lecture/laboratory, three hours. Prerequisite: consent of instructor. Not open for credit to students with credit for former course 146. The study of scenic painting techniques and materials and their relation to the realization of color design and elevations. May be repeated once for credit. Concurrently scheduled with course C446.

148. Special Courses in Design and Technical Theater. (Formerly numbered Theater Arts 148.) Lecture, three hours. Prerequisite: consent of instructor. Group study of selected subjects in design and technical theater. May be repeated twice for credit.

149A. Basic Drafting Techniques for the Stage (2 units). (Formerly numbered Theater Arts 149A.) Lecture/laboratory, four hours. Prerequisite: course 10 or consent of instructor. Studies of the basic skills and techniques of drafting for the stage through the execution of floor plans and elevation drawings.

149B. Advanced Drafting for Theater Arts. (Formerly numbered Theater Arts 149B.) Lecture/laboratory. Prerequisite: course 149A or consent of instructor. An advanced course in the technical sketching and drafting of working drawings essential in the development of the design of sets and properties for theater, television, and motion picture productions.

160. Fundamentals of Play Direction. (Formerly numbered Theater Arts 160.) Lecture/laboratory. Prerequisite: consent of instructor. Required of theater majors. Course 161A may be substituted for this requirement (if substituted, an additional two upper division units are required). Course 121 may be taken concurrently. Basic theories of play direction and their application through the preparation of scenes under rehearsal conditions.

161A. Continuum in Directing for the Stage (2 units). (Formerly numbered Theater Arts 161A.) Lecture/laboratory, six hours. Prerequisite: consent of instructor. Course 121 may be taken concurrently. The intensive development of primary directing skills and process, including text analysis and the exploration of craft fundamentals as a basis for director-actor communication and effective staging. Students work in proscenium configuration with scenes drawn from plays of American realism. May be applied toward the major requirement in directing.

161B. Continuum in Directing for the Stage. (Formerly numbered Theater Arts 161B.) Lecture/laboratory, six hours. Prerequisites: course 160 or 161A, consent of instructor. Course 121 may be taken concurrently. The further development of craft elements of directorial method, with additional emphasis on the psychological aspects of director-actor communication. Students work in arena and proscenium configurations with scenes drawn from the period of early realism through expressionism.

161C. Continuum in Directing for the Stage (6 units). (Formerly numbered Theater Arts 161C.) Lecture/laboratory. Prerequisites: course 161B, consent of instructor. Course 121 may be taken concurrently. Working in three-quarter and environmental configurations, student directors explore problems of style in production by staging scenes drawn from period plays (Greek through Romantic eras) and from contemporary, nonrealistic plays.

162A. Intermediate Play Direction. (Formerly numbered Theater Arts 162A.) Lecture/discussion, two hours; laboratory, eight hours. Prerequisites: course 160 or 161A, consent of instructor. The application of stage direction techniques to the one-act play. Each student directs a one-act play to be performed under rehearsal conditions. Material drawn from published sources.

162B. Advanced Play Direction. (Formerly numbered Theater Arts 162B.) Lecture, four hours; laboratory, six hours. Prerequisites: course 160 or 161A, consent of instructor. Special problems in the direction of original one-act plays under production conditions. May be repeated once for credit with consent of instructor.

170. Theater Laboratory. (Formerly numbered Theater Arts 170.) Lecture, four hours; laboratory, eight hours. Prerequisites: courses 140A, 141A, 142A, 143, consent of instructor. Required of theater majors. Laboratory in theater production under supervision. The translation of ideas and concepts into the dramatic form.

171A. Advanced Theater Laboratory (2 or 4 units). (Formerly numbered Theater Arts 171A.) Hours to be arranged. Prerequisite: consent of instructor. Creative participation as an actor or stage manager in the public presentation of departmental productions. May be taken for a maximum of four units.

171B. Advanced Theater Laboratory (2 or 4 units). (Formerly numbered Theater Arts 171B.) Hours to be arranged. Prerequisite: consent of instructor. Creative participation in the realization of production elements related to the public presentation of departmental productions. May be taken for a maximum of four units.

C172. Technical Theater Laboratory (2 units). (Formerly numbered Theater Arts C172.) Hours to be arranged. Prerequisite: consent of instructor. Required of theater majors. A laboratory in various aspects of theater production. Must be repeated for a maximum of eight units, but no assignment may be repeated more than once. Concurrently scheduled with courses C272 and C472.

174. Techniques of Stage Managing (2 units). (Formerly numbered Theater Arts 174.) The professional duties of the stage manager. The problems of unions, professional auditions, organization, scheduling, out-of-town openings, Broadway openings, and the responsibilities of a lengthy run.

C190A. The Role of the Producer in the Professional Theater (2 units). (Formerly numbered Theater Arts C190A.) Not open for credit to students with credit for former course 190A. A study of the structure governing the economic and artistic decision-making processes in the professional theater of America. Concurrently scheduled with course C294A.

C190B. The Role of Management in the Educational and Community Theater (2 units). (Formerly numbered Theater Arts C190B.) Not open for credit to students with credit for former course 190B. A study of the artistic, social, and economic criteria in the administration of educational and community theater. Concurrently scheduled with course C294B.

191. The Touring Company (2 to 12 units). (Formerly numbered Theater Arts 191.) Lecture, 20 hours; laboratory, 22 hours. Prerequisite: consent of instructor. Rehearsal and technical preparation of a theatrical work for touring and the performance of that work on tour.

199. Special Studies in Theater Arts (2 to 8 units). (Formerly numbered Theater Arts 199.) Hours to be arranged. Prerequisite: senior standing, 3.0 GPA in major, consent of instructor. May be taken for a maximum of eight units.

Graduate Courses

Certain graduate courses concerned with individual student projects may be repeated for credit on recommendation of the departmental graduate adviser. Graduate courses are not open to undergraduate students.

200. Bibliography and Methods of Research in Theater Arts. (Formerly numbered Theater Arts 200.)

202A. Seminar in Western Classical Theater. (Formerly numbered Theater Arts 202A.) Discussion, three hours. Prerequisites: graduate standing, consent of instructor. An examination of theatrical production and dramatic form in the Greek and Roman periods. May be repeated twice for credit.

202B. Seminar in Medieval Theater. (Formerly numbered Theater Arts 202B.) Discussion, three hours. Prerequisites: graduate standing, consent of instructor. Selected studies of theatrical production and dramatic form in the Middle Ages. May be repeated twice for credit.

202C. Seminar in Renaissance and Baroque Theater. (Formerly numbered Theater Arts 202C.) Discussion, three hours. Prerequisites: graduate standing, consent of instructor. Selected studies in theater architecture, theatrical production, and dramatic form in English and Continental theater from 1485 to the early 18th century. May be repeated twice for credit.

202D. Seminar in Bourgeois and Romantic Theater. (Formerly numbered Theater Arts 202D.) Discussion, three hours. Prerequisites: graduate standing, consent of instructor. Selected studies in theater architecture, theatrical production, and dramatic form in English and Continental theater from 1700 to 1870. May be repeated twice for credit.

202E. Seminar on the Modern Consciousness in Theater. (Formerly numbered Theater Arts 202E.) Discussion, three hours. Prerequisites: graduate standing, consent of instructor. Study of the prototypes of modern experience as encountered in the work of Ibsen and Strindberg. May be repeated twice for credit.

202F. Seminar in Modern Realism. (Formerly numbered Theater Arts 202F.) Discussion, three hours. Prerequisites: graduate standing, consent of instructor. Selected studies of the theater's response to science and technology, politics, and revolution. May be repeated twice for credit.

202G. Seminar in Modern Theatricalism. (Formerly numbered Theater Arts 202G.) Discussion, three hours. Prerequisites: graduate standing, consent of instructor. Selected studies in symbolism and the avant-garde theater. Exploration of the dream experience and the private psyche, the religious experience, and the revitalization of myth and ritual. May be repeated twice for credit.

202M. Seminar in American Theater. (Formerly numbered Theater Arts 202M.) Discussion, three hours. Prerequisites: graduate standing, consent of instructor. Selected studies in the development of theatrical production and dramatic writing in the American theater. May be repeated twice for credit.

202N. Seminar in Theater Architecture and Scenic Design. (Formerly numbered Theater Arts 202N.) Discussion, three hours. Prerequisites: graduate standing, consent of instructor. Selected studies of the playhouse and scenic environment, relating historic and contemporary concepts. May be repeated twice for credit.

202P. Seminar in Traditions of African Theater. (Formerly numbered Theater Arts 202P.) Discussion, three hours. Prerequisites: graduate standing, consent of instructor. Selected studies of traditional theater forms such as those indigenous to Ghana, Nigeria, and other African nations and their diaspora (Haiti, Jamaica, and other areas of the Caribbean) through an examination of character, structure, performance modes, and archetypes. May be repeated twice for credit.

202R. Seminar in East Asian Theater. (Formerly numbered Theater Arts 202R.) Discussion, three hours. Prerequisites: graduate standing, consent of instructor. Selected topics in the theater forms of East Asia, including dramatic literature, costume, theater spaces, and critical writings. May be repeated twice for credit.

202S. Seminar in South Asian Theater. (Formerly numbered Theater Arts 202S.) Discussion, three hours. Prerequisites: graduate standing, consent of instructor. Selected topics in the theater forms of South Asia, including dramatic literature, costume, theater spaces, and critical writings. May be repeated twice for credit.

202T. Seminar in Southeast Asian Theater. (Formerly numbered Theater Arts 202T.) Discussion, three hours. Prerequisites: graduate standing, consent of instructor. Selected topics in the theater forms of Southeast Asia, including dramatic literature, costume, theater spaces, and critical writings. May be repeated twice for credit.

205A. The Background of Theatrical Art. (Formerly numbered Theater Arts 205A.) Discussion, three hours. Prerequisites: graduate standing, consent of instructor. An analysis of major plays, commentaries, and historical materials from the classical and medieval periods.

205B. The Background of Theatrical Art. (Formerly numbered Theater Arts 205B.) Discussion, three hours. Prerequisites: graduate standing, consent of instructor. An analysis of major plays, commentaries, and historical materials from the Renaissance, baroque, and rococo periods.

205C. The Background of Theatrical Art. (Formerly numbered Theater Arts 205C.) Discussion, three hours. Prerequisites: graduate standing, consent of instructor. An analysis of major plays, commentaries, and historical materials from the Romantic, naturalistic, and symbolist periods.

216A. Critical and Historical Methods. (Formerly numbered Theater Arts 216A.) Discussion, three hours. Prerequisites: graduate standing, consent of instructor. Studies in theater historiography and sociological criticism.

216B. Critical Methods. (Formerly numbered Theater Arts 216B.) Discussion, three hours. Prerequisites: graduate standing, consent of instructor. Studies in critical theories of theatrical form and structure.

216C. Critical Methods. (Formerly numbered Theater Arts 216C.) Discussion, three hours. Prerequisites: graduate standing, consent of instructor. Studies in contemporary modes of psychoanalytic and archetypal criticism for the theater.

C217A. Research and Practice in Puppet Theater (2 units). (Formerly numbered Theater Arts C217A.) Laboratory, four hours. Prerequisites: graduate standing, consent of instructor. Not open for credit to students with credit for former course 117. Study of the history and practice of the art of puppetry. An examination of the materials and methods of construction. May be repeated twice for credit. Concurrently scheduled with course C117. Graduate students are required to present a "one-person" show of no less than 15 minutes, with puppets constructed and developed for the particular show (Fall Quarter, hand puppets; Winter Quarter, rod puppets; Spring Quarter, shadow puppets). Students develop the show concept with the advice of the instructor.

M217B. Seminar in the Puppet Theater. (Formerly numbered Theater Arts M217B.) (Same as Folklore M219.) Lecture, three hours. Prerequisite: consent of instructor. Studies in the puppet theaters of the world: techniques, literature, aesthetics.

230A-230B-230C. Advanced Playwriting. (Formerly numbered Theater Arts 230A-230B-230C.) Lecture, three hours. Prerequisites: course 130A, graduate standing, consent of instructor. Guided completion of a full-length play, or study and preparation for the writing of a thesis play.

232. Manuscript Analysis. (Formerly numbered Theater Arts 232.) Lecture, three hours. Prerequisites: graduate standing, consent of instructor. Critical and constructive study of dramatic techniques as employed by playwrights and screenwriters in selected examples of contemporary work. May be repeated once for credit.

240. The Contemporary Playhouse. (Formerly numbered Theater Arts 240.) Discussion. Prerequisites: graduate standing, consent of instructor. Advanced study of the concept, form, and function of the contemporary playhouse and its equipment.

241. Research in Technical Theater. (Formerly numbered Theater Arts 241.) Prerequisites: graduate standing, consent of instructor. Research in technical processes and equipment in theater.

243A-243B-243C. Advanced Problems in Design for the Theater. (Formerly numbered Theater Arts 243A-243B-243C.) Prerequisites: graduate standing, consent of instructor. Advanced study and practice in the design of stage productions. Determination of approach and style in scenic design.

244A. Advanced Theater Laboratory (2 or 4 units). (Formerly numbered Theater Arts 244A.) Laboratory, to be arranged. Prerequisites: graduate standing, consent of instructor. Creative participation as an assistant director, stage manager, or performer in the public presentation of departmental productions. May be taken for a maximum of four units.

244B. Advanced Theater Laboratory (2 or 4 units). (Formerly numbered Theater Arts 244B.) Laboratory, to be arranged. Prerequisites: graduate standing, consent of instructor. Creative participation in the realization of production elements related to the public presentation of departmental productions. May be taken for a maximum of four units.

245A-245B. Production Planning in Theater. (Formerly numbered Theater Arts 245A-245B.) Lecture, two hours; laboratory, two hours. Prerequisites: graduate standing, consent of instructor. Development of planning procedures through the execution of a complete plan for producing a multiscene production. Courses must be taken in sequence.

C272. Production and Performance Laboratory (2 units). (Formerly numbered Theater Arts C272.) Lecture, three hours; laboratory, to be arranged. Prerequisites: graduate standing, consent of instructor. Credit for creative production assignments required of all M.A. students during the first three quarters in residence. May be repeated twice for credit. Concurrently scheduled with courses C172 and C472.

290A. The Role of Management in Artistic Decision Making in the Theater. (Formerly numbered Theater Arts 290A.) Prerequisite: consent of instructor. A descriptive study of the criteria for decision making in artistic institutions, including the role of the institution in society, the economic environment of the arts, and the artistic value systems of arts organizations.

290B. Programming and Planning Policies in the Theater. (Formerly numbered Theater Arts 290B.) Prerequisite: consent of instructor. An analysis of the social, artistic, and economic roles of the arts as reflected in programming policy. An examination of the social goals pursued in establishing relationships between the arts and their environment.

C294A. Artistic Control of Theatrical Production by the Professional Producer (2 units). (Formerly numbered Theater Arts C294A.) Prerequisites: graduate standing, consent of instructor. Not open for credit to students with credit for former course 190A. A study of the structure governing the economic and artistic decision-making processes in the professional theater of America and the historical development of the involvement of the producer in the artistic process. Concurrently scheduled with course C190A. Additional research and writing required of graduate students.

C294B. The Organization and Operation of Community Theater (2 units). (Formerly numbered Theater Arts C294B.) Prerequisites: graduate standing, consent of instructor. Not open for credit to students with credit for former course 190B. A study of the artistic, social, and economic criteria in the administration of educational and community theater, with research in the history of current practices in operations, administration, and organization. Concurrently scheduled with course C190B.

417. Production Project for the Puppet Theater (8 units). (Formerly numbered Theater Arts 417.) Laboratory, 30 hours; consultation, five hours. Prerequisite: consent of instructor. Limited to M.F.A. candidates. The design, construction, and performance of a full-length production with puppets as the culminating exercise for candidates for the M.F.A. degree in puppet theater. Students are expected to present the full argument for the design style and techniques used in the construction of the puppets, the rationale for the use of puppets for the particular project presented, and a final justification and analysis of the completed work.

420A. Advanced Techniques in Acting. (Formerly numbered Theater Arts 420A.) Lecture/laboratory, six hours. Prerequisite: consent of instructor. Limited to M.F.A. acting candidates in theater. Exercises in sense memory, personalization, and objectives to help students respond truthfully to real and imaginary stimuli by developing concentration, awareness, imagination, and spontaneity.

420B. Advanced Techniques in Acting. (Formerly numbered Theater Arts 420B.) Lecture/laboratory, six hours. Prerequisite: consent of instructor. Limited to M.F.A. acting candidates in theater. Extended work in improvisations and exercises in order to apply these techniques to a role. Beginning with monologues, the work progresses to two-person scenes. Through these efforts students begin to personalize the character's emotional needs and drives.

420C. Advanced Techniques in Acting. (Formerly numbered Theater Arts 420C.) Lecture/laboratory, six hours. Prerequisite: consent of instructor. Limited to M.F.A. acting candidates in theater. Preparation and presentation of two-person scenes utilizing sensory work and "objectives" on a more refined basis. Students are able to find the similarities and differences between themselves and the characters and to play these elements truthfully and spontaneously.

421A. Advanced Projects in Acting (4 or 8 units). (Formerly numbered Theater Arts 421A.) Lecture/laboratory, six hours. Prerequisite: consent of instructor. Limited to M.F.A. acting candidates in theater. Preparation, presentation, and critique of scenes. Systematic role analysis and exercises in acting.

421B. Advanced Projects in Acting (4 or 8 units). (Formerly numbered Theater Arts 421B.) Lecture/laboratory, six hours. Prerequisite: consent of instructor. Limited to M.F.A. acting candidates in theater. Preparation, presentation, and critique of scenes. Systematic role analysis and exercises in acting.

421C. Advanced Projects in Acting (4 or 8 units). (Formerly numbered Theater Arts 421C.) Lecture/laboratory, six hours. Prerequisite: consent of instructor. Limited to M.F.A. acting candidates in theater. Class exercises in acting. Preparation and presentation of roles under performance conditions.

424A-424B-424C. Advanced Techniques in Voice for the Stage (2 units each). (Formerly numbered Theater Arts 424A-424B-424C.) Lecture/laboratory. Prerequisite: consent of instructor. Limited to M.F.A. acting candidates in theater. Development of voice techniques for the stage, including work on relaxation, limbering, breathing, articulators, and resonators. Special vocal problems for the actor.

424D-424E-424F. Special Problems in Voice for the Actor (2 units each). (Formerly numbered Theater Arts 424D-424E-424F.) Lecture/laboratory. Prerequisite: consent of instructor. Limited to M.F.A. acting candidates in theater. An extension of the first-year work, with increased demands on voice. Range and breathing capacity extension. Articulation and the phonetic alphabet. Advanced voice problems.

425A-425B-425C. Advanced Techniques in Movement for the Stage (2 units each). (Formerly numbered Theater Arts 425A-425B-425C.) Lecture/laboratory. Prerequisite: consent of instructor. Limited to M.F.A. acting candidates in theater. Physical awareness for the actor. Special emphasis on warming up the body, relaxation, gymnastics (balance, falls, stunts), movement techniques, and stage combat.

425D-425E-425F. Special Problems in Movement for the Actor (2 units each). (Formerly numbered Theater Arts 425D-425E-425F.) Lecture/laboratory. Prerequisite: consent of instructor. Limited to M.F.A. acting candidates in theater. Physical awareness for the actor, concentrating on individual problems in terms of space, movement, and time. Special emphasis on natural rhythms, relaxation, and balance.

430A-430B-430C. Advanced Studies in Playwriting (4 units, 8 units, 4 units). (Formerly numbered Theater Arts 430A-430B-430C.) Seminar, to be arranged. Prerequisites: courses 230A-230B-230C, consent of instructor. Guidance in the completion of thesis plays.

432. Manuscript Evaluation. (Formerly numbered Theater Arts 432.) Lecture, four hours; laboratory, to be arranged. Prerequisites: course 132 and consent of instructor, or candidate in M.F.A. writing program and consent of instructor. Evaluation of manuscripts of beginning writers, including but not limited to those produced in Motion Picture/Television 134A. May be taken twice for credit (once each year of M.F.A. residence).

442A-442B-442C. Advanced Problems in Costume Design. (Formerly numbered Theater Arts 442A-442B-442C.) Lecture/discussion. Prerequisite: consent of instructor. Limited to M.F.A. candidates. Study of costume design for theatrical productions. Development of costume designs from theatrical scripts, with emphasis on production styles and character revelation. The scripts vary in period and style to give design practice in the major costume periods and artistic styles.

443. Problems in Design (2 or 4 units). (Formerly numbered Theater Arts 443.) Lecture/laboratory, four hours (additional hours as required). Prerequisite: consent of instructor. Study and practice in design techniques for the theater. May be repeated for a maximum of 12 units.

444. The Development of Costume Design Construction Technologies for Theater. (Formerly numbered Theater Arts 444.) Discussion, two hours; laboratory, two hours. Prerequisite: consent of instructor. Limited to M.F.A. candidates. A study of the effect of artistic and stylistic ideas on the mode and dress of men and women. May be repeated twice for credit.

C446. Research and Practice in Scene Painting Techniques (2 units). (Formerly numbered Theater Arts C446.) Lecture/laboratory, three hours. Prerequisites: graduate standing, consent of instructor. Not open for credit to students with credit for former course 146. The study of scenic painting techniques and materials and their relation to the realization of color design and elevations. Concurrently scheduled with course C146. Each graduate student (1) researches a new painting method or technique and (2) solves a specific scenic problem or examines a particular period. The result is a theatrical scene painting project relating to that research.

460A. Problems in Advanced Direction for the Stage. (Formerly numbered Theater Arts 460A.) Lecture, to be arranged. Prerequisite: consent of instructor. Limited to M.F.A. candidates. Preparation and presentation of a published one-act play or equivalent under rehearsal conditions. Discussion and critique of work in progress.

460B. Problems in Advanced Direction for the Stage. (Formerly numbered Theater Arts 460B.) Lecture, to be arranged. Prerequisite: consent of instructor. Limited to M.F.A. candidates. Preparation and presentation of a published play under rehearsal conditions. Discussion and critique of work in progress.

460C. Problems in Advanced Direction for the Stage. (Formerly numbered Theater Arts 460C.) Lecture, to be arranged. Prerequisite: consent of instructor. Limited to M.F.A. candidates. Preparation and presentation of a full-length original play under rehearsal conditions. Discussion and critique of work in progress.

462. Production Project in Direction for the Stage (4 or 8 units). (Formerly numbered Theater Arts 462.) Lecture, to be arranged. Prerequisite: consent of instructor. Limited to M.F.A. candidates. Preparation and presentation of an original play under minimal production conditions. Discussion and critique of work in progress.

463. Production Project in Direction for the Stage (8 or 12 units). (Formerly numbered Theater Arts 463.) Lecture, to be arranged. Prerequisite: consent of instructor. Limited to M.F.A. candidates. Preparation and presentation of a play under fully produced theater conditions.

C472. Production and Performance Laboratory (2 or 4 units). (Formerly numbered Theater Arts C472.) Laboratory, to be arranged. Prerequisites: M.F.A. candidate, consent of instructor. Credit for creative production projects required of all M.F.A. students. May be repeated for a maximum of 12 units. Concurrently scheduled with courses C172 and C272.

495A. Problems in the Teaching of Theater Arts. (Formerly numbered Theater Arts 495A.) Lecture/laboratory, to be arranged. Prerequisites: graduate standing, consent of instructor. Study of and practice in the teaching of theater arts at the college and university level.

495B. Problems in the Teaching of Theater Arts (2 or 4 units). (Formerly numbered Theater Arts 495B.) Laboratory, to be arranged. Prerequisites: graduate standing, consent of instructor. Not open for credit to students with credit for former courses 495C-495D. Demonstration of competence in theater production through successful completion of a major teaching production assignment. May be repeated for a maximum of 12 units.

496. The Practice of Teaching Theater Arts (2 units). (Formerly numbered Theater Arts 496.) Discussion. Required once of all teaching assistants or associates in the department. Orientation and preparation of graduate students who have the responsibility to assist in the teaching of undergraduate courses in the department; discussion of problems common to the teaching experience. May not be applied toward the M.A., M.F.A., or Ph.D. May be repeated. S/U grading.

498. Professional Internship in Theater Arts (4, 8, or 12 units). (Formerly numbered Theater Arts 498.) Full- or part-time at a studio or on a professional project. Prerequisites: graduate standing, advanced standing in M.F.A. program, consent of instructor. An internship at various film, television, or theater facilities accentuating the creative contribution, the organization, and the work of professionals in their various specialties. Given only when projects can be scheduled.

501. Cooperative Program (2 to 8 units). (Formerly numbered Theater Arts 501.) Prerequisite: consent of graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Course is used to record the enrollment of UCLA students in courses taken under cooperative arrangements with neighboring institutions. S/U grading.

596A. Directed Individual Studies: Research (2 to 12 units). (Formerly numbered Theater Arts 596A.) Hours to be arranged. Prerequisite: graduate standing. May be repeated with consent of instructor.

596B. Directed Individual Studies: Writing (2 to 12 units). (Formerly numbered Theater Arts 596B.) Hours to be arranged. Prerequisite: graduate standing. May be repeated with consent of instructor.

596C. Directed Individual Studies: Directing (2 to 12 units). (Formerly numbered Theater Arts 596C.) Hours to be arranged. Prerequisite: graduate standing. May be repeated with consent of instructor.

596D. Directed Individual Studies: Design (2 to 12 units). (Formerly numbered Theater Arts 596D.) Hours to be arranged. Prerequisite: graduate standing. May be repeated with consent of instructor.

596E. Directed Individual Studies: Acting (2 to 12 units). (Formerly numbered Theater Arts 596E.) Hours to be arranged. Prerequisite: graduate standing. May be repeated with consent of instructor.

596F. Directed Individual Studies: Production (2 to 12 units). (Formerly numbered Theater Arts 596F.) Hours to be arranged. Prerequisite: graduate standing. May be repeated with consent of instructor.

597. Preparation for Ph.D. Qualifying Examinations in Theater Arts (2 to 8 units). (Formerly numbered Theater Arts 597.) May be repeated for a maximum of 12 units.

598. M.A. Thesis in Theater Arts (2 to 8 units). (Formerly numbered Theater Arts 598.) Prerequisite: advancement to M.A. candidacy. Research and writing for M.A. thesis. May be repeated for a maximum of 12 units.

599. Ph.D. Dissertation in Theater Arts (2 to 8 units). (Formerly numbered Theater Arts 599.) Prerequisite: advancement to Ph.D. candidacy. Research and writing for Ph.D. dissertation. May be repeated for a maximum of 12 units.

Romulus E. Zamora, M.F.A. *(Theater, Film, and Television)*

Scope and Objectives

The interdisciplinary major in world arts and cultures (formerly ethnic arts) is available to students in both the College of Fine Arts and the College of Letters and Science. The course of study is designed to provide students with the conceptual tools with which to examine and extract meaning from arts — regardless of language, culture, or geographical location. Students view the arts not as isolated phenomena, but as dynamic aesthetic forms which embody culture, history, and belief systems. Techniques of inquiry and analysis are drawn from both fine arts and letters and science frameworks and therefore require investigative research as well as aesthetic sensibility. The program encourages that both approaches be given equal consideration. In addition to these resources, the program utilizes UCLA's opportunities for participation in the aesthetic process in relation to ethnic dance, music, and theater.

Bachelor of Arts Degree

The major includes a core of seven courses (28 units) from anthropology, art, dance, folklore and mythology, music, and theater, film, and television; a concentration consisting of 36 units in one of these six disciplines; a senior colloquium; and three upper division elective courses (12 units).

Foreign Language Requirement

One year of a college-level foreign language is required in both the College of Fine Arts and the College of Letters and Science. All courses in foreign language, except foreign literature in English translation, may be applied toward this requirement.

If you plan to take the music concentration, you are advised to select French, German, or Italian.

General College Requirements

You must satisfy the general college requirements (other than foreign language) of your college (Fine Arts or Letters and Science) regardless of the department in which your concentration is located.

If you wish to confer with a counselor regarding program planning and major requirements, contact Wendy Urfrig at 825-8537 or 825-3951.

The Major

The following courses are required:

(1) A core of seven interdepartmental courses (28 units): Dance 70, 80A-80B, Folklore 15 or 101, Music 5A-5B-5C (5C is not required for the music concentration; two additional units are added within the concentration), Theater 102E, Anthropology 5, and Art History 55 or 56.

(2) A concentration of nine courses in one of the following areas (you must declare a concentration by the beginning of your junior year):

Anthropology: Courses 44 or 133R, 130, 150, 160, and any five upper division courses from 110 through 186B, including one area course from 171 through 177.

Art: Group A: one course from Art History 50, 51, 54, 55, 56, 57; group B: eight courses from Art History 102, 103A through 103E, 114A, 114B, 114C, 114D, C115A, C115B, C115C, C115D, C117A, C117B, C117C, 118A, 118B, 118C, 118D, C119A, C119B.

Dance: Courses 25B, 134A, 134B, 180A-180B; group A: two courses from 181A, 182A, 187A; group B: one course from 181B, 181C, 181D, 183A, 184B; group C: three two-unit courses from 171B through 176B (including one course each from Western and non-Western cultures; note that courses 71B through 76B are prerequisites for 171B through 176B).

Folklore and Mythology: Course 172; group A: one course from M111, 118, M180; group B: two courses from CM106, M123B, 124, M181, Classics 161, 168; group C: five courses from Folklore M112, M121, M122, M123A, M125, M126, M127, M128, M129, 130, 131, M149, M150, 190, German 134.

Music: Courses 20A, 20B, 20C (theory option) or 1B, 2A-2B (general music option); two courses from 140A, 140B, 140C; six one-unit performance courses selected from 80A-80N, 81A-81N (each must be repeated for a minimum of two quarters and a maximum of three quarters, totaling six courses); three courses from 26A, 26B, 26C, 126A, 126B, 126C, 130, 131A, 131B, 135A, 135B, 135C, 138, 139, 140A, 140B, 140C (only one course from the 140 series may be applied), 141, 142A, 142B, 143A, 143B, 144, 145, 146A, 146B, 146C, 147A, 147B, 148, 149, 151A, 151B, 152, 153A, 153B, 153C, M154A, M154B, 157, 158, M180, M181, C190A, C190B.

Students considering graduate study in ethnomusicology are strongly advised to select the theory option.

Theater, Film, and Television: Theater 5A, 5B, 5C; group A: one course from 140A, 140B, 141A, 141B, 142A, 142B; group B: eight units from 20, C117, 118A, 119A, 119B, 130A, 160, C190A, C190B; group C: three courses from 102A, 102B, 103A through M103D, 104D, 104E, 104F, Motion Picture/Television 106C, 128.

(3) World Arts and Cultures 190A-190B.

(4) Three elective courses which may be selected from the list below (other courses might also be appropriate). In order to meet degree requirements, the electives must be related to the major and approved by the concentration adviser. The three courses selected to meet this requirement must be upper division courses from three areas outside the area of concentration.

Upper Division Courses

190A-190B. World Arts and Cultures Senior Colloquium. Limited to senior world arts and cultures majors. Comparative and integrative studies in world arts and cultures, with application of concepts and content from the six disciplines of the major. Lecture/seminar format with the World Arts and Cultures faculty during first quarter; topics include the arts in a societal context, ethnicity and the individual, and problems and approaches to fieldwork. Faculty-directed individual projects during second quarter. Fieldwork on some aspect of the various arts/expressive behaviors found in the ethnic communities of Los Angeles. In Progress grading. (W,Sp)

Upper Division Electives

Anthropology 118A, 118B. Museum Studies
133R. Aesthetic Anthropology
135Q. The Individual in Culture
137. Enthnography on Film
154. Principles of Social Structure
185. History of Social Anthropology

Art History (Art, Design, and Art History) 101A, 101B, 101C. Egyptian Art and Archaeology
102. Art of the Ancient Near East
103A. Greek Art
103B. Hellenistic Art
103C. Roman Art
103D. Etruscan Art
103E. Late Roman Art

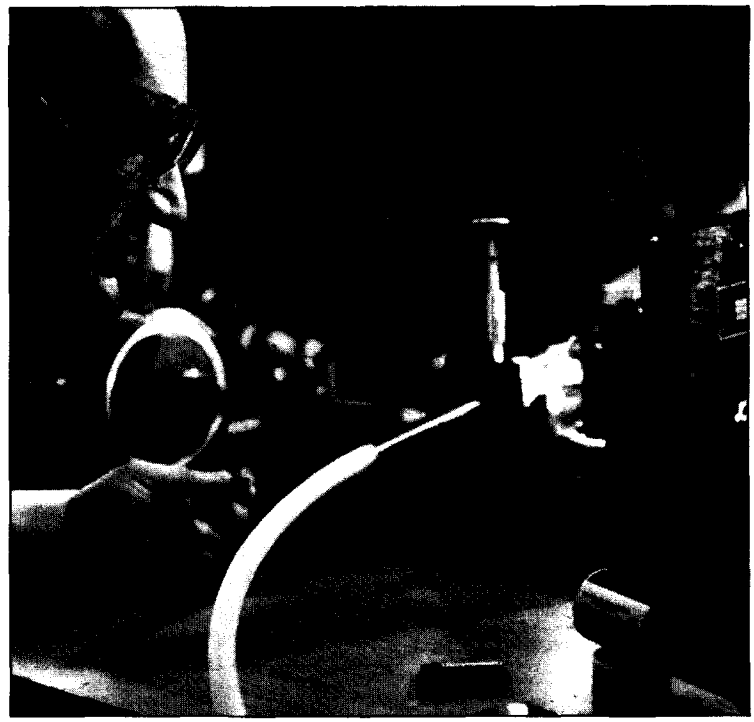
School of Engineering and Applied Science

A.R. Frank Wazzan, Acting Dean



7

An engineering education provides unusual opportunities for solving problems of major concern to our society. Technology is a dominant cause of change, including social change, and modern engineering is more than an identifiable body of science-based knowledge; it is a cogent point of view and approach to solving problems of great significance, as well.

The UCLA School of Engineering and Applied Science, although young by University standards, now ranks among the top engineering schools in the country in terms of the quality of instruction and the research contributions of its faculty. Its goal is an education that will allow graduates to practice the profession at the highest level and to move into new and still-to-be-discovered technical areas with confidence and ability. Included in this goal is preparation for graduate study. By the year 2000, it is anticipated that the majority of practicing engineers will have advanced degrees in engineering, and that many more individuals with an undergraduate education in engineering will be practicing medicine, dentistry, and law.

The six departments within the school serve as centers of activity for study and research in traditional as well as pace-setting engineering disciplines. By utilizing the resources of one or more departments, all students, undergraduate and graduate alike, are able to prepare for a wide range of professional careers in government, academia, and industry, including aerospace, computers, electrical and electronics, metal products, mining, machinery and manufacturing, chemicals and petroleum, utilities, and construction.

Photo: Dye laser beams are inspected in the millimeter wave laboratory of the Electrical Engineering Department, where research bears on the development of very high-frequency communications.

School of Engineering and Applied Science

Office of Student Affairs:
6426 Boelter Hall

Graduate: (213) 825-2682
Undergraduate: (213) 825-2826

Bachelor of Science Degrees

Students in the School of Engineering and Applied Science may elect one of the eight four-year curricula listed below.

(1) Bachelor of Science in Aerospace Engineering

(2) Bachelor of Science in Chemical Engineering

(3) Bachelor of Science in Civil Engineering

(4) Bachelor of Science in Computer Science and Engineering

(5) Bachelor of Science in Electrical Engineering

(6) Bachelor of Science in Engineering with a specialization in bioengineering*

(7) Bachelor of Science in Materials Engineering

(8) Bachelor of Science in Mechanical Engineering

*This is an interdepartmental program described under "Schoolwide Programs, Courses, and Faculty" at the end of the departmental listings.

The school offers instruction in acoustical engineering, aerospace engineering, applied plasma physics and fusion engineering, bioengineering, ceramic engineering, chemical engineering, civil engineering, computer engineering, control systems engineering, earthquake engineering, electrical and electronics engineering, general engineering, environmental engineering, fluid mechanics, geotechnical engineering, information and communications theory, manufacturing engineering, materials science, mechanical engineering, metallurgy, nuclear engineering, soil mechanics, solid mechanics, structural engineering, systems science, and water resources.

Admission

Applicants for admission to the school must satisfy the general admission requirements of the University as outlined in the section entitled "Undergraduate Admission" in Chapter 2. In the future, entrance to the school may be based on the results of a further examination of grades and test scores.

Applicants are encouraged to apply either at the freshman or junior level. Students who begin their college work at a California community college are expected to remain at the community college to complete the lower division requirements in chemistry, mathematics, physics, and the recommended engineering courses before transferring to the University. Experience indicates that transfer students who have completed the recommended lower division program in engineering at California community colleges are able to complete the remaining requirements for one of the B.S. degrees in six quarters (two academic years) of normal full-time study. Some students who select certain majors, such as computer science and engineering or chemical engineering, may be required to complete additional lower division courses as prerequisites for the major sequence.

Degrees Offered

Aerospace Engineering	B.S., M.S., Ph.D.
Chemical Engineering	B.S., M.S., Ph.D.
Civil Engineering	B.S., M.S., Ph.D.
Computer Science	M.S., Ph.D.
Computer Science and Engineering	B.S.
Electrical Engineering	B.S., M.S., Ph.D.
Engineering	B.S., M.S., M.Engr., Engr., Ph.D.
Engineering and Applied Science	Graduate Certificate of Specialization
Manufacturing Engineering	M.S.
Materials Engineering	B.S.
Materials Science and Engineering	M.S., Ph.D.
Mechanical Engineering	B.S., M.S., Ph.D.
Nuclear Engineering	M.S., Ph.D.

Admission as a Freshman

While many students take their first two years in engineering at a community college, an applicant may qualify for admission to the school in freshman standing. It is anticipated that admission will require that the following subjects be taken when satisfying the University admission requirements:

Algebra	2 years
Plane geometry	1 year
Trigonometry	½ year
Chemistry and physics with laboratory	2 years

It is also highly recommended that you take a course in technical drafting while in high school.

Freshman applicants whose entire secondary schooling was outside the United States must pass, with satisfactory scores, the College Board Scholastic Aptitude Test (verbal and mathematics sections) and Achievement Examinations in English composition, physics, and mathematics before a letter of admission to engineering can be issued. Arrangements to take the tests in another country should be made directly with the College Board, 1947 Center Street, Berkeley, CA 94704. Test scores should be forwarded to UCLA.

Admission as a Junior

Applicants for admission to the school in junior standing should have completed 21 to 23 courses (84 to 92 quarter units) in good standing, including the following minimum subject requirements:

(1) Two and one-fourth courses in chemistry, equivalent to UCLA's Chemistry 11A, 11B/11BL (chemistry is not a requirement for the computer science and engineering degree; the chemical engineering curriculum also requires Chemistry 11C/11CL, 21, 23, 25); (2) six courses in mathematics, equivalent to UCLA's Mathematics 31A, 31B, 32A, 32B, 33A, 33B; (3) four courses in physics, equivalent to UCLA's Physics 8A, 8B, 8C, 8D, and physics laboratory courses (8AL, 8BL, 8CL, 8DL), depending on curriculum selected.

Students transferring to the school from institutions which offer instruction in engineering subjects in the first two years, particularly California community colleges, are given credit for certain engineering core requirements.

Students who have been admitted to senior standing in the school on the basis of credit from another institution, from University Exten-

sion, or from another college or school of the University must complete, after admission, eight upper division courses which satisfy part of their approved major field sequence.

Degree Requirements

The requirements for the Bachelor of Science degrees in Aerospace Engineering, Chemical Engineering, Civil Engineering, Computer Science and Engineering, Electrical Engineering, Engineering, Materials Engineering, and Mechanical Engineering consist of completing the minimum number of required units (from 185 to 201 units, depending on the curriculum selected), the general University requirements, and the school requirements for scholarship and senior residence. You must also satisfy the curricular requirements for the curriculum you choose to follow.

University Requirements

University requirements in scholarship, Subject A or English as a Second Language (ESL), and American History and Institutions are discussed in detail in the "Undergraduate Degree Requirements" section in Chapter 2.

Scholarship Requirements

At least a 2.0 grade-point average must be achieved in all upper division University courses offered in satisfaction of the subject and elective requirements of the curriculum. In addition, a 2.0 minimum grade-point average in upper division mathematics, upper division core courses, and the major field is required for graduation.

Senior Residence Requirement

Of the last 48 units completed for the bachelor's degree, 36 must be earned in residence in the School of Engineering and Applied Science on this campus. No more than 16 of the 36 units may be completed in Summer Sessions at UCLA.

Study Lists and Credit Limitations

Study Lists require approval of the dean of the school or a designated representative. It is your responsibility to present Study Lists which reflect satisfactory progress toward the Bachelor of Science degree, according to standards set by the faculty; advisers in the Office of Student Affairs are available to help you. Study Lists or programs of study which do not comply with these standards may result in enforced withdrawal from the University or other disciplinary action. You may not enroll in more than 18 units per quarter unless an Excess Unit Petition is approved in advance by the dean.

You must maintain a minimum grade of C to satisfy the English 3 requirement, which must be met before you have completed 90 quarter units (a grade of C– does not satisfy this requirement).

After 213 quarter units, enrollment may not normally be continued in the school. You may petition the dean for special permission to continue work required to complete the degree. This regulation does not apply to Departmental Scholars.

After you have completed 105 quarter units (regardless of where these units have been completed), you will not receive unit credit or subject credit for courses completed at a community college.

Credit earned through the College Level Examination Program (CLEP) may not be applied toward the bachelor's degree.

No credit may be applied toward the bachelor's degree for Chemistry 2 or its equivalent after one year of high school chemistry has been completed with a grade of C or better.

No credit is granted toward the bachelor's degree for college foreign language courses equivalent to quarter levels one and two if the equivalent of level two of the same language was completed with satisfactory grades in high school.

Credit for Transfer Students

A course in digital computer programming, using a higher-level language such as FORTRAN IV, PASCAL, or PL/1, satisfies the Computer Science 10 requirement. Many sophomore courses in circuit analysis, strength of materials, and properties of materials may satisfy Electrical Engineering 100, Civil Engineering 108, and Materials Science and Engineering 14 requirements respectively. Check with the Office of Student Affairs.

Curricular Requirements

The curricula for the bachelor's degrees include the following categories, depending on curriculum selected:

(1) Three free elective courses (12 units) may be selected in some major/major field pro-

Lower Division Preparation for the Majors

	UCLA Equivalent Courses
Mathematics	
Analytic geometry and calculus, 8 units; calculus of several variables, 8 units; matrices and differential equations, 4 units; infinite series, 4 units (total of 24 quarter units minimum)	Mathematics 31A, 31B Mathematics 32A, 32B Mathematics 33A, 33B
Physics	
Calculus-based courses in mechanics of solids, vibration, wave motion, sound, fluids, heat, kinetic theory, electricity, magnetism, electromagnetic waves, light and relativity, with laboratory (total of 16 quarter units minimum)	Physics 8A/8AL*, 8B/8BL*, 8C/8CL*, 8D/8DL*
Chemistry**	
Two quarters or two semesters of general chemistry with laboratory (total of 9 quarter units minimum)	Chemistry 11A, 11B/11BL***
Engineering	
Digital computer programming, using a higher-level language such as FORTRAN IV, PASCAL, or PL/1 (4 units); other courses: statics, dynamics, graphics and descriptive geometry, surveying, circuit analysis, properties of materials, strength of materials, additional chemistry, additional computer science (total of 24 quarter units minimum)	Computer Science 10 or 11†; engineering core†† courses; free electives††
Additional Courses	
Life science (4 units), English composition (4 units), humanities-social sciences-fine arts (total of 20 quarter units minimum)	Life science course; English 3; humanities-social sciences-fine arts, three or four courses††

*Laboratory, depending on curriculum selected.
**Chemistry is not a requirement for the computer science and engineering degree.
***Chemical engineering curriculum also requires Chemistry 11C/11CL, 21, 23, 25.
†Computer Science 11 is a requirement only for the computer science and engineering degree.
††See specific undergraduate curricula for core courses, humanities-social sciences-fine arts electives, and free electives, depending on curriculum followed.

grams (see curriculum requirements in individual departments). The free electives may be selected from any courses yielding credit acceptable to the University of California except CLEP, certain remedial courses, and special courses designated by the school and posted in the Office of Student Affairs. However, in programs which include free elective units, it is strongly recommended that you select additional technical courses for some of these units.

(2) Six or seven humanities, social sciences, and/or fine arts courses (24 to 28 units) to be selected from an approved list. At least three (12 units) must be upper division courses.

To provide some depth, at least three courses (12 units) must be in the same academic department or must otherwise reflect coherence in subject matter. This group must contain at least two upper division courses.

In most cases, courses intended primarily to develop specific skills should be avoided except when the particular "skill" course is prerequisite to another upper division course strictly in the humanities or social sciences (e.g., foreign language and literature courses taught in the language). A list of courses which are normally acceptable individually as humanities-social sciences-fine arts electives is available in the Office of Student Affairs.

(3) One course in engineering and science in society (four units). One of the humanities-social sciences-fine arts courses or one of the free electives must deal primarily with engineering and science in society in the 100, 200, or 596 series (to be selected from an approved list).

(4) One life science course (four units) to be selected from an approved list.

(5) One mathematics course (four upper division units; computer science and engineering requires three courses — 12 upper division units); see curricula in individual departments for approved courses to fulfill this requirement.

(6) Engineering core courses, ranging from five to eight courses (20 to 32 units) depending on curriculum selected.

(7) Twelve to 16 courses (48 to 64 units) of upper division engineering major/major field courses, depending on curriculum followed.

(8) The engineering design content of your program must total at least one half-year of design experience.

(9) The engineering science content of your program must include a minimum of one year of engineering science units.

Lists of courses approved to satisfy specific curricular requirements, as well as specifying design and engineering science credit in engineering courses, are posted in the Office of Student Affairs.

The aerospace engineering, chemical engineering, civil engineering, electrical engineering, engineering, materials engineering, and mechanical engineering curricula are accredited by the Accreditation Board for Engineering and Technology, Inc. (ABET), the nationally recognized accrediting body for engineering programs.

Advising and Program Planning

As a new undergraduate, you must have your course of study approved by an engineering adviser. After the first quarter, curricular and career advising is accomplished on a formal basis. You are urged to select a faculty adviser as soon as possible, preferably at the beginning of your sophomore year.

You may use the curriculum in effect when you begin full-time continuous study in engineering at UCLA, or you may select the curriculum in the *UCLA General Catalog* in effect at graduation. Community college transfers may also select the curriculum in the catalog in effect at the time they began their community college work in an engineering program, providing attendance has been continuous since that time.

Attend the Junior Conference conducted by the School of Engineering and Applied Science to help you plan your curriculum. The conference usually is held during the fourth week of each quarter. For time and place, consult the Office of Student Affairs.

The Elective Selection form approved by the faculty adviser must be submitted for approval by the Associate Dean, Student Affairs, Office of Student Affairs, during the third quarter of the sophomore year. The deadline is announced each term in the school's *Undergraduate Enrollment Instructions* brochure.

Members of the Office of Student Affairs staff are available to assist you with University procedures and to answer any questions you may have in regard to general requirements. Pay them a visit.

Passed/Not Passed Grading

You may take one course per quarter on a Passed/Not Passed basis if you are in good academic standing and are enrolled in at least three and one-half courses (14 units) for the quarter. Only humanities-social sciences-fine arts and free electives may be taken on a Passed/Not Passed basis. For more details on P/NP grading, see "Units and Grading Policy" in Chapter 4.

Honors

Departmental Scholars

If you are an exceptionally promising junior or senior, you may be nominated as a Departmental Scholar to pursue bachelor's and master's degree programs simultaneously. See "Academic Excellence" in Chapter 2 and the *Announcement of the UCLA School of Engineering and Applied Science* for details.

Dean's Honors List

Students following the engineering curricula are eligible to be named to the Dean's Honors List each term. Minimum requirements are a course load of 16 units (12 units of letter grade) with a grade-point average equal to or greater than 3.7.

Honors with the Bachelor's Degree

Students who have achieved scholastic distinction may be awarded the bachelor's degree with honors. Students eligible for honors at graduation must have completed 90 or more units (for a letter grade) at the University of California and must have attained a grade-point average which places them in the top five percent of the school for *Summa cum laude*, the next five percent for *Magna cum laude*, and the next 10 percent for *Cum laude*.

Based on grades achieved in upper division courses, an engineering student should have a 3.8 grade-point average for *Summa cum laude*, a 3.634 for *Magna cum laude*, and a 3.484 for *Cum laude*. For all designations of honors, you must have a minimum 3.25 grade-point average in your major field elective courses. To be eligible for an award, you should have completed at least 80 upper division units at the University of California.

Tau Beta Pi

The UCLA chapter of *Tau Beta Pi*, the national engineering honor society, encourages high scholarship, provides volunteer tutors, and offers many services and programs "to foster a spirit of liberal culture in engineering colleges."

Extracurricular Activities

The faculty strongly encourages students to participate in the many extracurricular activities available on campus, especially those of most relevance to engineering. Among these are the student engineering society (the Engineering Society, University of California), student publications, and programs of the many technical and professional engineering societies in the Los Angeles area.

The student body takes an active part in shaping policies of the school through elected student representatives on the school's Executive Committee.

Women in Engineering

Women make up 21 percent of the undergraduate and 11 percent of the graduate enrollment in the School of Engineering and Applied Science. Today's opportunities for women in engineering are excellent, as both employers and educators try to change the image of engineering as a "males only" field. Women engineers are in great demand in all fields of engineering.

The Society of Women Engineers (SWE) has established a UCLA student chapter which sponsors field trips and engineering-related speakers (often professional women) to intro-

duce the various options available to women engineers. The UCLA chapter of SWE, in conjunction with other Los Angeles schools, also publishes an annual resumé book to aid women students in finding jobs.

Continuing Education

Continuing Education in Engineering is under the academic leadership of the School of Engineering and Applied Science and is managed by UCLA Extension. The department offers evening classes, short courses, special programs, and in-plant training in education. The Extension Office (637 UNEX, 10995 Le Conte Avenue, 825-4100) is open Monday through Friday.

Graduate Study

Admission

In addition to meeting the requirements of the Graduate Division, applicants for the graduate engineering programs are required to take the General Test and Subject Test of the Graduate Record Examination (GRE) in Engineering, Mathematics, or a related area. Applicants for the graduate computer science programs are required to take the GRE General Test and Subject Test in Mathematics or Computer Science.

Students entering the Engineer/Ph.D. program normally are expected to have completed the requirements for the master's degree with at least a 3.25 grade-point average and to have demonstrated creative ability. Exceptional students with research experience and strong evidence of creativity may petition to proceed to candidacy for the Ph.D. degree without the M.S. degree.

Graduate students without adequate preparation may be admitted provisionally and may be required to take certain remedial coursework which may not be applied toward the degree. After you arrive at UCLA, the adviser will help you plan a program which will remedy any such deficiencies.

For information on the proficiency in English requirements for international graduate students, refer to "Graduate Admission" in Chapter 3.

Admission forms, including a departmental supplement to the application, may be obtained by writing to the department in which you are interested, School of Engineering and Applied Science, UCLA, Los Angeles, CA 90024.

Undergraduate Courses

The following courses are not applicable toward graduate degrees: Engineering 11, 12, 106B, 106C, 106D, 109, Chemical Engineering M105A, M105D, 199, Civil Engineering 15, 106A, 108, M109A, 199, Computer Science 5, 10C, 10F, 11, 12, 13, 30, 99, 199, Electrical Engineering 100, 100L, 101, 102, 103, 199, Materials Science and Engineering 14, 15, 199, Mechanical, Aerospace, and Nuclear Engineering 94, 102, 103, M105A, M105D, M109A, 199.

Individual departments within the School of Engineering may impose certain restrictions on the applicability of other undergraduate courses toward graduate degrees. Consult with your graduate adviser on departmental requirements and restrictions.

Master of Science Degrees

Major Fields or Subdisciplines

The M.S. program is centered around one major field. The major fields and subdisciplines offered at the M.S. level parallel those listed below for the Ph.D. program. You are free, however, to propose to the school any other field of study, with the support of your adviser.

Course Requirements

A total of nine courses is required for the M.S. degrees, including a minimum of five graduate courses. No specific courses are required, but the majority of the total formal course requirement and a majority of the graduate course requirement must consist of courses in the School of Engineering. In the thesis plan, seven of the nine courses must be formal courses, including at least four from the 200 series. The remaining two courses may be 598 courses involving work on the thesis. In the comprehensive examination plan, at least five of the nine courses must be in the 200 series; the remaining four courses may be either 200-series graduate or upper division undergraduate courses. No 500-series courses may be applied toward the comprehensive examination plan requirements.

Thesis Plan

The thesis must either describe some original piece of research that you have done, usually but not necessarily under the supervision of the thesis committee, or else provide a critical exposition of some topic lying in your major field of study. You would normally start to plan the thesis at least one year before the award of the M.S. degree is expected. There is no examination under the thesis plan.

Comprehensive Examination Plan

The comprehensive examination, which is offered every quarter, is required in written form only. Your comprehensive examining committee may conduct an oral query after review of the written examination. In case of failure, you may be reexamined once with the consent of your departmental graduate adviser.

Cooperative Degree Programs

The School of Engineering and Applied Science has established two joint degree programs with other schools and departments on campus which allow you to earn two master's degrees simultaneously: the M.B.A./M.S.-Computer Science and the M.A.-Latin American Studies/M.S.-Engineering. Contact the Office of Student Affairs for details.

Master of Engineering Degree

Admission

In addition to the University minimum requirements, the following are required for the M.Engr. degree: (1) five years of responsible full-time professional experience in engineering; (2) some formal study in statistics; (3) the Graduate Management Admission Test (GMAT) or the Aptitude and Advanced Tests of the Graduate Record Examination (GRE) in Engineering, Mathematics, or a related field. A screening interview with the coordinator of the Engineering Executive Program may be required.

The School of Engineering and Applied Science has a supplement to the Application for Admission which may be obtained from the Engineering Executive Program, School of Engineering and Applied Science, 6722 Boelter Hall, UCLA, Los Angeles, CA 90024.

Major Field or Subdiscipline

Engineering management.

Course Requirements

A total of 12 graduate courses are required: Engineering 470A-470D, 471A-471B-471C (half course), 472A-472D (half course), 473A-473B.

Comprehensive Examination Plan

The comprehensive examination, which is offered once a year and is general in scope, is given in written and oral form. Students who fail this examination may be reexamined once.

Engineer Degree

The School of Engineering and Applied Science offers an Engineer (Engr.) degree at a level equivalent to completion of preliminaries in the Ph.D. program. The Engineer degree represents considerable advanced training and competence in the engineering field but does not require the research effort and orientation involved in a Ph.D. dissertation.

Requirements for the Engineer degree are identical to those of the Ph.D. degree up to and including the oral preliminary examination, except that the Engineer degree is based on coursework. The minimum requirement is 15 (at least nine graduate) courses beyond the bachelor's degree, with at least six courses in the major field (minimum of four graduate courses) and at least three in each minor field (minimum of two graduate courses in each).

The Ph.D. and Engineer degree programs are administered interchangeably in the sense that a student in the Ph.D. program may exit with an Engineer degree or even pick up the Engineer degree on the way to the Ph.D. degree; similarly, a student in the Engineer degree program may continue for the Ph.D. after receiving the Engineer degree. The time spent in either of the two programs may also be applied toward the minimum residence requirement and time limitation for the other program.

Ph.D. Degrees

Major Fields or Subdisciplines*

Chemical Engineering Department: Chemical engineering.

Civil Engineering Department: Earthquake engineering, soil mechanics, structures, water resource systems engineering.

Computer Science Department†: Computer methodology (dynamic systems modeling and optimization, machine intelligence, physical systems), computer network modeling and analysis, computer science theory, computer system architecture, programming languages and systems (software systems).

Electrical Engineering Department: Applied plasma physics and fusion engineering, circuits, communications and telecommunications engineering, control systems, electromagnetics, operations research, quantum electronics, solid-state electronics.

Materials Science and Engineering Department: Ceramics and ceramic processing, mechanical metallurgy and deformation processing, physical metallurgy and metal processing, science of materials.

Mechanical, Aerospace, and Nuclear Engineering Department: Applied dynamic systems control, applied plasma physics and fusion engineering, dynamics, fluid mechanics, heat and mass transfer, manufacturing engineering, nuclear science and engineering, and structural and solid mechanics.

Schoolwide Fields: Applied mathematics**, biocybernetics, man-machine-environment systems.

Schoolwide Program: Bioengineering.

*You may propose to the school any other field of study with the support of your adviser. Instructions on the definition of acceptable ad hoc fields and procedures for their approval are available in each department office.
†Computer science majors may pursue additional relevant minor fields of study offered by the School of Engineering and Applied Science.
**Established minor field only.

Course Requirements

All candidates must fulfill the minimum requirements of the Graduate Division (see "Requirements for Graduate Degrees" in Chapter 3). For further information, contact the individual departments.

Qualifying Examinations

All candidates must fulfill the minimum requirements of the Graduate Division (see "Requirements for Graduate Degrees" in Chapter 3). For further information, contact the individual departments.

Final Oral Examination

All candidates must fulfill the minimum requirements of the Graduate Division (see "Requirements for Graduate Degrees" in Chapter 3). For further information, contact the individual departments.

Graduate Certificate of Specialization

A certificate of specialization is available in all areas, except computer science, offered by the School of Engineering and Applied Science. Requirements for admission are the same as for the M.S. degree.

Each graduate certificate program consists of five 100- or 200-series courses, at least two of which must be at the graduate level. No work completed for any previously awarded degree or credential may be applied toward the certificate. Successful completion of a certificate program requires an overall minimum B average in all courses applicable to the certificate. In addition, graduate certificate candidates are required to maintain a minimum B average in 200-series courses used in the certificate program. A minimum of three quarters of academic residence is required. The time limitation for completing the requirements of a certificate program is two calendar years. Details regarding the certificate programs may be obtained from each department office.

Courses completed for a Certificate of Specialization in Engineering and Applied Science may subsequently be applied toward master's and/or doctoral degrees.

Chemical Engineering

5405 Boelter Hall, (213) 825-2046, 825-2491

Professors

Traugott H.K. Frederking, Ph.D.
Sheldon K. Friedlander, Ph.D. *(Ralph M. Parsons Professor of Chemical Engineering), Chair*
Eldon L. Knuth, Ph.D.
Ken Nobe, Ph.D.
Lawrence B. Robinson, Ph.D., *Associate Dean*
William D. Van Vorst, Ph.D.
A.R. Frank Wazzan, Ph.D., *Acting Dean*
F. Eugene Yates, M.D. *(Crump Professor of Medical Engineering)*

Associate Professors

Owen I. Smith, Ph.D.
Vincent L. Vilker, Ph.D.

Assistant Professors

David T. Allen, Ph.D.
Yoram Cohen, Ph.D.
Robert F. Hicks, Ph.D.
Vasilios Manousiouthakis, Ph.D.

Adjunct Professors

Manuel M. Baizer, Ph.D.
W. Kenneth Davis, M.S.
C. Pierre Zaleski, Ph.D.

Adjunct Lecturer

Dwight A. Landis, M.S.

Scope and Objectives

The Department of Chemical Engineering conducts active undergraduate and graduate programs of teaching and research in the areas of thermodynamics, mass transfer, complex mixture engineering and catalysis, electrochemistry and corrosion, combustion science, spectroscopy of complex systems, cryogenics and low-temperature processes, biochemical and biomedical engineering, computer-aided design, pollution control, and polymer engineering. Students are trained in the fundamental principles of these fields while learning a sensitivity to society's needs — a crucial combination in addressing the question of how industry can grow and innovate in an era of economic, environmental, and energy constraints. Faculty members in the department are active in the Crump Institute for Medical Engineering and the National Center for Intermedia Transport Research, sponsored at UCLA by the Environmental Protection Agency and the Center for Engineering and Systems Analysis for the Control of Toxics.

The undergraduate curriculum leads to a B.S. in Chemical Engineering and is accredited by ABET and AIChE. The department also offers graduate courses and research leading to M.S. and Ph.D. degrees. Both graduate and undergraduate programs closely relate teaching and research to important industrial problems.

Bachelor of Science in Chemical Engineering

The goal of the chemical engineering curriculum is to provide a high quality, professionally oriented education in modern chemical engineering. Balance is sought between design and science.

The Major

Course requirements are as follows (186 minimum units required):

(1) Six core courses: Chemical Engineering M105A, M105D, Civil Engineering 108, Electrical Engineering 100, 103, Mechanical, Aerospace, and Nuclear Engineering 103.

(2) Chemical Engineering 137, 137A, 137B, 137C, 137D, 137E (satisfies the engineering economics requirement), 137F, 138; 139A, 139B (satisfies the laboratory requirement); M192A (satisfies the mathematics requirement); Chemistry 113A, 114.

(3) Two elective courses from Chemical Engineering 130A, 138A, 138B, 138C, 138E (other courses in engineering, mathematics, and the sciences may be selected in consultation with your adviser), and one upper division chemistry elective course (except Chemistry 110A) selected in consultation with your adviser.

(4) English 3: Chemistry 11A, 11B/11BL, 11C/11CL, 21, 23, 25 (satisfies the life science requirement); Computer Science 10C or 10F; Mathematics 31A, 31B, 32A, 32B, 33A, 33B; Physics 8A, 8B, 8C, 8D.

(5) Six courses from the humanities, social sciences, and/or fine arts approved list (at least three must be upper division; at least three — with two upper division — must be in the same academic department or otherwise reflect coherence with respect to subject matter; and one must satisfy the engineering and science in society requirement).

Graduate Study

For information on graduate admission to the chemical engineering program and requirements for the M.S. and Ph.D. degrees, see "Graduate Study" at the beginning of this chapter.

Upper Division Courses

M105A. Introduction to Engineering Thermodynamics. (Formerly numbered Engineering 105A.) (Same as Mechanical, Aerospace, and Nuclear Engineering M105A.) Lecture, four hours; recitation, one hour. Prerequisites: Physics 8B, Mathematics 32B. Phenomenological thermodynamics. Concepts of equilibrium, temperature, and reversibility. First law and concept of energy; second law and concept of entropy. Equations of state and thermodynamic properties. Engineering applications of these principles in the analysis and design of closed and open systems. Mr. Knuth, Mr. Robinson, Mr. Van Vorst (F,W,Sp)

M105D. Transport Phenomena. (Formerly numbered Engineering 105D.) (Same as Mechanical, Aerospace, and Nuclear Engineering M105D.) Lecture, four hours; recitation, one hour. Prerequisites: Physics 8B, Mathematics 32B, 33A. Transport phenomena; heat conduction, mass species diffusion, convective heat and mass transfer, and radiation. Engineering applications in thermal and environmental control. Mr. Vilker (F,W,Sp)

130A. Introduction to Statistical Thermodynamics. (Formerly numbered Engineering 130A). Prerequisite: course M105A. Calculations of expected values and variances of thermodynamic functions for perfect monatomic gas, Einstein monatomic crystal, photon gas, electron gas in a metal, perfect absorbed gas, perfect diatomic gas, and Debye monatomic crystal. Calculations of gross emission rates from surfaces. Mr. Knuth (F)

137. Introduction to Chemical Engineering. (Formerly numbered Engineering 137.) Prerequisites: Mathematics 32B (may be taken concurrently), Chemistry 11C/11CL, Physics 8B. Introduction to the analysis and design of industrial chemical processes. Material and energy balances. Mr. Allen (F)

137A. Chemical Engineering Thermodynamics. (Formerly numbered Engineering 137A). Prerequisite: course 137. Thermodynamic properties of pure substances and solutions. Phase equilibrium. Chemical reaction equilibrium. Mr. Nobe (W)

137B. Chemical Engineering Diffusional Processes. (Formerly numbered Engineering 137B.) Prerequisites: courses M105D, 137, 137A. Brownian motion, fluxes according to irreversible thermodynamics; one-dimensional theory: membrane transport, facilitated transport; convective diffusion, concentration boundary layers, turbulent diffusion. The fundamentals illustrated by applications to separation processes, gas cleaning, and blood oxygenation. Mr. Allen, Mr. Friedlander (Sp)

137C. Chemical Engineering Separation Operations. (Formerly numbered Engineering 137C.) Prerequisites: courses M105D, 137, 137A. Application of the principles of heat, mass, and momentum transport to the design and operation of separation processes such as distillation, gas absorption, filtration, and reverse osmosis. Mr. Van Vorst (Sp)

137D. Chemical Engineering Kinetics. (Formerly numbered Engineering 137D.) Prerequisites: courses M105D, 137, 137A, 137B. Fundamentals of chemical kinetics and catalysis. Introduction to the analysis and design of homogeneous and heterogeneous chemical reactors. Mr. Smith (F)

137E. Chemical Process Economics and Synthesis. (Formerly numbered Engineering 137E.) Prerequisites: courses 137C, 137D, 139A, 139B (latter may be taken concurrently). Integration of chemical engineering fundamentals such as transport phenomena, thermodynamics, separation operations, and reaction engineering and simple economic principles for the purpose of designing chemical processes and evaluating alternatives. Mr. Van Vorst (W)

137F. Chemical Process Computer-Aided Design and Analysis. Prerequisites: courses 137C, 137D, 137E, Computer Science 10F. An introduction to the application of some of the mathematical and computing methods to chemical engineering design problems; the use of simulation programs as an automated method of performing steady state material and energy balance calculations. Mr. Cohen, Mr. Friedlander (Sp)

138. Chemical Engineering Process Dynamics and Control. (Formerly numbered Engineering 138.) Prerequisites: courses 137B, 137C, 137D. Principles of dynamics modeling and start-up behavior of chemical engineering processes. Chemical process control elements. Design and applications of chemical process computer control. Mr. Manousiouthakis (W)

138A. Introduction to Cryogenics and Low-Temperature Processing. (Formerly numbered Engineering 138A.) Prerequisite: course M105A. Liquefaction of gases, cooling to cryotemperatures, LNG processes, liquid hydrogen, and liquid He cryosystems for superfluids and applied superconductivity. Mr. Frederking (W)

138B. Chemical Engineering Polymer Processes. (Formerly numbered Engineering 138B.) Prerequisites: Mechanical, Aerospace, and Nuclear Engineering 103 and Chemistry 21, or senior standing in engineering or physical science. Formation of polymers, criteria for selecting a reaction scheme, polymerization techniques. Polymer characterization. Mechanical properties. Rheology of macromolecules, modeling and experimental methods to characterize non-Newtonian fluids. Polymer process engineering. Mr. Cohen (F)

138C. Chemical Engineering Pollution Technology. Prerequisites: courses 137C, 137D, or equivalent. Integration of chemical engineering fundamentals such as transport phenomena and chemical kinetics with environmental pollution concerns for the purpose of designing control devices and of analyzing the fate of pollutants in the environment. Mr. Cohen, Mr. Friedlander, Mr. Vilker (W)

138E. Fundamentals of Corrosion. (Formerly numbered Engineering 138E.) Prerequisites: courses M105A, and 137A or Materials Science and Engineering 141. The fundamentals of electrochemistry pertinent to metallic corrosion. Primary emphasis on the fundamental approach in the consideration of complex corrosion processes. Specific topics include pitting, crevice corrosion, stress corrosion, hydrogen embrittlement, and corrosion control. Mr. Nobe (Sp)

139A. Introductory Chemical Engineering Laboratory. (Formerly numbered 139AC.) Laboratory, eight hours. Prerequisites: courses M105A, M105D, 137, 137A, and Mechanical, Aerospace, and Nuclear Engineering 103, or consent of instructor. Basic introductory laboratory experiments illustrating applications of the principles of thermodynamics, chemical kinetics, and transport phenomena to practical systems. Experiments include examples of heat transfer, fluid flow, chemical thermodynamics, and homogeneous chemical kinetics. (F)

139B. Chemical Engineering Laboratory. (Formerly numbered 139BC.) Laboratory, eight hours. Prerequisites: courses 137B, 137C, and 139A, or consent of instructor. Course consists of four experiments, each of two weeks duration. After each experiment, students prepare a detailed report that includes sections on background material, theory, experimental procedures, experimental results, scale-up and design considerations, and error analysis. (W)

M192A. Mathematics of Engineering. (Formerly numbered Engineering 192A.) (Same as Mechanical, Aerospace, and Nuclear Engineering M192A.) Prerequisites: Mathematics 33A, 33B. Methods of solving ordinary differential equations in engineering. Review of matrix algebra. Solutions of systems of first- and second-order ordinary differential equations. Series solution to linear second-order ordinary differential equations. Special functions and introduction to boundary value problems. Mr. Robinson (F,W,Sp)

199. Special Studies (2 to 8 units). Prerequisites: senior standing, consent of instructor. Individual investigation of a selected topic to be arranged with a faculty member. Enrollment request forms available in department office. Occasional field trips may be arranged. May be repeated for credit. (F,W,Sp)

Graduate Courses

230A. Advanced Engineering Thermodynamics. Prerequisites: courses 130A, 137A, or equivalent. Phenomenological and statistical thermodynamics of chemical and physical systems with engineering applications. Presentation of the role of atomic and molecular spectra and intermolecular forces in the interpretation of thermodynamic properties of gases, liquids, solids, and plasmas. Mr. Robinson (F)

230B. Nonequilibrium Thermodynamics. Prerequisite: course 230A. Interpretation of nonequilibrium phenomena in terms of the fourth law of thermodynamics, namely (1) linear interdependence of fluxes and driving forces and (2) Onsager reciprocal relations. Boltzmann transport equation; diffusion; electrical and heat currents; numerical calculation of parameters. Mr. Robinson

230C. Cryogenics. Prerequisite: course 137A. The study of basic phenomena in low-temperature systems, including the third law, various cooling methods, and superfluid systems; Meissner state, type I and type II systems; applied superconductivity cryogenics. Mr. Frederking

230D. Thermodynamics of Phase Transitions. Prerequisite: course 230A or equivalent. Phase stability criteria and separation of phases. Molecular thermodynamic treatment of multicomponent systems with chemical engineering applications. Solubility of gases and solids in liquids. Phase equilibrium properties of fluid mixtures. Mr. Robinson

237A. Reaction Kinetics. Prerequisites: courses 130A, 137C, or equivalent. Macroscopic descriptions: reaction rates, relaxation times, thermodynamic correlations of reaction rate constants. Molecular descriptions: kinetic theory of gases, models of elementary processes. Applications: absorption and dispersion measurements, unimolecular reactions, photochemical reactions, hydrocarbon pyrolysis and oxidation, explosions, polymerization.
Mr. Knuth, Mr. Smith

237B. Molecular Dynamics. Prerequisite: course 130A or 137C. Analysis and design of molecular-beam systems. Molecular-beam sampling of reactive mixtures in combustion chambers or gas jets. Molecular-beam studies of gas-surface interactions, including energy accommodations and heterogeneous reactions. Applications to air pollution control and to catalysis. Mr. Knuth (W)

237E. Combustion Processes. Prerequisite: course 137C or Mechanical, Aerospace, and Nuclear Engineering 132A. Fundamentals: change equations for multicomponent reactive mixtures, rate laws. Applications: combustion, including burning of (1) premixed gases or (2) condensed fuels. Detonation. Sound absorption and dispersion.
Mr. Knuth, Mr. Smith (Sp)

238. Advanced Mass Transfer. Prerequisite: course M105D, 137E, or consent of instructor. Advanced treatment of mass transfer, with applications to industrial separation processes, gas cleaning, pulmonary bioengineering, controlled release systems, and reactor design; molecular and constitutive theories of diffusion, interfacial transport, membrane transport, convective mass transfer, concentration boundary layers, turbulent transport.
Mr. Cohen, Mr. Friedlander (F)

238A. Chemical Reaction Engineering. Prerequisites: courses 137B, 137C, or equivalent. Principles of chemical reactor analysis and design. Particular emphasis on simultaneous effects of chemical reaction and mass transfer on noncatalytic and catalytic reactions in fixed and fluidized beds.
Mr. Allen (W)

238C. Electrochemical Engineering. Prerequisite: one year of physical chemistry or equivalent. Transport phenomena in electrochemical systems; relationships between molecular transport, convection, and electrode kinetics, along with applications to industrial electrochemistry, fuel cell design, and modern battery technology. Mr. Nobe (F)

238D. Biochemical Engineering. Prerequisites: courses 137C and 137D, or consent of instructor. Theoretical models and experimental techniques for describing the thermodynamics and transport behavior of solutions of biological macromolecules. Nonideal solution behavior. Applications to mass transfer problems in natural and man-made systems. Elementary theory of biochemical reactions.
Mr. Vilker

239AA-239AZ. Special Topics in Chemical Engineering (2 to 4 units each). Prerequisites: consent of instructor, additional prerequisites for each offering as announced in advance by the department. Advanced and current study of one or more aspects of chemical engineering, such as chemical process dynamics and control, fuel cells and batteries, membrane transport, advanced chemical engineering analysis, polymers, optimization in chemical process design. May be repeated for credit with topic change. (F,W,Sp)

239CA-239CZ. Seminar: Current Topics in Energy Utilization. Prerequisite: consent of instructor. Review of current literature in an area of energy utilization in which the instructor has developed special proficiency as a consequence of research interests. Students report on selected topics. (F,W,Sp)

239EA-239EZ. Seminars in Chemical Engineering (2 to 4 units each). Prerequisites: consent of instructor, additional prerequisites for each offering as announced in advance by the department. Lectures, discussions, student presentations, and projects in areas of current interest. May be repeated for credit. S/U grading. (F,W,Sp)

240. Fundamentals of Aerosol Technology. Prerequisite: course 137B or equivalent. Technology of particle/gas systems with applications to gas cleaning, commercial production of fine particles, and catalysis. Particle transport and deposition, optical properties, experimental methods, dynamics and control of particle formation processes.
Mr. Friedlander (W)

250. Computer-Aided Chemical Process Design. Prerequisite: course 137E or consent of instructor. The application of optimization methods in chemical process design; computer aids in process engineering; process modeling; systematic flowsheet invention; process synthesis; optimal design and operation of large-scale chemical processing systems. (F)

260. Non-Newtonian Fluid Mechanics. Prerequisite: prior course in fluid mechanics such as Mechanical, Aerospace, and Nuclear Engineering 150A or consent of instructor. Principles of non-Newtonian fluid mechanics. Stress constitutive equations. Rheology of polymeric liquids and dispersed systems. Applications in viscometry, polymer processing, biorheology, oil recovery, and drag reduction.
Mr. Cohen

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. A teaching apprenticeship under the active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.
Mr. Friedlander (F,W,Sp)

596. Directed Individual or Tutorial Studies (2 to 8 units). Prerequisites: graduate standing in chemical engineering, consent of instructor. Petition forms to request enrollment may be obtained from the Assistant Dean, Graduate Studies. Supervised investigation of advanced technical problems. S/U grading.

597B. Preparation for Ph.D. Preliminary Examinations (2 to 16 units). Prerequisites: graduate standing in chemical engineering, consent of instructor. S/U grading.

597C. Preparation for Ph.D. Oral Qualifying Examination (2 to 16 units). Prerequisites: graduate standing in chemical engineering, consent of instructor. Preparation for oral qualifying examination, including preliminary research on dissertation. S/U grading.

598. Research for and Preparation of M.S. Thesis (2 to 12 units). Prerequisites: graduate standing in chemical engineering, consent of instructor. Supervised independent research for M.S. candidates, including thesis prospectus. S/U grading.

599. Research for and Preparation of Ph.D. Dissertation (2 to 16 units). Prerequisites: graduate standing in chemical engineering, consent of instructor. Usually taken after student has been advanced to candidacy. S/U grading.

Chemistry/Materials Science
(Interdepartmental)

Associate Professors
Lewis P. Felton, Ph.D.
Sanford B. Roberts, Ph.D.

Assistant Professor
Johannes B. Neethling, Ph.D.

Senior Lecturer
George J. Tauxe, M.S., *Emeritus*

Adjunct Professors
Robert E. Englekirk, Ph.D.
Y. Marvin Ito, Ph.D.
George E. Warren, Ph.D.

Scope and Objectives

The civil engineering programs at UCLA include structural engineering and design, geotechnical engineering, earthquake engineering, water resource systems engineering, environmental engineering, and decision making and engineering management.

The ABET-accredited civil engineering curriculum leads to a B.S. in Civil Engineering, a broad-based education in structural engineering, soil mechanics, and water resource systems. This program is an excellent foundation for entry into professional practice in civil engineering or for more advanced study.

At the graduate level, M.S. and Ph.D. degree programs are offered in a number of areas, including structures, structural mechanics, earthquake engineering, mechanics of solids, soil mechanics, environmental engineering, and water resource systems engineering. In these areas, research is being done on a variety of problems ranging from basic physics and mechanics problems to critical problems in earthquake engineering and in the development of new technologies for water treatment and pollution control.

Bachelor of Science in Civil Engineering

The objective of the civil engineering curriculum is to give graduating seniors an academically sound and practical background in civil engineering. A balanced program, including engineering science, design, and laboratory courses in civil engineering, is stressed. The ongoing goal of the program is to produce well-qualified graduates for the civil engineering profession or for graduate civil engineering schools in the United States.

The Major

Course requirements are as follows (187 minimum units required):

(1) Seven core courses: Chemical Engineering M105A or Mechanical, Aerospace, and Nuclear Engineering M105A, Civil Engineering 108, Electrical Engineering 100, 103, Materials Science and Engineering 14, Mechanical, Aerospace, and Nuclear Engineering 102, 103.

(2) Civil Engineering 106A, 165A, 165B or 166, 184B, 184D, 185A, 186; one mathematics course from Mechanical, Aerospace, and Nuclear Engineering 191A, M192A (or Chemical Engineering M192A), 192B, 192C, 193A, 193B.

(3) Twenty-eight elective units, to be selected from the courses listed below, which must include at least 13 design units and eight units of laboratory. At least two four-unit design courses are required (Civil Engineering 167A and 167B are recommended for students specializing in structures; Civil Engineering 167B and 185B are recommended for students specializing in geotechnical engineering or water resources and environmental engineering):

Engineering Mechanics: Civil Engineering 157B, 160, 166 (or Mechanical, Aerospace, and Nuclear Engineering 166A), Mechanical, Aerospace, and Nuclear Engineering 156A, 158A.

Geotechnical Engineering: Civil Engineering 185B, 185L, Earth and Space Sciences 100, M139.

Structures: Civil Engineering 165B, 165C (for structural analysis); Civil Engineering M169A, 169L (for structural dynamics); Civil Engineering 165L, 167A, 167B, 167C, 167L, 167X (for structural design).

Systems Analysis: Civil Engineering 174A, Engineering 176A.

Water Resources and Environmental Engineering: Civil Engineering M134A, 181A, 184A, 184E.

(4) English 3; Chemistry 11A, 11B/11BL; Civil Engineering 15; Mathematics 31A, 31B, 32A, 32B, 33A, 33B; Physics 8A/8AL, 8B/8BL, 8C, 8D; one life science elective course.

(5) Six courses from the humanities, social sciences, and/or fine arts approved list (at least three must be upper division; at least three — with two upper division — must be in the same academic department or otherwise reflect coherence with respect to subject matter).

(6) Three free elective courses, one of which must satisfy the engineering and science in society requirement.

Graduate Study

For information on graduate admission to the civil engineering program and requirements for the M.S. and Ph.D. degrees, see "Graduate Study" at the beginning of this chapter.

Lower Division Course

15. Introduction to Programming. Lecture, four hours; laboratory, two hours. Introduction to programming using structured FORTRAN. Selected topics in programming, with emphasis on numerical techniques as applied to engineering problems. Mr. Dong, Mr. Stenstrom (F,W,Sp)

Upper Division Courses

106A. Principles of Engineering Economy. (Formerly numbered Engineering 106A.) Prerequisite: upper division standing. Economic analysis of engineering projects; value systems; economic decisions on capital investment and choice of engineering alternatives; new projects, replacement and abandonment policies; risky decisions including make/buy policies and research investment; corporate financial practices and accounting. Mr. Dracup (F,W,Sp)

108. Introduction to Mechanics of Deformable Solids. (Formerly numbered Engineering 108.) Lecture, three hours; recitation, two hours. Prerequisite or corequisite: Mathematics 33A. Recommended: Mechanical, Aerospace, and Nuclear Engineering 102. Review of equilibrium principles. Concepts of stress and strain. Material constitution (stress-strain relations). Energy in deformable bodies. Structural applications to trusses, beams, shafts, columns, and pressure vessels. Mr. Nelson (F,W,Sp)

M109A. Engineering and Policy: Resources and Risk. (Same as Mechanical, Aerospace, and Nuclear Engineering M109A.) Lecture, two hours; recitation, two hours. Prerequisite: sophomore or higher standing in engineering. The philosophical, sociological, and institutional implications of engineering-based risk and decision making. Emphasis on opportunities for the useful development of resources, inherent risks, and the responsibilities of engineers in the decision process. Emphasis on thoughtful student discussion. Mr. Perrine (W)

M134A. New Energy Technology: Resources, Conversion, Constraints. (Formerly numbered 134A.) (Same as Mechanical, Aerospace, and Nuclear Engineering M134A.) Prerequisite: Chemical Engineering M105A or Mechanical, Aerospace, and Nuclear Engineering M105A or equivalent in physics or chemistry or consent of instructor. Energy resources: fossil fuels, nuclear fuels, hydro, solar, wind, geothermal, and biomass sources. Conversion methods for power production and other energy uses. Consideration of thermodynamic, economic, and environmental constraints. Mr. Perrine (F)

157B. Experimental Fracture Mechanics. (Formerly numbered Engineering 157B.) Lecture, two hours; laboratory, four hours. Prerequisite: Mechanical, Aerospace, and Nuclear Engineering 157 or equivalent. Elementary introduction to fracture mechanics and experimental techniques used in fracture, crack tip stress fields, strain energy release rate, fracture characterization, compliance calibration, surface flaws, fatigue crack growth and fatigue life of structural components, mixed mode fracture, and individual projects. Mr. Fourney (W)

160. Introduction to Biostructural Mechanics. (Formerly numbered Engineering 160.) Prerequisite: course 108 or equivalent. An introduction to biostructural mechanics of the human musculoskeletal system. Structural characteristics and behavior of skeletal members. Response to mechanical trauma. Elastic and viscoelastic properties of hard and soft tissues. Mathematical modeling. Design characteristics of hip prostheses and anthropometric dummies. Mr. Roberts (Sp)

165A. Elementary Structural Analysis. (Formerly numbered Engineering 165A.) Prerequisite: course 108. Equilibrium of structures; deformation analysis of structures by differential equation method, moment-area method, and the principle of virtual work; influence lines; analysis of statically determinate and indeterminate structures such as beams, frames, arches, and trusses; introduction to slope-deflection equations. Mr. Schmit (F,Sp)

165B. Intermediate Structural Analysis. (Formerly numbered Engineering 165B.) Prerequisite: course 165A. Classical force, displacement methods of structural analysis; three moment equation, slope-deflection equations, moment distribution; virtual work, minimum potential, complementary potential theorems; Castigliano's theorems, generalized displacements, forces; Rayleigh-Ritz method; introduction to matrix methods; stiffness, flexibility matrices for bars, beams. Mr. Nelson (F,W)

165C. Computer Analysis of Structures. (Formerly numbered Engineering 165C.) Prerequisite: course 165A. Development of algorithms and FORTRAN coding for matrix manipulation, inversion; solution of the linear algebraic equations, eigenvalue problems; structural applications; matrix displacement method for planar trusses, frames, direct assembly of system stiffness; matrix force method for planar frames. Mr. Dong (Sp)

165L. Structural Design and Testing Laboratory. (Formerly numbered Engineering 165L.) Lecture, two hours; laboratory, four hours. Prerequisites: courses 15 or equivalent, 165A. Computer-aided optimum design, construction, instrumentation, and test of a small-scale model structure. Use of computer-based data acquisition and interpretation systems for comparison of experimental and theoretically predicted behavior. Mr. Felton (Sp)

166. Elementary Structural Mechanics. (Formerly numbered M166.) Prerequisite: course 108. Analysis of stress, strain; phenomenological material behavior, fatigue, cumulative damage; bending, extension of beams, unsymmetrical sections, stiffened shell structures; torsion of beams, stress function, warping, thin-walled cross sections; shear stresses; plate analysis; instability, failure of columns, plates, approximate methods, empirical formulas. Mr. Roberts (W)

166L. Experimental Structural Mechanics. Lecture, three hours; laboratory, two hours. Prerequisite: course 166 or equivalent. Lecture and experiments in limit analysis of various aspects of structures. Elastic and plastic analysis of structural elements in multiaxial stress states. Buckling of columns, plates, and shells. Effects of actual boundary conditions on structural performance. Evaluation of structural fasteners. Mr. Fourney (F)

167A. Design of Steel Structures. (Formerly numbered Engineering 167A.) Lecture, three hours; recitation, three hours. Prerequisite: course 165A. Allowable stress design of tension members, compression members, beams, beam columns, and tension splices according to AISC specifications for buildings. (F)

167B. Design of Reinforced Concrete Structures. (Formerly numbered Engineering 167B.) Lecture, three hours; recitation, three hours. Prerequisite: course 165A. Design of reinforced concrete buildings. Reinforced concrete beams, columns, and slabs. Working stress and ultimate strength methods of analysis. Determination of loads and design constraints. Introduction to reinforced concrete structural systems. Mr. Selna (W)

167C. Design of Prestressed Concrete Structures. (Formerly numbered Engineering 167C.) Prerequisite: course 165A. Prestressing and post-tensioning techniques. Properties of concrete and prestressing steels. Loss of prestress. Analysis of sections for flexural stresses and ultimate strength. Design of beams by allowable stress and strength methods. Load balancing design of continuous beams and slabs. Mr. Selna (Sp)

167L. Reinforced Concrete Structural Laboratory. (Formerly numbered Engineering 167L.) Laboratory, eight hours. Prerequisites: course 167B, consent of instructor. Experimental verification of strength design methods used for reinforced concrete elements. Full- or near full-scale slab, beam, column, and joint specimens tested to failure. Mr. Selna (Sp)

167X. Reinforced Concrete Construction Laboratory (2 units). (Formerly numbered Engineering 167X.) Laboratory, four hours. Prerequisite: junior standing. Design and fabrication methods used for construction of reinforced concrete structural elements. Full- or near full-scale slab, beam, column, and joint elements formed, fabricated, and cast in the laboratory. Mr. Selna (F)

M169A. Introduction to Mechanical Vibrations. (Formerly numbered Engineering 169A.) (Same as Mechanical, Aerospace, and Nuclear Engineering M169A.) Prerequisites: course 108, Mechanical, Aerospace, and Nuclear Engineering 102. Recommended: Electrical Engineering 102. Fundamentals of vibration theory and applications. Free, forced, and transient vibration of one and two degrees of freedom systems, including damping and nonlinear behavior. Normal modes, coupling, and normal coordinates. Elements of vibration and wave propagation in continuous systems. Mr. Hart (F)

169L. Mechanical Vibrations Laboratory (2 units). (Formerly numbered Engineering 169L.) Corequisite: course M169A. Calibration of instrumentation for dynamic measurements. Determination of natural frequencies and damping factors from free vibrations. Determination of natural frequencies, mode shapes, and damping factors from forced vibrations. Dynamic similitude. (F)

174A. Introduction to Elements of Decision Making. (Formerly numbered Engineering 174A.) Prerequisite: Mechanical, Aerospace, and Nuclear Engineering 193A or equivalent mathematics course. Elements of decision making and the decision process. Decision and utility theory. Formulation of utility functions and objective functions. Subjective probabilities. Bayesian approach to value of information. Risk sharing and group decisions. Methods of eliciting judgments; bias and scoring rules.
Mr. Rubinstein (F)

181A. Air Pollution Control. (Formerly numbered Engineering 181A.) Prerequisite: senior standing or consent of instructor. Sources of air pollutants and their atmospheric transport, dispersion, and photochemical reactions. Design and operational basis for stationary and mobile source control systems. An overview of current regulatory trends.
Mr. Liu, Mr. Perrine (W)

181B. Waste and Hazardous Waste Management. Prerequisite: senior standing or consent of instructor. Waste sources and handling. Resource recovery processes and system design. Site selection, design, and operation for landfill disposal. Leachate transport, monitoring, and design for groundwater protection. Mr. Perrine (W)

184A. Engineering Hydrology. (Formerly numbered Engineering 184A.) Prerequisite: senior standing or consent of instructor. Recommended: elementary probability. Precipitation, climatology, stream flow analysis, flood frequency analysis, groundwater, snow hydrology, hydrologic simulation. Possible field trips. Mr. Dracup, Mr. Yeh (F)

184B. Introduction to Water Resources Engineering. (Formerly numbered Engineering 184B.) Prerequisite: Mechanical, Aerospace, and Nuclear Engineering 103 or consent of instructor. Principles of hydraulics, the flow of water in open channels and pressure conduits, reservoirs and dams, hydraulic machinery, hydroelectric power, introduction to system analysis and design applied to water resources engineering. Mr. Yeh (W)

184D. Water Quality Control Systems. (Formerly numbered Engineering 184D.) Prerequisites: Mechanical, Aerospace, and Nuclear Engineering 103 and upper division standing in engineering, or consent of instructor. Biological, chemical, and physical bases of water quality and pollution; potability and chemical aspects of treatment and reclamation; analysis and design of water and wastewater treatment systems; field trip. Mr. Stenstrom (F)

184E. Water Quality Control Laboratory. (Formerly numbered Engineering 184E.) Laboratory, eight hours. Prerequisites: course 184D (may be taken concurrently), Chemistry 11A, 11B. Basic laboratory techniques and practice for the characterization and analysis of waters and wastewaters. Selected experiments include measurement of biochemical oxygen demand, suspended solids, dissolved oxygen hardness, and other parameters used in water quality control. Mr. Stenstrom (F)

185A. Principles of Soil Mechanics. (Formerly numbered Engineering 185A.) Prerequisite: course 108. Recommended: Earth and Space Sciences 1. Soil as a foundation for structures and as a material of construction. Soil formation, classification, physical and mechanical properties, compaction, bearing capacity, earth pressures, consolidation and shear strength. Mr. Lade (F)

185B. Design of Foundations and Earth Structures. (Formerly numbered Engineering 185B.) (Not the same as course 185B prior to Winter Quarter 1983.) Prerequisite: course 185A. Design methods for foundations and earth structures. Site investigation, including determination of soil properties for design. Design of footings and piles, including stability and settlement calculations. Design of slopes and earth retaining structures. Mr. Lade (W)

185L. Soil Mechanics Laboratory (2 units). (Formerly numbered Engineering 185L.) Laboratory, four hours. Prerequisite: course 185A or consent of instructor. Laboratory experiments to be performed by the students to get basic data required for assigned design problems. Soil classification, Atterberg limits, permeability, compaction, shear strength, and specific gravity determination. Design problems, report writing. Mr. Lade (Sp)

186. Civil Engineering Projects. (Formerly numbered Engineering 186.) Lecture, two hours; recitation, four hours. Prerequisites: courses 167A or 167B or 167C, and 184B, 185A. Integration of civil engineering disciplines for design of bridges or other projects. Stream flow studies, stream bed transport, and scour. Foundation design of piers, abutments, and approach structures. Structural concepts, loading, analysis, member selection, and detailing of abutments, piers, and superstructure.
Mr. Selna (W)

M192F. Numerical Optimization Methods for Engineering Design. (Same as Mechanical, Aerospace, and Nuclear Engineering M192F.) Prerequisites: Computer Science 10F, Mathematics 32A, 33A. Recommended: Mathematics 115A. Systematic presentation of numerical optimization methods for engineering design; one-dimensional minimization, unconstrained minimization, linearly constrained minimization, general nonlinear problems, approximation concepts, duality. Optimization problem statements. Advantages and limitations of numerical optimization. Applications to general design in mechanical, aerospace, and manufacturing engineering.
Mr. Fleury

199. Special Studies (2 to 8 units). Prerequisites: senior standing, consent of instructor. Individual investigation of a selected topic to be arranged with a faculty member. Enrollment request forms available in department office. Occasional field trips may be arranged. May be repeated for credit. (F,W,Sp)

Graduate Courses

256B. Elasticity. (Formerly numbered Mechanics and Structures 256B.) Prerequisite: Mechanical, Aerospace, and Nuclear Engineering 256A or consent of instructor. Formulation of elastostatic problems; general, plane strain, plane stress. Reciprocal theorems and variational theorems. Airy's stress function and Papkovich-Neuber solution. Fundamental singular solutions, stress concentration, thermal stresses, elastic contact, load transfer, St. Venan's principle and applications. Mr. Muki (W)

264A. Theory of Plates and Shells. (Formerly numbered Mechanics and Structures 264A.) Prerequisite: course 166 or Mechanical, Aerospace, and Nuclear Engineering 158A or consent of instructor. Small and large deformation theories of thin plates; energy methods; free vibrations; membrane theory of shells; axisymmetric deformations of cylindrical and spherical shells, including bending. Mr. Roberts (W)

264B. Mechanics of Composite Material Structures. Prerequisites: courses 264A or equivalent and 166 (or an introductory course on linear elasticity or continuum mechanics or consent of instructor). Review of analysis of stress and strain. Anisotropic stress-strain temperature relations. Analysis of laminated anisotropic plates and shells based on classical and refined theories. Elastodynamic theory of vibrations and waves in laminated anisotropic plates and cylinders. Analysis of edge effects, joints, and fracture. Failure theories and fatigue for composite materials. Mr. Dong (Sp)

265A. Advanced Structural Analysis. (Formerly numbered Mechanics and Structures 265A.) Prerequisite: course 165B. Review of elasticity theory; theorem on virtual work, stationary value of potential and complementary potential; Castigliano, Maxwell-Betti theorems; stiffness, flexibility matrices for truss, beam elements; matrix force and displacement analysis of trusses, frames; introduction to finite element methods. Mr. Nelson (F)

265B. Finite Element Analysis of Structures. (Formerly numbered Mechanics and Structures 265B.) Prerequisites: courses 166 and 265A, or consent of instructor. Direct energy formulations for deformable systems; solution methods for linear equations; analysis of structural systems with one-dimensional elements; introduction to variational calculus; discrete element displacement force and mixed methods for membrane, plate, shell structures; instability effects.
Mr. Dong (W)

265C. Nonlinear Structural Analysis. (Formerly numbered Mechanics and Structures 265C.) Prerequisite: course 265B or consent of instructor. Classification of nonlinear effects; material nonlinearities; conservative, nonconservative material behavior; geometric nonlinearities, Lagrangian, Eulerian description of motion; finite element methods in geometrically nonlinear problems; postbuckling behavior of structures; solution of nonlinear equations; incremental, iterative, programming methods.
Mr. Nelson (Sp)

265D. Advanced Topics in Structural Mechanics. Prerequisites: graduate standing in engineering, consent of instructor. Current topics in composite materials, computational methods, finite element analysis, structural synthesis, nonlinear mechanics, and structural mechanics in general. Topics may vary from quarter to quarter. Mr. Muki (F)

266A. Stability of Structures I. (Formerly numbered Mechanics and Structures 266A.) Prerequisites: courses 165B, 166, or equivalent. Elastic buckling of bars. Different approaches to stability problems. Inelastic buckling of columns and beam columns. Columns and beam columns with linear, nonlinear creep. Combined torsional and flexural buckling of columns. Buckling of plates. Mr. Schmit (Sp)

M267A. Optimum Structural Design. (Formerly numbered 267A.) (Same as Mechanical, Aerospace, and Nuclear Engineering M267A.) Prerequisite: course 265A or Mechanical, Aerospace, and Nuclear Engineering 261A or consent of instructor. Synthesis of structural systems; analysis and design as optimization problems; techniques for synthesis and optimization; application to aerospace and civil structures. Mr. Felton, Mr. Schmit (W)

267C. Advanced Reinforced Concrete Design. (Formerly numbered Mechanics and Structures 267C.) Prerequisite: course 167B. Ultimate strength and seismic design considerations. Concrete mechanical properties. Columns: stability, biaxial bending. Slab design. Slab yield line theory. Footings. Joint design. Bracing systems: diaphragms, trusses, and shear walls. Braced and unbraced frame design for gravity, wind, and earthquake loads. Mr. Selna (Sp)

267E. Structural Loads and Safety for Civil Structures. (Formerly numbered Mechanics and Structures 267E.) Prerequisites: courses 167A or 167B or 167C, and M169A (may be taken concurrently). Concept of structural safety. Factors of safety and quantification of loads in building codes. Probability of failure and quantification of loads in probabilistic approaches to structural safety. Relationships between factor of safety and probability of failure. Mr. Hart (F, odd years)

267S. Advanced Steel Design. (Formerly numbered Mechanics and Structures 267S.) Prerequisite: course 167A. Working and ultimate load methods. Emphasis on seismic design. Brittle fracture, fatigue, and local buckling. Compression members. Element design for complex loading, including torsion. Braced and unbraced frames. Drift requirements. Steel frame design for gravity, wind, and earthquake loads. (W)

268A. Experimental Structural Analysis. (Formerly numbered Mechanics and Structures 268A.) Prerequisite: consent of instructor. Study of modern techniques in experimental mechanics, including dimensional analysis, measurement theory, and measurement techniques. Emphasis on techniques of modern optics (e.g., holography). Moire analysis, photoelasticity and speckle interferometry. Mr. Fourney (Sp)

M269A. Dynamics of Structures. (Same as Mechanical, Aerospace, and Nuclear Engineering M269A.) Prerequisite: course M169A. Principles of dynamics. Determination of normal modes and frequencies by differential and integral equation solutions. Transient and steady state response. Emphasis on derivation and solution of governing equations using matrix formulation. Mr. Dong (F)

M269C. Introduction to Probabilistic Dynamics. (Same as Mechanical, Aerospace, and Nuclear Engineering M269C.) Prerequisite: course M169A. Response of structural and mechanical systems to random vibrations. Stationary and nonstationary excitations. Response of systems with random parameters. Discrete and continuous linear systems. Applications to earthquakes, wind sway of buildings, gust response, vibrations due to gearing inaccuracies, train vibrations. Mr. Hart (Sp, even years)

274J. Multiattribute Decision Making with Conflicting Objectives. (Formerly numbered Engineering Systems 274J.) Prerequisite: course 174A or Computer Science 274A or equivalent. The structuring of models for multiattribute decision problems. The theory of quantifying preferences over multiple objectives. Multiattribute utility theory. The structuring of models for conditional strategies under conflict situations. The theory of metagames and metarationality. Mr. Pearl, Mr. Rubinstein (W)

274K. Perspectives of Systems Representation. (Formerly numbered Engineering Systems 274K.) Prerequisite: course 274J or consent of instructor. Mathematical and conceptual models used in analysis and synthesis of engineering. Sociotechnical systems. Mathematical representations of interpretative models. Decomposition using tools of graph theory and information theory. Guides to choice of models. Interaction of human and computer in the modeling process. Mr. Rubinstein (Sp)

281. Geohydrochemical Engineering. Prerequisite: graduate standing. Recommended: course 284B. The science and engineering underlying movement and fate of chemicals within the geospheres of the environment. Models for transport to, within, and from groundwater and their application. Mr. Liu, Mr. Perrine (Sp)

284A. Surface Water Hydrology. (Formerly numbered Engineering Systems 284A.) Prerequisite: course 184A or consent of instructor. In-depth study of the surface water components of the hydrologic cycle. Instantaneous unit hydrograph, dynamic wave equations, rainfall-runoff models using system investigation and physical hydrology. Stochastic hydrology: time-series analysis, Markovian streamflow generating models, and generation of multivariate synthetic streamflows. Applications. Mr. Dracup, Mr. Yeh (W)

284B. Groundwater Hydrology. (Formerly numbered Engineering Systems 284B.) Prerequisite: course 184A or consent of instructor. Theory of the movement and occurrence of water in subterranean aquifers. Steady flow in confined and unconfined aquifers. Mechanics of wells; steady and unsteady radial flows in confined and unconfined aquifers. Theory of leaky aquifers. Seawater intrusion. Numerical methods. Applications. Mr. Dracup, Mr. Yeh (W)

284C. Water Resources Systems Engineering. (Formerly numbered Engineering Systems 284C.) Prerequisite: course 184B. Application of mathematical programming techniques to water resources systems. Topics include reservoir regulation, optimal timing, sequencing and sizing of water resources projects, and real-time conjunctive operations of ground water and surface water resource systems. Emphasis on the management of water quality. Mr. Dracup, Mr. Yeh (Sp)

284F. Selected Topics in Water Resources (2 units). (Formerly numbered Engineering Systems 284F.) Prerequisites: graduate standing, consent of instructor. Review of recent research and development in the management of water resources. Water and hydroelectric supply systems. Water quality management. Water law and institutions. Economic planning and optimization of water resources development. May be repeated once for credit. Mr. Dracup, Mr. Stenstrom (F)

284G. Engineering Economics of Water and Related Natural Resources. (Formerly numbered Engineering Systems 284G.) Recommended prerequisites: one or more courses from Economics 1, 2, 100, 101A, and 101B, or consent of instructor. Economic theory and applications in the management of water and related natural resources; application of price theory to water resource management, electric power supply, petroleum and natural gas management, and renewable resources; benefit-cost analysis with applications to water resources planning. Mr. Dracup (F)

284H. Mathematical Models for Water Quality Management. (Formerly numbered Engineering Systems 284H.) Prerequisite: course 184D or consent of instructor. Development of mathematical models for water quality control systems. Emphasis on numerical techniques to solve the nonlinear partial differential equations arising out of water quality and chemical engineering research. Mr. Stenstrom (W)

284J. Aquatic Chemistry. Lecture three hours; laboratory, two hours. Prerequisites: course 184D, Chemistry 11B, Mathematics 33B. The dilute aqueous solution chemistry of acid/base reactions, complex formation, precipitation and dissolution reactions, and oxidation/reduction reactions, as applied to water and wastewater treatment processes as well as natural and polluted waters. Laboratory experiment. Mr. Neethling (F)

284K. Advanced Water Quality Control Systems I. (Formerly numbered 284D.) Prerequisites: courses 184D and 284J (latter may be taken concurrently), or consent of instructor. Physical, chemical, and biological basis for design of water quality control systems. Properties of water, water quality standards, reactions and stoichiometry. Field trip. Mr. Neethling, Mr. Stenstrom (W)

284L. Advanced Water Quality Control Systems II. Prerequisite: course 284K. Physical, chemical, and biological basis for design of water quality control systems. Principles and design of conventional and advanced water and wastewater treatment systems. Field trip. Mr. Neethling, Mr. Stenstrom (Sp)

284M. Membrane Separations in Aquatic Systems. Prerequisite: course 284J. Applications of membrane separations to desalination, water reclamation, brine disposal, and ultrapure water systems. Discussion of reverse osmosis, ultrafiltration, electrodialysis, and ion exchange technologies from both practical and theoretical standpoints. Mr. Stenstrom (Sp)

285A. Shear Strength of Soil and Stability of Slopes. (Formerly numbered Mechanics and Structures 285A.) Prerequisite: course 185A. Detailed study of fundamental concepts of shear strength of soils, strength determining factors, methods of strength measurement. Slope stability and stability analysis techniques using circular and noncircular failure surfaces, effect of side forces, total and effective stress analyses. Mr. Lade (F)

285B. Foundation Engineering. (Formerly numbered Mechanics and Structures 285B.) Prerequisites: courses 185A, 285A. Principles of foundation design, including theory of consolidation, impeded drainage, stress distribution, settlement analysis, allowable bearing capacity for shallow foundations, piles, and piers; laterally loaded piles. Mr. Oner (W)

285C. Soil Dynamics. (Formerly numbered Mechanics and Structures 285C.) Prerequisites: courses 185A, 285A. Design of foundation for vibrating equipment. Strength and stress-strain relations for soil under cyclic loading conditions. Fundamentals of earthquakes as applied to seismic response of earth structures and foundations. Design of embankments, retaining walls, and foundations for earthquake loading. Mr. Lade (Sp)

285D. Earth Pressures and Earth Retaining Structures. (Formerly numbered Mechanics and Structures 285D.) Prerequisites: course 185A, graduate standing. The basic concepts of the theory of earth pressures behind retaining structures, with special application to the design of retaining walls, bulkheads, and excavation bracing; the effects of flexibility of bulkheads, creep in soils, and construction techniques. Mr. Lade (W)

285E. Seminar on Advanced Topics in Soil Mechanics. (Formerly numbered Mechanics and Structures 285E.) Prerequisites: graduate standing in engineering, consent of instructor. Topics may vary each quarter to cover subjects such as earth dam design, seepage through soils, consolidation, constitutive laws, finite difference and finite element methods with special application in soil mechanics, theories of elasticity and plasticity, and case histories.
Mr. Lade

285L. Advanced Soil Mechanics Laboratory. (Formerly numbered Mechanics and Structures 285L.) Lecture, one hour; laboratory, six hours. Prerequisites: courses 185A, 185B, 285A, 285B. Lectures and laboratory studies of advanced aspects of soil properties and their application to design. Permeability, consolidation, strength testing, pore water pressure measurements, advanced instrumentation and measurement techniques. Preparation of engineering reports. Mr. Lade (Sp)

286A. Earthquake Engineering. (Formerly numbered Mechanics and Structures 286A.) Prerequisite: course M169A or 265A or 285A or Mechanical, Aerospace, and Nuclear Engineering 256A. Engineering seismology: strong earthquake motion, microtremors, wave velocity and damping, induced vibrations, spectral analysis. Risk of earthquakes and fault breaks. Site evaluation. Structure-earth system response. Introduction to earthquake resistive design of buildings, bridges, and dams. Theory and field experiments. Mr. Selna (W)

286B. Structural Response to Ground Motions. (Formerly numbered Mechanics and Structures 286B.) Prerequisite: course M269A or consent of instructor. Spectral analysis of ground motions; response, time, and Fourier spectra. Response of structures to ground motions due to earthquakes and nuclear explosions. Computational methods to evaluate structural response. Response analysis, including evalution of contemporary design standards. Limitations due to idealizations. (Sp)

289AA-289ZZ. Seminar: Current Topics in Civil Engineering (2 to 4 units). (Formerly numbered Mechanics and Structures 289AA-289ZZ.) Prerequisite: consent of instructor. Lectures, discussions, and student presentations and projects in areas of current interest in civil engineering. May be repeated for credit. S/U grading. Mr. Nelson (Sp)

M292. Asymptotic Methods. (Formerly numbered M292A.) (Same as Mathematics M274A.) Lecture, three hours. Prerequisites: Chemical Engineering M192A or Mechanical, Aerospace, and Nuclear Engineering M192A, Mathematics 132, or equivalent. The fundamental mathematics of asymptotic analysis, asymptotic expansions of Fourier integrals, method of stationary phase. Watson's lemma, method of steepest descent, uniform asymptotic expansions, elementary perturbation problems. Mr. Muki (F)

298. Seminar in Engineering (2 to 4 units). Prerequisites: graduate standing in civil engineering, consent of instructor. Seminars may be organized in advanced technical fields. If appropriate, field trips may be arranged. May be repeated with topic change.

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. A teaching apprenticeship under the active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.
Mr. Nelson (F,W,Sp)

596. Directed Individual or Tutorial Studies (2 to 8 units). Prerequisites: graduate standing in civil engineering, consent of instructor. Petition forms to request enrollment may be obtained from the Assistant Dean, Graduate Studies. Supervised investigation of advanced technical problems. S/U grading.

597A. Preparation for M.S. Comprehensive Examination (2 to 12 units). Prerequisites: graduate standing in civil engineering, consent of instructor. Reading and preparation for M.S. comprehensive examination. S/U grading.

597B. Preparation for Ph.D. Preliminary Examinations (2 to 16 units). Prerequisites: graduate standing in civil engineering, consent of instructor. S/U grading.

597C. Preparation for Ph.D. Oral Qualifying Examination (2 to 16 units). Prerequisites: graduate standing in civil engineering, consent of instructor. Preparation for oral qualifying examination, including preliminary research on dissertation. S/U grading.

598. Research for and Preparation of M.S. Thesis (2 to 12 units). Prerequisites: graduate standing in civil engineering, consent of instructor. Supervised independent research for M.S. candidates, including thesis prospectus. S/U grading.

599. Research for and Preparation of Ph.D. Dissertation (2 to 16 units). Prerequisites: graduate standing in civil engineering, consent of instructor. Usually taken after student has been advanced to candidacy. S/U grading.

Scope and Objectives

Computer science is concerned with computer-related information processing, systems, and applications. Its study at UCLA provides education at the undergraduate and graduate levels necessary to understand, design, implement, and use the software and hardware of digital computers and digital systems. The programs provide comprehensive and strongly related studies of subjects in artificial intelligence, computer science theory, computer system architecture, computer network modeling and analysis, software systems, and scientific computing.

The undergraduate and graduate studies and research projects in computer science are supported by extensive computing resources. The Center for Experimental Computer Science (CECS) is comprised of nearly a dozen laboratories specializing in areas such as computer communications, VLSI design, and artificial intelligence. The Cognitive Systems Laboratory is engaged in studying computer systems which emulate or support human reasoning. The Biocybernetics Laboratory is devoted to multidisciplinary research involving the application of engineering and computer science methods to problems in biology and medicine.

The Bachelor of Science degree may be attained through the computer science and engineering program.

The School of Engineering and Applied Science offers M.S. and Ph.D. degrees in Computer Science, as well as minor fields for graduate students seeking engineering degrees. The Graduate School of Management and the Computer Science Department offer a concurrent degree program which enables students to obtain the M.S. in Computer Science and the M.B.A. (Master of Business Administration).

Bachelor of Science in Computer Science and Engineering

The computer science and engineering curriculum at UCLA provides the education and training necessary to design, implement, test, and utilize the hardware and software of digital computers and digital systems. This curriculum has major components from the Computer Science and Electrical Engineering Departments. Within the curriculum students study all

aspects of computer systems from electronic design, based on solid-state physics concepts, through logic design, integrated circuit selection and design, MSI, LSI, and VLSI concepts and device utilization, machine language design, implementation and programming, operating system concepts, system programming, higher-level language skills, and application of these systems. Students are prepared for employment in the high-technology industries which interface with information and digital systems.

The Major

Course requirements are as follows (188 minimum units required):

(1) Five core courses: Computer Science 11, 12, 13, 30, Electrical Engineering 103.

(2) Computer Science 130, 131, 141, 151A, 151B, 181, Electrical Engineering 111A, 115A, 115B, 115C; eight laboratory units (Computer Science 152A, 152B, 171L, and Electrical Engineering 100L); Civil Engineering 106A (satisfies the engineering economics requirement); Chemical Engineering M192A or Mechanical, Aerospace, and Nuclear Engineering M192A; one course in probability and statistics selected from Mathematics 152A, Electrical Engineering 131A, or Computer Science 112.

(3) Three elective courses from Computer Science 111 through 199 or Electrical Engineering 116, 121A, or 123A.

(4) English 3; Mathematics 31A, 31B, 32A, 32B, 33A, 33B, 61; Physics 8A/8AL, 8B/8BL, 8C/8CL, 8D/8DL; one life science course.

(5) Seven courses from the humanities, social sciences, and/or fine arts approved list (at least three must be upper division; at least three — with two upper division — must be in the same academic department or otherwise reflect coherence with respect to subject matter; and one must satisfy the engineering and science in society requirement).

(6) Three free elective courses.

Graduate Study

For information on graduate admission to the computer science program and requirements for the M.S. and Ph.D. degrees, see "Graduate Study" at the beginning of this chapter.

Computer Science Breadth Requirement

Candidates for the M.S. or Ph.D. degree in Computer Science must satisfy the computer science breadth requirement by the end of the fourth quarter in graduate residence at UCLA. This requirement is satisfied by mastering the contents of six undergraduate courses in computer science or related subjects selected from the following two groups:

Group 1 (four required courses or equivalent): Computer Science 141, 151A, 151B, 181.

Group 2 (two required courses or equivalent): Computer Science 111, 112, 130 or 131 or 132, 161 or 163, 171 or 174, 172 or 173 or 270A.

Competence in any or all courses may be demonstrated in one of three ways:

(1) Satisfactory completion of the course at UCLA with a grade of B – or better.

(2) Satisfactory completion of an equivalent course at another university with a grade of B – or better.

(3) Satisfactory completion of a final examination in the courses at UCLA.

In addition, students must complete Computer Science 201 with a grade of Satisfactory.

M.B.A./M.S.-Computer Science

The Department of Computer Science in the School of Engineering and Applied Science and the Graduate School of Management offer a concurrent degree program which enables students to complete requirements for the M.S. in Computer Science and the M.B.A. (Master of Business Administration) in three academic years. Students should request all application materials from the M.B.A. Admissions Office, Graduate School of Management.

Lower Division Courses

5. Computer Literacy and Appreciation. Lecture, three hours; laboratory, one hour. An introduction to computers for students without prior experience. Survey of computer technology, computer applications, and how machines represent and process information. The development, power, limitations, and social impact of modern computer systems. Mr. Bussell

10C. Introduction to Programming. (Formerly numbered Engineering 10C.) Lecture, four hours; recitation, two hours. Recommended for mathematics/computer science and engineering majors (emphasis on numerical problems). Open to graduate students on S/U grading basis only. Not open to students with credit for course 10F or former course 10S. Exposure to computer organization and capabilities. Basic principles of programming (using PASCAL as the example language): algorithmic, procedural problem solving. Program design and development. Control structures and data structures. Human factors in programming and program design.
Mr. Levine (F,W,Sp)

10F. Introduction to Programming/FORTRAN. (Formerly numbered Engineering 10F.) Lecture, four hours; recitation, two hours. Recommended for Chemical Engineering, Electrical Engineering, and Mechanical, Aerospace, and Nuclear Engineering Department majors (emphasis on numerical problems). Open to graduate students on S/U grading basis only. Not open to students with credit for course 10C or former course 10S. Description and use of FORTRAN programming language. Selected topics in programming techniques. Programming and running of several numeric problems.

11. Introduction to Computer Science I. Lecture, four hours; recitation, two hours. Limited to computer science and engineering majors. Open to graduate students on S/U grading basis only. Not open to students with credit for course 10C, 10F, former course 10S, or Program in Computing 10. Human factors in programming and program design. Exposure to computer organization and capabilities, data representation, professional ethics. Principles of programming (using PASCAL as the example language): algorithm design and procedural abstraction. Program design and development. Control structures and data structures. Mr. Martin (F)

12. Introduction to Computer Science II. Lecture, four hours; recitation, two hours. Prerequisite: course 11 or consent of instructor. Limited to computer science and engineering majors. Open to graduate students on S/U grading basis only. Internal data structures (e.g., lists, trees, queues) and associated algorithms, described by function and implementation, with examples in a very high-level language and an algorithmic language respectively (e.g., LISP and C). Sorting, searching, algorithm analysis, models of computation. Mr. Martin (W)

13. Introduction to Computer Science III. Lecture, four hours; recitation, two hours. Prerequisite: course 12 or consent of instructor. Limited to computer science and engineering majors. Open to graduate students on S/U grading basis only. Design and development of programs solving problems of intermediate complexity drawn from various disciplines, using high-level languages such as LISP and C. Software engineering, data abstraction, human-machine interface, external data structures. Survey of current topics in computer science. Mr. Martin (Sp)

30. Introduction to Computer Operating Systems. Lecture, four hours; laboratory, two hours. Prerequisite: course 20. Open to graduate students on S/U grading basis only. Introductory course on functions, design principles, and use of modern computer systems. Overview of batch and time-sharing systems. Functional description of assemblers, compilers, linkage editors, loaders. Job control language, overlays, file structures, buffering, protection. Assignments include problems on the computer and the design of simple O/S functions.
Mr. McNamee, Mr. Muntz (F,Sp)

99. Individual Programming Projects (2 to 4 units). Prerequisite: course 10C or consent of instructor. Intended for students wishing to learn individually new programming languages and for students wishing to make up deficiencies so as to bring them to the level of course 20. Students design, check-out, and run programs in various programming languages. Mr. Melkanoff

Upper Division Courses

111. Systems Programming. Lecture, four hours; laboratory, two hours. Prerequisites: courses 30, 141. Introduction to the design and performance evaluations of modern operating systems. Mapping and binding of addresses. The organization of multiprogramming and multiprocessing systems; interrupts, process model, and interlocks. Resource allocation models and the problem of deadlocks. Job control and system management.
Mr. Gerla, Mr. Muntz (F,Sp)

112. Computer System Modeling Fundamentals. Prerequisite: upper division standing. Basic tools necessary for performance evaluation and design of distributed computer systems, including such topics as sets, combinatorics, generating functions, probability theory, transforms, Markov chains, baby queueing theory, counting and graphs, network flow theory. Presentation of this set of tools in a fashion that is rich with examples from the computer systems field.
Mr. Kleinrock (F,Sp)

130. Software Engineering. Lecture, four hours; laboratory, two hours. Prerequisite: course 20. Structured programming, program proving, modularity, abstract data types, composite design, program testing, team programming. Mr. Berry (Sp)

131. Programming Languages. Lecture, four hours; recitation, two hours. Prerequisite: course 13 or former course 20. Study, comparison, and evaluation of programming languages, in particular ALGOL 60, ALGOL 68, PL/1, FORTRAN, and COBOL, the compiled languages which serve as the bases for most commercially available compiled languages in use today. Additional topics as set by instructor.
Mr. Berry (F,W,Sp)

132. Compiler Construction. Lecture, four hours; recitation, two hours. Prerequisites: courses 131, 141, 181. Compiler structure; lexical and syntactic analysis; semantic analysis and code generation; theory of parsing. Mr. Martin (Sp)

141. Basic Methods of Data Organization. Lecture, four hours; recitation, two hours. Prerequisite: course 13 or former course 20. Fundamental techniques for organizing and manipulating data, stressing relationships to performance, time/storage trade-offs. Sequential and linked storage allocation for linear lists, multilinked structures. Trees: implementation, traversals, mathematical properties. Graphs and networks: memory representation, algorithms. Dynamic storage allocation. Topics include sorting-searching, algorithmic analysis, graph theory, concepts underlying file management. Mr. Gerla, Mr. Klinger (F,W,Sp)

151A. Computer Architecture I. Lecture, four hours; recitation, two hours. Prerequisites: course 10C or 11, Physics 8C. Introduction to digital systems. Specification and implementation of combinational and sequential systems. SSI/MSI/LSI standard modules and their use in digital systems. Specification and implementation of algorithmic systems. Modules for the data and control sections. Hardwired and microprogrammed approaches. Arithmetic algorithms and their implementation.
Mr. Ercegovac, Mr. Rennels (F,W,Sp)

151B. Computer System Architecture II (Intermediate). Lecture, four hours; recitation, two hours. Prerequisite: course 151A. Corequisite for mathematics/computer science majors and engineering undergraduates specializing in computer science and engineering: course 152B. Formal description of machine organization. Effects on machine organization of instruction sets and formats; addressing structures; memory organization and management; control sequence generator; I/O processing and interrupts; reliability aspects.
Mr. Bussell, Mr. Ercegovac (F,W,Sp)

151C. Design of Digital Systems. Prerequisites: courses 151A, 151B, 152A. Design of complex digital systems using hierarchial approaches and regular structures. Combinational, sequential, and algorithmic systems. Microprogramming and firmware engineering. Cost/performance measures and technology constraints. Use of design tools. Design project.
Mr. Ercegovac, Mr. Lang (Sp)

152A. Introductory Digital Circuits Laboratory (2 units). Prerequisite: course 10C. Corequisite: course 151A. Familiarization with design and interconnection of logic circuits and networks through implementation and debugging procedures, including experience with printed circuit design.
Mr. Bussell, Mr. Rennels (F,W,Sp)

152B. Digital Systems Laboratory (2 units). Corequisite: course 151B. A computer-based laboratory which probes computer architecture through construction simulation and measurement of digital subsystems. Mr. Bussell, Mr. Rennels (F,W,Sp)

161. Fundamentals of Artificial Intelligence. Lecture, four hours; laboratory, two hours. Prerequisites: courses 130 or 131, and 141, consent of instructor. Introduction to artificial intelligence. Knowledge representation, functional and logic programming, machine learning, survey of topics in robot microworlds, vision, automatic programming, expert systems, and cognitive modeling. Mr. Dyer, Ms. Flowers (Sp)

163. Introduction to Natural Language Processing. Lecture, four hours; laboratory, two hours. Prerequisites: courses 130 or 131, and 141, consent of instructor. Role of syntax, semantics, and pragmatics in human language processing by computers. Natural language generators and parsers, inference, and conceptual analysis. Modeling conceptual processes and representing semantic knowledge by means of computer problems. Mr. Dyer, Ms. Flowers (W)

168. Computer Vision. Prerequisites: courses 161, 170 or Electrical Engineering 102, 171, consent of instructor. Use of computational aspects of processing visual information to present a unified treatment of early vision, allowing transfer of concepts from analysis of natural vision to synthesis of machine vision. The extraction, processing the manipulation of image attributes. Their organization into data structures and processing by dedicated computing architectures. Issues in image segmentation based on aggregation of the feature descriptions.
Mr. Skrzypek (Sp)

168L. Computer Vision Laboratory (2 to 4 units). Laboratory, four hours. Prerequisites: course 168, senior standing, consent of instructor. Image acquisition, storage, processing, and analysis. Design and implementation of algorithms for low-level vision. Experiments in motion, texture, color, edge detection, binary and gray-level images. Scheme-based personal computer vision station. Mr. Skrzypek (W)

170. Basic Methodologies for Computer Modeling and Analysis of Dynamic Systems. Prerequisites: Mathematics 33A, 33B. An introduction to computer-oriented techniques for modeling and analysis of systems which evolve with time, with emphasis on examples from social and life sciences. Linearity, impulse responses, stability, state variables, algorithms for filtering and control. Mr. Aoki (W)

C170L. Biocybernetics Research Laboratory (2 to 4 units). Lecture, one or two hours; laboratory, two to four hours; recitation, one to two hours. Prerequisites: course M196B, consent of instructor. Interdisciplinary experimental laboratory techniques. Care, use, and design of laboratory instrumentation. Specialized research hardware, software, and computers. Laboratory automation. Comprehensive experiment design, including simulation. Radioactive isotope use and safety. Experimental animals, controls, and kinetic stimulus-response experiments. Concurrently scheduled with course C270L. Mr. DiStefano (F,W,Sp)

171. Real-Time Computer Systems. Prerequisite: senior standing or consent of instructor. A survey of fundamentals, with emphasis on hardware and systems concepts. Adapting digital computers to interfaces, including multiprogramming, interrupt, and time-sharing considerations. Digital communication, remote consoles, sampling, quantizing, multiplexing, analog-digital conversation, and data reconstruction.
Mr. Karplus, Mr. Levine (F,W,Sp)

171L. Real-Time Systems Laboratory (2 to 4 units). Laboratory, four to eight hours. Prerequisites: senior standing, consent of instructor. Recommended: courses 171 (may be taken concurrently), 152A. Tests and measurements of digital and analog signals and systems as encountered in data acquisition, on-line computing, telecommunication facilities, terminals, modems, interfaces, and standards (e.g., RS 232, IEEE488). May be repeated for credit with consent of instructor. Mr. Carlyle (F,W,Sp)

172. Simulation and Models. Prerequisite: course 20. Model formulation and programming for discrete event systems in simulation languages (e.g., GPSS, SIMSCRIPT). The simulation data base and considerations for language development. Statistical considerations: design of experiments, random number generation, analysis of model results. Computer exercises. Mr. Karplus, Mr. McNamee (F)

173. Random Data Analysis and Measurement Procedures. Prerequisite: Electrical Engineering 102. Practical aspects of random data analysis and measurement procedures. Statistical properties of random data, correlation, spectral density, input/output relationships, statistical errors, coherence functions, data acquisition, and processing techniques.
Mr. McNamee

174. Elements of Computer Graphics. Lecture, three hours; laboratory, one hour. Prerequisites: courses 131, 141, and 171, or consent of instructor. Hardware and software elements of computer graphics systems, including problems of intelligent terminals, communications, and graphics languages. Application areas and cost effective uses of interactive graphics. Design and development of interactive graphics programs to solve representative problems in various application areas. Mr. Vidal (F,Sp)

181. Introduction to Formal Languages and Automata Theory. Lecture, four hours; recitation, two hours. Prerequisite: senior standing or consent of instructor. Grammars, automata, and languages. Finite-state languages and finite-state automata. Context-free languages and pushdown store automata. Unrestricted rewriting system (i.e., languages and Turing machines). Introduction to computability and decision problems. Ms. Greibach (F,W,Sp)

183. Discrete Systems and Automata. Prerequisite: two quarters of lower division mathematics or comparable experience with mathematical ideas, such as in linguistics or basic courses in logic or computer programming. An introductory course emphasizing finite-state systems: graphs, machines, languages, regular expressions, coding, computing; memory, system identification, diagnosis; design considerations. Mr. Carlyle

196A. Introduction to Bioengineering and Cybernetics (2 units). (Formerly numbered Engineering 196A.) Prerequisite: calculus. Strongly recommended for students with a potential interest in bioengineering or cybernetics as a major. Introductory survey of topics in bioengineering and cybernetics disciplines. Lectures presented by faculty currently performing research in one of the areas; some sessions include laboratory tours. P/NP grading.
Mr. DiStefano (F)

M196B. Modeling and Simulation of Biological Systems. (Formerly numbered Engineering M196B.) (Same as Medicine M196B.) Lecture, four hours; laboratory, two hours. Prerequisite: calculus. Introduction to classical and modern systems and modeling and simulation methods for studying biological systems. Multicompartmental modeling, multi-exponential curve fitting, and simulation laboratory projects. Applications in physiology and medicine. Life science and medical students are encouraged to enroll.
Mr. DiStefano (F,Sp)

199. Special Studies (2 to 8 units). Prerequisites: upper division standing, consent of instructor. Individual investigation of a selected topic to be arranged with a faculty member. Enrollment request forms available in department office. Occasional field trips may be arranged. May be repeated for credit.
(F,W,Sp)

Graduate Courses

201. Computer Science Seminar (2 units). Prerequisite: graduate standing in computer science. Lectures on current research topics in computer science. May be repeated for credit. S/U grading.
(F,W,Sp)

202. Advanced Computer Science Seminar. Prerequisite: completion of major field examination in computer science or consent of instructor. Current computer science research into theory of, analysis and synthesis of, and applications of information processing systems. Each member completes one tutorial and one or more original pieces of work in the specialized area. May be repeated for credit.
Mr. Estrin

212A. Queueing Systems Theory. Prerequisites: course 112 and Electrical Engineering 131A, or consent of instructor. Resource sharing issues and the theory of queueing (waiting-line) systems. Review of Markov chains and baby queueing theory. Method of stages. $M/E_r/1$. $E_r/M/1$. Bulk arrival and bulk service systems. Series-parallel stages. Fundamentals of open and closed queueing networks. Intermediate queueing theory: M/G/1; G/M/m. Collective marks. Advanced queueing theory: G/G/1; Lindley's integral equation; spectral solution. Inequalities, bounds, approximations. Mr. Kleinrock (W)

212B. Queueing Applications: Scheduling Algorithms and Queueing Networks. Prerequisite: course 212A. Priority queueing. Applications to time-sharing scheduling algorithms: FB, Round Robin, Conservation Law, Bounds. Queueing networks: definitions; job flow balance; product form solutions — local balance, $M \rightarrow M$; computational algorithms for performance measures; asymptotic behavior and bounds; approximation techniques — diffusion — iterative techniques; applications.
Mr. Kleinrock, Mr. Muntz (W)

214. Data Transmission in Computer Communications. Prerequisites: course 112, graduate standing in computer science. Discrete data streams, formats, rates, transductions; digitial data transmissions via analog signaling in computer communication; media characteristics, systems methodologies, performance analysis; modem designs; physical interfaces in computer communication links; national/international standards; tests and measurements.
Mr. Carlyle

215. Computer Communications and Networks. Prerequisite: course 112. Resource sharing; computer traffic characterizations; multiplexing; network structure; packet switching and other switching techniques; the ARPANET and other computer network examples; network delay and analysis; network design and optimization; network protocols; routing and flow control; satellite and ground radio packet switching; local networks; commercial network services and architectures. Optional topics include extended error control techniques; modems; SDLC, HDLC, X.25, etc.; protocol verification; network simulation and measurement; integrated networks; communication processors. Mr. Chu, Mr. Kleinrock (F,Sp)

216. Distributed Multiaccess Control in Networks. Prerequisites: courses 212A, 215. Topics from the field of distributed control and access in computer networks, including terrestrial distributed computer networks; satellite packet switching; ground radio packet switching; local network architecture and control. Mr. Kleinrock (W,Sp)

218A. Network Protocol and Processor Design. Prerequisite: course 112. Recommended: course 215. Computer network architecture review. Protocol levels: subnet, network access, transport, application. Protocol specification and verification. Network processor architectures (single processor; multiprocessor). Task partitioning. Performance models (throughout, delay, reliability). Mr. Gerla (W)

219. Current Topics in Computer System Modeling Analysis (2 to 12 units). Prerequisite: consent of instructor. Review of current literature in an area of computer system modeling analysis in which the instructor has developed special proficiency as a consequence of research interests. Students report on selected topics. May be repeated for credit with consent of instructor.

221. Economics of Computers. Prerequisite: consent of instructor. Basic economic factors in data processing. Buyers and sellers; products; applications; major cost factors. Selection and operation of a data processing system. Mr. Melkanoff (W)

M222. Control and Coordination in Economics. (Formerly numbered System Science M222G.) (Same as Economics M240.) Prerequisites: graduate standing in economics or engineering, consent of instructor. Recommended: appropriate mathematics course. Stabilization policies, short- and long-run dynamics and stability analysis; decentralization, coordination in teams; certainty equivalence and separation theorems; stochastic and learning models. Bayesian approach to price and output rate adjustment. Mr. Aoki

231A. Advanced Topics in Programming Languages. Prerequisite: course 131. Presentation, analysis, and discussion of specialized programming languages, new higher-level languages, and new and/or advanced features of programming languages. Mr. Melkanoff (Sp)

231B. Advanced Topics in Computer Language Design. Prerequisites: courses 132, 141, 181, 232A, 232B. Treatment of current topics in computer language, including design goals of modern languages, levels of abstraction, methodologies for standardization, and proposals for new problem-oriented and extensible languages. Enrollment limited to allow individual application of language design principles.
(W)

232A. Operational Semantics of Programming Languages. Prerequisites: courses 131, 181 (may be taken concurrently). Interpreter models of programming language semantics: information structure models, Vienna definition language, lambda calculus, LISP definition, interpreter equivalence and correctness. Mr. Berry (F)

232B. Semantics of Programming Languages. Prerequisite: course 181 or equivalent or consent of instructor. Syntax-directed semantics of context-free languages. Knuthian semantic systems (K-systems) and their mathematical formulation. K-system formulation of programming language semantics; translational and denotational semantics. Properties of K-systems; equivalence of K-systems. Applications of current research interest. Mr. Martin (F)

234A. Correctness Proofs. Prerequisite: consent of instructor. Theoretical and practical aspects of correctness proofs. Partial correctness, total correctness, and termination. Axiomatic semantics and proof systems. Abstraction and correctness of implementations. Formulation, execution, and assessment of correctness proofs. Topics of current research interest. Mr. Martin (Sp)

234C. High-Level Language Computer Architecture. Prerequisites: courses 131, and 232A or 232B. A study of machine architectures to facilitate direct or nearly direct execution of high-level languages: ALGOL-like machines, including Burroughs B6700, microprogramming and microprogrammable machines, measurements and their use in architecture design. Mr. Berry

239. Current Topics in Computer Science: Programming Languages and Systems (2 to 12 units). Lecture, four hours. Prerequisite: consent of instructor. Review of current literature in an area of computer science programming languages and systems in which the instructor has developed special proficiency as a consequence of research interests. May be repeated for credit with topic change.

241AL. Data Management Systems (6 units). (Formerly numbered 241A.) Lecture, four hours; laboratory, two hours. Prerequisites: courses 131, 141, or equivalent. File management in programming languages, storage devices, and operating systems. Secondary index organizations. Data base systems architecture, design, and models (network, hierarchic, and relational). Logical and physical structures. Query languages. Commercial data base systems. Data base design, performance, security, and integrity. Mr. Cardenas, Mr. Muntz, Mr. Popek (F,W,Sp)

241B. Data Base, Software, and Information Systems. Prerequisites: course 131 or Management 113B, course 241AL, or equivalent. Data base systems technology. Application program development technology. Information system development cycle and methodology. Systems analysis. Feasibility and cost/effectiveness studies. Software architecture, management, costing. Automated program and data base generation. Problem statement languages. Various topics at instructor's discretion, emphasizing data base technology. Mr. Cardenas (W)

242A. Privacy and Security in Computer Information Systems. Prerequisite: course 111 or consent of instructor. Analysis of the technical difficulties of producing secure computer information systems that provide guaranteed controlled sharing, with emphasis on software models and design. Examination and critique of current systems and practices. Possible certifiability of such systems. Relevant social issues.
Mr. Popek

243A. Relational Data Bases. Prerequisites: courses 131, 141. The relational model of data: definition and operations; relational languages. Relational data bases: experimental and commercial; design methodology. Mr. Parker (W)

243B. Abstract Data Types and Program Specification. Prerequisites: courses 141, 181. The notions of abstract data type and abstract program specification permit one to understand how programs manipulate data, independently of their implementations. These notions also give powerful techniques for program structuring and verification. Programming exercises.

249. Current Topics in Data Structures (2 to 12 units). Prerequisite: consent of instructor. Review of current literature in an area of data structures in which the instructor has developed special proficiency as a consequence of research interests. Students report on selected topics. May be repeated for credit with consent of instructor.

251A. Advanced Computer Architecture. Prerequisites: courses 111, 151A, and 151B, or consent of instructor. Functional and structural models of computer systems. Architecture and organization at microprogramming, machine language, and operating system level. Processor organization and system control. Arithmetic processors: algorithms and implementation. Storage system organization: hierarchy and management. Communication organization and control. Mr. Ercegovac, Mr. Rennels (F,W)

252A. Computer System Design: Arithmetic Processors. Prerequisite: course 251A or consent of instructor. Concepts of number systems, digital numbers, algorithms; logic and organization of digital arithmetic processors; conventional arithmetic; algorithm acceleration; floating-point and significance arithmetics; redundant, signed-digit, residue number systems; error detecting codes for digital arithmetic; algorithm evaluation by analysis and simulation.
Mr. Avizienis, Mr. Ercegovac (W)

253A. Computer System Design: Fault Tolerance. Prerequisite: course 251A. Specification of fault-tolerance: fault classes, measures of reliability. Fault masking, fault detection, and system recovery algorithms. Methodology of implementation. Analytic modeling and evaluation. Design of fault-tolerance systems. Tolerance of man-made faults. Fault-tolerant software. Mr. Avizienis, Mr. Rennels (W)

253B. Advanced Topics in Fault-Tolerant Computing. Prerequisite: course 253A. Analysis and discussion of the modeling, design, and evaluation of fault-tolerant computer systems. Emphasis on current research results and new systems in the stages of design and development. May be repeated for credit with topic change. Mr. Avizienis, Mr. Rennels (Sp)

254A. Computer Memories and Memory Systems. Prerequisite: course 251A or consent of instructor. Generic types of memory systems; control, access modes, hierarchies, and allocation algorithms. Characteristics, system organization, and device considerations of ferrite memories, thin film memories, and semiconductor memories.
Mr. Chu, Mr. Rennels (F)

255A. Distributed Processing and Distributed Data Base System. (Formerly numbered 255B.) Prerequisite: course 241AL or 251A. Interprocess communications, bus structures. Task partitioning and allocation, precedence relationship, response time models, microprocessor-based distributed processing system, system reconfiguration, error recovery. File allocation, directory design, deadlock, synchronization, commit protocols, query optimization, data translation. Examples, design, and trade-offs.
Mr. Chu (W)

256A. Interactive Computer Graphics. Prerequisite: course 174 or equivalent. Current topics in interactive computer graphics system design, development, and applications. Mr. Bussell (Sp)

257A. Computer System Design: Comparative Architecture and Synthesis Methods. Prerequisite: course 252A. Advanced topics in computer system architecture. Important properties of computer systems and methods for modeling, evaluating, and synthesizing them. Mr. Estrin (W)

M258A. LSI in Computer System Design. (Formerly numbered M258A-M258B-M258C.) (Same as Electrical Engineering M216A.) Lecture, four hours; laboratory, four hours. Prerequisites: graduate standing in computer science or electrical engineering, consent of instructor. LSI/VLSI design and application in computer systems. Fundamental design techniques that can be used to implement complex integrated systems on a chip.
Mr. Avizienis, Mr. Viswanathan (F,W)

M258B-M258C. LSI in Computer System Design. (Formerly numbered M258A-M258B-M258C.) (Same as Electrical Engineering M216B-M216C.) Lecture, four hours; laboratory, four hours. Prerequisite: course M258A. LSI/VLSI design and application in computer systems. In-depth studies of VLSI architectures and VLSI design tools. In Progress grading.
Mr. Avizienis, Mr. Viswanathan
(W, M258B; Sp, M258C)

259. Current Topics in Computer Science: System Design/Architecture (2 to 12 units). Lecture, four hours. Prerequisite: consent of instructor. Review of current literature in an area of computer science system design in which the instructor has developed special proficiency as a consequence of research interests. Students report on selected topics. May be repeated for credit with topic change.

263A. Language and Thought. Prerequisite: consent of instructor. Recommended: understanding of LISP. Introduction to natural language processing. Representation and manipulation of conceptualizations underlying processes of thought for natural language comprehension and generation. Process models of story comprehension, question answering, paraphrasing, machine translation. Conceptual dependency theory, scripts, plans, goals, expectation-based parsing. Mr. Dyer, Ms. Flowers (F or W)

263B. Language and Memory. Prerequisites: course 263A, knowledge of LISP or PROLOG. Recommended: course 264A. Advanced natural language processing. Emphasis on organization of human memory for language comprehension. Episodic and semantic memory. Subjective understanding and modeling ideologies. Language acquisition, processes of generalization during comprehension. Cross-contextual remindings and thematic abstraction.
Mr. Dyer, Ms. Flowers (W or Sp)

264A. Artificial Intelligence Programming I. Prerequisite: consent of instructor. Recommended: knowledge of LISP or PROLOG. Introduction to tools, techniques, and issues in artificial intelligence programming. Functional programming for artificial intelligence applications. Review of LISP and introduction to lexically scoped LISPs (e.g., T, Scheme). Lambda calculus, closures, data-driven and object-oriented programming, flavors, d-nets, resolution-based deductive systems. Mr. Dyer, Ms. Flowers (F,W)

264B. Artificial Intelligence Programming II. Prerequisite: course 264A or consent of instructor. Techniques of logic programming. Artificial intelligence programming languages (e.g., PROLOG, AMORD, DUCK, CONNIVER, PLANNER, QA4, KRL, ACTORS, etc.) and artificial intelligence features (e.g., nonmonotonic logics, data-dependencies for truth maintenance, meta-rules, semantic networks, frame-based systems). Mr. Dyer, Ms. Flowers (W or Sp)

265A. Machine Learning. Prerequisites: courses 263A, 264A, consent of instructor. Introduction to machine learning. Learning by analogy, inductive learning, modeling creativity, learning by experience, role of episodic memory organization in learning. Examination of BACON, AM, EURISKO, HACKER, teachable production systems. Failure-driven learning.
Mr. Dyer, Ms. Flowers (W or Sp)

269. Seminar: Current Topics in Artificial Intelligence (2 to 4 units). Prerequisite: consent of instructor. Review of current literature and research practicum in an area of artificial intelligence in which the instructor has developed special proficiency as a consequence of research interests. Students report on selected topics. May be repeated for credit with topic change.

