A dissertation on a subject of your choice selected in consultation with your major professor is required. The final oral examination, administered by the doctoral committee, is a defense of

the completed dissertation, presented as a professional seminar and open in part to the public.

Lower Division Courses

6. Introduction to Microbiology. Lecture, three hours. Not open for credit to students with credit for course 101, Biology 5, or equivalent courses. Designed for nontechnical students; introduction to biology of microorganisms (bacteria, viruses, protozoa, algae, fungi), their significance as model systems for understanding fundamental cellular processes, and their role in human affairs. Mr. Robinson and the Staff (F,W,Sp)

6L. Microbiology Laboratory (2 units). Laboratory, six hours. Prerequisite: Chemistry 15. Optional laboratory, with emphasis on basic principles of diagnostic microbiology for students entering allied health fields. Focus on purposes and functions of clinical microbiology laboratory in diagnosis of infectious diseases, as well as application of aseptic disinfectant techniques. Practical insight and experience in modern medical procedures and new technologies. (Sp)

7. Developments in Biotechnology. Lecture, three hours. Prerequisite: course 6 or Biology 2 or 5. Not open for credit to students with credit for course 101. Survey of recent developments in biotechnology, with emphasis on use of single-celled organisms. Review of basic principles of microbiology as they apply to biotechnology and examination of wide variety of topics, including alternate energy sources, pollution, cleanup, genetic fingerprinting, genetic engineering, and agricultural and food microbiology. P/NP or letter grading. Mr. Robinson (F,W)

Upper Division Courses

101. Fundamentals of Bacteriology. Lecture, three hours; laboratory, six hours. Prerequisites: Biology 100A, Chemistry 153A. Recommended: Biology 108. Historical foundations of the science; introduction to bacterial structure, physiology, biochemistry, genetics, and ecology. Mr. Gunsalus (W)

Ms. Hartzell (F), Ms. McEwen (Sp)

102. Introductory Virology. Lecture, three hours; laboratory, four hours. Prerequisites: Biology 100A, 108. Recommended: Chemistry 153A. Biological properties of bacterial and animal viruses; replication; methods of detection; interactions with host cells and multicellular hosts. Mr. Berk, Mr. Witte (W)

C104A. Mammalian Cell as a Microorganism (2 units). Lecture, three hours; discussion, four hours. Prerequisites: Chemistry 132A, 132B, 153A, and 153B or Biology 144. Recommended: Chemistry 153C. Cultured mammalian cell as an experimental system for study of normal regulatory processes and disease mechanisms. Contents include regulation of cell growth in chemically defined medium; establishment, cloning, and characterization of cell lines, cultured cells as model systems in study of normal growth and development, disease mechanisms and cancer. May be concurrently scheduled with course C204A. P/NP or letter grading.

Mr. Fox (F, first five weeks)

C104B. Mammalian Cell Genetics (2 units). Lecture, two hours; discussion, two hours. Prerequisites: biochemistry, introductory genetics. Topics include cytogenetics, chromosomal organization and gene mapping, somatic cell mutants and hybrid cells, oncogenes and cancer genetics, mouse genetics, targeted mutagenesis, analysis of simple and complex genetic diseases. Reading material includes reviews and recent original publications. May be concurrently scheduled with course C204B.

Mr. Lusic (F, second five weeks)

C104C. RNA Tumor Viruses (2 units). (Formerly numbered C104E.) Lecture, three hours. Prerequisite: consent of instructor. Interactions of RNA tumor viruses with differentiating tissues, such as immune system and erythroid development. Concurrently scheduled with course C204C. P/NP grading.

Mr. Witte (Sp, five weeks)

C106. Molecular and Genetic Basis of Bacterial Infections. Lecture, three hours; discussion, one hour. Prerequisites: course 101, Biology 100A. Recommended: Biology 108. Biochemical and genetic properties of bacteria which afford potential for pathogenicity. Epidemiology and transmission of disease; chemotherapy and drug resistance. Regulation of virulence factors. Concurrently scheduled with course C206.

Ms. Miller (W)

C111. Biology of Prokaryotic Cell. Lecture, three hours; discussion, one hour. Prerequisites: course 101 and Chemistry 153C, or consent of instructor. Review of current knowledge of structural organization of prokaryotic cells. Emphasis on isolation methods, chemical composition, structure and assembly of subcellular components, including membranes, walls, flagella, ribosomes, and viruses. Concurrently scheduled with course C211.

Ms. Wisnieski (Sp)

C112. Molecular Biology of Bacterial Growth. Lecture, three hours; discussion, one hour. Prerequisites: course 101, Biology 108, Chemistry 153A, 153L. Analysis of growth, development, and physiological adaptations of bacteria, with emphasis on their molecular and genetic basis. Analysis of complex regulatory mechanisms that underlie cell cycle and other multicomponent cellular systems from perspective of contemporary research techniques. Concurrently scheduled with course C212.

Mr. Gunsalus, Mr. Nierlich, Mr. Simons (W)

C119. Microbial Genetics and Molecular Biology (5 units). (Formerly numbered 119.) Lecture, three hours; discussion, two hours. Prerequisites: Biology 108 and Chemistry 153A, or consent of instructor. Recommended: Chemistry 153B. Integrated, conceptual analysis of classical and modern molecular genetics of microbes, especially bacteria and their viruses, with emphasis on nature of the gene and control of gene expression. Concurrently scheduled with course C219.

Mr. Simons (Sp)

154. Advanced Molecular Genetics. (Formerly numbered M154.) Lecture, three hours; discussion, one hour. Prerequisites: Biology 9 and 108, or consent of instructor. Coverage of key papers in molecular genetics of prokaryotes from elucidation of the genetic code to the present, to acquaint students with essential elements of experimental design, analysis of results, and scientific logic.

Mr. Miller (W)

M185A. Fundamentals of Immunology. (Formerly numbered CM185.) (Same as Biology M185A and Microbiology and Immunology M185A.) Lecture, three hours; discussion, one hour. Prerequisite: Biology 108 or equivalent. Recommended prerequisites or corequisites: Biology 100A, 100B, Chemistry 153A, 153L. Introduction to experimental immunobiology and immunochemistry; cellular and molecular aspects of humoral and cell immune reactions.

Mr. Clark, Ms. Morrison (F)

CM185B. Immunology. (Same as Biology CM185B.) Lecture, three hours; discussion, two hours. Prerequisite: course M185A or equivalent. Suitable for undergraduate students with a grade of C or better in course M185A or equivalent, or for graduate students. Advanced treatment of major issues in contemporary immunology, using analysis of experiments as basis for discussion. Concurrently scheduled with course CM285B.

Mr. Aguilera, Mr. Kronenberg, Mr. Sercarz (W)

195. Proseminar (2 units). Prerequisites: senior standing, consent of instructor. Discussion by small groups of students and instructor on current research literature. Topics vary each year. May be taken only once for credit in the major but may be repeated for University credit.

Ms. McEwen (Sp)

199. Special Studies in Microbiology and Molecular Genetics (2 to 8 units). Prerequisites: Chemistry 153A, 153L, and junior or senior standing with minimum 3.0 GPA in the premajor and major, or consent of departmental adviser. Individual research project under direct supervision of departmental faculty member. Copy of report describing the research must be filed with Student Affairs Office by end of term. First four units must be taken P/NP; 12 additional units, four of which may be applied toward the major, may be taken for a letter grade.

(F,W,Sp)

199H. Honors Thesis (4 or 8 units). Prerequisite: honors program standing. Directed individual research for departmental honors; students must have a faculty sponsor. Three sequential 199H terms required. Progress report must be submitted to faculty sponsor at end of each of the first two terms, with honors thesis submitted at end of final term. Maximum of four units may be applied toward the major, with balance applied toward B.S. degree requirements.

(F,W,Sp)

Graduate Courses

C204A. Mammalian Cell as a Microorganism (2 units). Lecture, three hours; discussion, four hours. Prerequisite: Chemistry 132A, 132B, 153A, and 153B or Biology 144. Recommended: Chemistry 153C. Cultured mammalian cell as an experimental system for study of normal regulatory processes and disease mechanisms. Contents include regulation of cell growth in chemically defined medium; establishment, cloning, and characterization of cell lines, cultured cells as model systems in study of normal growth and development, disease mechanisms and cancer. May be concurrently scheduled with course C104A. S/U or letter grading.

Mr. Fox (F, first five weeks)

C204B. Mammalian Cell Genetics (2 units). Lecture, two hours; discussion, two hours. Prerequisites: biochemistry, introductory genetics. Topics include cytogenetics, chromosomal organization and gene mapping, somatic cell mutants and hybrid cells, oncogenes and cancer genetics, mouse genetics, targeted mutagenesis, analysis of simple and complex genetic diseases. Reading material includes reviews and recent original publications. May be concurrently scheduled with course C104B. S/U or letter grading.

Mr. Lulis (F, second five weeks)

C204C. RNA Tumor Viruses (2 units). (Formerly numbered C204E.) Lecture, three hours; discussion, one hour. Prerequisite: consent of instructor. Interactions of RNA tumor viruses with differentiating tissues, such as immune system and erythroid development. Concurrently scheduled with course C104C. Includes additional discussion section for graduate students on research literature and methodology. S/U grading.

Mr. Witte (Sp, five weeks)

C206. Molecular and Genetic Basis of Bacterial Infections. Lecture, three hours; discussion, one hour. Prerequisites: course 101, Biology 100A. Recommended: Biology 108. Biochemical and genetic properties of bacteria which afford potential for pathogenicity. Epidemiology and transmission of disease; chemotherapy and drug resistance. Regulation of virulence factors. Concurrently scheduled with course C106.

Ms. Miller (W)

C211. Biology of Prokaryotic Cell. Lecture, three hours; discussion, one hour. Prerequisites: course 101 and Chemistry 153C, or consent of instructor. Review of current knowledge of structural organization of prokaryotic cells. Emphasis on isolation methods, chemical composition, structure and assembly of subcellular components, including membranes, walls, flagella, ribosomes, and viruses. Concurrently scheduled with course C111. Term paper on research topic selected by each graduate student required.

Ms. Wisnieski (Sp)

C212. Molecular Biology of Bacterial Growth. Lecture, three hours; discussion, one hour. Prerequisites: course 101, Biology 108, Chemistry 153A, 153L. Analysis of growth, development, and physiological adaptations of bacteria, with emphasis on their molecular and genetic basis. Analysis of complex regulatory mechanisms that underlie cell cycle and other multicomponent cellular systems from perspective of contemporary research techniques. Concurrently scheduled with course C112.

Mr. Gunsalus, Mr. Nierlich, Mr. Simons (W)

213. Seminar: Unicellular Development (2 units). Lecture, 30 minutes; discussion, 90 minutes. Prerequisites: course 101 or equivalent, graduate standing or consent of instructor. Background on each of developmental systems in bacillus, myxobacteria, dictyostelium, and streptococcus. Student analysis and discussion of recent publications in each of these areas. S/U or letter grading.

Ms. Hartzell

C219. Microbial Genetics and Molecular Biology (5 units). Lecture, three hours; discussion, two hours. Prerequisites: Biology 108 and Chemistry 153A, or consent of instructor. Recommended: Chemistry 153B. Integrated, conceptual analysis of classical and modern molecular genetics of microbes, especially bacteria and their viruses, with emphasis on nature of the gene and control of gene expression. Concurrently scheduled with course C119.

Mr. Simons (Sp)

221. Seminar: Eukaryotic Transcription (2 units). (Formerly numbered 221X.) Prerequisite: Biological Chemistry M253 or equivalent. Reading and discussion of current literature in area of transcription regulation in eukaryotes. S/U grading.

Mr. Berk

M223. Membrane Research Seminar (2 units). (Same as Microbiology and Immunology M223.) Prerequisite: consent of instructor. Critical discussions of current literature in membrane research, with emphasis on relationship between structure and function in lipid bilayers. May be repeated for credit.

Ms. Wisnieski

M226A-M226B. Principles of Microbial Pathogenesis. (Same as Biology M226A-M226B and Microbiology and Immunology M226A-M226B.) Lecture, one hour; discussion, three hours. Prerequisites: Microbiology and Immunology 202A, 202B, 202C, and 202D, or equivalent, or consent of instructor. Lecture/discussion format designed to analyze basic pathogenesis of infections. Emphasis on molecular and cellular approaches to understand host-microbial interaction. **M226A.** Bacterial and Mycotic Infections; **M226B.** Parasitic and Viral Infections.

Mr. Ahmed (Sp, M226B), Mr. Miller (W, M226A)

M233. Principles, Practices, and Policies in Biotechnology (2 units). (Same as Biological Chemistry M233, Biology M233, Chemical Engineering M233, Chemistry M233, Microbiology and Immunology M233, and Radiological Sciences M233.) Prerequisite: graduate standing or consent of instructor. Presentation of technologies, regulatory practices, and policies required for product development and review of current opportunities for new technology development. Topics include fermentation processes, pilot and large-scale bioprocess technologies, scaleup strategies, industrial recombinant DNA processes, hybridomas, protein engineering, peptide mimetics and rational drug design, medical and microscopic imaging, and intellectual property issues. S/U or letter grading.

Mr. Fox, Ms. Morrison (W)

M246. Computer Analysis of Genetic Organization. (Same as Biology M246.) Lecture, two hours; laboratory, six hours. Prerequisites: course C119 or equivalent, or Biology 100A and 108 or equivalent. Lectures and laboratory instruction in contemporary procedures for analysis of nucleic acid and protein sequence data with the computer. No prior computer experience necessary; students gain both general and specialized facility with IBM PC and Digital VAX computers.

Mr. Nierlich, Mr. Simpson (F)

M248. Molecular Genetics. (Same as Biological Chemistry M248 and Biology M248.) Lecture, three hours; discussion, one hour. Prerequisite: consent of instructor. Basic concepts in modern genetics, with examples from both eukaryotic and prokaryotic systems. Emphasis on use of genetic techniques for addressing fundamental questions in biochemistry and molecular biology. Topics include mutagenesis, mutant selection, recombination, genetic mapping, complementation, transposable elements, gene organization, genetic regulation, and molecular evolution. (Sp)

250. Seminar: Microbial Metabolism (2 units). Prerequisite: consent of instructor. Discussion and student presentations of recent work in areas of genetic regulation and physiology of bacterial metabolism. Mr. Gunsalus, Ms. McEwen (F,W)

251. Seminar: Regulation and Differentiation (2 units). S/U grading. Mr. Gunsalus, Mr. Nierlich (F)

M252. Seminar: Microbial Pathogenesis (2 units). (Formerly numbered 252.) (Same as Microbiology and Immunology M252.) Prerequisite: consent of instructor. Limited to 10 students. Student presentations and critical discussion of current literature on various aspects of microbial pathogenesis. May be repeated for credit. S/U or letter grading. Mr. Miller, Ms. Miller (F,Sp)

255. Seminar: Microbial Cell Biology (2 units). Prerequisite: consent of instructor. Student presentations and critical discussion of current literature on various aspects of prokaryotic and eukaryotic cell biology and morphogenesis. May be repeated for credit. Ms. McEwen (F)

256. Seminar: Microbial Molecular Genetics (2 units). Prerequisite: consent of instructor. Student and instructor presentations and critical discussion of newly emerging concepts in prokaryotic and/or eukaryotic molecular genetics. Emphasis on nature of the gene and control of gene expression. May be repeated for credit. S/U or letter grading. Mr. Simons (F,W)

M258A. Molecular Genetic Mechanisms of Immune Response (2 units). (Same as Biology M258A and Microbiology and Immunology M258A.) Lecture, two hours; discussion, two hours. Prerequisite: course CM185B or CM285B or Microbiology and Immunology 202A or consent of instructor. Reading and discussion of current research articles on immunoglobulin I and II, oncogenes of immune system, T cell antigen receptor, and loci affecting differentiation. S/U or letter grading. Mr. Kronenberg, Mr. Wall (W, five weeks)

M258B. Biology of B Cells: Development, Repertoire, and Activation (2 units). (Same as Biology M258B and Microbiology and Immunology M258B.) Lecture, two hours; discussion, two hours. Prerequisite: course CM185B or CM285B or Microbiology and Immunology 202A or consent of instructor. Reading and discussion of current research articles on B cell development, repertoire, and growth and differentiative regulation. S/U or letter grading. Mr. Braun, Mr. Stevens (W, five weeks)

M258C. T Cells and the MHC (2 units). (Same as Biology M258C and Microbiology and Immunology M258C.) Lecture, two hours; discussion, two hours. Prerequisite: course CM185B or CM285B or Microbiology and Immunology 202A or consent of instructor. Reading and discussion of current research articles on structure of human and murine MHC chromosomal regions and genes, T cell recognition of mite products and foreign antigens, MHC polymorphism, MHC-like systems, MHC-linked genes, MHC and disease, and nonimmune function of MHC. S/U or letter grading. Mr. Bonavida, Mr. Clark (Sp, five weeks)

M258D. Molecular Interactions in Immune Responses (2 units). (Formerly numbered M258F.) (Same as Biology M258D and Microbiology and Immunology M258D.) Lecture, two hours; discussion, two hours. Prerequisite: course CM185B or CM285B or Microbiology and Immunology 202A or consent of instructor. Reading and discussion of current research articles on immunochemistry of antibodies, antigens, and complement, antigenic recognition, antibody restriction. S/U or letter grading. Ms. Morrison (F, five weeks)

M258E. Immunopathology: Immunology of Disease (2 units). (Formerly numbered M258D.) (Same as Biology M258E and Microbiology and Immunology M258E.) Lecture, two hours; discussion, two hours. Prerequisite: course CM185B or CM285B or Microbiology and Immunology 202A or consent of instructor. Reading and discussion of current research articles on tolerance and autoimmunity, autoimmune disease models, immune complex disease, immediate hypersensitivity and its cellular basis, and natural and acquired immune deficiency disease. S/U or letter grading. Mr. Porter (Sp, five weeks, alternate years)

M258F. Immune Regulation (2 units). (Formerly numbered M258E.) (Same as Biology M258F and Microbiology and Immunology M258F.) Lecture, two hours; discussion, two hours. Prerequisite: course CM185B or CM285B or Microbiology and Immunology 202A or consent of instructor. Reading and discussion of current research articles on idiotype networks, suppressor T cells, tolerance at T and B cell levels, and Ir gene control. S/U or letter grading. Mr. Sercarz (F, five weeks)

M260. Immunology Forum (2 units). (Same as Microbiology and Immunology M260.) Prerequisite: course M185A. Broad range of current topics in immunology presented and discussed at advanced frontier level. Continuing UCLA-wide, general graduate-level seminar involving faculty, postdoctoral immunologists, and graduate students from diverse departments. S/U grading. Mr. Sercarz (F,W,Sp)

M262A. Seminar: Current Topics in Immunobiology of Cancer (2 units). (Same as Biology M293A and Microbiology and Immunology M262A.) Prerequisite: consent of instructor. Review of recent literature in immunology, biology, and biochemistry of cancer, with emphasis on fundamental studies involving cell-mediated immunity, humoral response, tumor specific antigens, and new techniques. Discussion of reports on scientific meetings. May be repeated for credit. S/U grading. Mr. Bonavida (F,W,Sp)

M262B. Immunology of AIDS (2 units). (Same as Biology M293B, Epidemiology M214, and Microbiology and Immunology M262B.) Lecture, one hour; discussion, one hour. Prerequisites: courses M258B, M258C, Microbiology and Immunology 202A, 202B, 202C, 202D, or equivalent, consent of instructor. Lecture and student discussion of assigned publications. Topics include specific anti-HIV immune responses, activation of immune system by HIV, and basic mechanisms that underlie HIV-induced immunodeficiency. S/U or letter grading. Mr. Bonavida, Ms. Giorgi (W)

M262C. Biological Individuality and Immunity (2 units). (Same as Biology M293C and Microbiology and Immunology M262C.) Prerequisite: course M258C. Review of current literature in the field of immunogenetics, with emphasis on fundamental studies involving genetic and immunologic principles and techniques. Selected topics discussed and results interpreted; conclusions and experimental methods evaluated. (Sp, alternate years)

M262D. Selected Topics in Immunology (2 units). (Same as Biology M293D and Microbiology and Immunology M262D.) Prerequisite: consent of instructor. Student participation in discussions related to various topics in immunology. May be repeated for credit. S/U or letter grading. (F,W,Sp)

M263. Molecular and Cellular Immunology Seminar (2 units). (Same as Microbiology and Immunology M263.) Prerequisite: consent of instructor. Critical discussions of current literature in T and B cell immunology, with emphasis on molecular mechanisms. Mr. Kronenberg, Mr. Sercarz (F,W,Sp)

270. Seminar: Molecular Virology (2 units). Prerequisites: graduate standing, consent of instructor. Discussion and student presentations of recent work in molecular virology, including viral gene expression and function. S/U grading. Mr. Berk, Mr. Witte (F,W,Sp)

280. Seminar: Molecular and Cellular Endocrinology (2 units). Prerequisites: graduate standing, consent of instructor. Discussion and student presentations of recent work in molecular and cellular endocrinology. S/U grading. Mr. Fox (Sp)

CM285B. Immunology. (Same as Biology CM285B and Microbiology and Immunology M285B.) Lecture, three hours; discussion, two hours. Prerequisite: course M185A or equivalent. Suitable for undergraduate students with a grade of C or better in course M185A or equivalent, or for graduate students. Advanced treatment of major issues in contemporary immunology, using analysis of experiments as basis for discussion. Concurrently scheduled with course CM185B.

Mr. Aguilera, Mr. Kronenberg, Mr. Sercarz (W)
290. Seminar: Molecular Genetics (2 units). Lecture, one hour; discussion, one hour. Prerequisites: graduate standing, consent of instructor. Discussion and student presentations of recent work in molecular and genetic analysis of cellular gene regulation. S/U grading. (F,W,Sp)

M298. Seminar: Current Topics in Molecular Biology (2 units). (Same as Biological Chemistry M298, Biology M298, Chemistry M298, Microbiology and Immunology M298, and Molecular Biology M298.) Prerequisite: consent of instructor and graduate adviser of interdepartmental Molecular Biology Ph.D. Program. Each student conducts or participates in discussions on assigned topics. May be repeated for credit. (F,W,Sp)

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

495. Preparation for Teaching Microbiology in Higher Education (2 units). Lecture/discussion/laboratory. Prerequisites: graduate standing, consent of instructor. Study of problems and methodologies in teaching microbiology, including workshops, seminars, apprentice teaching, and peer observation. S/U or letter grading. Mr. Nierlich

596. Directed Individual Research (2 to 12 units).

598. Research for M.A. Thesis (2 to 12 units).

599. Research for Ph.D. Dissertation (2 to 12 units).

Scope and Objectives

The Ph.D. in Molecular Biology is offered under the supervision of an interdepartmental committee. The Molecular Biology Institute serves this committee and the various departments concerned in support of faculty research and teaching associated with the Ph.D. program. Staff members are from participating departments and from the Molecular Biology Institute. Areas for study include cell biology; developmental biology; DNA replication, repair, and recombination; gene expression; gene structure and regulation; immunobiology; microbiology/virology; molecular evolution; oncogenes, growth control, and molecular pathology; plant molecular biology; protein structural biology; and structural biology.

Ph.D. Degree

Admission

Recommended undergraduate training for the Ph.D. program includes a major in a biological or physical science. Coursework should include mathematics through calculus, one year of general and organic chemistry, one year of physics, two terms of physical chemistry based on the use of calculus, and one year of biology. Undergraduate requirements may be modified for qualified candidates with interests in certain areas. Candidates who enter the program with course deficiencies are expected to fulfill these early in the graduate program. In addition to University requirements, six terms of Molecular Biology M298 are required.

Only superior students are admitted, and in addition to the application, transcripts, and statement of purpose, three letters of recommendation are required along with Graduate Record Examination (GRE) scores. For more information, contact the Graduate Office, Molecular Biology Program, 168 MBI, UCLA, Los Angeles, CA 90024-1570.

Course Requirements

The usual program is two regular courses per term in addition to laboratory research, or the equivalent of 12 quarter units of upper division or graduate work. Six terms of Molecular Biology M298 are required.

Teaching Experience

Teaching experience is encouraged, as it is a skill needed for a future career.

Qualifying Examinations

Examinations are given in Molecular Biology M298, and four must be passed. The University Oral Qualifying Examination on original research proposed by the candidate independently of the Ph.D. adviser and on a topic distinct and separate from thesis research is held usually during the second year in the program. A "mid-stream seminar" must be presented during the third year in the program.

Final Oral Examination

The final oral examination is required of all students for the degree.

Graduate Course

M298. Seminar: Current Topics in Molecular Biology (2 units). (Same as Biological Chemistry M298, Biology M298, Chemistry M298, Microbiology M298, and Microbiology and Immunology M298.) Prerequisite: consent of instructor and graduate adviser of interdepartmental Molecular Biology Ph.D. Program. Each student conducts or participates in discussions on assigned topics. May be repeated for credit. (F,W,Sp)

Related Courses in Other Departments

The following courses offered by the departments listed are particularly appropriate to the research areas mentioned above. With the approval of the guidance committee or research supervisor, other related courses may be included in the program.

Biological Chemistry M221A, M221B, M248, M253, M255, M263, M264A-M264B-M264C, M266A-M266B-M266C, M267, M298

Biology 228, M230B, M230D, 234A, M248, 257, 294, M298

Chemistry and Biochemistry M230B, M230D, M253, M263, M264A-M264B-M264C, M267, M298

Microbiology and Immunology 250, M256, M258A, M258B, M260, M262A, M262B, M263, 264, M298

Microbiology and Molecular Genetics 250, 251, 256, M258A, M258B, M260, M263, 270, 290, M298

Musicology

2449 Schoenberg Hall, (310) 206-5187

Professors

Murray C. Bradshaw, Ph.D.
Malcolm S. Cole, Ph.D.
Frank A. D'Accone, Ph.D., *Chair*
Marie Louise Göllner, Ph.D.
Gilbert Reaney, M.A.
Robert M. Stevenson, Ph.D., *Recalled*
Edwin H. Hanley, Ph.D., *Emeritus*
Richard A. Hudson, Ph.D., *Emeritus*
W. Thomas Marrocco, Ph.D., *Emeritus*
Robert U. Nelson, Ph.D., *Emeritus*
Robert L. Tusler, Ph.D., *Emeritus*

Assistant Professors

Raymond Knapp, Ph.D.
Harris S. Saunders, Ph.D.

Scope and Objectives

The Department of Musicology provides students with a broad understanding of the history and literature of the art music of Europe and the Americas and of its place in the development of Western culture. Courses cover virtually every period, style, and genre as well as particular areas of popular music and jazz which have influenced or been influenced by Western art music. Musicology will appeal to undergraduate students with musical backgrounds whose interests and principal career goals lie in areas other than professional performance. The graduate program provides students with a strong foundation that will enable them to pursue careers in teaching and research.

The undergraduate program prepares students for graduate programs in music and related fields and provides them with sufficient background to teach in secondary schools after obtaining the necessary credentials in education. With its focused requirement of study in an area outside music, the program also offers training within the broader context of the humanities. Depending on your particular interests and career goals, you may select courses in the arts, literature, history and society, philosophy, and religion; these may be concentrated within such fields as Afro-American, American Indian, Asian American, Chicana and Chicano, and women's studies. If you wish to participate in performance at UCLA, you are encouraged to do so.

The graduate program offers courses leading to the M.A. and Ph.D. degrees. It is designed to equip students to pursue careers not only in teaching but also in other areas that require bibliographical skills and training in research methodologies. The department provides teaching and research assistantships each year for all qualified students.

Bachelor of Arts Degree

Admission

All applicants for admission and change of major must demonstrate proficiency in vocal or instrumental performance at the intermediate level. This requirement may be satisfied by completing a required prerequisite course with a grade of B or better or by passing an individual audition with a departmental faculty committee. If you are a junior transfer student, you are required to pass an audition with the departmental faculty admissions committee before you can be admitted to the program.

Preparation for the Major

Required: Musicology 1A-1B, 26A-26B-26C, 28A-28B-28C, Music 4A, 20A, 20B, 20C, and six units (three terms) of performance organizations selected from Ethnomusicology and Systematic Musicology 91D, 91F, 91H, 91K, 91P or Music 90A, 90B, 90E, 90F, 90G.

The Major

Required: Musicology 126A-126B-126C, four courses from 122, C127A through C127F, 130, 156, 188A through 188F; two courses (each in a different geographical or cultural area) from Ethnomusicology and Systematic Musicology 106A, 106B, 106C, 108A, 108B, M110A, M110B, 136A, 136B, 146, 147, 156A, 156B, 157, 160A, 160B; four courses in one area of concentration (arts, literature, history and society, or philosophy and religion) within which you may focus on a more specialized field such as Afro-American, American Indian, Asian American, Chicana and Chicano, and women's studies. A list of approved courses is available in the department office.

Master of Arts Degree

Admission

Applicants for the M.A. must have completed a Bachelor of Arts degree, or the equivalent, in Music or Music History. Other fields of study are accepted if you have the musical training and musicianship necessary to pursue graduate work. Transcripts must show at least 52 quarter units of work outside music, including one college year (or its high school equivalent) of French, German, Italian, or Spanish and an average grade of at least B in the basic areas that normally constitute the undergraduate core curriculum in music (harmony, counterpoint, music history, analysis, and musicianship).

Applicants for the Ph.D. must have completed a Master of Arts degree (or an equivalent degree) in Music. See "Admission" under the Ph.D. degree for more information.

Applicants for both degrees (M.A. and Ph.D.) are also required to (1) take a departmental assessment examination (details are automatically sent after the application has been received), (2) submit a letter describing their

background of study and stating their reasons for wishing to pursue graduate studies in musicology, (3) submit three letters of recommendation from former instructors and/or professionals with whom they have worked, and (4) submit one or two papers dealing with a topic in music history. Ph.D. applicants should submit the M.A. thesis if possible.

No application can be considered until the examination has been taken and all of the above materials have been received. Letters of inquiry and applications must be submitted to Mary Crawford, Graduate Adviser, 2539 Schoenberg Hall Annex, UCLA, Los Angeles, CA 90024-1616.

Foreign Language Requirement

Reading knowledge of German and a choice of French, Italian, Latin, or Spanish is required.

Course Requirements

You are required to complete a minimum of nine courses (52 units), including Musicology 200A, 210, 211, three courses from 201A through 201F, two courses from 260A through 260F, and one elective from other 200-series courses within the department or, with approval of the graduate adviser, an upper division or graduate course from outside the department. No more than six units of 500-series courses may be applied toward degree requirements.

Course 598 serves to guide the preparation of the thesis and should normally be taken during your last term in residence.

Thesis Plan

The thesis is an extended essay on a topic approved by the department.

Final Examination

The final examination is oral and includes discussion of both the thesis and related matters.

Ph.D. Degree

Admission

Applicants for the Ph.D. must have completed a Master of Arts degree (or an equivalent degree) in Music, which normally will have been taken in musicology or music history. Otherwise additional coursework, as prescribed by the department, must be completed. See "Admission" under the M.A. degree for information regarding the departmental assessment examination and other admission requirements.

Foreign Language Requirement

Reading knowledge of German and two other languages (French, Italian, Latin, Spanish, or another language approved by the department) is required. If you lack this proficiency when you enter the program, you must begin language study during your first year in residence.

Course Requirements

If you received an M.A. in Musicology from UCLA, you must take a minimum of six courses, including three additional terms of Musicology 201A through 201F, two courses from 250A, 250B, 256, 260A through 260F, and an elective selected with approval of the graduate adviser. If you did not receive the M.A. in Musicology from UCLA, you may be required, in consultation with the graduate adviser, to take other relevant and necessary courses beyond the six specified. Courses 495, 596, 597, and 599 may be taken for credit but may not be applied toward the degree requirements.

Qualifying Examinations

The five departmental written examinations are spread over a two-week period and must be completed within three weeks. With your guidance committee's recommendation, you may be reexamined on any failed parts twice within a six-month period. When you successfully complete the written examinations, the two-hour departmental oral examination can be scheduled. After passing this oral examination, you may submit your dissertation prospectus and request for a doctoral committee; this committee administers the University Oral Qualifying Examination.

Candidate in Philosophy Degree

You are eligible to receive the C.Phil. degree on advancement to candidacy for the Ph.D.

Dissertation/Final Oral Examination

The dissertation is an extended monograph supervised by your doctoral committee. A final oral examination, which is a defense of your dissertation, is required by the department.

Lower Division Courses

1A-1B. Introduction to Musicology. Prerequisite: consent of department. Introduction to principles, problems, and methods of musical historiography through examination of selected issues and concepts. Mr. D'Accone, Mr. Saunders (F,W)

2A-2B. Introduction to the Literature of Music. (Formerly numbered Music 2A-2B.) Lecture, four hours; laboratory, one hour. Prerequisite: undergraduate standing. Course 2A is not prerequisite to 2B. Designed for nonmusic majors. **2A.** Technical and formal principles of music literature through the mid-18th century. **2B.** Music literature from the mid-18th century to the present. Mr. Cole (F,W)

6GA-6GB. Graduate Review of Music History and Analysis (2 units each). (Formerly numbered Music 6GA-6GB.) Prerequisite: graduate standing. Designed to help entering graduate students remedy entrance deficiencies, to be cleared by examination. May be repeated for credit. S/U grading. Mr. Bradshaw

13. 20th-Century Music of the Western World. Survey of main trends in 20th-century music, with emphasis on representative works from avant-garde, mainstream, and popular traditions. Mr. Saunders, Ms. McClary

26A-26B-26C. History and Analysis of Music I. (Formerly numbered Music 26A-26B-26C.) Lecture, four hours; laboratory, one hour. Prerequisites: Music 20A, 20B, and 20C, or consent of instructor. Course 26A is prerequisite to 26B, which is prerequisite to 26C. History and literature of music from beginning of the Christian era to 1750, with emphasis on analysis of representative works of each style period. Materials selected illustrate history of style and changing techniques of composition. Ms. Göllner, Mr. Reaney

28A-28B-28C. Early Music Laboratory (2 units each). (Formerly numbered 28.) Laboratory, three hours. Corequisite: course 26A or 26B or 26C. Practical laboratory in which students perform music of various periods, as correlated with courses 26A-26B-26C. Mr. Bradshaw, Ms. Göllner

Upper Division Courses

122. Studies in History of Musical Thought. Prerequisite: consent of instructor. Alternative conceptions of music from early 18th century to about 1800, with emphasis on its nature as a medium of expression to its nature as a primarily formal or abstract art form. Mr. Cole, Mr. Saunders (W,Sp)

126A-126B-126C. History and Analysis of Music II. (Formerly numbered Music 126A-126B-126C.) Lecture, four hours; laboratory, one hour. Prerequisites: courses 26A-26B-26C, Music 20A, 20B, and 20C, or consent of instructor. Course 126A is prerequisite to 126B, which is prerequisite to 126C. History and literature of music from 1750 to the present, with emphasis on analysis of representative works of each style period. Materials selected illustrate history of style and changing techniques of composition. Mr. Knapp

C127A-C127F. Selected Topics in History of Music. (Formerly numbered Music C127A-C127F.) Discussion, three hours. Prerequisites to all courses: courses 1A-1B, 26A-26B-26C, Music 20A, 20B, 20C; in addition, 126A is prerequisite to C127D, 126B is prerequisite to C127E, and 126C is prerequisite to C127F. Designed as proseminars for undergraduates in preparation for graduate work. Special aspects of music of each period studied in depth. May be concurrently scheduled with courses C227A-C227F. **C127A.** Middle Ages; **C127B.** Renaissance; **C127C.** Baroque; **C127D.** Classic; **C127E.** Romantic; **C127F.** 20th Century. Prerequisite for nonmajors: consent of instructor. Mr. Bradshaw, Mr. Reaney

130. Music of the U.S. (Formerly numbered Music 130.) Prerequisite: consent of instructor. Survey of art music in the U.S. from Colonial times to the present. Mr. Stevenson

133. Bach. (Formerly numbered Music 133.) Lecture, two hours; laboratory, two hours. Prerequisite: undergraduate standing. Life and works of Johann Sebastian Bach. Mr. Knapp

134. Beethoven. (Formerly numbered Music 134.) Lecture, two hours; laboratory, two hours. Prerequisite: undergraduate standing. Life and works of Ludwig van Beethoven. Mr. Knapp

135A-135B-135C. History of Opera. (Formerly numbered Music 135A-135B-135C.) Lecture, four hours; laboratory, one hour. Prerequisite: undergraduate standing. **135A.** Opera of Baroque and Classical Periods; **135B.** Opera of Romantic Period; **135C.** Opera of the 20th Century. Mr. Saunders

139. History and Literature of Church Music. (Formerly numbered Music 139.) Prerequisite: consent of instructor. Study of forms and liturgies of Western church music. Ms. Göllner (F,Sp)

156. Studies in Musical Genres. Prerequisite: consent of instructor. Survey of musical genres, with emphasis on analysis of structural organization. Mr. Cole, Mr. D'Accone (Sp)

188A-188F. The Master Composer. (Formerly numbered Music 188A-188F.) Lecture, three hours; laboratory, one hour. Prerequisite: consent of instructor. Survey of works of an outstanding composer in Western art music, considered within context of his age. **188A.** Middle Ages; **188B.** Renaissance; **188C.** Baroque; **188D.** Classic; **188E.** Romantic; **188F.** 20th Century. Mr. Stevenson

189. The Symphony. (Formerly numbered Music 189.) Lecture, three hours; laboratory, one hour. Prerequisite: undergraduate standing. Survey of symphonic literature from Haydn through the 20th century. Mr. Bradshaw (W)

199. Special Studies in Musicology (2 or 4 units). (Formerly numbered Music 199.) Prerequisites: senior standing, 3.0 GPA, consent of instructor and department chair. Individual studies in musicology resulting in a research project. May be repeated for a maximum of eight units.

Graduate Courses

200A. Research Methods and Bibliography (6 units). (Formerly numbered Music 200A.) Lecture, three hours. Prerequisite: graduate standing in musicology. Survey of general bibliographic material in music. Mr. Cole, Mr. Saunders

201A-201F. Current Research Problems in Historical Musicology (6 units each). (Formerly numbered Music 201A-201F.) Discussion, three hours. Prerequisite: graduate standing in musicology. Investigation at graduate level of central questions and problems in history of Western music designed to give beginning graduate students a unified background for remainder of their studies and to employ their developing skills in research and bibliography. **201A.** Medieval; **201B.** Renaissance; **201C.** Baroque; **201D.** Classic; **201E.** Romantic; **201F.** 20th Century. Mr. Cole, Mr. Knapp

202. Selected Topics in History of Western Music (4 or 6 units). Lecture, three hours. Prerequisite: course 200A or consent of instructor. Designed for graduate students in areas other than musicology who are preparing for qualifying examinations. Systematic review of major stylistic trends in history of Western music from medieval times to the present through formal analysis and readings in contemporary and modern theoretical writings. May be repeated for a maximum of 12 units. Mr. Bradshaw, Mr. Cole

210. Medieval Notation (6 units). (Formerly numbered Music 210.) Lecture, three hours. Prerequisite: consent of instructor. Vocal and instrumental notation; paleography of the period. Mr. D'Accone, Ms. Göllner

211. Renaissance Notation (6 units). (Formerly numbered Music 211.) Lecture, three hours. Prerequisite: consent of instructor. Vocal and instrumental notation; paleography of the period. Mr. D'Accone

C227A-C227F. Selected Topics in History of Music. (Formerly numbered Music C227A-C227F.) Lecture, three hours. Prerequisite: graduate standing. Special aspects of music of each period studied in depth. Each course may be repeated once for credit. May be concurrently scheduled with courses C127A-C127F. Additional assignments, as well as evidence of greater depth of study, required of graduate students. **C227A.** Middle Ages; **C227B.** Renaissance; **C227C.** Baroque; **C227D.** Classic; **C227E.** Romantic; **C227F.** 20th Century. Prerequisite for nonmajors: consent of instructor. Mr. Bradshaw, Mr. Reaney

250A-250B. Seminars: History of Music Theory (6 units each). (Formerly numbered Music 250A-250B.) Lecture, three hours. Prerequisite: course 200A. Course 250A is not prerequisite to 250B. **250A.** Investigation of principal theoretical writings concerning music from antiquity through Zarlino. **250B.** Investigation of principal theoretical writings concerning music from Rameau to the present. Ms. Göllner, Mr. Reaney

256. Seminar: Musical Form (6 units). (Formerly numbered Music 256.) Lecture, three hours. Prerequisites: courses 126A-126B-126C. Analysis of structural organizations in music. Specific topics vary from year to year. Mr. Cole, Mr. D'Accone

257. Seminar: Music of the U.S. and Canada. (Formerly numbered Music 257.) Discussion, three hours. Prerequisite: course 130. Examination of principal figures and trends in North American music since the 18th century. Topics vary from year to year. Mr. Cole, Mr. Stevenson

260A-260F. Seminars: Historical Musicology (6 units each). (Formerly numbered Music 260A-260F.) Lecture, three hours. Prerequisites: courses 200A, 201A-201B-201C, and 210 or 211 (either may be taken concurrently). Specific topics vary from year to year. May be repeated for credit. **260A.** Medieval; **260B.** Renaissance; **260C.** Baroque; **260D.** Classic; **260E.** Romantic; **260F.** 20th Century. Mr. Bradshaw, Mr. Reaney

261A-261F. Problems in Performance Practices. Lecture, three hours. Prerequisites: graduate standing, consent of instructor. Investigation of primary source readings in performance practices as related to the period; analytical reports and practical applications in class demonstrations. May be repeated for credit. Mr. Bradshaw, Mr. Cole

269. Seminar: History of European Instruments. (Formerly numbered Music 269.) Discussion, three hours. Investigation of origins and development of principal families of instruments used in European music since the Middle Ages. Topics vary from year to year. Ms. Göllner, Mr. Stevenson

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

495. Introductory Practicum for Teaching Apprentices in Musicology (2 units). Eight weekly two-hour sessions, plus intensive training session during Fall Quarter registration week. Prerequisite: appointment as teaching apprentice in Music or Musicology Department. Required of all new teaching apprentices. Special course dealing with problems and practices of teaching music at college level. May not be applied toward degree requirements. S/U grading.

596. Directed Individual Studies in Musicology (2, 4, or 6 units). Prerequisites: graduate standing, consent of instructor. S/U grading.

597. Preparation for Master's Comprehensive Examination or Ph.D. Qualifying Examinations (2 or 4 units). Prerequisites: graduate standing, completion of all Ph.D. course and language requirements. S/U grading.

598. Guidance of M.A. Thesis (4, 8, or 12 units). Prerequisites: graduate standing, completion of all M.A. degree requirements (except thesis). S/U grading.

599. Guidance of Ph.D. Dissertation (4, 8, or 12 units). Prerequisites: graduate standing, advancement to Ph.D. candidacy. May be repeated for credit. S/U grading.

Near Eastern Languages and Cultures

Lecturers

Nancy Ezer, Ph.D. (*Hebrew*)
 Michael Fishbein, Ph.D. (*Arabic*)
 Ralph Jaeckel, Ph.D. (*Turkic*)

Scope and Objectives

The mission of the department is the discovery, interpretation, dissemination, and preservation of human values created over a period of five or more thousand years in an area which was the cradle of all civilization.

The department offers instruction in the major modern and ancient languages of the Near East: Akkadian, ancient Egyptian, Arabic, Armenian, Berber, Coptic, Hebrew, Persian, and Turkic. To meet increasing demands for a knowledge of this area and its past and present, it treats each language in a wide perspective — as a means of communication, as a vehicle of a cultural heritage, as a research tool for the area, and as an object of research itself.

Undergraduate majors may be taken in ancient Near Eastern civilizations, Arabic, Hebrew, Iranian studies, and Jewish studies. Master's and Ph.D. programs are offered in ancient Near Eastern civilizations, Arabic, Armenian, Hebrew, Iranian, Semitics, and Turkic.

Courses in the department prepare students for careers in government, foreign trade, teaching abroad, journalism abroad, archaeology, and further academic work involving the area.

Undergraduate Study

The department offers the Bachelor of Arts degree in five fields: (1) Ancient Near Eastern Civilizations, (2) Arabic, (3) Hebrew, (4) Iranian Studies, and (5) Jewish Studies. In each of these fields you must meet the prerequisites and take the courses prescribed. Your adviser assists in selecting a plan of study developed around your interests.

You may combine your major with one in another department (double major) to enhance your educational opportunities. Due to the number of additional courses required, you are advised to consider this option early in your academic career and in consultation with program advisers in both majors.

Bachelor of Arts in Ancient Near Eastern Civilizations

There are four options for a major in ancient Near Eastern civilizations: (1) Mesopotamia, (2) Egypt, (3) Syria/Palestine, and (4) biblical studies.

Preparation for the Major

Prerequisites for options 1 and 2 are German 1 and 2; prerequisites for options 3 and 4 are Greek 1, 2, Hebrew 1A-1B-1C, 102A-102B-102C. Majors in all four fields are expected to continue their study of German or Greek beyond the prerequisite levels.

The Major

Majors in all four options are required to take 14 courses selected in consultation with the program adviser.

Majors selecting options 1, 2, and 3 are required to take four language courses as follows: *option 1* — Semitics 140A-140B, 141, 142; *option 2* — Ancient Near East 120A-120B-120C, 121A; *option 3* — Semitics 130 and three terms of Hebrew 120. The remaining 10 courses for all three options are to be selected from the following: three literature courses from Ancient Near East 150A, 150B, 150C, Jewish Studies M150A; three courses in history and religion from Ancient Near East M104A, M104B, M105, 130, 170, History M191A, 193D, M203A, Iranian 169, 170; three courses in archaeology and art from Ancient Near East 160A, 160B, 161A, 161B, 161C, 162, Art History 101A, 101B; one course in research methodology (such as Anthropology 115R, 116P, M116Q, or Linguistics 120A, 120B, or English 140A) taken preferably in another department with the consent of the adviser.

Majors selecting option 4 are required to take 14 courses as follows: three terms of Hebrew 120; Ancient Near East 150C, 162, 170; English 108B or History 194A; Greek 130; Jewish Studies M150A; History M191A; Semitics 130. The remaining three courses may be selected from Ancient Near East M104A, M104B, M105, 130, 150A, 150B, 160A, 160B, Art History 101A, 101B, 105A, Classics 168, Greek 131, History 193D, 194B, Iranian 169, 170, Latin 120.

Bachelor of Arts in Arabic

Students majoring in Arabic may combine the major with the interdepartmental specialization in business and administration to enhance their career opportunities. Due to the number of additional courses required, you are advised to consider this option early in your academic career.

Preparation for the Major

Required: Arabic 1A-1B-1C, 102A-102B-102C, 150A-150B.

The Major

Required: Fifteen courses, including Arabic 103A-103B-103C and History 107A or Islamics 110; five courses from Arabic 120, 130, 132, 141; three courses from Arabic 111A, 111B, 111C, 112A, 112B, 112C, 114A, 114B, 114C; three courses from Art History 104A, Geography 187, History 106A, 106B, 106C, 107B, 108A, 108B, Political Science 132A, 132B, 164, 165.

Bachelor of Arts in Hebrew

Preparation for the Major

Required: Hebrew 1A-1B-1C, 102A-102B-102C, Jewish Studies M150A-150B, or equivalent.

The Major

Required: Sixteen courses, including Hebrew 103A-103B-103C; three terms of Hebrew 120 and/or 125; two courses from Hebrew 130, 135; two courses from Hebrew 140, 160; Hebrew 190A-190B; two additional courses in Hebrew or Aramaic to be approved by the adviser; two courses from History M191A, M191B, M192A, M192B.

Bachelor of Arts in Iranian Studies

Students majoring in Iranian studies may combine the major with specialization in other fields to enhance their career opportunities. Due to the number of additional courses required, you are advised to consider this option early in your academic career.

Preparation for the Major

Required: Iranian 1A-1B-1C or equivalent, 150A-150B.

The Major

Required: Sixteen courses, including Iranian 102A-102B-102C, 103A-103B-103C, 140, 141, 142, 180A-180B; five courses from Ancient Near East 163A, 163B, Arabic 1A, 1B, 1C, Art History 104A, 104B, C104C, Ethnomusicology and Systematic Musicology 20B, History 106A, 106B, 106C, 110B, Iranian 120, 169, 170, 190A, 190B, Political Science 164.

Bachelor of Arts in Jewish Studies

Preparation for the Major

Required: Hebrew 1A-1B-1C, History M191A-M191B, or equivalent.

The Major

Required: Sixteen courses, including Hebrew 102A-102B-102C, 103A-103B-103C, 120 or 125, Jewish Studies M150A-150B, 151A-151B, 199, and four other upper division courses. At least two of the four must be courses in the areas of Hebrew, Jewish history, or Yiddish. The remaining two may be selected either from those areas or from courses with Jewish content given in other departments and approved by the adviser.

Master of Arts Degree

Admission

In addition to the regular University requirements, a bachelor's degree or its equivalent in the language area selected for the degree, the Graduate Record Examination (GRE) General Test, and three letters of recommendation are required. The GRE must be taken within 24 months prior to receipt of your admission application by the department. As a rule, you are not admitted if your grade-point average is below 3.25 or if your GRE score is below 1,600. Prospective students may write to the Department of Near Eastern Languages and Cultures, 376 Kinsey Hall, UCLA, Los Angeles, CA 90024-1511.

You are assigned an adviser after being admitted. Subsequently, an examining committee is established to administer the comprehensive examination.

Major Fields or Subdisciplines

Ancient Near Eastern civilizations, Arabic, Armenian, Hebrew, Iranian, Semitics, Turkic.

You may concentrate on either language or literature in your selected field but are required to do work in both. In the field of ancient Near Eastern civilizations, the department also offers an archaeology emphasis.

Foreign Language Requirement

You are required to pass an examination in one major modern European language other than English by the beginning of your fourth term in residence. The choice of the language is determined in consultation with your adviser. You may satisfy this requirement by one of the following methods: (1) Graduate School Foreign Language Test (GSFLT) with a minimum score of 550, (2) departmentally administered examination, (3) two years of language instruction at a UC campus, with grades of B or better. It is strongly recommended that if you intend to continue toward a Ph.D. degree, you acquire knowledge of a second major European language other

than English while still a candidate for the M.A. degree.

Course Requirements

A minimum of nine upper division and graduate courses is required, at least six of which must be at the graduate level. All candidates are required to take one term of Near Eastern Languages 200.

In general, if you select either the language, literature, or archaeology option, you are required to study two Near Eastern languages, one of which is considered the major language. Students in Semitics or in Old Iranian study three languages.

In ancient Near Eastern civilizations, you may select as your major language any of the following: ancient Egyptian (including Coptic), Akkadian, Aramaic (including Syriac), Hebrew (with Ugaritic and Phoenician), or Old Persian. For your second language, you may select any of the above or Hittite or Sumerian.

Students in Hebrew must select Hebrew and another Semitic language. In Turkic, you may select either two Turkic languages or Turkish and a second culturally related language. In Arabic, Armenian, and Iranian (modern), you select a major language and a second culturally related language.

Students in Semitics are required to study three Near Eastern languages, at least two of which should be Semitic (the third may be Hittite or Sumerian). In Old Iranian, you study Persian, Sanskrit, and Old and Middle Iranian.

Twelve units of course 596 may be applied toward the total course requirement; eight units may be applied toward the minimum graduate course requirement.

Comprehensive Examination Plan

In general, you are required to take written comprehensive final examinations in your major and minor languages, as well as in the history and literature of your major field. Further details are available in the departmental *Guide to Graduate Studies*.

Ph.D. Degree

Admission

In addition to the regular University requirements, an M.A. or equivalent in your field, the Graduate Record Examination (GRE) General Test, and three letters of recommendation are required. The GRE must be taken within 24 months prior to receipt of your admission application by the department. As a rule, you are not admitted if your grade-point average is below 3.25 or if your GRE score is below 1,600. Prospective students may write to the Department of Near Eastern Languages and Cultures, 376 Kinsey Hall, UCLA, Los Angeles, CA 90024-1511.

The M.A. program need not have been completed at UCLA. You are assigned an adviser

after being admitted. Subsequently, an examining committee is established to administer the qualifying examinations.

Major Fields or Subdisciplines

Ancient Near Eastern civilizations, Arabic, Armenian, Hebrew, Iranian, Semitics, Turkic.

You may concentrate on either language or literature in your selected field but are required to do work in both. In the field of ancient Near Eastern civilizations, the department also offers an archaeology emphasis.

Foreign Language Requirement

Two modern major European languages other than English are required. The choice of languages must be approved by the adviser, who may also require additional language skills in modern and/or ancient languages if such skills are needed for scholarly work in the area of your interests.

The requirement is fulfilled by one of the following methods: (1) Graduate School Foreign Language Test (GSFLT) with a minimum score of 550, (2) departmentally administered examination, (3) two years of language instruction at a UC campus, with grades of B or better.

You are expected to pass one of the two required European languages at the beginning of your first term in residence and the second language no later than the beginning of your fourth term.

Course Requirements

If you select the language emphasis for the Ph.D., you are required to add a third Near Eastern language to the two that are required for the M.A. (for language options, see course requirements for the M.A. above). You must achieve high competence in two of your languages and familiarize yourself with the cultural backgrounds of each of the languages selected. You are also expected to take the equivalent of one year of general linguistics. Students in Semitics or in Old Iranian study three languages.

If you select the literature option, you are required to achieve high competence in two Near Eastern languages and their literatures (for language options, see course requirements for the M.A. above). You are also required to familiarize yourself, through appropriate coursework, with the history of your cultural area, and the methods of literary research and the history of literary criticism.

If you select the archaeology emphasis in the ancient Near Eastern civilizations specialization, you are required to achieve high competence in two ancient Near Eastern languages (for options, see course requirements for the M.A. above) and must be well-versed both in the history of the cultural area and in archaeological methodologies.

Further details regarding the choice of languages and examination requirements are available in the departmental *Guide to Graduate Study*.

Qualifying Examinations

You must pass the written qualifying examinations before your doctoral committee is formed.

Candidates in languages are examined in three Near Eastern languages and the literary and historical background of at least two of them. Candidates in literature are examined in the literatures written in two languages within the cultural area of concentration and the historical and cultural background of these languages, with emphasis on one of them. Candidates specializing in the archaeology of the ancient Near East are examined in two ancient languages and the history and archaeology of the ancient Near East.

When you have passed the written examinations, your doctoral committee administers the University Oral Qualifying Examination. Passing this examination allows you to advance to candidacy and begin work on your dissertation.

Candidate in Philosophy Degree

You are eligible to receive the C.Phil. degree on advancement to candidacy for the Ph.D.

Final Oral Examination

The department does not require an oral defense of the dissertation except when deemed necessary by the doctoral committee.

Ancient Near East

(Akkadian, Aramaic, Phoenician, and Ugaritic are listed under Semitics.)

Upper Division Courses

M104A-M104B. Ancient Egyptian Civilization. (Same as History M104A-M104B.) Lecture, three hours. Course M104A is not prerequisite to M104B. Political and cultural institutions of ancient Egypt and ideas on which they were based. **M104A.** Chronological discussion of Prehistory, the Old and Middle Kingdom. **M104B.** The New Kingdom and the Late period until 332 B.C. Mr. Loprieno (alternate years)

M105. History of Ancient Mesopotamia and Syria. (Same as History M105.) Lecture, three hours. Political and cultural development of the "Fertile Crescent," including Palestine, from the Neolithic to the Achaemenid period. Mr. Buccellati

120A-120B-120C. Elementary Ancient Egyptian. Lecture, three hours; laboratory, two hours. Prerequisite: consent of instructor. Grammar and texts. Mr. Loprieno

121A-121B-121C. Intermediate Ancient Egyptian. Lecture, three hours. Prerequisites: courses 120A-120B-120C. Readings in ancient Egyptian literature. Mr. Loprieno

123A-123B. Coptic. Lecture, three hours. Prerequisite: consent of instructor. Introduction to Coptic grammar and reading of Coptic texts. Mr. Loprieno

124. Middle Egyptian Technical Literature. Prerequisite: course 121C. Reading of Middle Egyptian technical literature in hieroglyphic transcription. Medical, veterinary, mathematical, and astronomical texts included. Mr. Loprieno

130. Ancient Egyptian Religion. Lecture, three hours. Introductory survey of various ancient Egyptian religious beliefs and practices, their origin, and development. Discussions of religiopolitical institutions such as divine kingship and pious foundations. Mr. Loprieno

140A-140B. Elementary Sumerian. Lecture, three hours. Prerequisites: Semitics 140A-140B. Elementary grammar and reading of royal inscriptions, letters, and administrative texts from the Ur III period.

145. Sumerian Literary Texts. Lecture, three hours. Prerequisites: courses 140A-140B or consent of instructor. Reading and interpretation of selected Sumerian literary texts.

150A-150B-150C. Survey of Ancient Near Eastern Literatures in English. Lecture, three hours. Each course may be taken independently for credit. **150A.** Mesopotamia; **150B.** Egypt; **150C.** Syria and Palestine. Mr. Buccellati, Mr. Loprieno

160A-160B. Introduction to Near Eastern Archaeology. Lecture, three hours. Terminology, geography, principles, strategy of research, bibliography, and general survey of Near Eastern archaeology. Ms. Carter (alternate years)

161A-161B-161C. Archaeology of Mesopotamia. Prerequisite: consent of instructor. Survey of main archaeological periods in Mesopotamia, with special emphasis on late prehistoric and early historical periods and with reference to neighboring cultural areas. Each course may be taken independently for credit. Ms. Carter

162. Archaeology of Palestine. Lecture, three hours. Survey of archaeology of Palestine and the Sinai Peninsula from the Bronze Age to destruction of Jerusalem in A.D. 70, with emphasis on geographic setting and relationships to other cultures of the Near East. (Alternate years)

163A-163B. Archaeology of Iran. Lecture, three hours. Designed to introduce students to Iranian archaeology from prehistoric through Achaemenid times. **163A.** Prehistoric and protohistoric phases of Iranian archaeology. **163B.** Archaeology of Elam, Iron Age, and Achaemenid Empire. Ms. Carter

164A-164B-164C. Archaeology of Historic Periods in Mesopotamia. Prerequisites: courses M105 and 161A-161B-161C, or consent of instructor. Survey of main archaeological periods in Mesopotamia, with special emphasis on historic periods and with reference to neighboring cultural areas. Each course may be taken independently for credit. Ms. Carter

170. Introduction to Biblical Studies. Lecture, two hours. Knowledge of original languages not required. The Bible (Old and New Testaments) as a book. Canon, text, and versions. Linguistic, literary, historical, and religious approaches to Bible study. Survey of history of interpretation from antiquity to the present.

199. Special Studies in the Ancient Near East (2 to 8 units). Prerequisite: consent of instructor.

Graduate Courses

210. Late Egyptian. Lecture, three hours. Prerequisites: courses 121A-121B-121C, consent of instructor. Late Egyptian grammar and reading of both hieroglyphic and hieratic texts. May be repeated for credit. Mr. Loprieno

211A-211B. Egyptian Texts of the Greco-Roman Period. Lecture, three hours. Prerequisite: course 121C. Introduction to grammar and orthography of hieroglyphic texts from Greco-Roman temples. Text readings and translation of various textual types. Mr. Loprieno

220. Seminar: Ancient Egypt. Seminar, three hours. Prerequisite: consent of instructor. May be repeated for credit. Mr. Loprieno

221A-221B. Demotic. Prerequisite: course 121C. Introduction to Demotic grammar and orthography. Reading of texts from various genres. Mr. Loprieno

240A-240B-240C. Seminars: Sumerian Language and Literature. Lecture, two hours. Prerequisite: consent of instructor. Readings of texts from various Sumerian periods and literary genres; selected problems in linguistic or stylistic analysis and literary history.

M250. Seminar: Ancient Mesopotamia. (Same as History M207.) Seminar, three hours. Selected topics on political, social, and intellectual history of ancient Mesopotamia. May be repeated for credit.

Mr. Buccellati

250X. Seminar: Ancient Mesopotamia (1 unit). Prerequisite: consent of instructor. Selected topics on political, social, and intellectual history of ancient Mesopotamia. Course for students who participate regularly in class meetings but without the homework required in course M250. May be repeated for credit. S/U grading.

Mr. Buccellati

260. Seminar: Ancient Near Eastern Archaeology. Lecture, two hours. Prerequisite: consent of instructor. May be repeated for credit.

261. Practical Field Archaeology (2 to 8 units). Fieldwork, two hours. Prerequisite: consent of instructor. Participation in archaeological excavations or other archaeological research in the Near East under staff supervision. May be repeated.

Mr. Buccellati, Ms. Carter

262. Seminar: Object Archaeology. Discussion, two hours; laboratory, one hour. Prerequisite: consent of instructor. Selected topics in analysis and interpretation of Near Eastern archaeological finds in museum collections. Students work with objects in Heermanek Collection of Los Angeles County Museum of Art.

Ms. Carter

272. Semitic Background of the New Testament. Lecture, two hours. Prerequisites: Hebrew 102A-102B-102C, Semitics 130, Greek 1, and 2, or consent of instructor. Study of Semitic elements in the Greek New Testament: traditions transmitted in Aramaic, relations to the Old Testament and to post-Biblical literature, and Palestinian Judaism.

596. Directed Individual Study (2 to 8 units). May be repeated for credit.

597. Examination Preparation (2 to 8 units). Prerequisite: consent of department or instructor. S/U grading.

599. Ph.D. Dissertation Research and Preparation (2 to 8 units). Prerequisite: consent of department or instructor. S/U grading.

Iranian

Lower Division Courses

1A-1B-1C. Elementary Persian. (Formerly numbered 101A-101B-101C.) Lecture, four hours; laboratory, two hours. Mr. Ziai

10A-10B-10C. Persian Conversation (2 units each). Lecture, three hours. Prerequisite: consent of instructor. Systematic and structured Persian conversation.

Upper Division Courses

102A-102B-102C. Intermediate Persian. Lecture, three hours; laboratory, three hours. Prerequisites: courses 1A-1B-1C or equivalent. Mr. Ziai

103A-103B-103C. Advanced Persian. Lecture, three hours. Prerequisites: courses 102A-102B-102C or equivalent. Mr. Ziai

111A-111B-111C. Elementary Kurdish. Lecture, three hours; laboratory, two hours. Prerequisite: consent of instructor. A proficiency-based course in basic grammar of literary Kurdish (Sorani). Graded readings, translation, composition (level one), conversation (levels one and two). Mr. Bodrogligeti

120. Comparative Study of Six Major Persian Poets. Lecture, two hours; discussion, one hour. Prerequisite: knowledge of Persian (lectures in Persian, readings in English and Persian). Comparative study of six major Persian poets from the 10th to 14th century who shaped the sense of Persian identity and delineated chief distinguishing characteristics of Persian thought and culture. P/NP or letter grading.

140. Contemporary Persian Belles Lettres. Lecture, three hours. Prerequisites: courses 103A-103B-103C or equivalent, consent of instructor. Study of major Persian poets and prose writers of the 20th century: prose — Jamalzadeh, Hedayat, Chubuk, Al Ahmad, Sa'edi, Golestan; poetry — Nima, Shamlu, Farrokhzad, Akhavan. Mr. Banani

141. Contemporary Persian Analytical Prose. Lecture, three hours. Prerequisites: courses 102A-102B-102C or equivalent, consent of instructor. Study of selected modern Persian analytical and expository prose texts, with emphasis on social sciences, literary criticism, and history. Mr. Banani

142. Persian Popular Ethics. Prerequisites: courses 102A-102B-102C or consent of instructor. Study of major Persian works on popular ethics which have helped shape normative social, cultural, and political values in Iranian civilization. P/NP or letter grading. Mr. Ziai (Sp)

150A-150B. Survey of Persian Literature in English. Lecture, three hours. Knowledge of Persian not required. Each course may be taken independently for credit. Mr. Banani

169. Civilization of Pre-Islamic Iran. Survey of Iranian culture from the beginning through Sasanian period. Mr. Schmidt

170. Religion in Ancient Iran. History of religion in Iran from the beginning to the Mohammedan conquest; Indo-Iranian background, Zoroastrianism, Manichaeism, Mazdakism. Mr. Schmidt

180A-180B. Iranian Civilization. Lecture, three hours; discussion, one hour. Cultural and social history of the Iranian world, with emphasis on legacy of Persian language and literature. Letter (majors) or P/NP or letter (nonmajors) grading. Mr. Banani

190A-190B. Introduction to Modern Iranian Studies. Lecture, three hours. Prerequisites: courses 1A-1B-1C or equivalent. Survey of Iranian languages. Comparative and historical grammar.

Mr. Bodrogligeti

199. Special Studies in Iranian (2 to 8 units). Prerequisite: consent of instructor.

Graduate Courses

220A-220B. Classical Persian Texts. Lecture, three hours. Prerequisites: courses 103A-103B-103C or consent of instructor. Study of selected classical Persian texts. Each course may be taken independently for credit.

Mr. Banani

221. Rumi, Mystic Poet of Islam. Seminar, three hours. Prerequisites: course 220A or 220B or equivalent, consent of instructor. Study of life and works of Rumi in context of interaction of Sufism and poetic creativity. May be repeated twice for credit.

Mr. Banani

M222A-M222B. Vedic. (Same as Indic M222A-M222B.) Lecture, three hours. Prerequisite: knowledge of Sanskrit equivalent to Indic 110C. Characteristics of Vedic dialect and readings in Rig-Vedic hymns. Only course M222B may be repeated for credit.

Mr. Schmidt

230A-230B. Old Iranian. Prerequisite: consent of instructor. Studies in grammars and texts of Old Persian and Avestan. Comparative considerations. Only course 230B may be repeated for credit.

Mr. Schmidt

231A-231B. Middle Iranian. Prerequisite: consent of instructor. Studies in grammars and texts of such Middle Iranian languages as best serve students' needs (e.g., Pahlavi, Sogdian, Sakan). Only course 231B may be repeated for credit.

Mr. Schmidt

250. Seminar: Classical Persian Literature. Seminar, three hours. Prerequisites: courses 103A-103B-103C and 199, or consent of instructor. May be repeated twice for credit.

Mr. Banani

251. Seminar: Contemporary Persian Literature. Seminar, three hours. Prerequisites: course 140 or equivalent, consent of instructor. Studies in specific problems and trends in Persian poetry and prose in the 20th century. May be repeated twice for credit.

Mr. Banani

596. Directed Individual Study (2 to 8 units). May be repeated for credit.

597. Examination Preparation (2 to 8 units). Prerequisite: consent of department or instructor. S/U grading.

599. Ph.D. Dissertation Research and Preparation (2 to 8 units). Prerequisite: consent of department or instructor. S/U grading.

Islamics

Upper Division Course

110. Introduction to Islam. Lecture, three hours. Genesis of Islam, its doctrines, and practices, with readings from the Qur'an and hadith; schools of law and theology; piety and Sufism; reform and modernism.

Mr. Poonawala

Graduate Courses

596. Directed Individual Study (2 to 8 units). May be repeated for credit.

597. Examination Preparation (2 to 8 units). Prerequisite: consent of department or instructor. S/U grading.

598. M.A. Thesis Research and Preparation (2 to 8 units).

599. Ph.D. Dissertation Research and Preparation (2 to 8 units). Prerequisite: consent of department or instructor. S/U grading.

Related Courses in Another Department

History 107A-107B. Islamic Civilization

Jewish Studies

Lower Division Course

10. Social, Cultural, and Religious Institutions of Judaism. Judaism's basic beliefs, institutions, and practices. Topics include development of biblical and rabbinic Judaism; concepts of god, sin, repentance, prayer, and the messiah; history of Talmud and synagogue; evolution of folk beliefs and yearcycle and lifecycle practices. (F,Sp)

(F,Sp)

Upper Division Courses

M111E. Ethnic Groups and Their Bibliographies: Jewish History and Culture. (Same as Library and Information Science M111E.) Basic reference sources on specific topics on Judaica, ranging from biblical studies to the Holocaust to Jewish life in the U.S.

Mr. Stern

130. Modern Jewish Religious Movements and Their Ideologies. Lecture, three hours. Introduction to and overview of Jewish religious movements and evolution of their ideologies in the Western world from time of the Enlightenment to the present.

Mr. Ellenson

140A-140B. American Jewish History. Lecture, three hours. Examination of social and cultural history of American Jewish community from its inception to the present, with emphasis on integration of successive immigrants and development of institutions. **140A.** 1654 to 1914; **140B.** 1914 to the Present. (W, 140B)

(W, 140B)

141. Modern Anti-Semitism. Lecture, three hours. Examination of modern anti-Semitism from the 18th century to the present; comparison of modern racist ideologies with premodern theories; case studies (e.g., Dreyfus affair, Beiliss Trail, Holocaust); Jewish reactions to these phenomena.

142. History and Institutions of State of Israel. Lecture, three hours. Study of social and cultural development of State of Israel from its pre-state institutional structures to the present, with emphasis on major trends, personalities, and ideologies, and state's position in wider framework of modern Jewish history.

M143. Introduction to Jewish Folklore. (Same as Folklore M142.) Nature of Jewish folklore; narrative, folk song, folk art, folk religion, and methods and perspectives used in their analysis.

M150A-150B. Hebrew Literature in English. Lecture, three hours. Each course may be taken independently for credit:

M150A. Literary Traditions of Ancient Israel: Bible and Apocrypha. (Same as Humanities M106.) Study of literary culture of ancient Israel through examination of principal compositional strategies of the Hebrew Bible and the Apocrypha (read in translation).

Mr. Band (alternate years)

150B. Rabbinic and Medieval Literature.

Mr. Davidson (alternate years)

151A-151B. Modern Jewish Literature in English. Lecture, three hours. Each course may be taken independently for credit:

151A. Diaspora Literature. Study of literary responses of Jews to modernity, its challenges and threats. Readings in texts originally written in English or translated from Hebrew, Yiddish, German, Russian, French, and Italian. Analysis of formal aspects of each work.

Mr. Band (alternate years)

151B. Israeli Literature. Study of translations from Hebrew literature written in Israel and reflecting cardinal facets of Israeli life: social issues, security problems, identity of the state, role of individual. Analysis of formal aspects of each work.

Mr. Hakak (alternate years)

155. Literature of the Cabala. Lecture, three hours. Cabalistic literature in the broad sense (i.e., Jewish esoteric literature from the rabbinic to modern period). Topics include precabalistic esoteric texts, the early cabala, the Zohar, Lurianic cabala, nature of mysticism, the question of whether there was a Jewish mysticism.

Mr. Davidson

M187. The Holocaust in Literature. (Same as Humanities M187.) Prerequisite: History 191E, 191F, or 191G or equivalent. Investigation of how the Holocaust informs a variety of literary and cinema works and raises a wide range of aesthetic and moral questions.

Mr. Band

190. Undergraduate Seminar: Jewish Studies. Examination of a single topic in depth with object of encouraging and guiding students' research in area of Jewish studies. Literary, cultural, and historical subjects included. (F,Sp)

(F,Sp)

M191A-M191B. Survey of Jewish History. (Same as History M191A-M191B.) Lecture, three hours. Survey of social, political, and religious developments.

M191A. From Biblical Times to End of the Middle Ages; **M191B.** From End of the Middle Ages to the Present.

Mr. Zipperstein

M191C-M191D. Focal Themes in Jewish History. (Same as History M191C-M191D.) Lecture, three hours. Treatment in depth of one major theme in Jewish history (such as history of Messianic Movements, structure of the Jewish communities) through the ages.

Mr. Zipperstein

M192A-M192B. Jewish Intellectual History. (Same as History M192A-M192B.) Lecture, three hours. Development of Jewish self-understanding in relation to intellectual climate of the environment as expressed in the halacha, in philosophy, and in cabalism. **M192A.** Medieval Period; **M192B.** Modern Period.

Mr. Friedlander

197A-197Z. Variable Topics in Jewish Studies. Lecture or seminar, three hours. Variable topics; consult *Schedule of Classes* for topics to be offered in a specific term. P/NP or letter grading. **197A.** 20th-Century Jewish Thought. May not be repeated for credit. **197B.** Jewish Feminist Theology.

199. Special Studies in Jewish Studies (2 to 8 units). Limited to Jewish studies majors.

Near Eastern Languages

Lower Division Courses

50A-50B-50C. Introduction to Near Eastern Languages and Cultures. Lecture, three hours. Three-term sequence designed both as an introduction for undergraduates and as a prerequisite to various majors within department. Art and archaeology, languages and literatures, cultural history. Each course may be taken independently for credit. **50A.** Ancient Near East; **50B.** Medieval Near East; **50C.** Modern Near East.

Graduate Courses

200. Bibliography and Method of Near Eastern Languages and Literatures. Lecture, two hours. Prerequisite: consent of instructor. Required for M.A. degree. Introduction to bibliographical resources and training in methods of research in various areas of specialization offered by department. May be repeated for credit.

210. Survey of Afro-Asiatic Languages. Lecture, three hours. Prerequisite: consent of instructor. Survey of structures of a number of representative languages from various major branches of Hamito-Semitic (Afro-Asiatic) language family.

M241. Folklore and Mythology of the Near East. (Same as Folklore M241.) Prerequisite: Folklore 101 or equivalent.

290. Seminar: Paleography. Seminar, three hours. Provides students with ability to cope with varieties of manuscripts.

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

501. Cooperative Program (2 to 8 units). Prerequisite: consent of UCLA graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Used to record enrollment of UCLA students in courses taken under cooperative arrangements with USC. S/U grading.

596. Directed Individual Study (2 to 8 units). May be repeated for credit.

597. Examination Preparation (2 to 8 units). Prerequisite: consent of department or instructor. S/U grading.

599. Ph.D. Dissertation Research and Preparation (2 to 8 units). Prerequisite: consent of department or instructor. S/U grading.

Semitics

Upper Division Courses

110. Neo-Aramaic. Lecture, three hours. Grammar and reading of selected texts (folktales, homilies, songs) in modern Aramaic dialects of the Jews and Christians of Kurdistan. Mr. Sabar

115. Syriac. Lecture, two hours. Morphology and syntax of Syriac language, introductory reading.

130. Biblical Aramaic. Lecture, three hours. Prerequisites: Hebrew 102A-102B-102C or consent of instructor. Grammar of biblical Aramaic and reading of texts. (Alternate years)

140A-140B. Elementary Akkadian. Lecture, three hours. Elementary grammar and reading of texts in standard Babylonian. Mr. Buccellati

141. Advanced Akkadian. Lecture, three hours. Prerequisite: consent of instructor. Old Babylonian syntax; reading of basic Old Babylonian texts.

Mr. Buccellati

142. Akkadian Literary Texts. Lecture, three hours. Prerequisite: consent of instructor. Selected readings from Akkadian myths and epics, with introduction to historical tradition of the works and their literary structure. Mr. Buccellati

199. Special Studies in Semitics (2 to 8 units). Prerequisite: consent of instructor. (F,W,Sp)

Graduate Courses

210. Ancient Aramaic. Lecture, two hours. Prerequisite: course 130 or consent of instructor. Reading of surviving inscriptions and papyri. May be repeated for credit.

215B. Syriac. Lecture, two hours. Morphology and syntax of Syriac language; readings in Syriac translation of the Bible and Syriac literature. May be repeated for credit. (Alternate years)

220A-220B. Ugaritic. Lecture, two hours. Prerequisites: Hebrew 102A-102B-102C or consent of instructor. Study of Ugaritic language and literature. Only course 220B may be repeated for credit.

225. Phoenician. Lecture, two hours. Prerequisites: Hebrew 102A-102B-102C or consent of instructor. Study of Phoenician language and inscriptions. May be repeated for credit.

230. Seminar: Northwest Semitic Languages and Literatures. Seminar, two hours. Prerequisite: consent of instructor. May be repeated for credit.

240. Seminar: Akkadian Language. Seminar, two hours. Prerequisite: consent of instructor. Readings of texts from various dialects of Akkadian; selected problems in linguistic analysis of Akkadian dialects. May be repeated for credit. Mr. Buccellati

240X. Seminar: Akkadian Language (1 unit). Seminar, two hours. Prerequisite: consent of instructor. Readings of texts from various dialects of Akkadian; selected problems in linguistic analysis of Akkadian dialects. Course for students who participate regularly in class meetings but without the homework required in course 240. May be repeated for credit. S/U grading. Mr. Buccellati

241. Seminar: Akkadian Literature. Seminar, two hours. Prerequisite: consent of instructor. Readings of texts from various Akkadian literary genres; selected problems in literary history and stylistic analysis. May be repeated for credit. Mr. Buccellati

241X. Seminar: Akkadian Literature (1 unit). Seminar, two hours. Prerequisite: consent of instructor. Readings of texts from various Akkadian literary genres; selected problems in literary history and stylistic analysis. Course for students who participate regularly in class meetings but without the homework required in course 241. May be repeated for credit. S/U grading. Mr. Buccellati

280A-280B-280C. Seminars: Comparative Semitics. Seminar, two hours.

596. Directed Individual Study (2 to 8 units). May be repeated for credit.

597. Examination Preparation (2 to 8 units). Prerequisite: consent of department or instructor. S/U grading.

599. Ph.D. Dissertation Research and Preparation (2 to 8 units). Prerequisite: consent of department or instructor. S/U grading.

Turkic Languages

Upper Division Courses

101A-101B-101C. Elementary Turkish. Lecture, five hours. Grammar, reading, conversation, and elementary composition drills. Mr. Jaeckel (F,W,Sp)

102A-102B-102C. Advanced Turkish. Lecture, five hours. Prerequisites: courses 101A-101B-101C or equivalent. Continuing study of grammar, conversation, and composition. Readings in modern literature and social science texts. Mr. Jaeckel

111A-111B-111C. Elementary Uzbek. Lecture, three hours; laboratory, two hours. Prerequisite: consent of instructor. Elementary grammar, reading, and composition exercises; elementary conversation. Mr. Bodrogligeti

112A-112B-112C. Advanced Uzbek. Lecture, three hours; laboratory, two hours. Prerequisite: consent of instructor. Descriptive Uzbek grammar, reading, and analysis of Uzbek literary and folkloric texts. High-style composition and conversation. Mr. Bodrogligeti

114A-114B-114C. Bashkir. Lecture, three hours. Prerequisite: course 102A or consent of instructor. Grammar, reading of literary and folkloric texts. Mr. Bodrogligeti

115A-115B-115C. Elementary Azeri. Prerequisite: consent of instructor. Knowledge of Russian, Turkish, and Iranian helpful. Grammatical competence at elementary level; knowledge of basic facts of Azeri grammar; reading competence with help of dictionary; ability to write simple compositions; basic conversational skill. Mr. Bodrogligeti

160. Cultural History of the Turks. Lecture, three hours. Prerequisite: consent of instructor. Survey of cultural history of the Turks, as seen primarily through their literature, from their early history to the present. Mr. Bodrogligeti

170. Turco-Mongolian Nomadic Empires. Lecture, three hours. Prerequisite: consent of instructor. Required of students in Turkic program. Survey of history of Turkic and Mongolian dominions from the 3rd century B.C. to A.D. 19th century (Hsiung-nu, Hsien-pi, Juan-Juan, T'u-Chueh, Uyghur, Khitan, Karakhanid, Seljuq, Kara-Khitay, Khorazmian, Jengiz-Khanite). Mr. Bodrogligeti

180. Modern Turkic Languages and Peoples. Lecture, three hours. Prerequisite: consent of instructor. Required of students in Turkic program and recommended for students in Soviet studies. Ethnic and linguistic survey of the Turkic peoples. Mr. Bodrogligeti

199. Special Studies in Turkic Languages (2 to 8 units). Prerequisite: consent of instructor.

Graduate Courses

210A-210B-210C. Introduction to Ottoman. Lecture, three hours. Prerequisite: consent of instructor. Introduction to literary language of Ottoman Empire from its foundation in the 14th century to its overthrow in the 20th century. For students of history, literature, and religion of the Balkans, Near East, and Central Asia. Topics include Arabic script as applied to Ottoman; Arabic and Persian elements in grammar and vocabulary. Readings of historical and literary texts. Mr. Jaeckel (F,W,Sp)

211. Ottoman Diplomats. Lecture, three hours. Prerequisites: courses 210A-210B-210C or equivalent. Organization and contents of Ottoman archives; reading and discussion of documents and registers. Introduction to use of Ottoman archive materials as a source for historical research. Mr. Shaw

220A-220B-220C. Classical Uzbek (Chagatay). Lecture, three hours. Prerequisites: courses 101A-101B-101C or 111A-111B-111C or Iranian 102A-102B-102C or Arabic 102A-102B-102C or Hebrew 102A-102B-102C or consent of instructor. Language of classical Central Asian Turkic literature. Descriptive and historical grammar, text analysis, translation, and composition drills. Mr. Bodrogligeti

225A-225B-225C. Old Turkic: Turk and Uygur. Lecture, three hours. Prerequisites: course 180, consent of instructor. Textual and linguistic analysis of Turk and Old Uygur documents: inscriptions, Manichean and Buddhist literary works.

Mr. Bodrogligeti (alternate years)

230A-230B-230C. Historical and Comparative Survey of Turkic Languages. Lecture, three hours. Prerequisite: course 180. Extinct and living Turkic languages. History of Turkic: developments in phonemic, grammatical, and lexical systems from the 8th to 20th century. Structural analysis of Turkic languages on comparative basis. Mr. Bodrogligeti

235A-235B. Middle Turkic: Karakhanid, Khorazmian, Mamluk-Kipchak, and Old Anatolian. Lecture, three hours. Prerequisites: course 180, consent of instructor. Survey of Middle Turkic documents. Textual and linguistic analysis of Middle Turkic texts from various literary genres.

Mr. Bodrogligeti (alternate years)

240A-240B-240C. Advanced Ottoman. Lecture, three hours. Prerequisites: courses 210A-210B-210C or equivalent or consent of instructor. Emphasis on different genres of Ottoman writing (belles lettres as well as various types of state documents) in elaborate high style of classical Ottoman period (15th to 19th century). Selections are read in manuscript to prepare students to read works in form in which they are likely to encounter them in their research.

Mr. Bodrogligeti, Mr. Jaeckel (F,W,Sp)

250A-250B-250C. Islamic Texts in Chagatay. Lecture, three hours. Prerequisites: courses 220A-220B-220C or consent of instructor. Philological and linguistic survey of basic Islamic source material written in Chagatay literary language. Reading and discussion of Chagatay texts on Islamic topics.

Mr. Bodrogligeti

280A-280B. Seminars: Modern Turkish Literature. Seminar, two hours. Prerequisites: course 102B or equivalent, consent of instructor. Specific issues and trends in development of Turkish literature from middle of the 19th century to the present. Mr. Jaeckel

290A-290B. Seminars: Classical Turkic Literature — Ottoman, Chagatay, and Azeri. Lecture, two hours. Prerequisites: courses 210A-210B-210C and/or 220A-220B-220C, consent of instructor. Survey of Islamic literatures of the Turks in classical period. Readings of Ottoman, Chagatay, and Azeri texts from various literary genres. Discussion of stylistic, prosodic, and linguistic characteristics. Mr. Bodrogligeti

596. Directed Individual Study (2 to 8 units). May be repeated for credit.

597. Examination Preparation (2 to 8 units). Prerequisite: consent of department or instructor. S/U grading.

599. Ph.D. Dissertation Research and Preparation (2 to 8 units). Prerequisite: consent of department or instructor. S/U grading.

Sule Ozler, Ph.D. (*Economics*)

Scope and Objectives

The graduate major in this discipline is called Islamic studies. For details, see the program by that name earlier in this chapter.

The undergraduate major is designed primarily for (1) students seeking a general education and desiring a special emphasis in this particular area, (2) those who plan to live and work in the Near East whose careers will be aided by a knowledge of its peoples, languages, and institutions, and (3) students preparing for academic study in the various disciplines pertaining to the Near East.

Bachelor of Arts Degree

Preparation for the Major

Required: The first-year course in Arabic, Armenian, Hebrew, Persian, or Turkish. You must also obtain reading proficiency in French, German, Italian, Russian, or Spanish as demonstrated by completing six quarter courses or their equivalent in the language of your choice. You may substitute for the European language requirement Program in Computing 1 and one course from Economics 40, Political Science 6, Psychology 41, Sociology 18, or Statistics 50, plus one course from Economics 141, Geography 171, Political Science 102, Psychology M142, or Sociology 112. Also required are History 9D and four courses from History 1A, 1B, 1C, Anthropology 8, 9, Economics 1, 2, Geography 3, Political Science 20, 50, Sociology 1.

The Major

Required: Sixteen courses as follows: (1) completion of the advanced level or equivalent in the same language taken in lower division; (2) History 106A-106B-106C and three additional courses in the history of the Near East, two of which are related to the major language; (3) four courses (two of which must be in the same discipline) from Anthropology 110, Art History M102A,

M102B, 104A, 104B, C104C, Economics 110, 111, 112, 190, Geography 187, 188, Political Science 132A, 132B, 164, 165, Sociology 187. This program may be modified in exceptional cases with consent of the adviser.

For further information, contact Professor Stanford J. Shaw at the program address.

Neuroscience (Interdepartmental)

The Ph.D. degree program in Neuroscience draws its staff members from participating departments in the School of Medicine and the College of Letters and Science. For details on this interdisciplinary program, see Chapter 16 on the School of Medicine.

Organizational Studies (Interdepartmental)

4256 Bunche Hall, (310) 825-3862

Scope and Objectives

Organizations are multifaceted and can usefully be explored from more than one disciplinary perspective. The undergraduate specialization in organizational studies brings together students and faculty from the Departments of History, Political Science, Economics, Sociology, Psychology, and Geography who share an interest in modern organizations. The program gives students a solid grounding in the organizational perspectives and methods of at least two departments. The specialization must be taken in conjunction with a major in the social sciences.

Special Undergraduate Program

You may elect to combine this program with a departmental major and may petition to have the area of specialization recognized with the bachelor's degree.

The option of completing an individual major in organizational studies is also open to qualified students. For more information on individual majors, see the beginning of Chapter 5.

If you have a departmental major, you should seek advising in your major department. If you are interested in the individual major, consult a Letters and Science counselor.

Courses within the specialization must be taken for a letter grade. The specialization must be taken in conjunction with a major in the division of social sciences.

Preparation for the Specialization

Required: At least five of the following courses appropriate to the courses to be taken in the specialization: Economics 1, 2; Geography 4; Political Science 80; Psychology 10; Sociology 1, or 18 and 104 or equivalent.

Upper Division

Required: Nine upper division courses, including (1) at least three courses outside your major department selected from Management 190, Political Science 180, Sociology 168, 173; (2) a minimum of three courses selected from one of the following suites within your major department: Economics 101A, 147A, 147B, 170, 171; Geography 148, 149; Political Science 142, 145, 146, 182A, 182B, 182C, 182D; Psychology 135, 137A; Sociology 132, 135, 156, 182; (3) a minimum of three courses selected from one of the suites in item 2 in a department outside your major department; (4) internship experience in a governmental or service organization.

Professor Oscar Grusky (264 Haines Hall, 825-3232) is the program adviser. For further information, contact the political science undergraduate counselor in the program office.

Philosophy

321 Dodd Hall, (310) 825-4641

Professors

Marilyn McCord Adams, Ph.D.
Robert Merrihew Adams, Ph.D.
Tyler Burge, Ph.D., *Chair*
Keith S. Donnellan, Ph.D.
Kit Fine, Ph.D., *Vice Chair*
David Kaplan, Ph.D.

Donald Kaiish, Ph.D.
Wesley Robson, Ph.D.
Robert M. Yost, Ph.D.

Associate Professor

Joseph Almog, Ph.D.

Assistant Professors

Andrew Hsu, C.Phil.
Marc Lange, Ph.D.
Gavin Lawrence, Ph.D.
Michael Otsuka, D.Phil.

Adjunct Professor

Richard Popkin, Ph.D.

Adjunct Associate Professor

Robert L. Martin, Ph.D.

Adjunct Assistant Professors

Arthur Flemming, Ph.D.
David C. Wilson, Ph.D.

Scope and Objectives

In a recent survey conducted by the Conference Board of the Associated Research Councils, UCLA's Philosophy Department was judged among the five best in the nation in terms of the quality of its faculty. It offers programs leading to the Bachelor of Arts and Ph.D. degrees.

Philosopher, translated from the Greek, literally means "lover of wisdom." The term has come to mean someone who seeks knowledge, enlightenment, and truth. The undergraduate program in philosophy is not directed at career objectives (although it is traditionally good preparation for law, theology, and graduate work in philosophy). Philosophy is taught to undergraduates primarily as a contribution to their liberal education. All of the lower and most of the upper division course offerings should be of interest and useful to students who are reflective about their beliefs or who wish to become so. It also provides the occasion to ponder the foundations of almost any other subject to which they are exposed — whether history, religion, government, or science.

The principal goal of the graduate program is to produce philosophers of high quality, thinkers informed by the great historical traditions of Western philosophers who can apply the methods of philosophical analysis to a broad range of current philosophical problems. Since all its graduate students hope to teach at the college or university level, the department is also committed to training clear, able, and stimulating teachers.

Bachelor of Arts Degree

Preparation for the Major

Required: Philosophy 7 or 21, 22, 31, and one other lower division philosophy course.

The Major

Required: Thirteen upper division (100 series) or graduate (200 series) philosophy courses (52 units), including Philosophy 100A, 100B, 100C. Seven of the 13 courses must be distributed among the groups into which the undergraduate and graduate courses are divided, in the following manner: two courses in each of three of the groups and one course in the remaining group.

Courses listed under "Special Studies" may be applied toward the major but not toward a group requirement. A maximum of eight units of course 199 may be applied toward the major but not toward a group requirement. Courses 100A, 100B, 100C may not be applied toward

any group requirement. No course used to satisfy the major or preparation requirements may be taken on a P/NP basis.

Students intending to do graduate work in philosophy should consult both the graduate and undergraduate advisers.

Honors Program

On recommendation of the department faculty, honors in philosophy are awarded at graduation to a major whose grade-point average in upper division philosophy courses is 3.3 and who has completed two graduate courses (eight units) in philosophy with an average GPA of 3.5.

Master of Arts Degree

Admission

It is the policy of the department to admit only those who plan to earn the Ph.D. degree. For admission requirements, see the description under "Ph.D. Degree."

Foreign Language Requirement

You must demonstrate reading knowledge of French, German, Latin, or Greek. (When relevant to your research, another language may be substituted with consent of the department.) This requirement can be satisfied by passing, with a score of at least 500, the Graduate School Foreign Language Test (GSFLT) in an approved language. Alternatively, it can be satisfied by either of the methods in which the Ph.D. language requirement can be satisfied.

Course Requirements

You must complete at least nine upper division or graduate courses (36 units), excluding Philosophy 199, of which five courses (20 units) must be in the 200 series.

Courses in the 500 series may not be applied toward the course requirements for the M.A. in Philosophy.

Comprehensive Examination Plan

Students seeking the M.A. must pass the master's comprehensive examination, which consists of four different examinations. All four parts must be taken by the end of your first year of study. One is on logic; it must be scheduled with the graduate counselor and taken before the end of the tenth week of Spring Quarter of your first year. Consult the *Manual for Graduate Students in Philosophy* for further information about this examination.

There are also examinations on each of the three first-year seminars. These examinations last two hours, and each occurs soon after the completion of the seminar to which it applies. The examination is passed or failed as a whole, which does not necessarily require passing of all four parts. A grade of B- is the lowest passing grade on the whole examination or any of its parts; C+ is a failing grade. In case of failure, the examination may be repeated.

Ph.D. Degree

Admission

Admission to UCLA as a graduate student in philosophy requires approval both by the Graduate Division and by the Department of Philosophy. The University application should be sent directly to UCLA Graduate Application Processing; the departmental application, three letters of recommendation (on the official forms), one official transcript from each institution attended, a statement of purpose, a sample of your written work, official scores from the Graduate Record Examination (GRE) General Test (the Subject Test in Philosophy is not required), and official Test of English as a Foreign Language (TOEFL) scores for applicants whose native language is not English should be sent to the department graduate counselor. Departmental information and all applications can be obtained by writing to the Graduate Counselor, Department of Philosophy, 321 Dodd Hall, UCLA, Los Angeles, CA 90024-1451.

Admission to graduate study in philosophy is not probationary. At the end of your first year of study, however, the department conducts a review of your work, and results are discussed in a meeting between you and your graduate adviser.

Foreign Language Requirement

You must demonstrate reading knowledge of French, German, Latin, or Greek. (Another language may be substituted with consent of the department, if it is used in your doctoral work.) You may satisfy this requirement by completing, with a grade of C or better, the final course in a two-year sequence of college courses in an approved language. Alternatively, you may satisfy the requirement by passing the department language examination. Completion of the foreign language requirement is not required for admission to the doctoral program but is required by the University for advancement to candidacy.

Course Requirements

A Ph.D. candidate must complete, with a grade of B or better, the three first-year seminars, plus 11 additional upper division and graduate philosophy courses (not including individual studies courses), distributed as follows:

Logic — Philosophy 135A and one other designated upper division or graduate course in logic in either the Philosophy or Mathematics Department. Consult the *Manual for Graduate Students in Philosophy* for the designated list.

History of Philosophy — One graduate course in history of philosophy, plus Philosophy 100A, 100B, 100C (or equivalent graduate or undergraduate courses taken at UCLA or elsewhere).

Ethics and Value Theory — One graduate-level course.

Metaphysics and Epistemology — One graduate-level course.

Special Area Requirement — In the second and third years, you must satisfy two special

area requirements — one in metaphysics and epistemology and one in ethics. You must take two specially designated graduate courses in one of the two areas and write a paper prepared in accordance with a specific format called a "proposition" in the other area.

The special course requirement in either metaphysics and epistemology or in ethics should be completed in your second year, with the proposition requirement covering the remaining area to be completed in your third year. Consult the *Manual for Graduate Students in Philosophy* for further details.

Electives — As many courses as needed to fulfill the requirement of 11 additional upper division or graduate philosophy courses.

Group classification of a course is generally given by its catalog listing, but final classification of a course is determined by the instructor on the basis of its content and the departmental guidelines. Normally, no substitutions for these courses are allowed, but if you have done graduate coursework elsewhere, you may be permitted to substitute previous graduate coursework in exceptional cases.

Teaching Experience

Before receiving a Ph.D., you are required to spend three terms as a teaching assistant at UCLA.

Qualifying Examinations

The department does not require you to pass any written examination as a condition of advancement to candidacy. You are, however, required to take the master's comprehensive examination (see "M.A. Degree") to give the department evidence of your proficiencies and deficiencies. All four parts of the examination must be taken by the end of your first year of study.

In the third year, you begin a new series of individual studies courses (Philosophy 596) with your dissertation supervisor to develop a well-defined dissertation project. A doctoral committee is selected and the University Oral Qualifying Examination is scheduled. The primary purpose of this examination is to determine whether you are able to complete the dissertation successfully. The scope of the examination varies according to the definiteness of the dissertation topic and the extent of your preliminary investigations. In case of failure, the doctoral committee makes a recommendation for or against allowing a second oral examination.

Candidate in Philosophy Degree

You are eligible to receive the C.Phil. degree on advancement to candidacy for the Ph.D.

Final Oral Examination

The final oral examination may be waived by the doctoral committee. This determination is usually made at the time of the oral qualifying examination.

Lower Division Courses

1. Beginnings of Western Philosophy. Lecture, three hours; discussion, one hour. Origins of Greek cosmology and philosophy, beginnings of systematic thought and scientific investigation concerning such questions as origin and nature of the material world, concept of laws of nature, possibility and extent of knowledge. Concentration on pre-Socratic philosophers, particularly Anaximander, Heraclitus, the Pythagoreans, Parmenides, Empedocles, and Greek atomists, during first two thirds of course and on Socrates and some earlier works of Plato in last few weeks.

2. Introduction to Philosophy of Religion. Lecture, three hours; discussion, one hour. Introductory study of such topics as nature and grounds of religious belief, relation between religion and ethics, nature and existence of God, problem of evil, and what can be learned from religious experience.

Mr. Adams, Ms. Adams

4. Philosophical Analysis of Contemporary Moral Issues. Lecture, three hours; discussion, one hour. Critical study of principles and arguments advanced in discussion of current moral issues. Possible topics include revolutionary violence, rules of warfare, sexual morality, right of privacy, punishment, nuclear warfare and deterrence, abortion and mercy killing, experimentation with human subjects, rights of women.

Mr. Flemming

5A. Philosophy in Literature. Lecture, three hours; discussion, one hour. Philosophical inquiry into such themes as freedom, responsibility, guilt, love, self-knowledge and self-deception, death, and meaning of life through examination of great literary works in the Western tradition.

Mr. Morris

6. Introduction to Moral and Political Philosophy. Lecture, three hours; discussion, one hour. Study of some classical or contemporary works in moral and political philosophy. Questions that may be discussed include What is justice? Why be moral? Why obey the law? Which form of government is best? How much personal freedom should be allowed in society?

Mr. Otsuka

7. Introduction to Philosophy of Mind. Lecture, three hours; discussion, one hour. Introductory study of philosophical issues about nature of the mind and its relation to the body, including materialism, functionalism, behaviorism, determinism and free will, nature of psychological knowledge.

Mr. Almog, Mr. Burge

8. Introduction to Philosophy of Science. Study of selected problems concerning the character and reliability of scientific understanding, such as nature of scientific theory and explanation, reality of theoretical entities, inductive confirmation of hypotheses, and occurrence of scientific revolutions. Discussion at non-technical level of episodes from history of science.

Mr. Lange

9. Principles of Critical Reasoning. Nature of arguments: how to analyze them and assess soundness of the reasoning they represent. Common fallacies that often occur in arguments discussed in light of what counts as a good deductive or inductive inference. Other topics include use of language in argumentation to arouse emotions as contrasted with conveying thoughts, logic of scientific experiments and hypothesis-testing in general, and some general ideas about probability and its application in making normative decisions (e.g., betting).

Mr. Wilson

21. Skepticism and Rationality. Lecture, three hours; discussion, one hour. Can we know anything with certainty? How can we justify any of our beliefs? Introduction to study of these and related questions through works of some great philosophers of modern period, such as Descartes, Leibniz, Berkeley, or Hume.

Mr. Donnellan, Mr. Hsu

22. Introduction to Ethical Theory. Lecture, three hours; discussion, one hour. Recommended or required for many upper division courses in Group III. Systematic introduction to ethical theory, including discussion of egoism, utilitarianism, justice, responsibility, meaning of ethical terms, relativism, etc.

Mr. Lawrence

31. Logic, First Course. Lecture, three hours; discussion, one hour. Recommended for students who plan to pursue more advanced studies in logic. Elements of symbolic logic, sentential and quantificational; forms of reasoning and structure of language.

Mr. Burge, Mr. Fine, Mr. Kaplan, Mr. R. Martin

32. Logic, Second Course. Lecture, three hours; discussion, one hour. Prerequisite: course 31 (preferably in preceding term). Symbolic logic; extension of systematic development of course 31. Quantifiers, identity, definite descriptions.

Mr. Fine, Mr. Kalish, Mr. D. Martin

97. Freshman Seminar. Prerequisite: consent of instructor. Variable topics; consult *Schedule of Classes* or "Department Announcements" for topics to be offered in a specific term. May be repeated for credit with consent of instructor.

Upper Division Courses

100A. History of Greek Philosophy. Lecture, three hours; discussion, one hour. Prerequisite: one philosophy course or consent of instructor. Survey of origins and development of Greek metaphysics from pre-Socratics through Plato and Aristotle, with some attention to epistemology.

Mr. Albritton

100B. Medieval and Early Modern Philosophy. Lecture, three hours; discussion, one hour. Prerequisite: one philosophy course or consent of instructor. Strongly recommended: course 100A. Survey of development and transformation of Greek metaphysics and epistemology within context of philosophical theology, and transition from medieval to early modern period. Special emphasis on Augustine, Anselm, Aquinas, and Descartes.

Ms. Adams

100C. History of Modern Philosophy, 1650-1800. Lecture, three hours; discussion, one hour. Prerequisite: one philosophy course. Strongly recommended: course 100B. Courses 100A, 100B, and 100C should be taken in immediately successive terms if possible. Survey of development of metaphysics and theory of knowledge from 1650 to 1800, including Locke and/or Berkeley, Malebranche and/or Leibniz, and culminating in Hume and Kant. Topics may include views of these (and perhaps other) philosophers of the period on mind and body, causality, existence of God, skepticism, empiricism, limits of human knowledge, and philosophical foundations of modern science.

Mr. Adams

Group I: History of Philosophy

101A. Plato — Earlier Dialogues. Lecture, three hours; discussion, one hour. Prerequisite: one philosophy course or consent of instructor. Study of selected topics in early and middle dialogues of Plato.

101B. Plato — Later Dialogues. Lecture, three hours; discussion, one hour. Prerequisite: course 101A. Study of selected topics in middle and later dialogues of Plato.

Mr. Lawrence

102. Aristotle. Lecture, three hours; discussion, one hour. Prerequisite: one philosophy course or consent of instructor. Study of selected works of Aristotle.

Mr. Lawrence

104. Topics in Islamic Philosophy. Lecture, three hours; discussion, one hour. Prerequisite: one philosophy course or consent of instructor. Development of Muslim philosophy in its great age (from Kindo to Averroes, 850 to 1200), considered in connection with Muslim theology and mysticism.

105. Medieval Philosophy from Augustine to Maimonides. Prerequisite: one philosophy course or consent of instructor. Development of early medieval philosophy within framework of Judeo-Christian theology and its assimilation and criticism of Greek philosophical heritage. Focus on problem of universals, existence and nature of God, problem of evil, and doctrines of the Trinity and atonement. Selected writings from Augustine through Maimonides read in English translation.

Ms. Adams

106. Later Medieval Philosophy. Prerequisite: one philosophy course or consent of instructor. Metaphysics, theory of knowledge, and theology of Aquinas, Duns Scotus, and Ockham, with less full discussion of other authors from the 13th through early 15th century. Selected texts read in English translation.

Ms. Adams

107. Topics in Medieval Philosophy. Prerequisite: one philosophy course. Recommended: course 105 or 106. Study of philosophy and theology of one medieval philosopher such as Augustine, Anselm, Abelard, Aquinas, Scotus, or Ockham, or study of a single area such as logic or theory of knowledge in several medieval philosophers. Topic announced each term. May be repeated for credit with consent of instructor.

Ms. Adams

C109. Descartes. Prerequisites: course 21 or two philosophy courses or consent of instructor. Study of works of Descartes, with discussion of issues such as problem of skepticism, foundations of knowledge, existence of God, relation between mind and body, and connection between science and metaphysics. May be concurrently scheduled with course C209.

Mr. Almog

C110. Spinoza. Lecture, three hours; discussion, one hour. Prerequisite: course 21 or consent of instructor. Study of philosophy of Spinoza. May be concurrently scheduled with course C210, in which case there is weekly discussion meeting, plus fewer readings and shorter papers for undergraduates. Limited to 30 students when concurrently scheduled.

Mr. Adams

C111. Leibniz. Lecture, three hours; discussion, one hour. Prerequisite: course 21 or consent of instructor. Study of philosophy of Leibniz. May be concurrently scheduled with course C211, in which case there is weekly discussion meeting, plus fewer readings and shorter papers for undergraduates. Limited to 30 students when concurrently scheduled.

Mr. Adams

C112. Locke and Berkeley. Prerequisite: one philosophy course or consent of instructor. Study of philosophies of Locke and Berkeley; emphasis may sometimes vary from one figure to other. May be concurrently scheduled with course C212.

Mr. Donnellan

C114. Hume. Prerequisite: one philosophy course or consent of instructor. Selected topics from metaphysical, epistemological, and ethical writings of Hume. Limited to 40 students when concurrently scheduled with course C214.

Mr. Donnellan

115. Kant. Lecture, three hours; discussion, one hour. Prerequisite: course 21 or 22 or consent of instructor. Study of Kant's views on related topics in theory of knowledge, ethics, and politics. May be repeated for credit with consent of instructor.

Mr. Burge

116. 19th-Century Philosophy. Lecture, three hours; discussion, one hour. Prerequisite: one philosophy course or consent of instructor. Selected topics in 19th-century thought.

Mr. Flemming

117. Late 19th- and Early 20th-Century Philosophy. Lecture, three hours; discussion, one hour. Prerequisite: one philosophy course or consent of instructor. Selected topics in work of one or more of following philosophers: Bolzano, Frege, Husserl, Meinong, G. Moore, early Russell, and Wittgenstein. May be repeated for credit with consent of instructor.

Mr. Almog, Mr. Burge

118. Kierkegaard. Prerequisite: one philosophy course or consent of instructor. Philosophical study of some major works of Kierkegaard, with emphasis on interpretation of the texts.

Mr. Adams

C119. Topics in Modern Philosophy. Prerequisite: one philosophy course or consent of instructor. Selected topics in one or more philosophies of the early modern period, or study in a single area such as theory of knowledge or metaphysics in several of the philosophies. May be repeated for credit with consent of instructor. Concurrently scheduled with course C219.

Mr. Adams, Mr. Flemming

Group II: Logic, Semantics, and Philosophy of Science

126A. Philosophy of Science. Lecture, three hours; discussion, one hour. Prerequisite: one philosophy course or consent of instructor. Historical introduction to philosophy of science. Several general topics discussed in context of actual episodes in development of natural sciences.

Mr. Lange

126B. Philosophy of Science. Lecture, three hours; discussion, one hour. Prerequisite: course 31 or 126A or consent of instructor. Introduction to contemporary philosophy of science, focusing on problems of central importance.

Mr. Lange

126C. Philosophy of Science: Social Sciences. Lecture, three hours; discussion, one hour. Prerequisites: two philosophy courses or consent of instructor. Discussion of topics in philosophy of social sciences (e.g., methods of social sciences in relation to physical sciences, value-bias in social inquiry, concept formation, theory construction, explanation and prediction, nature of social laws).

127A. Philosophy of Language. Prerequisite: course 31 or consent of instructor. Syntax, semantics, pragmatics. Semantical concept of truth, sense and denotation, synonymy and analyticity, modalities and tenses, indirect discourse, indexical terms, semantical paradoxes. May be repeated for credit with consent of instructor.

Mr. Burge, Mr. Kaplan, Mr. D. Martin

127B. Philosophy of Language. Prerequisite: course 32 or consent of instructor. Course 127A is not prerequisite to 127B. Selected topics similar to those considered in course 127A, but at more advanced and technical level.

Mr. Kaplan

128A. Philosophy of Mathematics. Prerequisites: courses 31, 32, and preferably one additional logic course. Philosophy of mathematics; logicism of Frege and Russell, arithmetic reduced to logic; ramified type theory and impredicative definition (Russell, Poincaré, early Weyl).

Mr. Almog, Mr. D. Martin

128B. Philosophy of Mathematics. Prerequisite: course 128A or consent of instructor. Intuitionism of Brouwer, Heyting, and later Weyl; proof theory of Hilbert.

Mr. D. Martin

129. Philosophy of Psychology. Lecture, three hours; discussion, one hour. Prerequisites: one four-unit psychology course, one philosophy course. Selected philosophical issues arising from psychological theories. Relevance of computer simulation to accounts of thinking and meaning; relations between semantical theory and learning theory; psychological aspects of theory of syntax; behaviorism, functionalism, and alternatives; physiology and psychology.

Mr. Burge

130. Philosophy of Space and Time. Lecture, three hours; discussion, one hour. Prerequisites: two philosophy courses or one philosophy course and one physics course, or consent of instructor. Selected philosophical problems concerning nature of space and time. Philosophical implications of space-time theories, such as those of Newton and Einstein. Topics may include nature of geometry, conventionalism, absolutist versus relationist views of space and time, philosophical impact of relativity theory.

Mr. Lange

131. Science and Metaphysics. Prerequisites: two philosophy courses or consent of instructor. Recommended: some background in basic calculus and physics. Intensive study of one or two metaphysical topics on which results of modern science have been thought to bear. Topics may include nature of causation, reality and direction of time, time-travel, backwards causation, realism, determinism, absolute view of space, etc. May be repeated for credit with consent of instructor.

Mr. Lange

133. Topics in Logic and Semantics. Prerequisite: course 32. Possible topics include formal theories, definitions, alternative theories of descriptions, many-valued logics, deviant logics.

Mr. Kaplan, Mr. D. Martin

134. Introduction to Set Theory. Prerequisites: course 32 or upper division standing in mathematics, consent of instructor. Introduction to axiomatic set theory; sets, natural numbers, relations, functions, cardinality, infinity. Mr. Kalish

135A. Metatheory of Sentential Logic. Lecture, three hours; discussion, one hour. Prerequisite: course 32 or equivalent. Introduction to metatheory of classical sentential logic. Emphasis on fundamental metalogical ideas, including proof by induction, rigorous definition of syntactic and semantic concepts, and proof of completeness. Discussion of philosophical significance of these ideas.

Mr. Almog, Mr. Fine, Mr. Hsu

135B. Metatheory of Predicate Logic. Lecture, three hours; discussion, one hour. Prerequisite: course 135A or equivalent. Classical first-order logic, its scope, and limits. Gödel's completeness theorem as main positive result. Some consideration to classical negative results on truth, decidability, and completeness, and relationship between first- and second-order logic.

Mr. Almog, Mr. Fine, Mr. Hsu

136. Modal Logic. Prerequisite: course 135A. First course in two-term sequence (also see course 176). Topics include various normal modal systems, derivability within the systems, Kripke-style semantics and generalizations, Lemmon/Scott completeness, incompleteness in tense and modal logic, quantificational extensions.

Mr. Almog, Mr. Fine, Mr. D. Martin

Group III: Ethics and Value Theory

150. Society and Morals. Lecture, three hours; discussion, one hour. Prerequisite: course 22 or consent of instructor. Critical study of principles and arguments advanced in discussion of current moral and social issues. Topics similar to those in course 4, but familiarity with some basic philosophical concepts and methods presupposed. May be repeated for credit with consent of instructor.

151A-151B-151C. History of Ethics. Lecture, three hours; discussion, one hour. Prerequisites: two philosophy courses or consent of instructor. Course 151A is not prerequisite to 151B, which is not prerequisite to 151C. **151A.** Selected Classics in Ancient Ethical Theories: Plato, Aristotle; **151B.** Selected Classics in Modern Ethical Theories: Hume, Kant, Mill, etc.; **151C.** Selected Classics of Medieval Ethics. Mr. Lawrence

153A. Topics in Ethical Theory: Normative Ethics. Prerequisite: course 22 or consent of instructor. Study of selected topics in normative ethical theory. Topics may include human rights, virtues and vices, principles of culpability and praiseworthiness (criteria of right action). May be repeated once for credit with consent of instructor.

Mr. Lawrence, Mr. Otsuka

153B. Topics in Ethical Theory: Metaethics. Prerequisite: course 22 or consent of instructor. Study of selected problems in metaethics. Topics may include analysis of moral language, justification of moral beliefs, moral realism, skepticism, etc. May be repeated once for credit with consent of instructor.

Mr. Lawrence, Mr. Otsuka

155. Medical Ethics. Examination of philosophical issues raised by problems of medical ethics, such as abortion, euthanasia, and medical experimentation.

Mr. Flemming

156. Topics in Political Philosophy. Lecture, three hours; discussion, one hour. Prerequisites: two philosophy courses or consent of instructor. Recommended: course 22. Analysis of some basic concepts in political theory. May be repeated for credit with consent of instructor.

Mr. Otsuka

157A-157B. History of Political Philosophy. Lecture, three hours; discussion, one hour. Prerequisites: two philosophy courses or consent of instructor. May be repeated with consent of instructor. **157A.** Reading and discussion of classic works in earlier political theory, especially those by Hobbes, Locke, Hume, and Rousseau. **157B.** Reading and discussion of classic works in later political theory, especially those by Kant, Hegel, and Marx.

Mr. Flemming, Mr. Otsuka

161. Topics in Aesthetic Theory. Lecture, three hours; discussion, one hour. Prerequisite: one philosophy course or consent of instructor. Philosophical theories about nature and importance of art and art criticism, aesthetic experience, and aesthetic values. May be repeated for credit with consent of instructor.

Mr. R. Martin

166. Philosophy of Law. Prerequisite: one philosophy course or consent of instructor. Examination, through study of recent philosophical writings, of such topics as nature of law, relationship of law and morals, legal reasoning, punishment, and obligation to obey the law.

Mr. Morris, Mr. Otsuka

Group IV: Metaphysics and Epistemology

170. Philosophy of Mind. Lecture, three hours; discussion, one hour. Prerequisites: two relevant philosophy courses or consent of instructor. Analysis of various problems concerning nature of mind and mental phenomena, such as relation between mind and body, and our knowledge of other minds. May be repeated once for credit with consent of instructor.

Mr. Donnellan

172. Philosophy of Language and Communication. Prerequisites: two relevant philosophy or linguistics courses or consent of instructor. Theories of meaning and communication; how words refer to things; limits of meaningfulness; analysis of speech acts; relation of everyday language to scientific discoveries.

Mr. Donnellan

175. Topics in Philosophy of Religion. Lecture, three hours; discussion, one hour. Prerequisite: course 21 or 22 or consent of instructor. Intensive investigation of one or two topics or works in philosophy of religion, such as attributes of God, arguments for or against existence of God, or relation between religion and ethics. Topics announced each term. May be repeated for credit with consent of instructor.

Mr. Adams, Ms. Adams, Mr. Wilson

176. Metaphysics of Modality. Prerequisites: courses 31, 32. Highly recommended: course 136. Second course in two-term sequence (also see course 136). Metaphysical foundations of modal logic and philosophical basis of modal theory of modal logic. What are "possible worlds"? What is the "accessibility" relation? Is modal logic a logic or a theory? Is its focus logical or metaphysical necessity? Are the two notions really distinct? How metaphysically involved is (quantified) modal logic? What is its connection to doctrines of (1) "Haecceitism" and (2) "Aristotelian Essentialism"? P/NP or letter grading.

Mr. Almog, Mr. Fine

177A. Existentialism. Lecture, three hours; discussion, one hour. Prerequisite: one philosophy course or consent of instructor. Analysis of methods, problems, and views of some of the following: Kierkegaard, Nietzsche, Heidegger, Jaspers, Sartre, Marcel, and Camus. Possible topics include metaphysical foundations, nature of mind, freedom, problem of self, other people, ethics, existential psychoanalysis.

177B. Historical Studies in Existentialism. Prerequisite: one philosophy course or consent of instructor. Study of central philosophical texts of one of the following: Nietzsche, Heidegger, Jaspers, Buber, Sartre, or Camus. Emphasis on explanation and interpretation of the texts. May be repeated for credit with consent of instructor.

Mr. Adams

178. Phenomenology. Lecture, three hours; discussion, one hour. Prerequisites: two philosophy courses or consent of instructor. Introduction to phenomenological method of approaching philosophical problems via works of some of the following: Brentano, Husserl, Heidegger, Scheler, Sartre, Merleau-Ponty, Ricoeur. Topics include ontology, epistemology, and particularly philosophy of mind.

179. Oriental Philosophy: Buddhism. Examination of central concepts and arguments in Buddhist philosophy, with emphasis on school of Mahayana Buddhism. Appropriate parallels to social concepts in the Western tradition.

182. Elements of Metaphysics. Lecture, three hours; discussion, one hour. Prerequisite: course 21 or consent of instructor. Study of basic metaphysical questions; nature of physical world, of minds, and of universals; and answers provided by alternative systems (e.g., phenomenalism, materialism, dualism).

Mr. Fine

183. Theory of Knowledge. Prerequisite: course 21 or consent of instructor. Analysis of concept of empirical knowledge.

Mr. Burge, Mr. Wilson

184. Topics in Metaphysics. Prerequisite: course 21 or consent of instructor. Intensive investigation of one or two topics or works in metaphysics, such as personal identity, nature of dispositions, possibility and necessity, universals and particulars, causality. Topics announced each term. May be repeated for credit with consent of instructor.

Mr. Almog, Mr. Donnellan, Mr. Fine

186. Topics in Theory of Knowledge. Prerequisite: course 182 or 183 or consent of instructor. Intensive investigation of one or two selected topics or works in theory of knowledge, such as a priori knowledge, problem of induction, memory, knowledge as justified true belief. Topics announced each term. May be repeated for credit with consent of instructor.

Mr. Burge, Mr. Lange

187. Philosophy of Action. Prerequisites: two philosophy courses or consent of instructor. Study of various concepts employed in understanding human action. Topics may include rational choice, desire, intention, weakness of will, and self-deception.

Mr. Burge, Mr. Donnellan

188. Philosophy of Perception. Prerequisites: two philosophy courses or consent of instructor. Critical study of main philosophical theories of perception and arguments used to establish them.

189. Major Philosophers of the 20th Century. Prerequisites: two philosophy courses or consent of instructor. Study of writings of one or more major modern philosophers (e.g., Russell, Moore, Wittgenstein, Carnap, Quine). May be repeated for credit with consent of instructor.

Mr. Almog, Mr. Burge, Mr. Donnellan, Mr. Hsu

Special Studies

M192. Philosophical Analysis of Issues in Feminist Theory. (Same as Women's Studies M110D.) Lecture, three hours. Prerequisite for women's studies majors: Women's Studies 10; for other students: one philosophy course or consent of instructor. Examination in depth of different theoretical positions on gender and women as they have been applied to study of philosophy. Emphasis on theoretical contributions made by the new scholarship on women in philosophy. Critical study of concepts and principles which arise in discussion of women's rights and liberation. Philosophical approach to feminist theories.

193. Christian Ethical Thought. Lecture, three hours; discussion, one hour. Reading of selected classic and contemporary authors in the Christian ethical tradition, with philosophical analysis and assessment of their views on morality and religious life.

Mr. Adams

195. 19th- and 20th-Century Religious Thought. Lecture, three hours; discussion, one hour. Philosophical approach to Western religious thought of last 200 years, through study of selected works by such authors as Kant, Schleiermacher, Kierkegaard, Buber, Camus, and Tillich.

Mr. Adams

196. Undergraduate Seminar: Philosophy. Lecture, one hour; discussion, three hours. Prerequisite: consent of instructor. Variable topics; consult *Schedule of Classes* or "Department Announcements" for topic to be offered in a specific term. May be repeated for credit with consent of instructor.

197. Reading and Writing Philosophy. Prerequisites: two lower or upper division philosophy courses. Designed to help philosophy students improve their ability to read philosophical texts and write philosophical essays. Selected texts used to illustrate problems of reading and writing; students required to do and redo written work.

199. Special Studies (2 to 8 units). Prerequisite: consent of instructor. Eight units may be applied toward degree requirements, but course cannot be substituted for a course in one of the four groups on basis of similarity of subject matter.

Graduate Courses

200A-200B-200C. Seminar for First-Year Graduate Students. Limited to and required of all first-year graduate students in philosophy. Selected topics in metaphysics and epistemology, history of philosophy, and ethics.

Group I. History of Philosophy

201. Plato. Prerequisite: consent of instructor. Study of later dialogues.

202. Aristotle. Prerequisite: consent of instructor. Analysis of major problems in Aristotle's philosophy based on reading, exposition, and critical discussion of relevant texts in English translation.

Mr. Lawrence

203. Seminar: History of Ancient Philosophy. Prerequisite: consent of instructor. Selected problems and philosophers. May be repeated for credit with consent of instructor.

Mr. Albritton

206. Topics in Medieval Philosophy. Prerequisite: consent of instructor. Study of philosophy and theology of one or several medieval philosophers such as Augustine, Anselm, Abelard, Aquinas, Scotus, or Ockham or study of a single area such as logic or theory of knowledge in several medieval philosophers. Topics announced each term. May be repeated for credit with consent of instructor.

Ms. Adams

207. Seminar: History of Medieval and Renaissance Philosophy. Prerequisite: consent of instructor. Selected problems and philosophers. May be repeated for credit with consent of instructor.

Ms. Adams

208. Hobbes. Prerequisite: consent of instructor. Hobbes' political philosophy, especially the *Leviathan*, with attention to its relevance to contemporary political philosophy.

Mr. Flemming

C209. Descartes. Prerequisite: consent of instructor. Study of works of Descartes, with discussion of issues such as problem of skepticism, foundations of knowledge, existence of God, relation between mind and body, and connection between science and metaphysics. May be concurrently scheduled with course C109.

Mr. Almog

C210. Spinoza. Prerequisite: consent of instructor. Selected topics in philosophy of Spinoza. May be concurrently scheduled with course C110, in which case there is a two-hour biweekly discussion meeting, plus additional readings and longer term paper for graduates.

Mr. Adams

C211. Leibniz. Prerequisite: consent of instructor. Selected topics in philosophy of Leibniz. May be concurrently scheduled with course C111, in which case there is a two-hour biweekly discussion meeting, plus additional readings and longer term paper for graduates.

Mr. Adams

C212. Locke and Berkeley. Prerequisite: consent of instructor. Selected topics in philosophy of Locke and Berkeley. May be repeated for credit with consent of instructor. May be concurrently scheduled with course C112.

Mr. Donnellan

C214. Hume. Prerequisite: consent of instructor. Selected topics in philosophy of Hume. May be repeated for credit with consent of instructor. May be concurrently scheduled with course C114.

Mr. Donnellan

215. Kant. Prerequisite: consent of instructor. Intensive study of selected writings of Immanuel Kant.

Mr. Adams

216. 19th-Century Philosophy. Prerequisite: consent of instructor. Topics in 19th-century philosophy. May be repeated for credit with consent of instructor.

C219. Topics in Modern Philosophy. (Formerly numbered 219.) Prerequisite: consent of instructor. Selected topics in one or more philosophies of the early modern period, or study in a single area such as theory of knowledge or metaphysics in several of the philosophies. May be repeated for credit with consent of instructor. Concurrently scheduled with course C119.

Mr. Adams, Mr. Flemming

220. Seminar: Topics in History of Philosophy. Seminar, three hours. Prerequisite: consent of instructor. Selected problems and philosophers which may be from different periods. May be repeated for credit with consent of instructor.

Mr. Adams, Ms. Adams

Group II. Logic, Semantics, and Philosophy of Science

221A. Topics in Set Theory. Prerequisite: Mathematics 112A or consent of instructor. Sets, relations, functions, partial and total orderings; well-orderings. Ordinal and cardinal arithmetic, finiteness and infinity, continuum hypothesis, inaccessible numbers. Formalization of set theory: Zermelo/Fraenkel; von Neumann/Gödel theory. May be repeated for credit with consent of instructor.

Mr. D. Martin

221B. History of Set Theory. (Formerly numbered 221C.) Prerequisite: consent of instructor. Development of concept of set and axiomatic set theory by examining selected writings of Frege, Cantor, Russell, Zermelo, Gödel, and several others. Origins and significance of certain key ideas, such as set theory as logic, axiomatic set theory as a reaction to the paradoxes, formal first-order axiomatic set theory as opposed to informal axiomatics, type theory and rank hierarchy, ramification and predicativity, proper classes and sets as small classes, and particular Zermelo/Fraenkel axiomatic theory. Emphasis on actual expressed ideas and views of various influential authors.

Mr. D. Martin

222A-222B-222C. Gödel Theory:

222A. Prerequisites: several courses in logic, preferably including course 135B. First in series of three courses leading to Gödel's incompleteness theorem and Tarski's definition of truth.

Mr. D. Martin

222B. Prerequisite: course 222A. Second-order arithmetic. Second in series of three courses leading to Gödel's incompleteness theorem and Tarski's definition of truth.

Mr. D. Martin

222C. Prerequisite: course 222B. Gödel numbering and Gödel theory. Final course in Gödel theory series.

Mr. D. Martin

224. Philosophy of Physics. Prerequisite: consent of instructor. Selected philosophical topics related to physical theory, depending on interests and background of participants, including space and time; observation in quantum mechanics; foundations of statistical mechanics. May be repeated for credit with consent of instructor.

225. Probability and Inductive Logic. Prerequisites: course 134 or Mathematics 112A-112B or consent of instructor. Topics may include interpretations of probability, Bayesian and non-Bayesian confirmation theory, paradoxes of confirmation, coherence, and conditioning.

Mr. Lange

226. Topics in Mathematical Logic. Prerequisite: consent of instructor. Content varies from term to term. May be repeated for credit with consent of instructor.

Mr. Kaplan, Mr. D. Martin

227. Philosophy of Social Science. Prerequisite: consent of instructor. Examination of philosophical problems concerning concepts and methods used in social sciences. Topics may include relation between social processes and individual psychology, logic of explanation in social sciences, determinism and spontaneity in history, interpretation of cultures radically different from one's own. Students with primary interest and advanced preparation in a social science are encouraged to enroll. May be repeated for credit with consent of instructor.

230. Seminar: Logic. Prerequisite: consent of instructor. May be repeated for credit with consent of instructor.

Mr. Almog, Mr. Fine, Mr. Kaplan, Mr. D. Martin

231. Seminar: Intensional Logic. Prerequisite: consent of instructor. Topics may include logic of sense and denotation, modal logic, logic of demonstratives, epistemic logic, intensional logic of *Principia Mathematica*, possible worlds semantics. May be repeated for credit with consent of instructor.

Mr. Almog, Mr. Fine, Mr. Kaplan, Mr. D. Martin

232. Philosophy of Science. Prerequisite: consent of instructor. Selected topics in philosophy of science. May be repeated for credit with consent of instructor.

Mr. Lange

233. Seminar: Philosophy of Physics. Prerequisite: consent of instructor. May be repeated for credit with consent of instructor.

Mr. Lange

Group III. Ethics and Value Theory

241. Topics in Political Philosophy. Prerequisites: course 150 or 156 or 157A or 157B or any two philosophy courses or consent of instructor. Examination of one or more topics in political philosophy (e.g., justice, democracy, human rights, political obligation, alienation). May be repeated for credit with consent of instructor.

245. Seminar: History of Ethics. Prerequisite: consent of instructor. Selected topics. May be repeated for credit with consent of instructor.

Mr. Lawrence

246. Seminar: Ethical Theory. Prerequisite: consent of instructor. Selected topics. Content varies from term to term. May be repeated for credit with consent of instructor.

Mr. Lawrence, Mr. Morris, Mr. Otsuka

247. Seminar: Political Theory. Prerequisite: consent of instructor. May be repeated for credit with consent of instructor.

Mr. Otsuka

248. Problems in Moral Philosophy. Prerequisite: consent of instructor. Intensive study of some leading current problems in moral philosophy. May be repeated for credit with consent of instructor.

Mr. Lawrence, Mr. Morris, Mr. Otsuka

255. Seminar: Aesthetic Theory. Prerequisite: consent of instructor. Selected topics. May be repeated for credit with consent of instructor.

M256. Topics in Legal Philosophy. (Same as Law M217.) Lecture, three hours. Prerequisite: consent of instructor. Examination of topics such as concept of law, nature of justice, problems of punishments, legal reasoning, and obligation to obey the law. May be repeated for credit with consent of instructor.