270A. Computer Methodology: Advanced Numerical Methods. Prerequisites: graduate standing in computer science or engineering, Electrical Engineering 103 or Mathematics 141B or comparable experience with numerical computing. Principles of computer treatment of selected numerical problems in algebraic and differential systems, transforms and spectra, data acquisition and reduction; emphasis on concepts pertinent to modeling and simulation and the applicability of contemporary developments in numerical software. Computer exercises.
Mr. Carlyle, Mr. Karplus (F,Sp)

270B. Analytical and Computational Methods for Modeling and Optimization of Dynamic Systems. Prerequisite: course 170 or equivalent. Recommended: intermediate-level knowledge of linear algebra. Development of analytical and computer-aided analysis and design tools for modeling, decision analysis, and optimization of dynamic systems. Linear and nonlinear system methods, model selection and simplification, sensitivity analysis, least squares and Kalman filtering, and optimal control algorithms.
Mr. Aoki, Mr. DiStefano (W)

M270C. Modeling Methodology for Biomedical Systems. (Formerly numbered M296A.) (Same as Medicine M270C.) Prerequisite: course 270B or Electrical Engineering 142 or Mathematics 115A or Mechanical, Aerospace, and Nuclear Engineering 171C or equivalent. Foundations of multicompartmental, noncompartmental, and dynamic system modeling methods. Special emphasis on their applications and limitations in the biomedical sciences and other limited data environments. Models for experiment design, data analysis, basic studies of mechanism, and control (therapy) of biomedical processes. Model parameter estimation algorithms. Mr. DiStefano (F)

M270D. Optimal Experiment Design and Control for Biological and Other Dynamic Systems. (Formerly numbered M296B.) (Same as Biomathematics M270 and Medicine M270D.) Prerequisites: courses 270B and M270C, or consent of instructor. Theory and algorithms for designing optimal experiments for quantifying or optimal inputs for controlling dynamic systems in engineering and life sciences. Optimal sampling schedules for parameter estimation. Control optimization and variations for designing optimal test-inputs. Algorithms, software, and applications in medicine and engineering. Mr. DiStefano (W)

M270E. Advanced Topics and Research in Biocybernetics. (Formerly numbered M296C.) (Same as Medicine M270E.) Prerequisite: course M270C or consent of instructor. Recommended: course M270D. Research techniques and experience on special topics involving models, modeling methods, or experiments in the biological and medical sciences. Review and critique of the literature. Research problem formulation. Solution methods. Individual student projects. M.S. and Ph.D. thesis preparation.
Mr. DiStefano (Sp)

C270L. Biocybernetics Research Laboratory (2 to 4 units). Lecture, one to two hours; laboratory, four to eight hours; recitation, one to two hours. Prerequisites: course M196B, consent of instructor. Interdisciplinary experimental laboratory techniques. Care, use, and design of laboratory instrumentation. Specialized research hardware, software, and computers. Laboratory automation. Comprehensive experiment design, including simulation. Radioactive isotope use and safety. Experimental animals, controls, and kinetic stimulus-response experiments. Concurrently scheduled with course C170L.
Mr. DiStefano (F,W,Sp)

271A. Computer Methodology: Continuous Systems Simulation. Prerequisites: course 171, Electrical Engineering 103. The organization, operation, and areas of application of analog-digital computer systems. Error analysis, numerical analysis aspects, digital simulation languages for continuous systems characterized by ordinary differential equations.
Mr. Karplus, Mr. Levine (W)

271B. Computer Methodology: Distributed Parameter Systems. Prerequisite: Electrical Engineering 103. A survey of the mathematical formulation and computer solution of engineering field problems governed by partial differential equations. Emphasis on digital simulation methods, including finite difference approximations, Monte Carlo methods, and the use of modern problem-oriented languages.
Mr. Karplus, Mr. Vidal (F)

271C. Seminar in Advanced Simulation Methods (2 units). Prerequisite: course 271A or equivalent. Discussion of advanced topics in the simulation of systems characterized by ordinary and partial differential equations. Topics include (among others) simulation languages, dataflow machines, array processors, and advanced mathematical modeling techniques. Topics vary each quarter. May be repeated for credit. S/U grading. Mr. Karplus (F,W,Sp)

273A. Digital Processing of Engineering and Statistical Data. Prerequisite: course 173. Computer methods for processing engineering and statistical data. Algorithms to evaluate recursive filter functions, Fourier series, power spectral, analysis correlation computations, and statistical testing.
Mr. McNamee (W)

274A. Problem Solving and Decision Making. (Formerly numbered M274A.) Prerequisite: Mechanical, Aerospace, and Nuclear Engineering 193A or equivalent. Formal models of problem structures. Heuristic techniques for mechanized problem solving. Foundations of quantitative coding of qualitative information. Theories of subjective probabilities and utility. Relation between artificial intelligence and decision analysis. Information processing models of human decision making and problem-solving behavior.
Mr. Pearl (F)

274B. Knowledge-Based Systems. (Formerly numbered M274B.) Prerequisite: course 274A or 277A or consent of instructor. Machine representation of judgmental knowledge and uncertain relationships. Inference on inexact knowledge bases. Rule-based systems — principles, advantages, and limitations. Signal understanding. Automated planning systems. Knowledge acquisition and explanation producing techniques. Mr. Pearl (W)

274C. Computer Methods of Data Analysis and Model Formation. (Formerly numbered M274C.) Prerequisite: Mechanical, Aerospace, and Nuclear Engineering 193A or Electrical Engineering 131A or equivalent or consent of instructor. Techniques of using computers to interpret, summarize, and form theories of empirical observations. Mathematical analyses of trade-offs between the computational complexity, storage requirements, and precision of computerized models. Mr. Pearl

274Z. Current Topics in Cognitive Systems. (Formerly numbered M274Z.) Prerequisites: consent of instructor, additional prerequisites for each offering as announced in advance by the department. Theory and implementation of systems which emulate or support human reasoning. Current literature and individual studies in artificial intelligence, knowledge-based systems, decision support systems, computational psychology, and heuristic programming theory. May be repeated for credit with topic change.
Mr. Pearl (W)

275A. Information Processes in Nervous Systems. Prerequisite: consent of instructor. Conceptual discussion of acquisition and transfer of information in the nervous system and of the role of computers in the analysis and interpretation of neurophysiological data. Mr. Vidal (W)

276A. Pattern Analysis and Machine Intelligence. Prerequisites: graduate standing, consent of instructor. Fundamentals of pattern recognition, feature extraction and selection, autonomous learning, clustering, and machine intelligence. Mr. Klinger

276B. Structured Computer Vision. Prerequisites: graduate standing, consent of instructor. Methods for computer processing of image data. Systems, concepts, and algorithms for image analysis, radiologic and robotic applications. Mr. Klinger

276C. Speech and Language Communication in Artificial Intelligence. Prerequisite: course 276A or 276B or consent of instructor. Topics in human-computer communication: interaction with pictorial information systems, sound and symbol generation by humans and machines, semantics of data, systems for speech recognition and understanding. Use of speech and text for computer input and output in applications. Mr. Klinger

277A. Heuristic Programming and Artificial Intelligence. Prerequisite: course 131 or 181 or consent of instructor. Principles underlying the use of computers to perform tasks generally agreed to require some intelligence. Development of an understanding of current research regarding the possibilities and limitations of existing experiments in automating intelligent behavior. Mr. Klinger, Mr. Pearl (F)

279. Current Topics in Computer Science: Methodology (2 to 12 units). Lecture, four hours. Prerequisite: consent of instructor. Review of current literature in an area of computer science methodology in which the instructor has developed special proficiency as a consequence of research interests. Students report on selected topics. May be repeated for credit with topic change.

280A-280ZZ. Algorithms. Prerequisites: consent of instructor, additional prerequisites for each offering as announced in advance by the department. Selections from design, analysis, optimization, and implementation of algorithms; computational complexity and the general theory of algorithms; algorithms for particular application areas. Subtitles of some current sections: Principles of Design and Analysis (280A); Graphs and Networks (280G). May be repeated for credit with consent of instructor and with topic change. Ms. Greibach (Sp)

281A. Computability and Complexity. Prerequisite: course 181 or compatible background. Concepts fundamental to the study of discrete information systems and theory of computing, with emphasis on regular sets of strings, Turing-recognizable (recursively enumerable) sets, closure properties, machine characterizations, nondeterminisms, decidability, unsolvable problems, "easy" and "hard" problems, PTIME/NPTIME. Ms. Greibach, Mr. Parker (F)

281D. Discrete State Systems. Prerequisite: consent of instructor. Recommended: course 181. Finite-state machines, transducers, and their generalizations; regular expressions, transduction expressions, realizability; decomposition, synthesis, and design considerations; topics in state and system identification and fault diagnosis, linear machines, probabilistic machines, applications in coding, communication, computing, system modeling, and simulation.
Mr. Carlyle

284A-284ZZ. Topics in Automata and Languages. Prerequisites: course 181, additional prerequisites for each offering as announced in advance by the department. Selections from families of formal languages, grammars, machines, operators; pushdown automata, context-free languages and their generalizations, parsing; multidimensional grammars, developmental systems; machine-based complexity. Subtitles of some current and planned sections: Context-Free Languages (284A), Parsing Algorithms (284P). May be repeated for credit with consent of instructor and with topic change. Ms. Greibach

287A. Theory of Program Structure. Prerequisite: course 181. Models of computer programs and their syntax and semantics; emphasis on programs and recursion schemes; equivalence, optimization, correctness, and translatability of programs; expressive power of program constructs and data structures; selected current topics. Ms. Greibach (F)

288S. Seminar in Theoretical Computer Science (2 units). Prerequisites: courses 280A, 281A, consent of instructor. Intended for students undertaking thesis research. Discussion of advanced topics and current research in such areas as algorithms and complexity models for parallel and concurrent computation, and formal language and automata theory. May be repeated for credit. S/U grading.
Ms. Greibach (F,W,Sp)

289A-289ZZ. Current Topics in Computer Theory (2 to 12 units each). Prerequisite: consent of instructor. Review of current literature in an area of computer theory in which the instructor has developed special proficiency as a consequence of research interests. Students report on selected topics.

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. A teaching apprenticeship under the active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.
Mr. Avizienis (F,W,Sp)

497D-497E. Field Projects in Computer Science. Prerequisite: consent of instructor. Students are divided into teams led by the instructor; each team is assigned an external company or organization which they investigate as a candidate for possible computerization, submitting a team report of their findings and recommendations. In Progress grading.
Mr. Cardenas, Mr. Melkanoff

596. Directed Individual or Tutorial Studies (2 to 8 units). Prerequisites: graduate standing in computer science, consent of instructor. Petition forms to request enrollment may be obtained from the Assistant Dean, Graduate Studies. Supervised investigation of advanced technical problems. S/U grading.

597A. Preparation for M.S. Comprehensive Examination (2 to 12 units). Prerequisites: graduate standing in computer science, consent of instructor. Petition forms to request enrollment may be obtained from the Assistant Dean, Graduate Studies. Reading and preparation for M.S. comprehensive examination. S/U grading.

597B. Preparation for Ph.D. Preliminary Examinations (2 to 16 units). Prerequisites: graduate standing in computer science, consent of instructor. Petition forms to request enrollment may be obtained from the Assistant Dean, Graduate Studies. S/U grading.

597C. Preparation for Ph.D. Oral Qualifying Examination (2 to 16 units). Prerequisites: graduate standing in computer science, consent of instructor. Petition forms to request enrollment may be obtained from the Assistant Dean, Graduate Studies. Preparation for oral qualifying examination, including preliminary research on dissertation. S/U grading.

598. Research for and Preparation of M.S. Thesis (2 to 12 units). Prerequisites: graduate standing in computer science, consent of instructor. Petition forms to request enrollment may be obtained from the Assistant Dean, Graduate Studies. Supervised independent research for M.S. candidates, including thesis prospectus. S/U grading.

599. Research for and Preparation of Ph.D. Dissertation (2 to 16 units). Prerequisites: graduate standing in computer science, consent of instructor. Petition forms to request enrollment may be obtained from the Assistant Dean, Graduate Studies. S/U grading.

Economics/System Science
(Interdepartmental)

For details on this undergraduate program, see Chapter 5 on the College of Letters and Science.

Electrical Engineering

7732 Boelter Hall, (213) 825-2647

Professors

Nicolaos G. Alexopoulos, Ph.D.
Frederick G. Allen, Ph.D., *Chair*
A.V. Balakrishnan, Ph.D.
Francis F. Chen, Ph.D.
Robert S. Elliott, Ph.D.
Harold R. Fetterman, Ph.D.
A. Theodore Forrester, Ph.D.
Stephen E. Jacobsen, Ph.D.
Nhan Levan, Ph.D.
Neville C. Luhmann, Jr., Ph.D.
Jimmy K. Omura, Ph.D.
H. J. Orchard, M.Sc.
Izhak Rubin, Ph.D.
Frederick W. Schott, Ph.D.
Oscar M. Stafsudd, Jr., Ph.D.
Gabor C. Temes, Ph.D.
Chand R. Viswanathan, Ph.D.
Kang-Lung Wang, Ph.D.
Paul K.C. Wang, Ph.D.
Donald M. Wiberg, Ph.D.
Alan N. Willson, Jr., Ph.D.
Kung Yao, Ph.D., *Assistant Dean*
Cavour W. Yeh, Ph.D.
Louis L. Grandi, M.S., *Emeritus*
William D. Hershberger, Ph.D., *Emeritus*
Ellis F. King, M.S., *Emeritus*

Associate Professors

Kenneth W. Martin, Ph.D.
Richard E. Mortensen, Ph.D.
Dee-Son Pan, Ph.D.
Jack Willis, B.Sc.

Assistant Professors

Asad A. Abidi, Ph.D.
Richard L. Baker, Ph.D.
Henry Samueli, Ph.D.
Denham S. Ward, M.D., Ph.D.

Adjunct and Visiting Professors
Ezio Biglieri, Dr.Eng., *Visiting*
Paul T. Greiling, Ph.D., *Adjunct*
William A. Peebles, Ph.D., *Adjunct*

Adjunct Associate Professors
James B. Forsythe, Ph.D.
Kenneth W. Iliff, Ph.D.
Chandrashekhar J. Joshi, Ph.D.
Siegfried G. Knorr, Ph.D.
George J. Ruzicka, Ph.D.
Joel N. Schulman, Ph.D.

Adjunct Assistant Professor
Mohammed Hamami, Ph.D.

Visiting Lecturers
Hassan Babaie, Ph.D.
Dariush Divsalar, Ph.D.
Paul T. Greiling, Ph.D.
Richard J. Hillestad, Ph.D.
Ziauddin Khawza, Ph.D.
Eugene H. Kopp, Ph.D.
Simon M. Law, M.S.
Donald C. Mayer, Ph.D.
Farid Mesghali, Ph.D.
Bernard Sklar, Ph.D
Vance C. Tyree, M.S., *Senior*
Mostafa R. Yazdy, Ph.D.
Mehrdad Zomorrodi, Ph.D.

Scope and Objectives

The Electrical Engineering Department emphasizes teaching and research in a variety of fields ranging from telecommunications and fiber optics to solid-state devices, circuits, materials growth, quantum electronics, antenna design, electromagnetics, digital systems, plasma diagnostics, and millimeter wave technology. In each of these fields, the department has state-of-the-art research programs exploring exciting new developments and is organized into nine major fields of study. Undergraduate students receive a B.S. degree in Electrical Engineering. Graduate research and training programs leading to the M.S. and Ph.D. degrees are also offered.

Laboratories are available for research in the following areas: analog and digital electronics, hybrid integrated circuits, integrated semiconductor devices, microwaves and millimeter waves, fiber optics, lasers and quantum electronics, and applied plasma physics. The department is also associated with the Center for High-Frequency and High-Speed Electronics, the Center for Plasma Physics and Fusion Engineering, and the Crump Institute for Medical Engineering, three research centers at UCLA.

Bachelor of Science in Electrical Engineering

The electrical engineering curriculum gives an excellent background for either graduate study or employment. The two main objectives are (1) to provide a deep and fundamental education in electrical engineering as well as in basic sciences and mathematics and (2) to provide specialized education in one branch of the electrical engineering field so that the student develops expertise in that branch.

The Major

Course requirements are as follows (188 minimum units required):

(1) Six core courses: Electrical Engineering 101, 102, 103, Materials Science and Engineering 14, Mechanical, Aerospace, and Nuclear Engineering 102, and one course from Civil Engineering 108, Mechanical, Aerospace, and Nuclear Engineering 103, M105A (or Chemical Engineering M105A).

(2) Electrical Engineering 111A, 111B, 115A, 121A, 161, and one course from 112, 115B, 141, 162A, 163A; four two-unit courses selected from the laboratory courses offered by the Electrical Engineering Department, Computer Science 152B and, by petition only, Electrical Engineering 199; Civil Engineering 106A (satisfies the engineering economics requirement); Mechanical, Aerospace, and Nuclear Engineering 191A or Mathematics 132 (satisfies the mathematics requirement).

(3) Any six major field elective courses (24 units) selected from those offered by the Electrical Engineering Department. With approval of the adviser, up to three may be selected from courses related to electrical engineering in the Computer Science Department.

(4) English 3; Chemistry 11A, 11B/11BL; Computer Science 10C or 10F; Mathematics 31A, 31B, 32A, 32B, 33A, 33B; Physics 8A, 8B/8BL, 8C/8CL, 8D/8DL; one life science elective course.

(5) Six courses from the humanities, social sciences, and/or fine arts approved list (at least three must be upper division; at least three — with two upper division — must be in the same academic department or otherwise reflect coherence with respect to subject matter; and one must satisfy the engineering and science in society requirement).

(6) Three free elective courses from any department, selected by the student in consultation with the adviser to supplement and strengthen the major field electives.

Graduate Study

For information on graduate admission to the electrical engineering program and requirements for the M.S. and Ph.D. degrees, see "Graduate Study" at the beginning of this chapter.

Upper Division Courses

100. Electrical and Electronic Circuits. (Formerly numbered Engineering 100.) Lecture, four hours; recitation, one hour. Prerequisites: Mathematics 31A, 31B, 32A, 33A, 33B, Physics 8C. Electrical quantities, circuit principles, signal wave-forms, AC circuits, semiconductor devices, small signal models, amplifiers, electrical and electronic instruments.
Mr. Luhmann (F,W,Sp)

100L. Circuit Analysis Laboratory (2 units). (Formerly numbered Engineering 100L.) Laboratory, four hours. Prerequisite or corequisite: course 100 or 111A. Experiments with circuits containing linear and nonlinear devices; transient and steady state behavior of circuits. Mr. Luhmann (F,W,Sp)

101. Engineering Electromagnetics. (Formerly numbered 100B.) Lecture, four hours; recitation, one hour. Prerequisites: Physics 8C, Mathematics 32A and 32B, or 33A and 33B. Electromagnetic field concepts; Maxwell's equations; static and quasi-static fields; field energy; energy flow and the Poynting vector; electromechanical interactions; waves in unbounded media and on two-wire transmission lines; reflection and refraction; lossy media; skin effect; analogs to electromagnetic fields.
Mr. Alexopoulos (F,W,Sp)

102. Systems and Signals. (Formerly numbered 121C.) Lecture, three hours; recitation, two hours. Prerequisites: Mathematics 32A, 32B, 33A and 33B or 31C and 32C, Physics 8A, 8B, 8C. Recommended: course 100 or Mechanical, Aerospace, and Nuclear Engineering 102 or Physics 8D. Introductory course with illustrations from physical and life sciences. Input-output descriptions of systems, linearity; impulse and frequency responses, Fourier methods; transforms, analysis of signals. Introduction to digital filtering and fast Fourier transform. Computational aspects of system modeling and identification.
Mr. Levan (F,W,Sp)

103. Applied Numerical Computing. (Formerly numbered 124A.) Lecture, three hours; recitation, two hours. Prerequisites: Computer Science 10C, Mathematics 33A, 33B, or equivalent. An introduction to numerical computing techniques: matrix computations, root finding, solutions of initial and boundary value problems of ordinary differential equations, interpolation and approximation.
Mr. Jacobsen, Mr. Wiberg (F,W,Sp)

111A. Basic Circuit Theory I. (Formerly numbered 110A.) Lecture, four hours; recitation, one hour. Prerequisites: Physics 8C, 8D (may be taken concurrently). The zero-input, zero-state, transient, steady state, and complete response of first-order and second-order circuits. Linear time-invariant networks: step response, impulse response, convolution integral. Sinusoidal steady state analysis. Coupling elements and coupled circuits. The Laplace transform.
Mr. Willson (F,W,Sp)

111B. Basic Circuit Theory II. (Formerly numbered 110B.) Lecture, four hours; recitation, one hour. Prerequisite: course 111A. Elementary graph theory, general methods of analyzing electric circuits. Introduction to state equations, natural frequencies. Properties of network functions. Network theorems. Methods of characterizing two-port networks.
Mr. Orchard (F,W,Sp)

112. Passive Network Synthesis. (Formerly numbered 110C.) Lecture, four hours; recitation, one hour. Prerequisite: course 111B or equivalent. Properties of positive real functions and tests for positive realness. Synthesis of one- and two-port RLC and two-element kind networks. Mr. Temes (F)

113. Digital Signal Processing. (Formerly numbered 210E.) Prerequisite: course 111B. Relationship between continuous-time and discrete-time signals. The z-transform. The discrete Fourier transform. The fast Fourier transform. State equations for discrete-time systems. Network structures for digital filtering. Introduction to digital filter design techniques. Mr. Temes, Mr. Willson (F)

115A. Electronics I. (Formerly numbered 116A.) Lecture, four hours; recitation, one hour. Prerequisite: course 111A. Equivalent circuit modeling of electron devices. Device-circuit-environment interactions. Design of single-stage amplifiers. Introduction to cascaded stages, coupling problems, and frequency responses. Mr. Abidi, Mr. Green (F,W,Sp)

115AL. Electronics I Laboratory (2 units). (Formerly numbered 116L.) Prerequisite: course 100L. Recommended: course 115A. Experimental determination of device characteristics, resistive diode circuits, single-stage amplifiers, compound transistor stages, effect of feedback on single-stage amplifiers.
Mr. Martin (F,W,Sp)

115B. Electronics II. (Formerly numbered 116B.) Lecture, four hours; recitation, one hour. Prerequisite: course 115A. Electron device-circuit-environment interactions, with emphasis on multistage amplifiers. Tuned amplifier considerations. Nonlinear situations requiring graphical method of solution. Emphasis on design techniques, including economics, reliability, and realization of performance specifications.
Mr. Martin (F,W,Sp)

115BL. Electronics II Laboratory (2 units). (Formerly numbered 116M.) Laboratory, four hours. Prerequisite: course 115AL. Recommended: course 115B. Experimental and computer studies of multistage, wideband, tuned, and power amplifiers, and multiloop feedback amplifiers. Introduction to thick film hybrid techniques. Construction of amplifier using hybrid thick film techniques.
Mr. Willis (F,W,Sp)

115C. Digital Integrated Circuits. (Formerly numbered 116C.) Lecture, four hours; recitation, one hour. Prerequisites: courses 115A, 115B, Computer Science 151A. Modern logic families (TTL, I^2L, ECL, NMOS, CMOS), IC layout, MSI digital circuits (flip-flops, registers, counters, PLAs, etc.), digital machine realization techniques, VLSI memories, A/Ds, VLSI systems (time permitting). Laboratory experiments in switching circuits. Mr. Martin (F,W,Sp)

115CL. Pulse and Digital Methods Laboratory (2 units). (Formerly numbered 116N.) Laboratory, four hours. Corequisite: course 115C. Digital circuits laboratory, with three different logic families characterized (I^2L, TTL, and CMOS). Use of synchronous machine techniques for building simple circuits, culminating in a 4-bit successive approximation A/D converter.
Mr. Martin (F,Sp)

115D. Applied Electronic Circuits. (Formerly numbered 116G.) Prerequisites: courses 115B, 115C, 118. Applications of distributed circuits. Operational amplifier applications and limitations. Power amplifiers. Feedback and stability. Precision analog circuits.
Mr. Abidi (Sp)

115E. Design Laboratory in Microcomputer Hardware and Interfacing. (Formerly numbered 116U.) Lecture, two hours; laboratory, six hours. Prerequisites: Computer Science 151B, 152B. A second-level design laboratory in microcomputer hardware and interfacing. Address, data, and control busses. I/O devices including serial interfaces, parallel interfaces, and timers. Assembly language programming. Advanced concepts such as interrupts, DMA, interprocessor communication, and industrial control applications in major design projects where practical digital systems are designed and realized.
Mr. Martin (Sp)

116. Communication Circuits. (Formerly numbered 116D.) Lecture, four hours; recitation, one hour. Prerequisites: courses 102, 115B. Signals and spectra. Signal distortion in transmission filters, transmission bandwidth requirements. Random signals and noise, linear modulation, exponential modulation circuits and characteristics. Commercial communication systems. Mr. Willis (F)

117. Introduction to Power Electronics. (Formerly numbered 116F.) Lecture, four hours; recitation, one hour. Prerequisite: course 115A. Electrical and thermal characteristics of power semiconductor devices, including diodes, transistors, and thyristors, and their application to power conditioning, conversion, and control. Emphasis on device limitations and design considerations. Examples from power amplifiers (switched and linear), inverters, and DC and AC motor drives. Mr. Schott (F)

118. Integrated Circuit Components and Design. (Formerly numbered 116E.) Lecture, four hours; recitation, one hour. Prerequisites: courses 115B, 121A. Realization of active and passive components in integrated circuit design. Passive components: resistors, capacitors, metal interconnections. Active devices: NPN and PNP BJTs, design rules; FET devices. Device interactions and layout rules.
Mr. Martin, Mr. K. Wang (W)

121A. Principles of Design of Semiconductor Devices. (Formerly numbered 115D.) Lecture, four hours; recitation, one hour. Prerequisite: senior standing in engineering. Semiconductor technology, Schottky barrier, p-n junction, MOS capacitance, transistor fundamentals, drift transistor, high-frequency properties, field effect transistors, integrated electronics, applications and design of devices.
Mr. Viswanathan, Mr. K. Wang (F,W,Sp)

122AL. Semiconductor Devices Laboratory (2 units). (Formerly numbered 115F.) Laboratory, four hours. Prerequisite: course 121A. Design, fabrication, and characterization of junction, field effect, and other semiconductor devices. In particular students perform various processing tasks such as wafer preparation, oxidation, impurity diffusion, metallization, sintering, and photolithography.
Mr. K. Wang (F,Sp)

122BL. Solid-State Electronics Laboratory (2 units). (Formerly numbered 115E.) Laboratory, four hours. Prerequisite: course 124. Experimental measurement of electronic, magnetic, thermal, and optical properties of p- and n-type semiconductors as used in the design of devices. Mr. Allen (W)

123A. Fundamentals of Solid-State I. (Formerly numbered 115A.) Lecture, four hours; recitation, one hour. Prerequisite: junior standing in engineering. Introductory atom concepts, quantum mechanical principles, energy level in complex atoms, quantum statistics, crystal structure, energy levels in solids, band theory. Mr. Fetterman, Mr. Viswanathan (F,Sp)

123B. Fundamentals of Solid-State II. (Formerly numbered 115B.) Lecture, four hours; recitation, one hour. Prerequisite: course 123A. A discussion of the solid-state properties, lattice vibrations, thermal properties, dielectric magnetic, and superconducting properties. Mr. Fetterman, Mr. Stafsudd (W)

124. Semiconductor Physical Electronics. (Formerly numbered 115C.) Lecture, four hours; recitation, one hour. Prerequisite: course 123B. Band structure of semiconductors, homogeneous semiconductors, excess carriers in semiconductors, semiconductor surfaces, optical and thermal properties; application to design of devices. Mr. Allen, Mr. Pan (Sp)

131A. Probability. (Formerly numbered 120A.) Prerequisites: Mathematics 32B, 33B. An introduction to the theory and application of probability, including random variables and vectors, distributions and densities, characteristic functions, limit theorems, preliminary concepts of stochastic processes.
Mr. Mortensen, Mr. Rubin (F,W)

131B. Introduction to Stochastic Processes. (Formerly numbered 120B.) Prerequisites: courses 102, 131A. Introduction to the theory and application of stochastic processes, emphasizing stationary processes — properties and operations, mean-square estimation. Random and pseudorandom generation of processes with application to simulation. Elements of spectral analysis and FFT.
Mr. Mortensen, Mr. Yao (Sp)

132A. Introduction to Communication Systems. (Formerly numbered 130.) Prerequisite: course 102 or equivalent. An introductory course on electronic communication systems. Models, digital and analog signals, random processes, performance measures, and satellite communication systems. Modulation formats, including amplitude modulation (AM) and frequency modulation (FM). Digital communications, including pulse amplitude modulation (PAM), pulse code modulation (PCM), frequency shift keying (FSK), and phase shift keying (PSK).
Mr. Omura (W)

136. Introduction to Optimization Techniques. (Formerly numbered 129A.) Lecture, four hours; recitation, one hour. Prerequisites: course 103, Mathematics 32A, and 33A, or consent of instructor. Minimization of unconstrained functions of several variables; steepest descent, Newton-Raphson, conjugate gradient, and quasi-Newton methods. Rates of convergence. Methods for constrained minimization: introduction to linear programming, gradient projection and reduced gradient methods, Lagrangian methods. Students are expected to use the school's microcomputers. Mr. Aoki, Mr. Jacobsen (F)

141. Principles of Feedback Control. (Formerly numbered 122A.) Prerequisite: course 102 or consent of instructor. Classical methods of analysis and design of feedback control systems as applied to problems selected from engineering, biology, and related areas. Mr. P.K.C. Wang (W)

142. Linear Systems: The State-Space Approach. (Formerly numbered 128A.) Prerequisite: course 102. State-space methods of linear system analysis and design, with application to problems in networks, control, and system modeling. Mr. Wiberg

161. Electromagnetic Waves I. (Formerly numbered 117A.) Lecture, four hours; recitation, one hour. Prerequisite: course 101. Review of transmission line theory; guided waves in enclosed waveguide and on surfaces; Smith chart; excitation of guided waves; phase and group velocity; cavity resonators; concept of Q; perturbation theory; waves in complex media (ferrites, crystals, semiconductors, plasmas).
Mr. Schott, Mr. Yeh (F,Sp)

162A. Antenna Design I. (Formerly numbered 117B.) Lecture, four hours; recitation, one hour. Prerequisite: course 161. Retarded potentials. Actual and equivalent sources. Far-field patterns of dipoles, loops, and helices. Reciprocity, directivity, beamwidth, and sidelobe level of antenna patterns. Design of linear arrays. Schelkunoff unit circle. Design of feeding networks. Array design including mutual coupling. Mr. Elliott (Sp)

162B. Antenna Design II. (Formerly numbered 117X.) Lecture, four hours; recitation, one hour. Prerequisite: course 162A. Radiation patterns of horns, slots, and patch antennas. Equivalent source representations. Synthesis of sum and difference patterns. Dolph-Chebychev excitation. Design of slot arrays with mutual coupling. Design of traveling wave antennas, reflectors, and lenses. Mr. Elliott (F)

163A. Introductory Microwave Circuits. (Formerly numbered 117Y.) Lecture, four hours; recitation, one hour. Prerequisite: course 161. Equivalent mode voltage/current representation of guided waves in arbitrary rectilinear structures. Design of matching obstacles, attenuators, phase shifters, directional couplers, hybrid junctions, isolators, circulators, and microwave filters. Mr. Elliott (W)

163B. Microwave and Millimeter Wave Active Circuits. (Formerly numbered 117D.) Prerequisite: course 161. Analysis of microwave and millimeter wave tubes such as klystrons, TWT, BWO, Magnetrons, and Gyrotrons, and solid-state circuits for IMPATTS, BARITTS, TUNNETS, Gunn effect devices, GaAs FETs, and bipolar transistors.
Mr. Luhmann (W)

163C. Microwave Amplifiers. (Formerly numbered 216D.) Prerequisites: courses 111B, 115B. Microwave transistors, characteristics, and equivalent circuits at microwave frequencies. Two-port networks, activity and stability. Matching network synthesis with lumped and distributed components. Commensurate matching networks. Linear amplifier design. Narrow band, broad band: input-output interactions. Optimum design approach, graphical approximations, syntheses, and optimization.
Mr. Willis (W, odd years)

164AL. Electromagnetics Laboratory (2 units). (Formerly numbered 117L.) Lecture, one hour; laboratory, three hours. Prerequisite: course 161. Experimental design, fabrication, and testing of microwave and millimeter wave sources; coaxial, waveguide, and microstrip transmission systems; detectors and power measuring devices; cavity resonator studies. Mr. Luhmann (W)

164BL. Active Microwave Circuit Design Laboratory (2 units). (Formerly numbered 117M.) Laboratory, four hours. Prerequisite: course 164AL. The application of contemporary analytic design techniques to the development of microwave amplifiers and oscillators incorporating state-of-the-art commercially available microwave transistors (silicon bipolar and GaAs MESFET). Mr. Luhmann (Sp)

165. Modern Optics. (Formerly numbered 117E.) Lecture, four hours; recitation, one hour. Prerequisite: course 161. Two-dimensional transforms. Diffraction methods. Geometrical optics and applications. Gaussian beams. Coherent and incoherent imaging systems. Optical processing methods. Holography and applications. Mr. Alexopoulos (Sp)

172. Introduction to Lasers and Quantum Electronics. (Formerly numbered 113A.) Lecture, four hours; recitation, one hour. Prerequisite: course 101 or equivalent or consent of instructor. Physical principles and applications of lasers and other quantum electronic devices. Interferometers, crystal optics, gain and saturation phenomena, and gas discharges. Mr. Stafsudd (F)

172L. Laser Laboratory (2 units). (Formerly numbered 113L.) Laboratory, four hours. Prerequisite or corequisite: course 172 or consent of instructor. Properties of lasers, including saturation, mode-locking, and relaxation effects. Laser applications, including optics, modulation, communication, holography, interferometry, and nonlinear effects. Mr. Stafsudd (F)

182. Electrical Power Systems. (Formerly numbered 111A.) Lecture, four hours; recitation, one hour. Prerequisite: course 111A (100 for nonelectrical engineering majors). Overall electrical power system requirements; typical systems; one-line diagrams. Per-unit quantities; characteristics of machines, transformers, overhead lines, and cables; steady state analysis of systems. Power limits and stability; fault calculations; relays and relay systems. Mr. Schott (W)

183. Electromechanical Energy Conversion. (Formerly numbered 111B.) Lecture, four hours; recitation, one hour. Prerequisite: course 111A (100 for nonelectrical engineering majors). Energy conversion and power flow in electromechanical interactions; electromechanics of actuators and rotating AC synchronous and induction machines and DC machines. Linear machines. Mr. Schott (Sp)

M185. Plasma Physics. (Formerly numbered M118.) (Same as Physics M122.) Prerequisite: course 101 or Physics 110A. Senior-level introductory course to physics of plasmas and ionized gases and fundamentals of controlled fusion. Particle motion in magnetic fields; fluid behavior, plasma waves; resistivity and transport; equilibrium and stability; kinetic effects. Discussion of illustrative laboratory experiments. Mr. Chen (F, even years; Sp)

199. Special Studies (2 to 8 units). Prerequisites: senior standing, consent of instructor. Individual investigation of a selected topic to be arranged with a faculty member. Enrollment request forms available in department office. Only two units may be applied toward the degree; the two units must be approved by petition and can be used only as a replacement for a regular Electrical Engineering laboratory course. Students may take additional 199 courses, but they may not be applied toward the degree. (F,W,Sp)

Graduate Courses

201S. Electrical Engineering Seminar (2 units). (Formerly numbered 201.) Prerequisite: graduate standing in engineering. Lectures on current research topics in electrical engineering. S/U grading. Mr. Green (F,W,Sp)

M208A. Analytical Methods of Engineering I. (Formerly numbered M291A.) (Same as Mechanical, Aerospace, and Nuclear Engineering M291A.) Prerequisites: Mathematics 131A, 132. Application of abstract mathematical methods to engineering problems. Review of elements of measure and integration, L_2 theory — linear spaces and operators. Eigenvalue problems. Introduction to spectral theory — elementary distribution theory. Applications to problems in engineering. Mr. Gibson, Mr. Wiberg (W)

M208B. Analytical Methods of Engineering II. (Formerly numbered M291B.) (Same as Mechanical, Aerospace, and Nuclear Engineering M291B.) Prerequisite: course M208A or Mechanical, Aerospace, and Nuclear Engineering M291A or consent of instructor. Application of modern mathematical methods to engineering problems. Review of spectral theory. Green's functions and eigenvalue problems for second-order ordinary differential equations and their adjoints. Discrete and continuous spectra for ordinary and partial differential equations. Initial and boundary value problems. Mr. Gibson, Mr. Levan (Sp)

210A. Advanced Circuit Theory I. Prerequisites: course 111B, knowledge of linear algebra and complex function theory. State equations for linear circuits. Characterization of n-ports and multiterminal elements. Introduction to and applications of the scattering matrix and related topics. Mr. Orchard (F)

210B. Advanced Circuit Theory II. Prerequisite: course 210A. Analytical techniques for active circuits: return difference, Blackman's formula for an active impedance. Characterization of nonlinear elements. State equations for nonlinear circuits. Stability of nonlinear circuits: Liapunov's direct method. Theory of nonlinear transistor circuits. Mr. Willson (W)

211A. Advanced Network Synthesis. (Formerly numbered 210C.) Prerequisite: course 112. Theory and practical development of lossless ladder networks. Lattice and constant-resistance networks. Loss-phase relations in minimum-phase networks. The Hilbert transform. Allpass functions and networks. Design of linear-phase polynomials. Mr. Orchard (W)

211B. Active, Passive, and Digital Filters. (Formerly numbered 210D.) Prerequisite: course 211A or consent of instructor. Approximation theory. Realization of passive filters. Electromechanical filters. Active filters with lumped and/or distributed elements. Switched and digital filters. Mr. Orchard (Sp)

212. Theory and Design of Digital Filters. (Formerly numbered 210F.) Prerequisite: course 113. Approximation of filter specifications. Use of design charts. Structures for recursive digital filters. FIR filter design techniques. Comparison of IIR and FIR structures. Implementation of digital filters. Limit cycles. Overflow oscillations. Discrete random signals. Wave digital filters. Distributed arithmetic structures. Mr. Willson (W)

215A. Analog Integrated Circuits. (Formerly numbered 216A.) Prerequisite: course 115B. High-speed linear amplifiers: circuit design for optimum high-frequency response. Operational amplifiers, improved input impedance and slew rate, pole-zero compensation, circuit design techniques for optimum SNR. Voltage multipliers, D/A and A/D converters. Mr. Abidi, Mr. Martin (F)

215B. Advanced Digital Integrated Circuits. (Formerly numbered 216B.) Prerequisite: course 115C. Modern logic families (description, analysis, and comparison), MSI digital circuits (flipflops, registers, counters, PLAs, etc.). VLSI memories (ROMs, RAMs, CCDs, bubble memories, EPROMs, EEPROMs) and VLSI systems (microcomputers, PIAs, ACIAs, etc.). Mr. Martin (W)

215C. Advanced Integrated Circuit Design. (Formerly numbered 216C.) Prerequisites: courses 118, 215A, 215B. Integrated circuit and system considerations: optimization and high-frequency effects, yield, reliability. Competing integrated circuit technologies: trade-off in materials and circuit design, special functions, hardware/software trade-off. Integrated circuit design project. Mr. Martin (F)

215D. MOS Analog Integrated Circuit Design. (Formerly numbered 216F.) Prerequisites: courses 112, 121A, 215A. Recommended: course 113. MOS technology and its limitations for analog ICs. MOS devices as analog circuit elements: MOSFET's MOS capacitors and switches. MOS op-amp and comparator design. Switched-capacitor filter design. A/D and D/A converters. Modulators, oscillators, other communication circuits. Applications in signal processing systems. Circuit analysis using computers.

M216A. LSI in Computer System Design. (Formerly numbered M258A.) (Same as Computer Science M258A.) Lecture, four hours; laboratory, four hours. Prerequisites: graduate standing in computer science or electrical engineering, consent of instructor. LSI/VLSI design and application in computer systems. Fundamental design techniques that can be used to implement complex integrated systems on a chip. Mr. Viswanathan (F,W)

M216B-M216C. LSI in Computer System Design. (Formerly numbered M258B-M258C.) (Same as Computer Science M258B-M258C.) Lecture, four hours; laboratory, four hours. Prerequisite: course M216A. LSI/VLSI design and application in computer systems. In-depth studies of VLSI architectures and VLSI design tools. In Progress grading. Mr. Viswanathan (W, M216B; Sp, M216C)

219A. Special Topics in Electric Circuit Theory. (Formerly numbered 219D.) Prerequisite: course 210B or 211A or 211B. Advanced treatment of topics selected from reseach areas in electric circuit theory.

221A. Physics of Semiconductor Devices I. (Formerly numbered 215D.) Prerequisite: course 121A. Physical principles and design considerations of junction devices. Mr. Allen, Mr. Viswanathan (F)

221B. Physics of Semiconductor Devices II. (Formerly numbered 215E.) Prerequisite: course 121A. Principles and design considerations of field effect devices and charge-coupled devices. Mr. Viswanathan (Sp)

221C. Microwave Semiconductor Devices. (Formerly numbered 215C.) Prerequisite: course 121A. Physical principles and design considerations of microwave solid-state devices: Schottky barrier mixer diodes, IMPATT diodes, transferred electron devices, tunnel diodes, microwave transistors. Mr. Fetterman, Mr. K. Wang (W)

223. Solid-State Electronics I. (Formerly numbered 215A.) Prerequisites: courses 124 and 270, or consent of instructor. Energy band theory, electronic band structure of various elementary, compound, and alloy semiconductors, defects in semiconductors. Recombination mechanisms, transport properties. Mr. Pan (F)

224. Solid-State Electronics II. (Formerly numbered 215B.) Prerequisite: course 223. Techniques to solve Boltzmann transport equation, various scattering mechanisms in semiconductors, high field transport properties in semiconductors, Monte Carlo method in transport. Optical properties. Mr. Pan (W, even years)

229. Seminars on Advanced Topics in Solid-State Electronics. (Formerly numbered 219B.) Prerequisites: courses 223, 224. Current research areas, such as radiation effects in semiconductor devices, diffusion in semiconductors, optical and microwave semiconductor devices, nonlinear optics, and electron emission.

229S. Advanced Electrical Engineering Seminar (2 units). (Formerly numbered 219X.) Prerequisite: successful completion of Ph.D. major field examination or consent of instructor. Seminar on current research topics in solid-state and quantum electronics (Section 1) or in electronic circuit theory and applications (Section 2). Students report on a tutorial topic and on a research topic in their dissertation area. May be repeated for credit. S/U grading. (F,W,Sp)

230A. Estimation and Detection in Communication and Radar Engineering. (Formerly numbered 230.) Prerequisite: course 131A or equivalent. Not open for credit to students with credit for former System Science 227A. Applications of estimation and detection concepts in communication and radar engineering; random signal and noise characterizations by analytical and simulation methods; mean square (MS) and maximum likelihood (ML) estimations and algorithms; detection under ML, Bayes, and Neyman-Pearson (NP) criteria; signal-to-noise ratio (SNR) and error probability evaluations.
Mr. Omura, Mr. Rubin, Mr. Yao (F)

230B. Digital Communication Systems. (Formerly numbered 233.) Prerequisite: course 230A. Basic concepts of digital communication systems and applications; representation of bandpass waveforms; geometry and optimum receivers in white Gaussian noise; comparisons of digital modulation schemes; transmission over real channels; applications to satellite systems. Mr. Rubin, Mr. Yao (Sp)

230C. Algorithms and Processing in Communication and Radar. (Formerly numbered 234.) Prerequisite: course 230A. Concepts and implementations of digital signal processing algorithms in communication and radar systems. Optimum dynamic range scaling for random data. Algorithms for fast convolution and transform. Spectral estimation algorithms. Parallel processing, VLSI algorithms, and systolic arrays. Mr. Yao (W)

230D. Signal Processing in Communications. (Formerly numbered 227S.) Prerequisite: course 241B or consent of instructor. Basic digital signal processing techniques for estimation and detection of signals in communication and radar systems. Optimization of dynamic range, quantization, and state constraints; DFT, convolution, FFT, NTT, Winograd DFT, systolic array; spectral analysis-windowing, AR, and ARMA; system applications.

231A. Information Theory: Channel and Source Coding. (Formerly numbered 231.) Prerequisite: course 230A. Not open for credit to students with credit for former System Science 227B. Fundamental concepts of information theory with applications to digital communications. Block and convolutional codes analyzed from both theoretical and practical implementation viewpoints. Channel coding and the theory of data compression (rate distortion theory).
Mr. Baker, Mr. Omura (W)

231B. Error Control Codes and Cryptography. (Formerly numbered 236.) Prerequisite: course 231A. Introduction to Galois fields with applications to error control codes and cryptography. Linear block codes, cyclic codes, BCH codes, Reed-Solomon codes, and Goppa codes. Digital circuit implementation of encoders, decoders, and cryptographic systems. Conventional and public key cryptosystems and key management.
Mr. Omura, Mr. Rubin, Mr. Yao (Sp)

231C. Rate Distortion Theory and Source Coding Techniques. Prerequisites: courses 230A and 231A, or consent of instructor. Sources and distortion measures, the rate distortion function and its evaluation for discrete and continuous sources, source coding theorems, comparisons of practical coding systems to theoretical bounds, speech and image quantization. Mr. Baker (Sp)

231D. Spread Spectrum Communications. (Formerly numbered 235.) Prerequisite: course 231A. Spread spectrum digital communication systems for antijam and multiple-access applications. Basic design approach, models, and a general analysis for spread spectrum systems. Direct sequence spread binary-phase-shift keying (BPSK) and frequency-hopped multiple-frequency-shift keying (MFSK) signals. Multiple access in spread spectrum digital radio networks. Mr. Baker, Mr. Omura (Sp)

231E. Algebraic Coding Theory. (Formerly numbered 227F.) Prerequisite: course 231A. Fundamentals of linear or parity-check codes and decoding algorithms based on the algebraic theory of finite groups and fields; cyclic codes; Hamming; Reed-Muller, Bose-Chaudhuri-Hocquenghem, and Reed-Solomon codes, and corresponding decoding algorithms.

232A. Stochastic Modeling with Applications to Telecommunication Systems. (Formerly numbered 232.) Prerequisite: course 131A or equivalent. Not open for credit to students with credit for former System Science 200D. Introduction to stochastic processes as applied to the study of telecommunication systems and traffic engineering. Renewal theory; discrete-time Markov chains; continuous-time Markov jump processes. Applications to traffic and queueing analysis of basic telecommunication system models.
Mr. Rubin, Mr. Yao (F)

232B. Telecommunication Switching and Queueing Systems. (Formerly numbered 237.) Prerequisite: course 232A. Not open for credit to students with credit for former System Science 220A. Queue modeling and analysis with applications to space-time digital switching systems and to integrated-service telecommunication systems. Fundamentals of traffic engineering and queueing theory. Queue size, waiting time, busy period, blocking, and stochastic process analysis for Markovian and non-Markovian models. Mr. Rubin (W)

232C. Telecommunication Architecture and Networks. (Formerly numbered 238.) Prerequisite: course 232B. Analysis and design of integrated-service telecommunication networks and multiple-access procedures. Stochastic analysis of priority-based queueing system models. Queueing networks; network protocol architectures; error control; routing, flow, and access control. Applications to local-area, packet-radio, satellite, and computer communication networks. Mr. Rubin (Sp)

232D. Telecommunication Networks and Multiple-Access Communications. (Formerly numbered 227T.) Prerequisite: course 232B. Performance analysis and design of telecommunication networks and multiple-access communication systems. Topics include architectures, multiplexing and multiple-access, message delays, error/flow control, switching, routing, protocols. Applications to local-area, packet-radio, local-distribution, computer and satellite communication networks.

232E. Graphs and Network Flows. (Formerly numbered 220G.) Prerequisite: course 136 or consent of instructor. Solution to analysis and synthesis problems which may be formulated as flow problems in capacity constrained (or cost constrained) networks. Development of tools of network flow theory using graph theoretic methods; application to communication, transportation, and transmission problems.
Mr. Jacobsen (Sp)

236A. Linear Programming. (Formerly numbered 272A.) Prerequisite: Mathematics 115 or equivalent knowledge of linear algebra. Basic graduate course in linear programming. The simplex method and its variants. Convergence proofs. Duality theory. Geometry of linear programs. Parametric programming. Special structures such as decomposition and upper bounded variables. Complementary pivot theory. Quadratic programming. Mr. Jacobsen (F)

236B. Nonlinear Programming. (Formerly numbered 200B.) Prerequisite: course 236A or equivalent. Basic graduate course in nonlinear programming. Convex sets and functions and their basic properties. Kuhn-Tucker points, saddle points, and nonlinear or conjugate duality theory. Development of algorithms and convergence theory.
Mr. Jacobsen (W)

236C. Optimization Methods for Large-Scale Systems. (Formerly numbered 272C.) Prerequisite: course 236B. Theory and computational procedures for decomposing large-scale mathematical programming problems. Generalized linear programming, decomposition algorithms, column generation, economic implications. Application to stochastic programming and optimal control. Topics in nonconvex programming; minimizing concave functions on convex polyhedra, reverse convex programming.
Mr. Jacobsen, Mr. Mortensen (Sp)

237. Dynamic Programming. (Formerly numbered 273A.) Prerequisite: course 232A. Introduction to the mathematical analysis of sequential decision processes. The finite horizon model in both the deterministic and stochastic cases. The finite-state infinite horizon model. Methods of solution. Detailed examples from inventory theory, finance, and transportation systems. Mr. Jacobsen (W)

238. Reliability Theory with Applications. (Formerly numbered 275B.) Prerequisite: course 131A or equivalent. Basic graduate course in reliability theory. Reliability models for complex systems, coherent structures, modular decomposition, reliability bounds. Constant, monotone hazard functions. Optimization problems in reliability: redundancy allocations, maintenance policies, stress-strength and safety considerations in engineering design. Statistical problems, current topics. Mr. Jacobsen (Sp)

239AS. Topics in Communication. (Formerly numbered 227EA-227EZ.) Prerequisite: consent of instructor. Topics in one or more special aspects of communication systems, such as phase-coherent communication systems, optical channels, time-varying channels, feedback channels, broadcast channels, networks, coding and decoding techniques. May be repeated for credit with topic change.

239BS. Topics in Operations Research. (Formerly numbered 272BA-272BZ.) Prerequisite: consent of instructor. Treatment of one or more selected topics from areas such as integer programming; combinatorial optimization; network synthesis; scheduling, routing, location, and design problems; implementation considerations for mathematical programming algorithms; stochastic programming; applications in engineering, computer science, economics. May be repeated for credit with topic change.

240A. Linear Dynamic Systems. (Formerly numbered 200A.) Prerequisite: course 142 or equivalent. State-space description of dynamic systems. Deduction of state spaces from input-output data. State controllability and observability. Stability and state feedback stabilizability; state observer.
Mr. Balakrishnan (F)

240B. Linear Optimal Control. (Formerly numbered 221.) Prerequisites: courses 141 or equivalent and 240A, or consent of instructor. An introduction to optimal control, with emphasis on detailed study of LQR, or linear regulators with quadratic cost criteria. Relationships to classical control system design.
Mr. Levan (W)

240C. Optimal Control. (Formerly numbered 222C.) Prerequisite: course 240B. Applications of variational methods. Pontryagin's maximum principle, dynamic programming and nonlinear programming to problems of optimal control theory and practical systems.
Mr. P.K.C. Wang (F,Sp)

241A. Stochastic Processes. (Formerly numbered 200C.) Prerequisite: course 131B or equivalent. Fundamentals and applications of second-order theory stochastic processes. Correlation and spectral density. Gaussian process, processing by dynamic systems, Bayes rule and conditional expectation; mean-square estimation and Kalman filtering.
Mr. Mortensen (F)

241B. Kalman Filtering. (Formerly numbered 227C.) Prerequisites: courses 240A, 241A. Statistical estimation theory, estimation of signal parameters in additive noise. Kalman filter theory: basic theory, steady state and frequency domain analyses, on-line estimation and colored noise. Likelihood ratios, Gaussian signals in Gaussian noise.
Mr. Balakrishnan (W)

241C. Stochastic Control. (Formerly numbered 222B.) Prerequisites: courses 240B, 241B. Estimation and control of linear discrete-time and continuous-time stochastic systems; separation theorem and applications; Kalman filtering.
Mr. Balakrishnan (Sp)

242. Nonlinear Control. (Formerly numbered 222A.) Prerequisite: course 240B. Techniques for studying nonlinear control systems, with emphasis on their stability; Liapunov's direct method; input-output stability; Popov's method; linearization.
Mr. P.K.C. Wang (W)

M243. Biological Control Systems. (Formerly numbered M222F.) (Same as Anesthesiology M222.) Prerequisite: course 141 or equivalent. Introduction to the application of control theory to the modeling and analysis of biological control systems, such as the respiratory system, cardiovascular system, and neuromuscular system. Emphasis on solving problems of current interest in biomedicine.
Mr. Ward, Mr. Wiberg

249S. Topics in Control. (Formerly numbered 222EA-222EZ.) Prerequisite: consent of instructor. Thorough treatment of one or more aspects of control theory and applications, such as computational methods for optimal control; stability of distributed systems; identification; adaptive control; nonlinear filtering; differential games; applications to flight control, nuclear reactors, process control, biomedical problems. May be repeated for credit with topic change.

260A-260B. Advanced Engineering Electrodynamics. (Formerly numbered 217A-217B.) Prerequisites: courses 161, 162A. Advanced treatment of concepts in electrodynamics and their applications to modern engineering problems. Waves in anisotropic, inhomogeneous, and dispersive media. Guided waves in bounded and unbounded regions. Radiation and diffraction, including optical phenomena. Partially coherent waves, statistical media.
Mr. Alexopoulos, Mr. Yeh (F, 260A; W, 260B)

261. Microwave and Millimeter Wave Circuits. (Formerly numbered 217C.) Prerequisite: course 163A or consent of instructor. Rectangular and circular waveguides, microstrip, stripline, finline, and dielectric waveguide distributed circuits, with applications in microwave and millimeter wave integrated circuits. Substrate materials, surface wave phenomena. Analytical methods for discontinuity effects. Design of passive microwave and millimeter wave circuits.
Mr. Alexopoulos (Sp)

262. Antenna Theory and Design. (Formerly numbered 217E.) Prerequisites: courses 162A, 162B. Antenna patterns. Sum and difference patterns. Optimum designs for rectangular and circular apertures. Arbitrary side lobe topography. Discrete arrays. Mutual coupling. Design of feeding networks.
Mr. Elliott (W)

270. Quantum Electronics I. (Formerly numbered 213A.) Prerequisite: course 123A or consent of instructor. Review of quantum mechanics, approximation methods, interaction of radiation and matter.
Mr. Stafsudd (F)

271. Quantum Electronics II. (Formerly numbered 213B.) Prerequisite: course 270 or consent of instructor. Optical beams and resonators, interaction of light with atoms (including amplification and saturation), properties of lasers (including power output and mode effects).
Mr. Stafsudd (W)

272. Quantum Electronics III. (Formerly numbered 213C.) Prerequisite: course 271 or consent of instructor. Properties of laser oscillators, including transient phenomena, quantum mechanical effects, and behavior of high-gain laser media.
Mr. Stafsudd (Sp)

273. Quantum Electronics IV. (Formerly numbered 213D.) Prerequisite: course 271 or consent of instructor. Quantum electronic systems, modulation, detection, acousto-optics, magneto-optics, nonlinear optics. Raman scattering, Brillouin scattering.
Mr. Stafsudd (Sp)

279S. Quantum Electronics Seminar (2 units). (Formerly numbered 213S.) Prerequisite: course 270 or consent of instructor. A series of lectures and student presentations on topics of current research interest in quantum electronics, modern optics, and laser physics. May be repeated for credit. S/U grading.
Mr. Stafsudd (W,Sp)

285A. Plasma Waves and Instabilities. (Formerly numbered 214A.) Prerequisites: courses 101, and M185 or Physics M122. Wave phenomena in plasmas described by the macroscopic fluid equations. Emphasis on homogeneous plasmas in uniform magnetic fields. Microwave propagation, plasma oscillations, ion acoustic waves, cyclotron waves, hydromagnetic waves, whistlers and helicon waves, and their classification. Illustrative experiments.
Mr. Chen, Mr. Luhmann (W)

285B. Advanced Plasma Waves and Instabilities. (Formerly numbered 214B.) Prerequisites: courses M185, and 285A or Physics 222A. Interaction of intense electromagnetic waves with plasmas: waves in inhomogeneous and bounded plasmas, nonlinear wave coupling and damping, parametric instabilities, anomalous resistivity, shock waves, echoes, laser heating. Emphasis on experimental considerations and techniques.
Mr. Chen, Mr. Luhmann (Sp)

M286. Principles of Magnetic Confinement Fusion. (Formerly numbered M214C.) (Same as Mechanical, Aerospace, and Nuclear Engineering M237A.) Prerequisites: courses M185, and 285A and 285B or Physics 222A-222B, or consent of instructor. Plasma requirements for controlled fusion. Structure of magnetic fields. Theory of MHD equilibrium and stability. Shear and minimum-B stabilization. Resistive and microinstabilities. Neoclassical diffusion physics of tokamak and tandem-mirror plasmas. Neutral beams and auxiliary heating. Alternate concepts.
Mr. Chen (F, odd years)

M287. Fusion Plasma Physics and Analysis. (Formerly numbered M214D.) (Same as Mechanical, Aerospace, and Nuclear Engineering M237B.) Prerequisite: course M185. Fundamentals of plasmas at thermonuclear burning conditions. Fokker-Planck equation and applications to heating by neutral beams, RF, and fusion reaction products. Bremsstrahlung, synchrotron, and atomic radiation processes. Plasma surface interactions. Fluid description of the burning plasma. Dynamics, stability, and control. Applications in tokamaks, tandem mirrors, and alternate concepts.
Mr. Chen (W)

M288. Fusion Reactor Technology and Design. (Formerly numbered M214E.) (Same as Mechanical, Aerospace, and Nuclear Engineering M237C.) Prerequisite: Mechanical, Aerospace, and Nuclear Engineering 135 or consent of instructor. Fusion reactors, both magnetic and inertial. Operating conditions, power balance, system Q. Drivers for inertial confinement, magnet systems; blanket and shield design and analysis, induced radioactivity, tritium breeding and processing; radiation damage effects, design of reactors for electricity production or as hybrid systems.
Mr. Chen (Sp)

298. Seminar in Engineering (2 to 4 units). Prerequisites: graduate standing in electrical engineering, consent of instructor. Seminars may be organized in advanced technical fields. If appropriate, field trips may be arranged. May be repeated with topic change.

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. A teaching apprenticeship under the active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.
Mr. Viswanathan (F,W,Sp)

596. Directed Individual or Tutorial Studies (2 to 8 units). Prerequisites: graduate standing in electrical engineering, consent of instructor. Petition forms to request enrollment may be obtained from the Assistant Dean, Graduate Studies. Supervised investigation of advanced technical problems. S/U grading.

597A. Preparation for M.S. Comprehensive Examination (2 to 12 units). Prerequisites: graduate standing in electrical engineering, consent of instructor. Reading and preparation for M.S. comprehensive examination. S/U grading.

597B. Preparation for Ph.D. Preliminary Examinations (2 to 16 units). Prerequisites: graduate standing in electrical engineering, consent of instructor. S/U grading.

597C. Preparation for Ph.D. Oral Qualifying Examination (2 to 16 units). Prerequisites: graduate standing in electrical engineering, consent of instructor. Preparation for oral qualifying examination, including preliminary research on dissertation. S/U grading.

598. Research for and Preparation of M.S. Thesis (2 to 12 units). Prerequisites: graduate standing in electrical engineering, consent of instructor. Supervised independent research for M.S. candidates, including thesis prospectus. S/U grading.

599. Research for and Preparation of Ph.D. Dissertation (2 to 16 units). Prerequisites: graduate standing in electrical engineering, consent of instructor. Usually taken after student has been advanced to candidacy. S/U grading.

Environmental Science and Engineering
(Interdepartmental)

This interdisciplinary graduate program, which leads to the Doctor of Environmental Science and Engineering (D.Env.) degree, provides scientific training in the enlightened management of the environment through a broad range of environmental disciplines. For details on this program, see Chapter 17 on the School of Public Health.

Materials Science and Engineering

6531K Boelter Hall, (213) 825-5534

Professors

Alan J. Ardell, Ph.D., *Chair*
Rointan F. Bunshah, D.Sc.
David L. Douglass, Ph.D.
Bruce S. Dunn, Ph.D.
John H. Lyman, Ph.D.
John D. Mackenzie, Ph.D.
Kanji Ono, Ph.D.
Aly H. Shabaik, Ph.D.
George H. Sines, Ph.D.
Christian N. J. Wagner, Dr.rer.nat.
Alfred S. Yue, Ph.D.
Daniel Rosenthal, Ph.D., *Emeritus*

Associate Professor
William Klement, Jr., Ph.D.

Adjunct Professors
Frederick F. Lange, Ph.D.
Morris A. Steinberg, D.Sc.

Scope and Objectives

At the heart of materials science is an understanding of the microstructure of solids. "Microstructure" is used broadly in reference to solids viewed at the subatomic (electronic) and atomic levels, and the nature of the defects at these levels. The microstructure of solids at various levels profoundly influences the mechanical, electronic, chemical, and biological properties of solids. The phenomenological and mechanistic relationships between microstructure and the macroscopic properties of solids are, in essence, what materials science is all about.

Materials engineering, on the other hand, is concerned with the design, processing, and nondestructive testing of engineering materials. Such materials must fulfill simultaneously dimensional, property, quality control, and economic requirements. Several manufacturing steps may be involved: (1) primary processing, such as solidification or vapor deposition of homogeneous or composite materials; (2) secondary fabrication, including shaping and microstructural control by operations such as mechanical working, machining, sintering, joining, and heat treatments; (3) nondestructive testing, which measures the degree of reliability of a processed part.

The undergraduate program leads to the Bachelor of Science degree in Materials Engineering. Students are introduced to the basic principles of metallurgy and ceramic and polymer science as part of the department's materials engineering major. A joint major field, chemistry/materials science, is offered to students enrolled in the Department of Chemistry (College of Letters and Science). Several courses in the undergraduate curriculum also play an important role in one of the options of the manufacturing engineering program.

The graduate program allows for specialization in one of the following fields: science of materials, physical metallurgy and metal processing, mechanical metallurgy and deformation processing, and ceramics and ceramic processing.

Bachelor of Science in Materials Engineering

Materials engineering is designed for students who wish to pursue a professional career in the materials field and desire a broad understanding of the relationship between microstructure and properties of materials. Metals, ceramics, and plastics, as well as the design, fabrication, and testing of metallic and other materials such as oxides, glasses, and fiber-reinforced composites, are included in the course contents.

Course requirements are as follows:

(1) Six core courses: Chemical Engineering M105A, M105D (or Mechanical, Aerospace, and Nuclear Engineering M105A, M105D), Civil Engineering 108, Electrical Engineering 100, Materials Science and Engineering 14, Mechanical, Aerospace, and Nuclear Engineering 102.

(2) Materials Science and Engineering 140E, 141, 142A, 144A, 145A, 146A, 147A; 142L and 146L, plus four additional laboratory units from 143L, 144L, 145B (one unit of lab credit), 147L; Mechanical, Aerospace, and Nuclear Engineering 191A, M192A or Chemical Engineering M192A (satisfies the mathematics requirement); Civil Engineering 106A (satisfies the engineering economics requirement).

(3) Five elective courses from Civil Engineering 165A, Electrical Engineering 121A, 123A, 123B, 124, Materials Science and Engineering 140D, 143A, 143B, 145B, 146B, 146F, 147B, 147E, 148A, Mechanical, Aerospace, and Nuclear Engineering 136C, 158A (the design content of the elective courses and the elective laboratory must total six units).

(4) English 3; Chemistry 11A, 11B/11BL; Computer Science 10C or 10F; Mathematics 31A, 31B, 32A, 32B, 33A, 33B; Physics 8A, 8B/8BL, 8C/8CL, 8D/8DL (physics labs are optional); one life science elective course.

(5) A minimum of seven courses from the humanities, social sciences, and/or fine arts approved list (at least three must be upper division; at least three — with two upper division — must be in the same academic department or otherwise reflect coherence with respect to subject matter; and one must satisfy the engineering and science in society requirement, which also may be satisfied within the free electives).

(6) Two free elective courses.

Graduate Study

For information on graduate admission to the materials science and engineering program and requirements for the M.S. and Ph.D. degrees, see "Graduate Study" at the beginning of this chapter.

Lower Division Courses

14. Science of Engineering Materials. (Formerly numbered Engineering 14.) Lecture, three hours; demonstration, one hour; recitation, one hour. Prerequisites: Chemistry 11A, 11B/11BL, Physics 8A, 8B. Physics 8C may be taken concurrently. General introduction to different types of materials used in engineering designs: metals, ceramics, plastics, and composites, relationship between structure (crystals and microstructure) and properties of technological materials. Illustration of their fundamental differences and their applications in engineering.
Mr. Douglass (F,W,Sp)

15. Introduction to Manufacturing Engineering. (Formerly numbered Engineering 15.) Manufacturing processes, materials and design in manufacturing; productivity, competitive aspects of manufacturing, manufacturing planning, production-scheduling, flexible manufacturing systems, economic and social aspects of manufacturing. Mr. Shabaik (F)

Upper Division Courses

M107A. Principles of Biotechnology. (Formerly numbered Engineering M107A.) (Same as Psychology M153.) Prerequisite: upper division standing. The principles of biological science developed in an engineering design context. Emphasis on how physiological, psychological, and sociological factors affect the integration of man into environmental, informational, and managerial systems through engineering design.
Mr. Lyman (F,W,Sp)

140D. Solid-State Electronic Materials. (Formerly numbered Engineering 140D.) Prerequisite: course 14. Principles of nucleation and crystal growth from the melt and vapor. Solute redistribution in the melt; preparation of semiconductor single crystals and thin films. Phase diagrams. Preparation of p-n junctions by the liquid-phase-epitaxy and diffusion techniques. Electrical properties of solar cells. Field trips.
Mr. Yue (W)

140E. Materials Selection and Engineering Design. (Formerly numbered Engineering 140E.) Prerequisites: courses 144A, 146A, 147A. Explicit guidance among the myriad materials available for design in engineering. Properties and applications of steels, nonferrous alloys, polymeric, ceramic and composite materials, coatings. Materials selection, treatment, and serviceability emphasized as part of successful design. Design projects. Mr. Lyman (Sp)

141. Phase Relations in Solids. (Formerly numbered Engineering 141.) Prerequisites: course 14, Chemical Engineering M105A or Mechanical, Aerospace, and Nuclear Engineering M105A. Summary of thermodynamic laws, equilibrium criteria, solution thermodynamics, mass-action law, binary and ternary phase diagrams, glass transitions. Mr. Ardell (F)

142A. Diffusion and Diffusion-Controlled Reactions. (Formerly numbered Engineering 142A.) Prerequisite: course 141. Diffusion in metals and ionic solids, nucleation and growth theory; precipitation from solid solution, eutectoid decomposition, design of heat treatment processes of alloys, growth of intermediate phases, gas-solid reactions, design of oxidation-resistant alloys, recrystallization, and grain growth. Mr. Douglass (F)

142L. Diffusion and Diffusion-Controlled Reactions Laboratory (2 units). (Formerly numbered Engineering 142L.) Corequisite: course 142A. Design of heat-treating cycles and performing experiments to study interdiffusion, growth of intermediate phases, recrystallization, and grain growth in metals. Analysis of data. Comparison of results with theory.
Mr. Douglass (F)

143A. Mechanical Behavior of Materials. (Formerly numbered Engineering 143A.) Prerequisite: course 14 or equivalent. Recommended: Civil Engineering 108. Plastic flow of metals under simple and combined loading, strain rate and temperature effects, dislocations, fracture, microstructural effects, mechanical and thermal treatment of steel for engineering applications. Mr. Sines (F,W)

143B. Failure Analysis of Metals. Prerequisite: course 142A or 147A. The analysis and prevention of failure based on design deficiencies, material selection, metallurgical defects, processing and fabrication errors, improper service conditions. Relationship to heat treatment, corrosion, joining technology, and mechanical behavior. Engineering and legal aspects. Case histories. Mr. Douglass (Sp)

143L. Mechanical Testing Laboratory (2 units). (Formerly numbered Engineering 143L.) Laboratory, four hours. Prerequisite or corequisite: course 143A. Experimental techniques for the measurements of mechanical properties of engineering materials. Elastic constants, tensile, compression and bend testing, fracture toughness, fatigue and creep testing. Mr. Sines (W,Sp)

144A. Polymer Science. (Formerly numbered Engineering 144A.) Prerequisite: consent of instructor. Polymerization mechanisms, molecular weight and distribution, chemical structure and bonding, structure crystallinity, and morphology and their effects on physical properties. Glassy polymers, spring polymers, elastomers, adhesives. Fiber forming polymers, polymer processing technology, plasticiation. Mr. Ardell (W)

144L. Laboratory Experiments in Polymer Synthesis and Characterization (2 units). (Formerly numbered Engineering 144L.) Prerequisite: course 144A or consent of instructor. Synthesis of addition and condensation type polymers. Polymerization kinetics. Characterization of polymer molecular weights, glass transition temperature and melting temperature. Glassy polymers and elastomers. Correlation of polymer structure and molecular weight with properties. Effect of polymer additives (e.g., plasticizers). Mr. Ardell (Sp)

145A. Introduction to Materials Characterization A (Crystal Structure and X-Ray Diffraction of Material). (Formerly numbered Engineering 145A.) Lecture, three hours; laboratory, two hours. Prerequisite: course 14. Modern methods of materials characterization; fundamentals of crystallography, properties of X rays, X-ray diffraction; powder method, Laue method; determination of crystal orientation and crystal structure; phase diagram determination; X-ray stress measurements; X-ray spectroscopy; design of materials characterization procedures. Mr. Wagner (F)

145B. Introduction to Materials Characterization B (Electron Microscopy). (Formerly numbered Engineering 145B.) Lecture, three hours; laboratory, two hours. Prerequisites: courses 14, 145A. Characterization of microstructure and microchemistry of materials; transmission electron microscopy; reciprocal lattice, electron diffraction, stereographic projection, direct observation of defects in crystals, replicas; scanning electron microscopy: emissive and reflective modes; chemical analysis; electron optics of both instruments. Mr. Ardell (W)

146A. Introduction to Ceramics and Glasses. (Formerly numbered Engineering 146A.) Prerequisite: course 14 or equivalent. An introduction to ceramics and glasses being used as important materials of engineering, processing techniques, and unique properties. Examples of design and control of properties for certain specific applications in engineering. Mr. Mackenzie (F)

146B. Processing of Ceramics and Glasses. (Formerly numbered Engineering 146B.) Prerequisite: course 146A or equivalent. A study of the processes used in fabrication of ceramics and glasses, relationship to structure and properties. Processing operations, including materials preparation, forming, sintering, and melting. Design of processing to achieve desired characteristics of structure, properties, and cost. Mr. Mackenzie (W)

146F. Electronic Ceramics. (Formerly numbered Engineering 146F.) Prerequisites: course 14, Electrical Engineering 100, or equivalent. The utilization of ceramics in microelectronics; thick film and thin film resistors, capacitors, and substrates; design and processing of electronic ceramics and packaging; magnetic ceramics; ferroelectric ceramics and electro-optic devices; optical wave guide applications and designs. Mr. Dunn (F)

146L. Laboratory in Ceramics (2 units). (Formerly numbered Engineering 146L.) Laboratory, four hours. Prerequisite: course 146A or equivalent. Recommended corequisite: course 146B. Processing of common ceramics and glasses. Attainment of specific properties through process control for engineering applications. Quantitative characterization and selection of raw materials. Slip casting and extrusion of clay bodies. Sintering of powders. Glass melting and fabrication. Determination of chemical and physical properties. Mr. Mackenzie (Sp)

147A. Introduction to Metallurgy. (Formerly numbered Engineering 147A.) Prerequisites: course 14, a course in thermodynamics. Introduction to metallic alloys used in engineering design. Metallurgical thermodynamics, phases in metal systems, phase diagrams, metal forming, steels and cast iron, nonferrous alloys, design of metallic alloys for specific applications. Mr. Bunshah (W)

147B. Manufacturing Processes. (Formerly numbered Engineering 147B.) Prerequisite: course 14. Theoretical basis for cold forming and hot forming processes; rolling, extrusion, and forging. Conventional metal removal. Solidification processes and casting. Powder metallurgy. Mr. Shabaik (Sp)

147E. Modern Process Metallurgy. (Formerly numbered Engineering 147E.) Prerequisites: course 147A, and/or Chemical Engineering M105A or Mechanical, Aerospace, and Nuclear Engineering M105A. Modern process metallurgy used in extraction and refining of metals and alloys. The role of vacuum processing in modernizing and enlarging the scope of extractive metallurgy. Design of extractive and refining processes. Properties of vacuum-processed materials. Mr. Bunshah (W, even years)

147L. Manufacturing Processes Laboratory. (Formerly numbered Engineering 147L.) Laboratory, eight hours. Prerequisite: course 147B. Experimental investigation, analysis, and design of metal forming processes (forging, extrusion, drawing, and rolling). Force measurements and energy calculations in metal cutting. Experimental investigation of hot and isostatic pressing of powder. Mr. Shabaik (Sp)

148A. Structure and Properties of Composite Materials. (Formerly numbered Engineering 148A.) Prerequisites: course 14, one course from 143A, Mechanical, Aerospace, and Nuclear Engineering 156A, 158A, or Civil Engineering 165A. Relationship between structure and mechanical properties of composite materials with fiber and particulate reinforcement. Properties of fiber, matrix, and interfaces. Selection of macrostructures and material systems. Mr. Ono (Sp)

149A. Materials and Structures in Nature and in Civilization. Lecture, two hours; laboratory, four hours. Prerequisite for undergraduates: equivalent of preparation in natural science and competency in English and mathematics expected of entering college freshmen; for graduate students: consent of instructor. Not open to engineering or physical science students. A far-reaching effort at understanding mechanical properties of materials, especially as embodied in structures both by nature and throughout history. Laboratory techniques to determine mechanical behavior of selected materials and structures. Individual experimental project; report and presentation. Mr. Klement (Sp)

149C. Properties of Art Ceramic Materials. (Formerly numbered Engineering 149C.) Lecture, three hours; laboratory, three hours. Not intended for engineering majors. Composition and properties of art ceramics and glazes. Ceramic raw materials and their functions in bodies and glazes. Design of glazes and methods of expressing composition. Laboratory projects included. Mr. Klement (W)

149E. Ceramic Materials in History and Archaeology. (Formerly numbered Engineering 149E.) Lecture, two hours; laboratory, four hours. Prerequisite: consent of instructor. A technical introduction to the origins and evolution of ceramics and related materials, with emphasis on fabrication processes and raw materials. Laboratory exercises aimed at the development of skills necessary for analytical studies (for students in the humanities and sciences).

180B. Machine and Systems Biotechnology. (Formerly numbered Engineering 180B.) Prerequisite: course M107A or consent of instructor. Quantitative and qualitative methods for assessing man as a component in engineering design applications. Limits and optima of human psychophysiological capabilities applied to display-control design, decision-making problems, and task definition; problems of man-machine interactions in large-scale systems. Mr. Lyman (Sp)

199. Special Studies (2 to 8 units). Prerequisites: senior standing, consent of instructor. Individual investigation of a selected topic to be arranged with a faculty member. Enrollment request forms available in department office. Occasional field trips may be arranged. May be repeated for credit. (F,W,Sp)

Graduate Courses

240A. Principles of Materials Science A (Microstructural Thermodynamics). Prerequisites: course 141, Chemical Engineering M105A or Mechanical, Aerospace, and Nuclear Engineering M105A, or equivalent. Thermodynamical equilibrium criteria for multicomponent systems of materials. Phase transformations and chemical reactions. Properties of solutions; the quasichemical approach. Free energy of binary systems and the construction of phase diagrams. Constitution of melts. Thermodynamics of interfaces and defects. Mr. Ardell (W)

240B. Principles of Materials Science B (Structure of Materials). Prerequisite: course 145A or equivalent. Atomic, electronic, and crystalline structure of materials; particles and waves, free electron model, binding in solids; crystal structure, real and reciprocal lattices; amorphous solids, kinematical theory of scattering, electrons in a periodic potential, pseudopotentials, conduction of electrons in solids. Mr. Dunn (Sp)

241. Oxidation of Metals. Prerequisite: course 141 or equivalent or consent of instructor. The kinetics and mechanism of gas-solid reactions. Absorption and phase-boundary reactions. Nucleation of reaction products, defect structure of oxides, crystal structure and morphology of oxide films, factors influencing adherence of surface films. Mr. Douglass (W)

242A. Plasticity Theory Applied to Metalworking I. Prerequisite: Mechanical, Aerospace, and Nuclear Engineering 158A. Fundamental concepts describing the mechanics of plastic deformation of homogeneous solids. Yield criteria. Methods of solution, including slip line field, of problems involving plastic deformation, with examples involving plane strain and axisymmetric deformation. Extrusion problem. Application of methods of solution. Mr. Shabaik (F)

243A. Fracture of Structure Materials. Prerequisite: Mechanical, Aerospace, and Nuclear Engineering 158A or equivalent. The engineering and scientific aspects of crack nucleation, slow crack growth, and unstable fracture. Fracture mechanics, dislocation models, fatigue, fracture in reactive environments, alloy development, fracture-safe design. Mr. Ono (W)

243B. Design for Fatigue Reliability. Prerequisites: one or more courses from 143A, Mechanical, Aerospace, and Nuclear Engineering 156A, and 158A, or equivalent. Prediction of fatigue life of machines, structures, and vehicles with statistical confidence. Design concepts and fabrication techniques to prevent premature failure. Low-cycle, long-life, and crack growth. Effects of environment, residual stress, over-stressing, and surface treatments. Air Force specifications. Mr. Sines (F, even years)

243C. Dislocations and Strengthening Mechanisms in Solids. Prerequisite: course 143A or Mechanical, Aerospace, and Nuclear Engineering 158A. Elastic and plastic behavior of crystals, the geometry, mechanics, and interaction of dislocations, mechanisms of yielding, work hardening, and other strengthening. Mr. Ono (Sp, odd years)

244. Electron Microscopy. Prerequisite: course 145B or equivalent. Essential features of the electron microscope, geometry of electron diffraction, kinematical and dynamical theories of electron diffraction, including anomalous absorption, applications of theory to defects in crystals. Moire fringes, direct lattice resolutions, Lorentz microscopy, laboratory applications of contrast theory.
Mr. Ardell (Sp, even years)

245C. Diffraction Methods in Science of Materials. Prerequisite: course 145A or equivalent. Theory of the diffraction of waves (X rays, electrons, and neutrons) in crystalline and noncrystalline materials. Long- and short-range order in crystals, structural effects of plastic deformation, solid-state transformations, arrangements of atoms in liquids and amorphous solids. Mr. Wagner (Sp, odd years)

246A. Mechanical Properties of Nonmetallic Crystalline Solids. Prerequisite: course 146A. Material and environmental factors affecting the mechanical properties of nonmetallic crystalline solids, including atomic bonding and structure, atomic-scale defects, microstructural features, residual stresses, temperature, stress state, strain rate, size, and surface conditions. Methods for evaluating mechanical properties.
Mr. Mackenzie (Sp)

246B. Structure and Properties of Glass. Prerequisite: course 146A. Structure of amorphous solids and glasses. Conditions of glass formation and theories of glass structure. Mechanical, electrical, and optical properties of glass and relationship to structure.
Mr. Mackenzie (W, even years)

246D. Electronic and Optical Properties of Ceramics. Prerequisite: course 146A. Principles governing electronic properties of ceramic single crystals and glasses and effects of processing and microstructure of these properties. Electronic conduction, ferroelectricity, and photochromism. Magnetic ceramics. Infrared, visible, and ultraviolet transmission. Unique application of ceramics.
Mr. Dunn, Mr. Mackenzie (Sp, even years)

247A. Solid-State Reactions. Prerequisite: course 142A. Phenomenology and atomistic mechanisms of solid-state diffusion. Nucleation theory. Theory of diffusional growth processes, kinetics of diffusional transformations in solids. Precipitation in solids. Spinodal decomposition.
Mr. Ardell (W, even years)

247C. Advanced Solidification. Prerequisites: courses 141, 147A, or equivalent. Liquid state concept of constitutional supercooling; nucleation from the liquid phase; solute redistribution during liquid-solid transformation; fluid motion; interface morphology; eutectic growth; determination of phase diagrams. Students report on current topics in solidification. Mr. Yue (Sp, even years)

248A. Experimental Methods in Materials Synthesis. Prerequisite: bachelor's degree in chemistry, physics, or engineering. Techniques used in materials synthesis temperature measurement, vacuum techniques, methods of heating and quenching, consolidation and refining of metals, crystal growth, thin film deposition and thick film deposition. Laboratory experiments and demonstrations.
Mr. Bunshah (F)

248B. Deposition Technologies and Their Applications. Prerequisites: courses 146A, 147A, and 248A, or consent of instructor. Deposition methods used in high technology application. Theory and experimental details of physical vapor deposition (PVD), chemical vapor deposition (CVD), plasma spray, electrodeposition. Applications in semiconductor, chemical, optical, mechanical, and metallurgical industries. Mr. Bunshah (W, odd years)

280A. Advanced Biotechnology. (Formerly numbered Engineering Systems 280A.) Prerequisite: course 180B or Mechanical, Aerospace, and Nuclear Engineering 180A or consent of instructor. Review and analysis of contemporary bioscience research which bears on problems of engineering component and system design. Emphasis on methodological and scientific factors underlying man-machine-environment interactions. Mr. Lyman, Mr. O'Brien (W)

280B. Advanced Biotechnology. (Formerly numbered Engineering Systems 280B.) Prerequisite: course 180B or Mechanical, Aerospace, and Nuclear Engineering 180A or consent of instructor. Specialized coverage of "human factors" and "human engineering," with orientation toward obtaining design optimization of the functions of humans in relation to engineering parameters of environment, communication, and control. Mr. Lyman (Sp)

298. Seminar in Engineering (2 to 4 units). Prerequisites: graduate standing in materials science and engineering, consent of instructor. Seminars may be organized in advanced technical fields. If appropriate, field trips may be arranged. May be repeated with topic change.

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. A teaching apprenticeship under the active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.
Mr. Ardell (F,W,Sp)

596. Directed Individual or Tutorial Studies (2 to 8 units). Prerequisites: graduate standing in materials science and engineering, consent of instructor. Petition forms to request enrollment may be obtained from the Assistant Dean, Graduate Studies. Supervised investigation of advanced technical problems. S/U grading.

597A. Preparation for M.S. Comprehensive Examination (2 to 12 units). Prerequisites: graduate standing in materials science and engineering, consent of instructor. Reading and preparation for M.S. comprehensive examination. S/U grading.

597B. Preparation for Ph.D. Preliminary Examinations (2 to 16 units). Prerequisites: graduate standing in materials science and engineering, consent of instructor. S/U grading.

597C. Preparation for Ph.D. Oral Qualifying Examination (2 to 16 units). Prerequisites: graduate standing in materials science and engineering, consent of instructor. Preparation for oral qualifying examination, including preliminary research on dissertation. S/U grading.

598. Research for and Preparation of M.S. Thesis (2 to 12 units). Prerequisites: graduate standing in materials science and engineering, consent of instructor. Supervised independent research for M.S. candidates, including thesis prospectus. S/U grading.

599. Research for and Preparation of Ph.D. Dissertation (2 to 16 units). Prerequisites: graduate standing in materials science and engineering, consent of instructor. Usually taken after student has been advanced to candidacy. S/U grading.

Mathematics/ Computer Science (Interdepartmental)

For details on this undergraduate program, see Chapter 5 on the College of Letters and Science.

Mechanical, Aerospace, and Nuclear Engineering

5732 Boelter Hall, (213) 825-2855, 825-2281

Professors

Mohamed A. Abdou, Ph.D.
George E. Apostolakis, Ph.D.
Ivan Catton, Ph.D.
Andrew F. Charwat, Ph.D.
Robert W. Conn, Ph.D.
Vijay K. Dhir, Ph.D.
Peretz Friedmann, Sc.D.
William E. Kastenberg, Ph.D., *Chair*
Robert E. Kelly, Sc.D.
Cornelius T. Leondes, Ph.D.
Ajit K. Mal, Ph.D.
William C. Meecham, Ph.D.
Michel A. Melkanoff, Ph.D.
Anthony F. Mills, Ph.D.
D. Lewis Mingori, Ph.D.
Philip F. O'Brien, M.S.
David Okrent, Ph.D.
Gerald C. Pomraning, Ph.D.
Aly H. Shabaik, Ph.D.
Lucien A. Schmit, Jr., M.S.
George H. Sines, Ph.D.
Russell A. Westmann, Ph.D.

Emeritus Professors

Joseph S. Beggs, D.Ing.
Harry Buchberg, M.S.
Kurt Forster, Ph.D.
Walter C. Hurty, M.S.
Antony J. A. Morgan, Ph.D.
Russell R. O'Neill, Ph.D.
Richard Stern, Ph.D.
Edward H. Taylor, M.S.
William T. Thomson, Ph.D.

Associate Professors

Claude G. Fleury, D.Sc.
Nasr M. Ghoniem, Ph.D.
James S. Gibson, Ph.D.
Peter A. Monkewitz, Ph.D.

Assistant Professors

Ann R. Karagozian, Ph.D.
Adrienne G. Lavine, Ph.D.
Vinod G. Mengle, Ph.D.
Daniel C. H. Yang, Ph.D.

Adjunct Professors

Leslie Cave, B.Sc.
R. Philip Hammond, Ph.D.
Leona M. Libby, Ph.D.
Milton S. Plesset, Ph.D.
Chauncey Starr, Ph.D.
Robert J. Taylor, Ph.D.

Adjunct Associate Professors

Sukumar Chakravarthy, Ph.D.
Charles L. Gustafson, Ph.D.
Kenneth A. Solomon, Ph.D.

Adjunct Assistant Professor

James M. McDonough, Ph.D.

Adjunct and Visiting Lecturers

Charles Ashbaugh, M.S., *Adjunct*
Alexander Samson, Ph.D., *Visiting Senior*

Scope and Objectives

The Mechanical, Aerospace, and Nuclear Engineering Department encompasses professional disciplines that are often divided into separate departments at other engineering schools. Curricula in mechanical engineering and aerospace engineering are offered on the undergraduate and graduate levels, while nuclear engineering is primarily a graduate discipline. The recent Conference Board of Associated Research Councils' study ranked UCLA's mechanical engineering program ninth in the nation for both teaching and research.

Because of the scope of the department, faculty research and teaching cover an extremely wide range of technical disciplines. Research in thermal engineering emphasizes basic heat and mass transfer processes as well as thermal hydraulics. Topics in the area of design, dynamics, and control include robotics, mechanism design, helicopter dynamics and aeromechanics, dynamics and control of large space structures. Studies in structural mechanics range from fracture mechanics and wave propagation to structural dynamics and aeroelasticity. In the area of fluid mechanics and acoustics, investigations are underway on combustion, flow instabilities, turbulence and thermal convection, aeroacoustics, and unsteady aerodynamics of turbomachines and helicopter rotors. Other key areas of research include fusion reactor design, experimental tokamak confinement physics, and surface physics; particle transport theory; light water reactor safety; reliability and risk assessment methodology and application; societal risk management; and nuclear materials. The department also has growing activity in computer-aided design and manufacturing.

At the undergraduate level, the department offers accredited programs leading to the Bachelor of Science degrees in Aerospace Engineering and Mechanical Engineering. The former includes opportunity to emphasize propulsion, heat and mass transfer, fluids, dynamics and control, or structures, while the latter includes opportunity to emphasize mechanical design, dynamics, and control, thermal science and power systems, or manufacturing processes.

At the graduate level, the department offers programs leading to M.S. and Ph.D. degrees in three separate areas: mechanical engineering, aerospace engineering, and nuclear engineering. An M.S. in Manufacturing Engineering is also offered.

Bachelor of Science in Aerospace Engineering

Aerospace engineering is concerned with the design and construction of various types of fixed-wing and rotary-wing (helicopters) aircraft used for air transportation and defense purposes. It is also concerned with the design and construction of spacecraft and exploration and utilization of space and related technological fields.

Aerospace engineering is characterized by a very high level of technology. The aerospace engineer is likely to operate at the forefront of scientific discoveries, often stimulating these discoveries and providing the inspiration for the creation of new scientific concepts. Meeting these demands requires the imaginative use of many disciplines, including fluid mechanics and aerodynamics, structural mechanics, materials and aeroelasticity, dynamics, control and guidance, propulsion, and energy conversion.

Course requirements are as follows:

(1) Eight core courses: Civil Engineering 108, Electrical Engineering 100, 102, Materials Science and Engineering 14, Mechanical, Aerospace, and Nuclear Engineering 102, 103, M105A, M105D.

(2) Mechanical, Aerospace, and Nuclear Engineering 150A, 150B, 150P, 154A, 154B, 154S, 166A, 171A, and 161A or M169A; 157, 157A (satisfy the laboratory requirement); Civil Engineering 106A (satisfies the engineering economics requirement); Mechanical, Aerospace, and Nuclear Engineering 191A or M192A or a suitable course in the Mathematics Department selected in consultation with your adviser (satisfies the mathematics requirement).

(3) Three elective courses selected in consultation with your adviser from Mechanical, Aerospace, and Nuclear Engineering 131A, 132A, 133A (propulsion, heat, and mass transfer); 153A, 153C (acoustics); 155, 161A, 164, M169A, 171C (dynamics and control); 156A, 158A (structural mechanics); 162A (design mechanisms); 131AL, 162C, Civil Engineering 157B, 169L (laboratory).

(4) English 3; Chemistry 11A, 11B/11BL; Computer Science 10F; Mathematics 31A, 31B, 32A, 32B, 33A, 33B; Physics 8A, 8B/8BL, 8C/8CL, 8D/8DL; one life science elective course.

(5) A minimum of seven courses from the humanities, social sciences, and/or fine arts approved list (at least three must be upper division; at least three — with two upper division — must be in the same academic department or otherwise reflect coherence with respect to subject matter; and one must satisfy the engineering and science in society requirement).

Bachelor of Science in Mechanical Engineering

The mechanical engineering program is designed to provide a basic knowledge in thermodynamics, fluid mechanics, heat transfer, solid mechanics, mechanical design, dynamics, control, mechanical systems, manufacturing, and materials. The program includes fundamental subjects important to all mechanical engineers, with an option in mechanical design, dynamics, and control; thermal science and power systems; and manufacturing processes.

Course requirements are as follows:

(1) Seven core courses: Civil Engineering 108, Electrical Engineering 100, Materials Science and Engineering 14, Mechanical, Aerospace, and Nuclear Engineering 102, 103, M105A, M105D.

(2) Materials Science and Engineering 147B, Mechanical, Aerospace, and Nuclear Engineering 131A, 133A, 150A, plus one course from 156A, 158A, 166A (or Civil Engineering 166), and two courses from 162A, M169A, 171A; Civil Engineering 106A (satisfies the engineering economics requirement); Mechanical, Aerospace, and Nuclear Engineering 162B and 162M (satisfy the design requirement); one mathematics course from Mechanical, Aerospace, and Nuclear Engineering 191A, M192A (recommended), 192B, 192C, 193A, 193B, or Electrical Enginnering 103.

Eight laboratory units: Mechanical, Aerospace, and Nuclear Engineering 157, plus four additional units from one of the following subject areas:

Manufacturing Processes: Materials Science and Engineering 143L, 144L, 146L, 147L, Mechanical, Aerospace, and Nuclear Engineering 163L, 195L.

Mechanical Design, Dynamics, and Control: Civil Engineering 157B (two units of lab credit), 169L, Materials Science and Engineering 143L, Mechanical, Aerospace, and Nuclear Engineering 162C (two units of lab credit).

Thermal Science and Power Systems: Mechanical, Aerospace, and Nuclear Engineering 131AL.

(3) Four elective courses, approved by your adviser, to be selected from one of the subject areas listed below (at least one course in each subgrouping — a, b — within your selected subject area should be included):

Manufacturing Processes:

(a) Materials Science and Engineering 143A, Mechanical, Aerospace, and Nuclear Engineering 158A*, 163A, 164.

(b) Civil Engineering 174A, Mechanical, Aerospace, and Nuclear Engineering 174B, 194A, 194B.

Mechanical Design, Dynamics, and Control:

(a) Mechanical, Aerospace, and Nuclear Engineering 155, 162A*, 163, M169A*, 171A*.

(b) Electrical Engineering 103, 131A, 131B, Materials Science and Engineering 143A, Mechanical, Aerospace, and Nuclear Engineering 164, 191A, 193A, 194A, 194B, Mathematics 115A, 115B, 131A, 131B.

*Unless taken as part of the core.

Thermal Science and Power Systems:

(a) Chemical Engineering 130A, Mechanical, Aerospace, and Nuclear Engineering 132A, 135, 150B.

(b) Mechanical, Aerospace, and Nuclear Engineering 134B, 136, 150P, 151.

(4) English 3; Chemistry 11A, 11B/11BL; Computer Science 10C or 10F; Mathematics 31A, 31B, 32A, 32B, 33A, 33B; Physics 8A, 8B/8BL, 8C/8CL, 8D/8DL; one life science elective course.

(5) A minimum of seven courses from the humanities, social sciences, and/or fine arts approved list (at least three must be upper division; at least three — with two upper division — must be in the same academic department or otherwise reflect coherence with respect to subject matter; and one must satisfy the engineering and science in society requirement).

Graduate Study

For information on graduate admission to the mechanical, aerospace, and nuclear engineering programs and requirements for the M.S. and Ph.D. degrees, see "Graduate Study" at the beginning of this chapter.

Lower Division Course

94. Introduction to Computer-Aided Design and Drafting. (Formerly numbered Engineering 94.) Lecture, two hours; laboratory, four hours. Fundamentals of computer graphics and two- and three-dimensional modeling on computer-aided design and drafting systems. Students use one or more on-line computer systems to design and display various objects.
Mr. Melkanoff (F,Sp)

Upper Division Courses

102. Mechanics of Particles and Rigid Bodies. (Formerly numbered Engineering 102.) Lecture, three hours; recitation, two hours. Prerequisites: Mathematics 33A, Physics 8A. Newtonian mechanics (statics and dynamics) of particles and rigid bodies. Fundamental concepts of mechanics. Statics, kinematics, and kinetics of particles and rigid bodies. Impulse-momentum and work-energy relationships. Applications. Mr. Mingori (F,W,Sp)

103. Elementary Fluid Mechanics. (Formerly numbered Engineering 103.) Lecture, three hours; recitation, two hours. Prerequisites: Mathematics 32B, 33A, Physics 8B. An introductory course dealing with the application of the principles of mechanics to the flow of compressible and incompressible fluids.
Mr. Meecham (F,W,Sp)

M105A. Introduction to Engineering Thermodynamics. (Formerly numbered Engineering 105A.) (Same as Chemical Engineering M105A.) Lecture, four hours; recitation, one hour. Prerequisites: Physics 8B, Mathematics 32B. Phenomenological thermodynamics. Concepts of equilibrium, temperature, and reversibility. First law and concept of energy; second law and concept of entropy. Equations of state and thermodynamic properties. Engineering applications of these principles in the analysis and design of closed and open systems. Mr. Dhir (F,W,Sp)

M105D. Transport Phenomena. (Formerly numbered Engineering 105D.) (Same as Chemical Engineering M105D.) Lecture, four hours; recitation, one hour. Prerequisites: Physics 8B, Mathematics 32B, 33A. Transport phenomena; heat conduction, mass species diffusion, convective heat and mass transfer, and radiation. Engineering applications in thermal and environmental control. Ms. Lavine (F,W,Sp)

M109A. Engineering and Policy: Resources and Risk. (Same as Civil Engineering M109A.) Lecture, two hours; recitation, two hours. Prerequisite: sophomore or higher standing in engineering. The philosophical, sociological, and institutional implications of engineering-based risk and decision making. Emphasis on opportunities for the useful development of resources, inherent risks, and the responsibilities of engineers in the decision process. Emphasis on thoughtful student discussion.
Mr. Kastenberg (W)

131A. Intermediate Heat Transfer. (Formerly numbered Engineering 131A.) Prerequisite: course M105D. Steady conduction: two-sided, two-ended, tapered, and circular fins; buried cylinders, thick fins. Transient conduction: slabs, cylinders, products. Convection: transpiration, laminar pipe flow, film condensation, dimensional analysis, working correlations. Surface radiation. Two-stream heat exchangers. Elements of thermal design.
Mr. Catton (F,Sp)

131AL. Thermal Sciences Laboratory. (Formerly numbered Engineering 131AL.) Laboratory, eight hours. Prerequisites: courses 131A, 157. Basic experimental investigations and analysis of the energy transformation and rate processes. Experiments include examples from thermodynamics and heat and mass transfer. Students take and analyze the data and discuss the physical phenomena.
Mr. Mills (Sp)

132A. Mass Transfer. (Formerly numbered Engineering 132A.) Prerequisites: courses M105D, 131A. The principles of mass transfer by diffusion. Mass transfer by convection in laminar and turbulent flows. Simultaneous heat and mass transfer. Applications including combustion of solids and volatile fuels, evaporation and condensation, ablation and transpiration cooling, gas absorption and catalysis.
Mr. Mills (Sp)

133A. Engineering Thermodynamics. (Formerly numbered Engineering 133A.) Prerequisites: courses 103, M105A, M105D. Applications of thermodynamic principles to engineering processes. Energy conversion systems. Rankine cycle and other power cycles, refrigeration, psychrometry, reactive and nonreactive fluid flow systems. Mr. Dhir (F)

M134A. New Energy Technology: Resources, Conversion, Constraints. (Same as Civil Engineering M134A.) Prerequisite: course M105A or equivalent in physics or chemistry or consent of instructor. Energy resources: fossil fuels, nuclear fuels, hydro, solar, wind, geothermal, and biomass sources. Conversion methods for power production and other energy uses. Consideration of thermodynamic, economic, and environmental constraints.
Mr. Kastenberg

134B. Solar Energy Use and Control. (Formerly numbered Engineering 134B.) Prerequisite: course M105D or equivalent or consent of instructor. Nature and availability of solar radiation; review of selected heat transfer topics pertinent to solar energy collection and use; design analysis of nonfocusing solar energy collector-converters and methods of energy storage; selected applications. Mr. Mills

135. Fundamentals of Nuclear Power. (Formerly numbered 135A.) Prerequisite: junior standing. Introduction to nuclear engineering; nuclear physics, neutron cross sections, nuclear fission and fusion; elementary analysis and design of reactors. Criticality, one-group neutron diffusion theory, heat removal, and heterogeneous effects. Mr. Kastenberg (F)

135D. Introduction to Fusion Engineering and Reactor Design. (Formerly numbered Engineering 135D.) Corequisite: course 135 or consent of instructor. Fusion reactions, fuel cycle, and operating conditions. Magnetic and inertial confinement, including tokamaks, magnetic mirrors, laser fusion, and selected others. Concepts for and subsystems of fusion reactors. Design of reactors and key subsystems. Application of fusion reactors for electricity, fissionable fuel, and/or chemical fuel production.
Mr. Conn (F)

136. Thermal Hydraulic Design of Nuclear and Other Power Systems. (Formerly numbered 136B.) Prerequisite: senior standing. Thermal hydraulic design of nuclear and other power systems, power generation and heat removal, power cycle, thermal hydraulic component design, overall plant design, steady state and transient operation.
Mr. Dhir (W)

136A. Introduction to Probabilistic Risk Analysis. (Formerly numbered Engineering 136A.) Prerequisite: consent of instructor. Probabilistic models for the failure of components and systems. Redundant systems. Maintenance models. Fault and event tree analysis. Applications to nuclear reactor systems.
Mr. Apostolakis

136C. Fundamentals of Nuclear Reactor Materials. (Formerly numbered Engineering 136C.) Prerequisites: Materials Science and Engineering 14, Mathematics 33A, Physics 8D. Function and choice of materials in reactors. Point defects. Diffusion in solids. Fuel element thermal performance. Behavior of fission products. Fuel swelling radiation effects in metals; hardening, embrittlement, and fracture; nuclear fuel equation of state; fuel element design.
Mr. Ghoniem

150A. Intermediate Fluid Mechanics. (Formerly numbered Engineering 150A.) Prerequisite: course 103 or equivalent or consent of instructor. The basic equations governing fluid motion. Fundamental solutions of the Navier-Stokes equations. Lubrication theory. Elementary potential flow theory. Boundary layers. Turbulent flow in pipes and boundary layers. Compressible flow: normal shocks, channel flow with friction or heat addition. Mr. Kelly (F,W)

150B. Aerodynamics. (Formerly numbered Engineering 150B.) Prerequisites: courses 103, 150A, or equivalent. Advanced aspects of potential flow theory. Incompressible flow around thin airfoils ($C_{\frac{1}{2}}$, C_m) and wings (lift, induced drag). Gas dynamics: oblique shocks, Prandtl-Meyer expansion. Linearized subsonic and supersonic flow around thin airfoils and wings. Wave drag. Transonic flow. Mr. Kelly (Sp)

150P. Jet Propulsion Systems. (Formerly numbered Engineering 150P.) Prerequisites: courses 103, M105A. Thermodynamic properties of gases, design and analysis of aircraft jet engine components, cycle analysis, design and analysis of combustion systems, performance of rocket vehicles.
Ms. Karagozian (F)

151. Performance of Vehicles. (Formerly numbered Engineering 151.) Prerequisites: courses 103, M105A. Preliminary design analysis of the performance of a variety of vehicles, including automobiles, trains, aircraft, rocket-powered vehicles, ground effect machines, ships and sailboats; performance parameters include speed, range, payload, efficiency, dynamics and stability, noise, and air or water pollution. Mr. Charwat (Sp)

153A. Engineering Acoustics. (Formerly numbered Engineering 153A.) Prerequisite: upper division standing in engineering or consent of instructor. Fundamental course in acoustics, including the ear and hearing; basic acoustical instrumentation; propagation of sound; sources of sound; architectural reverberation; selected subjects. Mr. Meecham (W)

153B. Acoustics Laboratory. (Formerly numbered Engineering 153B.) Laboratory, eight hours. Prerequisite or corequisite: course 153A or consent of instructor. Experimental studies in the field of acoustics, including audiometry, noise and noise control, acoustical filters, impedance measurements, transducer characteristics, and interferometry. Occasional field trips may be necessary to obtain data.
Mr. Meecham

153C. Noise and Noise Control Design. (Formerly numbered Engineering 153C.) Prerequisite: course 153A or consent of instructor. Practical concepts in design, construction, measurement, and analysis of noise suppression techniques. Equipment, transducers, environmental factors in sound propagation, enclosures, properties of materials, sound interaction in structures, mufflers, isolators, damping of panels, ducts, aerodynamic noise, noise criteria and standards. Mr. Meecham

154A. Preliminary Design of Aircraft. (Formerly numbered Engineering 154A.) Prerequisite: course 154S. Classical preliminary design of an aircraft, including weight estimation, performance and stability, and control consideration. Quarter assignment consists of the preliminary design of a low-speed aircraft.
Mr. Friedmann (W)

154B. Design of Aerospace Structures. (Formerly numbered Engineering 154B.) Prerequisites: courses 154A, 166A. Design of aircraft, helicopter, spacecraft, and related structures. External loads, internal stresses. Applied theory of thin-walled structures. Material selection, design using composite materials. Design for fatigue prevention and structural optimization. Field trips to aerospace companies.
Mr. Friedmann (Sp)

154S. Flight Mechanics, Stability, and Control of Aircraft. (Formerly numbered Engineering 154S.) Prerequisites: courses 150A, 150B. Aircraft performance, flight mechanics, stability, and control; some of the basic ingredients needed for the design of an aircraft. The effects of airplane flexibility on stability derivatives. Mr. Friedmann (F)

155. Intermediate Dynamics. (Formerly numbered Engineering 155.) Prerequisite: course 102 or equivalent. The axioms of Newtonian mechanics, generalized coordinates, Lagrange's equations, variational principles; central force motion; kinematics and dynamics of a rigid body. Euler's equations, motion of rotating bodies, oscillatory motion, normal coordinates, orthogonality relations, the vibrating string.
Mr. Gibson (Sp)

156A. Advanced Strength of Materials. (Formerly numbered Engineering 156A.) Prerequisite: Civil Engineering 108. Columns and beam columns. Torsion; Airy's stress functions, stress concentrations. Loads on balls, rollers. Rotating disks, thick hollow spheres, thick hollow circular cylinders, curved beams, coiled springs. Mr. Westmann (F,Sp)

157. Basic Mechanical Engineering Laboratory. (Formerly numbered Engineering 157.) Laboratory, eight hours. Prerequisites: courses 103, M105A, M105D, Civil Engineering 108. Methods of measurement of basic quantities and performance of basic experiments in the thermal sciences, fluid mechanics, and structures. Primary sensors, transducers (motion, force and stress, temperature), recording equipment, signal processing, and data analysis.
Mr. Mills, (F,W,Sp)

157A. Fluid Mechanics/Aerodynamics Laboratory. (Formerly numbered Engineering 157A.) Laboratory, eight hours. Prerequisites: courses 150A, 157. An experimental illustration of important physical phenomena in the area of fluid mechanics/aerodynamics, as well as hands-on experience with modern experimental tools and techniques in the field, including the basics of digital data acquisition.
Mr. Monkewitz

158A. Elasticity and Plasticity. (Formerly numbered Engineering 158A.) Prerequisite: Mathematics 32B. Three-dimensional stress and strain. Criteria for prediction of mechanical failure. Differential equations in three dimensions; analytical, numerical, and experimental solutions of plane state and torsion problems. (Stress function, iteration, strain gages, photoelasticity.) Homogeneous plastic flow, plastic tensile instability. Mr. Westmann (W)

161A. Introduction to Astronautics. (Formerly numbered Engineering 161A.) Prerequisite: course 102. The space-environment of earth, near-earth orbits and trajectories, step rockets and staging, the two-body problem, orbital transfer and rendezvous, elementary perturbation theory, influence of earth's oblateness. Mr. Kastenberg (F)

162A. Introduction to Mechanisms and Mechanical Systems. (Formerly numbered Engineering 162A.) Prerequisite: course 102. The analysis and synthesis of mechanisms and mechanical systems, including both kinematics and dynamics aspects. Mechanisms from a wide range of applications, including automatic machinery, transportation systems, and computer peripheral equipment.
Mr. Yang (F)

162B. Fundamentals of Mechanical System Design. (Formerly numbered Engineering 162B.) Lecture, three hours; laboratory, three hours. Prerequisites: course 102, Civil Engineering 108. Techniques of modern design and development of mechanical systems. Application and analysis of basic components and subsystems such as gear trains, bearings, hydraulic and pneumatic subsystems. The dynamics of high-speed machines. Students create a design of their choice. Mr. Yang (F,W)

162C. Electromechanical Systems Design Laboratory. (Formerly numbered Engineering 162C.) Lecture, one hour; laboratory, five hours. Prerequisite: course 162B or consent of instructor. Laboratory and design course for students interested in development of complex mechanical and electromechanical systems. Students, with consent of instructor, select a system which they develop, build, and instrument. Behavior of this system studied in detail.
Mr. Yang (Sp)

162M. Senior Mechanical Engineering Design. (Formerly numbered Engineering 162M.) Lecture, one hour; laboratory, five hours. Prerequisites: course 162B, Civil Engineering 106A, Materials Science and Engineering 147B. Must be taken during the last two quarters of the academic program. Students conceptualize, analyze, synthesize, and optimize group design projects. Consideration of constraints such as economics, safety, reliability, manufacturability, and social impact. Presentation, including a report with engineering specifications and drawings, made in competition among groups. Mr. Samson (Sp)

163. Dynamics and Control of Physical Systems. (Formerly numbered Engineering 163.) Prerequisites: courses 155 or M169A (may be taken concurrently), 171A. Application of the principles of dynamics and classical control theory to a wide range of physical systems, including simplified models of machines and electromechanical devices, space and ground transportation vehicles, and biomechanical systems. Mathematical modeling and computer simulation. Mr. Yang

163A. Fundamentals of Robotics. (Formerly numbered Engineering 163A.) Prerequisite: upper division standing. Mechanical modeling and control of robots. Interaction of robots with their environment. Study of robot components. Robot languages. Computer simulation of robot action. Intelligent robot in industrial applications. Social implications.
Mr. Melkanoff (F)

163L. Robotics Laboratory. (Formerly numbered Engineering 163L.) Laboratory, eight hours. Prerequisite: consent of instructor. Hands-on experience in programming and operating industrial robots. Research projects in industrial applications in robotics systems, languages, sensory systems, and artificial intelligence. Mr. Melkanoff (F,W)

164. Digital Control of Physical Systems. (Formerly numbered Engineering 164.) (Not the same as course 164 prior to Fall Quarter 1982.) Prerequisite: course 171A or Electrical Engineering 141. Recommended: courses 163, 171C. Analysis and design of digital control systems. Discrete-time transfer functions for physical systems. Design using classical methods: performance specifications, frequency response, root locus; compensation. Design using state-space methods: control laws, estimators. Practical considerations: roundoff, sample rate selection, computer implementation. Mr. Mingori (W)

166A. Analysis of Flight Structures. (Formerly numbered M166.) Prerequisite: Civil Engineering 108. Introduction to 2-D elasticity, stress-strain laws, yield and fatigue; bending of beams; torsion of beams; warping; torsion of thin-walled cross sections: shear flow, shear-lag; combined bending torsion of thin-walled, stiffened structures used in aerospace vehicles; elements of plate theory; buckling of columns. Mr. Friedmann, Mr. Westmann (F)

168. Introduction to Finite Element Technology. Lecture, four hours; laboratory, four hours. Prerequisites: course 94, Civil Engineering 108, Computer Science 10F, Mathematics 33A. Recommended: course 156A or 158A or Civil Engineering 166 or consent of instructor. Limited to 20 senior students. Introduction to the finite element method (FEM) and its matrix formulation; computer implementation of FEM concepts; practical use of FEM codes. Preprocessing and postprocessing techniques; graphics display capabilities; geometric and analysis modeling; interactive engineering systems; links with computer-aided design. Recent trends in FEM technology; design optimization. Term projects using FEM computer codes. Mr. Fleury (Sp)

M169A. Introduction to Mechanical Vibrations. (Formerly numbered Engineering 169A.) (Same as Civil Engineering M169A.) Prerequisites: course 102, Civil Engineering 108. Recommended: Electrical Engineering 102. Fundamentals of vibration theory and applications. Free, forced, and transient vibration of one and two degrees of freedom systems, including damping and nonlinear behavior. Normal modes, coupling, and normal coordinates. Elements of vibration and wave propagation in continuous systems.
Mr. Friedmann (W)

171A. Introduction to Feedback and Control Systems: Dynamic Systems Control I. (Formerly numbered Engineering 171A.) Prerequisite: consent of instructor. Recommended: Electrical Engineering 102. Introduction to feedback principles, control systems design, and system stability. Modeling of physical systems in engineering and other fields; transform methods; controller design using Nyquist, Bode, and root locus methods; compensation; computer-aided analysis and design. Mr. Mingori (F,W)

171C. Dynamic Systems Control II. (Formerly numbered Engineering 171C.) Recommended prerequisite: course 171A or Electrical Engineering 141. State-space models of continuous and discrete-time dynamic systems. Linear algebra of systems; vector spaces; geometric concepts; transformations and matrices; canonical forms. Stability. Controllability and observability. State representation of nonlinear systems; linearization. Emphasis on modeling concepts, applications, and computer-aided problem solving. Mr. Leondes (F,Sp)

174B. Reliability and Quality Assurance. (Formerly numbered Engineering 174B.) Prerequisite: course 193A or consent of instructor. An introduction to the manufacturing-oriented and related fields of reliability and quality in terms of organizational relationships, major functional tasks, statistical and other techniques, and elements of engineering analysis.
Mr. Apostolakis (F)

180A. Environmental Biotechnology. (Formerly numbered Engineering 180A.) Prerequisite: Materials Science and Engineering M107A or consent of instructor. Physical, physiological, and psychological aspects of the interaction between man and thermal, atmospheric, radiant, and mechanical agents and energies in the environment. Biological and physical requirements for engineering control of the environment; applications to complex systems.
Mr. O'Brien

191A. Laplace Transforms and Applied Complex Variables. (Formerly numbered Engineering 191A.) Prerequisites: course 102, Electrical Engineering 100. Introduction to the Laplace transformation: application to electrical and mechanical problems, convolution-type integral equations, difference equations, and simple boundary value problems in partial differential equations. Complex variable theory, contour integrals, residues; application to transform inversion and partial differential equations.
Mr. Forster (W,Sp)

M192A. Mathematics of Engineering. (Formerly numbered Engineering 192A.) (Same as Chemical Engineering M192A.) Prerequisites: Mathematics 33A, 33B. Methods of solving ordinary differential equations in engineering. Review of matrix algebra. Solutions of systems of first- and second-order ordinary differential equations. Series solution to linear second-order ordinary differential equations. Special functions and introduction to boundary value problems. Mr. Forster, Mr. Kastenberg (F,W,Sp)

192B. Mathematics of Engineering. (Formerly numbered Engineering 192B.) Prerequisite: course M192A or equivalent. Applications of mathematical methods to engineering problems. Eigenvalue problems for continuous systems and the related special functions. Mr. Kastenberg (Sp)

192C. Numerical Methods for Engineering Applications. (Formerly numbered Engineering 192C.) Recommended prerequisite: Electrical Engineering 103. Basic topics from numerical analysis having wide application in the solution of practical engineering problems. The algebraic eigenvalue problem. Initial and boundary value problems for ordinary and partial differential equations. Elementary finite difference techniques for partial differential equations applied to heat, wave, and Poisson equations.
Mr. Kastenberg (F,Sp)

M192F. Numerical Optimization Methods for Engineering Design. (Formerly numbered 192F.) (Same as Civil Engineering M192F.) Prerequisites: Computer Science 10F, Mathematics 32A, 33A. Recommended: Mathematics 115A. Systematic presentation of numerical optimization methods for engineering design; one-dimensional minimization, unconstrained minimization, linearly constrained minimization, general nonlinear problems, approximation concepts, duality. Optimization problem statements. Advantages and limitations of numerical optimization. Applications to general design in mechanical, aerospace, and manufacturing engineering.
Mr. Fleury

193A. Engineering Probabilistics and Stochastics. (Formerly numbered Engineering 193A.) Prerequisite: junior standing in engineering. Sets and set algebra; sample spaces; combinatorics; absolute and conditional probability; discrete and continuous random variables; probability distribution, increment, and density functions; Chebychev's inequality; Laplace-Fourier transforms; law of large numbers; central limit theorems; discrete and continuous stochastic processes. Mr. Meecham (F)

193B. Engineering Statistics. (Formerly numbered Engineering 193B.) Prerequisite: course 193A or equivalent or consent of instructor. Introductory concepts of statistical decision and estimation. Population parameters, samples, data, statistics. Classical tests of significance and hypotheses. OC-functions and sample sizes. Statistical estimation for one- and two-parameter populations. Bayesian inference, stopping rules. Decision theory, payoffs, losses. Applications. Mr. Apostolakis (W)

194A. Fundamentals of Computer-Aided Design and Manufacturing. (Formerly numbered Engineering 194A.) Prerequisite: junior standing in engineering or mathematics. Corequisite: course 194B. Basic course in computer-aided and manufacturing area. Foundation of computerized drafting, including primitives, operators, and major functions. Descriptions and representations of solid objects; hardware, software, and available commercial systems. The data processing and numerical control aspects of computer-aided manufacturing. Mr. Melkanoff (W)

194B. Computer-Aided Design Laboratory (2 units). (Formerly numbered Engineering 194B.) Laboratory, four hours. Prerequisite: junior standing in engineering or mathematics. Corequisite: course 194A. Students are taught how to utilize an on-line computer-aided system, to draw and to design various parts and systems. Mr. Melkanoff (W)

195A. Numerically Controlled Machine Programming and Control Software Design. Prerequisite: FORTRAN programming language. Advanced programming of machining processes in APT. Introduction to IBM APT-AC numerically controlled processor. Design of postprocessors. Variable programming in numerically controlled languages. Method of generating numerical control programs by using CAD systems. Mr. Melkanoff (W)

195L. Numerically Controlled Manufacturing Machinery Laboratory. Laboratory, eight hours. Prerequisite: consent of instructor. Programming and control of numerically controlled metal cutting machines. Numerically controlled programming in various languages. Postprocessors utilization. Direct interface to computer-aided design. Mr. Melkanoff (W)

199. Special Studies (2 to 8 units). Prerequisites: senior standing, consent of instructor. Individual investigation of a selected topic to be arranged with a faculty member. Enrollment request forms available in department office. Occasional field trips may be arranged. May be repeated for credit. (F,W,Sp)

Graduate Courses

201. Mechanical, Aerospace, and Nuclear Engineering Seminar (2 units). Prerequisite: graduate standing in engineering. Lectures on current research topics in mechanics and structures. May be repeated for credit. S/U grading. Mr. Kastenberg

202. Manufacturing Engineering Seminar (2 units). Prerequisite: graduate standing in engineering. Lectures on current research and development in manufacturing engineering. S/U grading.
Mr. Melkanoff

231A. Convective Heat Transfer Theory. (Formerly numbered Chemical, Nuclear, and Thermal Engineering 231A.) Prerequisite: course 131A. The conservation equations for flow of real fluids. Analysis of heat transfer in laminar and turbulent, incompressible and compressible flows. Internal and external flows; free convection. Variable wall temperature; effects of variable fluid properties. Analogies among convective transfer processes. Ms. Lavine (W)

231B. Radiation Heat Transfer. (Formerly numbered Chemical, Nuclear, and Thermal Engineering 231B.) Prerequisite: course 131A. Radiant intensity and flux. Radiation properties of walls, gases, and particulates. Heat transfer by combined conduction, convection, and radiation in nonabsorbing and absorbing media. Applications to industrial, aerospace, energy conversion, and environmental problems.
Mr. Catton

231C. Boiling and Condensation. (Formerly numbered Chemical, Nuclear, and Thermal Engineering 231C.) Prerequisites: courses 131A, 150A, or equivalent. Phenomenological theories of boiling. Hydrodynamic instability of liquid-vapor interfaces and their application to predict maximum and minimum heat fluxes. Forced flow boiling and boiling crisis in pipes. Pool and forced flow boiling of liquid metals. Film and dropwise condensation. Mr. Dhir (W)

231D. Application of Numerical Methods to Transport Phenomena. (Formerly numbered Chemical, Nuclear, and Thermal Engineering 231D.) Prerequisite: course 132A or consent of instructor. Numerical techniques for solving selected problems in heat and mass transfer. Applications include free convection, boundary layer flow, two-phase flow, separated flow, flow in porous media. Effects of concentration and temperature gradients, chemical reactions, radiation, electric and magnetic fields. Mr. Kastenberg (Sp)

231E. Two-Phase Flow Heat Transfer. (Formerly numbered Chemical, Nuclear, and Thermal Engineering 231E.) Prerequisites: courses 131A, 150A. Generalized constitutive equations for various two-phase flow regimes. Interfacial heat and mass transfer. Equilibrium and nonequilibrium flow models. Two-phase flow instability. One-dimensional wave propagation. Two-phase heat transfer applications: convective boiling, pressure drop, critical and oscillatory flows. Mr. Dhir (F)

231F. Advanced Heat Transfer. (Formerly numbered Chemical, Nuclear, and Thermal Engineering 231F.) Prerequisite: course 231A. Advanced topics in heat transfer from the current literature. Linear and nonlinear theories of thermal and hydrodynamic instability; variational methods in transport phenomena; phenomenological theories of turbulent heat and mass transport. Mr. Catton (F)

232B. Advanced Mass Transfer. (Formerly numbered Chemical, Nuclear, and Thermal Engineering 232B.) Prerequisites: courses 131A, 132A. The formulation of the general convective heat and mass transfer problem, including equilibrium and nonequilibrium chemistry. Similar and nonsimilar solutions for laminar flows; solution procedures for turbulent flows. Multicomponent diffusion. Application to the hypersonic boundary layer, ablation and transpiration, cooling combustion. Mr. Mills

233A. Advanced Power Production and Propulsion. (Formerly numbered Chemical, Nuclear, and Thermal Engineering 233A.) Prerequisite: course 133A or equivalent. Thermodynamic cycle analysis. Fluid mechanics and thermodynamics of compressors and turbines. Component matching. Atomization and vaporization. Flow and mixing in combustion chambers. Flame stabilization and combustion instabilities. Turbojet and ramjet engines and gas turbines. Rocket propulsion and stability of combustion processes. Mr. Charwat

234A. Topics in Thermal Design. (Formerly numbered Chemical, Nuclear, and Thermal Engineering 234A.) Prerequisites: courses 131A, 132A. Consideration of thermal design problems selected from applications such as heat exchangers, heat shields, heat pipes, thermal environment control, spacecraft temperature control, and solar thermal conversion. Presentations made by the staff and occasionally by invited off-campus specialists. Mr. Mills (Sp)

235A. Nuclear Reactor Theory. (Formerly numbered Chemical, Nuclear, and Thermal Engineering 235A.) Prerequisites: courses 135, M192A. The underlying physics and mathematics of nuclear reactor (fission) core design. Diffusion theory, reactor kinetics, slowing down and thermalization, multigroup methods, introduction to transport theory.
Mr. Pomraning (W)

235B. Kinetic Theory of Plasmas and Particle Transport. (Formerly numbered Chemical, Nuclear, and Thermal Engineering 235B.) Prerequisites: course 135 or 135D and Electrical Engineering M185, or consent of instructor. Unified kinetic theory treatment of plasma, neutron, and radiation transport phenomena. The Liouville equation, Boltzmann collision integral and H-theorem. Derivation of Fokker-Planck, neutron, and radiation transport equations. Fluid moment equations, dispersion relations, space and time relaxation phenomena. Applications from neutron transport, plasma physics, and radiative transfer.
Mr. Conn, Mr. Pomraning (Sp)

235C. Methods of Nuclear Reactor Analysis. (Formerly numbered Chemical, Nuclear, and Thermal Engineering 235C.) Prerequisite: course 235A or consent of instructor. The analysis of nuclear reactor systems by approximation techniques, analytical methods, and numerical methods. A synthesis of reactor physics and engineering, with applications to various systems. Mr. Pomraning

236A. Nuclear Fuel Element Behavior. (Formerly numbered Chemical, Nuclear, and Thermal Engineering 236A.) Prerequisite: course 136C. Void swelling of cladding materials, fuel swelling due to fission gases, pore migration and fuel restructuring, fission gas release, computer codes for swelling and gas release, densification, and hot pressing, modeling of the structural behavior of fuel elements and assemblies. Mr. Okrent

236B. Radiation Damage in Reactor Materials. (Formerly numbered Chemical, Nuclear, and Thermal Engineering 236B.) Prerequisite: course 136C. Fundamentals of radiation damage; energy loss and Linhard's theory, atom displacement, the collision cascade; focusing and channeling effects, computer simulations and experiments on cascades, damage simulation techniques for material testing, bulk effects of radiation; void swelling and irradiation creep, surface effects; blistering and sputtering of surface atoms. Mr. Ghoniem (W)

236C. Nuclear Reactor Safety. (Formerly numbered Chemical, Nuclear, and Thermal Engineering 236C.) Prerequisite: course 135B. Safety-related characteristics of thermal and fast nuclear power reactors; design criteria and siting considerations; methods of accident analysis; general risk considerations. Analysis of specific accidents; anticipated transients without scram, loss-of-coolant accidents, and reactivity transients. Mr. Okrent (W)

236D. Probabilistic Risk Assessment. (Formerly numbered Chemical, Nuclear, and Thermal Engineering 236D.) Prerequisite: course 136A. Basic concepts of risk benefit; low probability — high consequence events; methods for the evaluation of risk; fault/event tree analysis; dependent failures; data evaluation; decision theory; applications to large technological systems (e.g., nuclear power reactors, chemical process systems, dams, etc.). Mr. Apostolakis (Sp)

236E. Advanced Problems in Reactor Design. (Formerly numbered Chemical, Nuclear, and Thermal Engineering 236E.) Prerequisites: at least four courses from 235A, 235B, 235C, 236A, 236B, 236C, 236D. Methods of attack and solution for advanced problems in reactor design, including fuel elements, power reactor cores, pulsed reactors, fuel cycle and fuel management, thermal-hydraulics, shielding, and safety. Mr. Kastenberg (Sp)

M237A. Principles of Magnetic Confinement Fusion. (Formerly numbered M250.) (Same as Electrical Engineering M286.) Prerequisites: Electrical Engineering M185, and 285A and 285B or Physics 222A-222B, or consent of instructor. Plasma requirements for controlled fusion. Structure of magnetic fields. Theory of MHD equilibrium and stability. Shear and minimum-B stabilization. Resistive and microinstabilities. Neoclassical diffusion physics of tokamak and tandem-mirror plasmas. Neutral beams and auxiliary heating. Alternate concepts. Mr. Conn

M237B. Fusion Plasma Physics and Analysis. (Formerly numbered M251.) (Same as Electrical Engineering M287.) Prerequisite: Electrical Engineering M185. Fundamentals of plasmas at thermonuclear burning conditions. Fokker-Planck equation and applications to heating by neutral beams, RF, and fusion reaction products. Bremsstrahlung, synchrotron, and atomic radiation processes. Plasma surface interactions. Fluid description of the burning plasma. Dynamics, stability, and control. Applications in tokamaks, tandem mirrors, and alternate concepts. Mr. Conn (W,Sp)

M237C. Fusion Reactor Technology and Design. (Formerly numbered M252.) (Same as Electrical Engineering M288.) Prerequisite: course 135 or consent of instructor. Fusion reactors, both magnetic and inertial. Operating conditions, power balance, system Q. Drivers for inertial confinement, magnet systems; blanket and shield design and analysis, induced radioactivity, tritium breeding and processing; radiation damage effects, design of reactors for electricity production or as hybrid systems. Mr. Abdou (Sp)

239BA-239BZ. Seminar: Current Topics in Transport Phenomena (2 to 4 units each). (Formerly numbered Chemical, Nuclear, and Thermal Engineering 239BA-239BZ.) Prerequisite: consent of instructor. Lectures, discussions, student presentations, and projects in areas of current interest in transport phenomena. May be repeated for credit. S/U grading. (W)

239DA-239DZ. Seminar: Current Topics in Nuclear Engineering (2 to 4 units each). (Formerly numbered Chemical, Nuclear, and Thermal Engineering 239DA-239DZ.) Prerequisite: consent of instructor. Lectures, discussions, student presentations, and projects in areas of current interest in nuclear engineering. May be repeated for credit. S/U grading.

239FA-239FZ. Special Topics in Transport Phenomena (2 to 4 units each). (Formerly numbered Chemical, Nuclear, and Thermal Engineering 239FA-239FZ.) Prerequisites: consent of instructor, additional prerequisites for each offering as announced in advance by the department. Advanced and current study of one or more aspects of heat and mass transfer, such as turbulence, stability and transition, buoyancy effects, variational methods, and measurement techniques. May be repeated for credit with topic change.

239GA-239GZ. Special Topics in Nuclear Engineering (2 to 4 units each). (Formerly numbered Chemical, Nuclear, and Thermal Engineering 239GA-239GZ.) Prerequisites: consent of instructor, additional prerequisites for each offering as announced in advance by the department. Advanced study in areas of current interest in nuclear engineering, such as reactor safety, risk-benefit trade-offs, nuclear materials, and reactor design. May be repeated for credit with topic change.

239HA-239HZ. Special Topics in Fusion Physics, Engineering, and Technology (2 to 4 units each). (Formerly numbered 253AA-253Z.) Prerequisites: consent of instructor, additional prerequisites for each offering as announced in advance by the department. Advanced treatment of subjects selected from research areas in fusion science and engineering, such as instabilities in burning plasmas, alternate fusion confinement concepts, inertial confinement fusion, fission-fusion hybrid systems, and fusion reactor safety. May be repeated for credit with topic change.

250A. Foundations of Fluid Dynamics. Prerequisite: course 150A or consent of instructor. The fundamental theorems of fluid dynamics. Ideal fluids, potential flow, vortex motion, and viscous flow. The history of fluid dynamics, illustrated with problems drawn from mechanics, aerodynamics, and geophysics. Mr. Kelly (F)

250B. Viscous and Turbulent Flows. Prerequisite: course 150A or consent of instructor. The fundamental principles of fluid dynamics applied to the study of fluid resistance. States of fluid motion discussed in order of advancing Reynolds number; wakes, boundary layers, instability, transition, and turbulent shear flows. Mr. Kelly, Mr. Monkewitz (W)

250C. Compressible Flows. Prerequisite: course 150A or 150B or consent of instructor. Effects of compressibility in viscous and inviscid flows. Steady and unsteady inviscid subsonic and supersonic flows; method of characteristics; small disturbance theories (linearized and hypersonic); shock dynamics. Mr. Charwat (Sp)

251A. Stratified and Rotating Fluids. Prerequisite: course 150A or equivalent or consent of instructor. Fundamentals of fluid flows with density variations or rotation, illustrated by examples with environmental, geophysical, or technical importance. Linear and finite amplitude wave motion. Flow past bodies; blocking phenomena. Viscous effects. Instabilities. Turbulent shear flows, wakes, plumes, and gravity currents. Mr. Kelly (F)

251B. Marine Hydrodynamics. Prerequisites: courses 150A, 193A, and 193B, or equivalent, or consent of instructor. Basic hydrodynamics; small amplitude and shallow water theories; waves on beaches; ship waves; mathematical hydraulics; breaking of a dam. Mr. Kelly (Sp)

251C. Fluid Dynamics of Pollution. Prerequisite: course 150A or consent of instructor. Designed to introduce to engineers and/or scientists of various disciplines the fluid mechanical aspect of pollution problems. The fluid dynamics of photochemical smog, oil slicks, and pollution in waterways. Mr. Liu (F)

252A. Stability of Fluid Motion. Prerequisite: course 150A or equivalent or consent of instructor. Mechanisms by which laminar flows can become unstable and lead to turbulence of secondary motions. Linear stability theory; thermal, centrifugal, and shear instabilities; boundary layer instability. Nonlinear aspects: sufficient criteria for stability, subcritical instabilities, supercritical states, transition to turbulence. Mr. Kelly (W)

252B. Statistical Theory of Turbulence. Prerequisite: course 150A or consent of instructor. Development of statistical methods of wide utility in engineering applied to turbulent flows. Topics include stochastic processes, kinematics of turbulence, energy decay. Kolmogorov similarity, analytical theories, and origins of Reynolds stress. Mr. Meecham (Sp)

253A. Advanced Engineering Acoustics. Advanced studies in engineering acoustics, including three-dimensional wave propagation; propagation in bounded media; Ray acoustics; attenuation mechanisms in fluids. Mr. Meecham (F)

253B. Fundamentals of Aeroacoustics. Prerequisite: course 150A or consent of instructor. Detailed discussion of plane waves, point sources. Nonlinearity, layered and moving media, multiple reflections. Inhomogeneous wave equation. Monopole, dipole, quadrupole source fields from scattering inhomogeneities and turbulence; Lighthill's theory; moving sources. Similarity methods. Selected detailed applications. Mr. Meecham (W)

253C. Sound and Vibration. Prerequisite: consent of instructor. Theoretical analysis of the interaction of sound and structures; acoustic transmission through fluid layers and walls; structural wave propagation; multidimensional random processes using wave number and frequency space; response and radiation of infinite and finite structures; statistical energy analysis. Mr. Meecham

254A. Special Topics in Aerodynamics. Prerequisites: courses 150A, 150B, M192A, 192B, and 192C, or equivalent, or consent of instructor. Special topics of current interest in advanced aerodynamics. Examples include transonic flow, hypersonic flow, sonic booms, and unsteady aerodynamics. Mr. Mengle (W)

255A. Advanced Dynamics. Prerequisites: courses 155 and M169A, or consent of instructor. Variational principles and Lagrange's equations. Kinematics and dynamics of rigid bodies; procession and nutation of spinning bodies. Mr. Mingori (F)

255B. Mathematical Methods in Dynamics. Prerequisite: course 255A. Concepts of stability; state-space interpretation; stability determination by simulation, linearization, and Liapunov's direct method; the Hamiltonian as a Liapunov function; nonautonomous systems; averaging and perturbation methods of nonlinear analysis; parametric excitation and nonlinear resonance. Application to mechanical systems. Mr. Gibson

256A. Mechanics of Deformable Solids. Prerequisites: courses 158A and 166A, or consent of instructor. Kinematics of deformation, strain tensors, invariance, compatibility; conservation laws; stress tensors; equations of motion; boundary conditions; constitutive equations: general theory, linearization, anisotropy; reciprocity linear isotropic elastic problems, plane and generalized plane problems; dynamic problems. Mr. Mal, Mr. Westmann (F)

256C. Plasticity, Creep, and Thermal Stresses. Prerequisite: course 156A or 158A or consent of instructor. Incremental plastic stress-strain relations. Stress-strain-time relations commonly used in structural analysis. Unified treatment of plastic strain, creep strain, and thermal strain. Elastic-plastic, and creep analyses of beams, columns, shafts, frames, and plates. Mr. Westmann (Sp)

256F. Analytical Fracture Mechanics. Prerequisites: course 156A, 158A, or 166A, and Materials Science and Engineering 243A. Review of modern fracture mechanics, elementary stress analyses; analytical and numerical methods for calculation of crack tip stress intensity factors; engineering applications in stiffened structures, pressure vessels, plates, and shells. Mr. Westmann (Sp)

M257A. Elastic Wave Propagation I. (Same as Earth and Space Sciences M224A.) Prerequisite: course 158A or 166A or consent of instructor. Review of elasticity theory; elastic waves in unbounded media; reflection and refraction of plane elastic waves; surface waves and guided waves in multilayered media; waves generated by concentrated loads; radiation from dislocations; attenuation; representative applications in engineering and seismology. Mr. Mal (F)

M257B. Elastic Wave Propagation II. (Same as Earth and Space Sciences M224B.) Prerequisite: course M257A. Diffraction and scattering of elastic waves by isolated cracks and inclusions; normal mode theories for the vibration of finite elastic bodies; dynamic theories of fracture; representative applications in engineering and seismology. Mr. Mal

258. Experimental Techniques in Fluid Mechanics and Thermal Science. Prerequisite: consent of instructor. Survey of wind tunnels and other facilities for research in fluid mechanics, aerodynamics, and heat transfer; analysis of their critical design features. Modern sensors, instruments, and measurement techniques. Signal processing and storage by analog and digital methods. Mr. Charwat (W)

259A. Seminar on Advanced Topics in Fluid Mechanics. Prerequisite: consent of instructor. Advanced study of topics in fluid mechanics, with intensive student participation involving assignments in research problems leading to a term paper or an oral presentation (possible help from guest lecturers). Mr. Charwat (F)

259B. Seminar on Advanced Topics in Solid Mechanics. Prerequisite: consent of instructor. Advanced study in various fields of solid mechanics on topics which may vary from term to term. Topics include dynamics, elasticity, plasticity, and stability of solids. Mr. Westmann

260AA-260ZZ. Seminar: Current Topics in Mechanical Engineering (2 to 4 units each). (Formerly numbered 259AA-259ZZ.) Prerequisite: consent of instructor. Lectures, discussions, and student presentations and projects in areas of current interest in mechanical engineering. May be repeated for credit. S/U or letter grading. (Sp)

261A. Energy and Variational Principles in Structural Mechanics. Prerequisite: course 156A or 158A or 166A. Theory of linear elasticity. Calculus of variations. Principles of minimum potential energy and complementary energy. Stationary variational principles. Energy theorems. Matrix methods of structural analysis, with application to truss and frame problems. Variational principles as a basis of finite element methods. Mr. Fleury (F)

262A. Advanced Mechanisms and Mechanical Systems. Prerequisite: course 162A. The kinematic analysis and synthesis of mechanisms and mechanical systems, with special emphasis on use of modern analytical methods. The use of computer techniques, with a broad group of example systems. Mr. Yang

263A. Dynamics and Control of Machines and Electromechanical Systems. Prerequisite: course 163 or consent of instructor. The analysis of complex machines and electromechanical systems. Emphasis on the performance and dynamic response of systems containing gears, elastic compliances, active feedback elements, and other complex components and subsystems. Application of both classical methods and modern computer-based techniques. Mr. Yang (Sp)

263B. Topics in Modeling and Dynamics of Aerospace Vehicles. Prerequisites: courses 171A, 255A. Recommended: courses 154A, 255B, M269A. Modeling, dynamics, and stability of aerospace vehicles; improvement of performance using active control; applications to spinning and dual-spin spacecraft, space structures, rotordynamics and coupled rotor/fuselage dynamics of helicopters, active control of aircraft modes. Mr. Friedmann, Mr. Mingori (Sp, even years)

263C. Motion and Control of Industrial Robots. Prerequisite: course 163A or consent of instructor. Theory and implementation of industrial robots. Design considerations. Kinematic structure, modeling, trajectory planning, and systems dynamics. Control concepts and control computer algorithms. Mr. Yang (W)

M267A. Optimum Structural Design. (Same as Civil Engineering M267A.) Prerequisite: course 261A or Civil Engineering 265A or consent of instructor. Synthesis of structural systems; analysis and design as optimization problems; techniques for synthesis and optimization; application to aerospace and civil structures. Mr. Felton, Mr. Schmit (W)

268B. Failure of Structural Systems. Prerequisite: Civil Engineering 165B. Philosophy of structural safety. Principles of design for prevention of failure (other than buckling). Fatigue, brittle failure, delayed cracking, creep, design of efficient joints, environmental effects. Emphasis on current problems in actual structures. Mr. Sines (F)

M269A. Dynamics of Structures. (Formerly numbered 269A.) (Same as Civil Engineering M269A.) Prerequisite: course M169A. Principles of dynamics. Determination of normal modes and frequencies by differential and integral equation solutions. Transient and steady state response. Emphasis on derivation and solution of governing equations using matrix formulation. Mr. Friedmann (Sp)

269B. Advanced Dynamics of Structures. Prerequisites: course M269A, Civil Engineering 265A. Analysis of linear and nonlinear response of structures to dynamic loadings. Stresses and deflections in structures. Structural damping and self-induced vibrations. Mr. Friedmann

M269C. Introduction to Probabilistic Dynamics. (Formerly numbered 269C.) (Same as Civil Engineering M269C.) Prerequisite: course M169A. Response of structural and mechanical systems to random vibrations. Stationary and nonstationary excitations. Response of systems with random parameters. Discrete and continuous linear systems. Applications to earthquakes, wind sway of buildings, gust response, vibrations due to gearing inaccuracies, train vibrations.

269D. Aeroelastic Effects in Structures. Prerequisite: course M269A. Presentation of field of aeroelasticity from unified viewpoint applicable to flight structures, suspension bridges, buildings, and other structures. Derivation of aeroelastic operators and unsteady airloads from governing variational principles. Flow induced instability and response of structural systems. Mr. Friedmann (Sp)

271A. Dynamic Systems Optimal Control. (Formerly numbered Engineering Systems 271A.) Prerequisite: course 171C or consent of instructor. Optimal control problem formulation. Performance criteria for deterministic dynamic systems. Variational methods and Pontryagin's maximum principle for continuous and discrete-time models. Inequality constraints. Sensitivity analysis. Numerical computation methods for solving boundary value problems of optimal control. Applications in various fields. Mr. Mingori (F)

271B. Dynamic Systems Stochastic Estimation and Control. (Formerly numbered Engineering Systems 271B.) Prerequisites: courses 171C, 193A, and 271A, or consent of instructor. Applied treatment of optimal state estimation and stochastic control problems for continuous and discrete-time dynamic models with state-space descriptions. Kalman filtering, smoothing, and prediction algorithms. Stochastic optimal controllers; the separation principle. Emphasis on efficient numerical computations. Applications in various fields. Mr. Leondes (W)

271C. Dynamic Systems Identification, Stability, and Adaptive Control. (Formerly numbered Engineering Systems 271C.) Prerequisite: course 271A or consent of instructor. Recommended: course 271B. Nonlinear system stability. Dynamic systems modeling, identification, and parameter estimation techniques. Combined identification and control and self-adaptive control. Mr. Leondes (W)

271D. Seminar and Special Topics in Dynamic Systems Control. (Formerly numbered Engineering Systems 271D.) Prerequisite: consent of instructor. Seminar on current research topics in dynamic systems modeling, control, and applications. Topics selected from process control, differential games, nonlinear estimation, adaptive filtering, industrial and aerospace applications, etc. Mr. Leondes (Sp)

M291A. Analytical Methods of Engineering I. (Same as Electrical Engineering M208A.) Prerequisites: Mathematics 131A, 132. Application of abstract mathematical methods to engineering problems. Review of elements of measure and integration, L_2 theory — linear spaces and operators. Eigenvalue problems. Introduction to spectral theory — elementary distribution theory. Applications to problems in engineering. Mr. Gibson (W)

M291B. Analytical Methods of Engineering II. (Same as Electrical Engineering M208B.) Prerequisite: course M291A or Electrical Engineering M208A or consent of instructor. Application of modern mathematical methods to engineering problems. Review of spectral theory. Green's functions and eigenvalue problems for second-order ordinary differential equations and their adjoints. Discrete and continuous spectra for ordinary and partial differential equations. Initial and boundary value problems. Mr. Gibson (Sp)

291C. Integral Equations in Engineering. (Formerly numbered Engineering 291C.) Prerequisite: Mathematics 250B. Introduction to generalized function theory and Green's functions. Conversion of partial equations to integral equations and classification of integral equations. Solution to integral equations with degenerate kernels; discussions of successive approximations and Fredholm and Hilbert-Schmidt theory. Mr. Westmann (Sp)

295A. Computer-Aided Manufacturing. Prerequisites: courses 94, 163A, 163L, 195L. Analysis of the usage of the computer in manufacturing. Manufacturing information systems; group technology; computer-aided manufacturing process planning; flexible manufacturing systems. Mr. Melkanoff (F)

295B. Computer-Integrated Manufacturing. Prerequisite: course 295A. Systems analysis and design of computer-integrated manufacturing, including automated factories and flexible manufacturing systems. Mr. Melkanoff (W)

298. Seminar in Engineering (2 to 4 units). Prerequisites: graduate standing in mechanical, aerospace, and nuclear engineering, consent of instructor. Seminars may be organized in advanced technical fields. If appropriate, field trips may be arranged. May be repeated with topic change.

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. A teaching apprenticeship under the active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

Mr. Okrent (F,W,Sp)

497A-497B. Field Project in Manufacturing Engineering. Lecture, two hours. Prerequisite: consent of instructor. Teams of students perform detailed system analysis and plan the design of manufacturing engineering systems at various manufacturing plants. In Progess grading.

Mr. Melkanoff (W, 497A; Sp, 497B)

596. Directed Individual or Tutorial Studies (2 to 8 units). Prerequisites: graduate standing in mechanical, aerospace, and nuclear engineering, consent of instructor. Petition forms to request enrollment may be obtained from the Assistant Dean, Graduate Studies. Supervised investigation of advanced technical problems. S/U grading.

597A. Preparation for M.S. Comprehensive Examination (2 to 12 units). Prerequisites: graduate standing in mechanical, aerospace, and nuclear engineering, consent of instructor. Reading and preparation for M.S. comprehensive examination. S/U grading.

597B. Preparation for Ph.D. Preliminary Examinations (2 to 16 units). Prerequisites: graduate standing in mechanical, aerospace, and nuclear engineering, consent of instructor. S/U grading.

597C. Preparation for Ph.D. Oral Qualifying Examination (2 to 16 units). Prerequisites: graduate standing in mechanical, aerospace, and nuclear engineering, consent of instructor. Preparation for oral qualifying examination, including preliminary research on dissertation. S/U grading.

598. Research for and Preparation of M.S. Thesis (2 to 12 units). Prerequisites: graduate standing in mechanical, aerospace, and nuclear engineering, consent of instructor. Supervised independent research for M.S. candidates, including thesis prospectus. S/U grading.

599. Research for and Preparation of Ph.D. Dissertation (2 to 16 units). Prerequisites: graduate standing in mechanical, aerospace, and nuclear engineering, consent of instructor. Usually taken after student has been advanced to candidacy. S/U grading.

Schoolwide Programs, Courses, and Faculty

6426 Boelter Hall, (213) 825-2473

Bachelor of Science in Engineering

The bioengineering major field is an interdepartmental program leading to a Bachelor of Science degree in Engineering. A description and requirements follow.

Bioengineering Major Field

Area I

Area I is an area of specialization within the context of the major fields of chemical engineering, civil engineering, etc., and is designed to provide (1) engineering fundamentals and (2) specialization in a basic engineering discipline combined with bioengineering and life science courses.

This area of specialization within bioengineering is intended for students who wish to emphasize a traditional engineering discipline (e.g., civil, electrical, chemical) while preparing for a possible career and/or graduate study in bioengineering.

Course requirements are as follows:

(1) Eight recommended core courses: Chemical Engineering M105A (or Mechanical, Aerospace, and Nuclear Engineering M105A), Civil Engineering 108, Electrical Engineering 100, 102, Materials Science and Engineering 14, Mechanical, Aerospace, and Nuclear Engineering 102, 103, and Chemical Engineering M105D or Mechanical, Aerospace, and Nuclear Engineering M105D (for applied biochemistry) or Engineering 106B (for biostructural mechanics and biotechnology).

If you substitute courses for any of the recommended courses listed above, you must satisfy the **engineering curriculum core** requirements as follows:

The core consists of eight courses (32 units) selected from the five subject areas listed below. The minimum and maximum number of units allowed is given for each.

Computer Processes (0 to 4 units): Electrical Engineering 103.

Electrical Sciences (4 to 8 units): Electrical Engineering 100, 101.

Mechanics (8 to 12 units): Civil Engineering 108, Mechanical, Aerospace, and Nuclear Engineering 102, 103.

Systems (4 to 8 units): Electrical Engineering 102, Engineering 106B.

Thermal and Materials Science (8 to 12 units): Chemical Engineering M105A, M105D (or Mechanical, Aerospace, and Nuclear Engineering M105A, M105D), Materials Science and Engineering 14.

(2) Civil Engineering 106A (satisfies the engineering economics requirement); one upper division mathematics course selected in consultation with your faculty adviser; and the following courses, depending on your subject area:

Applied Biochemistry: Chemical Engineering 137A, 137B, 137D, Computer Science 196A, M196B, Engineering 106B, Materials Science and Engineering M107A, Mechanical, Aerospace, and Nuclear Engineering 180A, and two courses from Biology 146, 154, Chemistry 156; Chemical Engineering 139A and Engineering 106C (satisfy the laboratory requirement).

Biocybernetics: Civil Engineering 160, Computer Science 171, 196A, M196B, Electrical Engineering 111A, 115A, 131A, Materials Science and Engineering M107A, Mechanical, Aerospace, and Nuclear Engineering 171A or Electrical Engineering 141, Mechanical, Aerospace, and Nuclear Engineering 171C or Electrical Engineering 142; Electrical Engineering 100L, Biology 166 (two units of lab credit), and one additional laboratory course (satisfy the laboratory requirement).

Biostructural Mechanics: Civil Engineering 160, 165A, 165B, 166, M169A (or Mechanical, Aerospace, and Nuclear Engineering M169A), Computer Science 196A, M196B, Mechanical, Aerospace, and Nuclear Engineering 162B, Kinesiology 12B, 14, 122; eight laboratory units (Civil Engineering 157B and Mechanical, Aerospace, and Nuclear Engineering 157 are recommended; an additional two-unit laboratory course must be taken if course 157B is selected).

Biotechnology: Civil Engineering 174A, Computer Science 196A, M196B, Materials Science and Engineering M107A, 180B, Mechanical, Aerospace, and Nuclear Engineering 171A, 180A, 193B or Psychology 150, and two courses from Psychology 115, 120, Public Health 100B, 100C, 100D, 110; eight laboratory units (Engineering 106C and 106D are recommended).

(3) Required technical elective courses: Chemistry 11C/11CL, 21, 23, and 25 (may be used to satisfy the life science requirement) for applied biochemistry and biocybernetics; Kinesiology 12B, 14, and one free elective course for biostructural mechanics.

(4) English 3; Chemistry 11A, 11B/11BL; Computer Science 10C or 10F; Mathematics 31A, 31B, 32A, 32B, 33A, 33B; Physics 8A, 8B/8BL, 8C/8CL, 8D/8DL; one life science elective course.

(5) A minimum of seven courses from the humanities, social sciences, and/or fine arts approved list (at least three must be upper division; at least three — with two upper division — must be in the same academic department or otherwise reflect coherence with respect to subject matter; and one must satisfy the engineering and science in society requirement, which may also be satisfied by one of the free elective courses).

(6) Three free elective courses, which must be used to satisfy the required technical elective courses for the applied biochemistry, biocybernetics, and biostructural mechanics subject areas.

Area II

Area II is a multidisciplinary major field consisting of a core of courses in bioengineering and the physical and life sciences, and provides (1) engineering fundamentals, (2) breadth in the physical and biological sciences, (3) breadth in several bioengineering disciplines.

This area of specialization within bioengineering is intended for students desiring broad exposure to these three subject areas in preparation for a career and/or graduate study in bioengineering, biological science, behavioral science, or medical or dental school. This area satisfies all the life science requirements, except biological chemistry, for the Ph.D. program in Bioengineering at UCLA.

Course requirements are as follows:

(1) Eight recommended core courses: Chemical Engineering M105A, M105D (or Mechanical, Aerospace, and Nuclear Engineering M105A, M105D), Civil Engineering 108, Electrical Engineering 102, 103, Materials Science and Engineering 14, Mechanical, Aerospace, and Nuclear Engineering 102, 103.

If you substitute courses for any of the recommended courses listed above, you must satisfy the **engineering curriculum core** requirements as follows:

The core consists of eight courses (32 units) selected from the five subject areas listed below. The minimum and maximum number of units allowed is given for each.

Computer Processes (0 to 4 units): Electrical Engineering 103.

Electrical Sciences (4 to 8 units): Electrical Engineering 100, 101.

Mechanics (8 to 12 units): Civil Engineering 108, Mechanical, Aerospace, and Nuclear Engineering 102, 103.

Systems (4 to 8 units): Electrical Engineering 102, Engineering 106B.

Thermal and Materials Science (8 to 12 units): Chemical Engineering M105A, M105D (or Mechanical, Aerospace, and Nuclear Engineering M105A, M105D), Materials Science and Engineering 14.

(2) Civil Engineering 160, Computer Science 171, 196A, M196B, Electrical Engineering 111A, 115A, Materials Science and Engineering M107A, Mechanical, Aerospace, and Nuclear Engineering 171A or Electrical Engineering 141; Electrical Engineering 100L, Biology 166 (two units of lab credit), and four additional laboratory units; Civil Engineering 106A or any other course that satisfies the engineering economics requirement; Electrical Engineering 131A or Mathematics 152A (satisfies the mathematics requirement); two elective courses selected in consultation with a bioengineering faculty adviser (e.g., acoustics, control systems, electronics, materials, computer science, mechanics, biotechnology, biocybernetics, etc.).

(3) A minimum of six life science core courses, including Biology 5 and 7 (may be used to satisfy the life science requirement), 166, Chemistry 21, 23, and at least one course from Chemistry 25 (may be used to satisfy the life science requirement), Kinesiology 14, Psychology 115; Chemistry 11C/11CL are required technical electives.

(4) English 3; Chemistry 11A, 11B/11BL; Computer Science 10C or 10F; Mathematics 31A, 31B, 32A, 32B, 33A, 33B; Physics 8A, 8B/8BL, 8C/8CL, 8D/8DL; one life science elective course.

(5) A minimum of seven courses from the humanities, social sciences, and/or fine arts approved list (at least three must be upper division; at least three — with two upper division — must be in the same academic department or otherwise reflect coherence with respect to subject matter; and one must satisfy the engineering and science in society requirement).

(6) Three free elective courses which must be used to satisfy the required technical electives and other required courses in the life science core.

Graduate Study

For information on graduate admission to the schoolwide engineering programs and requirements for the M.S., Engineer, and Ph.D. degrees and certificate of specialization, see "Graduate Study" at the beginning of this chapter.

M.A.-Latin American Studies/ M.S.-Engineering

The school and the Latin American Studies Program have established an articulated degree program through which students may complete requirements for the M.S. in Engineering and the interdepartmental M.A. in Latin American Studies. After successful completion of the program, students are awarded both degrees simultaneously. Articulated programs do not allow course credit to be applied toward more than one degree.

Lower Division Courses

11. Patterns of Problem Solving. An introduction to patterns of reasoning in the process of problem solution and decision making. Exposure to concepts, theories, and techniques in the analysis and synthesis of total systems in our complex technological civilization. Mr. Rubinstein (F,W,Sp)

12. Applied Patterns of Problem Solving. Prerequisite: course 11. An application of the tools and methods discussed in course 11 to three specific problems of a social and technical nature.
Mr. Rubinstein (Sp)

Upper Division Courses

106B. Introduction to Design and Systems Methodology. Prerequisites: Computer Science 10C, Mathematics 32A, 32B, 33A, 33B. Theory of engineering design and synthesis. Models and modeling. Analysis, test, and evaluation. Methods for design optimization. Elementary decision theory. Student design projects. Mr. Rosenstein (F,W,Sp)

106C. Experimental Design Laboratory. Laboratory, eight hours. Prerequisite: course 106B or equivalent. Creative experimental projects for student designs in any engineering domain where individual students have preparation and interest, exemplifying the professional method. Predicted idealized performance compared to experimentally achieved realities. Student prize competition entries encouraged. (W)

106D. Engineering Systems Design Laboratory. Laboratory, eight hours. Prerequisites: course 106C, advanced senior standing. Similar to course 106C and normally a continuation thereof. Design projects generally emphasizing productivity, energy, environments, and process cost-benefit studies. (Sp)

109. The Engineer and Society. Prerequisite: senior standing. Selected lectures, discussions, oral and written reports related to creative engineering, its sociological and ecological impacts, present, future, and past relationships. Maximum student participation in topical selection and class structuring. Creativity and original thinking emphasized.
Mr. O'Brien (F,W,Sp)

176A. Introduction to Optimization Methods for Engineering Design. Prerequisites: Computer Science 10C, Mathematics 32A, 32B, 33A, 33B. Introduction to applied optimization as an engineering design tool. Computational algorithms and chemical, civil, electrical, mechanical, and structural applications. Methods for solving the general unconstrained and constrained minimization problem. Methods for converting the general inequality constrained problem to a sequence of unconstrained problems.
Mr. Rosenstein (F)

Graduate Courses

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. A teaching apprenticeship under the active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading. (F,W,Sp)

470A-470D. The Engineer in the Technical Environment (3 units each). Limited to students in the Engineering Executive Program. Theory and application of quantitative methods in the analysis and synthesis of engineering systems for the purpose of making management decisions. Optimization of outputs with respect to dollar costs, time, material, energy, information, and manpower. Case studies and individual projects. Mr. O'Neill

471A-471B-471C. The Engineer in the General Environment (3 units, 3 units, 1½ units). Limited to students in the Engineering Executive Program. Influences of human relations, laws, social sciences, humanities, and fine arts on the development and utilization of natural and human resources. The interaction of technology and society past, present, and future. Change agents and resistance to change. In Progress grading for courses 471B-471C only (credit to be given only on completion of course 471C).
Mr. O'Neill

472A-472D. The Engineer in the Business Environment (3 units, 3 units, 3 units, 1½ units). Limited to students in the Engineering Executive Program. The language of business for the engineering executive. Accounting, finance, business economics, business law, and marketing. Laboratory in organization and management problem solving. Analysis of actual business problems of the firm, the community, and the nation, provided through cooperation and participation with California business corporations and government agencies. In Progress grading (credit to be given on completion of courses 472B and 472D). Mr. O'Neill

473A-473B. Analysis and Synthesis of a Large-Scale System (3 units each). Recitation: two and one-half hours. Limited to students in the Engineering Executive Program. A problem area of modern industry or government is selected as a class project, and its solution is synthesized using quantitative tools and methods. The project also serves as a laboratory in organization for a goal-oriented technical group. In Progress and S/U grading. Mr. O'Neill

495. Teaching Assistant Training Seminar. Prerequisites: graduate standing in engineering, appointment as a teaching assistant. Seminar on communication of engineering principles, concepts, and methods, preparation, organization of material, presentation, use of visual aids, grading, advising, and rapport with students. S/U grading. (F)

501. Cooperative Program (2 to 8 units). Prerequisite: consent of UCLA graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Course is used to record the enrollment of UCLA students in courses taken under cooperative arrangements with neighboring institutions. S/U grading.

Schoolwide Engineering Faculty

Professor

Allen B. Rosenstein, Ph.D.

Emeritus Professors

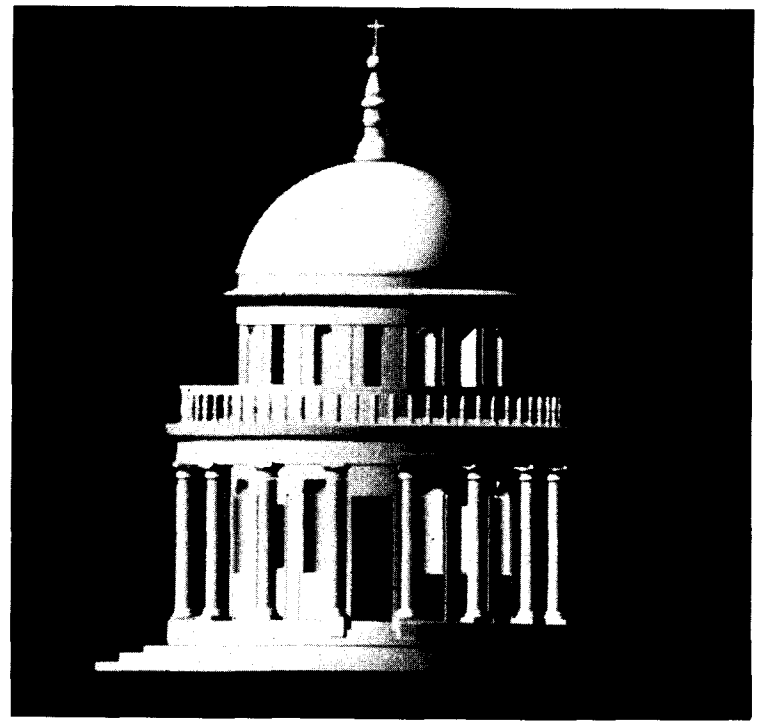
Edward P. Coleman, Ph.D.
J. Morley English, Ph.D.
Warren A. Hall, Ph.D.
Alfred C. Ingersoll, Ph.D.
Herbert B. Nottage, Ph.D.
Russell L. Perry, M.E.
Arthur F. Pillsbury, Engineer
Bonham Spence-Campbell, E.E.

Visiting Lecturers

Iris Firstenberg, Ph.D.
Thomas A. Sabol, Ph.D.

Graduate School of Architecture and Urban Planning

Richard S. Weinstein, Dean



8

In recent years Los Angeles has emerged as a dominant and growing center of finance and trade, reflecting the continued shift of the national agenda west to the Pacific Rim and south toward Mexico and Latin America. This growth of intense commercial activity has been linked to important developments in the arts, sciences, and communications, producing a regional culture of great ethnic diversity, energy, and momentum. The UCLA Graduate School of Architecture and Urban Planning (GSAUP) is playing an important role in understanding these changes and contributing to their direction.

Professional education is the central concern of GSAUP. Our belief is that a small, high-quality school of architecture and urban planning can make a great contribution to professional education, under conditions of rapid professional change and experimentation. To supplement the classroom experience and to help bring the public and the professional community into active relationship with the school, a series of public lectures and various exhibits are scheduled throughout the academic year. In addition, the school has created the Urban Innovations Group (UIG) as an independent, nonprofit, professionally managed practice arm where faculty and students undertake projects on a contract basis to provide opportunities for students to gain practical professional experience.

A noted regular faculty is supplemented by distinguished visiting faculty. The student body comes from around the world. Developed as a small school with an enrollment of 350, GSAUP encourages close interaction between faculty and student to maximize the educational experience.

Graduate School of Architecture and Urban Planning

1317 Architecture, (213) 825-3791

The Graduate School of Architecture and Urban Planning at UCLA offers programs of study leading to the degrees of Master of Architecture (M.Arch.), M.A. in Architecture/Urban Planning, Ph.D. in Architecture, and Ph.D. in Urban Planning. Currently, the school offers educational opportunities for a broad spectrum of careers, including a number that are not yet common in practice, but which reflect emerging social needs. It offers a choice of two major programs: Architecture/Urban Design and Urban Planning.

Degrees Offered

Architecture/Urban Design	M.Arch. I, M.Arch. II, M.A., Ph.D.
Urban Planning	M.A., Ph.D.

Architecture/ Urban Design

B315 Architecture, (213) 825-0525, 825-7857

Professors
Marvin Adelson, Ph.D.
Samuel Aroni, Ph.D.
Baruch Givoni, Ph.D.
Thomas S. Hines, Ph.D.
Lionel March, Sc.D., *Program Head*
Murray A. Milne, M.Arch.
Barton Myers, M.Arch.
Richard Schoen, M.Arch.
George Stiny, Ph.D.
Thomas R. Vreeland, Jr., M.Arch.
Richard S. Weinstein, M.A., *Dean*

Associate Professors
F. Eugene Kupper, M.Arch.
Jurg Lang, Dipl.Arch. ETH.
Robin Liggett, Ph.D.
George Rand, Ph.D.

Assistant Professors
Diane Favro, Ph.D.
Ben Refuerzo, M.Arch.

Lecturers
Berge Aran, Ph.D.
Charles Griggs, B.Arch.
Jeffrey Hamer, M.Arch.
Anthony Lumsden, B.Arch.
Donald Mills, B.Arch.
John Ruble, M.Arch.
Robert Yudell, M.Arch.

Adjunct and Visiting Professors
Charles Jencks, Ph.D., *Adjunct*
William J. Mitchell, M.E.D., *Visiting*
Charles W. Moore, Ph.D., *Adjunct*
Rex Lotery, B.Arch., *Adjunct*

Adjunct Associate Professors
Franklin Israel, M.Arch.
Kuppaswamy Iyengar, M.Arch.
Barton Phelps, M.Arch.

Scope and Objectives

Architecture/Urban Design at UCLA offers four degree programs tailored to the needs of different groups of students: M.Arch. I, M.Arch. II, M.A., and Ph.D.

M.Arch. I is a three-year first professional degree program which is accredited by the National Architectural Accrediting Board (NAAB). It does not assume any prior background in architecture. Students who do have some prior architecture background (e.g., a four-year undergraduate degree) may also enter the program and may petition to waive certain required courses and substitute more advanced electives in their place. M.Arch. I graduates normally pursue professional careers in architectural practice.

M.Arch. II is an advanced professional degree program for students who already hold a first professional degree in architecture. It provides opportunities for intensive concentration in a variety of areas of professional specialization.

The M.A. and Ph.D. degree programs provide opportunities to pursue research and scholarship in the field of architecture. Graduates typically pursue academic or applied research and consulting careers.

Master of Architecture I

Admission

The M.Arch. I program is open to students holding a bachelor's degree (or its equivalent) comparable in standards and content to a bachelor's degree from the University of California. Applications are accepted from students with a variety of backgrounds. No academic or experiential training in architecture is required, although some students have had experience in the field prior to admission.

Applicants are required to submit three letters of recommendation, academic transcripts, a statement of purpose, and a "creative" portfolio. No admission tests are required. In addition to the application for graduate admission, applicants should submit the "Departmental Supplement," available from the Admissions Office, Architecture/Urban Design, Graduate School of Architecture and Urban Planning, B315 Architecture, UCLA, Los Angeles, CA 90024.

For information on the proficiency in English requirements for international graduate students, refer to "Graduate Admission" in Chapter 3.

Major Fields or Subdisciplines

No in-depth specialization is required within the context of the M.Arch. I program. However, you are required to concentrate several elective courses within a single curricular area. A minimum of three elective courses must be taken within this curricular area, including two courses in theory and one studio application, during the second year of study.

Specializations are currently available in the following areas: urban design; policy, programming, and evaluation (including social building); technology (including energy conserving design); design theory and methods (including computer-aided design); history, analysis, and criticism of architecture.

Course Requirements

You must complete a minimum of 27 courses, at least 24 of which must be graduate courses. The total number of units required is 108. The required courses, listed below, must be taken in the sequence indicated.

First Year
Fall: Courses 411, 421, 200
Winter: Courses 412, 437, 431
Spring: Courses 413, 442, 432

Second Year
Fall: Courses 414, 433, 291, elective
Winter: Courses 415, 441, elective
Spring: Elective studio/project, plus two other electives

Third Year
Fall: Course 416, two electives
Winter: Elective/studio, course 461, elective
Spring: Course 598A

Elective courses allow you to explore in depth specific subject areas and to gain exposure to a variety of topics. You are required to take a minimum of seven elective courses. At least four of these must be taken within the school.

During the second year at least two electives must be in preparation for undertaking a specific studio or project in the Spring Quarter of your second year.

If you can demonstrate that you already have adequate background in topics covered by specific required courses, you may petition to waive those courses and replace them with electives. However, permission to waive required courses does not reduce the minimum number of 27 courses required for the M.Arch. I degree nor does it reduce the nine-quarter residence requirement. The petition should be addressed to the faculty member responsible for that course and may be granted at the faculty member's discretion, possibly by means of a special examination.

Students with undergraduate degrees in architecture or undergraduate degrees with majors in architecture may, at the end of their first quarter, petition the curriculum committee for advanced standing. You are then permitted to waive specified required courses and may enter second-year courses at the beginning of your second quarter. A petition for advanced standing should include a transcript documenting relevant prior academic work, a portfolio demonstrating level of design competence, and a plan showing how waived courses will be replaced by a program of elective work in specified areas of specialization. Advanced standing requires the concurrence of both the curriculum committee and the faculty member in charge of each specific course to be waived. It does not reduce the number of courses (27) required for the M.Arch. I degree nor does it reduce the nine-quarter residence requirement.

You must enroll in at least four and no more than eight units of Architecture and Urban Planning 598A. You may also apply eight units of course 596A toward the unit requirements for graduation with prior consent of your adviser. No more than eight units may be applied without consent of the curriculum committee; application of more than 16 units requires Graduate Division approval. A maximum of eight units of 596 courses taken outside the school may be applied toward graduation. All independent work is graded on an S/U basis.

Thesis or Comprehensive Examination Plan

M.Arch. I students generally present a large-scale design project that functions as a design thesis at the end of their three-year course of study. Occasionally, students who have already demonstrated superior design skills will elect to do more research-oriented work instead. Because of the format required by the nature of an architectural presentation, the projects are all classified as "comprehensive examinations."

You should obtain faculty approval of project topics at least three months, and preferably six months, before presentation dates.

Master of Architecture II

Admission

The M.Arch. II program emphasizes advanced studies in architecture and requires that applicants hold a five-year B.Arch. degree or equivalent.

You must state your major area of specialization and your choice of the comprehensive examination or thesis option on your application, as you are admitted to a specific major and option and may change only by petition to the advanced graduate studies curriculum committee. A minimum of three academic quarters in residence is required. This is a full-time program, and you are expected to remain continuously in residence until all academic work is completed, unless a leave of absence is granted.

If your native language is not English, you are required to score at least 580 on the Test of English as a Foreign Language (TOEFL). In addition, you must take the English as a Second Language Placement Examination (ESLPE) on arrival at UCLA and, beginning in your first quarter in residence, take any required English (ESL) courses. Because such courses may not be applied toward the minimum course requirement, you should expect to spend additional time in residence. Refer to "Proficiency in English" under "Graduate Admission" in Chapter 3 for further information.

Major Fields

You are required to select your major area at the time of application to the program and must take a minimum of 24 units of coursework in that area. The six major areas include architectural design; urban design; policy, programming, and evaluation; technology; design theory and methods; and history, analysis, and criticism of architecture.

Course Requirements

A minimum of 36 units of coursework (normally nine four-unit courses) is required. At least 24 units must be at the graduate level; the remaining 12 units may be either upper division or graduate courses. No more than eight units of Architecture and Urban Planning 596A may be applied toward the requirements for graduation. In addition to coursework, four units of course 597A or eight units of course 598A are required but may not be applied toward the minimum course requirements.

Students in architectural design are required to complete at least 12 units of advanced design studio work plus 12 units of approved seminar courses.

Students in urban design must complete a year-long sequence of related urban design studio and seminar courses consisting of one studio and one seminar course each quarter.

Students in the other four major areas (policy, programming, and evaluation; technology; design theory and methods; history, analysis, and criticism of architecture) are required to complete an approved sequence of three core courses consisting of two lecture/seminar courses which establish substantive foundations and a project course (Architecture and Urban Planning 403) which explores applications, plus 12 units of elective courses in the major area.

There may be more than one approved core sequence in each of the areas. The curriculum committee establishes and publishes a list of approved core sequences, which is reviewed and revised as necessary on a yearly basis. In special cases you may propose core sequences not on the list for approval by the committee.

Thesis Plan

Under this plan you may submit either a written thesis or a design project. A three-person thesis committee must be established at least one quarter before submission of the thesis, and you must take eight units of Architecture and Urban Planning 598A, which may not be applied toward the minimum course requirement. The thesis may, in exceptional cases, be presented after three quarters in residence, but you should normally expect to take from four to six quarters to complete the thesis plan. The thesis must be submitted within two years after entry into the program.

Comprehensive Examination Plan

Under this plan you are required to establish a comprehensive examination chair at least one quarter before taking the examination and to receive approval of an examination topic from the curriculum committee. You are then required to take four units of Architecture and Urban Planning 597A, which may not be applied toward the minimum course requirement. The examination consists of a research paper or design project on the approved topic, which is to be publicly presented and defended after the completion of all required coursework, usually at the end of the Spring Quarter, or at any point up to 12 months later. The faculty examination committee votes on acceptance or rejection. In the event of rejection, you may repeat the examination once.

Master of Arts in Architecture/Urban Planning

Admission

This program offers an academic degree and prepares students to do specialized research or teaching in fields related to the architectural profession. Applicants are required to hold a bachelor's degree (or its equivalent) comparable in standards and content to a bachelor's degree from the University of California. They should possess the experience and knowledge that would allow them to do advanced research in whatever aspect of architecture they plan to explore within the context of the master's program.

Applicants are required to submit three letters of recommendation, academic transcripts, a statement of purpose, and a "creative" portfolio. No admission tests are required. In addition to the application for graduate admission, applicants should submit the "Departmental Supplement," available from the Admissions Office, Architecture/Urban Design, Graduate School of Architecture and Urban Planning.

For information on the proficiency in English requirements for international graduate students, refer to "Graduate Admission" in Chapter 3.

Major Fields or Subdisciplines

You are required to focus your work on a specific academic area or professional issue. See "Major Fields" under the Ph.D. program for specializations currently available. In addition, you have the option of the Open M.A. wherein you structure your own area of interest from the courses offered by the school.

Course Requirements

(1) Candidates for the M.A. are expected to be in residence at UCLA for at least two years and undertake six quarters of study.

(2) A thesis or a comprehensive design project is required. When the committee members have signed the thesis proposal, you may take Architecture and Urban Planning 598A and begin work on the thesis itself. The course should be taken at some point during your last year of study.

(3) You are required to complete a minimum of 16 courses (64 units) of graduate or upper division work, at least 12 of which must be graduate courses.

(4) You must select and pursue one area of specialization.

(5) Up to seven courses may be taken from upper division or graduate courses offered campuswide.

(6) The University of California minimum requirements for the Master of Arts degree must be completed.

(7) You must enroll in at least four and no more than eight units of course 598A. You may also apply 12 units of course 596A toward the unit requirements for graduation with prior consent of your adviser. No more than 12 units may be applied without the consent of the curriculum committee; application of more than 16 units requires Graduate Division approval. A maximum of eight units of course 596 taken outside the school may be applied toward graduation. All independent work is graded on an S/U basis. (Courses in the 400 series may not be applied toward the graduate course requirement for the M.A. degree.)

Thesis or Comprehensive Examination Plan

M.A. students can choose to present a design project as a comprehensive examination (see M.Arch. I) or to do a research thesis. They should make this determination at least three months prior to the anticipated date of graduation.

Ph.D. in Architecture

Admission

Applicants must hold a bachelor's degree from an accredited college or university. It is anticipated that most applicants will have completed a first professional degree in architecture (a five-year B.Arch. or a professional M.Arch. degree). Students with degrees in other fields are also encouraged to apply but may, at the discretion of the Ph.D. program committee, be required to complete specific coursework as a condition of admission.

Applicants are required to submit three letters of recommendation, academic transcripts, a statement of purpose, a proposed program of studies, a short biographical resume, and examples of research and/or creative work. An interview may also be required.

Applicants whose native language is other than English are required to pass the Test of English as a Foreign Language (TOEFL) before entering. Refer to "Proficiency in English" under "Graduate Admission" in Chapter 3 for further information.

Criteria considered for admission include (1) evidence of capacity for original scholarship and research in architecture, and ability to achieve eminence in the field; (2) an outstanding academic record, including grades (3.5 minimum GPA), Graduate Record Examination (GRE) scores, and references; (3) demonstration in the work submitted of adequate communication skills, particularly writing skills; (4) presentation of a clear and realistic statement of purpose.

Preliminary Evaluation of Research Skills: Students who have any background deficiencies in research skills essential for work in their chosen areas of Ph.D. specialization (e.g., mathematics, statistics, or computing) are required to round out their knowledge early in their residence. The Ph.D. program committee conducts a formal evaluation of each student at an early stage to assure adequacy of research skills. You may apply for this evaluation no earlier than your second quarter in residence, and no later than the fourth quarter. In order to undergo the evaluation you must have made up any background deficiencies and present a research paper or other evidence of capacity for original work.

If you are unable to satisfy the committee of the adequacy of your research skills, you will either be given specific advice on how to make up remaining deficiencies and apply for reevaluation at a later date, or else be advised to leave the program. If you do not satisfy the committee by the end of the sixth quarter, you are subject to termination from the program.

Major Fields

Students are required to undertake programs of study that include one major area selected from the following: policy, programming, and evaluation; technology; design theory and methods; and history, analysis, and criticism of architecture.

Majors outside these areas, or combinations of some of them, may be undertaken, subject to the approval of the Ph.D. program committee if supported by qualified faculty members willing to provide the necessary instruction and guidance.

Minor Field Requirement

You are required to include in your program of study at least one minor field, which must be from outside the Architecture/Urban Design Program (i.e., outside the school or within the Urban Planning Program). The objectives of the minor field requirement are to assure adequate academic breadth in your preparation and to encourage participation in the general intellectual life of the University. Students planning their minor field courses are advised accordingly.

The normal method of demonstrating competence in the minor field is to complete at least 16 units of coursework, which represents a unified course of study in that field, with grades of B or better. If a qualified Architecture/Urban Design faculty member is willing to provide the necessary supervision, the Ph.D. program committee may accept an alternative method of completing this requirement (e.g., a substantial research project).

Mathematics, Computing, or Foreign Language Requirement

You are expected to develop adequate skills in mathematics, computing, or foreign languages, as appropriate to your field of specialization, and are strongly advised to complete this requirement as early as possible. One of the following is required.

(1) Proficiency in mathematics and computing as demonstrated by passing an approved group of four graduate or upper division courses in mathematics, statistics, and/or computing with grades of B or better. The courses must not overlap in content and normally require prerequisites which may not be applied toward the four-course requirement.

(2) Satisfactory reading knowledge of two foreign languages relevant to your field of specialization (a GSFLT score of 500 or better).

(3) Superior knowledge of one foreign language relevant to your field of specialization (a GSFLT score of 700 or better).

With approval of the Graduate Division, English may be used to satisfy the foreign language requirement if your language of education is not English.

Courses applied toward this requirement may not also be applied toward a major or minor field requirement.

Course Requirements

Generally you are required to take sufficient coursework to provide adequate preparation for the qualifying examination and the dissertation.

Each student in the program is required to take a proseminar in architectural theory, normally in the Fall Quarter of the first year. The proseminar is intended to establish a general orientation to the field of architecture that will ensure that you have an appropriate foundation for the acquisition of competence in the theory, methods, and history of architecture. In consultation with your adviser, you are expected to take whatever additional coursework is necessary to reach the required level.

Holders of a professional degree in architecture before admission to the program must complete four quarters in residence and 48 units of coursework in order to become eligible to take the qualifying examination. If you have an M.Arch. I, M. Arch. II, or M.A. degree in Architecture from UCLA, the Ph.D. program committee may, at its discretion, reduce these requirements to three quarters in residence and 36 units of coursework. All other candidates are required to complete six quarters in residence and 72 units of coursework.

Half of the units must be graduate courses in architecture/urban design, and an overall GPA of 3.0 or better must be maintained. In exceptional cases, and with prior approval of the Ph.D. program committee, upper division courses may be applied toward these requirements. At least 32 units must be in 200-series courses.

Each of the major field core sequences of three to five courses includes one project course (Architecture and Urban Planning 403), which focuses on the practical application of research results to architectural problems and provides an opportunity to explore interrelations between the research and professional concerns of the field.

Students who are admitted to the Ph.D. program without having the background of a professional degree in architecture are required to take at least 24 units of basic professional courses (400 series) in architecture approved by the Ph.D. program committee.

No more than eight units of course 596A may be applied toward degree requirements, but eight units of course 597A and as many units of course 599A as necessary may be applied.

Qualifying Examinations

After successful completion of the preliminary evaluation of research skills, the mathematics, computing, or foreign language requirements, and the course requirements, you may apply to take the qualifying examinations. They consist of a comprehensive written examination in the major field, a written examination in the minor field (this may be waived under certain circumstances), and an oral examination focusing primarily on your proposed dissertation. The qualifying examinations should be completed in one quarter and must not extend over more than two quarters.

The major and minor field examinations are conducted by a five-member examination committee. The written examination in the major field is a substantial exercise followed by an oral presentation to the committee. The work must demonstrate your ability to teach an introductory course in the field and contribute to the progress of the field through scholarship and research. The written examination in the minor field is a short exercise and may be waived for candidates who hold a recognized master's degree in the field in which the minor is located, or at the discretion of the examination committee on the basis of outstanding grades (at least two A grades out of the four minor field courses).

The University Oral Qualifying Examination, conducted by the doctoral committee, takes place after successful completion of the two written qualifying examinations. It explores your proposed dissertation topic and your ability to undertake the proposed work successfully. After passing the oral examination, you are advanced to candidacy (the C.Phil. degree is not awarded) and may begin work on your dissertation.

Final Oral Examination

The examination involves a verbal defense of the completed dissertation before the doctoral committee.

Upper Division Courses

187. Planning and Designing Our Cities. An introduction to urban planning and urban design, with emphasis on methods and tools used in practice. An overview of the planning field; physical planning for redevelopment, for projects in expanding areas, and for new towns. Lectures (with illustrated examples), field visits, and presentation of students' own projects create the framework for expanding the understanding of the urban planning and design process.
Mr. Kamnitzer

190. The Human Environment: An Introduction to Architecture and Urban Planning. The kinds of problems that arise in creating and maintaining an environment for urban activities, and the approaches and methods of architecture and urban planning in helping to cope with such problems. The complexities involved in giving expression to human needs and desires in the provision of shelters and movement systems, to the possibilities and limitations of technology and building forms, and to the issues involved in relating the human-made to the natural environment. Students are encouraged to comprehend the major urban issues both as citizens and as potential technical experts. Mr. Rand (F)

199. Special Studies (2 to 8 units). Prerequisite: consent of instructor. Independent research or investigation on a selected topic to be arranged with a faculty member. May be repeated for credit.

Graduate Courses

200. Introduction to the History of Architecture. Lecture, three hours. A survey of Western architecture from prehistory to the present day. Examination of not only architectural styles, but the aesthetic, social, political, economic, technological, and theoretical determinants of built form and different methods of analyzing our architectural heritage. Ms. Favro

201. Introduction to Architectural Theory. (Formerly numbered 201A.) Lecture, three hours. A broad overview of major architectural theorists from antiquity to the early 20th century. Exposure to the content of theoretical writings and to the complex cultural, philosophical, and pragmatic concerns which stimulated the evolution of architectural ideas in different contexts. Ms. Favro

203. Decision Making in Planning and Design. (Formerly numbered 203A-203B.) Lecture, three hours. Exploration of the challenges of decision making in general and in the design professions, which have far-reaching effects not only on clients, but also on professionals' own prospects. Psychological and mathematical approaches for improving decision quality. Mr. Adelson

204. Imaging the Future. Seminar, three hours. Introduction to social and technological forecasting, including nature and limitations of forecasting, ideology and values in forecasting, review of integrative forecasting techniques, and the role of forecasting in environmental planning, design, and management processes. Mr. Adelson

219. Special Topics in the Built Environment (2 to 8 units). Lecture, three hours. Seminar on topics in the built environment selected by the faculty. May be repeated for credit.

224A-224B. Design Theory. (Formerly numbered 224.) Lecture, three hours. Examination of design as a cultural enterprise in which rules are adopted and then followed to compose, describe, and evaluate designs. Development in detail of contemporary and historical examples from architecture, painting, sculpture, and other fine and applied arts.
Mr. March, Mr. Stiny (F,W)

226A. Computer Graphics. (Formerly numbered 227A.) Lecture, three hours. Use of graphics examples and practical graphics programming exercises to introduce basic concepts of computer programming in the PASCAL language. Provides the foundation necessary to undertake more advanced work in computer-aided design. Ms. Liggett (F)

226B. Computer Applications in Architecture and Urban Planning. (Formerly numbered 227A.) Lecture, three hours. Prerequisite: course 226A or equivalent. The logic of problem solving using the computer, with emphasis on algorithms and data structures specifically applicable to architecture, urban design, and planning. Ms. Liggett

227A. Computer-Aided Design I. (Formerly numbered 226B.) Lecture, three hours. Prerequisite: course 226A or consent of instructor. An introduction to geometric modeling and design data bases using interactive computer graphics systems: two-dimensional drawings, wireframe modeling, surface modeling, and solid modeling. Mr. Mitchell (W)

227B. Computer-Aided Design II. (Formerly numbered 226B.) Lecture, three hours. Prerequisite: course 227A or consent of instructor. Selected advanced topics in computer graphics and computer-aided design: three-dimensional geometrical modeling, color, realistic rendering, and interfaces for CAD systems. May be repeated for credit.

228A-228B. Computational Foundations of Architectural Design. Lecture, three hours. Prerequisite: consent of instructor. An introduction to the composition and description of architectural designs in algorithmic processes: alternative representations of shapes and their corresponding algebras, shape grammars and languages of designs, description schemes. Mr. March, Mr. Stiny (F,W)

242. Climate Responsive Design. Prerequisite: professional degree in architecture or consent of instructor. The theory and method of design of buildings which specifically respond to local climate; an intensive course in building climatology for advanced graduate studies students. Mr. Milne

243. Energy Modeling. Prerequisites: one course in building climatology and one course in environmental controls. The geometric description of a building and the computerized modeling of its instantaneous energy flows, using one of the large energy analysis computer programs such as DOE 2.1B. Mr. Milne

247A. Introduction to Energy-Conserving Solar Design. (Formerly numbered 446.) Lecture, three hours. Energy and alternative resource-conscious design integration into architectural and urban design; passive, active, and photovoltaic solar/wind systems; concepts of loads, energy flows worldwide, Third World, U.S.A., and within buildings and communities, stressing professional practice applications. Field trips. Mr. Schoen

247B. Energy-Conserving Solar Design and Practice. (Formerly numbered 446.) Lecture, three hours. Prerequisites: course 247A and one climatology course, or consent of instructor. Extension of concepts and sizing of systems introduced in course 247A; stand-alone approaches particularly in developing countries, integration of resource-responsive vernacular architecture with contemporary forces, programming for course 403B. Mr. Schoen

255A-255B. Climatic Issues in Urban Design. (Not the same as course 255 prior to Fall Quarter 1986.) Seminar, three hours. An in-depth examination of the impact of urban design (e.g., urban density, urban profile, public parks) on some aspect of the urban climate, such as urban temperature, wind field, solar radiation availability, etc. Mr. Givoni

258. Urban Morphology. (Formerly numbered 255.) Lecture, three hours. Exploration of urban space from a structuralist perspective. Primary emphasis on the relationships between socioeconomic, experiential, and formal structures of the urban environment. Mr. Aran

271. Elements of Urban Design. Lecture, three hours. Introduction of basic knowledge of elements and methods of urban design. A multidisciplinary approach leading to an understanding of the political, socioeconomic, and technological framework of urban systems and its dynamic interrelations. Mr. Lang (F)

272. Real Estate Development for Planners and Architects. Introduction to the real estate development process specifically geared to students in planning, urban design, and architecture. Financial decision model, market studies, designs, loan package, development plan, and feasibility study. Lectures and projects integrate the development process with proposed design solutions which are iteratively modified to meet economic feasibility tests. Mr. Kamnitzer

274. Introduction to Physical Planning. Lecture, three hours. An assessment of physical planning that analyzes contemporary approaches to the built environment, reviews historical antecedents and considerations for the future, focuses on issues and techniques used by planners, and gives students an understanding of the issues and skills with which to carry out land-use and policy recommendations. Ms. Leavitt

278. Research Methods in Human-Environment Relations. Lecture, three hours; discussion, two hours. A survey of a variety of research methods applicable to problems on the human-environment interface, including both those now frequently employed (survey research) and others that emphasize qualitative research methods (e.g., participant observation, photographic observation). Emphasis on the application of research methods to selected exercises and specific field situations, drawing on students' own research interests. Ms. Leavitt

279. Housing for Developing Countries. (Formerly numbered 279A.) Discussion, three hours. Considerations of sociocultural, economic, and political factors, materials, structural systems, shelter accessories, and manufacturing technologies related to the priorities of developing countries in housing policies and the planning and design of shelter. Mr. Aroni (Sp)

281. Introduction to the History of the Built Environment in the United States. Lecture, three hours. Open to advanced undergraduates with consent of instructor. An introduction to American urban, environmental, and architectural history, a survey of the main economic, political, social, and aesthetic forces forming the built environment. The Colonial period to the present, with emphasis on the importance of the spatial design of cities and buildings to public policy. Ms. Hayden

282A. Roots of Modernism. (Formerly numbered 189.) Lecture, three hours. An overview of developments in Western architecture during the 18th and 19th centuries, covering the Romantic and historicist trends of the 1700s, the eclectic preferences of the 1800s, and turn-of-the-century premodern developments including art nouveau. Mr. Jencks

282B. Modern and Postmodern Architecture. (Formerly numbered 189.) Lecture, three hours. An examination of 20th-century architectural developments from the revolutionary concepts of the modern movement, including their manifestations in the international style, to the current eclectic trends of postmodernism. Mr. Jencks

283. History of the American Household and the American Home. Lecture, 90 minutes; discussion, 90 minutes. Prerequisite: course 281 or consent of instructor. An introduction to the history of housing design in the United States, emphasizing the changing roles of women and men from Colonial times to the present and the effects of these social changes on the physical form of the dwelling and the settlement. Discussion of the concerns of professional architects and planners, as well as the activity of bankers, builders, and homemakers. Ms. Hayden

284. The Ideal City in History. Prerequisite: course 281 or consent of instructor. Since the time of Thomas More's *Utopia*, creating the ideal city has been a favorite device used by novelists, political theorists, economic and social critics, and architects to criticize existing society and demonstrate the dramatic possibilities of thoroughgoing reform. The utopian tradition in its literary, political, and aesthetic forms, examining satirical cities, moral cities, and urban fantasies from the 16th century to the present. Ms. Hayden

286A-286B. Ancient Architecture. (Not the same as course 286 prior to Fall Quarter 1986.) Lecture, three hours. A study of architectural developments from archaic Greece to the late Roman Empire. Examination of ancient buildings as functional constructs whose appearance was determined by aesthetic, religious, social, political, urban, and technological factors. Ms. Favro

287. Architecture in Europe and the Middle East, 400 to 1500. Lecture, three hours. Prerequisite: consent of instructor. A study of East-West relationships, cultural concerns, and social interactions as seen through some major urban and architectural developments in Europe and the Middle East. Mr. Aran

288A-288B. Renaissance and Baroque Architecture. (Formerly numbered 288.) Lecture, three hours. Examination of European architecture from the 15th to 17th century, with primary focus on developments in the Italian peninsula. Examination of Renaissance and baroque structures contextually, exploring changing cultural and theoretical values as well as aesthetic characteristics. Ms. Favro

289. Special Topics in Architecture and Urban Design (2 to 4 units). Prerequisite: consent of instructor. Selected academic topics initiated by students, student teams, or faculty and directed by a member of the faculty. May be repeated for credit.

290. History and Theory of Landscape. Lecture, three hours. A historical introduction to principles of garden and landscape design. Exploration of key issues through case studies of gardens and landscape from a wide variety of physical and climatic settings, cultural contexts, and periods. Mr. Mitchell, Mr. Moore

291. Theory of Architectural Programming. Lecture, three hours. Exploration of concepts and methods of architectural programming and its interrelation to the design process; planning of the design process; various techniques for the determination of program contents, basic conditions, resources, and constraints; the identification of solution types for given situations. Mr. Rand (F)

292. Social Meaning of Space. (Formerly numbered 298.) Discussion, three hours. The evolution of the concept of space from its origins in ritual and primitive social organizations, concentrating on the child's evolving conception of space, literature on perceptual development, and studies of adaptation to the spatial order of the human-made environment. Mr. Rand

294A-294B. Environmental Psychology. Lecture, three hours. Introduction to models, concepts, and theories concerning the impact of the environment on human behavior, perception, and thought. Review of research results concerning space perception, cognitive mapping, preferences and attitudes toward the environment, effects of crowding and stress, personal space and territoriality. Mr. Rand

296. Proseminar in Architectural Theory. (Not the same as course 296 prior to Fall Quarter 1986.) Seminar, three hours. An orientation for Ph.D. students to the tradition of architectural theory, scholarship, and research and to current research directions and questions, through intensive reading and critical discussion. Mr. Stiny

297. Group Process in Design. Lecture, two hours; discussion, two hours; laboratory, two hours. Prerequisite: consent of instructor. Designed to equip students with the knowledge and skills needed to work effectively in design processes with other professionals and with client and user groups in organizational and other settings where interaction is important in determining design outcomes. Mr. Adelson

298A-298D. Research Practicum in Architecture. Lecture, three hours. Prerequisite: consent of instructor. An in-depth examination of research methods in the various major fields. May be repeated for credit:

298A. Research Practicum in Policy, Programming, and Evaluation.

298B. Research Practicum in Technology.

298C. Research Practicum in Design Theory and Methods.

298D. Research Practicum in History, Analysis, and Criticism of Architecture.

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. A teaching apprenticeship under the active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

401. Projects in Architecture. Studio, eight hours. Prerequisite: consent of instructor. Students may choose from a number of different projects in relevant problem areas to be offered by faculty members. May be repeated for credit. (F,W,Sp)

402. Projects in Urban Design. Studio, eight hours. Prerequisite: consent of instructor. Students may choose from a number of different projects in relevant problem areas to be offered by faculty members. May be repeated for credit. (F,W,Sp)

403A-403D. Project with Specific Topic. (Formerly numbered 403A-403H.) Studio, eight hours. Prerequisites: prior courses of particular sequence or consent of instructor. May be repeated for credit:

403A. Projects in Policy, Programming, and Evaluation.

403B. Projects in Technology.

403C. Projects in Design Theory and Methods.

403D. Projects in History, Analysis, and Criticism of Architecture. (F,W,Sp)

411. Introductory Design Studio. Studio, 12 hours. Prerequisite: consent of instructor. Architectural composition is initially studied in terms of its separate elements. After each is studied by means of a manipulative exercise which allows for experimentation of its intrinsic possibilities, students then undertake a series of closely controlled exercises dealing with combining the elements. The latter part of the course is spent in the design of a small building in which previously acquired knowledge is synthesized into a single design. (F)

412. Building Design Studio. Studio, 12 hours. Prerequisite: course 411 or consent of instructor. The design of the project starts with the exploration of the architectural program in relation to the design process and, particularly, the implications of the program on architectural forms and concepts. In a second phase, structural elements are introduced to fulfill the program requirements and to support and further develop the intended forms and concepts. (W)

413. Building Design with Landscape Studio. Studio, 12 hours. Prerequisites: courses 411 and 412, or consent of instructor. Building design and site planning in relation to water, landforms, and plants in natural landscape, with special attention to natural light, heat, and ventilation. (Sp)

414. Major Building Design I. Studio, 12 hours. Prerequisite: second-year standing. Design projects which enable students to concentrate on specific architectural issues, with emphasis either on treatment in breadth of large-scale projects or exploration in depth and detail of smaller-scale projects. Students learn to integrate structure, environmental controls, physical context, and the cultural environment in design of buildings and to present their ideas in graphic or model form. (F)

415. Major Building Design II. Studio, 12 hours. Prerequisite: course 414. Design projects which enable students to concentrate on specific architectural issues, with emphasis either on treatment in breadth of large-scale projects or exploration in depth and detail of smaller-scale projects. Students learn to integrate structure, mechanical systems, physical context, and the cultural environment in design of buildings and to present their ideas in graphic or model form. Special emphasis on integration of environmental control systems.

416. Comprehensive Design Studio. Studio, 12 hours. Prerequisites: completion of required coursework up to first quarter of third year, consent of instructor. Course completes the regular required sequence of design work, preparing students for the third-year thesis preparation course. Comprehensive design projects are structured to test students on integration of structural aspects, mechanical systems, site planning, and climatic considerations within their design solutions. (F)

421. Architectural Drawing. Discussion, three hours; laboratory, three hours. Description of architectural drawing techniques and skills, including sketching, diagraming, freehand drawing, drafting techniques, introduction to axonometric projection and perspective. (F)

422. Advanced Architectural Drawing (2 to 4 units). Discussion, three hours; laboratory, three hours. Prerequisite: course 421 or consent of instructor. Emphasis on the exploration of the interrelationship between drawing and design. More advanced design strategies and modes of graphic exploration and presentation. (W)

431. Structures I. Lecture, three hours. Prerequisites: basic algebra, geometry, trigonometry, consent of instructor. Introduction to structural behavior and structural statics. Operations with forces and vectors, both algebraically and graphically. Equilibrium of force systems; polygon of forces and funicular polygon. Internal actions: axial force and bending moment. Reactions, stability, and statical determinacy. Determinate frames. Plane trusses: analysis and design. Mr. Aroni, Mr. Iyengar (W)

432. Structures II. Lecture, three hours. Prerequisites: course 431, consent of instructor. Mechanics of structures and structural elements. Elastic materials: stress, strain, and stress-strain relations. Theory of bending: curvature, stress and strain distributions, centroid, moments of inertia, resisting and plastic moments. Design of beams for bending, shear, and deflections. Torsion members. Instability and design of columns. Design for combined bending and compression. Tensile structures; cables, pneumatic structures. Slabs and plates; shells and folded plates. Mr. Aroni, Mr. Iyengar (Sp)

433. Structures III. Lecture, three hours. Prerequisites: course 432, consent of instructor. Introduction to statically indeterminate analysis. Structural materials and loads. Wind loads: distribution with height, design for comfort, structure behavior under lateral loads. Steel construction and concepts for high-rise structures. Structural case studies in timber and steel. Introduction to earthquakes: seismology, magnitude, intensity, history. Seismic instrumentation. Case studies of recent earthquakes and damage. Earthquake design concepts and seismic code requirements. Mr. Aroni, Mr. Iyengar (F)

434. Structures IV. Lecture, three hours. Prerequisites: course 433, consent of instructor. Considerations of concrete structures. Materials of construction: cement aggregates, concrete mix design. Construction methods and structural systems. Reinforced concrete theory: elastic and ultimate strength analysis and design of beams, columns, and slabs. Case studies of concrete structures. Economics of high-rise concrete apartment buildings. Mr. Aroni (W)

436. Building Construction. (Formerly numbered 437.) Lecture/studio, eight hours. Limited to M.Arch. I students. Principles of structure and enclosure; basic nature, production, classification of primary building materials. Building elements explored for formal and functional properties; production and assembly possibilities in factory and field, application and role within building. Hands-on project. Mr. Mills, Mr. Schoen (W)

437. Construction Documents. (Formerly numbered 436.) Studio, eight hours. Prerequisite: one course in basic building construction (such as 436) or consent of instructor. Office/field communications explored through design of simple structure and creation of key working drawings and outline specifications. Introduction to CADD (computer-aided design and drafting) systems. Mr. Schoen (Sp)

438. Systems Building. Prerequisite: consent of instructor. Discussion and survey of past and present developments in Europe, the U.S.S.R., and the U.S.A. Impacts, demands, socioeconomic and legal constraints, user needs, performance specifications. Systems engineering and design. Measurement regulation, modular coordination, closed systems, open systems, design of systems, subsystems, components, elements, and materials. (W)

441. Environmental Control Systems. Lecture, three hours. Prerequisite: consent of instructor. The design of the mechanical systems necessary for the functioning of large buildings: air handling, fire and life safety, plumbing, vertical and horizontal circulation, communication and electrical power distribution, analysis of the interaction of these systems and their integrated effects on the architectural form of a building. (W)

442. Building Climatology. Prerequisite: basic physics. The design of buildings which specifically respond to the local climate; utilization of natural energies, human thermal comfort; sun motion and sun control devices; use of plant materials and landform to modify microclimate. Mr. Givoni, Mr. Milne (Sp)

443A. Passively Integrated Solar Systems: Heating. (Formerly numbered 443.) Prerequisites: courses 242 and 442, or consent of instructor. Analysis of the different passively integrated solar systems for heating buildings, considering their anticipated performance and suitability for different climates and building types. Focus on quantitative aspects, including calculations of performance in terms of energy saving and expected indoor comfort conditions. Mr. Givoni (W)

443B. Passively Integrated Solar Systems: Cooling. (Formerly numbered 443.) Prerequisites: courses 242 and 442, or consent of instructor. Analysis of the different passively integrated solar systems for cooling buildings, considering their anticipated performance and suitability for different climates and building types. Focus on quantitative aspects, including calculations of performance in terms of energy saving and expected indoor comfort conditions. Mr. Givoni (Sp)

444. Light and the Visual Environment. Prerequisite: a course in building climatology or consent of instructor. Exploration of the extent to which the physical form of a building controls the luminous environment of its occupants; the design of naturally and artificially illuminated environments; parameters of human visual comfort. Mr. Milne

445. Sound and the Auditory Environment. Lecture, two to four hours. Prerequisite: course 442 or consent of instructor. Exploration of the extent to which the physical form of a building controls the acoustic environment of its occupants; the design of spaces for auditory privacy and for auditory enhancement; parameters of human audition. Mr. Milne

448. Communication and Diffusion of Innovation. Seminar, three hours. Innovation in the building industry and the design professions. Successful creation and introduction of innovative products, processes, and technologies. Students are expected to contribute to the meager literature of the field through case studies and projects. Visitors and field trips. Mr. Schoen

460. Computer-Aided Design Practice. (Not the same as course 460 prior to Fall Quarter 1986.) Lecture/seminar, three hours. An introduction to professional practice in a context of computer technology — planning for introduction of computer technology, system selection, education and training issues, operational issues, costs, benefits and financial implications, ethical issues. Mr. Hamer

461. Architectural Practice. Seminar, three hours. Historical development of the profession; the role of the architect in contemporary society, current forms of practice and emerging trends. Contractual relationships, ethical responsibility, office management and promotion. Case studies of the practical process. Mr. Phelps (W)

490. Urban Innovations Group Workshop (4 to 8 units). Laboratory. Prerequisite: consent of workshop staff. Applied research and development work in the Urban Innovations Group workshop under the supervision of the workshop staff. Client-oriented projects concerned with significant urban, social, or technical problems of the physical environment. May be repeated for credit. (F,W,Sp)

496. Special Projects in Architecture (2 to 8 units). Prerequisite: consent of instructor. Projects initiated either by individual students or student teams and directed by a member of the faculty. May be repeated for credit.

497. Special Projects in Urban Design (2 to 8 units). Prerequisite: consent of instructor. Projects initiated either by individual students or student teams and directed by a member of the faculty. May be repeated for credit.

596A. Directed Individual Research and Study in Architecture and Urban Design (2 to 8 units). May be repeated for credit.

597A. Preparation for Comprehensive Examination or Ph.D. Qualifying Examinations (2 to 8 units). Prerequisite: consent of instructor. May be repeated for credit. S/U grading.

598A. Preparation in Architecture/Urban Design for Master's Thesis (2 to 8 units). Prerequisite: consent of instructor. May be repeated for credit.

599A. Ph.D. Dissertation Research in Architecture (2 to 8 units). Prerequisite: doctoral standing. May be repeated for credit. S/U grading.

Urban Planning

1125J Architecture, (213) 825-7331, 825-8957

Professors

Leland S. Burns, Ph.D.
John Friedmann, Ph.D., *Program Head*
Dolores Hayden, M.Arch.
Peter Kamnitzer, M.Pl.
Peter Marris, B.A.
Donald Shoup, Ph.D.
Edward W. Soja, Ph.D.
Martin Wachs, Ph.D.

Associate Professors

Leobardo Estrada, Ph.D.
J. Eugene Grigsby III, Ph.D.
Allan Heskin, Ph.D., LL.B.
Jacqueline Leavitt, Ph.D., *Acting*
Robin Liggett, Ph.D.

Assistant Professors

Margaret FitzSimmons, Ph.D.
Rebecca Morales, Ph.D.
Paul Ong, Ph.D.
Michael Storper, Ph.D.

Adjunct Associate Professor

Karen Hill Scott, Ed.D.

Scope and Objectives

The professional urban planner works on the creation and management of the urban environment, including its physical, economic, and social elements. Housing, transportation, air and water quality, the preservation of historic communities, and the development of community-level economic and employment programs are some of the tasks undertaken by recent graduates of the UCLA Urban Planning Program. Graduates have taken positions in local, state, and national government, and increasingly with private companies whose products and services affect the urban environment. While most UCLA graduates find positions in the United States, the program offers the opportunity to specialize in development planning abroad, including rural development, and many graduates have found positions in Latin America, Africa, and Asia.

The program offers a two-year Master of Arts degree and a Ph.D. Concurrent degree programs are available which enable students to combine study for an M.A. in Architecture/Urban Planning with work toward an M.B.A. in the Graduate School of Management, a J.D. in the School of Law, or an M.A. in Latin American Studies.

The Urban Planning Program at UCLA takes pride in its collegial atmosphere. It features a lively mix of students from diverse academic backgrounds, drawn from many foreign countries and from every avenue of American life. It includes many members of racial and ethnic minority groups. A number of student organizations provide an interesting program of extracurricular activities.

Requirements for Graduate Degrees

Admission

The Urban Planning Program admits students in the Fall Quarter only, and you should begin the application process a year in advance.

Prospective applicants may obtain a detailed program statement and Graduate Division application by writing to Admissions, Urban Planning Program, Graduate School of Architecture and Urban Planning, 1125J Architecture, UCLA, Los Angeles, CA 90024.

A statement of purpose, letters of recommendation, grade-point averages, and relevant experience are all considered in the review process for admission. Applicants must submit transcripts from each college attended and are encouraged to submit Graduate Record Examination (GRE) scores. The Test of English as a Foreign Language (TOEFL) is required of applicants whose native language is not English, unless they have completed at least two years of university-level coursework at an English-language institution. Refer to "Proficiency in English" under "Graduate Admission" in Chapter 3 for further information.

A maximum of two work samples may be submitted in support of the application (e.g., reports, papers, slides, etc.). Work samples will be returned only on request. (Applicants in the U.S. must enclose a self-addressed, stamped envelope.)

Areas of Concentration

You should select an area of concentration by the end of your first quarter in the program. The areas of concentration distinguish between different kinds of issues and contexts in which planners characteristically become engaged, as a professional career or a field of research. They are not meant to be mutually exclusive. The four areas of concentration are:

Urban and Regional Development: Rural poverty and urban migration, unemployment, the problems of economically depressed areas, and the deterioration of inner-city neighborhoods all present problems which call for comprehensive analysis and innovative solutions. Within this area, you are expected to select an emphasis either on developments within the United States and other advanced industrial nations, with a focus on community, or on problems of development in newly industrializing countries.

Social Policy and Analysis: This field of study concentrates on services, approaching questions of equity and social structure through the planning and analysis of services that are supplied publicly or semipublicly. It is concerned with the economic, political, and social context of service delivery systems, with analytic techniques for planning and evaluating them, and with the implications of different ways of financing them.

Natural Environment and Resources: The natural environment is both the context within which all human activities take place and a social product of those activities. Environmental planning begins as an attempt to mitigate often unforeseen consequences of economic growth and expansion, consequences which appear both as environmental hazards to human health and well-being and as problems in the management of natural resources. A special feature of this area of concentration is its emphasis on problems arising from the intensive use of environmental resources, viewed from the perspective of political economy.

The Built Environment: This area of concentration represents a blending of urban planning and architecture. It deals with the social and economic forces affecting the built environment and with the built environment on an urban scale. Within this area, you can select one of three specializations: history, theory, and criticism of the built environment; public policy and the built environment; or urban design and physical planning.

Additional Areas of Concentration: In special circumstances, you may devise your own area in consultation with appropriate faculty members. Final approval of the proposed additional area of concentration must be obtained from the program head.

International Development Studies: If you wish to focus your studies on policy and planning problems of newly industrializing countries, you can do so in the context of one of the

major areas of concentration. Coursework is currently offered in rural development, urbanization policies, housing, the environmental impacts of resource-based development, spatial policies for development, and the role of women in development. In addition, a number of courses are concerned with the evolving world economy, general development issues, and related ideological questions.

In its four Area Studies Centers, UCLA has major institutional resources that facilitate research and furnish a rich environment in which to study development issues in a global context. Opportunities for work exist with international agencies, voluntary agencies, and foreign governments. Doctoral students are encouraged to pursue careers in teaching, research, and consulting.

Students wishing to pursue comparative development studies at either the M.A. or Ph.D. level should contact Professor John Friedmann.

Master of Arts in Architecture/Urban Planning

The M.A. degree is fully accredited by the Planning Accreditation Board, a joint undertaking of the American Institute of Certified Planners and the Association of Collegiate Schools of Planning.

Course Requirements

You must complete a minimum of 72 units. Students generally take 12 units per quarter, completing the program in two years.

Core Course Requirement: The core areas comprise knowledge common to all areas of planning, regardless of your specific focus. Seven core courses are required: Architecture and Urban Planning 207, 220A (waiver by examination), 220B, two core courses in theory and context, and two additional courses (three if course 220A is waived) from a selection of 12 remaining core courses in methods, theory and context, and/or practice.

On entering the program, you must pass examinations indicating competence in basic mathematics and microeconomics before enrolling in courses 220A and 207 respectively. Copies of sample examinations are mailed with admission offers to applicants accepted into the program. An undergraduate course in college algebra or precalculus should provide suitable background to pass the basic mathematics examination. An undergraduate course in microeconomics should be sufficient preparation for the microeconomics examination.

You are strongly encouraged to prepare for the examinations before enrolling so you can take courses 207 and 220A (offered only once per year in Fall Quarter) during your first quarter of studies.

Area Course Requirement: You must select an area of concentration. A list of courses is prepared for each area of concentration, from which you are required to select at least five; two are generally specified.

Fieldwork Requirement: Two fieldwork courses (eight units) are required (subject to waiver).

You are encouraged to seek waivers for requirements which have been met in your previous education.

Thesis Plan

In partial fulfillment of the requirements for the M.A. degree, you are required to complete either a thesis or one of two comprehensive examination plans during your second year of study. Each option has its own deadline for selection, and once a deadline has passed, you are limited to options with subsequent deadlines. The master's thesis is intended to provide the opportunity for independent scholarly research and should be the length and quality of a publishable journal article. If you select this option, in order to meet established deadlines, you must begin thesis work no later than the Fall Quarter of your second year. Academic credit for thesis preparation is given through Architecture and Urban Planning 598P (four units each in Fall, Winter, and Spring Quarters).

Comprehensive Examination Plan

If you select the comprehensive examination option, you may choose either Plan A or Plan B.

Plan A (Long-Term Project): A client-oriented project is recommended for students who are more interested in practical application of what they have learned in their coursework than in scholarly research. The time span and magnitude of the final project approximates that of the thesis. Academic credit for project involvement is given through Architecture and Urban Planning 597P (four units each in Winter and Spring Quarters).

As an alternative under Plan A, you are encouraged to take courses 217A-217B (group comprehensive project sequence), offered Winter and Spring Quarters, to fulfill the comprehensive examination requirement.

Plan B (Two-Week Examination): Examinations for all areas of concentration are normally offered during the break between Winter and Spring Quarters. A committee of three faculty members (appointed by the area of concentration coordinator) offers, reads, and grades the examination. No course credit is received.

Fieldwork

Master's students who come to the Graduate School of Architecture and Urban Planning without prior experience in planning are required to complete eight units of fieldwork. Fieldwork is defined as clinical or "real world" experience with a planning office, a private organization involved in planning, a community action agency, or applied research within a clinical context (excluding conventional university-based research projects). Details on fulfilling this requirement are available in the program office.

Concurrent Degree Programs

J.D./M.A.-Architecture/Urban Planning

The Graduate School of Architecture and Urban Planning and the School of Law offer a concurrent plan of study providing an integrated curriculum for students planning to specialize in the legal aspects of urban problems. Education in planning offers an overview of theories and methods that permit identification and treatment of urban problems; education in law offers insight into the institutional causes and possibilities for treatment of these problems. Students pursue studies in both schools and receive both the J.D. and M.A. degrees at the end of four years.

Students interested in the program must apply and be admitted to the School of Law, the Urban Planning Program, and the Graduate Division. For additional information, contact the graduate counselor in the Urban Planning Program.

M.B.A./M.A.-Architecture/Urban Planning

The Graduate School of Architecture and Urban Planning and the Graduate School of Management offer a three-year concurrent degree program designed for students who seek careers which draw on general and specialized skills in urban planning and management. By providing knowledge of the workings of both the private and public sectors, the program enables individuals who have acquired these skills to move easily between careers in private industry and public service.

Students should request all application materials from the M.B.A. Admissions Office, Graduate School of Management. Further details may be obtained from the graduate counselor in the Urban Planning Program.

M.A.-Latin American Studies/ M.A.-Architecture/Urban Planning

The Urban Planning Program and the Latin American Studies Program offer a 2½- to 3-year concurrent plan of study leading to an M.A. degree in each program. Issues related to migration and settlement, comparative urbanization, human resources development and distribution, and rural economics are all of direct concern to planners and other policymakers working in Latin America. The concurrent degree program provides an integrated curriculum through which students can devel-

op professional knowledge and skills while receiving advanced area studies and language training.

Students should apply through the Urban Planning Program. Further details may be obtained from the graduate counselor in the Urban Planning Program.

Ph.D. in Urban Planning

Admission

Students admitted to the Ph.D. program in Urban Planning must have a master's degree in planning or a closely related field.

You must have a minimum 3.5 grade-point average in all graduate work completed for consideration for the Ph.D. program. Employment experience in planning or a closely related field is strongly recommended.

Foreign Language Requirement

A foreign language is not required either for admission to or completion of the doctoral program. However, students who are expecting to do dissertation research abroad are strongly advised to obtain the necessary language skills prior to beginning such research.

Course Requirements and Qualifying Examinations

You must demonstrate a high level of competence in a major field, a minor field, and in planning theory as measured by coursework and doctoral examinations. In addition, you must satisfy a requirement in research methods and are required to take Architecture and Urban Planning 208 to aid in preparation of dissertation research and writing.

Planning Theory Requirement

Planning theory is concerned with the ideas which have influenced planning since the beginning of the 19th century and with philosophical issues in societal guidance and social transformation.

You are required to take Architecture and Urban Planning 210A, 210B, and 210C and to present, at the end of your third quarter, an original research paper on a topic related to planning theory selected in consultation with faculty. The planning theory requirement should be completed in your first year in the program, prior to taking the major field examination.

Research Methods Requirement

The research methods field covers a variety of techniques useful for collecting, organizing, processing, and analyzing information for planning decisions. The methods to be covered emphasize statistics and their application to urban and regional studies and planning. Statistical tools include probability theory, probability distribution, sampling, survey methods, estimation techniques, hypothesis testing, analysis of variance, correlation, regression, and factor analysis. You may also study methods which address research of a more qualitative nature, including ethnomethodology, anthropological field methods, historiography, and Marxist methodologies.

To fulfill the research methods requirement, you must complete a sequence of three methods courses beyond the introductory level with a grade of B or better. In order to meet a minimum requirement in statistics, one of the three courses must be Architecture and Urban Planning 220B or the equivalent. The courses must be approved by your adviser and should begin during your first year in the Ph.D. program.

Major Field Examination

The major field examination tests your competence in a substantive area of study in planning. Following a prescribed process (available in detail from the graduate counselor), a committee of three faculty members is appointed by the program head to supervise your preparation for the field examination, which normally takes from six months to a year following successful completion of the planning theory requirement. The examination has two parts — one written, one oral. The written part is given each quarter simultaneously to all students on the Friday of the seventh week of classes; the oral part is given before the end of the same quarter. You may receive academic credit for the preparation of the examination by enrolling in Architecture and Urban Planning 597P.

Minor Field Requirement

The minor field requirement is intended to provide a breadth of knowledge which extends beyond the specific area of the major field. This requirement is closely adjusted to your dissertation focus and is fulfilled by taking 12 units of coursework, with grades of B or better, in a related field approved by your principal adviser.

Oral Qualifying Examination

After successful completion of the planning theory, research methods, and major and minor field requirements, you may petition the Graduate Division for approval of your doctoral committee.

The doctoral committee administers the University Oral Qualifying Examination at which you defend your dissertation prospectus. To assist in the development of the proposal, you are required to complete Architecture and Urban Planning 208.

The University Oral Qualifying Examination is normally taken by the end of your third year of doctoral study.

Final Oral Examination

This examination, which is optional at the discretion of the doctoral committee, involves a defense of the completed dissertation.

Upper Division Courses

179. Variable Topics in Urban Planning (2 to 8 units). Lecture, three hours. A variable topics course in selected subjects in social policy and public services, urban and regional development, natural environment and resources, and the built environment. May be repeated for credit.

187. Planning and Designing Our Cities. See listing under "Architecture/Urban Design."
Mr. Kamnitzer

190. The Human Environment: An Introduction to Architecture and Urban Planning. See listing under "Architecture/Urban Design." Mr. Rand (F)

M195. Engineering and Environmental Geology. (Same as Earth and Space Sciences M139.) Lecture, two and one-half hours. Prerequisite: Earth and Space Sciences 1 or 100. Recommended: Earth and Space Sciences 111A. Principles and practice of soil mechanics and foundation engineering in light of geologic conditions, recognition, prediction, and control or abatement of subsidence, landslides, earthquakes, and other geologic aspects of urban planning and subsurface disposal of liquids and solid wastes.
Mr. Merifield (W)

197. Planning for Minority Communities. Lecture, three hours. Introduction to inner-city policy issues on three separate levels: (1) each student develops a comprehensive inner-city urban program using materials from the Alternatives Inner-City Future Exercise, (2) each student is expected to identify the value assumptions and theories of social justice implicit or explicit in alternative intervention programs, and (3) each student is expected to participate in class discussions that emphasize minority issues which affect implementation. Mr. Estrada

199. Special Studies (2 to 8 units). See listing under "Architecture/Urban Design."

Graduate Courses

M202A. Public Control of Land Development (3 to 6 units). (Same as Law M286.) Analysis of the legal and administrative aspects of the regulation of land use and development, and the problems and techniques of urban planning; dwelling legislation, building codes, zoning, subdivision controls, public acquisition of land, tax controls, and urban development.
Mr. McGee

M202B. Governance: State, Regional, and Local (3 to 4 units). (Same as Law M285.) Lecture, three hours. Legal problems involving local governmental entities; sources and extent of powers and duties with respect to personnel, finance, public works, community development, and related topics.

M202C. Seminar: Urban Affairs (3 to 6 units). (Same as Law M526.) Exploration in a concrete case setting of the application of legal tools to the solution of planning and land-use problems. Real situations are selected in which significant planning problems exist that appear to be amenable to solution by careful analysis and application of legal tools. A number of case studies are selected so that students may choose one issue which directly interests them. For each case, a specific client works with the class in presenting the problem that client is facing and remains available through the course of the project for consultation; the end product for each case is the presentation of a formal report. Clients include the City Planning Commission, the Environmental Quality Board, the Housing Authority, and others.

M205C. Urban Government. (Same as Political Science CM229.) An analysis of the policies, processes, interrelations, and organization of governments in heavily populated areas.

206A. Urban Data Analysis: Demographic Applications. (Formerly numbered 206.) Lecture, three hours; laboratory, one hour. Prerequisites: one graduate-level statistics course, familiarity with one of the packaged statistics programs. Development of basic demographic methods of analysis in a policy context, providing a parallel development of content, data sources, and applications. Topics include data sources and errors, mortality, fertility, age structure, and their effects on planning policy.
Mr. Estrada, Mr. Levine

206B. Urban Data Analysis: Planning Models. Lecture, three hours; laboratory, one hour. Prerequisite: course 206A or equivalent. An advanced course in urban data analysis which builds on course 206A. Examination of the relationship between demographic and other socioeconomic processes, with emphasis on planning models. Topics include internal and international migration, crime analysis, transportation demand, and economic activity forecasting.
Mr. Estrada, Mr. Levine

207. Public Resource Allocation. Lecture, three hours. Prerequisite: passing score on a microeconomics examination given the first day of class. The practical use of economics in analyzing public resource allocation problems. Topics include a review of marginal analysis, the difference between equity and efficiency, public goods and the free rider problem, environmental pricing, public service pricing, and conflicts between individual and collective rationality.
Mr. Shoup (F)

208. Seminar in Advanced Research Methods. (Formerly numbered 208A.) Lecture, three hours. Prerequisites: doctoral standing, consent of instructor. Required of Ph.D. students in or following the second year. The process of developing a dissertation proposal; introduction to the alternative conceptions of science (or rigorous scholarship) now apparent in various social science paradigms. S/U grading.
Ms. FitzSimmons (F)

209. Special Topics in Planning Theory (2 to 8 units). Lecture, three hours. Seminar on topics in planning theory selected by the faculty. May be repeated for credit.

210A. A History of Planning Thought since 1800. (Formerly numbered 201B). Lecture, three hours. A historical introduction to the major ideals and theories of planning which have influenced its development from the early 19th century to the present.
Mr. Friedmann (F)

210B. Colloquium in Planning Theory. (Formerly numbered 201C.) Lecture, one hour; discussion, two hours. Prerequisite: course 210A. Intended for Ph.D. students (M.A. students may enroll by departmental petition only). An introduction to some of the central theoretical issues of contemporary planning, such as the role of planning in the state, the nature of social learning, conceptions of space and time, the politics of spatial design, the ethics of forecasting. Designed to help students develop a topic for the research paper required in course 210C. In Progress grading (credit to be given only on completion of course 210C). (W)

210C. Research Seminar in Planning Theory. Discussion, three hours. Prerequisite: course 210B. Limited to Ph.D. students. A seminar to prepare Ph.D. students for their research paper in planning theory. Presentations by students and lectures and discussions on topics selected for research by the class.
(Sp)

211. Law and the Quality of Urban Life. Lecture, three hours. An introduction to law as an urban system, directed primarily toward those interested in social and advocacy planning. Urban problems, such as employment, housing, social welfare, and land use; the law's role as a partial cause and cure of these problems. Examination of law as a changing process rather than a collection of principles, so that students develop a facility to interact with law and lawyers in a positive and forceful manner. Mr. Heskin

212. Uses of Forecasts in Policy-Making. Alternative concepts of the future and their relationship to planning theory and practice; institutional requirements that forecasts be conducted by planners; the technical characteristics of forecasts themselves and the relationship between technical forecasting methods and assumptions about the future; case studies of the use of forecasting in policy-making drawn from a variety of sectors: transportation, housing, energy, and water supply; an examination of ethical dilemmas faced by forecasters in complex policy-making situations. Mr. Wachs

213. Social Indicators and Reports for Metropolitan Regions. Discussion, three hours. Prerequisite: second-year standing. Research seminar concerned with the development of social indicators for evaluating and reporting the performance of complex urban systems. Mr. Grigsby

214. Ethics in Planning. Examination of ethical dimensions of planning at many levels, including issues of bribery and corruption, aspects of client/sponsor and employer/employee relationships, collection, use, and release of information, and ethical aspects of administrative discretion. Ethical aspects of planning methods, the concept of environmental ethics, and the evolution of the code of ethics in the planning profession. Mr. Wachs

M215B. Spatial Statistics. (Same as Geography M272.) Lecture, two hours; discussion, one hour; laboratory, one hour. Prerequisites: Geography 171 or Mathematics 50, consent of instructor. Specific techniques useful in the analysis of spatial distributions, including both point and areal patterns and emphasizing spatial descriptive statistics, probability models of spatial distributions, and statistical surfaces.
Mr. Clark

217A-217B. Comprehensive Planning Project. Prerequisite: second-year standing. The comprehensive project is offered by at least two faculty members representing different areas of policy concentration in the urban planning program and brings together students of varying backgrounds and interests in joint solution of a problem in urban planning and development. Each project is the equivalent of eight units total and spans two quarters. Because of the time required for the completion of project work, it is expected that students enrolled in a project will select the comprehensive examination plan option in place of the master's thesis. Credit to be given on completion of course 217B. (W, 217A; Sp, 217B)

219. Special Topics in the Built Environment (2 to 8 units). See listing under "Architecture/Urban Design."

220A. Quantitative Analysis in Urban Planning I. Lecture, three hours. Prerequisite: passing score on a basic mathematics proficiency examination given the first day of class. An introduction to mathematical and statistical concepts and methods with applications in urban planning. Review of basic mathematical concepts fundamental to planning methods; descriptive statistics, probability, and sampling techniques. An introduction to the use of the computer as a tool in analysis of planning-related data. Ms. Liggett (F)

220B. Quantitative Analysis in Urban Planning II. Lecture, three hours. Prerequisite: course 220A or equivalent (demonstrated by passing score on mathematics proficiency examination given the first day of course 220A). An introduction to concepts of statistical inference and modeling, with emphasis on urban planning applications. Topics include hypothesis testing, analysis of variance, correlation, regression, and causal modeling. Applications include such planning problems as forecasting population growth and change, estimating the use and need for public facilities, and analyzing the changing social and economic characteristics of urban populations. Case studies presented which cover the design and analysis of typical urban planning research projects. Use of the computer as a tool in statistical analysis and modeling. Ms. Liggett (W)

221. Evaluation Methods. (Formerly numbered 221A, 221B.) Lecture, three hours. Prerequisites: courses 207, 220A. An examination of methods used to evaluate the efficiency and effectiveness of government programs and investment projects. Theory and practice of evaluation, with emphasis on techniques of cost-effectiveness analysis, cost-benefit analysis, discounting, sensitivity analysis, target efficiency, fiscal audits, and evaluation design.
Ms. Hill Scott, Mr. Shoup

223A. Professional Development Series. Lecture, three hours. A lecture-seminar-project course offering an introduction to the planning profession and, more specifically, to the Urban Planning Program at UCLA. An overview of the forces that shaped its practice over time and an exploration of various professional roles for planners. Planning education viewed as a response to changing needs and as a catalyst for emerging roles for professional planners. Several short projects designed to expose students to "real world" planning problems and to the various viewpoints and methods that the areas of concentration specialties would bring to bear. Course 223A is generally taken Fall Quarter of the first year as an introduction to course 223B. (F)

223B. Professional Development Series. Lecture, three hours. Highly recommended prerequisite: course 223A. Problems of professional practice. Students must be working in a field setting to enroll. A job fair is held at the beginning of Winter Quarter to place students in field settings. Students who wish to arrange their own placement and join the class may do so with consent of instructor. Development of methods which integrate theory and practice through readings and individual and collective analyses of each student's experience. In addition, a larger look at the planning profession provided by noted professionals brought to the classroom to dialogue with the students. Students combine course 223B with one quarter of course 490 or 496F to meet the fieldwork requirement. Mr. Heskin (W)

229. Special Topics in Planning Methods (2 to 8 units). Seminar on topics in planning methodology selected by the faculty. May be repeated for credit.

M231. Urban Housing and Community Development (3 to 4 units). (Same as Law M287.) Lecture, three hours; discussion, one hour. Comprehensive consideration of the rebuilding and construction of American cities, with major emphasis on the "housing process" — the way in which shelter and related facilities are created by the institutions which direct housing activities in urban areas. Students are encouraged to undertake research projects, with emphasis on field research, in lieu of a substantial portion of the final examination. Mr. McGee

232A. Introduction to Regional Planning: The Evolution of Regional Planning Doctrines. Lecture, three hours. A critical and historical survey of the evolution of regional planning theory and practice, with particular emphasis on the relations between regional planning and developments within Western social and political philosophy. Major concepts include regions and regionalism, the territorial community, and the social production of space.
Mr. Soja (W)

232B. Spatial Planning: Regional and International Development. An examination of the theory and practice of spatial planning at the regional, national, and international scales, including an evaluation of regional growth strategies, national settlement policy, growth center concepts, and the normative-ideological issues involved in international development planning. Generally taken in the first year.
Mr. Soja (Sp)

233. The Political Economy of Urbanization. An introduction to the basic concepts and analytical approaches of urban political economy, with major emphasis on American urban problems. Topics include the historical geography of urbanization, the development and transformation of urban spatial structure, suburbanization and metropolitan political fragmentation, urban fiscal crisis, and the role of urban social movements. Mr. Soja

235A-235B. Urbanization and Rural Development in Third World Countries. Lecture, 90 minutes; discussion, 90 minutes. Prerequisite for course 235A: course 266 or consent of instructor; for course 235B: course 235A or consent of instructor. Questions of urbanization and planning in first quarter; rural development in second quarter. Case studies from Latin America, Africa, and Asia. Lectures, student presentations, and policy debates.

Mr. Friedmann (W,Sp)

236A. Urban and Regional Economic Development I. Lecture, three hours. An introduction to basic principles of urban and regional economics as they bear on public policy formation and urban and regional planning, especially in the U.S. context. Contemporary economic problems, theoretical frameworks for analyzing these problems, and methods of analysis. Major topics include regional distribution of employment/unemployment income and standards of living, with special attention to sectoral shifts in employment and demographic and migratory changes in the U.S. Emphasis on economic growth policies and development planning in cities and regions.

Ms. Morales, Mr. Storper (W)

236B. Urban and Regional Economic Development II. Lecture, three hours. A seminar focusing on local economic development, meaning job creation, job retention, or various forms of income redistribution for the purposes of developing or stabilizing a community's economy. Reasons for and measurement of unemployment and impoverishment, programmatic approaches for dealing with these problems, and a critical analysis of the objectives, outcomes, and public accountability of the different approaches. Topics include labor market considerations in economic development planning; incentives to private enterprise investment; alternative institutions for local economic development; and financing public and private investment. Ms. Morales (Sp)

236C. Urban and Regional Economic Development III. Discussion, three hours. Prerequisite: course 236B. An advanced seminar for students wanting to design or critically evaluate programs in economic development. Two- to three-week intensive workshops on financing techniques and economic development law in first part of course; individual student projects during remainder of course.

Ms. Morales (F)

238. Advanced Seminar in Urban and Regional Development. Lecture, two hours; discussion, two hours. Prerequisite: doctoral standing or consent of instructor. An advanced research seminar on major issues in urban and regional development theory and/or policy. Topics usually reflect faculty research projects and change from year to year. May be repeated for credit.

239. Special Topics in Urban and Regional Development Policy (2 to 8 units). Lecture, three hours. Seminar on topics in urban and regional development policy selected by the faculty. May be repeated for credit.

241A. Urban Transportation Planning I. (Formerly numbered M241A.) Lecture, three hours. Historical development of urban transportation planning and the current political and administrative frameworks for planning; the relationship between transportation systems and urban form, historical review of automobile and public transit systems; urban highway and transit planning programs; the financing of urban transportation; environmental and social impacts of transportation systems; current policy dilemmas; controlling the automobile, promoting mass transit, energy issues, needs of elderly and handicapped.

Mr. Wachs

241B. Urban Transportation Planning II. (Formerly numbered M241B.) Prerequisites: courses 207 220B, and 241A, or consent of instructor. Economic and social basis for travel; basic data sources for examining urban travel and transportation; techniques of forecasting and analyzing travel; mathematical models of travel; trip generation, trip distribution, modal split, traffic assignment, and route choice; uses of forecasts and approaches to transportation system and project evaluation. Mr. Wachs

241C. Urban Transportation Planning III. (Formerly numbered M241C.) Prerequisites: courses 207, 220B, 241A, and 241B, or consent of instructor. Recent experience and case studies in transportation planning and policy. Planning a rail system and downtown people mover for Los Angeles; community dial-a-ride services; express buses on freeways; the Santa Monica Freeway diamond lane project; decision making in the case of the Century Freeway; a parking management program for Los Angeles; carpooling and vanpooling programs; field trips and guest speakers. Mr. Wachs (F)

244. Housing Markets. Lecture, three hours. The ways that housing markets should but sometimes do not work in developed economies. Interaction of demand factors such as population distribution, household formation, income, and credit, as well as their particular impacts on groups of the population. Topics include filtering, housing search, segregation, pricing, production efficiency, organization of the construction industry, market failure, and appropriate policy responses. Mr. Burns

245. Urban Public Finance. Lecture, three hours. Prerequisites: courses 207 and 220A, or consent of instructor. Theory and practice of urban public finance, with emphasis on methods used to fund public infrastructure. Topics include fiscal impact analysis of real estate development, the effects of taxes on land-use decisions, benefit assessments to finance neighborhood public investment, private and intergovernmental contracting as a method of supplying urban public services, tax increment finance for urban redevelopment, and the municipal bond market. The equity of public service distribution among and within cities; review of the results of lawsuits to equalize public services. Mr. Shoup

246. Housing in Social and Economic Development Policy. Lecture, three hours. Prerequisite: course 207 or equivalent or consent of instructor. Seminar on the position of housing in national and regional development strategies, with focus on policies for Third World nations. Topics include the nature of housing "need," market responses, evolution of housing policy, theory of intervention, alternative policies for increasing the housing supply. Numerous case studies. Mr. Burns

249. Special Topics in Social Policy and Analysis (2 to 8 units). Lecture, three hours. Seminar on topics in social policy and analysis selected by the faculty. May be repeated for credit.

251. Planning for Multiple Publics. Lecture, three hours. Prerequisite: prior background in statistics and research design. Exploration of the planning needs of various social groups in urban settings, using existing literature and research studies to determine appropriate mechanisms of planning for multiple publics. Analysis of communities in the Los Angeles metropolitan area as a means of gaining insights into the practical, theoretical, and methodological problems of planning for multiple publics. Generally taken in the first year. Mr. Grigsby

252A. Human Lives in Development. Lecture, three hours. The growth and development of the individual throughout the life cycle. Attention to four major schools of thought regarding human development, drawing implications to planning approaches. Emphasis on the psychosocial basis of individual development and its relationship to planning.
Ms. Hill Scott

252B. Social Policy in Human Development. Prerequisite: course 252A or consent of instructor. The applications of human development information on the formulation of child care and family policy. Examination of a wide variety of data on child development, family structure, female labor force participation, and the economics of public investments and its use in developing policies regarding the organization and supply of child care services. Ms. Hill Scott

253. Social Theory for Planners. Lecture, three hours. Prior knowledge of sociological theory would be useful but is not essential. The sociological tradition as it relates to issues of change, the role of the state, and the relationship between knowledge and values as they affect planning. Insights and crucial issues which have arisen from social theory as they relate to the concerns of planning and social policy. Contemporary developments in urban sociology.
Mr. Marris

254. Social Research Methods. Lecture, three hours. Prerequisite: course 220B or equivalent. Review of basic methods commonly used in planning and applied social research and, in particular, survey research. Topics include conceptualizing the research problem; developing a research plan; sampling, instrumentation, and data collection; and time management of a research study.
Mr. Estrada, Mr. Levine

256. Social Impact Analysis. Lecture, three hours. Prerequisite: consent of instructor. Recommended: courses 220A, 220B, a course in advanced statistics, a course in survey research and methodology. Limited enrollment. Exploration of ways of creating methods for assessing and determining social impacts on communities, in order to develop both methodologies and policy formulation for assisting in community development. Generally taken in the second year.
Mr. Grigsby

260A. Political Economy and the Environment. Lecture, three hours. Debate about environmental policy is increasingly couched in economic terms. Environmental issues have become questions of political economy, as they influence international and domestic policy and reflect on the functioning of the market system. Examination of the assumptions and implications of alternative approaches to political economy, as these pertain to questions of environmental policy. Ms. FitzSimmons

260B. Politics, Institutions, and the Environment. (Formerly numbered 261B.) Lecture, three hours. Planners face some important dilemmas in designing institutions and policies intended to correct or prevent disruptions of the environment. An introduction to these problems, focusing on the essential theoretical questions that must be addressed in attempts to control environmental problems in our society. Review of recent developments in environmental policy in light of the growing environmental movements; evaluation of current approaches to environmental problems, considering their institutional forms and epistemological foundations. Mr. Storper

261. Land-Use Control: Economic and Structural Perspectives. Lecture, two hours; discussion, one hour. Prerequisites: courses 260A and 260B, or consent of instructor. Comparison of regulatory methods of land-use control to command or planning methods. The basics of land use as a commodity in the first part: land economics, land markets. Development, historically, of a structuralist perspective on the use of land in cities and regions in the second part. Land-use regulation (in the third part) in the light of the first two, to see how effective it is in steering the course of land development. The regulatory approach compared with real planning. Mr. Storper

262A. Urban Environmental Problems: Wastes and Hazards. Lecture, three hours. Prerequisites: courses 260A and 260B, or consent of instructor. Biologically active chemicals in urban environments are a focus of increasing public concern. Public health experts and planners are being asked to assess the risks such substances present and to take such risks into account in the planning process. Toxic and hazardous wastes pose a planning and policy problem which requires simultaneous consideration of environmental issues, economic development questions, and social services policy. Ms. FitzSimmons

262B. Urban Environmental Problems: Water Resources. Lecture, three hours. Prerequisites: courses 260A and 260B, or consent of instructor. Water is life and wealth in California, which has the world's most extensive long-distance, interbasin water transfer system. To date, water resources planning has been devoted almost exclusively to adding facilities for water delivery. But conflicts over additional developments are increasing. Examination of the environmental impacts of water development; review of the geography of California water generally. The use of water in California: agricultural irrigation, water pricing, water rights, and water districts. Consideration of a resource planning perspective in contrast to a strict development orientation.
Mr. Gottlieb

263. Natural Resource Conservation. Discussion, three hours. Prerequisites: courses 260A and 260B, or consent of instructor. Exploration, through reading, discussion, and student presentations, of the meaning of resource conservation, its desirability, and ways of achieving it. Emphasis on the integrated management of the public lands, though students may attend particularly to a specific resource (minerals, water, timber, wilderness). Ms. FitzSimmons

M264. Environmental Law and Policy (3 to 4 units). (Same as Law M290.) Lecture, three hours. Examination, from perspectives meaningful to legal institutions, of the nature of environmental problems. The means by which law has responded, and can and should respond, to problems of environmental quality. Both common law and legislative and administrative measures considered. The air pollution problem is the primary vehicle for study.

265. History of American Environmentalism. Discussion, three hours. Prerequisites: courses 260A, 260B. Readings, discussion, and student papers on the conservationist/preservationist division at the turn of the century, the environmental implications of those concepts of regional integration developed by the RPAA and others in the 1920s which were institutionalized in the New Deal, the rise of environmental activism after World War II, and the emergence of a legislative and judicial framework for environmental politics. Ms. FitzSimmons, Mr. Gottlieb

266. City and Countryside in the Third World. (Not the same as course 266 prior to Fall Quarter 1984.) Lecture, three hours. Review of the basic literature and schools of thought on development theory through an analysis of the impact of mercantilism, colonialism, capitalism, and socialism on various urban and rural social and economic structures in the Third World. Presentation, through an evaluation of theoretical writings and case studies, of the complexity and diversity of developing countries. Emphasis on the linkages between policy and the rural and urban impacts. Gives students important background for courses 267A, 267B, and many of the other planning courses addressing Third World issues.
Ms. Hecht

267A. Resource-Based Development Planning. Discussion, three hours. Recommended prerequisite: course 266. Some of the major issues associated with the development of specific natural resources. Topics include the nature of the particular resource (or region associated with it), its previous management, the involvement of the state, corporations, and local groups, and the environmental and social impact of its development. Ms. Hecht

267B. Rural Development Issues. Lecture, three hours. Recommended prerequisite: course 266. Development more thoroughly of themes raised in earlier courses. Topics may include peasantries, development and rural women, agricultural ecology, comparative land reform, agrarian revolution, and the special problems of tropical development. May be repeated for credit with consent of instructor.
Ms. Hecht

268. Advanced Seminar in Natural Environment and Resources. (Formerly numbered 260.) Discussion, three hours. Prerequisite: consent of instructor. Exploration of broad issues related to environmental and resource planning. Generally intended for second-year M.A. and Ph.D. students. May be repeated for credit.

269. Special Topics in Natural Environment and Resources (2 to 8 units). Lecture, three hours. Seminar on topics in natural environment and resources selected by the faculty. May be repeated for credit.

272. Real Estate Development for Planners and Architects. See listing under "Architecture/Urban Design." Mr. Kamnitzer

273. Site Planning. (Formerly numbered 267.) Lecture, 90 minutes; discussion, 90 minutes. Introduction to principles of site planning for urban areas, including new towns, new towns-in-town, shopping centers, industrial parks, office parks, housing, and recreation areas. Discussion of case studies in Southern California; exercises at the scale of the small city, the urban neighborhood, and the superblock.

274. Introduction to Physical Planning. See listing under "Architecture/Urban Design." Ms. Leavitt

276. Planning Workshop (4 to 8 units). Laboratory, six hours. Prerequisite: course 421 or 422 or Design 32A or demonstrated background in architectural design or consent of instructor. Planning projects with a focus on physical planning. Emphasis on synthesis combined with iterative evaluation of the emerging solutions. Projects may be reality bound, hypothetical, or in the form of exploring the impact of nonphysical forces on the physical environment. Development of presentation skills, both graphic and verbal, is an essential component of this workshop.
Mr. Kamnitzer

277. Introduction to Historic Preservation. Lecture, two hours; discussion, one hour; one-day field trip. Following an explanation of the philosophy and history of the preservation movement, lectures focus on various aspects of historic preservation, such as current legislation, tax incentives for developers, preservation planning for cities, methods of recognizing significant buildings and of conducting a survey, adaptive reuse, citizen involvement from national to local levels, appropriate restoration techniques, structural reinforcement of masonry buildings, and social problems caused by preservation (such as gentrification and displacement).

278. Research Methods in Human-Environment Relations. See listing under "Architecture/Urban Design." Ms. Leavitt

281. Introduction to the History of the Built Environment in the United States. Lecture, three hours. Open to advanced undergraduates with consent of instructor. An introduction to American urban, environmental, and architectural history, a survey of the main economic, political, social, and aesthetic forces forming the built environment. The Colonial period to the present, with emphasis on the importance of the spatial design of cities and buildings to public policy.
Ms. Hayden

283. History of the American Household and the American Home. Lecture, 90 minutes; discussion, 90 minutes. Prerequisite: course 281 or consent of instructor. An introduction to the history of housing design in the United States, emphasizing the changing roles of women and men from Colonial times to the present and the effects of these social changes on the physical form of the dwelling and the settlement. Discussion of the concerns of professional architects and planners, as well as the activity of bankers, builders, and homemakers. Ms. Hayden

284. The *Ideal* City *in History.* *Prerequisite:* course 281 or consent of instructor. Since the time of Thomas More's *Utopia,* creating the ideal city has been a favorite device used by novelists, political theorists, economic and social critics, and architects to criticize existing society and demonstrate the dramatic possibilities of thoroughgoing reform. The utopian tradition in its literary, political, and aesthetic forms, examining satirical cities, moral cities, and urban fantasies from the 16th century to the present. Ms. Hayden

285. Private Life, Public Life, and the Built Environment: Planning for the Changing Household and the Changing Work Force. Lecture, 90 minutes; discussion, 90 minutes. An introduction to the substantial literature on the relationship between gender and urban experience. Alternative research strategies attempt to define a private/public urban split; to describe an inadequate fit between American households, housing, and services; and to document environmental inequities women and children face in contemporary cities. Students prepare seminar papers using one or more of these approaches to explore topics in the areas of housing, neighborhood development, transportation, or social services.
Ms. Hayden

375. Teaching Apprentice Practicum (1 to 4 units). See listing under "Architecture/Urban Design."

490. Urban Innovations Group Workshop (4 to 8 units). See listing under "Architecture/Urban Design." (F,W,Sp)

494. Supervised Independent Teaching (2 to 8 units). Supervised individual teaching experience. May be repeated for credit. S/U grading.

496F. Field Projects (2 to 8 units). May be repeated for credit. S/U grading.

501. Cooperative Program (2 to 8 units). Prerequisite: consent of UCLA graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Course is used to record the enrollment of UCLA students in courses taken under cooperative arrangements with neighboring institutions. S/U grading.

596P. Research in Planning (2 to 8 units). May be repeated for credit.

597P. Preparation for M.A. Comprehensive Examination or Ph.D. Qualifying Examinations (2 to 8 units). May be repeated for credit. S/U grading.

598P. Preparation for M.A. Thesis in Urban Planning (2 to 8 units). May be repeated for credit. S/U grading.

599P. Ph.D. Dissertation Research in Planning (2 to 8 units). May be repeated for credit. S/U grading.

Graduate School of Education

Lewis C. Solmon, Dean

9

The primary goal of the Graduate School of Education is "the improvement of educational practice." In attainment of this goal, the functions of the school have expanded markedly in the past several decades to include a major commitment to educational research, to the advanced education of professional leaders and specialists, to the study and criticism of educational policy, and to field consultative services — all in addition to the traditional preparation of teachers.

The school, largest of its kind in the University of California system, provides a full range of academic and professional degree programs. Students may select from programmatic offerings consistent with individual goals and professional aspirations. At the master's degree level, professional Master of Education and academic Master of Arts programs are offered; at the doctoral level, qualified students may pursue the professional Doctor of Education or the academic Doctor of Philosophy degree. Additionally, several instructional and services credential sequences are available.

In order to assure that each candidate is advantaged through preparation which provides for variation in individual objectives and anticipates qualification for careers of the future, the faculty of the school engages in an ongoing review and any needed revision of curricular offerings. Further, an attractive array of fellowships is available to assist in recruitment of outstanding students both locally and nationwide.

Wellford Wilms, Ph.D.
Julia C. Wrigley, Ph.D.
Simon González, Ed.D., *Emeritus*
Wendell P. Jones, Ph.D., *Emeritus*
Frances M. Obst, Ed.D., *Emeritus*

Assistant Professors

James S. Catterall, Ph.D.
Donald Dorr-Bremme, Ph.D.
David P. Ericson, Ph.D.
Sandra Graham, Ph.D.
Barbara Hecht, Ph.D.
Carollee Howes, Ph.D.
Harold G. Levine, Ph.D.
Don T. Nakanishi, Ph.D.

Visiting Assistant Professor

Carol Mock, M.S.

Adjunct and Visiting Lecturers

Marjorie S. Day, Ph.D., *Adjunct*
Philip Ender, Ph.D., *Visiting*
Madeline Hunter, Ed.D., *Visiting*
Virginia Kennedy, Ph.D., *Visiting*
Ann Phelps, Ph.D., *Visiting*
Burtis Taylor, Ed.D., *Visiting*

Degrees Offered

Master of Education (M.Ed.)
Master of Arts in Education
Doctor of Education (Ed.D.)
Doctor of Philosophy in Education

Requirements for Graduate Degrees

Admission

Qualifications for admission to a program of study in education, in addition to the University requirements for admission, are:

(1) A minimum total score of 1,000 on the combined quantitative and verbal sections of the Graduate Record Examination (GRE). (Note: The Miller Analogies and Doppelt Mathematical Reasoning Test may be substituted for the GRE; minimum scores are 48 and 19 respectively.)

(2) Acceptance in a particular specialization is dependent on the availability of openings in that field; preference may be given to applicants with related backgrounds and/or experience.

Admission to an initial advanced degree program occurs simultaneously with admission to graduate standing and to the Graduate School of Education. No screening examination (other than described above) and no specific coursework are required for admission to a degree program.

Note: Applicants who do not meet the University minimum grade average and/or GRE score requirements may be admitted to the school on the basis of relevant work experience, accomplishments, or public service.

Letters of recommendation, while not required, may prove useful in documenting qualifications and/or professional experiences. The Graduate School of Education has an application form for both master's and doctoral degree programs which must be completed in addition to the one used by the Graduate Admissions Office.

Application forms and departmental brochures are available from the Office of Student Services, Graduate School of Education, 201 Moore Hall, UCLA, Los Angeles, CA 90024.

For information on the proficiency in English requirements for international graduate students, refer to "Graduate Admission" in Chapter 3.

Major Fields or Subdisciplines

Area I — Social and Philosophical Studies in Education

Comparative and International Education — 204A, 204B, 204C, 204D, 204E, 204F, 253A, 253B, 253C, 253D, 253E, 253F, 253G, 253H

Education and the Social Sciences — M108, 200B, 200C, 203, 207, 208A, 208B, 208C, M229A-M229B, 252A, 252B, 275, M281A-M281B-M281C

Philosophy and History of Education — 200A, M201C, 206A, 206B, 206C, 206D, 206E, 251A, 251C, 251D, 251E

Area II — Educational Psychology

Counseling — 213A, 213B, 213C, 214A, 214B, 214D, 214E, 216, 257, 413A-413B-413C, 415A, 415B

Developmental Studies in Education — 217A, 217B, M217C, 217D, 217F, 256B, 261A, 421A, 421C, 421D, 421F, 421G

Learning and Instruction — 205, 212A, 212B, 212C, M215, 236, 237, 256A, 258A, 258B, 267, 418, 419A, 419B, 433A, 433B

Research Methods and Evaluation — 202, 210A, 210B, 210C, 210D, 211A, 211B, 211C, 218A, 218B, 218C, 219, 221, M222A, 222B, 222C, 228, 230, 245, 255, 411A, 411B, 460

Special Education — 125A, 125B, 225A, 225B, 226, 227A, 227B, 227C, 280A, 280B, 325A, 325B, 425, 501

Area III — Organizational and Administrative Studies in Education

Administrative and Policy Studies in Education — 240A, 241, 242, 244, 246A, 246B, 440C, 441A, 441B, 441C, 442B, 443, 444A, 444B, 447, 448A, 448B, 470A, 470B

Curriculum and the Study of Schooling — 220A, 220B, 223, 224, 260, 261C, 262A, 262B, 262F, 262J, 420A, 420D, 422, 423, 424A, 424B, 424C, 424G, 437A, 490A

Education and Work — 214C, M231, 232, 233, 234, 235, 247, 248, 261E, 262I, 437B

Higher Education — M148, 180, M197, 209A, 209B, 209C, 209D, 238, 239, 249A, 249B, 259A, 259B, 261D, 261F, 334, 430, 431A, 431B, 431C, 432, 461A, 461B, 461C

Teacher Education

100, M102, 112, 264, 312, 315A-315B, 316A-316B, 318A-318B, 320A-320B, 324A, 324B, 324C, 324D, 330A, 330B, 330C, 330D, 360, 481, 489, 491A, 492

Academic Interinstitutional Programs

313A-313B, 313C-313D, 314A-314B, 317A, 317B, 317C, 321A, 321B, 321C, 321D, 322A, 322B

Special Studies

199, 299A-299B-299C, 375, 498A-498B-498C, 499A-499B-499C, 596, 597, 598, 599

Fields of specialization which may be selected in completion of the specific degree programs are indicated below. Contact the Office of Student Services regarding faculty member(s) to be consulted with respect to enrollment and *research opportunities and/or course sequencing* in each field of specialization.

Master of Education — Administrative and policy studies in education; bilingual/cross-cultural education (not offered in 1986-87); curriculum and the study of schooling; teacher education.

Master of Arts in Education — Area I (education and the social sciences; philosophy of education); Area II (all specializations); Area III (education and work; higher education).

Doctor of Education — Area II (all specializations, except counseling); Area III (all specializations).

Note: No specializations in Area I are approved for major study in the Doctor of Education degree program. Since the Ed.D. program is oriented toward key concepts and issues in education, study includes specialized content in the selected field of specialization, as well as content from related specializations.

Doctor of Philosophy in Education — Areas I, II, III (all specializations).

Master of Education

The Master of Education (M.Ed.) *professional* degree program is designed for individuals preparing for a mid-level professional position in schooling or for advanced professional study; it is the appropriate degree to provide professional foundation study in preparation for the Ed.D. program.

Admission

Requirements are applicable in accordance with selected specializations:

(1) *Administrative and Policy Studies in Education:* Possession of a valid teaching credential is preferred. Students with a demonstrated commitment to improving American schooling are sought for admission.

(2) *Bilingual/Cross-Cultural Education:* Completion of an approved program of professional preparation leading to a preliminary teaching credential is required, as is classroom experience — as a teacher or aide — for at least two years, at any level of schooling. Evidence of professional competence and conscientiousness, as well as the necessary second-language proficiency are also required. (This M.Ed. specialization will not be offered in 1986-87.)

(3) *Curriculum and the Study of Schooling:* Persons with above-average capabilities and interest in curriculum and instruction are sought. Experience as a practitioner in the specialization field is advantageous.

(4) *Teacher Education:* This is a four-quarter program leading to qualification for a Multiple or Single Subject Instruction Credential and a Master of Education degree. Individuals with the highest qualifications in all subject areas, including mathematics, science, and the humanities, are sought. Experience in working with children is advantageous.

Course Requirements

A minimum of nine upper division and graduate courses (36 units) must be completed in graduate standing, although no specific upper division courses are necessary. At least five courses (20 units) must be in the professional education (400) series. No 500-series courses may be applied toward the degree. Education 597 may be taken on an optional basis.

Information regarding specific course requirements in a selected M.Ed. specialization may be obtained from the Office of Student Services.

Teaching Experience

For some M.Ed. specializations, teaching experience is required. Specific information may be obtained from the Office of Student Services.

Comprehensive Examination Plan

There is no thesis plan offered in this program. Comprehensive examinations for master's degrees are offered twice yearly, once in Fall Quarter and once in Spring Quarter. They consist of:

(1) A comprehensive written examination designed to assess (a) comprehension of the professional knowledge basic to the selected field of specialization, including key concepts and principles, major theoretical positions, and fundamental issues and (b) understanding of the broad educational context in which the selected professional field resides.

(2) A performance examination designed to assess your competency in the solution of problems in the selected professional field; a test of whether knowledge can be applied in a real or simulated professional setting.

Information regarding examination foci for any selected M.Ed. specialization is available from *your academic adviser.*

The comprehensive examination may be taken twice. After a second failure, you are allowed to continue in the Graduate School of Education only in highly unusual circumstances.

Master of Arts in Education

The Master of Arts *academic* degree program in Education is designed to meet the needs of the individual preparing for a career in basic research or for advanced graduate study; it is the appropriate prerequisite education degree to the Ph.D. degree program.

Course Requirements

A minimum of nine upper division and graduate courses (36 units) must be completed in graduate standing, although no specific upper division courses are necessary. Six courses (24 units) must be taken in the Education 200 and 500 series. A maximum of two 500-series courses (eight units) may be applied toward the divisional course minimum and toward the graduate course minimum.

Two courses must be selected from Education 200A, 200B, 210A, 210B. Additional courses to complete the 36-unit requirement may be selected from offerings in Education and/or other departments with consent of your assigned adviser.

Thesis Plan

Under this plan, you prepare a thesis which is a report of the results of original investigation. Before beginning work on the thesis, you must obtain approval of the subject and general plan from the Graduate School of Education and the chair of your thesis committee.

The thesis committee must be formed, and a Petition for Advancement to Candidacy for the Master of Arts must be filed no later than one quarter prior to completion of course requirements for the degree.

The Theses and Dissertations Adviser and the Graduate Division publication, *Regulations for Thesis and Dissertation Preparation,* provide guidance in the final preparation of the manuscript. The department does not require a formal examination in connection with the thesis plan.

Comprehensive Examination Plan

The comprehensive examination is concerned with central topics in the selected major area of study and field of specialization. Questions are comprehensive in nature and are designed to measure the breadth and depth of knowledge, as well as ability to focus that knowledge on specific problems.

The comprehensive examination, offered twice yearly in Fall and Spring Quarters, may be taken twice. After a second failure, you are allowed to continue in the Graduate School of Education only in highly unusual circumstances.

Doctor of Education

The Doctor of Education (Ed.D.) *professional* degree program is designed to meet the needs of individuals preparing for careers of leadership and applied research in the schools and community educational programs. Emphases include practice, applied studies, and knowledge related to professional skills.

Admission

A Master of Education degree or equivalent is required; at least two years of successful professional experience in education or equivalent must be completed prior to advancement to candidacy.

Course Requirements

A minimum of 18 courses is required, as follows:

(1) Three research methods courses, with no more than two introductory courses and at least one advanced course, selected from the departmental list approved for the Ed.D.

(2) Nine education courses, of which four must be in areas other than the specialization (to comprise a complementary support area) and of which at least six must be from the Education 400 series; all courses must be approved by the academic adviser.

(3) Three supplemental courses selected from offerings in the school (usually outside the specialization) or in another UCLA professional school or department.

(4) A sequential three-quarter field practicum to include a research paper or similar product submitted by the end of the sequence.

Individual course requirements may be waived, under exceptional circumstances, at the discretion of the committee on graduate degrees, admissions, and standards; in unusual cases, however, an academic adviser may recommend additional coursework.

Qualifying Examinations

After satisfying the above requirements, you are eligible to take the following qualifying examinations:

(1) A specialization-designed written examination which is offered twice yearly, once in Fall Quarter and once in Spring Quarter. After a second failure, you are allowed to continue in the Graduate School of Education only in highly unusual circumstances.

(2) The University Oral Qualifying Examination, conducted by the doctoral committee, which employs topics from education which are related to your written research proposal. In case of failure, the examination may be repeated once on the recommendation of your doctoral committee.

The dissertation, required of every candidate for the Ed.D. degree, must embody the results of your independent investigation and must contribute to professional knowledge in education.

Final Oral Examination

At the option of the certifying members of the doctoral committee, a final oral examination may be required.

Ph.D. in Education

The Doctor of Philosophy *academic* degree program in Education is designed for individuals preparing for a career in basic research or college-level instruction. Emphases include theory, research methodology, basic studies, and in-depth knowledge in education and an approved cognate field.

Admission

A master's degree or equivalent in either education or the cognate field in which you plan to work is required.

Foreign Language Requirement

There is a foreign language requirement for the Ph.D. in some specializations. Detailed information is available from the graduate adviser in the Office of Student Services.

Course Requirements

A minimum of 18 courses is required, as follows:

(1) Three research methods courses, with no more than two introductory courses and at least one advanced course, selected from the departmental list approved for the Ph.D.

(2) Nine education courses, of which four must be in areas other than the specialization (to comprise a complementary support area) and of which at least six must be from the Education 200 series; all courses must be approved by the academic adviser.

(3) For students with an academic master's degree, three cognate courses selected from discipline-based studies in one or more UCLA academic departments (five cognate courses are required of students with a degree other than an academic master's degree).

(4) A sequential three-quarter research practicum to include a research paper submitted by the end of the sequence.

Individual course requirements may be waived, under exceptional circumstances, at the discretion of the committee on graduate degrees, admissions, and standards; in unusual cases, however, an academic adviser may recommend additional coursework.

Qualifying Examinations

After satisfying the above requirements, you are eligible to take the following qualifying examinations:

(1) A specialization-designed written examination which is offered twice yearly, once in Fall Quarter and once in Spring Quarter. After a second failure, you are allowed to continue in the Graduate School of Education only in highly unusual circumstances.

(2) The University Oral Qualifying Examination, conducted by the doctoral committee, which employs topics from both education and the cognate discipline(s) which are related to your written research proposal. In case of failure, the examination may be repeated once on the recommendation of your doctoral committee.

For further information on the written and oral qualifying examinations, contact the Office of Student Services.

The dissertation, required of every candidate for the Ph.D. degree, must embody the results of your independent investigation, must contribute to the body of theoretical knowledge in education, and must draw on interrelations of education and the cognate discipline(s).

Final Oral Examination

At the option of the certifying members of the doctoral committee, a final oral examination may be required.

Cooperative Degree Programs

For details regarding the following cooperative degree programs, contact the Office of Student Services.

J.D./Education Program

The Graduate School of Education and the School of Law offer a concurrent plan which allows students to design a program of study

leading to the J.D. and any advanced degree in education (M.Ed., M.A., Ed.D., or Ph.D.). If the program meets the degree requirements in both schools, students are awarded both degrees on its completion. (This program will not be offered in 1986-87.)

M.A.-Latin American Studies/ M.Ed.

The Graduate School of Education and the Latin American Studies Program offer an articulated degree program which allows students to combine study for the M.A. in Latin American Studies and the M.Ed., with a specialization in curriculum. Articulated programs do not allow course credit to be applied toward more than one degree.

UCLA/CSULA Joint Ph.D. in Special Education

A joint Ph.D. program in Special Education is offered by UCLA and California State University, Los Angeles. The goals of the joint program are (1) the stimulation and preparation of research workers of high competence in the various fields of special education; (2) improved preparation for potential teachers of exceptional individuals; and (3) improved preparation of personnel for research and in policy formation in the public schools of California. Students seeking information regarding emphases and requirements should consult the joint doctoral adviser at UCLA (126B Moore Hall) or the chair of the Department of Special Education at CSULA.

Certificate (Credential) Programs

The California Commission on Teacher Credentialing has authorized the Graduate School of Education to offer professional programs that lead to (1) the Multiple Subject Instruction Credential, (2) the Single Subject Instruction Credential, (3) the Bilingual Emphasis Instruction Credential, (4) the Administrative Services Credential, (5) the Pupil Personnel Services Credential, (6) the School Psychologist Services Credential, and (7) the Severely Handicapped Specialist Credential.

Upper Division Courses

100. Cultural Foundations of Education. (Formerly numbered 100A, 100B.) Prerequisite: consent of instructor. Analysis of significant problems and issues in contemporary American education using historical, philosophical, sociological, and organizational perspectives, including those of particular minority groups in the United States. Patterns of intergroup and school-community relations.
Mr. Dorr-Bremme, Mr. Rust

M102. The Mexican-American and the Schools. (Formerly numbered 102.) (Same as Chicano Studies M102.) Prerequisite: consent of instructor. Review of research and teaching strategies. Analysis of school policies and practices and their effect on the development of Mexican-American and Chicano youth and communities.

M108. Sociology of Education. (Same as Sociology M143.) Prerequisite: Sociology 1. Study of social processes and interaction patterns in educational organizations; the relationship of such organizations to aspects of society, social class, and power; social relations within the school, college, and university; formal and informal groups, subcultures in educational systems; roles of teachers, students, and administrators. Mr. O'Shea, Ms. Wrigley

112. Psychological Foundations of Education. Prerequisite: consent of instructor. Analysis of learning processes in school situations. Processes of human motivation, the affective, cognitive, social, and personal development of children and adolescents, the evaluation of learning, individual differences, and the implications of relevant theory and research for instructional practices.
Ms. Graham, Ms. Kourilsky, Mr. Silberman

125A. The Education of Exceptional Individuals. Prerequisite: Psychology 10 or equivalent. An introduction to the field of special education, with emphasis on the psychology of individual differences, the learning characteristics of exceptional individuals, and application of research and theory to special education problems. Mr. Hewett

125B. Principles for Teaching Exceptional Individuals. Prerequisite: consent of instructor. Approaches for teaching exceptional individuals in special and regular education programs. Principles and assumptions underlying alternative approaches. Emphasis on individualizing curriculum and classroom management. Observation in schools.

M148. Women in Higher Education. (Same as Women's Studies M148.) Prerequisite: upper division standing. The education and career development of women in higher education. Specifically, emphasis on undergraduate and graduate women; women faculty and administrators; curricula, programs, and counseling services designed to enhance women's educational and career development, affirmative action, and other recent legislation. Ms. Astin

180. Social Psychology of Higher Education. An overview of significant studies in the social psychology of higher education. Focus on institutional characteristics and students' interpersonal and intrapersonal processes, with special emphasis on identifying and explaining the effects of the college experience on student development and achievement.
Mr. Trent

M197. Senior Seminar in Women's Studies. (Same as Women's Studies M197). Discussion, three hours; laboratory, one hour. Prerequisites: Women's Studies 100 plus two other women's studies courses; for seniors and juniors: consent of instructor. Designed for students completing work in women's studies. Each student pursues research on a specific topic concerning women, explores frameworks for understanding female experience (biological, economic, historical, and psychological), and refines methods for research. Ms. Astin

199. Special Studies (2 to 8 units). Prerequisites: senior standing, consent of instructor. Independent study of individual problems.

Graduate Courses

200A. Historical Research and Writing. Techniques of historical research and writing for students who are or who will be engaged in research and in report or paper or thesis writing, regardless of their field of interest. Mr. S. Cohen

200B. Survey Research Methods in Education. Prerequisite: course 210A or equivalent. Problems of conceptualization, organization, and gathering nonexperimental and quasi-experimental quantitative and qualitative data. Mr. O'Shea

200C. Analysis of Survey Data in Education. Lecture, three hours; laboratory, two hours. Prerequisite: course 200B. Introduction to techniques of processing and analyzing nonexperimental and quasi-experimental quantitative data. Mr. O'Shea

M201C. History of American Education. (Same as History M264.) Seminar, three hours. The intellectual and social forces impinging on American education from the 1860s to the present. Analysis of the relation between these forces and the values, curriculum, structural organization, and functions of education.
Mr. S. Cohen

202. Evaluation Theory. (Formerly numbered 411B.) Prevalent evaluation theories, systems for categorizing these theories, and the process of theory development in educational evaluation.
Mr. Alkin, Mr. Ellett

203. Educational Anthropology. Recommended prerequisite: Anthropology 22. Study of education through the research and method of the cultural anthropologist. Interdependence of culture and education, with emphasis on cross-cultural studies of enculturation, schooling, values, cognition, language, and cultural change.

204A. Topics and Issues in International and Comparative Education. Analysis of basic topics and issues in comparative and international education. Emphasis on those topics and issues that cut across national boundaries and are at the forefront of educational policy and practice in both developed and developing nations.
Mr. Hawkins, Mr. Nakanishi, Mr. Rust

204B. Introduction to Comparative Education. An examination of conceptual and methodological questions underlying comparative education. Particular attention to the development of the field and to styles of social analysis which may be applied to comparative and cross-national studies in education.
Mr. Hawkins, Mr. Nakanishi, Mr. Rust

204C. Education and National Development. Application of social science perspectives and methodologies to education in the international context. Emphasis on relevant research literature and development processes and strategies for international development education, with concentration on so-called less developed countries.
Mr. Hawkins and the Staff

204D. Minority Education in Cross-Cultural Perspective. Historical and contemporary analyses of educational policies with regard to ethnic, religious, and linguistic minorities through selected national and international case studies. Introduction to cross-cultural education in representative countries in relation to social, political, and economic systems.
Mr. Hawkins, Mr. Nakanishi

204E. International Efforts in Education. Analysis of problems and concepts related to diffusion, borrowing, and adaptation across cultural and national boundaries. Activities of bilateral and multilateral agencies in promoting international education, as well as conceptual and practical curricular efforts which intend to increase international understanding.
Mr. Hawkins and the Staff

204F. Nonformal Education in Comparative Perspective. A comparative and international study of organized and systematic educational activity for children, youth, and adults carried on outside of schools. Types of programs include, among others, consciousness raising, community action, skills training, literacy, and extension programs.
Mr. Hawkins, Mr. Rust

205. Computers in the Educational Process. Introduction to the theory, experimentation, evaluation, and future of computer systems in education, with emphasis on computer-assisted instruction (CAI), and the use of computers to teach programming and to foster development of writing, computational, and filing skills. Ms. Dorr

206A. Philosophy of Education: Introduction. Systematic introduction to the field, indicating ways in which philosophy serves to elucidate educational aims, content, methods, and values.
Mr. Ellett, Mr. Ericson, Mr. Weinberg

206B. Philosophy of Education: Existentialism and Humanism. Examination of existentialist ideas and their application in contemporary humanistic movements in school and society.
Mr. Ellett, Mr. Weinberg

206C. Philosophy of Education: Logic and Language. Conceptual analysis of recurrent and contemporary themes in the field. Emphasis on the development of logical and linguistic skills used in the analysis of educational problems and issues.
Mr. Ellett, Mr. Ericson

206D. Philosophy of Education: Ethics and Values. A study of ethics and value theory in teaching and learning, educational organization and policy, and curriculum design and validation.
Mr. Ellett, Mr. Ericson

206E. Philosophy of Education: Introduction to Humanism in Education. The philosophical foundations of humanism and their relationships to educational theory and practice. Mr. Weinberg

207. Politics and Education. The political dimensions of both formal and nonformal educational enterprises in a national and international perspective. Political theory explored in the context of such educational issues as policy formation, pressure groups, and public and private elites.
Mr. Hawkins and the Staff

208A. Perspectives on the Sociology of Education. Sociological perspectives on current issues in educational policy and practice, including desegregation, decentralization, equality of educational opportunity, structure of educational organization, teacher-student relationships, reform in education at the elementary, secondary, postsecondary levels.
Mr. O'Shea, Ms. Wrigley

208B. Issues in Education: Sociological Perspectives. Prerequisite: course 208A or equivalent. Exploration of educational issues and the structure and processes of formal schooling, from sociological perspectives such as functionalism, conflict theory, symbolic interactionism, ethnomethodology, and critical sociology. Mr. O'Shea

208C. Explanation in the Social Sciences and Educational Research. Lecture, two hours; discussion, two hours. Prerequisite: graduate standing or consent of instructor. An overview of basic strategies and forms of explanation relevant to inquiry in education from the vantage point of the various social and behavioral science disciplines.
Mr. Blurton Jones, Mr. Ericson

209A. History of Higher Education. An examination of the development of postsecondary education in the United States, with attention to the social context and to the scope and variety of institutions.
Mr. Astin, Mr. A. Cohen, Ms. Mock

209B. Issues in Higher Education. Identification, analysis, and discussion of current issues, innovations, trends, and policies in postsecondary education. Mr Clark, Mr. A. Cohen

209C. Problems in Research and Evaluation in Higher Education. A critical review of research and evaluation studies of higher education, with special attention to the need for studies of new programs and problems, and to the design and methodology of evaluative research. Mr. Astin, Ms. Mock

209D. The System of Higher Education. An analysis of the structure and function of American postsecondary education from a systems perspective. Emphasis on the structure of the system and comparative characteristics (faculties, student bodies, finances, outputs) of different types of institutions.
Mr. Astin, Mr. Clark

210A. Basic Concepts in Educational Research. Fundamentals of research design. The language of research. Planning and conduct of research. Interpretation and reporting of research outcomes. Introduction to descriptive statistics: mean, median, mode, variance. Introduction to the normal curve.
Mr. Levine, Mr. Skager, and the Staff

210B. Experimental Design in Educational Research. Prerequisite: knowledge of research designs and univariate descriptive statistics. Regression, correlation, inference, normal curve tests, t-tests, simple and factorial analysis of variance, and selected nonparametric tests.
Mr. Shavelson, Mr. Skager, Ms. Webb

210C. Experimental Design: Advanced Topics. Prerequisite: course 210B or equivalent. Completely randomized designs, randomized block designs, nested designs, and their combinations into advanced factorial designs using fixed, random, and mixed models. Analysis of covariance, introduction to multiple regression and quasi-experimental designs.
Mr. Shavelson, Ms. Webb, and the Staff

210D. Experimental Design: Multivariate Analysis. Prerequisite: course 210C or equivalent. Review of multiple regression analysis, analysis of covariance. Introduction to matrix algebra. Introduction to multivariate normal distribution. Multivariate analysis of variance. Linear discriminant function. Analysis of repeated measurements. Canonical correlation. Principal components.
Mr. Muthén, Ms. Webb, and the Staff

211A. The Measurement of Educational Achievement and Aptitude. Prerequisite: course 210A. A critical study of tests of achievement and aptitude, with emphasis on group tests; the relation of achievement to aptitude; social implications of the measurement of intelligence; elements of validity and reliability. Mr. Popham, Mr. Skager

211B. Measurement in Education: Underlying Theory. Prerequisite: course 211A. Measurement theory as applied to testing, focusing primarily on classical test theory; implications of theories for test construction and selection; current status of validity and reliability theory.
Mr. Burstein, Mr. Shavelson, Ms. Webb

211C. Problems in Measurement. Prerequisites: courses 210C, 211B, or equivalent. Generalizability theory, statistical theories of test scores; item response theory, factor analysis.
Mr. Muthén, Mr. Shavelson, Ms. Webb

212A. Learning and Education. Models of learning, modeling, reinforcement, motivation, encoding, memory, transfer, individual differences, and instruction. Ms. Graham, Mr. Silberman, Mr. Wittrock

212B. Motivation and Affect in the Educative Process. Prerequisites: courses 210A, 212A. A review of the theoretical and empirical literature on motivational factors in school settings and the conditions for the acquisition of affective outcomes.
Ms. Graham

212C. Cognition and Creativity in Education. Prerequisite: course 212B. A review of the theoretical and empirical literature on cognitive processes in school learning, including concept learning, problem solving, learning to learn, and creativity.
Mr. Wittrock

213A. Fundamentals of Student Personnel Work. Prerequisite: graduate standing or consent of instructor. Analysis and in-class application of student and pupil personnel service methods, with emphasis on task groups and evaluation.
Mr. Healy, Mr. Sorenson

213B. Legal and Ethical Bases of Student Personnel Work. Prerequisite: course 213A. Ethical and legal codes relevant to pupil personnel services; relation of value systems and personality; case studies in the implications of personal values in counseling situations. Mr. Berry, Mr. Sorenson

213C. Group Counseling Theory and Process. Lecture, three hours; discussion, one hour. Prerequisites: courses 213A, 214A, and 214B, or consent of instructor. Group productivity, leadership in groups, social perception, attitude formation, and the effect of behavior changes in individuals and groups. Evaluation of the social, psychological, and educational principles related to the therapeutic experiences of individuals in small groups. Mr. Berry

214A. Counseling Theory and Practice. Application of concepts drawn from cognitive psychology to the nonacademic problems which people encounter in everyday life, such as finding suitable employment, achieving satisfying interpersonal relationships, and making productive use of leisure time.
Mr. Sorenson

214B. Advanced Counseling Theory and Practice. Limited to advanced degree candidates whose major interest is counseling and to selected high school and college counselors. Counseling procedures, educational planning, and methods for helping students handle personal problems that interfere with school progress; critical evaluation of procedures.
Mr. Sorenson

214C. Principles of Career Planning. Examination of the nature of careers across ages and ethnic and sexual groups in order to determine implications for career planning in postindustrial society.
Mr. Healy

214D. Vocational Guidance. Depth study of current interests and needs in vocational guidance; principles, problems, and practices of vocational guidance.
Mr. Berry, Mr. Healy

214E. Alcohol and Other Drugs in Contemporary Society. Extent and variety of substance abuse and dependency in schools and wider society. Relevant theory, including predisposing factors, effects on users and significant others, and recovery process. Critical indicators of substance dependency in the counseling interview. Prevention education and intervention strategies for youths and adults.
Mr. Skager

M215. Personality, Motivation, and Attribution. (Same as Psychology M239.) Current research and theory relating personality variables (e.g., attributional styles, self-esteem) to motivational concerns such as persistence and intensity of behavior. Perceived causes of outcomes in achievement and affiliative domains.

216. Counseling Models from a Cross-Cultural Perspective. Prerequisite: course 213A or consent of instructor. Research related to the psychological, educational, and sociological characteristics of counseling clients within a cross-cultural perspective and the implications for counseling models. Evaluation of counseling practices through an analysis of school, community, and mental health settings. Mr. Berry

217A. Social Development and Education. Biological and familial, school, and other influences on the child; development in the context of current research and theoretical models; consideration of theoretical and methodological research on family, peer group, and school; application of developmental theory and research to educational practice. Ms. Howes

217B. Cognitive Development and Education. Lecture, two hours; discussion, two hours. Prerequisite: graduate standing. A critical review of theories and research in cognitive development, focusing on the work of Piaget and Vygotsky, and the relation of this work to issues in educational practice.
Mr. Saxe, Ms. Stipek

M217C. Personality Development and Education. (Same as Psychology M245.) Review of research and theory of critical content areas in personality development that bear on school performance: achievement motivation, self-concept, aggression, sex differences, empathy, and other social behaviors; review of the status of emotional behavior in personality theory and development. Ms. Feshbach

217D. Language Development and Education. Research and theory on how children develop their first language; sociolinguistic and psycholinguistic issues in preschool and primary years; bilingual and dialectical issues. Ms. Valadez

217F. Human Development and the Educational Process. Cognitive and social development; cultural, family, peer, and schooling influences on human development; application of developmental theory and research to educational practice.
Ms. Howes, Mr. Saxe, Ms. Stipek

218A. Multiple Regression Analysis. Prerequisite: course 210B. Regression-based techniques for analyzing quantitative data; multiple regression methods, multiple correlation, partial correlation; introduction to the general linear model, with direct application to educational inquiry.
Mr. Burstein, Ms. Webb

218B. Advanced Quantitative Models in Non-experimental Research. Prerequisites: course 218A or equivalent, consent of instructor. Quasi-experimental research designs, longitudinal models, introduction to causal models, path analysis, recursive and nonrecursive model estimation. Emphasis on conceptual and methodological foundations, assumptions, applications, and limitations.
Mr. Burstein, Mr. Muthén

218C. Structural Equation Modeling. Prerequisites: courses 210D, 218B, or equivalent. Extends path analysis (causal modeling) by considering models with measurement errors and multiple indicators of latent variables. The LISREL approach, including confirmatory factor analysis, covariance structure modeling, and multiple-group analysis. Identification, estimation, testing, and model building considerations. Mr. Muthén

219. Laboratory: Advanced Topics in Research Methodology. Provides assistance in the design of research and interpretation of data to advanced students from other specializations. Coverage of special topics not included in other courses on research methods. Mr. Burstein, Mr. Shavelson, Ms. Webb

220A. Inquiry into Schooling: Organization and Change. Critical analysis of issues in the reconstruction of schooling; concepts of function and structure of schooling; organization theory; systems approaches in the analysis of organization development and change.
Ms. Crabtree, Ms. Kourilsky, Ms. Tyler

220B. Inquiry into Schooling: Curricular Problems. Inquiry into the curriculum of schooling. Critical analysis of the relationship of curricular decision making to social system and contextual variables.
Ms. Crabtree, Ms. Kourilsky, Ms. Tyler

221. Computer Analyses of Empirical Data in Education. Lecture, two hours; laboratory, two hours. Prerequisites: courses 209C (section 1), 210A, or equivalent. Designed to develop conceptual and technical skills needed for designing and executing empirical research utilizing statistical packages. Each student conducts two original studies. Equal emphasis on techniques of data analysis and interpretation of results. Mr. Astin

M222A. A Laboratory for Naturalistic Observations: Developing Skills and Techniques. (Same as Anthropology M236Q and Psychiatry M235.) Lecture, three hours. Prerequisite: consent of instructor. The skill of observing and recording behavior in natural settings, with emphasis on field training and practice in observing behavior. Discussion of some of the uses of observations and their implications for research in the social sciences. Students are expected to integrate observational work into their current research interests. May be repeated for credit.
Mr. Levine

222B. Design Issues in Naturalistic Research. Lecture, three hours; discussion, one hour. Prerequisite: course M222A or consent of instructor. Issues in conceptualization and design of naturalistic research studies, particularly within educational settings. Specific topics include problem definition and focus, units of observation, sampling, controlled comparisons and meaningful variation, and reliability/validity concerns in observational research. Special attention to ethnographic studies. Mr. Levine

222C. Qualitative Data Reduction and Analysis. Lecture, two hours; discussion, two hours. Prerequisite: course M222A or 222B or consent of instructor. Theory of and practice in qualitative data reduction and analysis. Discussion of data storage and retrieval systems, data manipulation techniques such as typologies and attribute spaces, and specific analytic perspectives. Interfacing qualitative and quantitative data. Mr. Levine

223. Aesthetics and the Curriculum. Lecture, two hours; discussion, two hours. An examination of various ideas and theories in aesthetics and the application of these in schooling contexts. Mr. Weinberg

224. Problems and Issues in Bilingual and Multicultural Education. Introduction to the development and implementation of bilingual and multicultural programs in the U.S. Analysis of program goals, models, typologies, and effectiveness. Ms. Valadez

225A. Issues in the Education of Exceptional Individuals. Prerequisite: graduate standing. Analysis of major research regarding contemporary trends, issues, and programs for the exceptional; consideration of commonalities and differences among exceptional individuals.
Ms. Hecht, Ms. Krupski, and the Staff

225B. Advanced Issues in the Education of Exceptional Individuals. Prerequisite: consent of instructor. A synthesis of developmental and educational theory relevant to the study of exceptional individuals, including consideration of the historical context of current research and applied issues in special education. Ms. Keogh

226. Research in the Education of Learning Handicapped Individuals. Prerequisite: course 225A or consent of instructor. Research on the education of individuals with learning handicaps, with emphasis on assessment and instructional modifications.