Mr. Dolinko, Mr. Otsuka

M257. Seminar: Philosophy of Law. (Same as Law M524.) Lecture, three hours. Prerequisite: consent of instructor. Selected topics in philosophy of law. May be repeated for credit with consent of instructor.

Mr. Morris, Mr. Otsuka

Group IV. Metaphysics and Epistemology

271. Seminar: Topics in Metaphysics and Epistemology. Discussion, three hours. Prerequisite: consent of instructor. May be repeated for credit with consent of instructor.

275. Human Action. Prerequisites: two upper division philosophy courses or consent of instructor. Examination of theories, concepts, and problems concerning human actions. Topics may include analysis of intentional actions; determinism and freedom; nature of explanations of intentional actions. May be repeated for credit with consent of instructor.

Mr. Donnellan

280. 20th-Century Continental Philosophy. Prerequisite: consent of instructor. Selected topics in 20th-century continental European philosophy. May be repeated for credit with consent of instructor.

281. Seminar: Philosophy of Mind. Prerequisite: consent of instructor. May be repeated for credit with consent of instructor. Mr. Burge

282. Seminar: Metaphysics. Prerequisite: consent of instructor. May be repeated for credit with consent of instructor. Mr. Almog, Mr. Burge

283. Seminar: Theory of Knowledge. Prerequisite: consent of instructor. May be repeated for credit with consent of instructor. Mr. Donnellan

284. Seminar: Philosophy of Perception. Prerequisite: consent of instructor. May be repeated for credit with consent of instructor. Mr. Morris

285. Philosophy of Psychoanalysis. Prerequisite: consent of instructor. Examination of topics such as nature and validity of psychoanalytic explanations and interpretations, psychoanalysis and language, meta-psychological concepts such as the unconscious, the ego, id, superego, defense mechanisms, and psychoanalytic conception of human nature. Mr. Morris

286. Philosophy of Psychology. Relevance of computer simulation to accounts of thinking and meaning; relations between semantical theory and learning theory; psychological aspects of theory of syntax; behaviorism, functionalism, and alternatives; physiology and psychology. Mr. Burge

287. Seminar: Philosophy of Language. Prerequisite: consent of instructor. May be repeated for credit with consent of instructor. Mr. Burge, Mr. Donnellan, Mr. Fine

288. Seminar: Wittgenstein. Seminar, three hours. Prerequisite: consent of instructor. May be repeated for credit with consent of instructor. Mr. Hsu

289. Seminar: Philosophy of Religion. Prerequisite: consent of instructor. May be repeated for credit with consent of instructor. Mr. Adams, Ms. Adams

290. Workshop: Philosophy of Language. Seminar, two hours. Prerequisite: consent of instructor. Ongoing discussion of current issues in philosophy of language based on contemporary texts and current research. Presentations of ideas by attending faculty and graduate students with open discussion. May be repeated for credit with consent of instructor. Mr. Donnellan, Mr. Kaplan

Special Studies

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

495. Teaching College Philosophy (2 to 4 units). Prerequisite: consent of instructor. Seminars, workshops, and apprentice teaching. Selected topics, including evaluation scales, various teaching strategies and their effects, and other topics in college teaching. May be repeated for credit. S/U grading.

501. Cooperative Program (2 to 8 units). Prerequisite: consent of UCLA graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Used to record enrollment of UCLA students in courses taken under cooperative arrangements with USC. S/U grading.

596A-596B. Directed Individual Studies (2 to 8 units each). Properly qualified graduate students who wish to pursue a problem through reading or advanced study may do so if their proposed project is acceptable to a staff member. May be repeated for credit. S/U (course 596B) and letter (course 596A) grading.

597. Directed Studies for Graduate Examinations (2 to 8 units). Preparation for M.A. comprehensive examination or Ph.D. oral qualifying examinations. S/U grading.

599. Research for Ph.D. Dissertation (2 to 8 units). Prerequisite: advancement to Ph.D. candidacy. May be repeated for credit. S/U grading.

Muzaffer Atac, Ph.D.
Viktor Decyk, Ph.D.
Phillip Pritchett, Ph.D.

Scope and Objectives

Physics is a basic science with actual and potential applications in many fields. The undergraduate curriculum is broad and general with respect to physics but includes an introduction to theoretical and experimental work in specialized subfields of physics in the senior year. The Physics B.S. degree program is primarily directed at providing a basic foundation for students who intend to go on to graduate school in physics or related fields such as engineering or other physical sciences. However, for many this is a terminal degree preparatory to working as an engineer or technician in industry. The B.A. program in General Physics provides flexibility for students who are interested in fields outside of physics in which a strong background knowledge of physics would be helpful.

The department offers a comprehensive graduate program leading to the Master of Science degree (en route to the Ph.D.), the Master of Arts in Teaching (M.A.T.), and the Ph.D., which is offered in theoretical or experimental work in a choice of subfields. It is the policy of the department to admit only students who plan to earn the Ph.D. or M.A.T. degree.

Undergraduate Study

The Department of Physics offers a choice of two undergraduate majors: the B.S. degree program in Physics and the B.A. degree program in General Physics. Courses taken to fulfill any of the requirements for either major must be taken for a letter grade.

Bachelor of Science in Physics

This major should be taken if you intend to continue toward the Ph.D. in Physics.

Preparation for the Major

Required: Physics 8A/8AL, 8B/8BL, 8C/8CL, 8D/8DL, 8E; Chemistry and Biochemistry 11A, 11B/11BL, 11C (11CL is recommended but not required); Mathematics 31A, 31B, 32A, 32B, 33A, 33B. A detailed brochure on the major is available in the Undergraduate Office, 3-160 Knudsen Hall.

The Major

Required: Physics 105A, 105B, 110A, 110B, 112, 115A, 115B, 131, three courses from the 180 series; three additional upper division lecture courses selected from 108, 114, M122,

123, 124, 126, 132, 140. An upper division mathematics course may be substituted for Physics 132 with consent of an adviser. A C average is required in the above courses. Reading knowledge of Russian, German, or French is recommended.

If you are preparing for graduate school, you should take additional courses in physics and mathematics. Physics M122, 123, 124, 126, 132, and 140 are recommended.

Transfer Students — Junior transfer students should preferably have completed (1) a two-year calculus/analytic geometry sequence or equivalent and (2) the calculus-based physics course at their previous college, but in no case should less than three semesters or four quarters of the mathematics and one year of the physics sequence be completed before transferring to UCLA. Each mathematics and physics course must be passed with a grade of C or better.

Honors Programs

The department offers three honors programs leading to graduation with honors or highest honors in physics. You are eligible after completing the preparation for the major and four upper division physics courses with an overall grade-point average of 3.0 and a 3.5 GPA in upper division physics and mathematics courses. Contact the Undergraduate Office for a complete description of the programs and an application.

Bachelor of Arts in General Physics

The major is intended to provide the necessary flexibility for fields in which a strong background of knowledge in physics would be helpful. If you intend to continue work toward the Ph.D. in Physics, you are advised to work for the B.S. in Physics as described earlier.

Preparation for the Major

Required: Physics 8A/8AL, 8B/8BL, 8C/8CL, 8D/8DL, 8E; Chemistry and Biochemistry 11A, 11B/11BL, 11C (11CL is recommended but not required); Mathematics 31A, 31B, 32A, 32B, 33A, 33B. A detailed brochure on the major is available in the Undergraduate Office.

The Major

Required: Physics 105A, 110A, 110B, 112, 115A, 131, one course from the 180 series, two upper division physics electives (excluding 185 and 199), and five upper division courses in no more than two other UCLA departments. A C average in the upper division physics courses is required.

Instructional Credentials

You may earn credentials for teaching physical sciences and other subjects in California elementary and secondary schools. Completion of the instructional credential program in the Teacher Education Laboratory is required. Consult the Graduate School of Education (1605 Maxxam Building, 825-8328) for information.

Graduate Study

The Department of Physics offers opportunities for graduate study leading to the M.S. (en route to the Ph.D.), M.A.T. (Master of Arts in Teaching), and Ph.D. degrees. Special emphasis is given to preparation in the following fields of physics: acoustics/low-temperature, elementary particles, intermediate energy and nuclear physics, plasma and astrophysics, solid-state and condensed matter, spectroscopy.

Admission

You must have an excellent undergraduate record in addition to meeting the University minimum requirements. You are required to take the Graduate Record Examination (GRE) Subject Test in Physics and to submit three letters of recommendation. International applicants who are applying for financial support (fellowships, teaching assistantships, and graduate student researcher appointments) should have a letter of recommendation (included as one of the three required letters of recommendation) which comments on their verbal ability in English.

Application materials may be obtained by writing to the Graduate Office, Department of Physics, 3-145G Knudsen Hall, UCLA, Los Angeles, CA 90024-1547.

Master of Arts in Teaching

Major Fields or Subdisciplines

It is not required to designate an area of specialization for the M.A.T. degree.

Course Requirements

This degree is a physics master's degree which also leads to qualification for instructional credentials at the secondary school or junior college level. Five graduate courses, five professional (300 series) courses, and 12½ total courses are required.

(1) The five graduate physics courses must include Physics 370 and four courses from 210A, 210B, 215A, 221A, 221B.

(2) Also required are the courses necessary for completion of the preliminary State of California Single Subject Instructional Credential, K-12: Community Health Sciences 187, Education 100, 112, 312, 315A-315B, 330B, 330C.

Courses in the 500 series may not be applied toward the M.A.T. degree.

Teaching Experience

Teaching experience is required insofar as the required education courses are concerned (supervised teaching at the secondary or junior college level).

Comprehensive Examination Plan

A passing grade on a written comprehensive examination is required. M.A.T. candidates who fail to qualify at the master's level of achievement may take the examination a second time.

Permission to take it a third time may be granted only under exceptional circumstances.

Master of Science Degree

Except for the Master of Arts in Teaching program, the department does not offer a terminal master's degree. The M.S. degree is awarded to students in the Ph.D. program after they satisfy the requirements described below.

Course Requirements

The University requires a total of nine courses with an average grade of B or better for the M.S. degree. The Physics Department requires that a minimum of six of the nine be graduate courses in physics of which you must pass the five fundamental (core) courses: Physics 210A, 210B, 215A, 221A, 221B. To complete the minimum six graduate courses you are required to pass one of the following courses with a grade of B or better: 220, 221C, 231A. The remaining three courses (to complete the nine courses for the M.S. degree) may be satisfied by upper division or graduate courses, not necessarily in physics, which are acceptable to the Physics Department. No more than two of the three may be from course 596 or seminar courses. Only eight units of 500-series courses may be applied toward the total course requirement for the M.S. degree (courses 597 and 598 may not be applied).

Comprehensive Examination Plan

A passing grade on a written comprehensive examination is required. The examination must be taken no later than your fourth term in residence. This examination is given twice a year.

Although the department operates under the comprehensive examination plan rather than the thesis plan, arrangements generally can be made to write a master's thesis, provided you have a particularly interesting research problem and a professor willing to undertake the guidance of your work. You must petition the departmental committee of graduate advisers for permission to pursue the thesis plan. The comprehensive examination requirement is waived if the petition is approved.

Ph.D. Degree

The graduate program in physics leads to the Ph.D. degree. Although you may obtain the M.S. degree en route to the Ph.D., the department does not admit candidates for the M.S. degree only.

Major Fields or Subdisciplines

Ph.D. degrees are granted in the following fields of specialization: accelerator physics, elementary particles, intermediate energy and nuclear physics, low-temperature/acoustics, plasma and astrophysics, and condensed matter (including solid-state).

Arrangements can be made to obtain a Ph.D. in Physics while doing research in interdisciplinary fields such as biophysics, astrophysics,

geophysics, etc. The details of each program should be established in consultation with the graduate affairs officer.

Course Requirements

By the end of your first year of graduate study you are expected to acquire a mastery of the core graduate physics material presented in Physics 210A, 210B, 215A, 221A, 221B. Since knowledge of this material is tested on the written comprehensive examination, usually all or most of the five courses constitute your main course load in your first year of graduate study. Detailed syllabi for the courses are available in the Graduate Office, 3-145G Knudsen Hall.

You must fulfill a breadth requirement by passing course 220 or 221C or 231A with a grade of B or better. In addition, if you have not taken course 132 or its equivalent as an undergraduate, you must do so at the beginning of your graduate program. The core and breadth requirements should be completed by your fifth term in residence.

Qualifying Examinations

All departmental graduate students (master's and Ph.D.) take the same written comprehensive examination, which is graded as follows: (1) pass at the Ph.D. level of achievement, (2) pass at the master's level of achievement, or (3) fail. This examination is normally taken prior to your fourth term in residence.

All students in the Ph.D. program must pass the examination at the Ph.D. level of achievement. Permission to take it a third time may be granted only under exceptional circumstances.

No later than your fourth term in residence you are expected, in consultation with your adviser, to begin taking a series of courses, seminars, and tutorials to prepare you for original research in a given area of specialization. No later than your fifth term in residence you are expected to begin taking a sequence of Physics 596 courses with a faculty member in your chosen field of specialization. By the third term of the 596 sequence you are expected to make a substantive oral presentation describing the results of a problem in your 596 program before an audience which includes the faculty member(s) with whom you are taking course 596 and three other faculty members. No later than the end of your eighth term in residence you are expected to make a formal arrangement with a faculty member to serve as your Ph.D. research sponsor.

The doctoral committee conducts the University Oral Qualifying Examination, which may include (1) material in your field of specialization, (2) related material that members of the committee from other departments may wish to ask, and (3) discussion of the proposed dissertation problem. Committee members guide, read, approve, and certify the dissertation. A decision is also made at this time as to whether a final oral examination is required.

When a satisfactory report on the completion of the written and oral qualifying examinations has been submitted, you are eligible to be formally advanced to candidacy for the Ph.D.

Final Oral Examination

This examination ordinarily is a discussion of your original work, including your dissertation and other related matters to be determined by the committee. It may be, if the committee so desires, a survey or comprehensive examination.

Lower Division Courses

Students who wish to use physics to satisfy part of the general education requirements in the physical sciences and who have no mathematics background beyond the high school mathematics required for admission to UCLA may take either Physics 10 or 3A if only one course is to be taken, or 3A and 3B as a two-course sequence.

Physics 1Q is intended for entering freshman physics majors and other interested students. Although it is not a required course or a part of or prerequisite to any general physics sequence of courses, its purpose is to indicate the nature of current research problems in physics on a level intended to be attractive to entering students with a good high school science and mathematics background.

Physics 3A, 3B, 3C form a one-year sequence of courses in general physics (with laboratory). In this sequence only algebra and trigonometry are used in providing a mathematical description of physical phenomena; calculus is not used.

Physics 6A, 6B, 6C form a one-year sequence of courses in basic physics for students in the biological and health sciences. However, unlike Physics 3A, 3B, 3C, calculus is used throughout, and successful completion of basic calculus courses is a prerequisite for admission to this sequence.

Physics 8A, 8B, 8C, 8D, 8E form a sequence of courses in general physics for majors in physics.

The department takes into account prior preparation in physics. If you feel your background would permit acceleration, you may be exempted from one or more of courses 8A through 8E by taking the final examination with a class at the end of any term. These serve as placement examinations. A satisfactory score on one or both parts of the College Entrance Examination Board Advanced Placement Physics C Test may also serve as a placement examination, but placement is not automatic. You should discuss such possibilities with your departmental adviser.

Physics 10 is a one-term, non-laboratory course which surveys the whole field of physics. Any two or more courses from Physics 3A, 6A, 8A, and 10 are limited to six units credit.

1Q. Contemporary Physics (2 units). Review of current problems in physics, with emphasis on those being studied at UCLA. Significance of the problems and their historical context. P/NP grading. (F)

3A. General Physics: Mechanics of Solids and Fluids. Lecture/demonstration, three hours; discussion, one hour; laboratory, two hours. Prerequisites: three years of high school mathematics including trigonometry or two years of high school mathematics and one-term college course in mathematics with trigonometry included in the group of courses or equivalent courses. Not open for credit to students with credit for course 8A or equivalent. Fundamentals of classical mechanics: Newton's laws; conservation of momentum, angular momentum, energy; Kepler's laws; dynamics of systems of particles; fluid mechanics. (F)

3B. General Physics: Heat, Sound, Electricity and Magnetism. Lecture/demonstration, three hours; discussion, one hour; laboratory, two hours. Prerequisite: course 3A or equivalent. Temperature, heat, and laws of thermodynamics. Introduction to wave motion, resonance. Sound and acoustics. Electric and magnetic fields. Electric power. Elements of DC and AC circuits. (W)

3C. General Physics: Light, Relativity, and Modern Physics. Lecture/demonstration, three hours; discussion, one hour; laboratory, two hours. Prerequisite: course 3B or equivalent. Light, optical instruments. Introduction to relativity. Electron and atom. Matter waves. Nuclear and particle physics. (Sp)

6A. Physics for Life Sciences Majors: Mechanics. Lecture/demonstration, three hours; discussion, one hour; laboratory, two hours. Prerequisites: Mathematics 3A, 3B, 3C (may be taken concurrently), or equivalent. (F,W,Sp)

6B. Physics for Life Sciences Majors: Electricity and Magnetism. Lecture/demonstration, three hours; discussion, one hour; laboratory, two hours. Prerequisite: course 6A. (F,W,Sp)

6C. Physics for Life Sciences Majors: Light and Modern Physics. Lecture/demonstration, three hours; discussion, one hour; laboratory, two hours. Prerequisite: course 6B. (F,W,Sp)

8A. Physics for Scientists and Engineers: Mechanics. Lecture/demonstration, four hours; discussion, one hour. Prerequisite: Mathematics 31A or equivalent. Recommended: high school physics and chemistry. Corequisites: course 8AL, Mathematics 31B. Motion, Newton's laws, work, energy, linear and angular momentum, rotation, equilibrium, gravitation. (F,W,Sp)

8AL. Physics Laboratory for Scientists and Engineers: Mechanics (1 unit). Lecture, one hour; laboratory, two hours. Corequisite: course 8A or consent of instructor. (F,W,Sp)

8B. Physics for Scientists and Engineers: Waves, Sound, Heat. Lecture/demonstration, three hours; discussion, one hour. Prerequisites: course 8A, Mathematics 31B. Corequisites: course 8BL, Mathematics 32A (or equivalent). Harmonic oscillators, standing and traveling waves, fluid dynamics, sound, kinetic theory of gases, laws of thermodynamics. (F,W,Sp)

8BH. Physics for Scientists and Engineers (Honors). Lecture/demonstration, three hours; discussion, one hour. Prerequisites: course 8A with a grade of A or recommendation of 8A instructor and Mathematics 31B completed and 32A concurrent, or consent of instructor. Same material as course 8B but in greater depth. (Sp)

8BL. Physics Laboratory for Scientists and Engineers: Waves, Sound, Heat (1 unit). Lecture, one hour; laboratory, two hours. Corequisite: course 8B or consent of instructor. (F,W,Sp)

8C. Physics for Scientists and Engineers: Electricity and Magnetism. Lecture/demonstration, four hours; discussion, one hour. Prerequisites: course 8B, Mathematics 32A. Corequisites: course 8CL, Mathematics 32B. Electrostatics: electric field and potential, capacitors and dielectrics. Currents, DC circuits, transients in RC circuits. Magnetism: magnetic fields and forces, Ampere's law, Faraday's law, magnetic properties of matter. Maxwell's equations in integral form. Inductance and transients in RL circuits. (F,W,Sp)

8CH. Physics for Scientists and Engineers (Honors). Lecture/demonstration, four hours; discussion, one hour. Prerequisites: course 8BH or 8B with a grade of A or recommendation of 8B instructor and Mathematics 32A completed and 32B concurrent, or consent of instructor. Same material as course 8C but in greater depth. (F)

8CL. Physics Laboratory for Scientists and Engineers: Electricity and Magnetism (1 unit). Lecture, one hour; laboratory, two hours. Corequisite: course 8C or consent of instructor. (F,W,Sp)

8D. Physics for Scientists and Engineers: Electromagnetic Waves, Light, and Relativity. Lecture/demonstration, three hours; discussion, one hour. Prerequisites: course 8C, Mathematics 32B. Corequisites: course 8DL, Mathematics 33A. AC circuits, resonance. Maxwell's equations in differential form. Electromagnetic waves. Light: reflection, refraction, interference, diffraction, polarization. Special theory of relativity. (F,W,Sp)

8DH. Physics for Scientists and Engineers (Honors). Lecture/demonstration, three hours; discussion, one hour. Prerequisites: course 8CH or 8C with a grade of A or recommendation of 8C instructor and Mathematics 32B completed and 33A concurrent, or consent of instructor. Same material as course 8D but in greater depth. (W)

8DL. Physics Laboratory for Scientists and Engineers: Electromagnetic Waves, Light, and Relativity (1 unit). Lecture, one hour; laboratory, two hours. Corequisite: course 8D or consent of instructor. (F,W,Sp)

8E. Physics for Scientists and Engineers: Modern Physics. Lecture/demonstration, three hours; discussion, one hour; laboratory, two hours. Prerequisites: course 8D, Mathematics 33A. Corequisite: Mathematics 33B or equivalent. Wave-particle duality, quantum theory, Schrödinger's equation, hydrogen atom, exclusion principle. (W,Sp)

10. Physics. Lecture/demonstration, three hours; quiz/discussion, one hour. Not open for credit to students with credit for course 3A or 6A or 8A or equivalent course in mechanics. Special mathematical preparation beyond that necessary for admission to University in freshman standing not required. Satisfies in part Letters and Science requirements in physical sciences for nonphysical sciences majors. Topics include planetary motion, Newton's laws, gravitation, electricity and magnetism, wave motion, light, sound, and heat, relativity, quantum mechanics, atoms, and subatomic particles. As time permits, development of physical ideas is placed in cultural and historical perspective. (F,W,Sp)

11. Modern Physics for Nonscience Majors. Lecture/demonstration, three hours; quiz/discussion, one hour. Prerequisite: course 10. Topics include concept of energy, quantum theory, nuclear physics, relativity.

14A-14B. Mechanics: Preparatory Courses. Lecture, three hours; discussion, one hour. Prerequisites: Mathematics 3A, 3B, and 3C, or 31A. Corequisite for course 14A: Mathematics 31B. Introductory courses in mechanics that satisfy physics prerequisite for course 6B or 8B. Primarily intended for students who are inadequately prepared for course 6A or 8A. Lectures, demonstrations, discussions, laboratory, and small group problem-solving sessions.

Upper Division Courses

Prerequisites for all upper division courses: Physics 8A through 8E, Mathematics 31A, 31B, 32A, 32B, 33A, and (except for Physics 105A, 116) 33B, or consent of instructor. It is recommended that students take the 180 laboratories in their senior year.

105A. Analytic Mechanics. Lecture, three hours; discussion, one hour. Prerequisite: Mathematics 32A. Corequisite: Mathematics 32B. Newtonian mechanics and conservation laws, gravitational potentials, calculus of variations, Lagrangian and Hamiltonian mechanics, central force motion, linear and nonlinear oscillations. (F,Sp)

105B. Analytic Mechanics. Prerequisite: course 105A. Relativity with four vectors, non-inertial reference frames, dynamics of rigid bodies, coupled oscillators, normal modes of oscillation, vibrating strings, and wave propagation. (F,W)

108. Optical Physics. Prerequisite: course 110B. Interaction of light with matter; dispersion theory, oscillator strength, line widths, molecular scattering. Coherence theory, Kirchhoff formulation of diffraction theory, crystal optics, optical rotation, electro and magneto optical effects. Additional topics of fundamental or current interest.

110A. Electricity and Magnetism. Lecture, three hours. Prerequisite: course 131. Electrostatics and magnetostatics. (W,Sp)

110B. Electricity and Magnetism. Prerequisite: course 110A. Faraday's law and Maxwell's equations. Propagation of electromagnetic radiation. Multipole radiation and radiation from an accelerated charge. Special theory of relativity. (F,Sp)

112. Thermodynamics. Lecture, three hours; discussion, one hour. Prerequisite: course 115A or consent of instructor. Fundamentals of thermodynamics, including first, second, and third laws. Statistical mechanical point of view and its relation to thermodynamics. Some simple applications. (F,Sp)

114. Mechanics of Wave Motion and Sound. Lecture, three hours. Prerequisites: courses 105A and 105B, or consent of instructor. Vibrating systems and wave propagation in gases, liquids, and solids, including elements of hydrodynamics and elasticity. Applications in ultrasonics, low-temperature physics, solid-state physics, architectural acoustics.

115A. Elementary Quantum Mechanics. Lecture, three hours; discussion, one hour. Prerequisites: courses 8E, 105B (may be taken concurrently), 131. Classical background, basic ideas, formulation of quantum mechanics, one-dimensional problems, and methods of quantum mechanics. (W,Sp)

115B. Elementary Quantum Mechanics. Lecture, three hours; discussion, one hour. Prerequisite: course 115A. Three-dimensional problems, angular momentum, Pauli exclusion principle, variational and perturbative methods of quantum mechanics. (F,Sp)

116. Electronics. Lecture, three hours; laboratory, three hours. Alternating current circuits, transmission line circuits, transistor and IC circuits to generate, modify, and detect electrical signals, introduction to digital circuits, analysis of noise and methods to reduce its influence in electrical measurements.

M122. Plasma Physics. (Same as Electrical Engineering M185) Prerequisite: course 110A or Electrical Engineering 101. Senior-level introductory course to physics of plasmas and ionized gases and fundamentals of controlled fusion. Particle motion in magnetic fields; fluid behavior, plasma waves; resistivity and transport; equilibrium and stability; kinetic effects. Discussion of illustrative laboratory experiments.

123. Atomic Structure. Prerequisite: course 115B. Theory of atomic structure. Interaction of radiation with matter.

124. Nuclear Physics. Lecture, three hours; discussion, one hour. Prerequisite: course 115B. Nuclear properties, nuclear forces, nuclear structure, nuclear decays, and nuclear reactions.

126. Elementary Particle Physics. Lecture, three hours; discussion, one hour. Prerequisite: course 115B. Introduction to physics of elementary particles. The four basic interactions: strong, electromagnetic, weak, and gravitational. Properties of baryons, mesons, quarks, and leptons; conservation laws, symmetries and broken symmetries; the Standard Model; experimental techniques; new physics at the new accelerators.

131. Mathematical Methods of Physics. Lecture, three hours; discussion, one hour. Vectors and fields in space, linear transformations, matrices, and operators; Fourier series and integrals. (F,W,Sp)

132. Mathematical Methods of Physics. Lecture, three hours; discussion, one hour. Prerequisite: course 131. Functions of a complex variable, including Riemann surfaces, analytic functions, Cauchy theorem and formula, Taylor and Laurent series, calculus of residues, and Laplace transforms.

140. Introduction to Solid-State Physics. Prerequisite: course 115B or equivalent. Introduction to basic theoretical concepts of solid-state physics with applications. Crystal symmetry; cohesive energy; diffraction of electron, neutron, and electromagnetic waves in a lattice; reciprocal lattice; phonons and their interactions; free electron theory of metals; energy bands.

160. Numerical Analysis Techniques and Particle Simulations. Lecture, three hours; computer terminals, six hours. Prerequisites: courses 105A, 105B, 110A, 110B, minimum knowledge of computer programming (FORTRAN). Introduction to the field of computer modeling of physical systems using particle models; numerical models and methods, methods of diagnosing results, experience with running interesting physical problems.

180A. Nuclear Physics Laboratory.

180B. Physical Optics and Spectroscopy Laboratory.

180C. Solid-State Laboratory.

180D. Acoustics Laboratory.

180E. Plasma Physics Laboratory.

180F. Elementary Particle Laboratory.

185. Foundations of Physics. Prerequisite: senior standing in physics or consent of instructor. Historical development and philosophical sources of classical and modern physics.

199. Special Studies in Physics (2 to 4 units). May be repeated, but no more than 12 units may be applied toward Physics B.S. degree requirements.

Graduate Courses

210A. Electromagnetic Theory. Boundary value problems in electrostatics and magnetostatics. Multipole expansions; dielectrics and macroscopic media. Maxwell's equations and conservation laws. Wave guides and resonators; simple radiating systems. (W)

210B. Electromagnetic Theory. Electromagnetic potentials and Hertz vectors. Cylindrical waves. Spherical waves. Debye potentials. Multipole radiation. Classical relativistic electrodynamics. Radiation from moving charges. (Sp)

213A. Advanced Atomic Structure. Group representation theory. Angular momentum and coupling schemes. Interaction of radiation with matter.

213B. Advanced Atomic Structure. n -j symbols, continuous groups, fractional parentage coefficients, n electron systems.

213C. Molecular Structure. Application of group theory to vibrational and electronic states of molecules. Molecular orbital theory. Raman effect. Angular momentum and coupling in molecules.

214A. Advanced Acoustics. Propagation of waves in elastic and fluid media. Reflection, refraction, diffraction, and scattering of waves in fluids. Attenuation mechanisms in fluids.

214B. Advanced Acoustics. Propagation in nonhomogeneous fluids and in moving fluids. Radiation pressure, acoustic streaming, and attenuation in large amplitude sound fields. Propagation of sound in liquid helium. Mechanisms resulting in attenuation for elastic waves in solids.

215A. Statistical Physics. Thermodynamics and statistical mechanics with applications. (F)

215B. Nonequilibrium Statistical Mechanics. Probability theory, Markov processes, equations of change, BBGKY hierarchy and its consequences, Boltzmann equation, Chapman/Enskog method, transport coefficients, fluctuation/dissipation theorems, density matrix, H-theorems.

215C. Quantum Statistical Mechanics and the Many Body Problem. Classical methods for interacting systems; quantum field theory techniques in statistical mechanics; Green's function approach; Coulomb gas; imperfect Bose gas; electron/phonon interaction; superconductivity; phase transitions; theory of Fermi liquid. (F,W,Sp)

220. Classical Mechanics. Lecture, three hours. Hamilton/Jacobi theory, action-angle variables, classical perturbation theory, and selected topics such as introduction to physics of continuous media and fluids, nonlinear phenomena.

221A-221B-221C. Quantum Mechanics. Lecture, three hours. **221A.** Fundamentals of quantum mechanics, operators and state vectors, equations of motion. **221B.** Prerequisite: course 221A. Rotations and other symmetry operations, perturbation theory. **221C.** Formal theory of collision processes, quantum theory of radiation, introduction to relativistic quantum mechanics.

222A-222B-222C. Plasma Physics. Properties of a Coulomb gas with and without a magnetic field: equilibrium, oscillations, instabilities, fluctuations, collective phenomena, transport properties, and radiation. Description via single-particle orbit theory, magnetohydrodynamics, and kinetic equations of various types.

223. Advanced Classical Mechanics. Prerequisite: course 220. Topics such as nonlinear mechanics, ergodic theory, mechanics of continuous media.

224. Introduction to the Strong Interaction. Evidence concerning the strong interaction, particularly as exemplified in nucleon/nucleon and pion/nucleon systems. Isospin, scattering matrix, density matrix and polarization, properties of pions, one pion exchange potential, phase shift analysis.

225A-225B. Advanced Nuclear Physics. Prerequisites: courses 221A-221B. Normally preceded by course 224. Advanced course in structure of complex nuclei, nuclear models, scattering and reactions.

226A-226B-226C. Elementary Particle Physics (6 units each). Lecture, four hours. Prerequisites: courses 221A-221B-221C or equivalent and 230A-230B (may be taken concurrently). Modern theories of elementary particle physics beginning with symmetry principles and conserved quantities, classic V-A theory of weak interactions, gauge field theories (Abelian and non-Abelian), spontaneous symmetry breaking, $SU(2) \times U(1)$ electroweak interactions of leptons, quarks, W s, Z^0 and γ , quark theory of hadrons and quantum chromodynamics.

226D. Beyond the Standard Model. Lecture, three hours. Prerequisites: courses 226A-226B-226C, 230A-230B-230C. Discussion of possible extensions of the current standard model of electroweak and strong interactions, including axions, technicolor, grand unified theories, supersymmetry, supergravity, and superstrings. S/U grading.

230A-230B-230C. Relativistic Quantum Theory (6 units each). Lecture, four hours. Prerequisites: courses 221A-221B-221C or equivalent or consent of instructor. Modern quantum field theory, including quantum electrodynamics and quantum chromodynamics, renormalization group methods, path-integral quantization, spontaneous symmetry breakdown, monopoles and other solitons.

231A. Methods of Mathematical Physics. Not open for credit to students with credit for Mathematics 266A. Linear operators, review of functions of a complex variable, integral transforms, partial differential equations.

231B. Methods of Mathematical Physics. Not open for credit to students with credit for Mathematics 266B. Ordinary differential equations, partial differential equations, and integral equations. Calculus of variations.

231C. Methods of Mathematical Physics. Not open for credit to students with credit for Mathematics 266C. Perturbation theory. Singular integral equations. Numerical methods.

232A-232B. Relativity. Special and general theories, with applications to elementary particles and astrophysics.

232C. Special Topics in General Relativity.

233. Introduction to High-Energy Astrophysics. Introductory lectures on modern high-energy astrophysics. High-energy radiation processes. Neutron stars. Pulsars. X-ray sources. Black holes. Supermassive rotators and quasars.

235. Group Theory and Quantum Mechanics. Prerequisite: course 221A. Group representation theory and applications to quantum mechanics of atoms, molecules, and solids.

241A. Solid-State Physics. Prerequisites: courses 140, 215A, 221A. Symmetry, free electrons, electrons in a periodic potential, experimental measurement of band structure and Fermi surface parameters, cohesive energy, lattice vibrations, thermal properties.

241B. Solid-State Physics. Prerequisite: course 241A. Transport theory with applications, electron/electron interactions.

241C. Solid-State Physics. Prerequisite: course 241B. Semiconductors, magnetism, phase transitions, superconductivity.

242A-242B. Advanced Solid-State Theory. Prerequisites: courses 241A, 241B, and 241C (may be taken concurrently). Many body methods in solid-state physics.

243A-243K. Special Topics in Solid-State Physics.

243A. Disordered Systems; **243B.** Magnetic Resonance; **243C.** Phase Transitions; **243D.** Magnetism; **243E.** Superconductivity; **243F.** Macromolecules; **243G.** Semiconductors; **243H.** Optical Interactions; **243I.** Nonlinear Optics; **243J.** Hopping Transport; **243K.** Low-Temperature Physics.

250. Introduction to Acceleration of Charged Particles. Lecture, three hours. Prerequisites: courses 210A, 210B, 215A. Principles of charged-particle acceleration, including principles of synchrotrons and storage rings, beam parameter determination, statistical behavior of beams and beam cooling techniques, synchrotron light sources, colliding beam storage rings, medical accelerators, and free electron lasers.

260. Seminar: Problems in Plasma Physics.

261. Seminar: Special Problems in Theoretical Physics.

262. Seminar: Physics of the Solid State.

264. Seminar: Advanced Physical Acoustics.

266. Seminar: Propagation of Waves in Fluids.

268. Seminar: Spectroscopy.

269A. Seminar: Nuclear Physics (2 to 4 units).

269B. Seminar: Elementary Particle Physics (2 to 4 units).

280E. Advanced Plasma Laboratory. Lecture, two hours; laboratory, four hours. Prerequisites: courses M122, 180E. Laboratory experiments on behavior of plasmas in magnetic fields. Study of basic physics of particle motions, distribution functions, and fluid dynamics. Plasma waves and nonlinear phenomena. Advanced probe, microwave and plasma diagnostics.

290. Research Tutorial: Plasma Physics (2 or 4 units). Seminar and discussion by staff and students directed toward problems of current research interest in plasma physics group, both experimental and theoretical. Each graduate student doing research in this field is required to take three terms of this course, ordinarily during second or third year. May be repeated for credit. S/U grading.

291. Research Tutorial: Elementary Particle Theory (2 or 4 units). Prerequisites: courses 226A, 230A-230B. Seminar and discussion by staff, postdoctoral fellows, and graduate students. Each graduate student doing research in this field is required to take this course, ordinarily during second or third year. May be repeated for credit. S/U grading.

292. Research Tutorial: Spectroscopy, Low-Temperature, and Solid-State Physics (2 or 4 units). Seminar and discussion by staff and students on problems of current research interest in spectroscopy, low-temperature, and solid-state physics. Each graduate student doing research in these fields is required to take this course, ordinarily during second or third year. May be repeated for credit. S/U grading.

293. Research Tutorial: Current Topics in Physics (2 units). Lecture, one hour. Seminar and discussion by staff and students on current topics in physics, both experimental and theoretical (topics not limited to one field of physics). Strongly recommended for graduate students in physics. May be repeated for credit. S/U grading.

295. Research Tutorial: Solid Earth Physics (2 or 4 units). Seminar and discussion on solid earth physics. Each graduate student doing research in this field is required to take this course (or course 292 if appropriate), ordinarily in second or third year. May be repeated for credit. S/U grading.

298. Research Tutorial: Experimental Elementary Particle Physics (2 or 4 units). Limited to six students. Seminar and discussion by staff and students on current problems in experimental elementary particle physics. Each graduate student doing research in this field is required to take this course, ordinarily during second or third year. May be repeated for credit. S/U grading.

299. Research Tutorial: Nuclear Physics (2 or 4 units). Seminar and discussion on nuclear physics by staff and students, in both experiment and theory. Each graduate student doing research in this field is required to take this course, ordinarily during second or third year. May be repeated for credit. S/U grading.

370. Teaching Physics. Prerequisite: consent of instructor. Study of physics laboratory experiments and demonstrations available today for secondary school and community college physics courses. Part of Master of Arts in Teaching (M.A.T.) program but open to other interested students.

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

495. Teaching College Physics (2 units). Lecture/discussion (five or more one-hour meetings during term, plus intensive training week at beginning of Fall Quarter). Required of all new teaching assistants. Special course for teaching assistants designed to deal with problems and techniques of teaching college physics. Ideas and techniques learned are applied and evaluated in the sections of each teaching assistant. May be repeated for credit. S/U grading. (F)

596. Directed Individual Studies (2 to 12 units). May be repeated for credit. S/U grading.

597. Preparation for Master's Comprehensive Examination or Ph.D. Qualifying Examinations (2 to 8 units). May be repeated. S/U grading.

598. Master's Thesis Research and Writing (2 to 8 units). May be repeated. S/U or letter grading.

599. Ph.D. Research and Writing (8 to 12 units).

Physiological Science

2834 Slichter Hall, (310) 825-3891

Professors

R. James Barnard, Ph.D., *Vice Chair*
V. Reggie Edgerton, Ph.D. (*Neuromuscular Physiology*)
Gordon L. Fain, Ph.D. (*Neurosciences*)
Jack L. Feldman, Ph.D. (*Neurosciences*)
Robert J. Gregor, Ph.D. (*Biomechanics*)
Tara K. Scanlan, Ph.D.
Judith L. Smith, Ph.D. (*Neuromotor Control; Distinguished Teaching Award*)

Professors Emeriti

Camille Brown, Ed.D.
Bryant J. Cratty, Ed.D.
Glen H. Egstrom, Ph.D.
Gerald W. Gardner, Ph.D.
Donald T. Handy, Ed.D.
Valerie V. Hunt, Ed.D.
Jack F. Keogh, Ed.D.
Wayne W. Massey, Ph.D.
Ben W. Miller, Ph.D.
Norman P. Miller, Ed.D.
Laurence E. Morehouse, Ph.D.

Associate Professors

Scott H. Chandler, Ph.D. (*Neurosciences*)
Jeffrey C. Smith, Ph.D., *in Residence* (*Neurosciences*)
James G. Tidball, Ph.D. (*Muscle Cell Biology*)
Marjorie E. Latchaw, Ph.D., *Emerita*

Assistant Professors

David L. Glanzman, Ph.D. (*Neurosciences*)
Scott A. Henderson, Ph.D. (*Muscle Cell Biology*)

Lecturers

George J. Salem, Ph.D.
Eric Sternlicht, Ph.D.
William C. Whiting, Ph.D.

Scope and Objectives

The cornerstone of the physiological science curriculum is vertebrate physiology, with emphases on integrative functions. The research and educational programs focus on integrative physiology at several levels of organization from molecules to living organisms, microscopic structures to macroscopic organization, and cellular properties to organ functions. Students receive comprehensive instruction in all areas of physiological science, while elective courses reflect faculty research expertise, including cardiopulmonary function and adaptation, musculoskeletal physiology, cell biology, biomechanics, neural control of movement and homeostasis, and neural integration and sensory transduction.

Bachelor of Science Degree

Preparation for the Major

Required: Physiological Science 17A, 17B; Biology 9, 100A; Chemistry and Biochemistry 11A, 11B/11BL, 11C/11CL, 132A, 132B/132BL; Mathematics 3A, 3B, 3C (or 31A, 31B, 32A); Physics 6A, 6B, 6C (or 8A, 8B, 8C); one introductory statistics course.

Preparation courses outside the department may be taken for a letter grade or on a P/NP basis; Physiological Science 17A and 17B must be taken for a letter grade. All preparation courses must be passed with a grade of C- or better or a P and must be completed with an overall grade-point average of 2.0 or better. If you receive a grade of D, F, or NP in two preparation courses or in the repetition of a single preparation course, you are subject to dismissal from the major.

Transfer students with 80 or more units must complete the following courses prior to admission: one year of general chemistry with laboratory, one year of calculus, one cellular biology course. Two calculus-based physics courses are strongly recommended.

Transfer students are required to take Physiological Science 17A and 17B at UCLA because these courses emphasize the movement aspects of anatomy needed in preparation for upper division physiological science courses.

Transfer credit for UCLA Extension coursework and for any departmental courses (including courses 17A, 17B) is subject to prior approval by the department; consult the undergraduate counselor before enrolling in any courses for the major.

The Major

Required: Physiological Science 111A (or M180A-M180B), 111B-111C, Chemistry and Biochemistry 153A, 153L.

A total of four upper division physiological science electives (16 units) is required. Four units of course 199 or 199H may be applied toward the elective requirement. Courses 193, 196A-196B, and graduate courses at the 300, 400, or 500 level may not be applied toward this requirement. One graduate course at the 200 level may be applied toward the elective requirement by petition.

All required and elective courses must be taken for a letter grade, and a C average must be maintained in all upper division courses taken for the major.

Honors Program

The honors program provides exceptional students with the opportunity for individual research culminating in an honors thesis. Requirements for admission include a 3.0 overall grade-point average and a 3.2 GPA in preparation for the major courses. After completion of all requirements and with the recommendation of the faculty adviser, the undergraduate affairs committee confers departmental honors at graduation.

Graduate Study

The department offers Master of Science and Doctor of Philosophy degrees. Current faculty research specializations focus on mechanisms of musculoskeletal and cardiac development and adaptation, neural control mechanisms, biomechanics, and neural integration and sensory transduction.

Admission

Applicants for graduate study are expected to have completed an undergraduate degree in the biological or physical sciences. At the time of admission, you should have completed one year of coursework in each of the following: biology, calculus, inorganic chemistry, organic chemistry/biochemistry, and physics. A grade-point average of at least 3.0 (B) in all upper division undergraduate coursework is required, as are scores from the Graduate Record Examination (GRE). A departmental faculty committee considers applicants on the following bases: (1) prior scholastic performance, (2) three letters of recommendation, and (3) applicant's statement of purpose, which should include (a) relevant background or preparation, (b) field of emphasis, specific study interests, and type of research sought, (c) expectations, goals, degree objective, (d) the names of departmental faculty members whose research area parallels the study interest.

A list of faculty names and research interests is available from the Department of Physiological Science, 2834 Slichter Hall, UCLA, Los Angeles, CA 90024-1568. Applicants are encouraged to communicate directly with the faculty; personal interviews are required for Ph.D. applicants.

Applications for all terms must be submitted by Fall Quarter deadlines, since applications for all terms are reviewed only in January/February each year.

Master of Science Degree

Course Requirements

The Master of Science in Physiological Science requires nine courses, including a second-level statistics or research design course. A minimum of six of the nine courses must be graduate-level (200) courses, toward which two 596 courses may be applied. Courses 597 and 598 may not be applied toward any of the course requirements for the degree; however, there is no limit on the number of times you may enroll in course 597 or 598.

Coursework is selected by you and your advisory committee, with approval by the graduate affairs committee. All coursework must be completed by the end of your second year.

Thesis Plan

If you elect the thesis plan for the master's degree, you must report the results of an original research investigation. Under the guidance of the thesis committee, you must propose a problem area or outline of study, conduct original research in a specific area, and report the results. With committee approval, you may submit either a thesis manuscript or a manuscript suitable for publication.

Comprehensive Examination Plan

Students who elect this plan must achieve a passing mark on a comprehensive examination. The general purpose of the plan is that students acquire a thorough understanding of a reasonably broad problem area, which must be specified in consultation with an adviser. The selection of courses in the department and the related field must be pertinent to the problem area, and justification is required with the petition for advancement to candidacy.

While a written examination is required, the committee may use additional means to evaluate your competency.

If you fail the comprehensive examination, you may not repeat it until the following term. Only one repetition is allowed.

Ph.D. Degree

The goal of the department is to produce Ph.D. candidates who demonstrate academic breadth in physiological science and have the ability to design, perform, and conduct high-quality academic research that leads to the successful defense of a dissertation.

Course Requirements

Eleven courses are required for the doctoral degree, including eight graduate courses in your area of specialization, one graduate-level course on a topic outside your research area, and two courses in methods of experimental design or analysis or in research methods. One course requirement may be met by enrolling in two terms of Physiological Science 290. Two 596 courses may be applied toward the degree requirements.

Coursework is selected by you and your advisory committee, with approval by the graduate affairs committee.

First- and Second-Year Doctoral Review

At the end of your first and second years, you meet with your advisory committee which reviews your progress and makes recommendations to the graduate affairs committee concerning your doctoral coursework. At the end of your second year, you prepare a progress report for the same committee detailing your laboratory research experience and any abstract presentations or publications.

Teaching Experience

You must complete two terms as a teaching assistant. All teaching evaluations become a permanent part of your departmental record.

Qualifying Examinations

Your breadth of knowledge is demonstrated when you pass the two-day written preliminary examination at the end of your first year that tests your knowledge of and ability to interpret information on physiological systems. The examination, administered in the week preceding

Fall Quarter of your second year, is scored (1) passed at the Ph.D. level of achievement, (2) passed at the master's level of achievement, requiring you to pass a second examination at the Ph.D. level within the following six months, or (3) failed, requiring you to leave the program. If you receive a master's level of achievement score, you may leave the Ph.D. program and complete the M.S. degree.

After successfully passing the departmental written qualifying examination, and before advancement to candidacy, the University Oral Qualifying Examination is conducted by your doctoral committee and must be passed by the end of your fourth year of study. You must present a written research proposal of your intended dissertation project to your advisory committee and one member of the graduate affairs committee at least two weeks prior to the examination. You are expected to have formulated a research plan, have demonstrated appropriate research capability, and be knowledgeable of the relevant research literature. If you do not pass, the examination may be re-scheduled once at the discretion of your doctoral committee.

Dissertation/Final Oral Examination

After advancement to candidacy, you must complete and submit a dissertation which meets the approval of your doctoral committee. Your committee also determines whether a final oral examination (a defense of your dissertation) is required.

Lower Division Courses

5. Issues in Human Physiology: Diet and Exercise. (Formerly numbered Kinesiology 5.) Lecture, three hours; discussion, one hour. Not open to physiological science majors. Basic introduction to principles of human biology, with special emphasis on roles that exercise and nutrition play in health, and prevention and management of such illnesses as hypertension, diabetes, and heart disease.

Mr. Barnard, Mr. Sternlicht

6. The Human Machine: Physiological Processes. Prerequisite: Physics 3A or equivalent. General introduction to human musculoskeletal, cardiovascular, and respiratory systems and their function, with special emphasis on mechanical and physiological aspects of homeostasis and environmental interaction. Application of physical principles in selected areas of biomechanics, hemodynamics, ergonomics, orthopedics, and robotics.

Mr. Gregor, Mr. Salem, Mr. Whiting

13. Introduction to Human Anatomy (6 units). (Formerly numbered Kinesiology 13.) Lecture, four hours; laboratory, four hours. Not open to physiological science majors; any combination of courses 13 and 17A or 17B is equivalent to eight units. Structural survey of human body, including skeletomuscular, nervous, circulatory, respiratory, digestive, and genitourinary systems. Laboratory includes examination of human cadaver specimens.

Mr. Whiting (Sp)

17A. Musculoskeletal Anatomy and Biomechanics (5 units). (Formerly numbered Kinesiology 17A.) Lecture, three hours; laboratory, four hours. Prerequisites: Physics 6A, physiological science major. Thorough study of skeletal, articular, muscular, and connective tissue systems, including components of biomechanical function and physiological adaptation. Some emphasis on musculoskeletal structure to movement capabilities. Laboratory includes examination of prosected human cadaver specimens.

Mr. Gregor, Mr. Salem (F)

17B. Neuroanatomy and Visceral Anatomy. (Formerly numbered Kinesiology 17B.) Lecture, four hours; laboratory, two hours. Prerequisites: course 17A, physiological science major. Structural survey of human nervous, circulatory, digestive, respiratory, and urogenital systems. Laboratory includes examination of human cadaver specimens.

Mr. Salem, Ms. Smith (W)

90. Introduction to Physiological Science (2 units). (Formerly numbered Kinesiology 90.) Lecture, one hour; discussion, one hour. Prerequisite: freshman or sophomore standing. Introduction to current topics in physiological science by a team of departmental faculty members. P/NP grading.

Mr. Whiting (W)

Upper Division Courses

111A-111B-111C. Foundations in Physiological Science (6 units each). (Formerly numbered Kinesiology 111A-111B-111C.) Lecture, four hours; laboratory, two hours:

111A. Prerequisites: course 17B, Biology 9, Chemistry 132A, Physics 6B. Introduction to principles of neurophysiology: cellular and systems neuroscience, including factors controlling membrane excitability, neuronal circuits, sensorimotor regulation, special senses, cortical functions, and neuronal plasticity.

Mr. Chandler, Mr. Glanzman, Ms. Smith (Sp)

111B. Prerequisites: course 111A or M180A, Chemistry 132B. Principles of skeletomuscular and cardiopulmonary physiology.

Mr. Feldman, Mr. Henderson, Mr. Tidball (F)

111C. Prerequisites: course 111A or M180A, Chemistry 153A. Principles of gastrointestinal, renal, endocrine, and reproductive physiology.

Mr. Fain (W)

133. Exercise Physiology. (Formerly numbered Kinesiology 133.) Lecture, three hours; laboratory, two hours. Prerequisite: course 111B. Not open to students with credit for former Kinesiology 124. Physiological responses and adaptations to acute and chronic exercise.

Mr. Henderson, Mr. Sternlicht

C135. Dynamical Systems Modeling of Physiological Processes. Prerequisites: courses 111A-111B. Concepts of dynamical systems theory as applied to physiological systems. Introduction to qualitative theory of differential equations and their computer simulation, and extensive application to examples in neurophysiology, biomechanics, and systems physiology. Concurrently scheduled with course C235.

Mr. Garfinkel

136. Exercise and Cardiovascular Function. (Formerly numbered Kinesiology 136.) Prerequisite: course 133. Consideration of acute and chronic effects of exercise in diagnosis, prevention, and treatment of cardiovascular disorders.

Mr. Barnard, Mr. Sternlicht

137. Molecular Mechanisms of Muscle Growth and Adaptation. (Formerly numbered Kinesiology 137.) Prerequisite: course 111B. Molecular mechanisms of skeletal and cardiac muscle growth and adaptation to different stress.

Mr. Henderson

138. Neuromuscular Physiology and Adaptation. (Formerly numbered Kinesiology 138.) Prerequisites: course 111B, Chemistry 153A. Cellular responses to acute and chronic exercise and environmental states of neuromuscular system.

Mr. Edgerton

142. Sensorimotor Physiology. (Formerly numbered Kinesiology 142.) Lecture, three hours; laboratory, two hours. Prerequisite: course 111A or M180A. Not open to students with credit for former Kinesiology 126. Neurophysiological principles governing control of limb movements, including regulation by spinal cord circuits, cerebellum, basal ganglia, and sensorimotor cortices. Mr. Chandler, Ms. Smith

C143. Neuromotor Control of Posture and Movement. (Formerly numbered Kinesiology C143.) Prerequisite: course 142 or M180B. Examination of theories for neuromotor control of posture, walking, and voluntary arm movements. Concurrently scheduled with course C243. Ms. Smith

144. Neural Control of Physiological Systems. (Formerly numbered Kinesiology 144.) Prerequisite: course 111B or M180B. Role of central nervous system in control of respiration, circulation, sexual function, and bladder control. Material for each section to be developed by combination of lecture and open discussion. Mr. Feldman

C145. Neural Mechanisms Controlling Movement. (Formerly numbered Kinesiology 145.) Prerequisite: course 111A or M180A. Examination of central nervous system organization required for production of complex movements such as locomotion, mastication, and swallowing. Concurrently scheduled with course C245. Mr. Chandler

147. Neurobiology of Learning and Memory. (Formerly numbered Kinesiology 147.) Prerequisite: course 111A or M180A. Changes in central nervous system that accompany learning, with emphasis on cellular mechanisms. Mr. Glanzman

148. Advanced Neurophysiology. (Formerly numbered Kinesiology 148.) Prerequisite: course 111A or M180A. Advanced treatment of selected topics in cellular and systems neurophysiology. Mr. Smith

151. Limb Dynamics. (Formerly numbered Kinesiology 151.) Lecture, three hours; laboratory, two hours. Prerequisite: course 111B. Not open to students with credit for former Kinesiology 122. Kinematic and kinetic principles underlying limb movements. Mr. Gregor

C152. Skeletal-Arthrodiadial Adaptation. (Formerly numbered Kinesiology C152.) Prerequisite: course 111B. Anatomical, physiological, and mechanical characteristics of skeletal and diarthrodial joint structures in normal and abnormal loading environments. Concurrently scheduled with course C252. Mr. Salem, Mr. Whiting

153. Dissection Anatomy. (Formerly numbered Kinesiology 153.) Lecture, two hours; laboratory, six hours. Prerequisites: course 111B, departmental application. Study and dissection of upper and lower extremities of human cadavers; dissection of thorax and abdomen limited to musculature and neurovascular supply. Mr. Salem

155. Development and Structure of Musculoskeletal Soft Tissue. (Formerly numbered Kinesiology 155.) Prerequisite: course 111B. Development, histology, cell biology, and biochemistry of musculoskeletal soft tissues. Integration of knowledge of muscle and connective tissue structure and function on each of these levels to understand organization and physiological behavior of the intact system. Mr. Tidball

M173. Anatomy and Physiology of Sense Organs. (Same as Biology M173.) Lecture, three hours; discussion, one hour. Prerequisites: courses 111A (or Biology 171) or M180A-M180B (or Biology M175A-M175B) or equivalent. Structure and function of sense organs. Adoption of quantitative and comparative approach to provide insight into evolution of sense organs in both invertebrates and vertebrates. Mr. Fain, Mr. Narins, Mr. Simmons

M180A-M180B-M180C. Neuroscience: From Molecules to Mind (5 units each). (Formerly numbered Kinesiology M180A-M180B-M180C.) (Same as Biology M175A-M175B-M175C and Psychology M117A-M117B-M117C.) Lecture, four hours; discussion, one hour. P/NP or letter grading:

M180A. Cellular Mechanisms. Prerequisites: Biology 9 or equivalent, Physics 3B or 6B or 8C; any combination of Physiological Science 111A and M180A is equivalent to eight units. Cellular physiology, pharmacology, molecular biology, and development of the nervous system. Mr. Feldman, Mr. Scheibel, Mr. Watson (F)

M180B. Integrative Mechanisms. Prerequisite: course 111A (or Biology 171 or Psychology 115) or M180A (or Biology M175A or Psychology M117A); any combination of course M180B and former Kinesiology 126 is equivalent to 10 units. Central and reflex mechanisms of homeostasis, sensory information processing, and motor control. Mr. Levine, Mr. Schein, Mr. Smith (W)

M180C. Neural Bases of Behavior. Prerequisite: course M180B (or Biology M175B or Psychology M117B) or former Kinesiology 126 (or Psychology 115). Neural mechanisms underlying motivation, learning, and cognition. Mr. Gallistel, Mr. Glanzman, Mr. Zaidel (Sp)

191A-191Z. Proseminars: Physiological Science. (Formerly numbered Kinesiology 191A-191Z.) Prerequisite: upper division standing. Limited to 15 students. Advanced study of special topics. May be repeated for credit with topic change.

193. Field Studies in Physiological Science. (Formerly numbered Kinesiology 193.) Lecture, one hour; fieldwork, six to eight hours. Prerequisites: senior standing, departmental application. Supervised field studies in specific careers related to physiological science. May not be repeated for credit and may not be applied toward elective requirements for the major. P/NP grading. Mr. Salem, Mr. Whiting (F,Sp)

196A-196B. Laboratory Practicum in Physiological Science (2 units each). (Formerly numbered Kinesiology 196A-196B.) Laboratory, four hours. Prerequisites or corequisites: course 153, departmental application. Supervised practicum and training for advanced students who serve as undergraduate assistants in basic anatomy course in preparation of laboratory materials and innovative projects. May not be applied toward elective requirements for the major. Mr. Salem, Mr. Whiting

197A-197Z. Variable Topics in Physiological Science. (Formerly numbered Kinesiology 197A-197Z.) Prerequisite: upper division standing. Variable topics course which covers specific subjects of special interest. May be repeated for credit with topic change.

199. Special Studies in Physiological Science. (Formerly numbered Kinesiology 199.) Prerequisites: physiological science major with advanced junior standing and 3.0 GPA in the major, or senior standing, courses 111A-111B, consent of instructor and department chair. Directed independent research with a faculty member. Course application (available in 2834 Slichter Hall) must be submitted to the chair during first week of classes. Only four units of course 199/199H may be applied toward elective requirements for the major.

199HA. Honors Thesis. (Formerly numbered Kinesiology 199HA.) Prerequisites: courses 111A-111B, physiological science honors program standing. Directed independent research for departmental honors with a faculty member, involving definition of research topic and extensive reading and research in the field of proposed honors thesis. In Progress grading (credit to be given only on completion of course 199HB).

199HB. Honors Thesis. (Formerly numbered Kinesiology 199HB.) Prerequisite: course 199HA. Continued reading and research that culminate in final honors thesis. Only four units of course 199/199H may be applied toward elective requirements for the major.

Graduate Courses

M202. Cellular Neurophysiology. (Same as Neuroscience M202.) Lecture, three hours; discussion, one hour. Prerequisites: course 111A or M180A or Physics 6B or equivalent, Biology 166 or 171 or equivalent. Advanced course in cellular physiology of neurons. Action and membrane potentials, channels and channel blockers, gates, ion pumps and neuronal homeostasis, synaptic receptors, drug-receptor interactions, transmitter release, modulation by second messengers, and sensory transduction. Mr. Fain

M205. Behavioral and Systems Neuroscience. (Same as Neuroscience M205 and Psychology M205Z.) Lecture, three hours. Prerequisites: Neuroscience M201, M202, M203, and M204, or consent of instructor. Introduction to fundamentals of behavioral and systems neuroscience, with emphasis on role of behavioral analysis in understanding the functioning of nervous system and identifying anatomical circuits, cell physiological processes, and molecular mechanisms that mediate behaviorally defined functions. Mr. Feldman, Mr. Gallistel

206. Metabolism of Organ Systems Affected by Exercise. (Formerly numbered Kinesiology 206.) Prerequisite: Chemistry 132B/132BL. Key regulatory mechanisms of metabolism involved in exercise response and adaptation. Mr. Sternlicht

211. Exercise Cardiovascular Physiology. (Formerly numbered Kinesiology 211.) Prerequisite: Physiology 201A. Attention to cardiovascular adaptations to acute exercise as well as adaptations associated with regular exercise training. Mr. Barnard, Mr. Henderson

M212. Introduction to Cellular Physiology and Biophysics (6 units). (Same as Biology M237 and Physiology M212.) Lecture, five hours. Prerequisite: graduate standing; for upper division undergraduates: consent of instructor. Development of fundamental physiological and biophysical concepts associated with all membranes, membrane channels and transporters, membrane potential, membrane excitability, electrical signal transmission and transduction, and muscle contraction and their application to study of basic cellular processes. Emphasis in laboratory on development of skills using computer programming languages, spreadsheets, and graphics for modeling and analysis of cellular processes.

C235. Dynamical Systems Modeling of Physiological Processes. (Formerly numbered Kinesiology 235.) Prerequisites: courses 111A-111B. Concepts of dynamical systems theory as applied to physiological systems. Introduction to qualitative theory of differential equations and their computer simulation, and extensive application to examples in neurophysiology, biomechanics, and systems physiology. Concurrently scheduled with course C135. Mr. Garfinkel

M240. Neural Systems for Motor Control. (Formerly numbered Kinesiology M240.) (Same as Neuroscience M262.) Prerequisite: course C143 or consent of instructor. Advanced topics on neural mechanisms related to control of posture, locomotion, and highly skilled arm and hand movements. Emphasis on role of movement-dependent feedback at spinal segments and within sensorimotor areas of cerebral cortex, with respect to modification of motor output. Ms. Smith

C243. Neuromotor Control of Posture and Movement. (Formerly numbered Kinesiology C243.) Prerequisite: course 142 or M180B. Examination of theories for neuromotor control of posture, walking, and voluntary arm movements. Concurrently scheduled with course C143. Ms. Smith

C245. Neural Mechanisms Controlling Movement. Prerequisite: course 111A or M180A. Examination of central nervous system organization required for production of complex movements such as locomotion, mastication, and swallowing. Concurrently scheduled with course C145. Mr. Chandler

M247. Neural Control of Cardiopulmonary Function. (Formerly numbered Kinesiology M247.) (Same as Neuroscience M247.) Lecture, two hours; discussion, two hours. Prerequisites: courses 111A, 111B or 133 or 142 or M180A, M180B or equivalent. Cardiorespiratory homeostasis is accomplished via central nervous system (CNS) control of respiratory and circulatory pumping systems. Focus on CNS mechanism underlying (1) generation of respiratory rhythm, sympathetic and parasympathetic tone, (2) determination of patterns of motor outflow, and (3) responses to changes in behavioral state or afferent signals. Emphasis on critical reading of literature.

Mr. Feldman

250A. Muscle Dynamics. (Formerly numbered Kinesiology 250A.) Prerequisite: course 151. Integrated study of electrical and dynamic parameters of muscle-action, including topics in length-tension and force-velocity interrelationships; critical analysis of electromyographic and digital computer techniques.

Mr. Gregor

250B. Musculoskeletal Mechanics. (Formerly numbered Kinesiology 250B.) Prerequisites: course 151, Mathematics 3A, 3B. Mechanical parameters of moving human musculoskeletal system, including use of cinematographic, force platform, and digital computer techniques. Topics include biostatistics, dynamics, and empirical data modeling. Mr. Whiting

C252. Skeletal-Arthrodistal Adaptation. (Formerly numbered Kinesiology C252.) Prerequisite: course 111B. Anatomical, physiological, and mechanical characteristics of skeletal and diarthrodial joint structures in normal and abnormal loading environments. Concurrently scheduled with course C152.

Mr. Salem, Mr. Whiting

M260. Neuromuscular Factors in Movement Regulation. (Formerly numbered Kinesiology M260.) (Same as Neuroscience M260.) Prerequisite: course 138 or consent of instructor. Interaction of neural and muscular factors in regulation of muscle fiber properties and importance of these properties in neural strategies of movement regulation. S/U or letter grading.

Mr. Edgerton

M263. Neuronal Mechanisms Controlling Rhythmic Movements. (Formerly numbered Kinesiology M263.) (Same as Neuroscience M263.) Prerequisite: course 145 or consent of instructor. Advanced topics on brainstem mechanisms responsible for controlling cyclic and stereotypic movements such as mastication and locomotion. Emphasis on cellular neurophysiology and interaction between neuronal networks. Introduction to primary literature and techniques used in these areas. Students expected to critically evaluate data and conclusions drawn.

Mr. Chandler

290. Research Issues in Physiological Science (2 units). (Formerly numbered Kinesiology 290.) Seminar. Prerequisite: consent of instructor. Discussion of current research issues. Topics selected by participants in class. Two 290 courses may be used to satisfy one seminar course requirement for graduate program.

291A-291B-291C. Seminars: Cardiorespiratory Function and Adaptation (2 to 4 units each). (Formerly numbered Kinesiology 291A-291B-291C.) Prerequisite: course M260 or consent of instructor. Selected topics on cardiorespiratory function and adaptation. Students required to present two-hour seminar.

Mr. Barnard, Mr. Henderson

292A-292B-292C. Seminars: Biomechanics (2 to 4 units each). (Formerly numbered Kinesiology 292A-292B-292C.) Prerequisites: courses 250A, 250B, consent of instructor. Selected topics in biomechanics of movement. Students required to present two-hour seminar.

Mr. Gregor

293A-293B-293C. Seminars: Musculoskeletal Function and Adaptation (2 to 4 units each). (Formerly numbered Kinesiology 293A-293B-293C.) Prerequisites: courses 138 and M260, or consent of instructor. Selected topics on muscular determinants of movement, metabolic aspects of exercise, and mechanics of connective tissue. Students required to present two-hour seminar.

Mr. Edgerton, Mr. Tidball

M294A-M294B-M294C. Seminars: Neural Control of Movement (2 to 4 units each). (Formerly numbered Kinesiology M294A-M294B-M294C.) (Same as Neuroscience M265A-M265B-M265C.) Prerequisite: course M240 or M247 or M263 or consent of instructor. Selected topics on neural determinants of movement behavior. Students required to present two-hour seminar.

Mr. Chandler, Mr. Feldman, Ms. Smith

M295A-M295B-M295C. Seminars: Cellular Neuroscience (2 to 4 units each). (Same as Neuroscience M266A-M266B-M266C.) Prerequisite: course M202 or consent of instructor. Selected topics in sensory transduction, cellular integration, synaptic processing, central nervous system function, and learning. Students required to present two-hour seminar.

Mr. Fain, Mr. Feldman, Mr. Glanzman

375. Teaching Apprentice Practicum (1 to 4 units). (Formerly numbered Kinesiology 375.) Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

495. In-Service Practicum for Teaching Assistants in Physiological Science (2 units). (Formerly numbered Kinesiology 495.) Prerequisite: consent of instructor. Required of all teaching assistants. Supervised practicum in teaching laboratory courses in physiological science; material preparation and use of teaching aids. May not be applied toward degree requirements. S/U grading. (F)

501. Cooperative Program (2 to 8 units). (Formerly numbered Kinesiology 501.) Prerequisite: consent of UCLA graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Used to record enrollment of UCLA students in courses taken under cooperative arrangements with USC. S/U grading.

596. Individual Studies for Graduate Students (2 to 8 units). (Formerly numbered Kinesiology 596.) Petition signed by faculty sponsor, graduate adviser, and graduate affairs committee chair must be submitted prior to second week of class. Eight units may be taken for credit and may be applied toward minimum of six graduate courses required for M.S. Eight units may be applied toward the eight graduate courses required in area of specialization for Ph.D.

597. Preparation for M.S. Comprehensive Examination or Ph.D. Qualifying Examinations (2 to 16 units). (Formerly numbered Kinesiology 597.) To be arranged with faculty member serving as student's comprehensive examination chair or doctoral committee chair. Course section identified by two-letter code using faculty member's initials (see department for code). May not be applied toward M.S. or Ph.D. course requirements. May be repeated as necessary. S/U grading.

598. Research for and Preparation of M.S. Thesis (2 to 16 units). (Formerly numbered Kinesiology 598.) To be arranged with faculty member serving as student's thesis committee chair. Course section identified by two-letter code using faculty member's initials (see department for code). May not be applied toward M.S. course requirements. May be repeated as necessary. S/U grading.

599. Research for and/or Preparation of Ph.D. Dissertation (2 to 16 units). (Formerly numbered Kinesiology 599.) Course section identified by two-letter code using faculty member's initials (see department for code). May not be applied toward Ph.D. course requirements. May be repeated as necessary. S/U grading.

Frances Rosenbluth, Ph.D.
James Tong, Ph.D.

Scope and Objectives

The undergraduate program in political science aims to provide understanding of basic political processes and institutions as these operate in different national and cultural contexts. It also covers the interaction between national states, the changing character of the relations between citizens and governments, and the values and criteria by which the quality of political life is judged. The program may be individually focused to serve the needs of the liberal arts major, the student seeking preparation for graduate work in political science, public administration, law, and other professional fields, and the student preparing for specialized roles in political and public organizations.

The graduate program leads to the Ph.D. degree in Political Science (a master's degree may be earned in the process of completing Ph.D. requirements). It is designed to give students a strong foundation in the discipline while enabling them to acquire additional skills for advancing their professional careers.

Bachelor of Arts Degree

Students officially admitted to the political science major for Fall Quarter 1989 and thereafter are expected to fulfill the requirements listed below. Continuing students admitted prior to Fall Quarter 1989 should consult the 1988-89 *UCLA General Catalog*.

Pre-Political Science Major

All students intending to major in political science must enroll as pre-political science majors. After completion of preparation for the major courses, you need to petition to enter the major in the Undergraduate Office, 4256 Bunche Hall.

Preparation for the Major

Required: Four lower division courses from Political Science 10, 20, 30, 40, 50, 70, 80, including at least two courses from 10, 20, and 50. These lower division courses are prerequisites to upper division courses and 10, 20, 40, and 50 are required in those fields designated as your concentration or distribution field.

You must complete all premajor courses with a 2.0 grade-point average by the time you attain 135 units. Admission to the major is granted only after successful completion of all lower division requirements.

The Major

Required: Ten upper division courses (40 units) selected from Political Science 102 through 199 taken for a letter grade. You are also required to complete four upper division courses (16 units) in one or two of the following social sciences: anthropology, communication studies (only Communication Studies 160), economics, geography, history, management (only Management 150, 190), psychology (except Psychology 115, 116), sociology. These courses must be taken for a letter grade. You are required to maintain a

2.0 overall grade-point average in all upper division political science courses.

Upper division political science courses are organized into four fields and two subfields: (I) political theory, (II) international relations, (III) American politics, with subfields (IIIa) public law and (IIIb) public organization and policy, and (IV) comparative politics.

In fulfilling the requirement of 10 upper division political science courses, you must satisfy the following:

(1) A **concentration** in one field by completing the lower division course and at least four upper division courses in that field.

(2) A **distribution** of the two lower division courses and two courses in each of two other fields (four upper division courses). As specified below, restrictions apply to subfields IIIa and IIIb in satisfying the distribution requirement.

(3) Two additional elective courses in political science to comprise the total of 10.

Field Concentration Requirements — The lower division course is prerequisite to upper division courses in those fields designated as the concentration field and the two distribution fields for majors. Specific requirements for field concentration are as follows:

(I) *Political Theory* — Political Science 10 and any four courses in Field I.

(II) *International Relations* — Course 20 and any four upper division courses in Field II. Four units from courses 175A-175B may be applied as one of the four courses in Field II. Only one of the defense studies courses — 138A, 138B, 138C — may be applied toward the field concentration requirement.

(III) *American Politics* — Course 40 and any four courses in Field III.

(IV) *Comparative Politics* — Courses 50, 168, and any three additional courses in Field IV. Course 115, 181, or 183C — but no more than one of them — may also be applied toward concentration in this field.

Special Distributions in American Politics — Students concentrating in American politics (Field III) may fulfill the major's distribution requirement by selecting one of the special American politics subfields — public law (IIIa) or public organization and policy (IIIb) — as one of the two distribution fields. You may not use both to fulfill this requirement.

Students not concentrating in American politics may elect distribution fields in the general area of *American politics* (Field III) and in one of the special subfields (IIIa or IIIb), or may satisfy the distribution requirement by taking the necessary courses in the two special subfields (IIIa and IIIb).

Course 70 and two upper division courses in public law are required for a special distribution in Subfield IIIa; course 80 and two upper division

courses in public organization and policy are required for a special distribution in Subfield IIIb.

Note: No course may be applied toward both concentration and distribution requirements.

Also, courses 119, 139, 149, 169, 179, and 189 may be applied no more than twice toward the field concentration requirement. No more than three of these courses may be applied toward the major.

Courses 195A-195B-195C and 199 may not be applied toward either the concentration or distribution requirement.

Undergraduate Seminars

Each term the department offers a series of seminars (Political Science C197A-C197F) in each field. The prerequisites are two upper division courses in the field in which the seminar is offered, a 3.25 average at the upper division level in political science, or discretion of the instructor. These courses may be applied toward either the concentration or distribution requirement, and students who qualify are encouraged to take them.

Honors Program

The department honors program is open to seniors and to students who (1) have completed five upper division political science courses (two of which are in one field), (2) have a 3.5 grade-point average in upper division political science courses, and (3) are eligible for College of Letters and Science honors. You should have substantial experience in writing research papers and take at least one seminar course in the Political Science C197 series before you enter the honors program or course 195A.

Students wishing to qualify for graduation with departmental honors must complete the following: (1) courses 195A-195B-195C, in which a senior thesis is written; (2) eight upper division courses (excluding courses 119, 139, 149, 169, 179, and 189) distributed as follows: four courses in one field and four additional courses, two in each of two other fields; (3) four upper division courses in one or two of the social sciences other than political science.

M.A. and Ph.D. Degrees

The aim of the graduate program is to train scholars in the discipline of political science. The department only accepts students seeking the Ph.D. degree (a master's degree may be earned as part of the process of completing the requirements for the Ph.D.).

Admission

In addition to University minimum requirements, the department requires three letters of recommendation, scores of the General Test of the Graduate Record Examination (GRE), and a sample of your analytical writing skills (e.g., senior or M.A. thesis, term paper). Applicants are selected on the basis of perceived promise. Prospective students may write for

departmental brochures to the Graduate Studies Office, Department of Political Science, 4289 Bunche Hall, UCLA, Los Angeles, CA 90024-1472. The department does not have an application form in addition to the one used by UCLA Graduate Application Processing. The deadline for receipt of all application materials is December 15 prior to the Fall Quarter in which you plan to register.

Fields of Study

Five fields of study are offered to graduate students in the department: political theory, international relations, American politics, comparative politics, and formal theory and quantitative methods.

Foreign Language or Research Methodology Requirement

There is no foreign language requirement for the M.A. degree.

Prior to advancement to candidacy for the Ph.D., you must fulfill one of the following requirements:

(1) Foreign Language — You may fulfill this requirement by obtaining a minimum score of 550 on a Graduate School Foreign Language Test (GSFLT). In languages for which no GSFLT is given, you may take a department examination to test your proficiency at a level comparable to a GSFLT score of 550. You may also satisfy the requirement by completing, with a grade of B or better, the final course in a two-year sequence of college courses in a foreign language.

(2) Mathematics, Mathematical Economics, or Statistics — You must complete either (a) a sequence of three courses in mathematics or mathematical economics at or above Mathematics 31A (Mathematics 38A, 38B may not be applied) or (b) a sequence of three courses in statistics at or above the level of Political Science 200B. Courses applied toward this requirement may not be applied toward any other course requirements.

You are required to pass the foreign language or methodology requirement before you can be advanced to candidacy for the Ph.D., but you may pass the requirement after the University Oral Qualifying Examination.

Course Requirements

You must take Political Science 200A and 200AL, four courses in each of two major fields, one course in each of two minor fields, and four additional graded courses, including no more than two independent study courses. Fields decide which courses meet major and minor field requirements.

Of the 16 required courses, you must take at least seven during your first year of graduate study and 12 by the end of your second year.

Transfer Students — With the approval of the graduate adviser and the dean of the Graduate Division, graduate courses taken elsewhere

may be applied toward departmental course requirements. The maximum number of such courses is six if you transfer to UCLA with a master's degree in political science and choose to forego another master's degree from UCLA. In all other cases, the maximum is four for courses taken at another UC campus and two for courses taken outside the UC system.

Research Paper Requirement

You must submit two research papers, one by the beginning of your seventh term of graduate study, both by the beginning of your eighth term. You may also use these papers to meet course requirements. Each is graded not qualified, qualified, or qualified with distinction by a standing committee from all five fields. This committee may solicit the opinions of non-members. If a paper is graded not qualified, you may submit a revised version or another paper, once only, at most six months after your first submission.

For the Ph.D., you must receive at least a grade of qualified on both papers. You receive the M.A. degree after successful completion of 12 courses with an average grade of 3.0 or better and a grade of qualified or qualified with distinction on one paper.

Papers are evaluated for knowledge of subject, originality of ideas, and craftsmanship of research. They are also evaluated for conciseness — good ones may vary in length but are not expected to exceed 30 pages. They need not be publishable, but in their structure and format and in their coverage of topics and tasks, are expected to resemble papers published in peer-reviewed journals of their fields. The committee evaluating your papers assumes that you have not devoted all of your research time to two papers but have selected for submission, or for revision and submission, the best two from a portfolio of several seminar papers.

Research Design and Oral Examination

By your tenth term of graduate study, you must present a research design for your dissertation in a seminar or colloquium. It need not be the version you submit for the University Oral Qualifying Examination.

You may take that examination after you have completed your course and paper requirements and written a dissertation proposal accepted by your research adviser. You must take it no later than your twelfth term of graduate study, and the examination committee must have your proposal at least two weeks before the examination. The committee judges the feasibility and worth of your project and your ability to undertake it, and may recommend changes in your research design.

After successful completion of the University Oral Qualifying Examination and the language or methodology requirement, you are ad-

vanced to candidacy. This must take place no later than your fifteenth term of graduate study.

Candidate in Philosophy Degree

You are eligible to receive the C.Phil. degree on advancement to candidacy for the Ph.D.

Dissertation/Final Oral Examination

Approval of a written dissertation by your doctoral committee constitutes the final requirement for the Ph.D. degree in Political Science.

The doctoral committee for each candidate decides whether or not a final oral examination should be required.

Lower Division Courses

1. Introduction to American Government. Lecture, three hours; discussion, one hour. Introduction to principles and problems of government, with particular emphasis on national government in the U.S. Fulfills American History and Institutions requirement but does not fulfill a preparation for the major requirement.

6. Introduction to Quantitative Research. Lecture, three hours; discussion, one hour. Introduction to collection and analysis of political data, with emphasis on application of statistical reasoning to study of relationships among political variables. Use of computer as an aid in analyzing data from various fields of political science, among them comparative politics, international relations, American politics, and public administration. Mr. Petrocik, Mr. Zaller

10. Introduction to Political Theory. Lecture, three hours; discussion, one hour. Exposition and analysis of selected political theorists and concepts from Plato to the present.

Mr. Ashcraft, Mr. Campbell, Mr. Rapoport, Mr. Smith

20. World Politics. Lecture, three hours; discussion, one hour. Required of all students concentrating in Field II. Introduction to problems of world politics. Mr. Spiegel

30. Introduction to Political Economy. Lecture, three hours; discussion, one hour. Introduction to political economy, especially application of economic reasoning to political and social phenomena. P/NP or letter grading. Mr. Frieden

40. Introduction to Politics. Lecture, three hours; discussion, one hour. Basic institutions and processes of democratic politics. Treatment of themes such as constitutionalism, representation, participation, and leadership coupled with particular emphasis on the American case. Mr. Gilliam, Mr. Schwartz

50. Introduction to Comparative Politics. Lecture, three hours; discussion, one hour. Comparative study of constitutional principles, governmental institutions, and political processes in selected contemporary states, with emphasis on major European governments. Mr. Lofchie, Mr. Sklar

70. Supreme Court. Lecture, three hours; discussion, one hour. Required of all students concentrating in Subfield IIIa. Introduction to American constitutional development and role of Supreme Court as interpreter of the U.S. Constitution. Reading of Supreme Court cases as well as various historical and current commentaries. Mr. Hobbs

80. Introduction to Public Organization and Policy. Lecture, three hours; discussion, one hour. Introduction to processes of policy formation and implementation. Exploration of emergence and performance of government bureaucracies and their role in American political process. P/NP or letter grading. Mr. Fried

88A-88F. Lower Division Seminars. Seminar, three hours. Prerequisite: freshman or sophomore standing. Opportunity to enhance writing, verbal, and reasoning skills. General introduction to a subfield of a major area, or intensive exploration of a particular theme or topic. Variable topics; consult *Schedule of Classes* for topics to be offered in a specific term. May not be repeated for credit except by students who receive a grade of C-, D, or F. P/NP or letter grading. **88A.** Political Theory; **88B.** International Relations; **88C.** Politics; **88D.** Comparative Politics; **88E.** Public Law; **88F.** Public Organization and Public Policy.

Upper Division Courses

Prerequisite for all upper division courses: upper division standing or consent of instructor.

102. Statistical Analysis of Political Data. Prerequisite: course 6. Introduction to statistical inference. Topics include measures of central tendency, elementary probability theory, common probability distributions, least-squares and maximum likelihood estimation, confidence intervals and statistical tests, comparison of means, analysis of variance, and multiple regression and correlation. Statistical techniques and topics illustrated with applications to a variety of political data. Mr. Petrocic, Mr. Zaller

104A-104B. Introduction to Survey Research. Discussion, three hours. Prerequisite: course 6. Courses in fundamentals of survey research as a method. **104A.** Sampling theory and methods, writing of questions, questionnaire construction, and interviewing. Attitudes, attitude measurement, and attitude change. Participation in formulation of research problem. **104B.** Prerequisite: course 104A. Conducting a survey. Development of survey questionnaire, designing a sample, collecting interviews, maintaining quality control, and coding interviews for machine tabulation. Performance of computer-aided analysis of some part of data and submission of written report of that research.

M105. Economic Models of Public Choice. (Same as Economics M135.) Prerequisites: Economics 101A, any lower division political science course other than Political Science 1, and junior/senior standing, or consent of instructor. Analysis of methods and consequences of arriving at collective decisions through political mechanisms. Topics include free-rider problem, voting and majority choice, demand revelation, and political bargaining. Mr. Wallerstein

M106. Economic Models of Political Conflict and Conflict Resolution. (Same as Economics M136.) Prerequisites: Economics 101A, any lower division political science course other than Political Science 1, and junior/senior standing, or consent of instructor. Biological, cultural, and organizational sources of political conflict. Role of threats, promises, commitments. Models of the onset and termination of conflict. Conduct of war: strategy and tactics.

Field I: Political Theory

111A-111B-111C. History of Political Thought. Exposition and critical analysis of major political philosophers and schools:

111A. Ancient and Medieval Political Theory from Plato to Machiavelli. Mr. Campbell

111B. Early Modern Political Theory from Hobbes to Bentham. Mr. Ashcraft, Mr. Campbell

111C. Late Modern and Contemporary Political Theory from Hegel to the Present.

Mr. Ashcraft, Mr. Wolfenstein

112. Nature of the State. Systematic analysis of modern concepts and problems of political association.

Ms. Golden

113. Problems in 20th-Century Political Theory. Study and interpretation of theorists who have focused their analyses on social and political problems of the 20th century. Mr. Rocco

114A-114B. American Political Thought:

114A. Exposition and critical analysis of American political thinkers from the Puritan period to 1865.

Mr. Smith

114B. Prerequisite: course 114A or consent of instructor. Exposition and critical analysis of American political thinkers from 1865 to the present.

Mr. Smith

115. Theories of Political Change. Critical examination of theories of political change, relation of political change to changes in economic and social systems, and relevance of such theories for experience of both Western and non-Western societies. May be applied toward either Field I or IV. Mr. Lofchie

116. Marxism. Critical analysis of origins, nature, and development of Marxist political theory.

Mr. Ashcraft, Mr. Wolfenstein

117. Jurisprudence. Development of law and legal systems; consideration of fundamental legal concepts; contributions and influence of modern schools of legal philosophy in relation to law and government. May be applied toward either Field I or Subfield IIIa.

118. Political Violence. Examination of one or several different uses of violence in the revolutionary process: demonstrations, mass uprisings, coup d'état, assassination, and terrorism. May be applied toward either Field II or IV.

Mr. Rapoport, Mr. Tong

119A-119Z. Special Studies in Political Theory. Prerequisites: course 10, one additional course in Field I, consent of instructor. Intensive examination of one or more special problems appropriate to political theory. Sections offered on regular basis, with topics announced in preceding term. Courses 119, 139, 149, 169, 179, and 189 may be applied no more than twice toward field concentration requirement. No more than three of these courses may be applied toward the major.

Field II: International Relations

120. Foreign Relations of the U.S. Lecture, three hours; discussion, one hour. Survey of factors and forces entering into formation and implementation of American foreign policy, with special emphasis on contemporary problems.

Mr. Frieden, Ms. Larson, Mr. Rosecrance

121. Studies in Formulation of American Foreign Policy. Study of formation of American foreign policy with respect to individual cases. Consult *Schedule of Classes* for topics to be offered in a specific term.

Mr. Spiegel

122. World Order. Lecture, three hours; discussion, one hour. Prerequisite: course 20. Study of problems of the international system seen as a community capable of cooperation and development.

Mr. Wilkinson

124. International Political Economy. Prerequisite: course 20. Study of political aspects of international economic issues.

Mr. Frieden

125. Arms Control and International Security. Arms control in context of international security in the nuclear age. Nuclear arms race; relationship between deterrence doctrines and nuclear war; roles of technology and ideology; nuclear proliferation; outer space.

126. Peace and War. Prerequisites: courses 6, 20. Theory and research on causes of war and conditions of peace.

Ms. Larson, Mr. Wilkinson

127A-127B. Atlantic Area in World Politics:

127A. Western Europe. External relations of United Kingdom, West Germany, France, Italy, and other European members of NATO, in regard to European security in context of the Atlantic Alliance.

127B. U.S. and Europe. Prerequisite: course 127A or consent of instructor. Relations between the U.S. and Western European members of the Atlantic Alliance, in context of U.S./Soviet relations.

128A-128B. Soviet Sphere in World Politics. Prerequisite: course 20. Course 128A or consent of instructor is prerequisite to 128B. Contemporary survey of foreign policies and aspirations of the Soviet Union and other states in Soviet bloc; analysis of content and effects of Communist doctrine affecting relations between Soviet and democratic spheres.

Mr. Anderson, Mr. Korboniski

129. Comparative Foreign Economic Policy. Examination of foreign trade, monetary, and investment policies of the U.S., Japan, France, and Federal Republic of Germany since 1945.

130. Politics of Latin American Economic Development. Interaction of international and domestic factors in political and economic evolution of Latin America.

Mr. Frieden

131. Latin American International Relations. Prerequisite: course 20. Major problems of Latin American international relations and organization in recent decades.

Mr. Gonzalez

132A-132B. International Relations of the Middle East:

132A. Prerequisite: course 20. Contemporary regional issues and conflicts, with particular attention to inter-Arab politics, Arab-Israeli problem, and Persian Gulf area.

Mr. Binder

132B. Role of the great powers in the Middle East, with emphasis on American, Soviet, and West European policies since 1945.

Mr. Binder

133. International Relations of Sub-Saharan Africa. Contemporary regional issues and conflicts; foreign policies of African states; role of external powers.

Mr. Keller, Mr. Lofchie, Mr. Sklar

134. Foreign Policy Decision Making and Tools of Statecraft. Prerequisite: course 120 or consent of instructor. Contrasts purposive and process models of individual and group decision making. Impact of strategic interaction and situational factors on foreign policy decision making. Implications for policy choice of tools of statecraft (i.e., threats/promises, military/economic/diplomacy). P/NP or letter grading.

Mr. Stein

135. International Relations of China. Prerequisite: course 20. Relations of China with its neighbors and the other powers, with emphasis on contemporary interests and policies of China vis-à-vis the U.S. and Soviet Union.

Mr. Baum

136. International Relations of Japan. Prerequisite: course 20. Foreign policies of Japan and interests and policies of other countries, particularly the U.S., as they relate to Japan.

137A-137B. International Relations Theory:

137A. (Formerly numbered C137A.) Examination of various theoretical approaches to international relations. P/NP or letter grading.

137B. Alternative approaches to analysis of international politics and their application to historical and contemporary cases.

Mr. Stein

138A-138B-138C. Defense Studies. Prerequisite: course 20:

138A. Defense Strategy and Policies. Analysis of national and international security problems in the nuclear era, with special emphasis on the U.S.

138B. Conduct of Modern War. Study of recent and contemporary wars, with special emphasis on political and strategic problems.

138C. Military Policy and Organization. Study of institutional and policy framework in the national military field. May be applied toward either Field II or Subfield IIIb.

139A-139Z. Special Studies in International Relations. Prerequisites: two courses in Field II, or course 20 and one course in Field II, and consent of instructor. Intensive examination of one or more special problems appropriate to international relations. Sections offered on regular basis, with topics announced in preceding term. Courses 119, 139, 149, 169, 179, and 189 may be applied no more than twice toward field concentration requirement. No more than three of these courses may be applied toward the major.

M139A. Political and Economic Issues in the Proliferation of Nuclear Weapons. (Same as Economics M103A.) Interdisciplinary approach to the problem of nuclear proliferation. Economic aspects of acquisition of nuclear weapons and economic aspects of nuclear energy treating technological, bargaining, and stability issues. Mr. Intriligator (alternate years)

Also see courses 175A-175B

Field III: American Politics

M140. Political Psychology. (Same as Psychology M138.) Prerequisite: Psychology 10. Examination of political behavior, political socialization, personality and politics, racial conflict, and psychological analysis of public opinion on these issues.

Mr. Sears, Mr. Sidanius

141. Public Opinion and Voting Behavior. Lecture, three hours; discussion, one hour. Study of character and formation of political attitudes and public opinion. Role of public opinion in elections, relationship of political attitudes to the vote decision, and influence of public opinion on public policy formulation.

Mr. Petrocik, Mr. Zaller

142. Politics of Interest Groups. Systematic investigation of role of political interest groups in governmental process, with attention to internal organization, leadership, and politics of such groups to goals and functions of various types of groups and to strategy and tactics of influence.

Ms. Orren

143. Legislative Politics. Study of those factors which affect character of the legislative process and capacity of representative institutions to govern in contemporary society.

Mr. Snowiss

144. The American Presidency. Study of nature and problems of presidential leadership, emphasizing impact of the bureaucracy, congress, public opinion, interest groups, and party system on the presidency and national policy-making.

Ms. Orren, Mr. Snowiss

145. Political Parties. Organization and activities of political parties in the U.S. Attention to historical development of the parties, nature of party change, campaign functions and electoral role of the parties, membership problems and party activists, political finance, and policy formulation practices.

Mr. Petrocik

146. Political Behavior Analysis. Prerequisites: courses 6, 141. Advanced course in use of quantitative methods in study of political behavior, especially in relation to voting patterns, political participation, and techniques of political action. Students conduct computer-aided analyses of issues and problems treated in course 141 and similar courses.

Mr. Petrocik, Mr. Zaller

M147A. Chicano/Latino Politics. (Same as Chicana and Chicano Studies M147A.) Lecture, three hours; discussion, one hour. Prerequisite: one 140-level course or one upper division course on race or ethnicity from history, psychology, or sociology, or consent of instructor. Introduction to political economy of racial domination in the U.S., concentrating on study of Mexican origin communities. Emphasis on identifying and explaining the historically changing relationship between class, race, and power by studying the interaction between state policies and practices, class and racial stratification systems, and cultural codes and modes of ideological discourse in each historical period.

Mr. Rocco

M147B. Minority Group Politics. (Same as Afro-American Studies M147.) Lecture, three hours; discussion, one hour. Prerequisite: one 140-level course or one upper division course on race or ethnicity from history, psychology, or sociology, or consent of instructor. Course M147A is not prerequisite to M147B. Emphasis on dynamics of minority group politics in the U.S., touching on conditions facing racial and ethnic groups, with black Americans being the primary case for analysis. Three primary objectives: (1) to provide descriptive information about social, political, and economic conditions of the black community, (2) to analyze important political issues facing black Americans, (3) to sharpen students' analytical skills.

Mr. Gilliam, Mr. Keller

M148. Mass Media and Elections. (Formerly numbered M197C.) (Same as Communication Studies M161.) Assessment of manner in which Americans' political beliefs, choices, and actions are influenced by mass media presentations, particularly during election campaigns. Topics include processes of political attitude formation and change, different types of media "effects," and role of the media in the American political process.

Mr. Iyengar

149A-149Z. Special Studies in Politics. Prerequisites: two courses in Field III, consent of instructor. Intensive examination of one or more special problems appropriate to American politics. Sections offered on regular basis, with topics announced in preceding term. Courses 119, 139, 149, 169, 179, and 189 may be applied no more than twice toward field concentration requirement. No more than three of these courses may be applied toward the major.

Field IV: Comparative Politics

152. British Government. Government and politics of the United Kingdom; British constitution, parliament, parties and elections, foreign policies, administrative problems, and local governments.

Mr. Freedman

153. Governments of Western Europe. Constitutional and political structure and development of France and other states of continental Western Europe, with particular attention to contemporary problems.

Mr. Rogowski, Mr. Tsebelis

153A. Game-Theoretic Approach to West European Politics. Course 153 is not prerequisite to 153A. Uses of elementary game-theory to investigate post-World War II Western European politics: social and political forces, and political institutions. Particular emphasis on study of three West European countries — United Kingdom, France, and Federal Republic of Germany (West Germany). Consideration of current developments and comparisons with the U.S.

Mr. Tsebelis

154. Governments of Central Europe. Constitutional and political structure and development of Germany and other Central European states, with particular attention to contemporary problems.

Mr. Korbonski, Mr. Rogowski

155. Advanced Pluralist Democracies. Main features and basic problems of economically advanced democracies, analyzed in comparative framework, topic by topic. Emphasis on cross-Atlantic comparisons, not only political but also sociological.

156. Government of the Soviet Union. Intensive study of political and institutional organization of the Soviet Union and its component parts, with special attention to contemporary political issues, as well as party and governmental structures.

Mr. Anderson, Mr. Korbonski

157. Governments of Eastern Europe. Study of political and governmental organization of the Communist countries of Eastern and Central Europe (exclusive of the U.S.S.R.), with special reference to institutions, practices, and ideologies including interregional relations.

Mr. Korbonski

158A-158B. Socialism in Europe. Origins as a mass movement, split into electoral and insurrectionary wings, development into social democracy in West Europe and into state socialism in Russia and East Europe, successes and failures of the welfare state, central planning and collapse of state socialism. P/NP or letter grading:

158A. West European Socialism. Mr. Wallerstein

158B. East European Socialism. Mr. Anderson

159. Chinese Government and Politics. Organization and structure of Chinese government, with particular attention to policies, doctrines, and institutions of Chinese Communism; political problems of contemporary China.

Mr. Baum, Mr. Tong

160. Japanese Government and Politics. Structure and operation of contemporary Japanese political system, with special attention to domestic political forces and problems.

161. Government and Politics in Southeast Asia. Institutional and political processes and problems of states in Southeast Asia (Burma, Thailand, Malaysia, Laos, Cambodia, Vietnam, Indonesia, and the Philippines).

162. Government and Politics in South Asia. Comparative study of political change and development and performance of public institutions in Southern Asia, with special emphasis on India, Pakistan, and Bangladesh.

Mr. Sisson

163A-163B. Government and Politics in Latin America. Comparative study of governmental and political development, organization, and practices:

163A. States of Middle America. Mr. Gonzalez

163B. States of South America.

Ms. Geddes, Mr. Gonzalez

164. Government and Politics in the Middle East. Comparative study of government in the Arab States, Turkey, Israel, and Iran.

Mr. Binder

165. Government and Politics in North Africa. Comparative study of government and politics of the North African states, including relationship between political development, political organization, and social structure.

166A-166B-166C. Government and Politics in Sub-Saharan Africa. Patterns of political change in Africa south of the Sahara, with special reference to nationalism, nation building, and problems of development.

166A. Western Africa; **166B.** Eastern Africa; **166C.** Southern Africa. Mr. Keller, Mr. Lofchie, Mr. Sklar

166D. Special Topics in African Politics. Consult *Schedule of Classes* for topics to be offered in a specific term. P/NP or letter grading.

Mr. Keller (F,W,Sp)

167. Ideology and Development in World Politics. Comparative study of major modes of political and economic development in the world today. Relations between industrial and nonindustrial societies in light of current debate about imperialism.

Mr. Sklar

168L. Comparative Political Analysis. Lecture. Prerequisites: two courses in Field IV, or course 50 and one course in Field IV. Either course 168L or 168S is required of all students concentrating in Field IV (students with credit for course 168S will not receive credit for this course). Conducted as lecture course. Major approaches to study of comparative politics. Concepts and methodology of comparative analysis.

Mr. Baum, Ms. Golden

168S. Comparative Political Analysis. Seminar. Prerequisites: two courses in Field IV, or course 50 and one course in Field IV, and consent of instructor. Either course 168L or 168S is required of all students concentrating in Field IV (students with credit for course 168L will not receive credit for this course). Conducted as seminar. Major approaches to study of comparative politics. Concepts and methodology of comparative analysis.

169A-169Z. Special Studies in Comparative Politics. Prerequisites: two courses in Field IV, consent of instructor. Intensive examination of one or more special problems appropriate to comparative politics. Sections offered on regular basis, with topics announced in preceding term. Courses 119, 139, 149, 169, 179, and 189 may be applied no more than twice toward field concentration requirement. No more than three of these courses may be applied toward the major.

Also see courses 115, 181, 183C

Subfield IIIa: Public Law

170. Anglo-American Legal System. Lecture, four hours; discussion, one hour. Evolution of English common law courts and their legal system, with emphasis on development of basic concepts of law which were received from that system in the U.S. and remain relevant today.

172A-172B. American Constitutional Law. Prerequisite: course 70. **172A.** Constitutional questions concerning separation of powers, federalism, and relationship between government and property. **172B.** Protection of civil and political rights and liberties under the constitution. Mr. Hobbs

173. Government and Business. Nature of the corporation; regulation of competition; government promotion of economic interests; regulation of industries clothed with a public interest; government ownership and operation. May be applied toward either Subfield IIIa or IIIb. Ms. Orren

174. Government and Labor. Labor force and nature of trade union; regulation of labor relations; programs to encourage full employment and to mitigate unemployment; protective labor legislation. May be applied toward either Subfield IIIa or IIIb. Ms. Orren

175A-175B. International Law. Study of nature and place of international law in conduct of international relations. May be offered in consecutive terms or simultaneously. If offered consecutively, course 175A is prerequisite to 175B, and students may take 175A alone for four units credit. If offered simultaneously, student must take both courses for eight units. Maximum of four units may be applied toward Field II.

Mr. Wilkinson

179A-179Z. Special Studies in Public Law. Prerequisites: course 70, one additional course in Subfield IIIa, any special requirements, consent of instructor. Intensive examination of one or more special problems appropriate to public law. Sections offered on regular basis, with topics announced in preceding term. Courses 119, 139, 149, 169, 179, and 189 may be applied no more than twice toward field concentration requirement. No more than three of these courses may be applied toward the major.

Also see courses 117, 185

Subfield IIIb: Public Organization and Policy

180. Theories of Organization and Decision Making. Examination of theoretical frameworks for studying public and private bureaucracies, with emphasis on ideologies, values, behavioral patterns, and concepts of organization. P/NP or letter grading.

Mr. Chisholm, Mr. D. Wilson

181. Comparative and Development Administration. Analysis of bureaucratic structures and function in the U.S., other industrialized, and less developed countries, primarily at national level. Special attention to methods of comparative analysis and utility of various models. May be applied toward either Field IV or Subfield IIIb. P/NP or letter grading. Mr. Fried

182A-182D. Topics in National Policy Development and Implementation. Investigation of complex process of policy development and implementation in the U.S., including roles of federal, state, and local agencies as well as private organizations. Subsections offered on particular policy areas, with topics announced in preceding term. P/NP or letter grading.

183A-183B-183C. Subnational Institutions:

183A. American State Government. Examination of governments of states of federal union as major sources of public policy in the U.S., with government of California as principal topic. P/NP or letter grading. Mr. D. Wilson

183B. Government of American Cities. Intensive analysis of contemporary urban governance in the U.S. Emphasis on such student participatory activities as fieldwork, research, and gaming of urban politics and policy problems. P/NP or letter grading. Mr. Fried

183C. Comparative Urban Government. Cross-national exploration of urban government performance in such areas as crime control, planning, and finance. Considerable emphasis on empirical analysis of comparative performance. May be applied toward either Field IV or Subfield IIIb. P/NP or letter grading. Mr. Fried

184. Bureaucracy and Public Management. Prerequisite: familiarity with American government. Nature of bureaucracy in modern government, with emphasis on the U.S.; explanation of why government agencies behave as they do. Focus on real and imagined problems with bureaucratic rule; evaluation of commonly proposed solutions for these problems. Examples from schools, armies, welfare bureaus, regulatory agencies, and intelligence services, among others. P/NP or letter grading. Mr. Chisholm

185. Judicial Oversight of Public Organizations. Legal controls of administration action. Substantive and procedural limits on administrative discretion imposed by legislation, executive and judicial agencies, and sources of legal powers of administrative bodies within these limits. May be applied toward either Subfield IIIa or IIIb. P/NP or letter grading. Mr. Hobbs

186. Governing the Bureaucracy in the U.S. Prerequisites: course 40, and junior standing or consent of instructor. Relationship between elected officials and administrators in the U.S., especially efforts of elected and appointed officials to monitor and control behavior of those in "permanent government" (career bureaucrats). Mr. Aberbach

189A-189Z. Special Studies in Public Organization and Policy. Prerequisites: two courses in Subfield IIIb, consent of instructor. Intensive examination of one or more special problems appropriate to public organization and policy. Sections offered on regular basis, with topics announced in preceding term. Courses 119, 139, 149, 169, 179, and 189 may be applied no more than twice toward field concentration requirement. No more than three of these courses may be applied toward the major.

Also see courses 138C, 173, 174

Special Studies

195A-195B-195C. Honors Seminars and Thesis. Prerequisites: one course in C197 series, 3.5 GPA in upper division political science courses, eligibility for Letters and Science honors. Course 195A is prerequisite to 195B, which is prerequisite to 195C. One-year honors seminar and thesis-writing sequence. Students entering course 195A are expected to have some experience in writing research papers and to have in mind a research topic suitable for treatment at length and in depth:

195A. Students define their research topic, select a suitable research method, determine appropriate sources of information, prepare research proposal, find a thesis director, begin their research, and submit progress reports or preliminary drafts. Class sessions emphasize critical and constructive discussions of students' topics, methods, and problems in research, as well as general consideration of political science research topics and methods of current or continuing interest. Students also meet privately with instructor to discuss progress of their research.

195B-195C. Writing of honors thesis under direction of a faculty member. Thesis is read by appropriate field committee and graded high honors, honors, or no honors. In Progress grading.

C197A-C197F. Seminars for Majors. Seminar, three hours. Prerequisites: political science major, upper division standing, 3.25 GPA in upper division political science courses, two upper division courses in field in which seminar is offered. Consult *Schedule of Classes* for topics to be offered in a specific term. May be applied toward distribution or concentration requirement. May be concurrently scheduled with various graduate courses.

M197G. Introduction to Development Studies: Political Economy of Development. (Same as Development Studies M100B.) Seminar, three hours. Prerequisite: some beginning experience in social sciences at college level. Seminar for undergraduates designed to examine concepts and issues arising from economic, social, and political change in the Third World. Mr. Sklar (Sp)

199. Readings in Political Science (2 to 4 units). Prerequisites: upper division standing, 3.0 overall GPA, consent of instructor and department chair. Individual study. May not be applied toward concentration or distribution requirement. May be repeated for a maximum of 16 units.

Graduate Courses

Formal Theory and Quantitative Methods

200A. Statistical Methods I (0 units). (Formerly numbered 204A.) Lecture, three hours. Corequisite: course 200AL. Introduction to statistical analysis of political data. Methods of data analysis, estimation, and inference. Mr. DeNardo

200AL. Statistical Methods Laboratory I (8 units). (Formerly numbered 204A.) Laboratory, three hours. Corequisite: course 200A. Mr. DeNardo

200B. Statistical Methods II. (Formerly numbered 204B.) Lecture, three hours. Prerequisites: courses 200A/200AL. Recommended: knowledge of elementary calculus. Applications of multiple regression in political science. Mr. Ansolabehere

200C. Statistical Methods III. (Formerly numbered 204C.) Lecture, three hours. Prerequisites: courses 200A/200AL, 200B, knowledge of elementary calculus. Statistical modeling of political processes. Topics include simultaneous equations models, discrete choice models, time-series models. Mr. Ansolabehere

M200E. Advanced Regression Analysis. (Same as Psychology M256.) Seminar, three hours. Prerequisite: consent of instructor. Diagnostics, robust regression, cross validation, resampling, outliers, missing data, geometry of regression, validity of assumptions, categorical dependent variables, transformation of variables. Access to Macintosh computer very helpful. Mr. de Leeuw, Mr. DeNardo

201A. Introduction to Formal Political Analysis. (Formerly numbered 205A.) Seminar, three hours. Survey of formal political theory to enhance literacy and provide analytical tools without presupposing mathematical background. Model building, collective goods, unanimity and the social contract, voting rules, paradoxes and impossibility theorems, stability, individual liberty and decentralization, strategic manipulation representation, vote trading. Mr. Schwartz

201B. Theory of Collective Choice. (Formerly numbered 205B.) Seminar, three hours. Recommended prerequisite for political science students: course 201A. Open to any student of politics, economics, philosophy, or mathematics with ability for deductive reasoning. Introduction to abstract, deductive study of voting systems and other collective-choice processes. Axiomatic method applied to politics and political economy, concept of rationality, and agenda control, choice-set or solution concepts. Mr. Schwartz

202. Mathematics for Political Science. (Formerly numbered 206.) Lecture, three hours. Prerequisite: working knowledge of high school algebra. Survey of mathematical methods useful in political science. Topics include differential and integral calculus, differential equations, optimization, and linear algebra. Mr. Ansolabehere, Mr. Wallerstein

203A. Economic Theory and Methods for Political Science I. (Formerly numbered 203.) Discussion, three hours. Prerequisite: knowledge of elementary calculus. Introduction to techniques of economic analysis and survey of major topics in formal political economy. Investigation of models of regulation, trade protection, collective bargaining, and economic growth as time permits. Ms. Bawn, Mr. Wallerstein

203B. Economic Theory and Methods for Political Science II. Discussion, three hours. Prerequisite: course 203A. Continuing survey of microeconomic techniques used in formal political science, with focus on market failures and on modeling individual choice in nonmarket situations. Specific topics include externalities, public goods and allocation mechanisms, collective action, spatial models, structure-induced equilibrium, and information asymmetries. Ms. Bawn, Mr. Wallerstein

204. Game Theory in Politics. (Formerly numbered 240.) Seminar, three hours. Survey of game theory, with emphasis on utilizing mathematical models to understand political and economic phenomena. Applications concern political participation, public goods, legislatures, industrial regulation, bureaucracies, interest groups, and party competition. Designed to help students become informed consumers of game theoretical literature in political science. Mr. Tsebelis

M208A. Game Theory. (Formerly numbered M242A.) (Same as Economics M214B.) Lecture, three hours. Prerequisites: Economics 213A or suitable mathematics courses. Bargaining theory, the core, the value, other solution concepts. Applications to oligopoly, general exchange and production economies, and allocation of joint costs. S/U or letter grading. Mr. Shapley

M208B. Topics in Applied Game Theory. (Formerly numbered M241.) (Same as Economics M215.) Lecture, three hours. Prerequisites: calculus or introductory probability, and graduate standing in economics or consent of instructor. Survey and applications of major solution concepts to models of bargaining, oligopoly, cost allocation, and voting power. S/U or letter grading. Mr. Shapley

M208C. Large Economies. (Formerly numbered M242B.) (Same as Economics M214C.) Lecture, three hours. Prerequisites: Economics 213A or suitable mathematics courses. Consideration of economics with a continuum of consumers and with a continuum of goods. Basic model applied to perfectly competitive equilibrium, the core, location models, and other models with nonconvex preferences and/or technology. S/U or letter grading. Mr. Ellickson

M208D. Multivariate Analysis with Latent Variables. (Formerly numbered M247.) (Same as Psychology M257.) Lecture, three hours. Prerequisite: consent of instructor. Introduction to models and methods for analysis of data hypothesized to be generated by unmeasured latent variables, including latent variable analogues of traditional methods in multivariate analysis. Causal modeling: theory testing via analysis of moment structures. Measurement models such as confirmatory, higher-order, and structured-means factory analytic models. Structural equation models, including path and simultaneous equation models. Parameter estimation, hypothesis testing, and other statistical issues. Computer implementation. Applications. Mr. Bentler

M208E. Bayesian Econometrics. (Formerly numbered M249.) (Same as Economics M232A.) Lecture, three hours. Prerequisites: Economics 231A, 231B. Subjective probability, introduction to decision theory, Bayesian analysis of regression, sensitivity analysis, simplification of models, criticism. S/U or letter grading. Mr. Leamer

209. Special Topics in Formal Theory and Quantitative Methods. Seminar, three hours.

Political Theory

210A-210B. Introduction to Political Theory. Lecture, three hours. Exploration of major texts and issues in political theory:

210A. Classical and Medieval Formulations from Plato through Aquinas.

Mr. Campbell, Mr. Rapoport, Mr. Wolfenstein

210B. Early Modern Period from Machiavelli through the Enlightenment.

Mr. Ashcraft, Mr. Campbell, Mr. Rapoport

M211. Morality of Capitalism. (Same as Management M293B.) Lecture, three hours. Prerequisite: consent of instructor. Examination of major philosophical writings that defend or criticize capitalism on basis of principles of right conduct and just social arrangements (i.e., on moral grounds).

Mr. J. Wilson

212. Seminar: Political Theory. (Formerly numbered 257.) Discussion, three hours.

Mr. Ashcraft, Mr. Binder

213. The Bible as Political Theory. Seminar, three hours. Examination of the Bible as a political document. Particular attention to concepts which have played an essential part in Western political thought (i.e., covenant, charisma, history, law, states of nature, human nature, and the state). Mr. Rapoport

C217. Selected Texts in Political Theory. (Formerly numbered C221.) Discussion, three hours. Critical examination of major texts in political theory, with particular attention to their philosophic system, their relations to contemporary political and intellectual currents, and importance of the system for present-day political analysis. May be concurrently scheduled with course C197A.

C218. Selected Topics in Political Theory. (Formerly numbered C222.) Discussion, three hours. Critical examination of a major problem in political theory. May be concurrently scheduled with course C197A.

219. Workshop: Political Theory. Discussion, three hours.

International Relations

220. International Relations Theory. (Formerly numbered 212A.) Discussion, three hours. Approaches to and central problems of international relations theory. Mr. Rosecrance, Mr. Stein

C221. Advanced International Relations Theory. (Formerly numbered C231D.) Discussion, three hours. Introduction to contemporary problems in international relations theory. May be concurrently scheduled with course C197B.

Mr. Stein, Mr. Wilkinson

222. Seminar: Strategic Interaction. Seminar, three hours. A strategic move influences the other person's choice by affecting his expectations of how we will behave. Discussion of theories of deterrence, coercive diplomacy, crisis management, war termination, and negotiation. Use of various theoretical approaches to explaining strategic interaction, including psychology, bargaining theory, and game theory.

Ms. Larson

C223. Politics and Strategies of Modern War. (Formerly numbered C231B.) Seminar, three hours. Analysis of various national security problems in both their military/technical and political dimensions. Development in some depth of issues likely to be raised in course 138A (not prerequisite). May be concurrently scheduled with course C197B.

Mr. Rosecrance

225. American Foreign Policy. Discussion, three hours. Discussion of approaches used to explain foreign policy-making at individual, small group, bureaucratic, and domestic politics levels. Application to selected cases in American foreign policy.

Ms. Larson

C226. The Making of American Foreign Policy. (Formerly numbered C231A.) Seminar, three hours. Intensive analysis of policy formulation process and substance of selected contemporary problems in foreign policy. Political and institutional factors affecting foreign policies; analysis of policy options. May be concurrently scheduled with course C197B.

Mr. Spiegel

C227. Foreign Policy Process. (Formerly numbered C231C.) Discussion, three hours. Prerequisites: courses 120 and 220, or consent of instructor. Political science and policy science approaches to national foreign policy process, with primary focus on formulation and implementation of American foreign policy. May be concurrently scheduled with course C197B.

230. Contending Perspectives on International Political Economy. (Formerly numbered 232A.) Discussion, three hours. Survey of various theoretical approaches to international political economy.

231. Markets, States, and International Political Economy. (Formerly numbered 232B.) Discussion, three hours. Interaction between international trade and investment and domestic political economies of both industrialized and industrializing societies.

Mr. Frieden

233A-233B-233C. Political Economy Workshops (0 units, 0 units, 12 units). Discussion, two hours. Open only to graduate students who have successfully completed major field examinations. Workshop for students writing or preparing to write dissertations. Reading and discussion of research in progress presented by UCLA faculty, visiting scholars, and advanced graduate students. Research paper of publishable length and quality required. In Progress grading.

Mr. Frieden

234A-234B-234C. Workshops: National Security, Foreign Policy, and International Relations (0 units, 0 units, 12 units). Discussion, two hours. Course 234A is prerequisite to 234B, which is prerequisite to 234C. Courses must be taken in sequence. Open to graduate students who have successfully completed major examinations and intended for students preparing for or working on dissertations. Reading and discussion of research in progress presented by UCLA faculty, visiting scholars, and advanced graduate students. Major research paper required. In Progress grading.

Mr. Rosecrance, Mr. Stein

C239. Selected Topics in International Relations. (Formerly numbered C253.) Discussion, three hours. May be concurrently scheduled with course C197B.

Comparative Politics

240A-240B. Comparative Politics. (Formerly numbered 215A-215B.) Discussion, three hours. Course 240A or consent of instructor is prerequisite to 240B. Approaches to study of comparative politics and problems of comparative political analysis.

Mr. Binder, Mr. Rogowski, Mr. Sisson

C241. African Studies. (Formerly numbered C250E.) Discussion, three hours. May be concurrently scheduled with course C197D.

Mr. Keller, Mr. Lotchie, Mr. Sklar

C242. Chinese and East Asian Studies. (Formerly numbered C250C.) Discussion, three hours. May be concurrently scheduled with course C197D.

Mr. Baum, Mr. Tong

C243. Japanese and Western Pacific Studies. (Formerly numbered C250D.) Discussion, three hours. May be concurrently scheduled with course C197D.

C244. Latin American Studies. (Formerly numbered C250A.) Discussion, three hours. May be concurrently scheduled with course C197D.

Ms. Geddes, Mr. Gonzalez

C245. Middle Eastern Studies. (Formerly numbered C250F.) Discussion, three hours. May be concurrently scheduled with course C197D.

Mr. Binder

C247. Russian and Slavic Studies. (Formerly numbered C250B.) Discussion, three hours. May be concurrently scheduled with course C197D.

Mr. Anderson, Mr. Horelick

247A. Evolution of Soviet Politics. Discussion, three hours. Discussion seminar surveying principal scholarly controversies concerning transitions between various stages in political evolution of the Soviet Union.

Mr. Anderson

C247B. Domestic Context of Soviet Foreign Policy. Discussion, three hours. Examination of domestic social, political, bureaucratic, and organizational sources of Soviet foreign and strategic policy, with emphasis on *Perestroika* and its implications. May be concurrently scheduled with course C197B.

C248. South Asian Studies. (Formerly numbered C250L.) Discussion, three hours. May be concurrently scheduled with course C197D.

Mr. Sisson

C250A. Western European Studies. (Formerly numbered C250H.) Seminar, three hours. May be concurrently scheduled with course C197D.

Ms. Golden, Mr. Rogowski, Mr. Tsebelis

250B. Political Development of Modern Europe. Discussion, three hours. Principal phases of political development from high feudalism to the present, together with theories of causation. Mr. Rogowski

251. Political Economy of Structural Adjustment. Discussion, three hours. Some familiarity with economics helpful. Principal arguments for structural adjustment (trade and economic liberalization) and consideration of political issues that arise from this process. Mr. Lofchie

252A. Parties and Party Systems. Discussion, three hours. Theories and practices of political parties, party systems, and elections in comparative perspective. Mr. Tsebelis

252B. Foundations of Representative Government. (Formerly numbered 236A-236B.) Discussion, three hours. Analysis of factors affecting development and functions of representative institutions in the U.S., Europe, and selected political systems of Africa, Asia, and Latin America. American politics or comparative politics field credit.

Mr. Sisson, Mr. Snowiss

253. Political Change in Communist Systems. Discussion, three hours. Examination of political context and consequences of structural reform in Communist systems; theories of post-Leninist political pluralization and convergence. Mr. Baum

254. Seminar: Social Class and Political Analysis. (Formerly numbered 227.) Discussion, three hours. Investigation of concept of social class as a tool of political analysis, with emphasis on current debates regarding definition and utility of class as an analytic category. S/U or letter grading.

Mr. Ashcraft, Mr. Wallerstein

255. Seminar: Political Change. (Formerly numbered C271.) Seminar, three hours. Interdisciplinary seminar directed toward comparative analysis of political development and modernization.

Mr. Binder, Mr. Sklar

256. External Sources of Domestic Politics. Discussion, three hours. Theoretical and historical studies of impact of war and trade on domestic cleavages, policy, and institutions. Mr. Rogowski

257. Labor and Working-Class Politics. Discussion, three hours. Questions and topics on comparative labor and working-class politics. Ms. Golden

258. Seminar: Political Violence. Seminar, three hours. Empirical theory and research on causes, processes, and outcomes of violent social conflict, including mass political protest, riot, revolt, terrorism, and revolution. Mr. Tong

259. Selected Topics in Comparative Politics. (Formerly numbered 235.) Discussion, three hours. Critical examination of a major problem in comparative politics.

American Politics

260A. Survey Course in American Politics: Political Parties and the Electoral Process. (Formerly numbered 214A.) Discussion, three hours.

Mr. Ansolabehere, Mr. Petrocik, Mr. Zaller

260B. Survey Course in American Politics: American Political Institutions. (Formerly numbered 214B.) Discussion, three hours.

Mr. Aberbach, Ms. Orren

M261A. Proseminar: Political Psychology. (Formerly numbered M224G.) (Same as History M236A and Psychology M228A.) Discussion, three hours. Introduction to political psychology: psychobiography, personality and politics, mass attitudes, group conflict, political communication, and elite decision making. Mr. Iyengar, Ms. Larson, Mr. Sears, Mr. Zaller

C261B. Mass Attitudes and Political Behavior. (Formerly numbered C224H.) Discussion, three hours. Prerequisite: course 141 or 260A or consent of instructor. Analysis of development and change of political attitudes in mass publics and their relationship to voting, protest, and violence. May be concurrently scheduled with course C197C.

Mr. Petrocik, Mr. Sears, Mr. Zaller

261C. Political Communication. Discussion, three hours. Broad survey of research bearing on role of mass media in the American political process. Topics include theories of persuasion, evolution of "media effects" research, reporting and advertising as determinants of election outcomes, adversarial versus deferential journalism, and analyses of media bias.

Mr. Iyengar

M261D. Seminar: Political Psychology. (Formerly numbered M224G.) (Same as Psychology M228B.) Discussion, three hours. Prerequisite: course M261A or Psychology 220A or consent of instructor. Examination of political behavior, political socialization, racial conflict, mass political movements, and public opinion. Mr. Sears

M261E. Critical Problems in Political Psychology. (Same as Psychology M228C.) Discussion, three hours.

C262. Political Parties. (Formerly numbered C224I.) Discussion, three hours. Critical examination of literature on party systems and organization. Special attention to political functions, electoral campaigns, and party cadres. May be concurrently scheduled with course C197C.

Mr. Petrocik

C263. Political Recruitment. (Formerly numbered C224B.) Discussion, three hours. Critical evaluation of literature concerned with backgrounds of public figures and with screening and sponsoring mechanisms affecting their careers and political perspectives. May be concurrently scheduled with course C197C.

C264. Politics and Society. (Formerly numbered C224C.) Discussion, three hours. Application of selected classical and contemporary sociological theories to politics. May be concurrently scheduled with course C197C.

Mr. Gilliam

265. Politics and Economy. (Formerly numbered 224A.) Discussion, three hours. Analysis of theoretical and practical relationships between economic organization and governmental institutions. Development and political implications of the market system, banking and finance, corporate enterprise, and organized labor. Mr. Ansolabehere, Ms. Orren

266. Group Theories of Politics. (Formerly numbered 224D.) Discussion, three hours. Critical appraisal of "group theory" approaches to study of political decision making, with special attention to empirical research problems and findings.

Ms. Orren

268. Seminar: Political and Electoral Problems. (Formerly numbered 259.) Seminar, three hours. Prerequisites: two graduate courses in politics.

Mr. Ansolabehere, Mr. DeNardo, Mr. Schwartz

269. Seminar: Political Behavior. Seminar, three hours.

C270. Legislative Behavior. (Formerly numbered C224E.) Discussion, three hours. Analysis of major approaches to study of representative institutions, with special emphasis on assumptions, concepts, methods, and theoretical implications associated with each approach. May be concurrently scheduled with course C197C.

Mr. Ansolabehere, Mr. Snowiss

C271. Executive Politics and the Presidency. (Formerly numbered C224F.) Discussion, three hours. Analysis of executive organization and leadership, with emphasis on the American Presidency. Special attention to theories of organization and personality and relationship between the executive and other institutions and groups. May be concurrently scheduled with course C197C.

Mr. Aberbach, Mr. Snowiss

272. Political Environment of the Federal Executive. (Formerly numbered 224J.) Discussion, three hours. Examination of political environment of the federal executive in the U.S. Special attention to executive/legislative relations. Mr. Aberbach

273. American Political Development. Discussion, three hours. National political institutions in historical perspective, theories of state building, state societal relations, political culture. Ms. Orren

275. Seminar: American Political Institutions. Seminar, three hours.

C276. Public Law. (Formerly numbered C216.) Discussion, three hours. Systematic analysis of scope and nature of public law, with particular attention to its materials and methods as illustrated in concepts and doctrines from various of its subjective fields. May be concurrently scheduled with course C197F.

Mr. Hobbs

C277. Making of the Constitution. (Formerly numbered C238B.) Discussion, three hours. Examination of development of constitutional law during selected periods of American history, such as founding, Marshall and Taney eras, and New Deal. Emphasis on both judicial and nonjudicial materials. May be concurrently scheduled with course C197E.

Mr. Hobbs

C278. Bill of Rights and the States. (Formerly numbered C238C.) Discussion, three hours. Examination of problems surrounding application to the states of Amendments 1 through 9. May be concurrently scheduled with course C197E.

Mr. Hobbs

C279. Seminar: Public Law. (Formerly numbered C252.) Discussion, three hours. May be concurrently scheduled with course C197E.

C280. Organization Theory Approaches to Organizational Analysis. (Formerly numbered C218.) Discussion, three hours. Analysis of several major conceptual alternatives for study of organizations, with emphasis on public administrative organizations. Topics include structural/functional and systemic approaches to organization, rational-choice models, and social psychological analyses. Each alternative critically evaluated for its strengths and weaknesses as guide to understanding organizational analysis. May be concurrently scheduled with course C197F.

Mr. Chisholm

C281. Public Policy Studies. (Formerly numbered C219.) Discussion, three hours. Systematic analysis of nature and scope of public policy and its programmatic implications. Special emphasis on government organizations and process, as well as types of government intervention and stages of the policy process. Substantive focus primarily on American public policy and analysis. May be concurrently scheduled with course C197F.

C282. Subnational Administrative Systems. (Formerly numbered C229.) Discussion, three hours. Analysis of state administrative systems, their local subsystems, and their outputs. May be concurrently scheduled with course C197F.

Mr. Fried

C283. Seminar: Public Organization and Policy. (Formerly numbered C254.) Seminar, three hours. May be concurrently scheduled with course C197F.

Mr. Chisholm

284. Seminar: Bureaucracy and Organization. (Formerly numbered 261.) Discussion, three hours. Prerequisite: consent of instructor. Exploration of topics in analysis of public and private bureaucracies and organizational theory. Topics include empirical theories of bureaucratic behavior; bureaucratic growth; bureaucratic behavior and political culture; organizational structures and strategies; and function of the executive.

Mr. Chisholm

Special Studies

With consent, credit may be applied toward any field.

290. Modern Political Economy. (Formerly numbered 225A.) Discussion, three hours. Discussion of implications for understanding politics of the thinking of politicians, bureaucrats, producers, consumers, and nations as utility maximizers. Topics include microfoundations for macromodels, forms of political participation, the state, government regulation, growth of government, bureaucracy elections, public policy, inflation. Mr. Stein

M291A-M291B. Social Theory and Comparative History. (Formerly numbered M223A-M223B.) (Same as History M203A-M203B and Sociology M296A-M296B.) Colloquium, three and one-half hours every other week. Introduction to historically rooted social theory and theoretically sensitive history, following the program of the Center for Social Theory and Comparative History. Each course may be taken independently for credit.

Mr. Ashcraft, Mr. Brenner

292A-292B. Introduction to Political Inquiry. (Formerly numbered 203A-203B.) Discussion, three hours. **292A.** Problems of Scientific Inquiry and Normative Discourse; **292B.** Major Conceptual Frameworks and Approaches to Political Science. Prerequisite: course 292A or equivalent.

293. Terrorism. Discussion, three hours. Analysis of the concept, relationship of terrorism to other forms of violence, history of the phenomena, various forms, and costs. Mr. Rapoport

294. Religion, Revolution, and Violence. Discussion, three hours. Critical examination of various accounts of religion as a revolutionary and conservative force. Special attention to millenarianism and revolution and to the revealed religions, Christianity, Judaism, and Islam. Mr. Rapoport

295. Comparative Fundamentalism. Discussion, three hours. Study of political meaning of the fundamentalist phenomena in various religions, especially Christianity, Judaism, and Islam. Mr. Rapoport

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

495. Teaching Political Science. Workshop in teaching techniques, including evaluation of each student's own performance as a teaching assistant. Normally to be taken by all new teaching assistants in first term of their assistantships. May be taken only in term in which students are teaching assistants. May not be applied toward M.A. or Ph.D. course requirements. S/U grading.

501. Cooperative Program (2 to 8 units). Prerequisite: consent of UCLA graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Used to record enrollment of UCLA students in courses taken under cooperative arrangements with USC. S/U grading.

590A. Directed Reading for Ph.D. Dissertation Proposal (0 units). Required of all Ph.D. students. Must be taken under supervision of research adviser prior to term in which oral examination is taken. Research for proposed dissertation topic and submission of bibliographic essay on that topic. In Progress grading (credit to be given only on completion of course 590B).

590B. Directed Research for Ph.D. Dissertation Proposal (8 units). Prerequisite: course 590A. Required of all Ph.D. students. Must be taken under supervision of research adviser prior to or during term in which oral examination is taken. Development and writing of research design for Ph.D. dissertation. With consent of research adviser, courses 233A-233B-233C may, by petition, be accepted as equivalent to courses 590A and 590B.