227A. Research on the Learning Characteristics of Exceptional Individuals. Prerequisite: course 225B. An overview of research and theory regarding learning characteristics of exceptional individuals and discussion of the application of this work to educational practice. Ms. Krupski

227B. Research on the Cognitive and Language Characteristics of Exceptional Individuals. Prerequisite: course 227A. Review of the empirical and theoretical literature regarding the language and cognitive development of exceptional individuals; focus on intervention programs developing language and cognition. Ms. Hecht

227C. Research on the Behavioral and Social Characteristics of Exceptional Individuals. Prerequisite: course 227B. Analysis of social and emotional development of exceptional individuals and the development of social competence in special education programs. Mr. Hewett

228. Observation Methods and Longitudinal Studies. Lecture, two hours; discussion, two hours. Prerequisites: course 210A or equivalent, consent of instructor. Design of observational and longitudinal studies. Formulation of study conclusions concerning influences on children's development. Conduct of observations; processing and analysis of data. Use of portable computers for recording observations.
Mr. Blurton Jones

M229A-M229B. Seminar in Behavioral Biology. (Same as Anthropology M228A-M228B, Biology M252A-M252B, Physiology M252A-M252B, Psychiatry M291A-M291B, and Psychology M230A-M230B.) Discussion, six hours. Prerequisite: consent of instructor. Basic seminar for graduates interested in behavioral biology. An interdisciplinary course dealing with behavioral research in anthropology, biology, psychology, and the medical sciences. Proximate causation, development, and evolution in animal behavior. Physiology and the organization of behavior. Vertebrate social organization. Animal communication. The application of natural selection theory to human social behavior. In Progress grading.
Mr. Blurton Jones

230. Criterion-Referenced and Norm-Referenced Test Construction. (Formerly numbered 410.) Prerequisite: course 211A. Construction of criterion- and norm-referenced assessment instruments. Appropriateness of different assessment devices considered in relation to research, development, and evaluation.
Mr. Popham

M231. The Structure of Occupations. (Same as Sociology M231.) Lecture, two hours; discussion, two hours. Shifts in the occupational structure of the United States, changing skill requirements for jobs, the effects of automation on work environments, and the role of formal and informal education in preparing people for occupations. Mr. O'Shea, Ms. Wrigley

232. Industrialism, Work, and Education. Study of the relationship between education and the making of a working class in the new urban industrial America, 1860 to the present. Mr. S. Cohen

233. Institutional Incentives and Social Values in the Development of Job Training. Institutional incentives and social values that affect the development of job training programs, relevant research, and potential future job training policy. Mr. Wilms

234. Education and Social Stratification. The relationship between education and components of social stratification, including occupations and earnings. Competing theories used in studying education and social stratification; relevant research. Conclusions regarding individual career decisions, social policies, and theories of society.
Mr. O'Shea, Ms. Wrigley

235. Education and Work. A review of the theoretical and empirical literature on issues concerning the interface of education and work. A review of alternatives in the school-to-work transition of youth and an appraisal of present vocational training and manpower development programs. Mr. Silberman

236. Human Abilities. Prerequisite: course 210B or equivalent. The nature, development, and measurement of intellectual abilities and their relations to learning and instruction. Review of research and theory of models of ability and test development.
Ms. Webb

237. Principles for Effective Media. Prerequisites: courses 205, 210A, and 212A, or consent of instructor. Elucidation of theoretical principles underlying effective media content and media utilization. Consideration of particular differences among print, computers, and audiovisual media, in and out of school. Role of research in development of such materials.
Ms. Baker, Ms. Dorr

238. Cross-National Analysis of Higher Education. Comparative study of national systems of higher education: their division of work, basic values, structures of authority, modes of national integration, and types of change. Mr. Clark

239. The Organization and Governance of Educational Systems. Academic organizations, precollegiate and postsecondary, are most appropriately studied as complex, professionalized organizations. Emphasis on characteristics of educational institutions and systems as organizations: environmental relations, governance structures, processes, and patterns of decision making and policy-making.
Ms. Mock

240A. Organizational and Administrative Perspectives on School Management. Introductory course in administrative and organizational theory, with emphasis on the management of public and private schools and school systems. Perspectives on dominant educational reform strategies in the context of schools as complex organizations.
Mr. Williams

241. Research Methodology in School Administration. Prerequisite: consent of instructor. Examination of research problems and strategies in school administration.
Mr. Erickson, Mr. Williams, and the Staff

242. Economic Analysis for Educational Policy and Planning. Prerequisite: graduate standing. An introductory course focusing on concepts and quantitative methods from economics, statistics, and operations research applied to educational policy and planning issues. Instruction in programming microcomputers for instruction (BASIC) and management information systems (dBASE). Mr. Bruno

244. Economics of Education. An introductory course in microeconomic and macroeconomic techniques applied to education. Methodologies such as marginal analysis, linear programming, Leontief I-O models, and Lorenz curve analysis, with application to school finance, underdeveloped countries, equality of educational opportunity, and credentialing.
Mr. Bruno, Mr. Solmon

245. Seminar: Cost-Benefit Analysis in Education. Conceptual and theoretical underpinnings of cost-benefit analysis, critical analysis of current cost-benefit studies, and procedures for the conduct of cost-benefit studies. Mr. Alkin, Mr. Solmon

246A. Seminar: Mathematical Modeling in Educational Policy Analysis. Prerequisite: course 242 or consent of instructor. Stochastic and deterministic modeling techniques as applied to educational policy and planning issues. A mathematics review and instruction in the use of the MPS (Mathematical Programming System) and development of software for Monte Carlo computer simulation studies in education. Mr. Bruno

246B. Seminar: Operations Research — Systems Analysis in Education. Prerequisite: course 242 or consent of instructor. Application of advanced mathematical modeling techniques of operations research to educational policy and planning. Design of computer-based management information systems in education using dBASE. Mr. Bruno

247. Seminar: Personnel Training for the Corporate Setting. Lecture, two hours; discussion, two hours. Survey of major topics on personnel training methods used by organizations to facilitate the learning of job-related behavior on the part of their employees. Topics include needs assessment, maximizing trainees' learning, training methods, and evaluating training programs. Mr. Silberman

248. Seminar: Perspectives on Lifelong Learning. From an interdisciplinary perspective, lifelong learning is studied theoretically and as an area of educational research, policy, and practice. Conceptual distinctions among the major proponents of lifelong learning and implications for schooling.

249A. Seminar: National Evaluations of Postsecondary Education. Critical review of national evaluation studies of higher education, including programs of general education and professional and graduate school programs; emphasis on the design, methodology, and interpretation of large-scale evaluation studies. Mr. Astin

249B. Seminar: Institutional Research and Program Evaluation. Critical review of institutional evaluation studies, with consideration of the scope of information needed for various purposes and the problems of interrelating this information to appraise overall institutional functioning and effectiveness. Mr. Trent

251A. Seminar: Philosophy of Education, Epistemology. Prerequisite: consent of instructor. Mr. Ericson

251C. Seminar: Philosophy of Education, Behavioral Science Problems — Methodological Perspectives. Prerequisite: course 206C or consent of instructor. Mr. Ellett, Mr. Ericson

251D. Seminar: Philosophy of Education, Problems in Ethics and Values. Prerequisite: course 206D or consent of instructor. Mr. Ellett, Mr. Ericson

251E. Seminar: Philosophy of Education, Selected Issues.

252A. Seminar: Educational Organizations. Prerequisite: course 208A or consent of instructor. Mr. O'Shea, Ms. Wrigley

252B. Seminar: Education and Social Change. Prerequisite: course 208A or consent of instructor. Mr. O'Shea

253A. Seminar: Current Problems in Comparative Education.

253B. Seminar: African Education.

253C. Seminar: Asian Education. Mr. Hawkins

253D. Seminar: Latin American Education.

253E. Seminar: European Education. Mr. Rust

253F. Seminar: Education in Revolutionary Societies. A multidisciplinary and comparative study of socialist educational theory examined through the writings of Marx, Lenin, Mao, and others. The implementation of this theory in specific case studies, along with comparative assessments of nonsocialist nations. Mr. Hawkins, Mr. Rust

253G. Seminar: The Asian American and Education. Basic issues and topics related to Asian Americans in the field of education. Examples of the issues and topics include Asian Americans and the community, socioeconomic status, the education-to-work transition, the language and culture question. Mr. Nakanishi

253H. Seminar: The Chicano/Hispanic and Education. Basic issues and topics related to the Chicano and other Hispanic groups in education. Review of literature on specific educational levels and Chicano/Hispanic student progress (e.g., early childhood, elementary, higher education; specific topics: assessment, access, tracking, segregation; implications for schooling).

255. Seminar: Special Topics in Measurement and Research Design. Prerequisites: courses 210C and 211C, or consent of instructor.

256A. Seminar: Special Topics in School Learning. Prerequisite: consent of instructor. Ms. Graham, Mr. Wittrock

256B. Seminar: Special Topics in Development. Prerequisite: consent of instructor.

257. Seminar: Pupil Personnel Services. Prerequisite: consent of instructor. Mr. Berry, Mr. Healy, Ms. Tidwell

258A. Seminar: Problems in Instructional Research. Mr. Wittrock

258B. Seminar: Problems in Instructional Development. Ms. Baker, Ms. Dorr, Mr. Levine

259A. Seminar: Research on Characteristics of Students. Mr. Trent

259B. Seminar: Research on Characteristics of Educational Environments.

260. Seminar: Principles of Curriculum and Instruction. Mr. McNeil, Ms. Tyler

261A. Seminar: Early Childhood Education. Prerequisite: course 421A.

261C. Seminar: Secondary Education. Mr. McNeil, Mr. Silberman

261D. Seminar: The Community College. Mr. A. Cohen

261E. Seminar: Education and Work. Mr. Silberman and the Staff

261F. Seminar: Higher Education. Mr. Trent

262A. Seminar: The Social Studies. Ms. Crabtree

262B. Seminar: Reading. Mr. McNeil

262F. Seminar: Research Topics in Bilingual/Multicultural Education. Prerequisite: consent of instructor. Ms. Valadez

262I. Seminar: Contemporary Issues in Education and Work. Mr. Wilms

262J. Seminar: Economic Education. Ms. Kourilsky

264. Seminar: Teacher Education. Prerequisite: consent of instructor. Research, issues, and practices in preservice and in-service teacher preparation, evaluation, and certification. Social, philosophical, and methodological issues and current trends in America and abroad. Opportunities to observe, participate in, and discuss teacher education programs.

267. Seminar: Educational Technology. Ms. Baker, Ms. Dorr

275. Seminar: School Desegregation. Prerequisite: consent of instructor. Analysis of the social/political response to desegregation programs in Northern and Southern school districts; review of court decisions and development of legal policy on school desegregation. Consideration of effects of integration on school achievement and interracial attitudes. Ms. Wrigley

280A. Seminar: Selected Topics in Special Education (2 units). Prerequisite: consent of instructor.

280B. Seminar: Exceptional Individuals. Prerequisite: doctoral standing.

M281A-M281B-M281C. Seminar: Selected Topics in Human Ethology. (Same as Anthropology M229A-M229B-M229C and Psychiatry M279A-M279B-M279C.) Ethologists now use successful animal behavior methodology to study human behavior. When is this appropriate, how can it contribute? Each quarter covers one level of analysis: describing and recording behavior; causation; development, especially longitudinal studies; adaptation; evolutionary origins. Mr. Blurton Jones

299A-299B-299C. Research Practicum in Education (4 to 8 units each). May be repeated for credit.

312. Basic Principles of Curriculum and Instruction. Prerequisite: consent of instructor. Analysis and practice of basic principles and concepts for planning, conducting, and evaluating units of curriculum and instruction. Emphasis on the study and utilization of a variety of instructional strategies and their application in elementary and secondary schools. Ms. Crabtree, Ms. Kourilsky, Mr. McNeil

313A-313B. Principles and Methods for Teaching Elementary Mathematics (6 to 12 units each). Limited to credentialed teachers. Course 313A is prerequisite to 313B. Problem-solving strategies and geometry for elementary teachers. Use of concrete materials, computers, calculators, cooperative learning, and content for elementary teachers. S/U grading. Mr. Lara

313C-313D. Principles and Methods for Teaching Secondary Mathematics (6 to 12 units each). Limited to credentialed teachers. Course 313C is prerequisite to 313D. Problem-solving strategies in algebra, geometry, and trigonometry for secondary mathematics teachers. Use of concrete materials, computers, calculators, cooperative learning, and content for secondary teachers. S/U grading. Mr. Lara

314A-314B. Principles and Methods for Curriculum, Instruction, and Leadership in Mathematics (6 to 12 units each). Limited to credentialed teachers. Course 314A is prerequisite to 314B. Problem-solving, curriculum development, implementation of the California Mathematics Framework, strategies for encouraging women and minorities into mathematics, and leadership development. S/U grading. Mr. Lara

315A-315B. Principles and Methods for Teaching Reading for Multiple Subject Instruction (2 units each). Prerequisite: consent of instructor. Course 315A is prerequisite to 315B. Reading instruction in the elementary school. Analysis of reading problems and programs; study of relationships between language/culture/cognition and reading. Examination and development of instructional programs; analysis and practice of alternative instructional methods. Observation and participation in schools. Ms. Kourilsky

316A-316B. Principles and Methods for Teaching Reading for Single Subject Instruction (2 units each). Prerequisite: consent of instructor. Course 316A is prerequisite to 316B. Reading instruction in the secondary school. Analysis of reading problems and programs; study of relationships between language/culture/cognition and reading. Examination and development of instructional programs; analysis and practice of alternative instructional methods. Observation and participation in schools. Ms. Kourilsky

317A. Principles and Methods for Teaching Elementary Science — K-2 (6 to 12 units). Limited to credentialed teachers. Conceptual teaching of science and incorporation of science process skills for grades K-2. Demonstrations, hands-on experiences, and development of teaching materials. S/U grading. Mr. Lara

317B. Principles and Methods for Teaching Elementary Science — 3-4 (6 to 12 units). Limited to credentialed teachers. Conceptual teaching of science and incorporation of science process skills for grades 3-4. Demonstrations, hands-on experiences, and development of teaching materials. S/U grading. Mr. Lara

317C. Principles and Methods for Teaching Elementary Science — 5-6 (6 to 12 units). Limited to credentialed teachers. Conceptual teaching of science and incorporation of science process skills for grades 5-6. Demonstrations, hands-on experiences, and development of teaching materials. S/U grading. Mr. Lara

318A-318B. Principles and Methods for Multiple Subject Instruction (2 units each). Prerequisite: consent of instructor. Course 318A is prerequisite to 318B. Examination and development of instructional programs; analysis and practice of alternative instructional methods. Focus on subjects commonly taught in elementary schools. Observation and participation in schools. S/U grading. Ms. Kourilsky

320A-320B. Principles and Methods for Single Subject Instruction (2 units each). Prerequisite: consent of instructor. Course 320A is prerequisite to 320B. Examination and development of instructional programs; analysis and practice of alternative instructional methods. Focus on subjects commonly taught in secondary schools. Observation and participation in schools. S/U grading. Ms. Kourilsky

321A. Principles and Methods for Teaching Physics — 7-12 (6 to 12 units.) Limited to credentialed teachers. Conceptual teaching of physics and incorporation of science process skills for grades 7-12. Demonstrations, hands-on experiences, and development of teaching materials. S/U grading.
Mr. Lara

321B. Principles and Methods for Teaching Chemistry — 7-12 (6 to 12 units.) Limited to credentialed teachers. Conceptual teaching of chemistry and incorporation of science process skills for grades 7-12. Demonstrations, hands-on experiences, and development of teaching materials. S/U grading.
Mr. Lara

321C. Principles and Methods for Teaching Earth and Space Sciences — 7-12 (6 to 12 units.) Limited to credentialed teachers. Conceptual teaching of earth and space sciences and incorporation of science process skills for grades 7-12. Demonstrations, hands-on experiences, and development of teaching materials. S/U grading. Mr. Lara

321D. Principles and Methods for Teaching Life Sciences — 7-12 (6 to 12 units.) Limited to credentialed teachers. Conceptual teaching of life sciences and incorporation of science process skills for grades 7-12. Demonstrations, hands-on experiences, and development of teaching materials. S/U grading.
Mr. Lara

322A. Principles and Methods for Using Computers in Science Instruction — K-12 (6 to 12 units.) Prerequisites: courses 317A, 317B, and 317C, or 321A, 321B, 321C, and 321D. Limited to credentialed teachers. Use of computers and current proven computer software to teach science content and process conceptually at all grade levels. Development of teaching units. S/U grading. Mr. Lara

322B. Principles and Methods for Peer Leaders in Science Classrooms — K-12 (6 to 12 units.) Prerequisites: courses 317A, 317B, and 317C, or 321A, 321B, 321C, and 321D. Limited to credentialed teachers. Develops qualities in teachers necessary for leadership positions in science education at all grade levels. Exploration of leadership roles; leadership behavior practice. S/U grading. Mr. Lara

324A. Observation and Participation: Multiple Subject Instruction (2 to 6 units). Prerequisite: consent of instructor. Six hours per week of observation and participation in classrooms in which multiple subjects are taught, normally in elementary schools. Preparation for supervised teaching. S/U grading.
Ms. Kourilsky

324B. Supervised Teaching: Multiple Subject Instruction (2 to 10 units). Prerequisites: course 324A, consent of instructor. Practice teaching under the daily supervision of a teacher in a classroom in which multiple subjects are taught, normally in an elementary school. S/U grading. Ms. Kourilsky

324C. Supervised Teaching: Multiple Subject Instruction (2 to 10 units). Prerequisites: course 324B, consent of instructor. Advanced practice teaching under the daily supervision of a teacher in a classroom in which multiple subjects are taught, normally in an elementary school. S/U grading.
Ms. Kourilsky

324D. Supervised Teaching: Multiple Subject Instruction (2 to 10 units). Prerequisites: course 324C, consent of instructor. Advanced practice teaching under the daily supervision of a teacher in a classroom in which multiple subjects are taught, normally in an elementary school. S/U grading.
Ms. Kourilsky

325A. Laboratory in the Education of Exceptional Individuals. Prerequisite: course 125A or consent of instructor. Six to eight hours per week of fieldwork in the UCLA Neuropsychiatric Institute and Hospital School, other campus facilities, or public school special education programs.

325B. Advanced Laboratory in the Education of Exceptional Individuals. Prerequisite: course 325A. Six to eight hours per week of fieldwork in the UCLA Neuropsychiatric Institute and Hospital School, other campus facilities, or public school special education programs.

330A. Observation and Participation: Single Subject Instruction (2 to 6 units). Prerequisite: consent of instructor. Six hours per week of observation and participation in classrooms in which single subjects are taught, normally in secondary schools. Preparation for supervised teaching. S/U grading.
Ms. Kourilsky

330B. Supervised Teaching: Single Subject Instruction (2 to 10 units). Prerequisites: course 330A, consent of instructor. Practice teaching under the daily supervision of a teacher in a classroom in which a single subject is taught, normally in a secondary school. S/U grading. Ms. Kourilsky

330C. Supervised Teaching: Single Subject Instruction (2 to 10 units). Prerequisites: course 330B, consent of instructor. Advanced practice teaching under the daily supervision of a teacher in a classroom in which a single subject is taught, normally in a secondary school. S/U grading. Ms. Kourilsky

330D. Supervised Teaching: Single Subject Instruction (2 to 10 units). Prerequisites: course 330C, consent of instructor. Advanced practice teaching under the daily supervision of a teacher in a classroom in which a single subject is taught, normally in a secondary school. S/U grading. Ms. Kourilsky

334. Supervised Teaching: Higher Education.
Mr. A. Cohen

360. Teaching Clinical Practicum. Discussion, two hours; fieldwork, two hours. Prerequisite: consent of instructor and director of Teacher Education Laboratory. Seminar and directed field experience. Examination and analysis of different methods of subject matter instruction. Ms. Kourilsky

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. A teaching apprenticeship under the active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

411A. Introduction to Educational Evaluation. An introduction to systematic evaluation as it applies to appraising educational programs. Consideration of program evaluation as a means of improving the quality of educationally relevant decisions.
Mr. Alkin, Mr. Popham

411B. Procedural Problems in Evaluation. (Formerly numbered 411C.) Assessment methodologies appropriate for evaluation problems. Writing evaluation proposals, developing program monitoring procedures, selecting appropriate evaluation design strategies, coping with ethical considerations in evaluation, framing the decision context, and reporting evaluation results. Mr. Alkin, Mr. Burstein

413A-413B-413C. Internship in School Psychology. Lecture, two hours; field experience, 16 hours. Prerequisite: consent of instructor. Must be completed in three consecutive quarters; limited to students enrolled in the counseling specialization. Work experience in public schools or comparable setting performing duties of a school psychologist — psychodiagnosis, integrating case material, staffing cases, developing educational plans, working with teachers and parents, and establishing evaluative criteria.
Mr. Healy, Ms. Tidwell

415A. The Appraisal of Intelligence. Prerequisites: courses 210A, 211A. Concepts and theories leading to development of individual cognitive assessment instruments; issues and implications relating to the application and current practices of utilizing such tests in a multicultural society. Laboratory experience includes administration and interpretation of standardized instruments; case studies.
Mr. Healy, Ms. Tidwell

415B. Human Appraisal in School Counseling and School Psychology. Prerequisites: course 415A, consent of instructor. Survey and demonstration of the major techniques of cognitive, affective, and achievement appraisal and their applicability to problems found in the school setting. Research and theoretical issues concerned with appraisal.
Ms. Tidwell

418. Instructional Analysis. Prerequisite: consent of instructor. Analysis of instructional variables as they relate to diverse types of instructional strategies. Students acquire skill in techniques of conducting instructional research. Ms. Baker

419A. Experimentation on Media of Communication and Instruction. Prerequisite: course 210A. Analysis of basic methods used and results obtained in experiments on the development of knowledge, skills, and attitudes through audiovisual communication media and other instructional programs.
Ms. Baker, Ms. Dorr

419B. Experimental Analysis of Instructional Program Variables. Lecture, two hours; laboratory, four hours. Prerequisites: courses 210A, 212A, 419A. Recommended: courses 210B, and 212B or 212C. Advanced problems of methodology and rationale in the planning and conduct of experiments on the effects of psychologically defined variables in instructional programs; theory and techniques of laboratory and field experiments on instructional media.
Ms. Baker, Ms. Dorr

420A. Principles of Curriculum. Critical examination of the basic concepts underlying the determination of objectives, the selection and organization of learning experiences, and the evaluation process.
Ms. Crabtree, Mr. McNeil, Ms. Tyler

420D. Curriculum: Principles and Practice. An examination and application of various curricular perspectives to questions of purpose, learning opportunities, and evaluation. Mr. McNeil, Ms. Tyler

421A. Programs, Models, and Research in Early Childhood Education. Prerequisites: one course from the development series, one quarter of field placement. Examination of programs and research in early childhood, including observation of programs and review of the relation of research in developmental psychology and education to goals of early childhood education.

421C. Research and Evaluation of Early Childhood Programs. Prerequisite: course 421A or equivalent or consent of instructor. Critical review of evaluation models (e.g., summative, formative, implementation) and their utility for improving and evaluating the quality of child-related programs.

421D. Parents and Community Agents in Childhood Development. Prerequisites: two courses from the development series, one course from early childhood education, or equivalent. A critical review of the theoretical basis and effectiveness of training programs for parents of young and elementary school-aged children; the relation of preschool parent programs to family development and the role of the programs in the community. Ms. Feshbach

421F. Problems and Methods of Analysis in Child Development, Education, and Social Policy. Lecture, two hours; discussion, two hours. Relationships among public policymakers and social scientists in the development, implementation, and evaluation of policies affecting children and their families. Students learn to design and conduct interviews, analyze legislative documents, and present analyses to policymakers. Ms. Dorr, Ms. Stipek

421G. Issues in the Application of Child Development and Educational Research to Social Policy. Lecture, two hours; discussion, two hours. The relevance and adequacy of child development research to specific educational and public policies affecting children. Specific topics include issues such as children's rights, day care, children's television programming, and violence toward children.
Ms. Feshbach, Ms. Howes

422. Inquiry into Schooling: Basic Issues. Critical examination of basic issues and problems in the organization and reconstruction of precollegiate schooling. Consideration of historical development and changing functions of schooling in American society; school organization; schooling alternatives; problems in the management of educational change.
Mr. McNeil, Ms. Tyler

423. The Humanistic Curriculum. A consideration of the philosophical and cultural foundations of humanistic curricular strategies. Review of techniques and procedures of affective education with a view to their place in an overall theory of teaching and learning. Mr. Weinberg

424A. The Social Studies in the Curriculum. Advanced study in social studies curriculum development; problems in defining objectives and organizing single and multidisciplinary programs; critical review of literature on cognitive and affective learning in social science, with emphasis on experimental study of instructional programs. Ms. Crabtree

424B. Reading in the Curriculum. Prerequisite: course 210A. Study of reading curricula and instructional procedures, with emphasis on the rationale and research underlying their development and the research comparing their effectiveness. Mr. McNeil

424C. Language in the Curriculum. Advanced study in the school language curriculum; application to the improvement of the curriculum in the field.

424G. Curriculum Design for Bilingual Education. Prerequisite: consent of instructor. Advanced study of curriculum design for bilingual educational programs. Philosophical basis for bilingual programs; theories of learning and instruction applied to the bilingual learner; language assessment; development of instructional component; program evaluation.
Ms. Valadez

425. Appraisal of Exceptional Individuals. Prerequisites: courses 225A, 415A, or equivalent. Individual appraisal of exceptional individuals; analysis of tests and diagnostic procedures, case studies.

430. Higher Education and the Labor Market. The benefits of education from an economic perspective; the labor market for college graduates; college as preparation for work; manpower forecasting and Ph.D. demand and supply; policies toward the doctoral labor market and adults in postsecondary education. Mr. Solmon

431A. Administration in Higher Education. Overview of college and university administration and introduction to policy research and analysis in postsecondary institutions. Case studies of administrative problems, policies, and practices. Management information systems, resource allocation, and issues related to responsibility, authority, and participation in administrative decisions. Ms. Mock

431B. Curriculum and Instruction in Higher Education. Principles of curriculum and instruction in postsecondary programs. Theory and practices in goal setting, testing, media selection, and related instructional responsibilities. Preparing to teach college-level students. Mr. A. Cohen

431C. Innovative Forms and Practices in Higher and Continuing Education. New institutional forms (e.g., external degree programs and other nontraditional approaches to higher education, neighborhood learning centers, and peoples' colleges). Methodological innovations such as computer-assisted instruction, credit by examination, and independent study. Mr. A. Cohen

432. Seminar: Professional Topics in Higher Education. Ms. Astin

433A. Instructional Product Development. Prerequisite: consent of instructor. An examination of the procedures employed in the systematic development of instructional products. Students acquire competencies associated with those procedures.
Ms. Baker, Ms. Dorr

433B. Technological Development in Educational Media. Lecture, two hours; laboratory, four hours. Prerequisite: course 433A. Recommended: courses 210A, 212A. Theory, current problems, and anticipated trends in instrumentation and systems development for instructional applications and research, including computer-aided instruction, communication satellites, and other advanced systems; theory and laboratory practice with instrumentation in educational research. Ms. Baker, Ms. Dorr

437A. Principles of Curriculum in Economic Education. Theories, principles, and concepts relating to an understanding of the business and economic system; their application to teaching in the secondary school. Ms. Kourilsky

437B. Corporate Educational Programs. History and scope of corporate training programs; current educational problems in training programs within industry as they are affected by automation and technological change.

440C. Administration of the Instructional Program. Examination of current educational problems in society and the strategies of their solution through curriculum policy and practice; instructional design and operation; in-service training of teaching staffs.
Mr. Erickson and the Staff

441A. Instructional Supervision A. Analysis of teaching in light of research-substantiated elements of instruction: task analysis, appropriate objectives, principles that increase motivation, rate and degree of learning, retention and transfer, monitoring and adjusting instruction to meet the needs and capacities of learners. Ms. Hunter

441B. Instructional Supervision B. Prerequisite: course 441A or equivalent. Basic techniques of script-taping instructional episodes, planning teacher conferences through analysis of script-tapes, conducting and analyzing growth-evoking teacher conferences. Conducting mini-lessons to demonstrate elements of good instruction. Ms. Hunter

441C. Instructional Supervision C. Prerequisites: courses 441A, 441B, or equivalent. Development of individual and group staff development activities, including presentations, demonstrations, peer coaching, planning and conducting teacher conferences; observation and analysis of conferences; and in-service training techniques: teaching principles of learning and effective teaching to other professionals.
Ms. Hunter

442B. Legal Aspects of Educational Management and Practice. Examination of the structures and kinds of law governing educational systems in the United States; constitutional dimensions of church/state relations; employees' civil rights and legal aspects of hiring, firing, and negotiating procedures; student attendance, control, and civil rights.

443. Introduction to Policy Analysis in Education. Prerequisite: consent of instructor. An overview of the political, economic, and legal context of educational policy formation. Included in this examination are issues that impact on minorities (e.g., bilingual education, desegregation, affirmative action, the role of subdominants in the policy-making process).
Mr. Catterall

444A. Legal Aspects of Access to a Public Education. Prerequisite: course 442B or consent of instructor. A study of access to public education focused on the issues of affirmative action, testing, tracking, bilingual/bicultural education, special education, correctional education, and malpractice suits.

444B. Equality of Educational Opportunity through Desegregation and Finance Case Law. Prerequisite: course 442B or consent of instructor. A concentrated review of the definition of equality of educational opportunity as it is being developed by the courts in cases concerning desegregation and educational finance.

447. Seminar: Educational Policy and Planning, Special Studies (1 to 4 units). Prerequisite: consent of instructor.

448A. Urban School Leadership. Prerequisite: consent of instructor. Analysis of the problems of urban school leadership. Emphasis on the changing nature of the urban principalship, with considerable attention to the role of other school and community agencies that interact with the urban school leader.
Mr. Williams

448B. Urban Leadership Laboratory. Prerequisite: consent of instructor. Analysis of and opportunity to practice human and technical skills requisite for success as an urban school leader. Topics include negotiations, conflict resolution, applied computer technology, and effective communication. Activities include gaming, simulation, computer programming, and group dynamics.

460. Seminar: Special Issues in Evaluation. Topics and instructors vary each quarter. Recent emphases included evaluation utilization and cost-effectiveness evaluation. Mr. Alkin, Ms. Baker, Mr. Popham

461A. Seminar: Adult Education.

461B. Seminar: Adult Education in Other Countries.

461C. Seminar: Community Service and Development Programs in Postsecondary Education.

470A. Seminar: Large Systems and Individual Schools. Prerequisite: consent of instructor.

470B. Seminar: Educational Government. Prerequisite: consent of instructor.

481. Knowledge and Inquiry in the Classroom. Prerequisite: consent of instructor. The logical features of instruction and their application to inquiry techniques in teaching and learning. Various conceptions of truth, belief, and fact and opinion, and their application to classroom learning situations.
Mr. Ellett, Mr. Weinberg

489. Instructional Strategies in Education. Prerequisite: consent of instructor. Methods for academic instruction, including research and active participation in the adversary approach, forms of debate, role playing, interaction process analysis, and feedback instruments. Practical emphasis on social sciences and humanities instruction, K-12. Ms. Kourilsky

490A. Instructional Decision Making. Prerequisite: consent of instructor. Analysis of instructional models relevant to public school education. Assumptions, procedures, and constraints of each strategy considered in terms of learner and task variables. Laboratory experiences in classroom settings permit students systematically to apply and evaluate alternative instructional strategies.

491A. Curricular Decision Making. Prerequisite: consent of instructor. Examination of alternative solutions for the practical problems that classroom teachers face in making curricular decisions. Analysis of the influence of psychological, societal, and institutional factors in curricular decisions.

492. Evaluation of Teaching and Learning. Prerequisite: consent of instructor. Relationship between appraisal instruments and information required for making decisions about teachers, pupils, and materials. Recent developments in the evaluation of teaching and learning; the use of modern appraisal techniques in classroom settings.

498A-498B-498C. Directed Field Experience (4 to 8 units each). May be repeated for credit.

499A-499B-499C. Advanced Directed Field Experience (4 to 8 units each). May be repeated for credit.

501. Cooperative Program in Special Education (2 to 8 units). Prerequisite: consent of UCLA academic adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Limited to UCLA doctoral students in special education. Course is used to record enrollment in practicum courses taken under cooperative arrangements with California State University, Los Angeles. S/U grading.

596. Directed Independent Study (6 to 12 units). Individual study or research for graduate students. May be repeated for credit.

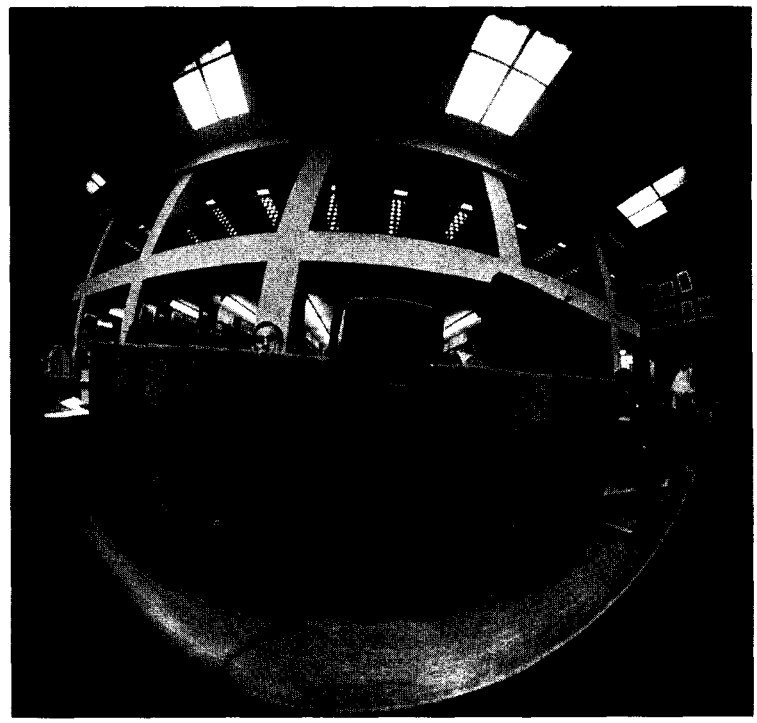
597. Preparation for Master's Comprehensive Examinations or Doctoral Qualifying Examinations (6 to 12 units). Individual study for master's comprehensive examinations or for Ph.D. or Ed.D. qualifying examinations. May be repeated for credit. S/U grading.

598. Thesis Research (6 to 12 units). Research for and preparation of master's thesis. May be repeated for a maximum of 12 units. S/U grading.

599. Dissertation Research (6 to 12 units). Research for and preparation of doctoral dissertation. May be repeated for credit. S/U grading.

School of Law

Susan Westerberg Prager, Dean



10

By any standard, the UCLA School of Law is recognized as one of the nation's great law schools. This reputation is based on excellence in scholarship, a rigorous educational program, and the quality of the faculty which includes eminent authorities in all major fields of law.

The educational program at the UCLA School of Law is rigorous and competitive, but it takes place in a humane environment where there is a genuine spirit of community. The student body of the school is intellectually distinguished, interesting, and culturally diverse.

The school's strong clinical program offers courses in lawyering skills such as interviewing, counseling, negotiation, and trial advocacy. UCLA students, alumni, and faculty have collaborated to pioneer clinical legal education. Students see more focus on the attorney/client relationship; they see more of what will ultimately face them as lawyers and policymakers.

An extensive and diversified student extern program, one of the most highly regarded moot court programs in the nation, and a basic philosophy that teaches law students to think clearly and analytically, but with compassion, all contribute to the distinction of the school.

School of Law

General Information: 1242 Law, (213) 825-4841

Admissions: 50 Dodd Hall, (213) 825-2080

Professors

Benjamin Aaron, LL.B.
Richard L. Abel, LL.B., Ph.D.
Norman Abrams, J.D.
William P. Alford, M.A., LL.B., J.D., *Acting*
Reginald H. Alleyne, Jr., LL.B., LL.M.
Alison Grey Anderson, J.D.
Michael R. Asimow, LL.B.
John A. Bauman, LL.B., LL.M., Jur.Sc.D.
Paul B. Bergman, J.D.
David A. Binder, LL.B.
Grace G. Blumberg, J.D., LL.M.
David Dolinko, J.D., Ph.D., *Acting*
Jesse J. Dukeminier, J.D.
Julian N. Eule, J.D., LL.M.
William E. Forbath, J.D., *Acting*
Carole E. Goldberg-Ambrose, J.D., *Associate Dean*
Robert D. Goldstein, M.Ed., J.D., *Acting*
Kenneth W. Graham, Jr., J.D.
Joel F. Handler, J.D.
Harold W. Horowitz, LL.B., LL.M., S.J.D.
Edgar A. Jones, Jr., LL.B.
Robert L. Jordan, LL.B.
Kenneth L. Karst, LL.B.
William A. Klein, LL.B.
Leon Letwin, LL.B., LL.M.
Wesley J. Liebeler, J.D.
Christine Littleton, J.D., *Acting*
Daniel H. Lowenstein, LL.B.
Henry W. McGee, Jr., J.D., LL.M.
William M. McGovern, Jr., LL.B.
Carrie J. Menkel-Meadow, J.D.
Herbert Morris, LL.B., D.Phil.
Stephen R. Munzer, B.Phil., J.D.
Frances E. Olsen, J.D., S.J.D., *Acting*
Patrick O. Patterson, J.D., *Acting*
Susan Westerberg Prager, M.A., J.D., *Dean*
Arthur I. Rosett, LL.B.
Gary T. Schwartz, J.D.
Murray L. Schwartz, LL.B., LL.D.
Steven H. Shiffrin, M.A., J.D.
James D. Sumner, Jr., LL.B., LL.M., J.S.D.
Phillip R. Trimble, M.A., LL.B.
Jonathan D. Varat, J.D.
William D. Warren, J.D., J.S.D.
John S. Wiley, J.D., *Acting*
Stephen C. Yeazell, M.A., J.D.
Eric M. Zolt, M.B.A., J.D., *Acting*
Richard C. Maxwell, LL.B. *(Emeritus Connell Professor of Law)*
David Mellinkoff, LL.B., *Emeritus*
Rollin M. Perkins, J.D., J.S.D. *(Emeritus Connell Professor of Law)*
Harold E. Verrall, M.A., LL.B., S.J.D., *Emeritus*
Kenneth H. York, LL.B., *Emeritus*

Lecturers

Susan Cordell Gillig, J.D., *Assistant Dean, Clinical Programs*
Kenneth N. Klee, J.D.
Kristine S. Knaplund, J.D.
Roderick D. Margo, LL.B., D.C.L.
Michael Rappaport, J.D., *Assistant Dean, Admissions*
David W. Reimann, J.D.
Antonio Rossmann, J.D.
Gary Stiffelman, M.F.A., J.D.

Adjunct and Visiting Professors

Abdullahi Ahmad An-Na'im, LL.B., Ph.D., *Visiting*
Jose A. Bracamonte, J.D., LL.M., *Visiting*
Charles M. Firestone, J.D., *Adjunct*
Albert J. Moore, J.D., *Visiting*

The School of Law, the only academic unit at UCLA which operates on a semester (rather than quarter) system, offers a three-year curriculum leading to the J.D. degree. The school is accredited by the California Committee of Bar Examiners, is a member of the Association of American Law Schools, and is on the approved list of the American Bar Association. Graduates of the school are qualified to apply for admission to practice in any state of the United States.

The school is designed to produce lawyers who are well-prepared for the various private and public roles which are assigned to members of the legal profession. Students do not undertake a specific major but have the opportunity to enroll in a wide variety of courses dealing with various legal fields.

Degrees Offered
Juris Doctor (J.D.)
Master of Laws (LL.M.)

Juris Doctor Degree

Admission

Students beginning their professional work are admitted only in the Fall Semester. You must have received a bachelor's degree from a university or college of approved standing before beginning work in the school. You are also required to take the Law School Admission Test (LSAT). The admissions committee considers grades and test scores, and, in appropriate cases, such additional factors as ability in languages other than English; work experience or career achievement; previous positions of leadership or other special achievements; ethnic background; prior community or public service; unusual life experiences; overcoming a physical handicap or other disadvantage; career goals; economic disadvantages; and any other characteristic which may indicate that you will contribute to the educational and other benefits of a diversified student body.

For detailed information about the academic programs offered by the School of Law, the fees, and the semester-system calendar by which it operates, obtain the *Announcement of the UCLA School of Law* by contacting the Admissions Office, School of Law, 50 Dodd Hall, UCLA, Los Angeles, CA 90024.

For information on the proficiency in English requirements for international graduate students, refer to "Graduate Admission" in Chapter 3.

Residence and Unit Requirements

The candidate for the degree of Juris Doctor must have pursued resident law school study for six semesters and successfully completed 87 units. The residence requirements may be satisfied as follows: (1) six semesters in regular session in this school or (2) two semesters in regular session (or equivalent) in a school which is accredited by the American Bar Association, coupled with four semesters in regular session (or equivalent) in this school.

Every first-year student is required to take the full schedule of required courses; second- and third-year students are required to take a minimum of 12 hours and may not take more than 16 hours each semester. The second- and third-year curriculum is elective, except for a required course in professional responsibility. In addition to the courses in the regular law school curriculum, students may take two courses for credit in other disciplines within the University. Graduate students may enroll in upper division law courses on a limited basis. Law courses are not open to non-UCLA students.

Attendance and Grades: The right to take examinations and the privilege of continuing as a student in the school are conditioned on regular classroom attendance. Information on the grading system, which is based on a numerical scale of 50 to 100, may be obtained from the Office of the Assistant Dean for Students. Standards for satisfactory performance and for graduation are prescribed by the faculty and are published separately. They may also be obtained from the above office.

Curriculum

The school offers courses of instruction within the school and supervised educational experiences outside it in an effort to enable its students to think intelligently and to prepare them for careers of practice and public service. To this end the school employs several instructional techniques in a variety of subject areas.

In the first year of their legal education students are exposed to an intensive study of Anglo-American legal reasoning in a series of fields which have historically dominated legal thought. In conjunction with these courses students also receive training in the use of legal bibliography and in effective legal writing and oral advocacy.

In the second and third years students have an opportunity to engage in a number of different fields of law and law-related study.

Concurrent Degree Programs

The School of Law offers three concurrent degree programs which allow you to fulfill the requirements of the J.D. and another graduate degree simultaneously.

M.A.-Architecture/Urban Planning/J.D.

The School of Law and the Graduate School of Architecture and Urban Planning offer a concurrent plan of study providing an integrated curriculum for students planning to specialize in the legal aspects of urban problems. Education in planning offers an overview of theories and methods that permit identification and treatment of urban problems; education in law offers insight into the institutional causes and possibilities for treatment of these problems. Students pursue studies in both schools and receive both the J.D. and M.A. degrees at the end of four years.

Students interested in the program must apply and be admitted to the School of Law, the Urban Planning Program, and the Graduate Division.

Education Program/J.D.

The School of Law and the Graduate School of Education offer a concurrent plan which allows students to design a program of study leading to the J.D. and any advanced degree in education (M.Ed., M.A., Ed.D., or Ph.D.). If the program meets the degree requirements in both schools, students are awarded both degrees on its completion. (This program will not be offered in 1986-87.)

M.B.A./J.D.

The School of Law and the Graduate School of Management offer a concurrent program which enables students to prepare for careers where law and management overlap and where understanding of both fields is necessary. Examples of such areas would include public service, international trade, industrial relations, corporate law, and specialized areas of management consulting. The program makes it possible to earn the J.D. and M.B.A. in four academic years. Students interested in such a program should apply to both schools simultaneously.

Master of Laws Degree

The school offers a graduate law program leading to the Master of Laws (LL.M.) degree to outstanding American and foreign students interested in pursuing graduate studies. Law school graduates with outstanding records who may be interested in this program should contact the Admissions Office for further information.

Other Programs

Clinical Program

The school permits students to participate in clinical training. These activities consist of fieldwork in a variety of federal and state agencies accompanied by seminars in the school which seek to analyze and expand the agency experience.

Extern Program

The school offers an extern program which gives students the opportunity to work in legal agencies away from the school for as long as six months (including the summer), for which they receive academic credit. Extern programs have been offered in Washington, DC, San Francisco, New York, and Hawaii.

First-Year Courses

The first year of law school is designed to introduce students to legal analysis using a variety of substantive fields. Each of the following courses is required of all first-year students.

100. Contracts (5 units). The law governing private agreements. Analysis of the criteria for determining whether or not a particular promise or voluntary agreement is legally enforceable and a survey of the major legal issues affecting enforceable agreements. Problems of interpreting contract language, the role of contract in a market society, the conflict between the commercial need for certainty and the demands of individual fairness, and the relationship between contract law and other areas of law.
Mr. Asimow, Ms. Littleton, Mr. McGovern, Mr. Rosett, Mr. Sumner

110. Legal Research and Writing (5 units). The year-long course teaches first-year students how to find the law, how to analyze it, and how to communicate their conclusions in writing. Focus on the skills of analyzing legal authority, developing arguments to solve specific problems where there is conflicting authority, and structuring legal writing which is clear, informative, and persuasive.

120. Criminal Law I (3 units). Selected topics in substantive criminal law. Consideration of principles underlying the definition of crime; an examination of various attempts to eliminate the requirement of mens rea and a consideration of such general doctrines as ignorance of fact and ignorance of law, causation, attempt, complicity and conspiracy; inquiry into principles of justification and excuse, with particular attention to the doctrines of necessity, intoxication, insanity, diminished capacity, and automatism. Emphasis on the basic theory of criminal law and the relationship between the doctrines of criminal law and the various justifications for imposition of punishment. Mr. Abrams, Mr. Dolinko, Mr. Eule, Mr. McGee, Mr. M. Schwartz

121. Criminal Law II (3 units). The criminal process insofar as it is affected by constitutional and statutory prescriptions and proscriptions. The restraints on law enforcement officers, including such police activities as arrest, stop-and-frisk, inspection and detention of various kinds; taking of statements; the modern techniques of electronic surveillance; and seizure of property with and without a warrant. Emphasis on the judicial resolution of the tension between constitutional imperatives and the techniques used to prevent crime and apprehend and convict those who commit it. Mr. Abrams, Mr. Dolinko, Mr. Goldstein, Mr. McGee, Mr. M. Schwartz, Mr. Shiffrin

130. Property (6 units). An analysis of property as a social institution and particularly of the dynamics of the system for recognizing and protecting competing claims to resources. Major problem areas include the historical development of various kinds of interests in property, sale and financing of real estate, housing, landlord and tenant, and public and private land-use planning and development.
Ms. Blumberg, Mr. Dukeminier, Mr. Lowenstein, Mr. Munzer

140. Torts (5 units). Personal injury law as it has developed within the Anglo-American legal tradition. The concept of negligence, the refinements of negligence law, and the doctrine of intentional torts. Contemporary rules of strict liability. Effort to identify the basic purposes which our tort law system achieves or should achieve. Mr. Abel, Ms. Anderson, Mr. Jones, Ms. Olsen, Mr. G. Schwartz, Mr. Shiffrin

145. Civil Procedure (5 units). The processes that courts follow in deciding disputes in noncriminal cases. The way in which conflicts are framed for courts, the stages through which litigation goes, the division of power among the various decision makers in the legal system and between the state and federal courts, the territorial limitations on the exercise of judicial power, the principles that define the consequences of a decision once a court has finished with a case, and the special opportunities and problems of litigations involving multiple disputants.
Mr. Delgado, Mr. Forbath, Ms. Goldberg-Ambrose, Mr. Graham, Mr. Letwin, Mr. Yeazell

Second- and Third-Year Courses*

All of the courses in the second- and third-year curriculum are elective with the exception of Law 312. Students must complete the professional responsibility requirement to graduate, either by preparing a paper in consultation with a faculty member or by completing one of the sections of course 312. The different sections vary in emphasis.

*The School of Law maintains its own course numbering system; course numbers as shown here do not correspond to Graduate Division course numbering definitions.

312. The Legal Profession (Section 1). The sociology of the legal profession, including such topics as the history of the legal profession, the distribution of legal services, the social structure of the profession (public/private, civil/criminal, etc.), and exposure to the world of practice (through role-plays, problem sets, and the reading of ethnographies and biographies about lawyers). The rules of lawyering, including such topics as the Code of Professional Responsibility, the Model Rules of Professional Conduct, and other applicable rules governing the practice of law (conflicts of interest, zealous representation, ineffective assistance of counsel, representational activity both in the courtroom and law office, and the frequently conflicting demands and requirements of the rules). The personal, professional, and moral identity of lawyers, including such topics as what it means to become a "professional," the role of lawyers in society, the political, social, and moral consequences of lawyering activity, and the meaning of both individual and professional responsibility.
Ms. Menkel-Meadow, Mr. M. Schwartz

312. The Legal Profession (Section 2). Consideration of what is wrong with the legal profession and what, if anything, can be done to change it. Sociological explanations for unethical behavior in terms of the structure of practice, patterns of recruitment, socialization, and allocation to professional role, and the failure of disciplinary procedures. The allocation of lawyers' services by market mechanisms in an unequal society leads to overrepresentation of the few and underrepresentation of most. The concept of legal "need," why we might want to meet unmet need, and the multiplicity of recent reforms that speak to this problem. Satisfies the professional responsibility requirement. Mr. Abel

Elective Courses

200. Constitutional Law I. Ways in which the United States Constitution (1) distributes power among the various units of government in the American political system and (2) limits the exercise of those powers. Structural limitations on government: the division of powers between the nation and the states in the federal system, and the separation of powers among the three branches (legislative, executive, and judicial) of the national government. Civil War Amendments (13th, 14th, and 15th) as limits on the states and as sources of congressional power. The proper role of the judiciary in limiting the action of other branches of government.

Mr. Eule, Mr. Karst, Mr. Shiffrin, Mr. Varat

201. Constitutional Law II. The First Amendment's guarantees of the freedoms of speech, press, and assembly, and the First Amendment's prohibition of the establishment of religion and its guarantee of the free exercise of religion. Jurisdictional limitations on the federal courts' exercise of the power of judicial review. Mr. Karst, Mr. Shiffrin, Mr. Varat

205. Wills and Trusts. The law of wills, trusts, and future interests. The wealth transmission process from the perspectives of social critics and estate planners. The substantive law of wills and trusts. The administration of decedents' estates and of trusts.

Mr. Dukeminier, Mr. McGovern, Mr. Sumner

207. Community Property. Detailed examination of the California community property system which regulates property relations between husband and wife during marriage and at its termination by divorce or death. Community property raises many questions about the nature of marriage and the various forms of gainful human activity.

Ms. Blumberg, Ms. Prager

208. Real Property Secured Transactions. The use of land as security for debts, with the California cases and statutes presented as an example of an operating system. The real estate security device from its common law origins to the modern deed of trust as it exists in California. Mr. Jordan, Mr. Warren

211. Evidence. The law of evidence is concerned with the process by which parties may prove facts which are essential to the existence of rights and liabilities in civil and criminal litigation. Rules for determining the relevance of evidence, the qualifications which must be met by witnesses, the regulation of the form and manner of interrogating witnesses, privileges granted to certain persons and institutions to refuse to disclose information, the special status of expert witnesses and the problems of proving technical facts, and rules governing documentary proof. The rule excluding hearsay evidence and the exceptions to that rule.

Mr. Abrams, Mr. Bergman, Mr. Graham, Mr. Letwin

212. Federal Courts. Selected problems in the jurisdiction and lawmaking powers of the federal courts, including the appellate jurisdiction of the Supreme Court; federal habeas corpus; the federal-question jurisdiction of the federal district courts; intervention by federal courts in state court proceedings; and choice of law in the federal courts.

Ms. Goldberg-Ambrose, Mr. Karst, Mr. Varat

214. Civil Rights. In-depth study of 42 U.S.C. § 1983. This provision, creating a cause of action for the deprivation of constitutional and federal statutory rights by state actors (i.e., state and local officials and municipalities), is now one of the most litigated actions in the federal courts. A historical review of the origins of § 1983 and its relation to other Reconstruction civil rights legislation and the 14th Amendment. The elements of action, defenses to action, and remedies for constitutional violations. Close attention to competing policies of controlling government abuse and allowing government to operate, and to the tensions in the judicial interpretation of § 1983 that arise from the use of federal power, especially the federal courts, to monitor state officials and governments. Students intending to take this course in addition to courses 200 and/or 212 should take this course concurrently with or after the other course(s).

Mr. Goldstein, Mr. Varat

215. The Law and the Poor. Major income-maintenance programs in the United States: Aid to Families with Dependent Children; Supplementary Security Income; Food Stamps; General Relief; Disability; and Social Security (OASDHI). Basic societal attitudes toward poverty related to welfare programs and policies, with emphasis on AFDC. Topics include the structure of programs, eligibility, constitutional boundaries, work requirements, standard of need, emergency assistance and special needs, child support, remedies, social movements, public interest law, and welfare reform. Mr. Handler

216. Administrative Law. Much of modern government is administered by agencies of government other than legislatures or courts. The substantive sources of (and limits on) administrative authority. The procedural norms with which agencies must comply in the course of adjudication or rule-making. Judicial review as a technique for correcting administrative error or abuse. The individual's rights to procedural due process in the individual's interactions with public agencies. Mr. Asimow, Mr. Schwartz

M217. Topics in Legal Philosophy. (Same as Philosophy M256.) Prerequisite: consent of instructor. An examination of topics such as the concept of law, the nature of justice, problems of punishments, legal reasoning, and the obligation to obey the law. May be repeated for credit with consent of instructor.

Mr. Munzer

220. Federal Taxation I. Fundamentals of federal income taxation, particularly as they apply to individuals. Gross income, the taxpayer to whom the income will be attributed, deductions and credits available in computing tax liability, the year in which income is properly reported and deductions properly taken, and characterization of income as ordinary income or capital gain. Issues of tax policy and reform and the provisions of the Internal Revenue Code and Income Tax Regulations. Mr. Asimow, Mr. Klein, Mr. Zolt

221. Federal Taxation II. Prerequisite: course 220. Course 230 may be taken concurrently. An application and extension of the principles of course 220 to the partner-partnership and shareholder-corporation relationships. The federal income tax consequences of the formation of partnerships and corporations, distributions to partners and shareholders, and liquidations and sales of partnership or shareholder interests. Mr. Zolt

222. Federal Taxation III. Federal taxation of gifts and decedents' estates; federal income taxation of trusts and estates. Emphasis on tax planning techniques. Of considerable importance to anyone who expects to practice in the areas of tax planning, estate planning, family law, and probate, among others.

226. Taxation of Foreign Income. Prerequisites or corequisites: courses 220, 221. Tax planning for foreign investment in the United States. Basic rules of U.S. taxing jurisdiction, source of income, withholding, residence, and what constitutes a trade or business. Planning strategies for portfolio investment, direct investment, and acquisition of U.S. real property. Use of income tax treaties and coordination with foreign tax requirements.

227. Federal Taxation of Partners and Partnerships. Prerequisite: course 220. Tax attributes of partnerships; organization, operation (including interim distributions), and termination. Business reasons for the choice of alternative forms of operation, particularly S corporations. Use of partnerships as tax shelter vehicles.

230. Business Associations. The issues that must be addressed when people decide to form joint economic ventures and how these issues are resolved in the law of agency, partnership, and corporation. The federal securities laws and their impact on planning for an operation of business ventures. Mr. Klein

233. Partnership Planning. Prerequisites: courses 220, 230. Recommended: a course in accounting. An advanced problem-oriented course that examines the organization, structuring, operation, and dissolution of partnerships. Detailed substantive study of the statutory and common law of partnerships, partnership taxation, and financial and economic considerations relating to partnership structure and operations. Discussion of problems involving real estate, oil and gas, motion picture, and other contemporary partnership structures.

234. Law and Accounting. Prerequisite: consent of instructor (for students with more than two undergraduate accounting courses). Recommended for students with no prior accounting training. Basic concepts of financial reporting by business enterprise. Bookkeeping; underlying principles of accounting. The relevance of accounting data to legal decision making, including the implications of financial accounting on planning and structuring businesses, compliance with federal securities laws, and reporting for federal income tax purposes. Provides the potential lawyer with understanding and background to read, comprehend, and interpret financial statements.

235. Business Planning. Prerequisites: courses 220, 230. Course 221 may be taken concurrently. An advanced course on the establishment, structuring, and restructuring of business enterprises, primarily in the corporate form. Analysis of four or five realistically complex problems, examining the state and federal corporate problems, the federal income tax implications, and the financial and accounting aspects of each problem, in order to prepare specific and comprehensive plans for dealing with each problem, considering all realistic alternatives and justifying the choices made.

236. Securities Regulation. Prerequisite: course 230 or consent of instructor. Federal and state regulation of the issuance of new securities and trading in outstanding securities. The Securities Act of 1933; the disclosure process as administered by the Securities and Exchange Commission; and exemptions from the prospectus requirements. Disclosure provisions of the Securities Exchange Act of 1934.

240. Antitrust I. Basic understanding of the federal antitrust law: the Sherman, Clayton, and Robinson-Patman Acts. Monopoly, cartels (price fixing, market division, boycotts), vertical restrictions (resale price maintenance, territory and customer allocation), mergers, price discrimination, joint ventures, tie-in arrangements, reciprocity, requirements contracts, etc. The economic perspective used by modern antitrust analysis. Mr. Liebeler, Mr. Wiley

242. Insurance Law. Basic introduction to the general principles of insurance law, including the definition of persons and interests protected, formation of the contract of insurance, insurable interest, concealment, misrepresentation, warranties and conditions, limitations on coverage, waiver and estoppel, the measure of recovery, indemnity and subrogation. Obligations of the insurer and insured during the currency of the insurance contract; the occurrence of the risk insured against. Issues of current significance in insurance litigation, including the insurer's duty to settle, the insurer's duty to defend, the insurance of progressive diseases (asbestosis), the insurability of punitive damages, and problems arising out of the tripartite relationship between insurer, broker, and insured. Mr. Margo

245. Antitrust II. Prerequisite: course 240. The historic Sherman Act monopolization and merger cases. The economic underpinnings of oligopoly theory, which presumably forms the basis for current antitrust policy toward concentrated industries; the validity of the so-called "Market Concentration Doctrine." Current antitrust efforts aimed at monopoly and "shared monopoly." Mr. Liebeler

247. Law and Economics. An economics background is not required. The basic theory of voluntary exchange and the conditions necessary for a voluntary exchange system to maximize community welfare, applied to various types of legal problems in an attempt to gauge the extent to which legal rules contribute to (or hinder) the maximization of such welfare. Mr. Liebeler

248. Bankruptcy. An examination of the Bankruptcy Code and related statutes from the viewpoint of what the commercial lawyer should know about the field in order to advise clients in planning and carrying out business transactions. Emphasis on liquidation of debtors' estates, reorganization of debtors' businesses, and the avoiding powers of the trustee in bankruptcy. Treatment of the consumer debtor in bankruptcy. Mr. Jordan, Mr. Warren

250. Commercial Law: Chattel Security and Commercial Paper. A detailed examination of the Uniform Commercial Code. A study of Article 9 of the Code, the law governing security interests in personal property. Business collateral such as equipment, inventory, accounts receivable, and chattel paper, as well as the financing of purchases by nonbusiness consumers. Some aspects of bankruptcy law, primarily the law of preferences, applicable to secured creditors. Commercial paper, the law of negotiable instruments (Article 3 of the Code), bank collection process (Article 4), documents of title (Article 7), letters of credit (Article 5), and aspects of sales law (Article 2) that bear on secured transactions and commercial paper. Mr. Jordan, Mr. Warren

251. Commercial Law: Sales. The law governing the sale of goods. Acceptance and rejection, contract cancellations, installment contracts, warranty, risk of loss, documentary sales, remedies for breach of contract, the seller's remedies on insolvency of the buyer. Emphasis on Article 2 of the Uniform Commercial Code, the use of bills of lading and warehouse receipts in sales transactions (Article 7), and letters of credit (Article 5). Mr. Jordan

252. Unfair Competition. Survey of four fields of intellectual property and competitive regulation, covering a range of doctrine that is useful to a general practitioner, business adviser, or litigator. The strands of moral and economic policy that unite these apparently diverse fields. Mr. Wiley

253. Regulated Industries. The theoretical justifications for, and fundamental criticisms of, leading types of economic regulation. Survey of the regulatory structures and issues in the transportation, communication, and energy utility sectors, using statutes, cases, and secondary material to introduce students to the legal issues that traditionally have dominated these fields. The intellectual foundations and empirical results of the recent deregulation movement in these three sectors. Mr. Wiley

255. Tort Law and Economics. Prerequisites: a reasonable interest in economics and at least a minimal understanding of basic college microeconomics. Exploration of the literature analyzing tort law from an economic perspective: to assess and profit from its strengths and to consider its limitations. Mr. G. Schwartz

259. Labor Arbitration. The practice, procedures, and substantive law of labor arbitration, with emphasis on what labor arbitrators actually do in their interpretation of collective bargaining agreements. The procedural content of labor arbitration: Who are the labor arbitrators? How are they mutually selected by unions and employers? How might the fact that the arbitrator is mutually selected and mutually paid by the union and the employer bear on the arbitrator's decision-making process? The utility of using the labor arbitration model as a dispute resolution mechanism outside the labor environment: domestic disputes, landlord-tenant disputes, etc. Mr. Alleyne

260. Labor Law I. Basic information concerning the laws and decisions which provide the framework for national labor policy in the private sector. The National Labor Relations Act, the Labor Management Relations Act, the Railway Labor act, and the Norris-La Guardia Anti-Injunction Act. Areas include collective bargaining; selection of bargaining representatives and determination of bargaining units; unfair labor practices; emergency disputes; federal-state jurisdiction; application of antitrust laws; and grievance and arbitration procedures. Mr. Alleyne, Mr. Jones

261. Labor Law II. Prerequisite: course 260 or consent of instructor. Collective bargaining in the public sector (government employment at the federal, state, and local levels). Differences and similarities in the private and public sectors, and the responses of federal and state legislatures and of the courts to the special problems of collective bargaining in the public sector. Mr. Alleyne

262. Law of the Collective Agreement. Prerequisite: course 260. Limited to 10 students. Enhancement of understanding of labor arbitration by a comparative study of the decision of issues brought to labor arbitration which have also been presented to the NLRB and federal courts. Use of transcripts and exhibits of actual arbitration cases. Each student works with three case files, functioning as a union advocate in one, an employer advocate in a second, and an arbitrator in the third. Each student prepares two briefs, one arbitration opinion and award, and a research paper. Mr. Jones

263. Employment Discrimination. Title VII of the 1964 Civil Rights Act and similar statutes prohibit discrimination based on race, sex, national origin, religion, age, and handicap. Examination of the substantive and procedural law that has developed under these statutes; consideration of the social policy goals and assumptions underlying that development. Specific topics include disparate treatment and disparate impact theories of discrimination, employment testing and test validation, statistical proof, equal pay and comparable worth, affirmative defenses (business necessity, bona fide occupational qualifications, bona fide seniority systems), affirmative action and reverse discrimination, obligations of government contractors, class actions, and administrative and judicial remedies. Mr. Aaron

264. Workers' Injuries. Study of the ways in which the law responds to the phenomenon of workers' injuries and occupational disease. The labor market and unionization, workers' compensation, the federal OSHA job-safety regulation program, and a limited but significant number of tort issues that workers' injuries provoke. Workers' compensation considered both as a compensation program and as a tort-like rule of strict liability. Mr. Bracamonte, Mr. G. Schwartz

267. Indian Law. The special legal status of American Indians and Indian tribes and the tension between moral/legal claims and political forces. The sources and scope of federal, state, and tribal power on Indian reservations; property law concepts unique to Indian tribes and Indians; rights to American Indians in relation to federal, state, and tribal governments and the federal trust relationship to Indians. Ms. Goldberg-Ambrose

268. Labor Law III. The rights and obligations of individual employees in collective bargaining units, especially of those who choose not to belong to a union, under present legislation, as well as some employment rights of employees of unorganized firms. The law of the Labor-Management Reporting and Disclosure Act of 1959, insofar as it relates to the regulations of internal union affairs. Mr. Aaron

269. Law, Foreign Policy, and National Security. Various legal considerations and restraints, both national and international, affecting the formulation of foreign policy and protection of national security. The decision-making process, including the constitutional balance between executive and legislative branches, the foreign relations power of the President, the War Powers Resolution and the Treaty Power. The role of bureaucratic politics. The congressional regulation of foreign policy and its attempts to subject intelligence activities to the rule of law. The problem of protecting national security information in a free society and other Bill of Rights issues. The role of international law affecting national security, including the UN Chapter, and multilateral and bilateral arms control obligations. Mr. Trimble

270. International Law. The role of law and legal institutions in international relations and in government foreign affairs decision making, particularly on the part of the United States. Nature and source of international law and how it is applied in the relations of states. The allocation of responsibility for decision making within the international system and how conflicts in the assertion of jurisdiction are resolved. Major limitations on the exercise of authority by states. The use of force by states, paramilitary groups, and international organizations. Mr. Trimble

271. International Business Transactions. The fundamental legal issues that arise in international trade, licensing, and investment. The legal and financial institutional framework within which international business is conducted; national and international limitations affecting the movement of goods, the transfer of technology, and the flow of capital; the organization, financing, and protection of international business undertakings; the use of agents, distributors, and licensees; problems of contract negotiation and dispute resolution in an international setting; and foreign investment. Mr. Alford, Mr. Rosett

272. International Economic Law and Organization. Public international law affecting private economic activity, principally in the areas of trade, investment, and monetary affairs; the roles of the GATT, IMF, World Bank, UNCTAD, and the UN Center on Trans-National Corporations; and the U.S. law governing the negotiation and implementation of international agreements. Mr. Trimble

278. Comparative Law: Chinese Law. 20th-century transformations in Chinese law in the context of their jurisprudential and historical background. A general introduction to the nature and function of law in China; comparative legal analysis. Equips future practitioners to address legal problems arising from commercial interaction with China. Mr. Alford

279. Admiralty Law. A study of the special jurisdictional, procedural, and substantive rules applicable to water-based activities, especially the carriage of passengers and goods by water. The allocation of disputes involving such activities between state and federal courts, the rules of practice applicable to maritime liens, the special procedures for limiting shipowners' liability, and the sources and nature of laws governing maritime torts, contracts, and property. The applicability of traditional maritime doctrines to modern phenomena such as offshore drilling, containerization, and oil spills. Ms. Goldberg-Ambrose

280. Aviation Law. The regulation of aviation and air transport under both international and domestic law. The nature and sources of aviation law, the legal regime of the airspace and the aircraft, and the regulation of users of the airspace, including jurisdiction over hijackings and other offenses committed aboard aircraft. The role of the Civil Aeronautics Board in the regulation of domestic air transport. The regime of liability for international air carriers established by the Warsaw Convention and subsequent instruments, and the liability of aircraft manufacturers, maintenance, repair, and service facilities, and air traffic control and advisory services. Mr. Margo

M285. Governance: State, Regional, and Local (2 to 3 units). (Same as Architecture and Urban Planning M202B.) Legal problems involving local governmental entities; sources and extent of powers and duties with respect to personnel, finance, public works, community development, and related topics.

M286. Public Control of Land Development (2 to 4 units). (Same as Architecture and Urban Planning M202A.) Analysis of the legal and administrative aspects of the regulation of land use and development, and the problems and techniques of urban planning; dwelling legislation, building codes, zoning, subdivision controls, public acquisition of land, tax controls, and urban development. Mr. McGee

M287. Urban Housing and Community Development (2 to 3 units). (Same as Architecture and Urban Planning M231.) Comprehensive consideration of the rebuilding and construction of American cities, with major emphasis on the "housing process" — the way in which shelter and related facilities are created by the institutions which direct housing activities in urban areas. Students are encouraged to undertake research projects, with emphasis on field research, in lieu of a substantial portion of the final examination. Mr. McGee

M290. Environmental Law and Policy (2 to 3 units). (Same as Architecture and Urban Planning M264.) Examination, from perspectives meaningful to legal institutions, of the nature of environmental problems. The means by which law has responded, and can and should respond, to problems of environmental quality. Both common law and legislative and administrative measures considered. The air pollution problem is the primary vehicle for study.

292. Water Law. The basic components of United States water law; the riparian system of allocating water used in the Eastern United States, the appropriation system of allocating water used in the Western United States, and the federal overlay of reserved rights, navigation power, and reclamation. Water use efficiency and conservation, protection of instream water uses, groundwater management, public rights to water-based recreation, and water pollution.

295. Criminal Procedure. The process by which courts decide the guilt or innocence of those accused of crime and the selection of an appropriate penalty. The right to bail and other devices by which accused persons can be released following arrest and pending trial. The process by which the prosecutor decides what charges to file and the limits on charging power, including the grand jury and the preliminary hearing. Criminal pleading, including the process of plea bargaining. The trial process, including the right to trial by jury and sentencing procedures.

299. Federal Criminal Law Enforcement. Federal criminal topics such as RICO (including both its criminal and civil uses), mail fraud, the Bank Secrecy Act, the Hobbs Act, the Travel Act, criminal tax enforcement, and drug offenses. The special features of complex criminal statutes, how federal enforcement priorities are determined, the *Petite* policy, and the nature of the federal criminal role. Federal approaches to the prosecution of white collar crime, organized crime, and political corruption. In recent years there have been a large number of federal prosecutions of business persons. Increasingly, it is becoming useful for corporate counsel, whose practice is largely noncriminal, to be familiar with the federal criminal laws. Gives students a lawyer's understanding of the most important crimes in the federal arsenal, the ways in which the federal criminal law and its enforcement differ from its state counterparts, and how the federal and state criminal systems relate to each other. Mr. Abrams

300. Remedies. The kinds and nature of relief afforded by courts to litigants in civil litigation. The theory and general principles governing the award of compensatory damages, equitable remedies, and restitution. The substantive law of restitution and the history of equity jurisdiction. Mr. Bauman

302. Copyright. A basic introduction to the law of copyright. The large and recently revised federal statute that governs the field. Mr. Wiley

306. Patent Law. Designed for the future general or business lawyer who should to be able to recognize a patent problem or a related intellectual-property problem, and for the prospective patent lawyer. Patents related to trade secrets, copyrights, and trademarks. The classic policy tension between technological progress and free competition, or patents vs. antitrust law. Use of patents to illuminate several general law areas. The constitutional base of the patent system; how the mandate is effectuated or defeated in practice. Broadening of professional responsibility insight by an ethics paradox peculiar to patent law. Patent office negotiations explored as a special application of principles of persuasion.

313. Conflict of Laws. Problems resulting from multistate (both sister state and foreign nation) disputes. The choice of law problem, constitutional limitations on state choice of law, recognition of foreign judgments and jurisdiction. Analysis of the governmental interests implicated in the dispute. Mr. Bauman, Mr. Trimble

317. Family Law. The *de jure* and *de facto* husband-wife relationship. Legal principles and social policies governing the creation, maintenance, and dissolution of the conjugal relationship. Property and support issues, divorce-related child custody, and the legal status of extramarital children. Ms. Blumberg, Ms. Olsen

319. Law and the Political Process. Recommended prerequisite or corequisite: course 201. Ways in which the laws governing the political process affect and reflect political power relationships. Statutory reforms enacted in the past 10 to 15 years at the federal and state levels. Right to vote, reapportionment, political parties, bribery, campaign finance, incumbency, ballot propositions, lobbying, and conflict of interest. Mr. Lowenstein

325. Law and Psychiatry. The law affecting the many persons identified as seriously mentally ill has rapidly changed in the past 30 years, especially with respect to the standards for involuntary civil commitment: the rights of those committed, including the right to treatment and to decline treatment; guardianship; doctor-patient confidentiality; discrimination against the mentally handicapped; the insanity and related defenses; competence to stand trial; and criminal dispositions. Attitudes concerning psychiatrists, psychotherapy, and mental illness have also changed. Exploration of these changes, with emphasis on the impact of constitutional adjudication on the law of civil commitment; the different world views of psychiatrists and lawyers regarding dependence and paternalism, and liberty and constraint; whether the imposition of legal rules on medical practices has diminished human suffering. Mr. Goldstein

326. Health Law and Administration. The major programs in health care financing (Medicare, Medicaid, private insurance, medically indigent) and health care organization (private practice, HMOs, preferred providers, etc.). The effects of cost containment and the administration's pro-competitive strategy. Selected topics include the professions, hospitals, quality control (including malpractice), antitrust, alternative approaches to health care, medical experimentation, special health problems of the poor, the elderly, women, minorities, and the defective newborn. Mr. Handler

327. Communications Law. Legal issues associated with the regulation of electronic mass media. First Amendment differences between print and broadcasting, broadcast licensing and the content-oriented regulations and policies of the Federal Communications Commission. Industry structures, networking, access to the media, public broadcasting, political broadcasting, fairness doctrine, and entertainment format changes. Regulation of cable TV and the merging of the media with new technologies, including telecommunications carriers, satellites, and fiber optics. Options for rewriting the Communications Act.

329. Women and the Law. A study of ways in which court decisions, statutes, and the operation of the legal system reflect ideas about what women and men are like and what their roles in life should be. "Protective" labor legislation, voting rights, equal protection of the laws, the Equal Rights Amendment, control of childbearing, employment discrimination, and either topics in criminal law (rape, prostitution) or topics in family law (the marriage obligation and grounds for divorce). Ms. Littleton

331. Immigration Law. An overview of the immigration and naturalization process from the practitioner's point of view. Nonimmigrant and immigrant visas, consular practice, deportation/exclusion proceedings, naturalization and citizenship, constitutional issues related thereto, and specific remedies available. Mr. Bracamonte

332. Children and the Law. Judicial and legislative allocation of power and responsibility between parents and the state; the child's economic situation with the family; child custody; adoption; medical treatment of minors; parental right to discipline children; neglect and abuse; state-enforced limitations on the liberty of minors and juvenile delinquency. Ms. Blumberg

335. Religious Legal Systems. The literature and institutions of a religious legal system. Offered from time to time by different instructors in Canon law, Islamic law, and the Rabbinic legal tradition. Content varies depending on the particular tradition under study; emphasis on concerns common to a legal system based on divine authority. The extent of human authority to interpret and modify the received law to meet new circumstances, the relation between law and morality, and the interaction between religious and secular law. Mr. Rosett

336. English Legal History. The growth of the Common Law and Trial by Jury in the period from 1187 to 1765. Mr. McGovern

337. American Legal History, 1776-1984. The history of legal and constitutional thought, together with the history of law's part in social and political change and in everyday life. Consideration of a wide variety of texts and events, with emphasis on the "separation" of law and politics, law's relation to other normative orders in society, the ambiguities of legal "freedom" and "equality," problems of interpretation in law and history. Revolution and constitution-making, the creation of judicial review, courts and the rise of industrial capitalism, black slavery and freedom, achievements and limits of a century of liberal legal reform (comparing experiences of women's, labor, and civil rights movements), legal realism and the rise of the administrative state, history of lawyering. Mr. Forbath

400. Pretrial Lawyering Process (Clinical). Training and practical experience in the full range of skills used by lawyers during the pretrial phases of the civil litigation process. The development of interviewing, case planning, fact-gathering, counseling, pleading, formal discovery, negotiation, and lawyer decision-making skills. Fieldwork offers an opportunity to employ lawyering skills in a law office setting under the supervision of experienced legal services attorneys.
Ms. Menkel-Meadow, Mr. Moore, Mr. Patterson

401. Appellate Advocacy (Clinical). The concepts of logic and the principles of argument and persuasion in the context of appellate advocacy. Students gain practical experience by working in public prosecutorial and defense offices at the federal and state level under the direct supervision of experienced appellate practitioners. Mr. Patterson

402. Fact Investigation and Discovery in Complex Litigation (Clinical). The process of developing and proving facts, the relationship between the discovery of facts and proof at trial, and the range of formal and informal discovery devices available for use in complex litigation. Through fieldwork in public law offices and private law firms, students work on various aspects of discovery in major pieces of litigation under the supervision of an experienced litigator.
Mr. Binder, Ms. Gillig, Mr. Patterson

403. Interviewing, Counseling, and Negotiation (Clinical). Basic interviewing, counseling, and negotiation concepts in the areas of litigation and business planning. The extent to which these principles require modification in the area of business planning. Classroom discussion enhanced by analysis of videotapes of "client" interviews and conducting simulated interviews. Mr. Bergman

405. Trial Advocacy (Clinical). Designed to provide training in the full range of skills needed by a trial advocate. A year-long series of classes emphasizing the development of courtroom advocacy and other lawyering skills: case planning, direct and cross-examination of witnesses, opening statement and closing argument, client and witness interviewing, case investigation, negotiation, and examination of expert witnesses. In Fall Semester role-play exercises are legal or nonlegal in nature, capped off with a mock trial. During Spring Semester students actually appear in court and represent indigent clients under the direct supervision of instructors.
Mr. Bergman, Mr. Moore, Mr. Patterson

405. Simulated Trial Advocacy (Clinical). Prerequisite or corequisite: course 211. Enrollment priority to third-year students. The first half of the year-long course 405. Theoretical and practical aspects of the trial process; training in the skills needed to represent clients in pretrial and trial litigation. The principal function of trials — the resolution of disputed questions of fact — and the trial lawyer's role in presenting persuasive evidence to the judges and jurors who perform that function. The development of specific skills in such tasks as interviewing, fact investigation and analysis, conducting direct and cross-examinations, making opening statements and closing arguments, using exhibits, and making and responding to evidentiary objections, presented through a combination of lecture, discussion, demonstration, and simulated role-play exercises. Presentation of a videotaped mock trial at the end of the semester (no fieldwork component).
Mr. Bergman, Mr. Moore, Mr. Patterson

407. Mediation and Alternative Dispute Resolution (Clinical). Issues, principles, and skills implicated in the use of nonadversarial methods of dispute resolution. The theories and various approaches to conflict resolution, including comparisons among and between adjudication, arbitration, mediation, med-arb, mini-trials, and community dispute centers. Some of the difficulties with alternative dispute resolution, including the role of law, inequality among the parties, consent, motivation, enforcement, and effects of alternative dispute resolution. Comparative study of dispute institutions in other political and legal systems. Through skills training and role-play exercises students learn and practice the skills necessary to conduct mediation and arbitration sessions.
Ms. Menkel-Meadow

408. Legal Negotiation (Clinical). The theoretical and practical aspects of the process of negotiating transactions and disputes in our legal system. Negotiation theory, using both legal and behavioral science materials; differences between litigation and transactional negotiations; the context in which particular negotiation strategies and tactics are successfully employed; ethical and normative implications of negotiating; the role negotiation plays in our legal system, both in dispute resolution and in legal planning; negotiating, both from planning and behavioral perspectives. Ms.Menkel-Meadow

409. Negotiation and Mediation (Clinical). The theoretical and practical aspects of negotiating and mediating transactions and disputes in our legal system. Negotiation and mediation theory, using both legal and behavioral science materials; the differences between litigation and transactional matters; development of an understanding of the context in which particular negotiation and mediation strategies and tactics are successfully employed; the ethical and normative implications of negotiations and mediations; consideration generally and structurally of the role negotiation and mediation play in our legal system, both in dispute resolution and in legal planning; development of proficiency in negotiation and mediation, both from planning and behavioral perspectives.
Ms. Menkel-Meadow

445. Planning and Drafting Small Estates (Clinical). The substantive law of estates, wills, trusts, and tax as those laws relate to testamentary disposition of small estates. Interviewing, drafting, and counseling techniques. In fieldwork, students are assigned clients and interview them to determine their estate planning needs. Students discuss with a supervising probate attorney the kind of estate plan needed and then draft an appropriate plan and review it with the attorney. Mr. Bergman, Mr. Binder, Ms. Gillig

500. Seminar in Constitutional Law. Selected topics in constitutional law.
Mr. Karst, Mr. Shiffrin, Mr. Varat

501. Seminar in Taxation: Timing Issues. Comparison of an income tax and a consumption tax, proceeding to various theoretical issues such as the pro per deduction for depreciation, the relationship between the treatment of the payor and the payee, and the role of loans and the interest deduction. Applications of the basic principles to the treatment of such issues as reserved rents, the sale of a life estate, and various rules added to the Code by the 1984 act (e.g., economic performance). Mr. Klein

502. Seminar in Copyright Law. Each student is assigned a specific topic relating to some aspect of copyright law, which is the subject of an in-depth study. The student first makes an oral presentation of the topic to the seminar and thereafter submits a fully researched paper dealing with the topic.

503. Seminar in Criminal Law (Death Penalty). Limited to 15 students. Is the death penalty morally impermissible? Is it immoral even if it has a deterrent effect? Or are there situations in which it is morally improper *not* to apply the death penalty (even if it has no extra deterrent effect)? Exploration of these questions, with emphasis on such topics as the allegedly arbitrary and discriminatory manner in which death sentences are carried out, the risk of executing the innocent, and whether retention or abolition of the death penalty better comports with respect for the sanctity of human life. Mr. Dolinko

503. Seminar in Criminal Law (Rape). The legal definition of rape, the procedural rules applied in the administration of rape statutes, and the sentences provided for rape offenses. In order to determine and critically evaluate the empirical and moral responsibilities of prosecutors and defense attorneys, rape cases are also examined, as are civil alternatives to rape prosecutions. Ms. Goldberg-Ambrose

504. Seminar in Theory of Property. A philosophical examination of the foundations of a theory of property. Topics include the concept of property, property rights in the body (including reference to abortion and suicide), and the relation of property to privacy and human nature. Readings from classical and contemporary writers, including Locke and Marx, and from instructor's work in progress. Mr. Munzer

506. Seminar in Comparative Company Law. Prerequisite: course 230. A comparative analysis of the company laws of the United States, the principal nations of the Common Market and, if feasible, several eastern nations. An evaluation of the divergent trends of developing company law in the nations of the world, with particular reference to the differences between United States law and the harmonization directives of the Common Market. Topics include capital structure and finance, disclosure, regulation of securities trading, dividends and distributions, and management and control structure.

507. Seminar in Labor Law. Prerequisite: course 260 or equivalent. Mr. Alleyne

512. Seminar on Selected Problems in Social Welfare and Health. Prerequisite: consent of instructor. Limited enrollment. A year-long research seminar on topics selected by students with consent of instructor, with emphasis on empirical-policy research outside the School of Law and preferably in the community. Joint class meetings to discuss topics, methods of approach, and preliminary findings, but most of work to be independent research. Mr. Handler

516. Seminar in International Law: The Changing International Legal Order — A Chinese Perspective. Doctrines and practices of the People's Republic of China (PRC) regarding the role of law in various international contexts. Issues both of public international law and the law of international trade and investment. The nature and sources of international law; the role of the United Nations and other international organizations; national sovereignty; territoriality; the regulation of natural resources lying within and beyond territorial limits; international human rights standards; the new international economic order; the regulation of foreign trade and investment; the resolution of disputes. Topics considered in light of China's history and her present legal, political, and economic circumstances and as a means of tracing the changing nature of the international legal order. Comparisons to the doctrines and practices of Taiwan, Japan, the U.S., the U.S.S.R., and selected developing nations. Mr. Alford

M524. Seminar: Philosophy of Law. (Same as Philosophy M257.) Prerequisite: consent of instructor. Selected topics in the philosophy of law. May be repeated for credit with consent of instructor.

525. Seminar in Communications Law. Prerequisite: course 327. Students select specific topics in communications law, with emphasis on the effect of new technologies on the legal issues associated with a particular problem, and prepare one or more papers designed to address legislative or litigative solutions to the problem. Students' work may be used in ongoing litigation or in current legislative deliberations. Mr. Firestone

M526. Seminar: Urban Affairs. (Same as Architecture and Urban Planning M202C.) Exploration in a concrete case setting of the application of legal tools to the solution of planning and land-use problems. Real situations are selected in which significant planning problems exist that appear to be amenable to solution by careful analysis and application of legal tools. A number of case studies are selected so that students may choose one issue which directly interests them. For each case, a specific client works with the class in presenting the problem that client is facing and remains available through the course of the project for consultation; the end product for each case is the presentation of a formal report. Clients include the City Planning Commission, the Environmental Quality Board, the Housing Authority, and others. Mr. McGee

532. Seminar in Bankruptcy. In-depth examination of the business reorganization provisions of Chapter 11 of the United States Bankruptcy Code. Conducted in a practical format requiring students to become initimately familiar with the substance and procedure of Chapter 11 business reorganization law in a problem-solving format. Students are expected to research and brief complex issues of reorganization law and to advocate their positions during class.
Mr. Klee

536. Seminar in Appellate Advocacy. Appellate practice and skills necessary for effective appellate advocacy. Generalized principles of brief writing and oral argument. Cases from the current U.S. Supreme Court docket are selected by the class from a list supplied by the instructor. Students are then paired off, two to a case (one for petitioner, one for respondent). Students are required to write an appellate brief of approximately 30 to 50 pages in length and participate in an oral argument before a panel consisting of faculty members and other students in the seminar. Mr. Eule

555. Seminar in Legal Theory/Toward Feminist Jurisprudence. During the past five years, sex discrimination scholarship has moved beyond its initial focus on legal doctrine and constitutional arguments to develop a criticism of the legal system itself. The impact that feminist theory is having on legal philosophy. Reading of the major works in feminist legal theory and discussion on the practical effects these theoretical formulations have on a variety of legal issues of importance to men and women.
Ms. Olsen

560. Seminar in Law and Management (Agency Law). Prerequisite: course 230. Recommended: familiarity with economics or the law and economics literature. A brief review of agency law and various aspects of the agency relationship drawing on both legal and nonlegal material. Emphasis on a theoretical consideration of the major aspects of the agency relationship: creation of the relationship, vicarious liability, authority and fiduciary obligation.
Ms. Anderson

564. Seminar in Evidence. Prerequisite: course 211. Selected topics include the plain error doctrine, problems raised by the testimony of young children, the relationship between scientific conclusions of experts and character evidence, problems in relation to "other crimes" evidence, and expert testimony under the federal rules. Mr. Letwin

565. Seminar in Legal History: Group Litigation. The history of the class action suit. The nature of representation, the phenomenon of class conflicts, the tendency of group litigation to escape formal legal norms, the effect of group structure on litigative power. Mr. Yeazell

565. Seminar in Legal History: Black Slavery and Freedom, 1630-1968. The contested meanings and boundaries of "slavery" and "freedom" in the legal and political cultures of the North and South at critical moments in their histories. How race and class figured in the legal oppression of blacks, and how blacks and others have sought to use law to extend their freedom. Introduction to a variety of ways of doing legal history and of exploring the interplay of law, politics, and society. Topics include genesis of the slave codes, history of the law of slavery, abolitionist jurisprudence and legal activism, the Constitution as a terrain of sectional conflict, emancipation and Reconstruction: ex-masters and ex-slaves contest the boundaries of the new freedom, rise of Jim Crow, emergence of modern civil rights movement and the legacy of antislavery, the desegregation and voting rights struggles, the relations between legal and other forms of political action, and the achievements and limits of the "second reconstruction" of 1954 to 1968. Mr. Forbath

565. Seminar in American Legal History, 1776-1984. Recommended prerequisite: course 337. Designed for students interested in doing original historical research. Reading of a handful of historians whose work illuminates important interpretive or methodological problems. Progress reports and presentations. Mr. Forbath

566. Seminar in Administration of Criminal Justice. Recent American decisions in criminal procedure concerning the rights of persons suspected or accused of criminal offenses, contrasted with the administration of justice in civil law legal systems, particularly those of Mexico and Spain. Comparison of the reaction by the American judiciary to the crisis of violent crime with that of Spanish law enforcement officials confronted with implementing the nation's new constitution while simultaneously attempting to suppress politically motivated violence. The gap between theory and practice, particularly in Mexico and Latin America. Mr. McGee

567. Seminar in Antitrust Law.
Mr. Liebeler, Mr. Wiley

568. Seminar in Political Theory and the Law. The theory of public choice. Since World War II, much democratic theory had tended to center around two questions: (1) On what basis should it be decided whether a type of decision should be made collectively through the government or individually through the market? (2) In what sense are government institutions "representative"? While some earlier writers such as Edmund Burke and James Madison may be considered, focus on contemporary writers, including David Truman, Anthony Downs, Richard Musgrave, Buchanan and Tullock, Moncur Olson, and Brian Barry. Mr. Lowenstein

572. Seminar in American Legal Education. Prerequisite: consent of instructor. Law schools as institutions in the legal establishment. Historical development of legal education; teaching methods; law school politics; recruitment of students and faculty; research and publications; class stratification in legal education; testing and evaluation of students and faculty; advanced legal education; comparative legal education; and the curriculum.
Mr. Bergman, Mr. Graham

572. Seminar: Teaching Assistants. Limited to teaching assistants. Ways to make teaching assistants' work more effective and interesting. The teaching of legal writing; criteria for evaluating legal writing, ways of editing others' work. Consideration of what approaches to first-year student writing are likely to be most effective. The teaching assistants' role in other parts of the first-year curriculum (torts, civil procedure, property, etc.). Consideration of how teaching assistants might help first-year students with their work, develop exercises for small discussion sections, then conduct and evaluate those discussions.
Ms. Anderson, Mr. Yeazell

573. Seminar in International Regulation of Military Power. The role of international law in the regulation of the use of force and the containment of military solutions to world problems. The original United Nations' plan, its invocation in resisting aggression, and its role in various peacekeeping ventures. Multilateral and bilateral arms control negotiations (such as the Comprehensive Nuclear Test Ban negotiations and SALT), the role of law in restraining military buildups and in achieving other national security objectives. Mr. Trimble

574. Seminar in European Economic Community. The structures and institutions of the European communities, their lawmaking processes, and administration. The interaction and conflict between community law and national law and the growing role of the European court in mediating between the nations and the communities. The processes of the court and parallels between American constitutional development and that in Europe. Mr. Rosett

575. Seminar in Business Planning. Prerequisites or corequisites: courses 220, 221, 230. The tax and corporate law aspects of important problems in the life of an enterprise, such as formation of a corporation, compensation of employees, recapitalization, stock redemptions, acquisitions, and corporate divisions. Mr. Asimow

576. Seminar in Arms Control and Legal Process. The role of sanctions and dispute-settlement techniques in arms control agreements. The original plan of the United Nations against the role it has actually played in international peacekeeping. The recent arms control efforts such as the Nuclear Test-Ban Treaty, the Nonproliferation Treaty, and SALT, with a view to assessing the potential for enhancing compliance with these through international institutions. Comparison with the experience of the GATT and the IMF, as well as some of the more theoretical literature on the reasons why nations comply with international law. Mr. Trimble

577. Seminar in Law and the Political Process. The ways in which the laws governing the political process affect and reflect political power relationships. Statutory reforms enacted in the past 10 to 15 years at the federal and state levels. Right to vote, reapportionment, political parties, bribery, campaign finance, incumbency, ballot propositions, lobbying and conflict of interest. Mr. Lowenstein

579. Seminar in Immigration Law (Aliens' Rights). Prerequisite: course 331. Emphasis on three substantive areas of immigration-related law that are legally and politically salient: citizenship and naturalization, refugee and asylum law, and the employment rights of aliens. Introduction to the fundamental law in the topics covered, while simultaneously developing a critical perspective on extant law. The basic statutory framework and traditional judicial gloss placed on various legal requirements and procedures for the attainment of certain status or equality of treatment at the workplace. Development of an understanding of the theories of migration, drawing crucial distinctions between labor and political migration, foreign policy and the rule of law, and the function of citizenship within our legal and political structures. Demonstration that our history of race relations, foreign policy, and economic structures have a predominant effect on our legal structures and have played a fundamental role in the evolution of our law dealing with the rights of aliens. Mr. Bracamonte

Graduate School of Library and Information Science

Robert M. Hayes, Dean

11

Our society has become a world of information. Over half of the nation's workforce is now directly engaged in producing, processing, and distributing information in one form or another. Education, scientific and technical development, banking and financial management, government and corporate management — all depend increasingly on accurate, relevant, and readily available information. New technologies have produced a wealth of forms in which we may distribute and transfer information. Printed media have been supplemented by photographic, audiovisual, and computer processible forms. As a result, libraries and information systems of all kinds have become crucial agencies for the management of the resulting flood of information.

The field of library and information science is concerned with the processes involved in these information agencies and, more generally, in the use of information in our society. How are records with essential information, whatever their form may be, to be acquired, preserved, organized, retrieved, and made available? How is information best used in making decisions and in meeting the goals of society as a whole, as well as those of specific organizations?

Education in the field must provide competence with both old and new methods for the processing of information and old and new approaches to the management of libraries, information centers, and information systems in organizations of all kinds. It is this goal to which UCLA's Graduate School of Library and Information Science is dedicated.

Applicants may write to the Graduate School of Library and Information Science, 120 Powell Library Building, UCLA, Los Angeles, CA 90024, for the school's announcement and application materials.

Degrees Offered

Master of Library Science (M.L.S.)
Post-M.L.S. Certificate of Specialization
Ph.D. in Library and Information Science

Master of Library Science

Admission

Students are admitted in Fall Quarter only. In addition to Graduate Division requirements and application procedures (see Chapter 3), the school requires:

(1) A statement of purpose.

(2) The application for admission provided in the school's announcement.

(3) A report of an interview by the dean of the school or by a person designated by the dean as qualified to conduct the interview.

(4) An official report of a score on the Graduate Record Examination (GRE) taken within the past five years. Applicants must have passed the General Aptitude Test of the examination with a minimum combined score (verbal and quantitative) of 900.

(5) Three letters of recommendation.

(6) Satisfaction of the following entrance requirements: (a) a statistics requirement, satisfied by completing a college-level course with a minimum grade of C; (b) a computer programming requirement, met either by completing a college-level course with a minimum grade of C or by passing a proficiency examination administered by the school (most standard languages such as PL/1, FORTRAN, COBOL, PASCAL, and BASIC or data base packages such as dBASE3, KNOWLEDGEMAN, and CONDOR are acceptable); (c) reading knowledge of a foreign language, which may be met by completing three quarters or two semesters of college-level study in the language with minimum grades of C or by passing the Graduate School Foreign Language Test (GSFLT) with a minimum score of 500. The school will accept the passing of a foreign language test administered by another UCLA department that meets that department's graduate degree requirements or, for languages not covered by the GSFLT, the passing of a reading test supervised by the appropriate UCLA foreign language department.

The dean may permit postponement of one or more of these requirements for full-time students, but completion of these courses at a later time may represent a serious work overload for the new student. In any case, all requirements must be completed before beginning your fourth quarter in residence. Part-time students may not enroll in the program until they have completed the entrance requirements.

Applicants not meeting the required grade-point average of 3.0 may be admitted in exceptional cases if GRE scores, letters of recommendation, or other factors indicate unusual promise. While work experience is not a requirement for admission, consideration is given to such experience in reviewing the total application.

For information on the proficiency in English requirements for international graduate students, refer to "Graduate Admission" in Chapter 3.

Course Requirements

You are normally required to enroll in three courses per quarter in order to complete the program in six quarters. Part-time enrollment may be permitted if you are working in a library or information center.

Eighteen courses (72 quarter units) are required for graduation from the M.L.S. program. Coursework must provide evidence both of basic professional competencies and of knowledge in a field of specialized competence.

Basic Professional Competence: The requirement is met by completing nine core courses: Library and Information Science 400, 402, 410, 411, 420, 421, 430, 441, and at least one graduate-level research methodology course such as 205, 240, 241, or 290. In certain cases, prior coursework or work experience may justify replacing a course by a validation examination administered by the school, but

this is not encouraged and should be used only for the purpose of increasing the extent to which you pursue a specialization.

Only in unusual cases will librarianship coursework taken elsewhere satisfy the basic competency requirements.

Specialized Competence: Completion of a course of study is required as evidence of knowledge of a field of specialization in librarianship, bibliography, or information science. The field of specialization and the specialized course program must be approved by a faculty adviser. The requirement ordinarily is met by the completion of nine additional courses, which may include internships. Relevant coursework in other departments or schools is encouraged.

During the second year, you may apply for an internship of one to three quarters either on campus or off campus at a library or information center. The internship is a regularly scheduled course and may be applied toward the 18 required courses.

No more than eight units of course 596 may be applied toward the total course requirement; only four units may be applied toward the minimum requirements of the Graduate Division. In order to enroll in any S/U graded course, including 500-series courses, you must be in good academic standing.

Comprehensive Examination Plan

A comprehensive examination consisting of two components is required. The written test breadth component is offered in Fall, Winter, and Spring Quarters and is designed to demonstrate your understanding of library and information science services as a totality. It does not cover the basic professional competencies individually; rather, it deals with the field in a unified form. To be eligible to take the written test component, you must complete one year of academic residency, satisfy all outstanding entrance requirements, and complete all nine core courses.

The specialization component of the comprehensive examination requires the completion of a paper or project in the area of your specialization, which demonstrates a considerable amount of work and thought and is of publishable quality. The paper or project is required even if you have an advanced academic degree in which a thesis or dissertation was a requirement and must be approved by your faculty adviser.

Cooperative Degree Programs

To participate in a cooperative program, you must make application to and be admitted by both this school and the other UCLA school or department. Fulfilling the combined set of program requirements normally takes three years.

M.A.-History/M.L.S.

This concurrent degree program of the Graduate School of Library and Information Science and the Department of History allows you to combine historical study with the tools of the information professional and to obtain two degrees — the M.L.S. and the M.A. in History. The best sequence of coursework should be discussed with the advisers from this school and the History Department.

M.A.-Latin American Studies/ M.L.S.

This specialization is an articulated degree program of the Graduate School of Library and Information Science and the Latin American Studies Program. You can obtain two degrees — the M.L.S. and the M.A. in Latin American Studies. However, no course may be used for credit toward more than one degree. The program provides broad training in library and information science, as well as the opportunity to explore and analyze on an advanced level the social, political, and cultural issues characteristic of Latin American societies.

M.B.A./M.L.S.

A concurrent degree program jointly sponsored by the Graduate School of Library and Information Science and the Graduate School of Management, this specialization is designed to provide an integrated set of courses for students who seek careers which draw on general and specialized skills in the two professional fields. Students should request all application materials from the M.B.A. Admissions Office, Graduate School of Management.

Post-M.L.S. Certificate of Specialization

The Post-M.L.S. Certificate of Specialization Program meets the need for specialized training in various areas of librarianship, information science, and bibliography, as well as research competence.

Admission requirements vary slightly for each field of specialization, but the basic requirements are a bachelor's (or higher) degree in letters and science, an M.L.S. degree from an American Library Association-accredited school, and unconditional admission to graduate standing by the UCLA Graduate Division.

Your course program may begin in any quarter of the academic year. If you are admitted for a preliminary quarter to complete prerequisite courses, that quarter will not be counted toward the minimum residence requirements.

Part-time enrollment is encouraged to provide flexibility for the working librarian. Opportunities for relevant coursework outside the department and internships, both on and off campus, are made available.

Three general areas of specialization have been authorized: librarianship, bibliography, and information science. Further specialization within these fields is possible. A minimum of nine courses (100-, 200-, 400-, and 500-series) must be completed in the Graduate School of Library and Information Science and other departments of the University.

In addition to taking coursework in your area of specialization, you must complete a paper or project in that area, which demonstrates a considerable amount of work and thought and is of publishable quality. The specialization paper or project is required even if you have an advanced academic degree in which a thesis or dissertation was a requirement and must be approved by your faculty adviser.

Ph.D. Degree

Admission

In addition to Graduate Division requirements and application procedures, the school requires:

(1) A master's degree or the equivalent from an institution of recognized standing, representing academic preparation equivalent to that required for a comparable degree from the University of California.

(2) Evidence of basic professional competence. This would be satisfied by an M.L.S. degree from a program accredited by the American Library Association or by completing Library and Information Science 400, 402, 410, 411, 420, 421, 430, 441, and at least one graduate-level research methodology course such as 205, 240, 241, or 290.

(3) Satisfaction of the same entrance requirements as listed in item 6 under the M.L.S. degree.

(4) A statement of purpose which identifies your proposed area of specialization, accompanied by appropriate evidence of qualifications for pursuing a doctoral program.

(5) A total score of 1,200 or better on the Graduate Record Examination (GRE) Aptitude Test, with at least 500 in each of the two parts (verbal and quantitative). The examination must have been completed within five years prior to application for admission.

(6) Three letters of recommendation.

(7) Interviews with two faculty members of the school.

(8) The application for admission provided in the school's announcement.

While work experience in a library is not a requirement for admission, consideration is given to such experience in evaluation of candidates.

Major Fields or Subdisciplines

You are expected to specialize in a subfield in one of three major fields:

(1) Information storage, organization, and retrieval.

(2) Communication and information transfer.

(3) Libraries and other information organizations.

The school strictly limits the specific subfields which, at any time, are accepted for doctoral work.

Course Requirements

No courses are required for the Ph.D. other than those for admission. However, you normally take Library and Information Science 272 several times, as well as a variety of other courses, both inside and outside the school, relevant to your individual program.

Qualifying Examinations

You are required to pass written qualifying examinations in each of the three areas of study listed above, including coverage of the historical as well as technical aspects. These are scheduled during one week in a quarter. If you fail one of the sections of the three-part examination, it may be repeated. Should you fail two or three sections, all three must be repeated.

After passing the written examinations, you are required to pass the University Oral Qualifying Examination, which is based on your dissertation proposal.

You are encouraged to start work on your proposal while taking courses in preparation for the written qualifying examinations. The proposal should, in most cases, be completed at the same time or soon after the completion of the written examinations, but it must be completed and accepted within two years after passing the written examinations.

The oral examination covers the methodology and feasibility of your research, as well as the depth of your knowledge in the specific field of your proposed dissertation research.

Your doctoral committee decides, after the oral examination, whether the proposal is accepted as written, is accepted with modification, or is not accepted. The committee also decides whether the oral examination has been passed. If the proposal is not accepted, the examination may not be passed.

Dissertation Research and Final Oral Examination

The third formal requirement of the program is that you research, write, and defend a dissertation. The required final oral examination is administered by members of the doctoral committee, who also evaluate the dissertation.

Upper Division Courses

Upper division courses may not be applied toward the M.L.S. degree.

110. Information Resources and Libraries. Prerequisite: sophomore standing or consent of instructor. Not open for credit to M.L.S. students. An introduction to bibliographic and information resources and relevant research methodology, covering both general and specialized materials. Designed to facilitate knowledgeable use of libraries and efficient retrieval of information. Some sections focus on specific subject areas (such as science and technology).

111A-M111E. Ethnic Groups and Their Bibliographies. Introduction to bibliographical and research tools and methods for students with interests in ethnic groups. **111A.** American Indian History and Culture; **111B.** Afro-American History and Culture; **111C.** Latino History and Culture; **111D.** Asian American History and Culture; **M111E.** Jewish History and Culture. (Same as Jewish Studies M111E.) Sections on other ethnic groups may be added. Offered in collaboration with the several centers for ethnic studies. May not be repeated for credit.

124. Information Access Systems. Exploration of new and established channels for providing information to the general public, including videotex, electronic publishing, data bases, information utilities, computer mail and bulletin boards, and conventional library operations. Each information technology studied on the basis of its history, economics, technical characteristics, relation to other media, and potential for social change.

140. Computer Programming for Library Operations and Services. Lecture, one hour; laboratory, three hours. Prior knowledge of computers, programming, or MARC is not required. Introduction to programming languages suitable for librarians, students of language and literature, and similar disciplines. Concepts of text manipulation, file handling, and storage management. Programs and examples emphasize processing of textual materials and bibliographic records (including Library of Congress MARC records). Practical experience with computers in processing such records.

Graduate Courses

Upper division undergraduate students must obtain consent of the instructor to enroll in 200-series courses and consent of the dean of the school to enroll in 400-series courses.

Graduate students from other schools or departments who wish to take courses in the Graduate School of Library and Information Science also must obtain consent of the instructor prior to enrolling.

M202. Folklore Archiving. (Formerly numbered M202A-M202B.) (Same as Folklore M202.) Lecture, two hours; laboratory, two hours. Exploration and analysis of alternative data indexing, storage, and retrieval systems and procedures for folklore archival collections, supplemented by firsthand experience in creating and managing data bases, utilizing both manual and computerized techniques.

205. Historiography of Librarianship, Bibliography, and Information Science. Prerequisite: consent of instructor. Identification of historical source material. Comprehensive and critical review of the historical and biographical literature. Identification of areas in need of research or reinterpretation.

206. Seminar on Library History. Prerequisite: consent of instructor. Special studies in biography and history of librarianship. Relationships to contemporaneous social, cultural, and intellectual history. Research papers on topics identified in course 205.

207. Seminar on International and Comparative Librarianship. Library development and service patterns in European and other countries; comparisons of these with librarianship in the United States. International library organizations and programs.

210. Seminar in Descriptive and Bibliographical Cataloging. Prerequisites: courses 410, 411, or equivalent. Specialized studies in selected areas of descriptive and bibliographical cataloging (e.g., purposes, principles, instructional development, potentialities of automation). May be repeated once.

211. Seminar in Subject Control of Library Materials. Prerequisites: courses 410, 411, or equivalent. Study of selected problems in the design and use of verbal headings and classification systems. Manual and mechanized systems. May be repeated once.

213. Seminar on Indexing. Prerequisite: consent of instructor. Development of basic concepts as reflected in the history of scholarship. Current problems in the transition from individual to large-scale indexing projects. Contribution made by automation. Future of mechanized indexing. Trend toward international standardization. Acceleration systems in indexing.

214. Seminar on Abstracting and Abstracting Services. Prerequisite: consent of instructor. Historical background and current situation, particularly in science and technology. Possibilities and present limitations of automation. Role in coordination of information services. Problems of standardization to achieve international coordination. Influence of changing needs.

221. Bibliography of Science, Engineering, and Technology. Prerequisites: courses 420, 421. Scientific and technical literature, with emphasis on special types of publications, research material, reference and bibliographical aids to the physical sciences. Importance, purpose, and nature of technical literature searches. Flow of information among scientists.

222. Bibliography of the Health and Life Sciences. Prerequisites: courses 420, 421. Literature of the medical and life sciences: reference and bibliographical works; periodicals and other serials; abstracting and indexing services; audiovisuals; notable books in the history of the biomedical sciences; organization of the literature; patterns of publication; applications of technological developments in the control of the biomedical literature.

223. Literature of the Social Sciences. Prerequisites: courses 420, 421. Seminar on the literature of the social sciences, including a review of the classics in the various fields, monumental source collections, periodicals, bibliographies, catalogs, indexes, abstracts, bibliographic and nonbibliographic data bases, etc. Trends in scholarly and popular writing. Interdisciplinary nature of the literature.

224. Literature of the Humanities and Fine Arts. Prerequisites: courses 420, 421. Seminar on the literature of the humanities and fine arts, including a review of the classics in the various fields, comparisons of editions, periodicals, bibliographical apparatus, and reviewing media. Trends in scholarly and popular writing.

M225. Latin American Research Resources. (Same as History M265 and Latin American Studies M200.) Seminar, three hours. General and specialized materials in fields concerned with Latin American studies. Library research techniques provide the experience and competency required for future bibliographic and research sophistication as the basis for enhanced research results.

228. Legal Bibliography. An introduction to the source materials of the law, with emphasis on primary authority, but covering as well secondary authority and the indexes and finding aids which the lawyer and professional law librarian use to gain access to legal information.

229A. Afro-American Bibliography. Prerequisite: consent of instructor. Resources for the study of Afro-American history, culture, and literature. Problems of identification, description, subject analysis. Bibliographical and reference apparatus.

M229B. Africana Bibliography and Research Methods. (Same as African Area Studies M229B.) Problems and techniques of research methodologies related to Africana studies. Emphasis on relevant basic and specialized reference materials, using the full range of available information resources, including library collections of books, serials, and computerized data bases.

230. History of Publishing and the Book Trade. Publishing and book trade history, with particular reference to libraries and book collecting, changing aspects of book production and distribution within the setting of cultural history.

231. Contemporary Publishing and the Distribution of Information. An in-depth examination of the publishing and distribution of information in contemporary society, most particularly as it relates to libraries. Historical, cultural, and economic factors. Creation of library materials (role of the author, editor, agent). Production and manufacturing. Marketing and promotion. Types of publishers. Structure and organization of publishing firms. Economics of the publication industry. Libraries, publishers, and information distribution — the current scene and future prospects.

240. Principles of Information Systems Analysis and Design. Theories and principles of special systems development, including determination of requirements, technical design and evaluation, and internal organization.

241. Measurement and Evaluation of Information Systems and Services. Prerequisite: a course in research methods. Recommended: a course in library automation. Information systems and services from the points of view of their cost and effectiveness in meeting desired objectives. Review of principles of costing. Study of the literature in which measures have been developed to evaluate the effectiveness of document collections, reference and information retrieval services, document delivery systems, networking, and technical services, including circulation, acquisitions, and document description.

242. Information Retrieval Systems. Prerequisite: course 240. Survey of principal vocabularies, methods of file organization, and search strategies in the control of publications in mechanized form.

243. Human/Computer Communication. Survey of issues related to human/computer communication. The role of the computer in society, psychological aspects of user behavior, and applications of interactive computer systems considered for their significance to systems design and user training. Students perform several on-line assignments and write a term paper on one of the topics covered in the course.

245. Data Base Management Systems. Theories, principles, and practicalities of data base systems, including data models, retrieval mechanisms, evaluation methods, and storage, efficiency, and security considerations.

246. Social Aspects of Information-Oriented Society. Analysis of the social evolution of information-oriented societies. Historical factors and current trends explored through discussion of selected international and domestic issues. Implications for information policy.

249. Seminar on Special Topics in Information Science. Prerequisites: course 400 and one from 240, 242, 243, or 405, or consent of instructor. Content varies from quarter to quarter to allow emphasis on specialized topics in information science, such as vocabulary development, file organization, searching procedures, indexing and classification, bibliographic and linguistic text processing, and measures of relevance and system effectiveness. May be repeated for credit with consent of instructor.

251. Reading and Reading Interests. Interests of the common reader, excluding children, with special reference to types of library patrons. Fiction and subject categories, popular and standard: philosophy, religion, social sciences, art, music, literature, history, science. Influence of paperbacks, best sellers, and current interest books on reading habits.

253. Reading Interests of Children. Reading interests and correlative types of literature surveyed with reference to the growth and development of children. Emphasis on the role of the librarian in responding to the needs and abilities of children through individualized reading guidance.

260. Historical Bibliography. Early records and the manuscript period; history of the printed book and of periodical publications and newspapers, including materials, methods, and production. Parallel history of scholarship, the book trade, and book collecting in ancient, medieval, and modern Western civilization.

261. Analytical Bibliography. Recommended (but not prerequisite): course 260 or equivalent in background or experience. History and methods of analytical bibliography, with emphasis on recent scholarship. The book as a physical object and its relationship to the transmission of the text. Emphasis on handpress books. Theories of Bradshaw, Proctor, Greg, McKerrow, Pollard, Esdaile, Bowers, Stevenson, Hinman, McKenzie, and others.

262. Seminar on Historical Bibliography. Prerequisite: course 260 or consent of instructor. Special studies in the history of books and publishing. Topics vary from quarter to quarter to allow emphasis on a particular historical period, geographical area, or other specific aspect, such as a form of publication, genre, or material of production (e.g., paper or type). May be repeated for credit with consent of instructor.

271. Seminar on Intellectual Freedom (2 or 4 units). Prerequisite: consent of instructor. Investigation of the idea of intellectual freedom: historical and constitutional bases; civil liberties and civil rights; censorship and other restraints on freedom of speech, the press, the arts, and access to ideas and information. S/U grading.

272. Research Seminar in Library and Information Science. Prerequisite: doctoral standing or consent of instructor. Emphasis on recent contributions to theory, research, and methodology. May be repeated for credit. S/U grading.

280. Information Seeking Behavior. Study of the factors and influences, both individual and social, associated with human beings needing, using, and acting on information. Topics include information theory, human information processing, information flow among social and occupational groups, and research on information needs and uses.

281. Information Resources for Business (2 units). Prerequisites: courses 420 and 421, or consent of instructor. An introduction to the information needs of the business world. Encyclopedias, directories, yearbooks, indexes, loose-leaf services, government publications, data bases, and other sources of business literature.

282. Records Management (2 units). Principles of records control from creation to disposition. Designed as an overview of records and information management to make students aware of the information processing problems of business and how a coordinated records and information management program can improve information access and utilization.

290. Research Methodology (2 or 4 units). Prerequisite: consent of instructor. Role of research in bibliography, librarianship, and information science. Identification and design of research problems. Historical, statistical, analytical, and descriptive techniques.

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. A teaching apprenticeship under the active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

400. The Information Professions. A historical and comparative overview of the information professions and the functions of libraries and information centers in society. The unity of librarianship and information science, highlighted through discussions of computer applications to information storage and retrieval systems, natural language text processing, and the automation of various library processes.

402. Fundamentals of Bibliography. The development and fundamentals of the several branches of bibliography: historical, physical (analytical or critical, descriptive), enumerative, or systematic; and the organization, control, and elements of bibliographical apparatus. New techniques and tools, theory, methods, and trends in bibliographical research in relationship to librarianship.

405. Automation of Library Processes. Overview of major components of library automation: on-line catalogs, serials, acquisitions, and circulation systems, integrated systems, data conversion, library networks, and developments in new technologies such as local-area networks and optical disks. Emphasis on practical skills and field experience in library automation; liberal use of guest speakers currently involved in automation projects.

410. Descriptive Cataloging. Entry and description of library materials. Constitution, structure, and form of the library catalog. Cataloging services, tools, and procedures. Cataloging rules and their application.

411. Introduction to Subject Access: Alphabetic-Subject and Systematic Indexing. (Formerly numbered 411A, 411B.) Lecture/discussion. Prerequisite: course 410. Overview of the major alphabetic-subject and systematic indexing languages and their use in manual and on-line environments, including theory and application of the Library of Congress subject headings and of the Dewey decimal and Library of Congress classifications.

412. Cataloging and Classification of Nonbook Materials. Prerequisites: courses 410, 411. Problems in cataloging and classification of selected nonbook materials (e.g., films, maps, pictorial works, sound recordings) as separate collections and integrated collections.

413. Introduction to Subject Access: Thesaurus Construction (2 units). (Formerly numbered 411C.) Overview of major thesauri in use in manual and on-line environments. Emphasis on their construction and evaluation and the principles underlying their design.

414. Principles of Indexing and Abstracting (2 units). Basic professional techniques, concepts, and methods of indexing monographs, serials, and specialized materials, of preparing informative and indicative abstracts, and of analyzing secondary abstracting and indexing services as library reference tools.

420. Information Resources and Services I. History, methods, and materials of information services. Types of information services and sources in different types of libraries and information centers. Evaluation of sources and services; standards for reference service; economic aspects of service. Sources include dictionaries, encyclopedias, biographical works, fact books, and atlases.

421. Information Resources and Services II. Prerequisite: course 420. Analysis and evaluation of sources of bibliographic control of information. Systems of national and trade bibliography (U.S. and foreign) serials control, indexing and abstracting services. Introduction to on-line data base searching.

425. Computer-Based Information Resources. Prerequisites: courses 420, 421. Emphasis on the use of reference and resource data bases. File structure and hardware requirements. Analyses of the information needs of scientists and business/labor, coupled with investigations into specific data bases addressing those needs.

429. Printing for Bibliographers. Prerequisites: course 260 or 261, consent of instructor. Printing processes as related to bibliography and librarianship. Discussions, demonstrations, and experiments in design, composition, and presswork, with special emphasis on the 19th-century handpress. S/U grading.

430. Collection Development and Acquisition of Library Materials. Background of publishing and the book trade (new and antiquarian) pertinent to acquisitions departments of public, school, academic, and special libraries. Theory and practice of selecting and ordering books and other materials. Organization and administration of acquisitions departments.

431. Special Problems in the Selection of Materials and Evaluation of Collections. Prerequisite: course 430. Subject and area collecting; special collections and rare books; building new collections. Evaluating and weeding collections. Cooperative collecting — regional, national, and international. Storage centers; subject specialization. Special format materials: films, maps, sound recordings, etc. Copying methods; facsimile reprinting; changing character of research collections.

432. Media Librarianship. Prerequisite: consent of instructor. Films, filmstrips, recordings, tapes, and other nonbook materials in audiovisual collections or instructional media centers. Bibliographical apparatus. Evaluation and collection development. Organization and administration.

433. Serials (2 units). Prerequisites: courses 410, 420. Examination of this form of publication, including problems of recognition, acquisition, cataloging, analysis, and corporate entry. Language barriers, automation, and standardization.

441. Management Issues in Libraries and Other Information Agencies. Prerequisite: consent of instructor. Principles of management, emphasizing management techniques applicable to libraries of various types and to library systems. Special attention to the management of human as well as technical resources.

442. Library Personnel Administration. The basic principles of personnel management. Survey of current personnel practices in libraries; how the basic principles apply or need to be modified to fit the library setting.

444. Information Networks. Problems in the formulation, funding, and operation of information networks. A survey of some of the major networks, including institutional and computer systems.

446. Library Services and Literature for Youth. An overview of the literature and programs which are of interest to young adults (seventh grade and above). Discussion of special problems in working with young people and the psychology of the teenager.

447. Library Space Planning (2 units). Introduction to space planning and programming techniques and how they apply to libraries. Emphasis on use of existing space, but planning new buildings included. Reading blueprints, use of scales, contracts, use of consultants.

461. College, University, and Research Libraries. Organization, administration, collections, facilities, finances, and problems of college and university libraries and their relationships within the institutions of which they are a part. Functions of research libraries and work of their staffs in serving scholars.

463. Public Libraries. The government, organization, and administration of municipal, county, and regional public libraries; developments in the changing patterns of public library service.

464. School Libraries. Elementary and secondary school libraries as multimedia instructional materials centers. Relationships of school libraries to school programs and curricula. Emphasis on administration, planning materials, services, and equipment.

465. Library Services and Programs for Children. Philosophy and objectives of children's services in public and school libraries. Emphasis on services to groups and techniques of program planning which incorporate storytelling, puppetry, nonprint media, etc.

466. Storytelling to Children and Adults, Oral Interpretation of Literature. Practical storytelling to children and adults in various situations, with emphasis on the folktale, and oral interpretation with emphasis on modern imaginative literature. Readings and discussion of the function of folklore and fantasy in literature, society, child development, and library programming. Students are required to choose, learn, and tell stories in class and in a library or community setting and to read stories aloud.

467. Seminar on Current Topics in Public Library Administration. Prerequisite: course 463 or consent of instructor. Special studies in public librarianship, with strong emphasis on techniques and problems of public library administration. Topics, which vary to allow in-depth examination of current issues and individually selected concerns, emphasize those aspects of management which are distinctive of public libraries. Particular attention to funding and budgetary matters, the impact of new technologies, and the marketing of public library services.

470. Special Libraries and Information Centers. Organization, administration, collections, facilities, finances, and problems of special libraries and of special collections within general libraries. Methods of handling nonbook materials. Current trends in documentation and mechanization.

471. Health and Life Sciences Libraries. Organization, administration, services, and problems of health and life sciences libraries; relationships with institutions of which they are a part and with the community. Several field trips.

472. Law Librarianship. An introduction to the profession of law librarianship; the organization of the professional associations and their activities; the character and distribution of law libraries throughout the United States; the distinctive characteristics of law library problems and their solutions.

473. Government Information. Introduction to the nature and scope of government information promulgated by the federal government, as well as by state, municipal, international, and foreign governments. Problem-oriented approach.

485. American Archives and Manuscripts. Prerequisite: consent of instructor. Identification, description, subject analysis, and organization of records contained in archives and manuscript collections. Administration. User requirements. Problems of acquisition, legal title, literary property, preservation, accessibility, and use.

486. Issues and Problems in Preservation of Library Materials (2 units). (Formerly numbered 487A.) Provides information for administration of conservation programs and decision making in the preservation of library materials. Topics include history of paper production and book structure in relation to the present endangerment of library materials; past and current practices in library storage, retrieval, and use; environmental controls, housekeeping; binding standards; collection processing and handling; rare book curatorship; microfilming; cooperative conservation programs; conservation ethics; disaster preparedness and recovery.

487A-487Z. Special Studies in Library and Information Science (2 to 4 units). Examination of specialized topics of professional interest. Topics and units vary according to subject and may include conservation of materials, business information sources, problems in library management, current issues in cataloging, etc.:

487C. Advanced Legal Bibliography. Examination of legal materials and research techniques not covered in course 228, including current and historical English legal materials, foreign and international law sources, administrative law materials, and special subject areas such as taxation, labor, securities, antitrust. Special emphasis on legislative history sources and research techniques and computer-assisted legal research. New legal research techniques and tools.

487D. Seminar on Current Issues in Librarianship. Prerequisite: consent of instructor. Identification, analysis, and discussion of critical issues currently facing the profession. May be repeated once.

487F. Special Studies in Children's Literature. A historical perspective that compares and contrasts aspects of children's literature in Britain and the United States.

489. Library Service to Special Population Groups. Prerequisite: consent of instructor. Special problems encountered by school, public, academic, special, and research libraries in meeting the needs of minority groups in urban and rural settings. Library service to the aging, the physically handicapped, and the institutionalized population.

490. Professional Communication (2 units). Designed to increase librarians' sensitivity to language in different contexts. Exploration of the range of stylistic and syntactic options open to students for presenting proposals, reports, and research results and covering all aspects of professional communications: written, oral, and visual, including computer-generated. S/U grading.

491. Interpersonal Communication Issues in Library Systems. Examination of interpersonal communication patterns in library management and staff relations, in resource sharing, and in providing information services. Emphasis on relationships within an organizational environment and on effective communication styles in decision making, managing conflict, and implementing change.

495. Training and Supervision of Teaching Assistants (2 units). Hours to be arranged (20 hours per quarter). Prerequisite: appointment as a teaching assistant or Extension Division instructor. Orientation, preparation, and supervision of graduate students who are involved in the teaching of an undergraduate or Extension course. Syllabus revision and materials preparation. Classroom observation. S/U grading.

497. Fieldwork in Libraries or Information Organizations (4 or 8 units). Supervised field experience in an approved library or information organization. Concentration must be on managerial or other professional problems of the site. Students spend full time in the field for most of the period. S/U grading.

498. UCLA Internship. Prerequisite: consent of instructor. Supervised professional training in one or more departments or units of the UCLA Library System or other University information centers. Minimum of 120 hours per quarter, including weekly critiques of bibliographical, administrative, and service problems. May be repeated twice. S/U grading.

499. Off-Campus Internship. Prerequisite: consent of instructor. Supervised professional training in a library or information center approved by the faculty of the school. Minimum of 120 hours per quarter, including weekly critiques of bibliographical, administrative, and service problems. May be repeated twice. S/U grading.

596. Directed Individual Study or Research (2 to 8 units). Prerequisite: consent of instructor. Directed special studies in the fields of bibliography, librarianship, and information science. Variable conference time depending on nature of study or complexity of research. S/U grading.

597. Directed Studies for Ph.D. Qualifying Examinations (2 to 12 units). S/U grading.

599. Ph.D. Research and Writing (2 to 12 units). S/U grading.

Graduate School of Management

J. Clayburn La Force, Dean

12

Because the world is changing rapidly and unpredictably, today's professional manager must learn the concepts and principles of management that make adjustments to new conditions possible. At the UCLA Graduate School of Management (GSM), consistently ranked among the best in the nation, people prepare to become first-rate managers with specialized skills and a broad understanding of the general economic, business, and managerial environment. This background enables them to become effective and efficient directors of organizations and people in the private, public, and not-for-profit sectors.

GSM's specific objectives, then, are to train professionals who have these qualities, to offer the business community a wide range of continuing education programs providing state-of-the-art information in a variety of fields, and to advance the art and science of management by engaging in, and educating scholars capable of conducting, basic research designed to study fundamental issues and implement a new knowledge.

Students come to GSM from a variety of professional and educational backgrounds; their career goals are as diverse as the business and nonprofit communities themselves. Whether they choose to pursue the professional M.B.A., the academic M.S., or a Ph.D. in Management, they will graduate with a broad understanding of people and organizations and with a sound technical background in the economic and mathematical concepts of management planning and decision making.

Graduate School of Management

3250 Graduate School of Management, (213) 825-7935

Professors

Robert B. Andrews, Ph.D. *(Production and Operations Management)*
John W. Buckley, Ph.D. *(Arthur Young Professor of Accounting)*
Elwood S. Buffa, Ph.D. *(Times Mirror Professor of Management Strategy and Policy)*
Fred E. Case, D.B.A. *(Urban Land Economics)*
Samuel A. Culbert, Ph.D. *(Behavioral and Organizational Science)*
Louis E. Davis, M.S. *(Behavioral and Organizational Science)*
David K. Eiteman, Ph.D. *(Finance)*
Donald Erlenkotter, Ph.D. *(Management Science; Production and Operations Management)*
Eric G. Flamholtz, Ph.D. *(Accounting-Information Systems; Human Resource Management and Industrial Relations)*
Walter A. Fogel, Ph.D. *(Human Resource Management and Industrial Relations)*
Arthur M. Geoffrion, Ph.D. *(Management Science)*
Glenn W. Graves, Ph.D. *(Management Science)*
Martin Greenberger, Ph.D. *(IBM Professor of Computers and Information Systems)*
Alfred E. Hofflander, Ph.D. *(Finance)*
John Hutchinson, Ph.D. *(Human Resource Management and Industrial Relations)*
Harold H. Kassarjian, Ph.D. *(Marketing)*
Larry J. Kimbell, Ph.D. *(Business Economics)*
Paul Kircher, Ph.D., C.P.A. *(Accounting-Information Systems)*
Archie Kleingartner, Ph.D. *(Human Resource Management and Industrial Relations)*
J. Clayburn La Force, Ph.D. *(Business Economics), Dean*
Bennet P. Lientz, Ph.D. *(Computers and Information Systems)*
Steven A. Lippman, Ph.D. *(Management Science)*
James B. MacQueen, Ph.D. *(Management Science)*
Robert Hal Mason, Ph.D. *(Organization and Strategic Studies)*
Fred Massarik, Ph.D. *(Behavioral and Organizational Science)*
David Mayers, Ph.D. *(Finance)*
John J. McDonough, D.B.A. *(Behavioral and Organizational Science; Accounting-Information Systems)*
Bill McKelvey, Ph.D. *(Organization and Strategic Studies)*
Bruce Miller, Ph.D. *(Accounting-Information Systems)*
Daniel J.B. Mitchell, Ph.D. *(Human Resource Management and Industrial Relations)*
Frank G. Mittelbach, M.A. *(Urban Land Economics)*
Rosser T. Nelson, Ph.D. *(Management Science; Production and Operations Management)*
Alfred Nicols, Ph.D. *(Business Economics)*
William G. Ouchi, D.Litt., Ph.D. *(Organization and Strategic Studies)*
Anthony P. Raia, Ph.D. *(Behavioral and Organizational Science; Organization and Strategic Studies)*
Richard W. Roll, Ph.D. *(Allstate Professor of Insurance and Finance)*
Rakesh K. Sarin, Ph.D. *(Production and Operations Management)*
John P. Shelton, Ph.D. *(Finance)*
R. Clay Sprowls, Ph.D. *(Computers and Information Systems)*
J. Fred Weston, Ph.D. *(Warren C. Cordner Professor of Money and Financial Markets; Business Economics; Finance)*
Harold M. Williams, J.D.
James Q. Wilson, Ph.D. *(James A. Collins Professor of Management; Organization and Strategic Studies)*

Emeritus Professors

Armen Alchian, Ph.D., *Recalled*
William F. Brown, Ph.D.
John C. Clendenin, Ph.D.
Ira N. Frisbee, M.B.A., C.P.A., LL.D.
Leo Grebler, Ph.D.
James R. Jackson, Ph.D.
Raymond J. Jessen, Ph.D.
Erwin M. Keithley, Ed.D.
Frederic Meyers, Ph.D.
Frank E. Norton, Ph.D.
George W. Robbins, M.B.A., *Emeritus Dean*
Harry Simons, M.A., C.P.A.
George A. Steiner, Ph.D., Litt.D., *Recalled (Emeritus Harry and Elsa Kunin Professor of Business and Society)*
Robert Tannenbaum, Ph.D., *Recalled*
Robert M. Williams, Ph.D.

Associate Professors

Lecturer

Warren H. Schmidt, Ph.D., *Emeritus Senior*

Adjunct Professor

John B. Farrell, M.B.A., C.P.A.

Adjunct Associate Professors

Ichak Adizes, Ph.D.
Marvin M. May, Ph.D.

Adjunct Assistant Professors

Jason L. Frand, Ph.D.
Ernest J. Scalberg, Ph.D., *Assistant Dean*

Adjunct and Visiting Lecturers

Janis S. Forman, Ph.D., *Adjunct, Management Communications Program Director*
Gordon Klein, J.D., *Visiting*
Linda F. Newton, M.B.A., *Adjunct, Management Field Studies Program Director*
David Ravetch, M.A., *Visiting*
Edward V. Sedgwick, Ph.D., *Visiting*
Dennis Sinclair, Ph.D., *Visiting*
Victor C. Tabbush, Ph.D., *Adjunct, Associate Dean*

The UCLA Graduate School of Management offers a variety of programs leading to graduate degrees at the master's and doctoral levels. These include both an academic (M.S.) and professional (M.B.A.) master's, as well as a 21-month Executive M.B.A. Program designed for working managers who are moving from specialized areas into general management. A Ph.D. in Management is also offered, as are a certificate Executive Program and research conferences and seminars for experienced managers. For information about these programs, call 825-7935.

The school does not offer an undergraduate major in management; however, several undergraduate courses in management are offered. Enrollment in Management 120, 122, 124, 130, 133, and 140 is open only to students in the Economics/Business program (see Chapter 5 for details on this program). Enrollment in other courses, although open to all University students who have completed the prerequisites, is limited, and non-GSM students are advised not to count on gaining admission to them in order to meet the requirements of other departments or programs.

Degrees Offered

Master of Business Administration (M.B.A.)
Master of Science (M.S.) in Management
Doctor of Philosophy (Ph.D.) in Management

Master of Business Administration

The two-year, full-time program leading to the Master of Business Administration (M.B.A.) degree is designed to prepare managers for business enterprises and for public/not-for-profit organizations. A part-time version of the program is available for a limited number of fully employed students, who must be able to attend classes scheduled between the hours of 4 and 10 p.m. at least two days a week.

The program aims to develop general management perspectives and knowledge while imparting expertise in student-selected fields of specialization. Along with mastery of subject matter, the M.B.A. program stresses integrating the lessons of various academic disciplines and functional fields, translating theory into practice, questioning the past and planning for the future, and self-guided learning as a continuing basis for effective managerial work.

Admission

Although no specific undergraduate major is required for entrance, you must complete elementary algebra and differential calculus before entering the M.B.A. program. You are required to take the Graduate Management Admission Test (GMAT). Any questions about the GMAT should be addressed to the Educational Testing Service, Box 966, Princeton, NJ 08541, (609) 883-8519 (the local phone number in Los Angeles is 254-5236).

International applicants who hold degrees from universities or colleges where English is not the primary language are required to take the Test of English as a Foreign Language (TOEFL). Refer to "Proficiency in English" under "Graduate Admission" in Chapter 3 for further information.

You must complete the M.B.A. Application, which includes the application for admission to graduate standing. Admission is for the Fall Quarter only; completed applications, with full documentation, must be filed with GSM by March 14. Applicants for the arts management program must specify their wish to be considered for admission in that field.

Consideration is given to your academic record; score on the GMAT and, for applicants whose native language is not English, score on the TOEFL; potential for management as evidenced by work experience and community, extracurricular, or other experience; and letters of recommendation. Preference is given to applicants who have had full-time management-related work experience since completing their bachelors' degrees. Students admitted directly from baccalaureate programs who choose to work before entering graduate school will have their admission honored for three years.

Small group information sessions are offered by the M.B.A. Admissions Office several days a week from July through mid-March on an appointment basis. Call 825-8874 to arrange attendance.

Applications and information about the M.B.A. program are available in the M.B.A. Program Office, 3371 Graduate School of Management, UCLA, Los Angeles, CA 90024.

Areas of Study

Accounting/information systems; behavioral and organizational science; business economics; computers and information systems; finance; human resource management and industrial relations; management science; marketing; organization and strategic studies; production and operations management; urban land economics. Interdisciplinary programs are offered in arts management, international and comparative management, and public/not-for-profit management. Programs in entrepreneurship and entertainment management are also available.

Course Requirements

The four required elements of the M.B.A. program are the nucleus, the management core, the area electives, and free electives, totaling at least 24 courses (96 units). The nucleus develops professional problem-solving and decision-making skills through experiences ranging from laboratory simulations to consulting projects in ongoing organizations. Management core subjects cover the fundamentals of disciplines which underlie the practice of management. The area of study (area electives) provides specialized knowledge and skills for a particular field of management work. Free electives permit students to pursue additional subjects of personal interest.

Nucleus: The nucleus is a series of three required courses that develops those interpersonal and decision-making skills essential to the practice of management. The first-year nucleus course (Management 440) utilizes experiential teaching methods to guide students in defining problem-solving skills from a personal perspective.

The second-year portion of the nucleus consists of a two-quarter management field study project in which teams of four or five students serve as management consultants to business firms or other organizations. Conclusions are summarized in a report which serves in lieu of a thesis or comprehensive final examination for the members of the team. The field study is judged by standards applicable to professional management consulting.

Management Core: The management core consists of 10 courses on subjects basic to the practice of management. It is divided into three parts: five courses in management, including Management 402, 403, plus three courses from 404, 405, 406, 407; three courses in functional fields selected from 408, 409, 410, 411; and two courses in management processes (Management 412, 420).

Area Electives: These focus on one or more fields of specialization within the broad realm of management. Students design programs of study to meet their specific academic needs and professional goals. Eight area electives are required, and you are encouraged to emphasize two or more areas of study.

Free Electives: You must select at least three free electives, subject only to general University regulations. These electives normally must be taken while enrolled in the program. They may support or complement the remainder of your program of study.

A maximum of two four-unit 596 courses may be applied toward the 96-unit requirement.

Extracurricular Activities

A variety of student organizations promote both professional competence in many areas and the development of contacts among students, alumni, faculty, and business executives. Many opportunities are presented for students to become involved in planning events with executives in both the public and private sectors, to participate in day-long programs at various organizations, and to meet with company representatives and alumni. Extracurricular activities are an integral part of life at GSM, and all students are encouraged to participate.

Concurrent Degree Programs

J.D./M.B.A.

The Graduate School of Management and the School of Law offer a concurrent program which enables students to prepare for careers where law and management overlap and where understanding of both fields is necessary. Examples of such areas would include public service, international trade, industrial relations, corporate law, and specialized areas

of management consulting. The program makes it possible to earn the J.D. and M.B.A. in four academic years. Students interested in such a program should apply to both schools simultaneously.

M.S.-Computer Science/M.B.A.

The Graduate School of Management and the Department of Computer Science in the School of Engineering and Applied Science offer a concurrent degree program which enables students to complete requirements for the M.S. in Computer Science and the M.B.A. in three academic years. Students should request all application materials from the M.B.A. Admissions Office, Graduate School of Management.

M.L.S./M.B.A.

A concurrent degree program jointly sponsored by the Graduate School of Management and the Graduate School of Library and Information Science, this specialization is designed to provide an integrated set of courses for students who seek careers which draw on general and specialized skills in the two professional fields. Students should request all application materials from the M.B.A. Admissions Office, Graduate School of Management.

M.P.H./M.B.A.

The Graduate School of Management and the School of Public Health, Division of Health Services, offer a three-year concurrent degree program designed for students who desire a management career in health care and related fields and who wish in-depth professional preparation for such a career. The program reflects the combined interest of employers, faculty, and students who have recognized the increasing challenges facing managers in the health care industry and the need for individuals who are skilled in dealing with these challenges. Students should request all application materials from the M.B.A. Admissions Office, Graduate School of Management.

M.A.-Latin American Studies/ M.B.A.

The Graduate School of Management and the Latin American Studies Program jointly sponsor a three-year concurrent degree program designed for individuals preparing for careers in international management with a special focus on the Latin American region. Establishment of the program was predicated on the belief that individuals employed in the area of international business and management are better equipped to meet the challenges of their employment with complementary preparation in language and regional studies. Students should request application materials from the M.B.A. Admissions Office and the Latin American Studies Program.

M.A.-Architecture/Urban Planning/M.B.A.

The Graduate School of Management and the Graduate School of Architecture and Urban Planning offer a three-year concurrent degree program designed for students who seek careers which draw on general and specialized skills in urban planning and management. By providing knowledge of the workings of both the private and public sectors, the program enables individuals who have acquired these skills to move easily between careers in private industry and public service. Students should request all application materials from the M.B.A. Admissions Office, Graduate School of Management.

Executive M.B.A. Program

Designed for mid-career managers with strong records of achievement, the Executive M.B.A. Program enables executives to obtain high quality advanced management education while continuing in their full professional roles. The program is limited to 50 participants with superior academic records and a minimum of eight years of combined work and managerial experience.

The intensive 22-month course of study leads to a regular M.B.A. degree. The emphasis is on general management training; increased competence in management specialties, organizational and interpersonal skills; and sophisticated understanding of the integration of businesses and their environments.

Classes are held at GSM on alternating Fridays and Saturdays, with three- to five-day residential sessions held at conference sites at the beginning, middle, and end of the program. Further information and application materials may be obtained by writing to the Assistant Dean, Executive M.B.A. Program, 4383 Graduate School of Management, UCLA, Los Angeles, CA 90024.

M.S./Ph.D. Programs

Admission

All applicants are required to take the Graduate Management Admission Test (GMAT) or the Graduate Record Examination (GRE). International applicants who hold a degree from a non-English-speaking university are required to take the Test of English as a Foreign Language (TOEFL). Refer to "Proficiency in English" under "Graduate Admission" in Chapter 3 for further information. Three letters of recommendation must be submitted with the completed application. All application materials, including transcripts, should be sent directly to the Doctoral Office, 3379 Graduate School of Management, UCLA, Los Angeles, CA 90024.

Applications are accepted for Fall Quarter admission only; the deadline for submission of applications and complete documentation is January 31.

Program information and application materials may be obtained from the Doctoral Office.

All applicants to the M.S. or Ph.D. program are strongly urged to arrange an interview with at least one faculty member of their proposed area of concentration or major field area. The interview should take place before February 1.

Master of Science Degree

The academic master's program is a full-time program which leads to the Master of Science degree in Management. Some students enter the program with the goal of eventual acceptance into the doctoral program; for others, the M.S. is a terminal degree. In either case, the program's emphasis is on advanced specialized training and the development of research capability.

Major Fields or Specializations

Business economics, management science.

Course Requirements

Business Economics: A maximum of 16 courses may be required. It is possible to waive the seven prerequisite courses on the basis of prior coursework. Nine graduate courses (the required and elective major field courses plus four units of Management 598) are required and cannot be waived.

(1) Prerequisites (seven courses): Management 200A, 200B, 213A, 400, 405, 406, 408.

(2) Specialization (eight courses; deviations may be approved by the chair of the business economics academic unit): Five required courses from Management 201A, 201B, 201C, 202B, 202C, 205A, plus three electives (illustrative courses and course sequences) selected from one of the following groups: *industrial organization* — Management 202A, 202D; M203A, M203B, M203C; 231A, 231B, 231C; Economics 204A-204B-204C; 271, 272; *techniques for analysis* — Economics 245A-245B-245C; 247, 248; Management 240A, 240B; *economic forecasting* — Management 201B, 201C, 201D; 205B, 205C; 230.