596. Directed Individual Study or Research (2 to 4 units). May be applied only three times toward minimum course requirement in first two years. May be repeated.

597. Preparation for Ph.D. Qualifying Examinations (2 to 12 units). May be repeated. S/U grading.

599. Research for and Preparation of Ph.D. Dissertation (2 to 12 units). May be repeated. S/U grading.

William McCarthy, Ph.D.
Dahlia Zaidel, Ph.D.

Scope and Objectives

We all practice some form of intuitive psychology to understand ourselves and the world around us. In contrast, the psychology curriculum at UCLA focuses on psychology as a scientific discipline that uses systematic methods of investigation to understand general principles of human behavior, cognition, and emotion.

The curriculum treats psychology as a biosocial science; human behavior is viewed from both biological and social viewpoints. The biosocial perspective allows students to study a broad range of topics such as psychobiology, animal behavior, learning, motivation, perception, cognition, measurement, memory, social psychology, personality, and clinical, developmental, community, and health psychology.

According to recent surveys, the UCLA Psychology Department is ranked as one of the top departments of its kind in the country in terms of faculty quality. The curriculum is both wide in terms of range of courses, and deep in terms of quality of the faculty.

The undergraduate curriculum provides a basic liberal arts foundation. It does not focus on training students to be only professional psychologists, but rather helps them to understand the world and our place in it. A choice of three majors, leading to either the B.A. or B.S. degree, is offered.

At the graduate level, the department offers training leading to the Ph.D. degree with emphases in various fields. The program is designed to prepare psychologists to function effectively as scientific investigators, college and university teachers, and professional psychologists.

Undergraduate Study

To meet the diverse needs of students, there are three different major curricula: the psychology major, the cognitive science major, and the psychobiology major. The first leads to a Bachelor of Arts degree; the other two culminate in a Bachelor of Science degree.

All courses required for these majors (which include lower division courses and major courses) must be taken for a letter grade. Graduate-level courses may not be applied toward degree requirements for any Psychology Department undergraduate major.

Bachelor of Arts in Psychology

The general psychology major emphasizes the experimental and research aspects of the field. It is a good choice for students with an interest in human behavior who wish to receive a general education in the liberal arts and sciences. For additional information, contact the Undergraduate Advising Office, 1531 Franz Hall, early in your career.

Preparation for the Major

You must file a petition in the Undergraduate Advising Office to declare the pre-psychology major; you are identified as a pre-psychology major until the preparation for the major requirements have been satisfied. The following required courses must be taken for a letter grade (a C- or better in each course and a 2.3 overall grade-point average in the preparation courses) before you reach 110 total units (effective Fall Quarter 1990 for all entering freshmen; transfer students must complete all preparation courses by the end of the first year of enrollment): Anthropology 7 or 10 or 12 or 15; Biology 2 or 3 or 5; Chemistry and Biochemistry 2 (if you have completed one year of high school chemistry with a C or better, this requirement is waived) or 11A; Mathematics 2 or two terms of calculus; Physics 10 or 3A or 6A or 8A/8AL; one course from Philosophy 1, 4, 6, 7, 8, 9, 21, 22; Psychology 10 or 11, 42; Psychology 41 (recommended) or Statistics 50. Psychology 41 and 42 should be taken early in your career; these courses are open only to students who have declared the pre-psychology major one term before the term in which they plan to enroll. You cannot take Psychology 42 until you have passed one of the statistics courses with a grade of C- or better.

Repetition of more than two preparation courses in which a grade of D or F was received or of any preparation course more than once results in automatic denial of admission to the major (effective Fall Quarter 1990 for all entering freshmen and transfer students).

These are minimum requirements in preparing for the major. More advanced courses in psychology, science, and statistics would provide stronger preparation and are highly recommended for students planning to pursue graduate work in psychology.

The Major

After completing the preparation courses, you must petition to enter the major at the Undergraduate Advising Office.

Required: (1) Psychology 110, 115, 120, 125, 130 (for students entering Fall Quarter 1987 and thereafter), 135; (2) one course from 111, 113, 116, 121, 136A and one course from 126, 136B, 171A, 174; (3) three additional upper division elective courses (12 units) in psychology.

All upper division courses must be taken for a letter grade. A C- or better is required in each core course (item 1 above) and in each laboratory (item 2), and you must have a 2.0 grade-point average in all upper division major courses.

Bachelor of Science in Cognitive Science

This major focuses on the study and implementation of intelligent systems, both human and artificial. Cognitive science involves the study of

cognitive psychology, computer science, mathematics, and related disciplines. For additional information, contact the Undergraduate Advising Office, 1531 Franz Hall, early in your career.

Preparation for the Major

You must file a petition in the Undergraduate Advising Office to declare the pre-cognitive science major; you are identified as a pre-cognitive science major until the preparation for the major requirements have been satisfied. The requirements listed below are effective Fall Quarter 1992 for all freshmen and new transfer students and for any students who have not declared the cognitive science major by Fall Quarter 1992. Questions about the major should be directed to the Undergraduate Advising Office, 1531 Franz Hall.

The following required courses must be taken for a letter grade (a C or better in each course and a 2.5 overall grade-point average in the preparation courses): Biology 2 or 3 or 5; Chemistry and Biochemistry 2 (if you have completed one year of high school chemistry with a C or better, this requirement is waived) or 11A; Mathematics 31A, 31B; Philosophy 7, 8, or 9; Physics 10 or 3A or 6A or 8A/8AL; Program in Computing 10A, 10B, 15; Psychology 10 or 11, 42, 85; Psychology 41 (recommended) or Statistics 50. Psychology 41 and 42 should be taken early in your career; these courses are open only to students who have declared the pre-cognitive science major one term before the term in which they plan to enroll. You cannot take Psychology 42 until you have passed one of the statistics courses with a grade of C- or better.

Repetition of more than two preparation courses in which a grade of D or F was received or of any preparation course more than once results in automatic denial of admission to the major (effective Fall Quarter 1990 for all entering freshmen and transfer students).

The Major

After completing the preparation courses, you must petition to enter the major at the Undergraduate Advising Office.

Effective Fall Quarter 1992 students who complete Psychology M117A-M117B-M117C will receive equivalent credit for course 115 and two upper division cognitive science electives.

Required: (1) Psychology 115, 120, and one course from 124A through 124I; (2) one course from 186A or 186B and one course from 121, 186A, 186B, or Computer Science 161; (3) three upper division elective courses (12 units) from Psychology 110, 112A through 119N, 123, 124A through 124I (if taken for the major, may not be applied as an elective), 130, 133B, 135, M142, 150, 151, 187, 189, 190B or 190C (if content is approved by the Undergraduate Advising Office and courses have not been applied toward the Psychology 188 requirement), Computer Science 111 through M196B, Linguistics 103 through C185B, Mathematics 110A through

151, Philosophy 126A through 136, Statistics M152A through M153B; (4) two terms of Psychology 188 (may be fulfilled by taking any two courses from 188, 190C, or 199, provided content is approved by the Undergraduate Advising Office).

You must have a 2.0 grade-point average in all upper division major courses. With the exception of Psychology 188, each course must be taken for a letter grade.

Quantitative Methods Concentration

This concentration is intended to give students more extensive preparation in statistics. The following additional courses are required: Mathematics 32A, 32B, 33A, 33B, and either M150A-150B and 151, or Statistics M152A and 152B-152C. Psychology 41 is not required if you select this specialization.

Bachelor of Science in Psychobiology

This major is designed for students who plan to go on to postgraduate work in physiological psychology, neuroscience, behavioral aspects of biology, or the health sciences. Psychobiology involves the study of brain-behavior relations and laboratory training in standard brain research techniques. For additional information, contact the Undergraduate Advising Office, 1531 Franz Hall, early in your career.

Preparation for the Major

You must file a petition in the Undergraduate Advising Office to declare the pre-psychobiology major; you are identified as a pre-psychobiology major until the preparation for the major requirements have been satisfied. The following required courses must be taken for a letter grade (a C- or better in each course and a 2.0 overall grade-point average in the preparation courses): Biology 5, 6, 9; Chemistry and Biochemistry 11A, 11B/11BL, 11C/11CL, 132A, 132B/132BL; Mathematics 3A, 3B, and 3C, or 31A, 31B, and 32A; Physics 6A, 6B, and 6C, or 8A/8AL, 8B/8BL, and 8C/8CL; Psychology 10 or 11, 42; Psychology 41 (recommended) or Statistics 50. Psychology 41 and 42 should be taken early in your career; these courses are open only to students who have declared the pre-psychobiology major one term before the term in which they plan to enroll. You cannot take Psychology 42 until you have passed one of the statistics courses with a grade of C- or better.

Repetition of more than two preparation courses in which a grade of D or F was received or of any preparation course more than once results in automatic denial of admission to the major (effective Fall Quarter 1990 for all entering freshmen and transfer students).

The Major

After completing the preparation courses, you must petition to enter the major at the Undergraduate Advising Office.

Effective Fall Quarter 1990 students who complete Psychology M117A-M117B-M117C will receive equivalent credit for course 115 and two upper division psychobiology electives.

Required: (1) Biology 100A, 108, 129 or Psychology 118 or Anthropology 128A and 128B, and Psychology 110, 115, 116, 120; (2) one course from Psychology 125, 127, 130, 135; (3) 16 units of graded elective courses from the following list: Biology 107, 112, 113A, 114 (no more than one from this group); Psychology 119A through 119N, 190C (only if content is approved by the Undergraduate Advising Office), Biology 102, C104, 105, 106, 110, 111, 115, 117, C119, 120, 122, 124 (only four units may be applied toward the major), 131 (only four units may be applied toward the major), 135, 138, 145A, 145B, 145C, 146, 153, CM156, 157, 158, 164, 166, 167, 168, 170, 171, 172A, 172B, M173, 179, Chemistry and Biochemistry 153A, 153L.

You must have a 2.0 grade-point average in all upper division major courses, and each must be taken for a letter grade.

Fieldwork and Research Opportunities

Many research and fieldwork opportunities are open to students who wish to expand their knowledge and broaden their background in the field of psychology. These experiences can be enriching and help bring undergraduates closer to understanding research and its applications in the everyday world. At least one of the following courses is recommended for students planning postgraduate study: Psychology 188, 192, 193, 194, 199, or the Student Research Program (SRP) through the College of Letters and Science. Information about these courses and programs is available in the Undergraduate Advising Office, 1531 Franz Hall.

Developmental Disabilities Immersion Program and Concentration

The Developmental Disabilities Immersion Program is cosponsored by the Department of Psychology, the Department of Psychiatry and Biobehavioral Sciences, and the Office of Instructional Development — Field Studies Development. Each year a group of 30 students is selected for the program which runs during Winter/Spring Quarters. Students participate in courses, fieldwork, and research at selected University and community facilities serving persons with developmental disabilities.

Required courses include Psychology/Psychiatry M180A, M180B, M181A-M181B. Students also take other courses related to developmental disabilities. Many of the courses fulfill psychology undergraduate major requirements (consult the Undergraduate Advising Office for details). Student individualized

research projects are also part of the immersion experience.

To earn a concentration, majors in psychology, cognitive science, and psychobiology must be accepted into the Developmental Disabilities Immersion Program. Information and applications are available from Field Studies Development, 70 Powell Library Building. The following courses are required for the concentration: Psychology 127 (may also be applied as one of the three upper division electives required for the psychology major), 130 (also satisfies a core requirement for the psychology major), M180A, M180B, M181A-M181B, 193 (two terms). With the exception of course 193, each course must be taken for a letter grade. Students in the department who complete the requirements receive a certificate of completion from the department at graduation.

For more information, contact the Undergraduate Advising Office (1531 Franz Hall) or Field Studies Development (70 Powell Library Building).

Specialization in Computing

Majors in psychology, psychobiology, and cognitive science may select a specialization in computing by (1) satisfying all the requirements for a bachelor's degree in the specified major, (2) completing Program in Computing 10A, 10B, and at least one course from 10C, 15 (recommended), 30, 60, and (3) completing Psychology 85 and at least two courses from M142, 150, 151, 186A, 186B. A grade of C or better is required in each course. You graduate with a bachelor's degree in your major and a specialization in computing.

Honors

Honors Courses

Each year the department offers a selection of honors courses, designated with an H suffix. The courses provide close contact with faculty members, emphasize readings in the original literature, student reports and small group discussions, and may include field or research experience. All such courses offer credit toward departmental honors and College Honors.

Honors Program

Psychology, cognitive science, and psychobiology majors intending to continue study at the graduate level are encouraged to apply for the departmental honors program. You work for a year with a faculty sponsor on a research project that is the basis of a formal honors thesis. During that year you also participate in a weekly seminar (Psychology 190A-190B-190C) in which thesis projects are presented and discussed and other topics of interest are explored with invited faculty members and other guests. In addition, you must take two (or more) psychology honors courses selected from a list provided by the department. Satisfactory completion of the program and the oth-

er requirements for the major leads to awarding of the degree with honors or highest honors. Consult the Undergraduate Advising Office early in your educational planning for further information and application forms.

Infant Development Program

The Infant Development Program is designed as a teaching and research facility for the department and is set up to accommodate both cross-sectional and longitudinal investigation of infants, toddlers, and their parents. In addition, the program provides an opportunity for students in developmental psychology and other areas to acquire firsthand experience working with infants and toddlers through a two- or three-term sequence of Psychology 193. The program is located in Franz Hall and provides child care for about 13 infants ranging in age from four months to two and one-half years.

Clinic for the Behavioral Treatment of Children

The Clinic for the Behavioral Treatment of Children carries out diagnosis, treatment, and research on children with severe psychological problems, such as autistic and schizophrenic children and those with severe developmental disorders. The treatment philosophy is largely behavioral/educational, with emphasis on language acquisition, peer and school integration, and parent training. Students are taught behavioral treatment procedures and work in an apprenticeship relation to senior staff. Prior research has focused on variables controlling self-destructive behavior, perceptual deficits, language acquisition, and emotional/social attachments. The clinic serves as a teaching and research environment for both graduate and undergraduate students.

National Research Center on Asian American Mental Health

The National Research Center on Asian American Mental Health (NRCAAMH) is one of several centers in the nation devoted to ethnic minority research, and the only one focusing on Asian Americans. NRCAAMH acts in a national multidisciplinary leadership role in the conduct and promotion of applied and basic research regarding the mental health of various Asian groups (e.g., Chinese, Japanese, Koreans, Filipinos, Southeast Asians, etc.) in the U.S. The center provides undergraduate and graduate students with opportunity to participate in research projects, publish scholarly articles, and collaborate with other researchers in the field.

Preparation for Graduate Study

The curriculum for the undergraduate major fulfills admission requirements at most universities. However, candidates seeking admission to research-oriented graduate programs should strengthen their preparation with additional experience in research, methodology, and statistics. Advanced undergraduate courses and seminars, independent study projects, honors theses, and fieldwork positions are also suggested. Consult the Undergraduate Advising Office in 1531 Franz Hall or the Graduate Admissions Office in 3453 Franz Hall for more information.

Ph.D. Degree

The graduate program in psychology leads to the Ph.D. degree. Although you may obtain the M.A. degree en route to the Ph.D., the department does not admit candidates for the M.A. degree only. For the Ph.D. degree, a thorough background in research methodology and psychological theory is required. Major specialized training is available in the areas of psychology listed below under "Major Fields or Subdisciplines."

A departmental brochure describing the graduate program in psychology is available in 3453 Franz Hall.

Admission

Admission to the Ph.D. program normally requires an undergraduate degree in psychology. However, students from other areas (particularly the mathematical, physical, biological, and social sciences) may be admitted. Admission is for Fall Quarter only and on a full-time basis only. Applicants must mail the following documents directly to the Psychology Department, 3453 Franz Hall, UCLA, Los Angeles, CA 90024-1563, by January 3 to be considered for admission the following Fall Quarter:

- (1) The departmental Application for Admission to the Doctoral Program and supplementary materials, available in 3453 Franz Hall.
- (2) Three letters of recommendation.
- (3) Two official transcripts from each college attended.
- (4) Scores from the Graduate Record Examination (GRE) General Test and the Subject Test in Psychology (taken within the last three years).
- (5) The Test of English as a Foreign Language (TOEFL), required of all international applicants whose native language is not English.

Students who are being considered as finalists for the clinical program may be required to meet with the clinical faculty for an interview.

Admitted students are expected to have had courses equivalent to the following: (1) Psychology 41; (2) two courses from Psychology 110, 115, 120; and (3) two courses from the

following alternatives: (a) Psychology 125 or 127; (b) 130; and (c) 135. If you have completed one of the UCLA Psychology Department majors, you will have satisfied the undergraduate preparation requirements. If you have not had training in these areas, you need to take appropriate coursework or examinations. In addition, you are expected to have taken at least one course in biology or zoology, one course in mathematics (e.g., calculus), and two courses in the physical sciences (physics and/or chemistry). A course in anthropology, philosophy, or sociology may be substituted for one of the physical sciences courses. Continuation in the Ph.D. program is contingent on successfully clearing undergraduate deficiencies by the end of your fourth term in residence.

Major Fields or Subdisciplines

You may major in behavioral neuroscience, clinical, cognitive, developmental, learning and behavior, measurement and psychometrics, personality, or social psychology. Training is also available in community psychology.

Course Requirements

General Course Requirements — All students, regardless of area, must fulfill the requirements listed below.

The core program must be completed within your first two years in residence. The core program includes four core courses, plus Psychology 250A, 250B, 251A-251B (and 251C, if an additional term is needed to complete the course).

Nine graduate courses (36 units), including Psychology 250A, 250B, 251A-251B (research project must be complete), and at least three of the four core courses are required for the M.A. degree. One 596 course (four units) may be applied. Courses in the 400 series may not be applied. All undergraduate deficiencies must be cleared.

By the end of the second year, you must complete at least one individual research course (596) and at least three second-year graduate courses, including one quantitative course from Psychology 238, 252A, 253, 254A, 255, M256, M257, 258, 259, 287.

During the third year, you must enroll in a minimum of three graduate-level courses, plus one term of course 596. At least one term of course 596 or 599 should be taken during the fourth year and each remaining year in the graduate program.

Major Area Course Requirements — Each area has its own specific requirements. A course may not be applied toward requirements in more than one major or minor area unless no other course options are designated. Requirements are as follows: *behavioral neuroscience* — eight units from the 205 series, three terms of course 212, two approved behavioral neuroscience seminars, and Neuroscience M201 and either M202 and M204 or Psychology M117A;

clinical — Psychology 270A-270B-270C, 271A-271B-271C, 277A, and at least four additional clinical courses, distributed among the 272 series (zero to two courses) and advanced courses beyond 272 (two to four courses); *cognitive* — courses 260A-260B, plus four additional courses, including at least two selected from 247B, 259, 261 through 266, and at least one from 268A through 268E or 269; *developmental* — courses 240A-240B, two courses from 242A through 242F or 244, one of the quantitative courses listed under second-year requirements, and 299; *learning and behavior* — courses 200A, 200B, plus two courses from 204A, 204B, 204C, 204E, 208, 210, 281, 290, 293; *measurement and psychometrics* — five courses from 249, 252A, 253, 254A, 254B, 255, M256, M257, 258; *personality* — courses 232, 233, 235, 278; *social* — courses 220A, 220B, 220C, three social seminars taught by three different faculty members, and courses 226A-226B-226C each year for the first three years of the program.

Minor Area Course Requirements — The minor area requirement is normally satisfied by taking three to four specified courses in one of the following areas: behavioral neuroscience, cognitive, developmental, experimental psychopathology, health, learning and behavior, measurement and psychometrics, personality, political, or social psychology. You may also petition for an individualized minor. See departmental bulletins for further details.

Qualifying Examinations

The qualifying examination generally consists of three separate sections. The first is an examination administered by the major area, which examines in breadth your knowledge of the major field. The second section is an individualized examination which examines in depth your knowledge of your area of specialization within the major field. The third section is the University Oral Qualifying Examination. All Ph.D. requirements listed above must be completed before this section can be taken. After successful completion of the oral examination, you are advanced to candidacy and may begin work on the dissertation.

Contact the department for the specific examination requirements of the various areas of specialization.

Practicum and Internship Requirements for Clinical Students

(1) At least six terms of approved supervised preinternship practicum (Psychology 401 — 10 to 15 hours per week) are required and are usually taken in the second and third years.

(2) The equivalent of at least nine months of supervised internship (Psychology 451) in an acceptable setting approved by the faculty, taken prior to the award of the degree, is required. This is usually taken in the fourth or fifth year. The remaining three months of supervised internship must be completed as out-

lined in the internship contract after the award of the degree. Contact the department for further information on internship assignments.

Candidate in Philosophy Degree

You are eligible to receive the C.Phil. degree on advancement to candidacy for the Ph.D.

Final Oral Examination

The final oral examination is required of all candidates for the Ph.D. degree.

Psychology Clinic

The Psychology Clinic in the Department of Psychology is a major training center for clinical psychology students in the Ph.D. program. It provides a broad range of psychological services to clients, including assessment and individual, couples, family, and group therapy. Clients cover the entire age range and represent diverse populations in the community.

Student therapists receive very close supervision and are encouraged to relate their case material to academic learning and current research. Students and faculty members are also involved in a variety of clinical research projects.

Lower Division Courses

10. Introductory Psychology. Not open to students with credit for course 11. General introduction including topics in cognitive, experimental, personality, developmental, social, and clinical psychology; six hours of psychological research.

11. Principles of Psychology (5 units). Lecture, three hours; discussion, one hour; laboratory, one hour. Recommended for premajors. Not open to students with credit for course 10. Introduction to psychology, with emphasis on critical analysis and research. Readings include selections from primary research literature. Discussion sections focus on writing assignments; labs focus on research simulation.

15. Introductory Psychobiology. Designed for non-majors. Survey of genetic, evolutionary, physiological, pharmacological, and experiential factors affecting behavior. Using comparative approach where appropriate, emphasis on relevance of biological mechanisms to understanding of man and his interaction with his environment.

41. Psychological Statistics. Lecture, five hours. Prerequisites: course 10, Mathematics 2, and psychology premajor standing or consent of instructor. Basic statistical procedures and their application to research and practice in various areas of psychology.

42. Research Methods in Psychology (6 units). Lecture, two hours; laboratory, four hours. Prerequisites: courses 10, 41, with grades of C- or better. Introduction to research methods and critical analysis in psychology. Lecture and laboratory topics include experimental and nonexperimental research methods, statistical design and analysis as applied to a broad range of basic and applied research issues.

85. Introduction to Cognitive Science. (Formerly numbered 97.) Lecture, three hours. Exploration of computer metaphor of mind as an information-processing system, focusing especially on perception, knowledge representation, and thought based on research in cognitive psychology, neuropsychology, and artificial intelligence. Many examples from visual information processing. (W)

88. Lower Division Seminar. Seminar, three hours. Prerequisite: course 10. Limited to freshmen and sophomores. Intensive analysis in seminar situations of selected topics of current psychological interest. Consult *Schedule of Classes* for topics and instructors. May be repeated for credit.

97. Variable Topics in Psychology. Lecture, three hours. Prerequisite: course 10 or 11. Study of selected topics in psychology at introductory level; lecture format designed for freshmen and sophomores. (W,Sp)

Upper Division Courses

M107. Asian American Personality and Mental Health. (Same as Asian American Studies M107.) Lecture, three hours. Prerequisite: course 10. Foundations of personality development and mental health among Asian Americans. Topics include culture, family patterns, achievements, stressors/resources, and immigrant and minority group status. Mr. Sue

110. Fundamentals of Learning. Lecture, three hours; discussion, one hour. Prerequisites: courses 10, 41, junior standing. Experimental findings on animal and human conditioning; retention and transfer of training; relation of learning and motivation. Intended to provide empirical basis for theory and research in this area.

111. Learning Laboratory. Lecture, two hours; laboratory, three hours. Prerequisites: courses 41, 42, 110 (may be taken concurrently), psychology major standing. Laboratory experience with techniques in study of learning, especially with animals.

112A. Basic Processes of Motivated Behavior. Lecture, 90 minutes; discussion, 90 minutes. Prerequisites: courses 10, 41, 110, junior standing. Examination of some basic processes underlying motivated behavior, stressing environmental determinants of behaviors such as feeding, drinking, and reproduction-related behavior. Discussion of physiological mechanisms that contribute to such behaviors. Consideration of topics such as reinforcement, acquired motivation, and drug addiction. Evaluation of evidence obtained in laboratory studies conducted with animals.

112B. Psychobiology of Fear and Anxiety. Lecture, three hours. Prerequisites: courses 10, 41, 110, junior standing. Presentation of biological and behavioral approaches to fear and anxiety, taken from laboratory and applied research. In addition to overview of major principles from each approach, emphasis on areas in which significant research advances have recently occurred. Examination of concordance and discordance between results from laboratory and applied research.

112C. Principles of Skill Acquisition. Lecture, three hours. Prerequisites: course 110 or 120 (recommended), and psychology major standing or consent of instructor. Investigation into principles of human skill learning, with focus on general principles of skill learning derived from laboratory settings. These principles have relevance to various industrial or occupational settings, musical performances, vehicle control, sport, and other activities in which complex perceptual-motor skills must be acquired with practice. Major topics include laboratory measurement procedures, effective structure of practice settings, feedback and knowledge of results, learning of automaticity, individual differences, and evaluation of various theories of skill learning.

113. Behavior and Alcohol Laboratory. Discussion, two hours; laboratory, four hours. Prerequisites: courses 10, 41, 42. Students conduct an experiment studying effects of alcohol on learning and complex processes using paid volunteers. Examination of set and setting and role of individual differences in relation to current theories of alcohol use and abuse. (W)

113H. Behavior and Alcohol Laboratory (Honors). (Formerly numbered 198H.) Discussion, two hours; laboratory, four hours. Prerequisites: courses 10, 41, 42. Honors course parallel to course 113.

- 114. Alcoholism.** Prerequisite: upper division standing. Theories and research on impact, causes, characteristics, and treatment of alcoholism considered from a biobehavioral point of view.
- 115. Physiological Psychology.** Lecture, three hours; discussion, one hour. Prerequisites for majors: course 41, Biology 2, junior standing; for nonmajors: Biology 5, 9, consent of instructor. Integrative activities, receptor and effector processes in relation to neuromuscular structure and function. Facts, problems, and methods.
- 116. Physiological Psychology Laboratory.** Lecture, one hour; laboratory, three hours. Prerequisites: courses 41, 42, 115 (may be taken concurrently), psychology major standing. Laboratory experience with various topics in physiological psychology.
- M117A-M117B-M117C. Neuroscience: From Molecules to Mind (5 units each).** (Same as Biology M175A-M175B-M175C and Physiological Science M180A-M180B-M180C.) Lecture, four hours; discussion, one hour. P/NP or letter grading:
- M117A. Cellular Mechanisms.** Prerequisites: Biology 9 or equivalent, Physics 3B or 6B or 8C. Cellular physiology, pharmacology, molecular biology, and development of the nervous system. (F)
- M117B. Integrative Mechanisms.** Prerequisite: course 115 (or Biology 171 or Physiological Science 111A) or M117A (or Biology M175A or Physiological Science M180A). Central and reflex mechanisms of homeostasis, sensory information processing, and motor control. (W)
- M117C. Neural Bases of Behavior.** Prerequisite: course 115 (or former Kinesiology 126) or M117B (or Biology M175B or Physiological Science M180B). Neural mechanisms underlying motivation, learning, and cognition. (Sp)
- 118. Comparative Psychobiology.** Prerequisites: course 115, junior psychology major standing. Survey of determinants of species-specific behavior, including genetic influences and learning.
- 119A. Neuropsychopharmacology.** (Formerly numbered 119C.) Lecture, three hours. Prerequisites: course 115, junior standing. Analysis of basic pharmacologic principles to include interaction of drugs with neurochemically significant substances in the brain.
- 119AH. Neuropsychopharmacology (Honors).** (Formerly numbered 119CH.) Lecture, three hours; discussion, one hour. Prerequisite: consent of instructor. Honors course parallel to course 119A.
- 119B. Human Neurophysiology.** Lecture, three hours. Prerequisites: course 115, junior standing. Exploration of biological basis of human cognitive processing, with emphasis on function of cerebral cortex.
- 119D. Behavioral Pharmacology.** Prerequisites: course 115, junior standing. Experimental and theoretical treatment of drug-behavior relationships. Particular emphasis on behavior and pharmacological mechanisms of drug action and interaction with neuronal function.
- 119DH. Behavioral Pharmacology (Honors).** Lecture, three hours; discussion, one hour. Prerequisite: consent of instructor. Experimental and theoretical treatment of drug-behavior relationships; pharmacological approaches to mood, aggression, learning, motivation; experimental studies of addiction.
- 119E. Stress and Bodily Disease.** Lecture, three hours. Prerequisites: course 115, junior standing. Psychobiological processes as they pertain to development of stress responses and disease states. Consideration of stress-related topics, including behavioral and pharmacological variables in stress and stress management.
- 119F. Neuron Circuitry and Behavior.** Prerequisites: course 115, Biology 171, and junior standing, or consent of instructor. Presentation of current data and theory concerning how neuron circuits produce behavior. Mechanisms of perception, response selection, motor pattern generation, learning, and motivation, with emphasis on operation of these processes in well-defined neural circuits.
- 119G. Psychobiology of Pain and Pain Inhibition.** Lecture, three hours. Prerequisites: course 115 and senior standing, or consent of instructor. Lectures and discussions on neural mechanisms of pain and problem of chronic pain disease.
- 119I. Psychophysiology of Motivation.** Lecture, three hours. Prerequisites: course 115, junior standing. Basic psychophysiology, including brain and endocrine mechanisms, involved in control of motivation. Discussion of homeostatic drives such as hunger and thirst and nonhomeostatic drives such as reproduction behavior.
- M119J. Ethology: Physiology of Behavior and Learning in Animals.** (Same as Psychiatry M190.) Prerequisites: course 115, junior standing. Basic course for undergraduate students which integrates systematic overview of common forms of behavioral plasticity and standard training procedures in laboratory animals (in behavioral, neurophysiological, and pharmacological studies) with broad biological, evolutionary perspective. (W)
- M119K. Evolution of Intelligence.** (Same as Psychiatry M119.) Lecture, two hours; discussion, two hours. Prerequisites: course 15 or 115, introductory statistics course, junior or senior standing, consent of instructor. Intelligence treated as neural information-processing capacity; its evolution in vertebrates correlated with evolution of enlarged brains. Quantitative approaches in evolutionary biology and neurosciences. (W)
- 119L. Human Neuropsychology.** Lecture, two hours. Prerequisites: courses 115, 120, consent of instructor. Survey of experimental and clinical human neuropsychology; neural basis of higher cognitive functions.
- 119M. Physiological Psychology of Learning.** Lecture, 90 minutes; discussion, 90 minutes. Prerequisites: course 115 and junior standing, or consent of instructor. Introduction to classical and current literature on mechanisms of learning, considering both cell-biological mechanisms and brain circuitry.
- 119N. The Visual System.** Lecture, three hours. Prerequisite: junior standing. The ability to image and analyze the visual world is a truly remarkable feat. Coverage of anatomy and physiology of visual processing from the retina to visual cortex through lectures, extensive reading, and discussions.
- 120. Cognitive Psychology.** Lecture, three hours; discussion, one hour. Prerequisites: courses 10, 42, junior standing. Survey of cognitive psychology: how people acquire, represent, transform, and use verbal and nonverbal information. Perception, attention, imagery, memory, representation of knowledge, language, action, decision making, thinking.
- 121. Laboratory in Cognitive Psychology.** Prerequisites: courses 10, 41, 42, 120 (may be taken concurrently). Laboratory experience with methods and phenomena from research on human perception, memory, and cognition.
- 122. Language and Communication.** Lecture, three hours. Prerequisite: course 10. Introduction to psychology of language and communication; verbal and nonverbal channels; interlinguistic and intralinguistic variation; animal communication; biological bases of language; production and comprehension of speech and writing; relation to perception, memory, and thought; conversational interaction; language development.
- 123. Psycholinguistics.** Prerequisite: junior standing. Current theory and research in psycholinguistics: survey of language acquisition, language perception, and language production; language physiology and pathology; problems of representation, sequencing, and timing in language and other cognitive skills; errors in speech production and perception.
- 124A. Sensation and Perception.** (Not the same as course 124A prior to Fall Quarter 1990.) Lecture, three hours. Prerequisites: courses 10, 41, 120, junior standing. Contemporary research and theory about visual and auditory perception. Topics include physiological mechanisms, psychophysical studies and models, and computational approaches.
- 124B. Visual Information Processing.** Lecture, two hours; discussion, one hour. Prerequisites: courses 10, 41, and 120, or consent of instructor. Exploration of issues in visual information, such as storage and representation of visual information in memory, pattern recognition, nature and role of attention in visual processing, word and picture recognition, object perception, and imagery. Possible consideration of developmental aspects.
- 124C. Human Memory.** Lecture, two hours; discussion, one hour. Prerequisites: course 120, junior standing. Analysis of recent research on basic processes and structural components that comprise the human memory system. Discussion topics include practical implications of such research for instruction, marketing, and witness testimony.
- 124D. Principles of Human Performance.** Prerequisite: psychology major standing or consent of instructor. Investigation into laboratory-based methods and principles of human performance. Major topics include research methods for human performance, central control of movements, anticipation and timing, automaticity, sensory involvement in action such as vision and kinesthesia, role of reflexes, speed-accuracy trade-offs, and individual differences and abilities. Principles discussed should have relevance for numerous real-world situations in which complex perceptual-motor skills are required, such as in industrial or occupational settings, musical performances, vehicle control, and sport.
- 124E. Language and Cognition.** Seminar, three hours. Prerequisites: courses 10, 41, 120, junior standing. Recent theories of language and cognition; nature of categories, feedback, and error detection in language and cognition; modularity; ambiguity; knowledge acquisition; processes and representations underlying perception, production, attention, and awareness in language and cognition.
- 124F. Thinking.** (Formerly numbered 112C.) Lecture, three hours. Prerequisite: course 120. Analysis of experimental studies of human categorization, reasonings, decision making, problem solving, creativity, and related topics.
- 124G. Perceptions of Speech and Music.** (Formerly numbered 124A.) Survey of theories and methods of auditory perception, with applications to speech and music. Brief review of auditory psychophysics and physiology, leading into perception of speech and music.
- 124I. Psychology of the Visual Arts.** Lecture, two hours; discussion, one hour. Prerequisites: courses 10, 41, 120. Psychological approaches to the visual arts, with major focus on cognitive information processing and developmental analyses. Topics include comprehending and drawing pictures, film, advertising, aesthetics, creativity, and relationships of artistic skills to brain damage and mental illness.
- 125. Personality.** Lecture, three hours; discussion, one hour. Prerequisites: courses 10, 41, junior standing. Survey of major topics in the field of personality, including personality theory, personality assessment, and physiological, behavioral, and cultural role of perception, learning, and motivation in personality.
- 126. Personality Laboratory.** Discussion, three hours; laboratory, three hours. Prerequisites: courses 41, 42, 125 (may be taken concurrently), psychology major standing. Laboratory experience with various topics in personality.
- 126H. Personality Laboratory: Emotions (Honors).** Discussion, three hours; laboratory, three hours. Prerequisites: courses 10, 41, 42, psychology major standing. Presentations of major approaches to emotion and experimentation of some hypotheses from the theories. Use of different (basic) statistical techniques and experimental methodologies.
- 127. Abnormal Psychology.** Lecture, three hours. Prerequisite: course 10. Study of dynamics and prevention of abnormal behavior, including neuroses, psychoses, character disorders, psychosomatic reactions, and other abnormal personality patterns.

127H. Abnormal Psychology (Honors). Lecture, three hours. Prerequisite: consent of instructor. Overview of characteristics of major forms of psychopathology, theories and research on causes of disorder, types of treatment, social and legal issues in mental illness.

129A. Personality Measurement. Prerequisite: course 125. Rationale, methods, and content of studies dealing with problems of describing persons in terms of a limited set of dimensions. Detailed consideration of research literature dealing with a few representative personality dimensions.

129B. Introduction to Psychoanalysis. (Not the same as course 129B prior to Summer Quarter 1990.) Prerequisites: courses 10, 41, 125, junior standing. Development of Freud's ideas from 1895 to 1926, with emphasis on how his theory evolved from a drive-based reinforcement model to the structural theory in which unconscious fantasy plays a crucial role. Coverage of developments beyond Freud, especially work of the British school under leadership of Klein, Winnicott, and Bim.

129E. Human Sexuality. Lecture, three hours. Prerequisite: senior psychology major standing. Overview of psychology of human sexuality. Psychological research, assessment, and therapy described in a format which highlights their significance for understanding human sexual functioning. Psychological mechanisms underlying expression of human sexuality.

130. Developmental Psychology. Lecture, three hours; discussion, one hour. Prerequisites: courses 10, 41, junior standing. Elaboration of developmental aspects of physical, mental, social, and emotional growth from birth to adolescence.

132. Learning Disabilities in Perspective. Lecture, three hours. Prerequisite: upper division standing. Exploration of different orientations to persons with learning problems, emphasizing assessment and intervention approaches and psychological impact of such approaches. Topics include interaction of learner and environment, sociopolitical nature of classroom, psychological impact of schooling, grades, and evaluations, process vs. goal focus in learning.

133A. Adolescent Development. Lecture, three hours. Prerequisite: course 130. Examination of cognitive, social, physical, and physiological development of the adolescent.

133B. Seminar: Cognitive Development. Seminar, three hours. Prerequisite: course 10, 41, 120, or 130. Major theories, approaches, and issues in study of cognitive development. Readings include original research on important topics such as development of perception, language, thinking, and problem solving, and acquisition of concepts and domain-specific language. (Sp)

133BH. Seminar: Cognitive Development (Honors). Seminar, three hours. Prerequisite: consent of instructor. Honors course parallel to course 133B. (Sp)

133D. Social and Personality Development. Lecture, two hours; discussion, one hour. Prerequisites: courses 10, 41, 130. Advanced course that surveys theory and research on social and personality development during childhood. Topics include parent/child attachment, temperament, self-control, aggression, sex-typing, self-concept, moral reasoning and behavior, social status and social skills, and peer group relations.

134. Psychology and Education. Lecture, three hours. Prerequisites: courses 10, 130. Application of principles of cognitive development, learning, and perception to educational problems. Topics include general instructional issues, psychology of reading and mathematics, exceptional children, early childhood education, and education of the disadvantaged.

135. Social Psychology. Lecture, three hours; discussion, one hour. Prerequisites: courses 10, 41, junior standing. Interrelationships between the individual and his social environment. Social influences on motivation, perception, and behavior. Development and change of attitudes and opinions. Psychological analysis of small groups, social stratification, and mass phenomena.

136A. Social Psychology Laboratory. Lecture, one hour; laboratory, four hours. Prerequisites: courses 41, 42, 135 (may be taken concurrently), psychology major standing. Introduction to research designs and methods used to test social psychological hypothesis, including experiments, observation, content analysis, and/or questionnaires.

136B. Nonexperimental Methods in Social Psychology. Lecture, two hours; laboratory, two hours. Prerequisites: courses 41, 42, psychology major standing. Research experience with experimental methods for study of social attitudes or behavior, including fieldwork with survey research, naturalistic observation, or questionnaires.

137B. Attitude Formation and Change. Lecture, three hours. Prerequisites: courses 10, 41, 135. Structure and functions of attitudes, their measurement, how they develop, and methods for changing them.

137C. Close Relationships. Lecture, three hours. Prerequisite: course 10 or 41 or 135 or consent of instructor. Examination of research and theory about friendship, dating, and marriage, with emphasis on how these relationships are affected by gender and changing sex roles.

137D. Introduction to Health Psychology. Prerequisite: course 10. Areas of health, illness, treatment, and delivery of treatment that can be elucidated by understanding of psychological concepts and research, psychological perspective on these problems, and how psychological perspective might be enlarged and extended in the medical area.

M137E. Work Behavior of Women and Men. (Same as Women's Studies M137E.) Prerequisite: course 10 or Women's Studies 10 or senior standing. Examination of work behavior of women and men. Topics include antecedents of career choice, job findings, leadership, performance evaluation, discrimination and evaluation bias, job satisfaction, and interdependence of work and family roles.

137I. Interpersonal Influence and Social Power. Lecture, three hours. Prerequisite: course 135. Theory and research focusing on how people influence one another and resist such influence, and on the bases of social power. Motivations and effects of influence for the powerholder and target of influence. Applications to such problems and issues as power and leadership in organizations, interpersonal influence and health, power relationships in the family, interpersonal influence in everyday life, social power of political figures.

M137J. Psychology of Language and Gender. (Formerly numbered 137J.) (Same as Communication Studies M124 and Women's Studies M137J.) Lecture, three hours. Prerequisites: course 10 or equivalent, junior standing. Examination of current topics at intersection of gender and language. Topics include sex differentiation in language cross-culturally; sex bias in lexicon and usage; sex differences in lexicon, syntax, phonology, and nonverbal behavior; development of sex-differentiated language in children; "women's" and "men's" language in various racial/ethnic/class/sexual preference groups; and conversational interaction.

M138. Political Psychology. (Same as Political Science M140.) Prerequisite: course 10. Examination of political behavior, political socialization, personality and politics, racial conflict, and psychological analysis of public opinion on these issues.

M142. Advanced Statistical Methods in Psychology. (Same as Psychiatry M142.) Lecture, two hours; discussion, 90 minutes. Prerequisite: course 41. Survey of statistical techniques commonly used in psychology, education, and behavioral and social sciences: correlational techniques, analysis variance, and multiple regression.

144. Psychological Tests and Evaluation. Prerequisite: course 41. Further study of principles of measurement, stressing basic concepts. Application to problems of test construction, administration, and interpretation.

150. Mathematical Models in Psychology. Lecture, two hours; discussion, two hours. Prerequisites: Mathematics 3C or 31B, Computer Science 10C or 10F, or consent of instructor. Review of theoretical models and experimental evidence for these models in various areas of psychology. Topics include mathematical computer models of learning, perception, cognition, and personality.

151. Computer Applications in Psychology. Lecture, two hours; discussion, two hours. Prerequisites: Computer Science 10C or 10F, consent of instructor. Topics include hardware and software computer problems in design, control, and analysis of experiments; programming problems arising in evaluation of models of psychological processes of various content areas such as learning, perception, social, personality, and clinical.

M153. Principles of Biotechnology. (Same as Materials Science and Engineering M107A.) Prerequisite: upper division standing. Principles of biological sciences developed in an engineering design context. Emphasis on how physiological, psychological, and sociological factors affect integration of man into environmental, informational, and managerial systems through engineering design. (F,W,Sp)

M163. Death and Suicide: Psychological and Sociological Aspects. (Same as Sociology M138.) Lecture, three hours. Prerequisite: junior standing. Definition and taxonomy of death; new permissiveness and taboos related to death; romanticization of death; role of the individual in his own demise; modes of death; development of ideas of death through life span; ways in which ideas of death influence conduct of lives; impact of dying on social structure surrounding the individual; preventive, interventive, and postventive practices in relation to death and suicide; partial death; megadeath; lethality; psychological autopsy; death of institutions and cultures. P/NP grading recommended (letter grading required if course to be applied toward psychology or sociology major).

M165. Psychology of Gender. (Same as Women's Studies M165.) Lecture, three hours. Consideration of psychological literature relevant to understanding contemporary sex differences. Topics include sex-role development and role conflict, physiological and personality differences between men and women, sex differences in intellectual abilities and achievement, and impact of gender on social interaction.

168. Environmental Psychology. Prerequisites: courses 41, 125. Research-oriented course which surveys theoretical and methodological issues which comprise the area of environmental psychology. Discussion of basic dimensions of emotional response to physical and social environments, measurement of information of rate of situations, and personality variables that are relevant to environmental theory. Residential, therapeutic, work, and recreational environments within a unified framework.

170A. Behavior Modification. Lecture, three hours. Prerequisite: upper division standing or consent of instructor. Applied behavior theory; study of application of principles derived from learning theory, as in classical and instrumental (operant) conditioning, to treatment of developmentally disabled, autistic, and schizophrenic children, adult schizophrenics, affective disorders, anxiety states, drug abuse, marital discord, etc. Lectures, discussions, and demonstrations.

170B. Fieldwork in Behavior Modification. Discussion, two hours; fieldwork, six hours. Prerequisites: course 110 with a grade of A or 170A, consent of instructor. Fieldwork in applied behavior theory, especially to problems of retarded and autistic children.

170C. Advanced Fieldwork in Behavior Modification for Non-Psychology Majors. Lecture, two hours; fieldwork, six hours. Prerequisites: course 170B, consent of instructor. Not open to students with credit for course 171A. Does not fulfill laboratory requirement for majors. Advanced fieldwork in applied behavior theory, especially related to problems of retarded and autistic children. Review of current research in the field. May not be applied as an elective toward any Psychology Department major.

171A. Advanced Fieldwork in Behavior Modification for Psychology Majors. Discussion, two hours; fieldwork, six hours; to be arranged, 20 hours. Prerequisites: course 170B, psychology major standing, consent of instructor. Advanced fieldwork in applied behavior theory, especially related to problems of retarded and autistic children. Students design and carry out individualized experimental study to evaluate behavioral interventions with developmentally disabled clients.

171B. Practicum: Design and Implementation of Behavioral Interventions. Discussion, two hours; fieldwork, six hours; to be arranged, 20 hours. Prerequisites: course 171A, consent of instructor. Design and implementation of behavioral interventions with developmentally disabled children. Topics include goal selection, ethical considerations, behavioral contracting, client right and human use procedures, home and community management, parent and staff training, working with schools, clinical issues.

M172. The Afro-American Woman in the U.S. (Same as Afro-American Studies M172 and Women's Studies M172.) Prerequisite: upper division standing. Impact of social, psychological, political, and economic forces which impact on interpersonal relationships of Afro-American women as members of a large society and as members of their biological and ethnic group.

173. Advanced Abnormal Psychology. Lecture, three hours. Prerequisites: courses 10, 41, 127. Examination of research and theory concerning origins, course, and outcomes of disordered behavior. Focus on continuity and change in patterns of behavior, assessment methods, and research approaches. Concentration on one of following: childhood disorders, anxiety and stress, the schizophrenias, or mood disorders.

174. Interpersonal Process Analysis. Lecture, two hours; laboratory, three hours. Prerequisites: courses 41, 42, 127, psychology major standing. Introduction to conceptual tools for analyzing interpersonal structures and functions in goal-oriented human interaction such as psychotherapy, persuasion, courtship, etc. Small group exercises integrated with lecture and discussion (additional laboratory work to be arranged).

175. Community Psychology. Prerequisites: junior or senior psychology major standing, consent of instructor. Application of psychological principles to understanding and solution of community problems. Topics include community development, community mental health problems, drugs, racism, and rehabilitation of prisoners.

M176. Communication and Conflict in Couples and Families. (Same as Communication Studies M116.) Lecture, 90 minutes; discussion, 90 minutes. Prerequisites: courses 10 or 11, 41, and 127, or consent of instructor. Examination of (1) dysfunctional communication and conflict in couples and families and (2) relationship of these processes to individual psychopathology, marital discord, and family disruption (e.g., separation and divorce).

177. Counseling Relationships. Prerequisites: courses 10, 41, 127, junior or senior standing, and consent of instructor, or junior or senior psychology major standing. Conceptual and empirical foundations of psychological counseling; comparison of alternative models of counseling processes. Emphasis on counseling approaches in community mental health areas such as drug abuse, suicide prevention, and crisis intervention.

178. Human Motivation. Lecture, three hours. Prerequisite: upper division standing. Examination of theories of human motivation, experimental findings supporting the theories, and history of study of motivation. Topics include sociobiology, conflict, aspiration level, achievement strivings, and causal attributions. (W)

179A. Health Behavior and Health Status of Ethnic Groups: Behavioral Perspective. (Formerly numbered 179.) Lecture, three hours. Prerequisites: course 10 or 11 or Community Health Sciences 270, junior or senior standing. Survey course of psychological aspects of health behavior and health status in major ethnic groups in the U.S. Emphasis on major diseases outlined by the U.S. Public Health Service (USPHS).

179B. Biomedical and Psychosocial Aspects of AIDS/HIV. Lecture, three hours. Prerequisites: course 137D or 179A or Health Services 100, junior or senior standing. Basics of epidemiology of the disease, routes of transmission, clinical characteristics of AIDS, neurological and psychological aspects of coping with HIV infection and AIDS. Presentation of biologic, behavioral, and therapeutic interventions.

M180A. Contemporary Problems in Mental Retardation. (Same as Psychiatry M180A.) Prerequisites: courses 10, 41, and 127 or 130. Corequisites: courses M181A-M181B. Limited to Immersion Program students. Presentation of concepts, issues, and research techniques in the area of mental retardation. Biological, psychological, and community questions concerning causes and treatment of developmental disabilities, as well as systems for care and training of retarded individuals. Lectures, directed reading, and discussion.

M180B. Contemporary Issues in Mental Retardation. (Same as Psychiatry M180B.) Prerequisite: course M180A. Limited to Immersion Program students. Psychoeducational issues in mental retardation relating literature to ongoing field experiences through lectures, discussions, media, and six student papers.

M181A-M181B. Research in Contemporary Problems in Mental Retardation. (Same as Psychiatry M181A-M181B.) Corequisites: courses M180A, M180B. Research experience. In Progress grading.

186A. Cognitive Science Laboratory: Introduction to Theory and Simulation. (Formerly numbered 186.) Lecture, two and one-half hours; discussion, 30 minutes; laboratory, three hours. Prerequisites: course 85, Program in Computing 15, and junior departmental standing or consent of instructor. Models in several psychological domains (e.g., visual perception, categorization, reasoning, and problem solving). Types of models include semantic networks, search, production systems, connectionist networks, and mathematical models. Lectures and discussions interwoven with computer simulations written in common LISP.

186B. Cognitive Science Laboratory: Neural Networks. (Formerly numbered 186.) Lecture, two and one-half hours; discussion, 30 minutes; laboratory, three hours. Prerequisites: course 85, Program in Computing 10A, 10B (or PASCAL), and junior departmental major standing or consent of instructor. Recommended: knowledge of calculus. Lectures and laboratory work in neural network modeling of perception and cognition. Specific topics include essential neurophysiology, basic architectures, learning, and programming techniques. Principles illustrated and discussed in context of models of specific perceptual and cognitive processes. Simulations written in PASCAL.

187. Psychology and Law. Lecture, two hours; discussion, one hour. Prerequisite: junior standing. Study of new topics on legal psychology, including suspect identification, witness reports, and police procedures. Outside speakers utilized in presentation of these materials. Students participate in presentations and/or discussions.

187H. Psychology and Law (Honors). Lecture, two hours; discussion, one hour. Prerequisites: junior standing, consent of instructor. Honors course parallel to course 187.

188. Fieldwork in Cognitive Science. Lecture, two hours; fieldwork, six hours. Prerequisites: cognitive science major standing, department consent. Fieldwork (approved community setting) or research (approved community setting) in applications of cognitive science. Consult Undergraduate Advising Office, 1531 Franz Hall, for contracts and further information. Four units of course 190C or 199 may be substituted for 188 if content is approved in advance by Undergraduate Office. P/NP grading.

189. Human Factors. Lecture, two hours; discussion, one hour. Prerequisites: courses 10, 110, sophomore standing. Principal objective of human factors psychology is optimization of human/machine productivity and efficiency while ensuring human safety. Research from engineering, computer science, and psychology combined for design of systems for human use. Contemporary applications include health care, safety systems, pollution control, transportation, and urban design.

190A-190B-190C. Honors Course. Seminar, two hours. Prerequisite: psychology honors program standing. Opportunity for development and analysis of creative ideas through individual research projects with a faculty sponsor and discussion of student and faculty research presentations. Information and applications may be obtained from Undergraduate Advising Office, 1531 Franz Hall. If approved in advance by Undergraduate Office, course 190C may be applied toward elective course requirement for any Psychology Department major.

192. Practicum in Teaching Psychology. Prerequisites: upper division psychology major, department consent. Training and supervised practicum for advanced undergraduates in teaching psychology. Students serve as junior teaching assistants and assist in preparation of materials and development of innovative programs. Consult Undergraduate Advising Office, 1531 Franz Hall, for contracts and further information. Only 12 units from courses 192, 193, and 194 may be applied toward undergraduate degree. May not be applied toward course requirements for any Psychology Department major. P/NP grading.

193. Fieldwork in Psychology. Seminar, two hours; fieldwork (approved community setting), six hours. Prerequisites: sophomore pre-psychology or psychology major standing, department consent. Fieldwork in applications of psychology. Consult Undergraduate Advising Office, 1531 Franz Hall, for contracts and further information. Only 12 units from courses 192, 193, and 194 may be applied toward undergraduate degree. May not be applied toward course requirements for any Psychology Department major. P/NP grading.

194. Research in Psychology. Seminar, one hour; internship (approved research setting), seven hours. Prerequisites: sophomore pre-psychology or psychology major standing, department consent. Practical applications of psychology through research. Consult Undergraduate Advising Office, 1531 Franz Hall, for contracts and further information. Only 12 units from courses 192, 193, and 194 may be applied toward undergraduate degree. May not be applied toward course requirements for any Psychology Department major. P/NP grading.

197. Current Issues in Psychology. (Formerly numbered 195.) Lecture, three hours. Prerequisite: junior or senior psychology major standing (some sections may require consent of instructor). Study of selected current topics of psychological interest. Consult *Schedule of Classes* for topics and instructors. May be repeated for credit with consent of instructor. Only one graded 197 course may be applied as an elective toward psychology major. May not be applied as an elective toward psychobiology or cognitive science major.

199. Directed Individual Research and Study. Prerequisites: junior or senior psychology, psychobiology, or cognitive science major standing (juniors must have at least 3.0 GPA in the major), consent of instructor and vice chair for Undergraduate Affairs (based on written proposal outlining course of study). Consult Undergraduate Advising Office, 1531 Franz Hall, for further information and approval forms. Only one four-unit 199 course may be taken per term and only one for a letter grade (additional 199 courses may be taken on a P/NP basis). If approved in advance by Undergraduate Office, four units of course 199 may be applied toward elective course requirement for psychology major and toward Psychology 188 requirement for cognitive science major.

Graduate Courses

200A. Animal Learning and Behavior. Basic principles and characteristics of learning and behavior, including Pavlovian conditioning, instrumental learning, and species-specific behavior.

200B. Human Learning and Behavior. Topics include human learning and conditioning and application of learning principles in etiology and treatment of a variety of socially significant problems. Special emphasis on systematic desensitization of anxiety states, behavior modification programs for schizophrenic children and adults, behavioral pharmacology, control of autonomic behavior, among others.

201. Current Issues in Learning and Behavior (1 unit). Discussion, 90 minutes. Prerequisite: graduate standing. Required of learning and behavior students a minimum of four times (entire first year and winter of second year). Presentation of papers of current interest in learning, behavior, or applied behavioral analyses by experts in the field. Evaluation of their significance and methodology in detail. May be repeated for credit. S/U grading.

Mr. Fanselow, Mr. Minor (W/Sp)

204A. Psychophysiology of Attention and Learning. Lecture, three hours. Study of research and theories concerned with psychophysiology of attention and learning primarily in humans. Concepts and areas include orientating reflex, dominant focus, classical conditioning, and their implications for psychophysiology of psychopathology and psychotherapy.

Mr. Maltzman

204B. Theories of Learning. Discussion, three hours. Prerequisite: course 200A or equivalent. Critical discussion and in-depth analysis of current major theoretical approaches to associative learning, with emphasis on recent experimental analyses of conditioning phenomena.

Mr. Fanselow

204C. Applied Learning. Lecture, three hours. Prerequisites: graduate standing in psychology, consent of instructor. Lectures and discussion on current research in application of learning principles to clinical and social problems such as alcohol and drug abuse, aggression, fear management, mental retardation, behavioral medicine, autism/schizophrenia, etc.

Mr. Lovaas

204D. Fear and Anxiety. Lecture, three hours. Prerequisite: graduate training. Presentation of theoretical and empirical advances, from biological and behavioral perspectives, in the area of fear and anxiety. Integration of animal and human research.

Ms. Craske, Mr. Fanselow, Mr. Minor

204E. Primitive Motivational Processes. Lecture, three hours. Prerequisite: consent of instructor. Analysis, using a behavioral systems approach, of basic motivated behavior such as feeding, drinking, foraging, and reproduction. Same approach also applied to phenomena such as acquired motivation, reinforcement, and drug addiction. Historical survey of behavioral analyses of motivation and goal-directed behavior.

Mr. Fanselow

205A. Behavioral Neuroendocrinology (2 units). (Formerly numbered 205A-205B.) Lecture, three hours. Prerequisite: graduate standing. Mechanisms of hormone action on the brain that influence behavior, including permanent actions in development and transient actions in adulthood. Using a comparative approach, topics include sexual differentiation, long-term effects of stress, seasonal and other changes in adulthood, and aging.

Mr. Arnold

205B. Human Neuropsychology (2 units). (Formerly numbered 205A-205B.) Lecture, three hours. Prerequisite: graduate standing. Examination of higher cognitive processes in terms of neural mechanisms that underlie them. Topics include cortical modularity and organization, coordinated sensory representation, language, regional functional specialization, attention, and regulation of cortical function by extracortical systems.

Mr. Beatty

205D. Clinical Psychopharmacology (2 units). (Formerly numbered 205A-205B.) Lecture, three hours. Prerequisite: graduate standing. General principles of brain neurotransmitters, including synthesis, cell bodies and pathways, and receptor subtypes. General principles of drug administration and pharmacokinetics. Major classes of psychoactive drugs, animal models, and "atypical" compounds.

Mr. Ellison

205E. Psychobiology of Emotion and Stress (2 units). (Formerly numbered 205A-205B.) Lecture, three hours. Prerequisite: graduate standing. Overview of literature on role of the brain and autonomic and endocrine systems in emotion and stress-related responses. Some emphasis on involvement of neurotransmitters, neuropeptides, and hormones in emotional plasticity, visceral function, and bodily diseases.

Mr. Grijalva

205F. Physiology of Learning (2 units). (Formerly numbered 205A-205B.) Lecture, three hours. Prerequisite: graduate standing. Search for anatomical loci of engrams. Cell biology of plasticity, including electrophysiological and molecular approaches. Theories of how neural circuitry might be organized to make learning possible.

Mr. Krasne

205G. Pain (2 units). (Formerly numbered 205A-205B.) Lecture, three hours. Prerequisite: graduate standing. Consideration of pain from both basic science and clinical perspectives. Discussion of nociceptors, spinal cord, brain mechanisms, pain inhibition, and role of endogenous opioids. Effects of pain and stress on immunity.

Mr. Liebeskind

205I. Motor Coordination (2 units). (Formerly numbered 205A-205B.) Lecture, three hours. Prerequisite: graduate standing. Elementary and complex units of behavior: reflexes, servomechanisms, oscillators, and central pattern generators. Principles of coordination: efference copy, oscillator coupling, potentiation, and depotentiation. Relation between levels of integration and anatomical levels: transections, lesions, focal stimulation, and single unit recording.

Mr. Gallistel

205J. Homeostatic Drive, Hunger, and Thirst (2 units). (Formerly numbered 205A-205B.) Lecture, three hours. Prerequisite: graduate standing. Homeostasis used as framework within which ingestive behavior is discussed. Analysis of thirst on basis of depletions of body fluid compartments. Consideration of hunger, focusing on two theories — "Glucostatic" and "Energostatic."

Mr. Novin

205K. Vision Neurobiology (2 units). (Formerly numbered 205A-205B.) Lecture, three hours. Prerequisite: graduate standing. Exploration of anatomy, physiology, and computation in visual system, focusing on retina, visual cortex, and overall performance.

Mr. Schein

205L. Cognitive Neuroscience (2 units). (Formerly numbered 205A-205B.) Lecture, three hours; Prerequisite: graduate standing. Overview of neural basis of higher cognitive functions, integrating anatomical, physiological, and behavioral approaches and incorporating clinical and experimental data. Systems covered include attention, perception, memory, language, and hemispheric specialization.

Mr. Zaidel

M205Z. Behavioral and Systems Neuroscience. (Formerly numbered M209.) (Same as Neuroscience M205 and Physiological Science M205.) Lecture, three hours. Prerequisites: Neuroscience M201, M202, M203, and M204, or consent of instructor. Introduction to fundamentals of behavioral and systems neuroscience, with emphasis on role of behavioral analysis in understanding the functioning of nervous system and identifying anatomical circuits, cell physiological processes, and molecular mechanisms that mediate behaviorally defined functions.

206. Psychophysiology of Brain Function. Modern concepts of functional organization of the brain, with particular reference to psychological phenomena and behavior. Recent advances in neurophysiology and electroencephalography bearing on perception, attention, drive, sleep-wakefulness, levels of consciousness, etc. Some emphasis on pathology of behavior resulting from brain injury.

Mr. Beatty

207A-207B-207C. Seminars: Physiological Psychology. Prerequisite: course 115 or equivalent.

Mr. Butcher, Mr. Ellison, Mr. Krasne

208. Seminar: Comparative Psychobiology.

Mr. Arnold

210. Comparative Psychobiology. Prerequisites: course 115 or equivalent, consent of instructor. Survey of determinants of species-specific behavior, including genetic influences and learning.

Mr. Arnold

212. Evaluation of Research Literature in Physiological Psychology (1 unit). Discussion, 90 minutes. Prerequisite: consent of instructor. Papers of current interest presented by members of seminar and their significance and methodology discussed and criticized in depth. May be repeated for credit. S/U grading.

220A. Social Psychology. Lecture, three hours. Prerequisite: graduate standing in psychology. Intensive consideration of concepts, theories, and major problems in social psychology.

Ms. Peplau, Ms. Taylor (F)

220B. Research Methods in Social Psychology. (Formerly numbered 224.) Lecture, three hours. Prerequisite: graduate standing in psychology or consent of instructor. Research design and methodological issues in experimental and nonexperimental social research.

Ms. Brewer, Mr. Collins (W)

220C. Advanced Social Psychology. (Formerly numbered 220B.) Lecture, three hours. Prerequisite: course 220A or 220D. Review of contemporary topics and issues in social psychological research and theory.

Ms. Dunkel-Schetter, Mr. Pelham

220D. Introduction to Social Psychology. (Formerly numbered 220C.) Lecture, three hours. Prerequisite: graduate standing. Introduction to theory and research in social psychology for students who are not psychology majors. Service course for graduate students in education, sociology, political science, management, public health, etc.

Mr. Sidanius

221. Seminar: Attitude Formation and Change. Discussion, three hours. Prerequisites: courses 220A and 220B, or consent of instructor. Social psychological research and theories on opinions and attitudes. Effects of mass communication, social factors in assimilation of information and influence.

Mr. Gerard

222A. Interpersonal Relations. Discussion, three hours. Prerequisite: course 220A or consent of instructor. Critical review of theory and research on interpersonal relations, with emphasis on friendship, dating, and marriage.

Ms. Peplau

222B. Interpersonal Influence and Social Power. Seminar, three hours. Prerequisite: advanced social psychology course (psychological or sociological) or consent of instructor. Review of theory and research on interpersonal influence and social power, with applications to various power relationships such as supervisor/subordinate, health care professional/patient, doctor/nurse, parent/child, wife/husband, teacher/student, political figures, etc.

Mr. Raven

223. Seminar: Social Survey Research. (Formerly numbered 223A, 223B.) Lecture, three hours. Prerequisite: course 220B or consent of instructor. Contemporary issues and topics in social survey research methodology.

Ms. Brewer

225. Seminar: Critical Problems in Social Psychology. Discussion, three hours. Prerequisites: courses 220A and 220B, or consent of instructor. May be repeated for credit with consent of instructor.

226A-226B-226C. Current Literature in Social Psychology (2 units each). (Formerly numbered 226.) Discussion, 90 minutes. Prerequisite for courses 226B-226C: consent of instructor for non-social psychology students. Course 226A is limited to first-year social psychology students. Recent and current research papers in social psychology presented by members of seminar and their significance and methodology discussed and criticized in depth. S/U grading.

(F, 226A; W, 226B; Sp, 226C)

227. Health Psychology. Lecture, two hours; discussion, one hour. Prerequisite: undergraduate degree or training in psychology. Psychological and social factors involved in etiology of illness, treatment and course of illness, long-term care and adjustment of chronically ill or disabled, and practice of institutional health care and self-care. Ms. Taylor

M228A. Proseminar: Political Psychology. (Formerly numbered M228.) (Same as History M236A and Political Science M261A.) Discussion, three hours. Introduction to political psychology: psychobiography, personality and politics, mass attitudes, group conflict, political communication, and elite decision making. Mr. Sears

M228B. Seminar: Political Psychology. (Formerly numbered M228.) (Same as Political Science M261D.) Discussion, three hours. Prerequisite: course 220A or Political Science M261A or consent of instructor. Examination of political behavior, political socialization, racial conflict, mass political movements, and public opinion. Mr. Sears

M228C. Critical Problems in Political Psychology. (Same as Political Science M261E.) Discussion, three hours.

229. Social Cognition. Lecture, one hour; discussion, two hours. Social cognition is concerned with how people organize and interpret social information in their environment. Seminar provides broad background in the field and also gives depth and focus on particular research topics in the field. Weekly papers, as well as a lengthy final paper, required. Ms. Taylor

231. Psychology of Gender. Seminar, three hours. Prerequisite: one prior course on gender/women's studies or consent of instructor. Critical evaluation of current research and theory concerning psychology of gender, drawing on work from various areas of psychology to understand sources of gender differentiation and its consequences for human behavior and social interaction. Ms. Henley, Ms. Peplau

232. Human Sexuality. Lecture, three hours. Prerequisite: graduate standing. Designed to teach students how to carry out research on human sexual behavior. Contents include theory construction, scale development, physiological and endocrinological implications, radioimmunoassay (measuring hormones in blood sample), ethical issues, methodological and statistical considerations, measurement of sexual arousal, fantasy, and sexual dysfunction therapy. Discussion-oriented, with emphasis on operationalizing predictions concerning human sexual functioning. Mr. Abramson

233. Seminar: Environmental Psychology. Prerequisites: courses 235, 250A, 250B. Critical review of work in environmental psychology designed to identify basic dimensions for analysis of man/environment relationships. Use of human emotional responses to environments as intervening variables linking specific stimulus qualities to a variety of approach-avoidance behaviors. Individual differences and drug-induced states as these relate to emotional response dimensions used to explain within-individual differences in response to same environment over time or between-individual differences to same situation. Review of literature relating information rate from environments to arousal and preferences for those environments. Mr. Mehrabian

234. Social Psychological Aspects of Competitive Youth Sport. (Formerly numbered M234.) Prerequisite: consent of instructor. Review of research concerning social psychological aspects of competitive sport for children. Sport is presented as a major achievement domain for young participants. Topics include sources and consequences of competitive stress, significant adult influences and interactions, predictors of performance, determinants of participation and dropping out, and socialization through sport. Ms. Scanlan

235. Personality. Survey of cognitive, analytic, and learning theory approaches to study of personality. Emphasis on intensive exploration of selected concepts and related research.

M239. Personality, Motivation, and Attribution. (Same as Education M215.) Current research and theory relating personality variables (e.g., attributional styles, self-esteem) to motivational concerns such as persistence and intensity of behavior. Perceived causes of outcomes in achievement and affiliative domains.

240A-240B. Developmental Psychology. Lecture, three hours. Prerequisites: one undergraduate developmental psychology course, graduate standing. Consideration of variables influencing cognitive social and emotional development of the human organism from conception through adolescence. Emphasis on research methodology and research base for current theories of development.

241. Current Developments in Developmental Psychology (1 unit). Discussion, 90 minutes. Prerequisite: graduate standing in developmental psychology. Presentation of papers on current advances in developmental psychology and closely related areas by experts in the field. Emphasis on approaches to a problem, making it suitable to interweave presentations by graduate students. Ms. Gelman

242A-242F. Seminars: Developmental Psychology. Seminar, three hours. Prerequisites: courses 240A-240B or equivalent, consent of instructor. Each course may be taken independently and may be repeated for credit:

242A. Perceptual Development.

242B. Cognitive Development. Ms. Greenfield

242C. Socialization.

M242D. Social Development and Education. (Same as Education M217A.) Biological and familial, school, and other influences on the child; development in context of current research and theoretical models; consideration of theoretical and methodological research on family, peer group, and school; application of developmental theory and research to educational practice.

242E. Cognitive Factors in Learning Disorders.

Mr. Adelman

242F. Development of Language and Communication. Ms. Greenfield

243A-243B. Seminars: Practical and Societal Issues in Developmental Psychology. Lecture, three hours. Prerequisites: courses 240A-240B or equivalent, consent of instructor. Socialization processes in human development and implication for social/political, educational, research issues, values, and societal change. In Progress grading.

244. Critical Problems in Developmental Psychology. Lecture, three hours. Prerequisites: courses 240A-240B or equivalent, consent of instructor. Current problems; content varies depending on interest of class and instructor. May be repeated for credit with consent of instructor.

M245. Personality Development and Education. (Same as Education M217C.) Review of research and theory of critical content areas in personality development that bear on school performance: achievement motivation, self-concept, aggression, sex differences, empathy, and other social behaviors; review of status of emotional behavior in personality theory and development. Ms. Feshbach

M246. Psychological Aspects of Mental Retardation. (Same as Psychiatry M246.) Lecture, 90 minutes. Discussion of psychological aspects of mental retardation, including classification, description, etiology, theory, prevention, treatment, assessment, modern and future developments, and input from other disciplines (ethics, law, religion, welfare systems). Mr. Tymchuk (F)

249. Evaluation Research. Prerequisites: courses 250A, 250B. Introduction to evaluation research in psychology, with emphasis on clinical, community, and social psychology applications. Survey includes policy and strategy issues, design of evaluative studies, data analysis, and utilization of findings. Mr. Woodward

250A. Advanced Psychological Statistics. Review of fundamental concepts. Basic statistical techniques as applied to design and interpretation of experimental and observational research. Mr. Wickens, Mr. Woodward

250B. Advanced Psychological Statistics. Advanced experimental design and planning of investigations. Mr. Wickens, Mr. Woodward

251A-251B-251C. Research Methods. Limited to psychology graduate students. Students design and conduct original research projects under supervision of instructor in charge. It is anticipated that many students will complete their project in two terms (normally three terms allowed). S/U grading (course 251A only).

252A. Multivariate Analysis. (Formerly numbered 252.) Lecture, three hours. Prerequisites: courses 250A and 250B, or consent of instructor. Introduction to analysis of data having multiple dependent variables. Topics include continuous multivariate distributions, multiple regression, multivariate analysis of variance, discriminant analysis, canonical correlation, principal component analysis. Applications from clinical, cognitive, physiological, and social psychology. Computer methods. Mr. Wickens, Mr. Woodward

253. Factor Analysis. Theory and practice of factor analysis in psychological research. Methods of factor extraction and rotation. Applications of computers to computations in factor analysis. Mr. Comrey

254A. Psychological Scaling. (Formerly numbered 254.) Lecture, three hours. Prerequisite: graduate standing. Theory of measurement, law of comparative judgment, methods of unidimensional scaling, multidimensional scaling, and related topics of current interest. Mr. Holman

254B. Cluster Analysis. Lecture, three hours. Prerequisite: graduate standing. Quantitative methods for classification. Theories and assumptions underlying major clustering methods. Use of methods in exploratory data analysis. Mr. Holman

255. Quantitative Aspects of Assessment. Fundamental assumptions and equations of test theory. Current problems in assessment. Mr. Woodward

M256. Advanced Regression Analysis. (Not the same as course 256 prior to Fall Quarter 1992.) (Same as Political Science M200E.) Seminar, three hours. Prerequisite: consent of instructor. Diagnostics, robust regression, cross validation, resampling, outliers, missing data, geometry of regression, validity of assumptions, categorical dependent variables, transformation of variables. Access to Macintosh computer very helpful. Mr. de Leeuw, Mr. DeNardo

M257. Multivariate Analysis with Latent Variables. (Same as Political Science M208D.) Lecture, three hours. Prerequisite: consent of instructor. Introduction to models and methods for analysis of data hypothesized to be generated by unmeasured latent variables, including latent variable analogues of traditional methods in multivariate analysis. Causal modeling: theory testing via analysis of moment structures. Measurement models such as confirmatory, higher-order, and structured-means factory analytic models. Structural equation models, including path and simultaneous equation models. Parameter estimation, hypothesis testing, and other statistical issues. Computer implementation. Applications. Mr. Bentler

258. Special Problems in Psychological Statistics. Lecture, three hours. Prerequisites: courses 250A and 250B, or consent of instructor. Special problems in psychological statistics and data analysis.

259. Quantitative Methods in Cognitive Psychology. Prerequisites: courses 250A and 250B, or consent of instructor. Number of nonstatistical mathematical methods and techniques commonly used in cognitive psychology. Topics include Markov chains, other stochastic processes, queueing theory, information theory, frequency analysis, etc.

Mr. Wickens

260A-260B-260C. Proseminars: Cognitive Psychology (1 unit each). Presentation of research topics by students, faculty, and visiting scholars. May be repeated for credit. S/U grading.

261. Perception. Lecture, three hours. Prerequisite: consent of instructor. Concepts, theories, and research in study of perception. Considers the questions: Why do things look, sound, smell, taste, or feel as they do? What is the nature of perceptual systems? How do these systems process information?

Mr. Thomas

262. Human Learning and Memory. Lecture, three hours. Prerequisite: consent of instructor. Contemporary theory and research in human verbal learning and memory; verbal and nonverbal learning and memory processes, structure and organization of short- and long-term memory.

Mr. Bjork

263. Psycholinguistics. Lecture, three hours. Prerequisite: consent of instructor. Contemporary theory and research in psycholinguistics: coding and decoding, psycholinguistic parameters of language learning, speech recognition and perception.

Ms. French, Mr. MacKay

264. Judgment and Decision Processes. Lecture, three hours. Prerequisite: consent of instructor. Contemporary theory and research in judgment and decision processes: psychophysical scaling, contextual effects on rating scales, models for analysis of value decisions.

265. Thinking. Lecture, three hours. Contemporary theory and research in thinking, problem solving, inference, semantic memory, internal representation of knowledge, imagery, concepts.

266. Cognitive Science. Lecture, three hours. Prerequisite: consent of instructor. Major issues in cognitive science. Representation of cognitive structures and higher-level processes. Specific areas include perception, learning and memory, problem solving, and reasoning. Relationships to artificial intelligence.

Mr. Wickens

268A-268E. Seminars: Human Information Processing. Seminar, three hours. Prerequisite: consent of instructor. Topics vary with interests of instructor. Each course may be taken independently and may be repeated for credit:

268A. Perception. Mr. Thomas

268B. Human Learning and Memory. Mr. Bjork

268C. Judgment and Decision Processes.

268D. Language and Thought. Mr. MacKay

268E. Human Performance.

Mr. Beatty, Mr. Carterette

269. Seminar: Cognitive Psychology. Seminar, three hours. Prerequisite: consent of instructor. Discussion of problems in cognitive psychology that encompass more than a single subfield of the area. May be repeated for credit.

270A-270B-270C. Foundations of Clinical Psychology. Corequisites: courses 271A-271B-271C. Limited to graduate students in clinical psychology:

270A. Analysis of phenomenological, theoretical, and research issues regarding etiology and mediating mechanisms in neurotic, affective, schizophrenic spectrum, and other personality disturbances.

270B. Principles and methods of psychological assessment and evaluation.

270C. Principles and methods of psychological intervention in individuals, families, and community settings.

271A-271B-271C. Clinical Psychological Methods (2 units each). Corequisites: courses 270A-270B-270C. Procedures in clinical psychology as applied in clinical and community settings. Supervised exposure to psychological attributes of psychopathology and procedures for psychological assessment, intervention, and research with clinical populations. Experience closely coordinated with content in courses 270A-270B-270C. S/U grading.

271D. Clinical Research Laboratory (2 units). Discussion, one hour; laboratory, one hour. Corequisites: courses 270A or 270B or 270C, and 271A or 271B or 271C. Limited to graduate students in clinical psychology. Acquaints students with faculty research interests and involves them in their course 251 research at an early stage to insure completion. S/U grading.

Mr. Christensen

272A-272G. Advanced Clinical Psychological Methods. Seminar, three hours. Prerequisite or corequisite: course 401 or 451. Each course may be taken independently for credit:

272A. Behavior Modification with Children. Prerequisites: courses 271A-271B-271C or consent of instructor. Course in series of clinical intervention and assessment offerings for second- and third-year clinical students that covers behavior modification research and practice in clinic, school, institution, and home settings.

Mr. Baker

272B. Psychotherapy with Adults.

272C. Clinical Interventions for Psychological Problems of Children.

272D. Family Therapy and Family Dynamics.

272E. Special Problems.

272F. Behavior Modification with Adults. Prerequisite: second-year graduate standing in clinical psychology. Current cognitive behavior modification principles and techniques. Major conceptual issues; specific techniques demonstrated and practiced by students to cover a range of adult problems such as depression, stress and anxiety, anger management, assertion problems.

Ms. Hammen, Ms. Mays

272G. Marital Therapies. Lecture, two hours; discussion, one hour; laboratory, one hour. Prerequisites: courses 270A-270B-270C, 271A-271B-271C. Examination of assessment and treatment approaches for relationship problems in couples. Presentation, discussion, and illustration of procedures derived from social-learning, psychodynamic, and systems theories, with relevant research findings.

Mr. Christensen

273. Interpersonal Communication Seminar. Prerequisite: course 282 or consent of instructor. Development of a design for studying help-oriented interchange in community and clinical settings. Initial focus on measuring interpersonal deficit, response styles, and training effects.

Mr. Goodman

274A-274B. Group Therapy Dynamics.

275. Family Process: Psychological and Social Perspectives on the Family. (Formerly numbered M275.) Various theoretical perspectives applicable to analysis of family structure and dynamics. Critical issues in application of family constructs to clinical problems.

Mr. Goldstein

276. Clinical Approaches to Children with Learning and Related Behavior Problems. Lecture, three hours; discussion, one hour. Prerequisite: doctoral standing. Theoretical and research issues and problems related to purposes of and practices involved in assessment and correction approaches for children with learning and behavior problems. Practicum experiences to illustrate course content and provide opportunities to improve research and clinical competence.

Mr. Adelman

277A-277B. Advanced Clinical Assessment. Laboratory, two hours; additional hours to be arranged through Psychology Clinic. Prerequisite: graduate standing in clinical psychology. Projective techniques, clinical interpretation, case studies, psychological test battery, psychopathology, and application of assessment to problems in psychotherapy.

278. Seminar: Motivation, Conflict, and Neurosis. Mr. Feshbach

279. Seminar: Research in Psychopathology.

M280. Affective Disorders (2 or 4 units). (Formerly numbered M280A-M280B.) (Same as Psychiatry M234.) Seminar, two hours. General topics related to primary affective disorders (depression, manic depressive illness), including diagnosis, pharmacology, epidemiology, psychology, phenomenology, biology, and treatment. Students enrolled for four units are assigned a more intensive reading list and required to make a presentation or prepare a research paper.

Mr. Gitlin, Ms. Hammen

281. Seminar: Behavior Therapy. Mr. Lovaas

282. Interpersonal Forms: Analysis of Human Interaction Structures. Lecture, two hours; laboratory, two hours. Conceptual and experimental study of six response modalities common to psychotherapy and everyday interaction: questions, silences, advisement, interpretation, self-disclosure, and reflection. Laboratory work performed in conjunction with lecture and seminar sessions.

Mr. Goodman

283. Psychopathology. Survey of dominant psychological attributes of particular forms of psychopathology, including analysis of status of various theories concerned with etiology and mediating mechanisms of personality, neurotic, schizophrenic spectrum, and affective disturbances.

284. Seminar: Clinical Psychology and Communication.

286. Issues and Concepts of Clinical Psychology. Open to graduate students in majors other than clinical psychology. Survey of major issues and alternatives in current practice. Emphasis on assessment and intervention, with consideration of historical, theoretical, and research bases for current trends.

Mr. Broen

287. Critical Problems in Clinical Research Methodology. Prerequisites: courses 250A, 250B. Special problems of measurement and design in clinical research.

Mr. Christensen

288. Seminar: Research in Personality (1 unit). Prerequisite: graduate standing in personality. Required of all students majoring in personality. Current research, theory, and professional issues within area of personality. Brown-bag format utilized to foster intellectual exchange and discussion. Students make at least one presentation per term and participate in discussions with faculty and guest lecturers.

290. History of Psychology. Philosophical and historical context of contemporary psychology. Major trends from the 19th century to contemporary issues.

Mr. Maltzman

291. Principles of Behavioral Pharmacology. Prerequisite: consent of instructor. Intensive analysis of drug, brain, and behavior relationships. Discussion of nature and source of drugs, general aspects of pharmacology, neurotransmitters and basic neuropharmacology, principles of behavioral pharmacology, categories of psychopharmacological agents, and pharmacological approaches to study of drug addiction, schizophrenia, and other behavioral processes, both normal and pathological.

Mr. Butcher

292. Biobehavioral Mechanisms of Stress and Disease. Lecture, three hours. Prerequisite: graduate standing in psychology or consent of instructor. Behavior/physiology interactions of some major bodily systems: nervous, cardiovascular, gastrointestinal, and endocrine systems. Usual and altered states of these systems (e.g., stress) as these can promote permanent tissue injuries, disease, or improved bodily function, health enhancement.

Mr. Grijalva

293. Behavioral and Psychophysiological Problems of Alcoholism. Prerequisite: consent of instructor. Behavioral and psychophysiological characteristics of alcoholism, along with theories concerning their etiology and treatment. Experimental approaches.

Mr. Maltzman

M294A-M294D. Seminars: Neural and Behavioral Endocrinology (3 units, 2 units, 3 units, 2 units). (Same as Anatomy M255A-M255D.) Lecture, three hours. Topics include hormonal biochemistry and pharmacology. Hypothalamic/hypophyseal interactions, both hormonal and neural. Structure and function of the hypothalamus. Hormonal control of reproductive and other behaviors. Sexual differentiation of brain and behavior. Stress: hormonal, behavioral, and neural aspects. Aging of reproductive behaviors and function. In Progress grading. Mr. Arnold (W, M294A, M294C; Sp, M294B, M294D)

M295. Laboratory for Naturalistic Observations: Developing Skills and Techniques. (Same as Anthropology M236Q, Education M222A, and Psychiatry M235.) Skill of observing and recording behavior in natural settings, with emphasis on field training and practice in observing behavior. Discussion of some uses of observations and their implications for research in social sciences. Students expected to integrate observational work into their current research interests.

M296. Neurobiology of Sleep (3 units). (Same as Neuroscience M259 and Psychiatry M249.) Lecture, one hour; discussion, two hours. Critical review of primary research publications concerning neural basis of sleep. Discussion of neural and biochemical control of REM and NREM sleep after reviewing sleep behavior and phenomenology, including developmental and comparative aspects. Presentation of relevant clinical phenomena. S/U or letter grading

297. Issues in Social Development of the Minority Child. Seminar, three hours. Prerequisites: graduate standing, consent of instructor. Critical evaluation and integration of existing research on social psychological development of the minority child. Emphasis on socialization of cognitive and personality style, with goal of empirically clarifying issues raised in this area of developmental study. Mr. Myers

298. Special Problems in Psychology. Content depends on interests of particular instructor. May be repeated for credit.

299. Developmental Methodology. Coverage of both theory and methods in measuring age-related changes in behavior. Experimental designs and data-analytic solutions to problems in measurement of change. Some experience in analysis of actual data sets.

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

401. Fieldwork in Clinical Psychology (1 to 12 units). Prerequisites: courses 271A-271B-271C. Students on practicum assignments are required to register for this course each term (except by consent of clinical program committee).

402. Fieldwork in Speech Pathology (4 or 8 units). Prerequisite: consent of instructor. Practical work in hospitals and clinics in diagnostic testing and psychotherapy with speech disorders.

410A-410B-410C. Clinical Teaching and Supervision. Prerequisites: completion of Ph.D. comprehensive examinations, advancement to candidacy or preparation for dissertation research actively under way, consent of instructor and clinic steering committee. Study and practice of knowledge, concepts, and theories on teaching and supervision of applied clinical psychology. Ms. Jacobs, Mr. Nakamura

420A-420B. Health Psychology Practicum (2 units each). Prerequisite: graduate standing. Determination of what areas of health, illness, treatment, and delivery of treatment can be elucidated by understanding of psychological concepts and research; psychological perspective on these problems; how psychological perspective might be enlarged and extended in the medical area. Through practical field placement, students apply knowledge acquired in class to research observation and/or clinical work in the field. Ms. Taylor

423. Social Survey Research Practicum. Practicum, two hours; additional hours to be arranged. Methods of survey sampling, conduct and management of computer-assisted telephone interview surveys.

425. Health Psychology Lecture Series (2 units). Clinicians and researchers in health psychology from Los Angeles area present their research, programs, and/or clinical work as part of a training program in health psychology. May be repeated for credit. S/U grading. Ms. Taylor

451. Internship in Clinical Psychology (6 to 12 units). Prerequisite: course 401. Limited to students who have successfully completed departmental qualifying examinations. May be repeated for credit. S/U grading.

454. Internship in Industrial Psychology (2 to 4 units).

490. Scientific Writing for Psychologists (2 units). Lecture, two hours; laboratory, two hours. Prerequisite: consent of instructor. Gives graduate students opportunity to improve their effectiveness in writing scientific papers for publication and proposals for dissertations or grants. May not be applied toward graduate degree requirements. S/U grading.

495. Presentation of Psychological Materials. Supervised practicum in undergraduate teaching. Students serve as discussion section leaders in selected undergraduate courses. S/U grading.

501. Cooperative Program (2 to 8 units). Prerequisite: consent of UCLA graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Used to record enrollment of UCLA students in courses taken under cooperative arrangements with USC. S/U grading.

596. Directed Individual Research and Study in Psychology (2 to 12 units). One 596 course is required during second year of graduate study, and one 596 or 599 course is required during each succeeding year of graduate study. (Terminal M.A. candidates are exempt from this requirement.)

597. Individual Studies (2 to 12 units). Intended primarily as preparation for Ph.D. qualifying examinations. May be required by some area committees as a prerequisite for taking examinations.

599. Research for Ph.D. Dissertation (2 to 12 units). Prerequisite: successful completion of qualifying examinations. One 599 course is required during each year following completion of qualifying examinations.

Religion, Study of (Interdepartmental)

Scope and Objectives

The UCLA major in the study of religion is designed to give students a broad humanistic perspective. It introduces students to several religious traditions and thus to an appreciation of the very nucleus of civilization in various periods of history and various parts of the world, as well as to an understanding of fundamental human orientations. The program also provides opportunity to study one or more particular religious traditions in greater depth. Cohesion and integrity in the program are furthered by courses dealing with philosophical problems in religion and with general anthropological reflections.

Bachelor of Arts Degree

Preparation for the Major

Required: History 4; Philosophy 2; two courses from Anthropology 9, East Asian Languages and Cultures 60, History 1A, 1B, 1C, 9A, 9C, 9D, 10A, 10B, 11A, 11B.

The Major

Required: A minimum of 14 upper division courses from the list below, of which at least four (including Study of Religion 100 and Philosophy 175) must be from Group I, at least two

must be from each of Groups II and IV, and at least three must be from Group III (at least one on each of the three religious traditions listed). No more than five of the 14 may be from any one group. A course may be taken twice, on different topics, for credit toward the major where repetition is allowed by the department offering the course. Variable topics courses not listed below (e.g., History 197) may be approved by the adviser as satisfying requirements for which their content is appropriate. A maximum of two upper division courses, not listed below, in an ancient language relevant to your course of study may be applied toward the major requirements (but not the group requirements) with consent of the adviser.

Special studies courses (199) may be applied toward the major but not toward a group requirement; a maximum of 12 units, approved by the adviser, may be applied. No course for the major or preparation for the major may be taken on a P/NP grading basis.

Honors Program

The honors program provides exceptional students with an opportunity to do independent research under the tutorial guidance of a faculty member. If you are admitted to honors, you should take three 199 courses under the guidance of the sponsoring professor. These courses are taken in the senior year and count as part of the regular requirement of 14 upper division courses. The program culminates in an honors thesis.

In order to qualify for admission, you should have a minimum grade-point average of 3.4. The 199 courses designed for the program and the thesis topic should be approved by the committee in charge of the major.

For further information, contact Professor Robert M. Adams at the program address.

Upper Division Course

100. Undergraduate Seminar: Study of Religion. Prerequisite: consent of instructor. Limited to 20 students. Interdisciplinary approach to some major topics in study of religion, such as religion and politics, mysticism, ideas of revelation, myth and religion, worship and ritual. May be repeated for credit with consent of instructor. Mr. Nagy

Study of Religion Upper Division Course List

Group I — Methods

Anthropology 133R. Aesthetic Systems
156. Comparative Religion

History 193A. History of Religions: Myth
193E. Special Topics in History of Religions

Philosophy 175. Topics in Philosophy of Religion

Study of Religion 100. Undergraduate Seminar: Study of Religion

Group II — Nonliterate and Ancient Religious Traditions

Ancient Near East (Near Eastern Languages) 130. Ancient Egyptian Religion

Anthropology 114P. Ancient Civilizations of Western Middle America (Nahuatl Sphere)

114Q. Ancient Civilizations of Eastern Middle America (Maya Sphere)

171. Civilization of Sub-Saharan Africa

174P. Ethnography of South American Indians

Scope and Objectives

The Romance Linguistics and Literature Program emphasizes modern linguistic and literary theories in the study of Romance languages. Linguistic and literary theories can be pursued independently or jointly; however, the integration of linguistic and literary knowledge is taken to be one of the highest aims of this interdepartmental graduate program.

Master of Arts Degree

Admission

The UCLA Bachelor of Arts degree in French, Italian, Portuguese, or Spanish, or the equivalent, is required. Applicants are expected to have a grade-point average of at least 3.4 in upper division courses, especially in those judged germane to their proposed program. Three letters of recommendation and the General Test of the Graduate Record Examination (GRE) are also required and should be submitted to the Chair, Romance Linguistics and Literature Program, 359 Royce Hall, UCLA, Los Angeles, CA 90024-1535. Students admitted from elsewhere whose preparation is considered deficient in view of their intended specialization are required to take specified upper division courses. Such courses may be taken concurrently with graduate courses, but they may not be applied toward the course requirements for the M.A. degree. Before enrolling for the first term in the program, new students must consult the program chair concerning the formation of their guidance committee. Students who know only the language of their major should prepare in at least one other Romance language during the first graduate year so they can take courses in their minor no later than the second year of graduate study.

Foreign Language Requirement

In addition to the Romance language of major interest and that of minor interest, you are required to take either Latin 3 or the equivalent, or Italian 3 or the equivalent (provided Italian is not your major), whether you specialize in linguistics or in literature. The language requirement must be completed no later than the term before you expect to receive your degree.

Course Requirements

Twelve courses are the minimum requirement, of which six courses (at least five of them graduate) must be in your major language, with specialization either in linguistics or in literature. One course in the history or development of the major language is highly recommended. At least three courses would be in the minor language, also with specialization in either linguistics or in literature. The remaining three courses should be selected in consultation with the guidance commit-

tee so as to be logically supportive of your major field of study. Linguistics 20 is required as a prerequisite for all students majoring in the linguistics field but may not be applied toward the total number of courses required for the degree. Up to eight units of Romance Linguistics and Literature 596 may be applied toward the M.A. Courses 597 and 598 may not be applied toward the degree.

Teaching Experience

Teaching experience is not required but is desirable. Consult the chair regarding the availability of teaching assistantships.

Thesis Plan

The program favors the comprehensive examination plan but will approve M.A. theses for exceptionally well-qualified students under special circumstances. You may petition for authorization to write an M.A. thesis only after completion of six courses applicable toward the degree. It is your responsibility to select an appropriate topic and find a professor to direct the thesis. After completion of the thesis, you must pass a two-hour oral examination testing your knowledge of the field of the thesis and your general competence. Only those students who attain a high pass on the examination are encouraged to proceed to candidacy for the Ph.D. degree.

Comprehensive Examination Plan

The comprehensive examination is administered by three members of the guidance committee, appointed by the chair. The written examination, consisting of one four-hour examination in the major field, one two-hour examination in the minor field, and one oral examination not to exceed one hour, is given each term two weeks prior to final examinations. If you fail the examination or any part thereof, you may retake the failed portions once when the examination is next regularly offered. Only those students who attain a high pass grade on the master's examination are automatically eligible for the Ph.D. program.

Ph.D. Degree

Admission

The UCLA Master of Arts degree in Romance Linguistics and Literature or the UCLA M.A. in French, Italian, Portuguese, or Spanish, or the equivalent, is required. A strong academic record (normally a GPA of 3.4 or better), three letters of recommendation, and the Graduate Record Examination (GRE) General Test (normally with a combined verbal/quantitative score of 1,100 or better) are also required.

Formal application is required of all students. Entering students who have completed the UCLA M.A. in Romance Linguistics and Literature with a high pass grade are automatically eligible for admission to the Ph.D. program; those who received a middle pass are reviewed like candidates from other institutions; those who received a low pass grade are ineligible for

admission. Students whose M.A. program registers deficiencies in scope or quality may be admitted but are required to complete three graduate courses (with grades of B or better) approved by the chair.

Following your formal admission, you select your guidance committee in consultation with the chair. You then meet as soon as possible with your committee to work out your program of courses and set a tentative date for the qualifying examinations. The guidance committee has final authority to prescribe the course of study. Until you have met with this committee and placed yourself under its direction, you are not officially in the Ph.D. program.

Major Fields or Subdisciplines

The program recognizes two fields of specialization: linguistics and literature.

Linguistics — Major fields include (1) the present-day grammar of the Romance language of your major interest and its relation to the grammar of its sister languages and to language in general, (2) the development of the Romance language of your major interest in relation to its sister languages (and possibly other interrelated cultural aspects) from the perspective of historical linguistics, and (3) the genetic and typological relationships of the Romance languages to other Indo-European languages and to language in general. The two minors may be other Romance languages, or one other Romance language plus a field of Romance literature.

Literature — Major fields include one of the following in the literatures of at least two Romance languages: (1) early Romance literature and philology; (2) Renaissance and baroque; (3) modern literature, preferably with emphasis in one century. The first minor may be one of the preceding fields not selected for the major. The second minor may be the same field or a new field in another Romance language, or some other related field in the major language or in Romance linguistics.

Foreign Language Requirement

In addition to the minimum of two Romance languages, Latin 3 or Italian 3 or the equivalent is required of all students in the program. Students selecting option 2 or 3 in linguistics or option 1 in literature must also take German, whereas those selecting option 1 in linguistics or option 2 or 3 in literature must take another foreign language to be determined by the guidance committee. In non-Romance languages, you must pass the Graduate School Foreign Language Test (GSFLT). In languages where there is no such test, passing a departmental examination fulfills the requirement. This requirement may also be met by completing two years of college-level courses in the language with a grade of B or better or by fulfilling the foreign language requirement in connection with an M.A. obtained elsewhere. The foreign

language requirement must be satisfied no later than the term before the qualifying examinations are taken.

Course Requirements

In each of the two specializations (linguistics or literature) the Ph.D. program consists of a major and two minors. The courses (a minimum program) are distributed as follows: major — five courses, first minor — three courses, second minor — two courses. At least one seminar is required in each of the three fields. In addition to those required for the master's degree (or equivalent) at least 10 other graduate courses (of which no more than two 596 courses may be applied), as well as such courses as the guidance committee may prescribe, are required. Linguistics 20 is required as a prerequisite for all students majoring in the linguistics field but may not be applied toward the total number of courses required for the degree.

Teaching Experience

Teaching experience is not required but is desirable. Consult the chair regarding the availability of teaching assistantships.

Qualifying Examinations

The qualifying examinations, given by the doctoral committee during Fall, Winter, and Spring Quarters, consist of (1) a three-hour written examination in the major field, (2) a two-hour examination in the first minor, (3) a one-hour examination in the second minor, and (4) a two-hour University Oral Qualifying Examination in the three fields, at which time your prospectus for the dissertation is also discussed and approved. Failed portions of the examination may be repeated once after any remedial preparation the committee may specify.

Candidate in Philosophy Degree

You are eligible to receive the C.Phil. degree on advancement to candidacy for the Ph.D.

Dissertation

The dissertation may be on any subject within the general area of Romance linguistics and literature. If more than five calendar years elapse between advancement to candidacy and the presentation of the dissertation, the program may require revalidation of the qualifying examinations.

Graduate Courses

204A-204B. Romance Syntax: French (1 to 4 units each). Lecture, three hours. Prerequisites: Linguistics 120B, 200B, consent of instructor. Course 204A is prerequisite to 204B. Structure of French from point of view of contemporary syntactic theory, with emphasis on considerations of comparative syntax with other Romance languages. Topics include verbal/auxiliary system; Wh-movement and Complementizer system; clitic constructions, causatives, inversion phenomena; quantifier distribution; impersonal constructions; negation and subjunctive. S/U or letter grading.

Mr. Sportiche

211. Comparative Romance Syntax. Lecture, three hours. Prerequisite: French 210A or Portuguese 204A or Spanish 204A or consent of instructor. Comparative study of syntactic processes in Romance languages. Investigation of parameters underlying linguistic variation. Mr. Otero, Mr. Quicoli

255. Topics in Romance Syntax (1 to 4 units). Prerequisite: consent of instructor. Topics in syntax of Romance languages, with emphasis on recent development in comparative studies; theoretical innovations based on Romance syntax. Mr. Sportiche

596. Directed Individual Study or Research (4 to 8 units). Prerequisite: consent of instructor and program chair. Study or research in areas or on subjects not offered as regular courses. Eight units may be applied toward M.A. degree requirements. S/U grading.

597. Preparation for Graduate Examinations (4 to 12 units). Prerequisite: consent of graduate adviser. Individual preparation for M.A. comprehensive examination or Ph.D. qualifying examinations. May be taken only once for each degree examination and only in term that comprehensive or qualifying examinations are to be taken. S/U grading.

598. Research for M.A. Thesis (2 to 12 units). Prerequisite: consent of guidance committee. Research in preparation of M.A. thesis. S/U grading.

599. Research for Ph.D. Dissertation (2 to 12 units). Prerequisite: successful completion of Ph.D. qualifying examinations. Research for and preparation of Ph.D. dissertation. S/U grading.

Romance Linguistics and Literature Course List

In consultation with the appropriate adviser(s), courses should be selected with an eye to the organic relationship between them, preferably among those listed below and/or their prerequisites:

Introductory Courses

Italian 201. Bibliography and Methods of Research
Spanish M200. Research Resources

Linguistics Courses

Grammatical Theory: Linguistics 201. Current Issues in Phonological Theory II
206. Linguistic Theory: Syntax II

Development of the Romance Languages

Hispano-Romance: Spanish M205A-M205B. Development of Portuguese and Spanish Languages

Indo-European: Indo-European Studies 210. Indo-European Linguistics: Advanced Course

280A-280B. Seminars: Indo-European Linguistics

Italic Dialects: Latin 242. Italic Dialects and Latin Historical Grammar

Italo-Romance: Italian 259A. History of the Italian Language

Latin History: Latin 240. History of the Latin Language

Medieval Latin: Latin 231A-231B. Seminars: Medieval Latin

Northern Gallo-Romance: French 210A. Phonology and Morphology from Vulgar Latin to French Classicism

210B. Syntax and Semantics from Vulgar Latin to French Classicism

Paleography: History 219A-219B. Paleography I, II

Romance Dialectology: Italian 259C. Italian Dialectology

Spanish 209. Dialectology

Romance Linguistics: Linguistics 225G. Linguistic Structures

Vulgar Latin: Latin 232. Vulgar Latin

Studies in the History of the Romance Languages

Gallo-Romance: French 214. Problematics of Medieval Language and Literature

Hispano-Romance: Spanish M251A-M251B. Studies in Gallegan-Portuguese and Old Spanish

Italo-Romance: Italian 210A. Early Italian Literature: Origins of Italian Language and Early Texts

259A-259B-259C. Studies in History of Italian Language

Synchronic Linguistics

Advanced Grammar: French 201. Literary Research and Composition

Italian 259B. Structure of Modern Italian

Portuguese 202. Synchronic Morphology and Phonology

204A-204B. Generative Grammar

Spanish 202A. Phonology

202B. Morphology

204A-204B. Generative Syntax and Semantics

Studies in Linguistics and Dialectology: Spanish 256A-256B. Studies in Spanish Linguistics

257. Studies in Dialectology

Literature Courses

History of Ideas: French 260A-260B. Studies in History of Ideas

Literary Criticism: French 202. Historical and Philosophical Background to French Literary Criticism

203. Contemporary Theories

258A-258B. Studies in Literary Criticism

Italian 205A-205B-205C. Methods of Literary Criticism

Spanish M201A-M201B. Literary Theory and Criticism

Literary History: History 218. Medieval Latin Literary History

Philosophy and Literature: French 259A-259B. Studies in Philosophy and Literature

Early Romance Literature

Petrarca: Italian 214D. Italian Literature of the 14th Century: Petrarca

251. Seminar: Petrarca

Studies in Early Romance Literature: French 215A-215D. Medieval Literature

250A. Major Medieval Texts

250B. Structure of Medieval Literature

250C. Problems in Medieval Literature

Italian 210B-210C. Early Italian Literature

214A-214G. Italian Literature of the 14th Century

215A-215B-215C. Italian Literature of the 15th Century

250A-250D. Seminars: Dante

252. Seminar: Boccaccio

Portuguese C224. Medieval Portuguese Literature

Spanish 222. Medieval Epic and Narrative Poetry

223. Medieval Prose

262A-262B. Studies in Medieval Spanish Literature

Modern Romance Literature

Genre Studies: Portuguese 252. Studies in Early Portuguese Literature

253. Studies in Modern Portuguese Literature

254. Studies in Early Brazilian Literature

255. Studies in Modern Brazilian Literature

Studies in the 18th Century: French 218A-218B-218C. 18th Century

254A-254B. Studies in the 18th Century

Italian 218A-218E. Italian Literature of the 18th Century

256A-256B. Seminars: 18th Century

Portuguese C227. Romanticism and Realism in Portuguese Literature

C232. Romanticism in Brazilian Literature

Spanish 229. Romanticism

239. Romanticism and Realism in Spanish-American Literature

270A-270B. Studies in 18th-Century Spanish Literature

277A-277B. Studies in Colonial Spanish-American Literature

Studies in the 19th Century: French 219A-219D. 19th Century

255A-255B. Studies in the 19th Century

Italian 219A-219F. Italian Literature of the 19th Century

257A-257B. Seminars: Romanticism

Portuguese C228. Post-Romanticism and Naturalism in Portuguese Literature

C233. Naturalism, Realism, and Symbolism in Brazilian Literature

Spanish 230. Realism and Naturalism

271A-271B. Studies in 19th-Century Spanish Literature

278A-278B. Studies in 19th-Century Spanish-American Literature

Studies in the 20th Century: French 220A-220D. 20th Century

221A-221C. French-African Literature

256A-256B. Studies in Contemporary Literature

257A-257B. Studies in French-African Literature

Italian 220A-220B-220C. Italian Literature of the 20th Century

258A-258B. Seminars: Contemporary Italian Literature

Portuguese C229. 20th-Century Portuguese Literature

C234. 20th-Century Brazilian Literature: Poetry and Drama

C235. 20th-Century Brazilian Literature: Novel

Spanish 232. Spanish Prose Literature from 1898 to the Civil War

233. Spanish Prose Literature after the Civil War

234. Spanish Drama and Poetry from 1898 to the Civil War

235. Spanish Drama and Poetry after the Civil War

240. Major Currents in Modern Spanish-American Literature

243A-243B. Contemporary Spanish-American Poetry

244A-244B. Contemporary Spanish-American Novel

245. Contemporary Spanish-American Essay

272A-272B. Studies in 20th-Century Spanish Literature

280A-280B. Studies in Contemporary Spanish-American Literature

Renaissance and Baroque Literature

Cervantes: Spanish 227. Cervantes

Studies in Renaissance and Baroque Literature: French 216A-216B-216C. Renaissance

217A-217D. 17th Century

251A-251B. Studies in the Renaissance

252A-252B. Studies in the Baroque

253A-253B. Studies in the 17th Century

Italian 216A-216E. Italian Literature of the 16th Century

217A-217B-217C. Italian Literature of the 17th Century

253A-253B-253C. Seminars: Chivalric Poetry in Italy

255A-255B. Seminars: Baroque

Portuguese C225. Renaissance Portuguese Literature

C226. Baroque and Neoclassical Portuguese Literature

C231. Colonial Brazilian Literature

Spanish 224. Poetry of the Golden Age

225. Drama of the Golden Age

226. Prose of the Golden Age

237. Literature of the Spanish Conquest

264A-264B. Studies in Golden Age Spanish Literature

ROTC Programs

In accordance with the National Defense Act of 1920 and with the concurrence of The Regents of the University, a unit of the Senior Division Reserve Officer Training Corps (ROTC) was established on the Los Angeles campus of the University in July 1920.

This voluntary training allows you to qualify for an officer's commission in the Army, Navy, Air Force, or Marine Corps while completing your college education. ROTC courses are offered by three departments within the College of Letters and Science: Aerospace Studies (Air Force), Military Science (Army), and Naval Science (Navy and Marine Corps). They are not considered academic majors, but ROTC courses may be taken as free electives and applied toward the total course requirements of your major. The ROTC program is also available through UCLA Extension.

All three ROTC departments offer voluntary four-year programs for incoming freshmen and two-year programs for students who apply early in their sophomore year. All have leadership laboratories which help to build management skills.

Beginning in 1996 all commissions will be reserve commissions. Active duty obligation following commissioning varies depending on branch of service.

Scholarships

ROTC Scholarships are awarded on a competitive basis to U.S. citizens regardless of parents' income. Scholarships provide tuition, a book allowance, fees, and a tax-free monetary allowance of \$100 per month during the academic year. Applications for four-year scholarships may be obtained by calling the appropriate department at UCLA — Army, 825-7381; Air Force, 825-1742; Navy, 825-9075 — or by writing to Armed Forces Opportunities, P.O. Box 2865, Huntington Station, NY 11746-2102. When writing, specify which service (Army, Air Force, Navy/Marine) scholarship is desired. Completed applications should be received prior to July 15 (Army) or August 15 (Air Force and Navy) for early consideration, but no later than December 1 (all services) of the year preceding college matriculation. Three- and two-year scholarship applications may be obtained from the appropriate UCLA department and must be submitted prior to February 1.

Aerospace Studies

210 Men's Gym, (310) 825-1742

Professor

Gary A. Jorgenson, M.A., Colonel, *Chair*

Adjunct Assistant Professors

William J. Kopps, M.S., Captain

Anthony D. Leppellere, M.B.A., Captain

Archie L. Roundtree, M.B.A., Captain

Air Force ROTC Scope and Objectives

Air Force ROTC provides selected students the opportunity to develop those attributes essential to positions of high responsibility as commissioned officers in the U.S. Air Force. This includes understanding Air Force history, doctrine, operating principles, and national security policies, demonstrating ability to apply modern principles of management and human relations in the Air Force environment, and mastering of leadership theory and techniques. Students must demonstrate dedication to their assignments, willingness to accept responsibility, and the ability to think critically and communicate with clarity and precision.

Four-Year Program

The four-year program is available to first-term freshmen and those full-time students with at least four years of undergraduate and/or graduate study remaining and consists of an initial two-year General Military Course, or GMC (Aerospace Studies 1A-1B-1C and 20A-20B-20C), followed by a two-year Professional Officer Course (POC) described under "Two-Year Program." GMC participation requires one hour of academic class and two hours of leadership laboratory each week during the academic year. Students incur no military obligation for GMC participation unless they qualify and accept an Air Force ROTC scholarship during or after their sophomore year.

Students who complete GMC and wish to enter POC attend a four-week field training course the summer following GMC completion. At field training, students are provided meals, quarters, clothing, and travel expenses and are paid about \$450 to cover incidental expenses. Subjects covered at field training include junior officer training, aircraft and aircrew orientation, career orientation, survival training, base functions, Air Force environment, and physical training.

Two-Year Program

The two-year program is known as the Professional Officer Course (POC) and consists of Aerospace Studies 130A-130B-130C and 140A, 140B, 140C. POC participation requires two hours of leadership laboratory and three hours of academic class each week during the academic year.

Prerequisites for the two-year program are successful completion of the GMC and a four-week field training course (see "Four-Year Program" above), or successful completion of a six-week field training program on an Air Force base during the summer preceding enrollment in the program.

Students interested in the six-week field training program are encouraged to apply to the department chair early during Fall Quarter of their sophomore year. The application deadline normally is February 1, but earlier submission is recommended, as the selection board considers applications monthly. U.S. citizenship is required. There is no obligation to apply. Students are selected on a competitive basis with consideration given to academic major, grade-point average, aptitude examination scores, medical examination results, performance during an officer board interview, and a physical fitness test.

Students selected for the six-week summer field training are provided meals, quarters, clothing, travel expenses, and approximately \$675 to cover incidental expenses. Subjects are the same as those in the four-week course plus the academic portion of the GMC (see "Four-Year Program" above).

Students enrolled in POC incur a military obligation and are paid \$100 per month during the academic year. Graduation and successful completion of POC leads to a commission as a second lieutenant. Cadets then report to one of the challenging assignments in the Air Force.

Freshman-Year Courses

1A-1B-1C. U.S. Military Forces in the Contemporary World (2 units each). Lecture, one hour. Air Force ROTC students should complete all three courses, preferably in sequence. Willingness to participate in class discussion required. P/NP or letter grading:

1A. Examination of roles and norms expected from military officers, with emphasis on characteristics of national power, U.S. national security apparatus, and key elements of current strategic doctrine. Role of U.S. Navy, Marine Corps, and Army.

Capt. Kopps (F)

1B. Focus on roles, missions, and organization of the Air Force, covering basic elements of air doctrine and functions of general purpose, strategic, and aerospace support forces. Emphasis on how aerospace forces are utilized during conflict, as well as current problems in defense procurement.

Capt. Kopps (W)

1C. "Threat assessment" of U.S.S.R. military and political policies and potential for military conflict in selected regions of the world. Examination of low-level conflict as represented by terrorist actions and guerrilla warfare. Analysis of basic elements of strategy which deter war.

Capt. Kopps (Sp)

Sophomore-Year Courses

20A-20B-20C. Developmental Growth of Air Power (2 units each). Lecture, one hour. Development of air power over past 80 years. Development of various concepts of employment of air power, with emphasis on factors which have prompted research and technological change. Key events and elements in history of air power, especially where these provide significant examples of impact of air power on strategic thought. P/NP or letter grading.

Capt. Roundtree (F,W,Sp)

Upper Division Courses

130A-130B-130C. Concepts of Air Force Management and Leadership. Lecture, three hours. Course 130A is prerequisite to 130B, which is prerequisite to 130C. Analysis of principles and functions of management, leadership, and organizational behavior, with special reference to the Air Force as a model. Problem solving, information systems and models, quantitative methods, and computer systems. Group discussions, case studies, films, and role-playing used as teaching devices. Communicative skills strengthened through preparation of written reports and oral presentations.

Capt. Leppellere (F,W,Sp)

140A. Military Judicial System. Lecture, three hours. Introduction to military justice system, international laws of armed conflict relating to air operations, and foundations of military professionalism. Oral and written reports to strengthen communicative skills. P/NP or letter grading.

Col. Jorgenson (F)

140B. The Military in American Society. Lecture, three hours. Forces and issues in social context of the American military. Influence of social norms, societal pressures, and cultural factors on functions and role of the military professional in the U.S. Communicative skills strengthened through extensive classroom presentations. P/NP or letter grading.

Col. Jorgenson (W)

140C. American Defense Policy. Lecture, three hours. U.S. security policy with respect to factors that influence its formulation, bureaucracy that formulates and implements it, and forms it has taken and may take in the future. Communication techniques strengthened, and communication abilities oriented to Air Force requirements through preparation of papers and classroom presentation and discussion. P/NP or letter grading.

Col. Jorgenson (Sp)

199. Special Studies in Aerospace Studies (2 or 4 units). Prerequisite: consent of instructor. Course of study for undergraduates who wish to engage in independent research under direct supervision of a department faculty member. P/NP or letter grading.

Col. Jorgenson

Army ROTC Scope and Objectives

Army ROTC prepares selected students for leadership as commissioned officers in the U.S. Army, Army Reserve, or National Guard. This training includes in-depth study of the military establishment, military history, doctrine, leadership principles, management, and many other basic skills necessary to build motivated, effective leaders.

Programs

The military science curriculum is divided into two parts: (1) the Basic Course, two years of lower division study during which students must complete 12 units of coursework and (2) the Advanced Course, two years of upper division

study consisting of 14 units of coursework and a six-week summer camp.

Transfer students and others who were unable to enroll in the Basic Course can receive equivalent credit in several different ways (see "Two-Year Program" below).

Admission to the Advanced Course is limited to selected students who meet all academic and physical requirements. Students in this course receive a subsistence allowance of \$100 a month for 10 months during each of the two academic years, plus military science books and uniforms. After completion of the Advanced Course and graduation, students have the opportunity to be commissioned as second lieutenants in one of the Army's 17 specialty areas in either the Army National Guard, Reserves, or Active Army. Students' desires are a major factor in determining which branch is selected.

Students selected for Advanced ROTC must attend a six-week Advanced Camp between their Military Science III and IV years. Cadets receive an allowance for travel expenses and are paid for attendance.

The active duty obligation for those students selected to enter the Reserves or National Guard is for initial training, and only for a period of several months. Students accepting ROTC scholarships and a commission in the Regular Army, or who are selected to enter the Active Army, serve longer terms. ROTC students wishing to obtain advanced degrees may be granted a delay in reporting to their initial assignment.

Four-Year Program

Students are enrolled in the Basic Course (freshman and sophomore years) on a voluntary basis. After completion of the Basic Course and before entrance into the Advanced Course (junior and senior years), students are required to execute a contract with the Department of the Army agreeing to complete the Advanced Course and accept a commission if offered.

Two-Year Program

This program is designed for students who receive placement credit for two years of ROTC and directly enter the Advanced Course. Placement credit may be given for completing three years of high school Junior ROTC, attending a paid ROTC summer camp, joining the Army Reserve or National Guard (veterans may receive VA benefits concurrently with Advanced Course subsistence allowances), completing two years of college-level Air Force or Navy ROTC, completing an ROTC compression course, or previous military service.

Commissioning

Successful completion of the Advanced Course program, one course each in computer literacy, mathematical reasoning, written communications, military history, and human behavior, and a bachelor's degree may lead to a commission as a second lieutenant in the Army Reserve, Na-

tional Guard, or Active Army. Distinguished graduates may qualify for a commission in the Regular Army.

Lower Division Courses

Army ROTC students may satisfy military history requirements by completing History 7B, 125E, 125F, 127A, 127B, 130C, 147A, 148A, 148B, 148C, 152A, or 152B in lieu of Military Science 110, with consent of the ROTC adviser.

000. Leadership Laboratory (No credit). Laboratory, three hours (lower division cadets) or four hours (upper division cadets). All cadets must be concurrently enrolled in a military science course; upper division cadets must also be under a contracted obligation with department. Designed to allow cadets to apply leadership techniques and military skills taught in classroom and to develop their confidence as future military officers.

10. Introduction to Leadership (2 units). Lecture, one hour; discussion, one hour. Introduction to leadership and motivational theory. Topics include nature of organizations, individual behavior, motivation and performance, values and organizational commitment, and influence processes. Capt. Leonard (F)

11. U.S. Defense Establishment I (2 units). Lecture, one hour; discussion, one hour. Study of evolution and organization of U.S. Department of Defense, including study of military services, with emphasis on the U.S. Army. P/NP or letter grading. Capt. Davis (W)

12. U.S. Defense Establishment II (2 units). Lecture, one hour; discussion, one hour. Fundamentals of national security policy development. P/NP or letter grading. Capt. Leonard (Sp)

14. Principles of Land Navigation Applicable in Maneuver (2 units). Lecture, one hour; discussion, one hour. Prerequisite: consent of instructor. Introduction to topographic maps and aerial photographs and their relation to land navigation; conceptual linkage to basic military tactics. Topics include map coordinate systems, scale and distance relationships, intersection and resection, photo interpretation, squad and platoon operations, and resource planning techniques. Introduction to new technologies, including Global Positioning Systems (GPS). Capt. Soussounis (Sp)

18. Modern Guerrilla Warfare (2 units). Lecture, one hour; discussion, one hour. Prerequisite: undergraduate standing. Introduction to low intensity conflict and guerrilla strategies; explanation/discussion of political, economic, religious, and social factors contributing to civil unrest and/or insurgencies. Topics include nonmilitary responses, military tactics, interrelationship of military and government, psychological warfare, and civic actions. Capt. Davis (W)

21. Psychology of Leadership I (2 units). (Formerly numbered 111.) Lecture, one hour; discussion, one hour. Study of relationship of individual differences, group dynamics, formal organizational constraints, and impact of society on leadership process. Introduction to external environmental pressures on a leader and psychology of the individual as a follower, examined in areas of motivation, peer pressure/conformity, and group norms. Capt. Leonard (W)

24. Theory of Warfare (2 units). Inquiry into theory, nature, causes, and elements of warfare, with attention also to evolution of weapons and warfare. Lt. Col. Murphy (F)

Upper Division Courses

110. U.S. Military History (3 units). (Formerly numbered 22, 23.) Lecture, three hours; discussion, one hour. Prerequisite: consent of instructor. Survey of American military history from 1860 to the present. Causes of war, strategy, tactics, and technological developments set against economic, political, and diplomatic concerns. Impact of warfare on society. Capt. Soussounis (F)

112. Psychology of Leadership II (3 units). Lecture, one hour; discussion, one hour. Prerequisite: consent of instructor. Introduction to various individual leadership styles and personalities to assist students in development of their own individual style. Different philosophies of leadership, along with dimensions of leader behavior. Special consideration to counseling, management, and communication techniques that must be mastered to be an effective leader. Capt. Soussounis (W)

113. Theory of Learning Applied to Teaching (2 units). Lecture, one hour; discussion, one hour. Prerequisite: consent of instructor. Study of instructional processes, lesson content planning procedures, techniques of applicatory education, role of testing (including evaluation and analysis). Emphasis on development of training programs to maximize organizational effectiveness. P/NP or letter grading. Capt. Davis (F)

123. Military Legal Systems (2 units). Lecture, one hour; discussion, one hour. Prerequisite: consent of instructor. Introduction to theory and application of military law and legal systems, with emphasis on Uniform Code of Military Justice and rights of the accused under the constitution. Capt. Davis (Sp)

125. Decision Making (2 units). Lecture, one hour; discussion, one hour. Prerequisite: consent of instructor. Designed to present students who will become commissioned officers with new insight into modern methods of managerial decision making and into various steps involved in the process. Introduction to various components of leadership and functions of management in order to understand where areas of problem analysis and decision making impact and how they fit into leadership and management. Various steps which comprise the problem analysis and decision-making processes. Lt. Col. Murphy (Sp)

126. Military Professionalism and Ethics (2 units). Lecture, 30 minutes; discussion, 90 minutes. Prerequisite: consent of instructor. Ethical concepts held by America's military institution. Classification of the military as a profession, special social responsibilities of those in the military, values related to and accepted by military society, and an ethical reasoning/decision-making process and model. Lt. Col. Murphy (W)

199. Supervised Independent Study (1 to 3 units). Prerequisites: upper division standing, consent of instructor. Supervised independent study and research for undergraduate students who desire to pursue topics of their own selection. Lt. Col. Murphy

Naval Science

123 Men's Gym, (310) 825-9075

Professor

Ralph F. Smith, M.S., Captain, U.S. Navy, *Chair*

Adjunct Assistant Professors

Edward B. Bowman, B.A., Lieutenant, U.S. Navy
Cass D. Howell, M.S., Lieutenant Colonel, U.S. Marine Corps

Jon Gilbert Hum, B.A., Lieutenant, U.S. Navy
David L. Swedensky, B.S., Lieutenant, U.S. Navy

Navy ROTC Scope and Objectives

Navy ROTC at UCLA offers subsidized and non-subsidized programs for college students who wish to serve their country as commissioned officers in the U.S. Navy or Marine Corps. The primary objectives of NROTC are to provide students with understanding of the fundamental concepts and principles of naval science; basic understanding of associated professional knowledge; appreciation of the requirements for national security; and a strong sense of personal integrity, honor, and individual responsibility.

NROTC enables college graduates to use their education in such military fields as marine engineering, nuclear propulsion engineering, aviation, and Marine Corps infantry, aviation, and combat service support roles. It also provides opportunity to develop leadership and management skills in a challenging environment of high responsibility.

The Department of Naval Science offers several programs for which U.S. citizenship is required.

College Program

This is a four-year program open to physically qualified men and women between the ages of 17 and 21. Students receive \$100 per month in their junior and senior years and complete one summer training cruise after their third year. After graduation, students are commissioned as Ensign, U.S. Naval Reserve, or Second Lieutenant, U.S. Marine Corps Reserve. A three-year active duty obligation is incurred.

Two-Year Program

Applications are accepted from UCLA students as well as incoming junior college transfers. After a six-week summer training period, students enroll in NROTC as juniors. Applicants should contact the department no later than March 1 of their sophomore year.

Freshman-Year Courses

1A. Introduction to Naval Science (2 units). Introduction to organization of the Naval Service, various components of the Navy, career opportunities, shipboard damage control, fire fighting, propulsion systems, and some customs and traditions of the Naval Service. Lt. Swedensky (F)

20B. Seapower and Maritime Affairs (2 units). Conceptual study of seapower, emphasizing historical development of naval and commercial power. Seapower examined in relation to economic, political, and cultural strengths, focusing on current abilities of specific nations to use the oceans to attain national objectives. (Sp)

Sophomore-Year Courses

1B. Naval Ship Systems I. Introduction to naval engineering, with emphasis on basic power cycles used in naval propulsion systems, basic thermodynamic principles inherent in ship propulsion, and salt water distillation systems. Detailed examination of ship hull and superstructure design, ship stability, and buoyancy. Lt. Bowman (F)

20A. Naval Ship Systems II. Study of naval weapon systems, with emphasis on infrared, radar, and sonar principles. Target designation and acquisition, methods of solving fire control problem, target detection systems. Analysis of transfer and feedback functions inherent in weapon systems. Lt. Swedensky (W)

Junior-Year Courses

101A. Navigation I. Study of principles of piloting, celestial, and electronic navigation employed in determining a ship's position at sea. Celestial and electronic theory, mathematical analysis, sextant sights, and use of navigational aids. Lt. Hum (W)

101B. Navigation II. Prerequisite: course 101A. Study of rules of the road, shiphandling, and basic concepts of multiple ship formations and maneuvering. In-depth analysis of problems associated with operations on high seas and inland waters applying to civil and U.S. Naval craft. Lt. Hum (Sp)

***103. Evolution of Warfare.** Study of evolution of warfare, including historical and comparative consideration of influence that leadership, political, economic, and sociological and technological development factors have had on warfare and influence they continue to exert in age of limited warfare. (W)

Senior-Year Courses

102B. Naval Leadership and Management I. Examination of current and classical leadership and management theories, with emphasis on their application to junior military officer's role as a leader/manager. Topics include managerial functions, performance appraisal, motivation theories, group dynamics, leadership theories, and communication.

102C. Naval Leadership and Management II (2 units). Prerequisite: course 102B. Current leadership and management in the U.S. Navy. Areas include human resources management, personnel management, material management, and performance and career evaluation. Lt. Bowman (W)

***104. Expeditionary Military Operations.** Study of historical use of expeditionary military operations, with particular emphasis on doctrine, tactics, and equipment used. Examination of topics through study of political and military objectives by focusing on historical examples, including Marathon, Gallipoli, World War II, Korea, Beirut, and Grenada. Examination of contemporary doctrine through study of recent operations. (W)

199. Supervised Independent Studies (1 to 4 units). Prerequisites: upper division standing, consent of instructor. Supervised independent study and research for undergraduate students who desire to pursue topics of their own selection. P/NP or letter grading.

Scope and Objectives

The Bachelor of Arts degree in Russian Language and Literature is designed to provide students with basic mastery of the Russian language and familiarity with the classics of Russian literature. Within the major, students concentrate either in Russian literature or Russian linguistics. Students typically begin to study Russian in their first year, but those contemplating a Russian major later in their academic program can fulfill the Russian language requirements by combining regular coursework with summer programs or with the University of California semester program at the Herzen Pedagogical Institute in Saint Petersburg, which is open to students who have completed the equivalent of two years of study (American Council of Teachers of Foreign Languages — ACTFL — level 1). Students interested in this program should consult the undergraduate adviser as early as possible.

The Bachelor of Arts degree in Slavic Languages and Literatures is designed to provide students with basic mastery of two Slavic languages and familiarity with their literatures, as well as general background in the cultural, political, and social history of the Slavic peoples.

The department also offers a Bachelor of Arts degree in Russian Studies in which students

achieve a basic mastery of the Russian language, as well as familiarity with Russian literature, history, and culture.

The graduate program provides advanced training in Slavic linguistics and literature leading to the M.A. and Ph.D. degrees. The primary task of the department faculty is to develop and refine the critical and analytic skills of its students in preparation for productive careers in college teaching and research in the Slavic field. Alternative careers include language teaching, translation, interpreting, librarianship, and government service.

Undergraduate Study

The department offers three majors: (1) Russian language and literature, with concentrations in Russian literature or Russian linguistics, (2) Slavic languages and literatures, and (3) Russian studies. The equivalent of a major in Slavic or Russian language and literature is normally required for admission to the department's graduate program and is used to determine the number of courses in Russian literature and/or linguistics that students majoring in Russian studies are expected to make up in order to receive graduate degrees in the department. Students not majoring in Slavic or Russian language and literature who intend to pursue graduate study in the department are strongly encouraged to take courses in Russian literature and linguistics during their undergraduate years to reduce the number of makeup courses required. Qualified seniors may also take graduate courses numbered below 220 with consent of the instructor and the graduate and undergraduate advisers.

Bachelor of Arts in Russian Language and Literature

Preparation for the Major

Required: Russian 1, 2, 3, 4, 5, 6, or equivalent proficiency as determined through departmental testing (equivalent to ACTFL level 1), and 99A.

The Major

Required: Russian language skills equivalent to ACTFL level 2 (students usually take Russian 101A-101B-101C and 102A-102B-102C to attain level 2 proficiency; consult the undergraduate adviser for information on summer programs and the Petersburg semester program), Russian 106A-106B and 130A or 140A.

You also must concentrate in either literature or linguistics. For the *literature* concentration, Russian 118, 119, 120 (all three may be taken in the sophomore year) and two courses from 124A through 124F, 125, 126, 130B, 130C, 134, 140B, 140C, 140D, M150 are required. For the *linguistics* concentration, Linguistics 100, one course from Linguistics 103, 110, 120A, 120B, and two courses from Slavic 201, 202, Russian 118, 119, 120, 124A through 124F, 125, 126, 130B, 130C, 134, 140B, 140C, 140D, M150, Linguistics 103, 110, 120A, 120B, 127 are required.

*Course to be taken by candidates for commissions in the Marine Corps or Marine Corps Reserve in lieu of courses 101A, 101B, 102B, 102C.

Bachelor of Arts in Slavic Languages and Literatures

Preparation for the Major

Required: Russian 1, 2, 3, 4, 5, 6, or equivalent proficiency as determined through departmental testing (equivalent to ACTFL level 1), Slavic 99.

The Major

Required: Russian 101A-101B-101C or equivalent proficiency as determined through departmental testing (equivalent to ACTFL level 1+); courses 118, 119, 120 (all three may be taken in the sophomore year); one three-course sequence from Czech 102A-102B-102C, 102D-102E-102F, Polish 102A-102B-102C, 102D-102E-102F, Serbo-Croatian 103A-103B-103C, 103D-103E-103F (placement with consent of instructor); three courses from Czech 102D, 102E, 102F, Polish 102D, 102E, 102F, Serbo-Croatian 103D, 103E, 103F, Russian 102A, 102B, 102C, 123, 130A, 130B, 130C, 134, 140A through 140D, M150; two courses from Czech 155A, 155B, Polish 152A, 152B, Serbo-Croatian 154A, 154B, Slavic M125, M126.

Bachelor of Arts in Russian Studies

Preparation for the Major

Required: Russian 1, 2, 3, 4, 5, 6, or equivalent proficiency as determined through departmental testing (equivalent to ACTFL level 1), and 99A.

The Major

Required: Russian 101A-101B-101C or equivalent proficiency as determined through departmental testing (equivalent to ACTFL level 1+), three courses in Russian literature, two courses from History 131A through 131D, two courses from Economics 182, Geography 184, Political Science 128A, 128B, 156, Russian M170, M180, and five additional courses selected from those listed above, from Russian language, literature, or linguistics courses, or from special courses (approved by the undergraduate adviser) offered by the Departments of Art, Art History, Design, Film and Television, History, Music, Political Science, Slavic Languages and Literatures, and Theater.

Graduate Study

The Department of Slavic Languages and Literatures at UCLA offers M.A. and Ph.D. degrees in Slavic Languages and Literatures.

Admission

In addition to the University minimum requirements, the department requires an undergraduate major in the field or three years of Russian language and a sufficient number of Russian history, literature, and linguistics courses to document a foundation for graduate study. For application to the Ph.D. program, the department requires a UCLA M.A. in Slavic Languages and Literatures or its equivalent. If you do not hold a

UCLA M.A. in Slavic Languages and Literatures, you are required to make up deficiencies as stipulated by the graduate adviser and take the M.A. examination as a screening examination within your first year.

All applicants must provide three letters of recommendation from persons capable of judging their academic potential and submit a writing sample in the field they wish to pursue. No departmental admission tests are necessary, but the Graduate Record Examination (GRE) is required.

A department brochure describing the curriculum in some detail (graduate and undergraduate) is available from the Graduate Adviser, Slavic Languages and Literatures, 115 Kinsey Hall, UCLA, Los Angeles, CA 90024-1502.

Major Fields or Subdisciplines

Candidates for the M.A. and Ph.D. degrees select a specialization in either literature or linguistics, with Russian as the principal language and literature. On the Ph.D. level, students may specialize in a language or literature other than Russian by special arrangement.

Master of Arts Degree

Foreign Language Requirement

There are two foreign language requirements which must be completed at least one term before the M.A. comprehensive examination: (1) you must pass a departmental Russian language proficiency examination which tests your ability to translate from Russian to English and vice versa. This examination may be retaken each term until a pass grade is achieved; (2) you must demonstrate ability to read scholarly literature in either French or German by one of three methods: (a) passing the appropriate Graduate School Foreign Language Test (GSFLT) reading examination with a score of 500 or better, (b) passing the departmental reading examination, or (c) completing level five at UCLA in one of the languages with a grade of B or better (equivalent university-level coursework in French or German taken within two years of admittance may satisfy this requirement at the discretion of the graduate adviser).

Course Requirements

Slavic 200, 201, Russian 201A-201B-201C, 204, 212A, and 220A are required of all M.A. students.

Literature students must also take Russian 211A or 211B, 212B, 213, and 219.

Linguistics students must also take Slavic 202, 221, Russian 220B, and one course from 211A, 211B, 212B, 213.

Courses in the 500 series may not be applied toward the M.A. course requirements.

Comprehensive Examination Plan

Application for advancement to candidacy must be made no later than the second week of the term in which the M.A. examinations are to be

taken and is accepted only if you have satisfied the foreign language requirement in French or German and have passed the Russian Language Proficiency Examination. Examinations are offered at the end of Fall and Spring Quarters. After you have declared your intention to take the examination, a committee consisting of three members is appointed by the chair. The comprehensive examination has two parts — written (three hours) and oral (two hours) — and is based on coursework and the departmental reading list. The examinations include materials from both subdisciplines. If you receive a pass grade on the written examination, you are admitted to the oral examination which is designed to test the fields of major interest and general background. It is conducted partly in Russian.

Your combined performance in the written and oral examinations is graded high pass, pass, or fail. A grade of high pass or pass is necessary to receive the M.A. degree; the grade of high pass is necessary to enter the Ph.D. program. Examinations may be repeated once; there is a six-month limit on retaking examinations graded pass and a one-year limit on examinations graded fail.

Ph.D. Degree

Admission

You are formally admitted to the Ph.D. program after (1) passing the UCLA M.A. comprehensive examination with a grade of high pass, (2) passing the reading examination in both French and German (see "Foreign Language Requirement"), and (3) demonstrating proficiency in modern Slavic languages other than Russian. Literature students must complete one year of the language of their second Slavic literature; linguistics students must complete one year of one language and two years of another (one of the languages should represent the West Slavic group, the other the South Slavic group). You may demonstrate equivalent proficiency through written and oral examinations in lieu of taking the language courses.

The comprehensive examination serves as a screening examination for admission to the doctoral program if you are entering UCLA with an M.A. from another institution. You may retake the examination once in order to achieve the necessary high pass grade.

Foreign Language Requirement

You must demonstrate ability to read scholarly literature in both French and German by completing one of the three methods listed under the master's degree. With departmental consent, students specializing in linguistics may substitute reading knowledge in another language important to the study of Slavic linguistics (Finnish, Hungarian, Lithuanian, Latvian, Romanian, or a Turkic language relevant to East or South Slavic historical linguistics) and a score of 450 on the Graduate School Foreign Language Test (GSFLT) in either French or

German. Reading knowledge of two such languages may, by the same procedure, be substituted for the entire French or (more rarely) German examination.

Course Requirements

Before the formation of a doctoral committee, you must have been officially admitted to the doctoral program and have taken the following required courses.

Linguistics students must take Slavic 222, 223, and four other advanced linguistics courses or seminars (numbered above 220).

Recommended preparation for linguists includes Linguistics 100, 103, 110, 120A, 120B, M150.

Literature students must take two courses from Slavic 230A-230B-230C; Russian 211A or 211B (to complement the M.A. course selection); and three additional advanced literature courses or seminars.

Candidates specializing in literature are advised to acquire sound general knowledge of modern Western European literature.

Qualifying Paper

You are required to submit to the faculty a qualifying paper that demonstrates your ability to conduct serious and original research. The paper must be received and approved by your faculty adviser (usually the prospective examination and dissertation committee chair) no later than one term preceding the term in which you expect to take the qualifying examinations.

Qualifying Examinations

All students are expected to have sound general knowledge of both Slavic philology and Russian literary history equivalent to that required for the M.A. at UCLA.

Students in linguistics must take one written examination on the structure of modern Russian and another on comparative Slavic linguistics, the history of Russian, and the history and structure of a second Slavic language. Each examination lasts three hours.

Students in literature must take a series of six examinations on Russian literature and one examination on a Slavic literature other than Russian. Each examination is one hour in length; all seven must be taken within a one-week time period.

If you receive a grade of pass on the written examination(s), you are admitted to a two-hour University Oral Qualifying Examination, which is designed to test the fields of major interest and general background, and which typically includes discussion of the dissertation topic.

After considering your overall performance in both the oral and written examinations, the committee assigns a cumulative grade. A pass grade entitles you to write a dissertation in order to receive the Ph.D. degree. At the committee's discretion, you may be required to retake

any or all portions of the Ph.D. examinations within one calendar year after the first attempt.

Within two terms (or one term and a summer) after passing the qualifying examinations, you must prepare a prospectus of the dissertation.

You are required to deliver a formal lecture in the California Slavic Colloquium no later than two calendar years after advancement to candidacy.

Candidate in Philosophy Degree

You are eligible to receive the C.Phil. degree on advancement to candidacy for the Ph.D.

Final Oral Examination

A final oral examination is required except in case of geographically imposed hardship.

Slavic

Lower Division Course

99. Introduction to Slavic Civilization. Lecture, three hours. Introductory survey of social and cultural institutions of the Slavic peoples and their historical background.

Upper Division Courses

M125. Interwar Central European Prose. (Same as German M119G and Humanities M125.) Lecture, three hours. Analysis of selected novels, stories, plays, and essays of representative authors of the 1920s and 1930s in translation. Special attention to relation between literature and historical and ethnic concerns.

M126. Postwar Central European Prose. (Same as German M119H and Humanities M126.) Lecture, three hours. Analysis of selected novels, stories, plays, and essays of representative contemporary authors in translation. Special attention to relation between art and ideology.

177. Baltic Languages and Cultures (2 units). General survey of peoples speaking Old Prussian, Lithuanian, and Latvian; their linguistic, historical, and ethnic affiliations.

M179. Baltic and Slavic Folklore and Mythology. (Same as Folklore M126.) Lecture, three hours. General course for students interested in folklore and mythology and for those interested in Indo-European mythic antiquities.

199. Special Studies (2 to 8 units). Prerequisites: senior standing, consent of instructor.

Graduate Courses

200. Proseminar. Presentation/discussion, three hours. Prerequisite: graduate standing. Required for M.A. (linguistics, literature). Introduction to research tools and techniques, as well as broad exposure to metalanguages of linguistics and literary criticism.

Linguistics

201. Introduction to Old Church Slavic. Lecture, three hours. Required for M.A. (linguistics, literature). Introduction to phonology and grammar; readings.

202. Introduction to Comparative Slavic Linguistics. Lecture, three hours. Prerequisite: course 201. Required for M.A. (linguistics). Introduction to comparative phonology and grammar of Slavic languages.

221. Introduction to East Slavic Languages. Lecture, three hours. Prerequisite: course 202. Recommended: Russian 102A-102B-102C or Ukrainian 101A-101B-101C. Required for M.A. (linguistics). Introduction to structure and history of East Slavic languages.

222. Introduction to West Slavic Languages. Lecture, three hours. Prerequisite: course 202. Recommended: Czech 102A-102B-102C or Polish 102A-102B-102C. Required for Ph.D. (linguistics). Introduction to structure and history of West Slavic languages.

223. Introduction to South Slavic Languages. Lecture, three hours. Prerequisite: course 202. Recommended: Serbo-Croatian 103A-103B-103C or Bulgarian 103A-103B-103C. Required for Ph.D. (linguistics). Introduction to structure and history of South Slavic languages.

224. Introduction to Ukrainian and Belorussian. Lecture, three hours. Prerequisite: course 202. Introduction to history and structure of Ukrainian and Belorussian.

M229. Introduction to Slavic Bibliography (2 units). (Same as Library and Information Science M229C.) Prerequisite: consent of instructor. Introduction to Slavic and East European bibliography for the humanities and social sciences. Emphasis to be determined by requirements and background of enrolled students. Topics include relevant library terminology and concepts; survey of languages and transliteration systems; acquisition of Slavic and East European library materials; Slavic and East European scholarship in the West; relevant reference sources, archival resources, and research methods; survey of on-line data bases; compilation of bibliographies. S/U grading.

241A-241B. Advanced Old Church Slavic. Lecture, three hours. Prerequisite: course 201. **241A.** Advanced Readings in Canonical Texts; **241B.** East, West, and South Slavic Recensions of Church Slavic.

242. Comparative Slavic Linguistics. Lecture, three hours. Prerequisite: course 202. Selected topics in development of Common Slavic.

251. Introduction to Baltic Linguistics. Lecture, three hours. Prerequisite: course 202. Introduction to Baltic linguistics, with special attention to relationship between Baltic and Slavic.

261. Slavic Paleography. Lecture, three hours. Prerequisite: course 201. Introduction to Slavic paleography: inscriptions, birchbark letters, Glagolitic and Cyrillic texts.

262A-262B. West Slavic Linguistics. Lecture, three hours. Prerequisite: course 222. **262A.** Lekhitic; **262B.** Czechoslovak, Sorbian.

263A-263B. South Slavic Linguistics. Lecture, three hours. Prerequisite: course 223. **263A.** Serbo-Croatian, Slovene; **263B.** Bulgarian, Macedonian.

281. Seminar: Slavic Linguistics. Seminar, three hours. Selected topics in comparative and historical Slavic linguistics. May be repeated for credit with consent of instructor and graduate adviser.

282. Seminar: Structural Analysis. Seminar, three hours. Selected topics. May be repeated for credit with consent of instructor and graduate adviser.

Literature

230A-230B-230C. Comparative Slavic Literature. Lecture, three hours. Recommended prerequisites: upper division courses in Czech, Polish, Russian, and Yugoslav literatures. Two terms required for Ph.D. (literature). **230A.** Middle Ages through Baroque; **230B.** Classicism to Romanticism; **230C.** Realism to Modernism.

290. Seminar: Comparative Slavic Literature. Seminar, three hours. Prerequisites: courses 230A-230B-230C. Recommended: reading knowledge of one Slavic language in addition to Russian. Selected topics involving more than one Slavic literature or Slavic and Western literatures. May be repeated for credit with consent of instructor and graduate adviser.

295. Seminar: Literary Analysis. Seminar, three hours. Recommended (but not prerequisite): reading knowledge of one Slavic language in addition to Russian. Selected topics from various Slavic literatures or Slavic and Western literatures, with emphasis on analytic methods. May be repeated for credit with consent of instructor and graduate adviser.

Special Studies

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

596. Directed Individual Study or Research (2 to 8 units). Prerequisite: consent of instructor and graduate adviser.

597. Preparation for M.A. Comprehensive Examination or Ph.D. Qualifying Examinations (2 to 8 units). Prerequisite: consent of instructor and graduate adviser.

599. Research for Ph.D. Dissertation (2 to 12 units).

Bulgarian

Lower Division Course

99. Introduction to Bulgarian Civilization. Lecture, three hours. Introductory survey of social and cultural institutions of the Bulgarian people and their historical background.

Upper Division Courses

103A-103B-103C. Elementary Bulgarian. Recitation, five hours. Basic courses in the Bulgarian language.

154. Survey of Bulgarian Literature. Lecture, three hours. Prerequisite: upper division standing. Lectures and readings in English. Survey of Bulgarian literature from the Middle Ages to the present.

Czech

Upper Division Courses

102A-102B-102C. Elementary Czech. Recitation, five hours. Basic courses in the Czech language.

102D-102E-102F. Advanced Czech. Recitation, three hours. Prerequisite: course 102C.

155A-155B. Czech Literature. Lecture, three hours. Lectures and readings in English. **155A.** Survey of Czech Literature from the Middle Ages to the Present; **155B.** Selected Topics.

Polish

Upper Division Courses

102A-102B-102C. Elementary Polish. Recitation, five hours. Basic courses in the Polish language.

102D-102E-102F. Advanced Polish. Recitation, three hours. Prerequisite: course 102C.

152A-152B. Survey of Polish Literature. Lecture, three hours. Lectures and readings in English. **152A.** From the Middle Ages to Romanticism; **152B.** From Realism to the Present.

160. Polish Romanticism. Lecture, three hours. Lectures and readings in English. Comparison of Polish Romanticism with that of other Slavic and Western European countries.

Graduate Course

280. Seminar: Polish Literature. Seminar, three hours. Selected topics in Polish prose, poetry, and drama. May be repeated for credit with consent of instructor and graduate adviser.

Russian

Language Courses

1. Elementary Russian. Recitation, five hours; laboratory, one hour.

2. Elementary Russian. Recitation, five hours; laboratory, one hour.

3. Elementary Russian. Recitation, five hours; laboratory, one hour.

4. Intermediate Russian. Recitation, four hours; laboratory, one hour.

5. Intermediate Russian. Recitation, four hours; laboratory, one hour.

6. Intermediate Russian. Recitation, four hours; laboratory, one hour.

10. Intensive Course in Russian (12 units). Intensive basic course in the Russian language equivalent to courses 1, 2, and 3.

11A-11B-12A-12B-13A-13B. Self-Paced Program in Russian (2 to 12 units). Basic courses in the Russian language. Each two-unit course in sequence requires 30 minutes of laboratory session per week and 30 minutes of discussion session per week, plus individual instruction as required by the staff. Courses 11B and higher require completion of or simultaneous enrollment in all courses lower in sequence.

101A-101B-101C. Advanced Russian. Lecture, five hours. Prerequisite: course 6. Advanced grammar, reading, and conversation.

102A-102B-102C. Advanced Composition and Conversation: Reading of Contemporary Texts. Lecture, three hours. Prerequisite: course 101C or consent of instructor. *Advanced conversation and composition, using a multimedia approach (contemporary Russian prose, Soviet television and films).*

106A-106B. Reading and Translation of Difficult Literary Texts: Structure Analysis. Lecture, three hours. Prerequisite: course 101C. Sequence that integrates concepts about the structure of Russian into practical language work at an advanced level, making more extensive use of literary texts.

107. Russian for Social Scientists (2 units). (Formerly numbered 107A-107B.) Prerequisite: three years of Russian or consent of instructor. Reading of texts relevant to social scientists: viewing of Soviet TV. May be repeated for credit.

Linguistics Course

123. Historical Commentary on Modern Russian. Lecture, three hours. Prerequisites: courses 121, 122. Historical explanation of phonological and morphological anomalies of modern Russian.

Literature and Civilization Courses

25. The Russian Novel in Translation. Lecture, three hours. Designed for nonmajors. Study of major works by the great 19th-century Russian novelists.

99A. Introduction to Russian Civilization. Lecture, three hours. Introductory survey of social and cultural institutions of the Russian people and their historical background.

99B. Soviet Civilization. Lecture, three hours. Survey of literature, theater, cinema, television, press, music, and arts in the Soviet Union. Emphasis on contemporary period, with constant reference to Russian and early Soviet antecedents.

118. Survey of Russian Literature to Pushkin. Lecture, three hours. Prerequisite: upper division standing. Slavic majors should take this course during their sophomore year. Lectures and readings in English.

119. Survey of 19th-Century Russian Literature. Lecture, three hours. Prerequisite: upper division standing. Slavic majors should take this course during their sophomore year. Lectures and readings in English.

120. Survey of 20th-Century Russian Literature. Lecture, three hours. Prerequisite: upper division standing. Slavic majors should take this course during their sophomore year. Lectures and readings in English.

124A-124F. Studies in Russian Literature. Lecture, three hours. Lectures and readings in English. Following writers are alternately discussed: **124A.** Pushkin; **124B.** Gogol; **124C.** Turgenev; **124D.** Dostoevsky; **124E.** Tolstoy; **124F.** Chekhov.

125. The Russian Novel in its European Setting. Lecture, three hours. Prerequisite: upper division standing. Emphasis on 19th- and 20th-century novelists. Lectures and readings in English.

126. Survey of Russian Drama. Lecture, three hours. Prerequisite: upper division standing. Major Russian plays from the 18th to 20th century. Lectures and readings in English.

127. Women in Russian Literature. Lecture, three hours. Prerequisite: upper division standing. Introduction to "alternative tradition" of women's writings in Russia and the Soviet Union. Emphasis on images of women expressed in this tradition as compared with those found in works of contemporary male writers. Lectures and readings in English.

128. Russian Science Fiction. Lecture, three hours. Introduction to Russian science fiction in the 20th century. Emphasis on function of science fiction in development of Russian culture before and after the October Revolution. Readings in English. P/NP or letter grading.

130A-130B-130C. Russian Poetry. Lecture, three hours. Prerequisite: course 6. Lectures and readings in Russian. **130A.** Introduction to Analysis of Poetic Texts; **130B.** From Mid-18th Century through Precursors of Symbolism; **130C.** From Late-19th Century through Contemporary Soviet Verse.

134. Pushkin. Lecture, three hours. Prerequisite: course 6. Major poetical works. Lectures and readings in Russian.

140A-140D. Russian Prose. Lecture, three hours. Prerequisite: course 6. Lectures and readings in Russian. Close reading of texts representing various periods and styles. Emphasis on narrative techniques, rhetorical strategies, and literary genres. **140A.** Introduction to Analysis of Prose Texts; **140B.** Karamzin to Turgenev. (Formerly numbered 140A.); **140C.** Dostoevsky to Gorky. (Formerly numbered 140B.); **140D.** Soviet and Emigre Writers. (Formerly numbered 140C.).

M150. Russian Folk Literature. (Same as Folklore M150.) Lecture, three hours. Lectures and readings in Russian.

M170. Russian Folklore. (Same as Folklore M170.) Lecture, three hours. General introduction to Russian folklore, including survey of genres and related folkloric phenomena. Lectures and readings in English.

193. Seminar: Russian Literature. Lecture, three hours. Prerequisite: course 6 or consent of instructor. Recommended: course 101C. Reading and discussion of selected authors; written seminar papers usually required.

Graduate Courses

Linguistics

201A-201B-201C. Introduction to Analysis of Russian Texts. Lecture, three hours. Prerequisite: course 102C or consent of instructor. Required for M.A. (linguistics, literature). Introduction to literary and linguistic approaches to literary texts. Reading, translation exercises, analysis, composition. Conducted in Russian.

203. Practicum in Russian (2 units). Prerequisite: course 201C. Two terms per year required of Ph.D. students. Reading of advanced texts; advanced composition, conversation; stylistics. May be repeated for credit. S/U grading.

204. Introduction to History of the Russian Literary Language. Lecture, three hours. Prerequisites: course 123, Slavic 201. Required for M.A. (linguistics, literature). Survey of literary Russian in its cultural and historical setting.

210. Readings in Old Russian Texts. Lecture, three hours. Prerequisite: Slavic 201 or consent of instructor. Readings in premodern Russian texts. May be repeated for credit.

220A-220B. Structure of Modern Russian. Lecture, three hours. **220A.** Phonology and Morphology. (Formerly numbered 221, 222.) Required for M.A. (literature, linguistics). Advanced study and analysis of problems in Russian phonology, inflection, and derivation. **220B.** Morphosyntax. (Formerly numbered 225.) Prerequisite: course 220A. Required for M.A. (linguistics). Survey of Russian syntax and grammatical categories.

241. Topics in Russian Phonology. Lecture, three hours. Prerequisite: course 220A. Selected topics in Russian phonology.

242. Topics in Russian Morphology. Lecture, three hours. Prerequisite: course 220A. Selected topics in Russian inflection and derivation.

243. Topics in Historical Russian Grammar. Lecture, three hours. Prerequisites: course 123, Slavic 221. Selected topics in Russian historical phonology, morphology, and syntax.

263. Russian Dialectology. Lecture, three hours. Prerequisite: Slavic 221. Phonology and grammar of modern Great Russian dialects.

264. History of the Russian Literary Language. Lecture, three hours. Prerequisites: course 204, Slavic 201. Evolution of literary Russian from the 11th to 20th century. Lectures and analysis of texts.

265. Advanced Russian Syntax. Lecture, three hours. Prerequisite: course 220B. Traditional and generative approaches to Russian syntax.

266. Russian Lexicology. Lecture, three hours. Examination of formal and semantic structure of Russian lexicon.

Literature and Civilization

211A-211B. Russian Literature before 1800. Lecture, three hours. Required for M.A. (literature). **211A.** Old Russian Literature. (Formerly numbered 251A.) Survey of Old Russian literature from the beginning through the Kievan and Muscovite periods up to end of the 17th century. **211B.** 18th-Century Russian Literature. (Formerly numbered 211.) Lectures and readings in major and secondary writers. Analysis of selected literary works.

212A-212B. 19th-Century Russian Literature. (Formerly numbered 212.) Lecture, three hours:

212A. The Golden Age. Required for M.A. (literature, linguistics). Survey of major literary movements and schools following demise of neoclassicism: sentimental school, early and late Romanticism, and beginnings of natural school. Discussion of representative works of Karamzin, Zhukovskiy, Batyushkov, Pushkin, Baratynskiy, Lermontov, Gogol.

212B. Age of Realism. Required for M.A. (literature). Survey devoted to emergence of critical and psychological realism, beginning with early works of Turgenyev, Goncharov, and Dostoevskiy, moving to major novels of Tolstoy, Dostoevskiy, and Saltykov-Shchedrin, and concluding with works of the pre-symbolist period, especially the short stories of Chekhov.

213. 20th-Century Russian Literature. Lecture, three hours. Required for M.A. (literature). Lectures and readings in major and secondary writers.

215. Contemporary Russian Literature. Discussion, three hours. Prerequisite: course 213. Close readings in selected texts of poetry and prose, metropolitan and emigre, of recent vintage. May be repeated for credit. S/U or letter grading.

219. Movements and Genres in Russian Literature. Lecture, three hours. Prerequisite: Slavic 200. Required for M.A. (literature). Introduction to most important theoretical issues of Russian literature viewed in diachronic perspective.

227. Linguistic Approaches to Russian Poetry. Lecture, three hours. Prerequisite: graduate standing. Introduction to use of linguistic methods in study of Russian poetic texts. May be repeated for credit.

251. Topics in Old Russian Literature. (Formerly numbered 251B.) Lecture, three hours. Prerequisite: course 211A. Detailed discussion of particular writers, periods, or genres.

270. Russian Poetics. Lecture, three hours. Prerequisites: courses 130A-130B-130C. Introduction to technical study of Russian poetics and versification, with attention to metrics, stanza forms, rhyme, and development of various verse types from the 18th into the 20th century.

290. Seminar: Russian Poetry. Seminar, three hours. Prerequisites: courses 130A-130B-130C. Recommended: course 270. Detailed study of a single author, period, or work. May be repeated for credit with consent of instructor and graduate adviser.

291A. Seminar: Old Russian Literature. Seminar, three hours. Prerequisite: course 211A. Selected topics from the 11th through the 17th century. May be repeated for credit with consent of instructor and graduate adviser.

291B. Seminar: 18th-Century Russian Literature. Seminar, three hours. Prerequisite: course 211B. Selected authors and works from 18th-century poetry, prose, and drama. May be repeated for credit with consent of instructor and graduate adviser.

292. Seminar: 19th-Century Russian Literature. Seminar, three hours. Prerequisites: courses 212A-212B. Selected authors and works from 19th-century poetry, prose, and drama. May be repeated for credit with consent of instructor and graduate adviser.

293. Seminar: 20th-Century Russian Literature. Seminar, three hours. Prerequisite: course 213. Selected authors and works from 20th-century poetry, prose, and drama. May be repeated for credit with consent of instructor and graduate adviser.

294. Seminar: Russian Literary Criticism. Seminar, three hours. Prerequisites: courses 211B, 212A-212B, 213. Detailed study of specific school of literary criticism, single literary critic, or period in Russian literary history as reflected in literary criticism. Simultaneous or similar phenomena in literary criticism in the West. May be repeated for credit with consent of instructor and graduate adviser.

296. Seminar: History of Russian Culture. Discussion, three hours. Reading and discussion on selected topics in history of Russian culture.

Serbo-Croatian

Upper Division Courses

103A-103B-103C. Elementary Serbo-Croatian. Recitation, five hours. Basic courses in the Serbo-Croatian language.

103D-103E-103F. Advanced Serbo-Croatian. Recitation, three hours. Prerequisite: course 103C.

113A-113B-113C. Advanced Reading and Composition. Recitation, three hours. Prerequisite: course 103F or consent of instructor. Reading and translation of difficult texts; advanced composition.

154A-154B. Yugoslav Literature. Lecture, three hours. Lectures and readings in English. **154A.** Survey of Yugoslav Literature from the Middle Ages to the Present; **154B.** Selected Topics.

Slovak

Graduate Course

222. Structure of Slovak. Lecture, three hours. Prerequisite: Slavic 202. Recommended: Slavic 222. Introduction to phonological and morphological structure of the Slovak language, especially as contrasted with Czech.

Ukrainian

Upper Division Courses

101A-101B-101C. Elementary Ukrainian. Recitation, five hours. Basic courses in the Ukrainian language.

152. Ukrainian Literature. Lecture, three hours. Survey of writers, literary trends, and issues in Ukrainian literature from the late 18th century to the present. Special attention to works of such major figures as I. Kotlyarevskiy, T. Shevchenko, I. Franko, L. Ukrainka, and P. Tychna. Lectures and readings in English.

Non-Slavic Languages of Eastern Europe

Lithuanian

Upper Division Courses

101A-101B-101C. Elementary Lithuanian. Recitation, five hours. Basic courses in the Lithuanian language.

Romanian

Lower Division Course

99. Introduction to Romanian Civilization. Lecture, three hours. Introductory survey of social and cultural institutions of the Romanian people and their historical background.

Upper Division Courses

101A-101B-101C. Elementary Romanian. Recitation, five hours. Basic courses in the Romanian language.

152. Survey of Romanian Literature. Lecture, three hours. Lectures and readings in English. Survey of Romanian literature from the Middle Ages to the present.

Graduate Course

201. Romanian as a Romance Language. Lecture, three hours. Survey of structure and development of the Romanian language, with special emphasis on relationship of Romanian to other members of the Romance group.

Related Courses in Other Departments

Dance 74B, C184B; **Economics** 182; **Ethnomusicology and Systematic Musicology** 91C, 128, 130; **Geography** 184; **History** 131A-131D; **Linguistics** 20, 103, 110, 120A, 120B, M150, as well as several of the graduate courses in linguistics; **Political Science** 128A-128B, 156, 157.

Social Science Cluster Program

The Social Science Cluster Program presents integrated clusters of three social sciences courses with an interdisciplinary seminar. This coordinated four-course program offers students opportunity to complete their social sciences general education requirements (both historical and social analysis) in a single term. Each cluster revolves around a particular theme. The social sciences cluster for 1992-93 includes Anthropology 8, Geography 3, History 8C, and Social Sciences 88.

The courses are taught by faculty members who are distinguished in teaching and scholarship. In addition, graduate students selected for their scholarly accomplishments and teaching ability are the teaching fellows for the Social Sciences 88 seminars.

The strengths of the course clusters are social, intellectual, educational, and practical. They create a unique experience at UCLA — 200 students taking the same classes for an entire term.

The current climate of reform for undergraduate education at UCLA has been enhanced by several initiatives undertaken both nationally and by the University of California. These efforts share the common theme that learning should be an active process, particularly in introductory general education courses. At large universities this is more easily stated than acted on. To meet this challenge, UCLA has received funding from the Ford Foundation and the College of Letters and Science to integrate general education courses in the social sciences.

For further information about the program, discuss it with your counselor. Enrollment is limited to 200 students per term.

Lower Division Courses

There is no major in social sciences; however, the following courses are offered for interested students.

20. Racial Minorities in the U.S. Lecture, three hours; discussion, one hour. Multidisciplinary examination of history and culture of Afro-Americans, Asian Americans, Chicanos, and Native Americans in the U.S. Topics include origins and maintenance of inequality, ethnic images in literature and art, psychosocial dimensions of racism, social movements, and minorities in California.

30. Law and Society (3 units). Introduction to nature of legal institutions, processes, and norms.

Mr. Abel (W)

40. Introductory Statistics. In a series of case studies from science and decision making, use of probability and statistics to quantify uncertainty and figure out how to make sensible choices in the face of it. Topics include how to design experiments and conduct surveys to reduce uncertainty, how to analyze data, and how to validly assess causality. Discussion-style learning blended with interactive sessions on personal computers, making numerical and graphical summaries that both measure uncertainty and help figure out what to do about it. P/NP or letter grading.

Mr. Draper

88. Introduction to Social Sciences. Seminar, three hours. Introduction to methods, concepts, and practices of social scientific scholarship. Organized around broad, interdisciplinary themes in anthropology, economics, geography, history, psychology, political science, and sociology. Emphasis on social sciences disciplines as a whole. P/NP or letter grading.

 Harry H.L. Kitano, Ph.D. (*UCLA Alumni and Friends of Japanese Ancestry Professor of Japanese American Studies*)
 Ivan H. Light, Ph.D.
 Michael Mann, Ph.D.
 William Mason, Ph.D.
 Valerie K. Oppenheimer, Ph.D.
 Melvin Pollner, Ph.D.
 Jerome Rabow, Ph.D.
 Emanuel A. Schegloff, Ph.D.
 Ivan Szelenyi, Ph.D., *Chair*
 Warren D. TenHouten, Ph.D.
 Donald J. Treiman, Ph.D.
 Roger Waldinger, Ph.D.
 Maurice Zeitlin, Ph.D.
 Lynne G. Zucker, Ph.D.

Professors Emeriti

Judith Blake, Ph.D.
 Burton R. Clark, Ph.D.
 Harold Garfinkel, Ph.D.
 C. Wayne Gordon, Ph.D.
 Leo J. Kuper, Ph.D.
 Gene N. Levine, Ph.D.
 Georges Sabagh, Ph.D.
 Melvin Seeman, Ph.D.
 Edwin S. Shneidman, Ph.D.
 Gerald H. Shure, Ph.D.
 Ralph H. Turner, Ph.D.

Associate Professors

Lawrence Bobo, Ph.D.
 Rogers Brubaker, Ph.D.
 Duane Champagne, Ph.D.
 David Halle, Ph.D.
 M. Nicolette Hart, Ph.D.
 John E. Horton, Ph.D.
 David E. López, Ph.D.
 David D. McFarland, Ph.D.
 Ruth H. Milkman, Ph.D.
 Melvin Oliver, Ph.D.
 Vilma Ortiz, Ph.D.
 Jeffrey Prager, Ph.D. (*Distinguished Teaching Award*)
 William G. Roy, Ph.D. (*Distinguished Teaching Award*)
 Samuel J. Surace, Ph.D., *Emeritus*

Assistant Professors

Steven E. Clayman, Ph.D.
 Peter E. Kollock, Ph.D. (*Luckman Distinguished Teaching Award*)
 Edward E. Telles, Ph.D.

Adjunct Associate Professor

Barbara Ballis Lal, Ph.D.

Adjunct Assistant Professors

Barry Goetz, Ph.D.
 Suzanne Wenzel, Ph.D.

Scope and Objectives

Variety is the special characteristic both of the field of sociology and of the UCLA Department of Sociology, which was judged among the 10 best in the nation in a recent survey conducted by the Conference Board of the Associated Research Councils.

Sociology will have a particular appeal to those students whose interests are broad and unspecialized. At both undergraduate and graduate levels, students study history, politics, statistics and mathematics, race relations, demography, psychology, language, and many other topics. A sociology student becomes a member of an intellectual community in which all these interests are represented.

The primary purpose of the major in sociology is to enhance the student's capacity for critical analysis and understanding of social phenomena. It is intended, at the same time, to serve as preparation for careers in high school or junior college teaching, social work, architecture and urban planning, law, public health, and government service, among others. It also provides training for advanced graduate work in sociology and social psychology.

The Ph.D. in Sociology usually leads to a career in research and/or teaching. Although most sociologists are employed by universities, there are increasing career opportunities in government and other nonuniversity research centers.

Bachelor of Arts Degree**Preparation for the Major**

Required: Sociology 1, 18 (or Statistics 50, Psychology 41, Economics 40, or Biostatistics 100A), one course from Group A (Mathematics 2, 3A), one course from Group B (Philosophy 8, 9, 31), one course from Group C (Anthropology 8, 9, Economics, 1, 2, Geography 3, History 1A, 1B, 1C, Political Science 1, Psychology 10).

Sociology 2, 3, 4, M5, 9 may be substituted for the Group B and/or Group C preparation requirements.

All courses required for the major in sociology, including lower division and allied field courses, must be taken for a letter grade. A 2.0 grade-point average is required for the preparation and for the major.

The Major

Required: Ten upper division sociology courses (40 units), which must include the following:

- (1) Sociology 101 or 102, and one course from 104, 105, 106, 113. These courses, devoted to the systematic exploration of sociological methods and theories, should be completed as early as possible in your junior year.
- (2) Four upper division courses as required by one of the specialized "Concentrations for the Major" listed below and one course from each of the remaining concentrations.
- (3) Any two additional upper division sociology courses.
- (4) Four upper division allied field courses (16 units) in other departments to complete the major. The allied fields are anthropology, economics, geography, history, political science, and psychology.
- (5) One course from English 100W, 129, 131A through 131J (may be taken on a P/NP grading basis).

Concentrations for the Major

By the end of your junior year and no later than the beginning of your senior year, you are required to declare your specific concentration by filing a statement with the undergraduate counselor. The purpose of the concentration requirement is to expose you to systematic, in-depth work within a specific area of sociology. Completion of a concentration requires four upper division sociology courses. You must select one of the following concentrations and meet its course requirements:

- (1) *Societies (Macrosociology)* — Courses 103, 116, 117, 118, 127, 156, 157, 161, M162, 173, 182, 183, 184, 185, 186, 187, 188, 189, 190.
- (2) *Institutions (Social Organizations and Institutions)* — Courses 143, M144, 145, 146, 147A, 147B, 149, 150, 155, 158, 159, M163, 168, 169, 170, 171, 172, 174, M175, M176.
- (3) *Interactions (Social Psychology and Processes)* — Courses 112, C124A, C124B, 125, 126, 128, 132, 133, 134, 135, 136, 137, M138, 148, 160.

Only eight units of Sociology 199 are allowed. At least six of the sociology courses must be taken while in residence in the College of Letters and Science at UCLA.

Courses 104, 210A, and 210B are recommended for students who intend to pursue graduate work in sociology.

Specialization in Computing

Majors in sociology may select a specialization in computing by (1) satisfying all the requirements for a bachelor's degree in the major, (2) completing Program in Computing 10A, 10B, 10C, and (3) completing two courses from Sociology 9, 112, 113. You graduate with a bach-

elor's degree in sociology and a specialization in computing.

Honors Program

The honors program in sociology provides opportunity for outstanding students to undertake an independent year-long research project under the guidance of a faculty member.

The project culminates with an honors thesis or paper. Students intending to obtain advanced degrees will find this program especially useful. If you are selected, you enroll in Sociology 199HA-199HB-199HC in your senior year. These courses may be applied toward the 10 upper division courses required of all sociology majors. After completing the program, you graduate with departmental honors.

Qualifications — You must have a 3.5 overall grade-point average, have completed the sociology preparation requirements and, in most cases, have completed the required theory course. Applications are available in the Undergraduate Counselor's Office, 254A Haines Hall. You should apply in the last term of your junior year.

M.A. and Ph.D. Degrees

The graduate program of the department takes as its primary aim the training of scholars who will conduct original research contributing to the advancement of sociological knowledge. For this reason, the department ordinarily accepts only students who are seeking the Ph.D. degree. A master's degree may be earned as part of the process of completing the requirements for the Ph.D.

Admission

In addition to the minimum University requirements, the department requires (1) three letters of recommendation, preferably from professors of sociology who are familiar with your written work and research experiences, (2) transcripts from all colleges where you have studied, (3) a statement of purpose, outlining reasons for pursuing graduate work, interests within sociology, career objectives, and any personal experiences bearing on these, (4) copies of one or two term papers or research reports you have written, (5) an official statement of scores on the Graduate Record Examination (GRE), and (6) for applicants whose native language is not English, the Test of English as a Foreign Language (TOEFL).

Although background preparation in sociology is highly desirable, it is not mandatory for admission to the department.

In addition to relatively formal criteria (such as analytic proficiency and articulateness), the department pays particular attention to applicants who seem likely to contribute considerable intellectual, social, or cultural diversity to its student body. Women and minorities are therefore encouraged to apply. The deadline for receipt of applications is December 15. Ap-

plication forms and more detailed information are available from the Graduate Affairs Assistant, Department of Sociology, 254C Haines Hall, UCLA, Los Angeles, CA 90024-1551.

Major Fields or Subdisciplines

In the first two years you usually satisfy the course requirements for the M.A. degree and write a master's paper that is evaluated by the department in your sixth term of residence. During the first year of graduate study, and no later than the second week of instruction in your fourth term in residence, you are expected to form a two-person master's committee to help you prepare the master's paper.

In the term following acceptance of your master's paper, usually at the beginning of the third year, you must affiliate with one of the department's five area programs in order to pursue more specialized, advanced study and research toward the Ph.D. The area programs represent the special strengths of the department in research and graduate instruction:

(1) *Communities and Institutions* — Studies in community organization and local and institutional processes of deviance and social control, particularly as they are affected by race, ethnicity, gender, and class; social networks; ethnic conflict and cooperation; organization of immigrant and minority communities; gender relations; social organization of work and occupations; institutional processes in criminal justice and medical settings.

(2) *Ethnomethodological, Phenomenological, and Observational Sociologies* — Studies of work especially in the sciences and professions, sociology of knowledge, sociology of law, deviance, social control, conversational and other forms of ordinary interaction, and historical studies of everyday interaction and consciousness.

(3) *Macrosociology* — Political sociology, economy and society, historical and comparative sociology, macrosociological theory, and comparative stratification.

(4) *Quantitative Sociology* — Survey research methods, methods of applied and evaluation research, formal and social demography, social stratification, advanced social statistics, and mathematical sociology.

(5) *Social Psychology* — Attitudes and social structure, collective behavior, socialization, social interaction and small group behavior, and organizational social psychology.

Foreign Language Requirement

There is no foreign language requirement for either the master's degree or the Ph.D. Students affiliated with the macrosociology area program are required to demonstrate reading knowledge of sociological texts in any foreign language.

Course Requirements

In addition to the departmental requirements, area programs and some subareas have their own course requirements for affiliated students.

Before the Master's Paper Review — Nine courses (36 units) are required.

(1) Sociology 202A-202B (must be taken in the first year).

(2) A two-term graduate-level methodology sequence from Sociology 211A through 216B, 217B-217C, 218A-218B.

In choosing a methodology sequence, you should note that some of the Ph.D. area programs and subprograms require particular methodology sequences.

(3) Five 200-level courses in sociology, excluding Sociology 202A-202B, 211A through 216B, 217B-217C, 218A-218B, and the 289, 290, 292, 293, and 295 series.

Because four of the five area programs require successful completion of Sociology 209A-209B or 210A-210B, you would ordinarily take these courses in your first two years and are strongly urged to do so in your first year.

Students intending to affiliate with an area would do well to satisfy some of its requirements in the first two years. Contact the department for information about entering the area programs.

After the Master's Paper Review — Two courses (eight units) are required. An additional methodology sequence (from courses 211A through 216B, 217B-217C, 218A-218B) must be completed before the awarding of the Ph.D. degree.

Course requirements for the five area programs are listed below. Contact the graduate affairs assistant or area directors for more specific details.

(1) *Communities and Institutions* — Sociology 290A-290B-290C and a second methods sequence selected from courses 211A-211B, 212A-212B, 213A-213B, 215A-215B, 216A-216B, or 217B-217C; two courses from 229A, 229B, 234, 235, 241, 261; two courses from 230, M231, 234, 236, 238A-238B, M249A, M249B, 254, 259, M262, 263, 265, M275, 276, 282, 291.

(2) *Ethnomethodological, Phenomenological and Observational Sociologies* — Sociology 222; at least two courses from 217A, 223, 229A, 229B, 243, 251, 252, 258, 264, 266, 267, 271, 284; two terms of one methods sequence and at least one term of a second, selected from courses 214A-214B, 217B-217C, 218A-218B, or C244A-C244B (you must still meet the department requirement of two two-term methods sequences); courses 293A-293B-293C.

(3) *Macrosociology* — Sociology 211A-211B, 228A-228B, 294A-294B-294C, and three additional graduate courses covering theoretical, substantive, or methodological topics.

(4) *Quantitative Sociology* — Sociology 295A-295B-295C.

Advanced Social Statistics Specialty — Sociology 216A-216B, 219A-219B, and electives selected from a list of eight recommended courses.

Applied Sociology and Evaluation Research Specialty — Sociology 216A-216B, 219A-219B, 279, 280, and electives selected from a list of 14 recommended courses.

Demography Specialty — Sociology 213A-213B, 226A-226B, courses in calculus and matrices, and two electives selected from a list of 11 recommended courses.

Mathematical Sociology Specialty — Sociology 281, 596, preparation in calculus, matrices, and differential equations, two or more substantive sociology courses relevant to the areas in which mathematical modeling will be carried out, and electives selected from a list of seven recommended courses.

Quantitative Social Stratification Specialty — Sociology 216A-216B, 239A-239B, 263, and two electives selected from a list of recommended courses.

(5) *Social Psychology* — Completion of an undergraduate program equivalent to two of the department's basic undergraduate social psychology courses and at least two courses in psychology, selected from the fields of learning, language and communication, personality, social psychology, and abnormal psychology; Sociology 224A-224B, 289A-289B-289C; a second methods sequence in addition to the one required for the M.A., selected from courses 215A-215B, 216A-216B, or 217B-217C.

Courses in the 500 series (595, 596, 597, 599) are normally taken in preparation for the master's paper review, the field examinations, and for dissertation research. They may not be applied toward the course requirements for the degree.

Master's Paper Review

During your sixth term in residence you must submit an acceptable master's paper for approval by the general faculty. The paper must demonstrate a general competence in sociological theory, methodology, and selected substantive areas and in intellectual attainment.

The paper should demonstrate that you (1) have an accurate grasp of the intellectual traditions of sociology, (2) can bring evidence to bear on the theoretical problems, (3) can describe how some aspect of the social order works, and (4) can adequately handle research and methodological issues. The main concern is with your capacity to do doctoral-level work.

After review of the paper, any of the following options may be recommended:

(1) The paper is passed. You are granted the M.A. and permitted to proceed to the Ph.D.

(2) The paper is passed conditionally. You are granted the M.A. and permitted to proceed to the

Ph.D. after completion of specified revisions of the paper.

(3) You are granted a terminal M.A.

(4) The paper is not acceptable (you may resubmit at a later time or may be asked to withdraw).

If you enter UCLA with an M.A. degree in Sociology from another institution, you normally come up for a master's paper review in your first term of residence at UCLA, and under no circumstances later than the third term of residence. In this review, the department determines whether you may proceed directly to preparation for the field examinations or whether additional work must be done, and if the methodology sequence requirement has been adequately satisfied. In addition to a paper, which can be an M.A. thesis written at another university, you should submit for the master's paper review a transcript from the university at which the M.A. degree was earned.

Contact the department for further details on master's paper review.

Field and Qualifying Examinations

The department requires you to pass two field examinations before taking the University Oral Qualifying Examination for the Ph.D. The emphasis is on mastery and depth of understanding in two areas of specialized study. Field examinations are administered and evaluated under guidelines established by area programs. You may take both or just one of your field examinations in the area with which you are affiliated. Each area program also has procedures enabling unaffiliated students to take field examinations in that area. Details are available from area directors and from the graduate affairs assistant.

If your performance on the field examination is satisfactory, you may nominate a doctoral committee and take the University Oral Qualifying Examination. You must submit a two-page abstract of the dissertation proposal to the graduate affairs assistant for distribution to the entire departmental faculty within two weeks of the oral examination.

Candidate in Philosophy Degree

You are eligible to receive the C.Phil. degree on advancement to candidacy for the Ph.D.

Final Oral Examination

The optional final oral examination for the Ph.D. degree is given by the doctoral committee no later than six months after the completion of the dissertation. A decision to waive the final examination is optional on the part of the Ph.D. committee.

Lower Division Courses

1. Introductory Sociology. Survey of characteristics of social life, processes of social interaction, and tools of sociological investigation.

2. Changing Society and Making History. Lecture, three hours; discussion, one hour. Leading question is how do politics, economics, and culture interact in changing society and making history? Answers provided by introductory level of study of contending substantive theories and contrasting methods of inquiry contained both in classic and exemplary contemporary works. Mr. Champagne, Mr. Mann, Mr. Prager

3. Sociology of Everyday Life. Lecture, three hours; discussion, one hour. Examination of ways in which taken-for-granted aspects of everyday life and relationships are shaped by interactional, cultural, and historical processes. Cultivation of capacity to critically observe tacit practices through which everyday life is constructed. Mr. Emerson, Mr. Katz, Mr. Pollner

4. Jobs and Careers: Sociological Approach. Lecture, three hours; discussion, one hour. Application of social science knowledge to common vocational problems. Description and analysis of major trends in employment, job search and hiring, career mobility patterns, forecasting, and entrepreneurship. Analysis of current thrust to worker ownership. Mr. Light, Ms. Zucker

M5. Social Organization of Black Communities. (Formerly numbered 5.) (Same as Afro-American Studies M5.) Lecture, three hours; discussion, one hour. Analysis and interpretation of social organization of black communities, with focus on origins and development of black communities, competing theories and research findings, defining characteristics and contemporary issues. Mr. Allen, Mr. Oliver (Sp)

9. Computers and Social Change. Lecture, two hours; laboratory, three hours. Impact of technological change from computers and computing on people, jobs, business firms, industries, and educational and legal institutions. Whenever needed for adequate understanding of those topics, course also provides information on selected aspects of contemporary computers and history of computing. In addition to reading assignments and lectures, course involves direct experience in a computing laboratory. Mr. McFarland

18. Interpretation of Quantitative Data. Prerequisite or corequisite: course 1. Satisfies statistics requirement for sociology major. Reading graphs and tables; statistical description using indices of central tendency, dispersion, and association; simple linear regression. Probability; binomial, normal, t, and chi-square distributions and hypothesis testing based on them. Examples from recent issues of *American Sociological Review* or other leading sociological journals.

31. Dilemmas of Third World Development. Lecture, three hours; discussion, one hour. Introduction to understanding dilemmas of Third World social development and prospects for progress in the future. Mr. López, Mr. Zeitlin

88A-88Z. Lower Division Seminars. Lecture, three hours. Limited to 15 freshmen and sophomores. Variable topics of current sociological interest. Consult *Schedule of Classes* or "Department Announcements" for topics and instructors.

Upper Division Courses

101. Development of Sociological Theory. Comparative survey of basic concepts and theories in sociology from 1850 to 1920; codification of analytic schemes; critical analysis of trends in theory construction. Mr. López, Mr. Mann, Mr. Prager

102. Contemporary Sociological Theory. Critical examination of significant theoretical formulations from 1920 to the present; analysis of relation between theoretical development and current research emphasis. Mr. Champagne, Mr. Mann, Mr. Szelenyi

103. Marxist Sociology. Fundamentals of Marxist theory and method and their historical development. Attention to continuing debates within Marxism and to differences between Marxism and other schools of sociological thought. May not be applied toward the theory requirement for the major. Mr. Horton

104. Introduction to Sociological Research Methods. Systematic treatment and semiquantitative skills of use in sociological research (e.g., classification, questionnaire and schedule design, content analysis, critical analysis of studies, conceptual analysis of case materials). Fieldwork may be required.

Mr. Bailey, Mr. Freeman, Mr. TenHouten

105. Research Methods in Policy Analysis and Evaluation. Prerequisite: course M144 or consent of instructor. Recommended: course 104. Approaches for identifying and analyzing social problems and for assessment of policies and interventions for their control and management.

Mr. Freeman, Ms. Zucker

106. Field Research Methods (6 units). Lecture, two hours; discussion, two hours; fieldwork, 12 hours. Prerequisites: upper division standing, consent of instructor. Fieldwork and extensive field notes required. Theory and practice of field research, with particular emphasis on interrelations between fieldwork role and substantive findings. Mr. Emerson

M107. Urban Poverty and Public Policy in the U.S. (Field Component). (Same as Geography M147.) Prerequisite: course M144. Corequisite: course 159 or Geography 150. Supplements and enriches students' academic understanding of urban poverty and the underclass by personal exposure and direct observation in a field setting. Students required to develop a plan of service in a local social service agency and observe policy formulation and implementation. Mr. Johnson, Mr. Oliver, Ms. Ortiz

112. Introduction to Mathematical Sociology. Prerequisites: course 18, Mathematics 2, 3A (course whose content includes introductions to probability theory, matrix algebra, and differential and integral calculus), or equivalent. Mathematical treatment of several sociological phenomena, such as occupational mobility, population growth, organizational structure, and friendship patterns, each covered in some detail, including initial development and subsequent evaluation and modification (emphasizing both deductive and computational aspects of mathematics).

Mr. Bonacich, Mr. McFarland

113. Statistical and Computer Methods for Social Research. Lecture, three hours; laboratory, one hour. Prerequisite: course 18. Continuation of course 18, covering more advanced statistical techniques such as multiple regression, analysis of variance, or factor analysis. Content varies. Students learn how to use the computer and write papers analyzing prepared data sets. Mr. Bonacich, Mr. TenHouten

116. Social Demography. Studies of past, present, and future trends in population growth. Sociological theories of causes and consequences of population growth and redistribution. Emphasis on correlates of fertility, mortality, and migration.

Mr. Bailey, Ms. Oppenheimer, Mr. Telles

117. Sociology of Family Demographic and Economic Behavior. Examination of demographic behavior associated with social organization of the family and its relationship to society's economic system. American and European historical studies of family socioeconomic and demographic characteristics and behavior in first half of course; U.S. experience since the 1930s in second half. Ms. Oppenheimer

118. Demography and Sociology of Women's Economic Roles. Prerequisites: courses 1 and 18 or Statistics 50 or Psychology 41 or Economics 40 or Biostatistics 100A, or consent of instructor. Demographic and sociological analysis of factors affecting women's economic roles in world of work and the family. Topics include demographic determinants of women's socioeconomic roles, women's changing place in the occupational structure, men's and women's contribution to socioeconomic status of the family, socioeconomic position of women without men to support them, future trends, and social policy affecting women's status.

C124A-C124B. Conversational Structures I, II. Lecture, three hours. May be concurrently scheduled with courses C244A-C244B:

C124A. Introduction to some structures which are employed in organization of conversational interaction, such as turn-taking organization, organization of repair, and some basic sequence structures with limited expansions. Mr. Schegloff

C124B. Prerequisite: course C124A. Consideration of some more expanded sequence structures, story structures, topical sequences, and overall structural organization of single conversations.

Mr. Schegloff

125. Normal Environments. Structural interpretation of concerted production, management, and alteration of perceived normal interpersonal environments. Fieldwork required.

Mr. Heritage, Mr. Pollner

126. Study of Norms. Properties of norms, of normatively governed conduct, of lay and professional methods for describing, producing, using, and validating norms in contrasting settings of socially organized activities; relevance of these properties for programmatic problems of analytic sociology. Fieldwork required.

Mr. Heritage, Mr. Pollner

127. Mind and Society. Lecture, two and one-half hours; discussion, one hour. Prerequisite: course 1 or equivalent. Study of social production of modes of thought and forms of knowledge. Study of ways in which bodies of knowledge and cognitive styles are produced, used, and transformed in everyday, organizational, and extraordinary contexts.

Mr. Pollner, Mr. TenHouten

128. Sociology of Emotions. Lecture, three hours; discussion, one hour. Prerequisites: course 1 and junior standing, or consent of instructor. Sociological theories and explanations of social conditions shaping and producing emotional experiences; effects of individual expression of emotions on social conditions; relations between thought, sensations, and the emotions; the self and emotions; social construction of emotions.

Mr. Katz, Mr. Rabow, Mr. TenHouten

132. Social Psychology: Sociological Approaches. Survey of contribution of sociologists to theory and research in social psychology, including theories of social control; conformity and deviation; reference groups; and interaction process.

Ms. Ortiz, Mr. Rabow

133. Collective Behavior. Prerequisites: courses 1, 18, or equivalent, upper division standing. Characteristics of crowds, mobs, publics, social movements, and revolutions; their relation to social unrest and their role in developing and changing social organization.

Mr. Kollock

134. Culture and Personality. Prerequisites: courses 1, 18, or equivalent, upper division standing. Theories of relation of variations in personality to culture and group life, in primitive and modern societies, and influence of social role on behavior.

Mr. Allen, Mr. Heritage

135. Group Processes. Systematic study of formation, structure, and functioning of groups; analysis of group processes and group products from a variety of theoretical viewpoints; implications of various research techniques.

Mr. Bonacich, Ms. Zucker

136. Process and Socialization in the Family. Prerequisites: courses 1, 18, or equivalent, upper division standing. Examination of processes of interaction, decision making, role differentiation, conflict, integration, and socialization within the family and their interrelations with society.

Mr. Allen

137. Psychoanalytic Sociology. Prerequisites: courses 1, 18. Recommended: one course in theory (course 101 or 102) and in social psychology. Fieldwork may be required. Designed to review models of integration between psychoanalysis and sociology. Application of this analytical perspective to selected substantive areas and social processes, including but not limited to group development, delinquency, deviance, socialization, identity and self formation, role taking and role making.

Mr. Rabow

M138. Death and Suicide: Psychological and Sociological Aspects. (Same as Psychology M163.) Lecture, three hours. Prerequisite: junior standing. Definition and taxonomy of death; new permissiveness and taboos related to death; romanticization of death; role of the individual in his own demise; modes of death; development of ideas of death through life span; ways in which ideas of death influence conduct of lives; impact of dying on social structure surrounding the individual; preventive, interventive, and postventive practices in relation to death and suicide; partial death; megadeath; lethality; psychological autopsy; death of institutions and cultures. P/NP grading recommended (letter grading required if course to be applied toward psychology or sociology major).

Mr. Shneidman

143. Human Health and Society. Lecture, three hours; discussion, one hour. Prerequisite: course 1. Exploration of long-run historical trends in relationship between human health and social organization, drawing on historical, anthropological, demographic, and sociological concepts, theories, and data.

Ms. Hart

M144. Urban Poverty and Public Policy in the U.S. (Formerly numbered 144.) (Same as Geography M145.) Historical overview of urban poverty and social welfare programs; ongoing debates about causes and consequences of poverty.

Mr. Johnson, Ms. Ortiz (F)

145. Sociology of Deviant Behavior. Examination of leading sociological approaches to study of deviance and general survey of major types of deviation in American society.

Mr. Horton

146. Sociology of Disputes and Troubles. (Not the same as course 146 prior to Spring Quarter 1992.) Lecture, three hours; discussion, one hour. Theoretical implications of everyday disputes and troubles in contemporary society; origins, progression, and outcomes of informal disputes; disputing in intimate family, community, public place, and workplace settings; forms dynamics and consequences of third-part intervention.

Mr. Emerson, Mr. Katz

147A. Sociology of Crime. (Formerly numbered 146.) Lecture, three hours; discussion, one hour. Sociological theories of social origins, organization, and meanings of crime and criminal behaviors.

Mr. Katz, Mr. Rabow

147B. Sociology of Criminal Justice. (Formerly numbered 147.) Lecture, three hours; discussion, one hour. Examination of structures and routine decision-making processes of key criminal justice institutions, including police, courts, probation and parole, jails and prisons.

Mr. Emerson

148. Sociology of Mental Illness. Analysis of major sociological and social psychological models of madness. Study of social processes involved in production, recognition, labeling, and treatment of "mental illness."

Mr. Emerson, Mr. Pollner

149. Social Organization of Psychiatric Treatment. Strongly recommended (but not prerequisite): course 148. Review of current research and theory on psychiatric treatment processes and treatment organizations, including mental hospitals and community mental health organizations.

Mr. Emerson

150. White-Collar Criminality. Lecture, three hours. Prerequisite: course 146 or consent of instructor. Theories of the genesis of crime applied to criminal behavior by business and political elites, including history and evaluation of criminal law enforcement against white-collar illegalities.

Mr. Katz

153. Chinese Immigration. Lecture, two hours; discussion, one hour. Survey of sociological studies of Chinese immigration, with focus on international context, organization, and institutions of Chinese America and its interactions with the social environment.

Ms. Cheng (F)

155. Chicanos in American Society. Lecture, three hours; discussion, one hour. Prerequisite: course 1 and junior standing, or consent of instructor. Exploration of history and social conditions of Chicanos in American society, with particular emphasis on their location in the larger social structure and on comparisons with other Latinos and minority groups. Topics include migration, family, education, and work issues.

Mr. Alvarez, Ms. Ortiz, Mr. Telles

156. Ethnic and Status Groups. Characteristics of "visible" ethnic groups (e.g., Japanese, Mexican, and black); their organization, acculturation, and differentiation. Development, operation, and effects of selective immigration and population mobility. Status of chief minorities in continental U.S., with comparative materials from Jamaica, Hawaii, and other areas.

Mr. Alvarez, Mr. Kitano, Mr. Prager

157. Social Stratification. Analysis of American social structure in terms of evaluational differentiation. Topics include criteria for differentiation, bases for evaluation, types of stratification, composition of strata and status systems, mobility, consequences of stratification, and problems of methodology.

Mr. McFarland

158. Urban Sociology. Lecture, three hours. Description and analysis of urbanization and urbanism in the U.S. and the world.

Mr. Halle, Mr. Light, Mr. Telles

159. Comparative Studies of Jewish Communities in the U.S. and Abroad. History, distribution, structure, and functioning of major Jewish communities, with particular emphasis on North America and Israel. Interrelationships and sources of conflict between Jews and Gentiles in Western countries. More generally, economic and social integration of Diaspora Jewish communities. Fieldwork may be required.

160. Intergroup Conflict and Prejudice. Study of causes and consequences of group conflict, with emphasis on majority/minority relations, prejudice, and discrimination. Special attention to alternative sociological and psychological theories of prejudice; effects of minority status on the individual; and possibilities for attitude and behavior change.

Mr. Bobo, Mr. Oliver

161. Comparative American Indian Societies. Lecture, three hours. Prerequisite: course 1. Comparative and historical study of political, economic, and cultural change in indigenous North American societies. Several theories of social change, applied to selected case studies.

Mr. Champagne

M162. Sex Roles and Society. (Same as Women's Studies M162.) Lecture, three hours; discussion, one hour. Prerequisite: course 1 or Women's Studies 10 or consent of instructor. Consideration of sociological literature pertaining to development and functions of sex roles in society from a critical perspective. Topics include socialization and gender norms, contemporary sex role strain, and challenge to traditional notions of sex roles posed by feminist critique.

Ms. Hart

M163. Gender and Work. (Formerly numbered 163.) (Same as Women's Studies M164.) Lecture, three hours. Prerequisite: course 1 or Women's Studies 10 or consent of instructor. Exploration of relationship of gender to work, concentrating on the U.S. experience but also including some comparative material. Particular emphasis on analysis of causes and consequences of job segregation by gender and of wage inequality.

Ms. Milkman

168. Organizations and Society. Sociological analysis of organizations and their social environment. Introduction to basic theories, concepts, methods, and research on behavior of organizations in society.

Mr. Alvarez, Mr. Grusky

169. Law and Society. Specific topics may include law in preindustrial and industrialized societies, legalization of contemporary social relations, participants' experiences of legal processes, lay perceptions of justice, social movements toward equal justice, roles of lawyers and judges, social impact of court decisions.

Mr. Abel, Mr. Emerson, Mr. Katz

170. Medical Sociology. Prerequisite: course 1 or consent of instructor. Provides majors in sociology and other social sciences, as well as students preparing for health sciences careers, with understanding of health-seeking behavior and interpersonal and organizational relations that are involved in receipt and delivery of health services.

Mr. Goldstein, Ms. Hart

171. Occupations and Professions. Description and analysis of representative occupations and professions, with emphasis on the contemporary U.S.

Ms. Milkman, Mr. Waldinger

172. Entrepreneurship. Lecture, three hours; discussion, one hour. Prerequisite: course 1. Description and analysis of entrepreneurship, with special reference to historical origins, ideology, international comparisons, women and ethnic minority participation, legal and illegal forms, public and private auspices.

Mr. Light

173. Economy and Society. Sociology of economic life, with emphasis on principal economic institutions of the U.S.

Mr. Light

174. Sociology of the Family. Theory and research dealing with the modern family, its structure, and functions, including historical changes, variant family patterns, family as an institution, and influence of contemporary society on the family.

Ms. Milkman

M175. Sociology of Education. (Same as Education M108.) Prerequisite: course 1. Study of social processes and interaction patterns in educational organizations; relationship of such organizations to aspects of society, social class, and power; social relations within school, college, and university; formal and informal groups, subcultures in educational systems; roles of teachers, students, and administrators. Fieldwork may be required.

Mr. Rabow, Ms. Wells

M176. Sociology of Mass Communication. (Formerly number 176.) (Same as Communication Studies M147.) Prerequisite: course 1. Studies in relationship between mass communication and social organization. Topics include history and organization of major media institutions, social forces that shape production of mass media news and entertainment, selected studies in media content, and effects of media on society.

Mr. Clayman

182. Political Sociology. Contributions of sociology to study of politics, including analysis of political aspects of social systems, social context of action, and social bases of power.

Mr. Prager, Mr. Roy, Mr. Zeitlin

183. Comparative and Historical Sociology. Prerequisite: course 1. Survey of central themes of comparative and historical studies in sociology. Various aspects of development of modern society, including development of nation-state, emergence of capitalism, industrialization, and population growth. Variation in contemporary society, viewed from a variety of theoretical perspectives.

Mr. Champagne, Mr. Mann, Mr. Roy

184. Social Change. Study of patterns of social change, resistance to change, and change-producing agencies and processes.

Mr. Alexander

185. American Society. Analysis of major institutions in the U.S. in historical and international perspective, with emphasis on topics such as industrialization, work, the state, politics, community, the family, religion, and American culture. Theories of social change, conflict, and order applied to the case of the U.S.

Mr. Roy, Mr. Zeitlin

186. Latin American Societies. Descriptive survey of major Latin American societies, emphasizing their historical backgrounds and their emergent characteristics, with special attention to relations between rural and urban life.

Mr. López, Mr. Zeitlin

187. Population and Society in the Middle East. Prerequisites: upper division standing, consent of instructor. Survey of Middle Eastern societies; their historic and environmental bases; contemporary demographic and cultural situation.

188. Comparative Social Institutions of East Asia. Analysis of selected social institutions of China, Japan, and Korea. Emphasis on continuity and change in East Asian societies.

Ms. Cheng

189. Japanese Society. Lecture, two and one-half hours; discussion, two hours. Prerequisite: course 1 or consent of instructor. Analysis of social-structural characteristics and functioning of contemporary Japanese society, with focus on (1) forms of social interaction and social structure, (2) work, family, and the life course, and (3) education and opportunity. Emphasis on structural perspectives, more than cultural perspectives.

190. Contemporary Socialist Societies. Lecture, three hours. Prerequisite: junior or senior standing. History of the socialist idea. Introduction to sociological literature on the social character and social structure of actually existing socialist societies. Focus on the East European experience, with comparative outlook at other socialist experiments, particularly Soviet and Chinese communism.

Mr. Szelenyi

195A-195Z. Special Topics in Sociology. Prerequisite: upper division standing (some sections may require prior coursework or consent of instructor). Study of selected current topics of sociological interest. Consult *Schedule of Classes* for topics and instructors. May be repeated for credit and may be applied as elective units toward sociology major.

M196A-M196B. Contemporary Issues in Urban Poverty Research. (Formerly numbered M197A-M197B.) (Same as Geography M146A-M146B.) Prerequisite: Geography 150. Two-term research seminar designed to engage students in ongoing faculty research projects focusing on models of urban poverty and underclass behaviors.

Mr. Johnson, Mr. Oliver, Ms. Ortiz

197. Undergraduate Seminar. Prerequisites: upper division standing, major in sociology, consent of instructor.

199. Special Studies (2 to 8 units). Prerequisites: senior standing, 3.0 GPA in major, courses 1 and 18 or equivalent, consent of instructor and department chair. Course of independent study designed for graduate or senior undergraduate students who (1) desire a more advanced or specialized treatment of an area covered in regular course list and who present that course as a prerequisite or (2) desire work in an area of sociological analysis currently not covered by an upper division course. Only eight units are allowed. See undergraduate counselor for course contract.

199HA-199HB-199HC. Special Study for Honors. Prerequisite: honors program standing:

199HA. Design of research project to serve as student's honors thesis. Research proposal, detailed bibliography, and regular meetings with sponsoring faculty member required.

199HB. Continuation of work initiated in course 199HA. Series of progress reports are prepared in consultation with instructor.

199HC. Completion of written report or honors thesis.

Graduate Courses

201A-201B. Proseminars: Sociology. Prerequisite: graduate standing. Designed primarily for graduate students in first year of residence. Comprehensive survey of basic concepts and theories in the major fields of sociology.

Mr. Alexander, Mr. López

202A-202B. Theory and Research in Sociology: Exemplary Studies, Classical and Contemporary. Lecture, two hours; discussion, two hours. Prerequisite: graduate standing. Required of first-year sociology graduate students. Introduction to study of the discipline's formative and exemplary works to learn about theory and research by reading work done by other people. Designed to help students link their research to the great traditions of sociological enterprise. In Progress grading.

203A. Social Survey Practicum. Lecture, one hour; discussion, one hour; laboratory, two hours. Prerequisite: graduate standing or consent of instructor. Training through practice in basic techniques of survey research.

Mr. Oliver, Ms. Zucker

203B. Social Survey Research Seminar. Lecture, one hour; discussion, one hour; laboratory, two hours. Prerequisite: graduate standing or consent of instructor. Development of individual survey research projects under faculty supervision.

Mr. Oliver, Ms. Zucker

209A-209B. Data Analysis for Social Scientists. Lecture, three hours; laboratory, one hour. Introduction to applied statistics and data collection for graduate students in social sciences. In Progress grading.

Mr. Berk

209C. Mathematics for Social Statistics. Lecture, three hours; computer exercises. Prerequisites: graduate standing, consent of instructor. Discussion of elementary mathematical techniques needed for more advanced statistics courses in various social sciences, psychology, and education. Calculus of sets, sets of numbers, sequences of numbers, notion of a function, polynomials, differentiation, elementary matrices, and vectors.

Mr. Berk, Mr. de Leeuw

210A-210B. Intermediate Statistical Methods I, II. Lecture, three hours; discussion, two hours. Prerequisite: course 18 or equivalent. Required for M.A. degree by four area programs. Intermediate statistical methods using computers: probability theory, sampling distributions, hypothesis testing, interval estimation, multiple regression and correlation, experimental design, analysis of variance and covariance, contingency tables, sampling theory. In Progress grading.

Mr. Bonacich, Mr. McFarland, Mr. TenHouten

211A-211B. Comparative and Historical Methods:

211A. Strategies of Research and Conceptualization. Prerequisite: consent of instructor. Topics include relationship of theory and fact to social sciences, logic of comparative and historical analysis, and substantive paradigms of comparative and historical analysis. Reading involves methodological examination of basic works in representative problem areas. In Progress grading (credit to be given only on completion of course 211B).

211B. Research Techniques. Prerequisite: course 211A. Topics include problem of evidence, quantitative and qualitative data. Techniques of data analysis, including use of manuscript census, content analysis, collective biography, and secondary analysis.

Mr. Prager, Mr. Roy, Mr. Zeitlin

212A-212B. Marxist Methodology. Prerequisite: course 101 or consent of instructor. Practice in dialectical method of attaining scientific knowledge about society as a process and mode of production. Critical examination of methodological issues and techniques and practical field research.

Mr. Horton

213A-213B. Techniques of Demographic and Ecological Analysis. Prerequisite: course 210A or equivalent. Procedures and techniques for collection, evaluation, and analysis of demographic and ecological data; models of population and ecological structure and change; applications to study of social structure and social change.

Mr. Mason, Mr. Telles

214A-214B. Naturalistic Methods for Recorded Data. (Not the same as courses 214A-214B prior to Winter Quarter 1990.) Prerequisite: consent of instructor. Special features of audio and video recordings as sources of data; problems of description and analysis posed by working with recorded data; practical exploration of techniques of data collection and transcription with both audio and video data; analysis of single cases and analytically defined collections; use of computer to organize research with recorded data. In Progress grading.

Mr. Schegloff

215A-215B. Experimental Sociology. Prerequisites: course 210A or equivalent, consent of instructor. Basic fundamentals of experimental method, particularly as it is used in social psychology. In Progress grading.

Mr. Grusky, Mr. Rabow

216A-216B. Survey Research Methods. Course in methodology and techniques: formulation of research problem; study design; hypotheses; sampling; measurement; questionnaire and schedule construction; interviewing and data collection; processing and tabulation; analysis and interpretation; presentation of findings; cross-national, replicative, panel, and other complex survey designs. Students participate in survey research project. In Progress grading.

Mr. TenHouten, Mr. Treiman

217A. Analyzing Ethnographies. Seminar, three hours. Prerequisite: consent of instructor. Analysis of ethnographic monographs.

Mr. Emerson, Mr. Katz

217B-217C. Ethnographic Fieldwork. (Formerly numbered 217A-217B.) Seminar, three hours. Prerequisite: consent of instructor. Recommended: course 217A. Theories and techniques of ethnographic fieldwork. Kinds of problems amenable to ethnographic approaches, methods, and techniques for doing fieldwork, and ethical problems involved in such research.

Mr. Emerson, Mr. Katz

218A-218B. Ethnomethodological Methods. Prerequisite: consent of instructor. Examination of techniques used in ethnomethodological research, practice in critical evaluation of research, and directed experience in conduct of an extended investigation employing ethnomethodological procedures. In Progress grading.

219A-219B. Advanced Statistical Methods I, II. Lecture, three hours; discussion, two hours. Prerequisites: courses 210A-210B or equivalent or consent of instructor. Not required. Advanced multivariate statistical methods: discrete variables and events, logit and log-linear regression, event-history analysis, general linear model, exploratory and confirmatory factor analysis, linear causal models, latent variables, reciprocal causation, classification and clustering, time-series analysis.

Mr. Bonacich

220. Role Theory. Prerequisites: graduate standing, consent of instructor. Review of theories and research dealing with social roles, with special emphasis on roles in social interaction and in formation of the social self.

221. Social Ecology. Prerequisites: courses 18, 116, or equivalent, and graduate standing, or consent of instructor. Examination of various approaches to both microecology and macroecology, including classical and neoclassical ecology, social area analysis, socio-cultural ecology, city-size distributions, effects of population density on animals and humans, proxemics, territoriality, and effects of physical environment on humans.

Mr. Bailey

222. Foundations of Ethnomethodological, Phenomenological, and Analytic Sociologies. Lecture, three hours. Prerequisite: graduate standing or consent of instructor. Basic issues, methods, and topics of ethnomethodological, phenomenological, conversation-analytic, and related varieties of inquiry. Central themes such as the world of everyday life, problem of rationality, rules/norms and tacit knowledge, problem of social order, speaking and discourse, constitutive practices, and production of ordinary interaction in first part; guest presentations by affiliated faculty in second part.

Mr. Pollner

223. Phenomenological and Interactionist Perspectives on Selected Topics. Lecture, three hours. Comparison of phenomenological and symbolic interactionist perspectives by examining a particular body of live or currently unresolved substantive issues. Topics vary; attention on development of phenomenological and interactionist thought on topic of concern, with special concern for ambiguities and divergences both within and between the two approaches. When relevant, attention to logical and historical relations of phenomenology and interactionism of pragmatist, existentialist, and ordinary language philosophies.

Mr. Katz

224A-224B. Problems in Social Psychology. Prerequisites: course 210A, consent of instructor. Basic course for graduate students intending to specialize in social psychology. **224A.** Major theoretical contributions to the field. **224B.** Current work being done in department in several subfields.

Mr. Grusky, Mr. Kollock

225A-225B. Demographic Perspectives on Relationship of Family and Economic Systems. Prerequisites: courses 210A-210B or consent of instructor. Examination of interrelationship of family and economic systems in societies at different levels of economic development, focusing particularly on the U.S. experience. Central to course: (1) analysis of how demographic factors affect economic and family systems; (2) how these systems, and changes in them, affect demographic variables; and (3) how this two-way process influences relationship of family and economic systems over time. **225A.** Lectures and readings. **225B.** Individual research projects involving term paper and classroom reports of results.

Ms. Oppenheimer

226A-226B. Introduction to Theory and Major Empirical Research in Social Demography. Lecture, two hours; discussion, one hour. Prerequisites: course 210A, consent of instructor. Survey and critical examination of population theories and related major empirical research. Emphasis on interrelation of cultural, socioeconomic, and demographic factors. Introduction to elementary demographic methods utilizing microcomputers.

Ms. Oppenheimer

227. Sociology of Knowledge. Prerequisite: graduate standing or consent of instructor. Survey of theories and research concerning social determinants of systems of knowledge and role of intellectual and artistic elites in Western societies.

Mr. Horton

228A-228B. Critical Issues in Macrosociology. Lecture, two hours; discussion, one hour. Prerequisite: graduate standing. Conceptual introduction to the area of macrosociology in which exemplary works are read, studied for substance and methods, and critiqued in seminar and in written papers. Usually team taught by faculty of varying orientations. In Progress grading.

Mr. Mann, Mr. Szelenyi, Mr. Zeitlin

229A. Informal Social Control. Lecture, three hours. Development and transformation of informal disputes and troubles in communities, neighborhoods, public places, work settings, households, and families.

Mr. Emerson

229B. Social Control Institutions. (Formerly numbered 229.) Lecture, three hours. Course 229A is not prerequisite to 229B. Current research and theory in formal social control processes and institutions, including police, courts, schools, and nonvoluntary treatment programs, among others.

Mr. Emerson

230. Capitalism and Socialism. (Not the same as course 230 prior to Fall Quarter 1989.) Lecture, one hour; discussion, two hours. Prerequisite: graduate standing. Introduction to theoretical and methodological foundations of cross-systemic, comparative social research and, in particular, to East-West comparative work in order to gain better understanding of sociological character of both capitalist and socialist societies in Eastern and Western Europe, North America, the U.S.S.R., and China.

Mr. Szelenyi

M231. Structure of Occupations. (Same as Education M231.) Lecture, two hours; discussion, two hours. Shifts in occupational structure of the U.S., changing skill requirements for jobs, effects of automation on work environments, and role of formal and informal education in preparing people for occupations.

232. Survey Data Acquisition. Lecture, three hours. Prerequisites: courses 210A-210B. Traditional topics on survey research practice in study design, instrument design, sampling, interviewing, and data management. Parallel coverage of research literature on various sources of nonsampling response bias that influence survey results. Ongoing survey that employs Computer-Assisted Telephone Interviewing is available as a resource for course.

233. Foundations of Political Sociology. Lecture, three hours. Prerequisite: graduate standing or consent of instructor. Survey of the field of political sociology, oriented around critical themes in major theoretical traditions and contemporary exemplars. Special attention to competing perspectives on power, theory of the state, and relationship of class structure to politics.

Mr. Prager, Mr. Roy

234. Sociology of Community Organization. Prerequisites: graduate standing, consent of instructor. Survey of recent and classical research and literature dealing with predominantly political institutions, problem of order, and organization of communal life in the village and metropolis.

Mr. Horton

235. Comparative Ethnic Stratification. Lecture, one hour; discussion, two hours. Prerequisite: graduate standing or consent of instructor. Examination of racial and ethnic stratification in both industrial and developing societies, and variety of theoretical approaches that have attempted to explain it. Emphasis on recent debates among pluralist, class analysis, and rational choice theoretical perspectives.

Mr. López

236. Social Change in the Middle East. Analysis of sources, extent, and types of social change in the Middle East, with emphasis on origin and consequences of industrialization and urbanization.

237. Seminar: Theory and Research in Comparative Social Analysis (2 units). (Not the same as course 237 prior to Fall Quarter 1989.) Prerequisite: graduate standing. Emphasis on one issue of particular importance for comparative analysis of capitalism and socialism, North America and Western Europe, developed capitalist and socialist countries and the Third World, and implications for theory construction and social research. S/U grading.

Mr. Szelenyi

238A-238B. Fieldwork in Minority Communities. Seminar, two hours. Prerequisites: graduate standing, consent of instructor. Designed to supply graduate students with conceptual and methodological skills for studying minority communities. Greater Los Angeles is the laboratory. Emphasis on both ethnographic and survey research techniques. In Progress grading.

239A-239B. Quantitative Research on Social Stratification and Social Mobility. Lecture, three hours. Prerequisites: courses 210A-210B or equivalent. Introduction to English language research literature on quantitative social stratification and social mobility in the U.S. and abroad. In Progress grading.

Mr. McFarland, Mr. Treiman

240. Mathematics of Population. Prerequisite: prior knowledge of matrices, calculus, and probability theory. Discrete and continuous deterministic and probabilistic models of growth and composition of a one-sexed population classified by age, plus selected topics on more complicated population models.

Mr. McFarland

241. Theories of Gender in Society. Lecture, one hour; discussion, two hours. Gender stratification in society and sociology; extent of gender diversity in human societies past and present; why gender is absent in classical macrosociology; can masculinist paradigms make space for gender or does a feminist-informed sociology necessitate a fresh approach?

Ms. Hart

242. Analysis of Categorical Data. Lecture, three hours. Prerequisites: courses 210A-210B or Statistics M152A and 152B-152C or equivalent or consent of instructor. Log-linear and log-bilinear analysis (hierarchical log-linear models, logit models, association models, quasi-symmetry models, log-rate models, latent-structure models, and latent-trait models).

Mr. Mason

243. Interaction and Institutions. Lecture, three hours. Examination of ethnographic and conversational analytic research on structure and processes of interaction in several institutional settings, taken from the following: medicine, criminal justice, psychiatry, social welfare, education, mass communications.

Mr. Emerson, Mr. Heritage

C244A-C244B. Conversational Structures I, II. Lecture, three hours; discussion, one hour. May be concurrently scheduled with courses C124A-C124B. Graduate students have additional assignments and/or meet as a group one additional hour each week.

C244A. Introduction to some structures which are employed in organization of conversational interaction, such as turn-taking organization, organization of repair, and some basic sequence structures with limited expansions. Mr. Schegloff

C244B. Prerequisite: course C244A. Consideration of some more expanded sequence structures, story structures, topical sequences, and overall structural organization of single conversations. Mr. Schegloff

245. Cultural Sociology: Classical and Contemporary Approaches. Lecture, one hour; discussion, two hours. Exploration of classical approaches to cultural dimension of social life — Weberian, Durkheimian, Parsonian, and critical — and living traditions they have spawned. Examination of contemporary efforts at constructing a new cultural sociology. Theoretical focus, with consideration of case studies. Mr. Alexander

246. Cultural Studies: Hermeneutic, Semiotic, and Poststructural Traditions. Lecture, one hour; discussion, two hours. Examination of cultural analysis as it has evolved outside the discipline of sociology, on premise that these extra-sociological approaches provide critical resources in advancing the field of cultural sociology today. Theoretical and comparative emphasis, with consideration of case studies. Mr. Alexander

247. Sociology of Emotions. (Not the same as course 247 prior to Fall Quarter 1992.) Lecture, two hours; discussion, one hour. Prerequisite: graduate standing. Sociological theories of emotional expression; experiential approaches to emotions: motivational, cognitive, psychophysiological, and behavioral; repression, social oppression, and the emotions; creativity and expressed affect; thought, sensations, and the emotions; specific emotions; cultural differences in emotional expression; measurement of emotions. Mr. TenHouten

M249A. Health Professions. (Same as Community Health Sciences M274.) Lecture, three hours. Prerequisite: Community Health Sciences 270 or consent of instructor. Sociological examination of concepts "health" and "illness" and role of various health professionals, especially physicians. Attention to meaning of professionalization and professional/client relationships within a range of organizational settings. Mr. Goldstein

M249B. Health and Illness Behavior. (Same as Community Health Sciences M275.) Prerequisites: Community Health Sciences 270 and Epidemiology 100, or consent of instructor. Sociocultural factors affecting differential patterns of health behavior, illness behavior, and sick-role behavior. Mr. Berkanovic

250. Methodological Problems. Mr. Bailey, Mr. TenHouten

251. Topics in the Problem of Social Order.

252. Criminology. Mr. Katz, Mr. Rabow

253. Quantitative Methods in Sociology. Mr. Bailey, Mr. Bonacich, Mr. Freeman

254. Sociology of Law. Social control functions of law and legal institutions, with particular attention to contrast between law-ways of stateless and tribal societies and contemporary American legal processes and institutions, primarily those of criminal law. Mr. Emerson, Mr. Katz, Mr. Prager

255A-255B. Selected Issues in Sociological Theory. Seminar. Prerequisite: consent of instructor. Course 255A is not ordinarily prerequisite to 255B. Examination of selected issues and problems in classical or contemporary sociological theory and in history of development of sociological theory. Mr. Champagne

256. Demography. Mr. Bailey, Mr. Telles

257. Demography of Marriage Formation and Dissolution. Discussion, three hours. Prerequisites: course 210A, consent of instructor. Extensive and intensive critical examination of major approaches to analysis of marriage formation and dissolution, with focus primarily on demographic literature. Ms. Oppenheimer

258. Talk and Social Institutions. Lecture, three hours. Prerequisite: consent of instructor. Introduction to methods of conversation analysis, with particular reference to interaction in institutional contexts. Examination of relations between design of specific interactional activities and larger social and institutional contexts in which those activities are embedded. Mr. Clayman, Mr. Heritage

259. Social Structure and Economic Change: Historical and Comparative Perspectives. Ms. Cheng, Mr. Zeitlin

260. Economy and Society. Discussion, two hours. Prerequisite: graduate standing or consent of instructor. Review and critique of major analytical traditions in economy and society. Mr. Light, Mr. Zeitlin

261. Ethnic Minorities.

M262. Selected Problems in Urban Sociology. (Same as Afro-American Studies M200C.) Seminar. Prerequisite: consent of instructor. Mr. Allen, Mr. Light, Mr. Oliver

263. Social Stratification. Mr. Treiman

264. Personal Identity in Historical Perspective. Lecture, three hours. Prerequisite: graduate standing. Examination of distinctive features of personal identity in contemporary society through use of historical materials on various aspects of private life. Topics include home, food, clothing and appearance, personal odor, and cleanliness in everyday life. Mr. Katz, Mr. Pollner

265. Problems in Organization Theory. Mr. Alvarez, Mr. Grusky, Ms. Zucker

266. Selected Problems in Analysis of Conversation. Prerequisite: course C124A or consent of instructor. Mr. Schegloff

267. Selected Problems in Communication. Mr. Pollner, Mr. Schegloff

268. Selected Problems in Psychoanalytic Sociology. Discussion, three hours. Recommended (but not prerequisite): at least one year of methods courses. Selected problems in interpretation of sociology and psychoanalysis, which may be substantive (group development, socialization, culture, deviance, collective behavior) or methodological; latter focuses on clinical fieldwork and experimental use of psychoanalytic and sociological techniques. Mr. Rabow

269. Collective Behavior.

270. Selected Problems in Socialization. Mr. Allen

271. Ethnomethodology.

272. Topics in Political Sociology. Mr. Roy, Mr. Zeitlin

273. Attitudes and Social Structure.

274. Selected Problems in Sociology of Africa. Prerequisites: graduate standing, consent of instructor. Selection of problems in sociology of Africa from among following fields: urbanization, racial and ethnic relations, national integration, and political change.

M275. Contemporary Issues of the American Indian. (Same as American Indian Studies M200C and Anthropology M269.) Introduction to most important issues facing American Indians as individuals, communities, tribes, and organizations in the contemporary world, building on historical background presented in American Indian Studies M200A and cultural and expressive experience of American Indians presented in American Indian Studies M200B. Mr. Champagne, Ms. Heth

276. Selected Topics in Sociology of East Asia. Prerequisites: graduate standing, consent of instructor. Selected problems in China, or in China and Japan comparatively. Possible topics include (1) China's Great Proletarian Cultural Revolution, (2) internal contradictions in Chinese society: male/female relations, city and countryside, minority nationalities, class struggle under socialism, etc., (3) China and Japan: two models of development. Ms. Cheng

277. Japanese Society: Selected Topics. Lecture, two and one-half hours. Prerequisite: graduate standing. Social structural characteristics and functioning of contemporary Japanese society, with focus on comparison and evaluations of functional (or rational) and cultural explanations of selected social phenomena. Topics include forms of social interaction, work organization, family, education, and equality.

278. Selected Problems and Issues in Mass Media Research. Seminar, two hours. Prerequisites: graduate standing, consent of instructor. Foci include methodological problems (surveys, panel studies, content analysis); research on audiences; problems of comparative, international media research; exposure and socialization; social, psychological, and political effects of technological innovation.

279. Seminar: Applied Social Research. Lecture, two hours; discussion, one hour. Opportunities for applied research, distinctive features of applied work, and procedures commonly employed in various areas of research. Examination of representative work in specific areas of applied research. Mr. Berk, Mr. Freeman

280. Seminar: Evaluation Research. Prerequisite: graduate standing. Technical and political aspects of implementing evaluation research studies. Role of evaluation research in social policy development, as well as procedures for undertaking process and impact evaluations. S/U or letter grading. Mr. Freeman

281. Selected Problems in Mathematical Sociology. Prerequisite: consent of instructor. Exploration of some mathematical models of sociological processes. Possible topics include models of small groups, social mobility, kinship relations, organizations, social interaction. Mr. Bonacich, Mr. McFarland

282. Organizations and the Professions. Mr. Alvarez

283. Applied Sociology. Discussion, two hours. Prerequisite: graduate standing. Examination of roots and intellectual traditions underlying contemporary interest and work in applied sociology. Discussion of range of methodological perspectives used in applied research, utility of social research in various substantive domains and conflicts and controversies related to ideological activities, competence and performance requirements, and identification with and participation in the discipline. Mr. Berk, Mr. Freeman

284. Topics in Mental Health and Illness. Prerequisites: course 148 or equivalent, graduate standing. Mr. Grusky, Mr. Pollner

285A-285Z. Special Topics in Sociology. Seminar, three hours. Prerequisite: graduate standing. Seminar on selected current topics of sociological interest. Consult *Schedule of Classes* for topics and instructors. May be repeated for credit.

286. Event History Analysis. Lecture, three hours. Prerequisites: courses 209A-209B and 209C, or 210A-210B, or equivalent, or consent of instructor. Logit models for discrete-time event history models; piecewise exponential hazards models based on use of log-linear analysis; proportional hazards, nonproportional hazards, and stratified models based on Cox's partial likelihood method; and accelerated failure-time regression models. S/U or letter grading.

M287A-M287B. Population Policy and Fertility. (Same as Community Health Sciences M237A-M237B.) Lecture, three hours; discussion, one hour. Prerequisite: consent of instructor. Course M287A is prerequisite to M287B. Analysis of research concerning major issues in population policy, with special emphasis on human fertility.

M287C. Seminar: Population Policy and Fertility. (Same as Community Health Sciences M237C.) Seminar, three hours; discussion, one hour. Prerequisites: courses M287A-M287B, consent of instructor. Review of current literature in population policy and fertility in conjunction with student research reports. May not be repeated for credit.

288A-288B-288C. Mental Health Services for Persons with AIDS (3 units each). Lecture, two hours; discussion, one hour. Prerequisite: graduate standing or consent of instructor. Analysis of current research on mental health service systems for persons with AIDS. S/U grading. Mr. Freeman, Mr. Grusky

289A-289B-289C. Social Psychology Seminars (2 units each). Lecture, one hour; discussion, one hour. Prerequisite: graduate standing. Required of students in social psychology area program, but open to all graduate students in good standing. Forum for presentation of advanced work in social psychology designed to develop ability to understand, critically evaluate, and present research in fields relevant to study of social psychology. May be repeated for credit. S/U grading.

290A-290B-290C. Communities and Institutions Seminars (2 units each). Lecture, one hour; discussion, one hour. Prerequisite: graduate standing. Required of students in communities and institutions area program, but open to all graduate students in good standing in department. Seminar for presentation of advanced work in communities and institutions designed to contribute to theoretical and methodological comprehension of work in this area program and to critically evaluate avenues for further research advancements. May be repeated for credit. In Progress and S/U grading.

291. Moral Solidarity in Communities. Comparative analysis of social solidarity and collapse of social solidarity in voluntary and traditional communities. Contrasts more and less solidarity types, with special reference to utopian communities and developmental processes. Mr. Light

292A-292B-292C. Research Development.

Mr. Grusky

293A-293B-293C. Colloquia: Ethnomethodological, Phenomenological, and Observational Sociologies (2 units each). Prerequisites: courses C124A-C124B or 217A-217B or 218A-218B and 222, or consent of instructor. Participants present ongoing work and read and discuss exemplary past work of common interest. Continuing colloquia in which participation is expected of faculty and graduate students affiliated with ethnomethodological, phenomenological, and observational sociologies area program (students taking a minor field examination may be exempt on request). S/U grading.

294A-294B-294C. Research Seminars: Macrosociology. Discussion, two hours. Prerequisite: consent of instructor. Required of students in macrosociology area program. Training in conduct, presentation, and critical evaluation of original research and analysis of substantive and methodological questions in macrosociology. In Progress and S/U grading. Mr. Zeitlin

295A-295B-295C. Seminars: Quantitative Sociology (2 units each). Ongoing seminar in quantitative sociology area program. Forum in which faculty, students, and visitors make presentations and obtain feedback on research being planned or conducted or recently completed, including didactic presentations on important developments in the area. Students required to make a presentation each term they are enrolled for credit. S/U grading.

M296A-M296B. Social Theory and Comparative History. (Same as History M203A-M203B and Political Science M291A-M291B.) Colloquium, three and one-half hours every other week. Introduction to historically rooted social theory and theoretically sensitive history, following the program of the Center for Social Theory and Comparative History. Each course may be taken independently for credit. Mr. Ashcraft, Mr. Brenner

297A-297B-297C. Colloquia: Macrosociology (2 units each). Weekly forum for presentation of advanced work in macrosociology by graduate students and faculty, as well as visitors from other campuses. Intended to contribute to theoretical and methodological understanding of work in area of macrosociology. S/U grading. Ms. Milkman, Mr. Roy

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

495A-495B. Supervised Teaching of Sociology (2 units each). Prerequisite: appointment as teaching assistant in Sociology Department or equivalent. Special course for teaching assistants designed to deal with problems and techniques of teaching introductory sociology. S/U grading.

501. Cooperative Program (2 to 8 units). Prerequisite: consent of UCLA graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Used to record enrollment of UCLA students in courses taken under cooperative arrangements with USC. S/U grading.

595. Directed Research for Master's Paper (4 to 12 units). Directed research for and writing of M.A. degree paper under guidance of student's M.A. committee chair. S/U grading.

596. Directed Individual Study and Research in Sociology (2 to 12 units).

597. Individual Study for Examinations (4 to 12 units). Preparation for Ph.D. qualifying examinations. S/U grading.

599. Research in Sociology for Ph.D. Candidates (4 to 12 units).

George L. Voyt, J.D., *Emeritus*

Scope and Objectives

The Department of Spanish and Portuguese is dedicated to the study and teaching of the languages, literatures, and cultures of the Hispanic heritage in all areas of the world, particularly on the continents of Europe and America. It maintains a strong commitment to the value of original research and professional instruction at all levels of its activities.

Whether studying for the B.A., M.A., or Ph.D. degree, students are given careful guidance in the choice of courses and in the preparation of a study program. The richness of Hispanic culture is amply represented in the extensive range of courses in language, linguistics, and literature. Although the literatures of Spain, Portugal, Brazil, and Spanish America predominate, courses are also offered in Chicano literature. The breadth of courses offered by the department allows undergraduate students to pursue many possible interests and enables graduate students to concentrate in depth in several areas of specialization.

The department's courses are primarily designed to serve the four B.A. programs: B.A. in Spanish (Plan A), B.A. in Spanish and Linguistics (Plan B), B.A. in Portuguese, and B.A. in Spanish and Portuguese, as well as to prepare students for its three graduate programs: M.A. in Spanish, M.A. in Portuguese, and Ph.D. in Hispanic Languages and Literatures. The courses are also functionally supportive of such interdepartmental programs as the California State Instructional Credential in Spanish, B.A. and M.A. programs in Latin American Studies, M.A. program in Folklore and Mythology, and M.A. and Ph.D. programs in Comparative Literature and Romance Linguistics and Literature.

Bachelor of Arts in Spanish and in Spanish and Linguistics

Students with one or more years of high school Spanish who plan to enroll in Spanish 1 through 25 must take the departmental placement examination. Consult the *Schedule of Classes* or the department office for test dates.

Preparation for the Majors

Required: Spanish 25 or equivalent as determined by the placement test; courses M35, M42, M44, or equivalent.

The Major, Plan A (Spanish Language and Literature)

Required: Fifteen upper division courses, including Spanish 100A-100B, 105, 119A, 119B, 119C, 120A-120B, 127, 136A-136B, and four elective courses in the department (one in Spanish literature, one in Spanish-American literature, and two others).

The Major, Plan B (Spanish and Linguistics)

Required: Completion of six terms of study in one other foreign language or three terms in each of two other foreign languages, in addition to the preparation for the major courses. Portuguese is recommended.

The major consists of 15 upper division courses, including Spanish 100A-100B, 105, 115, M118A-M118B, 127, Linguistics 100, 103, 110, 120A, 120B, and three electives in Spanish.

Honors Program

To qualify for graduation with departmental honors, you must achieve a 3.0 overall grade-point average and a 3.5 grade-point average in the major and have completed two of the three senior honors seminars (Spanish 170A, 170B, 170C) with appropriate grades.

Bachelor of Arts in Portuguese

Preparation for the Major

Required: Portuguese 3, 25, M35, M42 or M44, 46, or equivalent.

The Major (Portuguese Language and Literature)

Required: Thirteen upper division courses, including Portuguese 100A, 100B, 105, 120A-120B, 130A-130B, and six elective courses in Portuguese, or four electives in Portuguese plus two courses from areas that complement your program approved by the undergraduate adviser in Portuguese.

Portuguese and Linguistics Concentration

Required: Completion of six terms of study in one other foreign language or three terms in each of two other foreign languages, in addition to the preparation for the major courses. Spanish is recommended.

The concentration consists of 13 upper division courses, including Portuguese 100A, 100B, 105, M118A-M118B, Linguistics 100, 103, 110, 120A, 120B, and three electives, two of which must be in Luso-Brazilian literature.

Double Majors

Through judicious use of electives, students may find it possible to secure the B.A. degree with two complete majors (e.g., Portuguese/Spanish, Portuguese/History, Portuguese/Sociology, etc.). Interested students should consult the undergraduate adviser in Portuguese as early as possible in their B.A. program.

Study in a Portuguese-Speaking Country

You are encouraged to spend up to one year in a Portuguese-speaking country to study in a university or conduct research. Appropriate credit may be granted in accordance with your individual program, arranged in consultation with the undergraduate faculty adviser in Portuguese. Proposals must be submitted in advance in writing and must be approved by the department.

Bachelor of Arts in Spanish and Portuguese

Preparation for the Major

Required: Spanish 25, Portuguese 25, M35, M42 or M44, 46, or equivalent.

The Major

Required: Six upper division courses in language and linguistics, including Spanish 100A-100B, Portuguese 100A, 100B, M118A or M118B, and either Spanish 105 or Portuguese 105; nine upper division courses in literature selected from one of the following groups: *group A* (peninsular literature to 1700) — Spanish 123, 124, 127, Portuguese C124, C125, C126, and three other literature courses, one of which must be in Spanish and one in Portuguese; *group B* (peninsular literature from 1700 to the present) — Spanish 128, 130, 133, Portuguese C127, C128, C129, and three other literature courses, one of which must be in Spanish and one in Portuguese; *group C* (Spanish-American and Brazilian literature to 1900) — Spanish 137, 139, 140, Portuguese C131, C132, C133, and three other literature courses, one of which must be in Spanish and one in Portuguese; *group D* (Spanish-American and Brazilian literature from 1900 to the present) — Spanish 142, 143, Portuguese C134, C135, and five other literature courses, two of which must be in Spanish and two in Portuguese.

Master of Arts in Spanish

Admission

Admission to the M.A. program is based on careful review of your academic record by the graduate admissions committee. Minimum requirements include a B.A. in Spanish or the equivalent from UCLA or another recognized university, a satisfactory score on the Graduate Record Examination (GRE) General Test, and three letters of recommendation, preferably from professors with whom you have studied in the major field, who can comment on your potential as a graduate student. For admissions information, write to the Department of Spanish and Portuguese, 5310 Rolfe Hall, UCLA, Los Angeles, CA 90024-1532.

You may be required to take one or more complementary courses (which may not be applied toward the M.A.) if the committee determines that some area of your preparation in language or literature is deficient.

Foreign Language Requirement

You are required to study one of the following languages: French, German, Italian, Latin, Portuguese, or another language approved by your guidance committee. The requirement may be fulfilled by (1) passing the Graduate School Foreign Language Test (GSFLT) with a score of 500 or better, (2) passing the University reading examination in one of these languages when no GSFLT is available, or (3) passing at least a level three course at UCLA.

Course Requirements

Eleven graduate Spanish courses are required, at least one of which must be a seminar taken only after the appropriate preseminar. Course 596 may be included once; courses 597 and 598 may not be applied toward the degree.

Three plans of study for the M.A. in Spanish are offered: Plan A, Linguistics; Plan B, Literature; Plan C, Linguistics and Literature.

Plan A (Linguistics) — One graduate course in literature offered by the department, and eight elective graduate courses are required. You must select one major field (five courses) and one minor field (three courses) from the following areas of specialization: phonology and morphology; syntax; diachronic or synchronic language variation. Also required are Spanish M201A-M201B or two additional courses selected from an area outside your major and minor fields.

Plan B (Literature) — Spanish M201A-M201B, one course from 202A through 209, and eight elective graduate courses are required. You must select one major field (four courses) and one minor field (three courses) from the following areas of specialization: Spanish literature from its beginning to 1700; Spanish literature from 1700 to the present; Spanish-American literature from its beginning to 1900; Spanish-American literature from 1900 to the present. One additional course

must be selected from areas outside your major and minor fields.

Plan C (Linguistics and Literature) — Spanish M201A-M201B and nine elective graduate courses, four in literature and five in linguistics, are required. The four literature courses are to be selected from two of the fields specified in Plan B, two courses from each of two areas. Of the five courses in linguistics, one must be in phonology and morphology, one in syntax, and one in diachronic or synchronic language variation.

Comprehensive Examination Plan

One term before you propose to take the comprehensive examination, you must present to your guidance committee reading lists which constitute the basis for your examination. Students in Plan A receive a list of essential reading when they enter the plan and must present one reading list for the major field and one for the minor field. If you are in Plan B, you also must present for approval one reading list in your major field and one in your minor field. Plan C students must present for approval reading lists representing the literature fields (the reading list for linguistics is established by the guidance committee).

Thesis Plan

You may petition to present a thesis in lieu of taking the comprehensive examination only after you complete five graduate courses. The graduate adviser and your committee will approve your petition only if they find evidence of exceptional ability and promise in your term papers and coursework.

Master of Arts in Portuguese

Admission

The UCLA Bachelor of Arts in Portuguese or the equivalent is required. Other admission requirements are the same as those for the M.A. in Spanish.

Major Fields

You must select one major field and two minor fields from the following specialization areas: Portuguese literature; Brazilian literature; Portuguese linguistics.

Foreign Language Requirement

You are required to study one of the following languages: French, German, Italian, Latin, Spanish, or another language approved by your guidance committee. The requirement may be fulfilled by (1) passing the Graduate School Foreign Language Test (GSFLT) with a score of 500 or better, (2) passing the University reading examination in one of these languages when no GSFLT is available, or (3) passing at least a level three course at UCLA.

Course Requirements

Portuguese M201A-M201B, and eight elective graduate courses in Portuguese are required, at least one of which must be a seminar. You must select four courses in your major field and two courses in each of your two minor fields. Course 596 may be included once; courses 597 and 598 may not be applied toward the degree.

Comprehensive Examination Plan

The examination consists of (1) a three-hour written test in your major field and (2) a 90-minute written test in each of your two minor fields. One term before you propose to take the comprehensive examination, you must present for approval to your guidance committee one reading list for your major field in literature (approximately 15 authors and 30 works) and one reading list for your minor field in literature (approximately six authors and 15 works). The reading lists form the basis of the literature section of the examination (the reading list for linguistics is established by the guidance committee).

Thesis Plan

You may petition to present a thesis in lieu of taking the comprehensive examination only after you complete five graduate courses, one of which must be a seminar. The graduate adviser and your committee will approve your petition only if they find evidence of exceptional ability and promise in your term papers and coursework.

Ph.D. in Hispanic Languages and Literatures

Admission

The UCLA Master of Arts in Spanish or in Portuguese, or the equivalent, is required. Three letters of recommendation are also required from professors familiar with your work as a graduate student, to be addressed to your capacity for research-oriented doctoral studies and possible entry into the profession. The Graduate Record Examination (GRE) General Test is also required. A combined score of 1,000 is preferred; the verbal score is considered more important than the quantitative.

Students who hold the M.A. in Spanish or in Portuguese from UCLA fall into one of three categories and are so notified on receipt of the degree. The categories are (1) *low pass* (terminal M.A.) — not eligible for admission into the Ph.D. program, (2) *mid pass* — may continue toward the Ph.D. on a probationary basis, and (3) *high pass* — automatically eligible to enter the Ph.D. program.

Major Fields or Subdisciplines

The department recognizes the following areas of specialization, from which you select one major field and two minor fields, together with an optional complementary support area: (1) Spanish linguistics; (2) Portuguese linguistics; (3) dia-

chronic Hispanic linguistics and philology; (4) medieval Spanish literature; (5) Renaissance and Golden Age Spanish literature; (6) 18th- and 19th-century Spanish literature; (7) 20th-century Spanish literature; (8) colonial and 19th-century Spanish-American literature; (9) 20th-century Spanish-American literature; (10) early Portuguese literature; (11) modern Portuguese literature; (12) Brazilian literature; (13) Spanish and Luso-Brazilian folklore.

Foreign Language Requirement

Reading knowledge of two foreign languages in addition to both Spanish and Portuguese is required. The languages are selected in consultation with your guidance committee. The requirement may be fulfilled by (1) passing the Graduate School Foreign Language Test (GSFLT) with a score of 500 or better, (2) passing the University reading examination in the language when no GSFLT is available, or (3) passing at least a level three course at UCLA. You must fulfill the requirement in one of the languages no later than the sixth term of graduate study.

Course Requirements

After the B.A., a minimum of 20 graduate courses is required. Spanish or Portuguese M201A-M201B may be required if you do not have prior credit for it. You normally take a minimum of six graduate courses in your major field, of which at least two must be seminars. In each of the minor fields, you normally take a minimum of four graduate courses, of which at least one must be a seminar.

Qualifying Examinations

The qualifying examinations, given during the fifth and sixth weeks of Fall, Winter, and Spring Quarters, consist of (1) a four-hour written examination in the major field, (2) a two-hour written examination in each minor field, and (3) a two-hour University Oral Qualifying Examination on the three fields and at which your prospectus for the dissertation is discussed and approved. The written examinations are normally taken no later than nine terms after receiving the B.A. and six terms after receiving the M.A. Only students who pass the qualifying examinations are advanced to candidacy for the Ph.D.

Candidate in Philosophy Degree

You are eligible to receive the C.Phil. degree on advancement to candidacy for the Ph.D.

Final Oral Examination

The final oral examination is optional at the committee's discretion.

Spanish

Lower Division Courses

Spanish 1 through 3 use Shumway and Forbes' *Español en español*. The method is inductive. Selected examples are given to enable students to inductively grasp the rules and develop their own grammar. This enables students to use language effectively and creatively. The courses are taught entirely in Spanish — students simultaneously learn to understand, speak, read, and write Spanish.

No credit is allowed for completing a less advanced course after successful completion of a more advanced course in grammar and/or composition.

Students with one or more years of high school Spanish who plan to enroll in Spanish 1 through 25 must take the departmental placement examination. Consult the *Schedule of Classes* or the department office for test dates.

1. Elementary Spanish. Discussion, five hours; laboratory, one hour.

1G. Reading Course for Graduate Students. Lecture, three hours. Knowledge of Spanish not required. May not be applied toward degree requirements. S/U grading.

2. Elementary Spanish. Discussion, five hours; laboratory, one hour. Prerequisite: course 1 or equivalent as determined by placement test.

2G. Reading Course for Graduate Students. Lecture, three hours. Prerequisite: course 1G or equivalent. May not be applied toward degree requirements. S/U grading.

3. Elementary Spanish. Discussion, five hours; laboratory, one hour. Prerequisite: course 2 or equivalent as determined by placement test.

4. Intermediate Spanish. Discussion, five hours; laboratory, one hour. Prerequisite: course 3 or equivalent as determined by placement test.

5. Intermediate Spanish. Discussion, five hours; laboratory, one hour. Prerequisite: course 4 or equivalent as determined by placement test.

6. Intermediate Spanish. (Not the same as course 6 prior to Fall Quarter 1990.) Discussion, five hours. Prerequisite: course 5 or equivalent. Review and analysis of the more sophisticated and complex syntactic structures of Spanish, verb morphology, and lexical discrimination. Students who have completed course 5 with a grade of A- or better may enroll directly in course 25.

6A. Intermediate Spanish for Spanish Speakers. (Formerly numbered 6.) Prerequisite: proficiency as determined by placement test. Concentration on formal aspects of the language (i.e., spelling, punctuation, accentuation, composition, reading, and traditional grammar) in lieu of course 6.

8A-8B. Spanish Conversation (2 units each). Discussion, three hours. Course 8A is open to students with credit for course 4 or equivalent. Students who have completed course 3 with a grade of B or better may be admitted. (F,W,Sp)

9A-9B. Advanced Conversation (2 units each). Discussion, three hours. Prerequisite: course 8B or equivalent. (F,W,Sp)

25. Advanced Spanish. Prerequisite: course 5 or equivalent. Concentration on building of vocabulary and attainment of a high degree of comprehension in preparation for courses in literature.

25A. Composition for Spanish Speakers. (Formerly numbered 26.) Lecture, three hours. Prerequisites: course 5 or equivalent, consent of instructor. Practice in reading and writing of Spanish for students with oral proficiency in Spanish (in lieu of course 25).

M35. Spanish, Portuguese, and Nature of Language. (Same as Portuguese M35.) Lecture, three hours. Introduction to language study within context of Romance languages, focusing on Spanish and Portuguese. Nature of language: structure, diversity, evolution, social and cultural settings, literary uses. Study of language and its relation to other areas of human knowledge.

M42. Civilization of Spain and Portugal. (Same as Portuguese M42.) Required of majors. Highlights of civilization of Spain and Portugal, with emphasis on the artistic, economic, social, and historical development as background for upper division courses. Conducted in English.

Mr. Cruz-Salvadores, Mr. Johnson

M44. Civilization of Spanish America and Brazil. (Same as Portuguese M44.) Required of majors. Highlights of civilization of Spanish America and Brazil, with emphasis on the artistic, economic, social, and historical development as background for upper division courses. Conducted in English.

Mr. Skirijs

60A-60B-60C. Hispanic Literatures in Translation. Lecture, three hours. Class readings and analysis of selected works in translation. Classroom discussion, papers, and examinations in English. **60A.** Spanish Literature; **60B.** Spanish-American Literature; **60C.** *Don Quijote*.

61A-61B-61C. Hispanic Literatures in Spanish. Lecture, three hours. Not open for credit to students with credit for corresponding course in 60 series. Class readings and analysis of selected works. Classroom discussion, papers, and examinations in Spanish. **61A.** Spanish Literature; **61B.** Spanish-American Literature; **61C.** *Don Quijote*.

62A-62B-62C. Hispanic Literatures and Film. Lecture, three hours; film screenings, two to three hours. Analysis of main aesthetic, cultural, and philosophical questions in the Hispanic world as articulated in literature and film, addressing not only principal currents affecting Hispanic artistic expression but also diverse strategies employed by two distinct modes of representation. **62A.** Spain; **62B.** Spanish America; **62C.** The Chicano Experience.

Ms. Bergero, Mr. Monleón

Upper Division Courses

Prerequisite to all upper division courses is Spanish 25 or equivalent as determined by the placement test.

100A-100B. Introduction to Study of Spanish Grammar. Lecture, three hours. Prerequisite: course M35:

100A. Phonology and Morphology. Analysis of phonemic and morphological systems of Spanish.

Ms. Plann

100B. Syntax. Study of syntactical systems of Spanish.

Mr. Otero, Ms. Plann

105. Spanish Composition. (Formerly numbered 105A, 105B.) Lecture, three hours. Practice in writing Spanish with appropriate vocabulary, syntactical structures, and stylistic patterns.

107. The Spanish of Southern California. Lecture, three hours. Prerequisites: courses M35 and 100A-100B, or consent of instructor. Analysis of pronunciation, word formation, syntax, and lexicon of the Spanish of Southern California, with attention to regional features, social and age levels of speech, and interference from English.

115. Applied Linguistics. Lecture, three hours. Prerequisites: courses M35, 100B. Survey of major linguistic problems faced by teachers of Spanish.

Ms. Plann

M118A-M118B. History of Portuguese and Spanish. (Same as Portuguese M118A-M118B.) Lecture, three hours. Prerequisites: courses M35, 100A. Major features of development of Portuguese and Spanish languages from their origins in Vulgar Latin to modern times:

M118A. Phonology.

Ms. Plann, Mr. Quicoli, Mr. Smith

M118B. Morphology and Syntax.

Mr. Otero, Ms. Plann, Mr. Quicoli

119A. Introduction to Study of Literature: Prose. Lecture, three hours. Introduction to study of literary devices, figures of speech, and distinctive stylistic features in prose literature of Spain and Spanish America, particularly in the novel and essay.

119B. Introduction to Study of Literature: Poetry. Lecture, three hours. Introduction to study of literary devices, figures of speech, versification, and distinctive stylistic features in the poetry of Spain and Spanish America.

119C. Introduction to Study of Literature: Drama. (Formerly numbered 119B.) Lecture, three hours. Introduction to study of literary devices, figures of speech, and distinctive stylistic features in the drama of Spain and Spanish America.

120A-120B. Survey of Spanish Literature. Lecture, three hours. Introduction to principal periods, currents, and authors of Spanish literature.

Mr. Gimeno, Mr. Johnson, Mr. Rodriguez-Cepeda

122. Medieval Literature: Prose. Lecture, three hours. Recommended (but not prerequisite): course 120A. Study of main genres through representative works.

Mr. Gimeno

123. Medieval Literature: Poetry. Lecture, three hours. Recommended (but not prerequisite): course 120A. Study of main genres through representative works.

Mr. Gimeno

124. Golden Age: Poetry and Drama. Lecture, three hours. Recommended (but not prerequisite): course 120A. Study, through representative works, of the Golden Age poetry and drama.

Mr. Johnson, Mr. Rodriguez-Cepeda

125. Golden Age: Prose. Lecture, three hours. Recommended (but not prerequisite): course 120A. Study of 16th- and 17th-century prose writing in Spain, with particular emphasis on *Lazarillo de Tormes* and the picaresque tradition.

Mr. Johnson, Mr. Rodriguez-Cepeda

127. Golden Age: Don Quijote. Lecture, three hours. Recommended (but not prerequisite): course 120A. Development of the novel in the Golden Age, with particular reference to *Don Quijote*.

Mr. Johnson, Mr. Rodriguez-Cepeda

128. The Enlightenment and Romanticism in Spain. Lecture, three hours. Recommended (but not prerequisite): course 120B. Study, through representative works, of main manifestations of thought and literature from 1700 to 1850.

Mr. Benitez, Mr. Rodriguez-Cepeda

130. Post-Romanticism, Realism, and Naturalism in Spain. Lecture, three hours. Recommended (but not prerequisite): course 120B. Development of main trends of Spanish literature from 1850 to 1898.

Mr. Benitez, Mr. Smith

132. 20th-Century Spanish Prose. Lecture, three hours. Recommended (but not prerequisite): course 120B. Study of several representative works of Spanish prose literature since 1898.

Mr. Monleón, Mr. Morris

133. 20th-Century Spanish Poetry and Drama. Lecture, three hours. Recommended (but not prerequisite): course 120B. Study of several representative works of Spanish poetry and drama since 1898.

Mr. Morris

136A-136B. Survey of Spanish-American Literature. Lecture, three hours. Introduction to principal periods, currents, and authors of Spanish-American literature.

Ms. Arora, Mr. Luzuriaga, Mr. Skirijs

137. Literature of Colonial Spanish America. Lecture, three hours. Recommended (but not prerequisite): course 136A. Study of most important genres and authors from the Conquest to 1810.

Ms. Arora

139. Romanticism and Realism in Spanish-American Literature. Lecture, three hours. Recommended (but not prerequisite): course 136A. Study, through representative literary works, of most important currents of thought and literary trends from 1810 to 1880. Mr. Luzuriaga, Mr. Skiriuss

140. Modernismo. Lecture, three hours. Recommended (but not prerequisite): course 136A. Study, through representative works, of principal characteristics of *modernismo* in Spanish-American literature. Mr. Luzuriaga

142. 20th-Century Spanish-American Literature: Fiction and the Essay. Lecture, three hours. Recommended (but not prerequisite): course 136B. Study, through representative novels, short stories, and essays, of Spanish-American prose literature since 1910. Mr. Luzuriaga, Mr. Skiriuss

143. 20th-Century Spanish-American Literature: Poetry and Drama. Lecture, three hours. Recommended (but not prerequisite): course 136B. Study of principal poets, dramatists, and dramatic movements in Spanish-American literature since 1910. Mr. Skiriuss

144. Mexican Literature. Lecture, three hours. Recommended (but not prerequisite): course 136B. Study of major movements and authors of Mexican literature. Mr. Skiriuss

M145. Introduction to Chicano Literature. (Same as Chicana and Chicano Studies M145.) Lecture, three hours. Prerequisite: course 25 or 26. Recommended: course 136B. Introduction to texts representative of the Chicano literary heritage. Sampling of genres, as well as historical and geographical settings and points of view characteristic of work written by Chicanos during the 20th century. Most required reading is in Spanish. Bilingual and English works are included and discussed. Reading and analysis of a number of important scholarly and critical statements pertaining to characteristics and development of the Chicano literary corpus. Mr. Hernández

M149. Folk Literature of the Hispanic World. (Same as Folklore M149.) Lecture, three hours. Study of history and present dissemination of principal forms of folk literature throughout the Hispanic countries. Ms. Arora

151A-151B. Women in Hispanic Literature. Discussion, three hours. Study of works by and about women, with emphasis on portrayal of women, women's roles, and myths of womanhood within the Hispanic socio-ideological context. **151A.** Spain. Recommended (but not prerequisite): courses 120A-120B. **151B.** Spanish America. Recommended (but not prerequisite): courses 136A-136B.

M161. Film and Literature of the Spanish-Speaking World. (Formerly numbered 161.) (Same as Humanities M161.) Lecture, three hours. Exploration of perceptions of reality offered by different authors from Spain, Latin America, and the Chicano community. Mr. Monleón

170A. Senior Honors Seminar: Topics in Spanish Literature. Lecture, three hours. Prerequisite: senior Spanish major with 3.5 GPA in the major. Directed research on topics within general area of Spanish literature. Two senior seminars required for departmental honors. (F)

170B. Senior Honors Seminar: Topics in Spanish-American Literature. Lecture, three hours. Prerequisite: senior Spanish major with 3.5 GPA in the major. Directed research on topics within general area of Spanish-American literature. Two senior seminars required for departmental honors. (W)

170C. Senior Honors Seminar: Topics in Hispanic Linguistics. Lecture, three hours. Prerequisite: senior Spanish major with 3.5 GPA in the major. Directed research on topics within general area of Hispanic linguistics. Two senior seminars required for departmental honors. (Sp)

197. Undergraduate Seminar. Lecture, three hours. Prerequisites: upper division Spanish major, consent of instructor. Limited to 15 students. Variable topics course with readings, discussions, and papers; consult *Schedule of Classes* or department counselor for topic to be offered in a specific term.

197A. Studies in Hispanic Culture and Civilization. Lecture, three hours. Required of students preparing for a California State Instructional Credential in Spanish. Advanced course that studies diverse aspects of Hispanic culture, civilization, and history. Classroom discussions, papers, and examinations in Spanish.

199. Special Studies (2 to 4 units). Prerequisite: consent of adviser and instructor. Eight units may be applied toward the major requirements.

Graduate Courses

M200. Research Resources. (Same as Portuguese M200.) Lecture, three hours. Identification and use of research resources for graduate students. Mr. Benitez, Mr. Smith

M201A-M201B. Literary Theory and Criticism. (Formerly numbered M201.) (Same as Portuguese M201A-M201B.) Lecture, three hours. Definition, discussion, and application of main currents of contemporary literary theory and criticism. In Progress grading.

202A. Phonology. (Formerly numbered 202.) Lecture, three hours. Study of the sound structure of Spanish and main phonological processes that map underlying representations into surface representations. Bearing of phonological theory on study of meter. Mr. Otero, Ms. Plann

202B. Morphology. (Formerly numbered 202.) Lecture, three hours. Study of derivational and inflectional word formation processes and their interaction with syntactic structure. Mr. Otero, Ms. Plann

204A-204B. Generative Syntax and Semantics. Lecture, three hours. Study of syntactic structure of Spanish and relation between underlying representations and logical form within a principles-and-parameters framework. Bearing of syntactic and semantic structure on study of literature. Mr. Otero

M205A-M205B. Development of Portuguese and Spanish Languages. (Same as Portuguese M205A-M205B.) Lecture, three hours. Intensive study of historical development of Portuguese and Spanish languages from their origin in spoken Latin. Mr. Otero, Mr. Smith

209. Dialectology. Lecture, three hours. Major dialect areas of peninsular and American Spanish, with distinguishing features of each. Influence and contribution of cultural and historical features, including indigenous languages, to their formation.

221. Medieval Lyric Poetry. Lecture, three hours. Readings of and lectures on Spanish lyric poetry from the beginning to 1500. Mr. Gimeno

222. Medieval Epic and Narrative Poetry. Lecture, three hours. Readings of and lectures on Spanish epic and narrative poetry from the beginning to 1500. Mr. Gimeno

223. Medieval Prose. Lecture, three hours. Readings of and lectures on Spanish prose from the beginning to 1500. Mr. Gimeno

224. Poetry of the Golden Age. Lecture, three hours. Readings of and lectures on Spanish poetry from 1500 to 1700. Mr. Morris, Mr. Rodríguez-Cepeda

225. Drama of the Golden Age. Lecture, three hours. Readings of and lectures on the *comedia*. Mr. Rodríguez-Cepeda

226. Prose of the Golden Age. Lecture, three hours. Readings of and lectures on fictional, didactic, religious, and historical writings. Mr. Johnson

227. Cervantes. Lecture, three hours. Readings of and lectures on works of Cervantes. Mr. Johnson

228. The Enlightenment. Lecture, three hours. Readings of and lectures on representative works of the period. Mr. Benitez

229. Romanticism. Lecture, three hours. Readings of and lectures on representative works of the period. Mr. Benitez

230. Realism and Naturalism. Lecture, three hours. Readings of and lectures on literary works, principally novels, from 1850 to 1898. Mr. Benitez, Mr. Smith

231. Major Currents in Modern Spanish Literature. Lecture, three hours. Introduction to major literary currents, including symbolism, Parnassianism, and the Generation of 1898. Mr. Morris

232. Spanish Prose Literature from 1898 to the Civil War. Lecture, three hours. Readings of and lectures on representative essays, novels, and short stories of the period. Mr. Monleón, Mr. Morris

233. Spanish Prose Literature after the Civil War. Lecture, three hours. Readings of and lectures on representative essays, novels, and short stories of the period. Mr. Monleón, Mr. Morris

234. Spanish Drama and Poetry from 1898 to the Civil War. Lecture, three hours. Readings of and lectures on representative plays and poems. Mr. Morris

235. Spanish Drama and Poetry after the Civil War. Lecture, three hours. Readings of and lectures on representative plays and poems of the period. Mr. Morris

237. Literature of the Spanish Conquest. Lecture, three hours. Readings of and lectures on chronicles, poems, and indigenous accounts of the Spanish Conquest. Ms. Arora

238. Baroque, Enlightenment, and Neoclassicism in Colonial Literature. Lecture, three hours. Readings of and lectures on representative texts. Ms. Arora

239. Romanticism and Realism in Spanish-American Literature. Lecture, three hours. Intensive study of Romanticism and realism in Spanish-American literature. Mr. Skiriuss

240. Major Currents in Modern Spanish-American Literature. Lecture, three hours. Study of principal trends in modern Spanish-American literature, particularly *naturalismo* and *modernismo*. Mr. Luzuriaga

241A-241B. Contemporary Spanish-American Short Story. Lecture, three hours. Study of important short story writers from modernism to the present.

243A-243B. Contemporary Spanish-American Poetry. Lecture, three hours. Intensive study of important poets of Spanish America from modernism to the present.

244A-244B. Contemporary Spanish-American Novel. Lecture, three hours. Study of important novelists from modernism to the present.

245. Contemporary Spanish-American Essay. Lecture, three hours. Study of important Spanish-American essayists of the 20th century. Mr. Skiriuss

246. Contemporary Spanish-American Drama. Lecture, three hours. Study of principal Spanish-American dramatists and theater movements in the 20th century. Mr. Luzuriaga

247. Chicano Literature. Lecture, three hours. Study of major movements and authors of Mexican American literature. Mr. Calderón, Mr. Hernández

M249. Folk Literature of the Spanish and Portuguese Worlds. (Same as Folklore M249 and Portuguese M249.) Lecture, three hours. Intensive study of folk literature of the Spanish and Portuguese cultures as represented in (1) ballad and poetry, (2) narrative and drama, (3) speech. Ms. Arora

Seminar courses (M251A through 290) may be taken for a maximum of eight units each with consent of the appropriate guidance committee and with topic change.

M251A-M251B. Studies in Galegan-Portuguese and Old Spanish. (Same as Portuguese M251A-M251B.) Lecture, two hours. Study of problems related to historical development of Galegan-Portuguese and Old Spanish. Mr. Otero, Mr. Smith

256A-256B. Studies in Spanish Linguistics. Lecture, two hours. Study of problems in analysis and description of the contemporary Spanish language.
Mr. Otero

257. Studies in Dialectology. Discussion, two hours.

262A-262B. Studies in Medieval Spanish Literature. Discussion, two hours.
Mr. Gimeno

264A-264B. Studies in Golden Age Spanish Literature. Discussion, two hours.