(3) Master's Thesis (one course): Four units of Management 598.

Management Science: A maximum of 16 courses may be required. The four prerequisite courses and three managerial core course requirements may be waived on the basis of prior coursework. Nine graduate courses (methodological core, depth field, and four units of Management 598) are required and cannot be waived.

(1) Prerequisites (four courses): Mathematics 32B, 152A-152B, and two quarters of computer programming.

(2) Managerial Core (three courses): Management 403, 405, 408.

(3) Methodological Core (five courses; deviations may be approved by the chair of the management science academic unit): Management M203A, 210A, 210B, 210C, 216A.

(4) Depth Field: Three courses which support your thesis research.

(5) Master's Thesis (one course): Four units of Management 598.

Four units of course 596 may be applied toward the minimum graduate course requirement.

Thesis Plan

A thesis is required for the Master of Science degree. Students generally establish a thesis committee during their fifth quarter. Plans for the thesis should be presented to the committee for approval at the beginning of the sixth quarter.

Ph.D. Degree

The doctoral program is a research-oriented degree program which leads to the Ph.D. in Management. The program includes intensive training in research methods applicable to problems of organizations in the public and private sectors. It prepares students for careers in university teaching and research or as staff specialists in business firms and other organizations. The program offers students substantial opportunities to discover their own, unique scholarly focus and competence.

Major Fields

Accounting/information systems; behavioral and organizational science; business economics; computers and information systems; finance; human resources management and industrial relations; international and comparative management; management science; marketing; organization and strategic studies; production and operations management; urban land economics.

Course Requirements

The research preparation requirement consists of two parts: (1) a course requirement and (2) a research paper. You are required to take five research courses which are not part of the major field area. These courses must be completed before taking the oral qualifying examination and may not be waived by prior graduate work. The research paper must be submitted to and accepted by the research paper committee no later than the Spring Quarter of your third year of study.

The breadth requirement consists of eight courses which are clearly outside your major field area. You should use these courses to become more knowledgeable about the basic elements of several other management disciplines and functional areas or to define a minor field or research and teaching proficiency. Three of these courses may be waived by prior coursework. They must be completed before taking the oral qualifying examination.

There is no formal major field course requirement. Students, in consultation with a major field adviser, design a course of study which prepares them to pass the major field examination.

Qualifying Examinations

Proficiency in the major field area is determined by a written examination, supplemented in some areas by an oral examination. The major field examination must be passed by the end of the Spring Quarter of your third year of study.

You are required to present the substance of your dissertation proposal in a formal seminar to which all Ph.D. students and faculty are invited.

When all the preliminary requirements have been fulfilled (coursework, research paper, major field examination, seminar), the University Oral Qualifying Examination can be held; if passed, you are advanced to candidacy. The oral qualifying examination must be passed within four and one-half years of the date of entrance into the program.

Candidate in Philosophy Degree

You are eligible to receive the C.Phil. degree on advancement to candidacy for the Ph.D.

Final Oral Examination

The school requires that students take a final oral examination; this requirement may be waived only under exceptional circumstances.

Lower Division Courses

1A-1B. Elementary Accounting. Prerequisite: sophomore standing. Course 1A is prerequisite to 1B. An introduction to accounting theory and practice. The recording, analyzing, and summarizing procedures used in preparing balance sheets and income statements in the first quarter. Payroll and tax accounting, partnership and corporation accounts, manufacturing and cost accounting, and supplementary statements in the second quarter.

Upper Division Courses

108. Business Law. The essentials of contracts. An examination of the legal forms of business organizations, especially partnerships and corporations. Introduction to federal securities law and antitrust.

120. Intermediate Accounting. Prerequisites: courses 1A-1B or consent of instructor. The preparation of the principal accounting statements. Recording, valuation, and presentation of cash, temporary investments, receivables, inventories, investments, plant and equipment, intangibles, current obligations, long-term debt, paid-in capital, and retained earnings. Statement analysis. Statement of application of funds.

122. Cost Accounting. Prerequisites: course 1B, Economics 40, or equivalent. The nature, objectives, and procedures of cost accounting and control; job costing and process costing; accounting for manufacturing overhead; cost budgeting; cost reports; joint-product costing; distribution cost; standard costs; differential cost analysis; profit-volume relationships and break-even analysis.

124. Advanced Accounting. Prerequisite: course 122. Partnerships and joint ventures; installment sales and consignment sales; home office and branch relationships; corporate combinations; the preparation of consolidated statements; foreign branches and subsidiaries; receiverships; estates and trusts; governmental units; actuarial science.

130. Business Finance. Lecture, three hours; discussion, one hour. Prerequisites: course 120, Economics 40, or equivalent. A study of the forms and sources of financing business firms large and small, corporate and noncorporate. Emphasis on financial planning and developing judgment in formulating decisions on financial problems. Financial problems considered in their social, legal, and economic effects. Mr. Andersen

133. Investment Principles and Policies. Prerequisite: course 130. Principles underlying investment analysis and policy; salient characteristics of governmental and corporate securities; policies of investment companies and investing institutions; relation of investment policy to money markets and business fluctuations; security price-making forces; construction of personal investment programs. Mr. Shelton

140. Elements of Production and Operations Research. Prerequisites: Mathematics 3A, 3B, 3C, 3E, Economics 40, or equivalent. Principles and decision analysis related to the effective utilization of the factors of production in manufacturing and nonmanufacturing activities. Analytical models and methods for allocation, transportation, inventories, replacement, scheduling, and facilities design. Mr. Erlenkotter and the Staff

150. Elements of Industrial Relations. Principles and methods of effectively utilizing human resources in organizations. The relationship between social, economic, and other environmental factors and current problems in industrial relations. Mr. Hutchinson

175. Elements of Real Estate and Urban Land Economics. An examination of business decision making as related to logical forces shaping cities and influencing real estate market functions and land uses. Emphasis on decision making as it relates to appraising, building, financing, managing, marketing, and using urban property. Mr. Mittelbach

182. Leadership Principles and Practice. Knowledge and skills leading to effectiveness in interpersonal relations. Understanding oneself as a leader and others as individuals and as members of working groups. Understanding of group process, including group leadership. Lectures and "sensitivity training" laboratory.

190. Management Theory and Policy. Prerequisite: course 130. A study of the basic concepts and theory of management. Emphasis on an operational analysis of the manager's role in all types of organizations. Management issues in the areas of planning, organizing, staffing, directing, and controlling. Mr. Carrabino and the Staff

197. Special Topics in Management. Topics of special interest to undergraduate students. Specific subjects may vary each quarter depending on particular interest of instructors or students. May be repeated for credit.

Graduate Courses

Graduate courses are ordinarily open to students admitted in graduate standing. As a condition for enrollment, you must submit to the instructor in charge of the course evidence of satisfactory preparation for the work proposed.

200A. Techniques of Business Economics Analysis: Marginalist Models. Seminar, three hours. Prerequisite: course 405 or consent of instructor. Contemporary business economic principles of resource allocation and the price system. Classical optimization and comparative static techniques, applied to the models of consumer choice and firm and general production-exchange equilibrium models.
Mr. Osborne

200B. Techniques of Business Economic Analysis: Econometrics. Prerequisite: consent of instructor. Standard topics in applied econometric modeling. The assumptions underlying the classical normal linear regression model, special problems in application, and interpretation of results. Practical applications extensively developed in student projects.
Mr. Kimbell

201A. Business Forecasting. Seminar, three hours. Prerequisites: courses 402, 406. The role of business forecasting in managerial planning. Principles and methods of forecasting. Evaluation of the reliability of existing forecasting techniques. Short- and long-term forecasting of industry, regional, and national business trends.

201B. Industry Forecasting. Prerequisite: course 201A. Evaluation of various methooologies found useful in preparing industry forecasts; differences between short- and long-range forecasting techniques, etc.

201C. Regional Economic Forecasting. Prerequisite: course 201A. Forecasting of economic activity in a region, emphasizing special problems such as population and industry migration; the effects of external forces on the regional economy.

201D. Economic Policy and Business Environment. Prerequisite: consent of instructor. Analysis of economic policies shaping the business policy: stabilizing policy instruments; structural policies for efficiency and progress; policy needs for the future. Policy formation and administration, as well as design.

202A. Economic Theories of Business Behavior: Marginal, Managerial, and Behavioral. Prerequisite: course 200A. The economic behavior of the firm and firm groups. Theories extending from those which retain marginal analysis to treat alternative corporate objectives to those viewing the firm as an adaptive mechanism with limited cognitive and information processing capabilities.

202B. Principles of Industrial Organization. Discussion, three hours. Prerequisite: course 405. Application of the principles of microeconomics to actual firm behavior to better understand various firms' strategies for success. Topics include horizontal and vertical integration, mergers, the role of advertising, and price discrimination.
Mr. Granfield, Mr. Weston

202C. Empirical Studies in Industrial Organization. Prerequisite: course 202B. Analyses of factors influencing the size of industries, their size distribution, and the conditions of entry and exit. Implications of such industry characteristics, derived for decisions having to do with firm output, prices, advertising, and research/development. Mr. Weston

202D. The Organization of Industry and Business Policy. Prerequisite: consent of instructor. Analysis of economic aspects of long-range planning of firms with respect to horizontal expansion, vertical integration, and diversification, especially the review of statutory and legal decisions affecting internal and external expansion policies.

M203A. Economics of Decision. (Same as Economics M203A.) Prerequisites: rudiments of economic theory, calculus, probability, and statistics. Norms and facts of decision making in the household, business, and government. Consistent behavior in terms of personal utilities and probabilities. Multiattribute value theory. Departures from consistency: descriptive theories of behavior and resulting models.
Mr. Erlenkotter, Mr. Sarin

M203B. Economics of Information. (Same as Economics M203B.) Discussion, three hours. Prerequisites: rudiments of economic theory of the firm, calculus, probability, and statistics; course M203A or consent of instructor. Optimal decision and information rules. Risk aversion, stochastic dominance, and their impact on economic decisions in a stochastic environment. Mr. Lippman

M203C. Economics of Organization. (Same as Economics M203C.) Prerequisites: courses M203A, M203B. Rational models of teams. Relation to the theory of games.

205A. International Business Economics. Prerequisites: courses 405 and 406, or consent of instructor. The international business environment, international economic institutions, national and regional trade policies and developments, trends in foreign markets, international monetary problems studied for their influence on the organization and operation of the international corporation. Mr. Mason, Mr. Mitchell

205B. Comparative Market Structure and Competition. Prerequisite: course 205A or consent of instructor. A comparative study of public policies toward competition, market structures, and competitive practices in key industries in selected countries.

205C. Business Forecasting for Foreign Economies. Prerequisite: course 201A or consent of instructor. Forecasting changes in business activity, population, industrial structure, productivity, Gross National Product and its components for selected countries.

205D. The Management of Economic Development in Latin America. Discussion, three hours. Prerequisite: course 405 or Economics 1 or 2. An introduction to economic development in Latin America. The problem of population, human resources development, agriculture, and land reform. Various industrialization strategies, the role of foreign trade, foreign investment, and economic integration in the area's development. Role of inflation and financial intermediation in capital development.

207A. Resource Administration of Nonmarket Activities. Seminar, three hours. Prerequisite: course 405 or consent of instructor. Examination of the behavior of managers in the profit vs. not-for-profit sectors to determine the critical variables that explain the observed differences in behavior. Use of the methodology of microeconomics, particularly utility maximization. Mr. Granfield

207B. Public Services and Private Functions. Prerequisites: courses 405 and 406, or consent of instructor. Sources and uses of federal, state, and local revenues and their impacts on public and private resource allocations. Examination of the proper roles of government and the private sector in the financing and provision of public goods and services.

208. Selected Topics in Business Economics. Prerequisite: consent of instructor. Special topics in business economics. Current developments in theory or practice in business economics. May be repeated for credit.

210A. Mathematical Programming. Discussion, three hours. Prerequisite: linear algebra. A comprehensive development of the theory and computational methods of linear programming, with applications to business and related disciplinary areas.
Mr. Graves

210B. Applied Stochastic Processes. Discussion, three hours. Prerequisite: Mathematics 150A or Electrical Engineering 131A. Fundamentals of stochastic processes, including Poisson processes, renewal theory, and Markov chains. Sequential stochastic (usually Markovian) decision processes in discrete and continuous time. Emphasis on problem formulation and the characterization and computations of optimal policies, often via dynamic programming; applications to inventory, queueing, maintenance, reliability, and replacement problems.
Mr. Lippman, Mr. Mamer

210C. Network Flows and Integer Programming. Prerequisite: course 210A. Theory and techniques of discrete and network-related mathematical programming models in management science. Applications to various allocation, coordination, operating, and planning problems. Emphasis on fundamentals, efficient computational methods, and the keys to successful practical applications. Mr. Geoffrion

211A. Nonlinear Mathematical Programming. Prerequisites: course 210A, Mathematics 32A, or equivalent. Theory, methods, and application of the optimization of nonlinear systems. Review of classical optimization methods; optimality and duality theory for convex programs; main computational approaches to convex programming; survey of current computer codes and computational experience.
Mr. Geoffrion, Mr. Graves

211B. Large-Scale Mathematical Programming. Prerequisite: course 210A or equivalent. Theory and computational methods for optimizing large-scale linear and nonlinear programs. Exploitation of special structures with combinatorial, dynamic, multidivisional, and stochastic aspects to obtain practical solution procedures in spite of large numbers of variables and/or constraints. Mr. Geoffrion, Mr. Graves

212A. Management Science Models I. Prerequisites: course 407, Mathematics 31B. A broad survey of deterministic models, how to solve them, and their application in the management sciences. Solution techniques include linear programming, network optimization, integer programming, nonlinear programming, and dynamic programming. Application areas include allocation, corporate planning, distribution, finance, operations management, production, and project management.
Mr. Erlenkotter, Mr. Geoffrion

212B. Management Science Models II. Prerequisites: course 212A, Mathematics 32A, or equivalent. A broad survey of nonlinear, time-staged, and probabilistic models for managerial decision making. Application areas include finance, marketing, production, facilities design, and energy systems.
Mr. Erlenkotter, Mr. Mamer

212C. Management Science Models III. Prerequisites: courses 212A, 212B. In-depth reviews of actual management science applications. Emphasis on the professional skills needed for successful practical applications.

213A. Intermediate Probability and Statistics. Prerequisite: course 402 or equivalent. An introduction to probability theory and hypothesis testing as applied to management. SAS programs used in this course and its sequels. Mr. Mamer

213B. Statistical Methods in Management. Prerequisite: course 213A or consent of instructor. An introduction to parameter and interval estimation, simple and multiple linear regression and correlation, fixed, random, and mixed effects analysis of variance models and nonparametric statistics, all as they apply to management studies. Mr. Cooper, Mr. Hanssens

213C. Introduction to Multivariate Analysis. Prerequisite: course 213B or consent of instructor. An introduction to the use of multivariate models in management research to organize and represent information; interpretation of coefficients from multivariate exploratory models (e.g., principal axes and factor analysis models); a survey of multivariate statistical procedures (e.g., multiple discriminant analysis, multivariate analysis of variance, canonical correlation, and confirmatory factor models).
Mr. Cooper, Mr. Hanssens

214B. Behavioral Science Models. Prerequisite: consent of instructor. Formulation, analysis, and interpretation of mathematical models in the behavioral sciences. Emphasis on stochastic process models for aspects of individual and group behavior such as learning, problem solving, classification, communication, bargaining, and social exchange systems.
Mr. MacQueen

215D. Time-Series Analysis. Prerequisite: course 213B or consent of instructor. Univariate Box-Jenkins analysis, transfer functions, and intervention analysis. Relationship between econometric and time-series models, Granger causality, multiple time-series analysis. Numerous computer applications in modeling and forecasting. Mr. Hanssens

215E. Statistical Design of Surveys. Prerequisite: course 213B or equivalent. Mathematical theory and practices of statistical survey design and analysis.

216A. Simulation of Operational Systems. Discussion, three hours. Prerequisite: background in FORTRAN, PL/1, PL/C, or other batch computing language available on campus and in basic statistics (course 402 or equivalent) and modeling (course 407 or equivalent). Computer simulation methodology, including design, validation, operating procedures, and analysis of results of simulation experiments. Applications of simulation to management problems.
Mr. Nelson

216B. Advanced Computer Simulation. Prerequisite: course 216A. Advanced use of computer simulation techniques. Major term projects undertaken, either singly or in groups, with the object of developing in students the ability to accomplish all phases of the design and execution of computer simulation.
Mr. Nelson

217A. Statistical Decision Theory. Prerequisite: course 213A or equivalent. Relationships among statistical decision theory, game theory, and classical statistical inference, with emphasis on sequential analysis and dynamic decision processes; axiomatic foundations, Bayes' and minimax solutions, applications to selected models of dynamic decision problems in business. Mr. MacQueen

217B. Game Theory. Prerequisite: course 213A or equivalent. Nature of models for rational behavior in presence of conflicts of interests, zero-sum and nonzero-sum games, two-person and many-person games, state of the art, philosophical and computational limitations, relations with individual and group decision making. Mr. MacQueen

218A. Selected Topics in Management Science (1 to 4 units). Prerequisite: consent of instructor. Newly developing topics and viewpoints. Topics have included reliability and optimal maintenance theory, large-scale distribution/inventory systems, and Markovian decision processes under uncertainty. May be repeated for credit.

218C. Selected Topics in Business Statistics (1 to 4 units). Prerequisite: consent of instructor. Special topics in statistical methods. Current developments in statistical theory and practice. Analysis of recent literature. Topics and instructors announced in advance. May be repeated for credit.

218D. Current Problems in Management Science (1 to 4 units). Current research on a variety of topics in the general area of management science, presented by invited University and outside speakers. May be repeated for credit.

218X-218Y-218Z. Current Issues in Management Science (1 to 4 units each). Current issues and research on a variety of topics in the general area of management science. May be repeated for credit.

220A. Intermediate Financial Accounting I. Prerequisite: course 403 or consent of instructor. The first of a two-course sequence that deals with the concepts and principles of financial accounting, with emphasis on the pronouncements of the Financial Accounting Standards Board, the Securities and Exchange Commission, and other authorities.
Ms. Hughes, Mr. Miller

220B. Intermediate Financial Accounting II. Prerequisite: course 220A or consent of instructor. The second of a two-course sequence that deals with the concepts and principles of financial accounting, with emphasis on the pronouncements of the Financial Accounting Standards Board, the Securities and Exchange Commission, and other authorities.
Ms. Hughes, Mr. Miller

220C. Advanced Financial Accounting. Prerequisite: course 220B or consent of instructor. A continuation of course 220B, with emphasis on a range of topics, including accounting for partnerships, mergers, combinations, and parent-subsidiary relationships. Review of litigation procedures, including reorganizations, receiverships, and bankruptcy.
Mr. Miller

221. Current Issues in Accounting Information Systems. Prerequisite: consent of instructor. A forum for the discussion of contemporary issues in accounting and information systems, in a colloquium format. Drawing on prominent speakers in the field, course requires students to formulate a position paper on each topic presented.
Mr. Buckley, Mr. McDonough

222. Cost Accounting. Prerequisite: course 403. The nature, objectives, and procedure of cost accounting and control; job costing and process costing; joint product costing, standard costs; theories of cost allocation and absorption; uses of cost accounting data for management decision making.
Ms. Matsumura, Mr. Miller

223. Verification of Financial Statements. Problems of examination, verification, and presentation of financial statements from the standpoint of the independent public accountant. Legal and professional responsibilities of public accountants; professional ethics. Operational and management auditing.
Mr. Miller

224A. Computer Systems. Discussion, three hours. Prerequisites: courses 225A and either 413A or 413B, or consent of instructor. The specification and configuration of computer-based systems for management applications. Methods for costing system hardware and software and for assessing computer performance. Trade-off analysis of comparative computer configurations. Use of case materials and/or actual examples. Mr. Frand, Mr. Lientz

224B. Management of Computer-Based Information Systems. Discussion, three hours. Prerequisites: courses 224A and 224C, or consent of instructor. In-depth coverage of the problems in managing computer-based information systems. Focus on the definition, evaluation, installation, and continuing management of EDP systems. Issues of planning and control, as well as the organizational impact of computer systems. Mr. McLean

224C. Systems Analysis for Computer-Based Information Systems. Discussion, three hours. Prerequisite: course 225A or consent of instructor. The detailed design and specification of computer-based management information systems, including studies of existing systems, economic and organizational analyses of alternatives, and tools for determining user requirements. Use of case materials and/or actual examples. Mr. Sprowls

224D. Generalized Data Base Management Systems. Discussion, three hours. Prerequisite or corequisite: course 224C or consent of instructor. The features and capabilities of generalized data base management systems, including system classification, comparison of software features, and evaluation of specific systems. Emphasis on management uses of such systems. A field study project may be required.
Mr. Sprowls

224E. Computer Simulation for Management. Discussion, three hours. Prerequisite: course 413A or consent of instructor. Introduction to computer simulation and to general purpose simulation languages (e.g., GPSS, SIMSCRIPT, DYNAMO). Emphasis on the managerial use of simulation and the development of computer-based models for problem solving and policy analysis. Programming assignments.

224F. Telecommunications and Computer Networks. Prerequisite: course 224A or consent of instructor. Distributed processing. Networked minicomputer systems. Data communication technology. Data security in computer networks. Cost/benefit analysis for the design, configuration, and implementation of computer networks. Applications to computer utilities; command and control systems; and commercial, medical, and government networks. Mr. Lientz

224G. Special Topics in Computing. Prerequisite: consent of instructor. An examination in depth of issues or problems concerned with the theory and practice of computing and the management use of EDP systems. Course may have a single theme or may deal with a number of topics. May be repeated for credit.

225A. Introduction to Information Systems. Prerequisite: course 404 or consent of instructor. Basic concepts and uses of information systems in organizations. Fundamental design considerations. The role of data processing. Examples of information systems in profit and not-for-profit organizations.
Ms. Markus, Mr. Swanson

225B. Information Systems for Planning and Control. Prerequisite: course 403 or consent of instructor. Design of systems to produce information for planning and control. Survey of approaches and techniques employed at the strategic, managerial, and operational levels. Special consideration of accounting and budgeting methods. Impact of planning and control information on human behavior.
Mr. Greenberger, Mr. McDonough

225C. Measurement in Information Systems. Prerequisite: familiarity with basic statistics, probability theory, set theory, and accounting, or consent of instructor. A study of the role of measurement in accounting and information systems, from the standpoint of mathematical, economic, behavioral, and organizational consideration. Mr. Swanson

225D. Special Topics in Information Systems. Prerequisite: doctoral standing or consent of instructor. An examination in depth of problems or issues of current concern in information systems. Emphasis on recent contributions to theory, research, and methodology. Of special interest to advanced Ph.D. candidates, academic staff, or distinguished visiting faculty. May be repeated for credit.

225X-225Y-225Z. Current Research in Information Systems (1 unit, 1 unit, 2 units). Discussion, two hours. Prerequisite: doctoral standing. A year-long sequence associated with the Computers and Information Systems Colloquium Series. Regularly scheduled presentations of current research and state-of-the-art developments in the information systems field. Study and discussion of the research presented. May be repeated for credit. S/U grading.
Mr. Swanson

226. International Accounting. Prerequisite: graduate standing. Comparative analysis of accounting concepts and practices in other countries; study of contrasts between various systems; problems of accounting for international corporations, including transfers of funds and income measurement; accounting influences on economic development.
Mr. Farrell

227A. Tax Accounting. Prerequisite: course 403. A study of the fundamentals of income taxation, with emphasis on problems in federal and state income, franchise, gift, and estate taxes; study of source material and research methods for ascertaining current rulings and trends in laws and regulations.

227B. Taxation and Business Policy. Tax systems, tax shifting, and burden theory. Impact of taxation law and theory on business decisions. Corporate tax planning. The businessman and tax reform.

228. Evaluating Financial Statement Information. Lecture, three hours. Prerequisites: courses 220A or 220B, 230, 402. Issues of accounting information evaluation, with special emphasis on uses of financial statements by decision makers external to the firm (e.g., investors, creditors). Topics include load decisions, bankruptcy prediction, and interpreting earnings. Mr. Landsman

229A. Accounting Theory. Prerequisite: course 220B. A survey of accounting literature, with emphasis on the development of basic accounting concepts. Contemporary practice as it has evolved in accordance with basic theory and expanding demands for accounting information. Mr. Farrell

229B. Research Methodology in Accounting. Prerequisite: course 229A or consent of instructor. Design of empirical and theoretical research in accounting. Sources of research problems. Research conduct and methodology in accounting and other fields as they relate to accounting. Mr. Landsman

229C. Special Topics in Accounting. Prerequisite: doctoral standing or consent of instructor. An examination in depth of problems or issues of current concern in accounting. Emphasis on recent contributions to theory, research, and methodology. Of special interest to advanced Ph.D. candidates, academic staff, or distinguished visiting faculty. May be repeated for credit. Mr. Trueman

229X-229Y-229Z. Accounting and Information Systems Workshop (1 unit, 1 unit, 2 units). Discussion, two hours. Prerequisite: doctoral standing. Designed to develop an ability to critically evaluate research in fields relevant to the study of accounting. Papers are presented in a colloquium format by leading scholars in accounting. Active participation and intellectual interchange encouraged through discussion of the papers in sessions prior to the workshop, as well as during the colloquium. May be repeated for credit. S/U grading. Mr. Trueman

230. Theory of Finance. Prerequisite: course 408. Decision making under uncertainty, the theory of asset prices, and the efficiency of capital markets. Development of the most recent theoretical constructs and application to fundamental issues in corporate financial management (such as capital budgeting, capital structure, and dividend policy).
Mr. Copeland, Mr. Grinblatt, Mr. Titman

231A. Profit Sector Financial Policy. Prerequisite: course 230. Identifying and solving financial problems through the use of cases. The application of financial theory and financial techniques to business problems, using written reports and classroom discussion. Mr. May, Mr. Titman, Mr. Weston

231B. Nonprofit Sector Financial Policy. Discussion, three hours. Prerequisite: course 408. Identifying and solving financial problems for all types of nonprofit organizations, with attention to funds accounting, budgeting and control, investment decision making when market valuation cannot be used as a criterion, and sources of funds for nonprofit organizations. Cases are used. Mr. Eiteman

231C. Working Capital Management. Lecture, three hours. Prerequisite: course 230. More detailed advanced coverage of the short-range problems of financial management. Coverage of current assets, current liabilities, and their interrelationships.
Ms. Luna

232A. Security Analysis. Prerequisite: course 230. Primarily a course in stock market investing, but approach applicable to all investment assets. Techniques of security analysis and security valuation based on financial statements of the organization.
Mr. Mayers, Mr. Roll

232B. Portfolio Management. Prerequisite: course 230. Focus on entire portfolios rather than individual assets. Review portfolio theory as applied to portfolio decision making and the evaluation of achieved portfolio performance. Case studies of portfolio construction. Mr. Grinblatt, Mr. Roll

232D. Option Markets. Prerequisite: course 230. The organization and role of organized put and call markets, arbitrage and hedging relationships, the valuation of options, the implementation of option trading strategies, the perspective of corporate securities as options, the function of options in securities markets, and innovations in option markets. Students learn fundamentals of hedging and spreading by playing an option trading game and writing a term paper analyzing their trading strategies.
Mr. Geske

233A. Money and Capital Markets. Prerequisite: course 230. Application of interest theory and flow funds analysis to the price determination process in the markets for bonds, mortgages, stocks, and other financial instruments. Study of funds flow from credit markets. Analysis of costs of capital in individual industries. Mr. Cornell, Mr. Masulis, Mr. Roll

233B. Financial Institutions. Prerequisites: courses 230, 233A. Study of the financial policies and practices of commercial banks, savings and loan associations, pension funds, insurance companies, and other major financial institutions. Review of current major problems facing senior managers of these financial institutions.
Mr. Andersen, Mr. Masulis, Mr. Roll

233C. Speculative Markets. Prerequisite: course 230. Study of the theory and evidence of capital market efficiency, including the stock market, the bond market, commodity future markets, the options market, money markets, and foreign exchange markets.
Mr. Copeland, Mr. Hirshleifer

234A. Multinational Business Finance. Lecture, three hours. Prerequisites: course 408 and either 205A or 230. Financial problems in the management of multinational businesses. The international venture and financial techniques for the daily operation of a multinational firm. Mr. Eiteman

234B. Advanced Studies in International Finance. Prerequisites: courses 230, 234A. Study of current and important issues of international financial management. Major focus on the interrelation of advanced theoretical concepts and their implications for the business firm in its international financial management decisions.

235A. Problems in Insurance Management. Discussion, three hours. Prerequisite: consent of instructor. Advanced consideration of the problems of insurance management. The actuarial, underwriting, investment, marketing, and regulatory problems related to insurance activities. Mr. Hofflander

235B. Risk and Risk Bearing. Lecture, three hours. Prerequisite: consent of instructor. Advanced consideration of the theory of risk and risk bearing. The analysis of alternative ways of meeting risk and uncertainty, the scope and limits of insurance, and the economics of insurance. Mr. Hofflander

238. Special Topics in Finance. Prerequisites: course 230, consent of instructor. Intended for master's students. Selected topics in finance theory, empirical studies, and financial policy. May be repeated for credit with instructor change.

239A. Theory of Exchanges under Uncertainty. Prerequisites: course 230, consent of instructor. Foundations of the theory of exchange developed as an introduction to theoretical literature on the pricing of capital assets. Primarily intended for Ph.D. students, but well-prepared master's students may find the course useful in their career preparation.
Mr. Geske

239B. Theory of Investment under Uncertainty. Prerequisites: courses 230 and 239A, or consent of instructor. Foundations of theory of firm capitalization and investment decisions, with special attention to questions of exchange and allocative efficiency. Primarily intended for Ph.D. students, but well-prepared master's students may find the course useful in their career preparation. Mr. Mayers

239C. Empirical Research in Finance. Prerequisites: course 230, training in econometrics, consent of instructor. In-depth study of empirical research in the field of finance, with emphasis on market efficiency, capital asset pricing, and option pricing. Primarily intended for Ph.D. students, but well-prepared master's students may find the course useful in their career preparation. Mr. Roll

239D. Ph.D. Seminar in Finance. Prerequisites: course 230, courses in the 239 series. Intended for Ph.D. students. Advanced topics in finance theory and empirical research. May be repeated for credit with instructor change.

239X-239Y-239Z. Finance Workshop (1 unit, 1 unit, 2 units). Discussion, 90 minutes. Prerequisite: doctoral standing. Designed to develop an ability to critically evaluate finance research. Papers are presented in a colloquium format by leading scholars in finance. Active participation and intellectual interchange encouraged through discussion of the papers in sessions prior to the workshop, as well as during the colloquium. May be repeated for credit. S/U grading. Mr. Mayers

240A. Aggregate Planning and Work Force Scheduling. Prerequisite: course 410. Managerial methods for short-term capacity planning and scheduling in aggregate terms. Theoretical models and management practices in manufacturing and service operations. Model formulation that allocates use of regular and overtime labor, inventories where appropriate, backordering shortages, and outside capacity.
Mr. Sarin

240B. Scheduling and Control of Operations. Prerequisites: courses 407 and 410, or consent of instructor. Detailed short-term scheduling and control of productive (production or service) operations. Identification of objectives and performance criteria for evaluating scheduling and control procedures. Classification of production and service systems. Scheduling problems and solution approaches for different types of systems. Mr. Nelson

240C. Design of Operational Systems. Prerequisite: course 410. Issues in selection of the capabilities, characteristics, and configuration of service and manufacturing systems as part of overall strategy for attaining organizational goals; planning of capacity, location, processes/technologies, facilities, organizational structures, and jobs. Mr. Andrews

241. Technological Bases of Jobs and Organizations. Prerequisite: consent of instructor. Technological determinants of operating systems and jobs; productive system design models; behavioral models underlying operating system design, technology, and social system design; operating system variability, control, and measurement.

242A. Planning for Facilities Systems. Prerequisite: course 212A or equivalent. Planning of location, expansion, and replacement for interdependent systems of facilities. Examination of spatial and dynamic economic considerations. Applications in selected industries and public systems. Mr. Erlenkotter

243A. Project Management. Prerequisite: course 407 or equivalent. Management of development projects. Decision-making environment, economic analysis, network analysis, scheduling, and control of development projects. Sequential and aggregate development decisions.

243B. Inventory Theory. Prerequisite: course 210B or consent of instructor. General discussion of inventory models, with emphasis on characterizing the form of optimal policies and efficient computational methods. Consideration of deterministic, stochastic, discrete, and continuous time models.

243C. Scheduling Models for Intermittent Systems. Prerequisite: course 407. Scheduling models and results for single machine, flow shop, job shop, and resource-constrained project networks. Approaches include classical models, recent heuristic approaches, current research in coordinated interaction of computer models, and man-machine interaction. Mr. Nelson

244. Operations Strategy and Policy. Discussion, three hours. Prerequisite: second-year graduate standing. Definition and scope of operations strategy and its relation to corporate strategy, importance of productivity and its amplification in global competition, positioning the system to match market requirements, capacity decisions, product and process technology, the work force and job design, strategic implications of operating decisions, suppliers and vertical integration. Case analyses involving strategic issues in manufacturing and nonmanufacturing situations.
Mr. Buffa

245A. Special Topics in Operations Management. Studies of advanced subjects of current interest in operational management. Emphasis on recent developments and the application of specialized knowledge to operational problems. Topics vary each quarter. May be repeated for credit with topic change.

245B-245C. Survey of Operations Management. Prerequisite: graduate standing. Survey of the research literature in operations management. Seminar reports dealing with special topics.

245X-245Y-245Z. Production and Operations Management Seminar (1 unit, 1 unit, 2 units). Discussion, 90 minutes to three hours. Prerequisite: doctoral standing. Required of all students in the production and operations management concentration during the first two years of their Ph.D. work. Student and faculty presentations of ongoing research. May be repeated for credit. Mr. Sarin

246A. Strategy/Policy Analysis and Formulation in the Public and Private Nonprofit Sectors. Prerequisite: completion of the management analysis requirement for the M.B.A. program. Application of several techniques for strategy/policy analysis and formulation. Specific topics include forecasting/scenario writing, multiple objective decision making, cost analysis, risk/benefit analysis, and social experimentation. Limitations of methodologies examined and concepts illustrated through current applications and case studies. Mr. Zumeta

246B. Budgeting and Resource Allocations in the Public Sector. Prerequisites: courses 403 and 408, or consent of instructor. Resource allocation objectives/techniques used in federal, state, and local government. Budget analyzed as a planning device, vehicle for allocational decision making, financial control mechanism, crucible for political choice. Provides some insight into staff functions performed by those responsible for resource allocation.

246C. Strategy/Policy Implementation in the Public and Private Nonprofit Sectors. Prerequisites: courses 246A and 246B, or consent of instructor. Problems, tactics, techniques for implementing strategies/policies within the organizational context. Relation of public interest needs for accountability and responsibility to the organizational/managerial needs for security and advancement. Consideration of entrepreneurship, personnel management, consulting. Mr. Zumeta

247A. Interorganizational Strategies in the Public/Not-for-Profit Sector. Prerequisite: consent of instructor. Consideration of public/not-for-profit organizations as members of a network, from the point of view of strategies for managing the entire network, and managerial implications for an individual, focal organization. System structure, transactions, levels of collaboration, competition, and dependence. Mr. Boje

248. Special Topics in Public/Not-for-Profit. Prerequisite: consent of instructor. Studies of advanced subjects of current interest in public/not-for-profit management. Emphasis on recent developments and the application of specialized knowledge to public/not-for-profit problems. Topics vary each quarter. May be repeated for credit with topic change. Mr. Zumeta

250A. Labor Relations: Process and Law. (Formerly numbered 251.) Lecture, three hours. Prerequisite: graduate standing. Consideration, at an advanced level, of the collective bargaining process, the labor-management agreement, the administration of the contract, the law of labor-management relations, union structure and goals, and the influence of external labor markets on labor relations. Mr. Fogel, Mr. Jacoby, Mr. Mitchell

250B. Human Resource Management: Process and Law. (Formerly numbered 252.) Lecture, three hours. Prerequisite: course 250A. A systematic exposure to the theoretical and empirical literature concerning the administrative and legal aspects of human resource management. Topics include the processes of managing human resources and the impact of governmental policies on employer-employee relations. Ms. Broderick, Mr. Fogel, Mr. Jacoby

250C. Behavioral Foundations of Human Resources Management. (Formerly numbered 250B.) Lecture, three hours. Prerequisite: course 250B or consent of instructor. Topics include development and training; human resources accounting; behavioral foundations of participating management; motivation, productivity, and satisfaction; designing reward systems; and evaluation of organization effectiveness. Emphasis on understanding, predicting, and influencing human behavior in organizations. Mr. Flamholtz, Mr. Massarik

251. Managing Human Resources. (Formerly numbered 250A.) Lecture, three hours. The management of people in organizations, intended for managers as well as personnel specialists. Organized at three related but distinct levels of analysis: (1) the day-to-day utilization of people as organizational resources to achieve optimal productivity, satisfaction, retention, and development; (2) the personnel management function or system that performs specialized human resources functions; and (3) the issues facing top management which involve the management of human resources, including strategic planning for human resources, union-management relations, and design of corporate culture. Mr. Flamholtz

252. Systems of Employee-Management Participation. (Formerly numbered 250C.) Lecture, three hours. Prerequisite: consent of instructor. Designed to provide understanding of systems of employee-management participation around the world (apart from traditional collective bargaining systems). Specific concepts such as worker participation in decision making, industrial democracy, joint consultation, workers' councils, profit sharing. Mr. Kleingartner

253. Conflict Resolution in Labor-Management Relations. (Formerly numbered 253B.) Lecture, three hours. Prerequisite: graduate standing. Analysis of conflict in the employment relationship; theoretical and empirical findings. Principles and philosophies that underlie resolution of labor-management impasses, with emphasis on grievance procedures, arbitration, mediation, and fact-finding. Mr. Fogel

254. Analysis of Labor Markets. Prerequisite: consent of instructor. Problems of verifying hypotheses concerning labor market behavior and the application of data to managerial problems. Problems of operationally defining labor market concepts. Critical evaluation of available labor market data. Case studies applying these data to managerial problems. Mr. Jacoby, Mr. Mitchell

255. Comparative Industrial Relations. Prerequisite: course 409 or elementary knowledge of labor economics. At national and international levels, historical and contemporary analytical comparison of industrial relations systems within their political, social, and economic environments. The institutions, philosophies, and ideologies of labor, management, and government, and the interaction of their power relationships; the substance and manner of determination of "web of rules" governing the rights and obligations of the parties; and the resolution of conflicts. Mr. Hutchinson

256. Seminar in Human Resource Management and Industrial Relations. Discussion, three hours. Prerequisites: courses 250A, 250B, 250C. Capstone seminar for students interested in human resource management and industrial relations. Visiting lecturers emphasize recent developments in the field; students prepare seminar papers. Ms. Broderick

257. Labor-Management Relations in Public and Nonprofit Sectors. Prerequisite: graduate standing. Analysis of labor-management relations in government, including public education, and in nonprofit institutions (i.e., artistic, cultural, recreational, and health care). Emphasis on negotiations and group relationships rather than on public personnel administration. Mr. Kleingartner

258. Selected Topics in Industrial Relations (1 to 4 units). Prerequisite: doctoral standing or consent of instructor. An examination in depth of problems or issues of current concern in industrial relations. Emphasis on recent contributions to theory, research, and methodology. Of special interest to advanced Ph.D. candidates, academic staff, or distinguished visiting faculty. May be repeated for credit.

259A. Employment Planning and Evaluation. Lecture, three hours. Prerequisite: course 254. Development of programs and practices to meet the human resource needs of organizations, including staffing, training, management development, career progression, and evaluation. Mr. Fogel

259B. Equal Employment Opportunity Management. Lecture, three hours. Prerequisite: course 254. The development and administration of programs to provide equal employment opportunities in employing organizations. Current statutory and case law and administrative agency requirements. Ms. Broderick

260A. Advanced Marketing Management. Prerequisite: course 411 or consent of instructor. A decision-oriented course concerned with the solution of product, price, promotion, and distribution channel problems. Extensive use of case studies. Ms. Meyers-Levy, Mr. Nakamoto, Ms. Scott

260B. Marketing Strategy and Planning. Prerequisite: course 260A or consent of instructor. Development of a framework for strategic marketing planning. The analysis of a few, yet powerful, conceptual frameworks which have broad application. Within the framework of the strategic marketing plan, development of key elements in the annual marketing planning process. Ms. Kahn

261A. Management in the Distribution Channel. Prerequisite: course 260A or consent of instructor. An examination of decisions in the distribution channel. Issues of power in the distribution channel and the trade-offs between alternative channel systems.

261B. International Marketing Management. Prerequisite: course 260A or consent of instructor. Opportunities, distinctive characteristics, and emerging trends in foreign markets, including an exploration of alternative methods and strategies; organizational planning and control; impact of social, cultural, economic, and political differences; and problems of adapting American marketing concepts and methods. Mr. Hanssens

262. Price Policies. Prerequisite: course 260A or consent of instructor. Consideration of such concepts as product classification, demand, competition, and costs, as they apply to price making. The theory of price leadership, geographical pricing, price discrimination, price warfare, and leader pricing studied in relation to the price-making process. In addition, attention to the price policies of individual firms in which these concepts are applicable. Mr. Png

263A. Consumer Behavior. Prerequisite: course 411 or consent of instructor. A study of the nature and determinants of consumer behavior. Emphasis on the influence of sociopsychological factors such as personality, small groups, demographic variables, social class, and culture on the formation of consumers' attitudes, consumption, and purchasing behavior. Mr. Kassarjian, Ms. Meyers-Levy, Mr. Nakamoto

263B. Theory of Marketing Stimulation. Prerequisite: course 263A. Analysis of factors influencing consumer demand. Techniques for stimulating demand evaluated in relation to specific marketing objectives. Material from economics, psychology, sociology, anthropology, and marketing research.

264A. Marketing Research: Design and Evaluation. Prerequisite: course 411 or consent of instructor. Methods of measuring and predicting the forces affecting marketing, including quantitative aspects of demand, consumer reaction to product characteristics, effectiveness of advertising and other promotional devices, influence of rewards and organizational systems on sales efficiency, and effectiveness of competitors' strategies. Mr. Cooper, Mr. Currim, Mr. Meyer

264B. Mathematical Models in Marketing. Prerequisite: course 260A or equivalent or consent of instructor. A study of the utilization of models for the solution of marketing problems. Discussion on models concerned with such problems as brand switching, media selection, pricing, competitive strategy, scheduling, allocation problems, and waiting time.
Mr. Gupta, Mr. Hanssens, Mr. Meyer

264C. Seminar in Multidimensional Scaling. Prerequisite: consent of instructor. A seminar providing for the study of recent developments in metric and nonmetric multidimensional scaling. Mr. Cooper

265A. Marketing and the Law. Prerequisite: course 260A or consent of instructor. A detailed study of the legislative enactments (federal, state, or local) which influence the operation of institutions engaged in marketing activities, together with an analysis of the judicial decisions which have interpreted these laws.
Mr. Kassarjian

265B. Social Issues in Marketing. Prerequisite: course 260A or consent of instructor. Environmental impact of marketing in society; study of theories, methods, and relationships for evaluating transaction behavior in a scientific and humanistic context; macroanalytic perspectives in marketing.

266A. Product Management. Prerequisite: course 260A. Development of a framework for identifying and appraising alternative growth strategies of the firm. Product addition, modification, and deletion decisions, and the processes by which these decisions can be made in an optimal manner.
Mr. Currim, Mr. Meyer

266B. Advertising Policy. Prerequisites: courses 260A and 263A, or consent of instructor. A study of the formulation of advertising policies, involving an analysis of cases dealing with the role of advertising in marketing, the definition of advertising objectives, strategy, appropriation policy, media selection, evaluating advertising results, and the organization of the advertising function. Mr. Nakamoto

266C. Sales Force Management. Prerequisite: course 411 or consent of instructor. Development of a logical framework for the solution of problems in sales force management. The role of selling in the marketing mix, the selling interaction, and key problems in planning, organizing, evaluating, and controlling the sales force.

267. Macromethodological Issues in Research on People. Prerequisite: consent of instructor. A systematic approach to the special issues concerning research on people; criteria for evaluating macromethodologies; development of scientific concepts, models, theories, and law; the problem of private report, and the question of data language.

268. Selected Topics in Marketing (1 to 6 units). Prerequisite: course 260A or consent of instructor. A study of selected areas of marketing knowledge and thought. Specific subjects vary each quarter depending on the particular interests of the instructor and students. Individual projects and reports. May be repeated for credit.

269A. Theory in Marketing. Prerequisite: consent of instructor. Serves as a mechanism to introduce students to the development of marketing thought. Issues pertaining to the general topic of theory development and testing. Prepares students for conducting theoretically grounded research in marketing.
Mr. Nakamoto

269B. Research in Marketing Management. Prerequisite: consent of instructor. Intended for Ph.D. students. Study of research issues associated with marketing management decisions. Recent research in the areas of strategic marketing, marketing segmentation, new product development and introduction, pricing strategies, channel policy, promotion decisions, and sales force management examined critically. Review of both quantitative and behavioral approaches to studying these issues.
Mr. Hanssens, Ms. Scott

269C. Quantitative Research in Marketing. Prerequisite: consent of instructor. Intended for Ph.D. students in management and related fields. Students are assumed to have a good background in marketing principles and to be familiar with probability, statistics, mathematical programming, and econometrics. Review of a range of quantitative models as applied in marketing research.
Mr. Currim, Mr. Hanssens, Ms. Kahn, Mr. Meyer

269D. Behavioral Research in Marketing. Prerequisite: consent of instructor. Empirical research in consumer behavior surveyed and critically evaluated from theoretical as well as practical perspectives. Intended for Ph.D. students who will be conducting research in consumer behavior or related areas.
Mr. Kassarjian, Ms. Meyers-Levy, Mr. Nakamoto, Ms. Scott

269E. Special Research Topics in Marketing. Prerequisite: doctoral standing. Advanced selected topics in marketing, with emphasis on thorough examination of one or two topics in current research and theory. May be repeated for credit.

269X-269Y-269Z. Workshop in Marketing (1 unit, 1 unit, 2 units). Prerequisite: doctoral standing. Required of all students during the first two years of their Ph.D. work. Series consists of a number of leading scholars in marketing and related disciplines who make presentations to marketing faculty and Ph.D. students. Active participation and intellectual interchange, which helps students gain a richer perspective on the field of marketing. In Progress grading.

270. Environment of the Art World. Prerequisite: consent of instructor. Consideration and analysis of the political, social, economic, and environmental forces in American society as they affect the existence and development of arts institutions in the U.S. Exploration of present policies and trends and potential future developments.

271. Law and the Arts. Prerequisite: consent of instructor. Exploration of the way in which law and the arts relate, the role of the lawyer *vis-à-vis* artist and arts manager, policy underpinnings of the law and effect on the arts, and unsolved problems and issues in areas of interaction.

272. The Role of Management in Artistic Decision Making. Prerequisite: consent of instructor. A descriptive study of the criteria for decision making in artistic institutions, including the role of the institution in society, the economic environment of the arts, and the artistic value systems of arts organizations.

274. Current Issues in Arts Management. Prerequisite: consent of instructor. Examination of current issues in the management of artistic organizations. Relevant combinations of lectures, discussions, case studies, and team research projects.

275A. Urban Issues and Problems. Discussion, three hours. Prerequisite: course 175 or consent of instructor. Identification and analysis of emerging issues and problems in turbulent urban environments; land utilization and regulations, transportation, real estate and building industries, urban sprawl, taxation, city size and efficiency, environmental pollution, and related topics. Mr. Mittelbach

275B. Urban Land Markets. Discussion, three hours. Prerequisite: course 175 or 405 or consent of instructor. Development and use of economic and management principles and methods to analyze and project urban land uses and land values; study of demand for and supply of industrial, commercial, retail, and residential space in the context of urban growth, structure, and change. Mr. Mittelbach

275C. Alternative Urban Futures. Discussion, three hours. Prerequisites: completion of first-year M.B.A. requirements, consent of instructor. Intended primarily for students seeking a course which specifically relates real estate analysis to the array of management courses taught at GSM. Use of case studies to examine various managerial strategies for creating or acquiring and managing private real estate projects intended to respond to anticipated alternative urban futures. Use of business techniques and economic principles to define new areas of potential growth and to prepare financial, marketing, and management plans for realizing these potentials through private residential, commercial, or industrial development. Emphasis on forecasting, spread sheets, and financial analysis. Mr. Case, Mr. Mittelbach

276A. Theory of Urban Property Valuation. Discussion, three hours. Prerequisite: course 408 or equivalent. Use of a systems approach to prepare feasibility and valuation studies which systematically analyze the factors which create value in private or public property developments. Analysis of the particular social, economic, political, and physical forces which can influence property values. Students encouraged to use computer-based analysis.
Mr. Case, Mr. Mittelbach

276B. Comparative and International Urban Land Studies. Discussion, three hours. Analysis of private and public decisions shaping urban growth and change in developed and developing nations. Emphasis on economic, social, and institutional forces influencing urban structure, land-use patterns, and growth and distribution of jobs and people in the built environment. Mr. Case, Mr. Mittelbach

276C. Urban Dynamics: Degeneration and Regeneration. Discussion, three hours. Prerequisite: consent of instructor. Use of the local urban area as a laboratory to identify the forces which have caused changes — good and bad — in the area and to prepare market and financial feasibility studies of private development opportunities in such areas. Fieldwork is an integral part of the course, with students encouraged to organize into development teams.
Mr. Case, Mr. Mittelbach

277A. Housing Market Systems. Discussion, three hours. Prerequisite: consent of instructor. Concepts, models, and methods to study and forecast local, regional, and national housing markets; consumer and investor behavior; residential land development and building; primary and secondary residential mortgage markets; private and public forces influencing housing costs and prices. Mr. Case, Mr. Mittelbach

277B. Housing Policy. Discussion, three hours. Prerequisite: consent of instructor. Alternate housing strategies, policies, and programs; housing for low and moderate income groups; urban renewal; community services to improve housing environment; stimulating innovation and efficiency in production, distribution, and delivery of residential capital and housing services; the roles of private enterprise.
Mr. Case, Mr. Mittelbach

278A. Urban Real Estate Financing and Investing. Discussion, three hours. Prerequisite: consent of instructor. An investor-oriented course in which real estate and business trends are evaluated to determine alternative real estate investment opportunities. Use of current financial, economic, and investment theories and techniques to real estate investment opportunities in case studies and short case problems to illustrate the development of investment strategies.
Mr. Case, Mr. Mittelbach

278B. Sources, Uses, and Flows of Real Estate Capital. Discussion, three hours. Analysis of money, capital, and mortgage markets to determine the potential availability and costs of mortgage money from alternative sources. Evaluation of various sources of funds to determine factors influencing the decisions to make mortgage loans. Examination of all types of lending instruments, particularly mortgage instruments, for their impacts on real estate investment decisions. Mr. Case, Mr. Mittelbach

279A. Special Studies in Urban Land Economics. Limited to master's or Ph.D. candidates working on thesis- or dissertation-related research. May be repeated for credit. Mr. Case

279B. Selected Topics in Urban Land Economics. Discussion, laboratory, and fieldwork. Prerequisite: second-year graduate standing or consent of instructor. Designed for students who wish to pursue a particular topic in housing, real estate, or urban land economics in depth on an individual or cooperative basis. All work is computer-based; however, students are provided an introduction to the use of computers (preferably PCs) in various kinds of real estate analysis. May be repeated for credit.

279X-279Y-279Z. Urban Research and Development (2 to 4 units each). Prerequisite: graduate standing or consent of instructor. Exploration of urbania and its problems; prospects and prescriptions for the delivery of a quality life. Macroscopic and microscopic exploration as related to problems of a selected urban area.

280A. Important Studies in Human Systems. Prerequisite: doctoral standing or consent of instructor. Survey of seminal studies of human systems. Summarization and critique of literature focal to the evolution and current status of the field. Review of such topics as personality, motivation, group and intergroup behavior, systems theory, and organizational design and development. Mr. Massarik

280B. Survey of Research Philosophies and Methods. Prerequisite: doctoral standing or consent of instructor. A broad introduction to objectivist and subjectivist philosophies of science, and the psychology and sociology of science. Critique of laboratory and field experiments; field studies, analytical and descriptive methods; interview, participant observation, questionnaire, and unobtrusive methods of data collection.

280C. Personal and Professional Development. Prerequisite: doctoral standing or consent of instructor. Provides a setting where students may explore their own professional values in the process of testing and learning the values and standards important in the human systems Ph.D. program and held by the broader community of system researchers and interveners. Mr. Culbert

280D. Research Design for Human Systems Studies. Prerequisite: course 280A or 280C or consent of instructor. Temporal and logical sequences in the process of designing studies of human systems, including optimizing the fit of research topic, observation, and data collection methods and data analysis techniques. Actively involves students in the preparation of research proposals.

280E. Tutorial in Human Systems Research. Prerequisite: course 280D or consent of instructor. Provides an opportunity for students to offer and receive constructive comment on the design, data analysis, and writing of their Ph.D. research papers.

280F. Human Systems Research Seminar. Prerequisite: course 280D or consent of instructor. Exploration of various research methods and problems encountered in applying them. Students are actively involved in seminar reports and in class critique of course members' dissertation research designs. May be repeated for credit. Mr. Boje

281A. Sociotechnical Systems. Prerequisite: graduate standing. Introduction to systems concepts and view of work organizations as interacting social and technical systems open to forces from the surrounding environment. Focus on developing the sociotechnical systems analytic approach and understanding the advantages of this approach for designing and managing organizations. Mr. Davis

281B. People in Organizations. Prerequisite: graduate standing. Introduction to different philosophical perspectives for understanding human behavior. Theories and concepts important for understanding human behavior in organizations, as well as managerial implications of individual, group, and social behavior. Special attention to knowledge about satisfaction motivation and productivity in organizations. Ms. Lasko

281C. Situational Factors in Management. Prerequisite: graduate standing. Application of a situational, contingency, or "it all depends" perspective to important managerial issues such as personality, motivation, leadership, conflict management, and design of jobs and organizations. Development of a diagnostic way of thinking that is fundamental to managerial effectiveness in diverse organizational situations.

282. Task Group Processes. Prerequisite: course 281A or 281B or consent of instructor. The structures, processes, and interrelations of work groups in sociotechnical systems. Emphasis on an understanding of how group activities interrelate with the physical technical environment. Imparts a practical knowledge of task group functioning through class exercises and field observations. Mr. Culbert

283A. Environmental Settings of Sociotechnical Systems. Prerequisite: course 281A or consent of instructor. The complexity and uncertainty of organizational environments. Analysis of environments along sociocultural, political, and economic dimensions, their interrelationships, and their relations to technology. Organizational responses to various environments. Mr. Davis

284A. Organization Design. Prerequisite: course 281A or consent of instructor. Survey of organizational design theories and methods, including bureaucratic, participative, and cognitive models. Development of specific methods ranging from the microdesign of jobs to the macrodesign of total organizational structures. Special emphasis on sociotechnical and differentiation integration models. Mr. Davis

284B. Organization Development. Prerequisite: course 281B or consent of instructor. Effects of managerial practices on individual self-fulfillment and organizational effectiveness. Theories of organization change and the action-research methods of organization development practitioners. Theory merged with practice through seminar discussions of field observations.

285A. Leadership, Motivation, and Power. Prerequisite: course 281B or consent of instructor. Theoretical and practical approaches to influencing and motivating people. The relative effectiveness of various leadership styles, different motivation theories, and power tactics from a managerial point of view. Use of experience-based learning methods to aid diagnosis and understanding of one's own influence styles. Mr. Culbert

285B. Managerial Interpersonal Communication. Prerequisite: course 281B or consent of instructor. Organizational, interpersonal, and personality factors affecting managerial communications. Styles and modes of communication in one-to-one, group, and indirect communication settings. Opportunities offered to deepen understanding of one's own communication styles and skills. Mr. McDonough

287. Sensitivity Training Groups and Their Facilitation. Prerequisite: consent of instructor through prior application to the department. Development of cognitive and experiential understanding of the dynamics of sensitivity training groups and their facilitation. Relevant theory, research findings, and case studies; translation of these inputs into practice.

288A. Special Studies in Managing Organization Behavior. Prerequisite: M.B.A. standing or consent of instructor. An examination in depth of problems or issues of current concern in managing organizational behavior. Emphasis on recent theories, research findings, and professional applications of special interest to M.B.A. students and faculty. May be repeated for credit. Mr. Davis

288B. Selected Topics in Behavioral Science. Prerequisite: doctoral standing or consent of instructor. Philosophies and theories of human behavior fundamental to the study of individual, group, organizational, and cultural behavior. Exploration in depth of selected theoretic positions, extending and consolidating behavioral science knowledge and applications. May be repeated for credit. Mr. Tannenbaum

288C. Current Issues in Sociotechnical Systems and Organization Design. Prerequisite: doctoral standing or consent of instructor. Current topics in the analysis and design of organizations as sociotechnical systems engaged with various technologies and environments, emphasizing design approaches emanating primarily from Europe and the United States. In-depth comparisons of selected job and organizational design approaches. May be repeated for credit.

288D. Current Issues in Human Systems Change and Development through Consulting. Prerequisite: doctoral standing or consent of instructor. Current topics in philosophy, art, and technology of improving organizations and increasing managerial effectiveness through consulting interventions. In-depth treatment of consultant entry and leaving, diagnosing, process consultation, consciousness raising, team building, values, etc., depending on student and faculty preferences. May be repeated for credit.

288E. Selected Topics in Organization Theory. Prerequisite: doctoral standing or consent of instructor. In-depth treatment of organizations as units of analysis. Emphasis on recent theoretical and empirical development, methodological issues in organizational research, and concepts of organization structure, process, and effectiveness. May be repeated for credit.

288F. Selected Topics in Organizational Behavior. Prerequisite: doctoral standing or consent of instructor. Psychological and social psychological aspects of human behavior and performance in organizations. Theoretical models, empirical findings, and applications of such topics as attitudes and values, cognitive and perceptual processes, behavioral conflict, and individual change processes. May be repeated for credit.

288G. Current Issues in Human Systems Studies. Prerequisite: doctoral standing or consent of instructor. In-depth study of theory and research pertaining to a particular subject matter or such topics as cross-cultural, organization change, action, and multivariate research, depending on student and faculty interest. May be repeated for credit.

288X-288Y-288Z. Behavioral and Organizational Sciences Workshop (1 unit, 1 unit, 2 units). Discussion, two hours. Prerequisite: doctoral standing. Designed to expose Ph.D. students to the research within the field while at the same time requiring that each Ph.D. student develop a critical framework for evaluating and integrating recent research. May be repeated for credit. S U grading. Mr. Massarik

290. Organization Theory. Prerequisite: course 423 or consent of instructor. Analysis of the theory and practice of the managerial function of organizing through study of the literature, case analyses, and seminar discussion. Individual projects and reports. Mr. McKelvey

291. Planning and Control. Prerequisite: course 423 or consent of instructor. Analysis of the theory and practice of the managerial function of planning and control. The implementation of objectives through policy formulation, decision making, and control. Individual projects and reports. Mr. Carrabino, Mr. Steiner

292A. Research and Development Policy. Examination of research and development as a process and as an element of a goal-oriented organization. Factors affecting invention and innovation; transfer of technology; organizational and behavioral considerations; coupling of science, technology, and organizational goals; assessing of forecasting technological futures. Mr. Goodman

292B. Models of Organization Behavior. Prerequisite: consent of instructor. Theoretical frameworks for developing explanatory and predictive models of complex organizations. Exercises in constructing formal models, usually in mathematical or stochastic form and, where appropriate, using materials from field studies to develop empirical tests. These models may be used to discover implications for the systems changes recommended in the sociotechnical field study.

292C. Comprehensive Planning in the Public Sector. Prerequisite: consent of instructor. Evolving modes of planning under complexity, with particular emphasis on the public sector. Development of policy through standard setting, bargaining, and regulating governing relationships; reality and value judgments; social and technical dimensions of alternatives; and social and technological forecasting.

292D. Management in the Public and Private Nonprofit Sectors. Prerequisite: graduate standing. Examination of the roles and management systems of the three sectors of U.S. society; unique aspects and managerial issues of public and private nonprofit organizations and of their political, social, and technical environments. Financial, marketing, and operational considerations and evaluation, control, and ethical issues of service delivery systems. Mr. Andrews

293. Business and Society. Prerequisite: consent of instructor. A study of the business enterprise as a social institution, with emphasis on the changing purposes of social action. Adjustments of the firm to changes in the social environment. Ethical problems in management. Social responsibilities of the business manager.

294A. Strategy Formulation and Implementation. Prerequisite: consent of instructor. Case course dealing with strategy decisions and their implementation, executive action, and administrative behavior involved in managing total enterprises. Students are confronted with complex company situations to develop ideas essential to overall managerial direction.

294B. Environmental Impacts on Management. Prerequisite: consent of instructor. Examination of ways in which business, government, labor, and consumer organizational managers might respond to external environmental problems. Methods studied for developing and evaluating alternative managerial solutions which permit organizations to assist in improving current and future environmental quality.

295A. Entrepreneurship and Venture Initiation. Prerequisite: consent of instructor. An exploration in entrepreneurship particularly concerned with the formation and operation of new business ventures. Significant and crucial aspects of exploring new business opportunities and starting a business. Mr. Schöllhammer

295B. Small Business Management. Prerequisite: consent of instructor. Exploration of crucial aspects in managing small business enterprises. Emphasis on the identification and analysis of characteristic operating problems of small firms and the application of appropriate methods or techniques for their solution. Mr. Schöllhammer

296A. International Business Management. Discussion, three hours. Prerequisite: course 205A or consent of instructor. Identification, analysis, and resolution of managerial issues of policy and action within the context of a multinational corporation, with emphasis on problems of adaptation to different sociological, cultural, legal, political, and economic environmental characteristics on planning, the structuring of organizational relationships, coordination and control in multinational firms. Mr. Schöllhammer

296B. International Comparative Management Research. Prerequisite: doctoral standing or consent of instructor. In-depth study of theory and research pertaining to international business and comparative management. Emphasis on recent research developments and methodological issues. Imparts knowledge on the design and the conduct of international/comparative management research. Mr. Mason

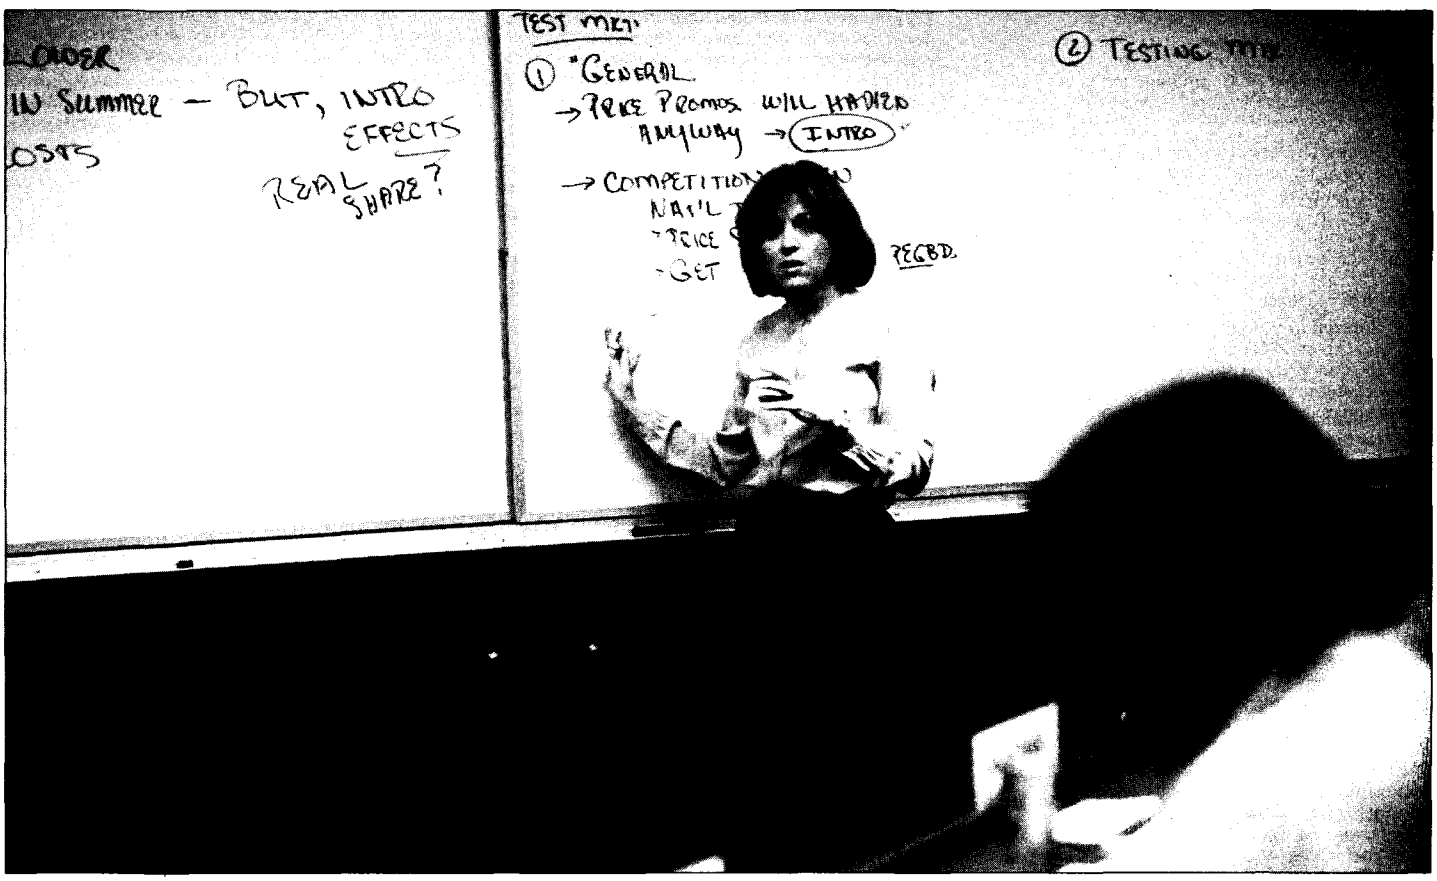
297A. Comparative and International Management. Prerequisite: course 412 or consent of instructor. A comparative study of the practice of management in selected foreign countries, as affected by their social environments and the development of management theory.

297B. International Business Policy. Prerequisites: course 205A, consent of instructor. Analysis of key managerial problems encountered in a multinational corporation. Concepts and theories acquired in other courses in international business and comparative management, applied to a series of complex cases and simulations of international business operation.

297C. International Business Law. Prerequisites: courses 205A, 296A. Legal environments in which international business operates; overseas business relationships and organizations; antitrust, taxation, transfer of capital, and technology regulations; patent, trademark, and copyright safeguards; arbitration of international business disputes; expropriation of foreign investments; international business and government relations.

297D. International Business Negotiations. Prerequisite: course 296A. Exploration of international business negotiations of multinational enterprises with governmental agencies and foreign-based firms on a wide range of issues, such as establishment/dissolution of joint ventures, extent of foreign ownership/management control, terms/conditions for technology transfer, investment incentives.

298A. Special Topics in Management Theory. Prerequisite: doctoral standing or consent of instructor. An examination in depth of problems or issues of current concern in management theory. Emphasis on recent contributions to theory, research, and methodology. Of special interest to advanced Ph.D. candidates, academic staff, or distinguished visiting faculty. May be repeated for credit.



298B. Special Topics in International and Comparative Management. Prerequisite: doctoral standing or consent of instructor. An examination in depth of problems or issues of current concern in international and comparative management. Emphasis on recent contributions to theory, research, and methodology. Of special interest to advanced Ph.D. candidates, academic staff, or distinguished visiting faculty. May be repeated for credit.

298C. Special Topics in Sociotechnical Systems. Prerequisite: doctoral standing or consent of instructor. An examination in depth of problems or issues of current concern in sociotechnical systems. Emphasis on recent contributions to theory, research, and methodology. Of special interest to advanced Ph.D. candidates, academic staff, or distinguished visiting faculty. May be repeated for credit.

298D. Special Topics in Management (1 to 4 units). Prerequisite: doctoral standing or consent of instructor. An examination in depth of problems or issues of current concern in management. Emphasis on recent contributions to theory, research, and methodology. Of special interest to advanced Ph.D. candidates, academic staff, or distinguished visiting faculty. May be repeated for credit.

298X-298Y-298Z. Management Strategy and Policy Workshop (1 unit, 1 unit, 2 units). Discussion, three hours. Prerequisite: doctoral standing. Designed to develop an ability to critically evaluate research in fields relevant to the study of management strategy and policy. Papers are presented in a colloquium format by leading scholars in management strategy and policy. Active participation and intellectual interchange encouraged through discussion of the papers in sessions prior to the workshop, as well as during the colloquium. May be repeated for credit. S/U grading. Mr. Goodman

299M. Ph.D. Seminar in Research Methodology. Discussion, three hours. Prerequisite: doctoral standing. Methodological issues in management research. Emphasis on the identification of research opportunities and the formulation and evaluation of a research proposal. Alternative goals, settings, and designs. Hypothesis development and testing. Measurement. Implementation considerations.

299R. Research Methods in Management. Prerequisite: doctoral standing. Provides feedback and evaluation of papers prepared for the research requirement. Quarterly meetings to discuss expectations of the research committee and the Doctoral Office. Students must enroll the quarter in which they are submitting their research paper. May be repeated for credit. S/U grading.

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. A teaching apprenticeship under the active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

The following courses are acceptable toward the M.B.A., M.S., and Ph.D. degrees within the limitations and conditions prescribed by the curricula of the Graduate School of Management.

400. Mathematics for Management. Prerequisite: graduate standing. Fundamental mathematics for business, including topics from matrix algebra, probability, and calculus, with applications to model building and decision making in business firms. S/U grading.

401. Managerial Economics. Prerequisite: graduate standing. Introduction to the measurement and determination of economic activity in the aggregate and to the role of prices in the decision making of the organization. National income accounting, basic economic policy, markets and prices, competition and monopoly, applications.

402. Data Analysis, Statistics, and Decision Making. Prerequisite: graduate standing. An introduction to statistics for graduate students who have had no previous course with emphasis on application to business problems.

403. Managerial Accounting. Prerequisite: graduate standing. An introduction to fundamental systems and procedures in financial and managerial accounting, with emphasis on income measurement, marginal analysis, standard and direct costing. Provides a firm understanding of how to read and interpret published financial statements.
Mr. Buckley, Mr. Kircher, Mr. Landsman

404. Managerial Computing. Prerequisite: graduate standing. An introduction to the use of computers for management applications. Computer hardware, software, and programming concepts. Programming problems, using both batch and interactive approaches. Mr. Frand, Mr. McLean

405. Managerial Economics: The Organization. Analysis of decision making in the firm, competitive policies and market structure, revenue and cost behavior. Mr. Granfield, Mr. Nicols, Mr. Osborne

406. Managerial Economics: Forecasting. Prerequisite: graduate standing. Sales, costs, and profit forecasting. General business forecasting and cyclical mechanisms. Mr. Kimbell, Mr. Norton

407. Managerial Model Building. Prerequisite: course 400 or 402 or equivalent. A survey of the uses of formal modeling approaches in managerial decision making. Emphasis on model types and formulations, and use of solutions obtained from computer routines. Application areas include finance, marketing, production, and public systems.

408. Managerial Finance. Analysis of main decision areas of managerial financial management, aimed at principles generally applicable to all types of organizations. Emphasis on financial planning and control, sources of funds, developing objectives and standards which lead to effective allocation and use of the organization's resources.
Mr. Copeland, Mr. Hofflander, Mr. Weston

409. Personnel Management and Labor Relations. Prerequisite: graduate standing. Human resources evaluation. Compensation practices. Collective bargaining impacts. Governmental policy impacts on public/private sectors regarding labor-management relations, affirmative action, occupational safety, pension reform. Concepts of labor markets and manpower planning. Innovations such as employee participation and flextime.

410. Production and Operations Management. Prerequisite: course 407 or equivalent. Principles and decision analysis related to the effective utilization of the factors of production in manufacturing and nonmanufacturing activities for both intermittent and continuous systems. Production organizations, analytical models and methods, facilities design, and the design of control systems for production operations.
Mr. Andrews, Mr. Buffa, Mr. Sarin

411. Elements of Marketing. Principles of market-driven managerial decision making: the definition of target markets, assessment of consumer needs, demand forecasting, market segmentation, and customer behavior. Management of the marketing function: product and pricing decisions, channels of distribution, sales force, and advertising.

412. Management of Organizations. Prerequisite: graduate standing. Integrative approach to theory and practice of management in complex organizations, emphasizing managerial roles in designing organizational structures, creating/maintaining planning, control, information, incentive systems, different patterns of human interaction such structures and systems tend to produce.
Mr. Barney, Mr. McKelvey, Mr. Spender

413A. Business Computer Programming. Prerequisite: course 404 or Computer Science 10C or equivalent experience. Programming business and management applications in a general purpose programming language. Choice of language used (e.g., PL/1, COBOL) may vary each quarter. Issues of program structure; input, output, and editing considerations; data and file structures; and characteristics of commercial data processing. Extensive programming assignments.
Mr. Lientz, Mr. McLean, Mr. Sprowls, Mr. Swanson

413B. Interactive Computer Programming. Prerequisite: course 404 or Computer Science 10C or equivalent experience. Use of interactive computer programming (e.g., in APL) to solve management problems. Emphasis on formulating algorithms for unstructured problems and ad hoc queries. Several computing environments (i.e., large central computers; minicomputers and microcomputers) featured. Extensive programming assignments.
Mr. Lientz, Mr. McLean, Mr. Sprowls, Mr. Swanson

420. Management Policy. Prerequisite: course 412. Evaluation and formulation of organization's overall policies and strategies. Economic, heuristic, and social process approaches to policy formulation, environmental analysis, and organizational appraisal. Senior management's role in managing the policy process. Mr. Barney, Mr. Mason, Mr. Rumelt

423. Advanced Management Theory. Advanced study of management theory in formally organized enterprise through significant readings; discussion of advanced approaches and techniques developed from applying theory; use of theory to integrate methods and findings of quantitative and behavioral sciences; lectures on sophisticated application of management theory in practice. Mr. Raia

435. Organizational Behavior and Management Processes. Prerequisite: graduate standing. A system approach to the theory and practice of management in complex organizations. An integrated view of human behavior and managerial processes in a dynamic organizational society.

440. Managerial Problem Solving: Individual. Prerequisite: graduate standing. Study and practice of individual decision making and problem solving, including the impacts of personality, motivation, interpersonal communication, and various decision-making techniques. The relationships among the individual, managerial roles, and complex organizations as they influence the managerial process.

441. Managerial Problem Solving: Complex Systems. Prerequisite: course 440. Study of organizational and interorganizational problem solving, including identification, formulation, data collection, forecasting, assumption testing, solution methods, implementation, evaluation, control, and dealing with conflict and ambiguity. Organization of projects in which problem solving is experienced at various levels of complexity.

444A-444B. Management Field Study. Must be taken in two consecutive quarters in the second year (or its equivalent) for part-time students. Supervised study of an organization, including establishment of client consultant relationship, identification of problem or strategic question, design of study, collection and analysis of data, development and reporting of implementable recommendations. In Progress grading.

450. Fieldwork in Behavioral Science Management Development (4 or 8 units). Prerequisites: course 287, consent of instructor. Supervised practical fieldwork in all phases of laboratory education for management development, such as sensitivity training laboratories, creativity and personal growth laboratories, simulated managerial behavior laboratories, etc.

451. Fieldwork in Organizational Development (2 to 12 units). Prerequisite: course 284B or 450 or consent of instructor. Supervised practical fieldwork in organizational development consultation in interpersonal, group, intergroup, total organization, and interorganizational settings.

452. Fieldwork in Technical Assistance for Minority Business Enterprise (1 to 4 units). Prerequisite: completion of first year of master's program or consent of instructor. Supervised field experience in business consulting and other forms of technical assistance for business firms and management in ethnic communities; seminars and other shared learning experiences in transmitting business administration technology to the urban ghetto.

453. Fieldwork in Arts Management (4 to 12 units). Prerequisite: consent of instructor. Supervised field experience and practical work in all phases of an arts organization (pictorial, performing, or community), concentrating on its managerial problems and its relationship to the community and society in general.

454. Fieldwork in Organizations. Prerequisites: completion of two quarters of the M.B.A. program, consent of the supervising faculty and the director of the M.B.A. program. Supervised, nonpaid practical experience or fieldwork in an organization as an intern or fellow. Execution of predetermined assignment(s) pursuant to a defined program of study which may include formal classwork. May not be repeated for credit.

495. Preparation for Teaching Business and Management. Prerequisites: graduate standing, consent of instructor. Study of problems and methods in the teaching of management. Seminars, workshops, and practice teaching. May not be applied toward the M.B.A., M.S., or Ph.D. degree requirements. S/U grading. Mr. Frand

The following individual study or research courses (501 through 599) may be used, within limitations and conditions prescribed by the school, to satisfy minimum higher degree requirements.

501. Cooperative Program (2 to 8 units). Prerequisite: consent of UCLA GSM graduate adviser and assistant dean, and host campus instructor, department chair, and graduate dean. Course is used to record the enrollment of UCLA students in courses taken under cooperative arrangements with neighboring institutions. S/U grading.

596A-596N. Research in Management (1 to 8 units each). Prerequisite: consent of director of master's program or director of Ph.D. program by special petition. Directed individual study or research. May be repeated.

597. Preparation for Qualifying Examinations (4 or 12 units). Prerequisite: consent of director of master's program or director of Ph.D. program by special petition. Preparation for master's comprehensive examination or Ph.D. qualifying examinations.

598. Thesis Research in Management (4 or 12 units). Prerequisite: consent of director of master's program by special petition. Research for and preparation of master's thesis. May be repeated. S/U grading.

599. Ph.D. Dissertation Research in Management (4 or 12 units). Prerequisite: consent of director of Ph.D. program by special petition. Research for and preparation of Ph.D. dissertation.

Executive M.B.A. Program

Admission to the Executive M.B.A. program is prerequisite for enrollment in the following courses:

461. Managerial Problem Solving (2 units). Focus on individual problem-solving and decision-making skills. Alternative conceptual frameworks presented for augmenting the individual's diagnostic and decision-making skills. Use of readings, cases, decision simulations, and discussions to explore the areas of charting job and career progress, working with others, and shaping the work culture. Mr. Ouchi

462. Economic Analysis for Managers. Policy-oriented problems in antitrust, tax securities, and environmental regulation. Concepts of microeconomic theory illustrated. Topics include traditional antitrust regulations, new trends in antitrust, private versus government antitrust, securities regulation, environmental regulations, and a business firm's optimal response to regulation. Mr. Granfield

463. Data Analysis and Management Decisions under Uncertainty. Survey of statistical model building, with emphasis on the managerial interpretation of the statistical summary of data. Classical statistics covered through multiple regression to support the courses in finance and marketing that follow. The fundamental approaches to decision making under uncertainty. Mr. Hanssens

464. Managerial Accounting. Familiarizes the manager with the functions of accounting by focusing on the use of external financial reports for evaluating corporate performance and the use of accounting information for internal planning and control. Mr. Buckley

465. Quantitative Methods for Managers. A survey of modeling approaches to managerial planning and decisions. Emphasis on the ability to recognize situations where models can be used advantageously, to work effectively with model building specialists, and to make good use of models once they have been developed. Mr. Geoffrion

466A-466B. Financial Policy for Managers (4 units, 2 units). Modern financial management deals with decision making under uncertainty for corporate financial management, for portfolio investment decisions, for financial institutions, and for international financial management. Focus on learning sound theoretical tools and applying them in casework. Mr. Copeland, Mr. Cornell

467. Management Information Systems (2 units). Information systems for management decision making. Emphasis on support of strategic planning and management control functions; computer-based decision support systems; organizational arrangements for performance measurement and control; programming and budgeting systems. Mr. Greenberger

468. Economic Forecasting (2 units). Macroeconomic theory and its application to business forecasting. Major economic indicators and their historical description of the U.S. economy; theoretical tools that business economists use to analyze the impacts of monetary and fiscal policy; macroeconometric techniques applicable to business decisions. Mr. Kimbell

469. Management of Human Resources. An introduction to the major areas of human resource management — personnel management, labor economics, labor law, and labor relations — accomplished by examining some of the major concepts, theories, and research related to each of these topic areas, as well as some of the practical problems for managers posed by each. Mr. Flamholtz

470A. Introduction to Action Research and Policy Analysis (2 units). Provides methods of organizational and strategic analysis to determine the relationship of the organization with its environment. Techniques for action research such as experimental design, survey design, and research methods.

470B-470E. Action Research and Policy Analysis Project (2 units, 1 unit, 1 unit, 2 units). Four quarters of supervised study of an organization in relation to complex environmental changes. Competitive and environmental analysis of the organization. Development of an action research project and managerial policy scenarios; examination of their organizational implications; and recommendations for managerial and organizational response to deal with environmental changes. Mr. Goodman, Mr. Raia

472. Marketing Strategy and Policy. Strategic marketing decisions, including the development of marketing objectives and strategies and the implementation of these strategies through pricing, channel, promotion, and new product decisions. Ms. Scott

473. Managerial and Organizational Processes. Development of an understanding of the workings of large, complex organizations, with emphasis on the macroanalytic, rather than on the microanalytic, approach. Mr. Raia

474. Production and Operations: Systems, Strategies, and Policies. Analysis of strategic and operating policies and decisions for systems that produce goods and services in enterprises. Examination of the role of broad-level planning, inventories, scheduling of resources, organization of resources, distribution systems, system location. Comprehensive operating problems. Mr. Sarin

475. International Managerial Policies and Strategies. Study of economic and business decisions in an international context, with emphasis on the formulation and implementation of management strategies in multinational enterprises. Application of concepts of international economic analysis and exploration of international corporate strategies. Mr. Schöllhammer

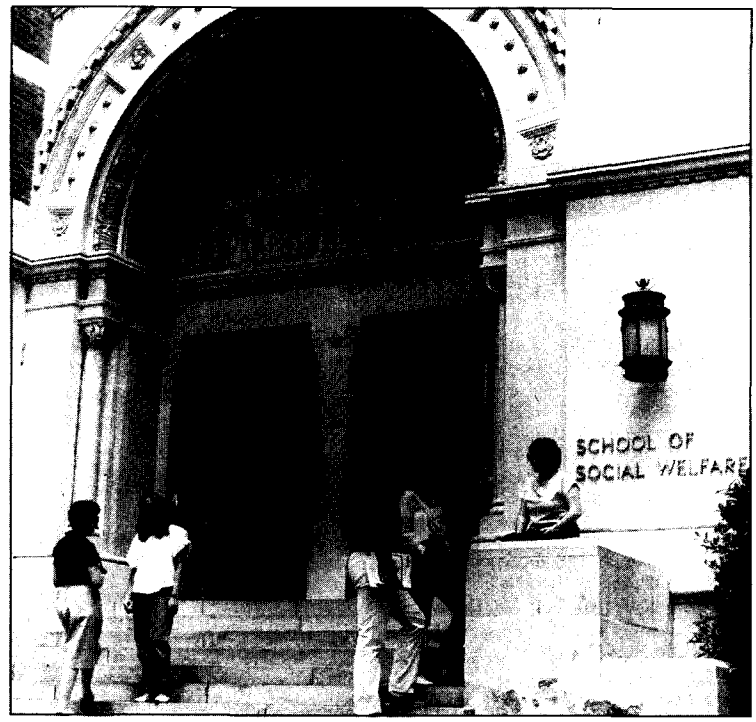
476. Competitive Strategy and Business Policy. The study of the general management task of forging a corporate competitive strategy. Emphasis on the economics of business rivalry within a variety of industrial settings and the implications of changing environments on business strategy. Mr. Rumelt

477. The Manager and Business/Society Relationships. While organizations may, to some extent, choose their immediate environments, there are broad environmental factors and trends that affect most, if not all, organizations. Examination of emerging trends in key areas of government regulation, labor relations, international trade, the basic economic structure, and social responsibility. Mr. Ouchi

478. Seminar on Management Strategy and Policy (2 units). Broad policy issues relevant to strategic planning and management. Group methods of problem solving, including a case study involving the top management team from a prominent corporation in an analysis of the corporation's competitive environment and strategic planning.

School of Social Welfare

Leonard Schneiderman, Dean



13

The profession of social work is one of the principal helping professions. Social workers are employed as policymakers, administrators, community organizers, managers, and practitioners in all of the human services, including physical and mental health, education, income security, housing and the social services, family and child welfare, manpower development and training, corrections, etc. Social work services are offered under public auspices, at all levels of government, under private-for-profit and not-for-profit auspices, and in the workplace. In each setting social work concerns focus on the restoration of impaired social functioning of individuals, groups, communities; the provision of resources, social and individual, which will enhance social functioning; and the control of factors which threaten effective and satisfying social functioning. Social work is also concerned with the causes, treatment, and prevention of personal and social ills and with the broader social and economic issues in society.

In its professional education and practice, social work collaborates with disciplines in the field of health, including physical, mental, and public health programs; law, including the areas of corrections, civil rights, and social legislation; education, with reference to social work in the schools, special needs of handicapped children, and programs developed for children in deprived areas. There is also close collaboration with the applied social sciences in the study of social institutions and social change.

UCLA's School of Social Welfare is considered among the top schools of its kind in the country based on the quality of its programs, its research grants, and its publications. The school's primary objective is to prepare graduate students not only for successful careers but also for imaginative leadership in the social welfare field.

School of Social Welfare

200 Dodd Hall, (213) 825-2892

Professors

Rosina Becerra, Ph.D., *Associate Dean*
Jerome Cohen, Ph.D.
Jeanne M. Giovannoni, Ph.D.
Doris S. Jacobson, Ph.D.
Harry H. L. Kitano, Ph.D.
Manuel R. Miranda, Ph.D.
Jack Rothman, Ph.D.
Leonard Schneiderman, Ph.D., *Dean*
Nathan E. Cohen, Ph.D., *Emeritus*
Maurice F. Connery, D.S.W., *Emeritus*
Alfred H. Katz, D.S.W., *Emeritus*
Elliot T. Studt, D.S.W., *Emeritus*

Associate Professors

Diane de Anda, Ph.D.
Alex J. Norman, D.S.W.
Harry Wasserman, D.S.W.

Assistant Professors

James E. Lubben, D.S.W.
Judith Rosenthal, D.S.W.
Ruth Zambrana, Ph.D.

Adjunct and Visiting Lecturers

Lourdes Arguelles, Ph.D., *Visiting*
Margaret Bonnefil, M.S.W., *Visiting*
Mary Ann Fraser, M.S.W., M.B.A., *Visiting*
Wanda Houck, M.S.S.W., *Visiting*
Maxine B. Jackson, M.S.W., J.D., R.N., *Visiting*
Mary Ann Jimenez, Ph.D., *Visiting*
Rosalie Kane, D.S.W., *Visiting*
Barrie Levy, M.S.W., *Visiting*
Rose M. Monteiro, M.S.W., *Visiting*
Idele Natterson, Ph.D., *Visiting*
Susan Price, Ph.D., *Adjunct*
Wanda Refuerzo, M.S.W., *Visiting*
Philip Ringstrom, Ph.D., *Visiting*
Terrence J. Roberts, Ph.D., *Adjunct, Assistant Dean of Student Services*
Jean Sanville, Ph.D., *Visiting*
David Shapiro, Ph.D., *Visiting*
Bernice Sokol, M.S.W., *Adjunct*
Julie Steckel, M.S.W., *Visiting*
Gloria Waldinger, D.S.W., *Adjunct, Director of Postgraduate Education and Development*

Fieldwork Consultants

Katherine M. Kolodziejski, Ph.D., *Coordinator*
Jane E. Kurohara, M.S.W.
Joseph Nunn, M.S.W.
Winifred E. Smith, M.S.W., *Emeritus*

Degrees Offered

Master of Social Welfare (M.S.W.)
Doctor of Social Welfare (D.S.W.)

The UCLA School of Social Welfare offers an M.S.W. program in Social Welfare and a doctoral program of study leading to the D.S.W. The programs are designed to prepare candidates who wish to train for careers in teaching, research, administration, and practice positions. Courses are scheduled in the School of Social Welfare and in schools and departments of related disciplines and professions.

Master of Social Welfare

Admission

In addition to University minimum graduate admission requirements, the master's program of the School of Social Welfare requires a minimum of five courses in social science or social welfare subjects as prerequisite undergraduate preparation for graduate study in the field of social work. Completion of courses in psychology and sociology is desirable, and a course in statistics is required.

A grade-point average of 3.0 or better is required in all courses taken during the junior and senior years. However, applicants with a GPA below 3.0 may be considered when there is clear evidence of capacity for academic achievement and professional development. In addition, the school applies the following criteria in the selection of candidates: personal suitability for professional education and a potential for successful social work practice, a satisfactory state of health, and an adequate financial and personal plan to permit completion of degree requirements.

The Aptitude Test of the Graduate Record Examination (GRE) is required, as are official transcripts from every school attended since high school. GRE results must be submitted prior to any evaluation of the application for admission. GRE scores must be less than five years old and may be repeated to achieve a higher score, if desired. The highest GRE Aptitude score achieved will be evaluated for admission. In addition, international students whose native language is other than English and whose higher education was not obtained in an English-speaking institution are required to take the Test of English as a Foreign Language (TOEFL). Refer to "Proficiency in English" under "Graduate Admission" in Chapter 3 for further information. The school may request that you take specified examinations to assist in the assessment of candidacy for admission.

Three letters of recommendation are required. In addition, an autobiographical statement and a professional concepts and goals statement must accompany the application.

Admission to the school requires simultaneous application to (1) the School of Social Welfare and (2) the Graduate Division. Both applications and the school brochure can be obtained by writing to the School of Social Welfare Admissions, 247 Dodd Hall, UCLA, Los Angeles, CA 90024, or by calling 825-7737.

Major Fields or Subdisciplines

Direct social work practice with individuals, families, and small groups, community organization, and social welfare administration are offered as social work methods. Concentrations are available in child and family welfare, health and aging, and mental health.

Course Requirements

A total of 76 units in courses in the School of Social Welfare is required, including three courses in social welfare policy and services, three courses in the human behavior and social environment sequences, six courses in methods of social work practice, five courses in social welfare research, plus six quarters of field instruction. Appropriate substitutions or waivers may be made by the dean. You may, with consent of the dean, take courses in other graduate schools of the University in fulfillment of the degree requirements.

With the consent of the instructor and the dean, you may substitute tutorial studies of comparable material in the 500 series for either required or elective courses. Only Social Welfare 596A and 597A may be taken. A maximum of nine units of 500-series courses may be applied toward the entire graduate course requirement for the degree.

Practicum Requirements

There is a concurrent field placement in each of the two years. Time spent in placement may vary according to guidelines established by the school, but approximately 1,300 hours are required.

Thesis Plan

While no University-approved master's thesis is required for the M.S.W. degree, the curriculum requires theoretical courses in research methodology. As a component of the second-year research course, the satisfactory completion of an individual research project, or participation in a group research project concerned with a social welfare problem, is required.

Comprehensive Examination Plan

All M.S.W. candidates must pass an oral comprehensive examination in the Spring Quarter of the second year of study. The examination may cover the entire range of the program.

Doctor of Social Welfare

Admission

In addition to the University minimum requirements, the school requires completion of an M.S.W. degree program with a superior record from an accredited school of social work. This requirement may occasionally be waived if an applicant possesses a postgraduate degree and professional experience in a related field. Such candidates, however, are required to fulfill specified requirements in the M.S.W. program in addition to the normal doctoral requirements.

Admission criteria include the quality of your performance in previous undergraduate and graduate study, capacity for doctoral-level scholarship, ability to express yourself clearly in writing, success in professional employment and other pertinent experience, results of the Graduate Record Examination (GRE), and personal qualifications indicating suitability for advanced study and research.

The Aptitude Test of the GRE is required, as are official transcripts from every school attended since high school. In addition, international students whose native language is other than English and whose higher education was not obtained in an English-speaking institution are required to take the Test of English as a Foreign Language (TOEFL). Refer to "Proficiency in English" under "Graduate Admission" in Chapter 3 for further information. The school may request that you take specified additional examinations to assist in the assessment of candidacy for admission.

Five letters of recommendation and a typewritten statement of professional and educational objectives are required. To exemplify your communication skills, you may submit any of the following: published articles, master's thesis, or other theoretical/research-oriented unpublished papers.

Although a personal interview is not required as part of the application procedure, whenever possible a conference is arranged with a member of the doctoral faculty.

Prospective students must apply separately to the School of Social Welfare and to the Graduate Division. Both applications and the school brochure are available by writing to the School of Social Welfare Doctoral Program, 200 Dodd Hall, UCLA, Los Angeles, CA 90024.

Major Fields or Subdisciplines

The core curriculum is the same for all students. Programs of specialized study relevant to the substantive area of the dissertation, which include courses in other schools and departments of the University as well as seminars and tutorials within the school, are developed in consultation with the adviser.

Course Requirements

Courses required for the degree normally cover a two-year span of study. All first-year course requirements must be completed before taking the qualifying examinations.

Required courses for the first year are Social Welfare 225A-225B, 245A-245B-245C, and 286A-286B-286C. In addition, a one-quarter course may be required in an area to be selected by the doctoral program committee, depending on the educational needs and interests of the first-year class.

Required courses for the second year are Social Welfare 210A-210B. A third course, which may be a seminar or individual or small group tutorial, is also required.

In addition to these requirements, you must take a minimum of three quarters in a graduate school or department outside the School of Social Welfare in an area related to your professional objectives, with consent of your adviser. In exceptional instances, you may obtain either a waiver of or substitution for a required course. Ordinarily, students in full-time study are expected to enroll in at least 12 units of study each quarter during the first two years and at least eight units per quarter thereafter.

A practicum may be required as a component of one or more courses, although it is not a general program requirement.

Qualifying Examinations

Before the formation of a doctoral committee, you must pass a written qualifying examination in each of the three core areas, as follows: (1) social welfare policy, history, and philosophy; (2) social work practice theory; and (3) research and scientific inquiry (philosophy and values, research methodology, research design, and behavioral concepts utilized in social welfare). The emphasis in these examinations is on your ability to integrate the knowledge gained from the several substantive areas for dealing with problems and issues of the field of social welfare at various levels — theoretical, operational, and evaluative.

The written qualifying examinations are graded on a pass/fail basis. If you fail one or two of the three examinations, you may be granted permission to retake those examinations. You ordinarily are required to take the examinations in June of your first year of study; any retaking of examinations ordinarily takes place in September.

The University Oral Qualifying Examination for advancement to candidacy covers the dissertation proposal and related areas and is administered by your doctoral committee, which consists of faculty from within and outside the school. The written qualifying examinations must be successfully completed prior to the oral examination.

Final Oral Examination

A final oral examination may be required at the option of the doctoral committee.

Graduate Courses

201A-201B-201C. Dynamics of Human Behavior I, II, III (2 units each). Biopsychosocial factors associated with individual and group behavior and development as applicable in the social functioning of individuals and groups. Emphasis on theoretical issues and research evidence which contribute to a unified theory of human development.

202A-202B. Dynamics of Human Behavior: Deviance IV, V (2 units each). Prerequisites: courses 201A-201B-201C. Deviations and pathologies or stresses in the physical, emotional, and social areas of human functioning as those problems relate to the role and function of the social worker.

203. Integrative Theory and Research in Human and Social Behavior (2 units). An integrative course which brings together the preceding courses in the human behavior and social environment series by examination at an advanced level of the major theoretical strands and the identification of problem areas requiring further research.

204A. Social Systems in Social Welfare (2 units). The application of social system theory to the problems of social welfare and social work. Analysis of the network of community relationships, values, stratification, institutions, and subcultures as related to the premises and services of social work.

204B. Small Groups in Social Welfare (2 units). Application of theory and knowledge of small group functioning to problems of working with groups in social work settings. Analysis of group formation, structure of interaction and communication patterns, and leadership and morale problems. Application to family, peer, and special-purpose groups.

205. Group Conflict and Change (2 units). Study of the phenomena of group conflict and change as they appear in the social welfare matrix of groups, communities, and social institutions; relationship between conflict and social and cultural change; major research contributions in understanding of these phenomena.

210A-210B-210C. Social Ecology. Lecture, two hours. Prerequisites: doctoral standing and/or consent of instructor. Exploration of data, theories, and research from the biological and policy sciences regarding ecological relationships. Review of current sociocultural, demographic, and political changes as they affect human society, its institutions and, more particularly, social welfare needs and the study of them.

220. History and Philosophy of Social Welfare (2 units). The history of social work as a field: body of knowledge, method and process, and point of view analyzed within the context of the economic, political, social, philosophical, and scientific climate of the period.

221A. Social Welfare Policy and Services I (2 units). Nature, roles, and history of welfare institutions in different societies; applicable social system theory with special reference to values as seen by different components of the welfare system; theory and research about needs met and not met, about various welfare policies and organizational forms, and about social change to prevent needs.

221B. Social Welfare Policy and Services II (2 units). Understanding of the significant theoretical constructs and relevant empirical evidence dealing with how organizations develop and maintain their internal functions. Development of beginning skill in organizational analysis. Special attention to organizational analysis of social welfare services.

222A-222B-222C. Social Welfare Administration I, II, III (2 units each). Prerequisites: graduate standing and/or consent of instructor. Study of methods by which welfare policies are formulated and translated into action; the nature of organizational and research processes involved in welfare administration; role of welfare agency personnel in policy formulation, implementation, and evaluation.

223. Seminar on the Social Work Profession (2 units). The nature and role of social work in contemporary society; relationships with other professions; probable future trends in the profession; social work ethics, professional organizations, certification licensing; professional responsibility for continued self-criticism and improvement of the profession.

224A-224B-224C. Advanced History and Philosophy of Social Welfare. Prerequisites: doctoral standing and/or consent of instructor. Analysis of long-term trends in welfare policies and programs in relation to political, economic, and other relevant factors. Philosophical foundations underlying social welfare theories, programs, and methods; values, assumptions, and attitudes historically affecting social welfare.

225A-225B-225C. Social Welfare Systems. Prerequisites: doctoral standing and/or consent of instructor. Analysis of theories of organizational behavior affecting social welfare systems (including supranational systems transcending national boundaries), their directions, goals, values, and relationships to social work. Application of organizational theory to planning, organizing, and administering welfare agencies.

227A-227B-227C. Comparative Social Welfare Theories and Programs. Prerequisites: doctoral standing and/or consent of instructor. Analysis of interrelationships between nations' welfare services and the social, economic, religious, and broader cultural milieus within which they develop. Special attention to social theories, value systems, and other elements of culture which particularly affect welfare programs.

230A-230B-230C. Theory of Direct Social Work Practice I, II, III (2 units each). Corequisite: required social work practicum. An introduction to the theory of social work with individuals and small groups and to the principles of practice which are derivative of this and related theory.

231A-231B-231C. Advanced Theory of Direct Social Work Practice IV, V, VI (2 units each). (Formerly numbered 231A-231B.) Corequisite: required social work practicum. Advanced level, critical analysis of theories, concepts, and principles underlying social casework practice. Specific attention to deviation and stress as conditions affecting functioning of individuals and groups, and to diagnostic knowledge and competence required in rehabilitation and prevention.

240A-240B-240C. Theory of Social Work Practice in Community Organization I, II, III (2 units each). Corequisite: required social work practicum. Historical and theoretical developments in community organization; understanding the community as a social system; role of the practitioner in identification, analysis, and evaluation of needs, existing programs, policies, structures, and strategies of intervention.

241A-241B-241C. Advanced Theory of Social Work Method (Community Organization) IV, V, VI (2 units each). (Formerly numbered 241A-241B.) Corequisite: required social work practicum. Emphasis on various patterns of community action for attaining social welfare objectives; research and field experience directed toward study of social problems within the context of community planning; emerging patterns of physical, economic, and social planning within the framework of social change theory.

M242. Counseling Families of Handicapped Children (2 units). (Same as Psychiatry M254.) Prerequisite: consent of instructor. Techniques and issues in counseling families through evaluation, feedback, and treatment. Social and psychological stresses on family unit, professional's reactions, community resources, and issues of genetic counseling, placement, and developmental crises.

Ms. Gottlieb (W)

245A-245B-245C. Development of Social Work Practice Theory. Lecture, two hours. Prerequisites: doctoral standing and/or consent of instructor. Critical analysis of social work practice theories and selected social sciences theories in historical, social, and scientific contexts, with attention to how theory becomes modified over time.

258. Critical Problems in Social Welfare. Prerequisites: doctoral standing and/or consent of instructor. Current problems in the field of social welfare. Specific topics vary depending on the research and educational interests and needs of the class. May be repeated for credit.

M275. Family Process: Psychological and Social Perspectives on the Family. (Same as Psychology M275.) Various theoretical perspectives applicable to the analysis of family structure and dynamics. Critical issues in the application of family constructs to clinical problems. Mr. Cohen, Mr. Goldstein

280. Social Welfare Research (2 units). Sources, nature, and uses of social work theory and research-based knowledge and of broader social data relevant to social welfare activities. Critical analysis of major methods of developing scientific knowledge.

281A-281B-281C. Advanced Social Welfare Research (2 units each). Individual or group research projects requiring intensive examination and analysis of a social problem area, directed toward the development of research knowledge and techniques for social work practice. In Progress grading.

285A-285B-285C. Research in Social Welfare. Prerequisites: doctoral standing and/or consent of instructor. Review of areas of research of concern to social workers, with special attention to design, instrument construction, data collection, data processing, data reduction, analysis, and interpretation. Designs studied include survey, panel, experimental observation, and theory development research.

286A-286B-286C. Survey of Research Methods. Prerequisites: doctoral standing and/or consent of instructor. Basic concepts underlying research methods. Content includes theoretical and conceptual approaches to research problem formulation; research design, including experimental, comparative, and survey; sampling; statistical methods; methods of observation and techniques of data analysis.

290A-290B-290C. Seminar in Social Work (2 units each). A series of seminars dealing with trends in social work and social welfare, with focus on current social problems affecting individuals, groups, and communities and new patterns of intervention based on recent demonstrations and research.

M290D. Women, Health, and Aging: Policy Issues (2 to 4 units). (Same as Public Health M241.) Lecture, three hours; discussion, one hour. Prerequisites: two upper division social science courses, two upper division biological science courses, or equivalent, consent of instructor. The social and economic context of older women's aging, the major physical and psychological changes older women experience, the delivery of health services to this population, and the policies that respond to their health needs.

401A-401B-401C. Practicum in Social Work. Laboratory, 20 hours. Educationally directed practicum conducted in selected health, welfare, and educational facilities. Provides opportunities for students to test their theoretical knowledge and to acquire a disciplined practice foundation in the profession. In Progress and S/U grading.

402A-402B-402C. Advanced Practicum in Social Work (6 units each). Laboratory, 24 hours. Prerequisites: courses 401A-401B-401C. Practicum in social work, arranged for students in keeping with their major field of study. In Progress and S/U grading.

490. Professional Communication for Social Welfare (2 units). Writing workshop on students' papers in progress, with an eye toward scholarly publication. Analysis and group discussion of rhetorical and stylistic principles. May be repeated once. S/U grading.

Mr. Jeske

501. Cooperative Program (2 to 8 units). Prerequisite: consent of UCLA graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Course is used to record the enrollment of UCLA students in courses taken under cooperative arrangements with neighboring institutions. S/U grading.

596A. Special Study and Research for M.S.W. Candidates (2 to 8 units). Individual programming for selected students to permit pursuit of a subject in greater depth.

596B. Special Study and Research for D.S.W. Candidates (2 to 8 units). Prerequisites: doctoral standing and/or consent of instructor. S/U or letter grading.

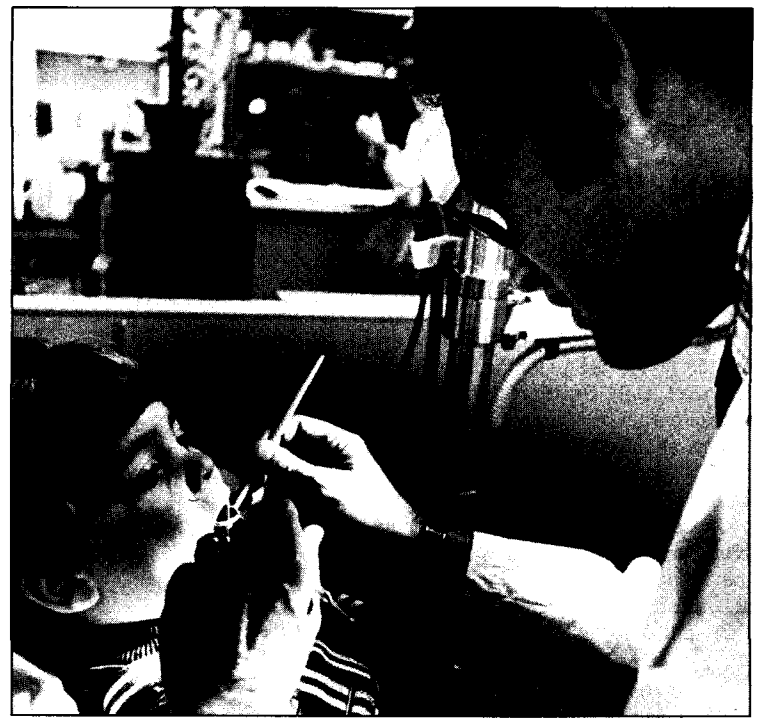
597A. Preparation for M.S.W. Comprehensive Examination (2 to 8 units). Prerequisite: consent of instructor.

597B. Preparation for D.S.W. Qualifying Examinations (2 to 8 units). Prerequisites: doctoral standing and/or consent of instructor.

599. D.S.W. Dissertation Research (2 to 8 units). Prerequisites: doctoral standing and/or consent of instructor.

School of Dentistry

James R. Hooley, Dean



14

The UCLA School of Dentistry has developed a national and international reputation for its teaching and research activities. Challenging educational and training programs prepare the dental student for a professional career dedicated to patient treatment and service. The curriculum is carefully designed to prepare students for changes in treatment modalities and health care delivery systems. Students become actively involved in preventive dental care early in their training and soon make valuable contributions to the clinical health team. The clinical instruction system emphasizes a patient care approach in which each patient is treated comprehensively. Students interact with their colleagues, faculty, and dental auxiliary personnel in much the same way as they will do in a private or group practice.

Opportunity exists for dental students to undertake programs designed to meet their special needs; senior-year electives encourage more advanced training in an area of particular interest. In addition to basic and applied research programs within the school, students participate in community service programs such as the Venice Dental Clinic and the Mobile Dental Clinic, the latter in conjunction with the University of Southern California. Postdoctoral study can be undertaken in one of several dental specialties, and an active continuing education program through University Extension provides a variety of short courses for members of the dental profession and their auxiliaries.

School of Dentistry

A3-042 Dentistry, (213) 825-6141

The UCLA School of Dentistry, which occupies facilities in the Center for the Health Sciences, offers a D.D.S. (Doctor of Dental Surgery) degree program, a number of postdoctoral programs, and an Oral Biology M.S. degree program. Concurrent D.D.S. and M.S. or certificate programs are also available. This catalog provides detailed information only on the M.S. program in Oral Biology, for which admission to the School of Dentistry is not required.

Degrees Offered
Doctor of Dental Surgery (D.D.S.)
Master of Science in Oral Biology

D.D.S. Degree Program

The UCLA dental curriculum leading to the degree of Doctor of Dental Surgery (D.D.S.) is based on the quarter system. The course of study usually takes four academic years of approximately nine months each, with two required summer quarters between the sophomore/junior and junior/senior years. The curriculum is designed to provide students with clinical competence and broad experience in all phases of clinical dentistry within the four years.

The dental curriculum consists of three principal areas: basic health science courses, didactic dental courses, and clinical experience. The first two years of the curriculum are chiefly devoted to didactic coursework in the basic health and dental sciences. The final two years emphasize training and instruction in the clinical fields, including endodontics, fixed prosthodontics, operative dentistry, oral diagnosis and treatment planning, oral radiology, oral and maxillofacial surgery, anesthesiology, orthodontics, pediatric dentistry, periodontics, and removable prosthodontics.

For further details on the D.D.S. program and a listing of the courses offered, see the *Announcement of the UCLA School of Dentistry*, available from the Office of Student Affairs and Admissions, School of Dentistry, A3-042 Dentistry, UCLA, Los Angeles, CA 90024. You are also referred to Chapter 5 for details on the three-year predental curriculum offered by the College of Letters and Science.

Postdoctoral Programs

The School of Dentistry offers the following opportunities for postdoctoral study: a one-year general practice residency program; a one-year residency in maxillofacial prosthodontics; a four-year oral and maxillofacial surgery residency training program; a three-year combined orthodontic-pediatric dentistry program; and two-year programs in the specialties of orthodontics, pediatric dentistry, periodontics, and prosthodontics.

Information on these postdoctoral programs can be obtained by writing directly to their respective directors, UCLA School of Dentistry, Los Angeles, CA 90024.

Oral Biology

63-050 Dentistry, (213) 825-1955

Professors
George W. Bernard, D.D.S., Ph.D.
John Beumer III, D.D.S., M.S. *(Restorative Dentistry)*
Angelo A. Caputo, M.S., Ph.D. *(Biomaterials Science)*
Fermin A. Carranza, Jr., D.D.S., Dr. Odont. *(Periodontics)*
Spiro J. Chaconas, D.D.S., M.S. *(Orthodontics)*
Glenn Clark, D.D.S., M.S. *(Gnathology)*
Andrew D. Dixon, D.D.S, M.D.S., Ph.D., D.Sc. *(Orthodontics)*
Colin K. Franker, Ph.D.
Jay A. Gershen, D.D.S., Ph.D. *(Pediatric Dentistry)*
Louis J. Goldberg, D.D.S., Ph.D., *Chair*
Douglas Junge, Ph.D.
E. Barrie Kenney, D.D.S., M.S. *(Periodontics)*
Frank J. Kratochvil, D.D.S. *(Removable Prosthodontics)*
Larry S. Luke, D.D.S., M.S., *Clinical (Pediatrics)*
Carol M. Newton, M.D., Ph.D. *(Biomathematics)*
No-Hee Park, D.M.D., Ph.D.
George R. Riviere, D.D.S., M.S., Ph.D. *(Pediatric Dentistry)*
Max H. Schoen, D.D.S., M.P.H., Ph.D. *(Public and Preventive Dentistry)*
G. Douglas Silva, F.D.S., M.R.C.S. *(Oral Medicine)*
William K. Solberg, D.D.S., M.S.D. *(Restorative Dentistry)*
Robert P. Thye, D.M.D., M.S., *Clinical (Restorative Dentistry)*
Stuart C. White, D.D.S., Ph.D. *(Oral Radiology)*
John A. Yagiela, D.D.S., Ph.D.
Fred Herzberg, D.D.S., M.S., *Emeritus*
Norman S. Simmons, D.M.D., Ph.D., *Emeritus*

Associate Professors
Russell Christensen, D.D.S., M.S. *(Oral Diagnosis)*
Joseph P. Cooney, D.D.S., M.S. *(Restorative Dentistry)*
Donald F. Duperon, D.D.S., M.Sc. *(Pediatric Dentistry)*
Patrick Turley, D.D.S., M.Ed. *(Orthodontics)*

Assistant Professor
Lawrence Wolinsky, D.D.S., Ph.D.

Adjunct Professor
Bernard G. Sarnat, M.D., D.D.S.

Adjunct Associate Professor
Michael G. Newman, D.D.S. *(Periodontics)*

Adjunct Assistant Professor
Mark L. Torbiner, D.M.D.

Scope and Objectives

The M.S. program in Oral Biology is intended to prepare students for teaching and research careers in dentistry while introducing them to modern approaches to research in the biology of the oral-facial area. The core curriculum is made up of basic science courses in embryology and histology, microbiology, immunology, physiology, neurophysiology, biology of bone, biochemistry of caries, pharmacology, and therapeutics, all directly related to oral-facial problems. In addition, students take concurrent courses in research methods and scientific writing, a course in biostatistics, and any of several electives in related areas.

All students carry out a thesis project, working in a laboratory in the School of Dentistry, Dental Research Institute, or other divisions of the Center for the Health Sciences. Each is exposed to modern research methodology and is supervised by a faculty member with research experience. Many students are in cooperative D.D.S./M.S. programs or resident programs in specialty areas, and many are dentists trained in other countries.

Master of Science Degree

Admission

Applicants are expected to have an acceptable bachelor's degree with a strong background in the biological and chemical sciences or a Doctor of Dental Surgery degree or the equivalent (i.e., D.M.D.) from an accredited university. The Graduate Record Examination (GRE) and the Dental Aptitude Test (DAT) are not required but may be submitted. Three letters of recommendation are required as part of the admissions packet. There is no separate application

form other than that required by the Graduate Division. International students are considered individually after evaluation of their curriculum and training and must take an English language proficiency examination. Refer to "Proficiency in English" under "Graduate Admission" in Chapter 3 for further information. Contact the Graduate Adviser, Oral Biology Section, School of Dentistry, 63-050 Dentistry, UCLA, Los Angeles, CA 90024, for more information.

Major Fields or Subdisciplines

Areas of specialization or subdisciplines which may be followed to complement or complete the degree requirements include anatomy, biological chemistry, cell biology and virology, immunology, microbiology, pharmacology, and physiology.

Course Requirements

The program requires a total of nine courses, five of which must be at the graduate level. Seven graduate core courses are required: Oral Biology 202, 204, M205, M206, 207, 208, M214. These should be taken during your first year of graduate study. Course 490, which focuses on the preparation of scientific writing and communication, and Biomathematics 170A are both required for completion of the degree.

Courses 596 and 598 are required 500-series courses. You are eligible to take two to eight units at a time on an S/U grading basis as many times as needed. A maximum of eight units of 500-series courses may be applied toward the total course requirement, of which four units may be applied toward the minimum graduate course requirement.

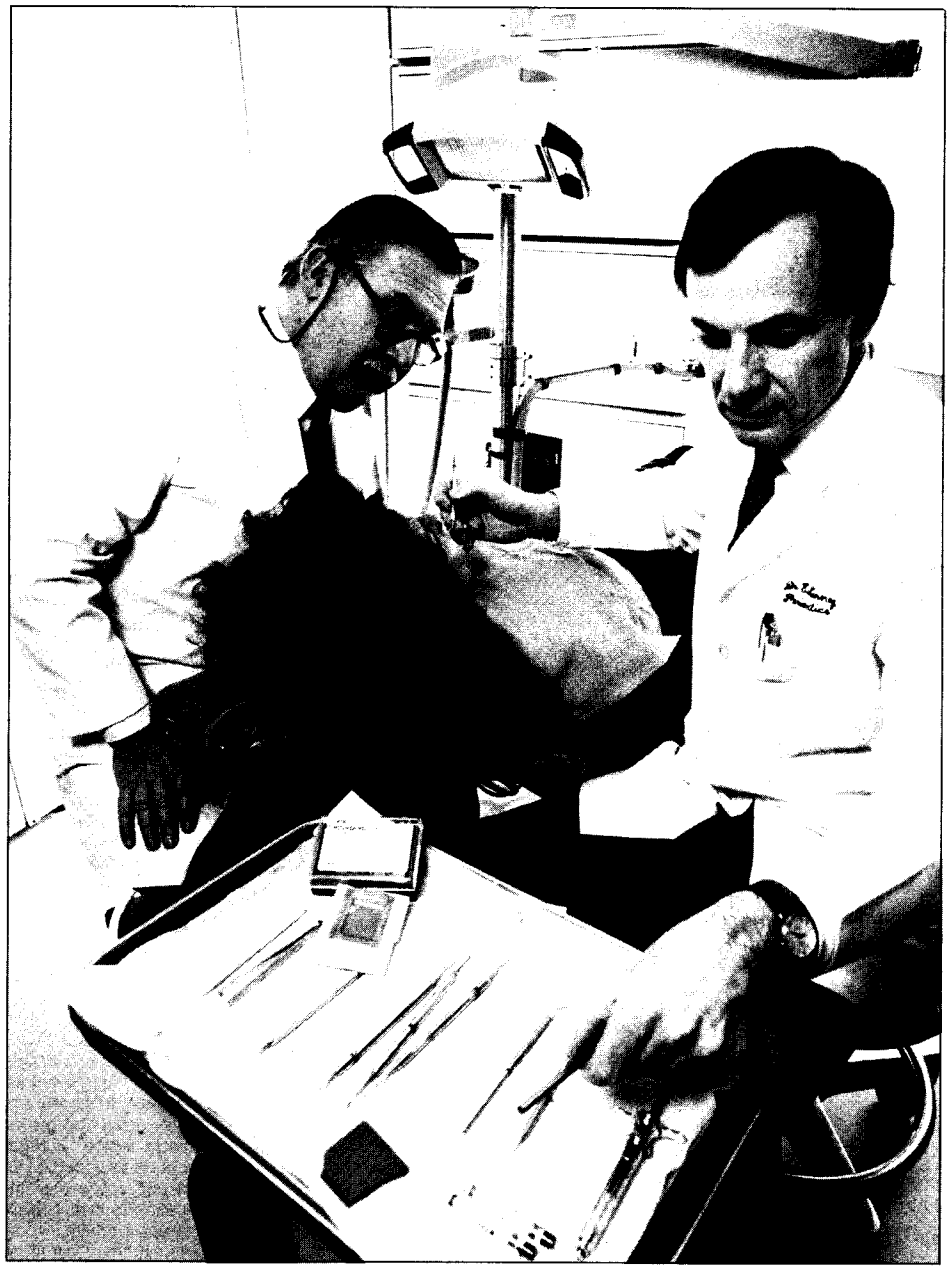
Thesis Plan

The master's thesis is intended to demonstrate your ability to design and carry out a research project and then to analyze and present the resulting data. The thesis must be prepared according to high standards of experimental design and data analysis. The subject of the thesis must be approved by the graduate adviser and by the faculty member who will direct the work of the thesis. After completing course requirements, you should prepare and send to your graduate committee a brief description of the proposed research project. The committee then discusses the proposal with you and makes suggestions.

The thesis should be prepared mainly in consultation with the sponsor, although other committee members are available for assistance. At least two weeks should be allowed between completion of the thesis and termination of the program, to allow committee members to read and comment on the manuscript.

Final Oral Examination

A final oral defense of your thesis is usually required.



Articulated Degree Program

The M.S. degree in Oral Biology has been structured so that students pursuing a dental degree or certificate in the UCLA School of Dentistry have an opportunity to participate in the program. These students must submit a separate application to the Graduate Admissions Office.

Graduate Courses

202. Principles and Methods of Research. Lecture, one hour; laboratory, three hours. Designed to familiarize students with the experimental method and its application to basic and applied research, including experimental method and design and interpretation of data. Research instrumentation and the advantages and limitations of various investigative tools.
Mr. Junge and the Staff (W)

M203. Oral Embryology. (Same as Anatomy M203.) Lectures and laboratory instruction in the development and histological structure of the facial region and the oral and peri-oral organs and tissues.
Mr. Bernard and the Staff (Sp)

204. Antibiotics and Antimicrobial Agents (2 units). A summary of current information on the chemistry, synthesis mode of action, and mechanism of resistance for generically grouped antimicrobial substances. Emphasis also on pharmacokinetic complications of antibiotic usage. Mr. Franker (F)

M205. Oral Physiology. (Same as Physiology M203.) Lecture, one hour; discussion, one hour. The organ-level and cellular physiology of the following systems, discussed in a somewhat flexible framework: (1) salivary glands, including the mechanisms of secretion, abnormalities such as Mikulicz-Sjorgren syndrome, and effects on the dentition; (2) dental pulp: development, normal physiology, and reparative mechanisms; (3) organization of sensory systems, receptors, pathways, and central projections; (4) dentinal pain mechanisms, hydrodynamic theory, and electrical recordings from dentin; (5) taste receptors: mechanisms of perception of four basic tastes, alterations of taste caused by drugs, diseases, and aging; (6) oral touch and temperature receptors: comparison with similar systems in the skin, assessment of sensory dysfunction; (7) speech: phonation, resonance, and articulation in speech production, normal time-course of development of various sounds in children. Classes supplemented with audiovisual materials and many references from the literature. Mr. Junge (F)

M206. Secretory and Gastrointestinal Immunity (2 units). (Same as Microbiology and Immunology M206.) Review of anatomy and physiology of the oral cavity, the intestines, and the related lymphatic and blood vascular systems in reference to the immune system. The secretory and systemic immune systems, with particular emphasis on the unique properties of SIgA. Discussion in terms of recent experimental findings of the ability to process enteric antigens, to respond, and to regulate enteric immunity. The role that enteric immunity may play in diseases of the GI tract, such as dental caries and inflammatory bowel diseases. Students participate in discussions following each lecture and present seminars based on a review of the relevant scientific literature.
Mr. Riviere (Sp, alternate years)

207. Brainstem Control of Rhythmical Movements (2 units). Discussion of the central nervous system mechanisms which coordinate and control the contraction patterns of the muscles which are involved in behaviors such as suckling, chewing, swallowing, speech, respiration, and locomotion. Emphasis on the interaction among brainstem reflexes, pattern generators, and "voluntary" control centers. Mr. Goldberg

208. The Biochemistry of Saliva and Dental Caries (2 units). A seminar on current research in the field of saliva biochemistry and its relationship to the development of dental caries. Each student is expected to present a current article for discussion.
Mr. Wolinsky (Sp)

M214. Biology of Bone (2 units). (Same as Anatomy M225.) Lecture, two hours; discussion, one hour. Prerequisite: consent of instructor. Embryology of bone tissue; bone as an organ; growth and development of specific bones; biochemistry and physiology of bone; remodeling of bone; crystallography of hydroxyapatite; pathological calcifications; pathology of bone; mechanisms and lineage of calcification; clinical correlations. Mr. Bernard (W)

M224A-M224B. Structure and Chemistry of Connective Tissue (2 units each). (Same as Anatomy M224A-M224B.) Prerequisites: histology, biochemistry. A seminar course designed for graduate students in dentistry, medicine, or basic science. Fundamental information on the fine structure and chemical composition of bone, dentin, cementum, cartilage, and cells of connective tissue in general, as well as enamel, with emphasis on the biosynthesis of collagen, noncollagenous proteins and glycoproteins, and glycosaminoglycans (mucopolysaccharides). The possible roles of the cellular and noncellular elements in the process of biological mineralization and correlation of biological processes to periodontal pathology. In Progress grading.
Mr. Weinstock and the Staff (F,W, alternate years)

225. Gross Postnatal Craniofacial Growth and Development (2 units). Designed primarily to develop a critical sense in the evaluation of the research literature and an appreciation of the dynamic complexity of postnatal craniofacial growth. At each session students present reviews and critiques of original articles, followed by group discussion. Specific aspects of the following general topics on growth of bone and bones considered in detail: historical review; modes of growth; general and craniofacial (mandible, midface, cranium) growth; methods of assessing; factors affecting; and conflicting hypotheses. Students are encouraged to pursue their particular interest.
Mr. Sarnat (Sp)

226A-226B. Craniofacial Growth and Development (2 units each). Prerequisite: strong background in histology and embryology. Students acquire, from scientific literature discussed in a lecture/seminar format, advanced knowledge of relevant aspects of human biology as they apply to classic and current concepts of the principles governing growth and development of the craniofacial region. Students are required to present seminars on assigned topics which aid their understanding and analysis of the course content that has application to their specific and professional fields. In Progress grading.
Mr. Dixon and the Staff (F,W)

227. Dental Embryology and Histology (1 unit). Description and interpretation of important stages in the development of the orofacial apparatus and histological features of its component tissues. Critique of scientific literature relevant to the course content and analysis of the current state of knowledge about selected features of the orofacial apparatus which are of significance to the clinical dental specialist.
Mr. Dixon (F)

228. Dental Pharmacology and Therapeutics (2 units). Lecture, three hours. A survey of pharmacology, with particular emphasis on how drugs interact with dentistry. General principles of drug action and drug effects on the autonomic and central nervous systems. Mr. Park, Mr. Yagiela (W)

M293. Major Concepts in Oncology. (Same as Microbiology and Immunology M293 and Pathology M293.) Lecture, three hours. Prerequisite: graduate standing or consent of instructor. Designed for graduate students contemplating research in oncology. Topics include cancer pathophysiology, genetics, membranes, macromolecular synthesis and control, cell cycle, growth control; physical, chemical, and viral oncogenesis, epidemiology of cancer; tumor immunology; principles of cancer surgery, radiation therapy, and chemotherapy. S/U or letter grading.
Mr. Hankinson, Mr. Seeger (W)

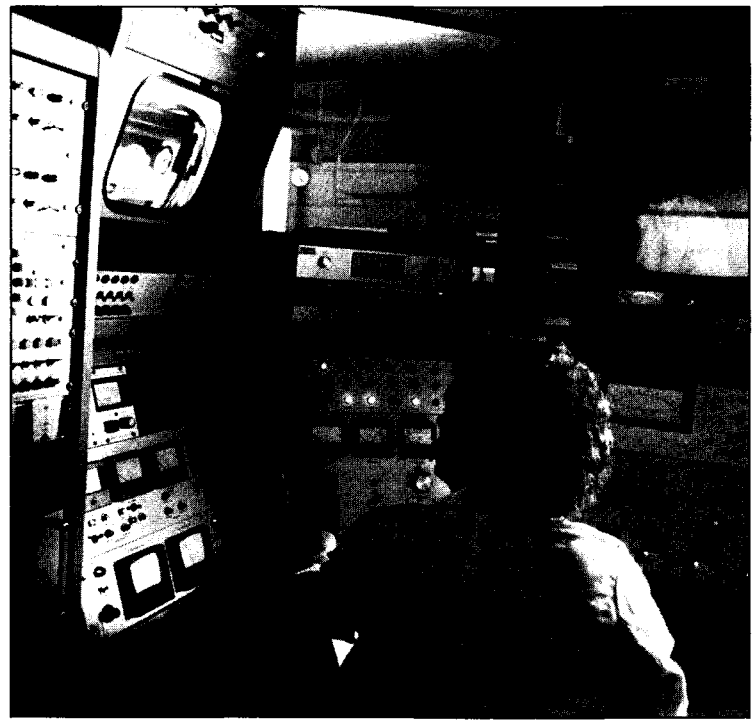
490. Professional Writing for Dentistry (2 units). Prerequisite: consent of instructor. Workshop in scholarly publication. Analysis of syntactic, rhetorical, and stylistic features of scientific prose to help students see the relationship of language to abstract thought and of writing to research. Coordinates with course 202. May be repeated once for credit. S/U grading. Ms. Gregory (W)

596. Directed Individual Study or Research (2 to 4 units). S/U grading.

598. Thesis Research and Preparation (2 to 4 units). S/U grading.

School of Medicine

Kenneth I. Shine, Dean



15

A modern school of medicine exists in many minds and in many places. It includes many more disciplines than all those available to such physicians as Copernicus and John Locke, famous for discoveries well beyond medicine then or now. UCLA School of Medicine faculty and students may be found in the Molecular Biology Institute and in the Department of Physiology, in the clinics, wards, and operating rooms of the UCLA Medical Center and Los Angeles County Harbor-UCLA Medical Center, in the Health Sciences Computer Center, in the Biomedical Library, and in dozens of other clinical and scientific facilities.

Regarded by many physicians and medical faculty to be among the best in the nation, UCLA's School of Medicine encompasses a wide range of clinical specialties, including neurology, obstetrics and gynecology, ophthalmology, pediatrics, radiation oncology, and surgery. Graduate work leading to the M.S. and/or Ph.D. degrees is offered through the Graduate Division, either separately or in conjunction with the M.D. program, in 11 different disciplines.

Each department of the school is staffed by a distinguished faculty of respected researchers and practitioners. They have at their disposal some of the most technologically advanced equipment and facilities, including one of the nation's eight hospital-based biomedical cyclotrons producing shortlived radioisotopes for research and diagnostic nuclear medicine procedures.

Photo: Technician operates UCLA's biomedical cyclotron.

School of Medicine

12-109 Center for the Health Sciences, (213) 825-6081

The UCLA School of Medicine offers an M.D. degree program, several allied health programs in affiliation with other hospitals and universities, and a number of postgraduate medical training programs. In addition to specialties in medicine, neurology, obstetrics and gynecology, ophthalmology, pediatrics, radiation oncology, and surgery, which lead to the M.D. degree, a range of master's and doctoral degrees is offered through the Graduate Division.

Graduate Degrees Offered

Anatomy	M.S., C.Phil., Ph.D.
Anesthesiology (Nurse Anesthesia)	M.S.
Biological Chemistry	M.S., Ph.D.
Biomathematics	M.S., Ph.D.
Microbiology and Immunology	M.S.*, Ph.D.
Neuroscience	Ph.D.
Pathology (Experimental Pathology)	M.S., Ph.D.
Pharmacology	M.S.*, Ph.D.
Physiology	M.S.*, Ph.D.
Psychiatry and Biobehavioral Sciences	
Social Psychiatry	M.S.P.**
Clinical Psychology Internship	Certificate
Radiological Sciences (Biomedical Physics)	M.S., Ph.D.

*The department admits only applicants whose objective is the Ph.D.
**Not admitting new students at this time.

M.D. Degree Program

The four-year curriculum leading to the degree of Doctor of Medicine (M.D.) at UCLA is designed to develop a comprehensive scientific and humane approach to patient care that includes basic sciences, preventive medicine, diagnosis, and therapeutics. Clinical skills are taught in the context of anatomical, molecular, pathophysiological, and psychosocial factors in health, disease, and treatment.

During the first two years, which are devoted mainly to the basic sciences with only periodic, brief clinical exposure, instruction is primarily in the form of lectures and laboratory sessions, demonstrations, and tutorials. In the last two years, instruction in patient care is given in the form of required and elective clinical clerkships at the UCLA Medical Center or at one of many affiliated hospitals.

All of the medical school departments participate in the medical curriculum leading to the M.D. degree. If you are interested in details on the M.D. curriculum and a listing of courses offered in each department, or if you wish to make application to the M.D. program, you are urged to obtain a copy of the *Announcement of the UCLA School of Medicine* from the Office of Student Affairs, School of Medicine, 12-109 CHS, UCLA, Los Angeles, CA 90024. You are also referred to Chapter 5 of this catalog for details on the four-year premedical studies program offered by the College of Letters and Science.

Graduate Programs

Master's and/or doctoral degrees are offered through the Graduate Division in the following fields: anatomy, nurse anesthesia, biological chemistry, biomathematics, biomedical physics (Department of Radiological Sciences), microbiology and immunology, neuroscience, experimental pathology, pharmacology, physiology, and psychiatry and biobehavioral sciences. Detailed information on these programs, for which admission to the School of Medicine is not required, is provided in the departmental listings which follow.

For information on the proficiency in English requirements for international graduate students, refer to "Graduate Admission" in Chapter 3.

Additional Programs

Articulated Degree Programs

The School of Medicine offers an articulated degree program in conjunction with the Graduate Division which allows you to earn both the M.D. and Ph.D. in six to seven years, depending on your course of study and research. The Ph.D. may be awarded in one of several medical science fields. For more information, contact the associate dean for Education in Medical Science at 891-2335.

In addition, an arrangement with the School of Public Health enables you to pursue the M.P.H. degree while attending medical school. Interested students should consult the Student Affairs Office in the School of Public Health.

Allied Health Programs

Programs in allied health include animal care technician, dental assistant, dental hygienist, dietetics technician, emergency medical technician, social work, pharmacy, respiratory therapist, vocational nurse, medical technologist, nurse anesthetist, operating room nurse, physician's assistant, physical therapist, prosthetist-orthotist, radiologic electronics specialist, radiologic technologist, radiation therapy technologist, and ultrasound technologist.

Information relative to these programs may be obtained from the Office of Allied Health Programs in the UCLA Center for the Health Sciences (825-6711).

Postgraduate Medical Training Programs

Postgraduate training programs, including residencies, are available at several off-campus sites in addition to those offered at the UCLA Medical Center. Programs offered at the allied institutions broaden the scope of the teaching programs by providing extensive clinical facilities, special population settings, and diverse practice modes. Information about these programs is available from the Office of Student Affairs, UCLA School of Medicine.

George W. Bernard, D.D.S., Ph.D.
P. Dean Bok, Ph.D. *(Dolly Green Professor of Ophthalmology)*
Nathaniel A. Buchwald, Ph.D., *in Residence*
Carmine D. Clemente, Ph.D.
Edwin L. Cooper, Ph.D.
Jean S. de Vellis, Ph.D., *in Residence*
Ellen R. Dirksen, Ph.D.
Earl Eldred, M.D., *Vice Chair*
Jerome Engel, M.D., Ph.D.
Louis J. Goldberg, D.D.S., Ph.D.
Roger A. Gorski, Ph.D., *Chair*
Ronald M. Harper, Ph.D.
Lawrence Kruger, Ph.D.
Richard N. Lolley, Ph.D., *in Residence*
David S. Maxwell, Ph.D.
Arnold B. Scheibel, M.D.
John D. Schlag, M.D.
José P. Segundo, M.D.
G. Douglas Silva, F.D.S., M.R.C.S., L.R.C.P. *(Dentistry and Medicine)*
M.B. Sterman, Ph.D., *in Residence*
Anna N. Taylor, Ph.D., *in Residence*
Bernard Towers, M.B., Ch.B., M.R.C.S., L.R.C.P.
Jaime R. Villablanca, M.D., *in Residence*
Charles D. Woody, M.D., *in Residence*
Richard W. Young, Ph.D.
Mary A.B. Brazier, Ph.D., *Emeritus, in Residence*
John D. French, M.D., *Emeritus*
H.W. Magoun, Ph.D., *Emeritus*
Richard E. Ottoman, M.D., *Emeritus*
Daniel C. Pease, Ph.D., *Emeritus*
Charles H. Sawyer, Ph.D., *Emeritus*

Associate Professors

Anthony M. Adinolfi, Ph.D.
John H. Campbell, Ph.D.
Emilio E. Decima, M.D.
John K. Lu, Ph.D.
Guido A. Zampighi, D.D.S., Ph.D.
Emery G. Zimmermann, M.D., Ph.D.

Assistant Professors

Robin S. Fisher, Ph.D., *in Residence*
Carolyn R. Houser, Ph.D., *in Residence*
Paul E. Micevych, Ph.D.

Adjunct, Clinical, and Visiting Professors

Stanley J. Gross, M.D., *Adjunct*
Frances S. Grover, Ph.D., *Adjunct*
Raymond J. Last, M.D., F.R.C.S., *Visiting*
Alfred Weinstock, D.D.S., Ph.D., *Clinical*

Adjunct and Clinical Associate Professors

Earle E. Crandall, M.D., Ph.D., F.A.C.S., *Clinical*
Carlos A.E. Lemmi, Ph.D., *Adjunct*
James F. McGinnis, Ph.D., *Adjunct*
Anselmo R. Pineda, M.D., *Clinical*

Adjunct Assistant Professors

Margaret N. Shouse, Ph.D.
Gary C. Sieck, Ph.D.

Scope and Objectives

The Department of Anatomy offers advanced training leading to the Ph.D. degree. The great majority of students graduating with a doctoral degree in anatomy can look forward to an academic career in medical or dental schools and, in accord with this, the department strives to produce graduates soundly qualified both for teaching of anatomical subjects at this level and for the conduct of productive research in morphology or in some related area. An M.S. degree is also available to individuals whose major interests and training lie in allied fields. The department does not offer an undergraduate degree. An informational brochure may be obtained by writing to the Vice Chair, Department of Anatomy, 73-235 CHS, UCLA, Los Angeles, CA 90024.

Requirements for Graduate Degrees

Admission

Applicants must have a bachelor's degree in a physical or biological science or in a premedical curriculum. Introductory courses in zoology, one year of general and organic chemistry, and one year of college physics are required. Courses in comparative anatomy, embryology, cell biology, genetics, elementary statistics, and the philosophy of science are highly recommended.

You must submit (1) transcripts of grades for all college-level work; (2) the results of the Graduate Record Examination (GRE), including the Advanced Test in Biology or in your undergraduate major; (3) at least three letters of recommendation from professors stressing potential for successful completion of graduate studies and creative independent research; and (4) an essay describing your background, work experience, interests, and career goals. Selected applicants are asked to an interview with an admissions committee of faculty and graduate students.

Major Fields or Subdisciplines

The major fields in which graduate research may be undertaken include (1) neuroanatomy and neurophysiology, (2) neuroendocrinology, and (3) cell biology, including immunology.

Master of Science Degree

The M.S. degree in Anatomy is available to applicants who have specialized objectives (e.g., students in bioengineering, medical illustration, physical therapy, and other paramedical specialties), as well as to international students who can plan only a limited stay in this country. Provision can also be made for medical and dental professionals at the postdoctoral level who wish to pursue a limited research project and will satisfy all requirements of the program.

Course Requirements

A total of 36 units of coursework is required, 20 of which must be in graduate-level courses. Eight units of Anatomy 598 may be applied toward the total requirement, but only four units may be applied toward the minimum graduate course requirement. All M.S. candidates must take two courses selected from 101 (eight units), M206A (five units), M206B (seven units), and 207A-207B (12 units); one departmental seminar; other courses essential to the student's program; courses in the minor field (for those under the comprehensive plan).

Thesis or Comprehensive Examination Plan

You may elect either the thesis or examination plan. For the thesis plan, a committee of the adviser and two department members approves the thesis proposal, usually at the start of your second academic year. All members participate in criticism and approval of the eventual thesis; there is no oral defense. Under the comprehensive examination plan, you must demonstrate in a written examination a grasp of the general principles of anatomy, as well as an understanding of some related field that is relevant to your objectives.

Ph.D. Degree

Course Requirements

(1) Basic knowledge of the fields of gross and microscopic anatomy and of the physiology and biochemistry of the mammalian organism. Normally this requirement is satisfied by successful completion of these major courses: (a) human gross anatomy, (b) human microscopic anatomy, (c) neurosciences, (d) mammalian physiology, and (e) biological chemistry.

(2) Participation in at least two departmental seminars.

(3) Completion of such other courses as are essential for your research interest.

(4) Completion of a "breadth requirement" which consists of the equivalent of eight units of work selected to augment the dissertation project. This may be satisfied by a foreign language examination.

Teaching Experience

Since the anatomy profession generally imposes relatively heavy teaching obligations, it is strongly recommended that students seek opportunities to gain teaching experience in the major anatomy courses, gross anatomy in particular.

Qualifying Examinations

The written comprehensive examination is intradepartmental and intended to evaluate your capacity to organize and integrate information gained in the major core courses. All students are required to take the examination at the end of the second year. After passing

this examination and spending perhaps a year in a laboratory, taking seminars, and reading in the field of research interest, you must take a University Oral Qualifying Examination before an ad hoc doctoral committee which evaluates your knowledge of the research field and ability to formulate a practicable and significant research program.

The Anatomy Department may decline to admit any student to the qualifying examination if, in its judgment, the student is inadequately prepared, is not sufficiently interested in those fields of research in which the department can offer qualified and sufficient guidance, or is for other reasons not adaptable to the program.