Mr. Johnson, Mr. Morris, Mr. Rodríguez-Cepeda

265. Cervantes. Discussion, two hours.
Mr. Johnson

270A-270B. Studies in 18th-Century Spanish Literature. Discussion, two hours.
Mr. Benítez

271A-271B. Studies in 19th-Century Spanish Literature. Discussion, two hours.

Mr. Benítez, Mr. Smith

272A-272B. Studies in 20th-Century Spanish Literature. Discussion, two hours.

Mr. Monleón, Mr. Morris

277A-277B. Studies in Colonial Spanish-American Literature. Discussion, two hours.

Ms. Arora

278A-278B. Studies in 19th-Century Spanish-American Literature. Discussion, two hours.

280A-280B. Studies in Contemporary Spanish-American Literature. Discussion, two hours.

Mr. Luzuriaga

281. Studies in Chicano Literature. Discussion, two hours.

Mr. Calderón, Mr. Hernández

M286A-M286B. Studies in Hispanic Folk Literature. (Same as Folklore M286A-M286B.) Lecture, two hours.
Ms. Arora

290. Special Topics. Lecture, two hours. Variable topics; consult *Schedule of Classes* or department counselor for topics to be offered in a specific term.

310. Teaching Spanish in Elementary School. Lecture, three hours.

370. Teaching Spanish in Secondary School. Lecture, three hours.

373. Teaching Composition (2 units). Prerequisites: graduate standing, consent of instructor. Seminar on teaching writing in Spanish language courses. Introduction to composition theory. Instruction and practice in integrating writing into curriculum, setting goals and standards, designing and sequencing course materials, evaluating and commenting on papers. May not be repeated for credit. S/U grading.

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

495. Teaching Spanish at College Level. Prerequisite: graduate standing in department. Basic concepts of modern theories of language and language acquisition which underlie modern methods of second language teaching. S/U grading.

596. Directed Individual Study or Research (4 to 8 units). Prerequisite: consent of graduate adviser and chair. Study or research in areas or subjects not offered as regular courses. No more than four units may be applied toward M.A. course requirements.

597. Preparation for Graduate Examinations (4 to 12 units). Prerequisites: official acceptance of candidacy by department, consent of graduate adviser. Individual preparation for M.A. comprehensive examination or Ph.D. qualifying examinations. May be taken only once for each degree examination and only in term that comprehensive or qualifying examinations are to be taken. S/U grading.

598. Research for M.A. Thesis (4 to 12 units). Prerequisite: consent of guidance committee. Research in preparation of M.A. thesis. S/U grading.

599. Research for Ph.D. Dissertation (4 to 8 units). Limited to students who have passed Ph.D. qualifying examinations. Research for and preparation of Ph.D. dissertation. S/U grading.

Portuguese

Lower Division Courses

No credit is allowed for completing a less advanced course after completion of a more advanced course in grammar and/or composition.

1. Elementary Portuguese. Discussion, five hours; laboratory, one hour.

2. Elementary Portuguese. Discussion, five hours; laboratory, one hour. Prerequisite: course 1 or equivalent.

3. Intermediate Portuguese. Discussion, five hours; laboratory, one hour. Prerequisite: course 2 or equivalent.

8A-8B. Portuguese Conversation (2 units each). Discussion, three hours. Prerequisite: course 3 with a grade of B or better.

25. Advanced Portuguese. Prerequisite: course 3 or equivalent.

M35. Spanish, Portuguese, and Nature of Language. (Same as Spanish M35.) Lecture, three hours. Introduction to language study within context of Romance languages, focusing on Spanish and Portuguese. Nature of language: structure, diversity, evolution, social and cultural settings, literary uses. Study of language and its relation to other areas of human knowledge.

40A-40B. Portuguese, Brazilian, and African Literature in Translation. (Formerly numbered 140A-140B.) Lecture, three hours. Reading and discussion of selected works in translation. Papers and examinations in English. **40A.** Portuguese and Portuguese-African Literature; **40B.** Brazilian Literature.
Mr. Dias

M42. Civilization of Spain and Portugal. (Same as Spanish M42.) Required of majors. Highlights of civilization of Spain and Portugal, with emphasis on the artistic, economic, social, and historical development as background for upper division courses. Conducted in English.
Mr. Cruz-Salvadores, Mr. Johnson

M44. Civilization of Spanish America and Brazil. (Same as Spanish M44.) Required of majors. Highlights of civilization of Spanish America and Brazil, with emphasis on the artistic, economic, social, and historical development as background for upper division courses. Conducted in English.
Mr. Skiriús

46. Civilization of the Portuguese-Speaking World. Lecture, three hours. Topical analysis of cultural history of Brazil, Portugal, and Portuguese-speaking African countries, with emphasis on physical environment, principal historical, social, and economic development, and artistic manifestations. Conducted in English. P/NP or letter grading.
Mr. Dias

Upper Division Courses

Prerequisite to all upper division courses is Portuguese 25 or consent of instructor.

100A. Phonology and Morphology. Lecture, three hours. Analysis of phonetic, phonemic, and morphological systems of Portuguese.
Mr. Quicoli

100B. Syntax. Lecture, three hours. Review of patterns of the Portuguese language.
Mr. Quicoli

101A. Advanced Reading and Conversation. Lecture, three hours. Reading and discussion of writings by modern Brazilian and Portuguese authors.

102A-102B. Intensive Portuguese. Prerequisite: foreign language experience (other than Portuguese) or consent of instructor. Development of speaking and reading skills equivalent to those covered in three terms of the traditional pattern and to meet special needs of advanced undergraduate and graduate students.

105. Advanced Composition and Style. Practice in writing Portuguese with appropriate vocabulary, syntactical structures, and stylistic patterns.

M118A-M118B. History of Portuguese and Spanish. (Same as Spanish M118A-M118B.) Lecture, three hours. Prerequisites: courses M35, 100A. Major features of development of Portuguese and Spanish languages from their origins in Vulgar Latin to modern times. **M118A.** Phonology; **M118B.** Morphology and Syntax.
Ms. Plann, Mr. Quicoli, Mr. Smith

120A-120B. Survey of Portuguese Literature. Lecture, three hours. Introduction to principal periods, currents, and authors of Portuguese literature.
Mr. Dias

C124. Medieval Portuguese Literature. Lecture, three hours. Study of main genres of medieval Portuguese and Galician literature through representative works. May be concurrently scheduled with course C224.
Mr. Dias

C125. Renaissance Portuguese Literature. Lecture, three hours. Study of main genres of Renaissance Portuguese literature, with particular emphasis on the works of Luis de Camoens. May be concurrently scheduled with course C225.
Mr. Dias

C126. Baroque and Neoclassical Portuguese Literature. Lecture, three hours. Study of main genres of baroque and neoclassical Portuguese literature through representative works. May be concurrently scheduled with course C226.
Mr. Dias

C127. Romanticism and Realism in Portuguese Literature. Lecture, three hours. Study of principal features through representative works. May be concurrently scheduled with course C227.
Mr. Dias

C128. Post-Romanticism and Naturalism in Portuguese Literature. Lecture, three hours. Study of principal features through representative works. May be concurrently scheduled with course C228.
Mr. Dias

C129. 20th-Century Portuguese Literature. Lecture, three hours. Study of representative trends and authors. May be concurrently scheduled with course C229.
Mr. Dias

130A-130B. Survey of Brazilian Literature. Lecture, three hours. Introduction to principal periods, currents, and authors of Brazilian literature.

C131. Colonial Brazilian Literature. Lecture, three hours. Study of most important authors to 1830. May be concurrently scheduled with course C231.

C132. Romanticism in Brazilian Literature. Lecture, three hours. Study of representative trends and authors. May be concurrently scheduled with course C232.

C133. Naturalism, Realism, and Symbolism in Brazilian Literature. Lecture, three hours. Study of representative trends and authors. May be concurrently scheduled with course C233.

C134. 20th-Century Brazilian Literature: Poetry and Drama. Lecture, three hours. Study of representative trends and authors. May be concurrently scheduled with course C234.

C135. 20th-Century Brazilian Literature: Novel. Lecture, three hours. Study of most important Brazilian novelists. May be concurrently scheduled with course C235.

141. Film and Literature of the Portuguese-Speaking World. Lecture, three hours. Not open for credit to students with credit for course 197. Topical analysis (conducted in English) of main literary and historical themes of Brazilian culture, through films and literary texts, from colonial beginnings to the present day.

197. Undergraduate Seminar. Lecture, three hours. Variable topics course with readings, discussions, and papers; consult *Schedule of Classes* or department counselor for topic to be offered in a specific term.

199. Special Studies (2 to 4 units). Prerequisite: consent of adviser and instructor. Eight units may be applied toward the major requirements.

Graduate Courses

M200. Research Resources. (Same as Spanish M200.) Lecture, three hours. Identification and use of research resources for graduate students.

Mr. Benitez, Mr. Smith

M201A-M201B. Literary Theory and Criticism. (Formerly numbered M201.) (Same as Spanish M201A-M201B.) Lecture, three hours. Definition, discussion, and application of main currents of contemporary literary theory and criticism. In Progress grading.

202. Synchronic Morphology and Phonology. Lecture, three hours. Study of theoretical synchronic linguistics as applied to Portuguese.

Mr. Quicoli

204A-204B. Generative Grammar. Lecture, three hours. Prerequisite: consent of instructor. Course 204A or consent of instructor is prerequisite to 204B. Generative approach to the Portuguese language, with some consideration of bearing of syntax, semiology, and phonology on style, metaphor, and meter.

Mr. Quicoli

M205A-M205B. Development of Portuguese and Spanish Languages. (Same as Spanish M205A-M205B.) Lecture, three hours. Intensive study of historical development of Portuguese and Spanish languages from their origin in spoken Latin.

Mr. Otero, Mr. Smith

C224. Medieval Portuguese Literature. Lecture, three hours. Study of main genres of medieval Portuguese and Galician literature through representative works. May be concurrently scheduled with course C124.

Mr. Dias

C225. Renaissance Portuguese Literature. Lecture, three hours. Study of main genres of Renaissance Portuguese literature, with particular emphasis on works of Luis de Camoens. May be concurrently scheduled with course C125.

Mr. Dias

C226. Baroque and Neoclassical Portuguese Literature. Lecture, three hours. Study of main genres of baroque and neoclassical Portuguese literature through representative works. May be concurrently scheduled with course C126.

Mr. Dias

C227. Romanticism and Realism in Portuguese Literature. Lecture, three hours. Study of principal features through representative works. May be concurrently scheduled with course C127.

Mr. Dias

C228. Post-Romanticism and Naturalism in Portuguese Literature. Lecture, three hours. Study of principal features through representative works. May be concurrently scheduled with course C128.

Mr. Dias

C229. 20th-Century Portuguese Literature. Lecture, three hours. Study of representative trends and authors. May be concurrently scheduled with course C129.

Mr. Dias

C231. Colonial Brazilian Literature. Lecture, three hours. Study of most important authors to 1830. May be concurrently scheduled with course C131.

C232. Romanticism in Brazilian Literature. Lecture, three hours. Study of representative trends and authors. May be concurrently scheduled with course C132.

C233. Naturalism, Realism, and Symbolism in Brazilian Literature. Lecture, three hours. Study of representative trends and authors. May be concurrently scheduled with course C133.

C234. 20th-Century Brazilian Literature: Poetry and Drama. Lecture, three hours. Study of representative trends and authors. May be concurrently scheduled with course C134.

C235. 20th-Century Brazilian Literature: Novel. Lecture, three hours. Study of most important Brazilian novelists. May be concurrently scheduled with course C135.

M249. Folk Literature of the Spanish and Portuguese Worlds. (Same as Folklore M249 and Spanish M249.) Lecture, three hours. Intensive study of folk literature of the Spanish and Portuguese cultures as represented in (1) ballad and poetry, (2) narrative and drama, (3) speech.

Ms. Arora

M251A-M251B. Studies in Galegan-Portuguese and Old Spanish. (Same as Spanish M251A-M251B.) Lecture, two hours. Study of problems related to historical development of Galegan-Portuguese and Old Spanish.

Mr. Otero, Mr. Smith

252. Studies in Early Portuguese Literature. Discussion, two hours.

Mr. Dias

253. Studies in Modern Portuguese Literature. Discussion, two hours.

Mr. Dias

254. Studies in Early Brazilian Literature. Discussion, two hours.

255. Studies in Modern Brazilian Literature. Discussion, two hours.

256A-256B. Studies in Portuguese Linguistics. Lecture, two hours. Study of problems in analysis and description of the contemporary Portuguese language.

Mr. Quicoli

370. Teaching Portuguese in Secondary School. For future teachers in this field.

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

596. Directed Individual Study or Research (4 to 8 units). Prerequisite: consent of graduate adviser and chair. Study or research in areas or subjects not offered as regular courses. No more than eight units may be applied toward M.A. course requirements.

597. Preparation for Graduate Examinations (4 to 12 units). Prerequisites: official acceptance of candidacy by department, consent of graduate adviser. Individual preparation for M.A. comprehensive examination or Ph.D. qualifying examinations. May be taken only once for each degree examination and only in term that comprehensive or qualifying examinations are to be taken. S/U grading.

598. Research for M.A. Thesis (4 to 12 units). Prerequisite: consent of guidance committee. Research in preparation of M.A. thesis. S/U grading.

599. Research for Ph.D. Dissertation (4 to 8 units). Limited to students who have passed Ph.D. qualifying examinations. Research for and preparation of Ph.D. dissertation. S/U grading.

Speech

334 Kinsey Hall, (310) 825-3303

Professors

Neil M. Malamuth, Ph.D. (*Communication Studies*),
Chair

Donald E. Hargis, Ph.D., *Emeritus*
Charles W. Lomas, Ph.D., *Emeritus*

Associate Professors

Paul I. Rosenthal, Ph.D. (*Communication Studies*;
Distinguished Teaching Award)
Ralph Richardson, Ph.D., *Emeritus*

Lecturers

Dee Bridgewater, Ph.D.
Stephen A. Doyle, M.A.
Marde S. Gregory, M.A. (*Distinguished Teaching Award*)

John Kochian, M.A.
Thomas E. Miller
Sonya H. Packer
Debra L. Schultz, Ph.D.

There is no major in speech; however, the following undergraduate courses are offered for interested students.

Lower Division Courses

1. Principles of Oral Communication. Prerequisite: satisfaction of Subject A requirement. Theory and practice of informal public speaking, including selection of content, organization of ideas, language, and delivery; practice in extemporaneous and manuscript speaking; training in critical analysis through reading and listening to contemporary speeches.

2. Public Speaking and Discussion. Prerequisite: course 1. Continuation of course 1, with special emphasis on group discussions, panels, symposia, debates, and formal public speaking. Critical analysis of speeches in both contemporary and historical settings.

Upper Division Courses

107. Principles of Argumentation. Analysis of propositions, tests of evidence, briefing. Study of hindrances to clear thinking, ambiguity of terms, and prejudices. Critical analysis of selected argumentative speeches.

Mr. Miller

144. Speech and Community Action. Prerequisite: consent of instructor. Intensive laboratory-based, observation-oriented study of speech and communication practices of action groups, protest groups, and public officials involved with the metropolitan Los Angeles urban crises.

Mr. Richardson

175. Speeches of Abraham Lincoln. Introduction to full span of Lincoln's speaking career. His methods of preparation, influence of associates, his style, his delivery, and lastly, his effect on the nation.

Mr. Richardson (W)

190A-190B. Forensics (2 units each). Prerequisite: consent of instructor. May be repeated once for credit.

Mr. Miller

191. Analysis and Briefing (2 units). Intensive study of selected political or social issues; preparation of bibliography; analysis and evaluation of issues and arguments. May be repeated once for credit.

Mr. Miller

197. Proseminar: Rhetoric. Prerequisite: senior standing or consent of instructor. Variable topics course involving intensive study of discourse associated with a single major issue or personality.

199. Special Studies (2 to 4 units). Prerequisites: senior standing, consent of instructor.

Adjunct Assistant Professor

Brian K. Lynch, Ph.D., *Academic Director, ESL Service Courses*

Scope and Objectives

The Teaching English as a Second Language and Applied Linguistics Department offers a program designed for students who wish to develop research skills related to the teaching and learning of English as an additional language. The program is a two-year course of graduate study leading to a Master of Arts degree.

The first year of the program is designed to improve teachers' performance in the ESL classroom. The second year provides opportunity to investigate in depth some particular aspect of teaching and learning English as a second language. The course of study includes a practical element: observing classes, preparing lesson plans, and actual classroom teaching. There is, however, greater emphasis on theory in the program. Students are expected to become familiar with current theories regarding the nature of language, as well as the ways in which people acquire and use language. They are also expected to be able to relate theoretical guidelines to practical procedures. The program is therefore not appropriate for the student who is interested exclusively in receiving vocational training. Admission preference is granted to applicants with strong research interests.

In addition, the Department of Teaching English as a Second Language and Applied Linguistics and the Department of Linguistics offer an interdepartmental degree program leading to a Ph.D.

in Applied Linguistics. For information, write to the Applied Linguistics Program, 3300A Rolfe Hall, UCLA, Los Angeles, CA 90024-1531. (Also see the section on Applied Linguistics earlier in this chapter.)

A limited number of teaching assistantships are available to qualified M.A. and Ph.D. students. For information and applications, write to the Academic Director, ESL Service Courses, 3312 Rolfe Hall, UCLA, Los Angeles, CA 90024-1531.

Master of Arts in Teaching English as a Second Language (TESL)

Admission

Students normally apply for the M.A. in TESL if they desire advanced training in the field. Because of the sequential nature of courses given during the first year, students are admitted only at the beginning of Fall Quarter. To be admitted to the M.A. program, U.S. citizens and students from other countries must have the equivalent of an American bachelor's degree.

After admission, you must maintain a grade-point average of at least B (3.0). A GPA of 3.25 (B+) is required in order to continue into the second year of the M.A. program and must be maintained throughout the second year.

Applications for admission may be obtained from the graduate adviser and are due by December 15 of the year prior to admission. The program requires three letters of recommendation in support of the application. You are requested to submit the letters of recommendation directly to the Graduate Adviser, Department of Teaching English as a Second Language and Applied Linguistics, 3300A Rolfe Hall, UCLA, Los Angeles, CA 90024-1531. Since admission is limited to approximately 25 students per year, it is important that supporting papers be submitted by January 15.

The admissions committee screens all applications, using the following criteria: grade-point average (must be 3.0 or better), Graduate Record Examination (GRE) scores (required only of applicants whose native language is English), letters of recommendation, statement of purpose, and relevant professional experience. A personal interview is not required for admission. The statement of purpose should contain the following information: (1) reasons for wishing to study TESL at UCLA; (2) special qualifications and experience as a teacher; (3) knowledge of languages other than English; and (4) knowledge of other cultures.

International students who hold a bachelor's or higher degree from a university in a country where the official language is English and in which English is the spoken tongue and the medium of instruction, or who have completed at least two years of full-time study at such an institution, are exempt from both the Test of English as a Foreign Language (TOEFL) and the UCLA

English as a Second Language Placement Examination (ESLPE). However, the department recommends that applicants who can waive the TOEFL requirement submit GRE scores, if possible. All other applicants must take the TOEFL, submitting the score as part of the application process.

Foreign Language Requirement

Students whose native language is English generally use their Fall and Winter Quarter electives to acquire or perfect knowledge of the native language or dialect of the pupils to whom they expect to teach English. This can be done by taking any one of four combinations of two courses: (1) two foreign language courses; (2) one foreign language course plus a corresponding course in the Linguistics 220 or 225 series; (3) one foreign language course plus Teaching English as a Second Language and Applied Linguistics M224; (4) course 227 plus an unrestricted elective.

Those particularly interested in working with Mexican American, Asian American, or American Indian pupils normally choose the third of these alternatives. When there is doubt as to which language is most appropriate, a non-European language should be selected because of the greater broadening of linguistic horizons that such a selection offers. Foreign language courses that deal with linguistic structure should be selected whenever possible.

Nonnative speakers of English, depending on the results of the UCLA English as a Second Language Placement Examination (ESLPE), may be required to take a course to improve their practical command of English.

Exemption from the foreign language requirement may be granted if you can demonstrate a strong need to take other electives and have an unusually extensive background of previous foreign language study. For more information, contact the graduate adviser.

First-Year Curriculum

The typical course of study for the first year of the M.A. program is as follows:

- Fall Quarter: Teaching English as a Second Language and Applied Linguistics 209 or 249, 370, foreign language requirement or elective (course depends on language requirement plan)
- Winter Quarter: Course 122, foreign language requirement or elective (course depends on language requirement plan)
- Spring Quarter: Courses 106 or 107 or 109, 241, 380, 103 or Linguistics 103

Exceptions to the above requirements are made only after consultation with the graduate adviser.

Of the nine courses required the first year, at least seven must be in TESL and applied linguistics, linguistics, or structure of language courses in language departments.

Successful completion of the above courses qualifies students for a TESL certificate (which is not a California State Instructional Credential).

Teaching Experience

One term of supervised teaching is required during the first year unless you have had extensive teaching experience. If this requirement is completed at UCLA in an adult education setting, you are eligible for the California Adult Education Credential in ESL (call 825-4581 for more information). The California Basic Educational Skills Test is required of all applicants for the credential.

Second-Year Curriculum

A total of 14 courses is required for the M.A. degree, including a minimum of four 200-series courses. Four of the nine courses taken during the first year (usually Teaching English as a Second Language and Applied Linguistics 122, 209 or 249, 241, and 103 or Linguistics 103) and, in special cases, two of the electives (100 or 200 series only) may be applied toward the University's nine-course minimum requirement for master's degrees. This leaves five courses, at least two of which must be at the graduate level, to be completed in consultation with the graduate adviser during the second year.

Eight units of 500-series courses may be applied toward the M.A. degree, but only four units may be applied toward the graduate course requirement. You must enroll in course 598 each term you are registered; however, only four units may be applied toward the degree (to be taken either in Spring Quarter of your first year or Fall Quarter of your second year).

Course 400 is a seminar in which TESL M.A. candidates present and defend the results of their thesis research. Enrollment is required in Spring Quarter but does not count as one of the 14 courses required for the M.A.

The electives taken during your second year should be selected, in consultation with the faculty M.A. adviser and the chair of your thesis committee, as a sequence of related courses relevant to your thesis topic. Any changes in the program must be approved by both the committee chair and the M.A. adviser.

Thesis Plan

By the end of the fourth term, your thesis proposal, signed by two faculty members, is submitted to the faculty. At this time, plans for the thesis are approved and the thesis committee is established.

Upper Division Courses

103. Phonetics for Teachers of English as a Second Language. (Formerly numbered English 103K.) Prerequisite: consent of instructor. Analysis of phonological structure of contemporary English, with attention to differences between British and American speech. Drill directed toward individual needs.

Ms. Goodwin

106. Writing in the ESL Context. (Formerly numbered English 106K.) Provides opportunities for practice and improvement in writing skills and thus fulfills composition requirement for TESL M.A. degree. Survey of important theoretical and methodological issues related to teaching writing/composition to ESL students and examination of appropriate classroom materials and authentic student compositions.

Ms. Holten (F)

107. Reading in the ESL Context. (Formerly numbered English 107K.) Provides opportunities for practice and improvement in reading and writing skills and thus fulfills composition requirement for TESL M.A. degree. Survey of important theoretical and methodological issues related to teaching reading and writing to ESL students and examination of appropriate classroom materials.

Ms. Jensen (W)

109. Literature in the ESL Context. (Formerly numbered English 109K.) Provides opportunities for practice and improvement in writing skills and thus fulfills composition requirement for TESL M.A. degree. Survey of important theoretical and methodological issues related to teaching literature to ESL students and examination of appropriate classroom materials. Strong emphasis on the cultural basis for literature.

(Sp)

122. Introduction to Structure of Present-Day English (for Teachers of English as a Second Language). (Formerly numbered English 122K.) Prerequisite: Linguistics 100 or consent of instructor. Introductory study of those grammatical structures of English most important in ESL classroom. Aims to provide insights from traditional, structural, and particularly transformational grammar.

Ms. Celce-Murcia (W)

189. Metaphor and Literal Speech. Lecture, two hours; discussion, one hour. Prerequisites: Linguistics 1 or equivalent and consent of instructor. Taking an interdisciplinary perspective, examination of systematicity of form and function peculiar to human language that underlies dichotomy between (1) neutral or literal capacity of language and (2) a metaphoric capacity. P/NP or letter grading.

Mr. Agha, Ms. Celce-Murcia

Graduate Courses

All graduate courses are open to qualified graduate students from other departments with consent of department.

209. Current Issues in Experimental Design and Statistics for Applied Linguistics. (Formerly numbered English 209K.) Specialized topics of interest to graduate students in TESL and applied linguistics. Emphasis varies according to current theoretical methodological trends in the field.

Mr. Bachman (F,Sp)

220. Materials Development for Language Teaching. (Formerly numbered English 220K.) Prerequisites: course 370, at least two years of ESL/EFL teaching experience. Planning and preparation of an original set of language teaching materials geared to needs of a specified group of learners. Revision of first drafts and evaluation of one's own work and that of one's peers.

Ms. Celce-Murcia (Sp)

221. Media for Language Teaching. (Formerly numbered English 221K.) Rationale and pedagogical application for using media equipment and materials in the language classroom. Training in standard classroom media equipment operation and basic materials production techniques, focusing on application to ESL instruction.

Ms. Brinton (W)

222. Language Testing for Teachers of English as a Second Language. (Formerly numbered English 222K.) Prerequisites: course 370, Linguistics 20. Theories and techniques for language assessment across the skill areas. Emphasis on classroom testing and functions of testing within a language program. Basic statistical concepts and hands-on experience with construction of language tests.

Mr. Bachman, Mr. Lynch (W)

225. Program Evaluation in Applied Linguistics. (Formerly numbered English 225K.) Evaluation of effectiveness of ESL curriculum and instruction, including assessment of teacher behavior. Prevalent evaluation theories, writing of evaluation proposals, developing program monitoring procedures, selecting appropriate evaluation design plans, framing the decision context, and reporting evaluation results.

Mr. Lynch (W)

227. Experiential Seminar: Second Language Learning. (Formerly numbered English 227K.) Lecture, one hour; laboratory, four hours. Prerequisite: graduate standing. Students learn an uncommonly taught language with use of authentic language materials (video and audio recordings and print material). Discussion of experience in terms of issues in language learning and language teaching.

Mr. Andersen (Sp)

229. Current Issues in Language Education. (Formerly numbered English 229K.) Specialized topics in language education of interest to graduate students in TESL and applied linguistics. Emphasis varies according to current topics of theoretical concern in the field.

Ms. Celce-Murcia, Mr. Rand

232. Advanced Seminar: Construction and Administration of Language Tests. (Formerly numbered English 232K.) Prerequisite: course 222 or consent of instructor. Designed to explore current issues in language testing research from both theoretical and practical perspectives and to provide actual experience in addressing a current issue. Specific topics vary according to trends in the field.

Mr. Bachman (F)

241. Interlanguage Analysis. (Formerly numbered English 241K.) Lecture, three hours; discussion, one hour. Prerequisites: course 370, Linguistics 20. Hands-on project-oriented introduction to research on interlanguage, the language of second language speakers. Theoretical and methodological aspects of linguistic research on second language acquisition. Research paper combining qualitative and quantitative research techniques required.

Mr. Andersen (W)

249. Current Issues in Language Analysis. (Formerly numbered English 249K.) Specialized topics in language analysis of interest to graduate students in TESL and applied linguistics. Emphasis varies according to current topics of theoretical import in the field.

Mr. Andersen, Ms. Celce-Murcia, Mr. Schumann

250. Advanced Seminar: Cohesion Analysis of English Structure. (Formerly numbered English 250K.) Prerequisite: course 122 or consent of instructor. Investigation in depth of selected linguistic features of oral and written texts that go beyond sentence level and thus signal cohesion. Study of structures to determine their function in a variety of English texts representing several discourse types.

Ms. Celce-Murcia (F)

251. Advanced Seminar: Interlanguage Analysis. (Formerly numbered English 251K.) Prerequisite: course 241. Analysis of interlanguage from various points of view (e.g., topic-comment structure, tense, aspect, modality, thematic structure of utterances), with aim of understanding how interlanguage is organized. Original research projects.

Mr. Andersen, Mr. Schumann (W,Sp)

252. Advanced Seminar: Contextual Analysis of English Structure. (Formerly numbered English 252K.) Prerequisite: course 122 or consent of instructor. Examination of selected words and structures in oral and written English texts to determine when and why the word or structure occurs. Emphasis on factors such as meaning, discourse genre, social/pragmatic function, and relative frequency. However, starting point in analysis is syntax (i.e., what are the structural properties — form, distribution — of word(s) or structure(s) under consideration?). Ms. Celce-Murcia (F)

258. Laboratory: Advanced Topics in Language Assessment. Prerequisite: consent of instructor. Collaborative coursework, with focus on specific theoretical and applied issues in development of innovative language assessment procedures for use in real-world settings. Specific projects determined by research being conducted by the working group in language assessment. Activities include designing and developing measurement instruments, gathering and analyzing data, and interpreting and reporting results. May be repeated for credit. Mr. Bachman

260. Psycholinguistics and Language Teaching. (Formerly numbered English 260K.) Prerequisites: course 370 and Linguistics 20, or consent of instructor. Exploration of those areas of psycholinguistics covering foreign language acquisition; types and theories of bilingualism; learning theories underlying current methods of teaching foreign languages. Mr. Schumann

261. Second Language Acquisition. (Formerly numbered English 261K.) Prerequisite: consent of instructor. Review of literature on child and adult second language acquisition. Language variables (phonological, morphological, sentential, and discourse levels) and social and psychological variables which may account for differences in learning.

Mr. Andersen, Mr. Schumann (F)

269. Current Issues in Language Acquisition. (Formerly numbered English 269K.) Specialized topics in language acquisition of interest to graduate students in TESL and applied linguistics. Emphasis varies according to current topics of theoretical concern in the field. Mr. Andersen, Mr. Schumann

271. Cross-Linguistic Topics in Second Language Acquisition. (Formerly numbered English 271K.) Lecture, one hour; discussion, three hours. Prerequisites: course 261, Linguistics 20. Advanced seminar on second language acquisition in which a particular linguistic topic (e.g., development of tense-aspect, reference, subordination, agreement) is pursued from cross-linguistic and cross-disciplinary perspectives. Focus on language-specific vs. universal (i.e., cross-linguistically valid) mechanisms of second language development. Readings from research on a variety of languages in second language acquisition and related research on first language acquisition, pidgins and creoles, language contact, and language loss. May be repeated for credit with topic change. Mr. Andersen (Sp)

283. Discourse Analysis. (Formerly numbered English 283K.) Survey course covering language teaching and discourse analysis; discourse analysis and syntax; planned and unplanned discourse; conversational analysis; analysis of speech events; unequal power discourse; and analysis of classroom discourse. Ms. Ochs (F)

284. English for Specific Purposes. (Formerly numbered English 284K.) Study of methodologies for needs analysis, curriculum development, and testing for specific academic, professional, and vocational groups who require English as a foreign or second language. (W)

289. Current Issues in Language Use. (Formerly numbered English 289K.) Specialized topics in language use and related areas of interest to graduate students in TESL and applied linguistics. Emphasis varies according to current topics of concern in the field. Ms. Ochs

370. Teaching English as a Second Language. (Formerly numbered English 370K.) Lecture, six hours. Prerequisite: consent of instructor. Bibliography, survey, and evaluation of methods and materials. Nature of language learning. Analysis of differences between two languages as a basis of instruction. Mr. Lynch (F)

375. Teaching Apprentice Practicum (1 to 4 units). (Formerly numbered English 375K.) Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading. Mr. Lynch (F,W,Sp)

380. Supervised Teaching: English as a Second Language or Dialect. (Formerly numbered English 380K.) Prerequisite: course 370. Team teaching at elementary, secondary, or adult level under supervision of a senior staff member. S/U grading.

Ms. Brinton (Sp)

400. TESL Colloquium. (Formerly numbered English 400K.) Prerequisite: consent of TESL M.A. adviser. M.A. candidates present and defend results of their thesis research. Required of all candidates but may not be applied toward M.A. degree requirements. Candidates for Ph.D. in Applied Linguistics may also use this course to report on their dissertations. S/U grading. (Sp)

495. Training and Supervision of Teaching Assistants (2 units). (Formerly numbered English 495K.) Lecture, two or more hours. Corequisite: appointment as a teaching assistant. Orientation, preparation, and supervision of graduate students who have responsibility for teaching ESL courses at UCLA. Syllabus revision and materials preparation. May not be applied toward degree requirements for M.A. or certificate in TESL or Ph.D. in Applied Linguistics. S/U grading. (F)

501. Cooperative Program (2 to 8 units). (Formerly numbered English 501K.) Prerequisite: consent of UCLA graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Used to record enrollment of UCLA students in courses taken under cooperative arrangements with USC. S/U grading.

596. Directed Individual Study. (Formerly numbered English 596K.) Prerequisite: graduate standing. Independent study in an area related to English as a second language. May not be repeated for credit.

598. M.A. Research and Thesis Preparation (4 to 8 units). (Formerly numbered English 598K.) Prerequisite: graduate standing. Survey of research needs and thesis preparation. Includes optional section on experimental design and statistical methods in Fall Quarter. Credit (four units) toward degree is allowed only once, but all M.A. candidates must enroll in course each term they are registered and engaged in thesis preparation. S/U grading. (F,Sp)

English as a Second Language (ESL) Service Courses

3308 Rolfe Hall, (310) 825-4378

Courses 32, 33A, 33B, 33C, 34, 35, 36, 103, 106, 107, 109 are only for students whose native language is other than English. Placement in these courses is established on the basis of the UCLA English as a Second Language Placement Examination (ESLPE), which students whose native language is not English must take in addition to the Subject A Examination (see "Subject A" in Chapter 2).

Depending on the results of this examination, you may either be exempt from any special ESL requirement or may be required to take one or

more courses. You are placed into the ESL track at a particular level and must enroll in one ESL course each term, beginning in your first term in residence at UCLA, until the sequence is completed. The required sequence for undergraduates is English as a Second Language 33A, 33B, 33C, and 35; each course must be passed with a grade of C or better (C- or a Passed grade is not acceptable). The required sequence for graduate students is English as a Second Language 33A, 33B, and 33C; each course must be passed with a grade of C or better if taken for a letter grade, or B or better if taken on an S/U basis. If you do not achieve a minimum score on the placement examination, you may be required to spend a term studying elementary English exclusively, through UCLA Extension, before retaking the ESLPE and continuing through the appropriate sequence of courses at UCLA.

Undergraduates may satisfy the English Composition requirement by completing course 36 with a grade of C or better (C- or a Passed grade is not acceptable). Admission into course 36 is determined by a Composition Placement Test administered the first day of class each term.

Lower Division Courses

32. Oral Communication Skills for ESL Students. (Formerly numbered English 32.) Prerequisite: grade of C or better in course 33B or proficiency demonstrated on English as a Second Language Placement Examination. Course 33C may be taken concurrently. Develops oral skills that prepare nonnative speakers of English to participate in class discussion, make oral presentations before an audience, ask and answer questions, participate appropriately in conversations with members of the academic community, and improve through self-evaluation of speech. P/NP (undergraduates), S/U (graduates), or letter grading.

33A. Low Intermediate English as a Second Language. (Formerly numbered English 33A.) Recitation, eight hours; laboratory, two hours. Prerequisite: grade of C or better in Extension course XLB32 or proficiency demonstrated on English as a Second Language Placement Examination. Displaces eight units on student's Study List but yields only four units of credit toward a degree. Intensive instruction in structure of English, with focus on vocabulary building, listening and speaking skills, and basic composition techniques.

33B. High Intermediate English as a Second Language. (Formerly numbered English 33B.) Recitation, five hours. Prerequisite: grade of C or better in course 33A or proficiency demonstrated on English as a Second Language Placement Examination. Emphasis on reading comprehension, vocabulary development, and composition techniques, with additional work on structure and oral skills.

33C. Advanced English as a Second Language. (Formerly numbered English 33C.) Recitation, five hours. Prerequisite: grade of C or better in course 33B or proficiency demonstrated on English as a Second Language Placement Examination. Emphasis on academic reading, writing, study skills, and lecture comprehension.

34. Advanced Oral Communication Skills for ESL Students. (Formerly numbered English 34.) Prerequisite: grade of C or better in course 33C or proficiency demonstrated on English as a Second Language Placement Examination. Develops oral skills that prepare nonnative speakers of English to present ideas extemporaneously, lead class discussions, give lectures or speeches before an audience, respond to questions posed by the audience, and improve through self-evaluation of speech. P/NP (undergraduates), S/U (graduates), or letter grading.

35. Developmental Composition for ESL Students. (Formerly numbered English 35.) Prerequisite: grade of C or better in course 33C or proficiency demonstrated on English as a Second Language Placement Examination. Developmental composition skills for ESL students, with focus on the writing process, grammatical structures, mechanics of writing, and practice with major forms of academic writing. Additional emphasis on academic reading skills.

36. Intermediate Composition for ESL Students. (Formerly numbered English 36.) Prerequisites: grade of C or better in course 35 (33C for graduate students) or proficiency demonstrated on English as a Second Language Placement Examination, and an appropriate Composition Placement Test score. Focus on major rhetorical techniques found in academic writing. Special attention to individual research, grammatical structures, and style.

Upper Division Courses

103. Pronunciation for ESL Students. (Formerly numbered English 103J.) Prerequisite: grade of C or better in course 33C or proficiency demonstrated on English as a Second Language Placement Examination. Detailed and systematic study of the sounds of American English and way in which they are put together in connected speech, applied to improvement of student's own accent.

Ms. Brinton, Ms. Goodwin

106. Advanced Composition for ESL Students. (Formerly numbered English 106J.) Prerequisites: grade of C or better in course 36 or proficiency demonstrated on English as a Second Language Placement Examination, and an appropriate Composition Placement Test score. Focus on production of fully developed, stylistically sophisticated expository and argumentative essays based on complex academic readings. Additional emphasis on grammatical structure and style.

Ms. Holten

107. Advanced Reading and Vocabulary for ESL Students. (Formerly numbered English 107J.) Prerequisite: grade of C or better in course 33C or proficiency demonstrated on English as a Second Language Placement Examination. Instruction in and practice of academic reading skills using authentic university texts. Focus on improving reading rate and comprehension, expanding academic vocabulary, and developing critical reading skills.

Ms. Jensen

109. Introduction to Literature for ESL Students. (Formerly numbered English 109J.) Prerequisite: grade of C or better in course 33C or proficiency demonstrated on English as a Second Language Placement Examination. Selections from English and American literature presented so as to make full allowance for students' linguistic and cultural problems and to contribute to increasing command of the English language.

Ms. Brinton

Urban Studies (Interdepartmental)

4256 Bunche Hall, (310) 825-3862

Scope and Objectives

Cities are multifaceted and can usefully be explored from more than one disciplinary perspective. The undergraduate specialization in urban studies brings together students and faculty from the Departments of Economics, Geography, History, Political Science, Psychology, and Sociology who share an interest in the modern city. The program gives students a solid grounding in the urban perspectives and methods of at least two departments. The specialization must be taken in conjunction with a major in the social sciences.

Special Undergraduate Program

You may elect to combine this program with a departmental major and may petition to have the area of specialization recognized with the bachelor's degree.

The option of completing an individual major in urban studies is also open to qualified students. For more information on individual majors, see the beginning of Chapter 5.

If you have a departmental major, you should seek advising in your major department. If you are interested in the individual major, consult a Letters and Science counselor.

Courses within the specialization must be taken for a letter grade. The specialization must be taken in conjunction with a major in the division of social sciences.

Preparation for the Specialization

Required: At least five of the following courses appropriate to the courses to be taken in the specialization: Economics 1, 2; Geography 4; Political Science 40; Psychology 10; Sociology 1, 18, 104 or equivalent.

Upper Division

Required: Nine upper division courses, including (1) at least three courses outside your major department selected from Anthropology 167, Economics 120, Geography 150, Psychology 168, Sociology 158; (2) a minimum of three courses selected from one of the following suites within your major department: Economics 121, 130, 133; Geography 150, 151, 156; History 154A, 154B, 154C, 154D; Political Science 181, 183A, 183B; Psychology 127, 135, 137A; Sociology 132, 156, 160; (3) a minimum of three courses selected from one of the suites in item 2 in a department outside your major department; (4) internship experience in an urban governmental or community service organization.

Professor Eric Monkkonen (9252 Bunche Hall, 825-3376) is the program adviser. For further information, contact the political science undergraduate counselor in the program office.

Scope and Objectives

The Women's Studies Program, established in 1975, is an interdisciplinary academic program spanning departments, disciplines, and ideologies and offering two options for study: an undergraduate major and a specialization. Students wishing to focus their studies on multidisciplinary perspectives in order to create a coherent and comprehensive analysis of women and gender may elect the major. Those

wishing to enhance study in a traditional discipline may elect the women's studies specialization in addition to a major in their chosen discipline.

The program offers the singular opportunity to study the full range of human experience and arrangements of social organization from the perspectives of those whose participation has been traditionally distorted, omitted, neglected, or denied — women in their racial, class, and sexual diversity. Students develop critical reasoning and analytical skills, research and communication skills, a deep appreciation for complexities of power, asymmetries in gender relations across time, class, and cultures, and conceptual tools for social change. Strong emphasis on multidisciplinary and multiethnic approaches assures a broader exposure to the humanities and social sciences than is commonly available within disciplinary confines. A background in women's studies offers unique contextual validation for today's woman and prepares students for a wide range of career and life choices, as well as for advanced study in traditional disciplines and the professions.

The field of women's studies has exploded over the past 20 years. It has developed a theoretical base, body of knowledge, and perspective which cannot be attained as a by-product of studying other fields. Where the study of women has been neglected or omitted, the field develops new knowledge through research and fills in gaps in the existing curriculum. Further, women's studies generates new perspectives on existing knowledge of women and gender, offers a critique of accepted beliefs and ideas, intellectually challenges existing structures of knowledge, and introduces new conceptual paradigms.

The core faculty members who teach women's studies courses come from various UCLA departments and professional schools. Many professionals within and outside the University contribute their time, expertise, and enthusiasm. A women's studies committee composed of the director, faculty members, and a student representative sets program policies and curricula.

The program sponsors a Student Association for Women's Studies and assists other student groups with extracurricular programming on feminist issues. Research in women's studies is sponsored in cooperation with the Center for the Study of Women. A library of information related to women's studies is housed in the program office.

While no formal graduate program exists at UCLA at this time, graduate students are invited to use the program's resources, attend lectures and events, and participate in the faculty seminar on women, culture, and theory.

Requirements for the Undergraduate Programs

Admission

To be admitted to either the major or specialization, you must have completed Women's Studies 10, be in good standing, and formally register with the program. You are encouraged to declare your major or specialization as early as possible and to discuss your proposed course of study with the director or undergraduate adviser.

You are encouraged to draw on the University's diverse resources in creating your major or specialization program. You may pursue traditional and/or innovative subjects in fields ranging from the humanities and fine arts to the social and life sciences. In addition to courses on the women's studies approved list, you may petition to have diverse courses accepted, including courses outside the College of Letters and Science, independent studies, or field study courses.

Bachelor of Arts in Women's Studies

The interdisciplinary major in women's studies may be taken alone or in conjunction with another Letters and Science major. In the case of a double major, no more than five courses may be applied toward both majors.

All courses applied toward the major must be taken for a letter grade, and you must have a GPA of 2.0 or better in women's studies courses to receive credit for completing the program. Courses in which you receive a grade below C may not be applied toward the major.

Preparation for the Major

Required: Women's Studies 10.

The Major

Required: Thirteen upper division courses as follows:

(1) Three *core* courses, including one course from Women's Studies 110A through M110D, one course on the study of American ethnic minority women from the approved list of women's studies credit courses issued each term by the program, and course 197 (departmental 197 courses may not be applied).

(2) Four *distribution* courses, one from each of four different departments, selected from the approved list of women's studies courses.

For the purpose of the ethnic studies requirement and the distribution requirement, appropriate Council on Educational Development (CED), field studies, and Women's Studies 110A, 110B, 110C, M110D, 120, 130, 170, and 185 may be considered.

(3) Six additional *concentration* courses from one or two of the fields in which your distribution courses have been taken. You may petition for interdisciplinary or topical concentra-

tions such as feminist theory, women of color, women's health, or lesbian studies.

Four units of Women's Studies 199 may be applied toward either the distribution or concentration requirement for the major (departmental 199 courses are not affected by this limit).

Honors Program

The honors program is open to senior women's studies majors with a 3.0 grade-point average in women's studies courses and a minimum 3.0 overall GPA who have no outstanding incomplete grades, and to majors who demonstrate ability to do honors work by submitting a paper to the program director for approval.

To be eligible for honors at graduation, you must successfully complete Women's Studies 197 and two successive terms of independent study (courses 199HA-199HB) with your faculty sponsor and receive a grade of B or better on your research paper/project. Further information is available from the undergraduate counselor in the program office.

Women's Studies Specialization

The specialization augments study in a traditional field. Students participating in this program are required to complete both a departmental major and the women's studies specialization.

You must take three core courses (Women's Studies 10, one course from 110A through M110D, and 197), plus five upper division elective courses from the approved list of women's studies credit courses issued each term by the program. One course on American ethnic minority women is strongly recommended. At least one of the five courses must be taken in a department other than the major department. Up to two may be experimental courses offered by the Council on Educational Development (CED). No more than four units of course 199 may be applied.

All courses applied toward the specialization must be taken for a letter grade, and you must have a GPA of 2.0 or better in women's studies courses to receive credit for completing the program. Courses in which you receive a grade below C may not be applied toward the specialization.

Lower Division Course

10. Introduction to Women's Studies: Feminist Perspectives on Women and Society. Lecture, two and one-half hours; discussion, one hour. Introduction to study of women and men in society, covering comparative issues of social, political, and economic position in the workplace, family, cultural institutions; historical basis of women's subordination; the female experience; the male experience; relations between women and men; intersections of ethnicity, class, and gender; violence against women; cultural images of women and men; social roles of women and men and movements for social change.

Upper Division Courses

110A. Feminist Theories: Social and Political. Lecture/discussion, three hours. Prerequisite: course 10. Examination in depth of differing feminist theorists' attempts to describe, explain, critique, and reconstruct social and political institutions from perspectives of women. Emphasis on whether and how feminist theory is related to change in structure, operation, or understanding of such institutions as law, politics, the state, education, work, family, religion, sexuality. Ms. Littleton, Ms. Pateman, Ms. Sacks

110B. Feminist Theories: Criticism. Lecture/discussion, three hours. Prerequisite: course 10. Examination in depth of differing feminist theorists' interpretations of language, literature, and the arts from a critical perspective. Emphasis on ways in which women and sexuality have been represented in cultural texts. Ms. Littleton, Ms. Mellor, Ms. Meizer

110C. Feminist Theories: Perspectives on Gender and Science. Lecture/discussion, three hours. Prerequisite: course 10. Examination in depth of different theoretical positions on gender and women as they have been applied to study of sciences. Emphasis on theoretical contributions made by the new scholarship on women as it applies to shaping of scientific enterprise.

M110D. Philosophical Analysis of Issues in Feminist Theory. (Same as Philosophy M192.) Lecture, three hours. Prerequisite for women's studies majors: course 10; for other students: one philosophy course or consent of instructor. Examination in depth of different theoretical positions on gender and women as they have been applied to study of philosophy. Emphasis on theoretical contributions made by the new scholarship on women in philosophy. Critical study of concepts and principles which arise in discussion of women's rights and liberation. Philosophical approach to feminist theories.

120. Internship in Women's Studies. Seminar, three hours. Prerequisites: course 10 and at least one course from 110A through M110D. Field studies course combining seminar with field placement. Practical experience in working on women's issues and connecting these experiences to methodological and theoretical themes explored in courses 110A through M110D.

130. Women of Color in the U.S. Lecture/discussion, three hours. Prerequisite: course 10. Exploration of experiences of African American, Asian American, Chicana, and Native American women in order to assess intersections of race, ethnicity, class, and gender. Contemporary and/or historical and/or theoretical perspectives on racism and its relation to feminism as defined by women of color.

160. Women and Social Movements. Lecture/discussion, three hours. Recommended (but not prerequisite): prior women's studies or anthropology courses. Comparative studies of social movements (e.g., nationalist, socialist, liberal/reform), beginning with Russia and China and including Cuba, Algeria, Guinea-Bissau, Mozambique, Nicaragua, and Iran. Analysis of women's participation in social transformations and the centrality of gender interests.

185. Special Topics in Women's Studies. Prerequisites: upper division standing, one prior course in women's studies. Specialized or advanced study in an area within women's studies.

197. Senior Seminar: Women's Studies. Discussion, three hours. Prerequisites: course 10, one course from 110A through M110D, two other women's studies courses; for seniors and juniors: consent of instructor. Designed for students completing work in women's studies. Each student pursues research on specific topic concerning women, explores frameworks for understanding female experience (biological, economic, historical, and psychological), and refines methods for research. Ms. Henley

199. Special Studies in Women's Studies. Prerequisites: at least two upper division women's studies courses, minimum 3.0 GPA, consent of instructor and program director. Directed program of independent readings and/or research on a specific topic within women's studies. No more than four units may be applied toward women's studies specialization or major.

199HA-199HB. Directed Studies for Honors. Prerequisites: course 197, 3.0 GPA overall, 3.0 GPA in major. Limited to women's studies honors majors. Two-term sequence to research and write honors thesis under direction of faculty sponsor.

Supporting Upper Division Courses

M107A. American Women Writers. (Same as English M107A.) Prerequisite: satisfaction of Subject A requirement. Survey of literary works by American women writers, with emphasis on roles of women, portrayal of nature and society, and evolution of forms and techniques in writing by American women.

Ms. Rowe, Ms. Smith

M107B. British Women Writers. (Same as English M107B.) Prerequisite: satisfaction of Subject A requirement. Survey of literary works by British women writers, with emphasis on roles of women, portrayal of nature and society, and evolution of forms and techniques in writing by British women.

Ms. Lewis, Ms. Mellor

M107C. Special Topics in Women and Literature. (Same as English M107C.) Prerequisite: satisfaction of Subject A requirement. Variable specialized studies course in women and literature, with emphasis on a period, genre, particular theme, or nontraditional literary grouping.

Ms. Cheung, Ms. Smith

M132A. Chicana Feminism. (Same as Chicana and Chicano Studies M110.) Lecture, three hours. Prerequisite: course 10 or consent of instructor. Examination of theories and practices of women who identify as "Chicana feminist." Analysis of writings of Chicanas who do not identify as feminist but whose practices attend to gender inequities faced by Chicanas both within the Chicana/Chicano community and the dominant society. Attention to Anglo-European and Third World women.

Ms. Saldivar-Hull

M132B. Contemporary Issues among Chicanas. (Same as Chicana and Chicano Studies M154.) Prerequisite: course 10 or consent of instructor. Overview of conditions facing Chicanas in the U.S., including issues on family, immigration, reproduction, employment conditions. Comparative analysis with other Latinas.

Ms. Ortiz

M137E. Work Behavior of Women and Men. (Same as Psychology M137E.) Prerequisite: course 10 or Psychology 10 or senior standing. Examination of work behavior of women and men. Topics include antecedents of career choice, job findings, leadership, performance evaluation, discrimination and evaluation bias, job satisfaction, and interdependence of work and family roles.

Ms. Goodchilds

M137J. Psychology of Language and Gender. (Same as Communication Studies M124 and Psychology M137J.) Lecture, three hours. Prerequisites: Psychology 10 or equivalent, junior standing. Examination of current topics at intersection of gender and language. Topics include sex differentiation in language cross-culturally; sex bias in lexicon and usage; sex differences in lexicon, syntax, phonology, and nonverbal behavior; development of sex-differentiated language in children; "women's" and "men's" language in various racial/ethnic/class/sexual preference groups; and conversational interaction.

Ms. Henley

M148. Women in Higher Education. (Same as Education M148.) Prerequisite: upper division standing. Education and career development of women in higher education. Specifically, emphasis on undergraduate and graduate women; women faculty and administrators; curricula, programs, and counseling services designed to enhance women's educational and career development, affirmative action, and other recent legislation.

Ms. Astin

M154. Women in Culture and Society. (Formerly numbered M163.) (Same as Anthropology M154.) Lecture, three hours. Prerequisite: Anthropology 9. Systematic approach to study of sex roles from an anthropological perspective. Critical review of relevant theoretical issues supported by ethnographic material from traditional cultures and contemporary American culture.

Ms. Hale, Ms. Sacks

M158. Women in Italian Culture. (Same as Italian M158.) Lecture, three hours. Designed with intent of examining role that women have played in Italian society. Concentration alternatively on the world of medieval and Renaissance "matriarch" and on "liberated" women of our times. Historical and political documents and social and religious taboos presented and discussed, together with other data derived from literature and art. Italian majors required to read texts in Italian and to prepare papers written in Italian.

Ms. Cottino-Jones

M162. Sex Roles and Society. (Same as Sociology M162.) Lecture, three hours; discussion, one hour. Prerequisite: course 10 or Sociology 1 or consent of instructor. Consideration of sociological literature pertaining to development and functions of sex roles in society from a critical perspective. Topics include socialization and gender norms, contemporary sex role strain, and challenge to traditional notions of sex roles posed by feminist critique.

Ms. Hart

M164. Gender and Work. (Same as Sociology M163.) Lecture, three hours. Prerequisite: course 10 or Sociology 1 or consent of instructor. Exploration of relationship of gender to work, concentrating on the U.S. experience but also including some comparative material. Particular emphasis on analysis of causes and consequences of job segregation by gender and of wage inequality.

Ms. Milkman

M165. Psychology of Gender. (Same as Psychology M165.) Lecture, three hours. Consideration of psychological literature relevant to understanding contemporary sex differences. Topics include sex-role development and role conflict, physiological and personality differences between men and women, sex differences in intellectual abilities and achievement, and impact of gender on social interaction.

Ms. Peplau

170. Jurisprudence of Sexual Equality. Prerequisites: course 10 and one course from 110A through M110D or Political Science 10 or Philosophy 6 or 9 or consent of instructor. Exploration of models of equality described and/or advocated by legal theorists — equality of opportunity, equality of outcome, equality of respect, etc. — using specific problems of women (e.g., sexual harassment or pregnancy leave policy) for purposes of comparison and critique.

Ms. Littleton

M172. The Afro-American Woman in the U.S. (Same as Afro-American Studies M172 and Psychology M172.) Prerequisite: upper division standing. Impact of social, psychological, political, and economic forces which impact on interpersonal relationships of Afro-American women as members of a large society and as members of their biological and ethnic group.

Ms. Mays

Supporting Courses in Other Departments

Check with the program office for additional course listings.

Anthropology 151. Marriage, Family, and Kinship
263P. Gender Systems

Asian American Studies 105. Asian American Women

Classics 150A. Origins of the Western View of Women: The Female in Greek Thought

150B. Origins of the Western View of Women: The Female in Roman and Early Christian Thought

Communication Studies 153. The Media and Aggression Against Women

Community Health Sciences 230. Family and Sexual Violence

English 180X. Specialized Studies in Literature

French 140. Women's Studies in French Literature
165. Topics in French Literature in Translation: From Nature (Female?) to Culture (Male?)

History 137A-137B-137C. History of Women in Europe
156C-156D-156E. Social History of American Women
156F-156G. History of the American Family
197. Undergraduate Seminars

Humanities C184. Alternate Tradition: In Search of a Female Voice in Contemporary Literature

Political Science 149A. Special Studies in Politics: Women and the Political Process

179A. Special Studies in Public Law: Women and Law

Psychology 197A. Current Issues in Psychology: Social Psychology of the Lesbian Experience

231. Psychology of Gender

World Arts and Cultures (Interdepartmental)

An intercollege, interdepartmental major in world arts and cultures is open to students in both the College of Letters and Science and the School of the Arts. You enroll in the college or school of your choice and fulfill the general education requirements of that college or school. For details on this undergraduate major, see Chapter 6 on the School of the Arts.

School of the Arts

Robert Blocker, Dean

6

The School of the Arts is a stimulating academic center dedicated to the education of socially aware and technically skilled artists. It serves as a vital component of the Los Angeles arts community and a resource for the entertainment industry and related fields. While the school offers a broad intellectual and cultural exchange for students, it also provides a learning environment where they can pursue and develop academic and creative excellence.

In addition to a quality education in the arts and liberal studies, students may contribute to the UCLA/Los Angeles community through direct participation in over 35 dance productions, four art and design exhibitions, and 200 music concerts.

The school has five departments — Art, Dance, Design, Ethnomusicology and Systematic Musicology, and Music — and one intercollege, interdepartmental program — World Arts and Cultures.

School of the Arts

125 East Melnitz Building, (310) 825-9705

The departments of the School of the Arts both borrow from and add to the rich and varied cultural life of the campus. Students in the Departments of Art and Design are taught to understand the broad panorama of the visual arts, while those in the Dance Department have opportunity to study ballet, modern, and ethnic dance forms. Students in the Department of Ethnomusicology and Systematic Musicology study all styles of music in the world from an ethnographic perspective. And the Music Department offers specializations in composition, theory, and performance.

World arts and cultures is an undergraduate major which integrates art, dance, music, theater, anthropology, and folklore and mythology into one unique program. This interdisciplinary major is offered jointly by the School of the Arts and the College of Letters and Science.

Informative brochures on the school are available from the Student Services Office, 125 East Melnitz Building, UCLA, Los Angeles, CA 90024-1427.

If you are interested in obtaining instructional credentials for California elementary and secondary schools, consult the Graduate School of Education, 1605 Maxxam Building (825-8328).

Undergraduate Study

Admission

In addition to the University of California Undergraduate Application, departments in the School of the Arts require auditions, portfolios, or evidence of creativity. Detailed information on departmental requirements is mailed to you on receipt of your application. Deadline date for applications is November 30, 1992, for admission in Fall Quarter 1993.

The Study List

Each term the student Study List must include from 12 to 17 units. The school has no provision for part-time enrollment. After your first term, you may petition to carry more than 17 units (up to 20 units maximum) if you have an overall grade-point average of 3.0 (B) or better and have attained at least a B average in the preceding term with all courses passed. The petitions must be filed and approved by the Student Services Office by the end of the fourth week of instruction.

If you have not filed your Study List by the end of the second week of classes, you must obtain the consent of the dean of the school to continue for that term.

Graduate Courses

Undergraduate students who wish to take courses numbered in the 200 series for credit toward the degree must petition for advance approval of the department chair and the dean of the school and must meet the specific qualifications. Courses numbered in the 400 and 500 series may not be applied toward the degree.

Concurrent Enrollment

Enrollment at another institution or UCLA Extension while enrolled at UCLA is not permitted.

Requirements for Bachelor of Arts Degrees

Each student must meet six kinds of requirements for the B.A. degree: University, school, and unit requirements, as well as residence, major, and scholarship requirements. The requirements are as follows.

University Requirements

For information on the Subject A or English as a Second Language (ESL) and American History and Institutions requirements, see "Undergraduate Degree Requirements" in Chapter 2 of this catalog.

School of the Arts students enrolled in English as a Second Language 33A, 33B, 33C must take the courses for a letter grade.

School Requirements

The general requirements of the School of the Arts must be completed with a grade-point average of 2.0 or better.

General Education (GE) Course Requirements

Listed below is a new set of general education (GE) requirements that are effective Fall Quarter 1992. Students admitted prior to Fall Quarter 1992 will be required to fulfill the previous GE requirements as listed in the catalog of their entrance year. For assistance in determining the set of requirements for which you will be held responsible, contact a school counselor.

For specific courses that fulfill the general education requirements, consult the Student Services Office before enrolling. Courses listed below are used only as a guideline for 1992-93.

Reciprocity with Other UC Campuses — Students who transfer to UCLA from other UC campuses and have met all general education requirements prior to enrolling at UCLA are not required to complete the School of the Arts general education requirements. Written verification from the college dean at the other UC

Majors and Degrees Offered

Art.....	B.A., M.A., M.F.A.
Art History*.....	B.A., M.A., Ph.D.
Dance.....	B.A., M.A., M.F.A.
Dance/Movement Therapy.....	M.A.

World Arts and Cultures.....	B.A.

*These majors have been transferred to the College of Letters and Science.

campus is required. Verification letters should be sent to Director of Student Services, School of the Arts, 125 East Melnitz Building, UCLA, Los Angeles, CA 90024-1427.

Transfer Core Curriculum/Intersegmental General Education Transfer Curriculum

Transfer students from non-UC schools have the option to fulfill UCLA's lower division general education requirements by completing a transfer core curriculum or the Intersegmental General Education Transfer Curriculum (IGETC) prior to transfer. Each curriculum consists of a series of subject areas and types of courses which have been agreed on by the University of California and the California community colleges. The transfer core curriculum or IGETC significantly eases the transfer process, as all of UCLA's general education requirements are fulfilled when you complete it. If you select one of these options, you must complete it entirely before enrolling at UCLA. Otherwise, you must fulfill the School of the Arts general education requirements. The Office of Undergraduate Admissions and Relations with Schools determines, at the point of admission, your completion of the transfer core or IGETC.

English Composition and Rhetoric

English 3 with a minimum grade of C or an AP score of 4 should be completed by the end of your freshman year and may not be taken on a Passed/Not Passed basis.

Critical Reading and Writing

One course from English 4, *Humanities 2A, 2B, or 2C with a minimum grade of C or an AP score of 5 should be completed by the end of your sophomore year and may not be taken on a Passed/Not Passed basis.

Foreign Language

You may meet this requirement by (1) scoring 3, 4, or 5 on the Advanced Placement (AP) foreign language examination in French, German, or Spanish, (2) presenting a UCLA foreign language proficiency examination score indicating competency through level three, or (3) completing one college-level foreign language course equivalent to UCLA's level three or above with an average grade of C or better.

International students may petition to use an advanced course in their native language for this requirement. Students whose entire secondary education has been completed in a language other than English may petition to be exempt from the foreign language requirement.

Mathematics

One course (four units) in mathematics or statistics or an introductory course in computers selected from Mathematics 1, 2, 3A, 3B, 3C, 3E, 5, 31A, 31B, Program in Computing 1, Statistics 50.

Science

Two courses (eight units) from different departments in physical or biological sciences selected from Anthropology 7, 10, 12, 15, Astronomy 2A, 2B, 3, 4, 5, 6, Atmospheric Sciences 2, 3, 4, 5, 6, Biology 2, 3, 5, 6, 9, 10, 13, 20, 21, 25, 40, 70, Chemistry and Biochemistry 2, 11A, 11B, 15, Earth and Space Sciences 1, 2, 5, 8, 9, 15, 16, Geography 1, 2, 5, Microbiology and Molecular Genetics 6, 7, Physics 3A, 3B, 3C, 6A, 6B, 6C, 8A, 8B, 8C, 10, Psychology 15.

Social Sciences

Three courses (12 units), with at least one from each group:

Group A — Economics 1, 2, 5, History 1A, 1B, 1C, 3A through 3D, 4, 5A, 5B, 6A, 6B, 6C, 7A, 7B, 8B, 8C, 8D, 9A through 9D, 10A, 10B, 11A, 11B, Political Science 10, 20, 40, 50.

Group B — Anthropology 8, 9, 33, Geography 3, 4, Psychology 10, 11, Sociology 1, 2, 3, 4, 31, Women's Studies 10.

Humanities

Three courses (12 units), with at least one course in three of the four groups:

Group A — Arts — Art History 50, 51, 54, 55A, 55B, 56A, 56B, 57 (except art and design majors), Classics 51, Dance 134A, 134B, 181A, 182A, C187A (except dance majors), Design 30A, 161A through 161J (except art and design majors), Ethnomusicology and Systematic Musicology 20A, 20B, 20C, 108A, 108B, M110A, M110B, 113, 136A, 136B, 147, 174 (except music and ethnomusicology majors), Film and Television 106A through 106E, 107, 108, 110A, 110B, 110C, 112, 113, 114, 116, Music 15, 136A, 136B, 136C (except music and ethnomusicology majors), Musicology 2A, 2B, 13, 133, 134, 135A, 135B, 135C (except music and ethnomusicology majors), Theater 5A, 5B, 5C, 102D, 102E, M103A through 103F, 104D, 104E, 104F, 105.

Group B — Culture and Civilization — Chicana and Chicano Studies 10A, Chinese 50, Classics 10, 20, Folklore and Mythology 15, German 100A, 100B, 100C, Italian 42A, 42B, Japanese 50, Jewish Studies 10, Korean 50, Portuguese M42, M44, Russian 99A, 99B, Spanish M42, M44.

Group C — Literature — Classics 40, 41, English 10A, 10B, 10C, 70, 75, 80, 85, 90, 95A, 95B, 95C, 96, French 12, 114A, 114B, 114C, German 50A, 50B, 101A, 101B, 101C, Humanities 1A, 1B, 1C, 2A*, 2B*, 2C*, Portuguese 40A, 40B, Scandinavian 50, Spanish 60A, 60B, 60C, 120A, 120B, 136A, 136B.

Group D — Philosophy/Religion — Chinese 160, 175, East Asian Languages and Cultures 60, Indic 175, Japanese 160, 175, Korean 160, 175, Philosophy 1, 2, 4, 5A, 6, 7, 8, 21, 22.

Additional Nonmajor Field Requirements

In addition to the general education requirements, you are required to take a minimum of 12 upper division units unrelated to your major department/field. Courses that do not apply on this requirement are studio, performance, activity, independent study, debate courses, children's theater, creative dramatics, internships, and field studies courses. Consult your departmental or school counselor for clarification.

Unit Requirements

Double majors in the school, or between the school and other academic units, are not permitted.

You must complete for credit, with a passing grade, no less than 180 units and no more than 208 units, of which at least 64 units must be upper division courses (numbered 100 through 199). No more than 16 units of CED courses and eight units of freshman seminars or 300-level courses may be applied toward the degree. Credit for 199 courses is limited to 16 units, eight of which may be applied to the major. All 199 courses must be taken for a letter grade.

UCLA Extension courses with the prefix X on those numbered in the 1 through 199, 200, 300, 400, or 800 series may not be applied toward the degree.

Credit earned through the College Entrance Examination Board (CEEB) Advanced Placement Tests may be applied toward the general education requirements. Portions of Advanced Placement Test credit may be evaluated by corresponding UCLA course numbers (e.g., History 1C). If you take the equivalent UCLA course, unit credit for such duplication is deducted before graduation.

Residence Requirements

You are "in residence" while enrolled and attending classes at UCLA as a major in the School of the Arts. Of the last 45 units completed for the bachelor's degree, 35 must be earned in residence in the School of the Arts. No more than 18 of the 35 units may be completed in UCLA Summer Sessions.

Courses in UCLA Extension (either class or correspondence) may not be applied toward any part of the residence requirements.

Major Requirements

A major is composed of not less than 14 courses (56 units), including at least nine upper division courses (36 units). All majors include both lower and upper division courses. Those listed under "Preparation for the Major" (lower division) must be completed before upper division major work is undertaken.

*If Humanities 2A, 2B, or 2C is taken to meet the critical reading and writing requirement, it may not also be applied toward the humanities/literature requirement.

You must complete your major with a scholarship average of at least a 2.0 (C) in all courses in order to remain in the major and must be recommended by the chair of your major department. All courses in your major department must be taken for a letter grade.

As changes in major requirements occur, you are expected to satisfy the new requirements insofar as possible. Hardship cases should be discussed with the departmental adviser, and petitions for adjustment should be submitted to the dean of the school when necessary.

Any department offering a major in the School of the Arts may require a general final examination.

Scholarship and Minimum Progress

A 2.0 (C) average is required in all work attempted at the University of California, exclusive of courses in UCLA Extension and those graded Passed/Not Passed. A C average is also required in all upper division courses in the major taken at the University, as well as in all courses applying to the general education and University requirements.

Minimum Progress — You are expected to complete satisfactorily at least 36 units during any three consecutive terms in residence; you are placed on probation if you fail to pass these units. You are subject to dismissal if you fail to pass at least 32 units in three consecutive regular terms in residence.

World Arts and Cultures

The interdepartmental major in world arts and cultures is open to students in both the School of the Arts and the College of Letters and Science. You enroll in the college or school of your choice and fulfill the general education requirements of that college or school. Counseling is available — consult Silvily Kessler Thomas in the World Arts and Cultures Office, A129 Fowler Building. For details on the major, see the section later in this chapter.

Honors

To receive **Dean's Honors** in the School of the Arts, you must have at least 12 graded units per term with a grade-point average of 3.8 for less than 16 units of work (3.7 GPA for 16 or more units). The honor is posted on your transcript for the appropriate term. You are not eligible for Dean's Honors in any given term if you receive an Incomplete or a Not Passed (NP) grade, change a grade, or repeat a course.

Honors at graduation are awarded to students with superior grade-point averages. To be eligible, you must have completed 90 or more units for a letter grade at the University of California. The levels of honors and the requirements for each level are: *cum laude*, an overall average of 3.594; *magna cum laude*, 3.745; *summa cum laude*, 3.836.

Counseling and Program Planning

The School of the Arts offers advising, program planning in the major and general education requirements, and individual meetings with departmental counselors, including a yearly degree check sent to each student. Prior to registration and enrollment in classes, each new student is assigned to a counselor in the major department. For further counseling information, contact the Student Services Office, School of the Arts, 125 East Meinitz Building (825-9705).

Graduate Study

The advanced degree programs offered in the School of the Arts provide graduate students with unique research opportunities when combined with special resources, such as the University Research Library, the special collections of the Arts and Music Libraries, and the University's exhibition and performance halls.

The School of the Arts cooperates with the UCLA John E. Anderson Graduate School of Management in offering a Master of Business Administration (M.B.A.) in Entertainment Management. Participating students serve term-long internships with such professional arts organizations as the Los Angeles County Museum of Art, the Mark Taper Forum, and the Los Angeles Philharmonic Orchestra.

A program in teaching is offered by the Graduate School of Education in each of the arts areas.

Fellowships, grants, and assistantships are available through the dean of the Graduate Division. The Graduate Affirmative Affairs Office provides counseling, academic support, and financial assistance to ethnic minority students.

Admission

In addition to requiring that applicants hold a bachelor's degree from an accredited U.S. institution or an equivalent degree of professional title from an international institution, each department in the school has limitations and additional requirements. In general, samples of your work (dance or music audition, art portfolio, etc.) are required. Detailed information can be found in the departmental listings which follow.

For information on the proficiency in English requirements for international graduate students, refer to "Graduate Admission" in Chapter 3.

Other Requirements

Requirements to fulfill each degree objective vary according to the degree and the department. See the departmental listings which follow for specific requirements and procedures.

Art

1300 Dickson Art Center, (310) 825-3281

Professors

Raymond B. Brown, M.A.
Chris Burden, M.F.A.
Henry T. Hopkins, M.A., *Chair*
Samuel Amato, B.F.A., *Emeritus*
William J. Brice, *Emeritus*
Elliot J. Elgart, M.F.A., *Emeritus*
Robert F. Heinecken, M.A., *Emeritus*
Lee Mullican, *Emeritus*

Associate Professors

Barbara Drucker, M.F.A.
Roger Herman, M.F.A.
Charles Ray, M.F.A.

Assistant Professors

Mark McFadden, M.F.A.
Patricia Wickman, M.F.A.

Lecturers

Anne Marie Karlsen, M.F.A.
Don Suggs, M.F.A.

Visiting Assistant Professors

Paul McCarthy, M.F.A.
Nancy Rubins, M.F.A.

Scope and Objectives

Art courses include painting and drawing, sculpture, printmaking, photography, and new alternative media (which include performance, installation, video, and other nontraditional media). Students are introduced to diverse media and ideas in lower division courses and have the opportunity to specialize in upper division. Individual expression is encouraged in a general way for those who wish careers requiring art-related knowledge and in a specific sense for those who go on to careers as professional artists.

The Department of Art curricula lead to the Bachelor of Arts, Master of Arts, and Master of Fine Arts degrees. All programs benefit from the rich and varied art resources at UCLA and in the Los Angeles community.

Bachelor of Arts Degree

Preparation for the Major

Required: Art 1A, 1B, 11A through 11D, 31, 32, and one course from Art History 50, 51, 55A, 55B, 56A, 56B, 57.

The Major

Required: A minimum of 13 upper division courses, including Art 100, 150, six courses from at least four of the following: 130, 133, 137, 140, 145, 147, one course from Art History 101A through 121B, and four art electives.

Master of Arts Degree

Admission

Students are admitted in Fall Quarter only. Regular admission requires a B.A. or equivalent and faculty consent following the annual review of creative work in February. Applicants must submit slides (maximum 20) or videotape (if applying to the video field) to the Counselor, Department of Art, 1300 Dickson, UCLA, Los Angeles, CA 90024-1615.

Provisional admission may be granted for work with faculty sponsors for three terms, pending reconsideration of regular admission.

Major Fields or Subdisciplines

Drawing, painting, sculpture, printmaking, photography, and alternative media. No limit to the variations, extent, or value of these designations is intended.

Course Requirements

A minimum of 36 quarter units of art courses numbered 130 through 280 (or courses from other departments that may be recommended by your adviser or committee chair) is required, with a B average or better.

Within those 36 units, a minimum of 20 quarter units in the 200 series must be taken in your field of specialization, including four units of Art 276. In addition, four units of course 280 are required as part of the 36 units.

A minimum of 36 quarter units of art history, theory, and criticism in undergraduate and/or graduate study is required (including Art 280). Art history courses completed at the undergraduate level may be applied toward the 36-unit art history requirement but may not be applied toward the 36 units required for the degree. Students with few or no art history courses in undergraduate study may take art history upper division or graduate courses at UCLA as electives to be applied toward the 36-unit art history requirement and toward the total units required for the degree. Subjects related to your special interest may be substituted by petition.

A total of eight units of Art 596 may be applied toward the 36 units required for the degree; four units may be applied toward the graduate course requirement.

Comprehensive Examination Plan

Each degree is granted on the basis of the quality of work as demonstrated in the exhibition which accompanies the final comprehensive examination. The number of units of credit attained is irrelevant to this judgment.

A precluding review of work precedes the final comprehensive examination. The examination, usually oral, includes a formal exhibition of work and a document of vita, photo

records of works, and a statement of the artist. The document is retained as property of the University.

Master of Fine Arts Degree

Admission

Students are admitted in Fall Quarter only. See "Admission" under the Master of Arts degree above.

The M.A. is not prerequisite to the M.F.A. but may be elected as your stated degree objective. Usually, however, students proceed directly to the M.F.A. as a terminal degree. The unit requirements applied to the M.A. do not apply to the M.F.A., with the exception of the accumulative art history units.

Major Fields or Subdisciplines

Drawing, painting, sculpture, printmaking, photography, and alternative media. No limit to the variations, extent, or value of these designations is intended.

Course Requirements

A minimum of 72 quarter units of art courses numbered 130 through 280 is required, with a B average or better.

Within those 72 units, a minimum of 40 quarter units in the 200 series must be taken in your field of specialization, including four units of Art 276. In addition, eight units of course 280 are required as part of the 72 units.

A minimum of 40 quarter units of art history in undergraduate and/or graduate study is required (including Art 280). Art history courses completed at the undergraduate level may be applied toward the 40-unit art history requirement but may not be applied toward the 72 units required for the degree. Students with few or no art history courses in undergraduate study may take art history upper division or graduate courses at UCLA as electives to be applied toward the 40-unit art history requirement and toward the total units required for the degree. Subjects related to your special interest may be substituted by petition.

A total of 12 units of Art 596 may be applied toward the 72 units required for the degree; four units may be applied toward the graduate course requirement.

Comprehensive Examination Plan

Same as the plan offered for the Master of Arts degree, as noted above.

Lower Division Courses

1A. Drawing. Studio, eight hours; five hours arranged. Course in basic drawing skills intended as preparation for work in a variety of media.

1B. Sculpture. Studio, eight hours; five hours arranged. Introduction to concepts and forms of contemporary sculpture to become familiar with tools and material to enable students to visually manifest their individual ideas. Presentation of work of contemporary artists.

11A. Painting. Studio, eight hours; five hours arranged. Prerequisites: courses 1A, 1B. Basics of painting: introduction to technical procedures, tools, and materials. Discussion of fundamental conceptual and formal concerns.

11B. Photography. Studio, eight hours; five hours arranged. Prerequisites: courses 1A, 1B. Fundamentals in technique, with emphasis on individual projects. Varied approaches, processes, and applications of the photographic medium within the context of art, supported by studies in theory, aesthetics, and history of photography.

11C. Printmaking. Studio, eight hours; five hours arranged. Prerequisites: courses 1A, 1B. Introductory survey of various technical and conceptual concerns in a variety of printmaking media as preparation for more focused study in particular media at upper division level.

11D. New Genres. Studio, eight hours; five hours arranged. Prerequisites: courses 1A, 1B. Introduction to projects in installation, performance, video, film, intermedia, and other nontraditional media and processes.

31. Modernism. Discussion, three hours. Survey of 20th-century European/American art, its antecedents, and its social and political context.

32. Survey of Critical Thought. Discussion, three hours. Overview of premodern, modern, and post-modern theory as reflected in critical writing and artistic practice, with emphasis on the 1940s to the present.

Upper Division Courses

100. Issues in Contemporary Art. Discussion, three hours. Prerequisites: courses 1A, 1B, 11A through 11D, 31, and 32, or consent of instructor. Selected topics in theoretical, critical, aesthetic, and historical studies and their relevance to practicing artists. May be repeated for a maximum of 16 units.

130. Advanced Drawing. Studio, eight hours; five hours arranged. Prerequisites: courses 1A, 1B, 11A through 11D, 31, and 32, or consent of instructor. Drawing as both an independent expressive medium and as a means of visualization. May be repeated for a maximum of 16 units.

Ms. Drucker, Mr. Herman (F,W,Sp)

133. Advanced Painting. Studio, eight hours; five hours arranged. Prerequisites: courses 1A, 1B, 11A through 11D, 31, and 32, or consent of instructor. Varied media and subjects to further develop students' technical and expressive means to implement their ideas. May be repeated for a maximum of 16 units.

Ms. Drucker, Mr. Herman (F,W,Sp)

137. Advanced New Genres. Studio, eight hours; five hours arranged. Prerequisites: courses 1A, 1B, 11A through 11D, 31, and 32, or consent of instructor. Emphasis to be selected by faculty from one or more of the following media: installation, performance, video, film, other nontraditional media and processes. May be repeated for a maximum of 16 units.

Mr. Burden (F,W,Sp)

140. Advanced Printmaking. Studio, eight hours; five hours arranged. Prerequisites: courses 1A, 1B, 11A through 11D, 31, and 32, or consent of instructor. Selected studies in fine printmaking, historical and contemporary: woodcut, etching and engraving, lithography, silk screen, mixed media. May be repeated for a maximum of 16 units.

Mr. Brown and the Staff (F,W,Sp)

145. Advanced Sculpture. Studio, eight hours; five hours arranged. Prerequisites: courses 1A, 1B, 11A through 11D, 31, and 32, or consent of instructor. Selected studies in sculpture, historical and contemporary: modeling, carving, casting, welding, and other media; forms in space, including installations and non-studio pieces. May be repeated for a maximum of 16 units. Mr. Ray and the Staff (F,W,Sp)

147. Advanced Photography. Studio, eight hours; five hours arranged. Prerequisites: courses 1A, 1B, 11A through 11D, 31, and 32, or consent of instructor. Selected projects in photography and related media, concentrating on development of individual students' artwork. Studio emphasis with special topics in theory and critical analysis. May be repeated for a maximum of 16 units. Mr. McFadden and the Staff (F,W,Sp)

150. Senior Studio. Studio, eight hours; five hours arranged. Prerequisites: courses 1A, 1B, 11A through 11D, 31, and 32, or consent of instructor, senior standing. Advanced studio projects, with emphasis on analysis and criticism of individual creative work and ideas. May be repeated once for credit.

197. Honors Course. Hours to be arranged. Prerequisites: 3.0 GPA overall, 3.5 GPA in major, consent of instructor, junior or senior standing. Individual studies for majors. May be repeated once for credit.

199. Special Studies in Art (2 to 8 units). Hours to be arranged. Prerequisites: 3.0 GPA in major, consent of instructor, senior standing. Individual studies for majors. May be taken for a maximum of eight units.

Graduate Courses

Prerequisite for all courses: consent of instructor. All courses may be repeated for credit (unless otherwise noted) on recommendation of the adviser; they are not open to undergraduate students.

271. Painting (2 to 8 units). Studio, eight hours. Study in painting and associated media.

Ms. Drucker, Mr. Herman

272. Graduate Printmaking (2 to 8 units). Studio, eight hours. Studies in traditional and experimental printmaking. Selected studies in intaglio, lithograph, woodcut, silk screen, photo printmaking, and mixed media. Mr. Brown

273. Graduate Sculpture (2 to 8 units). Studio, eight hours. Studies in sculpture with specific attention to ongoing nature, specificity, and approach to each student's particular discipline. Individual studio visits and consultation. Mr. Ray

274. Photography (2 to 8 units). Studio, eight hours. Studies concentrating on development of individual students' artwork. Studio emphasis with adjacent studies in theoretical and critical analysis. Specific attention to original, expressive, social, and humanistic values of art. Mr. McFadden

275. New Genre (2 to 8 units). Studio, eight hours. Prerequisite: consent of instructor. Studies in alternative media, including installation, performance, video, film, and other nontraditional media and processes. Mr. Burden

276. Graduate Group Critique. Discussion, four hours; tutorial, to be arranged. Group critique/discussion of students' research. Additional tutorial meetings by arrangement with instructor. May be repeated for credit.

280. Graduate Seminar: Art. Discussion, three hours. Advanced topics in critical theory and study of contemporary art, with emphasis on individuals, issues, and methodologies. Possible areas of study from structuralism, deconstruction, feminist and psychoanalytic theory, commodification, and censorship. May be repeated for credit.

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

501. Cooperative Program (2 to 8 units). Prerequisite: consent of UCLA graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Used to record enrollment of UCLA students in courses taken under cooperative arrangements with USC. S/U grading.

596. Directed Individual Study or Research (2 to 8 units). Prerequisite: consent of instructor.

The Department of Art reserves the right to hold for exhibition purposes examples of any work done in classes and to retain for the permanent collection of its galleries such examples as may be selected.

Judithe Gantz-Siegel, M.A., C.M.A., Visiting
Sally Kaplan, Visiting
Maria-Isabel H. Miranda, M.S., Visiting
Stan Pressner, Visiting

Scope and Objectives

A creative and intelligent dance artist or dance researcher must have a deep understanding of the expressive potentials of human movement, skills in dance technique to realize those potentials, and an awareness of dance in its artistic, cultural, and social contexts. The exploration of dance in all its manifestations forms the basis of the UCLA dance curriculum. Dance students at UCLA can select studio classes from a broad palette of forms, including modern dance technique, choreography, improvisation, ballet, a variety of world dance forms, and several historical dance forms. The interdisciplinary nature of dance is examined in costume design, lighting, scenic design, music, and video. Theoretical courses in dance history, ethnology, movement therapy, aesthetics, and education provide methodology for understanding dance in context while notation, Labananalysis, anatomy, and kinesiology provide tools for the analysis of movement.

UCLA offers the Bachelor of Arts degree in Dance, combining preprofessional training with a liberal arts education which is essential to the development of an intelligent creative individual.

The graduate program awards a Master of Arts in Dance, a Master of Arts in Dance/Movement Therapy, and a Master of Fine Arts in Dance. M.A. students may concentrate their work in dance ethnology, dance history, and dance education. The M.A. in Dance/Movement Therapy has a strong clinical component and is approved by the American Dance Therapy Association. The M.F.A. is a professional degree in choreography/performance.

Bachelor of Arts Degree

The dance major offered through the School of the Arts leads to the Bachelor of Arts degree. Students who wish to confer with the departmental counselor regarding program planning and major requirements should contact Wendy Temple in the department office.

Preparation for the Major

Required: Twenty-four units of lower division coursework, including Dance 6F-6W-6S, 7F-7W-7S, 11A through 11F, 20, 25, 48 (must be taken twice), 70 (or departmentally approved alternative).

The Major

Required: A total of 66 units of upper division coursework, including Dance 100A-100B-100C, C120, 123A, 123B, 132A, 134A, 134B, 141, 144, 148, 149, 196, and 12 units selected from one of the following clusters: (1) choreography/performance (courses 113A, 113B, 142, 145, six units of advanced studio); (2) analysis, documentation, and media (courses 125, 126, C180A, C180B); (3) critical studies (courses C132B, C133, C180A, C180B, 181A through

181D, 182A, 183A, CM184D, C187A); (4) applied studies (courses 123C, 151, 152, 153, 160).

Admission to the upper division major is determined by a screening and evaluation conducted during Spring Quarter of your sophomore year. All entering students audition for placement in technique and choreography classes.

Master of Arts in Dance

Admission

A bachelor's degree with an undergraduate major in dance or equivalent experience is required. Some of this experience may have been gained outside the academic setting through intensive workshops, summer sessions, and performance and professional work. In addition to that used by UCLA Graduate Application Processing, the department has its own application process which requires three letters of recommendation and an audition.

In the audition faculty members look for technical and creative potential. Special attention is given to the creative aspects of dance. Due to the diversity and specialization at the graduate level, you are asked to identify a primary focus (i.e., education, therapy, ethnology, or history).

Prospective students may write to the Department of Dance, 124 Dance Building, UCLA, Los Angeles, CA 90024-1608, for departmental brochures which give additional information on the graduate program.

Foreign Language Requirement

There is no foreign language requirement. However, fieldwork in dance ethnology and dance history may require working knowledge of the language of your research area.

Course Requirements

Nine courses (or more depending on your specialization) are required, distributed as follows: (1) Dance 230; (2) four courses (16 units) in the department at the graduate level (200 series); (3) four courses (16 units) in or outside the department at the upper division or graduate level; (4) one dance movement course per term. Technique courses may not be applied toward degree requirements.

Graduate courses in the following areas fulfill the requirements: choreography (courses 211A through 211D); music (courses C220, 221); theories of movement (courses 223, 225A-225B); notation (course 226); aesthetics (course 232); history (courses C233, 234, 235, 236, 237); media (courses 248, 249); education (courses 251A through 251D); ethnology (courses C279A through C287A).

Eight units of 500-series courses (596A, 596R, 598) may be applied toward the total course requirement; four units may be applied toward the minimum graduate course requirement.

The following upper division courses may be applied toward the M.A. degree: Dance 103,

114, 123C, 125, 126, 142, 145, 151, 152, 153, 160, 181A, 181B, 181C, 181D, 182A, 183A, C184B, C187A, 190, 191, 197A, 197B.

Depending on your area of focus, certain sequences of study, developed with the guidance and advice of the graduate adviser, lead to sound knowledge and depth in that area and produce a viable program to meet your objectives and goals.

While fieldwork is not a requirement for those specializing in the area of dance ethnology, it is strongly suggested as part of that program.

Teaching Experience

Teaching experience is not a requirement for the degree. It is highly recommended, however, for those who intend to teach after graduation.

Thesis Plan

If you select the thesis plan, you prepare a report of the results of your original research or creative work. Before beginning work on the thesis, you must obtain approval of the subject and general plan from a graduate faculty panel. After the thesis plan is accepted, a thesis committee is formed.

Comprehensive Examination Plan

You must declare your intention to take the comprehensive examination plan in your fourth or fifth term by preparing a written proposal of the plan, which is to be presented and defended before a faculty panel. The examination, administered by a committee selected from Dance Department faculty both inside and outside your specialization, consists of three written questions and an oral section. Each committee member grades all questions. In order to pass, each question must be graded pass or better. If any questions are failed, you may retake the failed portion(s) once only.

Master of Arts in Dance/Movement Therapy

An M.A. in Dance/Movement Therapy is required for registry as a therapist with the American Dance Therapy Association (ADTA).

Admission

In addition to the requirements listed above under the M.A. in Dance, an undergraduate course in abnormal psychology is required, and other courses in psychology (developmental, personality, and group dynamics) are highly recommended.

Course Requirements

Dance 225A-225B, 230, 260A-260B-260C, 261A-261B-261C, 262A-262B-262C, 460A-460B-460C, 596A, 596R are required.

During your second year, you are required to serve an internship within a clinical facility, which provides an opportunity to work with one of a variety of clinical populations.

Thesis Plan

A thesis of a theoretical, clinical, or empirical nature may be written under the supervision of senior faculty members in your major field and one faculty member from another department.

Comprehensive Examination Plan

You must declare your intention to take the comprehensive examination plan during your fourth or fifth term by preparing a written proposal of the plan, which is presented and defended before a faculty panel. The examination, administered by a committee of Dance Department faculty, consists of three written questions and an oral section. Each committee member grades all questions. In order to pass, each question must be graded pass or better. If any questions are failed, you may retake the failed portion(s) once only.

Master of Fine Arts in Dance

Note: Departmental faculty members are examining the curriculum with a view to its revision. Information regarding requirements for graduation may be subject to change.

Admission

In addition to that used by UCLA Graduate Application Processing, the department has its own screening procedure which requires three letters of recommendation, an audition, and a personal interview. M.F.A. applicants must demonstrate exceptional promise in either choreography (modern) or performance (modern, world, or historical). Auditioners in choreography show three original works; auditioners in performance present three selections already in their repertory. You are required to prepare a statement (no more than one page) describing the works shown.

Foreign Language Requirement

There is no foreign language requirement. However, if you are a performer of ethnic dance, it is recommended that you gain working knowledge of the language of the culture in which you are specializing.

Course Requirements

You are required to complete 24 courses (96 units) as follows: at least six courses (24 units) at the 400 level, including Dance 441 and 490, and at least eight courses (32 units) at the 200 level, including 221, 230, and 240A through 240D (with approval of their adviser, ethnic performers may substitute a course from ethnomusicology in the music of their cultural area for course 221). Only four units of 500-level courses may be applied toward the degree. You must enroll in a studio class (performance, technique, repertory) every term except while in an internship or during your final term.

Comprehensive Examination

You prepare a major concert in your third year in which you are the principal choreogra-

pher and/or performer, and produce, direct, and oversee production elements. An analytical paper which addresses the issues relevant to the concept is developed prior to the production and completed after the concert. In addition, a document with visual materials and written production record is required and is completed after the performances. An oral defense of the concert works must be presented to the comprehensive examination faculty.

Lower Division Courses

1A-1F. Fundamentals of Modern Dance (2 units each). Studio, three hours. Designed for nondance majors. Courses must be taken in sequence. Study of dance technique, improvisation, and choreography. Critical viewing, reading, and discussion of modern dance artists' historical/aesthetic styles.

(F,W,Sp)

6F-6W-6S. Fundamentals of Ballet (0 units, 0 units, 2 units). Laboratory, four hours. Prerequisite: dance major or consent of instructor. Students admitted in Fall Quarter only. Study of ballet techniques and principles, including dance terminology. In Progress grading.

Ms. Hills (F,W,Sp)

7F-7W-7S. Fundamentals of Ballet (0 units, 0 units, 2 units). Laboratory, four hours. Prerequisite: dance major or consent of instructor. Students admitted in Fall Quarter only. Study of ballet techniques and principles, including dance terminology. In Progress grading.

Ms. Hills (F,W,Sp)

10. Introduction to Dance (2 units). Introduction to the many and varied theoretical aspects of dance as a discipline.

11A-11F. Modern Dance Technique and Choreography (2 units each). Lecture, one hour; studio, three hours. Limited to dance majors. Experiences designed to achieve beginning to intermediate levels of kinesthetic awareness and technical and improvisational skills, as well as understanding of the creative process of structure and form in dance compositions.

Ms. Catterson, Ms. Leung (F,W,Sp)

20. Music Analysis for Dance (2 units). Lecture, two hours; laboratory, one hour. Study of elements of music, music structures, and their relationship to dance, with emphasis on rhythmic analysis, dance accompaniment, and teacher/accompanist roles.

Ms. McCray (F)

23L. Laboratory in Conditioning for Dancers (2 units). Laboratory, four hours. Specific conditioning principles applied to strengthening, stretching, and endurance training. Personalized attention enables students to increase their ability to dance more efficiently and to prevent dance injuries. P/NP grading.

25. Introduction to Dance/Movement Notation (2 units). (Formerly numbered 25A.) Lecture, two hours; laboratory, one hour. Beginning skills in observing, analyzing, reconstructing, and recording dance/movement based on principles of the Labanotation and Labananalysis systems.

Ms. Dunin, Ms. Leung

40. Introduction to Dance Theater (2 units). Lecture, two hours; laboratory, two hours. Prerequisite: course 11A or consent of instructor. Study of creative elements of choreography, sound score, and design and how they interact with practical elements of personnel, materials, and procedures in presenting dance theater.

48. Laboratory in Dance Production (1 unit). Laboratory, two hours. Realization of concepts of lighting, sound, costume, scene design, and stage practices in departmental dance productions. Must be repeated once in another year. P/NP grading.

(Sp)

70. Survey of Dancing in Selected Cultures (2 units). Studio, three hours. Introduction to dances and their movement characteristics in Western and non-Western cultures.

Mrs. Dunin, Mr. Quigley (F)

71B. Dance of Indonesia (2 units). Studio, three hours. Dance experience not required. Introduction to technique and repertory of dance traditions (e.g., Java, Bali, Sunda).

Ms. Mitoma

71C. Dance of Japan (2 units). Studio, three hours. Dance experience not required. Technique and repertory from the court dance tradition (e.g., Gagaku).

Mr. Togi (F,W,Sp)

71D. Dance of India (2 units). Studio, three hours. Dance experience not required. Introduction to dance in India, with emphasis on a particular tradition (e.g., Bharata Natyam).

Ms. Yodh (F)

71E. Dance of Korea (2 units). Studio, three hours. Dance experience not required. Technique and repertory of a selected dance tradition (e.g., Korean classical and folk).

72B. Dance of West Africa (2 units). Studio, three hours. Dance experience not required. Introduction to technique and repertory of a selected region (e.g., Ghana, Guinea, Nigeria).

73B. Dance of Mexico (2 units). Studio, three hours. Dance experience not required. Introduction to forms and styles in dances of several ethnographic regions. Emphasis on identifying dance characteristics through actual dancing.

Ms. Miranda (F)

74B. Dance of Yugoslavia (2 units). Studio, three hours. Dance experience not required. Introduction to forms and styles in dances of several ethnographic regions. Emphasis on identifying dance characteristics through actual dancing.

Ms. Dunin

74C. Dance of Spain (2 units). Studio, three hours. Dance experience not required. Technique and repertory of dances from selected ethnographic regions.

74D. Traditional Dances in the British Isles and Their Anglo-American Derivatives (2 units). Studio, three hours. Historical and regional overview and survey of vernacular dance traditions of the British Isles and their derivatives in North America, including both ceremonial and social forms, some of which have a strong presentational quality as well.

Mr. Quigley

76B. Dance of Israel (2 units). Studio, three hours. Dance experience not required. Technique and repertory from selected ethnographic regions.

79A-79Z. Dance of a Selected Culture (2 units each). Studio, three hours. Introduction to forms and styles in dance of a selected culture area.

80A-80B. Movement as Cultural Behavior (2 units each). Studio, three hours. Prerequisite: world arts and cultures major or consent of instructor. Studio/laboratory examination of individual and cultural factors which affect expressive movement in cultures. Experimental classes which enhance kinesthetic and movement awareness of self and others through cultural perspective.

Ms. Mitoma (W,Sp)

Upper Division Courses

100A-100B-100C. Modern Dance: Intermediate Technique and Choreography. Lecture, three hours; laboratory, four hours. Prerequisite: course 11F. Limited to dance majors. Intermediate to advanced levels of technical skill emphasizing musicality, spatial awareness, and movement complexity. Choreographic assignments include use of composed music, group forms, and stage space.

(F,W,Sp)

101A-101B-101C. Intermediate Modern Dance Technique (2 units each). Lecture, two hours; laboratory, two hours. Technique levels II and III. Emphasis on increasing technical skill. Each course may be repeated once.

Mr. Brown, Ms. Catterson, Ms. Wang (F,W,Sp)

C102A-C102B-C102C. Advanced Modern Dance Technique (2 units each). (Formerly numbered 102A-102B-102C.) Lecture, one hour; studio, five hours. Technique levels IV and V. Studies in advanced technique, with emphasis on performing skills. Each course may be repeated once. Concurrently scheduled with courses C402A-C402B-C402C.

Mr. Brown, Ms. Catterson, Ms. Wang (F,W,Sp)

103. Improvisation in Dance (2 units). Studio, four hours. Prerequisite: dance major or consent of instructor. Development of aesthetic perspective through use of imagery, sound, and other art. Concentration and projection. May be repeated twice.

106A-106B-106C. Intermediate Ballet (2 units each). Laboratory, three hours. Prerequisites: courses 7F-7W-7S or consent of instructor. Courses must be taken in sequence. Study of techniques and principles of classical ballet, including phrasing, combinations, and repertory. Each course may be repeated once.

Ms. Hills (F,W,Sp)

C107A-C107B-C107C. Advanced Ballet (2 units each). (Formerly numbered 107A-107B-107C.) Lecture, two hours; laboratory, six hours. Prerequisite: course 106C. Advanced technique in classical ballet, with emphasis on performing skills. Each course may be repeated once. Concurrently scheduled with courses C407A-C407B-C407C.

Ms. Hills (F,W,Sp)

113A-113B-113C. Advanced Modern Dance: Performance and Choreography (2 units each). Studio, two hours; rehearsal, two hours. Prerequisite: course 100C. Improvisation and choreographic study leading to independent work in solo and group forms. Development of performance, direction, and production skills culminating in a presentation.

Ms. Catterson (F,W,Sp)

114. Form and Structure in Choreography. Lecture, one hour; laboratory, three hours. Prerequisite: dance major or consent of instructor. Study of craft of choreography. Emphasis on breath movement, phrasing, ABA, theme and variations, rondo. Learning to discipline and shape creative impulse into specific forms, with emphasis on staging.

C120. Music as Dance Accompaniment. Prerequisite: course 20 or consent of instructor. Piano and percussion improvisation for dance. Choreographer/composer relationships. History of music for dance, with emphasis on contemporary trends. Music for dance performance. May be concurrently scheduled with course C220.

Ms. McCray (W)

122. Movement Theories: Variable Topics (2 units). Lecture, two hours; laboratory, one hour. Examination of coordination and expression applied to dance as a performing art. Critical analysis of qualitative motion factors of weight, space, time, flow. Personalized attention to increase students' ability to work efficiently and expressively. May be repeated twice. P/NP or letter grading.

123A. Anatomy for the Dancer. Prerequisite: course 11F or consent of instructor. Study of human muscular-skeletal system as related to dance.

Ms. Gantz-Siegel (F)

123B. Principles of Conditioning and Correctives for Dance. Prerequisite: course 123A. Study of biological and physical principles of human movement as related to dance. Prevention and care of dance injuries.

Ms. Gantz-Siegel (Sp)

123C. Projects in Dance Kinesiology. Prerequisite: course 123B. In-depth study of selected topics introduced in courses 123A and 123B.

Ms. Gantz-Siegel

125. Principles of Movement Analysis: Labananalysis. Lecture, two hours; laboratory, two hours. Prerequisite: course 25. Basic principles of Labananalysis. Emphasis on experiential understanding of movement through study of motion factors and elementary concepts of spatial dynamics. Focus on qualitative area of movement to further comprehension of dance as a creative art form.

Ms. Gantz-Siegel

126. Principles of Movement Analysis: Labanotation. Lecture, two hours; laboratory, two hours. Prerequisite: course 25. Developing skills in reading, writing, reconstructing, and score preparation of complex movement.

Mrs. Dunin, Ms. Leung (Sp)

132A-C132B. Philosophical Bases and Trends in Dance (4 units, 2 units). (Formerly numbered 132A-132B.) Course 132A is prerequisite to C132B. Critical analysis of dance as a creative experience and role of professional and educational dance in our society. Study of present-day concepts and their relationships to other art forms and cultures. Course C132B is concurrently scheduled with C231B.

Ms. Alter (W,Sp)

C133. Baroque Dance: Analysis and Re-creation. Lecture, two hours; laboratory, two hours. Prerequisites: courses 134A and 134B or equivalent experience, consent of instructor. Analysis and re-creation of 17th- and 18th-century dance as recorded in dance notation of the era. Study of cultural context, aesthetics, style, music. Social and theatrical dance forms. Concurrently scheduled with course C233.

134A. History of Dance in Western Culture, Origins to 1600. Development of dance styles in Western culture; function in society and relationship to contemporary artistic expression; ancient Egypt through European Renaissance.

Ms. Alter, Mrs. Thomas (F)

134B. History of Dance in Western Culture, 1600 to the Present. Prerequisite: course 134A or consent of instructor. Survey of dance styles in European and American cultures from early baroque to the present.

Ms. Alter, Mrs. Thomas (W)

141. Lighting Design for Dance Theater. Lecture, four hours; laboratory, two hours. Prerequisite: course 11F or consent of instructor. Lighting for dance: examination of aesthetics, principles, and technical elements. Application to selected choreographies to be publicly performed.

Mr. Pressner (F,Sp)

142. Advanced Studies in Dance Theater Lighting (2 or 4 units). Lecture, four hours; laboratory, four or more hours. Prerequisite: course 141 or consent of instructor. Analysis of diverse dance theater lighting problems at advanced level and individual development of creative solutions. May be taken for a maximum of four units.

Mr. Pressner (W,Sp)

144. Costume and Scenic Design Concepts for Dance Theater. Prerequisite: course 11F or consent of instructor. Study of theory for conceptualizing dance performance environments, communication through visual elements, artistic properties of costume and sets media, and procedures for producing dance costumes and sets in order to facilitate choreographer/designer communication.

Mr. Ritter (F,Sp)

145. Advanced Dance Costuming. Lecture, three hours; laboratory, six hours. Prerequisite: course 144 or consent of instructor. Theory of dance costume construction as it relates to design intent; enhancement, accommodation, and impact on movement. Choice of textiles, construction methodology, fabric modification, and accessories. Laboratories include dance design projects currently in production.

Mr. Ritter

148. Advanced Laboratory in Dance Production (1 unit). Laboratory, two hours. Prerequisites or corequisites: courses 141 and 144, or consent of instructor. Further development and application of concepts of lighting, sound, costume, scene design, and stage practices in departmental dance productions. May be repeated once. P/NP grading.

(Sp)

149. Dance Performance Practicum (1 unit). Laboratory, four hours. Dancing in selected choreography in public performance. P/NP grading.

(F,W,Sp)

151. Foundations of Dance Education. Lecture, two hours; laboratory, three hours. Prerequisite: dance major or consent of instructor. Introduction to movement concepts, skills, and teaching principles for modern dance instruction. Supervised teaching practicum included.

Ms. Gantz-Siegel, Ms. Leung (F,W)

152. Dance as Culture in Education. Lecture, two hours; laboratory, two hours. Prerequisite: course 70 or consent of instructor. Theoretical and practical aspects of teaching ethnic dance, especially in higher education.

Mrs. Dunin

153. Creative Dance for Children. Lecture, three hours; laboratory, one hour. Prerequisite: dance major or consent of instructor. Introduction to movement concepts, skills, and principles for teaching children's dance; emphasis on dance as a creative medium of expression.

Ms. Leung (Sp)

160. Introduction to Dance/Movement Therapy (2 units). Lecture, one hour; laboratory, three hours. Prerequisite: course 100C or consent of instructor. Group processes and dynamics in both nonverbal (movement) and verbal modes of experience, so students achieve a significant level of psychological insight to assist in functioning professionally as effective dance/movement therapists.

C171B. Dance of Indonesia (2 units). (Formerly numbered 171B.) Studio, three hours. Prerequisite: course 71B or consent of instructor. Technique and repertoire of a selected dance tradition (e.g., Java, Bali, or Sunda). Dance in relation to music, aesthetic principles, and cultural context. May be repeated once. Concurrently scheduled with course C471B.

Ms. Mitoma

C171C. Dance of Japan (2 units). (Formerly numbered 171C.) Studio, three hours. Prerequisite: course 71C. Technique and repertoire of a selected tradition. Dance in relation to music, aesthetic principles, and cultural context. May be repeated once. Concurrently scheduled with course C471C.

Mr. Togi (F,W,Sp)

C171D. Dance of India (2 units). (Formerly numbered 171D.) Studio, three hours. Prerequisite: course 71D. Technique and repertoire of a selected tradition. Dance in relation to music, aesthetic principles, and cultural context. May be repeated once. Concurrently scheduled with course C471D.

Ms. Yodh (W,Sp)

C171E. Dance of Korea (2 units). (Formerly numbered 171E.) Studio, three hours. Prerequisite: course 71E. Technique and repertoire of a selected tradition. Dance in relation to music, aesthetic principles, and cultural context. May be repeated once. Concurrently scheduled with course C471E.

C172B. Dance of West Africa (2 units). (Formerly numbered 172B.) Studio, three hours. Prerequisite: course 72B. Technique and repertoire of a selected region (e.g., Ghana, Guinea, Nigeria). Dance in relation to music, aesthetic principles, and cultural context. May be repeated once. Concurrently scheduled with course C472B.

C173B. Dance of Mexico (2 units). (Formerly numbered 173B.) Studio, three hours. Prerequisite: course 73B. Dance techniques of selected ethnographic regions. May be repeated once. Concurrently scheduled with course C473B.

Ms. Miranda (W,Sp)

C174B. Dance of Yugoslavia (2 units). (Formerly numbered 174B.) Studio, three hours. Prerequisite: course 74B. Dance techniques of selected ethnographic regions. May be repeated once. Concurrently scheduled with course C474B.

Mrs. Dunin

C174C. Dance of Spain (2 units). (Formerly numbered 174C.) Studio, three hours. Prerequisite: course 74C. Techniques and repertoire of a selected tradition. Dance in relation to music, aesthetic principles, and cultural context. May be repeated once. Concurrently scheduled with course C474C.

174D. Traditional Dances in the British Isles and Their Anglo-American Derivatives (2 units). Studio, three hours. Prerequisite: course 74D or consent of instructor. Particular genres involving more challenging technique than emphasized in course 74D, such as English ceremonial dance or solo step dancing from different regions.

Mr. Quigley

C176B. Dance of Israel (2 units). (Formerly numbered 176B.) Studio, three hours. Prerequisite: course 76B. Technique and repertoire from selected ethnographic regions. May be repeated once. Concurrently scheduled with course C476B.

C179A-C179Z. Dance of a Selected Culture (2 units each). (Formerly numbered 179A-179Z.) Studio, three hours. Prerequisite: course 79 (in corresponding culture area). Dance technique of a selected culture area. May be repeated for a maximum of four units. Concurrently scheduled with courses C479A-C479Z.

C180A-C180B. Studies in Dance Ethnography. (Formerly numbered 180A-180B.) Development of observation and recording skills for study of dance events, including both analytical consideration of selected ethnographies and development of skills. Concurrently scheduled with courses C279A-C279B. **C180A.** Labanotation and Labananalysis. Lecture, two hours; discussion, two hours; laboratory, two hours. **C180B.** Notation. Prerequisite: course C180A or consent of instructor.

Mrs. Dunin, Mr. Quigley (F,W)

181A. Dance Cultures of Asia. Introduction to dance cultures of Asia. How theories and practices of dance are influenced by historical and social factors and by ideological and aesthetic systems. Lectures illustrated with demonstrations, films, and slides.

Ms. Mitoma, Ms. Yodh

181B. Dance in Southeast Asia. Prerequisite: course 181A or consent of instructor. Survey of selected ritual, social, and court dances of Indonesia, Cambodia, Thailand, and the Philippines. Social, historical, and aesthetic factors. Lectures illustrated with demonstrations, films, and slides.

Ms. Mitoma

181C. Dance in East Asia. Prerequisite: course 181A or consent of instructor. Survey of dances of Japan, China, and Korea and factors which have influenced their development and social function. Consideration of relationship of dance to other art forms. Lectures illustrated with demonstrations, films, and slides.

181D. Dance in South Asia. Prerequisite: course 181A or consent of instructor. Survey of dance forms in India and Sri Lanka. Factors influencing development of dance, its social function, and its relationship to other art forms. Lectures illustrated with demonstrations, films, and slides.

Ms. Yodh (W)

182A. Dance Cultures of Africa. Illustrated survey of dance in sub-Saharan cultures, role of dance in society, historical background, and related folklore.

183A. Dance in Latin America. Prerequisite: course 73B or C173B or consent of instructor. Introduction to dances of Latin America, factors influencing their development and social function, consideration of relationship of dance to other art forms. Lectures illustrated with demonstrations, films, and slides.

Ms. Miranda (F)

C184B. Dance in the Balkans. (Formerly numbered 184B.) Introduction to dance occasions of the Yugoslavs, Greeks, Romanians, Bulgarians, Albanians, and Gypsies. Special attention to calendar and life cycle dance events of these populations in Southeast Europe and the Americas. Lectures illustrated with video, films, and slides. Concurrently scheduled with course C284B.

Mrs. Dunin

CM184D. Dance in the British Isles and North America: Anglo-American Tradition. (Same as Folklore CM184D.) Introduction to folklore research on dance, with examples primarily from the British Isles and related traditions in North America. Topics include search for origins, structural analysis of dance forms, and relation of dance to its contexts. Concurrently scheduled with course CM284D.

Mr. Quigley

C187A. Dance Cultures of Native American Indians. (Formerly numbered 187A.) Illustrated survey of Native American Indian dance, role of dance in society, historical background, and related folklore. Concurrently scheduled with course C287A.

190. Advanced Dance Performance (2 units). Lecture, one hour; laboratory, three hours. Study and performance of major choreography. May be repeated twice.

(F,W,Sp)

191. Repertory Dance Tour (2 or 4 units). Lecture, two hours; rehearsal or performance, four to six hours. Prerequisite: dance major or consent of instructor. Creation and performance of dance concerts in the community, with special emphasis on problems of touring dance company with a variable repertoire.

Ms. Leung (Sp)

196. Senior Project (2 or 4 units). Seminar, two hours; discussion, two hours, or laboratory, to be arranged. Prerequisites: course 100C, senior standing. Advanced project reflecting student's area of concentration. May be taken for a maximum of four units.

(W,Sp)

197A-197B. Proseminar: Dance Perspectives (2 units each). Prerequisite: upper division standing or consent of instructor. Consideration of aesthetics evolving from the work of great artists of our time.

199. Special Studies in Dance (2 to 8 units). Prerequisites: senior standing, consent of instructor.

Graduate Courses

211A-211F. Advanced Choreography. Lecture, two hours; laboratory, two hours. Prerequisite: course 113C or equivalent. Theoretical aspects of advanced choreography for students who have reached the level of self-initiation of substantial creative works. Refinement and realistic self-evaluation; critical counsel by acknowledged choreographers.

Ms. Catterson, Ms. Wang (F,W,Sp)

C220. Music as Dance Accompaniment. Prerequisite: course 20 or consent of instructor. Piano and percussion improvisation for dance. Choreographer/composer relationships. History of music for dance, with emphasis on contemporary trends. Music for dance performance. May be concurrently scheduled with course C120. Graduate students must complete two additional assignments. May not be applied toward M.A. degree requirements.

Ms. McCray (W)

221. Music for Dance. Prerequisite: course C120. Theory of aesthetic and functional relationship of music to dance.

Ms. McCray (Sp)

223. Principles of Dance Kinesiology. Prerequisite: consent of instructor. Scientific basis for movement for dance. Study of anatomical, kinesiological, and physical principles and demands of dance.

Ms. Gantz-Siegel

225A-225B. Theories of Movement: Laban Analysis. Lecture, two hours; laboratory, two hours. Theories of Laban movement analysis as means for analyzing and describing human movement. Use of Laban movement analysis to increase movement observation skills and theoretical understanding of role of movement in dance, nonverbal behavior, and cross-cultural dance studies. Focus on complex movement patterns and timing.

Ms. Gantz-Siegel (W, 225A; Sp, 225B)

226. Advanced Studies in Notation (2 units). Prerequisite: course 126. Selected problems in directing from notated repertoire; principles of teaching, comparative notation systems, writing projects.

230. Research Methods and Bibliography in Dance. Survey of methods for scholarly analysis of dance materials using systems from social sciences, physical sciences, and humanities.

Ms. Goodman, Mr. Quigley, Mrs. Thomas (F,Sp)

231A. Basic Issues in Dance and Dance Theory. Prerequisite: course 100C. Issues common to specialization areas in the field of dance: movement, presentation and transformation, composition, contexts (such as historical, ritual, social, educational, therapeutic), documentation (notation, film, video), production, etc.

Ms. Alter

C231B. Philosophical Bases and Trends in Dance (2 units). Prerequisite: course 231A. Study of present-day concepts and their relationship to other art forms and cultures. Concurrently scheduled with course C132B. Evaluations of graduate students based on extended reading list and term papers.

Ms. Alter

232. Aesthetics of Dance. Analysis of aesthetic concepts and critical methods used in writing about dance.

Mrs. Thomas

C233. Baroque Dance: Analysis and Re-creation. Lecture, two hours; laboratory, two hours. Prerequisites: courses 134A and 134B or equivalent experience, consent of instructor. Analysis and re-creation of 17th- and 18th-century dance as recorded in Feuillet notation. Study of cultural context, aesthetics, style, music. Social and theatrical dance forms. Concurrently scheduled with course C133.

234. Renaissance Dance: Analysis and Re-creation. Lecture, two hours; studio, two hours. Prerequisites: courses 134A and 134B, or consent of instructor. Analysis and re-creation of study of 15th- and 16th-century dance styles from Domenico da Piacenza through Cesare Negri.

Mrs. Thomas

235. History of Ballet. Prerequisites: courses 134A and 134B, or consent of instructor. Development of ballet from 19th-century Romanticism to the present. Stylistic differences in Italy, France, England, Denmark, and Russia.

Mrs. Thomas

236. Dance in the 20th Century. Prerequisites: courses 134A and 134B, or consent of instructor. Seminar in historical development of 20th-century dance.

Mrs. Thomas

237. Special Topics in Dance History. Prerequisites: courses 134A, 134B. Lecture, discussion, and analysis of a particular dance style or a specific time period in the historical development of the field. Topic to be identified by expertise of faculty member in charge. May be repeated once for credit.

240A. Production Arts Seminar. Lecture, two hours; discussion, two hours; laboratory, two hours. Prerequisite: consent of instructor. Examination and research of dance and performer/audience relationships in various historic periods and cultural settings. Impact of different aesthetic/directorial approaches to theatrical production of dance. Exploration of selection of locale, style, aural and visual enhancements.

(F)

240B. Production Arts Seminar. Lecture, four hours; laboratory, to be arranged. Prerequisite: consent of instructor. Study of elements of design. Development of a vocabulary for analysis of dance movement and choreography. Communication among collaborating artists. Conceptualizing and producing the design and sound score for a dance production.

Mr. Pressner, Mr. Ritter (W)

240C. Production Arts Seminar. Lecture, four hours; laboratory, to be arranged. Prerequisite: consent of instructor. Examination of contemporary art world, including arts organizations, funding sources, legal aspects of arts production, support groups, public relations and publicity. Relationship of film and video to choreographer and dancer. Choreographing for film/video. Adapting stage works to film/video.

Ms. Leung (Sp)

240D. Production Arts Seminar (2 units). Lecture, three hours. Prerequisite: consent of instructor. Corequisites: courses 441, 490. Topics from current problems of students preparing M.F.A. concert productions.

Ms. Leung (F)

248. Production Techniques for Dance Video. Lecture, one hour; laboratory, three hours. Recommended corequisite: course 249. Experiential dance video workshop concentrating on effective techniques of shooting, as well as choreographing movement especially for the camera. Choreographers/dancers and camerapeople/technicians with dance experience collaborate to establish a common vocabulary, set of values, and sensitivity to each other's concerns.

Ms. Kaplan

249. Dance and the Visual Media. Examination of aesthetic differences between dance, film, and video. Analysis of the record and documentary dance film, choreo-cinema, impact of MTV and VHS, as well as integration of media with performance.

Ms. Kaplan

251A-251D. Advanced Studies in Dance Education. Lecture, two hours; discussion, two hours. Prerequisite: course 151 or consent of instructor:

251A. Historical and Theoretical Framework for Dance Education. Development of a framework for teaching/learning process in dance and application to varied settings and populations.

Ms. Alter (W)

251B. Theories and Methods. Examination of current theories of artistic intelligence, body education systems, motor learning, and creativity and how they are related to teaching dance, including analysis of traditional models for developing alternative methodologies.

Ms. Alter (F)

251C. Curriculum Development in Varied Dance Settings. Issues include course/program/materials planning, development, implementation, and evaluation, with emphasis on analyzing underlying educational values affecting decision-making process.

Ms. Alter (W)

251D. Dance Administration. Relation of theories and practice to dance settings, clarifying issues of hierarchical structures, chains of command, staffing, facilities, and budget and why and how dance courses/programs succeed or fail.

Ms. Alter, Ms. Leung (Sp)

260A-260B-260C. Group Dynamics and Process (2 units each). Discussion, two hours; laboratory, two hours. Prerequisite: candidate in dance/movement therapy program. Experiential-didactic exploration of unfolding group dynamics and process within an ongoing movement therapy group.

Ms. Dosamantes (F,W,Sp)

260D-260E-260F. Group Dynamics and Process (2 units each). Discussion, two hours; laboratory, two hours. Prerequisites: courses 260A-260B-260C. Advanced-level exploration of unfolding individual and group dynamics, as well as process within context of an ongoing movement therapy group.

Ms. Fairweather (F,W,Sp)

261A-261B-261C. Dance Movement Therapy. Lecture, two hours; laboratory, two hours. Prerequisite: consent of instructor. **261A.** Theory and practice: historical overview of the field; introduction to basic theoretical concepts and their translation into practice. **261B.** Kinetic imagery: contribution of creative process and receptive knowing to therapy; unique functions served by movement and image modes explored theoretically and experientially. **261C.** Theory and method: assumptions and methods of current clinical approaches; students expected to develop their own theoretical model.

Ms. Goodman (F,W,Sp)

262A-262B-262C. Seminars: Dance/Movement Therapy. Lecture, two hours; laboratory, two hours. Prerequisites: courses 261A-261B-261C. **262A.** Developmental Perspective. Information of life-span approach to human development and object relationships established from infancy through senescence; concepts applied to individual clients demonstrated by clinical specialists. **262B.** Individual Psychodynamics and Therapeutic Intervention. Relationships between individual psychodynamics and therapeutic objectives. **262C.** Systems Perspective. System theory concepts applied to dyads, groups, families, and cultures.

Ms. Dosamantes (F,W,Sp)

C279A-C279B. Studies in Dance Ethnography. Development of observation and recording skills for study of dance events, including both analytical consideration of selected ethnographies and development of skills. Concurrently scheduled with courses C180A-C180B. **C279A.** Labanotation and Laban-analysis. Lecture, two hours; discussion, two hours; laboratory, two hours. **C279B.** Notation. Prerequisite: course C279A.

Mrs. Dunin, Mr. Quigley (F,W)

280A-280D. Advanced Studies in Dance Ethnology. (Formerly numbered 280A-280E.) Corequisites: courses C279A-C279B or consent of instructor. Dance viewed as an aspect of culture and human behavior.

280A. Survey of literature of the field of dance ethnology and in related fields of anthropology, folklore, and performance studies. **280B.** Advanced studies in methodologies and training in fieldwork to develop dance-focused ethnographies with emphasis on ethnographic interview. **280C.** Advanced studies in methodologies, ethnical questions, and training in fieldwork to develop dance-focused ethnographies with emphasis on technological tools for documentation. **280D.** Completion of fieldwork project through methodological skills developed in courses 280A-280C.

Mrs. Dunin, Mr. Quigley (F,W,Sp)

C284B. Dance in the Balkans. Introduction to dance occasions of the Yugoslavs, Greeks, Romanians, Bulgarians, Albanians, and Gypsies. Special attention to calendar and life cycle dance events of these populations in Southeast Europe and the Americas. Lectures illustrated with video, films, and slides. Concurrently scheduled with course C184B.

Mrs. Dunin

CM284D. Dance in the British Isles and North America: Anglo-American Tradition. (Same as Folklore CM284D.) Introduction to folklore research on dance, with examples primarily from the British Isles and related traditions in North America. Topics include search for origins, structural analysis of dance forms, relation of dance to its contexts. Concurrently scheduled with course CM184D. Mr. Quigley

C287A. Dance Cultures of Native American Indians. Illustrated survey of Native American Indian dance, role of dance in society, historical background, and related folklore. Concurrently scheduled with course C187A.

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading. (F,W,Sp)

400A-400B. Directed Professional Activities (2 to 8 units each). Prerequisite: consent of graduate adviser. Directed projects in professional editing, bibliography, filmography, videography, conference and festival direction, and other professional activities. May not be applied toward M.A. degree requirements. May be repeated for credit. S/U grading. (F,W)

C402A-C402B-C402C. Advanced Modern Dance Technique (2 units each). Lecture, one hour; studio, five hours. Technique levels IV and V. Studies in advanced technique, with emphasis on performing skills. Each course may be repeated once. Concurrently scheduled with courses C102A-C102B-C102C.

Mr. Brown, Ms. Catterson, Ms. Wang (F,W,Sp)

C407A-C407B-C407C. Advanced Ballet (2 units each). Lecture, two hours; laboratory, six hours. Prerequisite: course 106C. Advanced technique in classical ballet, with emphasis on performing skills. Each course may be repeated once. Concurrently scheduled with courses C107A-C107B-C107C. Ms. Hills (F,W,Sp)

441. Dance Production Practicum. Prerequisites: courses 240A, 240B, 240C. Corequisites: courses 240D, 490. Preparation of culminating concert.

Ms. Leung, Mr. Pressner

451. Teaching Assistant Seminar (2 units). Lecture, one hour; laboratory, three hours. Required of all Dance Department teaching assistants. Lectures, discussion, readings, and practice teaching. May be repeated once for credit. S/U grading. Ms. Gantz-Siegel (F,W,Sp)

452. Directed Field Study in Dance Education (2 to 8 units). Seminar, one hour; field study, two hours minimum. Prerequisite: consent of instructor. Directed field study to provide teaching experience in the community school or other approved site. No more than four units may be applied toward M.A. degree requirements. S/U grading. (F,W,Sp)

460A-460B-460C. Clinical Internship Supervision. Lecture, two hours; discussion, two hours. Corequisites: courses 262A-262B-262C, 596R. Practicum dealing with student internship: movement/observation, therapeutic goals, therapeutic process, and other clinical uses. S/U grading. (F,W,Sp)

460D-460E-460F. Clinical Internship Supervision (2 units each). Lecture, one hour; discussion, two hours. Prerequisites: courses 460A-460B-460C. Practicum dealing with student internship: movement/observation, therapeutic goals, therapeutic process, and other clinical uses. S/U grading. Ms. Goodman (F,W,Sp)

C471B. Dance of Indonesia (2 units). Studio, three hours. Prerequisite: course 71B or consent of instructor. Technique and repertoire of a selected dance tradition (e.g., Java, Bali, or Sunda). Dance in relation to music, aesthetic principles, and cultural context. May be repeated once. Concurrently scheduled with course C171B. Ms. Mitoma

C471C. Dance of Japan (2 units). Studio, three hours. Prerequisite: course 71C. Technique and repertoire of a selected tradition. Dance in relation to music, aesthetic principles, and cultural context. May be repeated once. Concurrently scheduled with course C171C.

Mr. Togi (F,W,Sp)

C471D. Dance of India (2 units). Studio, three hours. Prerequisite: course 71D. Technique and repertoire of a selected tradition. Dance in relation to music, aesthetic principles, and cultural context. May be repeated once. Concurrently scheduled with course C171D.

Ms. Yodh (W,Sp)

C471E. Dance of Korea (2 units). Studio, three hours. Prerequisite: course 71E. Technique and repertoire of a selected tradition. Dance in relation to music, aesthetic principles, and cultural context. May be repeated once. Concurrently scheduled with course C171E.

C472B. Dance of West Africa (2 units). Studio, three hours. Prerequisite: course 72B. Technique and repertoire of a selected region (e.g., Ghana, Guinea, Nigeria). Dance in relation to music, aesthetic principles, and cultural context. May be repeated once. Concurrently scheduled with course C172B.

C473B. Dance of Mexico (2 units). Studio, three hours. Prerequisite: course 73B. Dance techniques of selected ethnographic regions. May be repeated once. Concurrently scheduled with course C173B.

Ms. Miranda (W,Sp)

C474B. Dance of Yugoslavia (2 units). Studio, three hours. Prerequisite: course 74B. Dance techniques of selected ethnographic regions. May be repeated once. Concurrently scheduled with course C174B.

Mrs. Dunin

C474C. Dance of Spain (2 units). Studio, three hours. Prerequisite: course 74C. Techniques and repertoire of a selected tradition. Dance in relation to music, aesthetic principles, and cultural context. May be repeated once. Concurrently scheduled with course C174C.

C476B. Dance of Israel (2 units). Studio, three hours. Prerequisite: course 76B. Technique and repertoire from selected ethnographic regions. May be repeated once. Concurrently scheduled with course C176B.

C479A-C479Z. Dance of a Selected Culture (2 units each). Studio, three hours. Prerequisite: course 79 (in corresponding culture area). Dance technique of a selected culture area. May be repeated for a maximum of four units. Concurrently scheduled with courses C179A-C179Z.

480. Seminar: Research Topics (2 units). Forum in which faculty, students, and visitors make presentations and obtain feedback on research being planned, conducted, or recently completed. Students required to make a presentation each term they are enrolled for credit. May be repeated for a maximum of eight units. S/U grading.

490. Projects in Choreography and Performance (2 to 8 units). Tutorial, one three-hour rehearsal per unit per week minimum. Prerequisite: course 240C or consent of instructor. Creation, casting, and rehearsing of culminating concert, reflecting professional achievement in choreography or performance, in first term. In second term, direction of on-stage rehearsals for culminating concert by each student leading to fully staged performance. May be repeated for a maximum of 16 units.

498. Professional Internship in Dance (4, 8, or 12 units). Full- or part-time supervised fieldwork. Prerequisites: advanced standing in M.F.A. program, consent of instructor. Internship in dance, theater, film, or television organization. Participation in creative, administrative, or technical work of professionals in their specialties.

596A. Directed Individual Study or Research (2 to 8 units).

596R. Directed Study or Research in a Hospital or Clinic (2 to 8 units). S/U grading.

597. Preparation for Master's Comprehensive Examination (2 to 8 units). Preparation for M.A. or M.F.A. comprehensive examination. S/U grading.

598. Research for and Preparation of Master's Thesis (2 to 8 units). Research for and preparation of M.A. or M.F.A. thesis. S/U grading.

Scope and Objectives

Note: The Department of Design is examining the undergraduate and graduate curricula with a view to their revision. For further details, contact the Counselor, Department of Design, 1200 Dickson, UCLA, Los Angeles, CA 90024-1456.

The department offers a foundation of core courses, including color theory, perceptual drawing, three-dimensional design, computer, photography, and history, followed by a comprehensive group of integrated upper division courses in ceramics, fiber/textile, graphics, video, computer imagery, and environmental design which includes interior space planning and industrial design.

Design students are encouraged to work in experimental modes where materials and processes give new information and in the best of circumstances allow familiar visual and spatial relationships to be seen in new and diverse ways. The tools of design students range from highly technical electronic video and computer to the loom, potters wheel, camera, drafting table, pen, brush, and sometimes solely the hand and word. Through a balance of courses in theory, criticism, and practice, students develop in both vision and competence to realize new methods and new forms, both functional and expressive.

The Department of Design curricula lead to the Bachelor of Arts, Master of Arts, and Master of

Fine Arts degrees. All programs benefit from the rich and varied art resources at UCLA and in the Los Angeles community.

Bachelor of Arts Degree

Preparation for the Major

Required: Design 31A, 31B, 32A, 32B, 32C, 35A, 35B, 35C, and one course from Art History 50 through 57.

The Major

Required: Twelve upper division courses, selected in consultation with the adviser, including Design 161E, 162A, 165A, 167A, 171A, three courses from 161A, 161C, 161G, 161H, 161J, and History 154C or 154D, and four upper division design electives.

It is recommended that you have each term's program approved by the departmental adviser.

Note: Consult the *Schedule of Classes* for courses restricted to majors only.

Master of Arts Degree

Admission

Students are admitted in Fall Quarter only. An acceptable portfolio is required, in the form of slides (maximum 20) or videotape (if applying to the electronic imagery field). Acceptance is by a majority vote of the design faculty.

Applicants are expected to have a bachelor's degree from an accredited institution; it need not be in art or design. A minimum grade-point average of 3.0 overall in undergraduate upper division work is required. Your initial advisory committee is formed immediately after you are accepted.

Prospective students may contact the Counselor, Department of Design, 1200 Dickson, UCLA, Los Angeles, CA 90024-1456, for brochures and information.

Fields of Concentration

Communication imagery, image transfer, electronic imagery, computer imagery, ceramics, fiber structures, textiles, industrial design, exhibition design.

Course Requirements

A minimum of 36 quarter units in the department (or nondepartmental courses with the graduate adviser's consent) selected from courses numbered 161A through 295 (and possibly 596) is required, with a B average or better. These must include a minimum of 20 quarter units of design courses numbered above 200, of which at least four units must be from Design 290 and of which at least eight units must be devoted to a comprehensive project in your area of study. In addition, eight quarter units of art history are required (if you have a B.A. or B.F.A. in Art which includes a background in the history of art, you may substitute

eight units in other courses that are germane to your graduate pursuit).

A total of eight units of course 596 may be applied toward the 36 units required for the degree; four units may be applied toward the graduate course requirement.

Comprehensive Examination Plan

The M.A. program focuses on a scholarly project associated with a field of study and mastery of the technology. You meet with your committee to assess your progress on the comprehensive examination project throughout your two years in the program. Objectives of the design program are presented to students via faculty interaction, committee process, the graduate design curriculum, individual design practice, oral examination, and a master's statement exhibition of work accomplished.

Master of Fine Arts Degree

Admission

Admission requirements and procedures are essentially the same as for the M.A., except that the M.F.A. degree is the highest academic degree awarded in the studio disciplines of art and is conferred on the basis of outstanding achievement and consistent demonstration of quality throughout an original body of creative work. A higher standard of demonstrated ability and preparation in the area of intended study is usually applied in the portfolio review.

Fields of Concentration

Communication imagery, image transfer, electronic imagery, computer imagery, ceramics, fiber structures, textiles, industrial design, exhibition design.

Course Requirements

A minimum of 72 quarter units of upper division and graduate design courses is required, of which at least four units must be from Design 290 and of which at least 12 units must be devoted to a comprehensive project in your area of study.

Within those 72 units, a minimum of 52 quarter units in the 200 and 500 series must be taken in the field of specialization.

A minimum of 40 quarter units of art history in undergraduate or graduate study is required. Art history courses completed at the undergraduate level can be applied toward the 40-unit art history requirement but cannot be applied toward the 72 units required for the degree. Students with few or no art history courses in undergraduate study may take art history upper division or graduate courses at UCLA as electives to be applied toward the 40-unit art history requirement and toward the total units required for the degree. You may substitute a maximum of 12 units in other courses that are germane to your graduate pursuit, with the faculty adviser's consent.

A total of 12 units of course 596 may be applied toward the graduate and elective course requirements for the degree.

Comprehensive Examination Plan

The M.F.A. program focuses on the fostering of mature, professional-quality work with emphasis on experimentation and mastery of the technology associated with the field of study. You meet with your committee to assess your progress on the comprehensive examination project throughout your three years in the program. Objectives of the design program are presented to students via faculty interaction, committee process, the graduate design curriculum, design practice, oral examination, and a thesis exhibition of work accomplished.

Lower Division Courses

30A. Nature of Design. Lecture, three hours; discussion, one hour. Open to nonmajors. Understanding the design process, with emphasis on development of a visual language; study of historic, scientific, technological, economic, and cultural factors influencing design in our physical environment.

31A. Fundamentals of Design: Color. Lecture, two hours; laboratory, four hours. Course 32A may be taken concurrently. Exploration of color in theory and practice. Development and articulation of sensory concepts. Mr. Vasa in charge

31B. Fundamentals of Design: Form. Lecture, two hours; laboratory, four hours. Course 32B may be taken concurrently. Interrelation of three-dimensional form concepts as foundation for creativity; origination and solution of problems. Mr. Vasa in charge

32A. Perceptual Drawing. Demonstration/discussion/laboratory, eight hours. Course 31A may be taken concurrently. Translation of perception through delineation, drawing, and other descriptive media. Mr. Vasa in charge

32B. Visual Presentation. Studio, six hours. Prerequisite: course 32A. Course 31A or 31B may be taken concurrently. Translation of idea through delineation, drawing, and other descriptive media. Mr. Vasa in charge

32C. Drawing Methodologies. Studio, eight hours. Fundamentals of graphic representation, including orthographic and isometric projection methods, mechanical drawing and drafting, layout techniques, and introductory computer-aided drafting. Mr. Vasa in charge

35A. Introduction to Photography. Lecture, two hours; studio, four hours. Introduction to camera operation, photo processing, laboratory and lighting procedures. Mr. Vasa in charge

35B. Introduction to Tools and Processes. Lecture, two hours; studio, four hours. Introductory design shop course to develop necessary skills with traditional tools and power equipment, including fundamentals of joining, fastening, and finishing both natural and industrial materials, and their appropriate application in fabrication of design prototypes. Mr. Leeson

35C. Introduction to Computer. Lecture, two hours; studio, four hours. Introduction to the computer as a design tool and image development medium; overview of hardware and software, including microcomputers, disk operating systems (DOS), image processing systems, desktop publishing, computer loom, three-dimensional modeling and word processing systems. Mr. Brown, Mr. Kataoka

Upper Division Courses

(I) Historical and Comparative Studies in Design

161A. Ceramics. Lecture, three hours. Prerequisite: upper division standing. Open to nonmajors. Evolution of ceramic form through geographic, social, and technological influences. Mr. Saxe

161C. Communication Design. Lecture, three hours. Prerequisite: upper division standing. Open to nonmajors. Study of symbols, signs, and images within social, cultural, and historical context; analysis of print and electronic forms. Mr. Brown, Mr. Kataoka

161E. Modern Design History. Lecture, three hours. Prerequisite: upper division standing. Open to nonmajors. Historical survey of development of Western industrial culture. Studies of major factors influencing transition from industrial societies to postindustrial information societies.

161G. Shelter. Lecture, three hours. Prerequisite: upper division standing. Open to nonmajors. Survey of physical determinants of shelter forms within social, cultural, and historical contexts. Analysis of impact of environment, sociocultural factors, and technology on contemporary private and public buildings. Mr. Shapira

161H. Textiles. Lecture, three hours. Development of textile forms through geographic, cultural, stylistic, and technological influences. Mr. Bassler

161J. Video Imagery. Lecture, three hours; laboratory, to be arranged. Analysis of videographic form. Mr. Kataoka

(II) Concept and Form in Design

162A. Ceramics. Studio, six hours. Prerequisites: courses 31A through 35B. Introduction to ceramic materials and processes as a medium of cultural and individual expression. Investigation of handforming methods. Mr. Bermudez, Mr. Saxe

162B. Ceramics. Studio, six hours. Prerequisites: courses 162A, 165A, 167A, 171A. Introduction to use of potter's wheel. May be repeated after completion of courses 162B through 162F. Mr. Bermudez, Mr. Saxe

162C. Ceramics. Studio, six hours. Prerequisites: courses 162A, 165A, 167A, 171A. Creative development of ceramic materials and processes, with emphasis on indirect methods of forming such as use of molds and mechanically produced ceramic elements. May be repeated after completion of courses 162B through 162F. Mr. Saxe

162D. Ceramics. Studio, six hours. Prerequisites: courses 162A, 165A, 167A, 171A. Investigation of ceramic surface treatments and their relation to ceramic form; study of traditional and experimental materials and processes to achieve appropriate fired surfaces required for function and as means of creating decorative and expressive imagery. May be repeated after completion of courses 162B through 162F. Mr. Saxe

162E. Primitive Ceramics. Studio, six hours. Prerequisites: courses 162A, 165A, 167A, 171A. Investigation of materials and methods of Neolithic and other early ceramic traditions. Emphasis on creative use of primitive ceramic technology to better understand the nature of clay and effects of firing. Firing in the field without a kiln. May be repeated after completion of courses 162B through 162F. Mr. Bermudez, Mr. Saxe

162F. Advanced Ceramics. Studio, six hours. Prerequisites: courses 162A, 162B, 165A, 167A, 171A. Introduction of advanced technique in use of potter's wheel. Emphasis on individual creative experimentation with materials and methods introduced in courses 162A through 162E, in conjunction with advanced projects incorporating wheelformed elements. May be repeated after completion of courses 162B through 162F. Mr. Saxe

165A. Fundamentals of Communication Design. Studio, six hours. Prerequisites: courses 31A through 35B. Introduction to basic elements of graphic design and development of visual communication concepts. Exploration of letterforms, typography, symbols, and imagery through graphic and electronic media. Mr. Brown, Mr. Kataoka

165B. Communication Design: Printed Image. Studio, six hours. Prerequisite: course 165A. Development of concepts exploring visual potential of the graphic image. Technologies include screen printing, xerography, laser printing, ink jet, thermo dye — sublimated printing, offset lithography, video printing, and other reproduction processes. May be repeated after completion of courses 165B through 165E. Mr. Brown, Mr. Kataoka

165C. Communication Design: Video Image. Studio, six hours. Prerequisite: course 165A. Use of video technology (video systems, cameras, displays, editing, storage, and reproduction devices) to integrate image, sound, time, and motion. Emphasis on expression, continuity, and sequential patterns for video communication. May be repeated after completion of courses 165B through 165E. Mr. Kataoka, Ms. Tanaka

165D. Communication Design: Computer Image. Studio, six hours. Prerequisite: course 165A. Exploration of the computer as an image-generating tool. Development of visual ideas for print, television, and film applications using original images, videography, typography, and photography. May be repeated after completion of courses 165B through 165E. Ms. Allen, Mr. Brown, Mr. Kataoka

165E. Advanced Communication Design: Special Studies I. Studio, six hours. Prerequisites: three courses from 165A through 165D. Synthesis of studies and media presented in courses 165A through 165D. Student initiative encouraged, with emphasis on use of two or more media. May be repeated after completion of courses 165B through 165E. Mr. Brown, Mr. Kataoka

165F. Advanced Communication Design: Special Studies II. Studio, six hours. Prerequisites: minimum of three courses from 165A through 165E, consent of instructor. Emphasis on conceptual versatility based on experience in prior communication design courses. Students should be well-versed in all technologies available in program. May be repeated once. Mr. Brown, Mr. Kataoka

167A. Form in Industrialized Materials. Studio, six hours. Prerequisites: courses 31A through 35B. Exploration of form in relation to industrialized materials and manufacturing processes. Application of wood, metal, plastic, paper/cardboard, and ceramic materials. Use of industrial processes and fabricating methods. Development and design of products. Mr. Hartman, Mr. Shapira

167B. Fundamentals of Industrial Design. Studio, six hours. Prerequisites: courses 162A, 165A, 167A, 171A. Interrelation of function, form, materials, and technology. Fundamentals of industrial design. Studies of creative problem solving and methodology in design. Systems development of mass-produced products from concept to model. Introduction to computer-aided design. May be repeated after completion of courses 167B through 167F. Mr. Shapira

167C. Human Factors in Product and Space Planning. Studio, six hours. Prerequisites: courses 167A, 167B. Studies in psychological and physical requirements for designing products and spaces. Interpretation of anthropometric ergonomic information. Development of design concepts related to needs and use of objects and spaces. Computer applications included. May be repeated after completion of courses 167B through 167F. Mr. Hartman, Mr. Shapira

167D. Industrial Design: Product Development I. Studio, six hours. Prerequisites: courses 167A, 167B. Intermediate-level product planning, research, and development as a design tool. Studies in relation of design methodology to social and economic constraints. Development of design concepts and their realization at model and prototype stage. May be repeated after completion of courses 167B through 167F. Mr. Shapira

167E. Industrial Design: Product Development II. Studio, six hours. Prerequisites: courses 167A, 167B. Product planning, research, and development of design problems and information systems of higher complexity. Application of computer-aided design. Exploration of relation of design concepts to social, economic, and environmental impacts. May be repeated after completion of courses 167B through 167F. Mr. Shapira

167F. Advanced Industrial Design: Product Design, Research, and Innovation. Studio, six hours. Prerequisites: courses 167A, 167B. Further studies in computer applications in industrial design, from ideation, conceptualization, and programming to model building and manufacturing. Mr. Shapira

170A-170B. Space Planning. Lecture, two hours; studio, four hours. Prerequisites: courses 31A through 35B. Human factors and functional requirements in determining spatial configurations and relationships. **170A.** Emphasis on interior requirements in generating a building envelope. **170B.** Emphasis on environmental factors in creating exterior private and urban scale public spaces. May be repeated once for credit. Mr. Hartman, Mr. Shapira

171A. Textiles: Fundamentals of Fiber, Form, and Structure. Studio, six hours. Prerequisites: courses 31A through 35B. Introduction to terminology and scope of the field; orientation to materials and equipment; expansion of design concepts and theories toward making of fabrics; fundamental experiments in fabric making, dyeing, and patterning. Ms. Al Hilali, Mr. Bassler

171B. Fabric Surface. Studio, six hours. Prerequisites: courses 162A, 165A, 167A, 171A. Patterning through use of linoprint and silk screen processes, including experiments in traditional and random patterning systems; experiments utilizing single and multiple lino and screen printings. May be repeated after completion of courses 171B through 171F. Mr. Bassler

171C. Fabric Dye Processes. Studio, six hours. Prerequisites: courses 162A, 165A, 167A, 171A. Experimentation with essential dye systems and procedures, including immersion, direct application, and resist. May be repeated after completion of courses 171B through 171F. Ms. Al Hilali, Mr. Bassler

171D. On-Loom Textile Construction. Studio, six hours. Prerequisites: courses 162A, 165A, 167A, 171A. Experimentation utilizing loom for structural patterning, including two- to eight-harness weaves; float and supplementary elements; introduction to computer-generated patterning. May be repeated after completion of courses 171B through 171F. Mr. Bassler

171E. Non-Loom Fabric Making. Studio, six hours. Prerequisites: courses 162A, 165A, 167A, 171A. Introduction to terminology of the field, orientation to material and equipment, expansion of design concepts to construct fabrics without the loom as a tool, utilizing fiber and related pliable materials. May be repeated after completion of courses 171B through 171F. Mr. Bassler

171F. Textile Construction. Studio, six hours. Prerequisites: courses 162A, 165A, 167A, 171A. Development of two- and three-dimensional structures utilizing the loom, including experiments in construction of multiple-layer weaves, experiments in manipulation of woven surface, experiments in architecturally scaled fabrics. May be repeated after completion of courses 171B through 171F. Mr. Bassler

(III) Proseminars in Design

189. Topics in Design. Lecture/discussion, three hours; laboratory, to be arranged. Prerequisite: consent of adviser and instructor. Examination by faculty members of specific problems relevant to design theory and performance. Topics announced in advance. May be repeated for a maximum of 16 units.

193. Proseminar: Design — Senior Studies. Proseminar, three hours. Prerequisite: consent of adviser. Open to senior and advanced students through design faculty advisers. Examination by faculty members of specific problems relevant to design theory and performance. Topics announced in advance. May be repeated twice.

197. Honors Course. Hours to be arranged. Prerequisites: 3.0 GPA overall, 3.5 GPA in major, consent of instructor, junior or senior standing. Individual studies for majors. May be repeated once for credit.

199. Special Studies in Art (2 to 8 units). Hours to be arranged. Prerequisites: 3.0 GPA in major, consent of instructor, senior standing. Individual studies for majors. May be taken for a maximum of eight units.

Graduate Courses

Prerequisite for all courses: consent of instructor. All courses may be repeated for credit (unless otherwise noted) on recommendation of the adviser; they are not open to undergraduate students.

280. Communication Design: Graphics/Video/Computer (2 to 8 units). Studio, two to four hours. Advanced exploration of graphic and electronic imaging processes. Emphasis on research and individual creative manipulation of graphic media and electronic technologies. Development of original concepts and expressive applications. Mr. Brown, Mr. Kataoka

284. Ceramics (2 to 8 units). Studio or studio/seminar, to be arranged. Prerequisite: consent of instructor. Advanced creative research utilizing ceramic media. Emphasis on development of original, expressive, individually produced ceramic art. Mr. Saxe

287. Form and Structure (2 to 8 units). Studio or studio/seminar, to be arranged. Prerequisite: consent of instructor. Exploration of form, with emphasis on expressive experimentation in materials and processes. Mr. Vasa

288. Fiber Structures (2 to 8 units). Laboratory, two to four hours. Advanced formative work in traditional and experimental processes of fabric construction utilizing fiber media. Ms. Al Hilali, Mr. Bassler

290. Design Seminar: Collaborative View. Seminar, three hours. Critical and theoretical examination of concepts underlying the creative process, including initiation of an idea, its development, and its social and historical context.

292. Shelter (2 to 8 units). Development of individual projects to investigate concepts of shelter. Exploration of traditional and contemporary forms, methods, and materials. Mr. Shapira

293. Interior Space Design (2 to 8 units). Concept and practice of designing interior spaces. Evaluation of visual and functional needs for interior spaces (ranging from personal to social spaces) in two- and three-dimensional projects involving color, light, surface, materials, equipment, furniture, etc. Mr. Hartman, Mr. Shapira

294. Industrial Design (2 to 8 units). Laboratory, two to four hours. In-depth studies in topics such as design and management, person/object compatibility, visual identity programs, containing systems, transportation, design for developing countries, ergonomics, urban components, area studies, materials, and processes. Mr. Hartman, Mr. Shapira

295. Exhibition Design (2 to 8 units). Laboratory, two to four hours. Interpretation and presentation of materials for exhibition. Students may elect to work with instructor and gallery staff on regularly scheduled productions or they may outline their own project and proceed by producing studies, renderings, or schematics or by fabricating models.

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

596. Directed Individual Study or Research (2 to 8 units). Prerequisite: consent of instructor.

The Department of Design reserves the right to hold for exhibition purposes examples of any work done in classes and to retain for the permanent collection of its galleries such examples as may be selected.

Ethnomusicology and Systematic Musicology

Ikuko Yuge, B.A.
Tsun Y. Lui, *Emeritus*

Scope and Objectives

Ethnomusicology is a research field that combines the various techniques of musical analysis with the methods of the social sciences and humanities (i.e., the study of cultural systems including music). Although originally focused on folk, tribal, and Asian classical music traditions, ethnomusicology at UCLA includes the study of all styles of music in the world, including popular music, jazz, and even Western classical music when approached from a cultural analysis per-

spective. The undergraduate and graduate programs in ethnomusicology provide students with broad knowledge of world musics and methods currently used in their study.

The object of systematic musicology, a multidisciplinary field, is to answer fundamental questions on the nature and properties of music, not only as art but as empirical phenomena. At UCLA, this research orientation integrates the perspectives of aesthetics and philosophy, music theory, acoustics, sociology, psychology, organology, and semiotics, any of which can be cross-cultural, focusing on the systems or models discernible through these disciplines.

Bachelor of Arts in Ethnomusicology

Admission

Applicants are reviewed individually, based on a questionnaire, grade-point average, two letters of recommendation, test scores, and a personal statement of purpose.

Preparation for the Major

Required: Ethnomusicology and Systematic Musicology 10A-10B-10C, 20A-20B-20C, and 16 units of performance organizations (courses 91A-91Z).

The Major

Required: Ethnomusicology and Systematic Musicology M180, 181, C190A, six elective courses selected from 106A, 106B, 106C, 108A, 108B, M110A, M110B, 113 through 121, M126, 128, 130, 136A through 172B, 174, 176, C179, 199E, 199S, and four upper division courses from other departments related to your area of concentration and selected in consultation with a faculty adviser.

Master of Arts in Ethnomusicology

Admission

Applicants for the M.A. in either program must have completed a bachelor's degree in music or related fields of study. If your degree is not in music, you must provide evidence of your musical ability. You are required to submit (1) official transcripts of record, (2) a clear statement of purpose, (3) three letters of recommendation, (4) a research or term paper, and (5) proof of musical background or performance ability interpreted on a worldwide scale. For students with a bachelor's degree in music, the degree itself satisfies the musical background requirement. For students in other fields, the requirement is satisfied by official transcripts showing at least two years of music coursework, including music history and theory, or by an audition or monitored recording of any musical tradition.

Foreign Language Requirement

Reading knowledge of English and one other language relevant to your research and ap-

proved by the program committee in your area is required. The requirement may be fulfilled by (1) passing the Graduate School Foreign Language Test (GSFLT) with a score of 500 or better, (2) passing an examination administered by the department or another University department if no GSFLT is available in your selected language, or (3) completing the fifth term in the language with a grade of B or better, or (4) demonstrating literacy through submission of transcripts or other documents.

Course Requirements

A minimum of nine upper division and graduate courses is required, at least five of which must be at the graduate level. All candidates are required to take Ethnomusicology and Systematic Musicology 200, C201A, and one musical area seminar.

Students in ethnomusicology must also take courses C201B, 281A, 282, one additional musical culture area course, and one anthropology course. Students in the systematic musicology option must also take course C203, one course from 271, 273, 275, 283, or Musicology 269, and two terms of course 279. You may apply one term of course 292F toward your elective requirements.

You may select your remaining electives from all other upper division and graduate courses in the department, as well as from selected courses in Western music, a related discipline, or a particular area outside the department approved by your mentor.

If you have not taken courses 20A-20B-20C or their equivalent, you must audit them (unless you are in the systematic musicology option). Course 290 may be taken or audited but may not be applied toward the minimum graduate course requirement (you are encouraged to participate in course 290 in Spring Quarter when it functions as a general colloquium). No more than four units of 500-series courses may be applied toward the M.A. requirements.

Thesis Plan

You are required to submit an extended essay or other equivalent presentation involving the original investigation of a problem or subject of limited scope. The thesis topic, its presentation, and your three-member thesis committee must be approved by the program faculty before the committee can be appointed. Your presentation must demonstrate significant style, organization, creativity, and depth of understanding of the subject. You must complete the thesis within three years after you begin your M.A. coursework. If you do not, you normally must take the comprehensive examination (not applicable to the systematic musicology option) at the end of your third year in order to be considered for the Ph.D. program.

Comprehensive Examination Plan

This plan is not available to students in the systematic musicology option.

Students in ethnomusicology must first submit a research paper written during their master's studies to demonstrate their writing and scholarly abilities. After the paper is accepted, you take two written examinations, one in theory and method in ethnomusicology and one in a world music culture area or other approved topic reflecting your course of study. Failed examinations may be retaken only once during the following year. You must complete the comprehensive examination plan within three years after you begin your M.A. coursework.

Final Examination

The final examination is oral and includes discussion of both the thesis and related matters.

A final oral examination is required under both plans, providing opportunity for you to defend your thesis or research paper and written examination responses, and for your committee to explore further your suitability for admission to the doctoral program.

Ph.D. in Ethnomusicology

Admission

Applicants for the Ph.D. program in either area must normally have completed an M.A. or equivalent degree in one of the following: ethnomusicology, Western music, a non-Western music tradition, a related discipline, or area studies with a music specialization. If your qualifications do not meet the requirements for the department's M.A. degree, you must complete remedial coursework, as recommended by the department, before beginning the Ph.D. program.

Foreign Language Requirement

Reading knowledge of English and two other languages relevant to your research and approved by the program committee in your area is required. Normally one of the two other languages should be either French or German. See "Foreign Language Requirement" under the Master of Arts degree for testing procedures.

Course Requirements

If you have an M.A. in Ethnomusicology from UCLA, you must take 10 additional courses, including one musical culture seminar, one course from Ethnomusicology and Systematic Musicology 271, 273, 275, 282, or 283 (systematic musicology students may also select Musicology 269), three terms of course 290 (systematic musicology students may substitute three terms of course 279), and at least three terms of performance organizations — courses 91A-91Z (not required for systematic musicology students). You may apply one term of course 292F toward your elective requirements.

You may select your remaining electives from all other upper division and graduate courses in the department, as well as from selected courses in Western music, a related discipline,

or a particular area outside the department approved by your mentor.

If you do not have an M.A. in Ethnomusicology from UCLA, you may be required, in consultation with your mentor, to take other relevant and necessary courses beyond the 10 specified.

No more than two 500-series courses and two courses outside the department may be applied toward the Ph.D. degree requirements.

Qualifying Examinations

At the end of your first year of coursework, you may submit an examination schedule for approval. You are eligible to take the departmental written and oral qualifying examinations, under the direction of a five-member guidance committee, after you complete all course and foreign language requirements. Contact the Student Services Office for details and scheduling of the examinations.

After passing the departmental examinations, you submit your dissertation proposal and take the University Oral Qualifying Examination, which is administered by your doctoral committee.

Candidate in Philosophy Degree

You are eligible to receive the C.Phil. degree on advancement to candidacy for the Ph.D.

Dissertation/Final Oral Examination

The dissertation is an extended monograph; a final oral examination is required by the department.

Lower Division Courses

1A-1B. Fundamentals of Sound and Music of the World (2 units, 4 units). (Formerly numbered Music 5A-5B-5C.) Lecture, two hours; laboratory, one hour. Prerequisite: consent of instructor. Not open for credit to students with credit for former Music 5A-5B-5C. Acoustical makeup of sound (pitch, tone quality); tuning systems; modes and scales; harmony and polyphony; rhythm and meter; notational systems; relationships of music to culture. Laboratory includes ear training and instrumental techniques. (F,W)

10A-10B-10C. World Music Theory and Musicianship. Lecture, two hours; discussion, four hours; laboratory, two hours. Introduction to and participation in musical systems of selected world cultures through aural and written notations, vocal and instrumental skills, melodic and rhythmic dictation, improvisation, and composition. (F,W,Sp)

20A-20B-20C. Musical Cultures of the World. (Formerly numbered Music 140A-140B-140C.) Survey of musical cultures of the world (excluding Western art music), role of music in society and its relationship to other arts; consideration also to scale structure, instruments, musical forms, and performance standards. **20A.** Europe and the Americas. Not open to students with credit for former Music 140A. **20B.** Near East and Africa. Not open to students with credit for former Music 140B. **20C.** South Asia, Southeast Asia, and the Far East. Not open to students with credit for former Music 140C. Mr. Racy, Mr. Rice (F,W,Sp)

91A-91Z. World Music Performance Organizations (2 units each). (Formerly numbered Music 91A-91Z.) Activity, three hours. Prerequisite: consent of instructor. Group performance of traditional vocal and instrumental music of world cultures. May be repeated for credit without limitation. P/NP or letter grading. **91A.** Music and Dance of the American Indians; **91B.** Music of Bali; **91C.** Music and Dance of the Balkans; **91D.** Music of China; **91E.** Music and Dance of Ghana; **91F.** Music of India; **91G.** Music of Japan; **91H.** Music of Java; **91J.** Music of Korea; **91K.** Music of Mexico; **91L.** Music of Persia; **91M.** Music of Thailand; **91N.** Music of the Near East; **91P.** Music of Afro-Americans; **91Z.** Open Ensemble. (F,W,Sp)

Upper Division Courses

106A-106B-106C. Music of the American Indians. (Formerly numbered Music 153A-153B-153C.) American Indian music studied within broader context of styles, cultural values, and sources, including films, recordings, lectures, and limited group singing and dancing. **106A.** Eastern California-Yuman, Great Basin, and Northwest Coast Areas. Not open to students with credit for former Music 153A. **106B.** Athabaskan, Pueblo, Plains, and Modern Pan-Indian Trends. Not open to students with credit for former Music 153B. **106C.** Sociology of American Indian Music. Not open to students with credit for former Music 153C. Ms. Heth (Sp)

108A-108B. Music of Latin America. (Formerly numbered Music 131A-131B.) Prerequisite: consent of instructor. Course 108A is not prerequisite to 108B. Survey of traditional and contemporary musical culture. **108A.** Mexico, Central America, and the Caribbean Isles. Not open to students with credit for former Music 131A. **108B.** Latin South America. Not open to students with credit for former Music 131B. Mr. Loza

M110A-M110B. The Afro-American Musical Heritage. (Formerly numbered Music M154A-M154B.) (Same as Folklore M154A-M154B.) Lecture, three hours. Prerequisite: consent of instructor. Course M110A is not open to students with credit for former Music M154A; M110B is not open to students with credit for former Music M154B. Study of African music and its impact on the Americas; survey of development of various Afro-American musical genres from slave era to the present, including traditions in the West Indies and Central and South America. Ms. Djedje

M111. Ellingtonia. (Same as Afro-American Studies M145.) Music of Duke Ellington, his life, and far-reaching influence of his efforts. Ellington's music, known as "Ellingtonia," is one of the largest and perhaps most important bodies of music ever produced in the U.S. Covers the many contributions of other artists who worked with Ellington, such as composer Billy Strayhorn and musicians Johnny Hodges, Cootie Williams, and Mercer Ellington. Mr. Burrell (W)

113. Music of Brazil. (Formerly numbered Music 157.) Lecture, three hours. Prerequisite: consent of instructor. Not open to students with credit for former Music 157. History of ethnic and art music in Brazil, with some reference to Portuguese antecedents. Mr. Loza

115. Musical Aesthetics in Los Angeles. Lecture, three hours. Confronting aesthetics from classical perspective of art as intuition, examination on a cross-cultural basis of diverse musical contexts within the vast multicultural metropolis of Los Angeles, with focus on various musical networks and specific experiences of the Chicano/Latino, African American, American Indian, Asian, rock culture, Western art music tradition, and the commercial music industry. Mr. Loza (W)

117. American Popular Music. (Formerly numbered Music 144.) Not open to students with credit for former Music 144. Survey of history and characteristics of American popular music and its relationship to American culture, with emphasis on 20th-century popular music and its major composers, including comparison between traditional pre-1950 popular music and trends in post-1950 popular music. Ms. Heth

118. Development of Rock. (Formerly numbered Music 159.) Prerequisite: consent of instructor. Not open to students with credit for former Music 159. History of rock from the 1950s to the 1970s. In-depth survey of stylistic trends illustrated by pertinent examples and accompanied by extensive musical analysis.

120A-120B. Development of Jazz. (Formerly numbered Music 132A-132B.) Course 120A is not open to students with credit for former Music 132A; 120B is not open to students with credit for former Music 132B. Introduction to jazz; its historical background and its development in the U.S. Ms. Heth (F,W)

121. Cross-Cultural Perspectives in Jazz. (Formerly numbered Music 198W.) Prerequisite: consent of instructor. Exploration of assimilation and retention of jazz from the U.S. in various countries, with particular emphasis on cultural and social features which form the basis for new jazz-ethnic music blends.

123. Music of Bebop. Lecture, three hours. Study of jazz bebop tradition, including analysis of compositions and song forms, styles of improvisation, and developments from 1940 to the present. (Sp)

M124. Anglo-American Folk Song. (Same as English M111B and Folklore CM106.) Survey of Anglo-American balladry and folk song, with attention to historical development, ethnic background, and poetic and musical values. Mr. Porter

M126. Folk Music of Western Europe. (Formerly numbered Music M181.) (Same as Folklore M181.) Prerequisite: consent of instructor. Not open to students with credit for former Music M181. Introduction to forms and styles of traditional music in Western Europe. Historical and ethnological perspectives on this music combined with numerous recorded examples from major cultural subdivisions of the region. Mr. Porter

128. Folk Music of Eastern Europe. (Formerly numbered Music 142A.) Prerequisite: consent of instructor. Not open to students with credit for former Music 142A. Introduction to forms and styles of traditional music in Eastern Europe (including the Balkans). Historical and ethnological aspects of the music illustrated by numerous recorded examples from major cultural subdivisions of the area. Mr. Porter

130. Folk Music of the Mediterranean. (Formerly numbered Music 142B.) Lecture, three hours. Prerequisite: consent of instructor. Not open to students with credit for former Music 142B. Introduction to forms and styles of traditional music in the Mediterranean basin, particularly features of contrast, similarity, and cross-cultural interaction. Historical and ethnological aspects of the music illustrated by numerous recorded examples from major cultural subdivisions of the area. Mr. Racy

CM132. Celtic Folk Music. (Same as Folklore CM132.) Prerequisite: consent of instructor. Survey and analysis of indigenous traditional music in lands where a Celtic language is or was spoken into modern times. Instrumental and vocal genres, context and performance, social value and ideology. Concurrently scheduled with course CM232. P/NP or letter grading. Mr. Porter

136A-136B. Music of Africa. (Formerly numbered Music 143A-143B.) Prerequisite: consent of instructor. Course 136A is not open to students with credit for former Music 143A; 136B is not open to students with credit for former Music 143B. Investigation of historical aspects, social functions, musical instruments, and relationships of music to other art forms in selected areas of Africa. Ms. Djedje

146. Folk Music of South Asia. (Formerly numbered Music 148.) Lecture, three hours; laboratory, one hour. Prerequisite: consent of instructor. Not open to students with credit for former Music 148. Illustrated survey of some regional genres, styles, and musical instruments found in India and Pakistan, with special reference to religious, social, economic, and cultural context of their occurrence. Mr. Jairazbhoy

147. Survey of Classical Music in India. (Formerly numbered Music 152.) Not open to students with credit for former Music 152. Examination of melodic, metric, and formal structures of Indian classical music in context of religious, sociocultural, and historical background of the country.

Mr. Jairazbhoy

156A-156B. Music of China. (Formerly numbered Music 147A-147B.) Lecture, three hours; laboratory, two hours. Prerequisite: consent of instructor. **156A.** Not open to students with credit for former Music 147A. History and theory of music of China, including survey of various provinces and their instrumental techniques. **156B.** Prerequisite: course 156A. Not open to students with credit for former Music 147B. Introduction to various notational systems. Analysis of representative styles.

Mr. Jairazbhoy

157. History of Chinese Opera. (Formerly numbered Music 145.) Prerequisite: consent of instructor. Not open to students with credit for former Music 145. Survey of dramatic elements in Chinese operas, incorporating singing, dance, and acrobatics. Emphasis on traditional and modern Peking opera and its relation to Cantonese and other genres.

158A-158B-158C. Studies in Chinese Instrumental Music. (Formerly numbered Music 146A-146B-146C.) Lecture, three hours; laboratory, one hour. Prerequisite: consent of instructor. **158A.** Not open to students with credit for former Music 146A. Study of literature, major sources, paleography, theory, and philosophy of the Ch'in, including transcription and analysis. **158B.** Not open to students with credit for former Music 146B. Study of literature, major sources, paleography, theory, and philosophy of the Pi P'a, including transcription and analysis. **158C.** Not open to students with credit for former Music 146C. Comprehensive study of Chinese musical instruments, classification system, specific musical notation, and use in context of Chinese society.

(F,W,Sp)

160A. Survey of Music in Japan. (Formerly numbered Music 141A.) Lecture, three hours. Not open to students with credit for former Music 141A. Survey of main genres of Japanese traditional music, including Gagaku, Buddhist chant, Biwa music, Koto music, Shamisen music, and music used in various theatrical forms.

160B. Studies in Japanese Court Music. (Formerly numbered Music 141B.) Lecture, two hours; laboratory, one hour. Prerequisite: minimal musical ability. Not open to students with credit for former Music 141B. In-depth study of Japanese court music, including historical background, with emphasis on understanding the instrumental techniques and notation of various instruments of the court orchestra.

Mr. Togi, Ms. Yuge

170. Acoustics. (Formerly numbered Music 108.) Lecture, three hours. Prerequisite: consent of instructor. Not open to students with credit for former Music 108. Interrelationship of acoustical and musical phenomena. Tuning systems, consonance and dissonance, tone quality. Lecture, demonstration, and discussion; tours of instrumental collections and acoustical research facilities.

Mr. Kendall

172A-172B. Psychology of Music. (Formerly numbered Music 137A-137B.) **172A.** Not open to students with credit for former Music 137A. Designed for non-majors. Introduction to psychology of music; historical background and the broad field of study, including use of music as a stimulus, tests and measurements, and related modes of musical behavior. **172B.** Prerequisite: course 172A or consent of instructor. Not open to students with credit for former Music 137B. Study of psychological factors and problems in music from points of view of listener, performer, and composer.

Mr. Kendall

173. Experimental Research in Music. (Formerly numbered Music 184.) Prerequisite: consent of instructor. Recommended for music majors in all specializations. Not open to students with credit for former Music 184. Theories and processes in various modes of musical experimentation: physical, perceptual, psychological, pedagogical, quantificational, statistical procedures.

Mr. Kendall

174. Aesthetics of Music. (Formerly numbered Music 138.) Lecture, three hours. Not open to students with credit for former Music 138. Designed for nonmajors. Historical survey of musical aesthetic thought and practice. Selected readings and musical examples.

176. Problems in Musical Aesthetics. (Formerly numbered Music 187.) Prerequisite: course 174 or consent of instructor. Not open to students with credit for former Music 187. Critical approach to musical problems of aesthetic analysis, description, values, theories, including both Western and non-Western considerations.

Mr. Kendall

C179. Proseminar: Systematic Musicology. (Formerly numbered Music C191.) Lecture, three hours. Prerequisite: consent of instructor. Not open to students with credit for former Music C191. Introduction to systematic musicology, including basic readings in aesthetics/philosophy; anthropology, sociology, and ethnomusicology; psychology and acoustics. May be concurrently scheduled with course C203.

Mr. Kendall

M180. Analysis of Traditional Music. (Formerly numbered Music M180.) (Same as Folklore M180.) Prerequisite: consent of instructor. Not open to students with credit for former Music M180. Intensive study of methods and techniques necessary to understand traditional music.

Mr. Porter

181. Anthropology of Music. (Formerly numbered Music 149.) Prerequisite: consent of instructor. Not open to students with credit for former Music 149. Cross-cultural examination of music in context of social behavior and how musical patterns reflect patterns exhibited in other cultural systems, including economic, political, religious, and social structure.

Mr. Rice

C190A-C190B. Proseminars: Ethnomusicology. (Formerly numbered Music C190A-C190B.) Lecture, three hours. Prerequisites: courses 10A-10B-10C and 20A-20B-20C, or consent of instructor. Not open to students with credit for former Music C190A-C190B. May be concurrently scheduled with courses C201A-C201B.

Mr. Loza, Mr. Racy

199E. Special Studies in Ethnomusicology (2 to 4 units). Hours to be arranged. Prerequisites: senior standing, 3.0 GPA, consent of instructor and department chair. Individual studies in ethnomusicology resulting in research project. May be repeated for a maximum of eight units.

Ms. Heth and the Staff

199S. Special Studies in Systematic Musicology (2 to 4 units). Hours to be arranged. Prerequisites: senior standing, 3.0 GPA, consent of instructor and department chair. Individual studies in systematic musicology resulting in research project. May be repeated for a maximum of eight units.

Mr. Kendall and the Staff

Graduate Courses

200. Research Methods and Bibliography (6 units). (Formerly numbered Music 200B.) Lecture, three hours. Prerequisite: graduate standing. Not open to students with credit for former Music 200B. Guided writing, utilizing specific bibliography, in ethnomusicology and systematic musicology.

Mr. Kendall, Mr. Loza (W)

C201A-C201B. Proseminars: Ethnomusicology. (Formerly numbered Music C290A-C290B.) Lecture, three hours. Prerequisites: graduate standing, consent of instructor. Not open to students with credit for former Music C290A-C290B. Basic literature and schools of thought in the field of ethnomusicology from the late 19th century to the present. May be concurrently scheduled with courses C190A-C190B. Additional assignments, as well as evidence of greater depth of study, required of graduate students.

Mr. Loza, Mr. Racy

C203. Proseminar: Systematic Musicology. (Formerly numbered Music C291.) Lecture, three hours. Prerequisite: consent of instructor. Not open to students with credit for former Music C291. Introduction to systematic musicology, including basic readings in aesthetics/philosophy; anthropology, sociology, and ethnomusicology; psychology and acoustics. May be concurrently scheduled with course C179.

Mr. Kendall

207. Seminar: North American Indian Music. (Formerly numbered Music 288.) Seminar, three hours. Prerequisite: course 106A or 106B or 106C or consent of instructor. Not open to students with credit for former Music 288. Survey of representative musical styles of Native North American Indians, including problems of transcription, methods of analysis, symbolic implications of song texts. Emphasis on interrelationship between music and cultural context. Influence of Western music in acculturative contexts.

Ms. Heth

208. Seminar: Latin American Music. Seminar, three hours. Prerequisite: consent of instructor. Review of bibliographic, methodological, and philosophical bases of musical research in Latin America, working from both general and specific perspectives. Exploration of research problems and investigations on specific musical cultures and distinct genres of musical expression.

Mr. Loza (Sp)

211. Seminar: Afro-American Music. (Formerly numbered Music 289.) Seminar, three hours. Prerequisites: courses M110A-M110B or consent of instructor, graduate standing. Not open to students with credit for former Music 289. Intensive investigation of problems, theories, and methods of research related to study of Afro-American music. Emphasis on relationship of problems to representative styles of Afro-American music.

Ms. Djedje

228. Seminar: Balkan Music. (Formerly numbered Music 279.) Seminar, three hours. Prerequisite: course 128 or consent of instructor. Major issues in study of Balkan music, including song text analysis, music instruments, dance music, rituals and customs, minorities, and ideology.

Mr. Rice

CM232. Celtic Folk Music. (Same as Folklore CM232.) Prerequisite: consent of instructor. Survey and analysis of indigenous traditional music in lands where a Celtic language is or was spoken into modern times. Instrumental and vocal genres, context and performance, social value and ideology. Concurrently scheduled with course CM132. S/U or letter grading.

Mr. Porter

237. Seminar: African Music. (Formerly numbered Music 287.) Seminar, three hours. Prerequisite: course 136A or 136B or consent of instructor. Not open to students with credit for former Music 287. Intensive investigation of musical style; historical, social, and cultural aspects of indigenous musical traditions and related art forms.

Ms. Djedje

240. Music of Arabic-Speaking Near East. (Formerly numbered Music 284.) Lecture, three hours. Prerequisite: course 282 or course in ear training, analysis, and theory or consent of instructor. Not open to students with credit for former Music 284. Investigation of historical and cultural backgrounds, main musical styles, relationship between theory and practice and emphasis on mode and improvisation, and 20th-century trends. Concurrent participation in Near East performance ensemble (course 91N) required.

Mr. Racy

241. Music of Iran and Other Non-Arabic-Speaking Communities. (Formerly numbered Music 282.) Lecture, three hours. Prerequisite: course 282 or course in ear training, analysis, and theory or consent of instructor. Not open to students with credit for former Music 282. Comparative study of music of Iran and other related areas, including Turkey, with particular reference to their historical and cultural background, sources on music theory and aesthetics, instruments, style, technique of improvisation, and contemporary practice. Concurrent participation in Near East performance ensemble (course 91N) required.

Mr. Racy

248A-248B. Classical Music of India. (Formerly numbered Music 286A-286B.) Lecture, three hours. Prerequisite: course 146 or 147 or consent of instructor. Not open to students with credit for former Music 286A-286B. Study of history, theory, and practice of north and south Indian classical music. During first term, emphasis on music history and traditional theory; second term, analysis of present-day forms, styles, techniques, and musical instruments. Concurrent participation in Indian performance group (course 91F) required. Mr. Jairazbhoy

250A-250B. Music of Indonesia. (Formerly numbered Music 281A-281B.) Lecture, three hours. Prerequisite: course 20C or consent of instructor. Not open to students with credit for former Music 281A-281B. During first term, emphasis on music and related performing arts of Java. Focus on music and performing arts of Bali and other Indonesian islands during second term. Concurrent participation in one Indonesian performance group (course 91B or 91H) required. Mr. Jairazbhoy

252. Seminar: Music of Mainland Southeast Asia. (Formerly numbered Music 278.) Seminar, three hours. Prerequisite: course 20C or consent of instructor. Presentation of materials concerning musical performance traditions of Laos, Cambodia, Vietnam, Thailand, and Burma, both in mainland Southeast Asia and in the American context, with perspectives from archaeology, history, performance theory, applied anthropology, and ethnomusicology. Mr. Jairazbhoy

271. Seminar: Acoustics of Music (6 units). (Formerly numbered Music 273.) Seminar, three hours. Prerequisite: course 170 or consent of instructor. Selected topics in acoustics, including laboratory methodologies and practical applications. Topics include Western and non-Western instruments, tuning systems, psychoacoustics, and methods of spectral analysis. May be repeated once for credit. Mr. Kendall

273. Seminar: Psychology of Music (6 units). (Formerly numbered Music 276.) Seminar, three hours. Prerequisite: course 173 or consent of instructor. Selected topics in psychology of music, including recent findings in brain research, musical perception, learning, cognition, memory, therapy, affect, meaning, and measurement. May be repeated once for credit. Mr. Kendall

275. Seminar: Aesthetics of Music (6 units). (Formerly numbered Music 275.) Seminar, three hours. Prerequisite: course 176 or consent of instructor. Specific topics in Western and non-Western aesthetic thought, including value, meaning (semiotics), historical development of theoretical perspectives and critical theory, and interpretation. May be repeated once for credit.

279. Seminar: Systematic Musicology. (Formerly numbered Music 272.) Seminar, three hours. Prerequisites: course 170, consent of instructor. Exploration of specific topics in general field of systematic musicology covering disciplines such as anthropology, acoustics, aesthetics, music perception, philosophy, organology, sociology, and experimental approaches. May be repeated for credit. Mr. Kendall

281A-281B. Seminars: Field and Laboratory Methods in Ethnomusicology (6 units each). (Formerly numbered Music 254A-254B.) Seminar, three hours. Prerequisites: courses C201A-C201B. Fieldwork concepts and methods using technical equipment, conducting interviews, dealing with ethical issues, and designing research projects. Ms. Heth, Mr. Jairazbhoy

282. Seminar: Notation and Transcription in Ethnomusicology (6 units). (Formerly numbered Music 253.) Seminar, three hours. Prerequisites: courses 20A-20B-20C and C201A-C201B, or consent of instructor. Not open to students with credit for former Music 253. Survey of notations used in Western and non-Western musical cultures, with emphasis on notations used in ethnomusicology. Discussion of various types of mechanical sound registration equipment. Practical instruction in preparing musical notations and designing other types of diagrams useful in ethnomusicology.

283. Seminar: Study of Musical Instruments (Organology) (6 units). (Formerly numbered Music 255.) Seminar, three hours. Prerequisites: courses C201A-C201B or consent of instructor. Musical instruments studied in terms of their structures, performance contexts, cultural significance, and patterns of change. Mr. Racy

284. Seminar: Anthropology of Music. (Formerly numbered Music 277.) Prerequisites: courses C201A-C201B. Analysis of current anthropological paradigms and issues that have major impact on ethnomusicology. Mr. Rice

285. Seminar: Comparative Music Theory (6 units). (Formerly numbered Music 248.) Seminar, three hours. Prerequisite: consent of instructor. Not open to students with credit for former Music 248. Comparative study of codified music theories of selected cultures — Western and non-Western — considered in themselves and as expressions of their societies. Theory considered as a science of music; its place between cultural values and artistic practice in different civilizations. Mr. Jairazbhoy

M287. Seminar: Folk Music. (Formerly numbered Music M258.) (Same as Folklore M258.) Seminar, three hours. Prerequisite: consent of instructor. Not open to students with credit for former Music M258. Mr. Porter

290. Seminar: Ethnomusicology (6 units). (Formerly numbered Music 280.) Seminar, three hours. Prerequisites: courses 20A-20B-20C, 200, and C201A-C201B, or consent of instructor. May be repeated for credit. Mr. Racy, Mr. Rice

292A-292Z. Seminars: Special Topics in Ethnomusicology. (Formerly numbered 292.) Prerequisites: graduate standing, consent of instructor. Designed to utilize special interests and expertise of regular and visiting faculty; topics of current interest presently offered in ethnomusicology program.

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

495. Introductory Practicum for Teaching Apprentices in Ethnomusicology and Systematic Musicology (2 units). Eight weekly two-hour sessions, plus intensive training session during Fall Quarter registration week. Prerequisite: appointment as teaching apprentice in Ethnomusicology and Systematic Musicology Department. Required of all new teaching apprentices. Special course dealing with problems and practices of teaching ethnomusicology and systematic musicology at college level. May not be applied toward degree requirements. S/U grading. Ms. Heth

596. Directed Individual Studies (2, 4, or 6 units). (Formerly numbered Music 596B.) Only four units may be applied toward M.A. minimum course requirements.

597. Preparation for Master's Comprehensive Examination or Ph.D. Qualifying Examinations (2 or 4 units). May be repeated for credit. S/U grading.

598. Guidance of M.A. Thesis (4, 8, or 12 units). May be repeated for credit. S/U grading.

599. Guidance of Ph.D. Dissertation (4, 8, or 12 units). May be repeated for credit. S/U grading.

History/Art History (Interdepartmental)

For details on this undergraduate major, see Chapter 5 on the College of Letters and Science.

Timothy Mussard, D.M.A., *Visiting*
 Antoinette Perry, D.M.A., *Adjunct*
 Russell Steinberg, Ph.D., *Visiting*
 John Steinmetz, M.F.A., *Adjunct*
 Richard Todd, B.M., *Adjunct*
 Evan Wilson, *Adjunct*
 Kari Windingstad, B.A., *Visiting*
 Peter Yates, M.F.A., *Adjunct*

Scope and Objectives

As a result of the complete reorganization of the Music Department, there may be substantive changes to the curricula and degree programs listed below. Students with degrees in progress at the time these changes are approved should work closely with the advisers in their area to determine how these changes affect their degree requirements and options.

Due to the creation of the Departments of Musicology and Ethnomusicology and Systematic Musicology, courses in these areas that were formerly in the Music Department are listed under the new departments. Students should consult the graduate or undergraduate advisers in Schoenberg Hall for information on course equivalencies.

Students interested in a concentration in music history and literature should also consider the major in musicology offered through the College of Letters and Science.

The four-year Bachelor of Arts curriculum in Music is a classically oriented, balanced program of practical, theoretical, and historical studies, with related performance and academic studies in non-Western music. The major, designed for students who want to combine fine musicianship with academic excellence, is based on a core curriculum of theory, history, analysis, and individual and group performance. Given in the context of a liberal education, this provides a foundation for an academic or professional career and affords valuable cultural background.

At the graduate level, specialized studies leading to the degrees of Master of Arts and Doctor of Philosophy are offered in composition; specialized studies leading to the degree of Master of Fine Arts (performance practices) are offered in all classical solo instruments, voice, opera, and conducting.

Bachelor of Arts Degree

Admission

All applicants for admission and change of major are required to pass an audition in their principal performing medium.

Preparation for the Major

Required: Music 20A, 20B, 20C; 12 units from 60A through 65; two years (12 units) of performance organizations (courses 90A through 90N or Ethnomusicology and Systematic Musicology 91A-91Z) for a letter grade; and Musicology 26A-26B-26C. You must participate in a minimum of two different organizations over the

course of your stay at UCLA, one of which must be from courses 90A through 90H or Ethnomusicology and Systematic Musicology 91A-91Z. In addition, you are required to take one college year — or at least one course at level three — of French, German, Italian, or Spanish, which may be used to fulfill the school language requirement.

The Major

Required: A minimum of 48 units in upper division, including Music 120A, 120B, one course from 102, 105, 120C (individual specializations may specify a given course), Musicology 126A-126B-126C, and six courses selected from one of the specializations listed below.

Composition — Music 106A, 106B, 120C, 123A-123B-123C, and at least one course from 101, 109A, 109B, 109C, 116, 117, 118A, 118B, C122, additional terms of 123A-123B-123C, 156, C176, 199, Ethnomusicology and Systematic Musicology 117, 128, 130, 136A, 136B, 146, 156A, 156B, 157, 158A, 158B, 158C, 160A, 160B, 170, 181. In addition, you must have an original work completed and ready for rehearsal and performance on campus during your senior year.

Music Education — Music 100A-100B-100C, 116, 117, 120C, eight units from 115A through 115E. You are encouraged to take additional coursework from 112A, 112B, 118A, 118B, 199, Ethnomusicology and Systematic Musicology 170, 172B, 174 as your schedule allows. You are also encouraged to enroll in the type of performance organizations (courses 90A through 90N) that you plan to teach. If you are considering a music education specialization, you are encouraged to meet with a music education adviser during your freshman year.

Performance — Twelve units in performance instruction courses 160A through 165 (including junior and senior recital requirements), four units of chamber ensembles (Music 175), four units of elective courses from 101, 106B, 112A, 112B, 116, 117, 118A, 118B, 151A, 151B, 199, Musicology C127A through C127F, 130, 133, 134, 135A, 135B, 135C, 139, Ethnomusicology and Systematic Musicology 108A, 108B, 120A, 120B, 121, 170, 176, and one upper division elective course in music.

Theory — Music 120C and six courses selected in consultation with a faculty adviser.

Graduate Study

Graduate study in historical musicology is offered by the Musicology Department (see Chapter 5); study in ethnomusicology and/or systematic musicology is offered by the Department of Ethnomusicology and Systematic Musicology (see the listing earlier in this chapter).

Admission

Application for admission/fellowship due December 15

Supplementary application materials due January 15

Assessment examination ... end of January

Notice of acceptance or denial sent by March 15

Late applicants must meet the following deadlines:

Late applications for admission only (from addresses in the U.S. only) accepted until March 1

Supplementary application materials due April 1

Assessment examination early April

Notice of acceptance or denial sent by May 15

Failure to meet any deadline may result in a delay in action on an application for admission, as well as that for a fellowship or assistantship.

The application form must be filed according to instructions in the application booklet; all supplementary materials described below must be submitted to Mary Crawford, Department of Music, 2539 Schoenberg Hall Annex, UCLA, Los Angeles, CA 90024-1616.

Applicants for the M.A. and M.F.A. must have completed a Bachelor of Arts degree, or the equivalent, in Music or other fields of study, provided they have the musical training and musicianship necessary to pursue graduate work. Transcripts must show at least 52 quarter units of work outside music, including one college year (or its high school equivalent) of French, German, Italian, or Spanish and an average grade of at least B in the basic areas that normally constitute the undergraduate core curriculum in music (harmony, counterpoint, music history, analysis, and musicianship).

Applicants for the Ph.D. must have completed a Master of Arts degree in Music (or an equivalent degree). The degree normally will have been taken in the same field as the proposed doctorate. If you wish to obtain a doctorate in a field other than that of the M.A., additional coursework, as prescribed by the department, must be completed.

Applicants for all degrees (M.A., M.F.A., and Ph.D.) are also required to (1) take a departmental assessment examination (details are automatically sent after the application has been received), (2) submit a letter describing their background of study and stating their reasons for wishing to pursue graduate studies in music, (3) submit three letters of recommendation from former instructors and/or professionals with whom they have worked, and (4) submit written examples of their work — for composition, musical scores; for M.F.A. applicants, a repertoire list and sample concert or recital programs; for Ph.D. applicants, the M.A.

thesis or composition, if possible. In addition, applicants for the Ph.D. in composition with a cognate in ethnomusicology should submit a written sample of their work, as well as musical scores. M.F.A. applicants also are required to demonstrate by audition their general musical proficiency in their area of specialization. No application can be considered until the examination has been taken and all of the above materials have been received.

Major Fields

The Music Department offers the degrees of Master of Arts and Doctor of Philosophy in the field of composition and Master of Fine Arts (performance practices) in all classical solo instruments, voice, opera, and conducting.

Instructional Credential in Music

You may earn credentials for teaching music and other subjects in California elementary and secondary schools through the Graduate School of Education; completion of the instructional credential program in the Teacher Education Laboratory is required. Interested applicants should consult the Graduate School of Education (1605 Maxxam Building, 825-8328) and the faculty adviser in music for information.

Master of Arts Degree

Foreign Language Requirement

Reading knowledge of French, German, Italian, Spanish, or English (for students whose native language is not English) is required.

Course Requirements

You are required to complete a minimum of **nine courses**, five of which must be at the 200 level. Only four units of Music 596A, 596C, or 596D and four units of course 597 or 598 may be applied toward the total course requirement. No more than four units of all types of 500-series courses may be applied toward the minimum graduate course requirement. Upper division courses that may be applied toward the minimum of nine courses include 109A, 109B, 109C, 112A, 112B, 116, 117, 118A, 118B, 151A, 151B, 156, 175 (four units only), Ethnomusicology and Systematic Musicology 106A, 106B, 106C, 113, M126, 128, 130, 136A, 136B, 146, 147, 156A, 156B, 157, 158A, 158B, 158C, 160A, 160B, 170, 173, 176, M180, 181. Course 598 serves to guide the preparation of the thesis and should normally be taken during your last term in residence.

You must complete Music 251A, 266A-266B, one course from 251B or 251C or 251D, 252A, 252B, and 252C in sequence (with the option of substituting course 596A for 252C), and two electives on the recommendation of your graduate adviser. In addition to the thesis, you are expected to produce other works involving both instrumental and vocal music for both solo and ensemble forces. You are also responsible for the campus presentation of one original work during each year of residency.

Thesis Plan

The thesis is a work proposed by the student and approved by the composition and theory faculty. The topic and composition of the master's committee are approved by the faculty before submission to the Graduate Division.

Final Examination

The final examination is oral and includes discussion of both the thesis and related matters.

Master of Fine Arts Degree

Foreign Language Requirement

Reading knowledge of French, German, or Italian is required. International students may petition to substitute English. Candidates in the opera specialty must also be fluent in speaking one of these languages. The language requirement should be satisfied by the end of your first year in residence.

Course Requirements

You are required to complete a minimum of 18 courses, including at least six at the 200 level and six or more in the 400 series. Only four units of Music 596A, 596C, or 596D and eight units of course 598 may be applied toward the total course requirement. No more than four units of all types of 500-series courses may be applied toward the minimum graduate course requirement. The minimum residence requirement for the M.F.A. is two years.

Course requirements are as follows: two terms of Music 261A through 261F, six terms of 400-level performance instruction, two terms (eight units) of 598, seven elective courses, and Musicology 200A. Conducting students declare either a choral or instrumental specialization. Six terms of course 475 are required in the area of specialization (i.e., choral or instrumental) and at least two terms in the other area. (On a two-year program, the ratio would be four to one.) Recommended electives include courses 175, 596A, 596C, 596D, Ethnomusicology and Systematic Musicology 170, 176, and additional courses from the 200 and 400 series. A maximum of four units of chamber ensembles (course 175) may be applied toward the minimum 18 courses. Course 598 serves to guide the preparation of the final project and should normally be taken during your last two terms in residence.

Each year you must complete a solo recital on campus (preferably a noon concert) with a faculty committee in attendance to evaluate the performance. Conducting students present a program, or a substantial portion thereof, approved by the conducting faculty, either on or off campus.

The final project is to be completed during your last year in residence. A solo recital and appropriate scholarly paper are required in all areas. In addition, a major operatic performance is required in the area of opera. Conducting students present an on-campus program, or a

substantial portion thereof, with one of the department's performance organizations. The scholarly paper should be equivalent to a graduate seminar paper (15 to 25 pages in length) and should be concerned with performance problems which can be elucidated through research and analysis. The final version of the scholarly paper, with the accompanying recital program, must be submitted to the department in the format of a thesis.

The language requirement and a majority of the coursework must be completed before you submit the final project proposal and request for an M.F.A. committee. The proposal, which is to include the complete recital program and an abstract of the scholarly paper, should be submitted by Fall Quarter of your last year in residence.

Ph.D. Degree

Admission

See "Admission" under Graduate Study above.

Foreign Language Requirement

Reading knowledge of two languages selected from German, French, Latin, Italian, Russian, Spanish, or English (for students whose native language is not English; you may not use both English and the native language) is required.

Course Requirements

You may petition, on the advice of your graduate adviser, for exemption from specific requirements on the basis of equivalent work done at the M.A. level. You may complete the residence requirement by electing courses (with consent of the graduate adviser) from the 200 series or the list of 100-level courses under "Course Requirements" for the M.A.

You must complete Music 251A, 266A-266B, one course from 251B or 251C or 251D, six terms of 252A, 252B, 252C in sequence (with the option of substituting course 596A for 252C), and Musicology 200A. If you received the M.A. in composition from UCLA, you normally take a minimum of three terms of courses 252A, 252B, 252C in sequence in the Ph.D. program. If you received the M.A. in composition elsewhere, you normally take six terms of courses 252A, 252B, 252C in sequence, with the option of substituting course 596A for either or both 252Cs. In addition to the dissertation, you are expected to produce other works involving both instrumental and vocal music for both solo and ensemble forces. You are also responsible for the campus presentation of one original work during each year of residency.

You may elect to complete the optional cognate in ethnomusicology, in which you may substitute Ethnomusicology and Systematic Musicology C201A for Musicology 200A and Ethnomusicology and Systematic Musicology 282 or 283 for Music 251B or 251C or 251D. You are required to take two courses from Ethnomusicology and Systematic Musicology

207, 211, 237, 240, 241, 248A, 248B, 250A, 250B.

Qualifying Examinations

When you and your guidance committee believe you are ready to take the qualifying examinations, you should submit a schedule to the Student Services Office and the committee members listing the order in which the examinations are to be taken. The Student Services Office staff acts as proctor for the tests. Normally the written examinations are spread over a two-week period but should be completed within three weeks. Repeat examinations may be scheduled in consultation with the guidance committee and after a stipulated period of time. Contact the Student Services Office for details on the written examinations.

When you successfully complete the written examinations, the departmental oral qualifying examination can be scheduled. After passing this oral examination, you may submit your dissertation proposal and request for a doctoral committee; this committee administers the University Oral Qualifying Examination.

Candidate in Philosophy Degree

You are eligible to receive the C.Phil. degree on advancement to candidacy for the Ph.D.

Dissertation/Final Oral Examination

The dissertation consists of (1) an extended composition accompanied by a short description of the style and techniques of the work and (2) an analytical monograph dealing with some aspect of 20th-century music.

A final oral examination is required by the department.

Lower Division Courses

1A-1B. Fundamentals of Music. Lecture, three hours; discussion, two hours. Designed for nonmusic majors. **1A.** Introduction to elements of music: pitch and rhythm symbols, meter and time signatures, notation, scales, intervals, and chord structure. **1B.** Prerequisite: course 1A. Diatonic harmony; four-part writing, including inversions, sevenths, secondary dominants, and modulation; organization of melody and accompaniment; simple analysis; sight-singing and ear training.

Mr. Henderson, Ms. Karp

3A-3B. Preparatory Theory for Music Majors (2 units each). Lecture, two hours; discussion, one hour. Prerequisite: music major or consent of instructor. Course 3A is not open for credit to students with credit for course 1A; course 3B is not open for credit to students with credit for course 1B. Course for music majors in music fundamentals, including musicianship, theory, and terminology. Mr. Anderson

4A-4B-4C. Basic Musicianship (2 units each). Laboratory, three hours. Class instruction in elementary ear training and keyboard skills.

8G. Graduate Piano Sight-Reading (2 units). Prerequisite: graduate standing. Designed to help entering graduate students remedy entrance deficiencies, to be cleared by examination. May be repeated. S/U grading.

10. Computer-Assisted Sight-Singing Laboratory (2 units). Lecture, two hours; laboratory, one hour. Prerequisites: course 1A or equivalent, consent of instructor. Individualized, self-instructional approach for development of sight-singing skills through use of a music computer, keyboard instrument, and linear program learning.

12A-12B. Counterpoint (2 units each). Lecture, four hours. Corequisites: courses in the 11A-11F series. **12A.** Prerequisites: aptitude, achievement, and piano skills tests. 16th-century modal counterpoint in two parts, including writing of motets. **12B.** Prerequisites: courses 12A, 14B. 18th-century tonal counterpoint in two parts, including writing of inventions.

15. Art of Listening. Lecture, three hours; laboratory, one hour. Acquisition of listening skills through direct interaction with live performance, performers, and composers. Relationship of listening to theoretical, analytical, historical, and cultural considerations. Music as art and music as a cultural by-product.

Mr. Winter

20A. Music Theory I. Lecture, two hours; discussion, six hours. Prerequisite: passing score on departmental examination. Theory: species counterpoint through fifth species; description of triads and inversions. Musicianship: interval recognition; fixed-do solfège of diatonic melodies; one-part dictation of diatonic melodies; two-part dictation of small-compass, note-against-note melodies; simple rhythmic dictation; use of treble, alto, and bass clefs.

20B. Music Theory II. Lecture, four hours; discussion, four hours. Prerequisites: course 20A with a grade of C (2.0) or better, consent of instructor. Theory: diatonic harmony through secondary dominants and diminished sevenths; modulations to dominant and relative keys; writing of four-part chorales; style composition in baroque dance forms; introduction to figured bass notation. Musicianship: harmonic dictation, including secondary dominants and diminished sevenths, but not modulations; more advanced two-part dictation; chromatic one-part dictation; more advanced sight-singing; keyboard (three-part open score in homophonic textures, introduction to tenor clef).

20C. Music Theory III. Lecture, four hours; discussion, four hours. Prerequisites: course 20B with a grade of C (2.0) or better, consent of instructor. Theory: chromatic harmony including development of tonality, 1800 to 1850; appropriate analysis and style composition. Musicianship: advanced sight-singing; two-part contrapuntal dictation; keyboard harmony (harmonic sequences in major and minor keys); reading in open score of four homophonic parts in four clefs.

23. Composition Workshop (2 units). Prerequisites: courses 20A, 20B, and 20C, or consent of instructor. Introductory composition course which provides compositional experiences at a basic level. May be repeated once for credit.

Ms. Barkin, Mr. Bourland

Admission to courses 60A through 65 and the option of individual instruction or group instruction is based on the decision of the performance faculty at the time of the audition. Students may re-audition at the beginning of each academic year to gain admission to the courses. Permission to change from group instruction to individual instruction is based on the jury examination in Spring Quarter.

60A-65. Undergraduate Instruction in Performance (2 units each). Limited to music majors (all lower division majors, and upper division majors not in performance specialization). Individual instruction of one hour per week. Students must perform in a practicum once during academic year. Grades are assigned by applied instructor in Fall and Winter Quarters and by jury examination in Spring Quarter. May be repeated for credit.

60A. Violin.

Ms. Kamei, Mr. Treger

60B. Viola.

Mr. Wilson

60C. Cello.

Mr. Leonard

60D. String Bass.

Mr. Zibits

60E. Harp.

Ms. Neill

60F. Classical Guitar.

Mr. Norman, Mr. Yates

60G. Viola da gamba.

60K. Lute.

61A. Flute.

Mr. Stokes

61B. Oboe.

Ms. Northcutt

61C. Clarinet.

Mr. Gray

61D. Bassoon.

Mr. Steinmetz

61E. Saxophone.

Mr. Gray

62A. Trumpet.

Mr. Guarneri

62B. French Horn.

Mr. Todd

62C. Trombone.

Mr. Booth

62D. Tuba.

Mr. Johnson

63. Percussion.

Mr. Peters

64A. Piano.

Mrs. Harris-Heggie, Mr. Tzerko, and the Staff

64B. Organ.

Mr. Harmon

64C. Harpsichord.

Ms. Karp

65. Voice.

Mr. Mussard and the Staff

90A. Concert Choir (2 units). Activity, four hours. Prerequisite: audition. Select mixed ensemble of 50 to 60 voices performing chamber music appropriate for a concert choral ensemble, with emphasis on music after 1700. May be repeated for credit without limitation. P/NP or letter grading. Mr. Weiss

90B. Collegiate Chorus (2 units). Nonaudition mixed chorus of 50 to 150 voices performing medium- and concert-length choral works from baroque to the present. Collegiate Chorus performs only as part of "Choral Union," a large chorus made up of all of the choral ensembles. May be repeated for credit without limitation. P/NP or letter grading.

90C. Chamber Singers (2 units). Activity, three hours. Prerequisite: audition. Select mixed ensemble of 16 to 20 voices performing chamber choral music of all periods, with emphasis on Renaissance and baroque music. May be repeated for credit without limitation. P/NP or letter grading. Mr. Weiss

90D. Opera Workshop (2 units). Activity, six hours. Prerequisite: audition. Rehearsal and performance of scenes and complete operas, as well as repertoire, stage movement, and foreign language diction coaching. May be repeated for credit without limitation. P/NP or letter grading. Mr. Lumpkin

90E. Symphony Orchestra (2 units). Activity, four hours. Prerequisite: audition. Group performance of symphonic literature, as well as orchestral accompaniment for operatic and major choral works. May be repeated for credit without limitation. P/NP or letter grading. Mr. Robertson

90F. Symphonic Band (2 units). Prerequisite: audition. Group performance of instrumental music scored for band. May be repeated for credit without limitation. P/NP or letter grading. Mr. Henderson

90G. Wind Ensemble (2 units). Activity, four hours. Prerequisite: audition. Group performance of concert literature for wind ensemble. May be repeated for credit without limitation. P/NP or letter grading. Mr. Lee

90H. Collegium Musicum (2 units). Activity, three hours. Prerequisite: audition. Group performance of vocal and instrumental music of medieval, Renaissance, and baroque eras on period instruments. May be repeated for credit without limitation. P/NP or letter grading.

90J. Men's Glee Club (2 units). Activity, three hours. Prerequisite: audition. Select male chorus of 40 to 45 voices performing male choral music of all periods, with emphasis on popular and folk arrangements. May be repeated for credit without limitation. P/NP or letter grading. Mr. Weiss

90K. Women's Chorus (2 units). Activity, three hours. Prerequisite: audition. Select female chorus of 45 to 55 voices performing treble choral music of all periods, with emphasis on music after 1750. May be repeated for credit without limitation. P/NP or letter grading.

90L. Musical Comedy Workshop (2 units). Activity, six hours. Prerequisite: audition. Rehearsal and performance of scenes and complete musical theater productions, including repertoire and stage movement coaching. May be repeated for credit without limitation. P/NP or letter grading. Mr. Hall

90M. Marching and Varsity Bands (2 units). Activity, four hours. Prerequisite: audition. Group performance of special band arrangements for football and basketball games as well as special events. May be repeated for credit without limitation. P/NP or letter grading. Mr. Henderson

90N. Jazz Ensemble (2 units). Activity, three hours. Prerequisite: audition. Group performance of jazz and popular music in ensembles of 20 to 30 instruments. May be repeated for credit without limitation. P/NP or letter grading. Mr. Henderson

Upper Division Courses

100A-100B-100C. Music in American Education. Lecture, four hours; laboratory, one hour. Prerequisites: courses 20A, 20B, 20C, 116, 120A, 120B, 120C, Musicology 26A-26B-26C. Critical study and analysis of philosophy, history, organization, curriculum, and literature of music programs for elementary and secondary schools in American education. Each course may be taken independently for credit. **100A.** General Music; **100B.** Choral Music; **100C.** Instrumental Music. Mr. Anderson

101. Advanced Keyboard Harmony and Score Reading. Prerequisite: course 120B or consent of instructor. Intensive individual work in keyboard harmony and reading of chamber and orchestral scores. May be repeated once for credit.

102. Instrumentation. Lecture, three hours. Prerequisite: course 120B with a grade of C (2.0) or better. Not open for credit to students with credit for course 106A. Intended for music majors in specializations other than composition. Ranges and characteristics of instruments, exercises in scoring. Mrs. Barkin

105. Introduction to Composition. Lecture, three hours. Prerequisites: courses 20A, 20B, 20C, 120A, 120B, 120C. Intended for music majors in specializations other than composition. Nature of compositional process, with selected exercises in specific techniques and styles. Mr. Carlson

106A. Orchestration I. Discussion, three hours. Prerequisites: courses 20A, 20B, 20C. May be taken concurrently with courses 120A, 120B, 120C. Ranges and characteristics of instruments, with exercises in scoring. Mr. Reale

106B. Orchestration II. (Formerly numbered 106B-106C.) Discussion, three hours. Prerequisite: course 106A. Scoring and analysis for ensembles and full orchestra. Mr. Reale

109A-109B-109C. Composition for Motion Pictures and Television (2 units each). Prerequisites: courses 20A, 20B, 20C, 120A, 120B, and 120C, or consent of instructor. Course 109A is prerequisite to 109B, which is prerequisite to 109C. Composition of music for dramatic and documentary film in cinema and television. Techniques used in recording and editing. Mr. Raksin

112A-112B. Practical Scoring. Lecture, two hours; laboratory, two hours. Prerequisites: courses 20A, 20B, 20C, 120A, 120B, 120C, and Musicology 26A-26B-26C, or consent of instructor. Emphasis on practical problems in scoring for small and large ensembles at various educational levels. **112A.** Band Scoring; **112B.** Choral Scoring. Mr. Henderson, Mr. Weiss

113A-113B. Music Literature for Children. Lecture, three hours; laboratory, one hour. Prerequisites: course 1A and Musicology 2A, or consent of instructor. Course 113A is not prerequisite to 113B. Designed for nonmusic majors, particularly elementary education students. Study of music literature applicable to elementary school programs. **113A.** Emphasis on listening analysis, movement, and improvisation. **113B.** Emphasis on class performance — music reading, singing, and folk instruments.

115A-115E. Study of Instrumental and Vocal Techniques (1 unit each). (Formerly numbered 115A-115F.) Laboratory, three hours. Prerequisite or corequisite: course 20A. Applied studies in basic performance techniques and tutorial materials. Each of courses 115A-115D may be repeated once for credit. **115A.** Strings; **115B.** Woodwinds; **115C.** Brass; **115D.** Percussion; **115E.** Voice. Mr. Anderson

116. Introduction to Conducting (2 units). Lecture, three hours. Prerequisites: courses 20A, 20B, 20C, 120A. Fundamentals of conducting, including basic skills, techniques, analysis, and repertoire. Mr. Henderson

117. Study and Conducting of Instrumental and Choral Literature (2 units). (Formerly numbered 117A-117B.) Lecture, three hours. Prerequisite: course 116 or consent of instructor. Study and practice of conducting both instrumental and choral repertoire. In addition to further development of conducting gestures, focus on score study techniques, rehearsal techniques, style, and interpretation as applied to choral and instrumental repertoire. Mr. Anderson

118A-118B. Advanced Study and Conducting of Choral and Instrumental Literature (2 units each). Lecture, one hour; laboratory, two hours. Prerequisites: courses 116 and 117, or consent of instructor. Detailed investigation of musical styles, performance practices, and rehearsal techniques. Each course may be repeated once for credit. **118A.** Choral; **118B.** Instrumental. Mr. Lee, Mr. Weiss

119. Creative Process: Developing Imagination and Craft. Lecture, three hours. Prerequisites: courses 106A and 106B, or consent of instructor. In-depth philosophical and technical discussions as to nature of creativity, as well as compositional exercises intended to develop technique and imagination and to enrich musical vocabulary of students. Ms. Barkin, Mr. Carlson

120A. Music Theory IV. Lecture, four hours; discussion, four hours. Prerequisites: course 20C with a grade of C (2.0) or better, passing score on departmental first-year examination. Theory: baroque counterpoint including chorale prelude; two-part invention; exposition and first modulation of a three-part invention; canonic principles; analysis of inventions, canons, and fugues. Musicianship: sight-singing of extended chromatic melodies; advanced harmonic dictation (diatonic and chromatic); keyboard harmonization of modulating melodies; elementary score reading.

120B. Music Theory V. Lecture, four hours; discussion, four hours. Prerequisites: course 120A with a grade of C (2.0) or better, consent of instructor. Theory: advanced chromatic harmony including development of harmony from 1850; analytical projects; style composition. Musicianship: advanced score reading; advanced harmonic dictation; preparation for departmental examination.

120C. Music Theory VI. Lecture, four hours; discussion, two hours; listening, two hours. Prerequisites: course 120B with a grade of C (2.0) or better, consent of instructor. 20th-century harmonic language, including nonfunctional harmony, polytonality, free atonality, serialism, and minimalism. Mr. Krouse

121. Special Topics in 20th-Century Music. Lecture, three hours. Prerequisites: courses 20A, 20B, 20C, 120A, 120B, and 120C, or consent of instructor. In-depth study of certain aspects of 20th-century music ranging from individual composers and schools to ideological or stylistic concerns. May be repeated once for credit.

C122. Speculative Music Theory. (Formerly numbered 103A-103B.) Discussion, three hours. Prerequisites: courses 20A, 20B, 20C, 120A, 120B, and 120C, or consent of instructor. Techniques of tonal coherence studied through analysis and compositional exercises in styles of given periods. May be repeated once for credit. May be concurrently scheduled with course C222. Ms. Barkin

123A-123B-123C. Composition. (Formerly numbered 107A-107B-107C.) Lecture, three hours. Prerequisites: courses 20A, 20B, 20C, 120A, 120B, 120C. Course 123A is prerequisite to 123B, which is prerequisite to 123C. Designed for students specializing in composition. Vocal and instrumental composition in the smaller forms, including style composition and 20th-century techniques. Each course may be repeated once for credit, but first year must be taken in sequence. Mr. Bourland

136A-136B-136C. Historical Survey of Music Theater. Lecture, four hours; discussion, one hour. Historical survey of major works from music theater, tracing development of the art form from its European beginning to the American music theater of today. P/NP or letter grading. **136A.** Music Theater, Early Forms to 1900; **136B.** Music Theater, 1900-1945; **136C.** Music Theater, 1945-1975. Mr. Hall

150. Introduction to Music Criticism. Lecture, three hours. Prerequisite: music major or consent of instructor. Readings and discussion of music criticism past and current, and exercise in the writing of criticism of live concert events and recordings. Designed to aid students (performers, critics, or listeners) in verbalizing the experience of listening to music.

151A-151B. History of Musical Performance Practices. Prerequisites: courses 20A, 20B, 20C, 120A, 120B, Musicology 26A-26B-26C. General survey of musical interpretation and re-creation from viewpoint of stylistic authenticity. **151A.** Medieval through Baroque; **151B.** Classic through 20th Century.

155. Audio Technology for Musicians. Lecture, two hours; laboratory, three hours. Prerequisites: courses 20A, 20B, 20C, consent of instructor. Theory and practice of sound engineering in relation to concert and studio recording techniques. Mr. Cloud

156. Electronic Music: Theory and Techniques. Lecture, three hours; laboratory, three hours. Prerequisites: courses 107A-107B-107C. Designed for students specializing in composition. Applicable acoustical and electronic theory, history of technological and compositional development of classical electronic music. Analysis, manipulation of analog and digital synthesizers and ancillary equipment, invention and realization of materials. Mr. Bourland

158. New Orleans Jazz. Lecture, three hours; discussion, two hours. Major black and Creole figures in origin and development of jazz in New Orleans from turn of the 20th century through the 1960s, with emphasis on polycultural roots, local municipal traditions, and stylistic analysis.

160A-165. Undergraduate Instruction in Performance for the Performance Specialist (2 units each). Limited to upper division music majors who have been accepted by audition into performance specialization. Individual instruction of one hour per week. Students must perform in a noon concert once during their junior year and must present a full recital in their senior year. Grades are assigned by applied instructor in Fall and Winter Quarters and by jury examination in Spring Quarter. May be repeated for credit:

160A. Violin.	Ms. Kamei, Mr. Tregar
160B. Viola.	Mr. Wilson
160C. Cello.	Mr. Leonard
160D. String Bass.	Mr. Zibits
160E. Harp.	Ms. Neill
160F. Classical Guitar.	Mr. Norman, Mr. Yates
160G. Viola da gamba.	
160K. Lute.	
161A. Flute.	Mr. Stokes
161B. Oboe.	Ms. Northcutt
161C. Clarinet.	Mr. Gray

- 161D. Bassoon. Mr. Steinmetz
 161E. Saxophone. Mr. Gray
 162A. Trumpet. Mr. Guarneri
 162B. French Horn. Mr. Todd
 162C. Trombone. Mr. Booth
 162D. Tuba. Mr. Johnson
 163. Percussion. Mr. Peters
 164A. Piano.
 Mrs. Harris-Heggie, Mr. Tzerko, and the Staff
 164B. Organ. Mr. Harmon
 164C. Harpsichord. Ms. Karp
 165. Voice. Mr. Mussard and the Staff

C167. Selected Topics in Keyboard Literature. Lecture, three hours. Corequisite: course 164A or 164B or 164C or consent of instructor. In-depth study of selected topics in keyboard literature, concentrating on problems of performance through analysis, historical and comparative studies, and actual performances by participants. May be concurrently scheduled with course C267.

174A-174B-174C. The Language of Song (2 units each). (Formerly numbered 174A-174E.) Prerequisite: music major. Sounds of the language as applied to singing, including use of International Phonetic Alphabet, translation of art song texts, and application to student's current vocal repertoire. Background in the language is encouraged. **174A.** German; **174B.** French; **174C.** Italian. Mrs. Hast

175. Chamber Ensembles (2 units). Prerequisite: audition. Students must be at advanced level of their instrument to participate. Applied study of performance practices of literature appropriate to the ensemble. Students may enroll in two sections per term; total of 12 units may be applied toward degree requirements. May be repeated for credit.

C176. Electronic Music Composition. Lecture, three hours; studio, three hours. Prerequisites: course 156, advanced experience and accomplishment in serious composition (art music), consent of instructor. Limited enrollment. Analog and digital realizations of original compositional materials culminating in a composition at least five minutes in duration. May be concurrently scheduled with course C226. Mr. Bourland

C185. Historical and Philosophical Foundations of Music Education. Lecture, three hours. Prerequisite: completion of undergraduate music education specialization or consent of instructor. Development of music education in the U.S. according to established schools of thought. May be concurrently scheduled with course C225.

199. Special Studies in Music (2 or 4 units). Hours to be arranged. Prerequisites: senior standing, 3.0 GPA, consent of instructor and department chair. Individual studies in music resulting in research project. May be repeated for a maximum of eight units.

Mr. Harmon and the Staff

Graduate Courses

202. Analysis for Performers. Lecture, three hours. Prerequisite: graduate standing. Survey of analytical techniques and approaches required for professional performers, including phrase structure, harmonic rhythm and prolongation, small and large forms, theories of musical coherence, and understanding of styles. Mr. Harmon, Mr. Winter

203. Musical Terminology. Lecture, three hours. Prerequisite: graduate standing in music. Survey of musical terminology designed to clarify the performance and interpretation of vocal and instrumental music in the European tradition. Coverage of terms in Italian, French, and German.

Mr. Harmon, Mr. Winter

204. Music Bibliography for Performers. Lecture, three hours. Prerequisite: graduate standing in music performance. Survey of general bibliographic techniques in music, with emphasis on materials for the performing musician. Mr. Hammond, Mr. Winter

C222. Speculative Music Theory. Discussion, three hours. Prerequisite: graduate standing in music. Techniques of tonal coherence studied through analysis and compositional exercises in styles of given periods. May be repeated once for credit. May be concurrently scheduled with course C122.

Ms. Barkin

C225. Historical and Philosophical Foundations of Music Education. Lecture, three hours. Prerequisites: graduate standing, consent of instructor. Development of music education in the U.S. according to established schools of thought. May be concurrently scheduled with course C185. Additional assignments, as well as evidence of greater depth of study, required of graduate students.

C226. Electronic Music Composition. Lecture, three hours; studio, three hours. Prerequisites: course 156, graduate standing, advanced experience and accomplishment in serious composition (art music), consent of instructor. Limited enrollment. Analog and digital realizations of original compositional materials culminating in a composition of major proportions at least seven minutes in duration. May be concurrently scheduled with course C176. Mr. Bourland

251A-251D. Seminars: Special Topics in Composition and Theory. Seminar, three hours. Intensive exploration of specialized aspects of composition. May be repeated for credit. **251A.** Orchestration; **251B.** Specific Media; **251C.** Specific Styles; **251D.** Compositional Analysis. Ms. Barkin

252A-252B-252C. Seminars: Composition (6 units each). Lecture, three hours. Prerequisites: courses 106B, 107C. Course 252A is prerequisite to 252B, which is prerequisite to 252C. Courses may be taken out of sequence only with consent of instructor. May be repeated for credit.

261A-261F. Problems in Performance Practices. Seminar, three hours. Prerequisites: courses 151A-151B or consent of instructor. Investigation of primary source readings in performance practices as related to the period; analytical reports and practical applications in class demonstrations. May be repeated for credit. **261A.** Medieval; **261B.** Renaissance; **261C.** Baroque; **261D.** Classical; **261E.** Romantic; **261F.** Contemporary.

266A-266B. Seminars: Music of the 20th Century. Seminar, three hours. Prerequisite: graduate standing in music or consent of instructor. Discussion and analysis of major works of the 20th century, with emphasis on study of groups of works written at the same time in history. **266A.** 1900 to 1949; **266B.** 1950 to the Present. Mr. Ashforth, Mr. Reale

C267. Selected Topics in Keyboard Literature. Lecture, three hours. Corequisite: course 464A or 464B or 464C or consent of instructor. In-depth study of selected topics in keyboard literature, concentrating on problems of performance through analysis, historical and comparative studies, and actual performances by participants. May be concurrently scheduled with course C167.

270A-270G. Seminars: Music Education (6 units each). Lecture, three hours. Prerequisite: consent of instructor. May be repeated for credit. **270A.** History; **270B.** Non-Western Musics; **270C.** Curriculum Innovations; **270D.** Tests and Measurements; **270E.** Choral Literature; **270F.** Instrumental Literature; **270G.** General Topics.

370. Music in General Education (2 units). Prerequisite: graduate standing in Graduate School of Education teacher training program (all music students must take course 370 concurrently with Education 100, 112, 312, 315A, 315B, and supervised teaching). Critical discussions related to supervised teaching in progress. May be repeated twice for credit. Mr. Anderson

371. The Marching Band in Secondary Education (2 units). Prerequisite: course 193 or consent of instructor. Study of contemporary marching band as a component of the music curriculum in secondary education, including current approaches, practices, and problems associated with the marching band, as well as historical perspective. Mr. Henderson

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

460A-465. Graduate Instruction in Performance (6 units each). Limited to M.F.A. students. Individual instruction of one hour per week, with performance laboratory at discretion of instructor. Intensive study and preparation of musical literature in area of specialization. May be repeated for credit. **460A.** Violin; **460B.** Viola; **460C.** Cello; **460D.** String Bass; **460E.** Harp; **460F.** Classical Guitar; **460G.** Viola da gamba; **460K.** Lute; **461A.** Flute; **461B.** Oboe; **461C.** Clarinet; **461D.** Bassoon; **461E.** Saxophone; **462A.** Trumpet; **462B.** French Horn; **462C.** Trombone; **462D.** Tuba; **463.** Percussion; **464A.** Piano; **464B.** Organ; **464C.** Harpsichord; **465.** Voice.

470. Opera Studio for Graduate Students. Laboratory, six hours. Prerequisites: graduate standing, consent of instructor. Performance techniques and repertoire for graduate students in opera. Mr. Hall

472. Master Class in Opera (6 units). Laboratory, three hours. Limited to M.F.A. students. Intensive study and preparation of opera literature. May be repeated for credit.

475. Master Class in Conducting (6 units). Laboratory, three hours. Limited to M.F.A. students. Intensive study and preparation of musical literature in specialized field of conducting. May be repeated for credit.

495. Introductory Practicum for Teaching Apprentices in Music (2 units). Eight weekly two-hour sessions, plus intensive training session during Fall Quarter registration week. Prerequisite: appointment as teaching apprentice in Music Department. Required of all new teaching apprentices. Special course dealing with problems and practices of teaching music at college level. May not be applied toward degree requirements. S/U grading. Mr. Harmon

596A. Directed Individual Studies in Orchestration and Composition (2, 4, or 6 units). Only four units may be applied toward M.A. or M.F.A. degree requirements. May be repeated for credit.

596C. Directed Individual Studies in Music Education (2, 4, or 6 units). Only four units may be applied toward M.A. or M.F.A. course requirements.

596D. Directed Individual Studies in Performance Practices (2 to 12 units). Prerequisite: graduate standing. Only four units may be applied toward M.A. or M.F.A. degree requirements. May be repeated for credit.

597. Preparation for Master's Comprehensive Examination or Ph.D. Qualifying Examinations (2 or 4 units). S/U grading.

598. Guidance of M.A. Thesis or M.F.A. Final Project (4, 8, or 12 units). M.A. candidates may apply four units toward degree requirements; M.F.A. candidates may apply eight units toward degree requirements. May be repeated for credit. S/U grading.

599. Guidance of Ph.D. Dissertation (4, 8, or 12 units). May be repeated for credit. S/U grading.

Visiting Assistant Professor

Paul Humphreys, Ph.D. (*Ethnomusicology and Systematic Musicology*)

Scope and Objectives

The interdisciplinary major in world arts and cultures is available to students in both the School of the Arts and the College of Letters and Science. The course of study is designed to provide students with the conceptual tools with which to examine and extract meaning from the arts — regardless of language, culture, or geographical location. Students view the arts not as isolated phenomena, but as dynamic aesthetic forms which embody culture, history, and belief systems. The program is unique in that it places emphasis on cross-cultural study rather than the conventional focus on Western "high art" traditions. Techniques of inquiry and analysis are taken from

both the arts and letters and science frameworks and therefore require investigative research as well as aesthetic sensibility. The program encourages that both approaches be given equal consideration. In addition to these resources, the program utilizes UCLA's opportunities for participation in dance, music, and theater performance classes.

Students are encouraged to consider the Education Abroad Program during their junior year. Individuals interested in careers in elementary and secondary education should consult the program's student affairs officer.

Bachelor of Arts Degree

Admission

New students are admitted to the major only in Fall Quarter. Procedures and guidelines for the selection of freshman and transfer students are approximately the same. Applicants are reviewed individually, based on a questionnaire, grade-point average, two letters of recommendation, and a personal essay. For freshman applicants, college placement test scores are also considered.

Current UCLA students who petition to change their major are required to meet with the student affairs officer prior to application. An interview with the program chair may also be required. You are advised to take world arts and cultures courses during the term in which you apply to the program. You must have a minimum 3.0 overall grade-point average and no more than 120 quarter units. Change of major petitions are accepted in October for Winter Quarter and in April for Fall Quarter.

Concentrations

The *anthropology* concentration stresses both the empirical and theoretical foundations of cultural anthropology.

The *art history* concentration has particularly strong offerings for students interested in Asia, Africa, and the Americas.

The *dance* concentration includes studio opportunities, theory and research techniques, and history courses in both Western and non-Western dance.

The *folklore and mythology* concentration exposes students to a wide range of folklore forms derived from a diversity of cultures. (UCLA offers no undergraduate degree in folklore.)

The *music* concentration focuses on basic theory and skill in both Western and non-Western music. The theory option requires skill levels equivalent to lower division music majors, while the world musicianship option emphasizes ethnomusicology.

The *theater* concentration explores three fundamental aspects of Western and non-Western theater: (1) history and literature, (2) visual design, and (3) production and performance techniques.

Majors should be aware that the upper division course requirements in the major and in their college or school may not meet the upper division requirement for graduation (72 units for Letters and Science, 64 for the Arts). Additional upper division units may need to be taken to reach the unit total.

General College/School Requirements

You must satisfy the general education requirements of your school or college (Arts or Letters and Science). You may select either regardless of your concentration.

If you wish to confer with the student affairs officer regarding planning and major requirements, contact Silvily Kessler Thomas in the program office (206-3696).

The Major

The major includes a core of 28 units from anthropology, art history, dance, folklore and mythology, music, and theater; a concentration consisting of 36 units in one of these six disciplines; an eight-unit senior colloquium; and 12 units of upper division elective coursework.

The following courses are required:

(1) A core of seven interdepartmental courses (28 units): Anthropology 9, Art History 55A or 55B or 56A or 56B, Dance 70, 80A-80B, Ethnomusicology and Systematic Musicology 1A-1B, Folklore and Mythology 101, Theater 102E.

(2) A concentration of nine courses (36 units) in one of the following areas:

Anthropology — Courses 60, 133R, M154; group A: course 130 or 150; group B: any five courses from 110, 111, 112, 113P, 113Q, 113R, 114P, 114Q, 114R, 118A, 118B, 130P, 132, 133Q, 133R, 135A, 135B, 135C, 135S, M136Q, 137, 139, 139L, M140, 141, 143, 144, 145, 146, 151, 152, 153, 156, 161, 162, M162P, M164, 165, 167, M168, including one course from 171, 172R, M172T, 173Q, 174P, 174Q, 175P through 175U, 177.

Art History — Group A: one course from 50, 51, 54, 55A, 55B, 56A, 56B, 57; group B: eight courses from M102A, M102B, 104A, 104B, 114A, 114C through 114F, C115A through C115F, C117A, C117B, C117C, 118A, 118C, 118D, C119A, C119B.

Dance — Courses 134A, 134B, C180A-C180B; group A: four courses from 181A, 181B, 181C, 181D, 182A, 183A, C184B, C187A; group B: two two-unit courses from C171B through C179Z (note that courses 71B through 79Z are prerequisites for C171B through C179Z).

Folklore and Mythology — Group A: five courses from CM106, M111, 118, M122, M123B, 124, M140, M154A, M154B, 163, C165, C175, M180, M181, CM184D, 190, Classics 161, 168; group B: four courses from C105, C107, 108, M112, 113, M121, M123A, M125, M126, M127, M128, M129, 130, 131, M142, M149,

M150, M155, M170, 172, M182, 183, 190, German 134.

Music — Courses 20A, 20B, 20C (Western theory option) or Ethnomusicology and Systematic Musicology 10A-10B-10C; group A: two two-unit performance courses from Ethnomusicology and Systematic Musicology 91A-91Z; group B: one course with Western emphasis from Ethnomusicology and Systematic Musicology 117, 118, 120A, 120B, M126, 128, 174, Musicology 130, 135A, 135B, 135C, 139, Music 151A, 151B, 158; group C: four courses with non-Western emphasis from Ethnomusicology and Systematic Musicology 106A, 106B, 106C, 108A, 108B, M110A, M110B, 113, 121, 130, 136A, 136B, 146, 147, 156A, 156B, 157, 158A, 158B, 158C, 160A, 160B, M180, 181, C190A, C190B.

Theater — Courses 5A-5B-5C; group A: one course from 140A, 140B, 141A, 141B, 142A, 142B; group B: eight units from C117, 118A, 119A, 119B, 130A, 160, C190A, C190B; group C: three courses from M103A through 103F, 104D, 104E, 104F, 111A, 111B, 111C, Film and Television 106C, 128.

(3) World Arts and Cultures 190A-190B. These courses are the culmination of the major and focus on the culturally diverse communities of Los Angeles for field research. You select research topics on individual artists, community arts groups, or a genre of the arts.

(4) Three elective courses (12 units) which may be considered from the list below (or which may be petitioned in from a wide range of departments). In order to meet degree requirements, all electives must be related to the major and approved by the concentration adviser. The three courses selected to meet this requirement must be upper division courses from three different areas outside the area of concentration.

Honors Program

Majors enrolled in the College of Letters and Science who have a cumulative GPA of 3.0 overall and a cumulative GPA in major coursework of 3.5 or better are eligible to participate in the College Honors program. Interested students should consult the student affairs officer and the Honors Programs Office.

Upper Division Courses

100. Introduction to World Arts and Cultures. Lecture, three hours. Limited to world arts and cultures majors. Introduction to concepts and theories which integrate and underlie the multidisciplinary world arts and cultures major. Ms. Mitoma

120. Field Studies in World Arts and Cultures. Seminar, two to four hours; fieldwork in community settings, eight to 12 hours. Field studies in the arts. Seminars, guest speakers, and field trips provide theory and methodology related to ethnographic research and/or internship placements. Projects emphasize ethnic communities or international arts organizations. May be repeated once for credit.

Ms. Haut

130. Selected Topics in World Arts and Cultures. Lecture, three hours. Prerequisite: junior standing. Selected topics dealing with arts and cultures through disciplines of anthropology, art history, dance, folklore and mythology, music, and theater, and additional multidisciplinary cross-cultural areas. Consult *Schedule of Classes* for topics to be offered in a specific term. May be repeated twice for credit. P/NP or letter grading. Mr. Sellars

M162P. Destruction and Survival of Indigenous Societies. (Same as Anthropology M162P.) Lecture, three hours. Prerequisite: Anthropology 9 or upper division standing or consent of instructor. Clarification of concepts and forms of destruction and survival; analysis directed to different processes threatening the institutions of a group and its survival. Exploration of current theories of ethnocide and genocide for their relevance and validity. P/NP or letter grading.

Ms. Bray

190A-190B. World Arts and Cultures Senior Colloquium. Limited to senior world arts and cultures majors. Comparative and integrative studies in world arts and cultures, with application of concepts and content from the six disciplines of the major. Lecture/seminar format with World Arts and Cultures faculty during first term; topics include arts in a societal context, ethnicity and the individual, and problems and approaches to fieldwork. Faculty-directed individual projects during second term. Fieldwork on some aspect of various arts/expressive behaviors found in ethnic communities of Los Angeles. In Progress grading. Ms. Robinson (W,Sp)

199. Special Studies in World Arts and Cultures (2 to 8 units). Prerequisites: junior standing, 3.0 GPA in major, consent of instructor. Individual studies for world arts and cultures majors. May be taken twice for a maximum of eight units. (F,W,Sp)

Upper Division Electives

This is a sample list only; while all electives must be petitioned, many other options exist besides those listed.

Anthropology 110. World Archaeology

113P. Archaeology of North America

113Q. Prehistory of California Indian Cultures

113R. Southwestern Archaeology

114P. Ancient Civilizations of Western Middle America (Nahuatl Sphere)

114Q. Ancient Civilizations of Eastern Middle America (Maya Sphere)

114R. Ancient Civilizations of Andean South America

118A, 118B. Museum Studies

122. Biology, Society, and Culture

130. Study of Culture

130P. Study of the Individual in Society and Culture

133R. Aesthetic Systems

135C. Seminar: Psychocultural Studies

M136Q. Laboratory for Naturalistic Observations: Developing Skills and Techniques

137. Ethnography on Film

139, 139L. Field Methods in Cultural Anthropology

M140. Language in Culture

144. American Indian Ethnolinguistics and Sociolinguistics

145. Afro-American Sociolinguistics: Black English

146. Language and Culture in Polynesia: Past, Present, and Future.

150. Study of Social Systems

153. Evolution of Human Societies

M154. Women in Culture and Society

156. Comparative Religion

162. Contemporary American Indian Problems

M164. The Afro-American Experience in the U.S.

 C190B. Role of Management in Educational and Community Theater

School of Theater, Film, and Television

Gilbert Cates, Dean

The School of Theater, Film, and Television consists of the Department of Theater and the Department of Film and Television, which are recognized as national centers for higher education in these fields. From the ancient roots of theater as one of humanity's most essential and vital expressions to the avant-garde video, from the actor working in an empty space to the most technologically advanced areas of film, video, and stage production, students engage in the study and practice of these art forms, which together have reflected civilization's awareness of its own evolving consciousness in an unbroken time continuum extending from the remote past into the future. In its programs, the school recognizes and affirms the points of contact and interaction between these disciplines as well as their inherent differences as art forms and the different needs they fill in society.

Situated in the diverse and culturally rich environment of Los Angeles and drawing on the many resources of the campus at large, including the UCLA Center for the Performing Arts and the UCLA Film and Television Archive, the school provides the ideal setting for students to engage in the study and practice of these art forms so integral to a healthy and dynamic society.

7

School of Theater, Film, and Television

125 East Melnitz Building, (310) 825-9705

The Department of Theater and the Department of Film and Television are essential components of the rich intellectual, cultural, and professional life of UCLA. Depending on the degree involved, the school's programs are either strongly professional in nature or oriented toward advanced study and research in an atmosphere that recognizes and often draws on studio practice. Students in undergraduate courses receive a broadly based, liberal education within the context of either theater or film and television. The various specializations of the Master of Fine Arts degree are professional programs geared to preparing talented and highly motivated students for careers in the worlds of theater, film, and television. The M.A. and Ph.D. programs include critical study and research enhanced by an awareness of creativity and practice within the medium.

In the Department of Theater, approximately 275 undergraduate and 125 graduate students interact with over 35 faculty members, outstanding guests of national and international standing, and a professional staff of 35 in an exciting artistic community of theater production and study. Resources include the three theaters of the Macgowan Hall complex. Specializations in the Master of Fine Arts program include acting, directing, playwriting, design, technology and production management, and the producer's program. Most specializations include an internship.

In the Department of Film and Television, approximately 250 graduate and 90 undergraduate students are taught by a faculty of 35, whose number includes members of the Los Angeles and international film and television communities. Graduate specializations are offered in the areas of film and television production, screenwriting, animation, and the producer's program. The department's resources in Melnitz Hall include three sound stages, three television studios, extensive editing, scoring, and viewing facilities, and a complete animation laboratory for both traditional and comput-

er-generated animation. The UCLA Film and Television Archive, the largest in the U.S. outside the Library of Congress, forms a unique and priceless resource for research and class use.

Additionally the school participates in the undergraduate interdisciplinary world arts and cultures major which integrates art, dance, music, theater, anthropology, and folklore and mythology into one unique program.

Informative brochures on the school are available from the Student Services Office, 125 East Melnitz Building, UCLA, Los Angeles, CA 90024-1427.

If you are interested in obtaining instructional credentials for California elementary and secondary schools, consult the Graduate School of Education, 1605 Maxxam Building (825-8328).

Undergraduate Study

Admission

In addition to the University of California Undergraduate Application, departments in the School of Theater, Film, and Television require supplementary material. Detailed information on departmental requirements is mailed to you on receipt of your application. Deadline date for applications is November 30, 1992, for admission in Fall Quarter 1993.

The Study List

Each term the student Study List must include from 12 to 17 units. The school has no provision for part-time enrollment. After your first term, you may petition to carry more than 17 units (up to 20 units maximum) if you have an overall grade-point average of 3.0 (B) or better and have attained at least a B average in the preceding term with all courses passed. The petitions must be filed and approved by the Student Services Office by the end of the fourth week of instruction.

If you have not filed your Study List by the end of the second week of classes, you must obtain the consent of the dean of the school to continue for that term.

Graduate Courses

Undergraduate students who wish to take courses numbered in the 200 series for credit toward the degree must petition for advance approval of the department chair and the dean of the school and must meet the specific qualifications. Courses numbered in the 400 and 500 series may not be applied toward the degree.

Concurrent Enrollment

Enrollment at another institution or UCLA Extension while enrolled at UCLA is not permitted.

Requirements for Bachelor of Arts Degrees

Each student must meet six kinds of requirements for the B.A. degree: University, school, and unit requirements, as well as residence, major, and scholarship requirements. The requirements are as follows.

University Requirements

For information on the Subject A or English as a Second Language (ESL) and American History and Institutions requirements, see "Undergraduate Degree Requirements" in Chapter 2 of this catalog.

School of Theater, Film, and Television students enrolled in English as a Second Language 33A, 33B, 33C must take the courses for a letter grade.

School Requirements

The general requirements of the School of Theater, Film, and Television must be completed with a grade-point average of 2.0 or better.

Literature

*Three courses (12 units) in literature are required, at least one of which must be upper division. Any literature course taken in the original language can fulfill this requirement.

Majors and Degrees Offered

Film and Television	M.A., M.F.A., C.Phil., Ph.D.
Motion Picture/Television	B.A.
Theater	B.A., M.A., M.F.A., C.Phil., Ph.D.

*If Humanities 2A, 2B, or 2C is taken to meet the critical reading and writing requirement, it may not also be applied toward the literature requirement; English 4 may never be applied toward the literature requirement.

Foreign Language

You may meet this requirement by (1) scoring 3, 4, or 5 on the Advanced Placement (AP) foreign language examination in French, German, or Spanish, (2) presenting a UCLA foreign language proficiency examination score indicating competency through level three, or (3) completing one college-level foreign language course equivalent to UCLA's level three or above with an average grade of C or better.

International students whose entire secondary education has been completed in a language other than English may petition to be exempt from the foreign language requirement.

General Education (GE) Course Requirements

Listed below is a new set of general education (GE) requirements that are effective Fall Quarter 1992. Students admitted prior to Fall Quarter 1992 will be required to fulfill the previous GE requirements as listed in the catalog of their entrance year. For assistance in determining the set of requirements for which you will be held responsible, contact a school counselor.

For specific courses that fulfill the general education requirements, consult the Student Services Office before enrolling. Courses listed below are used only as a guideline for 1992-93. Note: Courses that include the review of film or television may not be applied toward any general education requirements.

Reciprocity with Other UC Campuses — Students who transfer to UCLA from other UC campuses and have met all general education requirements prior to enrolling at UCLA are not required to complete the School of Theater, Film, and Television general education requirements. Written verification from the college dean at the other UC campus is required. Verification letters should be sent to Director of Student Services, School of Theater, Film, and Television, 125 East Melnitz Building, UCLA, Los Angeles, CA 90024-1427.

Transfer Core Curriculum/Intersegmental General Education Transfer Curriculum — Transfer students from non-UC schools have the option to fulfill UCLA's lower division general education requirements by completing a transfer core curriculum or the Intersegmental General Education Transfer Curriculum (IGETC) prior to transfer. Each curriculum consists of a series of subject areas and types of courses which have been agreed on by the University of California and the California community colleges. The transfer core curriculum or IGETC significantly eases the transfer process, as all of UCLA's general education requirements are fulfilled when you complete it. If you select one of these options, you must complete it entirely before enrolling at UCLA. Otherwise, you must fulfill the School of Theater, Film, and Television general

education requirements. The Office of Undergraduate Admissions and Relations with Schools determines, at the point of admission, your completion of the transfer core or IGETC.

English Composition and Rhetoric

English 3 with a minimum grade of C or an AP score of 4 should be completed by the end of your freshman year and may not be taken on a Passed/Not Passed basis.

Critical Reading and Writing

One course from English 4, *Humanities 2A, 2B, or 2C with a minimum grade of C or an AP score of 5 should be completed by the end of your sophomore year and may not be taken on a Passed/Not Passed basis.

Art and Philosophy

Five courses (20 units), with no more than two courses from any single group:

Group A — Art History 50, 51, 54, 55A, 55B, 56A, 56B, 57, Classics 51, Design 30A.

Group B — Dance 134A, 134B, 181A, 182A, C187A.

Group C — Ethnomusicology and Systematic Musicology 20A, 20B, 20C, 108A, 108B, M110A, M110B, 113, 136A, 136B, 147, 174, Music 15, Musicology 2A, 2B, 13, 133, 134, 135A, 135B, 135C.

Group D — Philosophy 1, 2, 4, 5A, 6, 7, 8, 21, 22.

Social Sciences

Three courses (12 units), with no more than two courses from any single group. Whenever possible, two courses from a single sequence are recommended:

Group A — Chinese 50, Classics 10, 20, East Asian Languages and Cultures 60, Folklore and Mythology 15, German 100A, 100B, 100C, Italian 42A, 42B, Japanese 50, Jewish Studies 10, Korean 50, Portuguese M42, M44, Russian 99A, 99B, Spanish M42, M44, Women's Studies 10.

Group B — History 1A, 1B, 1C, 3A through 3D, 4, 5A, 5B, 6A, 6B, 6C, 7A, 7B, 8B, 8C, 8D, 9A through 9D, 10A, 10B, 11A, 11B, Political Science 10, 20, 40, 50.

Group C — Anthropology 8, 9, 33, Psychology 10, 11, Sociology 1, 2, 3, 4, 31.

Science

One course (four units) in physical sciences and one course (four units) in biological sciences:

Group A — Physical Sciences — Astronomy 2A, 2B, 3, 4, 5, 6, Atmospheric Sciences 2, 3, 4, 5, 6, Chemistry and Biochemistry 2, 11A, 11B, 15, Earth and Space Sciences 1, 2, 5, 8,

9, 15, Geography 1, Mathematics 2, 3A, 3B, 3E, 5, 31A, 31B, Physics 3A, 3B, 3C, 6A, 6B, 6C, 8A, 8B, 8C, 10.

Group B — Biological Sciences — Anthropology 7, 10, 12, 15, Biology 2, 3, 5, 6, 7, 8, 10, 13, 20, 21, 25, 40, 70, Earth and Space Sciences 16, Geography 2, 5, Microbiology and Molecular Genetics 6, 7, Psychology 15.

Unit Requirements

Double majors in the school, or between the school and other academic units, are not permitted.

You must complete for credit, with a passing grade, no less than 180 units and no more than 208 units, of which at least 64 units must be upper division courses (numbered 100 through 199). No more than 16 units of CED courses and eight units of freshman seminars or 300-level courses may be applied toward the degree. Credit for 199 courses is limited to 16 units, eight of which may be applied to the major. All 199 courses must be taken for a letter grade.

UCLA Extension courses with the prefix X on those numbered in the 1 through 199, 200, 300, 400, or 800 series may not be applied toward the degree.

Credit earned through the College Entrance Examination Board (CEEB) Advanced Placement Tests may be applied toward the general education requirements. Portions of Advanced Placement Test credit may be evaluated by corresponding UCLA course numbers (e.g., History 1C). If you take the equivalent UCLA course, unit credit for such duplication is deducted before graduation.

Residence Requirements

You are "in residence" while enrolled and attending classes at UCLA as a major in the School of Theater, Film, and Television. Of the last 45 units completed for the bachelor's degree, 35 must be earned in residence in the School of Theater, Film, and Television. No more than 18 of the 35 units may be completed in UCLA Summer Sessions.

Courses in UCLA Extension (either class or correspondence) may not be applied toward any part of the residence requirements.

Major Requirements

A major is composed of not less than 14 courses (56 units), including at least nine upper division courses (36 units). The theater major includes both lower and upper division courses. Those listed under "Preparation for the Major" (lower division) must be completed before upper division major work is undertaken. The motion picture/television major requires upper division work only.

You must complete your major with a scholarship average of at least a 2.0 (C) in all courses in order to remain in the major and must be

*If Humanities 2A, 2B, or 2C is taken to meet the critical reading and writing requirement, it may not also be applied toward the literature requirement; English 4 may never be applied toward the literature requirement.

recommended by the chair of your major department. All courses in the school must be taken for a letter grade.

As changes in major requirements occur, you are expected to satisfy the new requirements insofar as possible. Hardship cases should be discussed with the departmental adviser, and petitions for adjustment should be submitted to the dean of the school when necessary.

Any department offering a major in the School of Theater, Film, and Television may require a general final examination.

Scholarship and Minimum Progress

A 2.0 (C) average is required in all work attempted at the University of California, exclusive of courses in UCLA Extension and those graded Passed/Not Passed. A C average is also required in all upper division courses in the major taken at the University, as well as in all courses applying to the general education and University requirements.

Minimum Progress — You are expected to complete satisfactorily at least 36 units during any three consecutive terms in residence; you are placed on probation if you fail to pass these units. You are subject to dismissal if you fail to pass at least 32 units in three consecutive regular terms in residence.

Honors

To receive **Dean's Honors** in the School of Theater, Film, and Television, you must have at least 12 graded units per term with a grade-point average of 3.8 for less than 16 units of work (3.7 GPA for 16 or more units). The honor is posted on your transcript for the appropriate term. You are not eligible for Dean's Honors in any given term if you receive an Incomplete or a Not Passed (NP) grade, change a grade, or repeat a course.

Honors at graduation are awarded to students with superior grade-point averages. To be eligible, you must have completed 90 or more units for a letter grade at the University of California. The levels of honors and the requirements for each level are: *cum laude*, an overall average of 3.671; *magna cum laude*, 3.768; *summa cum laude*, 3.84.

Counseling and Program Planning

The School of Theater, Film, and Television offers advising, program planning in the major and general education requirements, and individual meetings with departmental counselors, including a yearly degree check sent to each student. Prior to registration and enrollment in classes, each new student is assigned to a counselor in the major department. For further counseling information, contact the Student

Services Office, School of Theater, Film, and Television, 125 East Melnitz Building (825-9705).

Graduate Study

The advanced degree programs offered in the School of Theater, Film, and Television provide graduate students with unique research opportunities when combined with special resources, such as the University Research Library, the special collections of the Arts Library, and the University's exhibition and performance halls.

The School of Theater, Film, and Television cooperates with the UCLA John E. Anderson Graduate School of Management in offering a Master of Business Administration (M.B.A.) in Entertainment Management. Participating students serve term-long internships with such professional arts organizations as the Los Angeles County Museum of Art, the Mark Taper Forum, and the Los Angeles Philharmonic Orchestra.

The producers program is a relatively new M.F.A. management program in the Departments of Theater and Film and Television, with options in either theater or film and television.

A program in teaching is offered by the Graduate School of Education in each of these areas.

Fellowships, grants, and assistantships are available through the dean of the Graduate Division. The Graduate Affirmative Affairs Office provides counseling, academic support, and financial assistance to ethnic minority students.

Admission

In addition to requiring that applicants hold a bachelor's degree from an accredited U.S. institution or an equivalent degree of professional title from an international institution, each department in the school has limitations and additional requirements. Detailed information can be found in the departmental listings which follow.

For information on the proficiency in English requirements for international graduate students, refer to "Graduate Admission" in Chapter 3.

Other Requirements

Requirements to fulfill each degree objective vary according to the degree and the department. See the departmental listings which follow for specific requirements and procedures.

Film and Television

2310 Macgowan Hall, (310) 825-5761

Professors

Jerzy Antczak, M.A.
Nicholas K. Browne, Ed.D.
Gilbert Cates, M.A., *Dean*
Lewis R. Hunter, M.A.
Dan F. McLaughlin, M.A.
Jorge R. Preloran, B.A.
Robert Rosen, M.A., *Chair*
Delia N. Salvi, Ph.D.
Frank A. Valert
Peter Wollen, B.A., *Acting*

Professors Emeriti

William B. Adams, M.A.
John D. Boehm, M.A.
Edgar L. Brokaw, B.A.
Shirley M. Clarke, A.A.
Arthur B. Friedman, Ph.D.
William Froug, B.J.
Hugh M. Grauel, M.A.
Richard C. Hawkins, M.A.
Walter K. Kingson, Ed.D.
Mark McCarty, M.A.
William H. Menger, M.A.
Darrell E. Ross, M.F.A.
Ruth E. Schwartz, Ph.D.
John W. Young, M.A.

Associate Professors

Janet Bergstrom, Ph.D.
Teshome H. Gabriel, Ph.D.
Stephen D. Mamber, Ph.D.
Robert A. Nakamura, M.F.A.
Howard Suber, Ph.D. (*Distinguished Teaching Award*)
Richard Walter, M.A.

Assistant Professor

Chon A. Noriega, Ph.D.

Lecturers

Robert Bookman, J.D.
Scott Brownlee, C.A.P.
Dee Caruso, M.A.
Robert Friedman
Chad Hoffman, B.A.
Gerald Isenberg, M.B.A.
Robert Jennings
David Nelson, M.F.A.
Arnold Rifkin
Tom Sherak, A.A.
Nigel Sinclair, LL.M.
C. Fabian Wagmister, M.F.A.
Michael Yanover, M.B.A.

Adjunct and Visiting Professors

Harold Ackerman, M.A., *Adjunct*
Max Almy, M.F.A., *Visiting*
Burt Brinckerhoff, *Visiting*
John T. Caldwell, Ph.D., *Visiting*
Vera Dika, Ph.D., *Adjunct*
Patrick Drummond, *Visiting*
Richard Edwards, B.A., *Adjunct*
A.P. Gonzalez, M.A., *Adjunct*
Sam Grogg, Ph.D., *Visiting*
H. Peter Guber, LL.M., *Visiting*
Jonathan Kuntz, Ph.D., *Visiting*
Barbara Marks, *Visiting*
Richard Marks, B.A., *Visiting*
Geoffrey Nowell-Smith, *Visiting*
Nancy Sackett, M.F.A., *Adjunct*

Myrl Schreiberman, M.F.A., *Adjunct*
 Robert M. Silberling, M.F.A., *Visiting*
 Robert Trachinger, *Adjunct*
 Janet Walker, Ph.D., *Visiting*

Scope and Objectives

The purpose of the Film and Television Department is to develop in its students a scholarly, creative, and professional approach to the film and television arts. The aim of the department is to train graduates who will eventually make original contributions in the field of their work.

The department offers graduate programs leading to the Master of Arts, Master of Fine Arts, and Ph.D. degrees in Film and Television.

Bachelor of Arts in Motion Picture/Television

Preparation for the Major

Students are admitted in Fall Quarter only. Admission is competitive, and only a limited number of students can be accepted each year. Prior to entry, you must complete at least 84 quarter units (56 semester units) with a 3.0 GPA or better and the general education requirements of the School of Theater, Film, and Television. You are also required to submit a portfolio of original written work consisting of (1) a personal essay, (2) a critical essay on a film, and (3) a creative writing sample. For further information on admission, contact the Student Affairs Office, Department of Film and Television, 103 East Melnitz Building, UCLA, Los Angeles, CA 90024-1622.

The Major

Required: Film and Television 130A, 130B, 175A-175B, 185, two film/television history courses from 106A, 106B, 106C, 108, 110A, two film/television theory and criticism courses from 107, 110B, 110C, 112, 113, 114, 116, and 18 to 24 units of film and television elective courses for a minimum total of 68 upper division units in the major. It is recommended that the majority of the required courses be completed during the junior year.

You should be mindful of the exigencies inherent in filmmaking and be prepared to meet the additional demands of time and costs.

Students are required to perform assignments on each other's projects. In addition, the department reserves the right to hold for its own purposes examples of any work done in classes and to retain for distribution such examples as may be selected.

Consult the *Schedule of Classes* for courses limited to majors only.

Graduate Study

The department offers the Master of Arts (M.A.), Master of Fine Arts (M.F.A.), and Doctor of Philosophy (Ph.D.) degrees in Film and Television.

Admission

Students are admitted in Fall Quarter only. Admission is competitive, and only a limited number of students are accepted each year in each program. The department does not have an application in addition to the one used by UCLA Graduate Application Processing, and no screening examination prior to admission is required. For further information, contact the Student Affairs Office, Department of Film and Television, 103 East Melnitz Building, UCLA, Los Angeles, CA 90024-1622.

Additional admission requirements are noted under each specific program.

Master of Arts Degree

Admission

In addition to the UCLA graduate application, you must submit a sample of scholarly or critical writing, a statement of purpose, three letters of recommendation, Graduate Record Examination (GRE) scores, and proof of competence in English for international students whose native language is not English (e.g., TOEFL scores). Consult the Student Affairs Office, Department of Film and Television, 103 East Melnitz Building, UCLA, Los Angeles, CA 90024-1622, for further information.

Major Fields or Subdisciplines

The program requires that you be conversant in both film and television, as you are tested on each in the comprehensive examination.

Research Tool Requirement

You may be required to demonstrate competence in a foreign language if necessary to support the research in your area of study. The language requirement may be met by (1) passing the Graduate School Foreign Language Test (GSFLT) in French, Spanish, German, or Russian with a score of 500 or better, (2) completing a level five foreign language course or equivalent with a grade of C or better, or (3) passing a UCLA language examination given in any foreign language department.

In certain cases, with committee approval, courses in statistics or computer science may fulfill the research tool requirement.

Course Requirements

A minimum of nine courses is required, five of which must be 200-level courses in film and/or television history, theory, or criticism. Of the five courses, Film and Television 200, 206C, 208B, and 217 are required core courses. The remaining seminar must be selected from course 203, 206A, 208A, 208C, 209A, 209B, 209D, 210, 211A, 211B, 219, 220, 221, 222, 223, 270, 271, 276, 277, or 298A-298B (only as approved by the chair). All five graduate-level courses must be completed with a grade of B or better. You select electives to complete the minimum requirement of nine courses with the advice and approval of the film and television studies committee.

Eight units of courses 596A, 596B, 596C, and 598 may be applied toward the total course requirement for the degree; however, none of these courses may be applied toward the minimum graduate course requirement.

Thesis Plan

Under special circumstances and with the approval of the critical studies committee, you may propose a thesis in lieu of taking the comprehensive examination. Guidelines may be obtained from the chair of the critical studies program.

Comprehensive Examination Plan

The written examination consists of two days of testing, four hours each day, and examines a broad range of knowledge in film and television. After completion, your committee grades you either pass or fail. You may be reexamined on any failed portions of the examination when it is next regularly scheduled, or within the year following the term in which it was first taken. The examination is required of all M.A. students applying to the Ph.D. program.

Master of Fine Arts Degree

Admission

Applicants with diverse backgrounds and undergraduate majors in areas other than theater, film, or television arts are encouraged. You must state clearly your degree objective (M.F.A.) and the area of specialization desired within the program: animation, film/television production, screenwriting, or producers program. All areas of specialization require three letters of recommendation.

If you intend to concentrate in film/television production, you must submit a description of the film or television project you may possibly undertake in graduate study. The description should be in proposal or treatment form, two to three pages in length.

If you intend to concentrate in writing, you must submit samples of creative writing such as screenplays, short stories, plays, poems, etc.

If you intend to concentrate in animation, you must submit a description of the animation project you may possibly undertake during graduate study, preferably in storyboard form. Other creative work may be submitted.

If you intend to concentrate in the producers program, you may submit a portfolio of supporting material which shows evidence of creative background, or a substantial statement of purpose and resumé.

Consult the Student Affairs Office, Department of Film and Television, 103 East Melnitz Building, UCLA, Los Angeles, CA 90024-1622, for further information.

Foreign Language Requirement

There is no foreign language requirement for the M.F.A. degree.

Course Requirements

A total of 18 courses (72 units) is required, five of which must be at the graduate level. At least three courses must be in the 200 series in film history, aesthetics, or structure. Course requirements for each specialization are available from the Student Affairs Office.

Only 16 units of Film and Television 596 may be applied toward the total course requirement, and only eight of these units may be applied toward the minimum graduate course requirement. Only four units of course 596A and four units of course 596B may be taken prior to advancement to candidacy. Courses 596C through 596F may be taken only after advancement to candidacy.

Fieldwork and internships are not required but may be taken as courses which may be applied toward the degree.

Comprehensive Examination Plan

The comprehensive plan is satisfied by fulfilling projects appropriate to your specialization. No later than the beginning of your final term in residence, you must submit for approval to the M.F.A. committee the appropriate documents for advancement to candidacy and a list of at least three faculty members who will serve on your committee. Consult the Student Affairs Office for further information.

M.A.-African Area Studies/M.F.A.-Film and Television

The Department of Film and Television and the African Area Studies Program have an articulated degree program which allows students to combine study for the M.A. in African Area Studies and the M.F.A. in Film and Television. Articulated programs do not allow course credit to be applied toward more than one degree. Interested students should write to the Graduate Adviser, Student Affairs Office, UCLA Film and Television Department.

Ph.D. Degree

Admission

Completion of an M.A. or M.F.A. degree equivalent to that offered by the UCLA Department of Film and Television is required. In exceptional cases, students with an M.A. outside the field are considered for direct admission to the program. The dossier submitted for admission must contain a letter describing your reasons for wishing to earn the Ph.D., the master's thesis or writing samples that demonstrate a high level of ability to write criticism or historical narrative, three letters of recommendation, GRE scores, and proof of competence in English for international students whose native language is not English (e.g., TOEFL scores).

Further information is available from the Student Affairs Office, Department of Film and Television, 103 East Melnitz Building, UCLA, Los Angeles, CA 90024-1622.

Major Fields or Subdisciplines

You are expected to understand film and television within their social contexts as significant forms of art and communication, and to achieve by disciplined study a mastery of their history, theory, and criticism.

Foreign Language Requirement

Mastery of one foreign language is required and must be demonstrated by one of the following methods: (1) passing the Graduate School Foreign Language Test (GSFLT) in French, Spanish, German, or Russian with a score of 500 or better, (2) completing a level five foreign language course or equivalent with a grade of C or better, or (3) passing a UCLA language examination given in any foreign language department. When mastery of more than one foreign language is necessary for your dissertation study, you are required to take courses or pass examinations in the additional language(s). Normally, the required foreign language examinations must be passed by the end of your first year in residence.

Course Requirements

During your first six terms in the Ph.D. program, you must take 13½ courses. During your first year in residence, Film and Television 211B, 215, and 273 must be completed, while course 274 is required in your sixth term. In addition to this core sequence, course 496 is also required. Further, you must select nine graduate elective courses, at least six of which must be from film and television.

You must select courses from three areas of concentration, chosen to broaden your familiarity and competence in related subject areas. A suggested list of concentrations is as follows: film theory, criticism, narrative studies, film and the other arts, authors, genres, documentary, film history, American film, European film, non-Western film and television, television studies, media and society, film and television as a business enterprise, and film and television production. It is expected that the dissertation topic will emerge from one of the concentrations.

Teaching Experience

Every student must complete Film and Television 496.

Qualifying Examinations

At the end of your second term in residence, you must take a preliminary oral examination conducted by the critical studies committee. The committee tests your progress to date and determines your general fitness to continue in the doctoral program. You present a plan of study at this time; guidelines are available from the Student Affairs Office.

After completion of all language and course requirements and approval of a dissertation prospectus, you are eligible to take and required to pass a written qualifying examination administered in three-hour segments during two successive days. Information regarding the examination is available from the chair of the critical studies committee. You may be reexamined on any failed portions of the examination when it is next regularly scheduled, or within the year following the term in which it was first taken.

After you pass the written examination, a doctoral committee is formed to administer the University Oral Qualifying Examination. You are advanced to candidacy only on successful completion of this examination.

Candidate in Philosophy Degree

You are eligible to receive the C.Phil. degree on advancement to candidacy for the Ph.D.

Dissertation/Final Oral Examination

A dissertation demonstrating your ability to carry out independent and significant inquiry in a historical, theoretical, or critical field of film and/or television is required. Final award of the Ph.D. depends on successful completion of the dissertation.