Candidate in Philosophy Degree

You are eligible to receive the C.Phil. degree on advancement to candidacy for the Ph.D.

Final Oral Examination

After you complete the research and writing of the dissertation, you must defend it in a final oral examination before the doctoral committee in closed session. You are also expected to give a final public seminar on your findings.

Upper Division Courses

101. Microscopic Anatomy and Cell Biology (8 units). Lecture/laboratory, four three-hour sessions (12 weeks). Prerequisite: medical student standing or consent of instructor. Microscopic study of the structure and function of tissues and cells, with special reference to the human body.
Ms. Dirksen, Mr. Young, and the Staff (F)

102A-102B. Gross Anatomy of the Human Body (2 units, 8 units). Lecture, one hour; laboratory, four hours (Winter). Lecture, four hours; laboratory, 12 hours (Spring). Prerequisite: dental student standing or consent of instructor. Course 102A is prerequisite to 102B. Systemic and topographical human anatomy, with dissection of the human cadaver. Emphasis on head and neck. In Progress grading.
Mr. Harper and the Staff (W,Sp)

103A-103B. Basic Neurology (1 unit, 3 units). Lecture/laboratory, one four-hour and two one-hour sessions (Winter — last six weeks); one two-hour, one three-hour, and two one-hour sessions (Spring). Prerequisite: medical student standing or consent of instructor. Corequisites: Physiology 103A-103B. Lectures, conferences, demonstrations, and laboratory procedures necessary for an understanding of the functions of the human nervous system. In Progress grading. Mr. Schlag and the Staff (W,Sp)

104. Mammalian Histology (6 units). Lecture/laboratory, three three-hour sessions. Prerequisite: dental student standing or consent of instructor. Lectures, demonstrations, and laboratories dealing with the structural organization of tissues and organs at the microscopic level. Mr. Campbell and the Staff (F)

105A-105B. Gross and Developmental Anatomy for Medical Students (8 units, 4 units). Lecture/laboratory, four four-hour sessions (Fall — 12 weeks); one- to four-hour sessions (total of 20 hours) on an irregular schedule (Winter — first four weeks). Prerequisite: medical student standing. Gross anatomy, embryology, and radiological anatomy of the human body as taught by lectures, demonstrations, and dissection. In Progress grading.
Mr. Maxwell and the Staff (F,W)

106. Functional Neuroanatomy. Lecture/laboratory, three two-hour sessions. Prerequisite: dental student standing or consent of instructor. Lectures, demonstrations, and laboratories dealing with the structure and functional organization of the nervous system.
Mr. Adinolfi and the Staff (W)

199. Individual Special Studies (2 to 8 units). Prerequisite: consent of instructor. Studies in anatomy and related subject areas appropriate for the training of particular students, which may include reading assignments or laboratory work leading to a final oral or written report. S/U or letter grading.

Graduate Courses

201. Structure and Function of Cells and Tissues (2 units). Lecture, one hour; discussion, one hour. Prerequisites or corequisites: course 101, consent of instructor. Current topics on structural and functional aspects of microscopic anatomy. May be repeated for credit. S/U grading.
Ms. Dirksen, Mr. Young, and the Staff (F)

M203. Oral Embryology. (Same as Oral Biology M203.) Lectures and laboratory instruction in the development and histological structure of the facial region and the oral and peri-oral organs and tissues.
Mr. Bernard and the Staff (Sp)

M206A. Neurosciences: The Introductory Course for Graduate Students (5 units). (Same as Neuroscience M206A). Lecture, four hours; laboratory/demonstrations, three hours. Prerequisites: a college-level course in biology or zoology, some familiarity with the subjects of electronics and electricity, consent of instructor. Introductory course on the principles of organization and function of the nervous system, intended for graduate students in relevant disciplines and as background for more advanced courses for students specializing in the neurosciences.
Mr. Decima, Mr. Scheibel, Mr. Segundo (W)

M206B. Neurosciences: The Intermediate Course for Graduate Students (7 units). (Same as Neuroscience M206B.) Lecture, six hours; laboratory, two hours; tutorial contacts. Prerequisites: course M206A or 103A-103B, or equivalent, consent of instructor. Neuronal excitability and integration, sensory mechanisms, and motor control as related to behavior.
Mr. Decima, Mr. Scheibel, Mr. Segundo (Sp)

207A-207B. Gross and Developmental Anatomy for Graduate Students (8 units, 4 units). Lecture/laboratory, four four-hour sessions (Fall); one- to four-hour sessions (total of 20 hours) on an irregular schedule (Winter — first four weeks). Prerequisite: consent of instructor. Gross anatomy, embryology, and radiological anatomy of the human body as taught by lectures, demonstrations, and dissection. **207A.** Trunk and Extremities; **207B.** Head and Neck. Each course may be taken independently for credit.
Mr. Maxwell and the Staff (F,W)

208A-208B. Electronics for Neuroscientists. Lecture, two hours; laboratory, four hours. Prerequisite: consent of instructor. Development of an understanding of electronic methods used in neuroscience. Basic principles of passive networks, operational amplifiers, semiconductor theory, digital logic, waveform generation, signal conditioning, data acquisition methods, and neurophysiological instrumentation systems. S/U or letter grading. (F,W)

211. Cellular Basis of Learned Behavior (2 units). Lecture/discussion, one two-hour session; laboratory, to be arranged. Prerequisites: microscopic anatomy, mammalian physiology. Anatomy and physiology of cerebral processes in alerting, learning, focusing attention, and memory. Mr. Woody (F)

213. Multigene Families (2 to 4 units). (Formerly numbered M213.) Lecture, one to two hours; discussion, one to two hours. Prerequisite: consent of instructor. Analysis of the molecular structure, developmental regulation, and evolution of multigene families. Topics include the hemoglobins, immunoglobulins, histones, ribosomal RNAs, satellite DNAs, and histocompatibility antigens. S/U or letter grading.
Mr. Campbell (W)

M221A-M221B. Cellular and Molecular Neurochemistry. (Same as Biological Chemistry M221A-M221B, Neuroscience M221A-M221B, Pharmacology M221A-M221B, and Psychiatry M221A-M221B.) Lecture, three hours. Prerequisites: Biological Chemistry 101A-101B-101C or equivalent. Contemporary neurochemistry for students with a general background in biochemistry. Relates the biochemical and structural properties of the nervous system to its development and functions and introduces students to disorders that result from alterations in the fundamental biochemistry of the nervous system. Although the subject is treated in an interdisciplinary manner, course progresses from structure through chemistry to function in precise manner and biological terms.
Mr. de Vellis, Mr. Eiduson, Mr. Olsen (W,Sp)

M223. Paradigms of Evolution. (Same as Biology M231A.) Lecture, two hours; discussion, two hours. Prerequisite: consent of instructor. The range of conceptual foundations underlying evolutionary studies in various fields of biology, biochemistry, geology, and physics today. S/U or letter grading.
Mr. Brunk, Mr. Campbell

M224A-M224B. Structure and Chemistry of Connective Tissue (2 units each). (Same as Oral Biology M224A-M224B.) Prerequisites: histology, biochemistry. A seminar course designed for graduate students in dentistry, medicine, or basic science. Fundamental information on the fine structure and chemical composition of bone, dentin, cementum, cartilage, and cells of connective tissue in general, as well as enamel, with emphasis on the biosynthesis of collagen, noncollagenous proteins and glycoproteins, and glycosaminoglycans (mucopolysaccharides). The possible roles of cellular and noncellular elements in the process of biological mineralization and correlation of biological processes to periodontal pathology. In Progress grading.
Mr. Weinstock and the Staff (F,W, alternate years)

M225. Biology of Bone (2 units). (Same as Oral Biology M214.) Lecture, two hours; discussion, one hour. Prerequisite: consent of instructor. Embryology of bone tissue; bone as an organ; growth and development of specific bones; biochemistry and physiology of bone; remodeling of bone; crystallography of hydroxyapatite; pathological calcifications; pathology of bone; mechanisms and lineage of calcification; clinical correlations. Mr. Bernard (W)

M226. Brainstem Control of Rhythmical Movements. (Same as Kinesiology M243; lecture is the same as Oral Biology 207, which is two units only.) Lecture, two hours; discussion, two hours. Discussion of the central nervous system mechanisms which coordinate and control the contraction patterns of the muscles which are involved in behaviors such as suckling, chewing, swallowing, speech, respiration, and locomotion. Emphasis on the interaction among brainstem reflexes, pattern generators, and "voluntary" control centers. Mr. Chandler, Mr. Goldberg

M235. Gut and Brain Peptides (2 units). (Same as Neuroscience M235 and Physiology M235.) Prerequisite: consent of instructor. Presentation of current knowledge of gut and brain peptides by surveying their chemistry, anatomy, and physiology. Experimental approaches used to study biologically active peptides. Review of current information about each of the major gut and brain peptides. S/U or letter grading.
Mr. Brecha, Mr. Reeve, Ms. Tache (W)

251. Problems in Developmental and Comparative Immunology (2 units). Prerequisite: consent of instructor. Review of current literature emphasizing early development and evolution of immune competence. Mr. Cooper (W)

252. Seminar on Basic and Quantitated Neurophysiology (2 units). Lecture, 90 minutes; discussion, 90 minutes. Prerequisite: consent of instructor. Lecture series on basic neurophysiology. Early lectures by invited specialists on their specific fields. Later lectures by each student on a topic selected and prepared in collaboration with the instructor.
Mr. Segundo (Sp, even years)

253. Communication and Coding in Nervous Systems. Lecture/discussion, one two-hour and two 90-minute sessions. Prerequisite: consent of instructor. Presentation, discussion, and critique of efforts to quantify neuronal function where the essence of the mathematics is expressed in qualitative and physiologically meaningful terms (e.g., stability, neurons as analyzers of spike trains, identification of synaptic operators). Mr. Segundo (Sp, odd years)

M255A-M225D. Seminars in Neural and Biobehavioral Endocrinology (3 units, 2 units, 3 units, 2 units). (Formerly numbered 255A-255D.) (Same as Psychology M294A-M294D.) Lecture, three hours. Topics include hormonal biochemistry and pharmacology. Hypothalamic-hypophyseal interactions, both hormonal and neural. Structure and function of the hypothalamus. Hormonal control of reproductive and other behaviors. Sexual differentiation of brain and behavior. Stress: hormonal, behavioral, and neural aspects. Aging of reproductive behaviors and function.

Mr. Gorski (W, M255A, M255C; Sp, M255B, M255D)

256. Seminar in Cell Structure and Function (2 units). Lecture, one hour; discussion, one hour. Prerequisite: consent of instructor. Selected topics in cell biology emphasizing those areas which are of current interest. An analysis of the various techniques being used to study the cell.

Ms. Dirksen and the Staff (W,Sp)

258. Seminar in Neuroscience (2 units). Prerequisite: basic neurology. Topics of current interest or ongoing research projects; examination of both content and method of presentation. May be repeated for credit. Mr. Scheibel (F, odd years; W, even years)

M261. Neuronal Circuit Analysis (2 units). (Same as Neuroscience M261.) Lecture/discussion, three hours. Prerequisites: courses M206A, M206B, or equivalent. A seminar with strong emphasis on specific reading assignments. An integrated view of neuronal circuit analysis at an advanced level; the layout and performance of a variety of basic neuronal circuits serving different control functions.

Mr. Schlag (W)

265. Evolution of Cancer (2 units). Prerequisite: consent of instructor. Review of current literature emphasizing the appearance of tumors and neoplasms in representative invertebrates, fishes, amphibians, and reptiles. Theories of cancer development from the evolutionary viewpoint. Mr. Cooper (W)

290. Tutorials in Anatomy (2 units). Tutorial, one hour. Prerequisite: consent of instructor. Individual study with a faculty member leading to submission of a scientific document (usually a review article) on a topic of mutual interest to the instructor and student. S/U grading.

390A-390B. The Peer Review System (2 units each). Prerequisite: advancement to candidacy in integrative or systems biology or consent of instructor. Introduction to the peer review system for the evaluation of research proposals. After consideration of the grant review process, each student prepares an abbreviated grant application which is evaluated in a mock peer review session moderated by the faculty. In Progress and S/U grading.

Mr. Gorski (W,Sp, odd years)

490. Communicating Scientific Information (2 units). Prerequisite: graduate standing in anatomy. Student papers and lectures as the basis for group discussions of the art and science of effective written and oral communication of scientific information. May be repeated for credit. S/U grading. (W)

495A-495F. Preparation for Teaching in the Anatomical Sciences (2 to 4 units each). Prerequisites: graduate standing, consent of vice chair and instructor. Observation and practice of the methods of teaching in anatomy, including preparation of material, participation in laboratory instruction, and presentation of review sessions, all with peer and faculty criticism. Gross anatomy, microscopic anatomy, and neuroanatomy subject fields included. A maximum of three 495 courses may be taken; none may be repeated. May not be applied toward degree requirements. S/U grading.

501. Cooperative Program (2 to 8 units). Prerequisite: consent of UCLA graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Course is used to record enrollment of UCLA students in courses taken under cooperative arrangements with neighboring institutions. S/U grading.

596. Directed Individual Study or Research (2 to 12 units).

597. Preparation for M.S. Comprehensive Examination or Ph.D. Qualifying Examinations (2 to 12 units).

598. Thesis Research for M.S. Candidates (2 to 12 units).

599. Dissertation Research for Ph.D. Candidates (2 to 12 units).

Medical History Division

Professors

Ynez V. O'Neill, Ph.D., *in Residence*
L.R.C. Agnew, M.D., *Emeritus*
Mary A.B. Brazier, Ph.D., *Emeritus, in Residence*
Franklin D. Murphy, M.D., Sc.D., *Emeritus*

Associate Professor

Robert G. Frank, Jr., Ph.D., *Division Chief*

Adjunct Lecturer

Elizabeth R. Lomax, M.D., Ph.D.

Upper Division Courses

107A-107B. Historical Development of Medical Sciences. Lecture, three hours. The major contributions of medicine and medical personalities from earliest times. **107A.** The contributions of medicine and medical personalities from earliest times through 1650. **107B.** The subject in the period from 1650 through the 19th century. Illustrated lectures, class discussion, and required readings from selected texts. Mr. Frank (Sp), Ms. O'Neill (W)

M108A-M108B. History of Biological Sciences. (Same as History M195F-M195G.) Lecture, three hours. **M108A.** Biological Sciences from Ancient Times to the Early 19th Century; **M108B.** Biological Sciences from the Early 19th Century to the Mid-20th Century. Mr. Frank (F,W)

Graduate Courses

240A-240B. History of Medical Sciences (2 units each). Lecture, one hour. Survey of the development of scientific and medical thought from ancient times to the present. (F,W)

241A-241B. History of Clinical Sciences (2 units each). Lecture, one hour. Survey of the development of the clinical specialties and comparison of medical practice in Western civilization with that developed in other parts of the world. (F,W)

242. History of Pathology (1 unit). Survey of the history of pathology and related sciences from antiquity to the 20th century, tracing the development of pathological theory, practice, organization, and education and comparing them to current practice. (F)

243. History of Surgery (1 unit). Survey of the history of surgery and related sciences from antiquity to the 20th century, tracing the development of surgical theory, practice, organization, and education and comparing them to current practice. (W)

244. History of American Medicine (1 unit). Survey of the history of medicine in the United States from the Colonial period to the present. (Sp)

246. History of Neurophysiology: Its Impact on Psychology and Medicine (2 to 4 units). Lecture, one hour; seminar, two hours. The development of experimental neurophysiology from its scientific roots in the 17th century through the recognition of the excitability of the nervous system, to the use of this characteristic in revealing the functions of the central nervous system. Discussion of the interaction of neurophysiological ideas with contemporaneous philosophy and medicine. Lectures may be taken independently. Ms. Brazier, Ms. Lomax, Ms. O'Neill (Sp)

250. History of Medical Psychology (2 units). Lecture, one hour. An examination of the themes underlying modern mental health theories. Beginning with a review of contemporary thinking, lectures focus on the various factors shaping present concepts of mental disorders and provide a framework for the understanding of current issues.

Ms. Lomax, Ms. O'Neill (W)

596. Directed Individual Studies in Medical History (2 to 12 units). Investigation of subjects in medical history selected by students with the advice and direction of the instructor. Individual reports and conferences. (F,W,Sp)

Scope and Objectives

The Department of Anesthesiology in the School of Medicine offers a program leading to the M.S. degree in Nurse Anesthesia. This program prepares qualified Registered Nurses in the specialty of anesthesiology and qualifies the graduate to sit for the certification examination given by the Council on Certification of Nurse Anesthetists. The graduate attains a high level of clinical competence combined with an extensive body of didactic knowledge relevant to the specialty. The program is designed to lead to careers in the clinical practice of nurse anesthesiology and the teaching of nurse anesthesiology with the opportunity for participating in research in the area.

Master of Science in Nurse Anesthesia

Admission

The following admission requirements must be met:

(1) A Bachelor of Science degree in Nursing or other appropriate undergraduate degree.

(2) Graduation from an accredited nursing program satisfactory to the program and to the UCLA Graduate Division. You may be required to enroll in certain additional undergraduate courses prior to final consideration by the program.

(3) Licensure as a Registered Nurse prior to entry into clinical coursework. Evidence of status as a Registered Nurse in the State of California is mandatory.

(4) Completion of a minimum of one year of experience as a graduate nurse in an acute care area of nursing, preferably an intensive care unit.

(5) Professional and academic competence attested through three letters of recommendation.

(6) Graduate Record Examination (GRE) Aptitude Test results submitted to the program.

(7) Successful completion of the following undergraduate-level courses: (a) inorganic chemistry, organic chemistry, and biochemistry, (b) introductory physics, (c) biology, (d) anatomy, (e) physiology, (f) English, (g) psychology, (h) statistics, and (i) a course in methods of research (highly recommended).

(8) A scholarship record satisfactory to the Graduate Division and the Nurse Anesthesia Program. Transcripts must be sent to both.

(9) Interview with the program director or designee and with members of the final selection committee, and observation in the clinical practicum.

Approximately five to six students are selected for admission in Fall Quarter by the final selection committee which meets annually in January. Information regarding the program may be obtained by writing to the Department of Anesthesiology, 56-125 CHS, UCLA, Los Angeles, CA 90024. All applicants must apply to both the department and the Graduate Division. Separate applications are needed.

Foreign Language Requirement

There is no foreign language requirement for the M.S. degree.

Course Requirements

Total courses required for the degree: 13¼; all must be graduate-level courses.

Required: Anesthesiology 210A, 210B, 210C, 215A, 215B, 220A, 220B, 220C, 221, 223, 225A-225B, 290, 400A through 400G, 401, 402, 597 or 598A, 598B.

Completion of courses 597 or 598A and 598B is required. Course 598B may be repeated twice, but only two of the courses may be applied toward the degree. Letter grading may be utilized in 500-series courses.

Thesis Plan

If you elect this option, your thesis committee is established during the second year of the program. The thesis proposal is written and approved during the Winter or Spring Quarter of your second year. You must take a written comprehensive examination for course completion.

Comprehensive Examination Plan

Students electing this option must demonstrate didactic and clinical competence in the field and must complete selected education courses.

If you elect the oral examination option, you must, in addition to the required curriculum in anesthesia, successfully complete designated courses in curriculum, testing and evaluation, and instruction to meet the accreditation requirements for teachers of anesthesia. The oral examination is general in scope and may include information from all aspects of the curriculum. A written comprehensive examination is also required for course completion. Examinations are offered quarterly.

Other Requirements

(1) You must complete all didactic and clinical work to earn the Master of Science degree.

(2) The program does not discriminate on any basis unless a handicap is determined by the selection committee to preclude the safe clinical practice of anesthesia.

(3) You must complete a minimum of 550 cases as the primary anesthetist.

(4) You must meet the requirements for application to sit for the Certification Examination of the AANA for program completion.

Graduate Courses

210A. Chemistry and Physics of Nurse Anesthesia I (2 units). Lecture, two hours; discussion, one hour. A study of the principles of chemistry and physics as applied specifically to the practice of anesthesia. Mr. Katz

210B. Chemistry and Physics of Nurse Anesthesia II (2 units). Lecture, two hours; discussion, one hour. Prerequisite: course 210A. A continuation of the study of the principles of chemistry and physics as applied specifically to the practice of anesthesia. Mr. Katz

210C. Chemistry and Physics of Nurse Anesthesia III (2 units). Lecture, two hours; discussion, one hour. Prerequisite: course 210B. A continuation of the study of chemistry and physics as related to anesthesia management, with specific emphasis on biochemistry as related to acid-base balance and theories of narcosis. Mr. Katz

215A. Pharmacology of Nurse Anesthesia I. Lecture, four hours; discussion, one to two hours. Introduction to basic pharmacological principles as applied to administration of anesthesia. A study of uptake and distribution, mechanism of action, fate, and toxicology as related to anesthetic agents. Mr. Flacke and the Staff

215B. Pharmacology of Nurse Anesthesia II. Lecture/discussion. A study of the pharmacology of adjunct drugs influencing anesthesia administration, including their uptake and distribution, mechanism of action, fate, biotransformation, and toxicology. Mr. Flacke and the Staff

220A. Respiratory Anatomy and Physiology for Nurse Anesthetists I (2 units). Lecture, two hours; discussion, one hour. A study of the structure and function of the respiratory system, with emphasis on anatomy and physiology at the cellular level. Ms. Ward

220B. Respiratory Anatomy and Physiology for Nurse Anesthetists II (2 units). Lecture, two hours; discussion, one hour. A continuation of respiratory anatomy and physiology, with emphasis on the respiratory system as related to anesthesia administration and relevant problems. Ms. Ward

220C. Respiratory Anatomy and Physiology for Nurse Anesthetists III (2 units). Lecture, two hours; discussion, one hour. A continuation of the study of respiratory anatomy and physiology as related to anesthesia administration and relevant problems. Ms. Ward

221. Cardiovascular Anatomy and Physiology for Nurse Anesthetists. Lecture, four hours; discussion, one hour. An integrated study of the anatomy and physiology of the C-V system as related to the management of anesthesia administration. Ms. Ward

M222. Biological Control Systems. (Same as Electrical Engineering M243.) Prerequisite: Electrical Engineering 141 or equivalent. Introduction to the application of control theory to the modeling and analysis of biological control systems, such as the respiratory system, cardiovascular system, and neuromuscular system. Emphasis on solving problems of current interest in biomedicine. Mr. Wiberg

223. Anatomy and Physiology of the Endocrine and Excretory Systems for Nurse Anesthetists. Lecture, four hours; discussion, one to two hours. An integrated study of the endocrine and excretory systems as related to the management of anesthesia administration. Mr. Katz

225A-225B. Anatomy and Physiology of the Nervous System for Nurse Anesthetists (2 units each). (Formerly numbered 225.) Lecture, two hours; discussion, one to two hours. An integrated study of the anatomy and physiology of the nervous system as related to the management of anesthesia administration. Mr. Rubinstein

M268. Behavioral Management of Pain Problems (2 units). (Same as Psychiatry M268.) Prerequisite: consent of instructor. Review of current knowledge and skills involved in the behavioral assessment and management of acute and chronic pain problems. The behavioral perspective integrated with related physiological and medical considerations. Mr. McCreary, Mr. Reeves (W)

290. Anesthesia Seminar for Nurse Anesthetists (2 units). Discussion, two to three hours. Discussion of research methods, basic statistics, and critical scientific paper analyses in relation to anesthesia research and practice. Ms. Ward and the Staff

400A. Basic Clinical Anesthesia for Nurse Anesthetists I (2 units). Lecture, three hours; laboratory, 30 hours. Prerequisite: course 402. Correlation of techniques of anesthesia administration with basic science knowledge as applied in the clinical area with supervised practice. S/U grading. Ms. Frye and the Staff

400B. Basic Clinical Anesthesia for Nurse Anesthetists II (2 units). Lecture, two hours; laboratory, 30 hours. Prerequisite: course 400A. A continuation of the practice of techniques of anesthesia administration as applied in the clinical area with supervised practice. S/U grading. Ms. Frye and the Staff

400C. Basic Clinical Anesthesia for Nurse Anesthetists III (2 units). Lecture, two hours; laboratory, 30 hours. Prerequisite: course 400B. A continuation of techniques of anesthesia administration as applied in the clinical area with supervised practice. S/U grading. Ms. Frye and the Staff

400D. Clinical Anesthesia for Nurse Anesthetists IV (2 units). Lecture, two hours; laboratory, 30 hours. Prerequisite: course 400C. A practice of refinements of anesthesia techniques, with emphasis on specialized areas of anesthesia administration in supervised practice. S/U grading. Ms. Frye and the Staff

400E. Clinical Anesthesia for Nurse Anesthetists V (2 units). Lecture, two hours; laboratory, 30 hours. Prerequisite: course 400D. A practice of refinements of anesthesia techniques, with emphasis on specialized areas of anesthesia administration in supervised practice. S/U grading. Ms. Frye and the Staff

400F. Clinical Anesthesia for Nurse Anesthetists VI (2 units). Lecture, two hours; laboratory, 30 hours. Prerequisite: course 400E. A practice of refinements of anesthesia techniques, with emphasis on specialized areas of anesthesia administration in supervised practice. S/U grading. Ms. Frye and the Staff

400G. Clinical Anesthesia for Nurse Anesthetists VII (2 units). Lecture, two hours; laboratory, 30 hours. Prerequisite: course 400F. A practice of refinements of anesthesia techniques, with emphasis on specialized areas of anesthesia administration in supervised practice. S/U grading. Ms. Frye and the Staff

401. Orientation to Nurse Anesthesia (2 units). Lecture, two hours; discussion, 30 minutes to one hour. Orientation to history, ethics, and legal aspects of nurse anesthesia. Psychology related to patient undergoing surgery and anesthesia. Ms. Katz

402. Fundamentals of Anesthesia Practice for Nurse Anesthetists (6 units). Lecture, six hours; discussion, one to two hours. Introduction to basic principles of anesthesia administration, including preanesthetic assessment, physical examination, techniques and procedures, and anesthesia for specialized techniques and surgery. Mr. Katz and the Staff

597. Preparation for M.S. Oral Qualifying Examination (2 units). Prerequisite: consent of instructor. Opportunity to pursue comprehensive study in anesthesiology and related areas on an individual basis, with the opportunity for discussion of the material with the instructor. Mr. Katz, Ms. Ward

598A. Research in Anesthesia I (2 units). Prerequisite: consent of instructor. Opportunity to pursue anesthesia research outlets for thesis preparation. Independent research of quality suitable for publication required. May be selected instead of the oral comprehensive examination for completion of the M.S. program. Ms. Ward

598B. Research in Anesthesia II (2 units). Prerequisite: course 598A. Opportunity to pursue anesthesia research outlets for thesis preparation. Independent research of quality suitable for publication required. May be selected instead of the oral comprehensive examination for completion of the M.S. program. May be repeated twice for credit. Ms. Ward

Scope and Objectives

Modern biochemistry is both intellectually and methodologically a wide-ranging and expanding field of science; it has grown well beyond its initial definition as the chemistry of living things. People who call themselves biochemists work in areas as diverse as medical research, nutrition, pharmacology, crystallography, virology, genetic manipulation, and cellular or molecular biology, as well as the "traditional" studies of metabolism, enzymology, and molecular structure.

The Biological Chemistry Department at UCLA attempts to provide students with the necessary background for continued growth in this fast-changing science. As a part of the School of Medicine, the department is involved in the basic education of students who will be practicing physicians, as well as medical research specialists. But through its graduate program and its interactions with other graduate departments, it deals with students whose primary interests are in biochemistry and other related sciences.

The department emphasizes biochemical research leading to the Ph.D. degree; the faculty represents a variety of research areas, and graduates find employment in a multiplicity of research or research-related fields, as well as in teaching. The department also offers limited opportunities for research or nonresearch study toward the M.S. degree.

Requirements for Graduate Degrees

Admission

In addition to the University's minimum requirements, which include a bachelor's degree (preferably in chemistry or a biological science), students should normally have completed the following: general chemistry, quantitative chemistry, organic chemistry (with laboratory), physical chemistry (with laboratory), general physics, mathematics through calculus, and general biology (or bacteriology, botany, zoology, biochemistry, or molecular biology). More advanced courses in these areas are also recommended where possible.

You are expected to take the Graduate Record Examination (GRE) Aptitude Test, preferably in October or before, but no later than December of the year prior to expected admission. It is strongly recommended that you also take the GRE Advanced Test in either Biology or Chemistry. In exceptional circumstances, the GRE test requirements may be waived by the departmental graduate admissions committee. If your native language is other than English, you are expected to take an appropriate examination which tests proficiency in English (e.g., TOEFL) prior to the time of application to this department.

There is no separate application form required for admission to the department, but at least three letters of recommendation are required. Have them sent directly to the Graduate Information Office at the address below.

Departmental brochures and information may be obtained by writing to the Graduate Information Office, Department of Biological Chemistry, 33-257 CHS, UCLA, Los Angeles, CA 90024.

Course Requirements

All graduate students must take the four core courses (Biological Chemistry M253, M255, M263, and M267) unless excused by the graduate adviser. (See additional course requirements under each degree program.)

Written Qualifying Examination

After completing the core course requirements (see above), you must take the departmental written examination (usually given in July; may be given in January or at other times if there is sufficient need). This examination is formulated by the departmental graduate student guidance committee from questions submitted by the various faculty members, who also evaluate your answers to the questions. The committee evaluates your overall performance on the examination and makes a recommendation to the departmental faculty of one of the following: (1) pass at the Ph.D. level of achievement; (2) pass at the master's level of achievement; (3) fail.

The departmental faculty can approve or change the recommended action and can authorize a reexamination in case of failure (consent is rarely given to take the test a third time). The faculty may also recommend or require additional coursework in specific areas prior to taking the examination a second time, or before taking final action on the results of the written examination.

Master of Science Degree

Course Requirements

In addition to the core course requirements described above for all students, elective courses must be taken to complete the total of nine courses (36 units) required for the degree.

No more than two courses (eight units) in the 500 series may be applied toward the total course requirement, and only one (four units) of the two courses may be applied toward the minimum graduate course requirement (20 units) for the degree.

With consent of the graduate adviser, Biological Chemistry 596, 597, and 598 may be taken if they are appropriate to your program. All three courses are graded S/U and may be taken as often as necessary.

Comprehensive Examination Plan

In general, the department prefers students to enter directly into the Ph.D. program, but if you enter the master's program, the comprehensive examination plan is preferred. Only in exceptional situations is a student approved for the thesis plan. In either plan you must pass the departmental written examination at the master's level of achievement (see above). Only course requirements and the written examination are needed to complete the comprehensive examination plan.

Thesis Plan

In addition to coursework, a written thesis is required. A thesis committee helps you plan the thesis research, determines the acceptability of the thesis, administers a final examination (if deemed appropriate), and recommends appropriate action on the granting of the degree. In the event of an unacceptable thesis or performance on the final examination (if one is given), the thesis committee determines if it is appropriate for additional time to be granted to rewrite the thesis or to be reexamined.

Ph.D. Degree

Admission

Students are not required to obtain a master's degree prior to admission into the doctoral program and do not usually obtain a master's degree as part of the normal progress toward the Ph.D.

Course Requirements

In addition to the general course requirements listed above, students in the Ph.D. program are expected to complete:

(1) Biological Chemistry 220A-220B-220C (each quarter during the first year). You must arrange for at least two rotations in the laboratories of different faculty members to help in the selection of a research adviser.

(2) Three or four elective courses (total of 10 to 12 units) in addition to the core courses described above. One of the courses must be a scientific language/instrumentation course (e.g., computer language, statistics, electron microscopy). Elective courses may be selected from those offered by any department.

(3) Courses 596, 597, and/or 599 during quarters in which research (596, 599) or study for written or oral examinations (597) is part of your program. Course 599 is for students who have passed their oral examinations; course 596 is for those who have not.

Teaching Experience

All students in the doctoral program are expected to participate in teaching activities by assisting the faculty in a laboratory for medical or dental students (usually one day a week for one quarter during the second year) and by assisting in the grading of examinations (usually one to two times per quarter starting in the second year).

Qualifying Examinations

If you have passed the departmental written examination at the Ph.D. level of achievement (see above), you should consult with the department chair, who is responsible for nominating faculty members to serve on your doctoral committee.

The University Oral Qualifying Examination, which must be passed before you can be advanced to candidacy, consists of the presentation and defense of a research proposal to the doctoral committee. This proposal should not be in the area of your dissertation research. The doctoral committee determines whether you pass the examination and whether reexamination is allowed in case of failure. The examination may be repeated only once. It is expected that students will complete the University Oral Qualifying Examination by the beginning of the third year of graduate work.

Final Oral Examination

The doctoral committee may elect to waive the final oral examination.

Articulated Degree Program

Students may apply for the M.D./Ph.D. program by making simultaneous applications for graduate standing in this department and for admission to the School of Medicine. Acceptance by both of the concerned units is necessary. Certain changes in the requirements (e.g., fewer required courses) allow some savings in time compared to separate M.D. and Ph.D. degrees.

Upper Division Courses

101A-101B-101C. Biological Chemistry. Lecture, three hours. Prerequisite: organic chemistry. Required in the medical curriculum; consent of instructor required for nonmedical students. (F, 101A; W, 101B; Sp, 101C)

101E. Biological Chemistry Laboratory. Laboratory, seven hours. Required in the medical curriculum; consent of instructor required for nonmedical students. Experiments illustrating some of the procedures employed in clinical chemistry, enzymology, and metabolic studies. (Sp)

102A-102B. Biological Chemistry Lecture (Dental Students). Lecture, three hours. Prerequisites: courses necessary for admission to dental school. Required in the dental curriculum; consent of instructor required for nondental students. The biochemical properties and structures of living systems, with special emphasis on mineral metabolism and nutrition. (F, 102A; W, 102B)

102C. Biological Chemistry Seminar (Dental Students) (1 unit). Seminar, four hours (five weeks). Required in the dental curriculum; consent of instructor required for nondental students. The seminars, given by the students to small discussion groups, involve presentation of material from current research dealing with biochemical studies. (W)

Graduate Courses

201A-201B. Biological Chemistry. Lecture, three hours. Prerequisites: organic chemistry, an undergraduate course in biochemistry other than a beginning survey course, consent of instructor. A graduate-level course in fundamentals of biochemistry, with emphasis on mammalian biochemistry. Structure, function, and metabolism of major cell constituents. (F, 201A; W, 201B)

220A-220B-220C. Research Laboratory Rotations (2 to 8 units each). Lecture, one hour; laboratory, six hours. Prerequisite: consent of instructor. Students arrange apprenticeships in the laboratories of one or more departmental faculty members and engage in a research project under close faculty direction. Allows students to acquire in-depth laboratory experience in specific research areas and facilitates an informed decision on their part in the selection of a thesis/research adviser. S/U grading.
Mr. Fulco and the Staff (F, 220A; W, 220B; Sp, 220C)

M221A-M221B. Cellular and Molecular Neurochemistry. (Formerly numbered 221.) (Same as Anatomy M221A-M221B, Neuroscience M221A-M221B, Pharmacology M221A-M221B, and Psychiatry M221A-M221B.) Lecture, three hours. Contemporary neurochemistry for students with a general background in biochemistry. Relates the biochemical and structural properties of the nervous system to its development and functions and introduces students to disorders that result from alterations in the fundamental biochemistry of the nervous system. Although the subject is treated in an interdisciplinary manner, course progresses from structure through chemistry to function in precise manner and biological terms.
Mr. de Vellis, Mr. Eiduson, Mr. Olsen (W,Sp)

222. Biochemistry of the Synapse (2 units). Prerequisite: course M221A. Detailed analysis of the research literature dealing with biochemistry of the synapse. Metabolism, storage, and release of transmitter; transmitter receptors and functions; neuronal plasticity. Mr. Howard

M248. Molecular Genetics. (Formerly numbered 248.) (Same as Biology M248.) Lecture, three hours; discussion, one hour. Prerequisite: consent of instructor. Basic concepts in modern genetics, drawing examples from both eukaryotic and prokaryotic systems. Emphasis on the use of genetic techniques for addressing fundamental questions in biochemistry and molecular biology. Topics include mutagenesis, mutant selection, recombination, genetic mapping, complementation, transposable elements, gene organization, genetic regulation, and molecular evolution.
Ms. Calame, Mr. McEntee, Mr. Miller, Mr. Shapiro (Sp)

M253. Macromolecular Structure (6 units). (Same as Chemistry M253.) Lecture or recitation, five hours. Prerequisites: courses 101A-101B or 201A-201B, or Chemistry 110A, 156, 157A, and 157B, or equivalent, or consent of instructor. Chemical and physical properties of proteins, nucleic acids, and other macromolecular complexes, with emphasis on theory and methodology; correlation of structure and biological properties; chemical synthesis and properties of polypeptides and polynucleotides. Ms. Calame (F)

M255. Biological Catalysis (2 units). (Same as Chemistry M255.) Prerequisites: course 101A or 101B or Chemistry 156, 157A, or 157B, and 110A, or equivalent, or consent of instructor. Reaction mechanisms in molecular biology; experimental approaches for the study of enzymes, including kinetics, isotopic labeling, stereochemistry, chemical modification, and spectroscopy; the design of pharmacologically active agents and artificial enzymes. Mr. Sigman (Sp)

M257. Physical Chemistry of Biological Macromolecules (2 units). (Same as Chemistry M257.) Prerequisite: Chemistry 25 or 110A or consent of instructor. Theory of hydrodynamic, thermodynamic, and optical techniques used to study the structure and function of biological macromolecules. (W)

M261. Advanced Chemistry and Biochemistry of Lipids. (Same as Chemistry M261.) Lecture, three hours; discussion, one hour. Prerequisites: courses 101A-101B or 201A-201B or Chemistry 157A and 157B, or equivalent. Comprehensive treatment of lipid nutrition and metabolic-nutrient interactions.
Ms. Alfin-Slater, Mr. Edmond, Mr. Mead (W)

M263. Metabolism and Its Regulation. (Formerly numbered M255.) (Same as Chemistry M263.) Lecture, three hours. Prerequisites: course 101A or 101B or Chemistry 156, 157A, or 157B, and 110A, or equivalent, or consent of instructor. Thermodynamic and kinetic aspects of metabolism; regulatory properties of enzymes; metabolic regulation; consideration of comparative aspects of metabolism in relation to physiological function. Mr. Atkinson, Mr. Weiss (Sp)

M264A-M264B-M264C. Molecular Basis of Atherosclerosis: Selected Topics (2 units each). (Same as Chemistry M264A-M264B-M264C.) Prerequisites: course M261 or equivalent, consent of instructor. The biochemistry, morphology, and physiology of atherosclerosis. Emphasis on the chemistry of lipoproteins and the role of plasma lipoproteins in the regulation of tissue lipid metabolism and the development of atherosclerosis. Each course may be taken independently for credit.

265. Seminar in the Biochemistry of Nucleic Acids (2 units). Lecture or recitation, one hour. Prerequisite: course M253 or equivalent. Biochemistry and chemistry of nucleic acids and nucleotides.
Mr. Glitz

266A-266B-266C. Seminar in the Biochemistry of Differentiation (2 units each). Lecture or recitation, one hour. Prerequisite: consent of instructor. A review of the current literature in the areas of specific expression of function and control of enzyme synthesis; metabolism in developing systems; and the control of gene expression pertaining to the biochemistry of development. Mr. Harary, Mr. Herschman

M267. Macromolecular Metabolism and Subcellular Organization (6 units). (Same as Chemistry M267.) Lecture or recitation, five hours. Prerequisites: courses 101A-101B or 201A-201B or Chemistry 157A and 157B, or equivalent. Recommended: course M253. Metabolism of nucleic acids and proteins; biosynthesis of complex lipids and polysaccharides; structure and properties of cellular organelles. Mr. Herschman, Mr. Martinson (W)

M269. Developmental Biochemistry (2 units). (Same as Chemistry M269.) Prerequisite: course M267 or consent of instructor. Biochemical aspects of development, specific tissue and cell function, and differential gene expression. The biochemistry of cell division, macromolecular synthesis, chromatin function in gene expression, cell-cell interactions, membrane organization, and growth as they contribute to such topics as hormone induction, morphogenesis, and viral transformation. Emphasis on the use of differentiating *in vivo* systems and cell culture as models. Mr. Harary, Mr. Herschman

M298. Seminar on Current Topics in Molecular Biology (2 units). (Same as Biology M298, Chemistry M298, Microbiology M298, Microbiology and Immunology M298, and Molecular Biology M298.) Prerequisite: consent of instructor and graduate adviser of interdepartmental Molecular Biology Ph.D. committee. Each student conducts or participates in discussions on assigned topics. May be repeated for credit. (F,W,Sp)

596. Directed Individual Study and Research (2 to 12 units). Laboratory, to be arranged. Prerequisite: consent of graduate adviser. S/U grading.

597. Preparation for Examinations (2 to 4 units). Prerequisite: consent of graduate adviser. Individual study for Ph.D. qualifying examinations or M.S. comprehensive examination. S/U grading.

598. Preparation of M.S. Thesis. Prerequisite: consent of graduate adviser. Preparation of research data and writing of M.S. thesis. S/U grading.

599. Research for and Preparation of Ph.D. Dissertation (2 to 12 units). Prerequisite: consent of graduate adviser. Preparation of research data and writing of Ph.D. dissertation. S/U grading.

Assistant Professor

Elliot M. Landaw, M.D., Ph.D.

Adjunct Professors

Edward C. DeLand, Ph.D.
Janet D. Elashoff, Ph.D.
Alan B. Forsythe, Ph.D.
Arthur Peskoff, Ph.D.

Adjunct Assistant Professors

Eli Engel, M.D., Ph.D.
David Greenberg, Ph.D.
Daniel F. Heitjan, Ph.D.

Scope and Objectives

As biology advances rapidly in quantitative research methods, both the need for and possibility of closely associated theoretical research increases. On numerous medical and medical science frontiers — such as human genetics, oncology, pharmacology, neurosciences, and physiology — biomathematics is contributing both in its basic research and the development of specialized computer software to support investigation and health care. UCLA has one of the few departments in this relatively new, rapidly evolving field.

The Department of Biomathematics welcomes both undergraduate and graduate students in other majors to its courses in biomedical computing, modeling, and statistics. Premedical majors with mathematical/computer interests can receive early guidance toward an M.D./Ph.D. program in Biomathematics. The department is responsible for statistical and biomathematical training in the medical curriculum.

The department's orientation is away from abstract modeling and toward theoretical research vital to the advancement of current biomedical research frontiers. The doctoral program reflects this in requirements for advanced training in a biomedical research specialty and for the mathematical and computing skills required to contend realistically with complex phenomena encountered in biology and medicine. The art of biomathematical research is developed individually from the first year on. The master's program adapts to the various needs of researchers desiring supplemental biomathematical training, people preparing to provide methodological support to researchers in biology or medicine, or students pursuing a stepwise approach to graduate training in biomathematics.

Requirements for Graduate Degrees

Admission

High academic achievement in one scientific or mathematical field is required. It is not necessary to be proficient in both mathematics and biology, though some prior preparation in both fields is desirable. Both the Aptitude and Advanced Tests of the Graduate Record Examination (GRE) should be taken. At least three letters of recommendation are required from faculty competent to evaluate your qualifications for pursuing graduate study and a creative research career; additional letters are welcomed and may be requested.

In addition to completing the Graduate Admissions Office application forms, you are required to complete a departmental application form, which should be sent directly to the department. All communications with the department, including requests for brochures and for the departmental forms, should be sent to the Chair, Graduate Admissions Committee, Department of Biomathematics, AV-617 CHS, UCLA, Los Angeles, CA 90024.

You are admitted to either program after you have achieved admission to the Graduate Division and have been approved by the departmental graduate admissions committee.

Master of Science Degree

Course Requirements

In fulfilling the University's minimum requirement of nine courses, master's candidates must complete at least five graduate-level courses in biomathematics, of which Biomathematics 201, 202, and 203 are required.

No more than two 596 courses may be applied toward the required nine courses, and none may be applied toward the graduate course requirement.

Thesis Plan

You generally are required to follow the comprehensive examination plan. Permission to undertake a thesis plan must be given by the departmental advisory committee, which must approve the thesis committee, as well as your plans for the thesis.

Comprehensive Examination Plan

A written comprehensive examination administered by a committee consisting of at least three faculty members appointed by the chair, with approval of the advisory committee, covers material presented in your coursework. This is usually the written comprehensive examination for the doctoral program given during the summer, but in exceptional cases a special committee and written examination is provided.

Ph.D. Degree

Major Fields or Subdisciplines

Each student completes the requirements for a field of special emphasis in biology. Presently approved fields of special emphasis for which courses of study have been developed include genetics, immunology, neurosciences, pharmacology, and physiology. Others may be added in response to students' requests.

Course Requirements

The following courses are required:

Biomathematics: 201, 202, 203, 204, and eight units from 205, 206, 207A, M207B, 208, 209.

Mathematics: Five graduate courses from an approved list, with two substitutions possible if especially appropriate to your research field. (Consent may be given by the advisory committee at the time of admission to the program to count prior graduate courses for full or partial completion of this requirement.)

Biology: Courses required for the field of major biological emphasis.

Independent Research: Each student must take at least four units of Biomathematics 596 with a member of the Biomathematics Department each year prior to taking the written comprehensive examination. As you progress, there is increasing emphasis on research and encouragement to publish. Failure to advance in capacity for independent, creative research is a primary indication for recommended withdrawal from the program.

The following courses are recommended:

Mathematics: By individual study or coursework, you should have strength in differential equations, probability and statistics, and real and complex analysis. Offerings in the Department of Mathematics are especially recommended.

Statistics: Additional training in biostatistics is highly recommended (see offerings in the School of Public Health).

Computer Methods: You must be a facile programmer and acquainted with numerical methods needed for your area of research. The numerical analysis sequence in the Department of Mathematics and computing courses in biomathematics are suggested.

Biology and Biological Chemistry: A broad background is expected, from molecular to organ-system levels. This probably will be provided in requirements for the field of major biological emphasis; supplemental coursework will be advised, if needed.

Teaching Experience

One teaching preceptorship (Biomathematics 596) is required. You participate fully in the planning and delivery of one course in the Biomathematics Department. The emphasis is on your training in all aspects of preparing for and offering a course; this is not a service-oriented teaching assistantship.

With consent of the advisory committee, a student who does not plan to pursue an academic teaching career may, for one quarter, participate at the level of one 596 course in the individual-instruction activities of a member of the department faculty (e.g., informal instruction of biomedical scientific collaborators, planning and guiding individual reading programs, developing and administering term projects in research).

Qualifying Examinations

In the summer, the department offers a written comprehensive examination to test your competence in biomathematics. Full-time students must take this by the end of two academic years of study and part-time students by the end of three.

The qualifying examination in the field of major biological emphasis usually is the regular comprehensive examination for doctoral students in that field and is taken prior to the examination that advances them to candidacy. Students entering with a Ph.D. in a biological field are exempt from the above requirements. Students with an M.D. are exempt from the required coursework; exemption from the examination may be granted by joint action of the curriculum and advisory committees in consultation with advisers from the specialty area.

The University Oral Qualifying Examination, administered by the doctoral committee appointed by the dean of the Graduate Division, critically probes the quality, scope, and feasibility of your proposed dissertation work. It explores the integration and strength of biomathematical, mathematical, and biological expertise in your intended area of research. You advance to candidacy after passing this examination.

Final Oral Examination

A final oral examination is required of all candidates and is a defense of the dissertation, administered by the doctoral committee.

Upper Division Courses

110. Elements of Biomathematics. Lecture, three hours; laboratory, three hours. Prerequisite: calculus. Analysis of deterministic models. Conditions under which deterministic and probabilistic descriptions of biological phenomena are appropriate. Both approaches are applied to selected examples in physiology and biology. Mr. Engel (Sp)

M153. Introduction to Computational Statistics. (Same as Public Health M101D.) Lecture, three hours; discussion, one hour. Prerequisite: Mathematics 150C or 152B or equivalent. Statistical analysis of data by means of package programs. Regression, analysis of variance, discriminant analysis, and analysis of categorical data. Emphasis on understanding the connection between statistical theory, numerical results, and analysis of real data. Mr. Jennrich

CM156. Human Genetics. (Same as Biology CM156.) Lecture, three hours; discussion, one hour. Prerequisites: Biology 8, Chemistry 25. The application of genetic principles in human populations, with emphasis on cytogenetics, biochemical genetics, population genetics, and family studies. Lectures and readings in the literature, with focus on current questions in the fields of medical and human genetics and the methodologies appropriate to answer such questions. Concurrently scheduled with course CM256. Mr. Merriam, Ms. Spence (Sp)

160. Introductory Biomathematics for Medical and Biomedical Research. Lecture, four hours; discussion, 90 minutes. An elementary statistics course that focuses on statistical concepts and critiques the literature, with emphasis on clinical research. Output from statistical computer packages discussed in class, but students do not use the computer themselves. Topics include descriptive statistics, t-tests, confidence intervals, linear regression and correlation, analysis of variance, nonparametric statistics, basic experimental design, sample size determination, article interpretation. Ms. Elashoff (W)

170A. Computer-Based Introductory Biomathematics for Medical and Biological Experimenters. (Not the same as course 170A prior to Fall Quarter 1985.) Lecture, four hours; discussion, 90 minutes. An intensive elementary statistics course emphasizing the design of experiments and analysis of data using statistical packages. Statistical topics similar to course 160 — descriptive statistics, t-tests, confidence intervals, linear regression and correlation, analysis of variance, nonparametric statistics, basic experimental design, sample size determination — but students also shown how to use the computer and run statistical software packages. Practical aspects of data collection and cleaning. Mr. Little (F)

170B. Statistical and Mathematical Modeling in Medical and Biological Research. (Not the same as course 170B prior to Spring Quarter 1986.) Lecture, four hours; discussion, 90 minutes. A second course in biomathematical methods. Topics include randomization methods, intermediate experimental design, contingency table analysis, analysis of variance, multiple linear regression, nonlinear regression, methods of classification, model checking, basic mathematical models including compartment models, and statistical computer software. Students have the opportunity to design their own experiments and analyze them on the computer, and to analyze previously collected data. Mr. Korn (Sp)

172. Design, Conduct, and Analysis of Clinical Investigations (2 units). Lecture, two hours; discussion, two hours. Topics include steps in bringing a possible therapy to clinical use; design of studies in animals to assess antitumor response; randomization, historical controls, p-values, size of study, stratification, and points; ethics of human experimentation; informed consent; three phases of human studies; indications for various types of controls, prognostic factors, survivorship studies, design of prognostic studies; organization of a clinical trial — administration, comparability, protocols, nursing and clinical standards, data collection and management. P/NP grading. Mr. Elashoff (Sp, five weeks)

190HA-190HB. Honors Research in Biomathematics. Prerequisites: upper division standing, consent of instructor and department chair. Individual research in some aspect of biomathematics designed to acquaint students in depth with mathematical models and computer applications in biology. Must be taken for at least two quarters and for a total of at least eight units. Thesis required. Ms. Spence (F,W,Sp)

199. Special Studies in Biomathematics (2 to 8 units). Prerequisites: upper division standing, consent of instructor. Special studies in biomathematics, including either reading assignments or laboratory work or both, designed for appropriate training of students. (F,W,Sp)

Graduate Courses

200. Research Frontiers in Biomathematics (2 units). Prerequisite: consent of instructor. A series of presentations by the faculty on research frontiers in biomathematics. S/U grading. (F, even years)

201. Deterministic Models in Biology. Prerequisite: knowledge of linear algebra and differential equations. Examination of the conditions under which deterministic approaches can be employed and conditions where they may be expected to fail. Topics include compartmental analysis, enzyme kinetics, physiological control systems, and cellular/animal population models. Ms. Newton (F)

202. Fourier Analysis in Biology. Prerequisite: knowledge of calculus, linear algebra, and probability. Introduction to the theory of Fourier transforms and Fourier series from the point of view of generalized functions. Elementary applications to differential equations, quantum mechanics, image reconstruction, X-ray crystallography, branching processes, and time series. Brief review of computational techniques based on the fast Fourier transform. Mr. Lange (W)

203. Stochastic Models in Biology. Prerequisite: Mathematics 150A or equivalent experience in probability. The mathematical description of biological relationships, with particular attention to areas where the conditions for deterministic models are inadequate. Examples of stochastic models drawn from genetics, physiology, ecology, and a variety of other biological and medical disciplines. Mr. Lange (Sp)

204. Biomedical Data Analysis. Prerequisite: consent of instructor. The quantity and quality of observations have been greatly affected by the present-day extensive use of computers. A problem-oriented study of the latest methods in statistical data analysis and the use of such arising in laboratory and clinical research. Mr. Little (Sp)

205. Electric Potential Problems in Membranes, Cells, and Tissues. Prerequisite: knowledge of differential equations and electrostatics, or consent of instructor. Review of electrostatics; potential problems in rectangular, spherical, and cylindrical coordinates; modeling subthreshold electrical properties of cells; microelectrode measurements of intracellular potentials; boundary conditions for current flow across membranes; eigenfunction expansions and singular perturbation analysis of intracellular and extracellular potential distribution in spherical and cylindrical cells and syncytia; computation of potential barriers for ions traversing a membrane pore. Mr. Peskoff (Sp)

206. Modeling of Cellular Systems (2 to 4 units). Students who can contribute to the class either as biologists or theoreticians may attend. Expected performance is based on each individual's background. Study of recently reported characterizations of differentiating systems, flow cytometry, etc. Development of deterministic, stochastic, and computer simulation models from simple dividing systems through special cell populations. Biological assumptions, indications for various approaches, and relationships to laboratory research and clinical applications. Ms. Newton (W)

207A. Theoretical Genetic Modeling. Lecture, three hours; discussion, one hour. Prerequisite: upper division mathematics or human genetics or consent of instructor. The theoretical foundations underlying models and techniques used in mathematical genetics and genetic epidemiology. Topics include use of likelihood methods, segregation analysis, ascertainment bias, linkage analysis, genetic heterogeneity, and complex genetic models. Course complements M207B; students may take either and are encouraged to take both. Ms. Hodge (F, odd years)

M207B. Applied Genetic Modeling. (Formerly numbered M207.) (Same as Anthropology M222R.) Lecture, three hours; discussion, one hour. Prerequisites: Anthropology M222Q and graduate standing, or consent of instructor. Methods of computer-oriented genetic analysis. Topics include segregation and linkage analysis, polygenic (quantitative) models, and population structure. Includes a laboratory for hands-on computer analysis of genetic data; laboratory reports required. Course complements 207A; students may take either and are encouraged to take both. Ms. Spence (F, even years)

208. Modeling and Analysis of Neuroelectric Data. Designed for biologists (especially neuroscientists), but open to other science majors. Application of mathematical approaches for modeling and developing neural theory to basic neurophysiological phenomena and neural models. Appropriate practical approaches. (Sp)

209. Problems in Fluid and Electrolyte Management (2 units). Prerequisites: biochemistry, physiology, FORTRAN equivalent. Principles of fluid and electrolyte balance and acid-base chemistry. Brief review of fluid and electrolyte metabolism and mechanisms of physiologic control, with reference to the research literature. Development and demonstration of the principles for management of acute imbalance, using computer-based patient simulation. Depending on each student's interests, special topics include analysis of patient data, design of parenteral and dialysate fluids, mathematical principles, patient simulation using on-line patient data, or analysis of physiologic mechanisms. Mr. DeLand (F)

210. Introduction to Biomedical Computation. Lecture, three hours; laboratory, three hours. Prerequisite: graduate standing. An introduction to FORTRAN programming, with a survey of biomedical computer applications and data processing techniques for both clinical and physiological experiments. Pace is rapid and subjects biologically oriented. Not recommended for students who merely wish an introductory course in FORTRAN programming. Prior knowledge of computers is not required even though the programming skills that are attained by the end of the quarter are quite substantial. (F)

213. Biomedical Laboratory Computing (Biomedical Minicomputing). Analysis of computational and data management problems encountered in the use of small digital computers for biomedical research. Practical experience acquired with the department's minicomputer in system generation and patching, documentation, interfacing, file management, assembler language, and higher order language programming with computer graphics. Selected laboratories used for experience in the direct processing of physiological data and in controlling laboratory experiments. (W)

215A. Advanced Biomedical Computation: Graphics. Lecture, four and one-half hours. Prerequisite: FORTRAN programming skills. Survey of biomedical graphics applications, rationale. Graphics hardware, software. Graphical representation: glyphs, projections, hidden lines. Interactive graphics programming, individual term projects. S/U or letter grading. Ms. Newton (Sp)

220. Kinetic and Steady State Models in Pharmacology and Physiology. Recommended: knowledge of linear algebra, differential equations, and statistics. Designed for biologists and theoreticians. Modeling and data analysis in pharmacokinetics, enzyme kinetics, and endocrinology. Topics include compartmental and noncompartmental approaches, steady state analysis of transport and binding processes, and optimal experiment design. Mr. Landaw (Sp)

M230. Computed Tomography: Theory and Applications. (Same as Radiological Sciences M230.) Prerequisite: consent of instructor. Computed tomography is a three-dimensional imaging technique being widely used in radiology and is becoming an active research area in biomedicine. Basic principles of computed tomography (CT), various reconstruction algorithms, special characteristics of CT, physics in CT, and various biomedical applications.
Mr. S-C. Huang (W)

M231. Special Topics: Statistical Methods for Categorical Data. (Same as Public Health M201E.) Lecture, three hours; discussion, one hour. Prerequisites: Public Health 100B or 101B, Mathematics 150C or 152B, or equivalent, consent of instructor. Statistical techniques for the analysis of categorical data; discussion and illustration of their applications and limitations. Mr. Korn (W)

M232. Statistical Analysis of Incomplete Data. (Same as Public Health M202F.) Lecture, three hours; laboratory, one hour. Prerequisites: Public Health 100B or 101B, Mathematics 150C or 152B, or equivalent, consent of instructor. Discussion of the statistical analysis of incomplete data sets, with material from the sample survey, econometric, biometric, psychometric, and general statistical literature. Topics include treatment of missing data in statistical packages, missing data in ANOVA and regression imputation, weighting, likelihood-based methods, and nonrandom nonresponse models. Emphasis on application of the methods to applied problems, as well as on the underlying theory. S/U or letter grading.
Mr. Little (Sp, odd years)

M233. Simultaneous Statistical Inference. (Same as Public Health M202G.) Lecture, three hours; discussion, one hour. Prerequisites: Mathematics 150C, Public Health 200C, M205A. Methods and theory of simultaneous statistical inference.
Mr. Korn (Sp, odd years)

M234. Applied Bayesian Inference. (Same as Public Health M202H.) Lecture, three hours; discussion, one hour. Prerequisites: Mathematics 150C, Public Health 200C, and M205A, or consent of instructor. The Bayesian approach to statistical inference, with emphasis on biomedical applications and concepts rather than mathematical theory. Topics include large sample Bayes inference from liklihoods, noninformative and conjugate priors, empirical Bayes, Bayesian approaches to linear and nonlinear regression, model selection, Bayesian hypothesis testing, and numerical methods. S/U or letter grading.
Mr. Little (Sp, even years)

M246. Probability Models and Statistical Methods in Genetics. (Same as Anthropology M222Q.) Lecture, three hours. Prerequisites: Anthropology 222P, Mathematics 3A, two quarters of statistics, graduate standing. An introduction to probability models and statistical methods in genetics. Maximum likelihood methods for estimating genetic parameters introduced and discussed in detail. Mr. Read (W)

CM256. Human Genetics. (Same as Biology CM256). Lecture, three hours; discussion, one hour. Prerequisites: Biology 8, Chemistry 25. The application of genetic principles in human populations, with emphasis on cytogenetics, biochemical genetics, population genetics, and family studies. Lectures and readings in the literature, with focus on current questions in the fields of medical and human genetics and the methodologies appropriate to answer such questions. Concurrently scheduled with course CM156. Independent research project required of graduate students. Mr. Merriam, Ms. Spence (Sp)

M270. Optimal Experiment Design and Control for Biological and Other Dynamic Systems. (Same as Computer Science M270D and Medicine M270D.) Prerequisites: Computer Science 270B and M270C, or consent of instructor. Theory and algorithms for designing optimal experiments for quantifying or optimal inputs for controlling dynamic systems in engineering and life sciences. Optimal sampling schedules for parameter estimation. Control optimization and variations for designing optimal test-inputs. Algorithms, software, and applications in medicine and engineering. Mr. Landaw (W)

M280. Computational Statistics. (Same as Mathematics M280 and Public Health M207J.) Lecture, three hours. Prerequisites: Mathematics 115A, 150C, or equivalent. Introduction to theory and design of statistical programs: pivoting and other technologies used in stepwise regression, nonlinear regression algorithms, algorithms for balanced and unbalanced analysis of variance, including the mixed model, iterative rescaling, and other methods for log-linear models. Mr. Jennrich (F)

M281. Survival Analysis. (Same as Public Health M201K). Lecture, three hours; discussion, one hour. Prerequisites: Public Health 100C and Mathematics 150C or 152B, or equivalent, consent of instructor. Statistical methods for the analysis of survival data.
Mr. Elashoff (F)

M282. Problems of Statistical Consultation. (Same as Public Health M202E.) Lecture, two hours; discussion, one hour; laboratory, two hours. Prerequisite: graduate course in applied statistics. Textbook and original problems requiring special expertise in design and analysis. Use of computer packages to diagnose failure of assumptions, suitability of models, and alternate analyses. Mr. Little (W)

596. Directed Individual Study or Research in Biomathematics (2 to 12 units). Individual study on topics not yet covered by the offerings of the department. May be repeated for credit with topic change. (F,W,Sp)

597. Preparation for M.S. or Ph.D. Comprehensive Examination or Ph.D. Qualifying Examinations (2 to 8 units). Prerequisite: consent of graduate adviser. Individual study. S/U grading. (F,W,Sp)

Medicine

32-127 Center for the Health Sciences, (213) 825-6275

Acting Executive Chair

Roy T. Young, M.D.

Chairs

Lawrence R. Freedman, M.D. *(Wadsworth VA)*
Richard J. Glassock, M.D. *(Harbor-UCLA)*
A. Paul Kelly, M.D., *Acting (King/Drew)*
Stanley G. Korenman, M.D. *(Sepulveda VA)*

Vice Chairs

Robert S. Sparkes, M.D. *(Academic)*
Roy T. Young, M.D. *(Training and Clinical)*

Scope and Objectives

The principal goal of the Department of Medicine is to educate students in the expert diagnosis and compassionate management of human illness. Building on the biochemical, physiological, and behavioral foundations of the preclinical experience, students are taught *information acquisition* through history taking, physical examination, and laboratory evaluation; *information synthesis* by achieving a differential diagnosis and evaluative plan; and *medical decision making* for continued evaluation and therapy. Students are encouraged and guided in developing a caring physician-patient relationship.

Instruction in the department is provided in the sophomore, junior, and senior years of medical school, with the junior and senior years constituting a continuum of clinical experience. Students become integrated into a ward team and apply and extend their clinical skills, medical knowledge, and judgment in the care of patients assigned to them under the immediate supervision of house officers and attending staff.

The department offers a broad range of advanced clinical clerkships in general and subspecialty, ambulatory and hospital-based internal medicine, at all the major affiliated centers.

For further details on the Department of Medicine and a listing of the courses offered, see the *Announcement of the UCLA School of Medicine.*

Microbiology and Immunology

John L. Fahey, M.D. *(Immunology)*
Sydney M. Finegold, M.D., *in Residence (Bacteriology)*
Sidney H. Golub, Ph.D., *in Residence (Immunology)*
Marcus A. Horwitz, M.D. *(Bacteriology)*
Dexter H. Howard, Ph.D. *(Mycology), Vice Chair*
David T. Imagawa, Ph.D. *(Virology)*
James N. Miller, Ph.D. *(Bacteriology)*
Debi P. Nayak, B.V.Sc., Ph.D. *(Virology)*
George R. Riviere, D.D.S., Ph.D. *(Immunology)*
Jack G. Stevens, D.V.M., Ph.D. *(Virology), Chair*
Jerrold A. Turner, M.D. *(Parasitology)*
Randolph Wall, Ph.D. *(Immunology)*
Felix O. Wettstein, Ph.D. *(Virology), Vice Chair*
Telford H. Work, M.D., M.Ph.H., D.T.M.&H. *(Virology)*
Ruth A. Boak, M.D., Ph.D., *Emeritus*
David McVickar, M.D., Ph.D., *Emeritus*
Margret I. Sellers, Ph.D., *Emeritus*
Henry E. Weimer, Ph.D., *Emeritus*
Stephen Zamenhof, Ph.D., *Emeritus*

Associate Professors

Asim Dasgupta, Ph.D. *(Virology)*
Ronald H. Stevens, Ph.D. *(Immunology)*
Jacob Zighelboim, M.D. *(Immunology)*

Assistant Professors

Rafi Ahmed, Ph.D. *(Virology)*
John Bramhall, Ph.D. *(Immunology)*
David A. Campbell, Ph.D. *(Parasitology)*
Lawrence T. Feldman, Ph.D. *(Virology)*
Mitchell Kronenberg, Ph.D. *(Immunology)*
Michael Lovett, M.D., Ph.D. *(Bacteriology)*
Virginia L. Scofield, Ph.D. *(Immunology)*

Lecturers
Margery L. Cook, Ph.D. *(Virology)*
Nina Dabrowa, Ph.D. *(Mycology)*
Maurice L. White, Ph.D. *(Bacteriology)*

Adjunct Associate Professor
George Fareed, M.D. *(Virology)*

Scope and Objectives

The desire to explain natural phenomena, including disease, is the basis for most students' interest in biological sciences. The Microbiology and Immunology Department in the UCLA School of Medicine is disease oriented. The emphasis is on pathogenesis of infection, malignancy, and immunological response of the host to these changes of immunological dysfunction. All tools available from molecular biology to morphological methods are applied to these problems.

Microbiology and immunology are interwoven disciplines. Microbiology has played a central role in all aspects of biological sciences, including morphogenesis, genetics, developmental biology, physiology, biochemistry, and cell biology. An understanding of microbiology is thus fundamental to biological research. Immunology, once a branch of microbiology, is now a major biological discipline and a basic component of disease-oriented microbiology.

The graduate program in microbiology and immunology is closely associated with advanced (postdoctoral) training in research, clinical and public health diagnostic work, and industrial applications. Careers in microbiology and immunology include industrial appointments and clinical laboratory supervision in both government agencies and private enterprises and academic positions.

Master of Science Degree

The department does not accept students whose sole objective is a master's degree.

Ph.D. Degree

Admission

In addition to the University minimum requirements, the following items are required:

(1) A bachelor's degree with a major in either the biological or physical sciences.

(2) At least a B+ in chemistry, physics, and mathematics; at least a B average in biology (upper division and prior graduate study).

(3) Three favorable letters of recommendation.

(4) Graduate Record Examination (GRE) general test and subject test in biology.

(5) Acceptable statement of purpose.

(6) An interview with members of the department graduate student committee when indicated.

For departmental brochures and/or application forms, write to the Graduate Student Office, Department of Microbiology and Immunology, 43-204 CHS, UCLA, Los Angeles, CA 90024.

Major Fields or Subdisciplines

You are expected to be competent in both microbiology and immunology. However, you must do your thesis work in one of the following divisions: immunology, medical microbiology, or virology.

Foreign Language Requirement

There is no foreign language requirement for the degree.

Course Requirements

(1) Microbiology and Immunology 202A, 202B, 202C, 202D are required and must be completed during your first year of study.

(2) Course 596 is required. You complete a laboratory rotation program during your first year of study.

(3) Courses M258A and M258B are required.

(4) Biological Chemistry M253 and six additional units of graduate biochemistry (Biological Chemistry M267 is recommended) are required.

(5) Additional course requirements are determined by your major field and your major professor.

Teaching Experience

Teaching assignment in one laboratory section of Microbiology and Immunology 201, 212, or another laboratory course presented by the department is required.

Qualifying Examinations

The departmental written qualifying examination is to be taken at the end of your first year of graduate study. The examination consists of a three-hour written test in your major (immunology, medical microbiology, or virology) and two three-hour tests in two additional minor field topics selected from bacteriology, genetics, immunology, molecular biology, mycology, parasitology, and virology. The examinations require factual knowledge, the ability to analyze experimental work, and the capacity to design problem-solving experiments and are graded on a pass/fail basis. Each examination is separately scheduled at the end of your first year and may be repeated once if failed.

You have the option of completing the University Oral Qualifying Examination by the end of either the second year (Plan I) or the third year (Plan II). Advancement to candidacy is awarded after successful completion of this examination. If inadequacies are encountered, you may be required to repeat the examination, in which case Plan II becomes mandatory.

Plan I (passed within 24 months) includes the preparation and defense of a research proposal (the topic is the same as the research that you intend to use as your thesis work) and the demonstration of general knowledge of microbiology and immunology.

Plan II (passed within 36 months) includes the preparation and defense of a research proposal (the topic is in a different area and uses a different approach from that of your thesis project and research, but within the fields of interest in the department), an explanation of the research and results, and the demonstration of general knowledge of microbiology and immunology.

The details of the dissertation requirement are supervised by your professor and doctoral committee. The dissertation must demonstrate an original and independent contribution to scientific knowledge acceptable for publication in a major scientific journal and presented in the University-required format.

Final Oral Examination

The final oral examination is optional with the doctoral committee. However, you are required to present a special seminar based on your dissertation.

Upper Division Courses

M185. Immunology. (Same as Biology M185 and Microbiology M185.) Lecture, three hours; discussion, one hour. Prerequisites: Biology 8, Chemistry 23, 25. Recommended corequisite: Chemistry 152 or 156. Introduction to experimental immunobiology and immunochemistry; cellular and molecular aspects of humoral and cell immune reactions.
Mr. Clark, Mr. Sercarz (F)

M186. Experimental Design in Immunology. (Same as Biology M186 and Microbiology M186.) Laboratory, 12 hours. Prerequisites: course M185, consent of instructor. Corequisite: course M187. Emphasis on a limited number of situations designed to train the student in organizing and evaluating immunological laboratory experiments.
Mr. Clark, Mr. Sercarz (W)

M187. Immunology Seminar (2 units). (Same as Biology M187 and Microbiology M187.) Prerequisites: course M185, consent of instructor. Corequisite: course M186. Student presentation of selected papers from the immunology literature. Designed to serve as a forum for the critical analysis of research papers. Mr. Clark, Mr. Sercarz (W)

199. Directed Individual Research Studies in Microbiology and Immunology (2 to 8 units). Prerequisites: senior standing, consent of instructor (based on written research proposal). Individual research projects carried out under direction of a professor. (F,W,Sp)

Graduate Courses

Undergraduates may enroll in some graduate courses with consent of instructor.

201. Microbiology and Immunology (8 units). Lecture/laboratory. Limited to medical students. Study of infectious agents of human disease, with emphasis on host-parasite relationships and immunologic phenomena in immunity and disease, including identification of bacteria, fungi, animal parasites, and viruses, and principles of prevention, treatment, and laboratory diagnosis. (F)

202A. Fundamentals of Immunology (2 units). Prerequisite: consent of instructor. Introduction to experimental immunobiology and immunochemistry; cellular and molecular aspects of humoral and cell-mediated immune functions.
(F, first weeks in September)

202B. Medical Bacteriology (2 units). Prerequisite: consent of instructor. Characteristics of bacteria rickettsiae and chlamydiae associated with diseases of humans; host-parasite interactions and immunity; identification and laboratory diagnosis; principles of prevention and treatment; introduction to microbial genetics as it pertains to pathogenicity. (F)

202C. Medical Virology (2 units). Prerequisite: consent of instructor. Biological properties of animal viruses; replication; methods of detection; interactions with host cells and multicellular hosts, introduction to tumor viruses. (F)

202D. Medical Mycology and Parasitology (2 units). Prerequisite: consent of instructor. Morphology, physiology, and pathogenicity of the fungi which cause human and animal diseases. Study of the morphology, biology, host-parasite relationship, public health problems, and control of protozoa, helminths, and arthropods parasitic in and on humans and animals. (F)

M206. Secretory and Gastrointestinal Immunity (2 units). (Same as Oral Biology M206.) Review of the anatomy and physiology of the oral cavity, the intestines, and the related lymphatic and blood vascular systems in reference to the immune system. The secretory and systemic immune systems, with particular emphasis on the unique properties of SIgA. Discussion in terms of recent experimental findings of the ability to process enteric antigens, to respond, and to regulate enteric immunity. The role that enteric immunity may play in diseases of the GI tract, such as dental caries and inflammatory bowel diseases. Students participate in discussions following each lecture and present seminars based on a review of the relevant scientific literature.
Mr. Riviere (Sp, alternate years)

208. Molecular Biology of Animal Viruses. Lecture, three hours. Prerequisites: courses in general biochemistry and general microbiology, including virology (consent of instructor may be obtained in special cases). Recommended for advanced undergraduate students with a major in public health, biology, or microbiology and for graduate students with an interest in any field of biology or chemistry. An overview of animal viruses, including viral structure, virus cell interaction, virus replication, and viral oncogenesis. Special emphasis on understanding the molecular mechanism involved in the control and regulation of replication, transcription, and translation of viral genome and its complex interaction with host.
Mr. Nayak (Sp)

210. Medical Mycology (3 units). Prerequisites: course M185, Microbiology 101, C103A, C103B. Recommended: Microbiology 110 (consent of instructor may be obtained in special cases). A study of the morphology, physiology, and pathogenicity of fungi causing human and animal diseases.
Mr. Howard (Sp)

210L. Medical Mycology (2 units). Prerequisites: course M185, Microbiology 101, C103A, C103B. Recommended: Microbiology 110 (consent of instructor may be obtained in special cases). Laboratory application of principles discussed in course 210. Laboratory must be taken by undergraduate students. Mr. Howard (Sp)

212. Laboratory Procedures in Immunological Research (2 units). (Formerly numbered M212.) Prerequisites: course M185 or equivalent, consent of instructor. Limited to 25 students. A series of intensive laboratory workshops designed to acquaint students with the advanced methodologies utilized for immunological research. Workshops offered at regular intervals and last two to three days. Successful completion of four workshops constitutes the requirements for the course. May be repeated for credit with topic change. S/U grading. (F,W,Sp)

214. Bacterial Pathogenesis. Lecture, two hours. Prerequisites: course 202B and/or consent of instructor. A study of the genetic and biochemical properties of bacteria and factors of the host which are relevant to the pathogenesis of bacterial diseases. S/U or letter grading. Mr. Lovett, Mr. Miller (W)

M215. Interdepartmental Course in Tropical Medicine (2 units). (Same as Medicine M215, Pathology M215, and Pediatrics M215.) Prerequisites: basic courses in microbiology and parasitology of infectious diseases in the School of Medicine or Public Health. Course draws on expertise in the Departments of Medicine, Pediatrics, Pathology, and Microbiology and Immunology to present current knowledge about diseases prevalent in tropical areas of the world. Use of lectures, demonstrations, and audiovisual materials to describe diseases which are prevalent in or localized in certain geographic areas. Major emphasis on infectious diseases, with coverage of problems in nutrition and exotic noninfectious diseases. A syllabus supplements the topics covered in the classroom. S/U grading.
Mr. Turner (Sp, alternate years)

222. Membrane Behavior. (Formerly numbered M222.) Lecture, two hours; discussion, two hours. Prerequisite: consent of instructor. Description and relation of membrane structure and biogenesis to the function of membranes as both barriers to and mediators of normal and pathological biological responses. Development of general principles of membrane behavior from studies of simple and complex model systems. Mr. Bramhall

M223. Membrane Research Seminar (2 units). (Same as Microbiology M223.) Prerequisite: consent of instructor. Critical discussions of the current literature in membrane research, with emphasis on the relationship between structure and function in lipid bilayers. May be repeated for credit.
Mr. Bramhall, Ms. Wisnieski

250. Cell and Molecular Biology. Lectures and student seminar presentations. A review of selected current topics in molecular and cellular biology. Topics include recent experimental results on the organization, expression, and regulation of genes in eukaryotic cells. S/U or letter grading. Mr. Feldman (W)

251. Seminar in Microbiology and Immunology (2 units). Consideration of the history of infectious diseases, their host-parasite relationships, etiology, pathogenesis, epidemiology, diagnosis, and immunity. S/U or letter grading. Mr. Howard (W)

252. Seminar in Viral Pathogenesis (2 units). Prerequisites: course 201 and Microbiology 102, or equivalent, or consent of instructor. A consideration of basic phenomena involved in pathogenesis of viral disease, using carefully selected examples. Emphasis on those systems which have been meaningfully dissected by quantitative immunological and molecular biological methods. Mr. Stevens (F)

254. Immunogenetics (2 units). Review of current literature in the field of immunogenetics, with emphasis on fundamental studies involving genetic and immunologic principles and techniques. Selected topics discussed and results interpreted; conclusions and experimental methods evaluated.
Ms. Scofield (Sp)

255. Seminar in Medical Mycology (2 units). Corequisite: course 210. Review of current and recent literature in the field of medical mycology, with emphasis on the host-parasite relationships in the human and animal mycoses. Students are expected to prepare reviews of selected subjects and to discuss contributions of various workers from the standpoint of experimental methods, results, their interpretation, and evaluation. S/U grading.
Mr. Howard (Sp)

M256. Seminar in Viral Oncology (2 units). (Same as Pathology M256.) An advanced research seminar designed to consider the current developments in the field. Selection of current subjects and publications dealing with tumor viruses, oncogenesis, development, and cellular regulation. Mr. Baluda

M258A. Molecular Genetics of the Immune System (2 units). (Same as Biology M250A and Microbiology M258A.) Lecture, two hours; discussion, two hours. Prerequisite: course M185 or 202A or equivalent or consent of instructor. Reading and discussion of current research articles on immunoglobulin I and II, oncogenes of the immune system, T cell antigen receptor, and loci affecting differentiation. S/U or letter grading.
Mr. Wall and the Staff (W, five weeks)

M258B. T and B Cell Function (2 units). (Same as Biology M250B and Microbiology M258B.) Lecture, two hours; discussion, two hours. Prerequisite: course M185 or 202A or equivalent or consent of instructor. Reading and discussion of current research articles on ontogeny, activation, and effector function of T and B cells. S/U or letter grading.
Mr. Bonavida and the Staff (W, five weeks)

M258C. Major Histocompatibility Complexes (2 units). (Same as Biology M250C and Microbiology M258C.) Lecture, two hours; discussion, two hours. Prerequisite: course M185 or 202A or consent of instructor. Reading and discussion of current research articles on the structure of human and murine MHC chromosomal regions and genes, MHC polymorphism, MHC-like systems, MHC-linked genes, MHC and disease, and nonimmune function of MHC. S/U or letter grading.
Mr. Clark, Ms. Scofield (Sp, five weeks)

M258D. Immunopathology (2 units). (Same as Biology M250D and Microbiology M258D.) Lecture, two hours; discussion, two hours. Prerequisite: course M185 or 202A or consent of instructor. Reading and discussion of current research articles on tolerance and autoimmunity, autoimmune disease models, immune complex disease, immediate hypersensitivity and its cellular basis, and natural and acquired immune deficiency disease. S/U or letter grading.
Mr. Fahey, Mr. Porter (Sp, five weeks)

M258E. Immunoregulation (2 units). (Same as Biology M250E and Microbiology M258E.) Lecture, two hours; discussion, two hours. Prerequisite: course M185 or 202A or consent of instructor. Reading and discussion of current research articles on idiotype networks, suppressor T cells, tolerance at T and B cell levels, and Ir gene control. S/U or letter grading.
Mr. Sercarz (F, five weeks)

M258F. Immunochemistry (2 units). (Same as Biology M250F and Microbiology M258F.) Lecture, two hours; discussion, two hours. Prerequisite: course M185 or 202A or consent of instructor. Reading and discussion of current research articles on the immunochemistry of antibodies, antigens, and complement, antigenic recognition, antibody restriction. S/U or letter grading.
Mr. Schumaker, Ms. Wisnieski (F or Sp, five weeks)

M260. Immunology Forum (2 units). (Same as Microbiology M260.) Prerequisite: course M185. A broad range of current topics in immunology presented and discussed at an advanced frontier level. A continuing UCLA-wide, general graduate-level seminar involving faculty, postdoctoral immunologists, and graduate students from diverse departments. S/U or letter grading. Mr. Sercarz (F,W,Sp)

261. Tumor Immunology (2 units). Prerequisites: courses M258A, M258B, or equivalent. Experimental basis for investigation of immune response to tumors; review of cell-mediated immunity and related humoral immunity; evidence for tumor-associated antigens in man; evaluation of attempts at immunotherapy of tumors. S/U or letter grading.
Mr. Golub (Sp, alternate years)

262. Seminar in Immunobiology of Cancer (2 units). Prerequisite: consent of instructor. Review of recent literature in the fields of immunology, biology, and biochemistry of cancer, with emphasis on fundamental studies involving cell-mediated immunity, humoral response, tumor specific antigens, and new techniques. Reports on scientific meetings discussed and evaluated. S/U grading. Mr. Bonavida (W)

M263. Cellular Immunology Seminar (2 units). (Same as Microbiology M263.) Prerequisite: consent of instructor. Critical discussions of the current literature in T and B cell immunology, with emphasis on molecular mechanisms. Mr. Sercarz (F,W,Sp)

264. Molecular Microbiology and Cell Biology (2 units). Prerequisites: courses 202A, 202B, 202C, 202D, and 250, or consent of instructor. Discussion of selected current topics related to microbiology and cell biology, with special emphasis on an understanding of the basic phenomena at the molecular level. S/U grading. Mr. Wettstein (F)

270. Immunology in Disease (2 units). Lecture, one hour; discussion, one hour. Prerequisite: basic immunology. Introduction to the role of immune processes in disease for students with prior knowledge of basic immunology. Topics include immunodeficiency, immediate hypersensitivity reactions, autoimmune disease, and immune complex-mediated diseases, together with transplantation immunology, tumor immunology (re the role of immunity in infection). Students prepare a 20- to 30-minute presentation on a selected topic. Mr. Fahey (W, alternate years)

271. Research Seminar in Virology (2 units). Prerequisite: consent of instructor. Selected topics in virology, including viral structures, host virus interaction, and regulation of viral and host gene expression, presented and discussed in depth. Mr. Nayak (Sp)

M282. Major Histocompatibility Complexes: Genetics, Biochemistry, and Biology (2 units). (Same as Biology M282.) Lecture, one hour; discussion, one hour. Prerequisites: course M185 or equivalent, genetics, biochemistry. Lectures and discussion of key papers underlying the present concepts of MHC structure and function. Emphasis on the murine MHC (H-2), but where appropriate and illustrative, the human MHC discussed. Mr. Clark (W)

M293. Major Concepts in Oncology. (Same as Oral Biology M293 and Pathology M293.) Lecture, three hours. Prerequisite: graduate standing or consent of instructor. Designed for graduate students contemplating research in oncology. Topics include cancer pathophysiology, genetics, membranes, macromolecular synthesis and control, cell cycle, growth control; physical, chemical, and viral oncogenesis, epidemiology of cancer; tumor immunology; principles of cancer surgery, radiation therapy, and chemotherapy. S/U or letter grading. Mr. Hankinson (W)

M298. Seminar on Current Topics in Molecular Biology (2 units). (Same as Biological Chemistry M298, Biology M298, Chemistry M298, Microbiology M298, and Molecular Biology M298.) Prerequisite: consent of instructor and graduate adviser of interdepartmental Molecular Biology Ph.D. committee. Each student conducts or participates in discussions on assigned topics. May be repeated for credit. (F,W,Sp)

596. Directed Individual Study or Research (2 to 8 units). Laboratory, to be arranged. Prerequisite: consent of graduate adviser. S/U grading.

597. Preparation for Ph.D. Qualifying Examinations (2 to 6 units).

599. Research for and Preparation of Ph.D. Dissertation (2 to 12 units). Research on an original problem in the field of microbiology and immunology to be selected by the graduate student with the advice of the adviser. Fields of study may be in bacteriology, immunology, mycology, parasitology, virology, tumor biology, or cell biology.

Molecular Biology
(Interdepartmental)

The Ph.D. degree program in Molecular Biology draws its staff members from participating departments in the health and life sciences and from the Molecular Biology Institute. For details on this interdisciplinary program, see Chapter 5 on the College of Letters and Science.

Neurology

1-239 Reed Neurological Research Center, (213) 825-5647

Acting Chair
Robert W. Baloh, M.D.

Vice Chairs
Mark A. Goldberg, M.D., Ph.D., *in Residence (Harbor-UCLA)*
Christian Herrmann, Jr., M.D.
Wallace W. Tourtellotte, M.D., Ph.D., *in Residence (Wadsworth VA)*
Claude G. Wasterlain, M.D., *in Residence (Sepulveda VA)*

Scope and Objectives

Neurology is the medical science dealing with the normal and diseased nervous system. Neurological disorders are often associated with significant disability, morbidity, and mortality. Their higher incidence in association with greater longevity of the population, increased awareness, improved diagnostic methods, and other factors place neurological disorders among the major medical problems today. The Department of Neurology and the Reed Neurological Research Center provide means for a coordinated basic science and clinical research approach to neurological disorders, patient care, and neurological education.

The department instructs medical students throughout the four years. Emphasis in the first year is on clinical examination of the normal nervous system; in the second year, neurological history taking and neurological examination of afflicted patients are stressed. The third year consists of a clerkship at an affiliated hospital, and the fourth year provides electives in neurology, including an advanced clinical clerkship.

For further details on the Department of Neurology and a listing of the courses offered, see the *Announcement of the UCLA School of Medicine.*

Neuroscience
(Interdepartmental)

73-346 Center for the Health Sciences, (213) 825-8153

Professors
Larry L. Butcher, Ph.D. *(Psychology), Chair*
Carmine D. Clemente, Ph.D. *(Anatomy)*
Samuel Eiduson, Ph.D., *in Residence (Psychiatry and Biological Chemistry)*
Jerome Engel, M.D., Ph.D. *(Neurology)*
Joaquin M. Fuster, M.D. *(Psychiatry)*
Ronald M. Harper, Ph.D. *(Anatomy), Vice Chair*
Michael T. McGuire, M.D. *(Psychiatry)*
Richard W. Olsen, Ph.D. *(Pharmacology)*
Stephen Zamenhof, Ph.D., *Emeritus (Microbiology and Immunology)*

Associate Professors
Michael S. Letinsky, Ph.D. *(Physiology)*
Peter M. Narins, Ph.D. *(Biology)*

Scope and Objectives

Few research fields have greater potential and importance to mankind than neuroscience. The brain is responsible for every human thought, emotion, action, and accomplishment. It is a miraculous organ which orchestrates and paces human maturation; permits us to learn, remember, reason, and behave as we do; and coordinates the function of every other organ and structure in the body.

To understand this complex organ completely is, perhaps, an unapproachable objective since it is the principal organ responsible for mankind's evolution and is itself constantly evolving. Yet, basic questions relating to neural function and dysfunction are approachable, and the solutions to many human neurological and psychiatric disorders can be achieved only through brain research.

The interdisciplinary program of graduate training leading to the Ph.D. in Neuroscience utilizes facilities, resources, and activities of the Brain Research Institute and is administered by an interdepartmental degree committee.

Ph.D. Degree

Admission

All applicants must satisfy the University minimum requirements. In addition, Graduate Record Examination (GRE) or Medical College Admission Test (MCAT) scores are required. Recommended preparation includes mathematics through calculus and at least one year each of general chemistry, organic chemistry, physics, and basic biology. Three letters of recommendation are required.

Information regarding the program may be obtained by writing to the Neuroscience Office, 73-346 CHS, UCLA, Los Angeles, CA 90024.

Major Fields or Subdisciplines

Biobehavioral sciences; neuroanatomy; neurochemistry; neurocybernetics and communication; neuroendocrinology; neuroimmunology; neuropathology; neuropharmacology; neurophysiology.

Foreign Language Requirement

The program does not have a language requirement but does have a breadth requirement which can be satisfied in one of the following ways:

(1) Passing the Graduate School Foreign Language Test in one of the approved languages (French, German, or Russian) with a score of 500 or better. Any exceptions must be approved by the neuroscience committee.

(2) Completing an in-depth minor in an area related to your field. A minor is defined as at least eight units of study beyond the introductory level.

No student is advanced to candidacy who has not met this breadth requirement.

Course Requirements

Basic course requirements include Biology 171 (or Physiology 213, 214, or 215 with approval of the neuroscience committee), Biomathematics 170A, 210, Neuroscience M201A-M201B, M206A, M260B, M221A-M221B, 233, and electives and laboratory experience as determined in consultation with your adviser.

Substitutions to the basic requirements may be made, depending on your background, with consent of the graduate adviser. You are expected to complete the core courses within your first two years of study.

Teaching Experience

Teaching experience is not required for the degree. However, such experience is obtained by virtually all students in Neuroscience 233, which is required.

Qualifying Examinations

A written qualifying examination is required following completion of the core requirements. The objective of this examination is to test your basic knowledge and ability to relate knowledge in different neuroscience areas, to locate and interpret literature, and to apply research problems.

After passing the written qualifying examination, you and your adviser select your doctoral committee to administer the University Oral Qualifying Examination, which is normally taken after the written qualifying examination and the breadth requirements have been completed.

When you have passed the oral examination, you are advanced to candidacy and may begin work on the dissertation.

Final Oral Examination

The final oral examination is optional with your doctoral committee.

Graduate Courses

200A-200B-200C. Clinical Concepts in the Neurosciences (2 units each). Information concerning neurological and psychiatric disorders for students from basic science backgrounds. S/U grading.
(Odd years)

M201A-M201B-M201C. The Functional Organization of Behavior (2 units each). (Same as Psychiatry M201A-M201B-M201C.) Prerequisite: consent of instructor. Course M201A is prerequisite to M201B, which is prerequisite to M201C. **M201A.** The development of behaviors within different species and the functional uses of behaviors; use of an evolutionary biological perspective as the framework. **M201B.** Research studies designed to take into account the functional behavior of animals. **M201C.** Special questions of interest to students.
Mr. McGuire, Mr. Woody (F,W,Sp)

M204. Structure and Function of the Limbic System (2 units). (Same as Neurology M204.) Prerequisite: consent of instructor. Current knowledge of the mammalian limbic system presented by surveying studies of its developmental anatomy, intrinsic synaptic organization, synaptic chemistry, afferent and efferent circuits, and dysfunctions in memory and cognition association with limbic system function. The pathophysiology of limbic epilepsy, related to normal limbic system structure and functions. Mr. Babb

205. Brain-Behavioral Strategies for the Neurosciences (3 units). Prerequisite: consent of instructor. Emphasis on behavioral designs, methods, and instruments employed to test specific neurological afferent-efferent and integrative systems of the central nervous system. The programming of signals and incentives in arousal, habituation, classical conditioning, and operant conditioning paradigms discussed in terms of the neural challenges for the coping animal. Emphasis on behavioral methods, along with concurrent recording of neurophysiological data. Designed primarily to present practical behavioral techniques to neuroscience students.
Mr. McGuire, Mr. Woody

M206A. Neurosciences: The Introductory Course for Graduate Students (5 units). (Same as Anatomy M206A.) Lecture, four hours; laboratory/demonstrations, three hours. Prerequisites: a college-level course in biology or zoology, some familiarity with the subjects of electronics and electricity, consent of instructor. Introductory course on the principles of organization and function of the nervous system, intended for graduate students in relevant disciplines and as background for more advanced courses for students specializing in the neurosciences.
Mr. Decima, Mr. Scheibel, Mr. Segundo (W)

M206B. Neurosciences: The Intermediate Course for Graduate Students (7 units). (Same as Anatomy M206B.) Lecture, six hours; laboratory, two hours; tutorial contacts. Prerequisites: course M206A or 103A-103B, or equivalent, consent of instructor. Neuronal excitability and integration, sensory mechanisms, and motor control as related to behavior.
Mr. Decima, Mr. Scheibel, Mr. Segundo (Sp)

M216A-M216B-M216C. Functional Neuropsychology. (Same as Physiology M255A-M255B-M255C and Psychiatry M216A-M216B-M216C.) Seminar, three hours. Prerequisites: graduate standing, consent of instructor. The neurobiology of human infant speech and the neuropsychology of language memory. Topics include animal communication, phylogeny and ontogeny of language, cerebral processing of language and speech in normal and brain-damaged adults, and neural models of memory. S/U or letter grading. Ms. Buchwald (F), Mr. Halgren (Sp), Ms. Van Lancker (W)

M221A-M221B. Cellular and Molecular Neurochemistry. (Same as Anatomy M221A-M221B, Biological Chemistry M221A-M221B, Pharmacology M221A-M221B, and Psychiatry M221A-M221B.) Lecture, three hours. Prerequisites: Biological Chemistry 101A-101B-101C or equivalent. Contemporary neurochemistry for students with a general background in biochemistry. Relates the biochemical and structural properties of the nervous system to its development and functions and introduces students to disorders that result from alterations in the fundamental biochemistry of the nervous system. Although the subject is treated in an interdisciplinary manner, course progresses from structure through chemistry to function in precise manner and biological terms.
Mr. de Vellis, Mr. Eiduson, Mr. Olsen (W,Sp)

233. Seminar in Neuroscience (2 units). Topics of current importance presented for discussion. Subject matter to be announced. S/U grading.

M235. Gut and Brain Peptides (2 units). (Same as Anatomy M235 and Physiology M235.) Prerequisite: consent of instructor. Presentation of current knowledge of gut and brain peptides by surveying their chemistry, anatomy, and physiology. Experimental approaches used to study biologically active peptides. Review of current information about each of the major gut and brain peptides. S/U or letter grading.
Mr. Brecha, Mr. Reeve, Ms. Tache (W)

254. Interdisciplinary Research Seminar (2 units). Lectures and discussions on many different disciplinary approaches to knowledge of brain function in order to broaden the experience of students studying in fields other than that of the lecturer; new information in depth from students in fields closely related to the subject discussed. S/U grading.

256A-256B-256C. Survey of the Basic Neurological Sciences (2 units each). Summary information concerning methodologies utilized in different research approaches to brain study (e.g., neurophysiology, neuroendocrinology, brain ultrastructure, neuropharmacology, and others) and brief review of present state of knowledge available from each. For students with interest in interdisciplinary aspects of brain research. (Odd years)

259A-259B-259C. Neurophysiology of Behavior: The Fetus, Newborn, and Infant (2 units each). An integrated review of neuroanatomic, neurophysiologic, and behavioral development of human and animal fetuses and infants. Correlation of behavior with the development of the brain during this period of rapid change in both. Mr. Parmelee

M261. Neuronal Circuit Analysis (2 units). (Same as Anatomy M261.) Lecture/discussion, three hours. Prerequisites: courses M206A, M206B, or equivalent. A seminar with strong emphasis on specific reading assignments. An integrated view of neuronal circuit analysis at an advanced level; the layout and performance of a variety of basic neuronal circuits serving different control functions.
Mr. Schlag (W)

596. Directed Individual Study or Research (2 to 12 units). Prerequisite: consent of instructor.
Mr. Butcher

597. Preparation for Ph.D. Qualifying Examinations (2 to 12 units). Prerequisite: consent of instructor. Mr. Butcher

599. Dissertation Research for Ph.D. Candidates (4 to 12 units). Designed for students requiring special instruction or time to work on dissertation.
Mr. Butcher

Obstetrics and Gynecology

24-153 Center for the Health Sciences, (213) 825-5688

Chair
J. George Moore, M.D.

Vice Chairs
Richard A. Bashore, M.D. *(Administration)*
Ezra C. Davidson, M.D. *(King/Drew)*
William J. Dignam, M.D. *(UCLA Medical Center)*
John R. Marshall, M.D. *(Harbor-UCLA)*
Dominic Muzsnai, M.D. *(Olive View)*
Maclyn E. Wade, M.D. *(Cedars-Sinai)*

Scope and Objectives

The undergraduate program in obstetrics and gynecology is designed to teach students the the physiology of women in infancy, childhood, and adolescence, an understanding of reproductive endocrinology during the menstruating years, experience in the management of obstetric deliveries, and an understanding of the changes in the postmenopausal years. The program includes experience in the management of normal and pathological obstetrical conditions, the anatomical and physiological variants following childbirth, and gynecological abnormalities not necessarily related to reproduction.

Students work on the wards and in the outpatient clinics during the third year, with clinical experience continuing during the fourth year in the advanced clinical clerkship.

The graduate medical education program in obstetrics and gynecology includes a four-year course of instruction. Subspecialty units provide instruction in perinatal medicine, general gynecology, gynecologic oncology, reproductive endocrinology, and family planning and sex counseling.

For further details on the Department of Obstetrics and Gynecology and a listing of the courses offered, see the *Announcement of the UCLA School of Medicine.*

Ophthalmology

2-142 Jules Stein Eye Institute, (213) 825-5051

Chair
Bradley R. Straatsma, M.D.

Vice Chairs
Robert E. Christensen, M.D.
Sherwin J. Isenberg, M.D. *(Harbor-UCLA)*

Scope and Objectives

Ophthalmology is the medical science that encompasses knowledge concerning the eyes and the visual system. Derived from many basic and clinical fields, this knowledge must be synthesized by the physician and applied to the prevention, diagnosis, medical management, and surgical therapy of ocular disease.

In response to the steadily increasing incidence and growing importance of ocular disorders, the Department of Ophthalmology and the Jules Stein Eye Institute are closely coordinated to form a comprehensive center for research in the sciences related to vision, for the care of patients with disease of the eyes and related structures, and for education in the broad field of ophthalmology.

The Department of Ophthalmology provides instruction to medical students during the second, third, and fourth years. Through lectures, demonstrations, discussions, and the opportunity to examine patients with a variety of ocular conditions, students gain knowledge and experience in ophthalmology.

For further details on the Department of Ophthalmology and a listing of the courses offered, see the *Announcement of the UCLA School of Medicine.*

Pathology

13-327 Center for the Health Sciences, (213) 206-6307

Professors
Marcel A. Baluda, Ph.D.
Luciano Barajas, M.D.
Pasquale A. Cancilla, M.D., *Chair*
Alistair J. Cochran, M.D., *in Residence*
Walter F. Coulson, M.D.
Robert Y. Foos, M.D.
Paul C. Fu, Ph.D., *in Residence*
Yao-Shi Fu, M.D.
Richard A. Gatti, M.D.
Hideo H. Itabashi, M.D., *in Residence*
Harrison Latta, M.D.
Juan Lechago, M.D., Ph.D., *in Residence*
Klaus J. Lewin, M.D., *Vice Chair*
Joseph M. Mirra, M.D.
Robert J. Morin, M.D., *in Residence*
Byron A. Myhre, M.D., Ph.D., *in Residence*
Donald E. Paglia, M.D.
David D. Porter, M.D.
Denis O. Rodgerson, Ph.D., *in Residence*
George S. Smith, M.D.
Julien L. Van Lancker, M.D.
M. Anthony Verity, M.D.
Roy L. Walford, M.D.
Luciano Zamboni, M.D., *in Residence, Vice Chair*
W. Jann Brown, M.D., *Emeritus*
William H. Carnes, M.D., *Emeritus*
Baldwin G. Lamson, M.D., *Emeritus*
M. Michael Lubran, M.D., Ph.D., *Emeritus*
Sidney C. Madden, M.D., *Emeritus*

Associate Professors
Judith A. Berliner, Ph.D., *in Residence*
Arthur H. Cohen, M.D., *in Residence*
Faramarz Naeim, M.D., *in Residence*
Shi-Kaung Peng, M.D., *in Residence*

Assistant Professors
Sanford H. Barsky, M.D.
Jonathan Braun, M.D.
Paul S. Dickman, M.D., *in Residence*
Thomas A. Drake, M.D., *in Residence*
Faye A. Eggerding, M.D., Ph.D.
Oliver Hankinson, Ph.D., *in Residence*
S. David Hudnall, M.D., *in Residence*
William Lewis, M.D.
James H. McBride, Ph.D., *in Residence*
Harry V. Vinters, M.D.

Adjunct Professors
Ruth Gussen, M.D.
Frank M. Hirose, M.D.

Adjunct Associate Professors
Peter J. Howanitz, M.D.
Roberta K. Nieberg, M.D.
Dorothy L. Rosenthal, M.D.
Nora C.J. Sun, M.D.

Adjunct Assistant Professors
Sunita M. Bhuta, M.D.
Camilla J. Cobb, M.D.
Richard H. Weindruch, Ph.D.

Scope and Objectives

Pathology is, by definition, the science of disease. Its main purpose is to unravel disease mechanisms. Without it, progress in prevention, diagnosis, and therapy are left to chance. Yet, among medical disciplines, it is one of the youngest because scientific concepts of disease, based on direct observation of diseased organs, developed only in the last 150 years.

Once normal molecules, cells, and organs have been damaged, the result of the injury manifests itself by distortions of behavior at the molecular, cellular, and organ levels. The study of these injuries and reactions to injuries constitutes a body of knowledge well worth mastering for its own sake. Students, however, must also learn to use the existing tools or develop the new tools needed to dissect the events that follow injury. Although education in methodology is not, in principle, different in pathology from that in all other biomedical sciences, it is very different in scope.

A combined education in breadth and depth is indispensable; it is this education, as it is applied to injuries and reaction to injuries, that is the goal of the Ph.D. program in Experimental Pathology.

Master of Science Degree

Students are generally accepted into the program for the purpose of obtaining a Ph.D. in Experimental Pathology. However, the department also awards an M.S. degree in Experimental Pathology in cases where a student is unable to finish the full Ph.D. program but

whose completed work is adequate to the standards and minimum requirements set for a master's degree.

The general requirements for the M.S. degree are the same as those for the Ph.D., with the following exceptions:

(1) Only 30 units of the listed electives are required in addition to the core courses.

(2) You are also expected to enroll in a minimum of eight units of Pathology 599 each quarter, starting in the third year. These may not be applied toward the minimum course requirement for the degree.

(3) You must pass the written qualifying examination at the master's level. The University Oral Qualifying Examination acts as the comprehensive examination. A thesis is also required, which encompasses individual research.

Ph.D. in Experimental Pathology

Admission

In addition to the University minimum requirements, Graduate Record Examination (GRE) Aptitude Test scores and three letters of recommendation are required. There is no application form in addition to the one used by the Graduate Division. Because of the sequencing of classes, applicants are generally considered for admission to the Fall Quarter only. For departmental brochures, write to the Chair, Department of Pathology, 13-327 CHS, UCLA, Los Angeles, CA 90024.

Students intending to take advanced degrees in the Department of Pathology must have a bachelor's degree in physical or biological sciences or in the premedical curriculum. M.D.s are also encouraged to apply. Minimum course requirements for admission normally include one year of calculus, physics, general chemistry, organic chemistry, and biological sciences. A physical chemistry course requiring calculus, a course in molecular biology, and a course in histology are recommended and are required before taking the written qualifying examination. In some cases, deficiencies in the prerequisites may be fulfilled in the first year of study.

Course Requirements

The following courses are required: Pathology 231A, M240, 242A, 242B, 244, 250A-250B-250C, 251, M293, and Biomathematics 170A. Three laboratory rotations must be taken to intelligently select a thesis adviser. In addition, if you are beginning the program with a bachelor's degree, you must select 40 units from remaining pathology courses and related biomedical areas of interest at the upper division or graduate level. Within these electives, you must take courses to obtain a basic knowledge of biochemistry and molecular biology. If you are entering the program with a master's degree or M.D., you may have fewer elective units to complete for the Ph.D.

Teaching Experience

You may assist for one or two quarters in medical or dental pathology courses to gain teaching experience.

Qualifying Examinations

After the core course requirements are completed (usually at the end of the second year), a comprehensive written qualifying examination covering core courses and required basic knowledge is administered. If examiners feel that some questions should be elaborated on orally, you must do this within three months of the written examination. If failed, the examination may be repeated.

Six months to one year after the written examination, the University Oral Qualifying Examination is administered by the doctoral committee. This examination normally includes defense of the subject matter of your proposed dissertation topic. You are expected to have done preliminary work before the examination and to demonstrate a wide and comprehensive knowledge of your special subject. After passing, you are advanced to candidacy.

Final Oral Examination

All candidates are required to defend their dissertation at an oral examination open to the public. The purpose of the dissertation is to demonstrate ability for independent investigation and proficiency in the field.

Graduate Courses

200A. Dental Pathology (3 units). Lecture, 90 minutes; laboratory, three hours. Prerequisite: consent of instructor. The fundamental causes of disease processes, using as examples selected lesions or diseases of major organ systems.
Mr. Foos and the Staff

M215. Interdepartmental Course in Tropical Medicine (2 units). (Same as Medicine M215, Microbiology and Immunology M215, and Pediatrics M215.) Prerequisites: basic courses in microbiology and parasitology of infectious diseases in the School of Medicine or Public Health. Course draws on expertise in the Departments of Medicine, Pediatrics, Pathology, and Microbiology and Immunology to present current knowledge about diseases prevalent in tropical areas of the world. Use of lectures, demonstrations, and audiovisual materials to describe diseases which are prevalent in or localized in certain geographic areas. Major emphasis on infectious diseases, with coverage of problems in nutrition and exotic noninfectious diseases. A syllabus supplements the topics covered in the classroom. S/U grading. Mr. Turner (Sp, alternate years)

231A. Pathological Anatomy and Physiology (6 units). Lecture, two hours; discussion, six hours; laboratory, four hours; other, six hours. Prerequisites: graduate standing, completion of curriculum satisfying basic requirements for study of human pathology. Lectures, demonstrations, and individual study of a student loan collection of microscopic slide preparations and of specimens from recent autopsies. Kodachrome photomicrographs and projection of microslides. Concentration in the area of general pathology. Ms. Eggerding and the Staff (F)

231B-231C. Pathophysiology of Disease (6 units each). Prerequisites: course 200A, graduate standing, completion of curriculum satisfying basic requirements for study of human pathology. Lectures, demonstrations, and individual study of a student loan collection of microscopic slide preparations and of specimens from recent autopsies. Kodachrome photomicrographs and projection of microslides. Concentration in the area of general pathology. In Progress grading. Mr. Lewin and the Staff (W,Sp)

232. Topics in Vertebrate Neurobiology (2 units). An introduction to the cell biology of the vertebrate central nervous system, with special reference to its development, structure, and potential disease processes.

M240. Immunopathology (2 units). (Same as Medicine M240.) Prerequisites: immunology course, consent of instructor. Study of the role of immunologic phenomena in the production of lesions and disease. Topics include immuno complex disease, antitissues antibody, immunologic mediators, cell-mediated immunity, and infectious diseases.
Mr. Glassock, Mr. Porter

242A. Molecular Mechanisms in Disease (2 units). Prerequisites: course 231A, consent of instructor. A description of molecular events resulting from administration of injurious chemical and physical agents (u.v., X rays, carcinogens, toxins, etc.) and from reactions to injuries (e.g., necrosis, degeneration, hyperplasia, neoplasia, inflammation, etc.) and an interpretation of structural and functional disturbances in terms of the molecular alterations.
Mr. Van Lancker and the Staff

242B. Molecular Mechanisms in Disease (2 units). Prerequisites: course 242A, consent of instructor. A description of molecular events resulting from administration of injurious chemical and physical agents (u.v., X rays, carcinogens, toxins, etc.) and from reactions to injuries (e.g., necrosis, degeneration, hyperplasia, neoplasia, inflammation, etc.) and an interpretation of structural and functional disturbances in terms of molecular alterations.
Mr. Van Lancker and the Staff

244. Electron Microscopy in Experimental Pathology. Lecture, six hours; discussion, four hours. Ultrastructural aspects of pathology, including introduction to use of modern methods of electron microscopy in pathological studies, essentials of normal ultrastructure, and ultrastructural phenomena in general pathology. Ms. Berliner, Ms. Frank

245. Environmental Pathology. Prerequisites: graduate standing, consent of instructor. Designed to explore the interrelationships of man with his total environment. Presentation of a series of special topics to discuss the effect on man of changes in the compositions of air, water, soil, and other materials. S/U grading. Mr. O'Donnell and the Staff

250A-250B-250C. Pathology Graduate Student Seminar (2 units each). Limited to and required of all students in experimental pathology. Review and discussion of current literature and research in special topics of experimental pathology.

251. Pathology Graduate Student Laboratory Seminar (2 units). Prerequisite: consent of instructor. Consists of 10 two-hour seminars, conducted by Pathology Department staff and guest lecturers, which may include demonstrations of apparatus and methods dealing with new and advanced experimental techniques of value in experimental pathology. Subjects include the biochemistry, biological and morphological techniques in tissue fractionation, tissue culture, and radioautography (electron microscopy, etc.) that are frequently used in the study of disease mechanisms.
Mr. Hankinson, Mr. Rodgerson

253. Free Radical Pathology (2 units). Lecture, four and one-half hours. Prerequisites: basic biochemistry, physical chemistry. Free radicals, mechanisms of formation, properties, and reactions. Reactions with significant biomolecules. Modes of production *in vivo*. Reactions *in vivo*. Protection against and sensitization toward these damaging effects.
Mr. O'Donnell

M256. Seminar in Viral Oncology (2 units). (Same as Microbiology and Immunology M256.) An advanced research seminar designed to consider the current developments in the field. Selection of current subjects and publications dealing with tumor viruses, oncogenesis, development, and cellular regulation. Mr. Baluda

M257. Introduction to Toxicology. (Same as Pharmacology M257.) Prerequisite: Pharmacology 241 or consent of instructor. Biochemical and systemic toxicology, basic mechanisms of toxicology, and interaction of toxic agents with specific organ systems. (Sp)

M258. Pathologic Changes in Toxicology. (Same as Pharmacology M258.) Designed to give students experience in learning the normal histology of tissues which are major targets of toxin and the range of pathologic changes that occur in these tissues (liver, bladder, lung, kidney, nervous system, and vascular system). Ms. Berliner (Sp)

261A-261B-261C. Laboratory Rotation (2 units each). Laboratory, six hours. An introduction to research with individual instructors, laboratories.

M293. Major Concepts in Oncology. (Same as Microbiology and Immunology M293 and Oral Biology M293.) Lecture, three hours. Prerequisite: graduate standing or consent of instructor. Designed for graduate students contemplating research in oncology. Topics include cancer pathophysiology, genetics, membranes, macromolecular synthesis and control, cell cycle, growth control; physical, chemical, and viral oncogenesis, epidemiology of cancer; tumor immunology; principles of cancer surgery, radiation therapy, and chemotherapy. S/U or letter grading. Mr. Hankinson, Mr. Seeger (W)

596. Directed Individual Study or Research (4 to 12 units). Individual research with members of the staff or of other departments, the latter for the purpose of supplementing programs available in the department. S/U grading.

597. Preparation for Qualifying Examinations (2 to 8 units). Prerequisite: one year of coursework in pathology. Individual study for qualifying examinations. S/U grading.

599. Preparation of Ph.D. Dissertation (2 to 8 units). Prerequisite: completion of qualifying examinations and majority of Ph.D. research. Writing and completion of dissertation. S/U grading.

Pediatrics

22-401 Marion Davies Children's Center, (213) 206-6327

Executive Chair
William F. Friedman, M.D.

Executive Vice Chair
Solomon A. Kaplan, M.D.

Chairs
Delbert A. Fisher, M.D. *(Harbor-UCLA)*
David L. Rimoin, M.D., Ph.D. *(Cedars-Sinai)*
Robert J. Schlegel, M.D. *(King/Drew)*

Scope and Objectives

The Department of Pediatrics encompasses four teaching hospitals: UCLA, Harbor-UCLA, King/Drew, and Cedars-Sinai Medical Centers. The UCLA Medical Center integrates its clinical program and teaching activities with the Olive View Medical Center. The clinical fundamentals course offers medical students detailed instruction in the techniques of the clinical examination of pediatric patients.

The required six-week clinical clerkship in pediatrics is given at one of the four medical centers. In-depth electives in the Department of Pediatrics are listed in the *School of Medicine Handbook of Clinical Courses,* as are the advanced clinical clerkships.

For further details on the Department of Pediatrics and a listing of the courses offered, see the *Announcement of the UCLA School of Medicine.*

Pharmacology

23-278 Center for the Health Sciences, (213) 825-5596

Professors
Jorge R. Barrio, Ph.D.
Robert O. Bauer, M.D.
Arthur K. Cho, Ph.D., *Vice Chair*
Matthew E. Conolly, M.D.
Werner E. Flacke, M.D.
Daniel X. Freedman, M.D.
Robert George, Ph.D.
Mark A. Goldberg, M.D., Ph.D., *in Residence*
William L. Hewitt, M.D.
Louis J. Ignarro, Ph.D.
Murray E. Jarvik, M.D., Ph.D.
Donald J. Jenden, M.D., Ph.D. (h.c.), *Chair*
Peter Lomax, M.D., D.Sc.
Ronald Okun, M.D., *in Residence*
Richard W. Olsen, Ph.D.
Jeremy H. Thompson, M.D., F.R.C.P.I.
Dermot B. Taylor, M.D., *Emeritus*

Associate Professors
Don H. Catlin, M.D.
Bernard K-K. Fung, Ph.D., *in Residence*

Assistant Professors
Cameron B. Gundersen, Ph.D., *in Residence*
Sherrel G. Howard-Butcher, Ph.D.
R. Craig Kammerer, Ph.D.
Bjorn V. Ringdahl, Ph.D., *in Residence*

Lecturer
Joseph H. Beckerman, Pharm.D.

Adjunct and Visiting Professors
Il Jin Bak, Ph.D., D.D.S., *Adjunct*
Yi-Han Chang, Ph.D., *Adjunct*
Roger W. Russell, Ph.D., *Visiting*

Adjunct Associate Professors
M. David Fairchild, Ph.D.
Larry A. Wheeler, Ph.D.

Scope and Objectives

The Department of Pharmacology offers instruction for undergraduate, graduate, and medical students. It includes a systematic treatment of the effects of drugs in normal and pathological states, the mechanisms by which these effects are exerted, and the factors influencing their absorption, distribution, and biological disposition. Consideration is also given to the medical and social problems created by the increasing use of drugs by both the medical profession and the public.

Although the department offers only graduate degrees, upper division undergraduate courses are offered with enrollment restrictions as indicated in the course descriptions.

Master of Science Degree

The Pharmacology Department offers the Ph.D. degree, and students may obtain the M.S. degree; however, the department normally does not admit candidates for the M.S. degree only.

Ph.D. Degree

Admission

In addition to meeting University requirements for graduate admission, you must have received a bachelor's degree in a biological or physical science or in the premedical curriculum.

In suitable cases, students who have course deficiencies may be admitted to graduate standing, but any deficiencies must be removed within a specified time. Graduate Record Examination (GRE) scores, Test of English as a Foreign Language (TOEFL) scores for international students, and three letters of recommendation are required.

Prospective students may write for a departmental brochure to the Graduate Student Office, Department of Pharmacology, 23-250 CHS, UCLA, Los Angeles, CA 90024.

Major Fields or Subdisciplines

Cardiovascular pharmacology; chemical pharmacology; clinical pharmacology; immunopharmacology; neuroendocrine pharmacology; neuropharmacology; psychopharmacology.

Course Requirements

Required: Pharmacology 200 (three quarters), 201A-201B, 202, 212A-212B, 234A-234B-234C, 237A-237B-237C, 241, 251 (must be taken every quarter), 291 (three quarters or alternative courses); Biological Chemistry 101A-101B-101C, or 101C and 201A-201B; Physiology 101, 102, 103A-103B (Anatomy 103A-103B); one course in biostatistics.

All coursework should be completed by the end of the sixth quarter and prior to taking the departmental comprehensive examinations.

The Pharmacology Department provides a system of laboratory rotations (course 200) in order to familiarize students with a variety of pharmacological research areas and techniques. During your first six quarters in the department, you participate in projects of your choosing. If possible, two of these are during the regular academic year and the third during

the summer. You also become familiar with the literature relevant to the various research projects and thus establish a basis for the selection of your own research area. If you have already chosen a research area at the time you enter the department, you may benefit by working in the related laboratory during the previous summer. This would provide an uninterrupted period of over two months to work on a research project.

As part of course 200 you must submit a report of your activities in the various research groups by the end of the quarter. The report should include the nature of the project, how you participated, the results obtained, and a critical evaluation of the project.

Teaching Experience

Seminar presentations are required of all students in the graduate program.

Qualifying Examinations

Examinations are given in all courses except seminars and research. These are in the form of written examinations, oral examinations, term papers, and/or laboratory practicals.

After completing the first two years of study, you are required to take a departmental comprehensive examination consisting of a written part and an oral part. You are then recommended for continuation toward the Ph.D. degree, for further remedial study, or for termination. Questions are intended to test for a rational, analytical approach to problem solving and for ability to integrate material learned in different courses. You are expected to know basic principles of pharmacology and the status of topics of current interest in pharmacology.

After passing the departmental comprehensive examination, you must take the University Oral Qualifying Examination within 18 months. This examination is administered by the doctoral guidance committee. Most questions concentrate on the background literature, experimental methods, and implications of your field of interest and dissertation project. When you pass this examination, you are eligible to petition the Graduate Division for advancement to Ph.D. candidacy.

If you fail any one of the above required examinations, you may be reexamined at a later date determined by the guidance committee.

Final Oral Examination

A final oral examination is administered after submission of the dissertation.

Articulated Degree Program

The Department of Pharmacology offers an articulated M.D./Ph.D. program with the UCLA School of Medicine. Candidates must be accepted by the School of Medicine Admissions Office in order to qualify.

Upper Division Courses

110. Drugs: Mechanisms, Uses, and Misuse. Lecture, four hours (seven weeks); discussion, four hours (three weeks). Prerequisites: Biology 5, 6, 7, Chemistry 21, 23, 25, or equivalent. An introduction to pharmacology for undergraduate students, emphasizing the principles underlying the mechanism of action of drugs, their development, control, rational use, and misuse. Mr. Jenden (W)

199. Special Studies (2 to 8 units). Prerequisite: consent of instructor and department chair. Special studies in pharmacology, including either reading assignments or laboratory work or both, designed for appropriate training of each student. (F,W,Sp)

Graduate Courses

200. Introduction to Laboratory Research (2 to 4 units). Prerequisite: consent of instructor. Individual projects in laboratory research for beginning graduate students. At the end of each quarter students submit to their supervisor a report covering the research performed. Pharmacology graduate students must take this course three times during their first two years in residence. (F,W,Sp)

201A-201B. Principles of Pharmacology (4 units, 2 units). (Formerly numbered 201.) Prerequisites: mammalian physiology, biochemistry. A systematic consideration of the principles governing the interaction between drugs and biological systems and of the principal groups of drugs used in therapeutics. Particular attention to the modes of action, pharmacokinetics, and disposition to provide a scientific basis for their rational use in medicine.
Mr. Ignarro in charge (F,W)

202. Clinical Pharmacology (2 units). (Formerly numbered 202A-202B.) Prerequisites: courses 201A-201B. A series of lectures and case presentations designed to illustrate the principles of pharmacology in a clinical context, and the solution of practical therapeutics by reference to pharmacokinetics, mechanisms of action, and disposition of drugs.
Mr. Catlin in charge (Sp)

212A-212B. Graduate Commentary: Clinical Pharmacology (2 units each). Prerequisites: mammalian physiology, biochemistry. A supplementation of topics covered in course 202. Primarily for graduate students. Mr. Catlin

M221A-M221B. Cellular and Molecular Neurochemistry. (Same as Anatomy M221A-M221B, Biological Chemistry M221A-M221B, Neuroscience M221A-M221B, and Psychiatry M221A-M221B.) Lecture, three hours. Prerequisites: Biological Chemistry 101A-101B-101C or equivalent. Contemporary neurochemistry for students with a general background in biochemistry. Relates the biochemical and structural properties of the nervous system to its development and functions and introduces students to disorders that result from alterations in the fundamental biochemistry of the nervous system. Although the subject is treated in an interdisciplinary manner, course progresses from structure through chemistry to function in precise manner and biological terms.
Mr. de Vellis, Mr. Eiduson, Mr. Olsen (W,Sp)

234A-234B-234C. Experimental Methods in Pharmacology (2 units each). Prerequisite: consent of instructor. A survey of experimental methods and instrumentation used in the analysis, identification, and study of mechanisms of action of pharmacologically active compounds.
Mr. Chang, Mr. George, Mr. Kammerer (F,W,Sp)

236. Neuropharmacology. Prerequisite: neurophysiology. Advanced neuropharmacology, including actions and modes of action of drugs acting on the central nervous system, interactions between drugs and nervous tissue, movements of drugs through the blood brain barrier, and distribution to the central nervous system; problems of central transmission.
Mr. George (W)

237A-237B-237C. Neurotransmission. (Formerly numbered 237.) Prerequisites: course 241, consent of instructor. A detailed examination of neurochemical transmission, dealing in particular with the cholinergic and adrenergic transmission mechanisms and pharmacological agents that affect them. Critical examination of the evidence for mechanisms involving other possible transmitters.
Mr. Cho, Mr. George, Mr. Gundersen, Mr. Olsen (F,W,Sp)

238. Behavioral Toxicology. Prerequisite: consent of instructor. Lectures and discussions designed to examine effects of exposures to a wide variety of chemical and physical agents on behavior of the total organism as it adjusts to changes in its physical and social environments. Such effects may be reflected as subtle disturbances of behavior before classic symptoms of toxic states become apparent. Consideration to methodologies by which such disturbances may be measured, to the state of present knowledge, and to application of the knowledge in regulating risks of both prenatal and postnatal exposure. Particular emphasis on the relevance of this knowledge to human behavior. Mr. Russell (Sp)

M239. Psychopharmacology. (Same as Psychiatry M239.) Prerequisite: consent of instructor. A presentation of the effects of drugs on behavior, with special attention to drugs used in psychiatry and drug seeking behavior. Physiological and biochemical mechanisms underlying such actions. Reports on relevant current research. Mr. Jarvik

241. Introduction to Chemical Pharmacology. Prerequisite: organic and biological chemistry. Introduction to general principles of pharmacology. The role of chemical properties of drugs in their distribution, metabolism, and excretion. Mr. Cho (F)

251. Seminar in Pharmacology (2 units). Seminars presented by students, faculty, and guest lecturers on a variety of topics. S/U grading.
Mr. Gundersen (F,W,Sp)

253. Seminar in Environmental Toxicology (2 units). Prerequisite: consent of instructor. Oral reports and discussions of current research on chemical pollutants in the environment, their effects on biological systems, and the mechanism of these effects.
Mr. Jenden (F,W,Sp)

M257. Introduction to Toxicology. (Same as Pathology M257.) Prerequisite: course 241 or consent of instructor. Biochemical and systemic toxicology, basic mechanisms of toxicology, and interaction of toxic agents with specific organ systems.
Mr. Cho, Mr. Froines (Sp)

M258. Pathologic Changes in Toxicology. (Same as Pathology M258.) Designed to give students experience in learning the normal histology of tissues which are major targets of toxin and the range of pathologic changes that occur in these tissues (liver, bladder, lung, kidney, nervous system, and vascular system). Ms. Berliner (Sp)

261. Introduction to Clinical Pharmacology (2 units). Prerequisite: consent of instructor. Lectures, case presentations, and discussions designed to acquaint graduate students with the special problems and effects encountered in clinical use of drugs, including absorption, metabolism and excretion, drug interactions and interference with clinical laboratory analysis. (W)

291. Special Topics in Pharmacology (2 to 4 units). Prerequisite: consent of instructor. Examination in depth of topics of current importance in pharmacology. Emphasis on recent contributions of special interest to advanced Ph.D. candidates, academic staff, or visiting faculty. May be taken twice for credit. (F,W,Sp)

596. Directed Individual Research in Pharmacology (4 to 12 units).

599. Research for and Preparation of Ph.D. Dissertation (4 to 12 units).

Scope and Objectives

Physiology is the science of the functional activities of the human body. This covers a wide range, on the one hand involving observations on human organisms and patients, on the other hand experiments on animals and model systems in order to understand principles. Physiology is the science most directly relevant to human medicine in all its specialties and to understanding all environmental factors affecting human life. It is also a pure science of great challenge because of the complexity of its problems and its extensive interaction with mathematical, physical, biochemical, and engineering sciences, as well as with other branches of biology.

Within the prescribed curriculum, students may specialize in cellular and molecular physiology, theoretical and mathematical physiology, neurobiology, communication and information, organ systems and integrative phenomena, and behavioral physiology.

In a recent survey conducted by the Conference Board of the Associated Research Councils, UCLA's Physiology Department was judged fifth best in the nation in terms of the quality of its faculty. In addition to the Ph.D. program, the department offers postdoctoral training in research and welcomes students interested in articulated M.D./Ph.D. programs.

Ph.D. Degree

Admission

Candidates for admission to graduate standing in the Department of Physiology are expected to pursue the Ph.D. degree. The department does not admit candidates for the M.S. degree. *Ph.D. students must conform to the general* admission requirements set by the Graduate Division and have received a bachelor's degree in a biological or physical science or in the premedical curriculum. In general, at the time of admission, you should have completed courses in mathematics through calculus and differential equations (equivalent to Mathematics 31A, 31B, 33A); physics (12 quarter units); chemistry (16 quarter units, including quantitative analysis, physical and organic chemistry); biology or zoology (16 quarter units, including comparative vertebrate anatomy).

In certain cases, at the discretion of the department, students lacking some of the preparation but having a strong background in areas pertinent to physiology may be admitted to graduate standing, provided that deficiencies are made up. *Successful completion of* the first-year curriculum requires knowledge of physical chemistry (at least equivalent to Chemistry 110A and 156) and differential equations (equivalent to Mathematics 33A). It is strongly recommended that these or equivalent courses be taken prior to admission. If not, these deficiencies must be removed within a specified time after admission, which would likely extend the first-year curriculum into the second year. Students may also be admitted on the recommendation and sponsorship of staff members subject to admission committee approval.

The Graduate Record Examination (GRE) Aptitude Test is required as well as the Advanced Test in Biology or in your major field. Medical College Admission Test (MCAT) scores are accepted in lieu of the GRE. Three letters of recommendation are required and should be addressed to the Director of Graduate Studies. Completion of a master's program is not required.

An application packet and/or departmental brochure is available from the Graduate Student Office, Department of Physiology, 53-170 CHS, UCLA, Los Angeles, CA 90024.

Major Fields or Subdisciplines

Cellular electrophysiology; membrane transport; excitation, contraction, energetics, and protein chemistry of muscle; fundamental neurophysiology; cardiovascular, respiratory, and gastrointestinal physiology.

Course Requirements

The graduate training program consists of a core requirement (Biology 171, Physiology 101, 102, 205) which must be completed within your first two years of study. A second series of at least three courses applicable to your research interest(s) and one advanced course in physiology outside your major area of interest are also required. Your curriculum must be approved by the graduate committee and your faculty adviser. One laboratory rotation is required within the first two years, prior to taking the written comprehensive examination.

Qualifying Examinations

The written comprehensive examination is given at the end of your formal coursework (core curriculum and specialty courses); it also contains at least one oral section covering your area of specialization. Recommendations following the examination are based on the total and specific areas of competence revealed by the examination, performance in coursework during the year, and recommendations of staff with whom you have had close association. Marginal performance in all areas with excellence in none is not considered acceptable.

Following successful completion of the departmental comprehensive examination, you must *select a sponsor who acts as chair of your doc*toral committee and directs your thesis research project. The committee members conduct the University Oral Qualifying Examination to establish that you are capable of conducting a productive research project. At this point in your training, you normally will have completed all formal coursework, will have passed the departmental comprehensive examination, and will have devoted approximately a year to a research project. After successful completion of the oral qualifying examination, you are advanced to candidacy.

Final Oral Examination

The final oral examination is optional with the doctoral committee.

Upper Division Courses

100. Elements of Human Physiology (6 units). Prerequisite: dental student standing or consent of instructor. Required of first-year dental students. Lectures, laboratories, and demonstration/discussions concerning functional activities of the living body in terms of both cellular and systemic functions. Examples presented, where possible, on the basis of information relevant to oral function.

Mr. Homsher and the Staff (F)

101. Neuromuscular and Cardiovascular Physiology (7 units). Prerequisites: basic courses in chemistry, physics, and biology, at least one year each; organic chemistry; histology; gross anatomy, human or comparative. Primarily for first-year medical students, but open to other students with consent of instructor. Lectures, laboratory, and conferences. An analysis of the electrical properties of muscle and nerve, the contractility of muscle and the heart, and the cardiovascular system and its regulation.
Ms. Wenzel (W)

102. Renal, Respiratory, and Gastrointestinal Physiology (6 units). Prerequisites: same as for course 101. Primarily for first-year medical students, but open to other students with consent of instructor. Lectures, laboratory, and conferences. A continuation of course 101, dealing with respiration, and the distribution of water, electrolytes, and metabolites by the renal and gastrointestinal systems, and the special physiology of certain organs.
Mr. Tormey, Ms. Wenzel (Sp)

103A-103B. Basic Neurology (1 unit, 3 units). Lecture/laboratory, one four-hour and two one-hour sessions (Winter — last six weeks); one two-hour, one three-hour, and two one-hour sessions (Spring). Prerequisite: medical student standing or consent of instructor. Corequisites: Anatomy 103A-103B. Lectures, conferences, demonstrations, and laboratory procedures necessary for an understanding of the functions of the human nervous system. In Progress grading. Mr. Chase and the Staff (W,Sp)

M105. Human Physiology. (Formerly numbered 105N.) (Same as Nursing M105.) Lecture, four hours; discussion, one hour. Prerequisite: nursing student standing or consent of instructor. Required of third-year nursing students. Lecture and discussion, with emphasis on a correlative approach to anatomy and physiology of the human body. Ms. Seraydarian

199. Special Studies (1 to 8 units). Prerequisite: consent of instructor. Special studies in physiology, including either reading assignments or laboratory work or both, designed for appropriate training of each student.

Graduate Courses

200. Transport across Biological Membranes. Prerequisite: consent of instructor. An in-depth study of transport ions, nonelectrolytes, and water across plasma membranes of single cells and epithelia. Lectures include such topics as membrane structure, the passive permeability of membranes to ions and nonelectrolytes, active transport of sugars and amino acids, active ion transport, and the mechanisms of water transport. Experimental work involves the transport of ions across single cell membranes and epithelia using radioactive tracer and electrophysiological techniques. Mr. Wright

202. Permeability of Biological Membranes to Ions (6 units). Prerequisites: Chemistry 110A, 110B, or equivalent, consent of instructor. Topics include ion permeation mechanisms, ion distribution, and physical basis of ion discrimination across cell membranes. Mr. Diamond

M203. Oral Physiology. (Same as Oral Biology M205.) Lecture, one hour; discussion, one hour. The organ-level and cellular physiology of the following systems, discussed in a somewhat flexible framework: (1) salivary glands, including the mechanisms of secretion, abnormalities such as Mikulicz-Sjorgren syndrome, and effects on the dentition; (2) dental pulp: development, normal physiology, and reparative mechanisms; (3) organization of sensory systems, receptors, pathways, and central projections; (4) dentinal pain mechanisms, hydrodynamic theory, and electrical recordings from dentin; (5) taste receptors: mechanisms of perception of four basic tastes, alterations of taste caused by drugs, diseases, and aging; (6) oral touch and temperature receptors: comparison with similar systems in the skin, assessment of sensory dysfunction; (7) speech: phonation, resonance, and articulation in speech production, normal time-course of development of various sounds in children. Classes supplemented with audiovisual materials and many references from the literature. Mr. Junge (F)

205. Physical Chemistry of Membranes and Cellular Systems. Prerequisite: consent of instructor. A mathematical and physical background for understanding current approaches in cellular electro-physiology and transport across membranes. Ordinary differential equations, functions of many variables, Fourier series, and integrals. The principle of equilibrium and nonequilibrium thermodynamics, the basic concepts of electrostatics and their application to physical-chemical problems typically encountered in the study of membrane transport (e.g., osmotic pressure, Gibbs-Donnan equilibrium, surface potential, solvent-solute coupling in transmembrane fluxes, integration of the Nernst-Planck equation and of the time-dependent diffusion equation, etc.).
Mr. Ciani

207. Neurophysiology. Prerequisite: consent of instructor. Seminar and laboratory course designed to acquaint students with behavioral techniques and concepts relevant to research problems encountered in modern neurophysiology, and to consider means of integrating them with neurophysiological methods.
Ms. Wengel

212A-212B-212C. Critical Topics in Physiology (1 to 8 units each). Prerequisite: consent of instructor. Advanced treatment of critical topics in physiology by staff and guest lecturers for graduate and postdoctoral students in the biomedical sciences.

213. Methods in Cell Physiology (6 units). Prerequisite: consent of instructor. Lectures and laboratory dealing with the integrated circuits and other solid-state devices employed in modern instruments, so that students learn to design and build many of the simpler circuits often required in their research. Emphasis on the particular circuits used in electrophysiology, RC analysis, and an introduction to cable theory. Mr. Bezanilla, Mr. Vergara (F)

214. Cell Physiology: Excitability (2 to 8 units). Prerequisites: course 213, consent of instructor. General properties of excitable cells, linear cable properties, nonlinear conductance changes, and the generation and propagation of the nerve impulse. Voltage gating and gating currents, as well as the relationship between macroscopic conductance and single channel properties. Mr. Bezanilla (W)

215. Cell Physiology: Cellular Interaction (4 to 8 units). Prerequisites: courses 213, 214, consent of instructor. Synaptic transmission mechanisms and potential generation in the special senses receptors. (Sp)

216. Cellular Electrophysiology (6 units). Prerequisites: basic knowledge of the physics of electricity, integral and differential calculus, and biology (equivalent to Biology 5), consent of instructor. Basic concepts of membrane structure, passive cable properties, nonlinear properties of excitation and conduction, and biophysics of transport phenomena, presented in semiquantitative terms. Rigorous in-depth coverage offered in course 213.

217A. Ion-Permeable Channels in Cell Membranes. Prerequisites: physical chemistry, consent of instructor. The properties of ion-permeable channels in cell membranes, including a survey of the types of ion-permeable channels found in membranes, analysis of the permeability and selectivity of channels, voltage and chemical regulation of ion-permeable channels, and single channel properties.
Mr. Ciani, Mr. Hagiwara, Mr. Horn, Ms. Krasne

217B. Transport Systems in Cell Membranes. Prerequisite: consent of instructor. Properties of pumps and carriers in cell membranes. Topics include nonelectrolyte (sugar, amino acid, carboxylic acids) and ion (Na, K, H, and Ca) transport across plasma membranes of single cells and epithelia.
Mr. Sachs, Mr. Wright

217C. Cellular Neurophysiology. (Formerly numbered 217B.) Prerequisite: course 213 or 216 or consent of instructor. Structure and function of synaptic transmission, neurotransmitters, excitation/inhibition special sensory receptors.

218A. Integrative Neurophysiology. Prerequisite: course 217C or consent of instructor. Structure and function of CNS neurons, structure and function of visual, cerebellum, and other CNS systems. Structure and function of autonomic nervous system.

218B. Physiology of Muscle. Prerequisite: course 216 or consent of instructor. Ultrastructure of muscle. Excitation, excitation-contraction coupling, calcium regulation of contraction, myofilament interactions, energetics mechanics, and chemical kinetics of contraction in vertebrate muscle.

221A-221B-221C. Concepts of Excitation and Contraction in Muscle (2 to 6 units each). Prerequisite: consent of instructor. In-depth study of muscle physiology, with material derived from a critical review of classical and recently published research papers. Content varies according to the special interests of the students. Mr. Brady

222. Graduate Commentary: Renal, Respiratory, and Gastrointestinal Physiology (2 units). Prerequisite: course 101. An advanced supplementation for graduate students of the topics presented in course 102.

223. Graduate Commentary: Physiology of the Nervous System (2 units). Prerequisites: basic courses in chemistry, physics, and biology, at least one year each; organic chemistry; histology; gross anatomy, human or comparative; consent of instructor. An advanced supplementation for graduate students of the topics presented in basic neurology.
Ms. Buchwald

225. Ionic Selectivity: The Role of Kinetic and Equilibrium Processes in Ion Permeation through Channels (2 to 4 units). Lecture, two hours; reading period, 10 hours. Prerequisites: course 217A (unless waived), consent of instructor. Coverage of the "state of the art" for characterizing the molecular details of ion permeation in model peptide channels (e.g., gramicidin) and biological channels (e.g., acetylcholine receptor channel, K channel, and Na channel), particularly as these can be inferred from electrical measurements. Molecular aspects of ion permeation.
Mr. Eisenman

227. Theoretical Problems in Membrane Permeation (2 units). Prerequisite: consent of instructor. Tutorial directed to specific theoretical problems of interest to the students. Mr. Ciani

228. Epithelia: Structure and Function (2 units). Prerequisite: consent of instructor. Lectures and seminars on the physiology of epithelia cells, with particular emphasis on membrane transport. S/U grading. Mr. Wright (W)

229. Research Topics in Neurobiology (2 units). Prerequisite: consent of instructor. Discussion of current literature covering research problems in neurobiology. S/U or letter grading. Mr. Letinsky

230A-230B-230C. Selected Topics in Organ Physiology (2 to 8 units each). Prerequisite: consent of instructor. Macroscopic, microscopic, and ultrastructural correlates of tissue and organ function. Advanced consideration of special topics in the physiology of the cardiovascular and gastrointestinal systems, as well as the respiratory, renal, and central nervous systems. Mr. Brady and the Staff

231A-231B-231C. Cardiovascular and Respiratory Physiology (2 to 6 units each). Prerequisite: consent of instructor. In-depth study of the cardiovascular and respiratory systems. **231A.** Respiratory mechanisms and control. **231B-231C.** The function and control of the cardiovascular system and its relation to the mechanics of respiration and cellular gas exchange. Critical reviews and discussion of selected articles in journals.

M235. Gut and Brain Peptides (2 units). (Same as Anatomy M235 and Neuroscience M235.) Prerequisite: consent of instructor. Presentation of current knowledge of gut and brain peptides by surveying their chemistry, anatomy, and physiology. Experimental approaches used to study biologically active peptides. Review of current information about each of the major gut and brain peptides. S/U or letter grading.
Mr. Brecha, Mr. Reeve, Ms. Tache (W)

245. Stochastic Analysis of Channel Gating. Prerequisite: consent of instructor. Review of probability theory; combinatorial analysis; introduction to theory of stochastic processes; renewal theory; discrete- and continuous-time Markov processes; analysis of kinetic models of channel gating; applications for single channel and "noise" measurements. S/U or letter grading. Mr. Horn

246. Current Topics in Single Channel Recording. Lecture, three hours. Prerequisite: consent of instructor. Discussion of current literature involving the use of single channel recording. Gating and ion permeation mechanisms in single channels and recent technical developments in the method. S/U grading. Mr. Horn (Sp)

250A-250B-250C. Techniques in Biological Research (1 unit each). Discussion of techniques of interest to students in the biological sciences. S/U grading.

251A-251B-251C. Seminar in Physiology (1 unit each). Prerequisite: consent of instructor. Review and discussion of current physiological literature, research in progress, and special topics. S/U grading.

M252A-M252B. Seminar in Behavioral Biology. (Same as Anthropology M228A-M228B, Biology M252A-M252B, Education M229A-M229B, Psychiatry M291A-M291B, and Psychology M230A-M230B.) Discussion, six hours. Prerequisite: consent of instructor. Basic seminar for graduates interested in behavioral biology. An interdisciplinary course dealing with behavioral research in anthropology, biology, psychology, and the medical sciences. Proximate causation, development, and evolution in animal behavior. Physiology and the organization of behavior. Vertebrate social organization. Animal communication. The application of natural selection theory to human social behavior. In Progress grading.

253A-253B-253C. Current Topics in Neurobiology and Biophysics (2 units each). Lecture, one hour; discussion, one hour. Prerequisite: consent of instructor. Weekly lectures by members of the faculty and visiting scientists, followed by scheduled discussion periods for students. All aspects of cellular neurobiology, with emphasis on quantitative and biophysical approaches. Most talks deal with original research, placed in the context of overall developments in the field. Some talks are reviews of recent interesting literature, with posted references for student preparation. S/U grading.

M255A-M255B-M255C. Functional Neuropsychology. (Same as Neuroscience M216A-M216B-M216C and Psychiatry M216A-M216B-M216C.) Seminar, three hours. Prerequisites: graduate standing, consent of instructor. The neurobiology of human infant speech and the neuropsychology of language memory. Topics include animal communication, phylogeny and ontogeny of language, cerebral processing of language and speech in normal and brain-damaged adults, and neural models of memory. S/U or letter grading. Ms. Buchwald (F), Mr. Halgren (Sp), Ms. Van Lancker (W)

260. The Use of Laboratory Animals in Research. Prerequisite: consent of instructor. An introductory course for graduate students in the medical and biological sciences, covering principles and practical problems in the handling and use of common laboratory animal species. Mr. Washington

297. Developmental Neurobiology. Lecture, two hours; discussion, two hours. Prerequisites: Biology 171 or equivalent, consent of instructor. Processes governing the production and differentiation of neurones, synaptogenesis, and specificity and plasticity in neuronal and nerve-muscle connections. Mr. Arnold, Mr. Grinnell

596. Directed Individual Study or Research (2 to 12 units). Prerequisite: consent of instructor.

597. Preparation for M.S. Comprehensive Examination or Ph.D. Qualifying Examinations (2 to 12 units). Prerequisite: consent of instructor.

598. Thesis Research for M.S. Candidates (2 to 12 units). Prerequisite: consent of instructor.

599. Dissertation Research for Ph.D. Candidates (2 to 12 units). Prerequisite: consent of instructor.

Psychiatry and Biobehavioral Sciences

Claire Weiner, M.S.W., *Adjunct (Social Work)*
Kathryn P. White, Ph.D., *Adjunct (Biobehavioral Sciences)*
Joyce Will, M.S.W., *Visiting (Social Work)*

Scope and Objectives

The Department of Psychiatry and Biobehavioral Sciences offers interdisciplinary courses related to the mental health professions of the biobehavioral sciences in addition to its programs for psychiatry interns and residents and for medical students (courses for medical students are listed in the *Announcement of the UCLA School of Medicine* and the *School of Medicine Handbook of Clinical Courses*).

Enrollment in department courses is limited to registered UCLA students, students registered in programs officially affiliated with UCLA, and students enrolled concurrently through University Extension. Students who meet these requirements, but who are not affiliated with a departmental training program, must also meet required course prerequisites determined by specific educational programs. Additional information is available from the department office.

Programs

The **Developmental Disabilities Immersion Program** is cosponsored by the Department of Psychology and the Department of Psychiatry and Biobehavioral Sciences and by the Office of Instructional Development — Field Studies Development. Each year a group of 28 students is selected for the program which runs during the Winter/Spring Quarters. Students participate in courses and research at Lanterman State Hospital and Developmental Center, a facility for mentally retarded citizens in Pomona, and do related fieldwork while living at the site. During each quarter of the program up to 20 units of coursework related to developmental disabilities are offered. Most of the courses are in the Psychiatry/Psychology M180 through M184 series, but courses from other departments (such as Biology) may supplement these offerings. Many of the courses fulfill psychology undergraduate major requirements. Student individualized research projects are also part of the immersion experience. Students interested in the program should contact the Office of Instructional Development — Field Studies Development (70 Powell Library) or the Psychology Undergraduate Office (1531 Franz Hall).

The department offers a 12-month **Clinical Psychology Internship,** which is a Graduate Division certificate program. Students enrolled in clinical psychology programs at APA-approved universities are eligible to apply. Applications are accepted through January 1. The primary goals of the internship are to provide a year of intensive exposure to a wide variety of clinical and human services experiences and to maximize the personal growth of each professional. Students interested in this certificate program should contact the Psychology Internship Training Office, C8-532 NPI&H (825-0145).

A certificate is also awarded by the department to qualified graduate students who successfully complete the **Mental Retardation and Other Developmental Disabilities Training Program.** The program fulfills the internship requirement for the Ph.D. program in Clinical Psychology and the master's program in social welfare, and for the disciplines of speech pathology, occupational therapy, and nutrition at nearby universities. Further, it satisfies state licensure and clinical placement requirements in psychology, speech and language, special education, social welfare, nursing, pediatrics, pediatric dentistry, occupational therapy, and nutrition. Interested students should contact the program training director, 78-243A NPI&H (825-0147), for further information.

Information on clinical practicums which are offered in conjunction with other educational institutions and UCLA departments may be obtained from the department office.

Master of Social Psychiatry

The Master of Social Psychiatry (M.S.P.) program is not admitting new students at this time.

Upper Division Courses

M112. A Laboratory for Naturalistic Observations: Developing Skills and Techniques. (Same as Anthropology M136Q and Psychology M155.) Prerequisite: consent of instructor. The skill of observing and recording behavior in natural settings, with emphasis on field training and practice in observing behavior. Group and individual projects. Discussion of some of the uses of observations and their implications for research in the social sciences.
Mr. Gallimore, Mr. Turner, Mr. Weisner (W)

M119. Evolution of Intelligence. (Same as Psychology M119.) Lecture, two hours; discussion, two hours. Prerequisites: Psychology 15 or 115, an introductory statistics course, junior or senior standing, consent of instructor. Intelligence treated as neural information-processing capacity; its evolution in vertebrates correlated with the evolution of enlarged brains. Quantitative approaches in evolutionary biology and the neurosciences. Mr. Jerison

M133. Exceptional Children. (Same as Psychology M133B.) Prerequisite: Psychology 130. Study of the issues and research problems in the areas of mental retardation, giftedness, learning disorders, emotional disorders, and childhood psychosis. Mr. Frankel

M142. Advanced Statistical Methods in Psychology. (Same as Psychology M142.) Lecture, two hours; discussion, two hours. Prerequisite: Psychology 41. Chi square, special correlation methods, multiple regression, nonparametric methods, analysis of variance, reliability and validity. Mr. Nihira (W)

175. Women Physicians: Professional Socialization. The professional socialization of women in medicine. The developmental stages of medical training and practice (premed, medical school, internship, residency, and various specialty areas of private practice). Women trainees and physicians in various specialties participate in presentations. Research project required. Mr. Coombs (F)

M180A. Contemporary Problems in Mental Retardation. (Same as Psychology M180A.) Prerequisites: Psychology 10, 41, and 127 or 130. Corequisites: courses M181A-M181B. Limited to Immersion Program students. Presentation of the concepts, issues, and research techniques in the area of mental retardation. Biological, psychological, and community questions concerning the causes and treatment of developmental disabilities, as well as systems for the care and training of retarded individuals. Lectures, directed reading, and discussion.
Mr. Fluharty and the Staff

M180B. Contemporary Issues in Mental Retardation. (Same as Psychology M180B.) Prerequisite: course M180A. Limited to Immersion Program students. Psychoeducational issues in mental retardation relating literature to ongoing field experiences through lectures, discussions, media, and six student papers. Mr. Baker

M181A-M181B. Research in Contemporary Problems in Mental Retardation. (Same as Psychology M181A-M181B.) Corequisites: courses M180A, M180B. Research experience. In Progress grading.
Mr. Silverstein and the Staff

M182A. Advanced Statistical Methods in Mental Retardation. (Same as Psychology M182A.) Prerequisite: Psychology 41. Limited to Immersion Program students. Introduction of statistical method and design in experimentation principles of statistical inference and appropriate testing methods. Introduction to the use of computers and various software packages. Mr. Olmstead

M182B. Advanced Design and Statistics. (Same as Psychology M182B.) Prerequisite: course M182A. Continuation of course M182A. Mr. Silverstein

M182C. Perception. (Same as Psychology M182C.) Limited to Immersion Program students. Human information processing, both physical and psychological, with special emphasis on pathologies in the mentally retarded. Mr. Galbraith

M182D. Current Issues in Mental Retardation. (Same as Psychology M182D.) Limited to Immersion Program students. Advanced topics in mental retardation. May be repeated for credit with consent of instructor. Mr. Olmstead

M183. Introduction to Neuroscience. (Same as Psychology M183). Limited to Immersion Program students. Gross anatomy of the human brain and spinal cord. Mr. Buchwald, Mr. Olmstead

M184. Human Genetics. (Formerly numbered 198.) (Same as Psychology M184.) Lecture, two hours; discussion, two hours. Limited to Immersion Program students. Application of genetic principles in human populations, with emphasis on cytogenetics, biochemical and population genetics, and family studies. Lectures and readings on the methodologies appropriate to answer current questions in the fields of medical and human genetics. Mr. Fluharty

M190. Ethology: Physiology of Behavior and Learning in Animals. (Same as Psychology M118F.) Lecture, four hours; laboratory, one hour. Basic course for undergraduate students which integrates a systematic overview of common forms of behavioral plasticity and standard training procedures in laboratory animals (in behavioral, neurophysiological, and pharmacological studies) with a broad biological, evolutionary perspective.
Mr. Soltysik (W)

199. Special Studies in Psychiatry (2 to 4 units). Prerequisite: consent of instructor and department chair, based on a written proposal outlining the course of study (to be structured by instructor and student at time of initial enrollment). Additional information and course proposal forms are available in the Office of Education, B7-349 NPI&H.

Graduate Courses

200. Colloquium on Biobehavioral Sciences (1 unit). Prerequisite: consent of instructor. A vehicle for continuing education on recent advances in various scientific fields relevant to behavior in its biobehavioral and biosocial contexts. A forum for pertinent interdisciplinary discussion. Speakers present information from their area of competence and express their ideas on the relevance of this material to the broader issues of behavior. Mr. West

M201A-M201B-M201C. The Functional Organization of Behavior (2 units each). (Same as Neuroscience M201A-M201B-M201C.) Prerequisite: consent of instructor. Course M201A is prerequisite to M201B, which is prerequisite to M201C. **M201A.** The development of behaviors within different species and the functional uses of behaviors; use of an evolutionary biological perspective as the framework. **M201B.** Research studies designed to take into account the functional behavior of animals. **M201C.** Special questions of interest to students.
Mr. Eiduson, Mr. McGuire, Mr. Woody (F,W,Sp)

207A-207B-207C. Hypnosis Seminar (2 units each). (Formerly numbered 207.) Prerequisite: psychology intern, psychiatry resident, member of (or trainee in) one of the licensed mental health professions, or consent of instructor. Experiential seminar intended to prepare mental health professionals for clinical applications, involving didactics, demonstration, practice, and feedback. Following training in inductions and development of classic hypnotic phenomena (e.g., age regression, hypnoanesthesia), focus on psychotherapeutic applications, including direct symptom removal, behavioral methods, and hypnoanalysis. Emphasis on developing skill for application in clinical practice. S/U grading.
Ms. Holroyd (F,W,Sp)

208A-208B-208C. Clinical Neuropsychology (2 units each). Lecture, 90 minutes. Prerequisites: graduate or postgraduate standing, consent of instructor. Introduction and review of neuropsychological concepts, including functional neuroanatomical systems of the brain, analytic and synthetic activities of the brain, the effects of generalized and focal brain impairment on behavior, and an introduction to the use of neuropsychological test instruments.
Mr. Marsh (F,W,Sp)

M210A-210B. Seminar in Psychocultural Studies. (Same as Anthropology M234A-M234B.) Lecture, three hours. Prerequisite: consent of instructor. A two-quarter sequence devoted to the present state of research in psychocultural studies. Survey of work in child development and socialization, personality, psychobiology, transcultural psychiatry, deviance, learning, perception, cognition, and psychocultural perspectives on change.
Mr. Kernan, Mr. Price-Williams

M211. Sociocultural Perspectives on Mental Retardation. (Same as Anthropology M234R.) Lecture, three hours. Prerequisite: consent of instructor. Exploration of concepts such as "intelligence," "competence," and "adaptive behavior" in varying non-Western societies as background to the study of the phenomenon of mental retardation in the West, particularly the United States. Topics include cross-cultural perspectives, the history of institutional confinement, the policies of deinstitutionalization and normalization, and current issues involving adaptation and "quality of life." Discussion of topics such as communicative competence, work, crime, deviance, sexuality, and marriage. May be repeated for credit.
Mr. Edgerton (W)

M212. Cultural Modes of Thought. (Same as Anthropology M232P.) Lecture, three hours. Prerequisite: consent of instructor. An examination of the influences of culture on learning, perception, thinking, and intelligence. The fields of cross-cultural psychology, in addition to cognitive anthropology. Focus on learning and thinking in non-Western cultures, including problems of education in ethnic areas within the U.S. Mr. Price-Williams (W)

M213A-M213B. The Individual in Culture. (Same as Anthropology M235A-M235B.) Lecture, three hours. Course M213A is prerequisite to M213B. In Progress grading. Mr. Langness (F,W)

M214. Selected Topics in the Cross-Cultural Study of Socialization and Childhood. (Same as Anthropology M236P.) Lecture, three hours. Prerequisite: consent of instructor. Methods, ethnographic data, and theoretical orientations. Emphasis on current research. May be repeated for credit.
Mr. Weisner (F)

M216A-M216B-M216C. Functional Neuropsychology. (Formerly numbered 216.) (Same as Neuroscience M216A-M216B-M216C and Physiology M255A-M255B-M255C.) Seminar, three hours. Prerequisites: graduate standing, consent of instructor. The neurobiology of human infant speech and the neuropsychology of language memory. Topics include animal communication, phylogeny and ontogeny of language, cerebral processing of language and speech in normal and brain-damaged adults, and neural models of memory. S/U or letter grading.
Ms. Buchwald (F), Mr. Halgren (Sp), Ms. Van Lancker (W)

M219A-M219B. Basic Core Courses in Mental Retardation Research (2 units each). (Same as Anthropology M237A-M237B.) Lecture, two hours; discussion, two hours. Prerequisite: consent of instructor. Required of all MRRC trainees. A systematic overview of mental retardation and the sciences basic to this field of study. The language, methods, aims, and contributions of the various disciplines that contribute to the field. The last two weeks of the second quarter are spent discussing and preparing multidisciplinary research designs with potential for the prevention or amelioration of mental retardation. S/U grading. Mr. Buchwald, Mr. Edgerton

220A-220B. Living Systems Theory and Its Application (2 or 4 units each). Prerequisite: consent of instructor. Current status of basic and applied scientific research in systems science at the levels of the cell, the organ, the organism, the group, the organization, the society, and the supranational systems. Present and potential future applications of systems science to psychodiagnostics, psychotherapy, group processes, community psychiatry, and organizational behavior. Possible applications to neurosciences, artificial intelligence, instructional technology, and other fields. If taken for four units, additional class time and reading and a research paper (20-25 pages) required. Mr. Miller (F,W)

M221A-M221B. Cellular and Molecular Neurochemistry. (Same as Anatomy M221A-M221B, Biological Chemistry M221A-M221B, Neuroscience M221A-M221B, and Pharmacology M221A-M221B.) Lecture, three hours. Prerequisites: Biological Chemistry 101A-101B-101C or equivalent. Contemporary neurochemistry for students with a general background in biochemistry. Relates the biochemical and structural properties of the nervous system to its development and functions and introduces students to disorders that result from alterations in the fundamental biochemistry of the nervous system. Although the subject is treated in an interdisciplinary manner, course progresses from structure through chemistry to function in precise manner and biological terms.
Mr. de Vellis, Mr. Eiduson, Mr. Olsen (W,Sp)

M222. Transcultural Psychiatry. (Same as Anthropology M234P.) Lecture, three hours. Prerequisite: consent of instructor. Consideration of psychiatric topics in cross-cultural perspective, such as studies of drug use, deviance, suicide, homicide, behavioral disorders, "culture specific" syndromes, non-Western psychiatries, and the questions of "sick" societies. May be repeated for credit. Mr. Kennedy

223. MMPI Seminar and Case Conference (2 units). Seminar, one hour; discussion, one hour. Prerequisite: psychology intern, psychiatry resident, or consent of instructor. Seminar and case conference on the interpretation of the Minnesota Multiphasic Personality Inventory (MMPI) — theory, principles, and research into the personality types. Discussion of case data relating to the MMPI profile and treatment planning. Mr. Caldwell

226A-226B. Childhood Psychopathology (2 units each). Seminar, one hour. Prerequisite: consent of instructor. Current research in the causes and behavioral manifestations of childhood psychopathology. Discussion on diagnosis and etiology of childhood psychopathology.
Ms. Sigman, Mr. Tanguay (F,W)

228. Behavioral Medicine. Seminar, three hours. Prerequisite: consent of instructor. Review of behavioral science knowledge and techniques relevant to the understanding of physical health and illness and discussion of the application of this knowledge and these techniques to prevention, diagnosis, treatment, and rehabilitation. Integration of behavioral and biomedical approaches.
Mr. McCreary, Mr. Munford, Mr. Reeves, Mr. Shapiro

230. Confucius and Asian Americans (1 unit). Prerequisite: consent of instructor. The cultural aspects relevant to the treatment of Asian Americans. Discussion of the philosophical teachings of Confucius. Similarities and differences among Asian Americans and relevant clinical issues. S/U grading.
Mr. Chien, Mr. Yamamoto (W)

231. Hispanic Mental Health Issues and Treatment (2 units). Prerequisite: consent of instructor. Mental health issues and needs of Hispanics through seminars and videotapes dealing with historical comparison of psychiatry in Mexico and the United States, an analysis of the various theoretical perspectives regarding biopsychosocial behavior; distinguishing psychodynamic from cultural factors in the treatment of Spanish-speaking patients; treatment of Hispanic families, couples, undocumented persons, and criminal justice system clientele.
Mr. Loya, Mr. Morales, Ms. Telles (W)

232A-232B-232C. Human Sexual Dysfunction (2 units each). Prerequisite: consent of instructor. One-year training and research course in the direct behavioral treatment of human sexual dysfunction. A combination of didactic material and supervised experience. Mr. Golden (F,W,Sp)

234A-234B. Affective Disorders (1 unit each). (Formerly numbered 234A-234B-234C.) Prerequisites: graduate standing, consent of instructor. General topics related to the primary affective disorders (depression, manic depressive illness), including diagnosis, pharmacology, epidemiology, psychology, phenomenology, biology, and treatment. S/U grading.
Mr. Gitlin, Ms. Jamison

M235. A Laboratory for Naturalistic Observations: Developing Skills and Techniques. (Same as Anthropology M236Q and Education M222A.) Lecture, three hours. Prerequisite: consent of instructor. The skill of observing and recording behavior in natural settings, with emphasis on field training and practice in observing behavior. Discussion of some of the uses of observations and their implications for research in the social sciences. Students are expected to integrate observational work into their current research interests. May be repeated for credit.
Mr. Gallimore, Mr. Turner, Mr. Weisner (W)

236A-236B-236C. Psychology Interns Seminar (1 unit each). Prerequisite: consent of instructor. Current topics in clinical psychology. Group selected topics for discussion pertaining to psychopathology, diagnostic evaluation, and modalities of treatment. S/U grading. Ms. Holroyd (F,W,Sp)

M239. Psychopharmacology. (Same as Pharmacology M239.) Prerequisite: consent of instructor. A presentation of the effects of drugs on behavior, with special attention to drugs used in psychiatry and drug seeking behavior. Physiological and biochemical mechanisms underlying such actions. Reports on relevant current research. Mr. Jarvik

240. Assessment and Treatment of Afro-American Families (3 units). (Formerly numbered 240A-240B-240C.) Seminar, two hours. Prerequisites: graduate standing, consent of instructor. Aids mental health professionals and trainees in the evaluation and treatment of Afro-American families in terms of their cultural milieu, historical background, and economic status. Didactic presentations by instructors and invited guests form the basis for supervised evaluation and case management with an Afro-American child and family.
Ms. Bass, Ms. Powell, Ms. Wyatt (Sp)

242A-242B-242C. Child Psychotherapy Seminar (1 unit each). Prerequisite: consent of instructor. **242A-242B.** Videotaped diagnostic and treatment sessions of children and their families provide a framework for discussing such topics as diagnostic criteria, the beginning of treatment, the overdetermined nature of the symptom, transference phenomenon related to parental conflict, initial recovery of psychological reactions to past events, factors enhancing future working relationships with child and family, and various other technical issues, including the handling of terminations. **242C.** The theory and principles of psychoanalytic work with parents, with emphasis on initiating and maintaining the treatment of the family. Student presentations encouraged in order to amplify clinical and theoretical issues.
Mr. Heinicke

243A-243B-243C. Mental Retardation Interdisciplinary Core Curriculum (1 unit each). Lecture, 90 minutes. Prerequisite: consent of instructor. A survey series on major topic areas of mental retardation, covering epidemiology, nosology, assessment, health care delivery systems, basic genetics, nutrition, direct care, and special deficits. Presented in an interdisciplinary framework as generic information independent of discipline. S/U grading.
Mr. Forness, Ms. Jacobs (F,W,Sp)

244. Computers in Mental Retardation Research. Prerequisite: consent of instructor. An introduction to the basic nature of digital computer systems, with emphasis on their impact on society. Directed toward providing the student with a broad general understanding of applications and limitations of computers. Specific examples from clinical, research, and administrative applications within the mental retardation and child psychiatry program.
Mr. Guthrie, Mr. Hull (W)

245A-245B. Psychological Assessment of Severely Handicapped Children (3 units each). Lecture, 90 minutes. Prerequisite: consent of instructor. Course 245A is prerequisite to 245B. The psychological assessment of the preschool child. Specific emphasis on the assessment of children with developmental disabilities and children who are generally thought to be "untestable." A practical orientation, involving two hours per week of supervised testing. S/U grading. Ms. Freeman (F,W)

M246. Psychological Aspects of Mental Retardation. (Same as Psychology M246.) Prerequisite: consent of instructor. Discussion of the psychological aspects of mental retardation, including classification, description, etiology, theory, prevention, treatment, assessment, modern and future developments, and input from other disciplines (ethics, law, religion, welfare systems). Mr. Tymchuk (F)

247A-247B-247C. Neurological and Psychological Bases of Behavior (1 unit each). Discussion, two hours. Prerequisites: graduate standing, consent of instructor. Discussion of advances in neurophysiology and neuropsychology, with particular reference to modern developmental studies. Faculty members or advanced students present results of their research work in the context of available literature; intense discussion during and after presentation. S/U grading.
Mr. Buchwald, Mr. Levine (F,W,Sp)

248. Research Rounds in Mental Retardation and Developmental Disabilities (1 unit). Prerequisite: consent of instructor. Monthly session, with presentation of a patient and discussion of research approaches relevant to that patient. Staff members from various disciplines and invited speakers participate. S/U grading. Mr. Levine (F,W,Sp)

251. Laboratory Exercises in the Techniques of Mammalian Cell Culture. Laboratory, 12 hours. Prerequisites: graduate or medical student standing, consent of instructor. Provides a working knowledge of the physiology and biochemistry of mammalian cells in culture through laboratory exercises involving the propagation and manipulation of differentiated and undifferentiated continuous mammalian cell lines. S/U grading. Mr. Haggerty (W)

253. Seminar: Child Development (1 unit). Prerequisite: consent of instructor. Theories of development, systems of child development, and chronological aspects of child development. Presentation of assigned readings by students plays a major role in each session. Mr. Cantwell

M254. Counseling Families of Handicapped Children (2 units). (Same as Social Welfare M242.) Prerequisite: consent of instructor. Techniques and issues in counseling families through evaluation, feedback, and treatment. Social and psychological stresses on family unit, professional's reactions, community resources, and issues of genetic counseling, placement, and developmental crises.
Ms. Gottlieb (W)

256. Basic Clinical Child Psychopathology (1 unit). Prerequisite: consent of instructor. Weekly seminars covering the basic clinical aspects of child psychopathology. Readings provided for a basis of discussion on topics including interviewing of parents and children, diagnosis, and related syndromes.
Mr. Cantwell

257A-257B-257C. Communication Disorders Associated with Developmental Disabilities and Psychiatric Disorders (3 units each). Laboratory, 90 minutes; didactic, 90 minutes. Prerequisite: consent of instructor. Didactic and practical training in communication and its dysfunction as these relate to language disabilities seen in an interdisciplinary medical setting. Provides a background for graduate and postgraduate students who plan to engage in clinical work and/or clinical research in which language disturbances of childhood and adulthood are relevant. Ms. Baltaxe (F,W,Sp)

259. Legal and Ethical Issues with Vulnerable Populations (3 units). Discussion, 90 minutes; laboratory, three and one-half hours. Prerequisite: consent of instructor. Discussion of current laws dealing with vulnerable populations (e.g., children, developmentally disabled people, elderly people); philosophies, ethics, ethical codes, issues, and how to resolve them. Use of videotapes and discussion of cases. Mr. Tymchuk (W)

260. The Chronically Medically Ill Child and Family. Lecture, three hours; seminar, one hour. Prerequisite: consent of instructor. Examination from a biopsychological perspective of the ramifications of chronic illness affecting the life-style and development of the child and family, including examination of relevant theoretical models and research. Clinical application to assessment and intervention strategies.
Ms. Betz (F,Sp)

261. Psychopathology in the Mentally Retarded (1 unit). Seminar, 90 minutes. Prerequisite: consent of instructor. Review of current research findings and clinical practice concerning dually diagnosed populations. Nosology, theoretical issues, assessment and therapeutic interventions pertaining to populations with mental retardation and emotional problems.
Ms. Jacobs, Mr. Price-Williams (F)

263A-263B-263C. Current Issues: Mental Retardation and Developmental Disabilities (1 unit each). Seminar, 21½ hours per month. Prerequisite: consent of instructor. Current clinical trends and research developments in the fields of mental retardation and development disabilities, providing a forum for discussion. Selected topics include autism, legal and ethical issues, intervention, and medical genetics. S/U grading. Mr. Forness, Ms. Jacobs

264. Biofeedback: Theory, Research, and Clinical Application. Seminar, two hours; laboratory, one hour. Prerequisite: consent of instructor. Introduction to concepts and techniques of biofeedback, including review of experimental literature and applications to various clinical problems (hypertension, headache, pain and anxiety, sexual dysfunction, cardiac arrhythmias, neuromuscular disorders, etc.). Training in the use of portable biofeedback devices. Consideration of research and clinical issues. Mr. Shapiro (W)

265. Mind and Brain in Evolution (2 units). Prerequisite: consent of instructor. Review of the fossil evidence on the organic evolution of the brain and the implications of that evidence for the evolution of mind and intelligence, with emphasis on quantitative approaches. Although some implications for cognitive psychology and individual differences are considered, the evolutionary analysis is "above the species level." Mr. Jerison (Sp)

266. Psychophysiological Research (1 unit). Seminar, 90 minutes. Prerequisite: consent of instructor. Advanced seminar and discussion of ongoing laboratory research, involving concepts, experimental design, measurement, and data analysis. Current topics include regulation of physiological and subjective reactions to stress and pain, discrimination and control of blood pressure, and behavioral regulation of postural hypotension. Mr. Shapiro (F,W,Sp)

M268. Behavioral Management of Pain Problems (2 units). (Same as Anesthesiology M268.) Prerequisite: consent of instructor. Review of current knowledge and skills involved in the behavioral assessment and management of acute and chronic pain problems. The behavioral perspective integrated with related physiological and medical considerations.
Mr. McCreary, Mr. Reeves (W)

271. Ethology of Motivation and Conditioning. Basic facts and concepts of motivation and learning in animals, presented in the framework of ethological and neurophysiological approach. Classical and instrumental conditioning procedures, with particular attention to the motivational variables.
Mr. Soltysik (W)

M272. Psychological Anthropology. (Same as Anthropology M234Q.) Lecture, three hours. Prerequisite: consent of instructor. Various psychological issues in anthropology, both theoretical and methodological. Areas of interest include such things as culture and theory, culture and personality, and culture psychiatry. Discussion of questions relating to symbolic and unconsciousness process as they are related to culture. Topics vary from quarter to quarter. May be repeated for credit.
Mr. Edgerton, Mr. Kennedy (W)

M273. Social Relations, Illness, and Health. (Formerly numbered 273.) (Same as Anthropology M263Q.) Prerequisite: one upper division course in anthropology, sociology, or psychology. Social structural factors that influence how health is defined and illness experienced, managed, and treated in the U.S. and abroad. Topics include the determinants of household health, institutional issues in the delivery of health services, and gender and health.
Ms. Browner

274. Neurophysiology and Behavior (3 units). Prerequisites: graduate standing, consent of instructor. An analysis of strategies and approaches used to study behavior of mammalian organisms. Special emphasis on recent developments in electrophysiological recording techniques in behaving animals and how such developments relate to classical concepts of brain function. Mr. Levine (Sp)

275A-275B. Sociobiology Seminar (2 units each). Prerequisite: consent of instructor. Review of sociological theory as it applies to adult bonding behavior: kin-selection theory, reciprocal altruism theory, mate selection theory, and bond strategy theory. Bonds viewed primarily from a biological rather than a psychological perspective. In Progress grading.
Mr. McGuire (F,W)

277. From Research to Practice: Biobehavorial Contributions (2 units). Prerequisite: consent of instructor. An overview of biobehavioral research as it is currently translated into therapeutic and preventive practice across disciplines. S/U grading.
Mr. Serafetinides

278. Clinical Psychopharmacology Research. Discussion, two hours; laboratory, two hours. Prerequisites: experience in a psychiatric facility, involvement in psychiatric research, consent of instructor. Directed research and clinical experience at the graduate level. Clinical skills taught in the practical setting of ongoing psychopharmacology research projects. Discussion of clinical case problems and ongoing psychopharmacology research projects and of proposed new projects focusing on practical problems, design, methodology, procedures, and instrumentation. Mr. May

M279A-M279B-M279C. Seminar: Selected Topics in Human Ethology. (Same as Anthropology M229A-M229B-M229C and Education M281A-M281B-M281C.) Ethologists now use successful animal behavior methodology to study human behavior. When is this appropriate, how can it contribute? Each quarter covers one level of analysis: describing and recording behavior; causation; development, especially longitudinal studies; adaptation; evolutionary origins. Mr. Blurton Jones (F,W,Sp)

280. Women, Work, and Health. Seminar, three hours; discussion, one hour. Prerequisite: consent of instructor. Examination of how women's socioeconomic roles in both developing and industrial societies influence their own health and that of the households in which they live. Women's caretaking roles in the household and in the larger society.
Ms. Browner (F)

281. Behavioral Therapy in an Educational Setting (3 units). Prerequisite: consent of instructor. Supervised experience in a classroom working with exceptional children. Theoretical background furnished through a one-hour weekly lecture.
Ms. Richey (F,W,Sp)

282. Schizophrenia: A Developmental Perspective (2 units). Prerequisite: consent of instructor. Review of research on the transmission of schizophrenia. Emphasis on a critical appraisal of the research strategies used to tease apart the relative contributions of environmental and genetic factors in the transmission of schizophrenia and on studies of children at risk for schizophrenia. Mr. Asarnow

285A-285B-285C. Intermediate Family Therapy (3 units each). Seminar, two hours. Prerequisite: consent of instructor. Theories and techniques of family therapy. History, foundations, and indications and contraindications for family therapy and diagnosis. Observations and demonstrations. Students encouraged to bring videotapes of their family therapy cases for discussion. Ms. Goldenberg

287. Psychopharmacology Seminar (2 units). Prerequisite: consent of instructor. A discussion of ongoing research in the area of psychopharmacology. Emphasis on smoking and other drug-related habits. Topics include initiation, maintenance, and cessation of habits. Basic mechanisms stressed. Psychological procedures used in habit development and control, particularly coping methodology. Mr. Jarvik

290. Quantitative Analysis of Ethnographic Data. Prerequisite: graduate standing. Didactic and experiential training in quantification and analysis of ethnographic data, including principles of psychological scaling and techniques of behavioral measurement as applied to ethnographic data and application of univariate and multivariate statistical methods for analysis of ethnographic data. Mr. Nihira

M291A-M291B. Seminar in Behavioral Biology. (Same as Anthropology M228A-M228B, Biology M252A-M252B, Education M229A-M229B, Physiology M252A-M252B, and Psychology M230A-M230B.) Discussion, six hours. Prerequisite: consent of instructor. Basic seminar for graduates interested in behavioral biology. An interdisciplinary course dealing with behavioral research in anthropology, biology, psychology, and the medical sciences. Proximate causation, development, and evolution in animal behavior. Physiology and the organization of behavior. Vertebrate social organization. Animal communication. The application of natural selection theory to human social behavior. In Progress grading.

293A-293B-293C. Sexual Abuse Seminar (1 unit each). Prerequisite: consent of instructor. Review of the interdisciplinary evaluation and treatment of sexually abused children and their families; recognition; reporting requirements and procedures; child advocacy; incidence and phenomenology; interviewing techniques; the physical examination; treatment modalities such as group, individual, family therapies, and self-help; family dynamics; special needs of the developmentally disabled; the adult molested as a child; understanding the perpetrator and controversial issues.
Ms. Johnson, Ms. Moan, Ms. Powell (F,W,Sp)

298. Current Topics in the Biobehavioral Sciences (1 to 4 units). Prerequisite: consent of instructor. Current issues in the biobehavioral sciences offered on a selective basis depending on instructor interest and topical relevancy of problems. See *Schedule of Classes* for topics and instructors. May be repeated for credit.

402. Childhood Psychosis Journal Club (1 unit). Prerequisite: consent of instructor. Discussion of basic and applied research issues related to childhood psychosis by a series of speakers. Readings suggested for each topic. Ms. Sigman

403. Individual Case Supervision (1 to 4 units). Prerequisite: consent of instructor and department chair (based on a written proposal to be structured by instructor and student prior to enrollment; additional information and proposal forms available in the Office of Education, B7-349 NPI&H). One-to-one supervision of individual therapy cases, including analyses of patient data, supervision of ongoing treatment, informal didactic sessions on personality theory, and applications to patient management.

413. Community Meeting: 2-West (1 unit). Prerequisites: assignment to Unit 2-West, consent of instructor. One-hour course devoted to individual experience in leading a large group of patients and staff. Leadership by rotation. A 30-minute process didactic session follows. Mr. Baxter

414. Emergency Treatment Attending Rounds (1 unit). Prerequisites: assignment to Emergency Treatment Unit, consent of instructor. Cases seen in the emergency room during the preceding night, reviewed by a consultant and the emergency treatment staff. Exploration of assessment techniques, methods of intervention, and alternate modes of treatment. Mr. Slawson

416. Treatment Planning Meetings (1 unit). Prerequisite: consent of instructor. Treatment and management problems posed by inpatient psychiatry. Discussion of clinical psychopathology, treatment plans, and interdisciplinary skills. Emphasis on formulating accurate diagnostic assessments and planning effective treatment programs utilizing the therapeutic methods of the milieu (somatic therapies, behavioral techniques, family therapy, group process, individual and dyadic treatment, etc.).

424. Ward Milieu Meeting (1 unit). Prerequisite: consent of instructor. Milieu course meetings designed to explore experientially and didactically the multiple aspects of group process on a psychiatric inpatient unit.

425. Teaching Case Conference (1 unit). Prerequisite: consent of instructor. Review of diagnosis and treatment of the full spectrum of disorders, with expert off-unit consultants.

426. Psychology Interns Psychosomatic Liaison Case Conference. Prerequisite: consent of instructor. Psychology interns case conference of psychosomatic aspects of physical illness. Cases discussed with regard to management issues, psychotherapy issues, methods of psychodiagnosis, counter transference, and relevant literature. In addition, participants receive individual supervision on a weekly basis. Mr. Wellisch

429. Child Outpatient Team (1 unit). Prerequisite: consent of instructor. Weekly team meetings to coordinate the clinical activities of the trainees in the Child Outpatient Department. Discussion of literature and theories related to selected cases. S/U grading.

445. Family Therapy Seminar for Clinicians (2 units). Prerequisites: prior clinical responsibility and treatment experience with individuals or families, consent of instructor. Conceptual and practical issues of family development and treatment. Emphasis on structural family therapy. Alternative models may be reviewed during the year. Videotape used extensively. Case supervision available. Participants must be treating one or more families. Mr. Gottlieb

449. Supervision in Systematic Parent Training (2 units). Lecture, 90 minutes; discussion, one hour. Prerequisites: graduate standing, consent of instructor. Advanced clinical trainees learn behavioral techniques of assessment and treatment of parent-child problems. Lectures, case presentations, and workshops on the various skills necessary. Mr. Frankel

462A-462B-462C. School Intervention by Child Psychiatrists. Prerequisite: consent of instructor. Knowledge of children in schools through (1) field experience, (2) a didactic program, (3) group supervision. Each trainee selects a local elementary or junior high school as the site of field experience in consultation. Supervision focuses on assessing the needs of the school and initiating the consultation. Seminars consider theories of consultation, systems theory as applied to the schools, the organization of the school systems, the professional roles represented in the school (e.g., teachers, counselors, principals, etc.), and their special problems. In Progress grading. Mr. Cantwell

465. Pediatric Psychopharmacology Seminar (1 unit). Prerequisite: child psychiatry fellow or consent of instructor. Designed for all fellows in child psychiatry. The background of childhood psychopharmacology; clinical evaluation of psychotropic drugs with children; clinical indications for various psychotropic drugs. Clinical supervision of individual cases provided along with seminars and discussions of various articles. Mr. Cantwell

471. Grand Rounds (No credit). Prerequisite: second-year resident in Child Service, child psychiatry fellow, or consent of instructor. Each month one second-year child psychiatry fellow presents a major clinical problem. Senior faculty discussants preside. The presenting trainees expected to cover the pertinent literature and to assemble the critical elements of information on the case or problem at hand. Most sessions eligible for Continuing Medical Education credit.

M472A. Nursing Care of the Developmentally Disabled. (Same as Nursing M410A.) Lecture, one hour; discussion, one to two hours; laboratory, 10 hours minimum. Prerequisite: consent of instructor. Study of the handicapping conditions of childhood and their effects on the individual and the family. Content based on normative developmental models with consideration for sociocultural diversity. Emphasis on prevention, systematic assessment, and planning of care for the individual and family. Introduction to the implementation of intervention strategies. Series of three courses integrates didactic material and clinical experience. Ms. Betz (F)

M472B. Nursing Care of the Developmentally Disabled. (Same as Nursing M410B.) Lecture, one hour; discussion, one to two hours; laboratory, 10 hours minimum. Prerequisites: course M472A and/or consent of instructor. Study of the philosophical and conceptual models affecting care delivery for the developmentally disabled. Emphasis on intervention strategies necessary for primary, secondary, and tertiary prevention. Ms. Betz (W)

M472C. Nursing Care of the Developmentally Disabled. (Same as Nursing M410C.) Lecture, one hour; discussion, one to two hours; laboratory, 10 hours minimum. Prerequisites: course M472B and/or consent of instructor. Exploration and participation in the assessment, planning, and delivery of health care to the developmentally disabled in a variety of settings. Emphasis on the expanded role of the nurse. Ms. Betz (Sp)

474. Child Psychiatry Colloquia (1 unit). Lecture, 90 minutes per month. Prerequisite: consent of instructor. Presentations of programmatic research in child psychiatry. Each session includes a faculty research presentation followed by comments from invited discussants, as well as general discussion. S/U grading. Ms. Asarnow, Mr. Tanguay

478. Clinical Genetics Rounds (No credit). Prerequisites: medical graduate, consent of instructor. Weekly clinical rounds on patients seen in the wards during the preceding week. House staff and others involved in clinical work may attend. Usually an in-depth discussion of the medical and genetic aspects of one or more disorders presented. Ms. Crandall

479. Genetics Clinic Presentation (No credit). Prerequisite: consent of instructor. A weekly clinical teaching session on the patients seen in the preceding genetics clinic. In-depth discussion on the genetics of each disorder. Ms. Crandall and the Staff

480. Analysis of Human Chromosome Studies (1 unit). Prerequisite: consent of instructor. Chromosome karyotypes prepared in the cytogenetics laboratory during the preceding week presented and discussed with reference to clinical findings. Teaching includes the interpretation of abnormal karyotypes and the technical aspects of routine and special chromosome stains. Mr. Sparkes

481. Chromatography Review (No credit). Prerequisites: premedical course or biochemistry, consent of instructor. A weekly session with presentation of amino acid chromatography carried out during the preceding week. The interpretation of abnormal chromatograms together with the technical aspects of the tests used. Mr. Cederbaum

482. Psychology Interns Group Process (1 unit). (Formerly numbered 482A-482B-482C.) Seminar, 90 minutes. Prerequisite: consent of instructor. Group processes and dynamics, involving an active learning experience whereby students study their own group interactions in order to examine group process variables such as styles of leadership, verbal and nonverbal methods of communication, the development of trust, self-disclosure, and the effects on group process of stereotypes about ethnic and masculine-feminine characteristics of people. S/U grading. Ms. Holroyd

485. Medical Genetics Seminar (No credit). Prerequisites: introductory course, consent of instructor. A weekly lecture series intended for those interested in genetics or in the specific topic to be presented. Speakers are invited for their expertise or research in some special area related to genetics and may be from UCLA or elsewhere. Discussion and questions from the audience encouraged. Ms. Crandall and the Staff

596P. Individual Studies in Psychiatry (2 to 12 units). Prerequisite: consent of instructor and department chair, based on a written proposal outlining the course of study (to be structured by instructor and student at time of initial enrollment). Additional information and course proposal forms available in the Office of Education, B7-349 NPI&H. Directed individual research and study in psychiatry at the graduate level. Mr. Tymchuk

Radiation Oncology

B3-109 Center for the Health Sciences, (213) 825-9304

Chair
Robert G. Parker, M.D.

Vice Chair
Edward A. Langdon, M.D.

Scope and Objectives

The Department of Radiation Oncology includes clinical divisions at the UCLA and Wadsworth VA Medical Centers and divisions of experimental radiation biology and medical radiation physics. Research and teaching facilities are available at both medical centers. The primary clinical mission of the department

is the management of patients who have cancer, although ionizing radiations also are used for preparing patients for bone marrow transplantation and for altering the immune system of patients with a range of illnesses. Knowledge of the disease in question, the comparative efficacy of radiation therapy and other methods, radiation biology and pathophysiology, and the physical characteristics of varying radiations is essential.

Research interests range from clinical problems through cellular kinetics, radiation modifiers, radiation chemistry, molecular biology, immunology, and basic and applied physics. The educational programs serve medical, dental, and nursing students and community and postgraduate physicians who are qualifying for certification in therapeutic radiology by the American Board of Radiology.

For further details on the Department of Radiation Oncology and a listing of the courses offered, see the *Announcement of the UCLA School of Medicine.*

Radiological Sciences

AR-259 Center for the Health Sciences, (213) 825-7811

Professors

Zoran L. Barbaric, M.D. *(Diagnostic Radiology)*
Jorge R. Barrio, Ph.D. *(Nuclear Medicine)*
Leslie R. Bennett, M.D., *Acting Chair*
H. K. Huang, D.Sc., *Medical Imaging Division Chief and Biomedical Physics Program Director*
Norman S. MacDonald, Ph.D. *(Nuclear Medicine)*
Carol M. Newton, M.D., Ph.D.
Amos Norman, Ph.D. *(Radiation Biology)*
Robert G. Parker, M.D. *(Radiation Oncology)*
Michael E. Phelps, Ph.D. *(Jennifer Jones Simon Professor of Biophysics), Nuclear Medicine and Biophysics Division Chief*
James B. Smathers, Ph.D. *(Radiation Oncology)*
Milo M. Webber, M.D., LL.B. *(Nuclear Medicine)*
Gabriel H. Wilson, M.D. *(MRI)*
H. Rodney Withers, M.D., D.Sc. *(Radiation Oncology)*
Moses A. Greenfield, Ph.D., *Emeritus*
Richard F. Riley, Ph.D., *Emeritus*

Associate Professors

Edward J. Hoffman, Ph.D., *in Residence (Nuclear Medicine, Biophysics)*
Sung-Cheng Huang, D.Sc. *(Nuclear Medicine, Biophysics)*
James Winter, M.D., Ph.D., *in Residence (Diagnostic Radiology)*

Assistant Professors

Stephen L. Glickman, Ph.D., *in Residence (Biophysics, Nuclear Medicine)*
W. N. Paul Lee, M.D., *in Residence (Pediatrics)*
Juan F. Lois, M.D., *in Residence (Diagnostic Radiology)*
Nicholas J. Mankovich, Ph.D., *in Residence (Medical Imaging)*

Adjunct Professors

J. Duncan Craven, M.D. *(Diagnostic Radiology)*
L. Stephen Graham, Ph.D. *(Nuclear Medicine)*

Adjunct Associate Professors

F. Eugene Holly, Ph.D. *(Radiation Oncology)*
Martin W. Herman, Ph.D. *(Diagnostic Radiology)*
Lawrence E. Williams, Ph.D. *(Medical Imaging)*

Adjunct Assistant Professors

Carolyn Kimme-Smith, Ph.D. *(Medical Imaging)*
Richard L. LaFontaine, Ph.D. *(Diagnostic Radiology)*
Lee T. Myers, Ph.D. *(Radiation Oncology)*
James S. Whiting, Ph.D. *(Medical Imaging)*

Adjunct and Visiting Lecturers

David O. Findley, Ph.D., *Visiting (Diagnostic Radiology)*
Charles L. Moler, *Adjunct (Diagnostic Radiology)*
Peter J. Rosemark, Ph.D., *Visiting (Radiation Oncology)*
Marilyn C. Wexler, M.S., *Visiting (Radiation Oncology)*

Scope and Objectives

The biomedical physics graduate program in the Department of Radiological Sciences offers training in four subspecialties: biophysics, medical imaging, medical physics, and radiation biology. Specialized facilities for training and research are available in the departmental clinical laboratories, the Laboratory of Biomedical and Environmental Sciences, the Image Processing Laboratory, and a number of associated hospitals. Highly specialized equipment includes the biomedical cyclotron, the radiation oncology cyclotron, the positron emission tomography (PET) scanners, the stereotactic gamma irradiator, and three VAX computer systems with three image processor systems. Students are trained to work both as professional medical physicists and as independent investigators.

Graduates in biomedical physics can expect to engage in any combination of clinical service, consultation, research, and teaching. Biomedical physicists are usually employed in hospitals frequently associated with a medical school, where they are members of the academic staff. They are also in demand in high technology private industry engaging in research and development of diagnostic equipment. In government agencies, biomedical physicists are involved in the formulation and enforcement of regulations applied to the use of radiation in health care delivery.

Requirements for Graduate Degrees

Admission

In addition to the University's minimum requirements, candidates for admission are required to have a bachelor's degree with a major in a science. Also, it is expected that all applicants will have had (1) one year of college physics (calculus-based), plus the equivalent of Physics 8E, (2) two years of college mathematics (through differential equations), including calculus equivalent to Mathematics 31A, 31B, 32A, 32B, 33A, 33B, (3) one year of college chemistry and one quarter of biochemistry, (4) one course each in anatomy and physiology, (5) at least one course in computer science, and (6) one course in statistics. Deficiencies in the above courses must be removed prior to advancement to candidacy.

Scores from the Graduate Record Examination (GRE) Aptitude Test, taken in the last three years, should be sent to the department. Three letters of recommendation are required. If you already have a master's degree, one of the letters should be from your adviser.

A brochure describing the program in biomedical physics may be obtained from the Department of Radiological Sciences, Biomedical Physics Graduate Program, AR-259 CHS, UCLA, Los Angeles, CA 90024.

Master of Science in Biomedical Physics

Course Requirements

A minimum of eleven courses, including eight core courses (Radiological Sciences 200A, 200B, 203, 204, 205, 207, 209, and 260A or 260B), course 208A or 208B, and Public Health 100A and 100B, are required for the M.S. degree. In addition, you must take three clinical rotations (Radiological Sciences 202A-202B-202C).

For students with a medical physics background or a career objective other than a practicing medical physicist, a more sharply focused curriculum may be advised.

Courses 596 and 598 may be applied toward the degree. Eight units of 500-series courses may be applied toward the total course requirement, four units toward the minimum graduate course requirement.

Thesis or Comprehensive Examination Plan

You are required to write a thesis (Plan I) based on a research project or to pass a comprehensive examination (Plan II) consisting of material selected from the core courses. The examination is offered at least once a year and may be repeated once.

Ph.D. in Biomedical Physics

Admission

Admission to the doctoral program requires (1) selecting a subspecialty, (2) passing either all of the core courses with grades of B or better or the M.S. comprehensive examination, and (3) passing a written subspecialty screening examination which may be repeated once. Completion of a master's program is not required.

Qualifying Examinations

The screening examination for admission to the Ph.D. program should be taken by the end of your sixth quarter in residence. Once the screening examination is passed and you have selected a research topic in your subspecialty for the dissertation, you should, within a reasonable time frame agreed on with the dissertation adviser, form a doctoral committee and schedule the University Oral Qualifying Examination. This examination covers your mastery of the biomedical physics curriculum, particularly the areas of the proposed dissertation topic.

If you do not complete the dissertation within four years after taking the written screening examination, you may be required to take it again.

Final Oral Examination

The final oral examination, or dissertation defense, is required.

Upper Division Course

199. Directed Individual Study or Research for Undergraduate Students (2 to 4 units). Prerequisite: consent of graduate adviser (based on a written proposal outlining the course of study or research). Directed individual study in biomedical physics for undergraduate students to be structured by faculty member and student at time of initial enrollment.
Mr. Norman (F,W,Sp)

Graduate Courses

200A. Physics and Chemistry of Nuclear Medicine. Lecture, one hour; laboratory, three hours. Prerequisite: consent of instructor. Nuclear structure, statistics of radioactive decay, nuclear radiations and their interaction with matter, nuclear decay processes, nuclear reactions, and compartment models. The physical and chemical properties of radioactive preparations used in nuclear medicine.
Mr. Hoffman (F)

200B. Instrumentation in Nuclear Medicine. Prerequisite: course 200A. Introduction to nuclear medicine instrumentation, including exterior probe systems, well scintillation detectors, liquid scintillation counters, scanners, and cameras; dosimetry of internally administered radioisotopes.
Mr. Graham (W)

202A-202B-202C. Applications of Medical Physics to Clinical Problems. Selected studies in the clinical use of radioisotopes:

202A. Nuclear Medicine. Prerequisite: course 200B or consent of instructor. (F,W,Sp)

202B. Diagnostic Radiology. Prerequisites: courses 200A, 205, and 208A-208B, or consent of instructor. (F,W,Sp)

202C. Radiation Therapy. Prerequisites: courses 203, 204, 207, and 208A-208B, or consent of instructor. (F,W,Sp)

203. Physics of Radiation Therapy. Radiation quantities and units. Radiation dosimetry, clinical applications in treatment planning. Methods of measuring radiation quantities. The calibration of radiation therapy equipment. Mr. Smathers (W)

204. Introductory Radiation Biology. Effect of ionizing radiation on chemical and biological systems.
Mr. Withers (Sp)

205. Physics of Diagnostic Radiology. Production of X rays, basic interactions between X rays and matter, X-ray system components, physical principles of medical radiography, radiographic image quality, fluoroscopy, image intensifiers, special procedures, X-ray protection. Laboratory experiments illustrate the basic theory. Mr. Glickman, Mr. H. Huang (Sp)

206. Advanced Instrumentation: MRI, CT, and DR. Prerequisites: courses 200A, 200B, 209, 210. An introduction to the recent advances in digital diagnostic imaging systems, with topics centered on instrumentation in magnetic resonance imaging (MRI), computed tomography (CT), and digital radiography (DR).
Mr. H. Huang (F)

207. Radiation Protection and Health Physics. Concepts in radiation protection, the recommendation of the national council on radiation protection and measurements, the maximum permissible dose levels. Shielding calculations. The layout and design of radiographic installation.
Mr. Herman, Mr. Norman (F)

208A-208B. Medical Physics Laboratory. Prerequisites: courses 203, 205. Techniques for measuring ionizing and nonionizing radiation, applications to problems in radiological sciences.
Mr. Herman (F, 208B; Sp, 208A)

209. Digital Techniques in Radiological Sciences. Lecture, three hours; laboratory, one hour. Prerequisites: one course in FORTRAN or another computer language, consent of instructor. Basic principles of the digital technology used in radiological sciences. The concepts and experience necessary to undertake radiological research in a diverse computing environment. Discussion of the relationship between computers and diagnostic equipment with regard to data acquisition, equipment interfacing, and data analysis. Mr. Mankovich (F)

210. The Physics of Medical Imaging. Prerequisites: courses 200A, 200B, 205, 209. Review of Fourier analysis measurement of the LSF and MTE. Radiographic mottle and the Wiener spectrum. Physics, mathematics, and engineering of imaging devices in conventional radiography, computerized tomography, ultrasound, and nuclear medicine. Detection of faint shadows, the ROC curve.
Mr. H. Huang (W)

211. Medical Ultrasound. Lecture, 90 minutes; laboratory, two hours. Prerequisite: at least one course in calculus; for non-Radiological Sciences Department students: consent of instructor. Designed to teach graduate biomedical physics students to calibrate ultrasound medical imaging equipment, to evaluate new instrumentation and research in the field, and to initiate their own research into clinical ultrasound studies. Ms. Kimme-Smith (W)

M230. Computed Tomography: Theory and Applications. (Same as Biomathematics M230.) Prerequisite: consent of instructor. Computed tomography is a three-dimensional imaging technique being widely used in radiology and is becoming an active research area in biomedicine. Basic principles of computed tomography (CT), various reconstruction algorithms, special characteristics of CT, physics in CT, and various biomedical applications.
Mr. S-C. Huang (W)

260A-260B. Seminar in Medical Physics (2 units each). Joint critical study by students and instructors of the fields of knowledge pertaining to medical physics. Periodic contributions made by visiting scientists. Discussion of research in progress.
Mr. Norman (W, 260A; Sp, 260B)

266A-266B-266C. Seminar in Nuclear Medicine (2 units each). Topics of current interest in nuclear medicine. Intended for physicians, radiation physicists, and graduate students. S/U grading.
Mr. Bennett (F,W,Sp)

268. Seminar in Radiopharmaceuticals (2 units). Current concepts in radioactive pharmaceutical agents in clinical use, including promising investigational agents. Utilization of short-lived, cyclotron produced isotopes in radiopharmaceuticals. The rational design of new radiodiagnostic agents.
Mr. Barrio (Sp)

495. Special Studies in Biomedical Physics. Discussion, two hours; laboratory, four hours. Teaching assistance in graduate laboratory courses under the supervision of a faculty member. S/U grading.

596. Research in Biomedical Physics (4 to 12 units). Directed individual study or research. Only one 596 course may be applied toward the M.S. degree requirements. May be repeated for credit.

597. Preparation for Ph.D. Qualifying Examinations. May not be applied toward the M.S. degree requirements. May not be repeated. S/U grading.

598. Research for and Preparation of M.S. Thesis (4 to 12 units). Two 598 courses (or 598 and 596 combined) may be applied toward the M.S. degree requirements. May be repeated. S/U grading.

599. Research for Ph.D. Dissertation (4 to 12 units). Prerequisite: successful completion of screening examinations. Research for and preparation of Ph.D. dissertation. May be repeated. S/U grading.

Surgery

72-125 Center for the Health Sciences, (213) 825-7017

Chair
W. Eugene Stern, M.D.

Executive Vice Chair
Eric W. Fonkalsrud, M.D.

Vice Chairs
E. Carmack Holmes, M.D. *(Sepulveda VA)*
Edward P. Passaro, Jr., M.D. *(Wadsworth VA)*
S. Eric Wilson, M.D. *(Harbor-UCLA)*
George J. Wittenstein, M.D. *(Olive View)*

Scope and Objectives

The Department of Surgery instructs medical students during all four years of medical school. Students are expected to obtain a broad knowledge of diseases treated by surgical means, to understand the pathology of these conditions, the therapy that may be applied, and the anticipated results of treatment. They are also encouraged to learn about the impact of surgical illness on the patient and the patient's family and environment.

Third-year students participate in a 12-week core clerkship in clinical surgery. UCLA, Wadsworth VA, and Harbor-UCLA Medical Centers provide individual sections, each of which has a special orientation depending on the patient population and the individual staff. During the fourth year, students may elect to take additional clinical clerkships with increasing responsibilities. Additional in-depth elective courses are offered in collaboration with other departments.

For further details on the Department of Surgery and a listing of the courses offered, see the *Announcement of the UCLA School of Medicine*.

School of Nursing

Ada M. Lindsey, Dean

16

The excellent reputation of the UCLA School of Nursing has been achieved by the faculty, students, and graduates. The school is recognized nationally and internationally for its fine undergraduate and graduate programs. Faculty and administration are proud that a new educational opportunity at UCLA, a Doctor of Nursing Science degree program, is expected to be available for enrollment in Fall Quarter 1987.

Faculty members are selected for their expertise, both in clinical areas of specialization and in research, and for their ability to transmit knowledge. In addition, highly skilled nurses practicing in many clinical settings are affiliated with the school and participate in the educational process.

In the curriculum, strong emphasis is placed on clinical competency and research. Faculty members are particularly cognizant of the needs of patients who represent a broad ethnic, racial, and cultural spectrum and have provided an emphasis on cultural diversity within the curricula. The School of Nursing has especially good technological support established to enhance the learning; for example, computer, media, and print resources are available for student use and are integral to the environment.

Students are selected for their capabilities, background, and potential for contributions to the profession and are prepared as highly competent professional nurses. Alumni, employed at all levels in many employment settings in different geographical areas, well represent the School of Nursing.

Outstanding educational opportunities are offered by the school. Faculty and administration are proud of the accomplishments and recognition of the school and its graduates and that the school continues to be in the forefront in preparing the future leaders in nursing.

The UCLA School of Nursing gives direction to interested potential applicants through monthly open counseling sessions. If you are interested in the academic programs offered, you are urged to attend a counseling session or request a copy of the *Announcement of the UCLA School of Nursing* by writing to the Student Affairs Office, School of Nursing, 2-200 Louis Factor Building, UCLA, Los Angeles, CA 90024 (825-7181).

History and Accreditation

The School of Nursing was authorized by The Regents of the University in 1949 as one of the professional schools of the UCLA Medical Center. This action paved the way for the development of an undergraduate basic program in nursing and made possible the establishment of a graduate program leading to the Master of Nursing degree. The baccalaureate program has been continuously approved by the California Board of Registered Nursing since 1949. The School of Nursing became an agency member of the Department of Baccalaureate and Higher Degree Programs of the National League for Nursing in 1952. The Accrediting Service of the National League for Nursing has granted full accreditation to both programs since 1954.

Degrees Offered
Bachelor of Science in Nursing (B.S.)
Master of Nursing (M.N.)

Bachelor of Science Degree

The baccalaureate program leading to the Bachelor of Science degree provides for a close interweaving of general and professional education. The physical, social, and emotional health aspects of nursing are emphasized throughout the curriculum. Clinical nursing experience under the guidance of faculty members is provided in hospitals, outpatient clinics, homes, and community health centers.

Credit by examination is available to qualified students on review of previous education.

The School of Nursing curriculum affords the opportunity to sit for the California Registered Nurse licensing examination at the conclusion of your junior year. You must maintain a minimum GPA of 3.0 each quarter and must petition the assistant dean to enroll beyond the four quarter courses usually permitted. Since many states do not reciprocally honor California nursing licenses obtained prior to completion of a baccalaureate degree, students who plan to follow this sequence should contact the assistant dean for Student Affairs before the beginning of the freshman year for more complete details.

Admission

The School of Nursing strives to attain a culturally and ethnically diverse student population. Admission, beginning in the junior year, is based on scholarship, diverse life experiences, and disadvantagement. You must have completed a minimum of 84 quarter units with an overall grade-point average of 2.8 or better and have three letters of recommendation. Diverse life experiences, including previous employment, volunteer work, and community service which reflect leadership, responsibility, multicultural involvement, multilingual abilities, and other unusual skills and knowledge are evaluated. Consideration is also given to social and economic disadvantagement such as educational background, heavy work schedule during school, housing conditions, family responsibilities, and mastery of physical handicaps. Completed applications should reflect clearly identified career goals and documentation of your potential in nursing.

Applications for acceptance to the baccalaureate program must be filed no later than November 30 for the next Fall Quarter. The School of Nursing admits 25 students each Fall Quarter. In addition to the regular *UC Undergraduate Application Packet* which must be filed with the Office of Undergraduate Admissions and Relations with Schools, an application must be filed with the school by November 30. This application is available directly from the Student Affairs Office, School of Nursing, 2-200 Louis Factor Building, UCLA, Los Angeles, CA 90024.

You can find a discussion of the prenursing curriculum and prehealth advising in "Preparing for a Professional School" in Chapter 5.

Degree Requirements

The Bachelor of Science degree in Nursing is granted on fulfillment of the following requirements.

(1) You must complete 45 required courses (180 quarter units) of college work and satisfy the general University requirements.

(2) Of the required 45 courses, at least 21 courses must be in general education, including the courses listed under the "Prenursing Curriculum" in Chapter 5 on the College of Letters and Science.

(3) You must complete at least 25 courses (100 quarter units) of upper division coursework toward the degree, including Nursing 101, 104A, 104B, M105, 109, 120A through 120F, 184, 190A, 190B, 192, 193, 195, four electives, Public Health 100A, 180.

(4) You must maintain an overall grade-point average of C (2.0) or better in all courses taken while a student in the School of Nursing.

(5) You must complete all required nursing courses in the school and receive a grade of C or better in the following courses: Nursing 101, M105, 109, 120A through 120F, 190A, 190B.

(6) You must have been enrolled in the School of Nursing during your final three quarters in residence; the last nine courses must be completed while so enrolled.

Study Lists: You may not enroll in more than four courses per quarter unless a petition is approved in advance by the assistant dean.

Honors

Dean's Honors

Dean's Honors are awarded annually to undergraduate students completing the academic year with distinction. To be eligible you must achieve an overall grade-point average of 3.75 on a minimum of 36 graded units of work completed during the academic year.

Honors with the Bachelor's Degree

College honors are awarded at graduation to students with a superior overall grade-point average. The levels of honors and the requirements for each level are: *Summa cum laude,* an overall average of 3.85; *Magna cum laude,* 3.65; *Cum laude,* 3.5. To be eligible for college honors, you must have completed at least 90 University of California units for a letter grade.

School of Nursing Faculty Award

The Faculty Award for excellence in nursing, established in 1965, is awarded to a student graduating from the bachelor's and the graduate program with the highest grade-point average in all nursing courses.

Master of Nursing Degree

The School of Nursing offers graduate study leading to the Master of Nursing (M.N.) degree. Students contribute to improving nursing care through the application of advanced knowledge in nursing research, theory, and clinical practice. Throughout the program, the structure for nurse-client relationships and research is provided by the nursing process. This is a deliberative problem-solving activity which includes assessment, diagnosis, intervention, and evaluation. In addition to their clinical specialization sequence, students may elect courses in teaching consultation and/or administration as preparation to meet their specific career goals.

Admission

(1) You must have graduated from a recognized college or university having a National League for Nursing-accredited baccalaureate nursing program satisfactory to the School of Nursing and to the Graduate Division. If you have completed other curricula (e.g., graduated from an international institution), you may be required to enroll in certain undergraduate nursing courses which generally may not be applied toward requirements for advanced degrees.

(2) You must have status as a licensed registered nurse in the State of California.

(3) An upper division statistics course or a lower division statistics course with content equivalent to Public Health 100A must be completed before entering the school.

(4) An upper division nursing research course, taken at an NLN-accredited institution and equivalent to Nursing 193, must be completed before entering the school.

(5) Professional and/or academic competence in nursing attested through three letters of recommendation is required.

(6) A satisfactory scholarship record is required.

(7) Since written and verbal communication skills are basic to the practice of nursing, it is essential that students read, write, and speak English well. International applicants from countries in which English is not the primary language and medium of instruction, whether licensed registered nurses in the United States or not, are required to pass the Test of English as a Foreign Language (TOEFL) with a score of 550 or better. Refer to "Proficiency in English" under "Graduate Admission" in Chapter 3 for further information.

(8) All international applicants who are not licensed registered nurses in the United States, prior to consideration for admission, are required to pass the Committee on Graduates of Foreign Nursing Schools (CGFNS) examination.

In addition to the Graduate Division application, you must also file the Application for Admission to Graduate Study in the School of Nursing, available through the Student Affairs Office, School of Nursing, 2-200 Louis Factor Building, UCLA, Los Angeles, CA 90024. Application deadlines are June 1 for Fall Quarter and December 30 for Spring Quarter. For information on admission to graduate standing, see Chapter 3.

Major Fields or Subdisciplines

The School of Nursing offers graduate studies in the following areas.

Maternal-Child Health: Maternity, pediatrics.

Medical-Surgical Nursing: Cardiopulmonary, general medical-surgical, nursing administration, oncology.

Primary Ambulatory Care / Family Nurse Practitioner: Family, gerontology, occupational health.

Psychiatric-Mental Health Nursing: Child mental health, community mental health, consultation liaison nursing, ethnic mental health, psychiatric nursing.

You may choose to add preparation in education or administration to your clinical requirement.

Course requirements for each specialty area are detailed below.

Degree Requirements

(1) A minimum of 10 courses (40 units) in the 100, 200, 400, and 500 series is required; eight of the courses (32 units) must be taken in the School of Nursing, with five (20 units) in the 200 and 400 series. Additional coursework is required to fulfill the requirements for certain areas of specialization. A total of eight units of 500-series courses may be applied toward the total course requirement for the degree.

(2) A minimum grade-point average of 3.0 is required. A grade of B is required in graduate clinical nursing courses in order to advance to the next clinical course in a series.

(3) A minimum of three quarters of full-time enrollment (eight units per quarter) is required for academic residence.

(4) Successful completion of a comprehensive examination or a thesis is required.

Course Requirements

You must successfully complete a minimum of one course from each of the following areas:

(1) Research in nursing (Nursing 204).

(2) Nursing theory (Nursing 203, 210, 211, 212, M217, 221, 222, 223, 224, 225).

(3) Cultural diversity (Nursing M158, 196, M217 if not used to meet the nursing theory requirement, 250, 251, Anthropology 131, 134, 135A, 135B, 155, M234Q, M236P, 261, 262, M263Q, Asian American Studies 200A or 200B, Psychiatry 240 — student must petition to the School of Nursing before enrolling to receive credit, Public Health 174E, 270, M271, M276, M283G, Sociology 124, 151, or 155).

(4) Clinical practice (Nursing 401, 402A, 402B, 403, 405, 414, 415, 416, 417, 421A through 429C, 440A, 440B, 441A, 441B). Courses selected from clinical practice must be completed in accordance with the requirements for clinical courses listed under each specialization.

(5) Clinical specialization.

Additional course requirements vary according to specialty area listed below.

Maternal-Child Health

Maternity Clinical Nursing Specialty: The goal of this specialty is to develop clinical specialists who take a leadership role in the nursing

management of the childbearing family in all phases of the reproductive cycle. Students develop individualized plans of study to meet their personal and professional goals. Guided options include management of low-risk pregnancy, alternative birthing options, perinatal nursing, and neonatal intensive care. This specialty requires a minimum of 10 courses, including Nursing 203, 204, one cultural diversity course, 212, 223, 422A, 422B, 422C.

Pediatric Clinical Nursing Specialty: The goal of this specialty is to develop clinical specialists who take a leadership role in the nursing management of a selected group of children and families. Guided options include children and families experiencing acute/critical illness, chronic illness, developmental disabilities, neonatal adaptation, or oncology. This specialty requires a minimum of 10 courses, including Nursing 203, 204, one cultural diversity course, 212, 223, 421A, 421B, 421C.

Medical-Surgical Nursing Specialty: The graduate of the medical-surgical nursing program is a specialist who takes leadership in the care of one or more specific groups of clientele whose health problems may be classified according to biological systems, pathology, acuity levels, medical treatment modalities, physical functions, or psychophysiological functions. Graduate students choose from existing clinical options (i.e., cardiopulmonary, general medical-surgical nursing, nursing administration, and oncology), and within each option they develop individualized plans of study to meet personal and career objectives.

Cardiopulmonary: This option is designed to prepare clinical nurse specialists to meet an increasing demand for improved health services for patients with cardiopulmonary diseases. Several years of experience in acute coronary/pulmonary care settings (medical and/or surgical) and/or in cardiac/pulmonary rehabilitation is highly recommended before entering this option. Graduates are expected to function as cardiopulmonary nurse clinicians, teachers, consultants, or research associates. This option requires a total of 10 courses, including Nursing 204, 210 or 211, one cultural diversity course, 415, 423A, 423B, 423C.

General Medical-Surgical: The goal of this option is to prepare clinicial specialists in general medical-surgical nursing. Students are encouraged to develop their own clinical focus in areas of acute chronic illness (e.g., critical care, trauma nursing, diabetes, neurological nursing, rehabilitation, geriatrics). At least two years of prior experience in medical-surgical nursing is highly recommended. This option requires a total of 10 courses, including Nursing 204, one theory course, one cultural diversity course, 423A, 423B, 423C, one elective course, and one course from 203, 401, or 403.

Nursing Administration: This option focuses on advanced clinical practice, organizational theory, health services and financial management, and the practice of nursing administration. Students gain the basic knowledge and skills required of nursing administrators in a volatile health care environment. Nursing content develops the knowledge of advanced clinical and management practice needed to plan and evaluate nursing services. Health services and financial management content provides a framework for organizing, directing, and coordinating health care resources. The program requires six quarters of full-time study, a summer session, and a three-month spring administrative residency. Stipends for the residency program are provided by the institutions in which the residency is completed.

In addition to the required courses in the School of Nursing, students in this program take courses in the School of Public Health, Division of Health Services Management, and the Graduate School of Management. Nursing administration students may select medical-surgical nursing as their clinical specialization. This program requires a total of 16 courses, including Nursing 204, one theory course, one cultural diversity course, 423A (eight units), 423B (eight units), 478A-478B, and seven health services/financial management courses (Management 403, 408, Public Health 130, 131, 430, 431 or Management 412, 436).

Oncology: The comprehensive care of the cancer patient requires that nurses be prepared in theory and skills to minister to the patient's total needs — physical, psychological, emotional, social, and spiritual. This option is designed to prepare clinical nurse specialists for the interdisciplinary team responsibility for cancer prevention, treatment, and rehabilitation. In addition to clinical competence in preventive, detection, and rehabilitative phases of cancer care, emphasis is directed to the preparation of the clinician in research, teaching, administration, and consultation. This option requires a total of 11 courses, including Nursing 203, 204, one cultural diversity course, 401, 416, 417, 423A, 423B, 423C.

Primary Ambulatory Care/Family Nurse Practitioner Specialty: This specialty prepares family nurse practitioners to take a leadership role in the care of individuals throughout the lifespan. The focus is on collaborative practice to assure comprehensive quality health care and health maintenance in outpatient, work site, nursing home, or home health settings. Emphasis is on the assessment, treatment, and evaluation of the client's responses to actual or potential health problems which may be chronic or acute and include primary prevention. Special options are available in occupational health or gerontology, with additional coursework.

Gerontology: Courses in the gerontology nurse practitioner option focus on the knowledge and skills needed for leadership roles in primary health care for older adults in ambulatory and long-term care facilities, at home, and in alternative settings. Interested students should request the fact sheet for this option.

Occupational Health: This option integrates principles of occupational health assessment and care with primary ambulatory care of the adult. Practitioners evaluate the individual as seen within the work setting as well as within the family group. Primary focus and emphasis is on health status assessment, health promotion, illness/accident prevention, hazard control, screening, surveillance, and rehabilitation of adult workers.

Requirements are met through a combination of courses and experiences specific to the delivery of occupational health care services. Interested students should request the fact sheet for this option.

Psychiatric-Mental Health Nursing Specialty: The primary intent of this specialization is the preparation of clinicians who can function in leadership, educational, research, practice, and consultative roles in mental health settings. The specific bases for practice are theories and research on personality development, function and dysfunction, biopsychosocial theories of mental illness, and psychotherapeutic approaches to nursing assessment, diagnosis, and treatment of clients' responses to mental health problems.

This specialty encompasses two subspecialties: community mental health (nurse therapist and consultant to health agencies) and psychiatric nursing (nurse therapist who serves individuals, groups, and families with acute or chronic mental health problems). Options within the subspecialties include child mental health (needs and problems of various age groups of children and their families), consultation liaison nursing (needs and problems of clients and consultees in general medical inpatient and outpatient settings), and ethnic mental health (health needs and problems of selected ethnic groups).

Community mental health subspecialty requires Nursing 204, one theory course, one cultural diversity course, 405, 424A, 424B, 440A-440B, 441A-441B.

Psychiatric nursing subspecialty requires Nursing 204, one theory course, one cultural diversity course, 405, 424A, 424B, 424C, one elective course.

Child mental health option requires courses listed under the psychiatric nursing subspecialty plus Nursing 234, or courses listed under the community mental health subspecialty plus Nursing 234.

Consultation liaison nursing option requires Nursing 204, one theory course, one cultural diversity course, 403, 405, 424A, 424B, 440A-440B, 442.

Ethnic mental health option requires Nursing 204, one theory course, 260, 403, 405, 424A, 424B, 440A-440B, 441A-441B, five cognate courses, a seminar in cultural concepts.

Thesis Plan

If you choose the thesis plan, you normally select a thesis committee by the beginning of your third quarter or following completion of Nursing 204 and 205A or 205B. You are expected to complete the thesis within the normal five- to seven-quarter time period. Completed theses should be filed approximately two weeks before the awarding of the degree.

Comprehensive Examination Plan

The comprehensive examination is given in written form and is scheduled each quarter. You are eligible to take the examination during the quarter in which you are advanced to candidacy and may repeat the examination, in its entirety or in part, twice. You must complete all requirements for the degree within one calendar year after advancement to candidacy.

Upper Division Courses

101. Introduction to the Art and Science of Nursing (8 units). Lecture, four hours; discussion, two hours; laboratory, 12 hours; autotutorial laboratory/seminars, variable. An introduction to nursing theory and practice. Content includes the following modules: nursing process, pharmacology, interpersonal and technical skills. Methodology includes laboratory, lectures, discussion, seminars, autotutorial laboratory, and clinical application.
Ms. Roach and the Staff

104A. The Behavior of Man in Health and Illness. An examination of the health-illness continuum from the framework of social and biological sciences. Content includes role theory, developmental theory, transcultural communication theory, and other theories relevant to nursing practice. Ms. Vasta

104B. The Behavior of Man in Health and Illness. Prerequisite: course 104A. An examination of the health-illness continuum from the framework of illness as a stressor and the possible responses to such stress. Content includes anxiety, pain, cognitive disturbances, loss, and other responses relevant to nursing practice. Ms. Vasta

M105. Human Physiology. (Same as Physiology M105.) Lecture, four hours; discussion, one hour. Prerequisite: nursing student standing or consent of instructor. Required of third-year nursing students. Lecture and discussion, with emphasis on a correlative approach to anatomy and physiology of the human body. Ms. Seraydarian

109. Communication in Health Care. Lecture, two hours; laboratory, three hours. Prerequisite for nonnursing majors: consent of instructor. Study of basic communication and group process theory and its application to practice. Laboratory experience, with emphasis on development of each individual's ability to communicate effectively in a dyad and in a small group. Ms. Topf

120A. Clinical Nursing. Lecture, four hours; laboratory, 24 hours. Prerequisites: courses 101, M105, 109. Clinical application of nursing theory in community situations: acute care, convalescent, and ambulatory. Theoretical content includes pathophysiology, pharmacology, and treatment modalities. Application of the theoretical concepts of growth and development related to the nursing care of the child and his family. Ms. Bowden (five weeks)

120B. Clinical Nursing. Lecture, four hours; laboratory, 24 hours. Prerequisites: courses 101, M105, 109. Clinical application of nursing theory in community situations: acute care, convalescent, and ambulatory. Theoretical content includes pathophysiology, pharmacology, and treatment modalities. Application of the theoretical concepts of reproduction to the nursing care of the family. (Five weeks)

120C. Clinical Nursing. Lecture, four hours; laboratory, 24 hours. Prerequisites: courses 101, M105, 109. Clinical application of nursing theory in community situations: acute care, convalescent, and ambulatory. Theoretical content includes pathophysiology, pharmacology, and treatment modalities. Application of the theoretical content related to the nursing care of the patient undergoing medical interventions.
Ms. Roach (five weeks)

120D. Clinical Nursing. Lecture, four hours; laboratory, 24 hours. Prerequisites: courses 101, M105, 109. Clinical application of nursing theory in community situations: acute care, convalescent, and ambulatory. Theoretical content includes pathophysiology, pharmacology, and treatment modalities. Application of the theoretical content related to the patient undergoing surgical interventions.
Ms. Grech (five weeks)

120E. Clinical Nursing. Lecture, four hours; laboratory, 24 hours. Prerequisites: courses 101, M105, 109. Clinical application of nursing theory in community situations: acute care, convalescent, and ambulatory. Theoretical content includes pathophysiology, pharmacology, and treatment modalities. Application of mental health content related to the nursing care of individuals, groups, or communities.
Ms. Vasta (five weeks)

120F. Clinical Nursing. Lecture, four hours; laboratory, 24 hours. Prerequisites: courses 101, M105, 109. Clinical application of nursing theory in community situations: acute care, convalescent, and ambulatory. Theoretical content includes pathophysiology, pharmacology, and treatment modalities. Application of community health concepts to nursing care in public health agencies. (Five weeks)

M158. Health in Culture and Society. (Same as Anthropology M168.) Prerequisite: upper division standing. An examination of the theories and methods of medical anthropology in relation to cross-cultural health systems, role networks, attitude and belief systems of the participants. Emphasis on interaction networks in health care systems.

184. Evolution and Dynamics of the Nursing Profession. A study of the evolution of nursing, focusing on historical, ethical, moral, legal, and institutional ramifications of nursing practice. In addition, the rights, obligations, and societal and institutional expectations of the professional nurse.
Ms. Ver Steeg

188. Seminar in Physiology (2 units). Prerequisite: course M105 or equivalent. Student presentation of selected topics in physiology based on recent monographs, review articles, and original research papers. Topics designed to amplify and extend information presented in course M105 lectures. May be repeated for credit. Ms. Seraydarian

189. Human Sexuality. Lecture, three hours; discussion, one hour. Prerequisite: consent of instructor. Lectures, discussions, and case presentations considering human sexuality, its joys and pleasures, pitfalls and problems. An interdisciplinary approach encompassing anatomic, physiologic, psychologic, and social aspects of heterosexual and homosexual relationships, including development of gender identity, intercourse, pregnancy, abortion, contraception, and venereal disease. Ms. Reeder

190A. Selected Area of Clinical Concentration (6 units). Lecture, two hours; laboratory, 20 hours. Prerequisites: courses 101, 104A, 104B, 120A through 120F. Beginning concentration in a clinical area of student's choice.

190B. Selected Area of Clinical Concentration (6 units). Lecture, two hours; laboratory, 20 hours. Prerequisites: courses 101, 104A, 104B, 120A through 120F, 190A. Beginning concentration in a clinical area of student's choice.

192. Physical Assessment of the Adult. Discussion, one hour; laboratory, three hours; individual study, three hours minimum. Prerequisites: courses 101, M105, 109. Designed to provide in-depth review and synthesis of the physical assessment skills and knowledge introduced in prerequisite and concurrent nursing courses. Individual study, using audiovisual aids in the laboratory and the required text, is mandatory and is supplemented by one hour of discussion per week. Emphasis on (1) reviewing and application of health history taking, (2) performing a comprehensive physical examination, (3) identifying deviations from the usual or anticipated anatomical and organ conditions, and (4) analyzing and reporting collected data. Ms. Stuart and the Staff

193. Introduction to Research. An introduction to planning a research project based on a simple question. Rules for definition of terms, alternative methods of writing purposes, selecting a sample, choosing a data collection instrument, planning for data analysis, protection of human rights, reading research reports, and writing a research proposal.

194. Computer Programs in Nursing Education and Health Care. (Formerly numbered 198A.) Lecture, two hours; laboratory or field, four hours. An introductory course in the review and evaluation of computer programs in nursing education and health care settings. Examination of programs in view of existing criteria in education and requirements for meeting people's health care needs. P/N grading.
Ms. Chang

195. Principles of Change and Change Agent Roles. Lecture, two hours; discussion, two hours. Theories and methods of change and their application to nursing. Principles of leadership, teaching-learning, health delivery systems, organization of nursing care, and patient advocacy. Mr. Clochesy

196. Health Care Problems of Minority Group Members. Prerequisite: Sociology 1. Description and discussion of the special health care problems that members of minority groups face which may be related to socioeconomic status as well as ethnic background and subcultural differences. Ms. Tien

199. Special Studies in Nursing (2 to 16 units). Prerequisites: senior standing and/or consent of instructor. Individual study of a problem in the field of nursing. May be repeated for credit, but only four units may be applied toward the degree requirements. P/NP or letter grading.

Graduate Courses

Research in Nursing, Nursing Theory, and Cultural Diversity

203. Theoretical Frameworks for Nursing Practice. Comparative study of selected conceptual models of nursing and the recipient of nursing, with particular emphasis on the regulatory model, the adaptation model, the supplementary model, and the complementary model. Ms. Derdiarian

204. Research in Nursing: An Advanced Course. Prerequisite: course 193 or equivalent upper division basic research methodology course. Complex research designs and analysis of multiple variables, with emphasis on techniques for control of variables, data analysis, and interpretation of results. Analysis in depth of the interrelationship of theoretical frameworks, design, sample selection, data collection instruments, and data analysis techniques. Content discussed in terms of clinical nursing research problems. Ms. Vredevoe and the Staff

205A. Qualitative Research Methods in Nursing. Prerequisite: course 204. Emphasis on nursing research designs utilizing the field method approach, ethnomethodology, and/or inductive methods.

205B. Quantitative Research Methods in Nursing. Prerequisite: course 204. Emphasis on nursing research designs requiring statistical analysis of data. Ms. Vredevoe

210. Respiratory Physiology as It Relates to Nursing. Lecture, three hours; discussion, one hour; seminars. Prerequisite: upper division course in human physiology. An advanced treatment of the topic presented in lectures and seminars, with emphasis on current research. Application of knowledge to nursing problems. Ms. Seraydarian

211. Cardiovascular Physiology as It Relates to Nursing. Lecture, three hours; discussion, one hour; seminars. Prerequisite: upper division course in human physiology. An advanced treatment of the topic presented in lectures and seminars, with emphasis on current research. Application of knowledge to nursing problems. Ms. Seraydarian

212. Discontinuities in Family Health during the Reproductive Years. Lecture, two hours; discussion, one hour. An overview of selected problems with health connotations that are potentially disruptive to the family during childbearing years. Selected problems examined in depth. Pertinent variables affecting the family's definition of the situation, resources, strategies for coping, and utilization of professional services; their relevance for nursing practice. Ms. Koniak and the Staff

M217. Medical Anthropology. (Same as Anthropology M263.) Lecture, three hours. Prerequisite: course M158 or consent of instructor. Any of the topics covered in course M158 are selected each quarter for intensive literature review and independent projects. May be repeated for credit.

221. Theoretical Frameworks for Developmental Problems, Middle and Later Years. Aspects of life span development relevant to understanding health needs in middle and later years. Changes in biological, cognitive, and psychosocial processes; implications for prevention and rehabilitative care. Ms. Putnam

222. The Concept of Grief and Loss. Lecture, three hours; laboratory, two to four hours. Prerequisite or corequisite: clinical nursing course. The concepts and theories of grief and loss, with particular emphasis on the loss of a significant other. Discussions about death and the dying person, with the intent of assisting the care giver to deal more effectively with a person and/or family involved in a life-threatening experience. Ms. van Servellen and the Staff

223. Management of Developmental Problems, Early Years. Lecture, two hours; discussion, two hours. Study of selected human developmental theories, hypotheses, and concepts as they relate to children. Problems relevant to nursing examined through the critique of pertinent literature. Ms. Nash, Ms. Verzemnieks

224. Problems in Patient Motivation. An exploration of the phenomena which may occur when a person assumes the role of a sick patient. Ms. Topf

225. Problems in Environmental Management. The prevention and treatment of nursing problems related to conditions of the psychophysical and social environment.

234. Issues in Health Care. Prerequisite: consent of instructor. A comprehensive course dealing with present and future views of health care and the roles of health team members as viewed by society and influenced by societal values. Selected health care issues debated by students utilizing an in-depth literature review on the issue. Ms. Ver Steeg

250. Seminar: Nursing in Other Cultures. Prerequisite: consent of instructor. Discussion of anthropological principles which affect nursing care in a particular cultural environment. Individual research projects based on the medical problems found in such an environment and the projected nursing interventions relative to those findings. Ms. Tien

251. Nursing Care to Ethnic People of Color in the United States. Prerequisites: course 196 and graduate standing, or consent of instructor. Selected theories from nursing and other sciences and their application to the delivery of intracultural and transcultural nursing care. Emphasis on value orientations, sociocultural perceptions and cognitions of health and illness, and ethnomedical health practices as predictive factors in analyzing health care delivery to ethnic people of color. Ms. Tien

260. Seminar in the Integration of Cultural Concepts and Mental Health Nursing (2 units). Seminar, two and one-half hours (eight weeks). Prerequisites: course 424B, a minimum of two cultural diversity cognate courses, consent of instructor. Corequisite: course 403. Discussion of the concepts of culture, language, life-style, and health practices which influence the practice of primary care among Asian/Pacific, black, Hispanic/Latino, and Native American people. Ms. Tien

264. Seminar in Primary Ambulatory Care. Corequisites: courses 402A and/or 402B, or consent of instructor. Discussion of the concepts of team practice, interprofessional and intraprofessional relationships, legal issues, and the socioeconomic aspects of primary care. Ms. Ver Steeg

Clinical Practice

401. Nursing Assessment and Intervention. Lecture, two hours; laboratory, four to eight hours. Prerequisite or corequisite: course 203. Instruction and experience in the systematic assessment of patients for the identification of nursing problems. Discussion and evaluation of major modes of interventive practice. Ms. Derdiarian

402A-402B. Primary Diagnosis for Nurse Practitioners. Lecture, four hours; laboratory, four hours; demonstration/practice, two hours. Prerequisites: successful completion of anatomy and physiology pretest, consent of instructor. Collection, analysis, and reporting of data used by the nurse practitioner in identification of patient problems. Principles and practice in history taking, physical examination, laboratory, and other diagnostic methodology. Pathology and pathophysiology integrated in a systems approach. Ms. Stuart and the Staff

403. Physical Assessment for Clinical Practice. Prerequisite: consent of instructor. An introductory study of the basic techniques of history taking and physical examination which are used in clinical practice as part of the total nursing assessment process, including theory, demonstration, and practice of physical assessment methodology. Ms. Stuart and the Staff

404. Comprehensive Group Theory. Lecture, two hours; laboratory, two hours. An in-depth study of group dynamics and group therapy, applicable to any health service area, with emphasis on the study and application of group theory and practice relevant to nursing. Students gain in-depth knowledge of group dynamics and group therapy, know how to apply the above theory to any area of nursing, develop a beginning ability to function as both leader and participant in the area of group dynamics and/or group therapy, and develop the ability to evaluate the effectiveness of group therapy. Ms. van Servellen

405. Assessment in Psychiatric Nursing. Lecture, two hours; laboratory, six to eight hours. A preparatory course for advanced clinical practice. A critical examination of the concepts and strategies which affect assessment of psychological behavior. Ms. Odum and the Staff

M410A. Nursing Care of the Developmentally Disabled. (Same as Psychiatry M472A.) Lecture, one hour; discussion, one to two hours; laboratory, 10 hours minimum. Prerequisite: consent of instructor. Study of the handicapping conditions of childhood and their effects on the individual and the family. Content based on normative developmental models with consideration for sociocultural diversity. Emphasis on prevention, systematic assessment, and planning of care for the individual and family. Introduction to the implementation of intervention strategies. Series of three courses integrates didactic material and clinical experience. Ms. Betz (F)

M410B. Nursing Care of the Developmentally Disabled. (Same as Psychiatry M472B.) Lecture, one hour; discussion, one to two hours; laboratory, 10 hours minimum. Prerequisites: course M410A and/or consent of instructor. Study of the philosophical and conceptual models affecting care delivery for the developmentally disabled. Emphasis on intervention strategies necessary for primary, secondary, and tertiary prevention. Ms. Betz (W)

M410C. Nursing Care of the Developmentally Disabled. (Same as Psychiatry M472C.) Lecture, one hour; discussion, one to two hours; laboratory, 10 hours minimum. Prerequisites: course M410B and/or consent of instructor. Exploration and participation in the assessment, planning, and delivery of health care to the developmentally disabled in a variety of settings. Emphasis on the expanded role of the nurse. Ms. Betz (Sp)

414. Current Perspectives in Respiratory and Cardiovascular Nursing (2 units). Lecture, one hour; discussion, one hour. Exploration of selected problems, trends, and issues in respiratory and cardiovascular pharmacology, with emphasis on their significance for the clinical nurse specialist. Ms. Cooper

415. Assessment in Respiratory and Cardiovascular Nursing. Introduction to the basic methods of assessing respiratory and cardiovascular function in health and illness, with emphasis on their application in clinical nursing practice. Ms. Dracup

416. Oncology and Treatment of Cancer. Lecture, two hours; discussion, one hour; laboratory, eight to 10 hours. Prerequisite: consent of instructor. Basic knowledge from biological, behavioral, and medical sciences for understanding the development, diagnosis, treatment, and prognosis of cancer. Nursing care management related to diagnostic and treatment modalities. Ms. Sarna

417. Systematic Approach to Oncologic Nursing. Lecture, two hours; discussion, two hours; laboratory, eight to 10 hours. Prerequisites: course 416, consent of instructor. Nursing management of persons with various types of malignancies. Emphasis on the assessment of special physical and psychosocial problems of patients with diagnoses of cancer in a specific site. Provides students with theoretical and technical skills necessary for the interventions of these problems. Ms. Sarna

421A. Clinical Nursing Care of Children. Discussion, two hours; laboratory, 16 to 20 hours. Prerequisites: courses 203, 223. The application of a theoretical model and the nursing process to a specific, identifiable patient population in a pediatric setting, with special emphasis on assessment and diagnosis. Content covers each aspect of the nursing process. Ms. Verzemnieks and the Staff

421B. Advanced Clinical Nursing Care of Children (8 units). Discussion, three hours; laboratory, 20 to 30 hours. Prerequisite: course 421A. The role of the clinical specialist in pediatric nursing, with emphasis on the practitioner core of the role. Students identify a selected patient population for whom they plan and implement the nursing process from assessment through evaluation. Content includes theoretical and practical issues related to the clinical specialist role. Ms. Verzemnieks and the Staff

421C. Clinical Specialization in Nursing Care of Children (8 units). Discussion, three hours; laboratory, 20 to 30 hours. Prerequisite: course 421B. Required for the pediatric clinical nursing specialty. The practitioner role is continued in this course to foster consolidation of knowledge and skills. Emphasis on the consultation, staff development, research, and patient advocacy dimensions of the clinical nurse specialist role. Ms. Verzemnieks and the Staff

422A. Clinical Maternity Nursing. Discussion, three hours; laboratory, 16 to 20 hours. Prerequisites: one theory course, consent of instructor. Emphasis on developing skill in the utilization of the assessment, intervention, and evaluation phases of the nursing process with childbearing families. Examination of family-centered orientations and theoretical models as they relate to the development of nursing practice and care giving. Ms. Ludington and the Staff

422B. Advanced Clinical Maternity Nursing (8 units). Discussion, three hours; laboratory, 20 to 30 hours. Prerequisite: course 422A. Knowledge and clinical expertise refined and extended, with emphasis on high-risk conditions in the reproductive process. Emphasis on the prescriptive, intervention, and evaluative phases of the nursing process and on teaching, counseling skills, and collegial relations. Ms. Koniak and the Staff

422C. Clinical Specialization in Maternity Nursing (8 units). Discussion, three hours; laboratory, 20 to 30 hours. Prerequisite: course 422B. Further development of clinical expertise in areas of the high-risk and/or normal conditions encountered during the reproductive cycle as they relate to the phases of the nursing process. Emphasis on coordination of care, patient and family education, counseling, and consultation. Ms. Koniak

423A. Clinical Medical-Surgical Nursing (8 units). Lecture, four hours; laboratory 12 hours. Prerequisites: course 204, one theory course. An advanced course in the theory and practice of the nursing care of medical-surgical adults. Major emphasis on the introduction of assessment and diagnosis of nursing problems within the UCLA conceptual framework for nursing practice. Focus on the assessment of physiological and psychological changes in clients as they move on the health-illness continuum. Ms. Nyamathi and the Staff

423B. Advanced Clinical Medical-Surgical Nursing (2 to 8 units). Lecture, two hours; seminar, 90 minutes; laboratory, 15 to 30 hours. Prerequisite: course 423A; for nonmedical-surgical specialization students: consent of instructor (may enroll for two units). Continued refinement of the nursing process and extension of professional knowledge and skills with a selected patient population. Emphasis on selection, utilization, and evaluation of interventions for nursing problems of medical-surgical patients. Students select a specific patient population for concentration in the course: (1) cardiopulmonary, (2) general medical-surgical, (3) oncology. Ms. Gonzales and the Staff

423C. Clinical Specialization in Medical-Surgical Nursing (2 to 8 units). Lecture, two hours; seminar, 90 minutes; laboratory, 15 to 30 hours. Prerequisite: course 423B; for nonmedical-surgical specialization students: consent of instructor (may enroll for two units). Required for the medical-surgical specialization. Examination and implementation of the clinical nurse specialist role with a specific patient population and/or within a particular practice setting. Emphasis on the functional aspects of the role: practitioner, educator, consultant, researcher. Students select a specific patient population for concentration in the course: (1) cardiopulmonary, (2) general medical-surgical, (3) oncology. Ms. Omery and the Staff

424A. Clinical Psychiatric Nursing. Discussion, three hours; laboratory, eight to 10 hours. Prerequisites: course 405, consent of instructor. Focus on the process of psychotherapy, with specific emphasis on the knowledge and skills of assessment and diagnosis. Content includes theories and techniques of practice. Ms. Birckhead and the Staff

424B. Advanced Clinical Psychiatric Nursing (8 units). Discussion, three hours; laboratory, 20 hours. Prerequisites: course 424A, consent of instructor. Refinement and extension of the process of psychotherapy, with emphasis on prevalent psychiatric health issues. Ms. van Servellen and the Staff

424C. Clinical Specialization in Psychiatric Nursing (8 units). Seminar, two hours; laboratory, 24 hours. Prerequisites: course 424B, consent of instructor. Required for the psychiatric nursing specialization. Supervised internship. Students select the setting and population. Ms. van Servellen and the Staff

425A. Advanced Clinical Gerontological Nursing. (Not the same as course 425A prior to Winter Quarter 1986.) Lecture, three hours; discussion, one hour; laboratory, eight hours. Prerequisite: one graduate course in nursing theory. Principles and practice of assessment of psychosocial variables in health problems of the elderly. Emphasis on integrated understanding of multiple variable influences in total health. Application of knowledge and skills of psychosocial nursing intervention of rehabilitation of the chronically ill aged. Ms. McBride, Ms. Stuart

425B. Clinical Specialization in Gerontological Nursing (8 units). (Formerly numbered 425C.) Discussion, three hours; laboratory, 30 hours maximum. Prerequisite: course 425A. Extension and demonstration of competencies in planning and implementation of nursing programs in health problems of the elderly. Ms. McBride, Ms. Stuart

429A-429B. Preceptorship in Primary Ambulatory Care Nursing (8 units each). Lecture, three hours; discussion, three hours; laboratory, 16 hours minimum. Prerequisites: courses 402A-402B, consent of instructor. Theory and clinical practice in nursing management and evaluation of health problems in a selected ambulatory population. Emphasis on health maintenance. Attention to the developmental and cognitive needs of clients in relation to family, social, and cultural structures.

429C. Advanced Preceptorship in Primary Ambulatory Care Nursing (8 units). Lecture, three hours; discussion, two hours; laboratory, 24 hours minimum. Prerequisites: courses 429A-429B, consent of instructor. Required of students who want to meet the requirements for preparation as a nurse practitioner as established by the California Board of Registered Nursing. Emphasis on the refinement and extension of assessment, management, and evaluation skills, family health care, and community health concepts. Placements provide the opportunity for an in-depth focus on a specific group of health problems.
Ms. Murata and the Staff

440A-440B. Clinical Specialization in Community Mental Health Consultation. Lecture, three hours; clinical, 10 hours. Prerequisites: course 424B, consent of instructor. Corequisites: courses 441A-441B. The study and application of mental health consultation theory and practices relevant to community mental health nursing. Focus on group consultation skills. The development of the nurse-consultant role in the interdisciplinary health team approach to mental health services. In Progress grading. Ms. Tien

441A-441B. Clinical Specialization in Community Organization. Discussion, three hours; clinical, 10 hours. Prerequisites: course 424B, consent of instructor. Corequisites: courses 440A-440B. The process of community mental health assessment and program evaluation and planning for health services. Emphasis on health advocacy, prevention of mental illness, and planned change concepts. In Progress grading. Ms. Flaskerud

442. Liaison Nursing. Lecture, three hours; laboratory, 10 hours. Prerequisites: courses 403, 440A. Behavior of groups of individuals studied from an intersystem framework. Students focus on the interactions of the health care providers and clients in general hospitals, clinics, and community health agencies. Attention to the variables influencing the health care providers' assessments and interventions concerning the clients' behavioral problem(s). This framework utilized to evaluate the stability and direction of the organization as these are causally related to the system's effectiveness in the delivery of quality health care. Examination of the interrelatedness of such variables as human services, sociopolitical and cultural life-style factors of the system.
Ms. Flaskerud

Functional Preparation

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. A teaching apprenticeship under the active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

473. Generic Consultation (4 to 8 units). Discussion, three hours; laboratory, 10 to 20 hours. Prerequisites: introductory and intermediate clinical practicums, one course in group dynamics and process, or equivalent. The study and application of consultation theory and practice relevant to nursing. Emphasis on the refinement of knowledge and skills necessary to establish a nursing role as an interdependent clinical nursing consultant. Concepts based on those theories from the following areas: group dynamics, learning, communication, change, and nursing process.
Ms. van Servellen and the Staff

475. Human Relations in Administration. A systematic study of the principles of human relations in administration, with emphasis on their application to the field of nursing.

478A-478B. Seminar in Nursing Administration. Prerequisite: consent of instructor. Analysis of current issues and trends in health care systems, with emphasis on integrating and applying management theories to the practice of nursing administration. Extensive discussion of key financial and professional factors affecting delivery of nursing services.
Ms. Burner

Special Studies

596. Directed Individual Studies for Graduate Students (4 to 8 units). Prerequisite: consent of instructor. Opportunity for graduate students in nursing to pursue special research interests. May be repeated for credit, but only four units may be applied toward the M.N. degree requirements. S/U grading.

597. Individual Study for Comprehensive Examination (4 to 8 units). May be repeated once for credit, but only four units may be applied toward the M.N. degree requirements. S/U grading.

598. Research for Thesis (4 to 8 units). Prerequisite: consent of instructor. May be repeated for credit, but only four units may be applied toward the M.N. degree requirements. S/U grading.

School of Public Health

Abdelmonem A. Afifi, Acting Dean

17

Public health is concerned with understanding, preventing, and controlling disease, and with promoting health in populations. Its goal is to ensure that the protection and improvement of the health of the public is accomplished by the most effective means consistent with equity for all individuals.

The mission of the UCLA School of Public Health is to develop, integrate, and apply pertinent knowledge from the biological, physical, and social sciences to enhance community health. In this context health is defined as a positive condition requiring not only the control of disease but also the presence of sufficient physical and mental vigor to promote well-being and improve the quality of life. To fulfill this mission the school (1) educates future public health professionals, (2) conducts research to protect and improve health and health services, and (3) contributes knowledge, expertise, and service to the community.

Seven areas of study are offered: behavioral sciences and health education, concerned with the study and implementation of behavior which prevents disease and enhances health; biostatistics, which develops statistical and analytic techniques for public health use; environmental and occupational health sciences, which elucidates health hazards in the general environment and in the workplace; epidemiology, concerned with the nature, extent, and distribution of disease and health in populations; health services, concerned with the organization, quality, and distribution of health care; nutritional sciences, concerned with identifying essential components of diet and promoting good nutritional practices; and population and family health, which identifies health problems of and promotes health in high-risk groups such as women, children, and the poor.

Students are prepared for careers in the public and private sectors, in health agencies, hospitals, industry, and voluntary organizations, and for careers in research and teaching.

Professors

Abdelmonem A. Afifi, Ph.D. *(Biostatistics), Acting Dean*
Roslyn B. Alfin-Slater, Ph.D. *(Nutritional Sciences), Assistant Dean for Academic Affairs*
Lawrence R. Ash, Ph.D. *(Infectious and Tropical Diseases)*
Allan Ralph Barr, Sc.D. *(Infectious and Tropical Diseases)*
Emil Berkanovic, Ph.D. *(Behavioral Sciences and Health Education)*
Judith Blake, Ph.D. *(Fred H. Bixby Professor of Population Policy)*
Robert H. Brook, M.D., Sc.D. *(Health Services)*
Potter C. Chang, Ph.D. *(Biostatistics)*
Virginia A. Clark, Ph.D. *(Biostatistics)*
Roger Detels, M.D., M.S. *(Epidemiology)*
John Edmond, Ph.D. *(Nutritional Sciences)*
Robert M. Elashoff, Ph.D. *(Biostatistics)*
Jonathan E. Fielding, M.D., M.P.H. *(Health Services)*
Ralph R. Frerichs, D.V.M., Dr.P.H. *(Epidemiology)*
William H. Glaze, Ph.D. *(Environmental and Occupational Health Sciences)*
Sheldon Greenfield, M.D. *(Health Services)*
Donald Guthrie, Ph.D., *in Residence (Biostatistics)*
Derrick B. Jelliffe, M.D., D.T.M.&H., D.C.H., F.R.C.P. *(Population and Family Health)*
Robert I. Jennrich, Ph.D. *(Biostatistics)*
Snehendu B. Kar, Dr.P.H. *(Behavioral Sciences and Health Education; Population and Family Health), Chair and Associate Dean*
Joel D. Kopple, M.D., *in Residence (Nutritional Sciences)*
Jess Kraus, Ph.D. *(Epidemiology and Occupational Health)*
Peter A. Lachenbruch, Ph.D. *(Biostatistics)*
Charles E. Lewis, M.D., Sc.D. *(Health Services)*
Virginia C. Li, Ph.D., M.P.H., *(Behavioral Sciences and Health Education)*
Robert A. Mah, Ph.D. *(Environmental and Occupational Health Sciences)*
Frank J. Massey, Jr., Ph.D. *(Biostatistics)*
Mohammad G. Mustafa, Ph.D. *(Environmental and Occupational Health Sciences)*
Beverlee A. Myers, M.P.H. *(Health Services)*
Alfred K. Neumann, M.D., M.A., M.P.H., F.A.B.P.M. *(Population and Family Health)*
Charlotte G. Neumann, M.D., M.P.H. *(Population and Family Health)*
Max H. Schoen, D.D.S., Dr.P.H. *(Health Services)*
Stuart O. Schweitzer, Ph.D. *(Health Services)*
William Shonick, Ph.D. *(Health Services)*
Marian E. Swendseid, Ph.D. *(Nutritional Sciences)*
Paul R. Torrens, M.D., M.P.H. *(Health Services)*
David H. Wegman, M.D. *(Environmental and Occupational Health Sciences)*
James L. Whittenberger, M.D., *in Residence (Environmental and Occupational Health Sciences)*
Daniel M. Wilner, Ph.D. *(Behavioral Sciences and Health Education)*
Telford H. Work, M.D., M.P.H., D.T.M.&H. *(Infectious and Tropical Diseases)*

Emeritus Professors

Ruth Boak, Ph.D., M.D.
Lester Breslow, M.D., M.P.H.
John M. Chapman, M.D., M.P.H.

Milton I. Roemer, M.D., M.P.H.
John F. Schacher, Ph.D.
Frank F. Tallman, M.D.

Associate Professors

Carol S. Aneshensel, Ph.D., *Acting (Population and Family Health)*
Linda B. Bourque, Ph.D. *(Population and Family Health)*
E. Richard Brown, Ph.D. *(Behavioral Sciences and Health Education)*
Albert Chang, M.D., M.P.H. *(Population and Family Health)*
Shan Cretin, Ph.D., M.P.H. *(Health Services)*
William G. Cumberland, Ph.D. *(Biostatistics)*
Climis A. Davos, Ph.D. *(Environmental and Occupational Health Sciences)*
Curtis D. Eckhert, Ph.D., *Acting (Nutritional Sciences)*
John R. Froines, Ph.D., *Acting (Environmental and Occupational Health Sciences)*
Michael S. Goldstein, Ph.D. *(Behavioral Sciences and Health Education)*
Sander Greenland, Dr.P.H. *(Epidemiology)*
William C. Hinds, Sc.D. *(Environmental and Occupational Health Sciences)*
Isabelle F. Hunt, Dr.P.H. *(Nutritional Sciences)*
Hal Morgenstern, Ph.D. *(Epidemiology)*
Talbot R. Page, Ph.D. *(Environmental and Occupational Health Sciences)*
Susan C. Scrimshaw, Ph.D. *(Population and Family Health)*
Judith M. Siegel, Ph.D., M.S.Hyg. *(Behavioral Sciences and Health Education)*
Jane L. Valentine, Ph.D. *(Environmental and Occupational Health Sciences)*
Barbara R. Visscher, M.D., Dr.P.H. *(Epidemiology)*

Assistant Professors

Rina Alcalay, Ph.D. *(Behavioral Sciences and Health Education)*
Shoshanna Churgin, Dr.P.H. *(Health Services)*
Joseph S. Coyne, Ph.D. *(Health Services)*
Pierre-Olivier Droz, Ph.D. *(Environmental and Occupational Health Sciences)*
Virginia F. Flack, Ph.D. *(Biostatistics)*
Robert W. Haile, Dr.P.H. *(Epidemiology)*
Michael R. Jones, Ph.D. *(Nutritional Sciences)*
Marlene M. Lugg, Dr.P.H. *(Health Services)*
Douglas M. Mackay, Ph.D. *(Environmental and Occupational Health Sciences)*
Glenn A. Melnick, Ph.D. *(Health Services)*
Donald E. Morisky, Sc.D., M.S.P.H. *(Behavioral Sciences and Health Education)*
Gary A. Richwald, M.D., M.P.H. *(Population and Family Health)*
Michael G. Ross, M.D., M.P.H., *in Residence*
Jeremy M.G. Taylor, Ph.D., *in Residence (Biostatistics)*
Robert O. Valdez, Ph.D., *in Residence*
Michael A. Vojtecky, Ph.D., M.P.H. *(Behavioral Sciences and Health Education)*

Lecturers

Jean L. Mickey, Ph.D. *(Biostatistics)*
Florence C. McGucken, M.S., *Emeritus*

Adjunct Professors

Ellen Alkon, M.D., M.P.H. *(Health Services)*
Linda Beckman, Ph.D., M.S. *(Behavioral Sciences and Health Education)*
Edith M. Carlisle, Ph.D. *(Nutritional Sciences)*
Arthur Chung, M.D.
Brian E. Henderson, M.D. *(Epidemiology)*
Leona M. Libby, Ph.D. *(Environmental and Occupational Health Sciences)*
Thomas Mack, M.D., M.P.H. *(Epidemiology)*
Joseph P. Newhouse, Ph.D. *(Health Services)*
John M. Peters, M.D., M.P.H., Sc.D.
Ruth J. Roemer, J.D.
John E. Ware, Ph.D. *(Health Services)*

Adjunct Associate Professors

Davida Coady, M.D., M.P.H. *(Epidemiology)*
Edward J. Faeder, Ph.D. *(Environmental and Occupational Health Sciences)*
Arlene Fink, Ph.D. *(Health Services)*
Raymond D. Goodman, M.D., M.P.H. *(Health Services)*
Richard L. Hough, Ph.D. *(Behavioral Sciences and Health Education)*
Jacqueline B. Kosecoff, Ph.D. *(Health Services)*
Jeffrey Pomerance, M.D., M.P.H. *(Population and Family Health)*
Susan M. Preston-Martin, Ph.D., M.P.H. *(Epidemiology)*
Gary H. Spivey, M.D., M.P.H. *(Epidemiology)*
Forest Tennant, M.D., Dr.P.H. *(Epidemiology)*

Adjunct Assistant Professors

David R. Boone, Ph.D. *(Environmental and Occupational Health Sciences)*
Allyson R. Davies, Ph.D. *(Health Services)*
Daniel Ershoff, Dr.P.H. *(Behavioral Sciences and Health Education)*
James Greenwood, Ph.D., M.P.H. *(Infectious and Tropical Diseases)*
Wilbert Jordan, M.D., M.P.H. *(Health Services)*
Laura M. Lake, Ph.D. *(Environmental and Occupational Health Sciences)*
Alfred C. Marcus, Ph.D. *(Behavioral Sciences and Health Education)*
Edward J. O'Neill, M.D., M.P.H. *(Environmental and Occupational Health Sciences)*
Jose Quiroga, M.D.
Lawrence S. Rubenstein, Ph.D. *(Health Services)*
James W. Sayre, Dr.PH. *(Biostatistics)*
Bernard M. Siegel, M.D. *(Health Services)*
Robert M. Sloane, M.S. *(Health Services)*
Bart B. Sokolow, D.Env. *(Environmental and Occupational Health Sciences)*
Howard M. Staniloff, M.D., M.P.H. *(Epidemiology)*
Marc Strassburg, Dr.P.H. *(Epidemiology)*
Jeffrey B. Wales, Ph.D. *(Health Services)*
Fred W. Wasserman, Dr.P.H. *(Health Services)*
Gary S. Whitted, Ph.D. *(Health Services)*

Adjunct and Visiting Lecturers

Emily Abel, Ph.D., *Adjunct*
Omar Alfi, M.D., *Visiting*
Nancy H. Allen, M.P.H., *Adjunct*
Linda M. Blanchard, M.P.H., *Adjunct*
Stewart N. Blumenfeld, Dr.P.H., *Visiting*
Michael L. Bobrow, B.Arch., *Visiting*
Helene G. Brown, B.S., *Adjunct*
Wen-Pin Chang, M.D., M.P.H., D.M.Sc., *Visiting*
Roger A. Clemens, Dr.P.H., *Visiting*
Carl F. Coffelt, M.D., M.P.H., *Visiting*
Anne H. Coulson, *Adjunct*
Patricia L. Engle, Ph.D., *Visiting*
Marsha A. Epstein, M.D., M.P.H., *Visiting*
Charles M. Ewell, Jr., Ph.D., *Visiting*
Paul M. Fleiss, M.D., M.P.H., *Visiting*
Jay W. Friedman, D.D.S., M.P.H., *Adjunct*
Kennard Friedman, M.S., M.H.A., *Visiting*
Emil Gauvreau, M.P.H., *Visiting*
Paul R. Ginsburg, Ph.D., *Visiting*
Robert D. Girard, LL.B., *Visiting*
Frank C. Gomez, Dr.P.H., *Visiting*
Lois Green, M.P.H., *Visiting*
Pensri Guptavanij, M.D., Ph.D., *Adjunct*
Joseph Hafey, M.P.H., B.A., *Visiting*
Eung-Soo Han, M.D., M.P.H., *Visiting*
Patricia Hassakis, M.D., M.P.H., *Visiting*
Arthur C. Hollister, Jr., M.D., M.P.H., *Visiting*
Patrice Jelliffe, R.N., M.P.H., *Adjunct*
Olive G. Johnson, B.A., *Visiting*
Martine Jozan, M.D., Dr.P.H., *Adjunct*
Stephen W. Kahane, D.Env., *Visiting*
Joel W. Kovner, Dr.P.H., *Visiting*
Kenneth E. Lee, M.S.P.H., *Visiting*
Martin L. Lee, Ph.D., *Visiting*
Harry M. Lieberman, M.D., M.P.H., *Visiting*
Robert G. Lindberg, Ph.D., *Adjunct*
Ronald L. Linder, Ed.D., *Visiting*
Lawrence S. Linn, Ph.D., *Adjunct*
J. Robert Liset, LL.B., *Visiting*
Irvin Lourie, M.D., *Visiting*
Eric J. McLaughlin, Ph.D., *Visiting (Health Services)*
Paul M. Merifield, Ph.D., *Visiting (Environmental and Occupational Health Sciences)*
Norma J. Murphy, M.S., *Adjunct (Nutritional Sciences), Associate Field Program Supervisor*
Audrey J. Naylor, M.D., *Adjunct*
Mario Panaqua, B.A., *Adjunct (Nutritional Sciences)*
Sondra T. Perdue, Dr.P.H., *Adjunct (Biostatistics)*
Donald W. Polhemus, M.D., M.P.H., *Visiting*
Stanton J. Price, Dr.P.H., *Visiting*
George W. Prichard, J.D., M.D., M.P.H., *Visiting*
Ruth F. Richards, M.P.H., M.A., B.A., *Adjunct (Behavioral Sciences and Health Education), Field Program Supervisor*
Stephen J. Robinson, M.D., M.P.H., *Visiting*
Hossain Ronaghy, M.D., *Visiting*
Robert R. Rygg, B.S., *Visiting (Health Services)*
Frederick T. Sai, M.B.B.S., D.T.M.&H., M.R.C.P., M.P.H., *Visiting*
Rafatollah Salimpour, M.D., *Visiting*
Simon A. Sayre, M.D., M.S.P.H., *Adjunct*
Pamela Viele Byrnes, M.P.H., *Adjunct (Behavioral Sciences and Health Education)*
Stephen L. Volla, M.P.H., *Visiting*
Lawrence G. Wayne, Ph.D., *Visiting (Epidemiology)*
Walter Wegst, Ph.D., *Adjunct*
Paul F. Wehrle, M.D., *Visiting (Epidemiology)*

The School of Public Health no longer offers a bachelor's degree, but does offer graduate programs leading to both academic and professional degrees in public health and biostatistics and is responsible for the administration of the graduate program in Environmental Science and Engineering, whose description immediately follows the public health programs.

Degrees Offered

Biostatistics	M.S., Ph.D.
Environmental Science and Engineering	D.Env.
Preventive Medicine and Public Health	M.S.*
Public Health	M.P.H., M.S., Dr.P.H., Ph.D.

*Not accepting new students at this time.

Requirements for Graduate Degrees

Admission

Application forms and the *Announcement of the UCLA School of Public Health,* as well as descriptive brochures and applications for the Environmental Science and Engineering Program, may be obtained by writing to the Office of Student Affairs, School of Public Health, 16-071 Public Health, UCLA, Los Angeles, CA 90024. Both the School of Public Health Application for Admission to Graduate Status and the Graduate Division application must be completed. Three letters of recommendation are required, two from former professors and one from an employer (if no employer, three former professors) before an application is considered complete. It is your responsibility to ensure that the application file is complete.

The preferred deadline for graduate applications is January 14, 1987, for Fall Quarter 1987 admission. Applications received after the deadline have considerably reduced opportunities for admission and financial aid.

Applicants must meet the University minimum requirement of an acceptable bachelor's degree with a B average in upper division coursework and/or prior graduate study. Exceptionally qualified applicants may be considered on an individual basis. Except for the Division of Population and Family Health, prior field experience is not required as a condition of admission, although a background of public health experience may be considered in your evaluation. In addition, you must be accepted by and accommodated in the division of the Department of Public Health in which you wish to study. If you need help in deciding on a division, you should speak to the staff in the Office of Student Affairs.

Applicants to the School of Public Health must perform satisfactorily on a recent (within the last five years) Graduate Record Examination (GRE), Medical College Admission Test (MCAT), or Dental Admission Test (DAT) Aptitude Test, which may be accepted in lieu of the GRE by some divisions under certain circumstances. (Note: The Nutritional Sciences and Epidemiology Divisions require GRE scores. MCAT or DAT scores are accepted only for applicants already holding M.D. or D.D.S. degrees.) Applicants at the master's level require a minimum combined (verbal and quantitative) score of 1,100. Applicants at the doctoral level need a minimum combined (verbal and quantitative) score of 1,200. The analytical section is not required. The Biostatistics Division has different criteria for evaluating performance on aptitude tests for its master's and doctoral degrees.

Refer to the UCLA *Application for Graduate Admission, Fellowship and Financial Aid* for the Test of English as a Foreign Language (TOEFL) requirement for international applicants. For more information on the proficiency in English requirements for international graduate students, refer to "Graduate Admissions" in Chapter 3.

No screening examination is required for admission; however, specified courses are required by the Biostatistics, Environmental and Occupational Health Sciences, Health Services, and Nutritional Sciences Divisions (see below). If your undergraduate coursework has been deficient in breadth of fundamental training, you must take specified undergraduate courses after admission.

Master's Applicants

Your prior program of study should include adequate preparation in mathematics, physical sciences, biological sciences, and social sciences, and typically include two courses each in mathematics, biological sciences, social sciences; one course in physical sciences; and others that constitute an adequate preparation for the proposed area of specialization.

If your prior work in the biological, physical, mathematical, and social sciences does not constitute adequate preparation for your proposed area of specialization, you must include courses in those sciences in your graduate program; these may not be applied toward the minimum requirements for the degree.

Specific Concentration Requirements

(1) Students concentrating in environmental and occupational health sciences should have a bachelor's (or master's) degree in chemistry, physics, biology, engineering, or other appropriate field. Coursework should include three quarters of general chemistry (including quantitative analysis) and two quarters of organic chemistry and/or biochemistry, mathematics through calculus, three quarters of biological sciences, and three quarters of physics. Substitutions for these requirements will be considered for applicants with an otherwise superior academic background.

(2) Students whose field of concentration is nutritional sciences should have a bachelor's degree in biological sciences or related areas, with coursework including three quarters of general chemistry (including quantitative analysis), three quarters of organic chemistry and/or biochemistry, mathematics through calcu-

lus, three quarters of biological sciences (including microbiology and physiology), and two quarters of physics. Substitutions for these requirements will be considered for applicants with an otherwise superior academic background.

(3) Applicants interested in the health services management program in the Division of Health Services must be interviewed by a faculty member in the program. Prior to enrollment, you must demonstrate a basic competency in accounting either by taking an introductory accounting course or by passing a waiver examination administered by the program.

(4) Applicants interested in the population and family health program must have some prior experience in the health field (paid or volunteer).

(5) For admission to the Master of Science in Biostatistics program, you must have completed a bachelor's degree. Majors in mathematics, computer science, or a field of application in biostatistics are preferred. Undergraduate preparation for the program should include Mathematics 31A, 31B, 32A, 32B, 33A, 33B (second-year calculus), or the equivalent.

Master of Public Health

The M.P.H. is a professional degree in the field of public health. You are expected to focus on public health practice and to acquire a broad knowledge related to professional skills.

Course Requirements

You must complete at least one year of graduate residence at the University of California and a minimum of 11 full courses, at least six of which must be graduate courses and at least two of which must be 400-series courses. Only one 596 course (four units) may be applied toward the six graduate courses; 597 and 598 courses may not be applied toward the degree. No more than 18 full courses may be required for the degree.

Mandatory core courses include Public Health 100A or 101A, 112 (114 for epidemiology majors), 130 (230A-230B for health services majors), and 150 or 155. Each core course may be waived if you have taken a similar course elsewhere and can pass the waiver examination.

In addition to the core courses, at least three courses (two or four units) outside your area of specialization are strongly recommended.

Only courses in which you receive a grade of C– or better may be applied toward the requirements for a master's degree. You must maintain an average of no less than 3.0 (B) in all courses required or elected during graduate residence at the University of California.

Areas of Specialization

Areas of specialization and typical course plans, in addition to mandatory courses, are listed below.

Behavioral Sciences and Health Education

Public Health 182, 482 (eight units), and five courses (20 units) from 282, 287, 295A, 481, and 181 or 484 are required. In addition, two to three elective courses from the list of specialty areas are required. Individual and experimental courses may not be applied toward the required course units. Additional courses may be elected, in consultation with your faculty adviser, from within the department or in other schools/colleges at UCLA. Normally two years or six quarters are needed to complete the course requirements. Candidates with a prior doctoral degree or advanced preparation in a related field may complete an M.P.H. degree in one year. In addition, it is possible for students to elect an additional area of concentration in another division.

Biostatistics

Required courses include Public Health 100A, 100B, 100C, and 100D, or 101A, 101B, and 101C; 200A; 401E or 401F or 401G; 402A, 402B (satisfies the field training requirement); three courses from 403, 404, 405, 406. Courses 211A and 211B are recommended. Elective courses should be selected in public health, biomathematics, or mathematics. Students whose mathematics preparation does not include sufficient calculus must take courses in the Mathematics Department while in the M.P.H. program.

Environmental and Occupational Health Sciences

Required courses include Public Health 150, 153 (required for students who have not taken a course in microbiology), 154, 156A or 156B, 253A, 255 (may be repeated for credit), 400, 450, 459, Environmental Science and Engineering 411 (may be repeated for credit). Elective courses should be selected in your area of specialization and in public health, engineering and applied science, chemistry, biology, management, architecture and urban planning, and medicine.

After, or simultaneous with, fulfillment of the core (divisional and schoolwide) requirements, you take courses with emphasis on water quality; environmental management; air pollution; environmental epidemiology; environmental sciences and engineering; industrial hygiene; or environmental toxicology.

Epidemiology

Infectious and Tropical Diseases: Required courses include Public Health 100B, 210, 211A, 211B, 212H, 216A, 216B, 218A, 218B, 220A, 220B, 222 (must be taken each quarter), 400 (for predoctoral students), 596 (for postdoctoral students). Students holding a doctorate in an appropriate biomedical science may petition for waiver of course 400. You must submit a report on a project related to infectious and tropical diseases.

Methodology/Chronic Diseases: Required courses include Public Health 100B, 210, 211A, 211B, 400 (for predoctoral students), 596 (for postdoctoral students), two or four units in behavioral sciences, and two additional courses from 211C, 211D, 212E, 212G, 212I, 212J, 212K, 213, 215A, 215B, 217, 221, 223, 225, 226, 227, 410A, 410B, 411, 414. (Physicians and other postdoctoral students in an appropriate biomedical science may petition for waiver of course 400.) You must submit a report demonstrating competence in epidemiologic methodology.

Health Services

Note: The Division of Health Services is examining the curriculum with a view to its revision. Information regarding requirements for graduation may be subject to change.

Required core courses include Public Health 132, 230A-230B (instead of 130), 238; students in the one-year program may select course 148 instead of 238.

Health Services Management: Management of organizations that deliver personal health care services, including hospitals, mental health and long-term care facilities, clinics, HMOs, and other health service providers. Admission to the program requires one course in accounting and one in microeconomics; prior coursework in management theory, economics, and statistics is highly recommended. Required courses include Public Health 131, 400, 430, 431, 432, 433, 436, 437, 596, Management 403, 408. Elective courses are selected in consultation with your faculty adviser.

Students are admitted only in Fall Quarter. After your first year, and depending on the completion of coursework, you are placed in an administrative residency for seven to nine and one-half months. Residencies are offered by various types of local health care facilities; students receive a stipend of $1,200 to $1,600 per month.

A special two-year concentration in health information systems is offered for students interested in the design, implementation, management, and evaluation of data systems in a wide range of health and health-related organizations. A summer internship is required.

Health Services Organization: An M.P.H. is available as a one-year program for students with prior doctoral degrees. Division core courses are required. Additional courses are determined on an individual basis. No summer internship is required.

Nutritional Sciences

Emphasis is on community nutrition. Required courses include Chemistry 152 or Biological Chemistry 101A and 101B, Public Health 165

or 261A, 260E, 260F, 260G, 260H, 262 or 263 (may be repeated for credit), 400, 460, 461, 463A, 463B. Public Health 162, 167, 264E, 264F, 462 are recommended. Electives should be selected from Public Health 100B, 100C, 166A, 166B, 181, 270, Biology 177, Psychiatry M184.

Of the courses listed above, at least six graduate courses (at least two must be in the 400 series) and at least one seminar course (262, 263) are required.

A minimum of 56 units is required. You must take two seminars during your course of study. If residence is extended beyond four quarters, more than two seminars are required.

Population and Family Health

Emphasis is on population, family health, family planning, reproductive and women's health, maternal and child health, and international health (including nutrition). Two tracks are available — domestic (U.S.A.) and international (primary health care). You are required to complete at least 16 units (for health professionals) or 20 units (for generalists) of divisional courses offered in selected tracks, plus Public Health 125, 171A, 400, 596. Elective courses are selected in consultation with your faculty adviser.

Students without a professional health degree are required to complete at least 60 units for the M.P.H. degree; students with a professional degree may graduate with a minimum of 48 units.

Comprehensive Examination Plan

You must pass two comprehensive examinations, one in the area of specialization, and a centrally administered written examination in the general field of public health. If you fail either examination, you may be reexamined once.

The schoolwide core course comprehensive examination is administered twice each academic year, usually the first Saturday in May and November. The examination in the major field is administered by your division.

Field Training

Field training in an approved public health program is required of candidates who have not had prior relevant field experience. A minimum of four units, but no more than eight, is required.

Interdivisional International Health

The school offers several options for international or domestic students interested in international health. Faculty in all divisions of the school are actively involved in health-related programs in foreign settings, and many departments on campus have international, health-related interests and courses relevant to health occupations in cross-cultural settings.

If you are interested, specify the division most relevant to your skills area on your application, clearly indicating your international interests. You will be given an appropriate adviser and directed to the international health committee, which is interdivisional and promotes internationally oriented training and research. Its members consult with interested students and attempt to optimize the learning experience.

Applicants with particular interest in primary health care, including maternal and child health, family planning, applied nutrition, family health program planning, administration and evaluation, and refugee health, are advised to apply to the Division of Population and Family Health.

Cooperative Degree Programs

Following are descriptions of combined programs of study leading to the M.P.H. degree. In the articulated degree programs listed below, no course may be used for credit toward more than one degree.

M.A.-African Area Studies/M.P.H.

The School of Public Health and the African Area Studies Program have an articulated degree program whereby you can work sequentially for the master's degree in African area studies and the Master of Public Health. By planning the major field emphasis in public health while working toward the M.A. in African Area Studies, it may be possible to shorten the amount of time it would normally take to complete both degrees.

Students interested in this articulated program should write to the Assistant Graduate Adviser, African Area Studies, UCLA African Studies Center, and/or the Office of Student Affairs, UCLA School of Public Health.

M.A.-Latin American Studies/ M.P.H.

The School of Public Health and the Latin American Studies Program have arranged an articulated degree program, organized to permit specializations within the M.A. and the M.P.H. degrees, with the award of both degrees after approximately three years of graduate study. Qualified students apply to the graduate adviser of the Latin American Studies M.A. degree program and to a relevant area of public health, such as (1) environmental and nutritional sciences, (2) epidemiology, (3) health education, (4) population and family health.

Potential applicants should contact the Graduate Adviser, Latin American Studies, UCLA Latin American Center, and/or the Public Health/Latin American Studies Articulated Degree Program Adviser, UCLA School of Public Health.

M.B.A./M.P.H.

The School of Public Health, Division of Health Services, and the Graduate School of Management offer a three-year concurrent degree program designed for students who desire a management career in health care and related fields and who wish in-depth professional preparation for such a career. The program reflects the combined interest of employers, faculty, and students who have recognized the increasing challenges facing managers in the health care industry and the need for individuals who are skilled in dealing with these challenges. Students should request all application materials from the M.B.A. Admissions Office, Graduate School of Management.

Preventive Medicine Residency Program

An accredited residency in general preventive medicine is available to physicians through the School of Public Health. The residency is designed to prepare qualified physicians for leadership roles in public health practice and preventive medicine teaching and research. Completion of the program can lead to board eligibility in public health and general preventive medicine — a specialty recognized by the American Board of Preventive Medicine.

The residency currently consists of at least two years of academic training and supervised field training in preventive medicine. The first year is comprised of formal studies for the Master of Public Health (generally in either epidemiology or health services). Other areas may be considered on an individual basis. Application must be made simultaneously for both the residency and admission to the School of Public Health for the M.P.H.

The field training year is individually organized for each resident's particular interests and needs. A variety of opportunities is available at UCLA and in the Los Angeles area, including close working relationships with the Los Angeles County Department of Health Services and the Jonsson Comprehensive Cancer Center. Residents may also undertake studies toward qualification for a more advanced degree in public health — the Dr.P.H. or Ph.D. — or do research in collaboration with members of the faculty. Physician applicants who have completed M.P.H. studies at an accredited school of public health may be admitted directly into the field training year. For further information, contact the Office of Student Affairs, UCLA School of Public Health.

Master of Science in Public Health

The Master of Science program provides research orientation within the general field of public health. It includes the preparation of a thesis or major written report.

Course Requirements

You must complete at least one year of graduate residence at the University of California and a minimum of 10 full courses, at least five of which must be graduate courses in the 200 or 500 series. Only one 596 course (four units) and one 598 course (four units) may be applied toward the total course requirement; only four units of either course may be applied toward the minimum graduate course requirement. Public Health 597 may not be applied toward the degree requirements. No more than 18 full courses may be required for the degree.

Mandatory core courses include Public Health 100A, 100B, and 112 (114 for epidemiology majors). Each core course may be waived if you have taken a similar course elsewhere and can pass the waiver examination.

Only courses in which you receive a grade of C– or better may be applied toward the requirements for a master's degree. You must maintain an average of no less than 3.0 (B) in all courses required or elected during graduate residence at the University of California.

Areas of Specialization

Areas of specialization and typical course plans, in addition to mandatory courses, are listed below.

Behavioral Sciences and Health Education

Public Health 181, 182, 281, and four to six divisional core courses (selected from an approved list) are usually required. Electives, selected in consultation with an adviser, must include the Public Health 283 series and research methods courses. Normal program length is six quarters.

Environmental and Occupational Health Sciences

Required courses usually include Public Health 150, 153 (required for students who have not taken a course in microbiology), 154, 156A or 156B, 253A, 255 (may be repeated for credit), 258, 459, 598 (a maximum of one course may be applied toward the minimum total course requirement), Environmental Science and Engineering 411 (may be repeated for credit), one course in biological chemistry (a specific course may be listed in the specialty track area). Elective courses should be selected in your area of specialization and in public health, biological chemistry, physical sciences, engineering and applied science, chemistry, biology, microbiology, law, and pharmacology.

At least five of the approximately 13 courses must be at the graduate level (200 and 500 series). In addition, you must complete a laboratory project and thesis.

After, or simultaneous with, fulfillment of the core (divisional and schoolwide) requirements, you take courses with emphasis on water quality; environmental management; air pollution; environmental epidemiology; environmental sciences and engineering; industrial hygiene; or environmental toxicology.

Students specializing in environmental epidemiology should discuss specific course requirements with the Division of Environmental and Occupational Health Sciences and the Division of Epidemiology.

Epidemiology

Infectious and Tropical Diseases: Required courses usually include Public Health 210, 211A, 211B, 212H, 216A, 216B, 218A, 218B, 220A, 220B, 222 (must be taken each quarter). Course 130 (for students planning to enter the Dr.P.H. program or to practice epidemiology in a health department) is recommended. Electives should be selected from courses 116, 214, 219, and other relevant courses in public health and biomedical sciences.

Methodology/Chronic Diseases: Required courses usually include Public Health 210, 211A, 211B, 221, plus one full course in each of demography, biostatistics, data management, and topic specific epidemiology (courses 116, 212D, 212E, 212G, 212H, 212I, 212J, 212K, 213, 214, 215A, 215B, 225, 226, or others). Courses 130 (for students planning to enter the Dr.P.H. program or to practice epidemiology in a health department), 410A, 410B are recommended. Relevant elective courses should be selected in public health and biomedical sciences.

Health Services

Note: The Division of Health Services is examining the curriculum with a view to its revision. Information regarding requirements for graduation may be subject to change.

Required core courses include Public Health 132, 230A-230B, 238. Emphasis is on health planning, health policy analysis, and health services research for clinicians.

Planning: Public Health 134, 138, 243, 248, 403, 444B, one course from the field of health financing, law, or public sector approved by your adviser, one evaluation course, three management courses, and a summer internship are usually required. Courses 100C, 100D, 131, 232, 233, 235, 239, 240, 247, 281, 287, 430, 438, 440A, 446, 447D, 447E, 447F are recommended.

Policy Analysis: Public Health 134, 138, 233, 243, 403, one course from the field of health financing, law, or public sector approved by your adviser, one evaluation course, two management courses, and a summer internship are usually required. Courses 100C, 131, 181, 232, 235, 239, 240, 247, 281, 430, 437, 438, 440A, 447D, 447E, 447F are recommended.

Research: Public Health 136A, 136B-136C, 231, 232, 233, 234A-234B, 235 are usually required. Courses 131, 134, 138, 236, 240, 446, 447D, 447E, 447F are recommended.

Electives, selected in consultation with your adviser, should be chosen from recommended courses and others. A summer field placement (minimum 10 weeks) is required following the first three quarters of study. The equivalent of 18 full courses and six quarters in residence are required for completion of the M.S. degree.

Nutritional Sciences

Emphasis is on nutritional biochemistry. Required courses usually include Biological Chemistry 101A or 201A, 101B or 201B, Public Health 260E, 260F, 260G, 260H, 261A, 261B, and 262 and 596 or 598 (may be repeated for credit). Public Health 165, 264E, 264F are recommended. Elective courses should be selected from Physiology 100, Public Health 100C, 166A, 166B, 167, 181, 461, 462, Biology 177, Biological Chemistry M261.

You must complete a thesis. A minimum of 52 units is required; five of the courses listed above must be at the graduate level (200 or 500 series). It is expected that after the first quarter you will take a seminar each quarter.

Thesis Plan

If the thesis option is approved, a thesis committee is established. The committee approves the thesis prospectus before you file for advancement to candidacy. The thesis must be acceptable to the thesis committee.

Comprehensive Examination/ Report Plan

If the comprehensive examination/report option is approved, a guidance committee of three faculty members is appointed. A written comprehensive examination on your major area of study must be passed. If you fail, you may be reexamined once.

The preparation of a major written research report is required; it must be approved by the guidance committee which also must certify successful completion of all degree requirements.

Master of Science in Biostatistics

Course Requirements

The M.S. degree requires a minimum of nine graduate and upper division courses, of which at least five must be graduate courses in the 200 and 500 series. The five required graduate courses must be in biostatistics or mathematical statistics, including at least three courses in biostatistics.

Areas of Specialization

Areas of specialization and typical course plans are listed below.

Biostatistics

Unless previously taken, the following courses must be included in the degree program: Public Health 101A, 101B, 101C, M101D, 200A-200B-200C, 204E, 402A, 402B; any two courses from M201E, 201F, 201G, 201H, 201J, M201K, 201M; Mathematics 150A-150B-150C (in exceptional circumstances, Mathematics 152A-152B and additional directed reading may be substituted).

Other courses in biostatistics or mathematical statistics, or in related areas such as biology, physiology, public health, management, or mathematics, may be selected with your adviser's consent.

A written report and written comprehensive examination covering the above course material are required.

Biostatistical Health Data Management

Unless previously taken, the following courses must be included in the degree program: Program in Computing 1, Public Health 101A, 101B, 101C, M101D, 200A-200B-200C, 203A, 203B, 403, 404 or 405, Mathematics 150A-150B-150C (in exceptional circumstances, Mathematics 152A-152B and additional directed reading may be substituted). One public health course in a division other than Biostatistics is selected with your adviser's consent.

Other courses in biostatistics or mathematical statistics, or in related areas such as biology, physiology, public health, management, or mathematics, are selected with your adviser's consent.

A written report and written comprehensive examination covering the above course material are required.

Comprehensive Examination Plan

The thesis plan is not used. The written comprehensive examination is on your major field only. It is taken during the Spring Quarter of the academic year of your Public Health 200A-200B-200C sequence. Normally no more than one reexamination after failure is allowed.

Master of Science in Preventive Medicine and Public Health

The program is not admitting new students at this time.

Doctor of Environmental Science and Engineering

The program leading to the D.Env. degree is administered and housed in the School of Public Health. Information on the program follows the public health course listings later in this chapter.

Doctor of Public Health

The Doctor of Public Health (Dr.P.H.) is the highest professional degree for the public health generalist. You are expected to focus on public health practice and to acquire broad knowledge related to professional skills. The dissertation is of an applied, practical, problem-solving nature and must demonstrate your ability for independent investigation.

There is no foreign language requirement; teaching experience is recommended but not required.

Admission

In addition to the University minimum requirements, the department requires (1) satisfactory performance on the Graduate Record Examination (GRE); (2) completion of the M.P.H. or a master's degree in an appropriately related field (if the master's degree is in a field other than public health, you must have taken the equivalent of the M.P.H. mandatory core courses or include them in the course of study after admission); (3) at least a 3.0 junior/senior undergraduate grade-point average, at least a 3.5 GPA in graduate studies or demonstrated superiority in graduate work, and at least a B in each of the mandatory core courses; (4) a positive recommendation by a division of the Department of Public Health; (5) approval by the policy admissions committee and the department chair. Screening or evaluation examinations may be required by each division.

Course Requirements

The course requirements in the major field depend on the division and the field you select. You must take a minimum of six full courses (four must be at the 200 or 400 level) in at least two divisions other than your major division.

The major division requires an additional area of concentration which may be either inside or outside the school. In divisions that allow it, an equivalent field experience completed while a doctoral student and approved by the guidance committee may be substituted for the additional area of concentration.

Areas of Specialization

Areas of specialization and typical course plans, in addition to courses required for the master's degree, are listed below.

Behavioral Sciences and Health Education

At least four advanced research methods/statistics courses and at least five advanced courses from a list designed and offered by the division are required. In addition, six full courses (four must be at the 200 or 400 level) in at least two divisions other than your major division are required for breadth; four of these must be in only one other division. Two quarters of research experience prior to beginning the dissertation are required, as is participation in the divisional doctoral seminar. Elective courses should be selected in consultation with your adviser.

Biostatistics

The Dr.P.H. in Biostatistics requires a research orientation for which the coursework for the M.S. in Biostatistics is more appropriate than the coursework for the M.P.H.

A written screening examination of all students entering the doctoral program is required and must be successfully completed before the end of your first year in the program (if not taken prior to entering). Courses covered by this and other examinations are determined in consultation with your adviser and the division faculty. All registered doctoral students enroll in the biostatistics consulting laboratory for one quarter each year.

Beyond the introductory program, the following courses, if not already taken, should be included: Public Health 200B-200C, any four courses from the 201 and 207 series, 203A, M205A-M205B-M205C, 401E through 401G (any two courses), 403, one course from 404, 405; Mathematics 150A-150B-150C. Public Health 402B is required and may be used as the additional area of concentration referenced below.

In addition, six full courses (four must be at the 200 or 400 level) in at least two divisions other than your major division are required for breadth. The major division requires an additional area of concentration which may be either inside or outside the school.