A final oral examination, held after completion of the dissertation, may be required at the option of the dissertation committee.

Upper Division Courses

106A. History of the American Motion Picture (6 units). Lecture/screenings, eight hours; discussion, one hour. Historical and critical survey, with examples, of the American motion picture both as a developing art form and as a medium of mass communication. May be repeated once for credit with consent of department and topic change.

106B. History of the European Motion Picture (6 units). Lecture/screenings, eight hours; discussion, one hour. Historical and critical survey, with examples, of the European motion picture both as a developing art form and as a medium of mass communication. May be repeated once for credit with consent of department and topic change.

106C. History of African, Asian, and Latin American Film (6 units). Lecture/screenings, eight hours; discussion, one hour. Critical, historical, aesthetic, and social study — together with exploration of the ethnic significance — of Asian, African, Latin American, and Mexican films.

106D. Development of Film in Europe and the U.S. from WWI through the Depression. Lecture/screenings, eight hours; discussion, one hour. Interdisciplinary and comparative approach to development of film in Europe and the U.S. from the silent era through the Depression. Particular emphasis on interrelationship of film with its historical context and social dimensions of film structure, aesthetics, and language.

106E. Development of Film in Europe and the U.S. from WWII to the Present. Lecture/screenings, eight hours; discussion, one hour. Course 106D is not prerequisite to 106E. Interdisciplinary and comparative approach to development of film in Europe and the U.S. from end of the 1930s to the present. Particular emphasis on interrelationship of film with its historical context and social dimensions of film structure, aesthetics, and language.

107. Experimental Film (6 units). Lecture/screenings, eight hours; discussion, one hour. Study and analysis of unconventional developments in the motion picture.

108. History of Documentary Film (6 units). Lecture/screenings, eight hours; discussion, one hour. Philosophy of documentary approach in the motion picture. Development of critical standards and examination of techniques of teaching and persuasion used in selected documentary, educational, and propaganda films.

110A. History of Broadcasting. Lecture/viewing, six hours; discussion, one hour. Critical survey of broadcasting here and abroad. Consideration of social responsibilities and educational implications of broadcasting.

110B. Problems and Issues in Broadcast Media. Lecture, four hours; discussion, two hours; laboratory, to be arranged. Prerequisite: consent of instructor. Study of current issues and problems related to public and commercial broadcast programming and management, including analysis of contemporary criticism of broadcast media.

110C. World Media Systems. Lecture/viewing, four hours; discussion, one hour. Prerequisites: course 110A or equivalent, upper division standing, consent of instructor. Global analysis of internal and external broadcasting services, with emphasis on their motives, origins, technologies, and programming. Special attention to political, economic, and regulatory constraints and common world media issues.

112. Film and Social Change (6 units). Lecture/screenings, eight hours; discussion, one hour. Development of documentary and dramatic films in relation to and as a force in social development.

113. Film Authors (6 units). Lecture/screenings, eight hours; discussion, one hour. In-depth study of a specific film author (director or writer). May be repeated once for credit with consent of department and topic change.

114. Film Genres (6 units). Lecture/screenings, eight hours; discussion, one hour. Study of a specific film genre (e.g., Western, gangster cycle, musical, silent epic, comedy, social drama). May be repeated once for credit with consent of department and topic change.

116. Film Criticism. Lecture, four hours; laboratory, to be arranged. Study of and practice in film criticism.

126. Acting for Film and Television. (Formerly numbered 126A.) Laboratory, six hours. Prerequisite: consent of instructor. Projects in acting for television, video, and film. May be repeated twice for credit.

128. Media and Ethnicity. Prerequisite: consent of instructor. Utilizing the Asian American experience, exploration of impact and uses of media on contemporary American ethnic communities. Role and techniques of media influence besides community utilization and production.

CM129. Contemporary Topics in Theater, Film, and Television (2 units). (Same as Theater CM129.) Lecture, two hours; screenings, two hours. Prerequisite: upper division or graduate standing in theater/film and television. Examination of creative process in theater, film, and television, with consideration of writing, direction, production, and performance. Overview of individual contributions in the collaborative effort; examination of distinctiveness and interrelations among these arts. Individual units include participation of leading members of theater, film, and television professions. May be repeated for a maximum of six units. Concurrently scheduled with course CM229.

130A. Screenwriting Fundamentals (2 units). (Formerly numbered 134B.) Lecture, one hour. Corequisite for graduate students enrolled in course 431. Not open to students with credit for former course 134B. Examination of screenwriting fundamentals: structure, character and scene development, conflict, locale, theme, history of drama. Review of authors such as Aristotle, Egri.

130B. Screenwriting Fundamentals Workshop. (Formerly numbered 134A.) Discussion, three hours. Prerequisite: consent of instructor. Not open to students with credit for former course 134A. Problems in film and television writing.

131. Nontheatrical Screenwriting for Film and Television (4 or 8 units). Discussion, three hours. Prerequisite: consent of instructor. Research and writing of documentary, technical, educational, industrial, and propaganda scripts. May be repeated for a maximum of 12 units.

135. Advanced Screenwriting Workshop (8 units). Workshop, three hours. Prerequisites: course 130B and/or consent of instructor. Course in film and television writing. Original screenplays to be developed. May be repeated twice for credit. (F,W,Sp)

150. Basic Cinematography: Film and Electronic. Lecture, three hours; laboratory, three hours. Prerequisite: consent of instructor. Limited to film and television majors. Introduction to image control in motion picture photography through exposure, lighting, and selection of film, camera, and lens. Supervised projects in photography to complement material covered in lecture.

151. Film and Television Image Laboratory. Lecture, three hours; laboratory, to be arranged. Prerequisite: consent of instructor. Limited to film and television majors. Techniques of image manipulation, design, and art direction. May be repeated twice for credit (if repeated, students required to design and complete a short film).

152. Film and Television Sound Recording. Lecture, three hours; laboratory, to be arranged. Prerequisite: consent of instructor. Limited to film and television majors. Introduction to principles and practices of film and television sound recording, including supervised exercises.

153. Color Cinematography. (Formerly numbered 153C.) Lecture, three hours. Prerequisite: consent of instructor. History and theories of color photography, with emphasis on present-day methods in film and television production. Comparative study of additive and subtractive systems as employed by Technicolor, Ansco, Kodak, and others.

154. Film Editing. Lecture, three hours; laboratory, to be arranged. Prerequisite: consent of instructor. Limited to film and television majors. Introduction to artistic and technical problems of film editing, with practical experience in editing of image and synchronous sound.

164. Film Directing. Laboratory, to be arranged. Prerequisite: consent of instructor. Study of problems faced by a film director and various approaches to their solution. May be repeated twice for credit.

165. Television Directing. Laboratory, six hours. Prerequisites: courses 130B, 185, consent of instructor. Introduction to and supervised exercises in television multicamera direction, with emphasis on creative use of cameras, sound, composition, and communication with those in front of and behind the camera. May be repeated twice for credit.

175A-175B. Undergraduate Film Production (8 units, 4 to 8 units). Prerequisite: consent of instructor. Limited to film and television majors. Not open to students with credit for former course 166. **175A.** Lecture, four hours; laboratory, eight hours. Writing, preproduction, and production for a short 16mm nonsynch film. **175B.** Lecture, three hours; laboratory, eight hours. Completion of postproduction (editing, creation of nonsynch sound tracks) for short film begun in course 175A.

176A-176B. Undergraduate Production II (8 units each). Lecture, three hours; laboratory, to be arranged. Prerequisites: courses 175A-175B, 185, consent of production faculty. Limited to film and television majors. Completion of a video production (no more than 20 minutes), including its writing, production, and editing.

177. Film and Television Acting Workshop (2 units). Laboratory, four hours. Prerequisite: consent of instructor. Workshop providing opportunities for students to rehearse, perform, and evaluate their scenes under supervision and criticism of instructor. Three different production styles to which performers may need to adjust are (1) preproduction rehearsals with director, (2) single-camera experience, and (3) multiple-camera experience. May be repeated twice for credit (to accommodate performer's circumstance).

178. Technical Film and Television Laboratory (2 or 4 units). Laboratory, to be arranged. Prerequisite: consent of instructor. Limited to film and television majors. Laboratory on various aspects of film and television production. May be repeated for a maximum of 12 units, but only eight units may be applied toward film and television major.

181A. Animation Design in Film and Television. Lecture, three hours; laboratory, three hours. Prerequisite: consent of instructor. History and use of creative arts used in animation to form effective communication on film.

181B. Writing for Animation (4 to 8 units). Lecture, six hours; laboratory, to be arranged. Prerequisites: course 181A, consent of instructor. Research and practice in creative writing and planning for animated film. May be repeated for a maximum of 16 units.

181C. Animation Workshop (4 or 8 units). Lecture, six hours; laboratory, to be arranged. Prerequisites: course 181A, consent of instructor, storyboard at first class meeting. Organization and integration of various creative arts used in animation to form a complete study of a selected topic. May be repeated for a maximum of 16 units.

185. Undergraduate Television and Video Production (8 units). Laboratory, six hours (additional hours to be arranged). Prerequisite: consent of instructor. Limited to film and television majors. Instruction and exercises in basic techniques of television and video production.

187A-187B-187C. Producing and Directing Field Television Programming (4 units, 6 units, 6 units). Laboratory, three hours (additional hours to be arranged). Prerequisites: course 185, consent of instructor. **187A.** Introduction to field or remote broadcasting utilizing multiple- and single-camera video. Educational goals in student productions to be clarity of concept, simplicity in production, and meeting deadlines. **187B-187C.** Instruction and supervised productions of the remote experience, with focus on development and execution of concept. Experience closely patterned after professional experiences in working with talent, production venues, and production logistics of remote on-location video programs.

189. Overview of Motion Picture Industry. Discussion, three hours. Prerequisite: consent of instructor. Evolution of economic and business structure of motion pictures from early beginnings to present, stressing methods of operation and influence of social and economic pressures that contributed to changing financial, distribution, and exhibition practices.

192. Film and Television Internship (4 to 8 units). Field experience, to be arranged. Prerequisite: consent of instructor. Limited to senior film and television majors. Internship at film and television industry organizations. May be taken for a maximum of eight units.

193A. Film Curatorship. Lecture, two hours; discussion, two hours; laboratory, four hours. Prerequisite: consent of instructor. Study of principles and techniques of film curatorship and research, including but not limited to acquisitions, cataloging, storage, and retrieval systems. Special attention to application of new technology, equipment, and program materials to film archival-library design for research and teaching.

193B. Television Curatorship. Lecture, two hours; discussion, two hours; laboratory, four hours. Prerequisite: consent of instructor. Study of principles and techniques of television curatorship and research, including but not limited to acquisitions, cataloging, storage, and retrieval systems. Special attention to application of new technology, equipment, and program materials to television archival-library design for research and teaching.

199. Special Studies in Film and Television (2 to 8 units). Prerequisites: senior standing, 3.0 GPA in major, consent of instructor. May be taken for a maximum of eight units.

Graduate Courses

Certain graduate courses concerned with individual student projects may be repeated for credit on recommendation of the departmental graduate adviser. Graduate courses are not open to undergraduate students.

200. Bibliography and Methods of Research in Film and Television (6 units). Discussion, three hours; laboratory, four to six hours. Examination and study of research methods, techniques, and resources related to film and television research and preparation of term papers, theses, and dissertations. Development of bibliographies in film and television and examination of current data bases.

203. Seminar: Film and Other Arts (6 units). Discussion, three hours; film screenings, four to six hours. Prerequisites: graduate standing, consent of instructor. Studies in interrelationships between film and fine arts, or performing arts, or literature, with emphasis on ways these other arts have influenced film. May be repeated twice for credit.

206A. Seminar: European Film History (6 units). Discussion, three hours; film screenings, four to six hours. Prerequisites: course 106B, graduate standing, consent of instructor. Studies in selected historical movements such as expressionism, socialist realism, surrealism, neorealism, New Wave, etc. May be repeated twice for credit.

206C. Seminar: American Film History (6 units). Discussion, three hours; film screenings, four to six hours. Prerequisites: course 106A, graduate standing, consent of instructor. Study of central topics in American film history. May be repeated twice for credit.

208A. Seminar: Film Structure (6 units). Discussion, three hours; film screenings, four to six hours. Prerequisites: graduate standing, consent of instructor. Examination of various film conventions, both fictional and nonfictional, and of role of structure in motion picture.

208B. Seminar: Classical Film Theory (6 units). Discussion, three hours; film screenings, four to six hours. Prerequisites: graduate standing, consent of instructor. Study of principal topics and lines of inquiry that characterize theoretical writings of Arnheim, Eisenstein, Bazin, Mitry, etc.

208C. Seminar: Contemporary Film Theory (6 units). Discussion, three hours; film screenings, four to six hours. Prerequisites: course 208B, graduate standing, consent of instructor. Study of redefinition of aims and methods of film theory through contemporary writings.

209A. Seminar: Documentary Film (6 units). Discussion, three hours; film screenings, four to six hours. Prerequisites: graduate standing, consent of instructor. Nonfictional film and its relation to contemporary culture.

209B. Seminar: Fictional Film (6 units). Discussion, three hours; film screenings, four to six hours. Prerequisites: graduate standing, consent of instructor. Film as fiction and its relation to contemporary culture. May be repeated once for credit.

M209C. Ethnographic Film. (Same as Anthropology M268.) Prerequisites: graduate standing, consent of instructor. Seminar on uses of film in ethnography and production course in which anthropologists, other social scientists, and humanists learn how to make films that are useful for their disciplines. Cameras and editing facilities provided. (F)

209D. Seminar: Animated Film. Discussion, three hours; laboratory, three hours. Prerequisite: consent of instructor. Critical study of animated film: its historical development and its structure, style, and use.

210. Seminar: Contemporary Broadcast Media. Discussion, three hours (additional hours as required). Prerequisites: graduate standing, consent of instructor. Consideration of issues raised by recent developments in television and radio, commercial and public, associated with innovations in satellite, cable, and cartridge systems.

211A. Seminar: Historiography. Discussion, three hours. Prerequisites: graduate standing, consent of instructor. Limited to film and television M.A. candidates. Beginning examination of function and methods of writing film and television history as seen in works of key historians in the U.S. and Europe.

211B. Seminar: Historiography. Discussion, three hours. Prerequisites: graduate standing, consent of instructor. Limited to film and television Ph.D. candidates. Examination of function and methods of writing film and television history as exemplified by key works in this tradition, with attention to central issues of historical thought on the media.

215. Seminar: Theory and Method. Discussion, three hours. Limited to film and television Ph.D. candidates. Examination of major modes of theoretical reflection that bear on film and television through study of central texts of such traditions as phenomenology, auterism, semiology, psychoanalysis, sociology, etc.

217. Seminar: Television History. Discussion, four hours; viewing, to be arranged. Prerequisite: course 110A or equivalent. Examination of origins and development of American television. Topics include industry structure, economics, policy and regulation, and programming.

218. Culture, Media, and Society. Lecture, four hours; screenings, to be arranged. Prerequisite: consent of instructor. Emphasis on "discourse of the other(s)." Thematization of the other is concerned with theories of "difference" rather than similarity or identity — with how other cultures enter into politics of representation and representation of politics through metaphors of (1) difference without opposition, (2) heterogeneity without hierarchy, and/or (3) otherness without ethnocentrism. Examination of how women, national minorities, and Third World peoples have been rendered others; place of the cinematic apparatus in this process and how academization of others is positioned vis-à-vis mainstream critical discourse.

219. Seminar: Film and Society (6 units). Discussion, three hours; film screenings, four to six hours. Prerequisites: graduate standing, consent of instructor. Study of ways film affects and is affected by social behavior, belief, and value systems; considered in relation to role of media in society. May be repeated once for credit.

220. Seminar: Television and Society. Discussion, three hours (additional hours as required). Prerequisites: graduate standing, consent of instructor. Study of ways television forms affect and are affected by social behavior, belief, and value systems; study of technological and economic aspects of the medium. May be repeated once for credit.

221. Seminar: Film Authors (6 units). Discussion, three hours; film screenings, four to six hours. Prerequisites: graduate standing, consent of instructor. Intensive examination of works of outstanding creators of films. May be repeated twice for credit.

222. Seminar: Film Genres (6 units). Discussion, three hours; film screenings, four to six hours. Prerequisites: graduate standing, consent of instructor. Studies of patterns, styles, and themes of such genres as the Western, gangster, war, science fiction, comedy, etc. May be repeated twice for credit.

223. Seminar: Visual Perception. Discussion, three hours (additional hours as required). Prerequisites: graduate standing, consent of instructor. Aesthetic, psychological, and physiological principles of vision as they relate to ways in which man "sees" film and television, with emphasis on ways in which these are different from other visual experiences.

224. Computer Applications for Film Study. Survey of computer applications relevant to film study, principally computer-videodisc systems and image capture technology.

CM229. Contemporary Topics in Theater, Film, and Television (2 units). (Same as Theater CM229.) Lecture, two hours; screenings, two hours. Prerequisite: upper division or graduate standing in theater/film and television. Examination of creative process in theater, film, and television, with consideration of writing, direction, production, and performance. Overview of individual contributions in the collaborative effort; examination of distinctiveness and interrelations among these arts. Individual units include participation of leading members of theater, film, and television professions. May be repeated for a maximum of six units. Concurrently scheduled with course CM129.

247. Production Planning in Film and Television. Discussion, three hours. Prerequisite: consent of instructor. Analysis of procedures and problems in preparing a script for film or television production, with emphasis on role of production manager in breaking down scripts, setting up shooting schedule, planning postproduction, and preparing budgets.

M265A-M265B. Ethnographic Film Direction (4 or 8 units each). (Same as Anthropology M267B-M267C.) Lecture, four hours; laboratory, to be arranged. Prerequisites: course M209C, graduate standing, consent of instructor. Further consideration of methods and criteria for use of film as a medium for preservation and communication of human cultures. Production of films and videotapes on topics selected by students. (W, M265A; Sp, M265B)

268. Seminar: Short Film. Lecture, two hours; discussion, two hours. Prerequisites: graduate standing, consent of instructor. Study of problems presented by conceptualization of form and structure of the short film, with classical and student examples.

270. Seminar: Film Criticism (6 units). Discussion, three hours; film screenings, four to six hours. Prerequisites: graduate standing, consent of instructor. Study of key aesthetic questions of analysis and evaluation in relation to central works of motion picture criticism. May be repeated once for credit.

271. Seminar: Television Criticism. Discussion, three hours (additional hours as required). Prerequisites: graduate standing, consent of instructor. Analysis of major forms of television production and criticism it has elicited. May be repeated once for credit.

273. Seminar: Contemporary Film and Television Criticism (6 units). Discussion, three hours; film and television screenings, four to six hours. Limited to film and television Ph.D. candidates. Study and practice of analytic and critical response, with emphasis on contemporary film and television.

274. Seminar: Research Design. Discussion, three hours. Prerequisite: second-year standing in film and television Ph.D. program. Examination of general principles that govern formulation of major research projects and preparation of a prospectus for Ph.D. dissertation.

276. Seminar: Non-Western Films. Discussion, three hours (additional hours as required). Prerequisites: graduate standing, consent of instructor. Study of aesthetic and ideological impulses of selected films from Asia, Africa, and Latin America.

277. Seminar: Narrative Studies. Discussion, three hours (additional hours as required). Prerequisites: graduate standing, consent of instructor. Study of writings on theory of narrative structure and their significance for analysis of film forms.

289A-289B-289C. Current Business Practices in Film and Television. Prerequisites: course 247, graduate standing, consent of instructor. Examination of current status of financing/production/distribution agreements, union agreements, music, copyright, etc., necessary to understand the film and television industry. May be taken in any sequence.

291A-291B-291C. Role of Management in Entertainment Industry. Prerequisites: course 247, graduate standing, consent of instructor. Study of artistic, social, and economic criteria for decision making in production and distribution of motion pictures and entertainment programs. May be taken in any sequence.

292A-292B-292C. Network Television Management and Decision Making. Lecture, two hours; discussion, two hours. Prerequisites: course 247, graduate standing, consent of instructor. Study of business structure and economic, social, and artistic criteria currently utilized by network television management. Only eight units may be taken for credit.

293. Seminar: Film and Television Curatorship. Discussion, three hours (additional hours as required). Prerequisites: graduate standing, consent of instructor. Study and practice of issues in archival research and administration.

298A-298B. Special Studies in Film and Television (2 to 4 units each). Lecture/discussion. Prerequisites: graduate standing, consent of instructor. Seminar study of problems in film and television, organized on topic basis. May be repeated once for credit.

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

400. Film Image Design Laboratory. Lecture, two hours; laboratory, six hours. Prerequisite: consent of instructor. Limited to film and television graduate students. Conception and design of nonnarrative film imagery. One-minute experiments in the relation of meaning to technique, including manipulation of optics, photochemistry, elements of electronic processes, and display of time and motion. May be repeated once for credit.

402A-402B. Advanced Workshops: Fiction (8 units each). Lecture/discussion/laboratory, 12 hours; fieldwork, to be arranged. Prerequisites: courses 401A-401B, 433, consent of instructor. Limited to 10 students per section. Production of a 20-minute fictional film or television project. Students preplan, test, and complete photography on location and/or in studio by end of first term and work as crew for each other in rotating assignments. In second term students complete postproduction of their projects.

403A-403B-403C. Advanced Documentary Workshops (4 to 8 units each). (Formerly numbered 403A-403B.) Lecture/discussion/laboratory, 16 to 24 hours; fieldwork, to be arranged. Prerequisite: consent of instructor. Limited to film and television graduate students. Production of advanced individual documentary film/video projects. Students conceptualize, research, write, shoot (on location), and edit projects to completion. May be repeated once for credit.

404A-404B. Advanced Workshops: Abstract/Experimental Media (8 units each). Lecture/discussion/laboratory, 12 hours; fieldwork, to be arranged. Prerequisites: courses 410A-410D, 433, consent of instructor. Limited to 10 students per section. Production of a 20-minute abstract or experimental film or video. Students plan, design, and shoot their projects in first term and work as crew for each other in rotating assignments. In second term students complete postproduction of their projects.

405. Television Production Workshop (8 units). (Formerly numbered 401C.) Laboratory, eight hours; other, to be arranged. Prerequisite: consent of instructor. Limited to film and television graduate students. Not open to students with credit for former course 401C. Basics of television production and direction, focusing on studio multiple camera with minimal use of remote camera. Use of various formats of video production, including scripted and nonscripted projects, culminating in a narrative three-camera project.

406. Experimental Video Workshop. (Formerly numbered 401D.) Laboratory, six hours; other, to be arranged. Prerequisite: consent of instructor. Limited to film and television graduate students. Not open to students with credit for former course 401D. Introduction to independent and experimental video with examination of impact of new video technologies in television, covering concepts of video art, new television, digital video, high-definition TV, and film and tape postproduction.

407. Video Documentary Workshop (8 units). Laboratory, 12 hours. Prerequisite: consent of instructor. Limited to film and television graduate students. Exploration of documentary video, including screening a variety of international works and producing a short documentary project using single-camera field production techniques.

408A-408B. Video Editing. (Formerly numbered 483.) Discussion, four hours; laboratory, to be arranged. Prerequisite: consent of instructor. Limited to film and television graduate students. Individual instruction in electronic editing. **408A.** On-Line Editing; **408B.** Off-Line Editing.

409. Directing the Actor for the Camera. Workshop, six hours; laboratory preparation, two to four hours. Prerequisite: consent of instructor. Limited to film and television graduate students. Team-taught with five weeks designed to give experience to the director with camera techniques, and five weeks to offer basic strategies to elicit good performances from actors. Emphasis on problems faced when directing actors for film.

410A-410D. Film Production Workshops (8 units, 12 units, 4 units, 4 units). (Formerly numbered 401A-401B.) Lecture/discussion/laboratory, 24 hours; fieldwork, to be arranged. Prerequisites: courses 405, 409, 417, consent of instructor. Limited to film and television graduate students. Production workshop spanning four terms, designed to give hands-on experience in all aspects of film production (the tools and a practicum of the medium) as each student writes/directs/edits a 10-minute film.

417. Lighting for Film and Television (6 units). (Formerly numbered 450B.) Lecture, three hours; discussion, one hour; laboratory, six hours. Prerequisite: consent of instructor. Limited to film and television graduate students. Lectures, supervised exercises on a stage or in an exterior, screenings of scenes, and discussions aimed at learning to master the lighting to create an appropriate mood or atmosphere of a premeditated scene recorded on a film or through an electronic system. May be repeated twice for credit.

418. Cinematography and Directing (8 units). (Formerly numbered 450C.) Lecture, three hours; discussion, one hour; laboratory, seven hours. Prerequisites: course 417, consent of instructor. Limited to film and television graduate students. Not open to students with credit for former course 450C. Supervised filming of short dramatic projects on the sound stage and at exterior locations that explore the complexity of the process, emphasizing balance and collaboration essential to both directing and photography in its varied technical, production, and creative aspects.

419. Advanced Cinematography. (Formerly numbered 450A.) Lecture, two hours; discussion, one hour; laboratory, one hour. Prerequisites: courses 417, 418, consent of instructor. Limited to film and television graduate students. Not open to students with credit for former course 450A. Advanced study of principles of cinematography, with emphasis on exposure, lighting, and selection of film, camera, and lenses.

423A. Direction of Actors for Film and Television. (Formerly numbered 423.) Lecture, four hours; workshop. Prerequisites: first film project, consent of instructor. Limited to film and television graduate students. Exercises in analysis of script and character for purpose of directing actors in film and television productions. Emphasis on eliciting best possible performance from the actor. May be repeated twice for credit.

423B. Advanced Direction of Actors for Film and Television. Studio workshop, six hours. Prerequisites: course 423A, consent of instructor. Limited to film and television graduate students. Advanced study and practice of directing actors before a camera. Emphasis on developing techniques to immediately enhance communication between director and actor on the set in order to maintain continuity from shot to shot.

431. Introduction to Film and Television Screenwriting. Lecture, three hours. Prerequisite: consent of instructor. Limited to film and television graduate students. Introductory course in problems of film and television screenwriting.

433. Writing the Short Screenplay. Lecture, three hours. Prerequisite: consent of instructor. Limited to film and television graduate students. Conception, development, and writing of a 20-minute film or video script in either fiction, documentary, or experimental medium, to be produced in one of the advanced workshops.

434. Advanced Screenwriting (8 units). Discussion, three hours. Prerequisites: course 135, consent of instructor. Advanced problems in writing of original film and television screenplays. May be repeated twice for credit.

435. Advanced Writing for Short Film and Television Screenplays. (Formerly numbered 435B.) Discussion, three hours. Prerequisites: courses 402A-402B or 403A-403B or 404A-404B, consent of instructor. Limited to film and television graduate students. Not open to students with credit for former course 435A or 435B. Required of students planning fiction projects. Final screenwriting course in which students write their thesis project (no longer than 30 minutes in length).

437. Nontheatrical Writing for Film and Television. Discussion, three hours. Prerequisite: consent of instructor. Limited to film and television graduate students. Advanced problems in the field of documentary and special feature programs, with emphasis on research and preproduction. May be repeated for a maximum of 16 units.

451. Advanced Design for Film and Television. Laboratory, to be arranged. Prerequisite: consent of instructor. Limited to film and television graduate students. Advanced study and practice of techniques and methods of design for motion pictures. Art direction for advanced workshop productions. May be repeated for a maximum of 12 units.

452A. Film and Television Sound Recording. Lecture, three hours; laboratory, four hours. Prerequisite: consent of instructor. Limited to film and television graduate students. Principles and practices of film and television sound recording, including supervised exercises.

452B. Music Recording Workshop. Lecture, four hours; laboratory, eight hours. Prerequisites: course 452A and/or consent of instructor. Supervised exercises in studio music recording techniques, with emphasis on special requirements for motion pictures and television.

452C. Film and Television Sound Rerecording. Laboratory, eight hours. Prerequisites: course 152 or 452A, consent of instructor. Limited to film and television graduate students. Techniques of preparation and execution of rerecording using multitrack pickup recording technology, including supervised operational experience.

454A-454B. Advanced Film Editing. Lecture, three hours; laboratory, to be arranged. Prerequisite: consent of instructor. Limited to film and television graduate students.

454A. Study of role of editing fictional and nonfictional production, with emphasis on techniques and procedures used in manipulation of sound track in sync dialogue cutting, post syncing, and music and sound effects cutting, including offscreen narration, dialogue substitution, and playback tracks.

454B. Study of role of editing fictional and nonfictional production, with emphasis on finishing stages, including title preparation. Use of optical effects and blowups, preparation for supervision of the mix, and cutting of originals for single strand and A&B printing.

459A-459B. Directing for Film and Television. Lecture, three hours. Prerequisite: consent of instructor. Limited to film and television graduate students. Analysis and exploration, with specific scenes, of differences and many similarities in directorial approach to same literary material in three media.

464A-464B. Advanced Film Directing (8 units each). Hours to be arranged. Prerequisite: consent of instructor. Limited to film and television graduate students. Special problems in direction of fictional and documentary films.

466A-466B. Advanced Television Directing (8 units each). Lecture, two hours; laboratory, six hours. Prerequisite: consent of instructor. Limited to film and television graduate students. Special problems in direction of dramatic and documentary television programs.

475. Film I (8 units). Discussion, three hours; laboratory, to be arranged. Prerequisites: graduate standing, consent of instructor. Study of basic techniques of film production, including preproduction planning and production of a short film.

476. Video I (8 units). Discussion, three hours; laboratory, to be arranged. Prerequisites: graduate standing, consent of instructor. Study of basic techniques of television and video production, including completion of one or more projects.

477. Film II (8 units). Discussion, three hours; laboratory, to be arranged. Prerequisites: course 166 or 475, graduate standing, consent of instructor. Group experience in film production with each member rotating on crew work in production of individual or collective projects.

478. Video II (8 units). Discussion, three hours; laboratory, to be arranged. Prerequisites: course 185 or 476, graduate standing, consent of instructor. Group experience in video production with each member rotating on crew work in production of individual or collective projects.

479A-479B-479C. Film III (4 or 8 units each). Laboratory, to be arranged. Prerequisites: course 475 or 166, graduate standing, consent of instructor. Course 178 may be taken concurrently. Completion of a film (no longer than 10 minutes), including its writing, design, production, and editing.

482A-482B. Advanced Animation Workshops (4 or 8 units each). Lecture, three hours; laboratory, to be arranged. Prerequisites: courses 181A, 181B, 181C, consent of instructor. Organization and integration of various creative arts used in animation, resulting in production of a complete animated film. May be repeated for a maximum of 16 units.

485A-485B-485C. Video III (4 or 8 units each). Laboratory, 16 hours. Prerequisites: course 478, graduate standing, consent of instructor. Creation, preparation, and production each term of one advanced television program (no longer than 10 minutes).

486. Directed Individual Study: Preproduction Laboratory (2 to 4 units). Prerequisites: graduate standing in M.F.A. production program, consent of instructor. Specialized development and practice of preproduction methods appropriate to individual projects in M.F.A. production program.

487. Directed Individual Study: Postproduction Laboratory (2 to 4 units). Prerequisites: graduate standing in M.F.A. production program, consent of instructor. Specialized preparation of distribution materials appropriate to individual projects in M.F.A. production program. May be repeated for a maximum of eight units.

489A. Computer Animation in Film and Video (4 to 8 units). Lecture, three hours; laboratory, four to eight hours; other, to be arranged. Prerequisites: courses 181A, 181C, a complete animated film, consent of instructor. Limited to film and television graduate students. Instruction in and supervised production of computer animation. May be repeated for a maximum of 16 units.

489B. Production in Computer Animation (4 or 8 units). Lecture, three hours. Prerequisite: course 489A. Instruction in creation, preparation, and production of a complete and original computer animation film or tape. May be repeated for a maximum of 16 units.

496. Practice of Teaching Film and Television (2 units.) Discussion. Required once of all teaching assistants or associates in department. Orientation and preparation of graduate students who have responsibility to assist in teaching undergraduate courses in department; discussion of problems common to the teaching experience. May not be applied toward M.A., M.F.A., or Ph.D. May be repeated. S/U grading.

498. Professional Internship in Film and Television (4, 8, or 12 units). Full- or part-time at a studio or on a professional project. Prerequisites: graduate standing, advanced standing in M.F.A. program, consent of instructor. Internship at various film, television, or theater facilities accentuating creative contribution, organization, and work of professionals in their various specialties. Given only when projects can be scheduled.

501. Cooperative Program (2 to 8 units). Prerequisite: consent of graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Used to record enrollment of UCLA students in courses taken under cooperative arrangements with USC. S/U grading.

596A. Directed Individual Studies: Research (2 to 12 units). Hours to be arranged. Prerequisite: graduate standing. May be repeated with consent of instructor.

596B. Directed Individual Studies: Writing (2 to 12 units). Hours to be arranged. Prerequisite: graduate standing. May be repeated with consent of instructor.

596C. Directed Individual Studies: Directing (2 to 12 units). Hours to be arranged. Prerequisite: graduate standing. May be repeated with consent of instructor.

596D. Directed Individual Studies: Design (2 to 12 units). Hours to be arranged. Prerequisite: graduate standing. May be repeated with consent of instructor.

596E. Directed Individual Studies: Acting (2 to 12 units). Hours to be arranged. Prerequisite: graduate standing. May be repeated with consent of instructor.

596F. Directed Individual Studies: Production (2 to 12 units). Hours to be arranged. Prerequisite: graduate standing. May be repeated with consent of instructor.

597. Preparation for Ph.D. Qualifying Examinations in Film and Television (2 to 8 units.) Hours to be arranged. May be repeated for a maximum of 12 units. S/U grading.

598. M.A. Thesis in Film and Television (2 to 8 units). Hours to be arranged. Prerequisite: advancement to M.A. candidacy. Research and writing for M.A. thesis. May be repeated for a maximum of 12 units. S/U grading.

599. Ph.D. Dissertation in Film and Television (2 to 8 units). Hours to be arranged. Prerequisite: advancement to Ph.D. candidacy. Research and writing for Ph.D. dissertation. May be repeated for a maximum of 12 units. S/U grading.

Jose Saucedo, B.A.

Scope and Objectives

Theater study offers an opportunity to investigate fundamental cultural, social, ethical, and political issues in the context of artistic expression enriched by historical perspective. The curriculum promotes an awareness of theater as a global phenomenon embodying the contributions of diverse cultures and explores the verbal and visual elements of its language as

revealed through the dynamics of theater production. With this in mind, students engage in the presentation of dramatic work in a community where creativity and critical thought combine in the exploration of the artistic and intellectual challenges inherent in the making of theater.

The departmental degrees offer comprehensive study of theater and drama in programs that recognize the interrelation of critical thought and studio practice. At the undergraduate level, the B.A. degree provides students with an overview of the major component parts of theater in a liberal arts framework. The various specializations of the Master of Fine Arts degree offer in-depth professional training. The Ph.D. degree, which also recognizes studio practice, offers an intensive course of study in the critical and historical aspects of theater and drama as an art form. In conjunction with their theater studies, students also have the opportunity to pursue elective courses in the area of film and television.

Bachelor of Arts Degree

Note: Effective Fall Quarter 1993, the theater major will be revised. Prospective students should contact the school's Student Services Office or the departmental counselor for advice on the new preparation for the major courses.

Admission

All applicants must meet the admission standards of UCLA and the departmental screening process. Applications are accepted only in November for admission to the following Fall Quarter. There are no mid-year admissions. On receipt of your application the department notifies you of the screening process, which includes submission of a written personal essay, letters of recommendation, and an interview and/or audition. Information on the scheduling of the audition/interview is sent to each applicant with the departmental request for supplemental materials. Every applicant must complete the interview portion of the application process. The audition is optional for all students except those wishing to qualify for admission on the basis of their ability in performance. Although the B.A. is a comprehensive program of study, applicants may submit materials for consideration in one or more of the following areas: acting, directing, design and technical theater, dramatic writing, and history and criticism.

Preparation for the Major

Required: Theater 5A-5B-5C, 10, 20, English 90.

The Major

Required: A total of 60 upper division units, including Theater 130A, 140A, 141A, 142A, 160, 170, C172 (eight units); 27 units of approved upper division theater electives (to include one course from film and television). Through certain

of these required courses, you are responsible for completing specific production assignments related to production activity of the theater curriculum during each term in residence.

Graduate Study

The department offers three-year professional training programs leading to the Master of Fine Arts (M.F.A.) in Theater, with specializations in acting, directing, and design and production (scenic design, costume design, lighting design, sound design, or production management/technology). The producers program and playwriting are two-year specializations that also lead to the M.F.A. in Theater.

The department also offers the Doctor of Philosophy (Ph.D.) in Theater, with a history/criticism emphasis, and the Master of Arts (M.A.) degree which may be obtained only en route to the Ph.D.

Admission

Students are admitted in Fall Quarter only. Admission is competitive, and only a limited number of students are accepted in each program. The department does not have an application in addition to the one used by UCLA Graduate Application Processing. No screening examination prior to admission is required; however, the screening process may involve letters of recommendation, an audition, portfolio review, or interview. For further information, contact the Student Affairs Office, Department of Theater, 103 East Melnitz Building, UCLA, Los Angeles, CA 90024-1622. Applicants are advised that all records submitted in support of an application, including creative work, are not returnable, and the department is not responsible for such material.

In addition to satisfying minimum University requirements for graduate admission, you must (1) have completed an undergraduate major in any area comparable to that offered at UCLA and (2) provide the department with at least three letters of reference and a statement of purpose.

Additional admission requirements are noted under each specific program.

Master of Arts Degree

Admission

The M.A. degree is awarded only in conjunction with study in the Ph.D. degree program to students who have successfully completed one year of graduate work and all requirements for the M.A. degree, and who either do not wish to continue or are not passed by the Ph.D. committee to continue in the doctoral program. Requirements include the results of the Graduate Record Examination (GRE), a sample of scholarly or critical writing, a statement of purpose, and other information (resumé, portfolio, script, production book, interview, etc.) that may be required to establish the quality of your work in the program. Consult the Student Affairs Office, Department

of Theater, 103 East Melnitz Building, UCLA, Los Angeles, CA 90024-1622, for further information.

Major Fields

The program leads to a general graduate degree, though there are opportunities, through your electives and thesis or research paper topics, to stress a particular interest such as acting, design, directing, dramatic writing, and theater history and criticism.

Foreign Language Requirement

The program does not require a foreign language, but you are urged to develop proficiency in either French, German, Spanish, or Italian.

Course Requirements

You are required to complete a minimum of 10½ courses (42 units), five of which must be at the graduate level, in at least one year of intensive study, laboratory exercises, and research leading to the successful completion of either the thesis or comprehensive examination plan. You are required to take an active part in the production program of the department as partial fulfillment of the degree requirements.

The required courses are Theater 200, 245B, and C272 (a two-unit course to be taken three times). After consultation with your adviser, you select seven other courses, including one graduate course in theater history (205A, 205B, or 205C), one graduate course in theater production theory (240, 241, 290A, or 290B), and five other courses which emphasize production practice or historical study. Students accepted for joint M.A. and Ph.D. programs are required to take courses 205A-205B-205C.

Only eight units from the 596 series may be applied toward the total course requirement, and only four of these units may be applied toward the minimum graduate course requirement. No 598 courses may be applied toward the total course requirement.

Thesis Plan

Before beginning work on the thesis, you must obtain approval of a subject dealing with the history, aesthetics, criticism, or techniques of the theater and a general plan of investigation from the Ph.D. critical studies committee. A thesis committee is formed when you are within one term of completing the coursework, at which time you are eligible to advance to candidacy. You must present the adviser and the committee with a prospectus of the thesis and a petition to advance to candidacy. Both are used as the basis for approval.

If your thesis fails to pass the committee, you may present a rewritten version for approval. The number of times a thesis may be presented depends on assessments made by the committee.

Comprehensive Examination Plan

If you elect this plan, you must complete an examination consisting of a research paper which may be associated with four units of Theater 596A, a one-hour oral defense of the paper, and a two-part, six-hour written examination covering theater history and production practice. The examination normally occurs during your final term in residence, at which time you should have advanced to candidacy.

Master of Fine Arts Degree

Admission

Students are selected on the basis of ability to work on an advanced level and professional promise. At the time of application to the Graduate Division, you must indicate the M.F.A. degree objective and satisfy the specific admission requirements of one of the following areas of specialization within the M.F.A. program.

Acting — Submit a complete resumé and audition for the M.F.A. committee or its representative.

Design and Production (scenic, costume, lighting, production management/technology, or sound) — Submit a resumé and related coursework; provide evidence of ability appropriate to each emphasis as demonstrated by sketches, renderings, photographs, production books, plots, technical papers, reviews, or other appropriate exhibits. In addition to presentation of the portfolio, an interview may be required by the department.

Directing — Submit a resumé and evidence of production work, including prompt books, photographs, reviews, critical commentaries; provide an essay outlining a directorial approach to a selected play. An interview may be required by the department.

Playwriting — Submit a resumé and examples of creative writing which may include dramatic writing or narrative fiction such as full-length plays, one-act plays, and screenplays. An interview may be required by the department.

Producers Program — Submit a resumé, examples of related coursework, and a statement outlining your areas of specific interest and intent. An interview may be required by the department following initial application review by the faculty committee.

In addition, all applicants must submit three letters of recommendation and the results of the Graduate Record Examination (GRE) General Test. Consult the Student Affairs Office, Department of Theater, 103 East Melnitz Building, UCLA, Los Angeles, CA 90024-1622, for further information.

Major Fields or Subdisciplines

The areas of specialization for the M.F.A. program are as specified above.

Foreign Language Requirement

There is no foreign language requirement for the M.F.A. degree.

Course Requirements

For the two-year playwriting and producers programs a total of 18 courses (72 units) is required. You must take five graduate-level courses for the producers program and eight and one-half for playwriting. Only 16 units of Theater 596 may be applied toward the total course requirement and the minimum graduate course requirement.

For the three-year programs in acting, directing, and design and production (scenic design, lighting design, costume design, sound design, and production management/technology) a total of 23½ courses (94 units) is required. Only 12 units of course 596 may be applied toward the total course requirement. You must take 20½ graduate-level courses for the acting, directing, scenic design, and production management/technology specializations, 22½ for sound design and lighting design, and 23 for costume design.

Specific course requirements for each specialization are available in the Student Affairs Office.

Fieldwork and Internships — Occasionally, students fulfill project requirements in the field. Certain specializations may take advantage of opportunities offered by professional theaters or other organizations.

Comprehensive Examination Plan

The comprehensive plan is satisfied by fulfilling a series of creative projects appropriate to your specialization. On completion of the final creative project or in the last term in residence, whichever is last, you must file for advancement to candidacy. The committee then reviews and evaluates your record. Your participation in the final review is at the discretion of the committee.

Ph.D. Degree

Admission

You must submit evidence of potential as a practicing scholar as indicated by (1) breadth and depth of advanced coursework in history, theory, and criticism, (2) imagination and quality of scholarly writing, and (3) academic achievements and potential as indicated by grade-point average, Graduate Record Examination (GRE) scores, awards, scholarships, fellowships, etc. Additionally, you should demonstrate awareness and experience in one of the major fields of the theater, such as directing, dramaturgy, or design.

Students may be admitted with an M.F.A., M.A., or B.A. degree. The dossier submitted for admission must contain a statement of purpose indicating areas of interest appropriate to the doctoral degree, as well as a thesis or other writing samples.

Further information is available from the Student Affairs Office, Department of Theater, 103 East Melnitz Building, UCLA, Los Angeles, CA 90024-1622.

Major Fields or Subdisciplines

The Ph.D. student in theater is expected to be knowledgeable regarding theater history and theory, critical methods, theatrical production, and dramatic literature.

Foreign Language Requirement

Mastery of one foreign language approved by the Ph.D. committee is required and must be demonstrated by one of the following methods: (1) passing the Graduate School Foreign Language Test (GSFLT) in French, Spanish, German, or Russian with a score of 500 or better, (2) completing a level five foreign language course or equivalent with a grade of C or better, or (3) passing a UCLA language examination given in any foreign language department. The foreign language requirement may be completed after admission to the Ph.D. program; however, you are encouraged to complete five quarters or three semesters of a foreign language appropriate to Ph.D. research objectives prior to admission. Language courses taken toward fulfillment of the language requirement cannot be applied toward the degree.

Course Requirements

During the first six terms (two academic years), you must complete a minimum of 12 graduate courses (200 or 500 level) and two professional courses (Theater 495A and 495B). Courses 216A, 216B, 216C are required. The remaining nine courses are elective graduate courses, seminars, or tutorials. Of these electives, no more than four may be taken outside the department and no more than two may be tutorials. In addition, the distribution of electives must include at least one each in the areas of Western or non-Western theater study. These electives must augment the required courses so as to constitute a definable area of study associated with the dissertation topic. The dissertation is a historical, critical, analytical, or experimental study of a theater topic.

Teaching Experience

Every student must complete Theater 495A and 495B.

Qualifying Examinations

At the end of your second term in residence, you must take a preliminary oral examination administered by a representative committee of the faculty. The committee specifies the area of review, tests your background preparation and progress to date, and determines your general fitness to continue in the doctoral program.

After completion of all language and course requirements, approval of a dissertation prospectus, and appointment of a dissertation commit-

tee, you are required to pass a written qualifying examination administered during four successive days. Information regarding the examination is available from the Ph.D. committee. With approval of the department chair, you may be reexamined on any failed portions of the examination when it is next regularly scheduled, or within the year following the term in which it was first taken.

After you pass the written examination, a doctoral committee is formed to administer the University Oral Qualifying Examination. You are advanced to candidacy only on successful completion of this examination.

Candidate in Philosophy Degree

You are eligible to receive the C.Phil. degree on advancement to candidacy for the Ph.D.

Dissertation/Final Oral Examination

A dissertation demonstrating your ability to carry out independent and significant inquiry in a historical, theoretical, or critical field of theater is required. Final award of the Ph.D. depends on successful completion of the dissertation.

A final oral examination, held after completion of the dissertation, may be required at the option of the dissertation committee.

Lower Division Courses

5A-5B-5C. History and Drama of Theater. Lecture, three hours; discussion, one hour. Required of theater majors. History of influence of different cultures, traditions, and technologies on development of theater as a social institution. **5A.** Primitive Times to 1640; **5B.** 1640 to 1900; **5C.** 1900 to the Present.

10. Fundamentals of Theater, Film, and Television. Lecture, four hours; discussion, one hour; laboratory, two hours. Required of theater majors in first term in residence. Basic study of artistic relationship between management, writing, history, criticism, directing, acting, design, technical direction, cinematography, and animation in theater, film, and television production. Emphasis on understanding each of the arts which contribute to the final presentation.

11. Contemporary Theater Issues. Lecture, three hours. Investigation of theater in contemporary American culture and society. Topics illustrated by faculty and guest speakers, visits to off-campus theaters, and reading from contemporary plays.

12. Introduction to Performance. Lecture, two hours; studio, four hours. Investigation of phenomenon of performance and role of the performer in the theatrical event, including interpretation of drama through performance. Examination of various forms of theatrical performance and styles of expression, and development of acting, voice, and movement skills.

13. Play Reading and Analysis. Lecture, three hours. Provides a base for subsequent study in theater. Development of techniques of play reading and habits of scholarship useful to further study in each of the theater's subdisciplines, including acting, directing, design, playwriting, and critical study.

14A-14B-14C. Introduction to Design. Lecture, three hours; studio, six hours. Exploration of visual interpretation of drama. Study of styles and techniques of design, collaborative role of the designer, principles of design for scenery, lighting, costumes, and sound. Both technical and aesthetic groundwork for further study.

15. Introduction to Directing. Lecture, two hours; studio, four hours. Prerequisite: course 11. Investigation of role of the director in theatrical production and theories of play direction, with emphasis on analysis and interpretation of dramatic work and its realization in production.

20. Acting Fundamentals. Lecture/laboratory. Required of theater majors. Introduction to interpretation of drama through art of the actor. Development of individual insights, skills, and disciplines in presentation of dramatic material to an audience.

21A-21B. Introduction to Acting, Voice, and Movement (2 units each). Studio, six hours. Study of beginning acting technique: improvisation, games, and sense memory with examination of action and objective exercises, outline of Stanislavsky system, and development of voice and movement skills.

50. Theater Production and Performance (2 units). Studio, six hours. Laboratory experience in various aspects of theater production, including performance in a project or production, stage management, or member of a crew. May be repeated for a maximum of eight units.

Upper Division Courses

100. Teaching Theater. Lecture, three hours. Prerequisites: courses 160 or 161A, and 162A, or consent of instructor. Highly recommended for students pursuing a secondary instructional credential. Study of current methods and problems of production as related to secondary level.

101A-101B-101C. History of World Theater and Drama. Lecture, three hours; discussion, one hour. Survey of history of influence of different cultures, traditions, and technologies on development of theater as a social institution. **101A.** Ritual and Religious Drama. Study of origins of theater and drama from oral tradition, myth, storytelling, Shamanism, collective ritual, Greek festival drama, and cloister drama of different cultures. **101B.** Rise of Secular Drama. Study of Renaissance secular theater and drama in Europe, Asia, Africa, and the New World. **101C.** Emergence of Realism and 20th-Century Responses. Study of realism and subsequent departures from realism in theater and drama.

102A. Theater of Japan. Lecture, three hours. Exploration of major theater traditions of Japan from emergence of earliest theatrical activity to the present, including investigation of Noh, Bunraku, and Kabuki performance traditions.

102D. History of European Theater. Lecture, three hours. Prerequisite: consent of instructor. Not open for credit to students with credit for more than one course from 5A-5B-5C series. Survey of development of theater from the Greeks to the present.

102E. Theater of Non-European World. Lecture, three hours; discussion, one hour. Survey of theater forms of non-European world in which primary attention is concentrated on examination and analysis of traditional dance-drama and puppet theaters of East Asia, Southeast Asia, South Asia, the Middle East, and Africa. Analogous forms from European theater included for comparative purposes.

M103A. African American Theater History: Slavery to Mid-1800s. (Formerly numbered 103A.) (Same as Afro-American Studies M103A.) Lecture, three hours. Prerequisite: upper division standing. Exploration of extant materials on history and literature of theater as developed and performed by African American artists in America from slavery to the mid-1800s. (F)

M103B. African American Theater History: Minstrel Stage to Rise of the American Musical. (Formerly numbered 103B.) (Same as Afro-American Studies M103B.) Lecture, three hours. Prerequisite: upper division standing. Exploration of extant materials on history and literature of theater as developed and performed by African American artists in America from the minstrel stage to the rise of the American musical. (W)

M103C. Origins and Evolution of Chicano Theater. (Same as Chicana and Chicano Studies M103C.) Lecture, three hours. Prerequisite: upper division standing. Exploration of development of Chicano theater from its beginning in legends and rituals of ancient Mexico to work of Luis Valdez (late 1960s).

M103D. Contemporary Chicano Theater. (Same as Chicana and Chicano Studies M103D.) Lecture, three hours. Prerequisite: upper division standing. Study of recent trends in Chicano theater as reflected in works of contemporary Chicano dramatists and theater artists.

M103E. African American Theater History: The Depression to the Present. (Formerly numbered 103E.) (Same as Afro-American Studies M103E.) Lecture, three hours. Prerequisite: upper division standing. Exploration of extant materials on history and literature of theater as developed and performed by African American artists in America from the Depression to the present. (Sp)

103F. Native American Theater. Prerequisite: consent of instructor. Study of American Indian theater as an evolving art form. (Sp)

104D-104E-104F. History of American Theater. Lecture, three hours. **104D.** Revolutionary War to the Civil War; **104E.** Civil War to WWI; **104F.** WWI to the Present.

105. Main Currents in Theater. Lecture, three hours. Critical examination of leading theories of theater from 1887 to the present. Study and discussion of modern styles of production.

106. History of American Theater and Drama. Lecture, three hours. Survey of key works of American dramatic literature and landmarks of American theater history.

107. Drama of Diversity. Lecture, three hours. Investigation of diversity in American society as manifested in dramatic works and theatrical presentations.

111A. Selected Topics on History of European Theater from Primitive Times to 1640. (Formerly numbered 102A.) Lecture, three hours. Investigation in depth of a selected area of study in theater history from the Greeks to 1640. May be repeated twice for credit.

111B. Selected Topics on History of European Theater from 1640 to 1900. (Formerly numbered 102A.) Lecture, three hours. Investigation in depth of a selected area of study in theater history from the Renaissance through 1900. May be repeated twice for credit.

111C. Selected Topics on History of European Theater from 1900 to the Present. (Formerly numbered 102B.) Lecture, three hours. Investigation in depth of a selected area of study in theater history from the baroque to the present. May be repeated twice for credit.

115. Acting, Voice, Movement I. Studio, 12 hours. Prerequisites: courses 21A-21B. Further study of beginning acting technique and development of acting, voice, and movement skills culminating in a recital project.

116A-116B-116C. Acting, Voice, Movement II (2 units each). Studio, six hours. Prerequisites: courses 21A-21B. Development of acting skills through scene study, use of self, and personalization. Examination of characterization. Exercises and their application to contemporary American scenes. Development of speech, voice, and movement skills.

C117. Puppet Theater (2 units). Lecture/laboratory, four hours. Prerequisite: consent of instructor. Study of history and practice of art of puppetry. Examination of materials and methods of construction. Staging of puppet productions as laboratory practice. May be repeated twice for credit. Concurrently scheduled with course C217A.

118A. Creative Dramatics. Lecture/laboratory. Studies of principles and procedures of improvisational approach to drama as done with children from nursery school to junior high.

- 118B. Advanced Creative Dramatics (2 to 4 units).** Lecture, four hours; other, to be arranged. Prerequisite: consent of instructor. Practical application of creative drama process. Exploration of interrelationships of the arts to traditional disciplines of learning. May be repeated once for credit.
- 119A. Theater for the Child Audience: Theory and Criticism.** Lecture/laboratory. Principles of production and performance for the child audience.
- 119B. Theater for the Child Audience: Performance.** Lecture, two hours; laboratory, four hours. Prerequisites: audition and consent of instructor prior to first class meeting. Designed to provide opportunity for students to work together as an ensemble, creating through improvisation a theater presentation for a young audience. Emphasis on testing theoretical concepts through ensemble work, rehearsal, pretesting, and evaluation of an original production for possible presentation outside the classroom.
- 121. Acting Workshop (2 units).** Laboratory, to be arranged. Prerequisites: course 20, consent of instructor. Courses 160, 161A, 161B, and 161C may be taken concurrently. Workshop which provides students with opportunity to rehearse, perform, and criticize scenes. May be repeated once for credit.
- 122. Makeup for the Stage (2 units).** Prerequisite: consent of instructor. Art of makeup and its relation to the production as a whole. History, aesthetics, materials, and procedures of makeup.
- 123. Intermediate Acting for the Stage.** Lecture/laboratory. Prerequisites: course 20, consent of instructor. Study and practice of art of acting through perfecting of techniques and application of those techniques to acting problems.
- 124A. Advanced Voice (2 units).** Studio/laboratory, three to four hours. Prerequisites: courses 126A-126B-126C. Development of voice techniques for the stage, including work in relaxation, limbering, breathing, articulators, and resonators.
- 124B. Advanced Speech (2 units).** Studio/laboratory, three to four hours. Prerequisite: course 124A. Designed to acquaint students with international phonetic alphabet and its uses and to exercise students' skills in pronunciation, enunciation, and development of diction versatility.
- 125A. Advanced Movement (2 units).** Studio/laboratory, three hours. Physical awareness for the actor, concentrating on warming up the body, relaxation, control, stunts, and gymnastics.
- 125B. Advanced Movement and Combat (2 units).** Studio/laboratory, three to four hours. Prerequisite: course 125A. Advanced and contemporary approach to classical and modern movement for the stage actor.
- 126A-126B-126C. Acting, Voice, Movement III.** Studio, nine hours. Prerequisites: courses 21A-21B. Study of characterization, including introduction to Shakespeare. Approach to verse, scansion, use of emboles in classic texts. Personalization within heightened reality. Further work in voice, speech, and movement.
- 127A-127B-127C. Advanced Acting (2 units each).** Studio, six hours. Prerequisites: courses 126A-126B-126C. Comedy workshop, stand-up comedy, performance art pieces. Audition and cold reading workshop. Solving individual acting projects.
- CM129. Contemporary Topics in Theater, Film, and Television (2 units).** (Same as Film and Television CM129.) Lecture, two hours; screenings, two hours. Prerequisite: upper division or graduate standing in theater/film and television. Examination of creative process in theater, film, and television, with consideration of writing, direction, production, and performance. Overview of individual contributions in the collaborative effort; examination of distinctiveness and interrelations among these arts. Individual units include participation of leading members of theater, film, and television professions. May be repeated for a maximum of six units. Concurrently scheduled with course CM229.
- 130A. Beginning Playwriting.** Lecture, three hours; discussion, one hour. Prerequisite: consent of instructor. Required of theater majors. Designed to stimulate students' creative faculties through preparation and completion of a one-act play. Students' critical faculties stimulated by play analysis and scene exercises in discussion section.
- 130B. Fundamentals of Playwriting II.** Lecture, three hours plus conference. Prerequisites: course 130A, consent of instructor. Study in original material for the theater, its preparation and development. Designed to give further insight into critical and creating aspects of short and full-length plays and guidance in completion of one-act and full-length plays. May be repeated twice for credit.
- 130C. Writing for American Musical Theater.** Lecture/laboratory, three hours. Prerequisite: consent of instructor. Study of practice and techniques used in writing a libretto for musical theater: opening numbers, romance, subplots, and comedy. May be repeated once for credit.
- 132. Manuscript Evaluation for Theater.** Lecture, three hours. Prerequisites: course 130A, consent of instructor. Principles and practices in evaluation of manuscripts for theater. May be repeated once for credit.
- C133A-C133B-C133C. Script Development Workshops.** Laboratory, three hours. Prerequisite for playwrights and directors: consent of instructor. Guided preparation of a script for production, focusing on collaborative process between playwright and director, scene work, staged readings, casting, rehearsal, and full production. Emphasis on communication, artistic growth, and professional process. Concurrently scheduled with courses C433A-C433B-C433C.
- 136. Advanced Acting for the Stage.** Lecture/laboratory. Prerequisites: courses 123, 124A, 125A, consent of instructor. Study and practice of art of acting through a progression to more advanced acting problems. May be repeated twice for credit. Consecutive enrollment with same instructor not permitted. Total units for courses 136, 137A, 137B, and 137C may not exceed 12 units.
- 137A-137B-137C. Continuum Study in Acting for the Stage.** Lecture/laboratory. Prerequisites: courses 123, 124A, 125A, consent of instructor. Technique of characterization and performance in advanced and complex acting styles. Total units for courses 136, 137A, 137B, and 137C may not exceed 12 units.
- 138. Special Problems in Performance Techniques.** Lecture/laboratory. Prerequisite: consent of instructor. Study of complex problems in voice, movement, and acting. May be repeated twice for credit.
- 140A. Scenic Techniques for the Stage.** Lecture, three hours; laboratory, six hours. Prerequisites: course 10, consent of instructor. Intensive study of stage scenery techniques; tools, hardware, and materials; and their relationship to the art of theatrical scenic design through analysis of scenic design history, overall production concepts, and design styles.
- 140B. Advanced Scenery for the Stage.** Lecture/laboratory. Prerequisite: course 140A. Advanced study of technical problems in staging theater productions, including design analysis and planning related to rigging, shifting, and construction techniques.
- 141A. Lighting Techniques for the Stage.** Lecture, three hours; laboratory, six hours. Prerequisites: course 10, consent of instructor. Required of theater majors. Intensive study of theater lighting, with emphasis on relationship of lighting instruments and control equipment to lighting design. Courses 141A, 140A, and 142A may be taken in any sequence, but not concurrently.
- 141B. Advanced Lighting for the Stage.** Lecture/laboratory. Prerequisite: course 141A. Detailed study of stage lighting as an art, with emphasis on design concepts. Interpretation of a script or score through control of light and color in relation to actor and audience.
- 142A. Theater Costuming Techniques.** Lecture, three hours; laboratory, six hours. Prerequisites: course 10, consent of instructor. Required of theater majors. Study of costume analysis and interpretation of theatrical costume design through use of patterns, fabrics, and related costume materials. Courses 142A, 140A, and 141A may be taken in any sequence, but not concurrently.
- 142B. Advanced Costuming for the Stage.** Lecture, three hours; laboratory, four hours. Prerequisites: course 142A, consent of instructor. Special problems in procuring, designing, construction, and management of costumes used in theatrical productions.
- 143. Scenic Design for the Theater.** Prerequisite: course 140A. Basic principles of design as applied to interpretation and presentation of visual aspects of dramaturgy. Study of styles, techniques, and methods of design for theater arts. Translation of ideas into visual forms. May be repeated once for credit.
- 144A. Theater Sound Techniques (2 units).** Lecture, two hours; laboratory, two hours. Prerequisite: course 10 or an approved equivalent. Study of equipment and techniques utilized in recording and reproduction of sound for the theater.
- 144B. Advanced Theater Sound.** Lecture, three hours; laboratory, four hours. Prerequisite: course 144A or consent of instructor. Detailed study of theater sound, with emphasis on composition and execution of theater sound tracks, recording techniques, and acoustic reinforcement.
- 145. Costume Design for the Theater.** Lecture/laboratory. Prerequisite: consent of instructor. Design of costumes for theatrical presentations. Study of use of silhouette, fabrics, color, and decoration as related to theatrical characterizations. May be repeated once for credit.
- 147A. Drafting (2 units).** (Formerly numbered 149A.) Studio, four hours. Development of visual communication skills through drafting. Exploration of drafting for scenic and lighting designs. May be repeated once for credit.
- 147B. Rendering (2 units).** Studio, four hours. Introductory course in basic skills necessary for drawing and rendering for scenic, costume, and lighting design for theater, film, and television. May be repeated once for credit.
- 148. Special Courses in Design and Technical Theater.** Lecture, three hours. Prerequisite: consent of instructor. Group study of selected subjects in design and technical theater. May be repeated twice for credit.
- 149B. Advanced Drafting for Theater Arts.** Lecture/laboratory. Prerequisite: course 149A or consent of instructor. Advanced course in technical sketching and drafting of working drawings essential in development of design of sets and properties for theater, television, and motion picture productions.
- 150. Theater Production and Performance (2 units).** Studio, six hours. Prerequisite: course 50. Laboratory experience in various aspects of theater production, including performance in a project or production, stage management, member of a crew, or assignment as a designer or assistant on a production. May be repeated for a maximum of eight units.
- 151A-151B. Scenic Design.** Prerequisites: courses 14A-14B-14C. Introduction to principles of study and practice of the design of scenery for theater, film, and television. Imagination as impetus for design, text analysis, metaphor, and conceptualization. Investigation of design research process, composition, and style leading to visual presentation of the design.
- 152A-152B. Lighting Design.** Prerequisites: courses 14A-14B-14C. Investigation of principles and techniques of lighting design for theater and television. Study of lighting, with emphasis on imagination, text analysis, metaphor, and conceptualization. Investigation of composition and control of light and color in relation to the actor.

154A-154B. Sound Design. Prerequisites: courses 14A-14B-14C. **154A.** Study of recording, mixing, editing, and playback of sound effects, voice, and music in the theater. **154B.** Introduction to use of delay, equalization, and microphone placement for theater sound reinforcement. Study of creation of sound effects, control of MIDI data, and design techniques for musical theater.

C155G. Graphic Representation of Design: Scene Painting Techniques (2 units). (Formerly numbered C146.) Studio, three hours. Prerequisite: course 147A or 147B. Study of scenic painting techniques and materials and their realization of color design and elevations. May be repeated once for credit. Concurrently scheduled with course C455G.

159. Design Portfolio Project. Prerequisites: courses 14A-14B-14C. Preparation of complete designs and drawings for a production and assembly of a design portfolio and resumé. Projects prepared under guidance of a faculty adviser.

160. Fundamentals of Play Direction (5 units). Lecture, two hours; laboratory, four hours. Prerequisite: consent of instructor. Required of theater majors. Course 121 may be taken concurrently. Basic theories of play direction and their application through preparation of scenes under rehearsal conditions.

162A. Intermediate Play Direction. Lecture/discussion, two hours; laboratory, eight hours. Prerequisites: course 160 or 161A, consent of instructor. Application of stage direction techniques to the one-act play. Each student directs a one-act play to be performed under rehearsal conditions. Material taken from published sources.

163A-163B-163C. Directing for the Stage. (Formerly numbered 161A, 161B, 161C.) Prerequisites: course 15, consent of instructor:

163A. Intensive development of primary directing skills and process, including text analysis and exploration of craft fundamentals as a basis for director/actor communication and effective staging. Students direct scenes from plays under laboratory conditions.

163B. Further development of craft elements of directorial method, with additional emphasis on psychological aspects of director/actor communication. Students direct scenes under laboratory conditions in alternative stage configurations.

163C. Culminating development of directorial methods, with particular emphasis on challenges of style in text and production. Students direct scenes under laboratory conditions in alternative stage configurations.

C163D. Directing Project for the Stage. (Formerly numbered C162B.) Lecture, four hours; studio, six hours. Prerequisites: courses 163A-163B-163C, consent of instructor. Completion of course C163D satisfies course 180 requirement. Application of stage directing techniques in production of a short play. Students direct a one-act play. May be repeated once for credit. Concurrently scheduled with course C263D.

170. Theater Laboratory. Lecture, four hours; laboratory, eight hours. Prerequisites: courses 140A, 141A, 142A, consent of instructor. Required of theater majors. Laboratory in theater production under supervision. Translation of ideas and concepts into the dramatic form.

171A. Advanced Theater Laboratory (1 to 4 units). Hours to be arranged. Prerequisite: consent of instructor. Creative participation as actor or stage manager in public presentation of departmental productions. May be taken for a maximum of four units.

171B. Advanced Theater Laboratory (1 to 4 units). Hours to be arranged. Prerequisite: consent of instructor. Creative participation in realization of production elements related to public presentation of departmental productions. May be taken for a maximum of four units.

C172. Technical Theater Laboratory (2 units). Hours to be arranged. Prerequisite: consent of instructor. Required of theater majors. Laboratory in various aspects of theater production. Must be repeated for a maximum of eight units, but no assignment may be repeated more than once. Concurrently scheduled with courses C272 and C472.

173A. Design Assignment: Assistant Designer (2 units). Studio, six hours. Prerequisites: courses 14A-14B-14C. Laboratory experience as an assistant designer, including participation in preparation and realization of scenic, lighting, costume, or sound designs. May be repeated twice.

173B. Production Design Assignment: Designer (2 units). Studio, six hours. Prerequisites: courses 14A-14B-14C. Laboratory experience as a designer, including preparation and realization of scenic, lighting, costume, or sound designs. May be repeated twice.

174A. Stage Managing Techniques (2 units). Studio, six hours. Prerequisites: courses 14A-14B-14C. Professional duties of stage manager. Problems of unions, professional auditions, organization, scheduling, out-of-town openings, Broadway openings, and responsibilities of a lengthy run.

174B. Project in Stage Management (3 units). Studio, nine hours. Prerequisite: course 174A. Laboratory experience in the professional duties of assistant stage manager, including participation as an assistant stage manager in preproduction, rehearsal, and performance phases of a production. May be repeated once for credit.

174C. Project in Stage Management. Studio, 12 hours. Prerequisite: course 174A. Laboratory experience in the professional duties of stage manager, including participation as a stage manager in preproduction, rehearsal, and performance phases of a production. Problems of unions, auditions, organization, scheduling, and responsibilities of a lengthy run. May be repeated once for credit.

180. Senior Project. Lecture/studio, three hours. Prerequisites: courses 101A-101B-101C. Preparation of a conceptual or creative project to provide a culminating experience in the production of a creative or research work.

C190A. Role of Producer in Professional Theater (2 units). Study of structure governing economic and artistic decision-making processes in professional theater of America. Concurrently scheduled with course C294A.

C190B. Role of Management in Educational and Community Theater (2 units). Study of artistic, social, and economic criteria in administration of educational and community theater. Concurrently scheduled with course C294B.

191. The Touring Company (2 to 12 units). Lecture, 20 hours; laboratory, 22 hours. Prerequisite: consent of instructor. Rehearsal and technical preparation of a theatrical work for touring and performance of that work on tour.

192. Motion Picture, Television, and Theater Internship (2, 4, or 8 units). Field experience, eight, 16, or 24 hours; individual conferences, to be arranged. Prerequisite: consent of instructor. Limited to senior Department of Theater majors. Internship at various studios or theaters accentuating creative contribution, organization, and work of professionals in their various specialties. May be taken for a maximum of eight units.

199. Special Studies in Theater Arts (2 to 8 units). Hours to be arranged. Prerequisite: senior standing, 3.0 GPA in major, consent of instructor. May be taken for a maximum of eight units.

Graduate Courses

Certain graduate courses concerned with individual student projects may be repeated for credit on recommendation of the departmental graduate adviser. Graduate courses are not open to undergraduate students.

200. Bibliography and Methods of Research in Theater Arts.

202A. Seminar: Western Classical Theater. Discussion, three hours. Prerequisites: graduate standing, consent of instructor. Examination of theatrical production and dramatic form in the Greek and Roman periods. May be repeated twice for credit.

202B. Seminar: Medieval Theater. Discussion, three hours. Prerequisites: graduate standing, consent of instructor. Selected studies of theatrical production and dramatic form in the Middle Ages. May be repeated twice for credit.

202C. Seminar: Renaissance and Baroque Theater. Discussion, three hours. Prerequisites: graduate standing, consent of instructor. Selected studies in theater architecture, theatrical production, and dramatic form in English and Continental theater from 1485 to the early 18th century. May be repeated twice for credit.

202D. Seminar: Bourgeois and Romantic Theater. Discussion, three hours. Prerequisites: graduate standing, consent of instructor. Selected studies in theater architecture, theatrical production, and dramatic form in English and Continental theater from 1700 to 1870. May be repeated twice for credit.

202E. Seminar: Modern Consciousness in Theater. Discussion, three hours. Prerequisites: graduate standing, consent of instructor. Study of prototypes of modern experience as encountered in work of Ibsen and Strindberg. May be repeated twice for credit.

202F. Seminar: Modern Realism. Discussion, three hours. Prerequisites: graduate standing, consent of instructor. Selected studies of theater's response to science and technology, politics, and revolution. May be repeated twice for credit.

202G. Seminar: Modern Theatricalism. Discussion, three hours. Prerequisites: graduate standing, consent of instructor. Selected studies in symbolism and avant-garde theater. Exploration of dream experience and private psyche, religious experience, and revitalization of myth and ritual. May be repeated twice for credit.

202M. Seminar: American Theater. Discussion, three hours. Prerequisites: graduate standing, consent of instructor. Selected studies in development of theatrical production and dramatic writing in American theater. May be repeated twice for credit.

202N. Seminar: Theater Architecture and Scenic Design. Discussion, three hours. Prerequisites: graduate standing, consent of instructor. Selected studies of playhouse and scenic environment, relating historic and contemporary concepts. May be repeated twice for credit.

202P. Seminar: Traditions of African Theater. Discussion, three hours. Prerequisites: graduate standing, consent of instructor. Selected studies of traditional theater forms such as those indigenous to Ghana, Nigeria, and other African nations and their diaspora (Haiti, Jamaica, and other areas of the Caribbean) through examination of character, structure, performance modes, and archetypes. May be repeated twice for credit.

202R. Seminar: East Asian Theater. Discussion, three hours. Prerequisites: graduate standing, consent of instructor. Selected topics in theater forms of East Asia, including dramatic literature, costume, theater spaces, and critical writings. May be repeated twice for credit.

202S. Seminar: South Asian Theater. Discussion, three hours. Prerequisites: graduate standing, consent of instructor. Selected topics in theater forms of South Asia, including dramatic literature, costume, theater spaces, and critical writings. May be repeated twice for credit.

202T. Seminar: Southeast Asian Theater. Discussion, three hours. Prerequisites: graduate standing, consent of instructor. Selected topics in theater forms of Southeast Asia, including dramatic literature, costume, theater spaces, and critical writings. May be repeated twice for credit.

203. Theater Ethics and Issues (5 units). Seminar, four hours. Prerequisites: graduate standing, consent of instructor. Investigation of a selected area of theater and drama study that explores significant issues and ethical considerations of the modern world. May be repeated four times for credit.

204. Theater Genres (5 units). Seminar, four hours. Prerequisites: graduate standing, consent of instructor. Investigation of history and literature of the theater as manifested in one or more of its major forms or genres. May be repeated four times for credit.

205A-205B-205C. Background of Theatrical Art. Discussion, three hours. Prerequisites: graduate standing, consent of instructor. Analysis of major plays, commentaries, and historical materials. **205A.** Classical and Medieval Periods; **205B.** Renaissance, Baroque, and Rococo Periods; **205C.** Romantic, Naturalistic, and Symbolist Periods.

206. Themes in World Theater and Drama (5 units). Seminar, four hours. Prerequisites: graduate standing, consent of instructor. Selected topics in world theater history, drama, production, and/or architecture organized on a thematic basis. May be repeated four times for credit.

207A-207B. Theater Aesthetics. Prerequisites: graduate standing, consent of instructor. Discussion of essential issues in aesthetics of theater and drama based on philosophy of art and theories of the theater. **207A.** Classical and Medieval Theories of Art and Theater; **207B.** Renaissance Theories of Art and Theater to the Present.

208. Dramaturgy. Discussion/laboratory, three hours. Prerequisites: graduate standing, consent of instructor. Theoretical and practical aspects of the dramaturge's work in contemporary theater.

209. Theater Authors (5 units). Prerequisites: graduate standing, consent of instructor. Investigation of work of a theater artist from history of world theater, with special emphasis on relationship to time in which the work was generated. May be repeated four times for credit.

210. Topics in World Theater and Drama (5 units). Prerequisites: graduate standing, consent of instructor. Investigation of selected topics in world theater, drama, production, and architecture. May be repeated four times for credit.

216A. Critical and Historical Methods. Discussion, three hours. Prerequisites: graduate standing, consent of instructor. Studies in theater historiography and sociological criticism.

216B. Critical Methods. Discussion, three hours. Prerequisites: graduate standing, consent of instructor. Studies in critical theories of theatrical form and structure.

216C. Critical Methods. Discussion, three hours. Prerequisites: graduate standing, consent of instructor. Studies in contemporary modes of psychoanalytic and archetypal criticism for theater.

C217A. Research and Practice in Puppet Theater (2 units). Laboratory, four hours. Prerequisites: graduate standing, consent of instructor. Study of history and practice of art of puppetry. Examination of materials and methods of construction. May be repeated twice for credit. Concurrently scheduled with course C117. Graduate students required to present "one-person" show of no less than 15 minutes, with puppets constructed and developed for particular show (Fall Quarter, hand puppets; Winter Quarter, rod puppets; Spring Quarter, shadow puppets). Students develop show concept with advice of instructor.

M217B. Seminar: Puppet Theater. (Same as Folklore M219.) Lecture, three hours. Prerequisite: consent of instructor. Studies in puppet theaters of the world: techniques, literature, aesthetics.

220. Graduate Forum (1 unit). (Formerly numbered 220F-220W-220S.) Seminar, two hours bimonthly or five times per term. Prerequisite: graduate standing in theater. Presentation and discussion of issues informing and affecting contemporary theater. May be repeated four times for credit. S/U grading.

CM229. Contemporary Topics in Theater, Film, and Television (2 units). (Same as Film and Television CM229.) Lecture, two hours; screenings, two hours. Prerequisite: upper division or graduate standing in theater/film and television. Examination of creative process in theater, film, and television, with consideration of writing, direction, production, and performance. Overview of individual contributions in the collaborative effort; examination of distinctiveness and interrelations among these arts. Individual units include participation of leading members of theater, film, and television professions. May be repeated for a maximum of six units. Concurrently scheduled with course CM129.

230A-230B-230C. Advanced Playwriting (4 to 8 units each). Lecture, three hours. Prerequisites: graduate standing in M.F.A. playwriting program and/or consent of instructor. Guided completion of scripts for the stage.

232. Manuscript Analysis. Lecture, three hours. Prerequisites: graduate standing, consent of instructor. Critical and constructive study of dramatic techniques as employed by playwrights and screenwriters in selected examples of contemporary work. May be repeated once for credit.

240. Contemporary Playhouse. Discussion. Prerequisites: graduate standing, consent of instructor. Advanced study of concept, form, and function of contemporary playhouse and its equipment.

241. Research in Technical Theater. Prerequisites: graduate standing, consent of instructor. Research in technical processes and equipment in theater.

242A-242B-242C. History of Style and Ornamentation. Prerequisites: graduate standing, consent of instructor. In-depth study of history of costume, architecture, interiors, furnishings, and their interrelationships from early Western culture through the late Gothic period. Emphasis on those periods most prolific in dramatic literature and on resources and research techniques for visual artists.

243A-243B-243C. Scenic Design. Prerequisite: consent of instructor. Advanced study and practice in scenic design for theater. Imagination as impetus for design, text analysis, metaphor, and conceptualization. Investigation of design research process, composition, and style leading to visual presentation of the design. May be repeated once for credit.

244A. Advanced Theater Laboratory (2 or 4 units). Laboratory, to be arranged. Prerequisites: graduate standing, consent of instructor. Creative participation as assistant director, stage manager, or performer in public presentation of departmental productions. May be taken for a maximum of four units.

244B. Advanced Theater Laboratory (2 or 4 units). Laboratory, to be arranged. Prerequisites: graduate standing, consent of instructor. Creative participation in realization of production elements related to public presentation of departmental productions. May be taken for a maximum of four units.

245A. Production Management. Lecture, three hours. Prerequisite: consent of instructor. Study in production management for the theater. Examination of professional duties of production manager, including preproduction, rehearsal, and performance phases of a production. Problems of resource management, unions, organization, scheduling, and budgeting while maintaining a creative and collaborative environment.

245B. Production Management. (Formerly numbered 245.) Lecture, three hours. Prerequisite: course 245A. Advanced study in production management for the theater, with focus on planning process of professional production manager in a seasonal and repertory environment. Problems of resource allocation, unions, organizational structure, scheduling, and budgeting to establish a creative and collaborative environment.

245C. Projects in Stage Management. Studio/laboratory. Prerequisite: course 245B. Laboratory experience in professional duties of production manager, including participation as a production manager in preproduction, rehearsal, and performance phases of a production. Problems of resource management, unions, organization, scheduling, and budgeting.

246A-246B-246C. History of Costume. Lecture/studio. Prerequisite: graduate standing. Study of history of costume as a manifestation of cultural, social, economic, and political influences to provide a historical framework for design of costumes for theater, film, and television. Historic survey and in-depth exploration of a selected period, with study of influences of diverse cultures.

247. Collaborative Project in Design and Production. Studio. Prerequisites: graduate standing, consent of instructor. Collaborative project in design, including analysis, conceptual development, and preparation of scenic, lighting, costume, or sound designs. May be repeated once for credit.

260. Directing I. Lecture, four hours; studio, 24 hours. Prerequisites: graduate standing, consent of instructor. Development of directorial skills of analysis, planning, staging, and criticism through medium of written preparations and directing of scenes.

261. Directing II. Lecture, four hours; studio, 30 hours. Prerequisites: graduate standing, consent of instructor. Problems in direction of post-realist plays through medium of interpretation and laboratory scene work.

263. Production Project in Direction for the Stage (4 to 6 units). Discussion, one hour; laboratory, 15 to 24 hours per week of rehearsal (three to six weeks depending on project). Prerequisites: graduate standing, consent of instructor. Direction of a dramatic work for public performance. Discussion and critique of work in progress. May be repeated for a total of no more than 12 units.

C263D. Directing Project for the Stage. (Formerly numbered C262.) Lecture, four hours; studio, six hours. Prerequisites: courses 163A-163B-163C, consent of instructor. Application of stage directing techniques in production of short play. Students direct a one-act play. May be repeated once for credit. Concurrently scheduled with course C163D.

264. Directing Classical and Historical Drama. Lecture, four hours; studio, 30 hours. Prerequisites: graduate standing, consent of instructor. Problems in interpretation and direction of historical or classical drama through medium of laboratory scene work.

265. Modern Theories of Production. Examination of modern theories of production from emergence of the director in the 19th century to the present. Investigation of different responses to problems of creating a vital theatrical event in context of ongoing evolution of theater as an art form. Examination of contribution of significant directors and movements; relation between theater and other forms of representation.

266. Theatrical Conceptualization. Examination of process of conceptualization in dramatic production; centrality of theatrical conceptualization in interpretation of dramatic text; exploration of range of possibilities inherent in different theatrical spaces and options in design components. Consideration of visual arts and music as sources of stimulus for theatrical conceptualization, with focus on collaborative aspect of theatrical production.

C272. Production and Performance Laboratory (2 units). Lecture, three hours; laboratory, to be arranged. Prerequisites: graduate standing, consent of instructor. Credit for creative production assignments required of all M.A. students during first three terms in residence. May be repeated twice for credit. Concurrently scheduled with courses C172 and C472.

290A. Role of Management in Artistic Decision Making in the Theater. Prerequisite: consent of instructor. Descriptive study of criteria for decision making in artistic institutions, including role of the institution in society, economic environment of the arts, and artistic value systems of arts organizations.

290B. Programming and Planning Policies in the Theater. Prerequisite: consent of instructor. Analysis of social, artistic, and economic roles of the arts as reflected in programming policy. Examination of social goals pursued in establishing relationships between the arts and their environment.

C294A. Artistic Control of Theatrical Production by Professional Producer (2 units). Prerequisites: graduate standing, consent of instructor. Study of structure governing economic and artistic decision-making processes in professional theater of America and historical development of involvement of producer in artistic process. Concurrently scheduled with course C190A. Additional research and writing required of graduate students.

C294B. Organization and Operation of Community Theater (2 units). Prerequisites: graduate standing, consent of instructor. Study of artistic, social, and economic criteria in administration of educational and community theater, with research in history of current practices in operations, administration, and organization. Concurrently scheduled with course C190B.

298A-298B. Special Studies in Theater Arts (2 to 4 units each). Lecture/discussion. Prerequisites: graduate standing, consent of instructor. Seminar study of problems in theater arts, organized on topic basis. May be repeated once for credit.

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

417. Production Project for Puppet Theater (8 units). Laboratory, 30 hours; consultation, five hours. Prerequisite: consent of instructor. Limited to M.F.A. candidates. Design, construction, and performance of a full-length production with puppets as culminating exercise for candidates for M.F.A. degree in puppet theater. Students expected to present full argument for design style and techniques used in construction of puppets, rationale for use of puppets for particular project presented, and final justification and analysis of completed work.

420A-420B-420C. Advanced Acting I. Studio/laboratory, six to 18 hours:

420A. Development of an internal technique, beginning with an autodrama which is a dramatization of one's personal history. Scene work follows, with emphasis on off-stage preparations, improvisations capturing the circumstances, life of the character, and intentions of the scene.

420B. Scene work, usually from 20 to 30 minutes in length. Continuation of work on off-stage preparation, with further development of how the actor goes about doing research and fieldwork on the character being played.

420C. Development of an external technique through comedy and of skits, improvisation, physical humor, delivery of a line, rhythm, timing, and public cabaret. Fusion of the internal; use of action and objective with the external.

421A-421B-421C. Advanced Acting II (4 or 8 units each). Studio/laboratory, six to 18 hours. **421A.** Extending the idea of autobiography and using it as art. The actor as performance artist. Playing characters quite removed from oneself. Using language. Using Shakespeare and oneself to play him. **421B.** Continued character behavior study through language and movement. Further work on actions, objectives, and researching the role. **421C.** Comedy workshop. Exploration of craft of comedy and development of cabaret pieces.

422. Advanced Acting for Theater, Film, and Television (8 to 12 units). Studio/laboratory. Intensive performance experience. May be repeated for a maximum of 24 units. S/U grading.

424A-424B-424C. Advanced Voice and Speech I (2 or 4 units each). Studio/laboratory, three to six hours. Development of voice and speech techniques for the stage, including those of relaxation, breathing, resonance, and development of speaking voice. Speech training uses International Phonetic Alphabet to train students in standard American speech. Text work in poetry and prose.

424D-424E-424F. Advanced Voice and Speech II (2 or 4 units each). Studio/laboratory, three to six hours. Advanced voice problems. Extension of first-year work, with increased demands on voice. Range, resonance, and breathing capacity extension. Articulation and phonetic alphabet. Text work in classical verse.

425A-425B-425C. Advanced Movement I (2 or 4 units each). Studio/laboratory, three to six hours. Discovery of body's unique language through exercises designed to explore and free the total instrument. Development of a flexible actor with range, expression, and confidence physically. Awakening of the imagination while exploring the worlds of ritual, animal, conceptual, and modern dance movements.

425D-425E-425F. Advanced Movement II (2 or 4 units each). Studio/laboratory, three to six hours. Presentation of a more complete picture of stage movement and its relationship to theater, music, and dance. Advancement of physical training of individual actors to their maximum potential. Experience in techniques and discovery of origins of a variety of acrobatic and dance disciplines, including ballet, ballroom, period dance, and circus techniques.

429. Performance Workshop (2 units). Studio, four hours. Prerequisites: graduate standing, consent of instructor. Limited to graduate students not enrolled in M.F.A. acting program. Exercises in performance techniques, including autodrama and scene study. Development of performance skills through scene study, use of self, and personalization. Examination of characterization exercises and their application to scenes.

430A-430B-430C. Advanced Studies in Playwriting (4 to 8 units each). Lecture, three hours. Prerequisite: graduate standing in M.F.A. playwriting program. Guided completion of full-length scripts for the stage.

431. Special Topics in Playwriting. Discussion, three hours. Prerequisites: graduate standing in M.F.A. playwriting program and/or consent of instructor. Analysis and practice of varied aspects of playwright's art. Variable content selected from topics such as comedy writing, docudrama, writing for alternative audiences, adaptation from stage to screen, children's theater, or improvisational techniques. May be repeated twice for credit.

432. Manuscript Evaluation. Lecture, four hours; laboratory, to be arranged. Prerequisites: course 132 and consent of instructor, or candidate in M.F.A. writing program and consent of instructor. Evaluation of manuscripts of beginning writers, including but not limited to those produced in Film and Television 130B. May be taken twice for credit (once each year of M.F.A. residence).

C433A-C433B-C433C. Script Development Workshops. Laboratory, three hours. Prerequisites for playwrights and directors: graduate standing, consent of instructor. Guided preparation of a script for production, focusing on collaborative process between playwright and director, scene work, staged readings, casting, rehearsal, and full production. Emphasis on communication, artistic growth, and professional process. Concurrently scheduled with courses C133A-C133B-C133C.

435AF-435AW-435AS. Problems in Advanced Writing for the Stage (0 units, 0 units, 2 units). Prerequisite: consent of instructor. Limited to M.F.A. candidates. Review discussion and critique of playwriting projects. May be repeated for a maximum of six units. In Progress and S/U grading.

440A-440B-440C. Development of Costume Design Construction Technologies for Theater. Discussion, two hours; laboratory, two hours. Prerequisite: consent of instructor. Limited to M.F.A. candidates. Study of effect of artistic and stylistic ideas on mode and dress of men and women.

441A-441B-441C. Lighting Design. Lecture/studio. Prerequisite: consent of instructor.

441A. Study and practice in lighting the actor, emphasizing textual and character analysis from lighting designer's perspective, conceptual development with the director, effect of light on dynamics of staging, use of color in light, and relationship of lighting designer to the actor. May be repeated once for credit.

441B. Study of use of light and color to define space, effect of light on scenery and costumes, lighting for arena/thrust theaters, multiscenic productions, lighting patterns, and moving scenery. May be repeated once for credit.

441C. Investigation of lighting design in production, musical theater, opera, touring, and repertory situations. Study of analysis of script and score for lighting designer. May be repeated once for credit.

441D-441E. Advanced Problems in Lighting Design. Lecture/laboratory. Prerequisites: graduate standing, consent of instructor.

441D. Advanced study and practice in scenic projection and media techniques, with emphasis on analysis, design, and execution of theatrical projection and photographic technique for the stage.

441E. Study of design, selection, operation, and performance of lighting instruments, dimming equipment, and control systems as they relate to design of performance lighting.

442A-442B-442C. Costume Design. Lecture/studio. Prerequisite: consent of instructor. Advanced study and practice in costume design for theater. Imagination as impetus for design, text analysis, metaphor, and conceptualization. Investigation of design research process, period style, and character analysis leading to visual presentation of the design. Study of costume design for theatrical productions, ballet, opera, and musical theater. May be repeated once for credit.

442D-442E-442F. Advanced Problems in Costume Design. Prerequisites: graduate standing, consent of instructor. **442D.** Costume design and methodology for the large-scale production. Special problems and techniques unique to opera, ballet, and musical comedy costume design. **442E.** Intensive study of professional design practice in film and television. **442F.** Practical analysis of textile usage, history, and fabric modification for theatrical costume design.

443. Problems in Design (2 or 4 units). Lecture/laboratory, four hours (additional hours as required). Prerequisite: consent of instructor. Study and practice in design techniques for theater. May be repeated for a maximum of 12 units.

444A-444B-444C. Sound Design. Lecture/studio. Prerequisite: consent of instructor.

444A. Study of sound and acoustics as they relate to performance environments, techniques associated with recording, mixing, processing, automation, and reproduction of dialogue, effects, and music tracks for theater sound design. May be repeated once for credit.

444B. Advanced study and practice in preparation and recording of theater sound designs, with emphasis on analysis of script and score, conceptual development of the design, and multitrack recording techniques to realize the design. May be repeated once for credit.

444C. Study and practice in processing and mixing of live and recorded sound; mix-down of multitrack recordings; preparation of sound tracks and sound reinforcement in the theater. Study of creation of sound effects, control of MIDI data, and design techniques for music theater. May be repeated once for credit.

447. Current Practices in Scenic Design and Art Direction. Prerequisites: courses 243A-243B-243C, consent of instructor. Intensive study of professional design practice in theater, film, and television.

448. Computer-Aided Design and Drafting for Theater. Lecture/laboratory. Prerequisites: course 149B or consent of instructor, graduate standing. Study of use of computer-aided design and drafting techniques for the designer.

C455G. Graphic Representation of Design: Scene Painting Techniques (2 units). (Formerly numbered C446.) Studio, three hours. Prerequisite: course 147A or 147B. Study of scenic painting techniques and materials and their realization of color design and elevations. May be repeated once for credit. Concurrently scheduled with course C155G.

459A-459B. Directing for Theater, Film, and Television. Lecture, three hours. Prerequisite: consent of instructor. Limited to graduate students in Department of Theater. Analysis and exploration, with specific scenes, of differences and many similarities in directorial approach to same literary material in three media.

460AF-460AW-460AS. Seminars: Directing (2 units each). Seminar, three hours. Prerequisites: graduate standing, consent of instructor. Discussion of role of director in contemporary professional practice. Review discussion and critique of directing projects. May be repeated for a maximum of four units.

460B-460C. Problems in Advanced Direction for the Stage. Lecture, to be arranged. Prerequisite: consent of instructor. Limited to M.F.A. candidates. Discussion and critique of work in progress. **460B.** Preparation and presentation of a published play under rehearsal conditions. **460C.** Preparation and presentation of a full-length original play under rehearsal conditions.

462. Production Project in Direction for the Stage (4 or 8 units). Lecture, to be arranged. Prerequisite: consent of instructor. Limited to M.F.A. candidates. Preparation and presentation of an original play under minimal production conditions. Discussion and critique of work in progress.

463. Production Project in Direction for the Stage (8 or 12 units). Lecture, to be arranged. Prerequisite: consent of instructor. Limited to M.F.A. candidates. Preparation and presentation of a play under fully produced theater conditions.

C472. Production and Performance Laboratory (2 to 8 units). Laboratory, to be arranged. Prerequisites: M.F.A. candidate, consent of instructor. Credit for creative production projects required of all M.F.A. students. May be repeated three times for a maximum of 16 units. Concurrently scheduled with courses C172 and C272.

474. Advanced Problems in Theater Design (2 or 4 units). Discussion, three hours; laboratory, 12 hours to be arranged. Prerequisites: graduate standing, consent of instructor. Study and practice in preparation and performance of dramatic works for public performances as a contributing artistic member of a departmental production. Creative responsibilities include designer, technical supervisor, production manager, choreographer, or dramaturge. May be repeated for a maximum of 16 units.

495A. Problems in Teaching Theater Arts. Lecture/laboratory, to be arranged. Prerequisites: graduate standing, consent of instructor. Study of and practice in teaching theater arts at college and university level.

495B. Problems in Teaching Theater Arts (2 or 4 units). Laboratory, to be arranged. Prerequisites: graduate standing, consent of instructor. Demonstration of competence in theater production through successful completion of a major teaching production assignment. May be repeated for a maximum of 12 units.

496. Practice of Teaching Theater Arts (2 units). Discussion. Required once of all teaching assistants or associates in department. Orientation and preparation of graduate students who have responsibility to assist in teaching undergraduate courses in department; discussion of problems common to the teaching experience. May not be applied toward M.A., M.F.A., or Ph.D. May be repeated. S/U grading.

498. Professional Internship in Theater, Film, and Television (4, 8, or 12 units). Full- or part-time at a studio or on a professional project. Prerequisites: graduate standing, advanced standing in M.F.A. program, consent of instructor. Internship at various film, television, or theater facilities accentuating creative contribution, organization, and work of professionals in their various specialties. Given only when projects can be scheduled.

501. Cooperative Program (2 to 8 units). Prerequisite: consent of graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Used to record enrollment of UCLA students in courses taken under cooperative arrangements with USC. S/U grading.

596A. Directed Individual Studies: Research (2 to 12 units). Hours to be arranged. Prerequisite: graduate standing. May be repeated with consent of instructor.

596B. Directed Individual Studies: Writing (2 to 12 units). Hours to be arranged. Prerequisite: graduate standing. May be repeated with consent of instructor.

596C. Directed Individual Studies: Directing (2 to 12 units). Hours to be arranged. Prerequisite: graduate standing. May be repeated with consent of instructor.

596D. Directed Individual Studies: Design (2 to 12 units). Hours to be arranged. Prerequisite: graduate standing. May be repeated with consent of instructor.

596E. Directed Individual Studies: Acting (2 to 12 units). Hours to be arranged. Prerequisite: graduate standing. May be repeated with consent of instructor.

596F. Directed Individual Studies: Production (2 to 12 units). Hours to be arranged. Prerequisite: graduate standing. May be repeated with consent of instructor.

597. Preparation for Ph.D. Qualifying Examinations in Theater Arts (2 to 8 units). May be repeated for a maximum of 12 units.

598. M.A. Thesis in Theater Arts (2 to 8 units). Prerequisite: advancement to M.A. candidacy. Research and writing for M.A. thesis. May be repeated for a maximum of 12 units.

599. Ph.D. Dissertation in Theater Arts (2 to 8 units). Prerequisite: advancement to Ph.D. candidacy. Research and writing for Ph.D. dissertation. May be repeated for a maximum of 12 units.

8

For most of the twentieth century, U.S. technological know-how, prowess, and leadership reigned supreme. Now, evidence of a significant decline in U.S. competitiveness in the world market abounds. A reversal of this process promises to be a most arduous task. We at the University can contribute to this effort in many ways, but perhaps most effectively through the training of students for the frontiers of technology and through an acceleration of technology transfer to industry. It is an exciting and rewarding time to be a career engineer, and the challenges and rewards of the profession have never been greater.

UCLA is a top choice among engineering schools. Students receive rigorous instruction in the fundamentals of engineering and in their primary specializations from outstanding faculty members. The curricula are structured to include significant exposure to the humanities, social sciences, and fine arts. Recently the School of Engineering and Applied Science began a five-year, nearly \$100 million expansion of its facilities. The new engineering building opened in spring 1990, and plans for further expansion and renovation of existing facilities are under way.

A program of collaboration with industry and federal research laboratories, including establishment of interdisciplinary research centers focusing on significant issues of national interest, continues to be most successful. The school fosters a balanced approach to education — teaching and research as an independent intellectual endeavor and in the service and support of the industrial and business communities.

Whatever the changes, the school will be ready for the challenges that a new century will hold. To the parent, we ask you to entrust the future of your sons and daughters into our capable hands. To the student, we invite you to join this dynamic school in all of its excitement and promise. Be a part of the great success story of UCLA.

School of Engineering and Applied Science

Office of Student Affairs:
6426 Boelter Hall

Graduate: (310) 825-1704
Undergraduate: (310) 825-2826

Bachelor of Science Degrees

Students in the School of Engineering and Applied Science may elect one of the nine four-year curricula listed below.

- (1) Bachelor of Science in Aerospace Engineering
- (2) Bachelor of Science in Chemical Engineering
- (3) Bachelor of Science in Civil Engineering
- (4) Bachelor of Science in Computer Science
- (5) Bachelor of Science in Computer Science and Engineering
- (6) Bachelor of Science in Electrical Engineering
- (7) Bachelor of Science in Engineering with a specialization in bioengineering*
- (8) Bachelor of Science in Materials Engineering
- (9) Bachelor of Science in Mechanical Engineering

*Bioengineering is an interdepartmental program listed under Schoolwide Programs, Courses, and Faculty at the end of the departmental listings.

The school offers instruction in acoustical engineering, aerospace engineering, applied plasma physics and fusion engineering, bioengineering, ceramic engineering, chemical engineering, civil engineering, computer engineering, control systems engineering, earthquake engineering, electrical and electronics engineering, general engineering, environmental engineering, fluid mechanics, geotechnical engineering, information and communications theory, manufacturing engineering, materials science, mechanical engineering, metallurgy, nuclear engineering, soil mechanics, solid mechanics, structural engineering, systems science, and water resources.

Admission

Applicants for admission to the school must satisfy the general admission requirements of the University as outlined in the section entitled "Undergraduate Admission" in Chapter 2. You must select a specific major within the school when applying for admission. In the selection process many elements are considered, including grades, test scores, and academic preparation.

Freshman applicants are strongly advised to take the tests required by the University for admission on or before December 2. Reports of test scores are needed to give full consideration to admission requests; ask the testing agencies to send your results directly to the UCLA Undergraduate Admissions Office.

Applicants are encouraged to apply either at the freshman or junior level. Students who begin their college work at a California community college are expected to remain at the community college to complete the lower division requirements in chemistry, mathematics, physics, and the recommended engineering courses before transferring to the University. Experience indicates that transfer students who have completed the recommended lower division program in engineering at California community colleges are able to complete the remaining requirements for one of the B.S. degrees in six terms (two academic years) of normal full-time study. Some students who select certain majors, such as computer science and engineering or chemical engineering, may be required to complete additional lower division courses as prerequisites for the major sequence.

Admission as a Freshman

While many students take their first two years in engineering at a community college, an applicant may qualify for admission to the school in freshman standing. It is anticipated that admission will require that the following subjects be taken when satisfying the University admission requirements:

Algebra	2 years
Plane geometry	1 year
Trigonometry	½ year
Chemistry and physics with laboratory	2 years

It is also highly recommended that you take a course in technical drafting while in high school.

Freshman applicants whose entire secondary schooling was outside the U.S. must pass, with satisfactory scores, the College Board Scholastic Aptitude Test (verbal and mathematics sections) and Achievement Examinations in English composition, physics, and mathematics before a letter of admission to engineering can be issued. Arrangements to take the tests in another country should be made directly with the Educational Testing Service, 1947 Center Street, Berkeley, CA 94704. Test scores should be forwarded to UCLA.

Admission as a Junior

Applicants for admission to the school in junior standing should have completed 21 to 23 courses (84 to 92 quarter units) in good standing, including the following minimum subject requirements:

- (1) Two and one-half courses in chemistry, equivalent to UCLA's Chemistry and Biochemistry 11A, 11B/11BL (only Chemistry and Bio-

Degrees Offered

Aerospace Engineering	B.S., M.S., Ph.D.
Chemical Engineering	B.S., M.S., Ph.D.
Civil Engineering	B.S., M.S., Ph.D.
Computer Science	B.S., M.S., Ph.D.
Computer Science and Engineering	B.S.
Electrical Engineering	B.S., M.S., Ph.D.
Engineering	B.S., M.S., M.Engr., Engr., Ph.D.
Engineering and Applied Science	Graduate Certificate of Specialization
Manufacturing Engineering	M.S.
Materials Engineering	B.S.
Materials Science and Engineering	M.S., Ph.D.
Mechanical Engineering	B.S., M.S., Ph.D.
Nuclear Engineering	M.S., Ph.D.

chemistry 11A is required for the computer science and engineering degree; the computer science degree does not require chemistry; the chemical engineering curriculum also requires Chemistry and Biochemistry 11C/11CL, 132A, 132B/132BL, which do not need to be taken prior to admission to UCLA); (2) six courses in mathematics, equivalent to UCLA's Mathematics 31A, 31B, 32A, 32B, 33A, 33B; (3) four courses in physics, equivalent to UCLA's Physics 8A, 8B, 8C, 8D (Physics 8D/8DL are not required for the computer science or computer science and engineering degree), and physics laboratory courses (8AL, 8BL, 8CL, 8DL), depending on curriculum selected.

It is strongly recommended that transfer students complete a course equivalent to UCLA's English 3 in addition to the minimum admissions requirements.

Students transferring to the school from institutions which offer instruction in engineering subjects in the first two years, particularly California community colleges, are given credit for certain engineering core requirements.

Students who have been admitted to senior standing in the school on the basis of credit from another institution, from UCLA Extension, or from another college or school of the University must complete, after admission, eight upper division courses which satisfy part of their approved major field sequence.

Degree Requirements

The requirements for the Bachelor of Science degrees in Aerospace Engineering, Chemical Engineering, Civil Engineering, Computer Science, Computer Science and Engineering, Electrical Engineering, Engineering, Materials Engineering, and Mechanical Engineering consist of completing the minimum number of required units (from 180 to 201 units, depending on the curriculum selected), the general University requirements, and the school requirements for scholarship and senior residence. You must also satisfy the curricular requirements for the curriculum you choose to follow.

University Requirements

University requirements in scholarship, Subject A or English as a Second Language (ESL), and American History and Institutions are discussed in detail in the "Undergraduate Degree Requirements" section in Chapter 2.

Scholarship and Minimum Progress Requirements

At least a 2.0 grade-point average must be achieved in all upper division University courses offered in satisfaction of the subject and elective requirements of the curriculum. In addition, a 2.0 minimum grade-point average in upper division mathematics, upper division core courses, and the major field is required for graduation.

Lower Division Preparation for the Majors

Mathematics

Analytic geometry and calculus, 8 units; calculus of several variables, 8 units; matrices and differential equations, 4 units; infinite series, 4 units (total of 24 quarter units minimum)

Physics

Calculus-based courses in mechanics of solids, vibration, wave motion, sound, fluids, heat, kinetic theory, electricity, magnetism, electromagnetic waves, light and relativity, with laboratory (total of 16 quarter units minimum)

Chemistry**

Two quarters or two semesters of general chemistry with laboratory (total of 10 quarter units minimum)

Engineering

Digital computer programming, using a higher-level language such as FORTRAN IV, PASCAL, or PL/1 (4 units); other courses: statics, dynamics, graphics and descriptive geometry, surveying, circuit analysis, properties of materials, strength of materials, additional chemistry, additional computer science (total of 24 quarter units minimum)

Additional Courses

Life sciences (4 units)^{†††}, English composition (4 units), humanities/social sciences/fine arts (total of 20 quarter units minimum)

UCLA Equivalent Courses

Mathematics 31A, 31B
Mathematics 32A, 32B
Mathematics 33A, 33B

Physics 8A/8AL*, 8B/8BL*,
8C/8CL*, 8D/8DL*

Chemistry and Biochemistry
11A, 11B/11BL***

Computer Science 10, 11, or
Civil Engineering 15A and
15B[†]; engineering core^{††}
courses; free electives^{††}

Life sciences course^{†††}; En-
glish 3; humanities/social sci-
ences/fine arts, three or four
courses^{††}

*Depending on curriculum selected; Physics 8D/8DL are not required for the computer science or computer science and engineering degree.

**Only Chemistry and Biochemistry 11A is required for the computer science and engineering degree; chemistry is not required for the computer science degree.

***Chemical engineering curriculum also requires Chemistry and Biochemistry 11C/11CL, 132A, 132B/132BL.

[†]Civil Engineering 15A, 15B are required only for the civil engineering degree.

^{††}See specific undergraduate curricula for core courses, humanities/social sciences/fine arts electives, and free electives, depending on curriculum followed.

^{†††}Depending on curriculum selected.

Full-time undergraduate students in the School of Engineering and Applied Science must complete a minimum of 36 units in three consecutive terms in which they are registered.

Senior Residence Requirement

Of the last 48 units completed for the bachelor's degree, 36 must be earned in residence in the School of Engineering and Applied Science on this campus. No more than 16 of the 36 units may be completed in Summer Sessions at UCLA.

Study Lists and Credit Limitations

Study Lists require approval of the dean of the school or a designated representative. It is your responsibility to present Study Lists which reflect satisfactory progress toward the Bachelor of Science degree, according to standards set by the faculty; academic counselors in the

Office of Student Affairs are available to help you. Study Lists or programs of study which do not comply with these standards may result in enforced withdrawal from the University or other academic action. You are expected to enroll in at least 12 units each term. If you enroll in less than 12 units, you must obtain approval by petition to the dean prior to enrollment in courses. The normal program is 16 units per term. You may not enroll in more than 18 units per term unless an Excess Unit Petition is approved in advance by the dean.

You must attain a minimum grade of C to satisfy the English 3 requirement, which must be met before you have completed 90 quarter units (a grade of C- does not satisfy this requirement).

After 213 quarter units, enrollment may not normally be continued in the school. You may petition the dean for special permission to con-

tinue work required to complete the degree. This regulation does not apply to Departmental Scholars.

After you have completed 105 quarter units (regardless of where these units have been completed), you will not receive unit credit or subject credit for courses completed at a community college.

Credit earned through the College Level Examination Program (CLEP) may not be applied toward the bachelor's degree.

No credit is granted toward the bachelor's degree for college foreign language courses equivalent to quarter levels one and two if the equivalent of level two of the same language was completed with satisfactory grades in high school.

Credit for Transfer Students

A course in digital computer programming, using a higher-level language such as FORTRAN IV, PASCAL, or PL/1, satisfies the Computer Science 10 requirement. Many sophomore courses in circuit analysis, strength of materials, and properties of materials may satisfy Electrical Engineering 100, Civil Engineering 108, and Materials Science and Engineering 14 requirements respectively. Check with the Office of Student Affairs.

Curricular Requirements

The curricula for the bachelor's degrees include the following categories, depending on curriculum selected:

- (1) Twelve to 16 engineering major field courses (48 to 64 units), depending on curriculum followed.
- (2) Four to nine engineering core courses (16 to 36 units), depending on curriculum selected.
- (3) Mathematics courses, ranging from four to 12 upper division units; see curricula in individual departments.
- (4) Six or seven humanities, social sciences, and/or fine arts courses (24 to 28 units) to be selected from an approved list. At least three (12 units) must be upper division courses.

To provide some depth, at least three courses (12 units) must be in the same academic department or must otherwise reflect coherence in subject matter. This group must contain at least two upper division courses.

In most cases, courses intended primarily to develop specific skills should be avoided except when the particular "skill" course is prerequisite to another upper division course strictly in the humanities or social sciences (e.g., foreign language and literature courses taught in the language). A list of courses which are normally acceptable individually as humanities/social sciences/fine arts electives is available in the Office of Student Affairs. (See the electrical engineering curriculum for the history and literature requirement and the computer science curriculum for its requirements.)

(5) English 3, which must be completed with a minimum grade of C within your first 90 units.

(6) One life sciences course (four units) to be selected from an approved list (required in some curricula — see curriculum requirements).

(7) Free elective courses (four to 12 units) may be selected in some programs (see curriculum requirements in individual departments). The free electives may be selected from any courses yielding credit acceptable to the University of California except CLEP, certain remedial courses, and special courses designated by the school and posted in the Office of Student Affairs. However, in programs which include free elective units, it is strongly recommended that you select additional technical courses for some of these units.

(8) The engineering design content of your program must total at least one half-year of design experience.

(9) The engineering science content of your program must include a minimum of one year of engineering science units.

Lists of courses approved to satisfy specific curricular requirements, as well as specifying design and engineering science credit in engineering courses, are available in the Office of Student Affairs.

The aerospace engineering, chemical engineering, civil engineering, computer science and engineering, electrical engineering, materials engineering, and mechanical engineering curricula are accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET), the nationally recognized accrediting body for engineering programs.

Advising and Program Planning

As a new undergraduate, you must have your course of study approved by an academic counselor. After the first term, curricular and career advising is accomplished on a formal basis. You are assigned a faculty adviser in your particular specialization in your sophomore year or earlier.

In addition you are assigned, by major, to an academic counselor in the Office of Student Affairs who provides you with advice regarding general requirements for the degrees and University and school regulations and procedures. It is your responsibility to periodically meet with your academic counselor in the Office of Student Affairs, as well as with your faculty adviser, to discuss curriculum requirements, programs of study, and any other academic matters of concern.

You may use the curriculum in effect when you begin full-time continuous study in engineering at UCLA, or you may select the curriculum in the *UCLA General Catalog* in effect at graduation. California community college transfers may also select the curriculum in the catalog in effect at the time they began their community college work in an engineering program, pro-

viding attendance has been continuous since that time.

Attend the Conference on Planning Electives conducted by the School of Engineering and Applied Science to help you plan your curriculum. The conference is held during the third week of each term. For time and place, consult the Office of Student Affairs.

The Program Proposal form must be submitted for approval by the associate dean, Student Affairs, Office of Student Affairs, during the third term of the sophomore year. The deadline is announced each term in the school's *Undergraduate Enrollment Instructions* brochure.

Academic counselors in the Office of Student Affairs are available to assist you with University procedures and to answer any questions you may have in regard to general requirements. Pay them a visit.

Passed/Not Passed Grading

You may take one course per term on a Passed/Not Passed basis if you are in good academic standing and are enrolled in at least three and one-half courses (14 units) for the term. Only humanities/social sciences/fine arts and free electives may be taken on a Passed/Not Passed basis. For more details on P/NP grading, see "Units and Grading Policy" in Chapter 4.

Honors

Departmental Scholars

If you are an exceptionally promising junior or senior, you may be nominated as a Departmental Scholar to pursue bachelor's and master's degree programs simultaneously. See "Academic Excellence" in Chapter 2 and the *Announcement of the UCLA School of Engineering and Applied Science* for details.

Dean's Honors List

Students following the engineering curricula are eligible to be named to the Dean's Honors List each term. Minimum requirements are a course load of 16 units (12 units of letter grade) with a grade-point average equal to or greater than 3.7.

Honors at Graduation

Students who have achieved scholastic distinction may be awarded the bachelor's degree with honors. Students eligible for University honors at graduation must have completed 90 or more units (for a letter grade) at the University of California and must have attained a grade-point average which places them in the top five percent of the school (GPA of 3.798 or better) for *summa cum laude*, the next five percent (GPA of 3.695 or better) for *magna cum laude*, and the next 10 percent (GPA of 3.524 or better) for *cum laude*.

Based on grades achieved in upper division courses, engineering students must have a 3.798 grade-point average for *summa cum laude*, a 3.695 for *magna cum laude*, and a

3.524 for *cum laude*. For all designations of honors, you must have a minimum 3.25 grade-point average in your major field courses. To be eligible for an award, you should have completed at least 80 upper division units at the University of California.

Tau Beta Pi

The UCLA chapter of *Tau Beta Pi*, the national engineering honor society, encourages high scholarship, provides volunteer tutors, and offers many services and programs "to foster a spirit of liberal culture in engineering colleges."

Special Programs and Activities

Extracurricular Activities

The faculty strongly encourages students to participate in the many extracurricular activities available on campus, especially those of most relevance to engineering. Among these are the student engineering society (the Engineering Society, University of California), student publications, and programs of the many technical and professional engineering societies in the Los Angeles area.

The student body takes an active part in shaping policies of the school through elected student representatives on the school's Executive Committee.

Women in Engineering

Women make up approximately 20 percent of the undergraduate and 12 percent of the graduate enrollment in the School of Engineering and Applied Science. Today's opportunities for women in engineering are excellent, as both employers and educators try to change the image of engineering as a "males only" field. Women engineers are in great demand in all fields of engineering.

The Society of Women Engineers (SWE), recognizing that women in engineering are still a minority, has established a UCLA student chapter which sponsors field trips and engineering-related speakers (often professional women) to introduce the various options available to women engineers. The UCLA chapter of SWE, in conjunction with other Los Angeles schools, also publishes an annual resumé book to aid women students in finding jobs and presents a career day for women high school students.

Continuing Education

Continuing education in engineering is developed and administered by the UCLA Extension Department of Business, Engineering, and Management in close cooperation with the School of Engineering and Applied Science. The department offers evening classes, short courses, certificate programs, special events, and on-site educational training. The office (540 UNEX, 10995 Le Conte Avenue) is open

Monday through Friday. For information, call 825-4100 (class programs) or 825-3344 (short course programs).

Graduate Study

Admission

In addition to meeting the requirements of the Graduate Division, applicants to the graduate engineering programs are required to take the General Test of the Graduate Record Examination (GRE). In some cases applicants are also required to take the GRE Subject Test in Engineering, Mathematics, or a related area. Applicants for the graduate computer science programs are required to take the GRE General Test and Subject Test in Mathematics or Computer Science. Specific information about the GRE may be obtained from the department of interest.

Students entering the Engineer/Ph.D. program normally are expected to have completed the requirements for the master's degree with at least a 3.25 grade-point average and to have demonstrated creative ability. Normally the M.S. degree is required for admission to the Ph.D. program. Exceptional students, however, can be admitted to the Ph.D. program without having an M.S. degree.

Graduate students without adequate preparation may be admitted provisionally and may be required to take additional coursework which may not be applied toward the degree. After you arrive at UCLA, the adviser will help you plan a program which will remedy any such deficiencies.

For information on the proficiency in English requirements for international graduate students, refer to "Graduate Admission" in Chapter 3.

Admission forms, including a departmental supplement to the application, may be obtained by writing to the department in which you are interested, School of Engineering and Applied Science, UCLA, Los Angeles, CA 90024.

Undergraduate Courses

No lower division courses may be applied toward graduate degrees. In addition, the following upper division courses are not applicable toward graduate degrees: Chemical Engineering M105A, 199, Civil Engineering 106A, 108, M115, 199, Computer Science 199, Electrical Engineering 100, 100L, 101, 102, 103, 199, Materials Science and Engineering 199, Mechanical, Aerospace, and Nuclear Engineering 102, 103, M105A, 105D, M109A, 199.

Individual departments within the School of Engineering may impose certain restrictions on the applicability of other undergraduate courses toward graduate degrees. Consult with your graduate adviser on departmental requirements and restrictions.

Master of Science Degrees

Major Fields or Subdisciplines

The M.S. program is centered around one major field. The major fields and subdisciplines offered at the M.S. level in most cases parallel those listed below for the Ph.D. program. There are some differences (e.g., manufacturing engineering in the Department of Mechanical, Aerospace, and Nuclear Engineering is offered only at the M.S. level). Contact the department concerned regarding possible differences between the M.S. and Ph.D. fields and subdisciplines. You are free to propose to the school any other field of study, with the support of your adviser.

Course Requirements

A total of nine courses is required for the M.S. degrees, including a minimum of five graduate courses. (Some fields require more than five; obtain specific information from your department of interest.) A majority of the total formal course requirement and of the graduate course requirement must consist of courses in the School of Engineering. In the thesis plan, seven of the nine courses must be formal courses, including at least four from the 200 series. The remaining two courses may be 598 courses involving work on the thesis. In the comprehensive examination plan, at least five of the nine courses must be in the 200 series; the remaining four courses may be either 200-series graduate or upper division undergraduate courses. No 500-series courses may be applied toward the comprehensive examination plan requirements.

Thesis Plan

The thesis must either describe some original piece of research that you have done, usually but not necessarily under the supervision of the thesis committee, or else provide a critical exposition of some topic in your major field of study. You would normally start to plan the thesis at least one year before the award of the M.S. degree is expected. There is no examination under the thesis plan.

Comprehensive Examination Plan

The comprehensive examination, which is offered every term, is required in written form only. Your comprehensive examining committee may conduct an oral query after review of the written examination. In case of failure, you may be reexamined once with the consent of your departmental graduate adviser.

Cooperative Degree Programs

The School of Engineering and Applied Science has established two joint degree programs with other schools and departments on campus which allow you to earn two master's degrees simultaneously: the M.B.A./M.S.-Computer Science and the M.A.-Latin American Studies/M.S.-Engineering. Contact the Office of Student Affairs for details.

Master of Engineering Degree

The Master of Engineering (M.Engr.) degree is granted to graduates of the Engineering Executive Program, a two-year work-study program consisting of graduate-level professional courses in the management of technological enterprises. For full details, write to the Office of Student Affairs, School of Engineering and Applied Science, 6426 Boelter Hall, UCLA, Los Angeles, CA 90024-1601 (825-1704).

Engineer Degree

The School of Engineering and Applied Science offers an Engineer (Engr.) degree at a level equivalent to completion of preliminaries in the Ph.D. program. The Engineer degree represents considerable advanced training and competence in the engineering field but does not require the research effort involved in a Ph.D. dissertation.

Requirements for the Engineer degree are identical to those of the Ph.D. degree up to and including the oral preliminary examination, except that the Engineer degree is based on coursework. The minimum requirement is 15 (at least nine graduate) courses beyond the bachelor's degree, with at least six courses in the major field (minimum of four graduate courses) and at least three in each minor field (minimum of two graduate courses in each).

The Ph.D. and Engineer degree programs are administered interchangeably in the sense that a student in the Ph.D. program may exit with an Engineer degree or even pick up the Engineer degree enroute to the Ph.D. degree; similarly, a student in the Engineer degree program may continue for the Ph.D. after receiving the Engineer degree. The time spent in either of the two programs may also be applied toward the minimum residence requirement and time limitation for the other program.

Ph.D. Degrees

Major Fields or Subdisciplines*

Chemical Engineering Department — Chemical engineering.

Civil Engineering Department — Earthquake engineering, geotechnical engineering, structures, water resource systems engineering.

Computer Science Department — Artificial intelligence, computer network modeling and analysis, computer science theory, computer system architecture, programming languages and systems (software systems), scientific computing (biomedical systems, physical systems).

Electrical Engineering Department — Applied plasma physics and fusion engineering, circuits and signal processing, communications and telecommunications engineering, control systems, electromagnetics, integrated circuits and systems, operations research, quantum electronics, solid-state electronics.

Materials Science and Engineering Department — Ceramics and ceramics processing, materials science, mechanical metallurgy, metallurgy and metals processing.

Mechanical, Aerospace, and Nuclear Engineering Department — Applied dynamic systems control, applied plasma physics and fusion engineering, dynamics, fluid mechanics, heat and mass transfer, nuclear science and engineering, structural and solid mechanics.

Schoolwide Fields — Applied mathematics (established minor field only), biocybernetics, man/machine/environment systems.

Schoolwide Programs — Biocybernetics, man/machine/environment systems.

Requirements

All candidates must fulfill the minimum requirements of the Graduate Division (see "Requirements for Graduate Degrees" in Chapter 3). Major and minor fields may have additional course and examination requirements. For further information, contact the individual departments.

Graduate Certificate of Specialization

A certificate of specialization is available in all areas, except computer science, offered by the School of Engineering and Applied Science. Requirements for admission are the same as for the M.S. degree.

Each graduate certificate program consists of five 100- or 200-series courses, at least two of which must be at the graduate level. No work completed for any previously awarded degree or credential may be applied toward the certificate. Successful completion of a certificate program requires an overall minimum B average in all courses applicable to the certificate. In addition, graduate certificate candidates are required to maintain a minimum B average in 200-series courses used in the certificate program. A minimum of three terms of academic residence is required. The time limitation for completing the requirements of a certificate program is two calendar years. Details regarding the certificate programs may be obtained from each department office.

Courses completed for a Certificate of Specialization in the School of Engineering and Applied Science may subsequently be applied toward master's and/or doctoral degrees.

Scope and Objectives

The Department of Chemical Engineering conducts active undergraduate and graduate programs of teaching and research in the areas of thermodynamics, mass transfer, catalysis, semiconductor materials processing, electrochemistry and corrosion, high-temperature chemical kinetics and reaction engineering, combustion science, environmental reaction engineering, cryogenics and low-temperature processes, biochemical and biomedical engineering, computer-aided process design and control, particle technology, pollution control, and polymer engineering. Students are trained in the fundamental principles of these fields while learning a sensitivity to society's needs — a crucial combination in addressing the question of how industry can grow and innovate in an era of economic, environmental, and energy constraints.

The undergraduate curriculum leads to a B.S. in Chemical Engineering, is accredited by ABET and AIChE, and includes a bioengineering option for students who wish to pursue careers in biotechnology or medicine. The department also offers graduate courses and research leading to M.S. and Ph.D. degrees. Both graduate and undergraduate programs closely relate teaching and research to important industrial problems.

Bachelor of Science in Chemical Engineering

The goal of the ABET-accredited chemical engineering curriculum is to provide a high quality, professionally oriented education in mod-

*You may propose to the school any other field of study with the support of your adviser. Instructions on the definition of acceptable ad hoc fields and procedures for their approval are available in each department office.

ern chemical engineering. The bioengineering option exists as a subset of courses within the accredited curriculum. Balance is sought between design and science.

The Major

Course requirements are as follows (193 minimum units required):

(1) Four general engineering courses: Chemical Engineering M105A, Civil Engineering 108, Electrical Engineering 100, 103.

(2) Chemical Engineering 100, 101A, 101B, 101C, 102, 103, 106, 107, 108A, 108B, 109, 104A, 104B (satisfy the laboratory requirement); Chemistry and Biochemistry 113A, 132A, 132B/132BL.

(3) Two elective courses from Chemical Engineering 110, C111, 112, 113, C114, C115, C116 (other courses in engineering, mathematics, and the sciences may be selected in consultation with your adviser), and three upper division chemistry elective courses (except Chemistry and Biochemistry 110A, 190, 196A-196F, 199A-199ZZ) selected in consultation with your adviser.

(4) English 3; Chemistry and Biochemistry 11A, 11B/11BL, 11C/11CL; Computer Science 10C or 10F; Mathematics 31A, 31B, 32A, 32B, 33A, 33B; Physics 8A, 8B/8BL, 8C/8CL, 8D/8DL.

(5) Six courses from the humanities, social sciences, and/or fine arts approved list (at least three must be upper division; at least three — with two upper division — must be in the same academic department or otherwise reflect coherence with respect to subject matter).

Bioengineering Option

Course requirements are as follows (196 minimum units required):

(1) Four general engineering courses: Chemical Engineering M105A, Civil Engineering 108, Electrical Engineering 100, 103.

(2) Chemical Engineering 100, 101A, 101B, 101C, 102, 103, 106, 107, 108A, 108B; 104A, 104B (satisfy the laboratory requirement); Biology 108 or Microbiology and Molecular Genetics 101; Chemistry and Biochemistry 132A, 132B/132BL, 153A, 153L, 156.

(3) Two elective courses from Chemical Engineering 112, C114, C115 (other courses in engineering, mathematics, and the sciences may be selected in consultation with your adviser), and one upper division biology elective course selected from Biology 135, 141, 157 (or one upper division microbiology elective selected from Microbiology and Molecular Genetics 102, C104A/C104B, C112, C119, 154).

(4) English 3; Chemistry and Biochemistry 11A, 11B/11BL, 11C/11CL; Biology 5, 9; Computer Science 10C or 10F; Mathematics 31A, 31B, 32A, 32B, 33A, 33B; Physics 8A, 8B, 8C, 8D.

(5) Six courses from the humanities, social sciences, and/or fine arts approved list (at least three must be upper division; at least three — with two upper division — must be in the same academic department or otherwise reflect coherence with respect to subject matter).

Graduate Study

For information on graduate admission to the chemical engineering program and requirements for the M.S. and Ph.D. degrees, see "Graduate Study" at the beginning of this chapter.

Upper Division Courses

100. Introduction to Chemical Engineering. Prerequisites: Mathematics 32B (may be taken concurrently), Chemistry 11C/11CL, Physics 8B. Introduction to analysis and design of industrial chemical processes. Material and energy balances.

Mr. Monbouquette (F)

101A. Momentum Transfer. Prerequisites: course M105A, Mathematics 33A, 33B. Introduction to analysis of fluid flow in systems of interest to chemical engineering practice. Fundamentals of momentum transport, Newton's law of viscosity, Navier/Stokes equations, interphase momentum transport and friction factors, flows in conduits and around submerged objects.

Mr. Cohen (F)

101B. Heat Transfer. Lecture, four hours; discussion, one hour. Prerequisite: course 101A. Introduction to analysis of heat transfer in systems of interest to chemical engineering practice. Fundamentals of thermal energy transport, Fourier's law of heat conduction, forced and free convection, radiation, interphase heat transfer, heat exchanger analysis.

Mr. Smith (W)

101C. Mass Transfer. Lecture, four hours; discussion, one hour. Prerequisites: courses 100, 101B, 102. Introduction to analysis of mass transfer in systems of interest to chemical engineering practice. Fundamentals of mass species transport, Fick's law of diffusion, diffusion in chemically reacting flows, interphase mass transfer, multicomponent systems.

Mr. Hicks (Sp)

102. Chemical Engineering Thermodynamics. Prerequisites: courses 100, M105A. Thermodynamic properties of pure substances and solutions. Phase equilibrium. Chemical reaction equilibrium.

Mr. Cohen (W)

103. Separation Processes. Prerequisites: courses 100, 101B, 102. Application of principles of heat, mass, and momentum transport to design and operation of separation processes such as distillation, gas absorption, filtration, and reverse osmosis.

Mr. Vilker (Sp)

104A. Chemical Engineering Laboratory I. Laboratory, eight hours; other, four hours. Prerequisites: courses 100, 101B, 102, M105A. Introductory laboratory emphasizing fundamental temperature, pressure, flow rate, viscosity, liquid and gas composition measurements, and basic methods of data acquisition and equipment control. Demonstrations and experiments applying principles of physics, chemistry, thermodynamics, and transport phenomena to solve practical engineering problems. Equipment selection and fabrication, laboratory safety, statistical analysis of data and technical communication.

Mr. Frederking (Sp)

104B. Chemical Engineering Laboratory II. Laboratory, eight hours. Prerequisites: courses 101C, 103, 104A. Course consists of four experiments, each of two weeks duration. After each experiment, students prepare a detailed report that includes sections on background material, theory, experimental procedures, experimental results, scaleup and design considerations, and error analysis.