Electives, selected in consultation with your adviser, should be chosen from courses in mathematics, biomathematics, survey research methods, operations research, computer data processing, and other appropriate areas.

Environmental and Occupational Health Sciences

Recommended courses are determined in consultation with your adviser. In addition, six full courses (four must be at the 200 or 400 level) in at least two divisions other than your major division are required for breadth. The major division requires an additional area of concentration which may be either inside or outside the school.

Epidemiology

The recommended program includes additional courses in biostatistics, demography, and epidemiology beyond those required for the M.P.H.; courses or directed group study in specialized areas of infectious and chronic disease epidemiology or application of epidemiology to health planning, management, and/or policy; laboratory or clinical studies in medical, health, or biological sciences.

In addition, six full courses (four must be at the 200 or 400 level) in at least two divisions other than your major division are required for

breadth (you may petition to include up to two 100-level courses). The major division requires an additional area of concentration which may be either inside or outside the school (e.g., biostatistics, biology, microbiology and immunology, neuroscience).

Health Services

Note: The Division of Health Services is examining the curriculum with a view to its revision. Information regarding requirements for graduation may be subject to change.

From 48 to 72 quarter units beyond the master's degree are required. About one-third is to be in the substantive area of structure and functioning of health services, one-third in skills and tools required for health services management and policy analysis, and one-third in elective courses to meet individual needs and interests. In addition, if the master's degree did not include it, you must spend three to nine months in a supervised residency or practicum experience in one or more health-related organizations.

In addition, six full courses (four must be at the 200 or 400 level) in at least two divisions other than your major division are required for breadth. The major division requires an additional area of concentration which may be either inside or outside the school (e.g., economics, political science, sociology, management).

Nutritional Sciences

Recommended courses include Biological Chemistry 101A or 201A, 101B or 201B, Public Health 260E, 260F, 260G, 260H, 261A, 262 or 263 (may be repeated for credit), 265 (may be repeated for credit), 400, 460, 461, 463A, 463B, and 495, 596, and 599 (may be repeated for credit). Conversational Spanish is also recommended.

In addition, six full courses (four must be at the 200 or 400 level) in at least two divisions other than your major division are required for breadth. The major division requires an additional area of concentration which may be either inside or outside the school (e.g., biology, biostatistics).

Population and Family Health

Course content for the major field includes courses needed for the divisional M.P.H., the divisional doctoral seminar, and two advanced courses in research methodology. Beyond the master's degree requirements, a minimum of 48 units (four quarters with an average of 12 units each) is required. Of these, at least 20 units must be in this division, in addition to the divisional doctoral seminar.

In addition, six full courses (four must be at the 200 or 400 level) in at least two divisions other than your major division are required for breadth (you may petition to include up to two 100-level courses). The major division requires an additional area of concentration which may be either inside or outside the school.

Qualifying Examinations

Before advancement to candidacy, you must pass written examinations in the major field, prepared and administered by the guidance committee or by the faculty of the division. Normally no more than one reexamination after failure is allowed. The doctoral committee is nominated after you have made a tentative decision on a dissertation topic. The doctoral committee administers the University Oral Qualifying Examination after you have successfully completed the written examinations.

Final Oral Examination

A final oral examination is required of all candidates.

Ph.D. in Public Health

The Ph.D. is the highest research degree in public health for the student who desires in-depth knowledge in the area. Depth of knowledge and research skills are stressed. The dissertation must demonstrate your ability for independent scholarly investigation.

There is no foreign language requirement for the Ph.D.; teaching experience is recommended but not required.

Admission

In addition to the University minimum requirements, the department requires (1) satisfactory performance on the Graduate Record Examination (GRE); (2) completion of the M.S. in Public Health or an appropriately related field (students with an M.P.H. need to satisfy the requirements of the M.S. in Public Health before or after admission); (3) at least a 3.0 junior/senior undergraduate grade-point average, at least a 3.5 GPA in graduate studies or demonstrated superiority in graduate work, and at least a B in each of the mandatory core courses; (4) a positive recommendation by a division of the Department of Public Health; (5) approval by the policy admissions committee and the department chair. Screening examinations may be required by each division.

In the Division of Behavioral Sciences and Health Education, you must satisfy the divisional core requirements for the M.P.H. or M.S. in Public Health (depending on your background) at a level acceptable for the doctoral program. Coursework may be waived by examination if equivalent courses have been taken elsewhere.

Major Fields or Subdisciplines

Behavioral sciences and health education, environmental and occupational health sciences, epidemiology, health services, and nutritional sciences.

Course Requirements

The courses needed to pass the written examination in your major field depend on the division and field you select.

The minor must be in a field cognate to the major field in public health. A strong minor is required, with at least four full graduate courses (16 units) or equivalent from a department that grants a Ph.D. Biostatistics is the only division considered cognate to a major in public health.

Qualifying Examinations

Before advancement to candidacy, you must pass a written examination in the major field, complete the requirements in a minor field, and pass an oral qualifying examination on the major and minor fields. Normally no more than one reexamination is allowed. When you are ready to take the University Oral Qualifying Examination, a doctoral committee is nominated.

After passing the University Oral Qualifying Examination, you may be advanced to candidacy and commence work on a dissertation in your principal field of study. The doctoral committee guides your progress toward completion of the dissertation.

Final Oral Examination

A final oral examination is required of all candidates.

Ph.D. in Biostatistics

Admission

Qualifications for admission are those currently specified by the Graduate Division (see Chapter 3). Normally, students receive an M.S. in Biostatistics at UCLA before admission to the Ph.D. program.

Course Requirements

There are no specific course requirements. However, your program of study must be approved by the Division of Biostatistics and must include, at the graduate level, three areas of knowledge: biostatistics, mathematical statistics, and a third field such as biology, epidemiology, infectious diseases, medicine, microbiology, pharmacology, physiology, psychology, zoology, or public health. You are encouraged to participate in the biostatistics consulting laboratory for one quarter each year. Recommendation for the degree is based on your attainments rather than on the completion of specified courses.

Screening/Qualifying Examinations

Biostatistics requires a written screening examination of all students entering the doctoral program. The examination must be successfully completed before the end of the first year in the program (if not taken before entering the program).

Written qualifying examinations in biostatistics and mathematical statistics and an examination in your selected third field are taken before advancement to candidacy.

The University Oral Qualifying Examination is taken before advancement to candidacy and after successful completion of the written examinations. Administered by the doctoral committee, it is usually a defense of the dissertation proposal. A failed examination may be repeated once. The timing of reexaminations is specified by the division in the case of written examinations or by your committee in the case of oral examination. If you do not take the examinations at the designated time, you forfeit your right to reexamination.

Final Oral Examination

A final oral examination is required.

Lower Division Courses

18. Principles of Healthful Living. Analysis of health care issues as related to the health care consumer and the health care delivery system. Identification of health needs and clarification of personal responsibilities for health.

19. Peer Health Counselor Training. Limited to students in the Peer Health Counselor Program. Analysis of student health care issues as related to the campus health care delivery system and to the health care consumer. Identification of health needs, determination of appropriate resources, delivery of preventive and self-care education, and delineation of peer health counselor's role. Ms. Viele Byrnes

Upper Division Courses

100A. Introduction to Biostatistics. Lecture, three hours; laboratory/quiz, two hours. Prerequisites: upper division standing, one course in biological or physical science. Students who have completed courses in statistics may enroll only with consent of instructor. Not open for credit to students with credit for course 101A. Introduction to methods and concepts of statistical analysis. Sampling situations, with special attention to those occurring in the biological sciences. Topics include distributions, tests of hypotheses, estimation, types of error, significance and confidence levels, sample size.

100B. Introduction to Biostatistics. Lecture, three hours; laboratory/quiz, two hours. Prerequisites: course 100A or equivalent, consent of instructor. Not open for credit to students with credit for course 101B. Introduction to analysis of variance, linear regression, and correlation analysis.

100C. Introduction to Biostatistics. Lecture, three hours; laboratory/quiz, two hours. Prerequisites: course 100B or equivalent, consent of instructor. Design of experiments, analysis of variance, multiple and polynomial regression analysis with biomedical applications.

100D. Introduction to Biostatistics. Lecture, three hours; laboratory, two hours. Prerequisites: course 100B or equivalent, consent of instructor. Introduction to concepts of probability used in biomedical sciences. Enumeration statistics and nonparametric methods. Comparison of nonparametric with analogous parametric tests. Discussion of power and sample size.

101A. Basic Biostatistics. Lecture, three hours; quiz, one hour. Prerequisite: Mathematics 31B or equivalent. Not open for credit to students with credit for course 100A. Basic concepts of statistical analysis applied to biological sciences. Topics include random variables, sampling distributions, parameter estimator, statistical inference.

101B. Basic Biostatistics. Lecture, three hours; quiz, one hour. Prerequisite: course 101A. Not open for credit to students with credit for course 100B. Topics include elementary analysis of variance, simple linear regression and correlation, nonparametric methods, elements of sequential analysis.

101C. Basic Biostatistics. Lecture, three hours; laboratory, two hours. Prerequisite: course 101B or equivalent. Not open for credit to students with credit for course 100C or 100D. Introduction to multiple regression; topics relating to analysis of variance and experimental designs.

M101D. Introduction to Computational Statistics. (Same as Biomathematics M153.) Lecture, three hours; discussion, one hour. Prerequisite: Mathematics 150C or 152B or equivalent. Statistical analysis of data by means of package programs. Regression, analysis of variance, discriminant analysis, and analysis of categorical data. Emphasis on understanding the connections between statistical theory, numerical results, and analysis of real data.

103. Statistics for Public Health. Lecture, three hours; laboratory, two hours. Prerequisites: upper division standing, one course in biological or physical science. Open to students in the M.P.H. and nursing programs. Introduction to sources of demographic and health information, methods of calculating and interpreting vital and health statistics, and elementary methods for statistical inference.

110. Introduction to Medical Science. Prerequisite: one course in chemistry or other natural sciences. Recommended: one-year sequence in biology, physiology, or other biological science. An introduction to normal human physiology and disease processes.

112. Principles of Epidemiology. Lecture, two hours; laboratory, four hours. Prerequisite: course 110. Not open for credit to students with credit for course 114. Introduction to epidemiology, including factors governing health and disease in populations.

114. Epidemiology I. Lecture, two hours; laboratory, four hours. Prerequisites: courses 100A (may be taken concurrently), 110, consent of instructor. Not open for credit to students with credit for course 112. Introduction to epidemiology, including factors governing health and disease in populations.

M115. Disease Problems of Socioeconomic and Political Impact in Latin America. (Same as Latin American Studies M155.) Lecture, six hours; discussion, six hours. Prerequisite: one upper division course in Latin American studies. Social, economic, and political impact of important disease problems in Latin American countries. Mr. Work

116. Epidemiology of Nosocomial Infections (2 units). Prerequisites: course 112 or Microbiology 110, consent of instructor. Introduction to the epidemiology of hospital-acquired infections, their detection and control.

125. Applied Social Science Methodology. Lecture, two hours; discussion, two hours; laboratory, one hour. Prerequisites: course 100A or equivalent, consent of instructor. Applied procedures for conducting research in family health. A research design comprises one of the course requirements.
Ms. Bourque

130. Health Services Organization. Prerequisite: four units of social science. Structure and function of American health care system; issues and forces shaping its future. Mr. Fielding, Mr. Torrens

131. Structure and Function of Health Care Facilities. Lecture, two hours; discussion, two hours. Prerequisites or corequisites: course 130, consent of instructor. Introduction to structure, organization, and function of health care facilities.

132. Management Science for Health Planning and Administration. Lecture, three hours; laboratory, two hours. Prerequisites: courses 100A, either 403 or Management 404, or equivalent, consent of instructor. Introduction to the use of quantitative analyses to support managerial and operational decisions in health services organizations. Topics include mathematical models for structuring decisions, resource allocation, inventory control, task sequencing, scheduling, and forecasting. Use of microcomputers.
Mr. Valdez

133. Interpersonal Dynamics in Health Services Management (2 units). Prerequisites: one undergraduate course in sociology or psychology, consent of instructor. An introduction to the application of behavioral science theory to understanding the interpersonal dynamics of health care facilities and their management.

134. Introduction to Comprehensive Health Planning. Lecture, four hours; fieldwork, four hours. Prerequisite: one upper division course in microeconomics, statistics, calculus, or political science. Concepts underlying health planning, state of the art, and some relevant literature. Mr. Melnick

M135. Organization of Medical Practice (2 units). (Same as Medicine M158.) Prerequisites: course 130, graduate standing in public health, medicine, or nursing. Education and certification of medical practitioners. Organization of medical practice: solo, group, HMO. Doctor-patient relationships, medical ethics, economics, professional liability, health care evaluations. Mr. Goodman

136A. Introduction to Health Services Research. Prerequisites or corequisites: courses 100A, 110, or equivalent, consent of instructor. Review of the field of health services research. Uses of quantitative methods and the applications of conceptual-theoretical constructs (as well as methodologies) from social and behavioral sciences and epidemiology to studies of the workings of health services. Mr. Lewis

136B-136C. Practices of Evaluation in Health Services: Theory and Methodology (2 units each). (Formerly numbered 136B.) Lecture, four hours; discussion, one hour. Prerequisites: course 136A or equivalent, consent of instructor. Introduction to health services evaluation. Examination and performance of specific evaluation procedures. Conducting of health services investigations, reporting results and methodologies. In Progress grading.
Ms. Fink, Ms. Kosecoff

137. Managing Human Resources in Health Facilities and Programs. Prerequisites: one course in social sciences, consent of instructor. Didactic and experimental study of management of human resources in health-related organizations and programs.

138. Politics of Health Care. Prerequisites: one course in social sciences, consent of instructor. Concepts and procedures for political analysis; national, state, and local politics in health care; examination of selected case studies.

139. Quantitative Methods for Decision Making in Health Services. Prerequisites: courses 100A, 110, 130, consent of instructor. Decision theory and use of statistics in decision making. Decision theory includes frameworks for decision making and control, decision under uncertainty, utility theory, Bayes' theorem, and value of information. Statistical topics include communicating with statistics, measures of association, regression, analysis of variance, and forecasting.

140A-140B. Health Record Science. Lecture, two hours; laboratory, two hours. Prerequisites: Biology 5 or equivalent, consent of instructor. Course 140A is prerequisite to 140B. Principles and theories of systems and techniques used for organization, analysis, and maintenance of records and reports studied and evaluated according to their use in varied situations.

141. Financial and Managerial Accounting for Health Services Organizations. Prerequisites: course 130 or equivalent, consent of instructor. An introduction to financial and managerial accounting and its application to the health services industry.
Mr. McLaughlin

143. Integrating Medical and Fiscal Records in Health Institutions. Prerequisites: course 140A, Management 403, or equivalent, consent of instructor. The patient charge system from admission through collection. The interfacing of patient medical records and patient fiscal records, presented via a student field project.

144. Decisions in Automating Data Systems in Ambulatory Patient Care Facilities. Lecture, two hours; discussion, two hours. Prerequisites: courses 130, 140A. Definition of the techniques used to propose, design, and evaluate the automation of data systems for patient care and operations of ambulatory care facilities. Practical experience through analysis of a case problem.

145. Society's Response to Aging. Prerequisites: courses 130, 180, 183, or equivalent, consent of instructor. Relationship of changing age structure in America to family, economy, politics, health care, retirement, age stratification, death and dying.
Mr. Wales

148. Introduction to Health Economics. Prerequisites or corequisites: courses 230A-230B or equivalent, consent of instructor. Presentation of the tools of economic analysis. Topics include introductory concepts of microeconomics, the theory of demand for health insurance and health care, substitution of health personnel, hospital cost functions, and costs and benefits of health programs. Mr. Schweitzer

150. Environmental Health. Lecture, three hours; discussion, one hour. Prerequisites: Biology 5, Chemistry 11A, Mathematics 3A, Physics 3A or 6A. Broad coverage of environmental health, including airborne and waterborne pollutants; pollutants from urban industrial and agricultural wastes; pollution from pesticide chemicals, mining, and energy production and consumption; chemical food additives; and occupational exposure to chemical and physical hazards. Mr. Mustafa

152. Biological Effects of Air Pollution. Lecture, three hours; discussion, one hour. Prerequisites: Biology 5, Chemistry 11A, or equivalent, consent of instructor. Survey of biological effects and assessment methods of air contaminants present in urban, industrial, and occupational environments.
Mr. Mustafa

153. Public Health and Environmental Microbiology. Lecture, three hours; laboratory, six hours. Prerequisites: Biology 7, Chemistry 25, or equivalent, consent of instructor. Basic principles and laboratory procedures employed in the provision of sanitary elements to the community, including food and milk, water supply and waste disposal, soil and environmental effluents. Mr. Mah

154. Environmental Management. Lecture, four hours; discussion, one hour. Prerequisites: Economics 100, Political Science 142 or 143, or equivalent, consent of instructor. Introduction to foundations and principles of environmental management, decision making, and evaluation of environmental policies and programs. Mr. Davos

155. Introduction to Environmental Health (2 units). Prerequisites: one college course in chemistry or biology or equivalent courses, consent of instructor. Not open to students specializing in environmental health. Introduction to environmental health, including coverage of sanitary principles and chronic and acute health effects of environmental contaminants.

156A. Introduction to Occupational Safety and Health I. (Formerly numbered 156.) Prerequisites: Biology 5, Chemistry 21, or equivalent, consent of instructor. Scientific, legal, policy, and historical issues in occupational health. Introduction to various related disciplines (e.g., occupational medicine, nursing, industrial hygiene, toxicology, epidemiology, and health education). Two field trips.
Mr. Froines, Mr. Wegman

156B. Introduction to Occupational Health II. Prerequisites: course 156A or equivalent, consent of instructor. Introduction to the health effects of occupational exposures, including the recognition, evaluation, and prevention of occupational diseases. Emphasis on concept of disease mechanisms, manifestations, and classification relevant to professionals in the disciplines related to occupational health (e.g., industrial hygiene, toxicology, epidemiology, health education, and nursing). One field trip.
Mr. Froines, Mr. Harber, Mr. Wegman

157E. Properties and Measurement of Airborne Particles. Lecture, three hours; laboratory, two hours. Prerequisites: one year of chemistry, physics, and mathematics through calculus, consent of instructor. Basic theory and application of aerosol science to environmental health, including properties, behavior, sampling, and measurement of aerosols and quantitative problems. Laboratory for industrial hygiene majors only; paper for others. Mr. Hinds

157F. Identification and Measurement of Gases and Vapors (2 units). Lecture, two hours; laboratory, two hours (every other week). Prerequisite: course 156A. Required of all industrial hygiene students in the Division of Environmental and Occupational Health Sciences. The theoretical and practical aspects of the industrial hygiene sampling of gases and vapors. Mr. Froines

160. Principles of Food and Nutrition (2 units). Prerequisites: one course in biology, chemistry, or physiology, consent of instructor. Not open for credit to students specializing in nutrition. Principles of nutrition and nutritional requirements for normal growth and development. Ms. Alfin-Slater

161. Nutrition and Health (2 units). Prerequisites: course 110 or 160 or equivalent, consent of instructor. Not open for credit to students specializing in nutrition. Basic and clinical nutrition theory and practice for students in health science curricula.
Ms. Alfin-Slater, Mr. Jelliffe

162. Nutrition. Lecture, three hours. Prerequisites: organic chemistry, Biology 7, or equivalent. Metabolic aspects of carbohydrates, fats, proteins, vitamins, and minerals. Digestion and absorption of nutrients, energy and protein requirements, mineral and vitamin metabolism. Ms. Hunt

163. Biologic Processes. Lecture, three hours. Prerequisites: one year of organic chemistry, Biology 7. Metabolism of carbohydrates, proteins, and other nitrogen compounds and lipids; role of hormones and enzymes in metabolism; physiological processes.
Ms. Alfin-Slater

165. Clinical Nutrition Laboratory (2 units). Discussion, one hour; laboratory, four hours. Prerequisites: one course in quantitative analysis or equivalent, one year of organic chemistry, Biology 7, consent of instructor. Analytical procedures for determining the various constituents of blood and urine.
Mr. Eckhert

166A. Therapeutic Nutrition (2 units). Prerequisites: courses 162, 163, or equivalent, consent of instructor. Recent findings in the field of diet and disease and modifications made in normal diet for pathological conditions. Ms. Carlisle

166B. Therapeutic Nutrition (2 units). Prerequisites: course 166A, consent of instructor. Recent findings in the field of diet and disease and modifications made in normal diet for pathological conditions.
Ms. Carlisle

167. Biologic Processes: Physiology and Nutrition. Lecture, three hours. Prerequisites: course 163, consent of instructor. Metabolism of lipids, carbohydrates, and proteins; role of hormones and enzymes in metabolism; physiological processes occurring in various organs. Ms. Alfin-Slater

170. Family Health and Biosocial Development. Lecture, two hours; discussion, two hours. Prerequisites: Psychology 130 or Physiology 100 or equivalent, consent of instructor. Biosocial factors related to normal human physical, intellectual, and emotional growth and development from a family and public health perspective. Mr. Katz

170E. Genetics and Public Health. (Formerly numbered 170A.) Lecture, three hours; discussion, one hour. Prerequisites: one course in biology, consent of instructor. The public health significance of genetic disease, biological basis of genetic disease and birth defects, services available in the areas of diagnosis, treatment, and prevention, and the legal, social, and ethical implications of genetic disease. Mr. Alfi

171A. Family Health and Population: Principles and Issues. Prerequisites: course 110 or equivalent, consent of instructor. Biosocial aspects of family formation, reproductive physiology and behavior, "at risk" aspects of pregnancy and childbirth, and primary women's health care services. Physical aspects of growth, physical, intellectual, and social development from infancy to older childhood and adolescence.

171B. Family Health and Population: Principles and Issues. Prerequisites: course 171A, consent of instructor. Considerations of population growth, trends in domestic and international mortality, international migration, women's health issues, family planning. Child health issues in the United States and MCH/family problems, programs, and policy in developing Third World countries.

172. Introduction to Reproductive Health. Lecture, two hours; discussion, two hours. Prerequisites: course 110 or equivalent, consent of instructor. Review of reproductive physiology, normal and abnormal pregnancy, family planning, male-specific and female-specific health problems, including health care and psychosocial considerations.

174E. Health, Disease, and Health Services in Latin America. Prerequisite: one upper division course in Latin American studies or course 110. Introduction to health, disease, and health services in Latin America, with emphasis on epidemiology, health administration, medical anthropology, and nutrition.
Ms. Scrimshaw

174H. Public Health in the People's Republic of China (2 units). Lecture, four hours. Prerequisites: course 130 or equivalent or two upper division or graduate courses in social or behavioral sciences or medical sciences, consent of instructor. Historical overview of policies and implementation of public health in the People's Republic of China from 1949 to the present. Emphasis on relevance for public health in other developing countries. Mr. Neumann

176. Human Sexuality and Sexual Health. Lecture, three hours; discussion, one hour. Prerequisites: two courses in behavioral and/or life sciences, consent of instructor. Interdisciplinary review of sexual physiology and sexual behaviors followed by consideration of pregnancy and its prevention, sexual dysfunction, and sex-transmitted disease. Psychosocial, cultural, political, and health care aspects.

176E. Family and Sexual Violence. Lecture, three hours; field trip. Prerequisites: course 130, consent of instructor. Examination of rape, incest, spouse and elder abuse. The definitions, causes, outcomes of, and research on family and sexual violence, as well as the responses of the social service, medical, and criminal justice systems. Mr. Richwald

177A. Principles of Genetic Counseling (2 units). (Formerly numbered 177.) Prerequisites: course 170 or 171A, Biology 8. Theoretical basis, current research, and practical considerations and techniques of counseling, especially as practiced in genetics settings. Mr. Katz

177B. Principles of Genetic Counseling (2 units). Prerequisite: course 177A. Counseling principles and techniques arising from such reproductive areas as prenatal care/diagnosis, abortion, adoption, sterilization. Counseling in relation to grief and mourning; theories underlying alternative counseling models pertinent to these areas. Mr. Katz

177C. Principles of Genetic Counseling (2 units). Prerequisites: courses 171A, 177A, consent of instructor. Evaluation of counseling process and outcome; clinical research; the counselor as a team worker; ethical and administrative issues.
Mr. Katz

178. Legal Aspects of Family Health (2 units). Prerequisites: course 170, consent of instructor. Analysis and clarification of legal issues involving family health services, including family planning, sterilization, abortion, dental care for children, battered child laws, mental hospitalization, personnel and standards for care and implementation of sound health programs.
Ms. Roemer

179A. Health Problems and Programs in Africa (2 units). Lecture, one hour; discussion, one hour. Prerequisites: one course from Public Health 110, History 175A-175Z, 176A, 176B, 177, 178A, 179A, 275, 278A, Anthropology M168, 171, 271, Political Science 166A, C250E, Geography 122, 188, 189, 288, 289, or equivalent, consent of instructor. Consideration of traditional beliefs about illness and treatment, factors affecting health status in Africa, major health problems, and some programs proposed as remedies.

179B. African Health Sector Analysis Seminar (2 units). Prerequisite or corequisite: course 179A. Approach is that of a multidisciplinary team analyzing the health sector of a representative African country to determine needs and priorities for external aid.

180. Introduction to Public Health. Prerequisite: four units of life science. Principles of public health. Analysis of demographic, professional, organizational, fiscal, social, and research features. Health, mental health, environmental health, and consumer protection fields. Mr. Wilner

181. Introduction to Social Research Methods in Health. Lecture, four hours; assignments, eight hours. Prerequisites: course 100A or equivalent, consent of instructor. Basic methods and techniques in designing and conducting health research using a variety of methods. Discussions of students' own research plans.

182. Behavioral Sciences and Health. Lecture, three hours. Prerequisite: one course in social sciences. Basic concepts in behavioral sciences pertinent to health and medical care; cultural and social class variations in health status; health team and community relations; community decision making in public health. Mr. Goldstein, Mr. Kar

183. Community Health Education. Lecture, two hours; discussion, two hours. Prerequisites: one course in social sciences, consent of instructor. Problems of social, economic, and cultural origin as they apply to sound community organization in the public health field. Examination of health education activities of professional, voluntary, and official health agencies and analysis of their interrelationships.

184. Health and Consumer Economics. Lecture, three hours. Prerequisites: Economics 1 and 2, or 100, upper division or graduate standing. Impact of health problems and costs on individual and family incomes and expenditures, including productivity and dependency.

185. Economics of Health and Medical Care. Lecture, three hours. Prerequisites: Economics 1 and 2, or 100, upper division or graduate standing. Demand, supply, and price determinants in private and public sectors of health and medical care fields.

186. The World's Population and Food. Lecture, three hours. Prerequisites: Economics 1 and 2, or 100, upper division or graduate standing. World food sources; major food groups, human food requirements, and consumption; food in developing economies; international movement of foods; interrelations of foods, population, and economic progress.

187. Health Education for Teacher Credentials (2 units). Limited to students in the teacher education credential program. Required for the California State Teaching Credential. The teaching-learning process as applied to personal and community health. Topics include psychoactive drugs (alcohol, tobacco, and narcotics), human sexuality, nutrition, and community health resources. Mr. Linder

188. Community Mental Health. Prerequisites: one upper division course in psychology, sociology, or anthropology, consent of instructor. Concepts of mental health, mental illness, prevention of mental disorders, mental health in public health programs. Public health aspects of control of mental disorders. Epidemiology, program planning, and legal aspects of mental disorders.

189. Community Cancer Education. Lecture, two hours; discussion, one hour; fieldwork, one hour; reading assignments, one hour. Prerequisites: Biology 30 or equivalent, consent of instructor. Exploration of the process of cancer education through community resources, culminating in student-generated community field study proposal and presentation. Ms. Brown

199. Special Studies (2 to 4 units). Prerequisites: senior standing, consent of instructor and department chair (based on a written proposal outlining the course of study). Individual undergraduate guided studies under direct faculty supervision. Study to be structured by instructor and student at time of initial enrollment. Only four units may be taken each quarter.

Graduate Courses

200A-200B-200C. Biostatistics. Lecture, three hours; discussion, one hour. Prerequisites: course 100C, Mathematics 32B, 152B, or equivalent (certain prerequisites may be taken concurrently or waived with consent of instructor). Quantitative methods in public health, medicine, and biological sciences; statistical theory and application to problems in design and analysis of medical experiments and surveys.

M201E. Special Topics: Statistical Methods for Categorical Data. (Same as Biomathematics M231.) Lecture, three hours; discussion, one hour. Prerequisites: course 100B or 101B, Mathematics 150C or 152B, or equivalent, consent of instructor. Statistical techniques for the analysis of categorical data; discussion and illustration of their applications and limitations.

201F. Special Topics: Distribution Free Methods. Lecture, three hours; discussion, one hour. Prerequisites: course 100D or 101B, Mathematics 150C or 152B, or consent of instructor. Theory and application of distribution free methods in biostatistics.

201G. Special Topics: Statistical Simulation Techniques. Lecture, three hours; discussion, one hour. Prerequisites: course 100C, Mathematics 150C or 152B, a course in computer programming, consent of instructor. Techniques for simulating important statistical distributions, with applications in biostatistics.

201H. Special Topics: Finite Population Sampling. Lecture, three hours; discussion, one hour. Prerequisite: course 100D or Mathematics 150C or 152B. Theory and methods for sampling finite populations and estimating population characteristics.

201J. Special Topics: Supplemental Topics. Lecture, three hours; discussion, one hour. Prerequisites: course 100C, consent of instructor. Topics in biostatistics not covered in other courses.

M201K. Survival Analysis. (Same as Biomathematics M281.) Lecture, three hours; discussion, one hour. Prerequisites: course 100C and Mathematics 150C or 152B, or equivalent, consent of instructor. Statistical methods for the analysis of survival data.

201M. Introduction to Statistical Methods for Biological Assays. Prerequisites: course 100C and Mathematics 150C or 152B. Topics include standard statistical procedures for the estimation of relative potency, density of microorganisms, and density of radioactivity, models used for these procedures, and statistical considerations for designing such assays.

M202E. Problems of Statistical Consultation. (Same as Biomathematics M282.) Lecture, two hours; discussion, one hour; laboratory, two hours. Prerequisite: graduate course in applied statistics. Textbook and original problems requiring special expertise in design and analysis. Use of computer packages to diagnose failure of assumptions, suitability of models, and alternate analyses.

M202F. Statistical Analysis of Incomplete Data. (Same as Biomathematics M232.) Lecture, three hours; laboratory, one hour. Prerequisites: course 100B or 101B, Mathematics 150C or 152B, or equivalent, consent of instructor. Discussion of the statistical analysis of incomplete data sets, with material from the sample survey, econometric, biometric, psychometric, and general statistical literature. Topics include treatment of missing data in statistical packages, missing data in ANOVA and regression imputation, weighting, likelihood-based methods, and nonrandom nonresponse models. Emphasis on application of the methods to applied problems, as well as on the underlying theory. S/U or letter grading.

M202G. Simultaneous Statistical Inference. (Same as Biomathematics M233.) Lecture, three hours; discussion, one hour. Prerequisites: courses 200C, M205A, Mathematics 150C. Methods and theory of simultaneous statistical inference.

M202H. Applied Bayesian Inference. (Same as Biomathematics M234.) Lecture, three hours; discussion, one hour. Prerequisites: courses 200C, M205A, and Mathematics 150C, or consent of instructor. The Bayesian approach to statistical inference, with emphasis on biomedical applications and concepts rather than mathematical theory. Topics include large sample Bayes inference from likelihoods, noninformative and conjugate priors, empirical Bayes, Bayesian approaches to linear and nonlinear regression, model selection, Bayesian hypothesis testing, and numerical methods. S/U or letter grading.

203A. Data Base Management Systems. Lecture, three hours; laboratory, two hours. Prerequisites: course 403 or equivalent, consent of instructor. Data base and data base models applied to medical and public health studies; design of data bases for efficient data retrieval and statistical analysis using package data base management and statistical package programs.

203B. Systems Analysis for Health Data. Lecture, three hours; laboratory, two hours. Prerequisites: course 203A, consent of instructor. Health data computer processing as a total system; review of selected health information systems, statistical packages, and computer languages; design, development, testing, and maintenance of a computer system for managing health data.

204E. Seminar in Biostatistics (2 units). Prerequisites: course 200B, two courses from the M201E-201J series, consent of instructor. Current developments of methodology and problems in applications of biostatistics.

204F. Advanced Seminar in Biostatistics (2 units). Prerequisites: course 200C, consent of instructor. Current research in biostatistics. May be repeated for credit. S/U grading.

M205A-M205B-M205C. Linear Statistical Models. (Same as Mathematics M279A-M279B-M279C.) Lecture, three hours. Prerequisites: course 100C, Mathematics 150C or 152B, or equivalent. Topics include linear algebra applied to linear statistical models, distribution of quadratic forms, the Gauss-Markov theorem, fixed and random component models, balanced and unbalanced designs.

206A-206B. Multivariate Biostatistics. Lecture, three hours. Prerequisite: course M205A or equivalent. Multivariate analysis as used in biological and medical situations. Topics from component analysis, factor analysis, discriminant analysis, analysis of dispersion, canonical analysis.

207E. Advanced Topics: Stochastic Processes. Lecture, three hours. Prerequisites: upper division mathematics, including statistics and probability. Stochastic processes applicable to medical and biological research.

207F. Advanced Topics: Mathematical Epidemiology. Lecture, three hours. Prerequisites: course 207E or equivalent, upper division mathematics (including statistics and probability). Mathematical theory of epidemiology with deterministic and stochastic models and problems involved in applying the theory.

207G. Advanced Topics: Statistical Genetics. Lecture, three hours. Prerequisites: upper division mathematics, including statistics and probability. Introduction to statistical genetics.

207H. Statistical Methods for Research Biological Assays. Prerequisite: course 201M. Topics include statistical methods developed for research assays for which the standard procedures do not apply.

M207J. Computational Statistics. (Same as Biomathematics M280 and Mathematics M280.) Lecture, three hours. Prerequisites: Mathematics 115A, 150C, or equivalent. Introduction to theory and design of statistical programs: pivoting and other technologies used in stepwise regression, nonlinear regression algorithms, algorithms for balanced and unbalanced analysis of variance, including the mixed model, iterative rescaling, and other methods for log-linear models.

207L. Advanced Topics: Recent Developments. Lecture, three hours; discussion, one hour. Prerequisite: course 200C. Advanced topics and developments in biostatistics not covered in the Public Health 201 or 207 series, or in other courses. Possible topics include time-series analysis, classification procedures, correspondence analysis, etc.

210. Principles of Infectious Disease Epidemiology. Lecture, three hours. Prerequisites: courses 100A or equivalent, 112, one-year sequence of biology and chemistry, consent of instructor. Ascertainment of infection, transmission, and epidemiological parameters rather than clinical and pathological aspects. Specific diseases discussed in depth to illustrate epidemiologic principles. Mr. Barr

211A. Epidemiology II. Lecture, two hours; laboratory, four hours. Prerequisites: courses 100B (may be taken concurrently), 114, consent of instructor. Discussion of study designs, research methodology, problems of measurement, and analytic techniques used in epidemiologic research.

211B. Advanced Epidemiology. Lecture, two hours; laboratory, four hours. Prerequisites: course 211A, graduate standing, consent of instructor. A continuation of course 211A, with concentration on selection of appropriate research design, problems of measurement, and analytic techniques commonly used in epidemiologic studies.

211C. Advanced Epidemiologic Analysis. (Formerly numbered 298.) Lecture, two hours; laboratory, four hours. Prerequisites: courses 100C or 100D and 211B, or equivalent, consent of instructor. Advanced principles and methods of epidemiologic analysis. Topics include relating prevalence and incidence, analysis of clustering and seasonality; measures of effect, sources of bias, regression to the mean, estimation and hypothesis testing in epidemiology; models for risk and rates; cohort analysis.
Mr. Greenland

212D. AIDS, A Major Public Health Challenge (2 units). Lecture, 90 minutes; discussion, 90 minutes. Prerequisites: courses 100A, 110, 112 or 114, 130. Presentation and discussion of the Acquired Immunodeficiency Syndrome (AIDS), with emphasis on epidemiology, biology, immunology, clinical characteristics, psychosocial factors, and strategies for control. S/U grading. Mr. Detels

212E. Epidemiology of Cardiovascular Disease (2 units). Lecture, one hour; discussion, one hour. Prerequisites: course 211A, consent of instructor. Theoretical, practical, and controversial aspects of cardiovascular epidemiology in developed and underdeveloped countries. Mr. Quiroga, Mr. Staniloff

212G. Epidemiology of Neurologic Disease (2 units). Prerequisites: course 211B or equivalent, consent of instructor. Epidemiologic characteristics of selected chronic neurologic diseases, with particular emphasis on etiology and possible control.
Ms. Visscher

212H. Epidemiology of Arthropod-Borne Disease. Prerequisites: course 211B, graduate standing. Epidemiologic aspects of disease carried by arthropods, emphasizing life cycle and ecology of vectors as related to epidemiology of viral, rickettsial, bacterial, protozoal, and helminthic diseases. Mr. Barr

212I. Epidemiology of Nonintentional Injuries. Lecture, three hours; discussion, two hours. Prerequisites: courses 100A, 110 (or equivalent), 112 (or equivalent), 155, consent of instructor. Pertinent epidemiology methods for study of nonintentional trauma, including that from motor vehicle crashes, occupational exposures, falls, and other major external causes, which focus on research approaches, data sources, analytical techniques. Substance findings on related subproblem areas presented for critical review. Mr. Kraus

212J. Occupational Epidemiology. Lecture, two hours; discussion, two hours. Prerequisites: course 211A or equivalent, consent of instructor. Methodological considerations, approaches, and limitations in epidemiological studies of occupational groups and environments. Mr. Kraus

212K. Epidemiology of Assault, Homicide, and Suicide (2 units). Lecture, two hours; discussion, one hour. Prerequisites: courses 100A, 110, 112 or equivalent, 155, consent of instructor. Presentation and evaluation of epidemiologic research approaches to the study of violent injury, including a description of incidence, study design, risk factor analysis, and control evaluation. Mr. Kraus

213. Environmental Epidemiology. Lecture, two hours; discussion, one hour; independent study, three hours. Prerequisites: courses 100B, 112 or 114, Chemistry 21, Physics 3C or equivalent, graduate standing, consent of instructor. Methodologic problems and approaches of epidemiology for assessing the health impact of major types of environmental exposure. Mr. Spivey

214. Infectious and Tropical Disease Epidemiology. Lecture, three hours; discussion, three hours. Prerequisites: courses 100A, 112, or equivalent, consent of instructor. Epidemiology of major infectious and tropical diseases in developing countries, including those with direct or contact mode of spread and those vector borne.

215A. Epidemiology of Cancer. Prerequisites: courses 100A, 112, consent of instructor. Etiological concepts and mechanisms. Pathogenesis, diagnosis, and classification of neoplastic diseases. Epidemiologic principles and methods as applied to cancer. Classical studies in cancer epidemiology. Models of causal association. Mr. Haile

215B. Epidemiology of Cancer (2 units). Lecture, one hour; discussion, one hour. Prerequisites: course 215A, consent of instructor. Current issues in cancer epidemiology, including etiologic research, screening programs, prevention. Mr. Haile

216A. Ecology of Exotic Diseases. Lecture, two hours; discussion, six hours. Prerequisites: course 112, Microbiology C103A, C103B, or equivalent, consent of instructor. Geographic pathology and behavioral causes of exotic diseases. Climatological, ecological, and biological determinants of the distribution, exposure to, and occurrence of exotic diseases.
Mr. Work

216B. Viral Diseases of Man. Lecture, two hours; laboratory, six hours. Prerequisites: course 216A or equivalent, consent of instructor. Viral and rickettsial diseases of man. Natural history, epidemiology, diagnosis, control, and prevention of these diseases, especially in tropical situations. Mr. Work

217. Prevalence Studies in Epidemiology. Lecture, two hours; discussion, one hour; laboratory, two hours; outside assignments, 10 to 12 hours. Prerequisites: courses 100B, and 211A or 181, or equivalent, consent of instructor. Design, testing, field use, analysis, and interpretation of data collection instruments to obtain prevalence estimates in epidemiologic studies of populations and samples. Design and administration of questionnaires, interviewing procedures, and the application of noninvasive objective measurements. Ms. Bourque

218A. Protozoal Diseases of Man. Prerequisites: Microbiology 101 or Biology 105 or equivalent, consent of instructor. May be taken concurrently with course 218B. Comprehensive overview of systematics, morphology, biology, host-parasite relationships, public health problems, and control of protozoa parasitic in man and animals. Mr. Ash

218B. Protozoal Diseases of Man (2 units). Prerequisite or corequisite: course 218A. Laboratory methods of diagnosis and microscopic recognition of protozoa parasitic in man and animals. Intestinal protozoa and organisms occurring in the blood and tissues of their hosts and pathology associated with these infections. Mr. Ash

219. Arthropods of Medical Importance. Lecture, two hours; laboratory, six hours. Prerequisites: Biology 105 or 107 and 181, Microbiology 101, or equivalent. Biology and identification of mites and insects of public health importance involved in transmission and causation of human diseases. Mr. Barr

220A. Helminthic Diseases of Man. Prerequisites: Microbiology 101 or Biology 105 or equivalent, consent of instructor. May be taken concurrently with course 220B. Comprehensive overview of systematics, morphology, biology, host-parasite relationships, public health problems, and control of the nematodes, trematodes, and cestodes parasitic in man and animals. Mr. Ash

220B. Helminthic Diseases of Man (2 units). Prerequisite or corequisite: course 220A. Laboratory diagnosis and practical microscopic recognition of the nematodes, trematodes, and cestodes parasitic in man and animals. Pathology produced by these infections. Mr. Ash

221. Seminar in Epidemiology: Methodology (2 units). Prerequisites: course 211A or equivalent, consent of instructor. Review of current epidemiologic research contained in recent medical literature. May be repeated for credit. S/U grading.

222. Seminar in Epidemiology: Infectious and Tropical Disease (2 units). Prerequisites: course 211A or equivalent, consent of instructor. Review of research on specific diseases of public health importance. May be repeated for credit. S/U grading.

223. Topics in Theoretical Epidemiology (2 units). Prerequisites: courses 100A and 100B and 100D (or Mathematics 152A), 211A, 211B, consent of instructor. Selected topics from current research areas in epidemiologic theory and quantitative methods. Topics selected from biologic models, epidemiologic models, problems in inference, model specification problems, design issues, analysis issues, and confounding. May be repeated for credit with consent of instructor. S/U grading. Mr. Greenland

224. Principles of Epidemiology II. Lecture, four hours; discussion, two hours. Prerequisites: courses 100A, 112, upper division biology course, or equivalent, consent of instructor. Material presented in course 112 examined in greater detail. Topics include measures of disease occurrence and criteria of causality; reliability and validity concerns; proper design, analysis, interpretation of experiments, and cohort and case control studies. Mr. Haile

225. Research Methods in Cancer Epidemiology (2 units). Prerequisites: courses 100A, 112, 211A. Biologic, quantitative, philosophical, and administrative considerations in epidemiologic cancer research. Hypothesis specification and choice of study design. Uses of descriptive epidemiology, cohort studies, case control studies. Clustering, screening, and cancer control. Means of identifying subjects and controls. Design of instruments. Sources of bias and confounding. Mr. Mack

226. Genetic Epidemiology (2 units). Prerequisites: courses 100A, 112, upper division biology course, or equivalent, consent of instructor. Proper design, analysis, interpretation, and application of analytical methods used by genetic epidemiologists, including studies of familial prevalence, twins, migrants, genetic marker-disease associations, and more complex analyses of genetic models. Mr. Haile

227. Public Health Research Using Available Data (2 units). Lecture, one hour; discussion, one hour. Prerequisites: courses 100A, 110, 112, and 410A or 403 or 217 or 405, or equivalent, consent of instructor. Presentations and discussions of the availability, concepts, content, and usefulness of already collected data in public health research. Major emphasis on public data such as National Center for Health Statistics surveys, vital statistics, census, etc.
Ms. Coulson

229. Advanced Seminar in Epidemiology (2 units). Prerequisites: course 211B, consent of instructor. Current research in epidemiology. May be repeated for credit. S/U grading.

230A-230B. Health Systems Organization and Financing. Lecture, four hours; discussion, two hours. Prerequisites: health services major; four upper division courses in two of the following: social science, political science, history, economics, anthropology, medicine or health science, law, management or organizational behavior, operations research, philosophy; consent of instructor. In-depth analysis of health services systems in the United States, using relevant theories, concepts, and models.
Ms. Myers and the Staff

231. Health Policy Seminar: Health Care Financing, Competition, and Regulation. Prerequisites: courses 100A, 100B, 230A-230B, 238, or equivalent, consent of instructor. Limited to doctoral students and M.S. or M.P.H. students with advanced degrees. Public policy concerning payment for medical care services and characteristics of the market for those services: demand for care, fee-for-service and prepaid payment systems, regulation of price and capital investment, private sector efforts to control health care costs. Mr. Newhouse and the Staff

232. Governmental Health Services and Trends. Prerequisites: course 130, two additional upper division social or behavioral sciences courses, consent of instructor. Systematic analysis of the interface between organized programs of personal health services and governmental agencies at all jurisdictional levels. Study of changing relationships between traditional public health and newer medical care and quality control functions. Mr. Shonick

233. Health Policy Analysis. Lecture, two hours; discussion, two hours. Prerequisites: course 130 or equivalent, three courses in social sciences, consent of instructor. Conceptual and procedural tools for the analysis of health policy, emphasizing the role of analysis during the various phases of the life cycle of public policy.

234A-234B. Clinical Epidemiology (2 units each). Prerequisites or corequisites: courses 100A, 112, 136A, consent of instructor. Introduction to special issues in clinical health services research. Focus on research design and analysis of data. In Progress grading. Mr. Greenfield

235. Law, Social Change, and Health Service Policy. Prerequisites: course 130, two upper division courses in political science or sociology or equivalent, consent of instructor. Legal issues affecting policy formulation for environmental, preventive, and curative health service programs. Ms. Roemer

236. Quality Assessment and Assurance. Lecture, 90 minutes; discussion, 90 minutes; conference, one hour. Prerequisites: courses 100A, 112, 130, one additional course in health services or epidemiology, or equivalent, consent of instructor. Fundamental issues in quality assessment, quality assurance, and the measurement of health status.
Mr. Brook, Mr. Greenfield

237A-237B. Special Topics in Health Services Research Methodology. Lecture, one hour; discussion, three hours. Prerequisites: courses 100A, 100B, 100C, 130, or equivalent, consent of instructor. In-depth consideration of problems in the application of statistical and other quantitative methods in health services research. Critique of adequacy of study designs, appropriateness of analyses, and degree to which conclusions are supported by data. S/U grading. Ms. Cretin, Mr. Shonick

238. Microeconomic Theory of the Health Sector. Prerequisites: courses 100A or equivalent, 232, Economics 1, 2, consent of instructor. Microeconomic aspects of the health care system, including health manpower substitution, choice of efficient modes of treatment, market efficiency, and competition.
Mr. Schweitzer

239. Aging and Long-Term Care. Prerequisites: courses 130, 138, 182, or equivalent, consent of instructor. Long-term care of the chronically ill elderly examined from a perspective of political and sociodemographic trends, including populations at risk, policy options, and alternative forms of care such as nursing homes, home care, and care by informal support systems.

240. Health Care Issues in International Perspective. Prerequisites: two courses in health administration, two upper division courses in social sciences, or equivalent, consent of instructor. Analysis of crucial issues in health care; manpower policy, economic support, health facilities, patterns of health service delivery, regulation, planning, and other aspects of health care systems probed in the settings of European welfare states, developing nations, and socialist countries. Mr. Roemer

M241. Women, Health, and Aging: Policy Issues (2 or 4 units). (Same as Social Welfare M290D.) Lecture, three hours; discussion, one hour. Prerequisites: two upper division social science courses, two upper division biological science courses, or equivalent, consent of instructor. The social and economic context of older women's aging, the major physical and psychological changes older women experience, the delivery of health services to this population, and the policies that respond to their health needs.
Ms. Abel, Mr. Lubben

243. Issues in Health Planning. Discussion, three hours; other, three hours. Prerequisites: courses 181 or equivalent research course, 444B. In-depth presentation and analysis of current issues of importance to advanced students in health planning.
Ms. Myers

247. Research Topics in Health Economics. Prerequisites: courses 130, 238, 446 or equivalent, consent of instructor. Seminar in economic analysis of current health services issues. Critical examination of studies pertaining to health manpower, health care costs and controls, the diffusion of technology, and cost-benefit analysis of health programs.
Mr. Schweitzer

248. Small Area Planning for Resources for Personal Health Service. Lecture, three hours; laboratory, two hours. Prerequisites: courses 130, 134, or equivalent, consent of instructor. General planning theory and health planning theory, methods, and experience with planning for personal health care resources for small geographic areas. Determining needs and estimating required utilization levels and health care resources. Survey of elements of different disciplines used in areawide health planning. Laboratory projects and exercises designed to implement studies of health planning theory and methods.
Mr. Shonick

250. Advanced Environmental Health. Lecture, three hours. Prerequisites: course 150 or equivalent, consent of instructor. Theoretical considerations and supporting data involved in scientific establishment and justification of environmental health standards and requirements, with particular reference to related health factors. Ms. Valentine

251. Chemical Behavior of Aquatic Systems. Lecture, three hours. Prerequisites: course 150, Chemistry 11A, Mathematics 3A, consent of instructor. Chemistry of ocean waters, rivers, ground waters, and water treatment systems. Topics include thermodynamics of natural waters, acids and bases, carbon dioxide cycle, solubility reactions, oxidation and reduction, plus applied problems. Ms. Valentine

252. Environmental Microbiology. Lecture, three hours. Prerequisites: courses 150, 153, or equivalent, consent of instructor. Basic concepts of eutrophication, indicator organisms, aquatic microbes; assessment of biological treatment practices in water reuse and/or purification. Mr. Mah

253A. Environmental Toxicology. Lecture, three hours; discussion, one hour. Prerequisites: Chemistry 152, Biological Chemistry 101A-101B, consent of instructor. Essentials of toxicology, dose response, physical, chemical, or biological agents that adversely affect man and environmental quality.
Mr. Froines, Mr. Mustafa

253B. Environmental Toxicology: Trace Contaminants. Lecture, three hours; discussion, one hour. Prerequisite: course 253A. Essentials of toxicology in relation to trace contaminants. Mr. Froines

254. Environmental Decision Systems Analysis. Lecture, four hours; discussion, one hour. Prerequisites: courses 154, 250, Mathematics 3C, or equivalent, consent of instructor. Techniques and models of systems analysis and concepts of general system theory as applied to comprehensive study, planning, evaluation, and management of environmental decision systems. Experimentation with relevant computer programs. Mr. Davos

255. Seminar in Environmental Health Sciences (2 units). Prerequisites: courses 150, 156A, consent of instructor. A presentation in seminar format of theoretical and practical aspects of environmental and occupational sciences currently being conducted in local, state, federal, and academic settings. May be repeated for credit. S/U grading.

256. Seminar in Health Effects of Environmental Contaminants (2 units). Prerequisites: Biological Chemistry 101A-101B or equivalent, consent of instructor. Emphasis on health effects of air, water, environmental pollutants on man and review of research literature. May be repeated for credit.

257. Control of Airborne Contaminants in Industry. Lecture, two hours; laboratory, two hours. Prerequisites: courses 156A, 157E, consent of instructor. Intended for industrial hygiene majors. Principles and applications of control technology to industrial environments, including general and local exhaust ventilation, air cleaning equipment, and respiratory protection. Mr. Hinds

258. Instrumental Methods in Environmental Sciences. Lecture, two hours; laboratory, six hours. Prerequisites: courses 150, 153, 156, Chemistry 25, consent of instructor. Laboratory techniques and instrumentation used in the preparation and analysis of biological, environmental, and occupational samples.
Mr. Panaqua

259. Biological Monitoring in Occupational Health (2 units). Prerequisites: courses 156B, 253A, consent of instructor. Principles and applications of biological monitoring for assessment of occupational exposure to organic and inorganic chemicals.
Mr. Droz

260E. Advanced Nutrition: Vitamins. Lecture, three hours; discussion, one hour. Prerequisites: Biological Chemistry 101A-101B-101C or equivalent, consent of instructor. Comprehensive treatment of vitamin nutrition and metabolic-nutrient interactions.
Ms. Swendseid

260F. Advanced Nutrition: Proteins. Lecture, three hours; discussion, one hour. Prerequisites: Biological Chemistry 101A-101B-101C or equivalent, consent of instructor. Comprehensive treatment of protein nutrition and metabolic-nutrient interactions.
Mr. Jones

260G. Advanced Nutrition: Lipids. Lecture, three hours; discussion, one hour. Prerequisites: Biological Chemistry 101A-101B-101C or equivalent, consent of instructor. Comprehensive treatment of lipid nutrition and metabolic-nutrient interactions.
Ms. Alfin-Slater

260H. Advanced Nutrition: Minerals (2 units). Prerequisites: Biological Chemistry 101A-101B-101C or equivalent, consent of instructor. Comprehensive treatment of mineral nutrition and metabolic-nutrient interactions. Ms. Carlisle

261A. Laboratory Instrumentation and Methods. Lecture, two hours; laboratory, six hours. Prerequisites: course 165 and Chemistry 25 or Biological Chemistry 101A (may be taken concurrently), consent of instructor. Biochemical techniques and instrumentation used in environmental and nutritional sciences, including absorption, atomic absorption and fluorescence spectroscopy, gas chromatography, HPLC, electrophoresis, radioisotopes, and centrifugation. Mr. Panaqua

261B. Advanced Laboratory Techniques in Nutritional Science. Lecture, one hour; laboratory, six hours. Prerequisites: course 261A, consent of instructor. Current biochemical methods emphasizing design of nutritional experiments. Mr. Eckhert

262. Seminar in Nutrition (2 units). Prerequisites: courses 162, 167, one course in the 260 series. Review of current literature in nutritional science. Emphasis on methodology and data evaluation. May be repeated for credit.

263. Seminar in Public Health Nutrition (2 units). Prerequisites: courses 162, 167, one nutrition course in the 200 or 400 series. Review of literature in selected areas of public health nutrition. May be repeated for credit.

264E. Clinical Nutrition Problems (2 units). Prerequisites: one or more nutrition courses in the 200 series, and Biological Chemistry 101A-101B-101C or 201A-201B. Nutrition and nutrient-metabolic interactions in various disease states such as gastrointestinal disorders, renal disease, and liver disease.
Ms. Alfin-Slater, Mr. Kopple, Ms. Swendseid

264F. Clinical Nutrition Problems (2 units). Prerequisites: one or more nutrition courses in the 200 series, and Biological Chemistry 101A-101B-101C or 201A-201B. Nutrition and nutrient-metabolic interactions in various disease states such as cardiovascular disease, diabetes, and obesity.
Ms. Alfin-Slater, Mr. Kopple, Ms. Swendseid

265. Doctoral Research Seminar in Nutritional Sciences (2 units). Prerequisites: at least one course in the 260 series, doctoral standing, consent of instructor. Limited to doctoral students. Presentation of research projects. Emphasis on data evaluation. May be repeated for credit. S/U grading.

270. Maternal and Child Nutrition. Prerequisites: courses 110, 161, 170, or equivalent, consent of instructor. Nutrition of mothers, infants, and children in countries at various levels of socioeconomic development; measures for prevention and treatment of protein-calorie malnutrition; relationship between nutrition and mental development; impact of ecological, socioeconomic, and cultural factors on nutrition, nutrition education, and service.
Mr. Jelliffe, Ms. Neumann

M271. Medical Anthropology. (Formerly numbered 271.) (Same as Anthropology M266.) Prerequisites: courses 110, 112, one upper division course in psychology, sociology, or anthropology, or equivalent, consent of instructor. Cross-cultural aspects of human behavior as they relate to perception, treatment, incidence, and prevalence of disease and illness.
Ms. Scrimshaw

272. Seminar on Current Issues in Maternal and Child Health (2 units). Prerequisites: courses 110 or equivalent, 171A, 171B, consent of instructor. New knowledge and approaches in selected health and social problems of families, women of childbearing age, and children, including early development, day care, and genetic counseling. Mr. A. Chang

M273. Qualitative Research Methodology. (Formerly numbered 273.) (Same as Anthropology M284.) Discussion, three hours; laboratory, one hour. Prerequisites: courses 100A and 125 or 181, an undergraduate or graduate course in social psychology, anthropology, or sociology, consent of instructor. Intensive seminar-field course in qualitative research methodology. Emphasis on using qualitative methods and techniques in research and evaluation related to health care. Ms. Scrimshaw

M274A-M274B. Population Policy and Fertility. (Same as Sociology M287A-M287B.) Lecture, three hours; discussion, one hour. Prerequisites: courses 100A, 112, 171A, 171B, or equivalent, graduate standing, consent of instructor. Course M274A is prerequisite to M274B. Analysis of research concerning major issues in population policy, with special emphasis on human fertility. Ms. Blake

M274C. Seminar in Population Policy and Fertility. (Same as Sociology M287C.) Seminar, three hours; discussion, one hour. Prerequisites: courses M274A-M274B or equivalent, graduate standing, consent of instructor. Review of current literature in population policy and fertility in conjunction with student research reports. May not be repeated for credit.
Ms. Blake

275. Human Lactation: Biological and Public Health Significance (2 units). Prerequisites: courses 112, 270, or equivalent, consent of instructor. Biological and economic aspects of human lactation in industrialized and developing countries.
Mr. Jelliffe

M276. Culture and Human Reproduction. (Formerly numbered 476.) (Same as Anthropology M262P.) Lecture, two hours; discussion, two hours. Prerequisites: courses 110, 112, 172, 474, or equivalent, consent of instructor. Exploration of human behavior related to reproduction. Cross-cultural exploration of biological and behavioral factors, with particular reference to human adaptation. Ms. Scrimshaw

278. Clinical Genetics (2 units). Lecture, 90 minutes; discussion, 30 minutes. Prerequisites: courses 100A, 112, 170E, 256, consent of instructor. An in-depth view of genetic disorders, their clinical manifestations, and characteristic approaches to management of the patient and family. Mr. Alfi

279. Advanced Seminar in Population and Family Health (2 units). Prerequisites: doctoral standing, consent of instructor. Current research in population and family health. May be repeated for credit. S/U grading.

280. Change Determinants in Health-Related Behavior. Prerequisites: course 182, three courses from Psychology 135, 170A, Sociology 152, 154, or equivalent, consent of instructor. Unified behavioral science approach to natural determinants of change, as foundation for planned change in health-related behavior at community, group, and individual levels.
Ms. Siegel

281. Advanced Social Research Methods in Health. Lecture, two hours; laboratory, two hours. Prerequisites: courses 100B, 181, or equivalent, consent of instructor. Problems of health survey design and data collection; measurement issues in data analysis and interpretation; use of computer for analysis of large-scale survey data using various statistical techniques.

282. Communications in Health Promotion and Education. Lecture, two hours; discussion, two hours. Prerequisites: courses 182, 183, or equivalent, consent of instructor. Design, implementation, and evaluation of interpersonal communication strategies for health promotion programs. Equal emphasis on communication theories, models, and empirical research literature and on specific applications in health programs and case studies.
Ms. Beckman, Mr. Kar

283E. Social Epidemiology I. (Formerly numbered M283E.) Lecture, two hours; discussion, one hour. Prerequisites: courses 112, 183, three courses in psychology, sociology, or anthropology, or equivalent, consent of instructor. Relationship between sociological, cultural, and psychosocial factors in etiology, occurrence, and distribution of morbidity and mortality. Emphasis on life-styles and other socioenvironmental factors associated with general susceptibility to disease and subsequent mortality. Ms. Siegel

M283F. Sociocultural Aspects of Health and Illness: Health Professions. (Same as Sociology M249A.) Lecture, three hours. Prerequisites: course 182, three courses in psychology, sociology, or anthropology, or equivalent, consent of instructor. Sociological examination of the concepts "health" and "illness" and role of various health professionals, especially physicians. Attention to the meaning of professionalization and professional-client relationships within a range of organizational settings.
Mr. Goldstein

M283G. Sociocultural Aspects of Health and Illness: Health Behavior. (Same as Sociology M249B.) Seminar, three hours. Prerequisites: course 182, three courses in psychology, sociology, or anthropology, or equivalent, consent of instructor. Sociocultural factors affecting differential patterns of health behavior, illness behavior, and sick role behavior.
Mr. Berkanovic

283H. Social Epidemiology II. Lecture, two hours; discussion, one hour. Prerequisites: courses 112, 183, three courses in psychology, sociology, or anthropology, or equivalent, consent of instructor. Relationship between sociological, cultural, and psychosocial factors in etiology, occurrence, and distribution of chronic diseases. Topics include hypertension, coronary heart disease, and cancer. Emphasis on life-styles and other socioenvironmental factors associated with chronic diseases. Ms. Siegel

284. Ecology of Mental Health. Lecture, three hours. Prerequisites: courses 100A, 112 and 182 or equivalent, consent of instructor. Analysis of occurrence and distribution of mental disorders in the community and the relationships to social structure. Problems of classification, definition, measurement in sociopsychiatric epidemiology, sociocultural and social-psychological factors in mental disorders.
Mr. Goldstein

285. Community Problems in Mental Disorders. Lecture, three hours. Prerequisites: course 182, three upper division or graduate courses in psychology or sociology or equivalent, consent of instructor. Intensive examination of the meaning of mental health, mental illness, and psychotherapy, both curative and preventive, within a public health context. Implications for social policy and planning. Mr. Goldstein

286. Seminar in Behavioral Sciences and Health (2 to 4 units). Lecture, two hours. Prerequisites: courses 283E, M283F, M283G, or equivalent, consent of instructor. Recent significant contributions of behavioral sciences to understanding health and illness, with selected and varying topics each quarter. May be repeated for credit. S/U grading.
Mr. Berkanovic, Mr. Morisky

287. Community Organization in the Health Field. Lecture, two hours; discussion, one hour; fieldwork, eight hours. Prerequisites: courses 182, 183, at least two courses in sociology or anthropology, or equivalent, consent of instructor. Theory and practice of community organization applied to health problems, including analysis of relevant factors in physical and social environment and development of community-based intervention strategies to improve health and health services. Mr. Brown

288. Current Problems in Health Education. Lecture, one hour; discussion, three hours. Prerequisites: courses 183, 280, consent of instructor. Current problems and findings in health education content areas, such as nutrition, mental health, family health, consumer health, safety, communicable and chronic diseases.

289. Issues in Program Evaluation. Discussion, three hours. Prerequisites: course 281, one course in social sciences, or equivalent, consent of instructor. Advanced seminar which explores the problems of planning and implementing evaluation research in the context of local demonstration projects.
Mr. Berkanovic

290. Seminar in Community Health Education (2 units). Prerequisites: courses 288, 481. In-depth analysis of health education concepts as they relate to the professional practitioner.

291. Advanced Topics in Health Survey Research Methods. Lecture, two hours; discussion, two hours. Prerequisites: course 281 or equivalent, consent of instructor. Special topics in health survey research methods. Design of special purpose surveys; recent interviewing techniques; diaries and memory aids; measurement error, including response bias, social desirability, response validity; telephone interviewing; obtaining data on sensitive issues; ethics and confidentiality of survey research data. Mr. Goldstein

292. Alcohol and Drug Abuse: Social Policy Perspectives (3 units). (Formerly numbered M292.) Prerequisite: consent of instructor. Alternative models of alcohol and other drug addictions examined and implications assessed for public policy regarding their control. Prevention efforts and findings from California and national surveys, with primary emphasis on alcohol use and abuse. Ms. Beckman

293. Alcoholism and Drug Abuse among Women. (Formerly numbered M293.) Prerequisite: consent of instructor. Discussion of the psychosocial aspects of abuse of alcohol and other drugs among women. Topics include etiology, prevention, treatment, hormonal influences, and the role of the family. Emphasis on current theoretical perspectives and research findings. Ms. Beckman

294. Introduction to Occupational Health Education. Lecture, one hour; discussion; two hours; outside assignment, one hour. Prerequisites: course 156A, two courses in sociology, psychology, or education, consent of instructor. Health education theory and practice as applied to occupational health and safety. Emphasis on design and evaluation of education programs dealing with health and safety issues for workplace settings. Mr. Vojtecky

295A. Advanced Community Health Education. (Formerly numbered 296.) Lecture, two hours; discussion, two hours. Prerequisites: course 182, three upper division courses in social science or public health, consent of instructor. Before planning the educational components of a health program, one must assess the behaviors and factors influencing the health problem. Conceptual, theoretical, and evaluative skills developed and applied in constructing a community-based educational program. Mr. Morisky

295B. Research in Community and Patient Health Education. (Formerly numbered 295.) Lecture, two hours; discussion, two hours. Prerequisites: courses 182, 295A, two other courses in public health, consent of instructor. Designed to provide students with an opportunity to review and discuss the conceptual framework, research methodology, design, implementation, and evaluation of previous and ongoing community and patient health education programs of their choice from selected articles, monographs, or reports.

297. Social and Behavioral Perspectives on Work and Health. Prerequisites: courses 156A, 294, two courses in psychology or sociology, consent of instructor. Discussion of current social and behavioral research, issues, and perspectives on work and health. Mr. Vojtecky

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. A teaching apprenticeship under the active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May not be substituted for any departmental enrollment requirements. May be repeated for credit. S/U grading.

400. Field Studies in Public Health (2 or 4 units). Prerequisite: consent of instructor. Field observation and studies in selected community organizations for health promotion or medical care. Students must file field placement and program training documentation on form available from Student Affairs Office. May not be applied toward the M.S. minimum course requirement; four units may be applied toward the 44-unit minimum total required for the M.P.H. degree.

401E. Statistical Methods in Medical Studies (2 units). Prerequisites: course 100C or 100D or Mathematics 152B or equivalent, graduate standing in public health or related field. Design and analysis of biomedical studies. S/U grading (nondivision majors only).

401F. Statistical Methods for Longitudinal Data. Lecture, three hours. Prerequisites: courses 100C or 100D or Mathematics 150C or 152B or equivalent, 112, consent of instructor. Design and analysis of longitudinal or panel studies. S/U grading (nondivision majors only).

401G. Statistical Methods for Case-Control Studies. Lecture, three hours. Prerequisites: courses 100C and 100D, or 101C. Statistical designs, sampling statistics, and analytic models of case-control studies. Special topics such as exploratory analyses, multiplicity of analyses, cross-validation, small sample performance of variance estimators, measurement error in the covariates, and incomplete data.

402A. Principles of Biostatistical Consulting (2 units). Lecture, one hour; discussion, one hour. Prerequisites: course 100B or 101B and Mathematics 150B or 152B. Presentation of structural format for statistical consulting. Role of statistician and client. Reviews of actual statistician-client interactions and case studies.

402B. Biostatistical Consulting. Discussion, two hours; laboratory, two hours. Prerequisites: courses 100C and 402A, or consent of instructor. Principles and practices of biostatistical consulting. May be repeated for credit. S/U grading.

403. Computer Management of Health Data. Lecture, three hours; laboratory, two hours. Prerequisites: at least one statistics course, two courses in research methodology, Program in Computing 1 or equivalent, consent of instructor. Concepts of health data management, design and maintenance of large data bases on tapes or disks; computing tools and techniques facilitating data retrieval for statistical analysis, tabulation and report generation useful to biostatisticians, health planners, and other health professionals.

404. Principles of Sampling. Lecture, three hours; discussion, one hour. Prerequisites: courses 100B, 112, or equivalent, consent of instructor. Statistical aspects of the design and implementation of a sample survey. Techniques for the analysis of the data, including estimates and standard errors. Avoiding improper use of survey data.

405. Demographic Materials and Methods. Lecture, three hours; laboratory, two hours. Prerequisites: courses 100A or 101A, 112 or 114, 180, or equivalent, consent of instructor. Sources of demographic information; description of human populations; calculation and interpretation of statistics used to measure and describe population growth, structure, geographic distribution, mortality, natality, and migration.

406. Applied Multivariate Biostatistics. Lecture, three hours; laboratory, one hour. Prerequisites: course 100B, at least two other upper division research courses, consent of instructor. The use of multiple regression, principal components, factor analysis, discriminant function analysis, logistic regression, and canonical correlation in biomedical data analysis. S/U grading optional for nondivision majors.

410A. Management of Epidemiologic Data (2 units). Prerequisites: courses 100A, 112 (one course may be taken concurrently with consent of instructor). Concepts, collection, and management of data, with particular emphasis on large-scale data bases. Introduction to computers and appropriate selection and use of packaged programs. Ms. Coulson

410B. Management of Epidemiologic Data (2 units). Prerequisites: course 410A or equivalent, consent of instructor. Development of special purpose programming and compiler languages for epidemiologic problems. Data management in large-scale studies in infectious and chronic diseases. Ms. Coulson

411. Research Resources in Epidemiology (2 units). Lecture, one hour; discussion, one hour. Prerequisites: courses 100B, 211B, consent of instructor. Instruction and practical experience in the use of varied bibliographic aids and sources of information, building of reference files, and presentation of research findings for publication. Ms. Coulson, Mr. Spivey

412. Administration of Preventive and Medical Clinics (2 units). Lecture, one hour; discussion, one hour; field trips. Prerequisites: courses 112, 130, or equivalent, consent of instructor. Delivery of preventive and ambulatory health services in the clinic. Epidemiologic, administrative, and financial aspects of communicable disease, substance abuse, mental health, prenatal care, family planning, cardiovascular disease, presymptomatic screening, venereal disease, and degenerative diseases. Mr. Tennant

413. Preventive Medicine in Public Health Practice. Lecture, two hours; discussion, two hours. Prerequisites: courses 100A, 110, 112, 130, or equivalent, graduate standing, consent of instructor. Development, current status, and potential of preventive medicine in public health practice, focusing on the risk indicator approach (exercise, alcohol, stress, etc.), with consideration of program settings, delivery problems, and issues. Mr. Fielding

414. Practical Epidemiologic Investigations. Lecture, one hour; laboratory, three hours. Prerequisites: courses 100A, 112 or 114, 211A, or equivalent, consent of instructor. Practical approaches to epidemic investigations presented through problem sets based on actual outbreaks. Data collection, analysis, and written presentation of findings. Mr. Strassburg, and the Staff

415. Epidemiology for Developing Countries. (Not the same as course 415 prior to Fall Quarter 1986.) Prerequisites: courses 100A, 112 or equivalent, two courses in biological sciences or equivalent, consent of instructor. Uses of epidemiology for assessing the burden of illness in the community, establishing program priorities, and developing disease intervention or prevention strategies. Mr. Kraus

430. Health Service Organization and Management Theory. Prerequisites: course 131, two upper division courses in social sciences, or equivalent, consent of instructor. Application of contemporary organization and management theory to systems that provide personal health care services. Environmental characteristics, missions/goals, structure and processes of health service organizations.

431. Managerial Processes in Health Service Organizations. Lecture, one hour; laboratory, three hours. Prerequisites: course 430, consent of instructor. Managerial skills and behaviors applied to components of organizations at several levels: individual, interpersonal, group, intergroup, system, and interorganization. Unique features of health service organizations are stressed as applications are presented.

432. Integrative Seminar in Health Services Management. Prerequisite: course 431. Residents and preceptors are responsible for presenting cases of actual administrative problems for solution by teams of students and faculty.

433. Health Service Organization Policy and Strategy. Lecture, three hours; discussion, one hour. Prerequisites: courses 131, 400 (at least six units), 430, or equivalent, consent of instructor. Conceptual, analytical, and technical aspects of policy and strategy formulation in health service organizations. Special attention to structure and dynamics of competitive markets, corporate-level strategic planning and marketing, managerial ethics and values, organizational creativity/innovation.

434. Quantitative Methods in Health Services Management. Prerequisite: course 139. Quantitative methods for managerial decision making. Deterministic and stochastic analyses of problems in resource allocation, inventory control, task sequencing, patient and facilities scheduling, demand forecasting, and cost-benefit analysis.

435. Manpower Management in Health Services Organizations (2 units). Prerequisites: course 131 or equivalent, consent of instructor. Introduction to personnel administration and labor relations as they apply to health care facilities.

436. Financial Management of Health Service Organizations. Prerequisites: courses 131, 141, 430, or equivalent, consent of instructor. Application of financial management and accounting principles to health care facilities, including unique financial characteristics of health care facilities, third-party reimbursement, cost finding and rate setting, operational and capital budgeting, auditing, and risk management. Mr. Coyne

437. The Legal Environment of Health Services Management (2 units). Prerequisites: course 131 or equivalent, consent of instructor. General survey of legal aspects of health services management, including governance, agency, informed consent, medical malpractice, contracts, negligence, and case law relating to health facility operations. Mr. Liset

438. Issues and Problems of Local Health Administration (2 units). Prerequisites: courses 110, 130, one additional health services course, consent of instructor. Analysis of organizational issues currently faced by local health departments in increasing scope and quality of services; exploration of administrative problems and interagency relationships. Ms. Alkon

439. Dental Care Administration (2 units). Prerequisites or corequisites: courses 100A, 112, or equivalent, consent of instructor. In-depth examination of several specific dental care policy issues: manpower, relationship of treatment to disease, national health program strategies, and evaluation mechanisms. Mr. Schoen

440A. Health Information Systems: Organization and Management. Lecture, two hours; laboratory, three hours. Prerequisites: courses 140A-140B or equivalent, consent of instructor. Principles of and systems relating to organization and management of a health facility's health information system. Ms. Lugg

440B. Health Information Systems: Organization and Management. Lecture, two hours; laboratory, three hours. Prerequisites: course 440A or equivalent, consent of instructor. Health and administrative research using clinical records. Principles of planning for routine and special studies. Individual investigation in methods of obtaining and processing data to meet needs of programs in institution and agency. Introduction to principles of medical auditing; analysis of medical and health services. Ms. Lugg

442. Principles and Practices of Medical Care Audit (2 units). Prerequisites: courses 100A, 112, 130, or equivalent, consent of instructor. Analysis of systems used in evaluating health care professional providers' performances in hospital and ambulatory settings. Health information systems and data available used for medical audits. Mr. Goodman

443D. Advanced Hospital Financial Management Simulation. Lecture, one hour; discussion, one hour; laboratory, two hours. Prerequisites: courses 130, 141, 436, consent of instructor. Practical aspects of hospital management decisions in a changing environment examined through computer simulation, with particular attention to economic projections, demand patterns, investment programs, and health care regulations. Mr. Coyne

443E. Advanced Hospital Financial Management Seminar. Prerequisites: courses 130, 131, 141, 436, or equivalent, consent of instructor. Hospital financial management, including reimbursement management, capital financing, and capital investment analysis, discussed and analyzed with respect to students' individual residency sites. Mr. Coyne

444A. Information Processing for Health Planners. Prerequisites: courses 100A or 101A, 134, consent of instructor. Information theory presented as framework for understanding data analysis. Computer used to implement data analysis results with previously presented information systems concepts.

444B. Applied Methodology in Health Planning. Lecture, three hours; fieldwork, four hours. Prerequisites: courses 130 or equivalent, 444A, consent of instructor. Demonstration of methodology of health planning by involving students in formulation of actual health plan for existing agency in Los Angeles area. Mr. Melnick

445A-445B. Practicum in Health Planning and Policy. Field placement. Prerequisites: courses 100A, 100B, 130 (may be taken concurrently), 233, 248, or equivalent, consent of instructor. Required of all M.S. health planning and policy students. Preparation for and subsequent analysis of 10-week work experience undertaken during summer between first and second year. In Progress and S/U grading.

446. Financing Health Care. Prerequisites: course 130, Economics 1, 2, or equivalent, consent of instructor. Patterns of health care financing by consumers, providers, third-party intermediaries; trends in health service use; expenditures, national health insurance, and international comparisons of health financing. Mr. Schweitzer

447D. Management of Health Maintenance Organizations. Lecture, three hours. Prerequisites: courses 130, 134, or equivalent, consent of instructor. Alternative approaches to fee-for-service for paying, providing, or arranging for delivery of health care services, and relating these approaches to the national health policy. Mr. Wasserman

447E. Health Insurance Principles and Programs. Prerequisites: courses 130, 232, one additional health services course, or equivalent, consent of instructor. Examination of social, actuarial, and commercial assumptions underlying private health insurance. Comparison with government-sponsored health insurance. Analysis of diversity of voluntary medical care insurance plans under different sponsorships and with varied scopes of coverage and benefits and their implications for public and private medical care developments. Mr. Shonick

447F. Health of Americans: Trends and Issues. Prerequisites: courses 100A, 110, 112, 130, or equivalent, graduate standing, consent of instructor. Analysis of major trends in mortality, morbidity, and other aspects of health status, what determines these trends, services designed to influence these trends, and nature and extent of public responsibility for such services.

448. Special Populations: Health Service Policy Issues. (Not the same as course 448 prior to Spring Quarter 1986.) Prerequisites: courses 138, 230A-230B, 232, or equivalent, consent of instructor. Limited to doctoral students or M.S. and M.P.H. students with advanced degrees. A doctoral-level seminar which focuses on health services for selected priority population groups, integrating the scientific, organizational, economic, ethical, and political evidence as a basis for public policy. Different populations may be selected for attention each year. Ms. Myers

M449. Health Policy Issues for Dental Professionals (2 units). (Same as Dentistry M422.) Prerequisites: courses 103, 112, 130, or equivalent, consent of instructor. Current public health policy issues in dental health, including cost, financing, role of government, and quality assurance. Mr. Schoen

M449D. Case Studies in Dental Practice (2 units). (Same as Dentistry M433A.) Provides students with a practice methodology for evaluation of dental care settings. Didactic and field experience, providing a foundation for evaluation of programs. Mr. Marcus

M449E. Introduction to Health Care (2 units). (Same as Dentistry M441C.) Description and analysis of the American dental care system from historical, ethical, and legal perspectives. Assessment of how dentistry fits within the general provision of health care services in America, with comparisons to dental care provisions in other countries. Mr. Freed

450. Environmental Measurements. Lecture, two hours; laboratory, four hours. Prerequisites: courses 153 or 261A, 250. Instrumental methods for laboratory and field applications to assess quantity of environmental pollutants in air, food, and water, and to assess degree of exposure to such factors as noise and radiation. Mr. Mah, Ms. Valentine

451. Water Quality and Health. Lecture, three hours; discussion, one hour. Prerequisites: courses 150, 250, 450, or equivalent, consent of instructor. An introduction to water quality, with coverage of hydrology, water chemistry, and various chemical contaminants that may affect human health. Various treatment methods and health implications. Ms. Valentine

452. Environmental Hygiene and Appropriate Technologies (2 units). Prerequisites: courses 112, 150, 153, 254, consent of instructor. Environmental sanitation of water supplies in rural and developing areas. Review of water quality problems and solutions for the nonurban, developing community. Technical, socioeconomic, and cultural problems associated with maintenance and delivery of high water quality. Mr. Day

454. Environmental Policy Decision Making. Lecture, four hours; discussion, one hour. Prerequisite: course 254. Foundations, principles, and modeling of environmental policy decision making. Critical analysis of normative and behavioral models of action choices for protection and enhancement of environmental health, and development of an alternative model. Mr. Davos

457. Environmental Hygiene Practices (2 units). Prerequisites: courses 112, 150, 154, 450. Field principles and practices of environmental sanitation as applicable to the sanitarian. Topics include theory, code enforcement, and inspection procedures for applicable environmental topic areas. Mr. Gomez

459. Critical Review of the Scientific Basis of Occupational Standards. Prerequisites: courses 100A, 112, 156A, 156B. Designed to provide students with the opportunity to review the scientific basis for the association of selected occupational exposures with disease. Special emphasis on critical evaluations of the literature. Attention specifically to the interface of science and regulatory standards. Mr. Wegman

460. Principles of Public Health Nutrition. Prerequisites: courses 100A, 130 (may be taken concurrently), 262 or 263, consent of instructor. Survey of methods of evaluating and improving nutritional status of population groups. Ms. Hunt

461. Computer Use in Dietary Assessment. Lecture, two hours; laboratory, six hours. Prerequisites: courses 100A, 112 (may be taken concurrently), 162, 163, 460, consent of instructor. Collection and computer analysis of nutrient intake data for the purpose of nutritional assessment of population groups. Ms. Murphy

462. Nutritional Assessment: Laboratory Assays (2 units). Lecture, one hour; laboratory, three hours. Prerequisites: courses 162, 165, 167, or equivalent, one course in the 260 series. Biochemical methods for evaluating nutritional status of individuals or population groups. Techniques for measuring vitamins, minerals, lipids, and proteins. Ms. Swendseid

463A. Preparation for Practicum in Public Health Nutrition (2 units). Discussion, one hour; laboratory or fieldwork, five hours. Prerequisites: courses 112, 165, 460 (may be taken concurrently), Chemistry 152, consent of instructor. Students analyze a public health nutrition problem and prepare to conduct and evaluate the public health nutrition practicum. Ms. Hunt, Mr. Jones

463B. Practicum in Public Health Nutrition. (Formerly numbered 463). Discussion, two hours; laboratory or fieldwork, 10 hours. Prerequisites: courses 400 (may be taken concurrently), 460, 461, 463A, consent of instructor. Students analyze a public health nutrition problem and conduct and evaluate the public health nutrition practicum. Ms. Hunt, Mr. Jones

470A. International Health Agencies and Programs. Prerequisites: three upper division or graduate courses in social, health, or behavioral sciences, consent of instructor. Historical development and functions of international health organizations. Key problems and trends in international health. Bilateral programs, medical-religious missions, private foundations, and others disseminating information, money, and services. Mr. Neumann

470B. Advanced Issues in International Health. Lecture, two hours; discussion, two hours. Prerequisites: courses 240, 270, 470A or 472A or 475 or equivalent, consent of instructor. In-depth focus on major health care issues confronting recipient less-developed countries and donors of technical and financial assistance. Mr. Neumann

471A. Women's Health: Principles, Programs, and Policies. (Not the same as course 471A prior to Fall Quarter 1985.) Prerequisites: courses 100A, 110, 130 or equivalent, 171A, consent of instructor. In-depth consideration of health services, programs, and issues relevant to nonreproductive women's health care. Subjects include health status of women, endocrinological issues, chronic diseases, cancer, surgery in women, psychosocial and life-style issues, and women's health services. Mr. Richwald

471B. Perinatal Health Care: Principles, Programs, and Policies. (Not the same as course 471B prior to Winter Quarter 1986.) Prerequisites: courses 100A, 110, 130 or equivalent, 171A, consent of instructor. Comprehensive examination of perinatal health care, including perinatal epidemiology, outcome measures, public programs, controversies surrounding new technology, regionalization, organization of services at the federal, state, and county levels, and medical-legal issues. Mr. Richwald

471C. Family Planning: Public Health Principles, Programs, and Policies. Prerequisites: courses 100A, 110, 130, 171A, or equivalent, consent of instructor. A critical review of public health issues in the area of family planning, abortion, and sterilization. Health care problems, delivery of services, and public programs. Mr. Richwald

472A. Maternal and Child Health in Developing Areas. Prerequisites: courses 270, 470A, or equivalent, consent of instructor. Major health problems of mothers and children in developing areas, stressing causation, management, and prevention. Particular reference to adapting programs to limited resources in cross-cultural milieux. Ms. Neumann

472B. Recent Developments in Maternal and Child Health in Disadvantaged Countries (2 units). Prerequisites: courses 171A, 171B, 270, 472A, or equivalent, consent of instructor. Analytic in-depth consideration of recent advances in the field of international maternal and child health, with special reference to developing countries. Mr. Jelliffe

472D. Overseas Refugee Health Programs (2 units). Lecture, one hour; discussion, one hour. Prerequisites: courses 110, 112, 270 or 472A, or equivalent, consent of instructor. Comprehensive overview of the health problems of overseas refugee situations and of programs designed to deal with these special circumstances. Mr. Jelliffe

473A. Handicapped Children: The Public Health Concern (2 units). Prerequisites: courses 110, 130, 170, or equivalent, consent of instructor. Etiology, prevalence, social consequences, and remedial programs for the major handicapping conditions in children. Emphasis on biological and social factors, current research, and program developments. Mr. Katz

473D. Child Health in the United States of America. Lecture, three hours; discussion, one hour; one field trip, three hours. Prerequisites: courses 110, 112, 130, 170, or equivalent, consent of instructor. Examination of the health problems affecting infants, children, and adolescents in the United States and exploration of alternatives of priorities, approaches, services, and policies aimed at ameliorating these problems. Mr. Chang

473E. Adolescent Health: Major Issues and Problems (2 units). Lecture, two hours; field trips, 21 hours. Prerequisites: courses 110, 171A, 171B, 172, or equivalent, consent of instructor. Overview of adolescent growth and development, significant physical and psychological problems, issues in health services delivery, and laws affecting youth and the juvenile offender. Mr. Jelliffe and the Staff

473F. Research Seminar in Community Child Health Services (2 units). Discussion, one hour; laboratory, one hour; field trips, two hours. Prerequisites: courses 100A, 125, 130, 171A, 171B, or equivalent, consent of instructor. Examination and development of evaluation strategies for existing community child health services at the local level and development of evaluation strategies for selected topics in programmatic areas. Emphasis on collaborative research and consultation skills, with participation of local health department personnel. Mr. Chang

473G. Health Services in Child Day Care. Lecture, two hours; discussion, two hours; one field trip, three hours. Prerequisites: courses 110, 112, 130, 170, or equivalent, consent of instructor. Assessment of needs, planning, and development of health and nutrition services for young children in day care and related child development programs. Mr. Chang

473H. Child Health Policy. Lecture, three hours; discussion, one hour. Prerequisites: courses 130 or equivalent, 171A, 172, 473D, consent of instructor. Analysis of the development and characteristics of child health programs and policies; issues related to health services for children examined according to chronological development of child; relationship of health programs to programs of nutrition, day care, education, and welfare; strategies for achieving change and the politics of developing a child health policy. Ms. Roemer

474. Self-Care and Self-Help in Community Health. Lecture, two hours; discussion, two hours. Prerequisites: courses 112, 130, fieldwork internship, or equivalent, consent of instructor. Review of background, principles, concepts, programs, and research concerning the emerging field of self-care in health. Mr. Katz

475. Planning and Development of Family Health Programs. Lecture, two hours; discussion, two hours. Prerequisites: courses 100A, 125 or 470A, 170, 270, or equivalent, consent of instructor. Theory, guidelines, and team exercise for planning community health/family planning projects in the United States and in developing countries. Phases include community needs identification; goal setting; budget and work plan development; funding; staffing; evaluation design; data and cost analysis; and project presentation. Mr. Neumann

476D. Analysis of Family Health and Fertility Data. Lecture, three hours; laboratory, two hours; assignments, 12 hours. Prerequisites: courses 100B, 125 or 181, 217, or equivalent, consent of instructor. Analysis and interpretation of large-scale data sets, case studies, and experimental data in the area of applied family health and fertility. Computer used as a tool in the management and analysis of the data necessary for interpreting and preparing research articles. Ms. Bourque

477. Assessment of Family Nutrition. Prerequisite: course 270. Assessment of nutritional status of families in developing countries, with special reference to limited resources, terrain, and cross-cultural considerations, stressing anthropometric methods and techniques. Mr. Jelliffe, Ms. Neumann

478. Anthropometric Nutritional Assessment (2 units). Prerequisites: course 270 or 477 or equivalent, consent of instructor. Practicum in anthropometry illustrating how it is used in nutritional assessment. Data presentation and interpretation. Didactic sessions, readings, demonstrations, and practical experience in clinical anthropometric techniques. Ms. Neumann

478E. Cytogenetics Practicum (1 unit). Prerequisites: courses 100A, 112, 170E, 256, consent of instructor. Explanation and applied experiences in cytogenetic laboratory procedures, including culturing, harvesting, microscopy, photography, karyotyping, and interpretation of results. Mr. Alfi

479. Nutrition Programs and Policies for Families in the Third World. Lecture, two hours; discussion, two hours. Prerequisites: course 472A or equivalent, consent of instructor. Programs and policies to improve the nutrition of families in Third World countries, with special reference to mothers and young children. Ms. Jelliffe

479D. Nutrition Education and Training: Third World Considerations (2 units). Lecture, one hour; student participation, one hour. Prerequisite: course 472A or equivalent, consent of instructor. Problems and priorities in nutrition education and training for families and health workers in Third World countries, including new concepts in primary health care services, mass media, communications, and governmental and international interventions. Ms. Jelliffe

480. Health Education in Clinical Settings. Lecture, two hours; discussion, two hours. Prerequisites: courses 130, 183, 280, 282, consent of instructor. Analysis of the role, methods, and techniques of health education pertaining to hospitals, clinics, and patient education. Observation and discussion of clinical activities in the medical center in relation to the process of health education.

481. Administrative Relationships in Health Education. Lecture, two hours; discussion, two hours. Prerequisites: courses 130, 183, 280, consent of instructor. Study of administration concepts; relationships and applicability to health education settings. Responsibility and authority for health education in organizations and other groups. Ms. Li

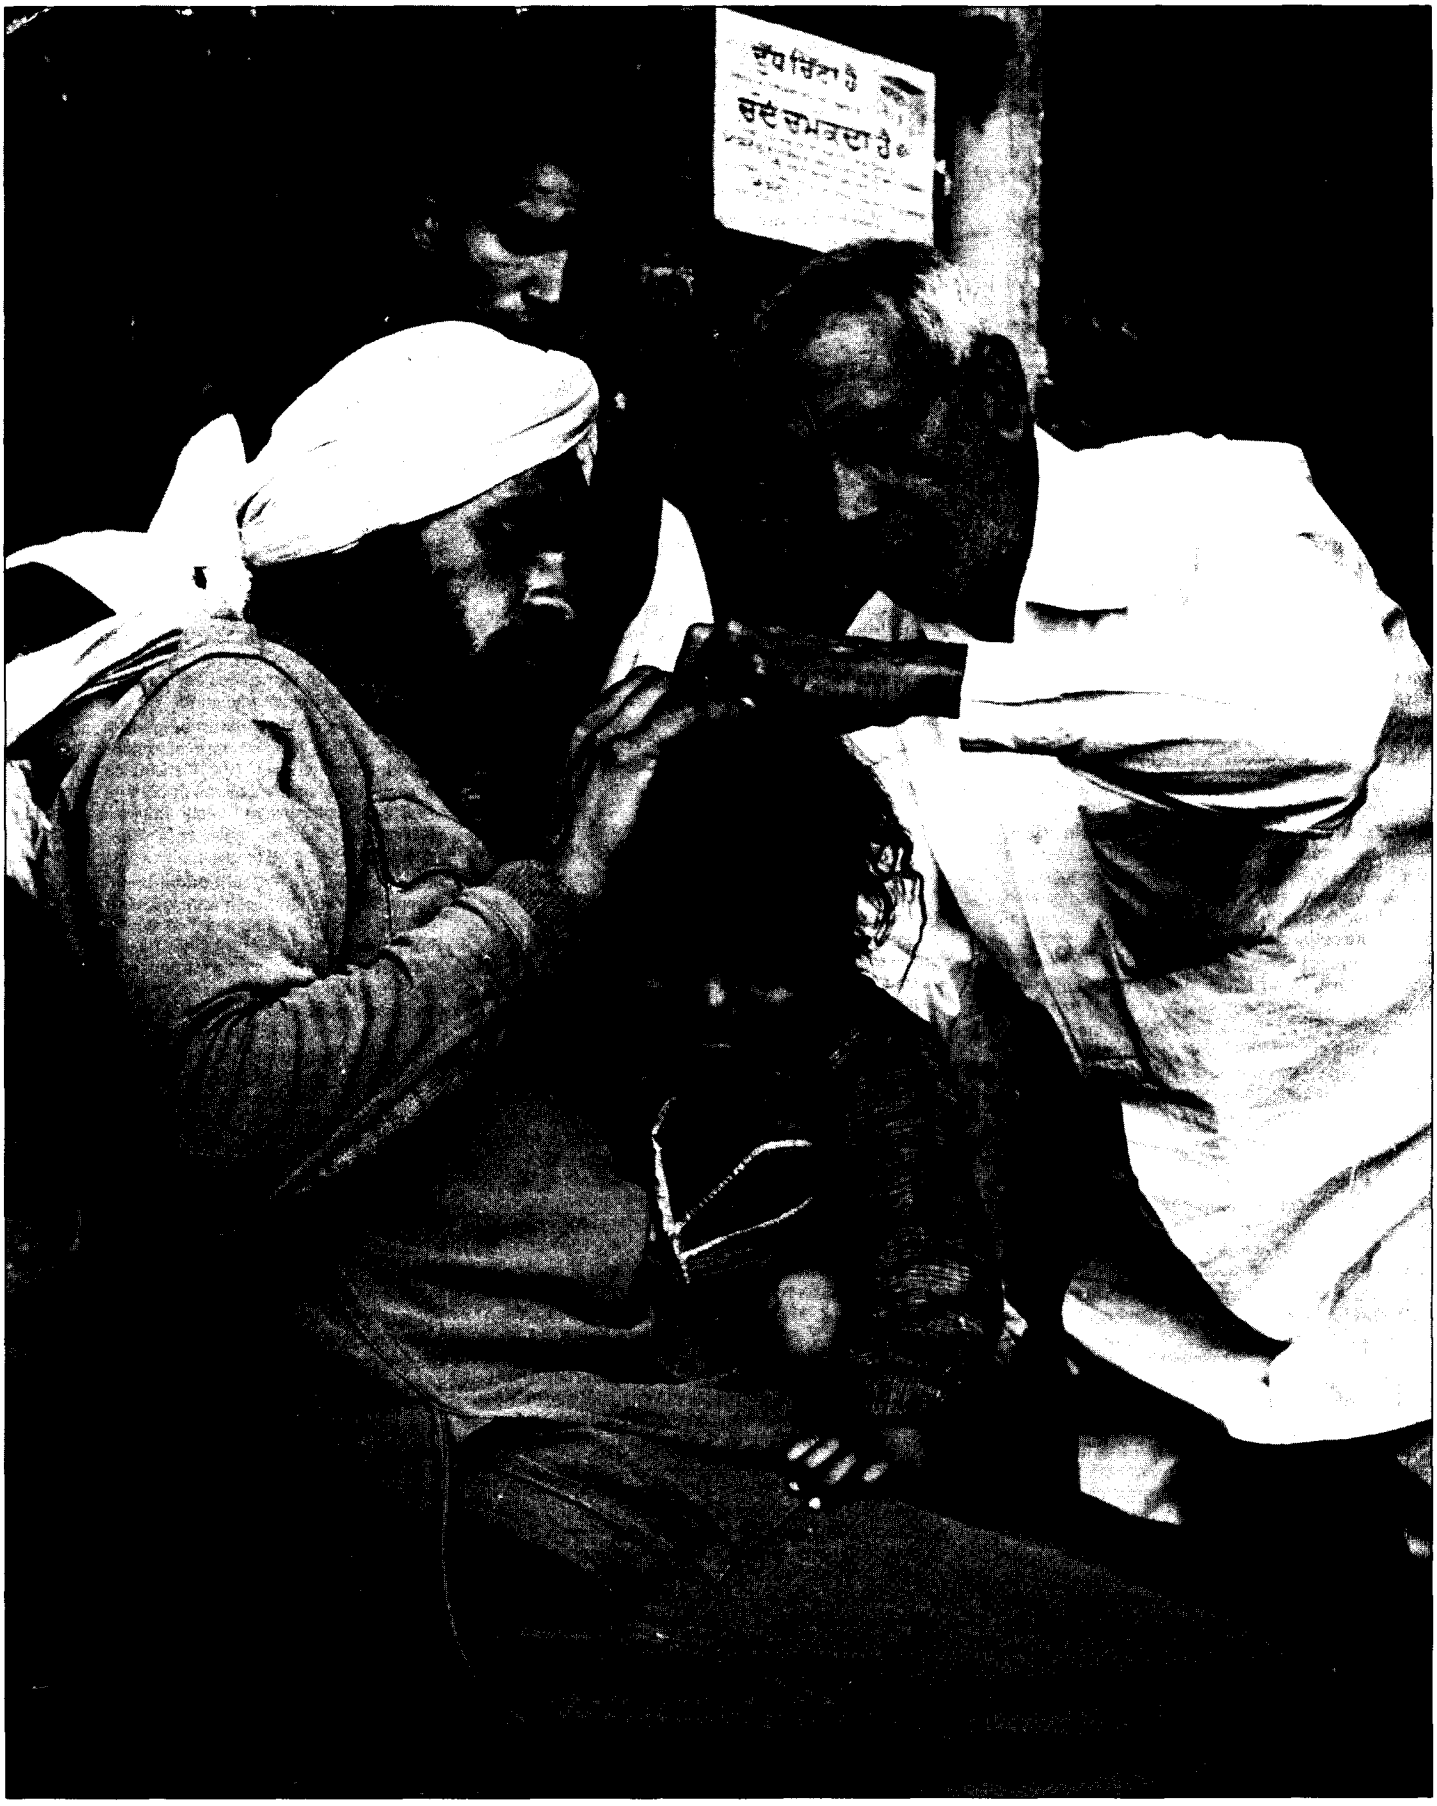
482. Practicum in Health Education (4 or 8 units). Discussion, two hours; fieldwork, six or 18 hours. Prerequisites: courses 182, 280, consent of instructor. Study of community and group-felt needs as reflected in behavior. Analysis of data for understanding, planning, implementing, and evaluating need-directed health education and medical care programs. Ms. Richards

483. Social Interventions for Health Promotion and Evaluation. Lecture, two hours; discussion, one hour; seminar, one hour. Prerequisites: courses 182, 183, 280, or equivalent, consent of instructor. Selected social intervention strategies for health promotion and health education programs. Emphasis on theories, working assumptions, methodologies, and impacts of selected strategies within the contexts of planned change in health-related behaviors. Mr. Kar

484. Introduction to Program Evaluation. Lecture, two hours; discussion, two hours. Prerequisites: course 100A, three courses in social sciences, or equivalent, consent of instructor. An introduction to the principles of program evaluation as they are applied to public health programs in the community. Mr. Berkanovic, Mr. Vojtecky

485. Benefit-Cost Evaluation of Health Programs. Lecture, two hours; discussion, two hours. Prerequisites: courses 100A, 112, Economics 102, or equivalent, consent of instructor. Cost-benefit and cost-effectiveness principles and techniques employed to evaluate public health programs and projects.

486. Death, Suicide, and Homicide: A Public Health Perspective. Lecture, three hours; field trips, outside readings, and reports, one hour. Prerequisites: courses 100A or 103, 112, 182, 183, or equivalent, consent of instructor. Identification and discussion of the role of public health in suicide and homicide prevention, and death and dying. Lectures range from vital statistics to the role of the behavioral scientist in prevention, intervention, and postvention of suicide and homicide. Ms. Allen



Field studies in India.

487. Health Applications of Community Organization. Seminar, three hours; fieldwork, four hours. Prerequisites: courses 182, 183, 287, at least one other public health course, or equivalent, consent of instructor. Application of community organization methods to health problems and health education programs, including community-based needs assessment, planning and developing community-based projects, and evaluation. Emphasis on organizational and process skills; class fieldwork project.

Mr. Brown

488. Consumer Health Behavior. Lecture, three hours. Prerequisites: course 182, at least three courses in anthropology, psychology, or sociology, consent of instructor. Discussion and demonstration of the role of economics and economic incentives and disincentives in altering consumer health behavior.

490. Professional Writing for Public Health (2 units). Prerequisite: consent of instructor. Practice in writing reports, grant proposals, abstracts, and article-length research papers. Analyzing rhetorical and stylistic features of essays in various professional journals to help participants improve both their prose style and their editorial abilities. May not be applied toward any degree requirements. S/U grading.

Mr. Bjork

495. Teacher Preparation in Public Health (2 units). Prerequisites: 18 units of cognate courses in area of specialization, consent of department chair. May not be applied toward the master's degree minimum total course requirement. May be repeated for credit. S/U grading.

501. Cooperative Program (2 to 8 units). Prerequisite: consent of UCLA graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Course is used to record enrollment of UCLA students in courses taken under cooperative arrangements with neighboring institutions. No more than eight units may be applied toward the master's degree minimum total course requirement; may not be applied toward the minimum graduate course requirement. S/U grading.

502. UCLA/Hawaii Western Consortium Exchange (4 to 16 units). Prerequisite: consent of UCLA graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Course is used to record enrollment of UCLA students in courses taken at the University of Hawaii, Manoa, as part of the UCLA/UH Western Consortium Exchange Program. Only the equivalent of eight quarter units taken at UH may be applied toward the degree. Extra units may be applied toward division requirements by petition to the Public Health Student Affairs Office. UH letter-graded courses appear on the UCLA transcript with the letter grades, while UH Cr/NCr-graded courses appear as S/U grades. Grade points from these courses are not counted in the UCLA grade-point average.

596. Directed Individual Study or Research (2 to 8 units). Prerequisites: graduate standing, consent of instructor. Individual guided studies under direct faculty supervision. Only four units may be applied toward the M.P.H. and M.S. minimum total course requirement. May be repeated for credit.

597. Preparation for Master's Comprehensive or Doctoral Qualifying Examinations (2 to 8 units). Prerequisites: graduate standing, consent of instructor. May not be applied toward any degree requirements. May be repeated for credit. S/U grading.

598. Master's Thesis Research (2 to 8 units). Prerequisite: consent of instructor. Only four units may be applied toward the M.P.H. and M.S. minimum total course requirement; may not be applied toward the minimum graduate course requirement. May be repeated for credit. S/U grading.

599. Doctoral Dissertation Research (2 to 8 units). Prerequisite: consent of instructor. May not be applied toward any degree requirements. May be repeated for credit. S/U grading.

Environmental Science and Engineering (Interdepartmental)

Bart B. Sokolow, D.Env.

Adjunct Lecturer

Robert G. Lindberg, Ph.D. *(Public Health)*

Scope and Objectives

Enlightened management of the environment is necessary to maintain a suitable quality of life. Such management requires scientists trained in a multiplicity of environmental disciplines. These interdisciplinary, interactive skills are developed through the UCLA graduate program in environmental science and engineering, leading to the Doctor of Environmental Science and Engineering (D.Env.) degree.

The goal of the program is to prepare professional environmental analysts to deal with the complexities of various courses of action on the environment and resources; to develop recommendations for sound environmental policies; and to devise means to implement policies adopted.

The present focus of the program, that of interdisciplinary training in the environmental sciences and its application, is a successful one. Graduates have been employed in technical assessment and management positions with governmental agencies, consulting firms, and industrial firms concerned with environment-related projects.

No undergraduate major is offered; however, studies can be arranged along several routes. Students with majors in the natural sciences, geography/ecosystems, public health, or engineering who have environmental or energy problem solving as a professional goal may wish to supplement their course preparation in consultation with the program faculty.

Although participating faculty members are mainly from the College of Letters and Science and the School of Engineering and Applied Science, the program is administered through the School of Public Health.

Doctor of Environmental Science and Engineering

Admission

In addition to meeting University minimum standards, you must have an excellent scholastic record (3.0 GPA in undergraduate work and 3.5 in graduate work) and must be acceptable to the interdepartmental committee. Your overall academic record, including Graduate Record Examination (GRE) scores, must reflect exceptional verbal and quantitative skills. Three letters of recommendation are required. You must hold a master's degree in engineering, public health, or one of the natural sciences to be formally admitted to the program.

Students with graduate training in fields of science and engineering who have not earned a master's degree may be considered for admission. In these cases you must show evidence of graduate training equivalent to the master's degree, including some research experience. Students with a bachelor's degree may be informally affiliated with the program while earning a master's degree in one of the participating departments.

All students must have taken the following preparation courses: (1) one year of introductory biology with laboratory; (2) one year of general chemistry with laboratory, including analytical methods, and one quarter of organic chemistry; (3) one course or equivalent experience in elementary programming and use of computer hardware and software; (4) one course in introductory geology with laboratory; (5) one year of calculus and one course in elementary statistics; (6) one year of introductory physics with laboratory. Any of the courses may be taken after you arrive at UCLA. Conditional admission is given to students who are otherwise qualified.

Subject to available funds, the program offers fellowships to eligible first-year students. Prospective students may write for descriptive brochures to the Environmental Science and Engineering Program, School of Public Health, 46-081 CHS, UCLA, Los Angeles, CA 90024.

Major Fields or Subdisciplines

Specialties within the program include, but are not limited to, the assessment and management of hazardous substances in the air, soil, and water environments, migration of contaminants in groundwater, health risks of toxic substances, and environmental problems common to the United States and Mexico. Also, you may slant your work toward greater emphasis either on the science engineering side or on the science policy side of your specialty.

Course Requirements

A minimum of 15 courses after admission to the program is required, including three core courses offered by the program faculty. At least three breadth courses, in addition to the core courses, must be at the graduate level. Breadth courses from the following categories are selected in consultation with your faculty adviser. Exact requirements depend on your previous training.

Environmental Science: Five courses, including environmental chemistry; environmental biology, microbiology, and ecology (two courses); environmental geology; and atmospheric sciences.

Environmental Engineering and Technology: Seven courses, including hydrology; advanced statistics, computer science, or applied mathematics; engineering (three courses); and toxicology or epidemiology.

Social Sciences/Law: Three courses, including one in environmental law.

Electives: Three courses, of which individual instruction and research may be used to satisfy all or part of the requirement.

Core Courses: You must complete three four-unit core courses, offered by the program faculty, with grades of B or better. The courses cover critical issues and methods in environmental science, engineering, and policy. Successful completion of each core course is prerequisite for advancement to the problems course sequence.

Seminar: You are required to enroll in Environmental Science and Engineering 411 each quarter you are in residence.

Problems Course: Before proceeding to the problems course sequence, you must have completed a minimum of 12 breadth courses and the three core courses and have the approval of the program faculty. Twenty-four quarter units of the Environmental Science and Engineering 400 series (problems course sequence) are required and may be met by completing three consecutive quarters (eight units per quarter) on a single theme, or as a minimum, at least two consecutive quarters devoted to a single theme plus one quarter of participation or activity approved by the faculty. Enrollment in more than one problems course per quarter is not allowed. Normally problems course credit is earned only through courses offered by the program. However, you may petition the faculty for permission to earn problems course credit through multidisciplinary environmental projects offered in other departments at UCLA.

Qualifying Examinations

The written qualifying examination is normally taken during your second year in residence, after completing the core courses and most of the breadth courses. If all or parts of the examination are failed, one and only one repeat is allowed — at the next offering. The written examination covers the material in the core courses and selected topics in classical and contemporary subjects in the program's areas of interest. A reading list is provided.

When you have completed all other course requirements and are in the final quarter of the problems course, a doctoral committee is established. The committee conducts the University Oral Qualifying Examination, which explores the depth, breadth, and extent of your preparation, with appropriate emphasis on practical problems and situations. After successful completion of the oral examination and the problems course requirements, you are advanced to candidacy.

In case of failure, you may repeat the oral examination once after completing any additional coursework or individual study the doctoral committee may recommend.

Internship

Once you have been advanced to candidacy, an 18- to 24-month internship in your field of interest is arranged at an outside institution. Arrangements for the internship are your responsibility and must be approved by the doctoral committee, the interdepartmental committee, and the dean of the Graduate Division. Supervision during the field training experience is by your doctoral committee. During the internship, you must register for eight units of a 599 course in each academic-year quarter.

Dissertation and Final Oral Examination

A dissertation is required and should be a scholarly treatment of the problem area in which you have worked, but not a description of the totality of the experience. It should show evidence of critical throught and originality. No later than nine months after advancement to candidacy and the beginning of the internship, you are required to present a written prospectus, including an outline, of the dissertation and defend it before your doctoral committee. After completing the internship, you must return to UCLA to present an open seminar. The final oral examination includes the problems course, internship experience, and a defense of your dissertation.

If the seminar and all other elements of your performance are judged satisfactory, you are awarded the degree of Doctor of Environmental Science and Engineering (D.Env.).

Graduate Courses

400A. Environmental Science and Engineering Problems Course (8 units). Prerequisite: consent of instructor and program chair. Primarily intended for students enrolled in the environmental science and engineering doctoral program. Multidisciplinary technical and socioeconomic analysis and prognosis of significant current environmental problems. In Progress grading (credit to be given only on completion of course 400C).

400B. Environmental Science and Engineering Problems Course (8 units). Prerequisites: successful completion of course 400A, consent of instructor and program chair. Multidisciplinary technical and socioeconomic analysis and prognosis of significant current environmental problems. In Progress grading (credit to be given only on completion of course 400C).

400C. Environmental Science and Engineering Problems Course (8 units). Prerequisites: successful completion of course 400B, consent of instructor and program chair. Multidisciplinary technical and socioeconomic analysis and prognosis of significant current environmental problems.

400D. Environmental Science and Engineering Problems Course (8 units). Prerequisite: successful completion of course 400C and of an internship approved by the Environmental Science and Engineering Interdepartmental Committee. Multidisciplinary technical and socioeconomic analysis and prognosis of significant current environmental problems.

410. Environmental Science and Engineering Workshop (2 units). Prerequisite: consent of instructor. Primarily intended for students enrolled in the environmental science and engineering doctoral program. Development of analytical or experimental skills essential to the solution of environmental problems studied within courses 400A, 400B, 400C, and 400D.

411. Environmental Science and Engineering Seminar (2 units). Prerequisite: consent of instructor. Required of graduate students in environmental science and engineering each quarter in residence. Current topics in environmental science and engineering. May be repeated for credit. S/U grading.

501. Cooperative Program (2 to 8 units). Prerequisite: consent of UCLA graduate adviser, program chair, and graduate dean, and host campus instructor, department chair, and graduate dean. Course is used to record the enrollment of UCLA students in courses taken under cooperative arrangements with neighboring institutions. S/U grading.

596. Directed Individual or Tutorial Studies (2 to 8 units). Prerequisite: consent of instructor and program chair. Supervised investigation of advanced environmental problems. S/U grading.

Appendix

Nondiscrimination

The University of California, in compliance with Title VI of the Civil Rights Act of 1964, Title IX of the Education Amendments of 1972, Section 504 of the Rehabilitation Act of 1973, and the Age Discrimination Act of 1975, does not discriminate on the basis of race, color, national origin, religion, sex, handicap, or age in any of its policies, procedures, or practices; nor does the University discriminate on the basis of sexual orientation. This nondiscrimination policy covers admission and access to, and treatment and employment in, University programs and activities, including but not limited to academic admissions, financial aid, educational services, and student employment.

Inquiries regarding the University's equal opportunity policies may be directed to the Campus Counsel, 2241 Murphy Hall, UCLA, Los Angeles, CA 90024.

Students may complain of any action which they believe discriminates against them on the ground of race, color, national origin, religion, sex, sexual orientation, or handicap and may contact the Dean of Students Office, 2224 Murphy Hall, for further information and procedures.

Residence for Tuition Purposes

Students who have not been residents of California for more than one year immediately prior to the residence determination date for each term in which they propose to attend the University are charged, along with other fees, a nonresident tuition fee. The residence determination date is the day instruction begins at the last of the University of California campuses to open for the quarter, and for schools on the semester system, the day instruction begins for the semester.

Law Governing Residence

The rules regarding the establishment of legal residence for tuition purposes at the University of California are governed by the California Education Code and by Standing Orders of The Regents of the University of California. Under these rules residence for tuition purposes can be established by adult citizens or by certain classes of aliens. There are also particular rules applicable to the residence classification of minors (under 18) in that such residence is generally regarded as being derived from the parent or parents with whom the minor last resided.

Who Is a Resident?

In order to be classified a resident for tuition purposes, an adult, other than an adult alien present in the U.S. under the terms of a nonimmigrant status which precludes the adult alien from remaining permanently in the U.S., must have established his or her residence in California for more than one year immediately preceding the residence determination date for the term during which he or she proposes to attend the University and relinquished any prior residence. An individual must couple physical presence within this state for one year with objective evidence that such presence is consistent with intent to make California his or her permanent home and, if these steps are delayed, the one-year durational period will be extended until both presence and intent have been demonstrated for one full year. Indeed, physical presence within the state solely for educational purposes does not constitute the establishment of California residence under state law, regardless of the length of stay. A woman's residence shall not be derivative from that of her husband or vice versa.

Establishing the Requisite Intent to Become a California Resident

Relevant evidence which can be relied on to demonstrate one's intent to make California the permanent residence includes registering to vote and voting in California elections; designating California as the permanent address on all school, employment, and military records; obtaining a California driver's license or if a nondriver, a California identification card; obtaining California vehicle registration; paying California income taxes as a resident, including income earned outside California from the date residence is established; establishing an abode where one's permanent belongings are kept within California; licensing for professional practice in California; and the absence of this evidence in other states during any period for which residence in California is asserted. Documentary evidence may be required. All relevant evidence will be considered in the classification determination.

Salary and Employment Information, University of California

FIELD OF STUDY	DEGREE LEVEL OF GRADUATES			DEFINITE JOB COMMITMENT[2]
	BACHELOR'S	MASTER'S	DOCTORATE	
	AVERAGE MONTHLY SALARY[1]			
Engineering	$2,281	$2,640	$3,632	68.6%
Humanities	1,512	—	—	51.5
Life Science	1,912	—	—	48.6
Management	1,623	2,318	—	—
Physical Science	2,068	2,580	—	58.7
Social Science	1,603	1,363	—	63.8

[1]Source: A national survey of a representative group of colleges conducted by the College Placement Council, representing the 60 percent range of offers for December 1985 throughout the country. It should be noted that a wide variation in starting salaries exists within each discipline based on job location, type of employer, personal qualifications of the individual, and employment conditions at the time of job entry.

[2]Source: *The Job Market for UCLA's 1985 Graduates.* Percentages are based only on those students with bachelor's degrees who began working full time immediately after graduation.

General Rules Applying to Minors

The residence of the parent with whom an unmarried minor (under age 18) child lives is the residence of the unmarried minor child. The residence of an unmarried minor who has a parent living cannot be changed by his or her own act, by the appointment of a legal guardian, or by relinquishing a parent's right of control. When the minor lives with neither parent, residence is that of the parent with whom the student lived last. The minor may establish residence when both parents are deceased and a legal guardian has not been appointed. Where the residence of the minor is derived, the California residence of the parent from whom it is derived must satisfy the one-year durational requirement.

Specific Rules Applying to Minors

(1) **Divorced or Separated Parent Situations** — The student must move to California to live with the California resident parent while still a minor (before the 18th birthday) in order to receive derivative California resident status. Otherwise, he or she will be treated like any other adult coming to California to establish legal residence.

(2) **Parent of Minor Moves from California** — A student who remains in the state after his or her parent, who was domiciled in California for at least one year immediately prior to leaving and has, during the student's minority and within one year immediately prior to the residence determination date, established residence elsewhere, shall be entitled to resident classification. This exception continues until the student has attained the age of majority and has resided in the state the minimum time necessary to become a resident so long as, once enrolled, he or she maintains continuous attendance at an institution.

(3) **Self-Support** — Nonresident students who are U.S. citizens or eligible aliens, who are minors or 18 years of age, and who have demonstrated the intent to make California their permanent home, and can evidence that they have been self-supporting and actually present within California for the entire year immediately prior to the residence determination date, may be eligible for resident status.

(4) **Two-Year Care and Control** — Students who are U.S. citizens or eligible aliens shall be entitled to resident classification if immediately prior to the residence determination date, they have lived with and been under the continuous direct care and control of any adult or adults other than a parent for not less than two years, provided that the adult or adults having such control have been California residents during the year immediately prior to the residence determination date. This exception continues until the student has attained the age of majority and has resided in the state the minimum time necessary to become a resident student, so long as continuous attendance is maintained at an institution.

Exemptions from Nonresident Tuition

(1) **Member of the Military** — A student who is a member of the United States military stationed in California on active duty, except a member of the military assigned for educational purposes to a state-supported institution of higher education, may be exempt from the nonresident tuition fees until he or she has resided in the state the minimum time necessary to become a resident. He or she must provide the Residence Deputy with a statement from the commanding officer or personnel officer stating the assignment to active duty in California is not for eductional purposes and must include the dates of assignment to the state.

(2) **Spouse or Other Dependents of Military Personnel** — Exemption from payment of the nonresident tuition fee is available to a spouse or to a natural or adopted child or stepchild who is a dependent of a member of the United States military stationed in California on active duty. Such exemption shall be maintained until the student has resided in California the minimum time necessary to become a resident. The student must petition for this exemption each term he or she is eligible. If a student is enrolled in an institution and the member of the military (a) is transferred on military orders to a place outside this state and continues to serve in the Armed Forces or (b) retires from active duty immediately after having served in California on active duty, the student shall retain this exemption under conditions set forth above.

(3) **Child or Spouse of Faculty Member or Member of UC Management Program** — To the extent that funds are available, the unmarried, dependent child under age 21 or the spouse of either a member of the University faculty who is a member of the Academic Senate or a member of the UC Management Program may be eligible for a waiver. Confirmation of the faculty member's membership on the Academic Senate or the manager's membership in the UC Management Program shall be secured each term before this waiver is granted.

(4) **Child of University Employee** — To the extent that funds are available, the unmarried, dependent child under 21 of a full-time University employee whose assignment is outside California (e.g., Los Alamos Scientific Laboratory) and who has been employed by the University for more than one year may be entitled to a waiver of the nonresident fee. The parent's employment status with the University shall be ascertained each term that the student requests the waiver.

(5) **Children of Deceased Public Law Enforcement or Fire Suppression Employees** — Children of deceased public law enforcement or fire suppression employees who were California residents and who were killed in the course of fire suppression duties or law enforcement duties may be entitled to an exemption of the nonresident fees.

Maintaining Residence During a Temporary Absence

A student's temporary absence from the state for business or educational purposes will not necessarily constitute loss of California residence unless the student has acted inconsistently with the claim of continued California residence during his or her absence. The burden is on the student to show retention of California residence during an absence from the state. Steps a student (or parent of a minor student) should take to retain California resident status for tuition purposes include:

(1) Continue to use a California permanent address in all records — educational, employment, etc.

(2) Satisfy California resident income tax obligations. Individuals claiming permanent California residence are liable for payment of income taxes on their total income from the date they establish California residence. This includes income earned in another state or country.

(3) Retain California voter's registration, voting by absentee ballot.

(4) Maintain California driver's license and vehicle registration. If it is necessary to change driver's license and/or vehicle registration while temporarily residing in another state, these must be changed back to California within 10 days for the driver's license and within one year or when registration expires (whichever comes first) for vehicle registration.

Reclassification Petitions

Students MUST PETITION IN PERSON at the Registrar's Office for a change of classification from nonresident to resident status. All changes of status must be initiated prior to the late registration period for the term of attendance for which the student seeks reclassification.

California law requires that financial independence be included among the factors considered for students classified as nonresidents and seeking reclassification as residents. Financial independence will not be considered for graduate students who are teaching assistants, research assistants, or teaching associates employed on a 0.49 or more time basis for the term for which reclassification is sought. For detailed information regarding reclassification, contact the Campus Residence Deputy in 1134 Murphy Hall (825-3447).

Time Limitation on Providing Documentation

If additional documentation is required for either an initial residence classification or reclassification but is not readily accessible, the student will be allowed a period of time no later than the end of the applicable term to provide such documentation.

Incorrect Classification

All students classified incorrectly as residents are subject to reclassification and to payment of all nonresident fees not paid. If incorrect classification results from false or concealed facts by the student, the student is also subject to University discipline. Resident students who become nonresidents must immediately notify the Residence Deputy.

Inquiries and Appeals

Inquiries regarding residence requirements, determination, and/or recognized exceptions should be directed to the CAMPUS RESIDENCE DEPUTY, Office of the Registrar, 1134 Murphy Hall, 405 Hilgard Avenue, Los Angeles, CA 90024 (825-3447) or to the Legal Analyst-Residence Matters, 590 University Hall, Berkeley, CA 94720. NO OTHER UNIVERSITY PERSONNEL ARE AUTHORIZED TO SUPPLY INFORMATION RELATIVE TO RESIDENCE REQUIREMENTS FOR TUITION PURPOSES. The student is cautioned that this summation is NOT a complete explanation of the law regarding residence. A copy of the regulations adopted by The Regents of the University of California is available for inspection in the Registrar's Office, 1134 Murphy Hall. Please note that changes may be made in the residence requirements between the publication date of this statement and the relevant residence determination date. Any student, following a final decision on residence classification by the Residence Deputy, may make a written appeal to the Legal Analyst within 90 days of the notification of the final decision by the Residence Deputy.

Privacy Notice

All of the information requested on the Statement of Legal Residence form is required (by the authority of Standing Order 110.2 (a)-(d) of The Regents of the University of California) for determining whether or not a student is a legal resident for tuition purposes. Registration cannot be processed without this information. The Registrar's Office on campus maintains the requested information. The student has the right to inspect University records containing the residence information requested on the form.

Grading Regulations

Assigning a Grade

The instructor in charge of a course is responsible for determining the grade of each student in the course. The standards for evaluating student performance are based on the course description as approved by the appropriate course committee.

The final grade in the course is based on the instructor's evaluation of the student's achievement in the course. When on an examination or other work submitted by a student, the student is suspected of having engaged in plagiarism or otherwise having cheated, the suspected infraction is to be reported to the appropriate administrative officer of the University for consideration of disciplinary proceedings against the student. Until such proceedings, if any, have been completed, the grade DR (Deferred Report) is assigned for that course. If in such disciplinary proceedings it is determined that the student did engage in plagiarism or otherwise cheat, the administrative officer, in addition to imposing discipline, reports back to the instructor of the course involved, the nature of the plagiarism or cheating. In light of that report, the instructor may replace the grade DR with a final grade that reflects an evaluation of that which may fairly be designated as the student's own achievement in the course as distinguished from any achievement that resulted from plagiarism or cheating.

Student Grievance Procedures

Grounds for student grievance are the application of nonacademic criteria such as considerations of race, politics, religion, sex, or evaluation of student work by criteria not directly reflective of performance related to course requirements. Students having such a grievance should talk to the instructor of the course, the department chair, the dean or divisional dean of the college or school, and the vice chancellor — faculty relations, in that sequence.

If the dispute is not resolved through these discussions, a grievance may be filed with the Charges Committee of the Academic Senate (3125 Murphy Hall). If it is determined that probable cause exists for violation of the faculty code of conduct, the grievance is then brought to the Committee on Privilege and Tenure.

If an instructor in charge of a course has been determined by the Committee on Privilege and Tenure to have assigned a grade on any basis other than academic grounds, that committee shall inform the divisional Academic Senate chair. Within a period of two weeks after notification, guided by the Committee on Committees, the divisional Senate chair shall establish an ad hoc committee to determine whether the grade shall be changed. The ad hoc committee shall consist of at least three members, with at least one member a representative of the department involved. The ad hoc committee will obtain whatever records are available and use these records to make a final decision concerning the grade. If the records are not adequate, then the committee may assign a grade of Pass, or allow the student to repeat the course without penalty. The ad hoc committee will report to the divisional chair, who shall report the change of grade to the Registrar. In order to protect the student, the grade shall be changed, if warranted, within four weeks following the formation of the ad hoc committee.

Correction of Grades

All grades, except DR, I, and IP, are final when filed by an instructor in the end-of-term course report. However, the Registrar is authorized to change a final grade (1) on written request of an instructor, provided that a clerical or procedural error is the reason for the change or (2) on written request of the chair of the division in cases where it has been determined by the Committee on Privilege and Tenure that an instructor has assigned a grade on any basis other than academic grounds. No change of grade may be made on the basis of reexamination or, with the exception of the I and IP grades, the completion of additional work. Any grade change request made more than one year after the original filing must be validated for authenticity of the instructor's signature by the department chair. Any grade change request made by an instructor who has left the University must be countersigned by the department chair.

Undergraduate Final Examinations

No student shall be excused from assigned final examinations except as provided below.

The instructor in charge of an undergraduate course shall be responsible for assigning the final grade in the course. The final grade shall reflect the student's achievement in the course and shall be based on adequate evaluation of that achievement. The instructor's methods of evaluation must be announced at the beginning of the course. The methods may include a final written examination, a term paper, a final oral examination, a take-home examination, or other evaluation device. Evaluation methods must be of reasonable duration and difficulty and must be in accord with applicable departmental policies. Final written examinations shall not exceed three hours' duration and shall be given only at the times and places established by the department chair and the Registrar.

At the end of the term in which a student is expected to be graduated, a student's major department may examine him or her in the field of the major, may excuse the student from final examinations in courses offered by the department during that term, and with the approval of the appropriate Committee on Courses, assign a credit value to such general examination.

An instructor shall, if he or she wishes, release to individual students their original final examinations (or copies). This may be done by any method which insures the students' right to privacy. Otherwise, the instructor shall retain final examination materials, or a copy thereof, until the end of the next succeeding regular quarter of instruction, during which period students shall have access to their examinations.

Student Conduct: Violation of University Policies

Students are subject to disciplinary action for several types of misconduct, including dishonesty such as cheating, plagiarism, or knowingly furnishing false information to the University; forgery or other misuse of University documents, keys, or identifications; theft or damage to property; unauthorized entry to University properties; disruption of teaching, research, administration, disciplinary procedures, or other University activities; physical abuse or threats of violence; disorderly conduct; disturbing the peace; the use, possession, or sale of narcotic or illegal drugs on campus or at official University functions; and violations of other University policies or campus rules and regulations. Further information on these infractions and on the procedures concerning student discipline are contained in the *University of California Policies Applying to Campus Activities, Organizations, and Students* (Parts A and B), *UCLA Student Conduct Code of Procedures*, and *UCLA Activity Guidelines.* Copies of these booklets are available in the Dean of Students Office, 2224 Murphy Hall, or the Center for Student Programming, 161 Kerckhoff Hall.

In addition, the Dean of Students Office publishes "Official Notices" in the *Daily Bruin* at various times during the year. Such notices are important, and *all students are held responsible* for the information in them.

Disclosure of Student Records

Pursuant to the Federal Family Educational Rights and Privacy Act of 1974, the California Education Code as amended in 1976, and the University of California Policies Applying to the Disclosure of Information from Student Records, students at UCLA have the right (1) to inspect and review records pertaining to themselves in their capacity as students, except as the right may be waived or qualified under the Federal and State Laws and the University Policies; (2) to have withheld from disclosure personally identifiable information from their student records, except as provided by the Federal and State Laws and the University Policies; (3) to inspect records maintained by the University of disclosures of personally identifiable information from their student records; (4) to seek correction of their student records through a request to amend the records and subsequently through a hearing; and (5) to file complaints with the Department of Education regarding alleged violations of the rights accorded them by the Federal Act.

The University may publish, without the student's prior consent, items in the category of "public information," which are name, address, telephone number, date and place of birth, major field of study, dates of attendance, degrees and honors received, the most recent previous educational institution attended, participation in officially recognized activities (including but not limited to intercollegiate athletics), and the name, weight, and height of participants on intercollegiate athletic teams. Students who do not wish all or part of the items of "public information" disclosed may, with respect to address and telephone number, so indicate on the UCLA Address/Data portion of the Registration Form, and with respect to the other items of information, by filling out a *Decline to Release Public Information* form available in the Registrar's Office, 1105 Murphy Hall.

Student records which are the subject of the Federal and State Laws and the University Policies may be maintained in a wide variety of offices. Students are referred to the *UCLA Campus and CHS Directory* which lists all the offices which may maintain student records, together with their campus address, telephone number, and unit head. Students have the right to inspect their student records in any such office subject to the terms of the appropriate Federal and State Laws and the University Policies.

A copy of the Federal and State Laws, the University Policies, and the *UCLA Campus and CHS Directory* may be inspected in the office of the Records Management Coordinator, Business Enterprises Administration Building, 270 De Neve Drive. Information concerning these matters and students' hearing rights is also available there.

Endowed Chairs

Although UCLA is a public institution, private gifts are increasingly important in maintaining the quality of the University's three missions of teaching, research, and community service. Among the principal forms of private support are endowed professorships or "chairs," which support the educational and research activities of distinguished members of the faculty.

As this catalog goes to press, UCLA has 64 endowed chairs which have been approved by The Regents of the University of California, as follows. (* Asterisks indicate new chairs which have been approved by The Regents since the publication of the 1985-86 *UCLA General Catalog.*)

College of Letters and Science

*Arthur Andersen and Company Alumni Chair in Business Economics
Ralph Bunche Chair in International Studies
Flint Professorship of Philosophy
Gloria and Paul Griffin Chair in Philosophy
Marvin Hoffenberg Chair in Political Science
Endowed Chair in Modern European History
Franklin D. Murphy Chair in Italian Renaissance Studies
Narekatsi Chair in Armenian Studies
Presidential Chair
*Charles Speroni Chair in Italian Literature and Culture
The 1939 Club Chair in Holocaust Studies
UCLA Alumni and Friends of Japanese Ancestry Chair in Japanese American Studies
UCLA Foundation Chair
Saul Winstein Chair in Organic Chemistry

College of Fine Arts

Edward W. Carter Chair in Netherlandish Art
Armand Hammer Chair in Leonardo Studies
UCLA Art Council Chair in Art

School of Engineering and Applied Science

L.M.K. Boelter Chair in Engineering
Hughes Aircraft Company Chair in Manufacturing Engineering
Ralph M. Parsons Chair in Chemical Engineering

Graduate School of Architecture and Urban Planning

*S. Charles Lee Chair in Architecture and Urban Design
Harvey S. Perloff Chair

Graduate School of Education

Allan M. Cartter Chair in Higher Education
George F. Kneller Chair in Education and Philosophy

School of Law

Connell Chair in Law
Chair in Entertainment Law
Gleeson L. Payne Chair in Insurance Law
Security Pacific Bank Chair

Graduate School of Management

Allstate Chair in Insurance and Finance
California Chair in Real Estate and Land Economics
Edward W. Carter Chair in Business Administration
James A. Collins Chair in Management
Warren C. Cordner Chair in Money and Financial Markets
*Henry Ford II Chair in International Management
Irwin L. Hearsh Chair in Money and Banking
IBM Chair in Computers and Information Systems
Harry and Elsa Kunin Chair in Business and Society
William E. Leonhard Chair in Management
Chauncey Medberry III Chair in Management
Times Mirror Chair in Management Strategy and Policy
Arthur Young Chair in Accounting

School of Medicine

Louis D. Beaumont Chair in Surgery
Bowyer Professorship of Medical Oncology
Judson Braun Chair in Biological Psychiatry
Joseph Campbell Chair in Child Psychiatry
Edward W. Carter Chair in Internal Medicine
Castera Chair in Cardiology
Crump Chair in Medical Engineering
Max Factor Family Foundation Chair in Nephrology
Charles Kenneth Feldman Chair in Ophthalmology
Dolly Green Chair in Ophthalmology
Eleanor I. Leslie Chair in Neuroscience
Della Martin Chair in Psychiatry
James H. Nicholson Chair in Pediatric Cardiology
*Samuel J. Pearlman, M.D. and Della Z. Pearlman Chair in Head and Neck Surgery
Thomas P. and Katherine K. Pike Chair in Alcohol Studies
Augustus S. Rose Chair in Neurology
Jennifer Jones Simon Chair in Biophysics
Sprague Chair in Molecular Oncology
Jules Stein Chair in Ophthalmology
Streisand Chair in Cardiology Sponsored by the American Heart Association
Leon J. Tiber, M.D. and David S. Alpert, M.D. Chair in Medicine
Wasserman Chair in Ophthalmology

School of Public Health

Fred H. Bixby Chair in Population Policy

University Administrative Officers

Regents Ex Officio

Governor of California
George Deukmejian

Lieutenant Governor of California
Leo T. McCarthy

Speaker of the Assembly
Willie L. Brown, Jr.

State Superintendent of Public Instruction
Bill Honig

President of the Alumni Association of the University of California +
Claude B. Hutchison

Vice President of the Alumni Association of the University of California +
James Toledano

President of the University
David Pierpont Gardner

Appointed Regents+

Sheldon W. Andelson (1994)
Yvonne Brathwaite Burke (1993)
Glenn Campbell (1996)
Edward W. Carter (1988)
Frank W. Clark, Jr. (1988)
Tirso del Junco (1997)
David Geffen (1990)
Jeremiah F. Hallisey (1993)
Willis W. Harman (1990)
John F. Henning (1989)
Frank L. Hope, Jr. (1988)
Leo S. Kolligian (1997)
Vilma S. Martinez (1990)
Joseph A. Moore (1990)
Robert N. Noyce (1992)
Stanley K. Sheinbaum (1989)
William French Smith (1998)
Yori Wada (1992)
Dean A. Watkins (1996)
Harold M. Williams (1994)
William A. Wilson (1988)
David Bryan Hoffman (1987) +

Faculty Representatives to the Board of Regents
Neil J. Smelser
Murray L. Schwartz

+ Terms of Regents appointed by the Governor expire February 28 of the year named in parentheses. The Student Regent (David Bryan Hoffman) and Alumni Regents serve a one-year term beginning July 1 and ending June 30 of the year listed.

Officers of The Regents

President of The Regents
George Deukmejian

Chair of The Regents
Vilma S. Martinez

Vice Chair of The Regents
Robert N. Noyce

Acting General Counsel
James E. Holst

Secretary
Bonnie M. Smotony

Treasurer
Herbert M. Gordon

Office of the President

President of the University
David Pierpont Gardner

Senior Vice President — Academic Affairs
William R. Frazer

Senior Vice President — Administration
Ronald W. Brady

Vice President — Agriculture and Natural Resources
James B. Kendrick, Jr.

Vice President — Budget and University Relations
William B. Baker

Vice President — Health Affairs
Cornelius L. Hopper, M.D.

Executive Assistant to the President
Gloria L. Copeland

Officers Emeriti

President of the University, Emeritus, and Professor of Economics, Emeritus
Charles J. Hitch

President of the University, Emeritus, and Professor of Business Administration, Emeritus
Clark Kerr

President of the University, Emeritus, and Professor of Physics, Emeritus
David S. Saxon

Vice President of the University, Emeritus, and Professor of Physics, Emeritus
William P. Fretter

Vice President of the University, Emeritus, Professor of Agricultural Economics, Emeritus, and Agricultural Economist, Emeritus
Harry R. Wellman

Vice President—Budget Plans and Relations, Emeritus
Thomas E. Jenkins

Vice President — Financial and Business Management, Emeritus, and Professor of Pathology, Emeritus
Baldwin G. Lamson

University Provost, Emeritus, Chancellor, Emeritus, and Professor of Mathematics, Emeritus
Angus E. Taylor

Vice President, Emeritus, and Secretary and Treasurer of The Regents, Emeritus
Robert M. Underhill

Secretary of The Regents, Emeritus
Marjorie J. Woolman

Associate Secretary of The Regents, Emeritus
Elizabeth O. Hansen

Treasurer of The Regents, Emeritus
Owsley B. Hammond

General Counsel of The Regents, Emeritus
Thomas J. Cunningham

Associate Counsel of The Regents, Emeritus
John E. Landon

Chancellors of the Campuses

Chancellor at Berkeley
Ira Michael Heyman

Chancellor at Davis
James H. Meyer

Chancellor at Irvine
Jack W. Peltason

Chancellor at Los Angeles
Charles E. Young

Chancellor at Riverside
Theodore L. Hullar

Chancellor at San Diego
Richard C. Atkinson

Chancellor at San Francisco
Julius R. Krevans

Chancellor at Santa Barbara
Robert A. Huttenback

Chancellor at Santa Cruz
Robert L. Sinsheimer

University Professors

E. Margaret Burbidge, *University Professor,* San Diego, Department of Physics

Melvin Calvin, *Emeritus University Professor,* Berkeley, Department of Chemistry

Gerard Debreu, *University Professor,* Berkeley, Departments of Economics and Mathematics

Murray Krieger, *University Professor,* Irvine, Department of English and Comparative Literature

Julian S. Schwinger, *University Professor,* Los Angeles, Department of Physics

Glenn T. Seaborg, *Emeritus University Professor,* Berkeley, Lawrence Berkeley Laboratory

Neil J. Smelser, *University Professor,* Berkeley, Department of Sociology

Edward Teller, *Emeritus University Professor,* Livermore, Lawrence Livermore Laboratory

Charles H. Townes, *University Professor,* Berkeley, Department of Physics

Sherwood L. Washburn, *Emeritus University Professor,* Berkeley, Department of Anthropology

John R. Whinnery, *University Professor,* Berkeley, Department of Electrical Engineering and Computer Sciences

Lynn White, Jr., *Emeritus University Professor,* Los Angeles, Department of History

UCLA Administrative Officers

Chancellor
Charles E. Young, Ph.D.

Executive Vice Chancellor
William D. Schaefer, Ph.D.

Vice Chancellor—Faculty Relations
Harold W. Horowitz, S.J.D.

Vice Chancellor—Graduate Programs and Dean of Graduate Division
Victoria A. Fromkin, Ph.D.

Vice Chancellor—Research Programs
Albert A. Barber, Ph.D.

Vice Chancellor—Student Affairs
Winston C. Doby, Ed.D.

Administrative Vice Chancellor
James W. Hobson, M.B.A.

Vice Chancellor—Institutional Relations
Elwin V. Svenson, Ed.D.

Vice Chancellor—Public Affairs
Alan F. Charles, J.D.

Vice Chancellor—Planning
Adrian H. Harris, M.S.

Executive Assistant to the Chancellor
Rosemary Ford, B.A.

Assistant Chancellor—Executive Assistant
John R. Sandbrook

Director of Neuropsychiatric Hospital
Don A. Rockwell, M.D.

Director of Neuropsychiatric Institute
Louis Jolyon West, M.D.

Director of UCLA Medical Center
Raymond G. Schultze, M.D.

Campus Counsel
Patricia M. Jasper, J.D.

University Librarian
Russell Shank, M.B.A., D.L.S.

Dean of Continuing Education
Leonard Freedman, Ph.D.

Deans of UCLA Colleges and Schools

Graduate School of Architecture and Urban Planning
Richard S. Weinstein, M.A.

School of Dentistry
James R. Hooley, D.D.S.

Graduate School of Education
Lewis C. Solmon, Ph.D.

School of Engineering and Applied Science
A.R. Frank Wazzan, Ph.D., *Acting*

College of Fine Arts
Robert H. Gray, M.F.A.

School of Law
Susan W. Prager, J.D.

College of Letters and Science

Provost
Raymond L. Orbach, Ph.D.

Division of Humanities
Herbert Morris, LL.B., D.Phil.

Division of Life Sciences
John D. O'Connor, Ph.D.

Division of Physical Sciences
Clarence A. Hall, Jr., Ph.D.

Division of Social Sciences
David O. Sears, Ph.D.

Division of Honors
Edward A. Alpers, Ph.D.

Graduate School of Library and Information Science
Robert M. Hayes, Ph.D.

Graduate School of Management
J. Clayburn La Force, Ph.D.

School of Medicine
Kenneth I. Shine, M.D.

School of Nursing
Ada M. Lindsey, R.N., Ph.D.

School of Public Health
Abdelmonem A. Afifi, Ph.D., *Acting*

School of Social Welfare
Leonard Schneiderman, Ph.D.

Counselors and Advisers

Department/Major	Counselor/Adviser	Address	Extension
Aerospace Studies	Sally A. Cohen, Staff	208 Men's Gym	51743
	Richard L. Folks, Faculty	212 Men's Gym	51743
African Area Studies (Graduate)	John A. Distefano, Staff	10250 Bunche Hall	52944
	Teshome H. Gabriel, Faculty	10375 Bunche Hall	53686