Mr. Senkan (F)

M105A. Introduction to Engineering Thermodynamics. (Same as Mechanical, Aerospace, and Nuclear Engineering M105A.) Lecture, four hours; recitation, one hour. Prerequisites: Physics 8B, Mathematics 32B. Phenomenological thermodynamics. Concepts of equilibrium, temperature, and reversibility. First law and concept of energy; second law and concept of entropy. Equations of state and thermodynamic properties. Engineering applications of these principles in analysis and design of closed and open systems.

Mr. Nobe (F,W,Sp)

106. Chemical Reaction Engineering. Prerequisites: courses 100, 101C, 102. Fundamentals of chemical kinetics and catalysis. Introduction to analysis and design of homogeneous and heterogeneous chemical reactors.

Mr. Allen (F)

107. Process Dynamics and Control. Prerequisites: courses 101C, 103, 106. Principles of dynamics modeling and start-up behavior of chemical engineering processes. Chemical process control elements. Design and applications of chemical process computer control.

Mr. Manousiouthakis (W)

108A. Process Economics and Analysis. Prerequisites: courses 103, 104B, 106. Integration of chemical engineering fundamentals such as transport phenomena, thermodynamics, separation operations, and reaction engineering and simple economic principles for purpose of designing chemical processes and evaluating alternatives.

Mr. Manousiouthakis (W)

108B. Chemical Process Computer-Aided Design and Analysis. Prerequisites: courses 103, 106, 108A, Computer Science 10F. Introduction to application of some mathematical and computing methods to chemical engineering design problems; use of simulation programs as an automated method of performing steady state material and energy balance calculations.

Mr. Allen (Sp)

109. Mathematical Methods in Chemical Engineering. Lecture, four hours; recitation, one hour; other, seven hours. Prerequisites: Electrical Engineering 103 (may be taken concurrently), Mathematics 33A, 33B. Review of matrix theory; numerical and analytical methods for solving ordinary differential equations emphasizing systems encountered in chemical engineering applications; introduction to partial differential equations.

Mr. Smith (F)

110. Intermediate Engineering Thermodynamics. Lecture, four hours; outside study, eight hours. Prerequisite: course 102. Principles and engineering applications of statistical and phenomenological thermodynamics. Determination of partition function in terms of simple molecular models and spectroscopic data; nonideal gases; phase transitions and adsorption; nonequilibrium thermodynamics and coupled transport processes.

Mr. Nobe (Sp)

C111. Cryogenics and Low-Temperature Processes. (Formerly numbered 111.) Lecture, four hours; outside study, eight hours. Prerequisites: courses 102 (or Materials Science and Engineering 130), M105A. Fundamentals of cryogenics and cryoengineering science pertaining to industrial low-temperature processes. Basic approaches to analysis of cryofluids and envelopes needed for operation of cryogenic systems; low-temperature behavior of matter, optimization of cryosystems and other special conditions. Concurrently scheduled with course C211.

Mr. Frederking (W)

112. Polymer Processes. Prerequisites: course 101A, Chemistry 132A. Formation of polymers, criteria for selecting a reaction scheme, polymerization techniques. Polymer characterization. Mechanical properties. Rheology of macromolecules, modeling and experimental methods to characterize non-Newtonian fluids. Polymer process engineering.

Mr. Cohen, Mr. Monbouquette (Sp)

113. Pollution Control Technology. Prerequisites: courses 103, 106. Integration of chemical engineering fundamentals such as transport phenomena and chemical kinetics with environmental pollution concerns for purpose of designing control devices and of analyzing fate of pollutants in the environment.

Mr. Cohen, Mr. Friedlander, Mr. Vilker (W)

C114. Electrochemical Processes and Corrosion. (Formerly numbered 114.) Lecture, four hours; other, eight hours. Prerequisites: courses M105A, and 102 or Materials Science and Engineering 130. Fundamentals of electrochemistry and engineering applications to industrial electrochemical processes and metallic corrosion. Primary emphasis on fundamental approach to analysis of electrochemical and corrosion processes. Specific topics include corrosion of metals and semiconductors, electrochemical metal and semiconductor surface finishing, passivity, electrodeposition, electroless deposition, batteries and fuel cells, electrosynthesis and bioelectrochemical processes. May be concurrently scheduled with course C214. Mr. Nobe (F)

C115. Biochemical Engineering. Prerequisites: courses 101C, 103, 106. Use of previously learned concepts of thermodynamics, transport phenomena, reaction engineering, process dynamics, control, and economics to develop tools needed for technical design and economic analysis in biotechnology industries. May be concurrently scheduled with course C215. Mr. Monbouquette, Mr. Vilker (W)

C116. Surface and Interface Engineering. Prerequisites: courses 101C, 102, 106. Description of thermodynamics and kinetics of surface phenomena: nucleation, growth, and coalescence of films; adsorption, desorption, diffusion, and reaction of gases on surfaces. Application of these concepts to electronic materials processing and catalyst design. May be concurrently scheduled with course C216. Mr. Hicks (F)

199. Special Studies (2 to 8 units). Prerequisites: senior standing, consent of instructor. Individual investigation of selected topic to be arranged with a faculty member. Enrollment request forms available in department office. Occasional field trips may be arranged. May be repeated for credit. (F,W,Sp)

Graduate Courses

200. Advanced Engineering Thermodynamics. Prerequisite: course 102 or equivalent. Phenomenological and statistical thermodynamics of chemical and physical systems with engineering applications. Presentation of role of atomic and molecular spectra and intermolecular forces in interpretation of thermodynamic properties of gases, liquids, solids, and plasmas. (F)

210. Advanced Chemical Reaction Engineering. Prerequisites: courses 101C, 106, or equivalent. Principles of chemical reactor analysis and design. Particular emphasis on simultaneous effects of chemical reaction and mass transfer on noncatalytic and catalytic reactions in fixed and fluidized beds. (W)

C211. Cryogenics and Low-Temperature Processes. (Formerly numbered 211.) Lecture, four hours; outside study, eight hours. Prerequisites: courses 102 (or Materials Science and Engineering 130), M105A. Fundamentals of cryogenics and cryo-engineering science pertaining to industrial low-temperature processes. Basic approaches to analysis of cryofluids and envelopes needed for operation of cryogenic systems: low-temperature behavior of matter, optimization of cryosystems and other special conditions. Concurrently scheduled with course C111. Mr. Frederking (W)

C214. Electrochemical Processes and Corrosion. Lecture, four hours; other, eight hours. Prerequisites: courses M105A, and 102 or Materials Science and Engineering 130. Fundamentals of electrochemistry and engineering applications to industrial electrochemical processes and metallic corrosion. Primary emphasis on fundamental approach to analysis of electrochemical and corrosion processes. Specific topics include corrosion of metals and semiconductors, electrochemical metal and semiconductor surface finishing, passivity, electrodeposition, electroless deposition, batteries and fuel cells, electrosynthesis and bioelectrochemical processes. May be concurrently scheduled with course C114. Mr. Nobe (F)

C215. Biochemical Engineering. Prerequisites: courses 101C, 103, 106. Use of previously learned concepts of thermodynamics, transport phenomena, reaction engineering, process dynamics, control, and economics to develop tools needed for technical design and economic analysis in biotechnology industries. May be concurrently scheduled with course C115. Mr. Monbouquette, Mr. Vilker (W)

C216. Surface and Interface Engineering. Prerequisites: courses 101C, 102, 106. Description of thermodynamics and kinetics of surface phenomena: nucleation, growth, and coalescence of films; adsorption, desorption, diffusion, and reaction of gases on surfaces. Application of these concepts to electronic materials processing and catalyst design. May be concurrently scheduled with course C116. Mr. Hicks (F)

217. Electrochemical Engineering. Prerequisite: course C114. Transport phenomena in electrochemical systems; relationships between molecular transport, convection, and electrode kinetics, along with applications to industrial electrochemistry, fuel cell design, and modern battery technology. Mr. Nobe (F)

220. Advanced Mass Transfer. Prerequisite: course 101C or equivalent. Advanced treatment of mass transfer, with applications to industrial separation processes, gas cleaning, pulmonary bioengineering, controlled release systems, and reactor design; molecular and constitutive theories of diffusion, interfacial transport, membrane transport, convective mass transfer, concentration boundary layers, turbulent transport. (F)

230. Reaction Kinetics. Prerequisites: courses 106, 200, or equivalent. Macroscopic descriptions: reaction rates, relaxation times, thermodynamic correlations of reaction rate constants. Molecular descriptions: kinetic theory of gases, models of elementary processes. Applications: absorption and dispersion measurements, unimolecular reactions, photochemical reactions, hydrocarbon pyrolysis and oxidation, explosions, polymerization. Mr. Senkan, Mr. Smith (Sp)

231. Molecular Dynamics. Prerequisite: course 106 or 110. Analysis and design of molecular-beam systems. Molecular-beam sampling of reactive mixtures in combustion chambers or gas jets. Molecular-beam studies of gas-surface interactions, including energy accommodations and heterogeneous reactions. Applications to air pollution control and to catalysis. Mr. Allen (W)

232. Combustion Processes. Prerequisite: course 106, 200, or Mechanical, Aerospace, and Nuclear Engineering 132A. Fundamentals: change equations for multicomponent reactive mixtures, rate laws. Applications: combustion, including burning of (1) premixed gases or (2) condensed fuels. Detonation. Sound absorption and dispersion. Mr. Senkan, Mr. Smith (Sp)

M233. Principles, Practices, and Policies in Biotechnology (2 units). (Same as Biological Chemistry M233, Biology M233, Chemistry M233, Microbiology M233, Microbiology and Immunology M233, and Radiological Sciences M233.) Prerequisite: graduate standing or consent of instructor. Presentation of technologies, regulatory practices, and policies required for product development and review of current opportunities for new technology development. Topics include fermentation processes, pilot and large-scale bioprocess technologies, scaleup strategies, industrial recombinant DNA processes, hybridomas, protein engineering, peptide mimetics and rational drug design, medical and microscopic imaging, and intellectual property issues. S/U or letter grading. Mr. Fox, Ms. Morrison

240. Fundamentals of Aerosol Technology. Prerequisite: course 101C. Technology of particle/gas systems with applications to gas cleaning, commercial production of fine particles, and catalysis. Particle transport and deposition, optical properties, experimental methods, dynamics and control of particle formation processes. Mr. Friedlander (W)

250. Computer-Aided Chemical Process Design. Prerequisite: course 108B. Application of optimization methods in chemical process design; computer aids in process engineering; process modeling; systematic flowsheet invention; process synthesis; optimal design and operation of large-scale chemical processing systems. Mr. Manousiouthakis (F)

260. Non-Newtonian Fluid Mechanics. Prerequisite: course M105A. Principles of non-Newtonian fluid mechanics. Stress constitutive equations. Rheology of polymeric liquids and dispersed systems. Applications in viscometry, polymer processing, biorheology, oil recovery, and drag reduction. Mr. Cohen (Sp)

290A-290Z. Special Topics (2 to 4 units each). Prerequisites: consent of instructor, additional prerequisites for each offering as announced in advance by department. Advanced and current study of one or more aspects of chemical engineering, such as chemical process dynamics and control, fuel cells and batteries, membrane transport, advanced chemical engineering analysis, polymers, optimization in chemical process design. May be repeated for credit with topic change. S/U or letter grading:

M290U. Toxics Reduction: Science, Engineering, and Policy Issues. (Same as Architecture and Urban Planning M262A and Environmental Health Sciences M249.) Lecture, three hours. Prerequisites: Architecture and Urban Planning 260A and 260B, or consent of instructor. Public health experts, industrial engineers, and planners are being asked to assess risks biologically active chemicals present and to take such risks into account in planning process. Examination of potential for toxics reduction and current state of government and industry activities in this area.

298A-298Z. Research Seminars (2 to 4 units each). Prerequisites: consent of instructor, additional prerequisites for each offering as announced in advance by department. Lectures, discussions, student presentations, and projects in areas of current interest. May be repeated for credit. S/U grading. (F,W,Sp)

299. Departmental Seminar (2 units). Prerequisite: graduate standing in chemical engineering. Seminars by leading academic and industrial chemical engineers on development or application of recent technological advances in the discipline. May be repeated for credit. S/U grading.

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading. Mr. Friedlander (F,W,Sp)

596. Directed Individual or Tutorial Studies (2 to 8 units). Prerequisites: graduate standing in chemical engineering, consent of instructor. Petition forms to request enrollment may be obtained from assistant dean, Graduate Studies. Supervised investigation of advanced technical problems. S/U grading.

597B. Preparation for Ph.D. Preliminary Examinations (2 to 16 units). Prerequisites: graduate standing in chemical engineering, consent of instructor. S/U grading.

597C. Preparation for Ph.D. Oral Qualifying Examination (2 to 16 units). Prerequisites: graduate standing in chemical engineering, consent of instructor. Preparation for oral qualifying examination, including preliminary research on dissertation. S/U grading.

598. Research for and Preparation of M.S. Thesis (2 to 12 units). Prerequisites: graduate standing in chemical engineering, consent of instructor. Supervised independent research for M.S. candidates, including thesis prospectus. S/U grading.

599. Research for and Preparation of Ph.D. Dissertation (2 to 16 units). Prerequisites: graduate standing in chemical engineering, consent of instructor. Usually taken after student has been advanced to candidacy. S/U grading.

Chemistry/Materials Science (Interdepartmental)

For details on this undergraduate program, see Chapter 5 on the College of Letters and Science.

Civil Engineering

3173 Engineering I, (310) 825-6153

Professors

Stanley B. Dong, Ph.D.
John A. Dracup, Ph.D.
Michael E. Fournay, Ph.D.
Gary C. Hart, Ph.D.
Poul V. Lade, Ph.D.
Rokuro Muki, Ph.D.
Richard B. Nelson, Sc.D.
Moshe F. Rubinstein, Ph.D. (*Distinguished Teaching Award*)
Lawrence G. Selna, Ph.D.
Michael K. Stenstrom, Ph.D., *Chair*
William W-G. Yeh, Ph.D.
Tung Hua Lin, D.Sc., *Emeritus*
Chung Yen Liu, Ph.D., *Emeritus*
Richard L. Perrine, Ph.D., *Emeritus*
Lucien A. Schmit, Jr., M.S., *Emeritus*

Associate Professors

Lewis P. Felton, Ph.D., *Vice Chair*
Sanford B. Roberts, Ph.D., *Emeritus*

Assistant Professors

Menachem Elimelech, Ph.D.
Thomas C. Harmon, Ph.D.
Janet G. Hering, Ph.D.
Mladen Vucetic, Ph.D.

Senior Lecturer

George J. Tauxe, M.S., *Emeritus*

Adjunct Professors

Robert E. Englekirk, Ph.D.
Y. Marvin Ito, Ph.D.
Keith D. Stolzenbach, Ph.D.

Scope and Objectives

The civil engineering programs at UCLA include structural engineering, structural mechanics, geotechnical engineering, earthquake engineering, water resource systems engineering, environmental engineering, and decision making and engineering management.

The ABET-accredited civil engineering curriculum leads to a B.S. in Civil Engineering, a broad-based education in structural engineering, geotechnical engineering, and water resource systems. This program is an excellent foundation for entry into professional practice in civil engineering or for more advanced study.

At the graduate level, M.S. and Ph.D. degree programs are offered in the areas of structures (including structural/earthquake engineering and structural mechanics), geotechnical engineering, and water resources and environmental engineering. In these areas, research is being done on a variety of problems ranging from basic physics and mechanics problems to critical problems in earthquake engineering and in the development of new technologies for water treatment and pollution control.

Bachelor of Science in Civil Engineering

The objective of the civil engineering curriculum is to give graduating seniors an academically sound and practical background in civil engineering. A balanced program, including engineering science, design, and laboratory courses in civil engineering, is stressed. The ongoing goal of the program is to produce well-qualified graduates for the engineering profession or for graduate civil engineering schools in the U.S.

The Major

Course requirements are as follows (192 minimum units required):

(1) Seven core courses: Chemical Engineering M105A or Mechanical, Aerospace, and Nuclear Engineering M105A, Civil Engineering 108, Electrical Engineering 100, 103, Materials Science and Engineering 14, Mechanical, Aerospace, and Nuclear Engineering 102, 103.

(2) Civil Engineering 106A, 120, 121, 130, 135A, 135B, 151, one course from 141, 142, one course from 155, 163, 164; one mathematics course from Mechanical, Aerospace, and Nuclear Engineering 191A, 192A, 192B, 192C, 193A, 193B.

(3) Twenty-four elective units, to be selected from the courses listed below, which must include at least 11 design units and eight units of laboratory:

Engineering Mechanics — Civil Engineering 130, 130F, 130L, 139, Mechanical, Aerospace, and Nuclear Engineering 168.

Geotechnical Engineering — Civil Engineering 121, 128L, Earth and Space Sciences 100, 139.

Structures — Civil Engineering 135B, 135C, 135L, 137, 137L, 141, 142, 142L, 142X, 143, 144, 147.

Systems Analysis — Civil Engineering M140, 175.

Water Resources and Environmental Engineering — Civil Engineering 150, 156A, 156B, 157A, 157B, M161, 163, 164.

(4) English 3; Chemistry and Biochemistry 11A, 11B/11BL; Civil Engineering 15A, 15B; Mathematics 31A, 31B, 32A, 32B, 33A, 33B; Physics 8A/8AL, 8B/8BL, 8C, 8D; one life sciences elective course.

(5) Six courses from the humanities, social sciences, and/or fine arts approved list (at least three must be upper division; at least three — with two upper division — must be in the same academic department or otherwise reflect coherence with respect to subject matter).

(6) Three free elective courses.

Graduate Study

For information on graduate admission to the civil engineering program and requirements for the M.S. and Ph.D. degrees, see "Graduate Study" at the beginning of this chapter.

Lower Division Courses

11. Patterns of Problem Solving. (Formerly numbered Engineering 11.) Introduction to creative patterns of problem solving and decision making. Discussion of attitudes and techniques productive in problem solving. Heuristic guides for knowledge acquisition, problem representation, and problem solution. *Tools and concepts for decision making that include technology and human values.*

Mr. Rubinstein (F)

12. Applied Patterns of Problem Solving. (Formerly numbered Engineering 12.) Prerequisite: course 11. Application of tools and methods discussed in course 11 to a major problem of a social and technical nature. Experience in team problem solving and decision making.

Mr. Rubinstein (W)

15A. Introduction to Computing in Civil Engineering (2 units). Lecture, two hours; laboratory, two hours. Overview of operating systems for microcomputers, file editors, spreadsheets, data base programs, SEASnet facilities. Introduction to programming. Civil engineering applications.

Mr. Dong (F,W)

15B. Introduction to FORTRAN Programming (2 units). Lecture, two hours; laboratory, two hours. Prerequisite: course 15A. Introduction to programming using structured FORTRAN. Selected topics in programming, with emphasis on numerical techniques as applied to engineering problems.

Mr. Dong (W,Sp)

Upper Division Courses

106A. Problem Solving in Engineering Economy. Prerequisite: upper division standing. Problem-solving and decision-making framework for economic analysis of engineering projects. Foundation for understanding corporate financial practices and accounting. Decisions on capital investments and choice of alternatives for engineering applications in all fields.

Mr. Dracup (W,Sp)

108. Introduction to Mechanics of Deformable Solids. Lecture, three hours; discussion, two hours. Prerequisite or corequisite: Mathematics 33A. Recommended: Mechanical, Aerospace, and Nuclear Engineering 102. Review of equilibrium principles. Concepts of stress and strain. Material constitution (stress-strain relations). Energy in deformable bodies. Structural applications to trusses, beams, shafts, columns, and pressure vessels.

Mr. Felton (F,W,Sp)

M115. Engineering and Policy: Resources and Risk. (Same as Mechanical, Aerospace, and Nuclear Engineering M109A.) Lecture, two hours; recitation, two hours. Prerequisite: sophomore or higher standing in engineering. *Philosophical, sociological, and institutional implications of engineering-based risk and decision making. Emphasis on opportunities for useful development of resources, inherent risks, and responsibilities of engineers in the decision process. Emphasis on thoughtful student discussion.*

Mr. Stenstrom (W)

120. Principles of Soil Mechanics. Prerequisite: course 108. Recommended: Earth and Space Sciences 1. Soil as a foundation for structures and as a material of construction. Soil formation, classification, physical and mechanical properties, compaction, bearing capacity, earth pressures, consolidation and shear strength. Mr. Lade (F)

121. Design of Foundations and Earth Structures. Prerequisite: course 120. Design methods for foundations and earth structures. Site investigation, including determination of soil properties for design. Design of footings and piles, including stability and settlement calculations. Design of slopes and earth retaining structures. Mr. Lade (W)

128L. Soil Mechanics Laboratory. Lecture, one hour; laboratory, eight hours. Prerequisite: course 120 or consent of instructor. Laboratory experiments to be performed by students to obtain soil parameters required for assigned design problems. Soil classification, grain size distribution, Atterberg limits, specific gravity, compaction, expansion index, consolidation, shear strength determination. Design problems, report writing. Mr. Vucetic (Sp)

130. Elementary Structural Mechanics. Prerequisite: course 108. Introduction to two-dimensional elasticity, stress-strain laws, yield and fatigue; bending of beams; torsion of beams; warping; torsion of thin-walled cross sections: shear flow, shear-lag; combined bending torsion of thin-walled, stiffened structures used in aerospace vehicles; elements of plate theory; buckling of columns. Mr. Nelson (W)

130F. Experimental Fracture Mechanics. Lecture, two hours; laboratory, four hours. Prerequisite: Mechanical, Aerospace, and Nuclear Engineering 157 or equivalent. Elementary introduction to fracture mechanics and experimental techniques used in fracture, crack tip stress fields, strain energy release rate, fracture characterization, compliance calibration, surface flaws, fatigue crack growth and fatigue life of structural components, mixed mode fracture, and individual projects. Mr. Fournery (W)

130L. Experimental Structural Mechanics. Lecture, two hours; laboratory, four hours. Prerequisite: course 130 or equivalent. Lecture and experiments in limit analysis of various aspects of structures. Elastic and plastic analysis of structural elements in multi-axial stress states. Buckling of columns, plates, and shells. Effects of actual boundary conditions on structural performance. Evaluation of structural fasteners. Mr. Fournery (Sp)

135A. Elementary Structural Analysis. Lecture, four hours; other, eight hours. Prerequisites: course 108, Mechanical, Aerospace, and Nuclear Engineering 102. Equilibrium analysis of structures; deflection calculations by differential equations, moment-area, virtual work, and slope-deflection methods; influence lines; indeterminate analysis; applications to planar truss and frame structures. Mr. Felton (F)

135B. Intermediate Structural Analysis. Lecture, four hours; other, eight hours. Prerequisite: course 135A. Classical force and displacement methods of analysis; indeterminate structural analysis by virtual work, slope-deflection equations, moment-distribution methods; Castigliano's theorems, minimum potential and complementary energy theorems, and Maxwell/Betti reciprocity; introduction to matrix analysis techniques. Mr. Nelson (W)

135C. Computer Analysis of Structures. Prerequisite: course 135A. Recommended: course 135B. Matrix structural analysis by displacement and force methods. Symmetry/antisymmetry principles. Approximate analysis techniques for estimation/validation of computer results. Influence lines, Mueller/Breslau principle. Solution of linear algebraic equations. Mr. Dong (Sp)

135L. Structural Design and Testing Laboratory. Lecture, two hours; laboratory, eight hours. Prerequisites: courses 15A, 15B, 135A, or equivalent, senior standing, consent of instructor. Limited enrollment. Computer-aided optimum design, construction, instrumentation, and test of a small-scale model structure. Use of computer-based data acquisition and interpretation systems for comparison of experimental and theoretically predicted behavior. Mr. Felton (Sp)

137. Elementary Structural Dynamics. (Formerly numbered M137.) Lecture, four hours; outside study, eight hours. Prerequisite: course 135B or consent of instructor. Basic structural dynamics course for civil engineering students. Elastic free, forced vibration, and earthquake response spectra analysis for single and multidegree of freedom systems. Axial, bending, and torsional vibration of beams. Mr. Fournery (F)

137L. Mechanical Vibrations Laboratory. Laboratory, eight hours. Corequisite: course 137. Introduction to instrumentation for dynamic measurements, including computer data acquisition. Determination of natural frequencies and damping factors from free vibrations. Determination of natural frequencies, mode shapes, and damping factors from forced vibrations. Dynamic similitude. Nonlinear behavior of systems. Mr. Fournery (F)

139. Introduction to Biostructural Mechanics. Prerequisite: course 108 or equivalent. Introduction to biostructural mechanics of human musculoskeletal system. Structural characteristics and behavior of skeletal members. Response to mechanical trauma. Elastic and viscoelastic properties of hard and soft tissues. Mathematical modeling. Design characteristics of hip prostheses and anthropometric dummies. Mr. Fournery (F)

M140. Numerical Optimization Methods for Engineering Design. (Same as Mechanical, Aerospace, and Nuclear Engineering M192F.) Prerequisites: Computer Science 10F, Mathematics 32A, 33A. Recommended: Mathematics 115A. Systematic presentation of numerical optimization methods for engineering design; one-dimensional minimization, unconstrained minimization, linearly constrained minimization, general nonlinear problems, approximation concepts, duality. Optimization problem statements. Advantages and limitations of numerical optimization. Applications to general design in mechanical, aerospace, and manufacturing engineering. Mr. Felton (F)

141. Design of Steel Structures. Lecture, three hours; recitation, three hours. Prerequisite: course 135A. Allowable stress design of tension members, compression members, beams, beam columns, and tension splices according to AISC specifications for buildings. Mr. Hart (F)

142. Design of Reinforced Concrete Structures. Lecture, three hours; recitation, three hours. Prerequisite: course 135A. Design of reinforced concrete buildings. Reinforced concrete beams, columns, and slabs. Working stress and ultimate strength methods of analysis. Determination of loads and design constraints. Introduction to reinforced concrete structural systems. Mr. Selna (W)

142L. Reinforced Concrete Structural Laboratory. Lecture, two hours; laboratory, six hours; other, four hours. Prerequisite: course 142. Experimental evaluation of design equations used for reinforced concrete structures. American Concrete Institute Building Code (ACI 318-89) strength and stiffness relations used for design of beams, columns, slabs, and joints verified by full- or near full-scale tests. Mr. Selna (Sp)

142X. Reinforced Concrete Construction Laboratory (2 units). Laboratory, four hours. Prerequisite: junior standing. Design and fabrication methods used for construction of reinforced concrete structural elements. Full- or near full-scale slab, beam, column, and joint elements formed, fabricated, and cast in the laboratory. Mr. Selna (F)

143. Design of Prestressed Concrete Structures. Prerequisite: course 135A. Prestressing and post-tensioning techniques. Properties of concrete and prestressing steels. Loss of prestress. Analysis of sections for flexural stresses and ultimate strength. Design of beams by allowable stress and strength methods. Load balancing design of continuous beams and slabs. Mr. Selna (Sp)

144. Structural Systems Design. Lecture, four hours; outside study, eight hours. Prerequisites: course 142, consent of instructor. Limited enrollment. Design course for civil engineering students, with focus on aspects of complete structural systems. Introduction to construction concepts. Design of concrete, steel, and masonry gravity and lateral load systems. System selection using realistic criteria. Project involving design of a building. Mr. Hart (Sp)

147. Design and Construction of Tall Buildings. (Formerly numbered 180.) Prerequisite: course 141 or 142. Introduction to total design process and professional participants. Systematic presentation of advantages and limitations of different structural forms and systems. Identification of critical design factors influenced by tallness. Foundation systems. Construction site visits, costing, and scheduling. Mr. Hart (W)

150. Engineering Hydrology. Lecture, four hours; other, eight hours. Prerequisites: course 151, Mechanical, Aerospace, and Nuclear Engineering 103. Analysis of components of hydrologic cycle, including precipitation, infiltration, surface water runoff, groundwater, and evapotranspiration. Statistics and probability of floods and droughts. Field trip. Mr. Dracup, Mr. Yeh (F)

151. Introduction to Water Resources Engineering. Prerequisite: Mechanical, Aerospace, and Nuclear Engineering 103 or consent of instructor. Principles of hydraulics, flow of water in open channels and pressure conduits, reservoirs and dams, hydraulic machinery, hydroelectric power, introduction to system analysis and design applied to water resources engineering. Mr. Yeh (W)

153. Introduction to Environmental Engineering. Lecture, four hours; outside study, eight hours. Prerequisite: Mechanical, Aerospace, and Nuclear Engineering 103. Water, air, and soil pollution: sources, transformations, effects, and processes for removal of contaminants. Water quality, water and wastewater treatment, waste disposal, air pollution, global environmental problems. Field trip. Ms. Hering (F)

155. Water Quality Control Systems. Prerequisites: Mechanical, Aerospace, and Nuclear Engineering 103 and upper division standing in engineering, or consent of instructor. Biological, chemical, and physical bases of water quality and pollution; potability and chemical aspects of treatment and reclamation; analysis and design of water and wastewater treatment systems; field trip. Mr. Stenstrom (F)

156A. Water Quality Control Laboratory I. (Formerly numbered 156.) Lecture, two hours; laboratory, six hours; outside study, five hours. Prerequisites: course 155 (may be taken concurrently), Chemistry 11A, 11B. Basic laboratory techniques in analytical chemistry related to water and wastewater analysis. Selected experiments include gravimetric analysis, titrimetry spectrophotometry, redox systems, pH and electrical conductivity. Concepts to be applied to analysis of "real" water samples in course 156B. Mr. Stenstrom (F)

156B. Water Quality Control Laboratory II. Lecture, two hours; laboratory, six hours; outside study, five hours. Prerequisite: course 156A. Characterization and analysis of typical natural waters and wastewaters for inorganic and organic constituents. Selected experiments include solids, nitrogen species, oxygen demand, chlorine, alkalinity, hardness, and trace analysis. Discussion of relevance of these measurements to water resource engineering. Mr. Elmelich, Mr. Stenstrom (W)

157A. Design of Water Resource Structures. Lecture, four hours; other, eight hours. Prerequisites: course 151, Mechanical, Aerospace, and Nuclear Engineering 103. Review design of hydraulic structures, pertinent fluid mechanics, and hydraulic theory and applications. Examples of failures and successes of hydraulic structures. Class design projects and field trips required. Mr. Dracup (Sp)

157B. Design of Water Quality Control Systems. (Formerly numbered 157.) Lecture, two hours; discussion, two hours; laboratory, four hours; other, four hours. Prerequisite: course 155. Design of water and wastewater treatment plants, hydraulic profiles, conceptual design, process design and control, economic evaluation of design. Field trip. Mr. Elimelech (Sp)

M161. New Energy Technology: Resources, Conversion, Constraints. (Same as Mechanical, Aerospace, and Nuclear Engineering M134A.) Prerequisite: Chemical Engineering M105A or Mechanical, Aerospace, and Nuclear Engineering M105A or equivalent in physics or chemistry or consent of instructor. Energy resources: fossil fuels, nuclear fuels, hydro, solar, wind, geothermal, and biomass sources. Conversion methods for power production and other energy uses. Consideration of thermodynamic, economic, and environmental constraints. Mr. Stenstrom

163. Air Pollution Control. Prerequisite: senior standing or consent of instructor. Sources of air pollutants and their atmospheric transport, dispersion, and photochemical reactions. Design and operational basis for stationary and mobile source control systems. Overview of current regulatory trends. Mr. Stenstrom (Sp)

164. Waste and Hazardous Waste Management. Prerequisite: senior standing or consent of instructor. Waste sources and handling. Resource recovery processes and system design. Site selection, design, and operation for landfill disposal. Leachate transport, monitoring, and design for groundwater protection. Mr. Stenstrom (W)

175. Introduction to Elements of Decision Making. Prerequisite: Mechanical, Aerospace, and Nuclear Engineering 193A or equivalent mathematics course. Elements of decision making and the decision process. Decision and utility theory. Formulation of utility functions and objective functions. Subjective probabilities. Bayesian approach to value of information. Risk sharing and group decisions. Methods of eliciting judgments; bias and scoring rules. Mr. Rubinstein (F)

199. Special Studies (2 to 8 units). Prerequisites: senior standing, consent of instructor. Individual investigation of selected topic to be arranged with a faculty member. Enrollment request forms available in department office. Occasional field trips may be arranged. May be repeated for credit. (F,W,Sp)

Graduate Courses

220. Shear Strength of Soil and Stability of Slopes. Prerequisite: course 120. Detailed study of fundamental concepts of shear strength of soils, strength determining factors, methods of strength measurement. Slope stability and stability analysis techniques using circular and noncircular failure surfaces, effect of side forces, total and effective stress analyses. Mr. Lade (F)

221. Foundation Engineering. Prerequisites: courses 120, 220. Principles of foundation design, including theory of consolidation, impeded drainage, stress distribution, settlement analysis, allowable bearing capacity for shallow foundations, piles, and piers; laterally loaded piles. Mr. Lade (W)

222. Soil Dynamics. Prerequisites: courses 120, 220. Design of foundations for vibrating equipment. Strength and stress-strain relations for soil under cyclic loading conditions. Fundamentals of earthquakes as applied to seismic response of earth structures and foundations. Design of embankments, retaining walls, and foundations for earthquake loading. Mr. Vucetic (W)

223. Earth Pressures and Earth Retaining Structures. Prerequisites: course 120, graduate standing. Basic concepts of theory of earth pressures behind retaining structures, with special application to design of retaining walls, bulkheads, and excavation bracing; effects of flexibility of bulkheads, creep in soils, and construction techniques. Mr. Vucetic (F)

224. In-Situ Testing and Foundation Design. Prerequisites: courses 220, and 221 or consent of instructor. Use of in-situ (field) testing devices to obtain conventional soil strength and compressibility properties. Design of foundation based on in-situ test data. Discussion of SPT, CPT, PMT, and other in-situ tests. Mr. Lade

228L. Advanced Soil Mechanics Laboratory. Prerequisites: courses 120, 121, 220, 221. Lectures and laboratory studies of advanced aspects of soil properties and their application to design. Permeability, consolidation, strength testing, pore water pressure measurements, advanced instrumentation and measurement techniques. Preparation of engineering reports. Mr. Lade (Sp)

229. Seminar: Advanced Topics in Soil Mechanics. Prerequisites: graduate standing in engineering, consent of instructor. Topics may vary each term to cover subjects such as earth dam design, seepage through soils, consolidation, constitutive laws, finite difference and finite element methods with special application in soil mechanics, theories of elasticity and plasticity, and case histories. Mr. Lade (Sp)

M230. Applied Linear Elasticity. (Same as Mechanical, Aerospace, and Nuclear Engineering M256B.) Prerequisite: Mechanical, Aerospace, and Nuclear Engineering 256A or consent of instructor. Review of general principles. Equations of linear isotropic elastostatics. Two-dimensional problems. Torsion and bending. Three-dimensional problems. Saint Venant's principles. Reciprocal theorem, variational principles. Mr. Mal, Mr. Muki (W)

231. Inelastic Effects in Structures and Materials. Prerequisite: course 130 or equivalent or consent of instructor. Analogy between inelastic strain and applied force in stress analysis. Mathematical and physical theories of plasticity and creep and their basic assumptions. Static and dynamic analysis of inelastic beams, columns, frames, and plates. Localized plastic deformation in materials. Mr. Lin (W, even years)

232. Theory of Plates and Shells. Prerequisite: course 130 or Mechanical, Aerospace, and Nuclear Engineering 158A or consent of instructor. Small and large deformation theories of thin plates; energy methods; free vibrations; membrane theory of shells; axisymmetric deformations of cylindrical and spherical shells, including bending. Mr. Nelson (W)

233. Mechanics of Composite Material Structures. Prerequisites: courses 130 (or introductory course on linear elasticity or continuum mechanics or consent of instructor) and 232 or equivalent. Review of analysis of stress and strain. Anisotropic stress-strain temperature relations. Analysis of laminated anisotropic plates and shells based on classical and refined theories. Elastodynamic theory of vibrations and waves in laminated anisotropic plates and cylinders. Analysis of edge effects, joints, and fracture. Failure theories and fatigue for composite materials. Mr. Dong (Sp)

234. Advanced Topics in Structural Mechanics. Prerequisites: graduate standing in engineering, consent of instructor. Current topics in composite materials, computational methods, finite element analysis, structural synthesis, nonlinear mechanics, and structural mechanics in general. Topics may vary from term to term. Mr. Muki (Sp)

235A. Advanced Structural Analysis. Prerequisite: course 135B. Review of elasticity theory; theorem on virtual work, stationary value of potential and complementary potential; Castigliano, Maxwell/Betti theorems; stiffness, flexibility matrices for truss, beam elements; matrix force and displacement analysis of trusses, frames; introduction to finite element methods. Mr. Felton (F)

235B. Finite Element Analysis of Structures. Prerequisites: courses 130 and 235A, or consent of instructor. Direct energy formulations for deformable systems; solution methods for linear equations; analysis of structural systems with one-dimensional elements; introduction to variational calculus; discrete element displacement, force, and mixed methods for membrane, plate, shell structures; instability effects. Mr. Felton (W)

235C. Nonlinear Structural Analysis. Prerequisite: course 235B or consent of instructor. Classification of nonlinear effects; material nonlinearities; conservative, nonconservative material behavior; geometric nonlinearities, Lagrangian, Eulerian description of motion; finite element methods in geometrically nonlinear problems; postbuckling behavior of structures; solution of nonlinear equations; incremental, iterative, programming methods. Mr. Nelson (Sp)

236. Stability of Structures I. Prerequisite: course 130 or 135B or equivalent. Elastic buckling of bars. Different approaches to stability problems. Inelastic buckling of columns and beam columns. Columns and beam columns with linear, nonlinear creep. Combined torsional and flexural buckling of columns. Buckling of plates. Mr. Dong (Sp)

M237A. Dynamics of Structures. (Same as Mechanical, Aerospace, and Nuclear Engineering M269A.) Prerequisite: course M137. Principles of dynamics. Determination of normal modes and frequencies by differential and integral equation solutions. Transient and steady state response. Emphasis on derivation and solution of governing equations using matrix formulation. Mr. Bendiksen, Mr. Dong, Mr. Friedmann (W)

M237C. Introduction to Probabilistic Dynamics. (Same as Mechanical, Aerospace, and Nuclear Engineering M269C.) Prerequisite: course M137. Response of structural and mechanical systems to random vibrations. Stationary and nonstationary excitations. Response of systems with random parameters. Discrete and continuous linear systems. Applications to earthquakes, wind sway of buildings, gust response, vibrations due to gearing inaccuracies, train vibrations. Mr. Hart (Sp, even years)

238. Optical Metrology. Prerequisite: consent of instructor. Study of modern techniques in experimental mechanics, including dimensional analysis measurement theory and measurement techniques. Emphasis on techniques of modern optics (e.g., holography). Moiré analysis, photoelasticity and speckle interferometry. Mr. Fournery (Sp, odd years)

M240. Optimum Structural Design. (Same as Mechanical, Aerospace, and Nuclear Engineering M267A.) Prerequisite: course 235A or Mechanical, Aerospace, and Nuclear Engineering 261A or consent of instructor. Synthesis of structural systems; analysis and design as optimization problems; techniques for synthesis and optimization; application to aerospace and civil structures. Mr. Felton (W)

241. Advanced Steel Design. Prerequisite: course 141. Working and ultimate load methods. Emphasis on seismic design. Brittle fracture, fatigue, and local buckling. Compression members. Element design for complex loading, including torsion. Braced and unbraced frames. Drift requirements. Steel frame design for gravity, wind, and earthquake loads. Mr. Hart (W)

242. Advanced Reinforced Concrete Design. Prerequisite: course 142. Ultimate strength and seismic design considerations. Concrete mechanical properties. Columns: stability, biaxial bending. Slab design. Slab yield line theory. Footings. Joint design. Bracing systems: diaphragms, trusses, and shear walls. Braced and unbraced frame design for gravity, wind, and earthquake loads. Mr. Selna (Sp)

244. Structural Loads and Safety for Civil Structures. Prerequisite: course 141 or 142 or 143. Concept of structural safety. Factors of safety and quantification of loads in building codes. Probability of failure and quantification of loads in probabilistic approaches to structural safety. Relationships between factor of safety and probability of failure. Mr. Hart (F)

245. Earthquake Engineering. Prerequisite: course M137 or 220 or 235A. Engineering seismology: strong earthquake motion, microtremors, wave velocity and damping, induced vibrations, spectral analysis. Risk of earthquakes and fault breaks. Site evaluation. Structure-earth system response. Introduction to earthquake resistive design of buildings, bridges, and dams. Theory and field experiments.

Mr. Selna (W)

246. Structural Response to Ground Motions. Prerequisite: course M137. Spectral analysis of ground motions: response, time, and Fourier spectra. Response of structures to ground motions due to earthquakes and nuclear explosions. Computational methods to evaluate structural response. Response analysis, including evaluation of contemporary design standards. Limitations due to idealizations.

Mr. Hart, Mr. Selna (Sp)

250A. Surface Water Hydrology. Prerequisite: course 150 or consent of instructor. In-depth study of surface water components of hydrologic cycle. Instantaneous unit hydrograph, dynamic wave equations, rainfall-runoff models using system investigation and physical hydrology. Stochastic hydrology: time-series analysis, Markovian streamflow generating models, and generation of multivariate synthetic streamflows. Applications.

Mr. Dracup, Mr. Yeh (W)

250B. Groundwater Hydrology. Prerequisite: course 150 or consent of instructor. Theory of movement and occurrence of water in subterranean aquifers. Steady flow in confined and unconfined aquifers. Mechanics of wells; steady and unsteady radial flows in confined and unconfined aquifers. Theory of leaky aquifers. Seawater intrusion. Numerical methods. Applications.

Mr. Yeh (W)

250C. Mathematical Modeling of Contaminant Transport in Groundwater. Lecture, four hours; laboratory, eight hours. Prerequisites: courses 250B and 253, or consent of instructor. Phenomena and mechanisms of hydrodynamic dispersion, governing equations of mass transport in porous media, various analytical and numerical solutions, determination of dispersion parameters by laboratory and field experiments, coupled and multiphase pollution problems, computer programs and applications.

Mr. Yeh (Sp)

251. Water Resources Systems Engineering. Prerequisite: course 151. Application of mathematical programming techniques to water resources systems. Topics include reservoir regulation, optimal timing, sequencing and sizing of water resources projects, and real-time conjunctive operations of ground water and surface water resource systems. Emphasis on management of water quality.

Mr. Dracup, Mr. Yeh (Sp)

252. Engineering Economics of Water and Related Natural Resources. Prerequisites: one or more courses from Economics 1, 2, 100, 101A, and 101B, or consent of instructor. Economic theory and applications in management of water and related natural resources; application of price theory to water resource management, electric power supply, petroleum and natural gas management, and renewable resources; benefit-cost analysis with applications to water resources planning.

Mr. Dracup (Sp)

253. Mathematical Models for Water Quality Management. Prerequisite: course 155 or consent of instructor. Development of mathematical models for water quality control systems. Emphasis on numerical techniques to solve nonlinear partial differential equations arising out of water quality and chemical engineering research.

Mr. Stenstrom (F)

254. Aquatic Chemistry. Lecture, three hours; laboratory, two hours. Prerequisite: course 155. Dilute aqueous solution chemistry of acid/base reactions, complex formation, precipitation and dissolution reactions, and oxidation/reduction reactions, as applied to water and wastewater treatment processes as well as natural and polluted waters. Laboratory experiment.

Mr. Elimelech (F)

255A. Advanced Water Quality Control Systems I. Prerequisites: courses 155 and 254 (latter may be taken concurrently), or consent of instructor. Physical, chemical, and biological basis for design of water quality control systems. Properties of water, water quality standards, reactions and stoichiometry. Field trip.

Mr. Elimelech (W)

255B. Advanced Water Quality Control Systems II. Prerequisite: course 255A. Physical, chemical, and biological basis for design of water quality control systems. Principles and design of conventional and advanced water and wastewater treatment systems. Field trip.

Mr. Stenstrom (Sp)

255C. Colloidal Phenomena. Lecture, four hours; other, eight hours. Prerequisite: consent of instructor. Advanced topics in colloidal interactions and stability, colloidal hydrodynamics, surface chemistry, adsorption of pollutants on colloidal surfaces, transport of colloids in porous media, coagulation, and particle deposition. Consideration of applications to colloidal processes in aquatic environments.

Mr. Elimelech (Sp)

258A. Membrane Separations in Aquatic Systems. Prerequisite: course 254. Applications of membrane separations to desalination, water reclamation, brine disposal, and ultrapure water systems. Discussion of reverse osmosis, ultrafiltration, electrodialysis, and ion exchange technologies from both practical and theoretical standpoints.

Mr. Stenstrom (Sp)

259. Selected Topics in Water Resources (2 units). Prerequisites: graduate standing, consent of instructor. Review of recent research and development in management of water resources. Water and hydroelectric supply systems. Water quality management. Water law and institutions. Economic planning and optimization of water resources development. May be repeated once for credit.

Mr. Dracup, Mr. Stenstrom (F)

260. Advanced Topics in Hydrology and Water Resources. Lecture, four hours; other, eight hours. Prerequisites: courses 250A, 250B, and 251, or consent of instructor. Current research topics in inverse problem of parameter estimation, experimental design, conjunctive use of surface and groundwater, multiobjective water resources planning, and optimization of water resource systems. Topic may vary from term to term.

Mr. Yeh (F)

M262A. Introduction to Atmospheric Chemistry. (Same as Atmospheric Sciences M203A.) Lecture, three hours. Principles of chemical kinetics, thermochemistry, spectroscopy, and photochemistry; chemical composition and history of Earth's atmosphere; biogeochemical cycles of key atmospheric constituents; basic photochemistry of troposphere and stratosphere, upper atmosphere chemical processes; air pollution; chemistry and climate.

(F)

M262B. Atmospheric Diffusion and Air Pollution. (Same as Atmospheric Sciences M224B.) Lecture, three hours. Nature and sources of atmospheric pollution; diffusion from point, line, and area sources; pollution dispersion in urban complexes; meteorological factors and air pollution potential; meteorological aspects of air pollution. S/U grading for majors with consent of instructor after successful completion of written and oral comprehensive examination and for nonmajors at discretion of major department.

(Sp)

265. Geohydrochemical Engineering. Prerequisites: course 250B, graduate standing. Science and engineering underlying movement and fate of chemicals within geospheres of the environment. Models for transport to, within, and from groundwater and their application.

Mr. Stenstrom (Sp)

275. Multiattribute Decision Making with Conflicting Objectives. Prerequisite: course 175. Structuring of models for multiattribute decision problems. Theory of quantifying preferences over multiple objectives. Multiattribute utility theory. Structuring of models for conditional strategies under conflict situations. Theory of metagames and metarationality.

Mr. Pearl, Mr. Rubinstein (W)

276. Perspectives of Systems Representation. Prerequisite: course 275 or consent of instructor. Mathematical and conceptual models used in analysis and synthesis of engineering. Sociotechnical systems. Mathematical representations of interpretative models. Decomposition using tools of graph theory and information theory. Guides to choice of models. Interaction of human and computer in the modeling process.

Mr. Rubinstein (Sp)

M292. Asymptotic Methods. (Same as Mathematics M274A.) Lecture, three hours. Prerequisites: Mechanical, Aerospace, and Nuclear Engineering 192A, Mathematics 132, or equivalent. Fundamental mathematics of asymptotic analysis, asymptotic expansions of Fourier integrals, method of stationary phase. Watson's lemma, method of steepest descent, uniform asymptotic expansions, elementary perturbation problems.

Mr. Muki (F)

296AA-296ZZ. Seminars: Current Topics in Civil Engineering (2 to 4 units). Prerequisite: consent of instructor. Lectures, discussions, and student presentations and projects in areas of current interest in civil engineering. May be repeated for credit. S/U grading.

(F,W,Sp)

298. Seminar: Engineering (2 to 4 units). Prerequisites: graduate standing in civil engineering, consent of instructor. Seminars may be organized in advanced technical fields. If appropriate, field trips may be arranged. May be repeated with topic change.

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

(F,W,Sp)

495. Teaching Assistant Training Seminar (2 units). Prerequisite: appointment as teaching assistant in Civil Engineering Department. Seminar on communication of civil engineering principles, concepts, and methods; teaching assistant preparation, organization, and presentation of material, including use of visual aids; grading, advising, and rapport with students. S/U grading.

(F)

596. Directed Individual or Tutorial Studies (2 to 8 units). Prerequisites: graduate standing in civil engineering, consent of instructor. Petition forms to request enrollment may be obtained from assistant dean, Graduate Studies. Supervised investigation of advanced technical problems. S/U grading.

597A. Preparation for M.S. Comprehensive Examination (2 to 12 units). Prerequisites: graduate standing in civil engineering, consent of instructor. Reading and preparation for M.S. comprehensive examination. S/U grading.

597B. Preparation for Ph.D. Preliminary Examinations (2 to 16 units). Prerequisites: graduate standing in civil engineering, consent of instructor. S/U grading.

597C. Preparation for Ph.D. Oral Qualifying Examination (2 to 16 units). Prerequisites: graduate standing in civil engineering, consent of instructor. Preparation for oral qualifying examination, including preliminary research on dissertation. S/U grading.

598. Research for and Preparation of M.S. Thesis (2 to 12 units). Prerequisites: graduate standing in civil engineering, consent of instructor. Supervised independent research for M.S. candidates, including thesis prospectus. S/U grading.

599. Research for and Preparation of Ph.D. Dissertation (2 to 16 units). Prerequisites: graduate standing in civil engineering, consent of instructor. Usually taken after student has been advanced to candidacy. S/U grading.

 Thomas A. Rogers, Ph.D., *Emeritus*

Associate Professors

Michael G. Dyer, Ph.D.
 Eliezer M. Gafni, Ph.D.
 David R. Jefferson, Ph.D.
 Richard E. Korf, Ph.D.
 David A. Rennels, Ph.D.

Assistant Professors

Rajive L. Bagrodia, Ph.D.
 Jinsheng (Jason) Cong, Ph.D.
 David E. Heckerman, Ph.D.
 Andrew B. Kahng, Ph.D.
 Josef Skrzyppek, Ph.D.
 Yuval Tamir, Ph.D.

Lecturers

Patrick Mak, Ph.D.
 Thomas M. Simundich, Ph.D.
 Leon Levine, M.S., *Senior Emeritus*

Adjunct Professors

Barry W. Boehm, Ph.D.
 Norman C. Dalkey, Ph.D.
 Alfred Inselberg, Ph.D.
 Boris Kogan, Ph.D.
 Gerald J. Popek, Ph.D.

Scope and Objectives

Computer science is concerned with the modeling, analysis, design, and applications of computer-related systems. Its study at UCLA provides education at the undergraduate and graduate levels necessary to understand, design, implement, and use the software and hardware of digital computers and digital systems. The programs provide comprehensive and strongly related studies of subjects in artificial intelligence, computer science theory, computer system architecture, computer network modeling and analysis, distributed computer systems, programming languages and systems, and scientific computing.

The undergraduate and graduate studies and research projects in computer science are supported by extensive computing resources. In addition to the departmental computing facility, there are nearly a dozen laboratories specializing in areas such as computer communications, VLSI systems, VLSI CAD, and artificial intelligence. The Cognitive Systems Laboratory is engaged in studying computer systems which emulate or support human reasoning. The Biocybernetics Laboratory is devoted to multidisciplinary research involving the application of engineering and computer science methods to problems in biology and medicine.

The Bachelor of Science degree may be attained either through the computer science and engineering major or through the computer science major described below.

The School of Engineering and Applied Science offers M.S. and Ph.D. degrees in Computer Science, as well as minor fields for graduate students seeking engineering degrees. In cooperation with the John E. Anderson Graduate School of Management, the Computer Science Department offers a concurrent degree program which enables students to obtain the M.S. in Computer Science and the M.B.A. (Master of Business Administration).

Bachelor of Science in Computer Science and Engineering

The ABET-accredited computer science and engineering curriculum at UCLA provides the education and training necessary to design, implement, test, and utilize the hardware and software of digital computers and digital systems. This curriculum has major components from the Computer Science and Electrical Engineering Departments. Within the curriculum students study all aspects of computer systems from electronic design, based on solid-state physics concepts, through logic design, integrated circuit selection and design, MSI, LSI, and VLSI concepts and device utilization, machine language design, implementation and programming, operating system concepts, system programming, networking fundamentals, higher-level language skills, and application of these systems. Students are prepared for employment in the high-technology industries which interface with information and digital systems.

The Major

Course requirements are as follows (180 minimum units required):

- (1) Five core courses: Computer Science 21, 22, 23, 24, 51A.
- (2) Computer Science 111, 112, 118, 131, 151B, 180, 181, Electrical Engineering 10, 102, 110, Statistics 154A; four laboratory units (Computer Science 152A, 152B); one course

from Computer Science 161, 163, 168; two computer science/electrical engineering electives (excluding Electrical Engineering 100) and two computer science/electrical engineering laboratories; Computer Science M196B or Electrical Engineering 103.

(3) Two upper division elective courses from the Computer Science Department, one of which must be from 132, 171, 172, 173, 174, M196B. Course 199 may normally be taken only as a free elective; however, you may petition for exceptions in extraordinary situations.

(4) English 3; Mathematics 31A, 31B, 32A, 32B, 33A, 33B, 61; Physics 8A/8AL, 8B/8BL, 8C/8CL; Chemistry and Biochemistry 11A.

(5) Six courses from the humanities, social sciences, and/or fine arts approved list (at least three must be upper division; at least three — with two upper division — must be in the same academic department or otherwise reflect coherence with respect to subject matter).

(6) Two free elective courses.

Bachelor of Science in Computer Science

The computer science curriculum is designed to accommodate students who want full professional preparation in computer science but do not necessarily have a strong interest in computer systems hardware. The curriculum consists of major components in computer science, a minor or technical support area, and a core of courses from the social sciences, life sciences, and humanities. Within the curriculum, you study subject matter in software engineering, principles of programming languages, data structures, computer architecture, theory of computation and formal languages, operating systems, distributed systems, computer modeling, computer networks, compiler construction, and artificial intelligence. Majors are prepared for employment in a wide range of industrial and business environments.

The Major

Course requirements are as follows (180 minimum units required):

- (1) Five core courses: Computer Science 21, 22, 23, 24, 51A.
- (2) Computer Science 111, 112, 118, 131, 132, 151B, 180, 181, Statistics 154A; one course from Computer Science 161, 163, 168; course M196B or Mathematics 141A or Electrical Engineering 103; four laboratory units (Computer Science 152A, 152B).
- (3) One elective upper division computer science course.
- (4) A minor or technical support area composed of a coherent group of three upper division courses selected from astronomy, atmospheric sciences, biology, chemical engineering, chemistry and biochemistry, civil engineering, Earth and space sciences, economics,

electrical engineering, library and information sciences, linguistics, management, materials science and engineering, mathematics, mechanical, aerospace, and nuclear engineering, molecular biology, physics.

(5) English 3; Mathematics 31A, 31B, 32A, 32B, 33A, 33B, 61; Physics 8A/8AL, 8B/8BL, 8C/8CL.

(6) Four humanities courses, four social sciences courses, and two life sciences courses selected from an approved list for this curriculum. Chemistry 11A may be substituted for one of the life sciences courses.

(7) Two free elective courses.

Graduate Study

For information on graduate admission to the computer science program and requirements for the M.S. and Ph.D. degrees, see "Graduate Study" at the beginning of this chapter.

Computer Science Breadth Requirement

Candidates for the M.S. or Ph.D. degree in Computer Science must satisfy the computer science breadth requirement by the end of the fourth term in graduate residence at UCLA. This requirement is satisfied by mastering the contents of six undergraduate courses in computer science selected from the following two groups:

Group 1 (four required courses or equivalent)
— Computer Science 51A, 141 or 180, 151B, 181.

Group 2 (two required courses or equivalent)
— Computer Science 111, 112, 131 or 132, 161 or 163 or 168, 171 or 174, 172 or 173 or 270A.

Competence in any or all courses may be demonstrated by one of three methods:

(1) Satisfactory completion of the course at UCLA with a grade of B- or better.

(2) Satisfactory completion of an equivalent course at another university with a grade of B- or better.

(3) Satisfactory completion of a final examination in the courses at UCLA.

In addition, for each degree students must complete at least three consecutive terms of Computer Science 201 with grades of Satisfactory.

M.B.A./M.S.-Computer Science

The Department of Computer Science in the School of Engineering and Applied Science and the John E. Anderson Graduate School of Management offer a concurrent degree program which enables students to complete requirements for the M.S. in Computer Science and the M.B.A. (Master of Business Administration) in three academic years. Students should request application materials from both

the M.B.A. Admissions Office, John E. Anderson Graduate School of Management, and the Department of Computer Science.

Lower Division Courses

1. Principles of Computer Science. Lecture, four hours; laboratory, two hours; other, six hours. Not open for credit to computer science majors. Introduction to fundamental scientific principles of computation. Programming in LISP. Systems software, including interpreters, and operating systems. Computer hardware design and implementation. Theory of computation, including computability and complexity. Applications, including artificial intelligence and scientific computing.
Mr. Korf (W)

10C. Introduction to Programming/PASCAL. Lecture, four hours; discussion, two hours. Exposure to computer organization and capabilities. Basic principles of programming (using PASCAL as example language): algorithmic, procedural problem solving. Program design and development. Control structures and data structures. Character strings and word processing.
Mr. Geria (Sp)

10F. Introduction to Programming/FORTRAN. Lecture, four hours; discussion, two hours. Open to mathematics and computer science majors; open to graduate students on S/U grading basis only. Description and use of FORTRAN programming language. Selected topics in programming techniques. Programming and running of several programs.
Mr. Geria (W)

11. Introduction to PASCAL. Lecture, four hours; discussion, two hours; other, six hours. Limited to students in computer science and engineering and computer science majors. Open to graduate students on S/U grading basis only. Not open to students with credit for course 10C, 10F, or Program in Computing 10A. Human factors in programming and program design. Exposure to computer organization and capabilities, data representation, professional ethics. Principles of programming (using PASCAL as example language): algorithm design and procedural abstraction. Program design and development. Control structures and data structures.
Mr. Martin (F)

21. Introduction to Computer Science I. Lecture, four hours; discussion, two hours; outside study, six hours. Prerequisite: course 11 or equivalent or consent of instructor. Importance of specification. Turing machines as formal specifications of procedures. Formal systems. Propositional and predicate logic and Horn logic. Set theory, relations, functions, and sequences. Practical examples of specification.
Mr. Gafni, Mr. Parker (F,W)

22. Introduction to Computer Science II. (Formerly numbered 12.) Lecture, four hours; recitation, two hours. Prerequisite: course 21 or consent of instructor. Limited to students in computer science and engineering major. Open to graduate students on S/U grading basis only. Higher-level programming objects, control flow, streams, object-oriented programming (using SCHEME programming language), co-routines, syntactic abstraction.
Mr. Dyer, Mr. Korf (W,Sp)

23. Introduction to Computer Science III. (Formerly numbered 13.) Lecture, four hours; recitation, two hours. Prerequisites: courses 21 and 22, or consent of instructor. Design and specification of algorithmic solutions. Design and specification of data structures, complexity analysis of algorithms and data structures. Implementation of algorithms and data structures in C programming language. Performance analysis of computer programs.
Ms. Greibach, Mr. Kahng (F,Sp)

24. Systems Programming (5 units). Prerequisite: course 23. Introductory course on assembly language and operation systems fundamentals. Number systems, machine language, and assembly language. Procedure calls, stacks, interrupts, and traps. Assemblers, linkers, and loaders. Operating systems concepts: processes and process management, I/O programming, memory management, file systems.
Mr. Muntz, Mr. Rennels (F,W)

51A. Computer Architecture I. (Formerly numbered 151A.) Lecture, four hours; recitation, two hours. Prerequisite: Physics 8C. Introduction to digital systems. Specification and implementation of combinatorial and sequential systems. SSI/MSI/LSI standard modules and their use in digital systems. Specification and implementation of algorithmic systems modules for data and control sections. Hardwired and microprogrammed approaches. Arithmetic algorithms and their implementation.
Mr. Avizienis, Mr. Ercegovac (F,W,Sp)

Upper Division Courses

111. Operating Systems Principles. Lecture, four hours; laboratory, two hours. Prerequisites: courses 23 or equivalent, 24. Introduction to design and performance evaluations of modern operating systems. Mapping and binding of addresses. Organization of multiprogramming and multiprocessing systems; interrupts, process model, and interlocks. Resource allocation models and problem of deadlocks. Scheduling, synchronization. Memory management, virtual memory, I/O control, file systems.
Mr. Jefferson, Mr. Muntz (W,Sp)

112. Computer System Modeling Fundamentals. Prerequisite: upper division standing. Basic tools necessary for performance evaluation and design of distributed computer systems, including such topics as combinatorics, generating functions, probability theory, transforms, Markov chains, baby queueing theory. Presentation of this set of tools in a fashion that is rich with examples from computer systems field.
Mr. Kleinrock (F)

118. Computer Network Fundamentals. Lecture, four hours; discussion, two hours. Prerequisite: upper division standing. Investigation of functions required to operate computer communications networks. Development of methodology for implementing these functions in procedures called protocols. Organization around ISO-OSI seven-layer architecture, with review of each layer. Specific functions defined and available alternatives studied. Presentation of several applications and case studies based on existing public and private networks.
Mr. Geria, Mr. Kleinrock (F)

130. Software Engineering. Lecture, four hours; laboratory, two hours. Prerequisites: courses 22, 23. Structured programming, program specification, program proving, modularity, abstract data types, composite design, software tools, software control systems, program testing, team programming.
Mr. Bagrodia (Sp)

131. Programming Languages. Lecture, four hours; laboratory, two hours. Prerequisites: courses 23, 24. Study, comparison, and evaluation of alternative strategies for language specification, data description, data control, program modularity, instruction sequencing, and language implementations. Use of a few languages selected from FORTRAN 77, ADA, SNOBOL 14, LISP, MODULA 2, and PROLOG to illustrate particular implementations of some of above features.
Mr. Bagrodia, Mr. Jefferson (W,Sp)

132. Compiler Construction. Lecture, four hours; discussion, two hours. Prerequisites: courses 23 or equivalent, 131, 181. Compiler structure; lexical and syntactic analysis; semantic analysis and code generation; theory of parsing.
Mr. Bagrodia, Mr. Martin (W)

141. Basic Methods of Data Organization. Lecture, four hours; laboratory, two hours. Prerequisites: courses 22 and 23, or consent of instructor. Fundamental techniques for organizing and manipulating data, stressing relationships to performance, time/storage trade-offs. Sequential and linked storage allocation for linear lists, multilinked structures. Trees: implementation, traversals, mathematical properties. Graphs and networks: memory representation, algorithms. Dynamic storage allocation. External storage devices. Data base concepts and architectures. Topics include sorting-searching, algorithmic analysis, graph theory, concepts underlying file management.
Mr. Cardenas, Mr. Geria (W)

143. Introduction to Data Base Systems. Lecture, four hours; discussion, two hours; laboratory, two hours; outside study, four hours. Prerequisites: courses 22 and 23, or consent of instructor. Information systems and data base systems in enterprises. File organization and secondary storage structures. Relational model and relational data base systems. CODASYL and other data management approaches. Data base design principles. Transactions, concurrency, and recovery. Integrity and authorization.

Mr. Cardenas, Mr. Zaniolo (W,Sp)

151B. Computer Systems Architecture II (Intermediate). Lecture, four hours; discussion, two hours. Prerequisites: courses 24, 152A. Machine organization and design, formal descriptions, comparative study of machine instruction sets and formats, data representation and floating point, addressing structures, mechanization of procedure calls, memory organization and management, microprogramming, I/O processing and interrupts, and reliability aspects.

Mr. Cong, Mr. Rennels, Mr. Tamir (F,W,Sp)

151C. Design of Digital Systems. Lecture, four hours; discussion, two hours. Prerequisites: courses 51A, 151B, 152A. Design of complex digital systems using hierarchical approaches and regular structures. Combinational, sequential, and algorithmic systems. Microprogramming and firmware engineering. Cost/performance measures and technology constraints. Use of design tools. Design project.

Mr. Ercegovic (W)

152A. Introductory Digital Design Laboratory (2 units). Laboratory, four hours. Prerequisite: course 51A. Hands-on design, implementation, and debugging of digital logic circuits, use of computer-aided design tools for schematic capture and simulation, implementation of complex circuits using programmed array logic, design projects.

Mr. Rennels (F,W,Sp)

152B. Computer Design and Interfacing Laboratory (2 units). Laboratory, four hours. Prerequisite: course 151B. Design and implementation of computer I/O interfaces and device controllers, implementation of microprogrammed machines.

Mr. Rennels, Mr. Tamir (F,W,Sp)

161. Fundamentals of Artificial Intelligence. Lecture, four hours; laboratory, two hours. Prerequisite: course 23 or equivalent. Introduction to fundamental problem solving and knowledge representation paradigms of artificial intelligence. Introduction to LISP with regular programming assignments. State-space and problem reduction methods, brute-force and heuristic search, planning techniques, two-player games. Knowledge structures including predicate logic, production systems, semantic nets and primitives, frames, scripts. Special topics in natural language processing, expert systems, vision, and parallel architectures.

Mr. Dyer, Mr. Korf (F,Sp)

163. Introduction to Natural Language Processing. Lecture, four hours; laboratory, two hours. Prerequisite: course 130 or 131 or consent of instructor. Role of syntax, semantics, and pragmatics in human language processing by computers. Natural language generators and parsers, inference, and conceptual analysis. Modeling conceptual processes and representing semantic knowledge by means of computer problems.

Mr. Dyer (W)

168. Vision in Man and Machine. Lecture, four hours; discussion, two hours; other, six hours. Prerequisites: courses 161 and 170, or consent of instructor. Use of computational aspects of processing visual information to present a unified treatment of early vision, allowing transfer of concepts from analysis of natural vision to synthesis of machine vision. Extraction, processing the manipulation of image attributes. Their organization into data structures and processing by dedicated computing architectures. Issues in image segmentation based on aggregation of feature descriptions.

Mr. Carlyle, Mr. Skrzypek (W)

168L. Computer Vision Laboratory (2 to 4 units). Laboratory, eight hours. Prerequisites: course 168, senior standing, consent of instructor. Image acquisition, storage, processing, and analysis. Design and implementation of algorithms for low-level vision. Experiments in motion, texture, color, edge detection, binary and gray-level images. Scheme-based personal computer vision station.

Mr. Carlyle, Mr. Skrzypek

171. Real-Time Computer Systems. Prerequisite: senior standing or consent of instructor. Survey of fundamentals, with emphasis on hardware and systems concepts. Adapting digital computers to interfaces, including multiprogramming, bus structure, interrupt, and time-sharing considerations. Digital communication, remote consoles, sampling, quantizing, multiplexing, analog-digital conversion, and data reconstruction.

Mr. Karplus (F)

171L. Real-Time Systems Laboratory (2 to 4 units). Laboratory, four to eight hours. Prerequisites: senior standing, consent of instructor. Recommended: courses 152A, 171 (may be taken concurrently). Tests and measurements of digital and analog signals and systems as encountered in data acquisition, on-line computing, telecommunication facilities, terminals, modems, interfaces, and standards (e.g., RS 232, IEEE488). May be repeated for credit with consent of instructor.

Mr. Carlyle, Mr. Karplus (F,W,Sp)

172. Simulation and Models. Lecture, four hours; other, eight hours. Prerequisite: course 23. Recommended: one statistics course. Model formulation and programming for discrete event systems in the simulation language GPSS. Statistical considerations: design of experiments, random number generation, analysis of model results. Computer exercises.

Mr. Karplus, Mr. McNamee

173. Random Data Analysis and Measurement Procedures. Prerequisite: Electrical Engineering 102 or equivalent. Practical aspects of random data analysis and measurement procedures. Statistical properties of random data, correlation, spectral density, input/output relationships, statistical errors, coherence functions, data acquisition, and processing techniques.

Mr. McNamee

174. Elements of Computer Graphics. Lecture, two hours; laboratory, two hours; outside study, eight hours. Prerequisite: course 23 or equivalent. Hardware and software elements of computer graphics systems. Graphics languages. Graphic workstations and specialized I/O devices. Design and development of interactive graphics programs.

Mr. Vidal (W)

180. Introduction to Algorithms and Complexity. Lecture, four hours; discussion, two hours; other, six hours. Prerequisites: Mathematics 33B, 61, junior standing in computer science. Introduction to design and analysis of algorithms. Design techniques: divide-and-conquer, greedy method, dynamic programming; selection of prototypical algorithms; choice of data structures and representations; complexity measures: time, space, upper, lower bounds, asymptotic complexity; NP-completeness.

Ms. Greibach, Mr. Kahng, Mr. Parker (F)

181. Introduction to Formal Languages and Automata Theory. Lecture, four hours; discussion, two hours. Prerequisites: Mathematics 61, and senior standing in computer science or consent of instructor. Grammars, automata, and languages. Finite-state languages and finite-state automata. Context-free languages and pushdown store automata. Unrestricted rewriting system (i.e., languages and Turing machines). Closure properties and pumping lemmas. Introduction to computability.

Mr. Carlyle, Ms. Greibach (F,Sp)

196A. Introduction to Bioengineering and Cybernetics (2 units). Prerequisite: calculus. Strongly recommended for students with potential interest in bioengineering or cybernetics as a major. Introductory survey of topics in bioengineering and cybernetics disciplines. Lectures presented by faculty currently performing research in one of the areas; some sessions include laboratory tours. P/NP grading.

Mr. DiStefano (Sp)

M196B. Modeling and Simulation of Biological Systems. (Same as Medicine M196B.) Lecture, four hours; laboratory, two hours. Prerequisite: calculus. Introduction to classical and modern systems and modeling and simulation methods for studying biological systems. Multicompartmental modeling, multi-exponential curve fitting, and simulation laboratory projects. Applications in physiology and medicine. Life sciences and medical students encouraged to enroll.

Mr. DiStefano (F)

C196L. Biomedical Systems/Biocybernetics Research Laboratory. Lecture, one hour; laboratory, three hours; outside study, eight hours. Prerequisite: course M196B or consent of instructor. Special laboratory techniques and experience in biocybernetics research. Laboratory instruments, their use, design, and/or modification for research in life sciences. Special research hardware, firmware, software. Use of simulation in experimental laboratory. Laboratory automation and safety. Comprehensive experiment design. Radioactive isotopes and kinetic studies. Experimental animals, controls. Concurrently scheduled with course C296L.

Mr. DiStefano (Sp)

199. Special Studies (2 to 8 units). Prerequisites: upper division standing, consent of instructor. Individual investigation of selected topic to be arranged with a faculty member. Enrollment request forms available in department office. Occasional field trips may be arranged. May be repeated for credit.

(F,W,Sp)

Graduate Courses

201A-201B-201C. Computer Science Seminars (2 units each). (Formerly numbered 201.) Prerequisite: graduate standing in computer science. Lectures on current research topics in computer science. May be repeated for credit. In Progress and S/U grading.

(F,W,Sp)

202. Advanced Computer Science Seminar. Prerequisite: completion of major field examination in computer science or consent of instructor. Current computer science research into theory of, analysis and synthesis of, and applications of information processing systems. Each member completes one tutorial and one or more original pieces of work in the specialized area. May be repeated for credit.

Mr. Estrin (F,W,Sp)

209AA-209ZZ. Research Seminars: Computer Science (2 to 4 units each). Prerequisite: consent of instructor. Discussion of advanced topics and current research in algorithmic processes that describe and transform information: theory, analysis, design, efficiency, implementation, and application. May be repeated for credit. S/U grading.

(F,W,Sp)

212A. Queueing Systems Theory. Prerequisites: course 112 and Electrical Engineering 131A, or consent of instructor. Resource sharing issues and theory of queueing (waiting-line) systems. Review of Markov chains and baby queueing theory. Method of stages. $M/E_r/1$. $E_r/M/1$. Bulk arrival and bulk service systems. Series-parallel stages. Fundamentals of open and closed queueing networks. Intermediate queueing theory: $M/G/1$; $G/M/m$. Collective marks. Advanced queueing theory: $G/G/1$; Lindley's integral equation; spectral solution. Inequalities, bounds, approximations.

Mr. Kleinrock (W)

212B. Queueing Applications: Scheduling Algorithms and Queueing Networks. Prerequisite: course 212A. Priority queueing. Applications to time-sharing scheduling algorithms: FB, Round Robin, Conservation Law, Bounds. Queueing networks: definitions; job flow balance; product form solutions — local balance, $M \rightarrow M$; computational algorithms for performance measures; asymptotic behavior and bounds; approximation techniques — diffusion — iterative techniques; applications.

Mr. Kleinrock, Mr. Muntz

214. Data Transmission in Computer Communications. Prerequisites: course 112, graduate standing in computer science. Discrete data streams, formats, rates, transductions; digital data transmissions via analog signaling in computer communication; media characteristics, systems methodologies, performance analysis; modem designs; physical interfaces in computer communication links; national/international standards; tests and measurements. Mr. Carlyle

215. Computer Communications and Networks. Prerequisite: course 112. Resource sharing; computer traffic characterizations; multiplexing; network structure; packet switching and other switching techniques; ARPANET and other computer network examples; network delay and analysis; network design and optimization; network protocols; routing and flow control; satellite and ground radio packet switching; local networks; commercial network services and architectures. Optional topics include extended error control techniques; modems; SDLC, HDLC, X.25, etc.; protocol verification; network simulation and measurement; integrated networks; communication processors.

Mr. Chu, Mr. Kleinrock (W)

216. Distributed Multiaccess Control in Networks. Prerequisites: courses 212A, 215. Topics from the field of distributed control and access in computer networks, including terrestrial distributed computer networks; satellite packet switching; ground radio packet switching; local network architecture and control. Mr. Kleinrock (Sp)

218. Advanced Computer Networks. (Formerly numbered 218A.) Lecture, four hours; outside study, eight hours. Prerequisites: courses 112 and 118, or consent of instructor. Review of seven-layer ISO-OSI model. High-speed networks: LANs, MANs, ATM. Flow and congestion control; bandwidth allocation. Interneting. Mr. Gerla (W)

219. Current Topics in Computer System Modeling Analysis (2 to 12 units). Prerequisite: consent of instructor. Review of current literature in an area of computer system modeling analysis in which instructor has developed special proficiency as a consequence of research interests. Students report on selected topics. May be repeated for credit with consent of instructor.

221. Economics of Computers. Prerequisite: consent of instructor. Basic economic factors in data processing. Buyers and sellers; products; applications; major cost factors. Selection and operation of a data processing system.

M222. Control and Coordination in Economics. (Same as Economics M222A.) Lecture, three hours. Prerequisite: graduate standing in economics or engineering or consent of instructor. Recommended: appropriate mathematics course. Stabilization policies, short- and long-run dynamics and stability analysis; decentralization, coordination in teams; certainty equivalence and separation theorems; stochastic and learning models. Bayesian approach to price and output rate adjustment. S/U or letter grading. Mr. Aoki

231A. Advanced Topics in Programming Languages. Prerequisite: course 131. Presentation, analysis, and discussion of specialized programming languages, new higher-level languages, and new and/or advanced features of programming languages.

232A. Operational Semantics of Programming Languages. Lecture, four hours; outside study, eight hours. Prerequisites: courses 131, 181, or equivalent. Introduction to formal semantics. Interpreter-based operational definitions. Induction and structural operational semantics. Proving equivalence between structural and interpreter-based operational definitions. Static and dynamic semantics. Example operational definitions of functional, imperative, concurrent, logic, and object-oriented programming languages. Mr. Martin (F)

232B. Semantics of Programming Languages. Prerequisites: courses 131 and 181, or consent of instructor. Denotational semantics of programming languages. Notation and foundations. Expressions, commands, declarations, and other constructs. Environments, stores, and continuations. Examples. Relations between semantic definitions of programming languages. Applications of current research interest. Mr. Martin

233A. Parallel Programming. Lecture, four hours; other, eight hours. Prerequisites: courses 111, 131. Mutual exclusion and resource allocation in distributed systems; primitives for parallel computation; specification of parallelism, interprocess communication and synchronization, atomic actions, binary and multiway rendezvous; synchronous and asynchronous languages: CSP, ADA, LINDA, MAISE, UC, and others; introduction to parallel program verification. Mr. Bagrodia

233B. Verification of Concurrent Programs. Lecture, four hours; other, eight hours. Prerequisite: course 233A. Formal techniques for verification of concurrent programs. Topics include safety, liveness, program and state assertion-based techniques, weakest precondition semantics, Hoare logic, temporal logic, UNITY, and axiomatic semantics for selected parallel languages. Mr. Bagrodia

234A. Correctness Proofs. Prerequisite: consent of instructor. Theoretical and practical aspects of correctness proofs. Partial correctness, total correctness, and termination. Axiomatic semantics and proof systems. Abstraction and correctness of implementations. Formulation, execution, and assessment of correctness proofs. Topics of current research interest. Mr. Martin

235A. Logic Programming and PROLOG. Lecture, four hours; outside study, eight hours. Prerequisite: graduate standing in computer science. Logic programming; PROLOG as an approximation thereof; PROLOG programming techniques; translation and definite clause grammars; rewriting and interpreters; implementation of PROLOG; constraint logic programming and other proposed extensions to PROLOG; parallel logic programming systems. Mr. Parker (Sp)

239. Current Topics in Computer Science: Programming Languages and Systems (2 to 12 units). Lecture, four hours. Prerequisite: consent of instructor. Review of current literature in an area of computer science programming languages and systems in which instructor has developed special proficiency as a consequence of research interests. May be repeated for credit with topic change.

241AL. Data Management Systems (6 units). Lecture, four hours; laboratory, two hours. Prerequisites: courses 23 or equivalent, 131. File management in programming languages, storage devices, and operating systems. Secondary index organizations. Data base systems architecture, design, and models (network, hierarchic, and relational). Logical and physical structures. Query languages. Commercial data base systems. Data base design, performance, security, and integrity. Mr. Cardenas (F)

241B. Data Base, Software, and Information Systems. Prerequisites: course 131 or Management 404, course 241AL. Object, pictorial, and conventional data base management. Application development technology; fourth- and fifth-generation languages. Information system development methodology. Cost-effectiveness. Automated program and data base generation. Requirements statement languages and natural language data base interaction. Various topics at instructor's discretion, emphasizing data base technology. Mr. Cardenas (W)

243A. Relational Data Bases. Lecture, four hours; outside study, eight hours. Prerequisites: courses 23 or equivalent, 131. Relational model of data: definition and operations; relational languages. Relational data bases: experimental and commercial; design methodology. Mr. Muntz, Mr. Zaniolo (W)

243B. Abstract Data Types and Program Specification. Lecture, four hours; outside study, eight hours. Prerequisites: courses 23 or equivalent, 181. Notions of abstract data type and abstract program specification permit one to understand how programs manipulate data, independently of their implementations. These notions also give powerful techniques for program structuring and verification. Programming exercises.

249. Current Topics in Data Structures (2 to 12 units). Prerequisite: consent of instructor. Review of current literature in an area of data structures in which instructor has developed special proficiency as a consequence of research interests. Students report on selected topics. May be repeated for credit with consent of instructor. (F,W,Sp)

251A. Advanced Computer Architecture. Lecture, four hours; other, eight hours. Prerequisites: courses 51A, 111, and 151B, or consent of instructor. Functional and structural models of computer systems. Architecture and organization at microprogramming, machine language, and operating system level. Processor organization and system control. Arithmetic processors: algorithms and implementation. Storage system organization: hierarchy and management. Communication organization and control. Mr. Rennels, Mr. Tamir (F)

251B. Parallel Computer Architectures. Prerequisite: course 251A. Parallel algorithmic structures and computer organizations. Effect of sequencing mechanisms, granularity, coupling, and locality. Organizations of control, memory, interconnection, and processing elements. Performance evaluation measures. Detailed discussion of system organization and performance of vector computers, array computers, loop-level multiprocessors, process-level multiprocessors, and data-flow computers. Mr. Ercegovic

252A. Computer System Design: Arithmetic Processors. Prerequisite: course 251A or consent of instructor. Concepts of number systems, digital numbers, algorithms; logic and organization of digital arithmetic processors; conventional arithmetic; algorithm acceleration; floating-point and significance arithmetics; redundant, signed-digit, residue number systems; error detecting codes for digital arithmetic; algorithm evaluation by analysis and simulation. Mr. Avizienis, Mr. Ercegovic

253A. Computer System Design: Fault Tolerance. Prerequisite: course 251A. Specification of fault-tolerance: fault classes, measures of reliability. Fault masking, fault detection, and system recovery algorithms. Methodology of implementation. Analytic modeling and evaluation. Design of fault-tolerance systems. Tolerance of man-made faults. Fault-tolerant software. Mr. Avizienis, Mr. Rennels

253B. Advanced Topics in Fault-Tolerant Computing. Prerequisite: course 253A. Analysis and discussion of modeling, design, and evaluation of fault-tolerant computer systems. Emphasis on current research results and new systems in stages of design and development. May be repeated for credit with topic change. Mr. Avizienis, Mr. Rennels

254A. Computer Memories and Memory Systems. Prerequisite: course 251A or consent of instructor. Generic types of memory systems; control, access modes, hierarchies, and allocation algorithms. Characteristics, system organization, and device considerations of ferrite memories, thin film memories, and semiconductor memories. Mr. Chu, Mr. Rennels

255A. Distributed Processing and Distributed Data Base System. Lecture, four hours; outside study, eight hours. Prerequisite: course 241AL or 251A. Interprocess communications, remote procedure calls, bus structures. Task partitioning and allocation, precedence relationship, response time models, microprocessor-based distributed processing systems, system reconfiguration, error recovery. File allocation, directory design, deadlock, synchronization, commit protocols, query optimization, semantic query optimization, knowledge-base and data base systems. Examples, design, and trade-offs. Mr. Chu (W)

256A. Principles and Examples of Architectures for VLSI Implementation. (Not the same as course 256A prior to Winter Quarter 1990.) Prerequisites: courses 111, 251A, consent of instructor. Capabilities and implementations of VLSI technology. Architectures that exploit these capabilities and overcome the limitations. Interdependency of system and chip architectures. General-purpose and special-purpose VLSI systems. Wafer-scale integration. Current research areas. Examples of chips and systems. Mr. Tamir

257A. Computer System Design: Comparative Architecture and Synthesis Methods. Prerequisite: course 252A. Advanced topics in computer system architecture. Important properties of computer systems and methods for modeling, evaluating, and synthesizing them. Mr. Estrin

M258A. LSI in Computer System Design. (Same as Electrical Engineering M216A.) Lecture, four hours; laboratory, four hours. Prerequisites: graduate standing in computer science or electrical engineering, consent of instructor. LSI/VLSI design and application in computer systems. Fundamental design techniques that can be used to implement complex integrated systems on a chip. Mr. Rennels

M258B-M258C. LSI in Computer System Design. (Same as Electrical Engineering M216B-M216C.) Lecture, four hours; laboratory, four hours. Prerequisite: course M258A. LSI/VLSI design and application in computer systems. In-depth studies of VLSI architectures and VLSI design tools. In Progress grading. Mr. Rennels

258D. VLSI CAD Techniques. Prerequisite: graduate standing in computer science or electrical engineering or consent of instructor. In-depth study of latest advances in computer-aided VLSI design techniques, including building block layout, placement and routing algorithms, simulation, design verification and timing, analog/digital synthesis techniques, testing, silicon compilation, expert system applications, and automatic performance optimization. Mr. McNamee

258E. Foundations of VLSI CAD Algorithms. Lecture, four hours; other, eight hours. Prerequisites: one course in analysis and design of algorithms, consent of instructor. Basic theory of combinatorial optimization for VLSI physical layout, including mathematical programming, network flows, matching, greedy and heuristic algorithms, and stochastic methods. Emphasis on practical application to the computer-aided physical design of VLSI circuits at the high-level phases of layout: partitioning, placement, graph folding, floorplanning, and global routing. Mr. Kahng

258F. Physical Design Automation of VLSI Systems. Lecture, four hours; other, eight hours. Prerequisite: consent of instructor. Detailed study of various physical design automation problems of VLSI circuits, including logic partitioning, floorplanning, placement, global routing, channel and switchbox routing, planar routing and via minimization, compaction and performance-driven layout. Discussions of applications of a number of important optimization techniques, such as network flows, Steiner trees, simulated annealing, and generic algorithms. Mr. Cong (Sp)

259. Current Topics in Computer Science: System Design/Architecture (2 to 12 units). Lecture, four hours. Prerequisite: consent of instructor. Review of current literature in an area of computer science system design in which instructor has developed special proficiency as a consequence of research interests. Students report on selected topics. May be repeated for credit with topic change.

261A. Problem Solving and Search. Lecture, four hours; outside study, eight hours. Prerequisite: course 23 or equivalent. Examination in depth of that part of artificial intelligence concerned with problem-solving behavior, including problem spaces, brute-force search, heuristic search, two-player game searches, planning, subgoaling, GPS, macro-operators, and abstraction. Emphasis on mathematical rigor and complexity analyses of search algorithms. Mr. Korf (F)

262A. Reasoning with Partial Beliefs. Prerequisite: course 112 or Electrical Engineering 131A or equivalent. Review of several formalisms for representing and managing uncertainty in reasoning systems; presentation of comprehensive description of Bayesian inference using belief networks representation. Mr. Pearl (F)

262B. Knowledge-Based Systems. Prerequisite: course 262A. Machine representation of judgmental knowledge and uncertain relationships. Inference on inexact knowledge bases. Rule-based systems — principles, advantages, and limitations. Signal understanding. Automated planning systems. Knowledge acquisition and explanation producing techniques. Mr. Pearl

262C. Computer Methods of Data Analysis and Model Formation. Prerequisite: course 112 or equivalent or consent of instructor. Techniques of using computers to interpret, summarize, and form theories of empirical observations. Mathematical analysis of trade-offs between computational complexity, storage requirements, and precision of computerized models. Mr. Pearl

262Z. Current Topics in Cognitive Systems. Prerequisites: course 262A, consent of instructor, additional prerequisites for each offering as announced in advance by department. Theory and implementation of systems which emulate or support human reasoning. Current literature and individual studies in artificial intelligence, knowledge-based systems, decision support systems, computational psychology, and heuristic programming theory. May be repeated for credit with topic change. Mr. Pearl (W)

263A. Language and Thought. Prerequisite: consent of instructor. Recommended: understanding of LISP. Introduction to natural language processing. Representation and manipulation of conceptualizations underlying processes of thought for natural language comprehension and generation. Process models of story comprehension, question answering, paraphrasing, machine translation. Conceptual dependency theory, scripts, plans, goals, expectation-based parsing. Mr. Dyer (F or W)

263B. Language and Memory. Prerequisites: course 263A, knowledge of LISP or PROLOG. Recommended: course 264A. Advanced natural language processing. Emphasis on organization of human memory for language comprehension. Episodic and semantic memory. Subjective understanding and modeling ideologies. Language acquisition, processes of generalization during comprehension. Cross-contextual reminders and thematic abstraction. Mr. Dyer (W or Sp)

264A. Artificial Intelligence Programming I. Prerequisite: consent of instructor. Recommended: knowledge of LISP or PROLOG. Introduction to tools, techniques, and issues in artificial intelligence programming. Functional programming for artificial intelligence applications. Review of LISP and introduction to lexically scoped LISPs (e.g., T, Scheme). Lambda calculus, closures, data-driven and object-oriented programming, flavors, d-nets, resolution-based deductive systems. Mr. Dyer (F or W)

264B. Artificial Intelligence Programming II. Prerequisite: course 264A or consent of instructor. Techniques of logic programming. Artificial intelligence programming languages (e.g., PROLOG, AMORD, DUCK, CONNIVER, PLANNER, QA4, KRL, ACTORS, etc.) and artificial intelligence features (e.g., nonmonotonic logics, data-dependencies for truth maintenance, meta-rules, semantic networks, frame-based systems). Mr. Dyer (W or Sp)

265A. Machine Learning. Prerequisites: courses 263A, 264A, consent of instructor. Introduction to machine learning. Learning by analogy, inductive learning, modeling creativity, learning by experience, role of episodic memory organization in learning. Examination of BACON, AM, EURISKO, HACKER, teachable production systems. Failure-driven learning. Mr. Dyer (W or Sp)

267A. Neural Models. Prerequisites: graduate standing, consent of instructor. Review of major neurophysiological milestones in understanding brain architecture and processes. Focus on brain theories that are important for modern computer science and, in particular, on models of sensory perception, sensory-motor coordination, and cerebellar and cerebral structure and function. Students required to prepare a paper analyzing research in one area of interest. Mr. Vidal

267B. Artificial Neural Systems and Connectionist Computing. Prerequisites: graduate standing, consent of instructor. Analysis of major connectionist computing paradigms and underlying models of biological and physical processes. Examination of past and current implementations of artificial neural networks along with their applications to associative knowledge processing, general multisensor pattern recognition including speed and vision, and adaptive robot control. Students required to prepare a paper analyzing research in one area of interest. Mr. Vidal

268. Machine Perception. Prerequisites: graduate standing, consent of instructor. Course 168 may be taken concurrently. Computational aspects of processing visual and other sensory information. Unified treatment of early vision in man and machine. Integration of symbolic and iconic representations in process of image segmentation. Computing multimodal sensory information by "neural-net" architectures. Mr. Skrzypek

268CN. Computational Neuroscience. Lecture, four hours; discussion, two hours; outside study, eight hours. Prerequisite: consent of instructor. Computational neuroscience as a paradigm of formal analysis and demonstrations of how to correctly interpret sensory data by discovering constraints from the natural world. Neural networks and connectionist models as a paradigm for parallel and concurrent computation and application to problem of vision, multimodal sensory interpretation, and learning. Mr. Skrzypek (W)

268S. Seminar: Computational Neuroscience (2 units). Prerequisite: consent of instructor. Intended for students undertaking thesis research. Discussion of advanced topics and current research in computational neuroscience. Neural networks and connectionism as a paradigm for parallel and concurrent computation in application to problems of perception, vision, multimodal sensory integration, and robotics. May be repeated for credit. S/U grading. Mr. Skrzypek (W or Sp)

269. Seminar: Current Topics in Artificial Intelligence (2 to 4 units). Prerequisite: consent of instructor. Review of current literature and research practicum in an area of artificial intelligence in which instructor has developed special proficiency as a consequence of research interests. Students report on selected topics. May be repeated for credit with topic change.

270A. Computer Methodology: Advanced Numerical Methods. Prerequisites: graduate standing in computer science or engineering, Electrical Engineering 103 or Mathematics 141B or comparable experience with numerical computing. Principles of computer treatment of selected numerical problems in algebraic and differential systems, transforms and spectra, data acquisition and reduction; emphasis on concepts pertinent to modeling and simulation and the applicability of contemporary developments in numerical software. Computer exercises. Mr. Carlyle, Mr. Karplus

271A. Modeling and Simulation of Lumped Parameter Systems. Lecture, eight hours. Recommended (but not prerequisite): course 270A or equivalent. Characterization of electrical, electromechanical, and other engineering problems by systems of nonlinear ordinary differential equations. Survey of integration algorithms. Digital simulation languages for continuous systems. Real-time simulation using array processor and multi-processor computer systems. Mr. Karplus (W)

271B. Modeling and Simulation of Distributed Parameter Systems. Lecture, eight hours. Recommended (but not prerequisite): course 270A or equivalent. Mathematical formulation of engineering field problems governed by partial differential equations. Finite difference and finite element approximations. Principal algorithms for solving elliptic, parabolic, and hyperbolic partial differential equations. Supercomputers, vector processors, multiprocessors, and array processors. Mr. Karplus (Sp)

271C. Seminar: Advanced Simulation Methods (2 units). Prerequisite: course 271A or equivalent. Discussion of advanced topics in simulation of systems characterized by ordinary and partial differential equations. Topics include (among others) simulation languages, dataflow machines, array processors, and advanced mathematical modeling techniques. Topics vary each term. May be repeated for credit. S/U grading. Mr. Karplus (F,W,Sp)

273A. Digital Processing of Engineering and Statistical Data. Prerequisite: course 173. Computer methods for processing engineering and statistical data. Algorithms to evaluate recursive filter functions, Fourier series, power spectral, analysis correlation computations, and statistical testing. Mr. McNamee

276A. Pattern Analysis and Machine Intelligence. Prerequisites: graduate standing, consent of instructor. Fundamentals of pattern recognition, feature extraction and selection, autonomous learning, clustering, and machine intelligence. Mr. Klinger

276B. Structured Computer Vision. Prerequisites: graduate standing, consent of instructor. Methods for computer processing of image data. Systems, concepts, and algorithms for image analysis, radiologic and robotic applications. Mr. Klinger

276C. Speech and Language Communication in Artificial Intelligence. Prerequisite: course 276A or 276B or consent of instructor. Topics in human-computer communication: interaction with pictorial information systems, sound and symbol generation by humans and machines, semantics of data, systems for speech recognition and understanding. Use of speech and text for computer input and output in applications. Mr. Klinger

279. Current Topics in Computer Science: Methodology (2 to 12 units). Lecture, four hours. Prerequisite: consent of instructor. Review of current literature in an area of computer science methodology in which instructor has developed special proficiency as a consequence of research interests. Students report on selected topics. May be repeated for credit with topic change. (F,W,Sp)

280A-280ZZ. Algorithms. Prerequisites: consent of instructor, additional prerequisites for each offering as announced in advance by department. Selections from design, analysis, optimization, and implementation of algorithms; computational complexity and general theory of algorithms; algorithms for particular application areas. Subtitles of some current sections: Principles of Design and Analysis (280A); Graphs and Networks (280G). May be repeated for credit with consent of instructor and with topic change. Ms. Greibach

281A. Computability and Complexity. Prerequisite: course 181 or compatible background. Concepts fundamental to study of discrete information systems and theory of computing, with emphasis on regular sets of strings, Turing-recognizable (recursively enumerable) sets, closure properties, machine characterizations, nondeterminisms, decidability, unsolvable problems, "easy" and "hard" problems, PTIME/NPTIME. Ms. Greibach, Mr. Parker

281D. Discrete State Systems. Prerequisite: consent of instructor. Recommended: course 181. Finite-state machines, transducers, and their generalizations; regular expressions, transduction expressions, realizability; decomposition, synthesis, and design considerations; topics in state and system identification and fault diagnosis, linear machines, probabilistic machines, applications in coding, communication, computing, system modeling, and simulation. Mr. Carlyle

284A-284ZZ. Topics in Automata and Languages. Prerequisites: course 181, additional prerequisites for each offering as announced in advance by department. Selections from families of formal languages, grammars, machines, operators; pushdown automata, context-free languages and their generalizations, parsing; multidimensional grammars, developmental systems; machine-based complexity. Subtitles of some current and planned sections: Context-Free Languages (284A), Parsing Algorithms (284P). May be repeated for credit with consent of instructor and with topic change. Ms. Greibach

287A. Theory of Program Structure. Prerequisite: course 181. Models of computer programs and their syntax and semantics; emphasis on programs and recursion schemes; equivalence, optimization, correctness, and translatability of programs; expressive power of program constructs and data structures; selected current topics. Ms. Greibach

288S. Seminar: Theoretical Computer Science (2 units). Prerequisites: courses 280A, 281A, consent of instructor. Intended for students undertaking thesis research. Discussion of advanced topics and current research in such areas as algorithms and complexity models for parallel and concurrent computation, and formal language and automata theory. May be repeated for credit. S/U grading. Ms. Greibach (F,W,Sp)

289A-289ZZ. Current Topics in Computer Theory (2 to 12 units each). Prerequisite: consent of instructor. Review of current literature in an area of computer theory in which instructor has developed special proficiency as a consequence of research interests. Students report on selected topics.

M296A. Modeling Methodology for Biomedical Systems. (Same as Medicine M270C.) Lecture, four hours; outside study, eight hours. Recommended (but not prerequisite): course M196B, some intermediate knowledge of linear systems analysis or linear algebra (e.g., Mathematics 115A, Electrical Engineering 141, 142, Mechanical, Aerospace, and Nuclear Engineering 171A, 171C, or equivalent). Development of dynamic systems modeling methodology for physiological, biomedical, pharmacological, chemical, and related systems, including dynamic system experiment/model development, multicompartmental, non-compartmental, and input/output models, linear and nonlinear. Emphasis on model applications, limitations, and relevance in biomedical sciences and other limited data environments. Problem solving in PC laboratory. Mr. DiStefano

M296B. Optimal Parameter Estimation and Experiment Design for Biomedical Systems. (Same as Biomathematics M270 and Medicine M270D.) Lecture, four hours; outside study, eight hours. Prerequisite: course M296A or consent of instructor. Estimation methodology and model parameter estimation algorithms for quantifying (fitting) dynamic system models to real-world data. Theory and algorithms for designing optimal experiments for developing and quantifying models, with special focus on data sampling schedule design. Exploration in PC laboratory of applications software for model building and optimal experiment design. Mr. DiStefano

M296C. Advanced Topics and Research in Biomedical Systems Modeling and Computing. (Same as Medicine M270E.) Lecture, four hours; outside study, eight hours. Prerequisite: course M296A or consent of instructor. Research techniques and experience on special topics involving models, modeling methods, and model/computing in biological and medical sciences. Review and critique of the literature. Research problem searching and formulation. Approaches to solutions. Individual M.S.- and Ph.D.-level project training. Mr. DiStefano

C296L. Biomedical Systems/BioCybernetics Research Laboratory. Lecture, one hour; laboratory, three hours; outside study, eight hours. Prerequisite: course M196B or consent of instructor. Special laboratory techniques and experience in biocybernetics research. Laboratory instruments, their use, design, and/or modification for research in life sciences. Special research hardware, firmware, software. Use of simulation in experimental laboratory. Laboratory automation and safety. Comprehensive experiment design. Radioactive isotopes and kinetic studies. Experimental animals, controls. Concurrently scheduled with course C196L. Mr. DiStefano

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading. Mr. Chu (F,W,Sp)

495. Teaching Assistant Training Seminar (2 units). Prerequisite: graduate standing in Computer Science Department. Seminar on communication of computer science materials in classroom: preparation, organization of material, presentation, use of visual aids, grading, advising, and rapport with students. S/U grading.

497D-497E. Field Projects in Computer Science. Prerequisite: consent of instructor. Students are divided into teams led by instructor; each team is assigned an external company or organization which they investigate as a candidate for possible computerization, submitting a team report of their findings and recommendations. In Progress grading. Mr. Cardenas, Mr. Melkanoff

596. Directed Individual or Tutorial Studies (2 to 8 units). Prerequisites: graduate standing in computer science, consent of instructor. Petition forms to request enrollment may be obtained from assistant dean, Graduate Studies. Supervised investigation of advanced technical problems. S/U grading.

597A. Preparation for M.S. Comprehensive Examination (2 to 12 units). Prerequisites: graduate standing in computer science, consent of instructor. Reading and preparation for M.S. comprehensive examination. S/U grading.

597B. Preparation for Ph.D. Preliminary Examinations (2 to 16 units). Prerequisites: graduate standing in computer science, consent of instructor. S/U grading.

597C. Preparation for Ph.D. Oral Qualifying Examination (2 to 16 units). Prerequisites: graduate standing in computer science, consent of instructor. Preparation for oral qualifying examination, including preliminary research on dissertation. S/U grading.

598. Research for and Preparation of M.S. Thesis (2 to 12 units). Prerequisites: graduate standing in computer science, consent of instructor. Supervised independent research for M.S. candidates, including thesis prospectus. S/U grading.

599. Research for and Preparation of Ph.D. Dissertation (2 to 16 units). Prerequisites: graduate standing in computer science, consent of instructor. Petition forms to request enrollment may be obtained from assistant dean, Graduate Studies. S/U grading.

Economics/System Science (Interdepartmental)

For details on this undergraduate program, see Chapter 5 on the College of Letters and Science.

Electrical Engineering

58-121 Engineering IV, (310) 825-2794

Professors

Nicolaos G. Alexopoulos, Ph.D., *Chair*
 A.V. Balakrishnan, Ph.D.
 Francis F. Chen, Ph.D.
 Harold R. Fetterman, Ph.D.
 Tatsuo Itoh, Ph.D. (*TRW Professor of Electrical Engineering*)
 Stephen E. Jacobsen, Ph.D., *Associate Dean*
 Chandrashekhar J. Joshi, Ph.D.
 Nhan Levan, Ph.D. (*Distinguished Teaching Award*)
 Neville C. Luhmann, Jr., Ph.D.
 Yahya Rahmat-Samii, Ph.D.
 Izhak Rubin, Ph.D.
 Oscar M. Stafsudd, Jr., Ph.D., *Vice Chair*
 Chand R. Viswanathan, Ph.D. (*Distinguished Teaching Award*)
 Kang-Lung Wang, Ph.D.
 Paul K.C. Wang, Ph.D.
 Donald M. Wiberg, Ph.D.
 Alan N. Willson, Jr., Ph.D., *Associate Dean*
 Eli Yablonovich, Ph.D.
 Kung Yao, Ph.D.
 Frederick G. Allen, Ph.D., *Emeritus*
 Robert S. Elliott, Ph.D., *Emeritus (Distinguished Teaching Award)*
 Richard E. Mortensen, Ph.D., *Emeritus*
 H.J. Orchard, M.Sc., *Emeritus*
 Frederick W. Schott, Ph.D., *Emeritus*
 Gabor C. Temes, Ph.D., *Emeritus*

Associate Professors

Asad A. Abidi, Ph.D., *Vice Chair*
 Brian H. Kolner, Ph.D.
 Jia-Ming Liu, Ph.D.
 Stephen A. Maas, Ph.D.
 Dee-Son Pan, Ph.D., *Vice Chair*
 Henry Samuelli, Ph.D.
 Ming-Chiang Wu, Ph.D.
 Jack Willis, B.Sc., *Emeritus*

Assistant Professors

Abeer A.H. Alwan, Ph.D.
 Nicholas Bampos, Ph.D.
 Rajeev Jain, Ph.D.
 Bahram Jalali, Ph.D.
 Ioannis Kanellakopoulos, Ph.D.
 Kristofer S. Pister, Ph.D.
 Greg J. Pottie, Ph.D.
 John D. Villasenor, Ph.D.
 Jason C.S. Woo, Ph.D.

Adjunct Professor

Timothy T. Fong, Ph.D.

Adjunct Associate Professors

Kenneth W. Iliff, Ph.D.
 Lawrence E. Larson, Ph.D.

Scope and Objectives

The Electrical Engineering Department emphasizes teaching and research in the fields of applied plasma physics, circuits and signal processing, communications and telecommunications, control systems, electromagnetics, integrated circuits and systems, microwave and millimeter wave electronics, operations research, quantum electronics, and solid-state

electronics. In each of these fields, the department has state-of-the-art research programs exploring exciting new concepts and developments. Undergraduate students receive a B.S. degree in Electrical Engineering. Graduate research and training programs leading to the M.S. and Ph.D. degrees are also offered.

Laboratories are available for research in the following areas: analog and digital electronics, hybrid integrated circuits, integrated semiconductor devices, microwave and millimeter wave electronics, fiber optics, lasers and quantum electronics, and applied plasma physics. The department is associated with the Center for High-Frequency Electronics and the Institute of Plasma and Fusion Research, two research centers at UCLA.

Bachelor of Science in Electrical Engineering

The ABET-accredited electrical engineering curriculum gives an excellent background for either graduate study or employment. The two main objectives are to provide (1) a deep and fundamental education in electrical engineering as well as in basic sciences and mathematics and (2) specialized education in one branch of electrical engineering so that the student develops expertise in it.

Students officially admitted to the electrical engineering major for Fall Quarter 1988 and thereafter must fulfill the following requirements. Continuing students admitted prior to Fall Quarter 1988 and following a program in an earlier *UCLA General Catalog* may change to the program listed below.

The Major

Course requirements are as follows (190 minimum units required):

(1) Five core courses: Electrical Engineering 101, 102, 103, and two courses from Civil Engineering 108, Materials Science and Engineering 14, Mechanical, Aerospace, and Nuclear Engineering 102, 103, M105A (or Chemical Engineering M105A), 105D.

(2) Electrical Engineering 10, 110, 115A, 121A, 121B, 132A, 141, 161, Computer Science 51A, Mathematics 132; four two-unit courses selected from the laboratory courses offered by the Electrical Engineering Department, Computer Science 152A, 152B and, by petition only, Electrical Engineering 199; Mechanical, Aerospace, and Nuclear Engineering 192A and either Electrical Engineering 131A or a course in statistical mechanics.

(3) Any five major field elective courses (20 units) selected from those offered by the *Electrical Engineering Department*. With approval of the adviser, two may be selected from courses related to electrical engineering in other departments.

(4) English 3; Chemistry and Biochemistry 11A, 11B/11BL; Computer Science 10C or 10F;

Mathematics 31A, 31B, 32A, 32B, 33A, 33B; Physics 8A/8AL, 8B/8BL, 8C/8CL, 8D/8DL.

(5) Four courses from the humanities, social sciences, and/or fine arts approved list (at least three must be upper division; at least three — with two upper division — must be in the same academic department or otherwise reflect coherence with respect to subject matter) AND three courses from History 1A, 1B, 1C, Humanities 1A, 1B, 1C, 2A, 2B, 2C (selection of a course in the Humanities 2 sequence precludes the corresponding course in the Humanities 1 sequence and vice versa; courses must be completed within the first 90 units). English 3 may be replaced with a second free elective if one of the courses in the Humanities 2 sequence is selected.

(6) One free elective course from any department, selected by the student in consultation with the adviser to supplement and strengthen the major field electives.

Graduate Study

For information on graduate admission to the electrical engineering program and requirements for the M.S. and Ph.D. degrees, see "Graduate Study" at the beginning of this chapter.

Lower Division Course

10. Circuit Analysis I. Lecture, four hours; discussion, one hour. Prerequisite: Physics 8C. Corequisite: Mathematics 33A. Introduction to linear circuit analysis. Resistive elements, characteristics, Kirchhoff's laws, node and loop analysis of resistive circuits, source transformations, operational amplifiers. Piecewise continuous waveforms, capacitors and inductors, first-order linear circuits, zero-state, transient and steady state solutions, step and impulse response. Mr. Samuelli (F,Sp)

Upper Division Courses

100. Electrical and Electronic Circuits. Lecture, four hours; recitation, one hour. Prerequisites: Mathematics 31A, 31B, 32A, 33A, 33B, Physics 8C. Electrical quantities, circuit principles, signal waveforms, AC circuits, semiconductor devices, small signal models, amplifiers, electrical and electronic instruments. Mr. Samuelli (F,W,Sp)

100L. Circuit Analysis Laboratory (2 units). Laboratory, four hours. Prerequisite or corequisite: course 100 or 115A. Experiments with circuits containing linear and nonlinear devices; transient and steady state behavior of circuits. Mr. Samuelli (F,W,Sp)

101. Engineering Electromagnetics. Lecture, four hours; recitation, one hour. Prerequisites: Physics 8C, Mathematics 32A and 32B, or 33A and 33B. Electromagnetic field concepts; Maxwell's equations; static and quasi-static fields; field energy; energy flow and Poynting vector; electromechanical interactions; waves in unbounded media and on two-wire transmission lines; reflection and refraction; lossy media; skin effect; analogs to electromagnetic fields.

Mr. Alexopoulos, Mr. Rahmat-Samii (F,W)

102. Systems and Signals. Lecture, four hours; discussion, one hour. Prerequisites: Mathematics 33A, 33B, Physics 8C. Systems: input-output description, linearity, time-invariance, and causality. Linear systems, impulse response functions, superposition and convolution integrals. Laplace transforms and system functions. Periodic and finite energy signals. Fourier series and transforms. Frequency responses, responses of systems to periodic signals. Sampling theorem. Mr. Levan (F,W,Sp)

103. Applied Numerical Computing. Lecture, three hours; recitation, two hours. Prerequisites: Computer Science 10C, Mathematics 33A, 33B, or equivalent. Introduction to numerical computing techniques: matrix computations, root finding, solutions of initial and boundary value problems of ordinary differential equations, interpolation and approximation.

Mr. Jacobsen (F,W,Sp)

110. Circuit Analysis II. Lecture, four hours; discussion, one hour. Prerequisite: course 10. Corequisite: course 102. Analysis of second- and higher-order linear circuits. RLC circuits, characteristic roots, phasors, impedance, network functions, poles and zeros, coupled inductors, convolution, application of Laplace transforms to linear circuits.

Mr. Willson (F,W)

113. Digital Signal Processing. Prerequisites: courses 102, 110. Relationship between continuous-time and discrete-time signals. Z-transform. Discrete Fourier transform. Fast Fourier transform. State equations for discrete-time systems. Network structures for digital filtering. Introduction to digital filter design techniques.

Mr. Samuelli, Mr. Willson (F,Sp)

113L. Digital Signal Processing Laboratory (2 units). Laboratory, four hours; other, two hours. Prerequisite: course 113. Recommended: Computer Science 151B. Real-time implementation of digital signal processing algorithms on digital processor chips. Experiments involving A/D and D/A conversion, aliasing, digital filtering, sinusoidal oscillators, Fourier transforms, and finite wordlength effects.

Mr. Samuelli, Mr. Willson (F,W)

115A. Electronics I. Prerequisite: course 110. Equivalent circuit modeling of electron devices. Device/circuit/environment interactions. Design of single-stage amplifiers. Introduction to cascaded stages, coupling problems, and frequency responses.

Mr. Abidi (W,Sp)

115AL. Electronics I Laboratory (2 units). Prerequisite: course 100L. Recommended: course 115A. Experimental determination of device characteristics, resistive diode circuits, single-stage amplifiers, compound transistor stages, effect of feedback on single-stage amplifiers.

Mr. Abidi (F,W,Sp)

115B. Electronics II. Lecture, four hours; recitation, one hour. Prerequisite: course 115A. Electron device/circuit/environment interactions, with emphasis on multistage amplifiers. Tuned amplifier considerations. Nonlinear situations requiring graphical method of solution. Emphasis on design techniques, including economics, reliability, and realization of performance specifications.

Mr. Abidi (F,Sp)

115BL. Electronics II Laboratory (2 units). Laboratory, four hours. Prerequisite: course 115AL. Recommended: course 115B. Experimental and computer studies of multistage, wideband, tuned, and power amplifiers, and multiloop feedback amplifiers. Introduction to thick film hybrid techniques. Construction of amplifier using hybrid thick film techniques.

Mr. Abidi (F,W,Sp)

115C. Digital Integrated Circuits. Lecture, four hours; discussion, one hour; other, seven hours. Prerequisites: courses 115A, 115B, Computer Science 51A. Modern logic families (TTL, I^2L , ECL, NMOS, CMOS), IC layout, MSI digital circuits (flipflops, registers, counters, PLAs, etc.), digital machine realization techniques, VLSI memories, A/Ds, VLSI systems (time permitting). Laboratory experiments in switching circuits.

Mr. Jain (F,W)

115CL. Pulse and Digital Methods Laboratory (2 units). Laboratory, four hours. Corequisite: course 115C. Digital circuits laboratory, with three different logic families characterized (I^2L , TTL, and CMOS). Use of synchronous machine techniques for building simple circuits, culminating in a 4-bit successive approximation A/D converter.

Mr. Jain (F,W,Sp)

115D. Applied Electronic Circuits. Prerequisites: courses 115B, 115C, 118. Applications of distributed circuits. Operational amplifier applications and limitations. Power amplifiers. Feedback and stability. Precision analog circuits.

Mr. Abidi (W)

116. Communication Circuits. Lecture, four hours; recitation, one hour. Prerequisites: courses 102, 115B. Signals and spectra. Signal distortion in transmission filters, transmission bandwidth requirements. Random signals and noise, linear modulation, exponential modulation circuits and characteristics. Commercial communication systems.

Mr. Samuelli (Sp)

117. Introduction to Power Electronics. Lecture, four hours; recitation, one hour. Prerequisite: course 115A. Electrical and thermal characteristics of power semiconductor devices, including diodes, transistors, and thyristors, and their application to power conditioning, conversion, and control. Emphasis on device limitations and design considerations. Examples from power amplifiers (switched and linear), inverters, and DC and AC motor drives.

Mr. Luhmann, Mr. Pan (F)

118. Integrated Circuit Components and Design. Lecture, four hours; recitation, one hour. Prerequisites: courses 115B, 121A. Realization of active and passive components in integrated circuit design. Passive components: resistors, capacitors, metal interconnections. Active devices: NPN and PNP BJTs, design rules; FET devices. Device interactions and layout rules.

Mr. Abidi (F)

121A. Physical Principles of Semiconductor Devices. Lecture, four hours; discussion, one hour. Prerequisites: courses 10 or 100, and 101. Introduction to quantum mechanics and solid-state fundamentals. Introduction to principles of semiconductor devices, survey of semiconductor device physics, principles of operation of p-n junctions.

Mr. Viswanathan (F,W)

121B. Principles of Semiconductor Device Design. Lecture, four hours; discussion, one hour. Prerequisite: course 121A. Introduction to principles of operation of bipolar and MOS transistors, equivalent circuit, high-frequency behavior, voltage limitations.

Mr. Viswanathan (W,Sp)

122AL. Semiconductor Devices Laboratory (2 units). Laboratory, four hours. Prerequisite: course 121A. Design, fabrication, and characterization of junction, field effect, and other semiconductor devices. In particular students perform various processing tasks such as wafer preparation, oxidation, impurity diffusion, metallization, sintering, and photolithography.

Mr. K. Wang, Mr. Woo (F,Sp)

122BL. Solid-State Electronics Laboratory (2 units). Laboratory, four hours. Prerequisite: course 124. Experimental measurement of electronic, magnetic, thermal, and optical properties of p- and n-type semiconductors as used in design of devices.

Mr. K. Wang, Mr. Woo (W)

123A. Fundamentals of Solid-State I. Lecture, four hours; recitation, one hour. Prerequisite: junior standing in engineering. Introductory atom concepts, quantum mechanical principles, energy level in complex atoms, quantum statistics, crystal structure, energy levels in solids, band theory.

Mr. Fetterman, Mr. Viswanathan (F,Sp)

123B. Fundamentals of Solid-State II. Lecture, four hours; recitation, one hour. Prerequisite: course 123A. Discussion of solid-state properties, lattice vibrations, thermal properties, dielectric magnetic, and superconducting properties.

Mr. Fetterman, Mr. Stafsudd (W)

124. Semiconductor Physical Electronics. Lecture, four hours; recitation, one hour. Prerequisite: course 123B. Band structure of semiconductors, homogeneous semiconductors, excess carriers in semiconductors, semiconductor surfaces, optical and thermal properties; application to design of devices.

Mr. Pan (Sp)

131A. Probability. Prerequisites: Mathematics 32B, 33B. Introduction to theory and application of probability, including random variables and vectors, distributions and densities, characteristic functions, limit theorems, preliminary concepts of stochastic processes.

Mr. Rubin (F,W)

131B. Introduction to Stochastic Processes. Prerequisites: courses 102, 131A. Introduction to theory and application of stochastic processes, emphasizing stationary processes — properties and operations, mean-square estimation. Random and pseudorandom generation of processes with application to simulation. Elements of spectral analysis and FFT.

Mr. Yao (Sp)

132A. Introduction to Communication Systems. Lecture, four hours; discussion, one hour. Prerequisites: courses 102, 131A. Properties of signals and noise. Baseband pulse and digital signaling. Bandpass signaling techniques. Communication systems: digital transmission, frequency-division multiplexing and telephone systems, satellite communication systems, television. Performance of communication systems in presence of noise.

Mr. Bambos (W,Sp)

132B. Data Communications and Telecommunications. Prerequisite: course 131A. Layered communication architectures. Queueing system modeling and analysis. Error control, flow and congestion control. Packet switching, circuit switching, and routing. Network performance analysis and design. Multiple-access communications: TDMA, FDMA, polling, random access. Local, metropolitan, wide area, integrated services networks.

Mr. Rubin (W)

136. Introduction to Optimization Techniques. Lecture, four hours; recitation, one hour. Prerequisites: course 103, Mathematics 32A, and 33A, or consent of instructor. Minimization of unconstrained functions of several variables; steepest descent, Newton/Raphson, conjugate gradient, and quasi-Newton methods. Rates of convergence. Methods for constrained minimization: introduction to linear programming, gradient projection and reduced gradient methods, Lagrangian methods. Students are expected to use school's microcomputers.

Mr. Jacobsen (W)

141. Principles of Feedback Control. Prerequisite: course 102 or consent of instructor. Classical methods of analysis and design of feedback control systems as applied to problems selected from engineering, biology, and related areas.

Mr. P.K.C. Wang (F,Sp)

142. Linear Systems: State-Space Approach. Prerequisite: course 102. State-space methods of linear system analysis and design, with application to problems in networks, control, and system modeling.

Mr. Wiberg (W)

161. Electromagnetic Waves. Lecture, four hours; discussion, one hour. Prerequisite: course 101. Review of transmission line theory; guided waves in enclosed waveguide and on surfaces; Smith chart; excitation of guided waves; phase and group velocity; cavity resonators; concept of Q; perturbation theory; waves in complex media (ferrites, crystals, semiconductors, plasmas).

Mr. Alexopoulos, Mr. Rahmat-Samii (F,Sp)

162A. Antenna Design I. Lecture, four hours; recitation, one hour. Prerequisite: course 161. Retarded potentials. Actual and equivalent sources. Far-field patterns of dipoles, loops, and helices. Reciprocity, directivity, beamwidth, and sidelobe level of antenna patterns. Design of linear arrays. Schelkunoff unit circle. Design of feeding networks. Array design including mutual coupling.

Mr. Alexopoulos (Sp)

162B. Antenna Design II. Lecture, four hours; recitation, one hour. Prerequisite: course 162A. Radiation patterns of horns, slots, and patch antennas. Equivalent source representations. Synthesis of sum and difference patterns. Dolph/Chebyshev excitation. Design of slot arrays with mutual coupling. Design of traveling wave antennas, reflectors, and lenses.

Mr. Alexopoulos (F)

163A. Introductory Microwave Circuits. Lecture, four hours; recitation, one hour. Prerequisite: course 161. Equivalent mode voltage/current representation of guided waves in arbitrary rectilinear structures. Design of matching obstacles, attenuators, phase shifters, directional couplers, hybrid junctions, isolators, circulators, and microwave filters.

Mr. Itoh, Mr. Maas (W)

163B. Microwave and Millimeter Wave Active Circuits. Prerequisite: course 161. Analysis of microwave and millimeter wave tubes such as klystrons, TWT, BWO, Magnetrons, and Gyrotrons, and solid-state circuits for IMPATTs, BARITTs, TUNNETs, Gunn effect devices, GaAs FETs, and bipolar transistors.

Mr. Luhmann (W)

163C. Microwave Amplifiers. Lecture, four hours; other, eight hours. Prerequisites: courses 110, 115B. Microwave transistors, characteristics, and equivalent circuits at microwave frequencies. Two-port networks, activity and stability. Matching network synthesis with lumped and distributed components. Commensurate matching networks. Linear amplifier design. Narrow band, broad band: input-output interactions. Optimum design approach, graphical approximations, syntheses, and optimization.

Mr. Maas (Sp)

164AL. Electromagnetics Laboratory (2 units). Lecture, one hour; laboratory, three hours. Prerequisite: course 161. Experimental design, fabrication, and testing of microwave and millimeter wave sources; coaxial, waveguide, and microstrip transmission systems; detectors and power measuring devices; cavity resonator studies.

Mr. Luhmann (W)

164BL. Active Microwave Circuit Design Laboratory (2 units). Laboratory, four hours. Prerequisite: course 164AL. Application of contemporary analytic design techniques to development of microwave amplifiers and oscillators incorporating state-of-the-art commercially available microwave transistors (silicon bipolar and GaAs MESFET).

Mr. Luhmann (Sp)

165. Fourier Optics. Lecture, four hours; outside study, eight hours. Prerequisites: courses 102, 161. Two-dimensional linear systems and Fourier transforms. Foundations of diffraction theory. Analysis of optical imaging systems. Spatial filtering and optical information processing. Wavefront reconstruction and holography.

Mr. Kolner (Sp)

172. Introduction to Lasers and Quantum Electronics. Lecture, four hours; recitation, one hour. Prerequisite: course 101 or equivalent or consent of instructor. Physical principles and applications of lasers and other quantum electronic devices. Interferometers, crystal optics, gain and saturation phenomena, and gas discharges.

Mr. Joshi, Mr. Stafsudd (F)

172L. Laser Laboratory (2 units). Laboratory, four hours. Prerequisite or corequisite: course 172 or consent of instructor. Properties of lasers, including saturation, mode-locking, and relaxation effects. Laser applications, including optics, modulation, communication, holography, interferometry, and nonlinear effects.

Mr. Joshi, Mr. Stafsudd (F)

182. Electrical Power Systems. Lecture, four hours; recitation, one hour. Prerequisite: course 110 (100 for nonelectrical engineering majors). Overall electrical power system requirements; typical systems; one-line diagrams. Per-unit quantities; characteristics of machines, transformers, overhead lines, and cables; steady state analysis of systems. Power limits and stability; fault calculations; relays and relay systems.

Mr. Alexopoulos (W)

183. Electromechanical Energy Conversion. Lecture, four hours; recitation, one hour. Prerequisite: course 110 (100 for nonelectrical engineering majors). Energy conversion and power flow in electromechanical interactions; electromechanics of actuators and rotating AC synchronous and induction machines and DC machines. Linear machines.

Mr. Alexopoulos (Sp)

M185. Plasma Physics. (Same as Physics M122.) Prerequisite: course 101 or Physics 110A. Senior-level introductory course to physics of plasmas and ionized gases and fundamentals of controlled fusion. Particle motion in magnetic fields; fluid behavior, plasma waves; resistivity and transport; equilibrium and stability; kinetic effects. Discussion of illustrative laboratory experiments.

Mr. Chen (F, even years; Sp)

199. Special Studies (2 to 8 units). Prerequisites: senior standing, consent of instructor. Individual investigation of selected topic to be arranged with a faculty member. Enrollment request forms available in department office. Only two units may be applied toward degree; the two units must be approved by petition and can be used only as a replacement for a regular Electrical Engineering laboratory course. Students may take additional 199 courses, but they may not be applied toward degree.

(F,W,Sp)

Graduate Courses

M208A. Analytical Methods of Engineering I. (Same as Mechanical, Aerospace, and Nuclear Engineering M291A.) Prerequisites: Mathematics 131A, 132. Application of abstract mathematical methods to engineering problems. Review of elements of measure and integration, L_2 theory — linear spaces and operators. Eigenvalue problems. Introduction to spectral theory — elementary distribution theory. Applications to problems in engineering.

Mr. Gibson, Mr. Wiberg (W)

M208B. Analytical Methods of Engineering II. (Same as Mechanical, Aerospace, and Nuclear Engineering M291B.) Prerequisite: course M208A or Mechanical, Aerospace, and Nuclear Engineering M291A or consent of instructor. Application of modern mathematical methods to engineering problems. Review of spectral theory. Green's functions and eigenvalue problems for second-order ordinary differential equations and their adjoints. Discrete and continuous spectra for ordinary and partial differential equations. Initial and boundary value problems.

Mr. Gibson, Mr. Levan (Sp)

208C. Semigroups of Linear Operators and Application. Lecture, four hours; other, eight hours. Prerequisite: course M208B or equivalent. Semigroups of linear operators over Hilbert spaces. Generator and resolvent, generation theorems, Laplace inversion formula. Dissipative operators and contraction semigroups. Analytic semigroups and spectral representation. Semigroups with compact resolvents. Parabolic and hyperbolic systems. Controllability and stabilizability. Applications.

Mr. Balakrishnan, Mr. Levan

210B. Advanced Circuit Theory II. Prerequisite: course 210A. Analytical techniques for active circuits: return difference, Blackman's formula for active impedance. Characterization of nonlinear elements. State equations for nonlinear circuits. Stability of nonlinear circuits: Liapunov's direct method. Theory of nonlinear transistor circuits.

Mr. Willson (W)

212. Theory and Design of Digital Filters. Prerequisite: course 113. Approximation of filter specifications. Use of design charts. Structures for recursive digital filters. FIR filter design techniques. Comparison of IIR and FIR structures. Implementation of digital filters. Limit cycles. Overflow oscillations. Discrete random signals. Wave digital filters. Distributed arithmetic structures.

Mr. Willson (W)

213A. Advanced Digital Signal Processing Circuit Design. Prerequisites: courses 115C, 212. Digital filter design and optimization tools, architecture for digital signal processing circuits; integrated circuit modules for digital signal processing; programmable signal processors; application-specific IC design CAD tools and MOSIS cell libraries; case studies of speech and image processing circuits.

Mr. Jain (Sp)

215A. Analog Integrated Circuits. Prerequisite: course 115B. High-speed linear amplifiers: circuit design for optimum high-frequency response. Operational amplifiers, improved input impedance and slew rate, pole-zero compensation, circuit design techniques for optimum SNR. Voltage multipliers, D/A and A/D converters.

Mr. Abidi (W)

215B. Advanced Digital Integrated Circuits. Lecture, four hours; outside study, eight hours. Prerequisites: courses 115C, M216A. Modern logic families (description, analysis, and comparison), MSI digital circuits (flip-flops, registers, counters, PLAs, etc.). VLSI memories (ROMs, RAMs, CCDs, bubble memories, EPROMs, EEPROMs) and VLSI systems (microcomputers, PIAs, ACIAs, etc.).

Mr. Abidi (Sp)

215D. Analog Microsystem Design. Lecture, four hours; design, four hours; outside study, four hours. Prerequisites: courses 113, 215A. Analog signal processing families. Discrete-time switched-capacitor circuits. Continuous-time filters. A/D and D/A converters. Samplers, modulators, oscillators. System-level circuit design.

Mr. Abidi (Sp)

M216A. LSI in Computer System Design. (Same as Computer Science M258A.) Lecture, four hours; laboratory, four hours. Prerequisites: graduate standing in computer science or electrical engineering, consent of instructor. LSI/VLSI design and application in computer systems. Fundamental design techniques that can be used to implement complex integrated systems on a chip.

Mr. Jain (F)

M216B-M216C. LSI in Computer System Design. (Same as Computer Science M258B-M258C.) Lecture, four hours; laboratory, four hours. Prerequisite: course M216A. LSI/VLSI design and application in computer systems. In-depth studies of VLSI architectures and VLSI design tools. In Progress grading.

Mr. Jain

219A. Special Topics in Electric Circuit Theory. Prerequisite: course 210B or 211A or 211B. Advanced treatment of topics selected from research areas in electric circuit theory.

221A. Physics of Semiconductor Devices I. Prerequisite: course 121A. Physical principles and design considerations of junction devices.

Mr. K. Wang, Mr. Woo (F)

221B. Physics of Semiconductor Devices II. Prerequisite: course 121A. Principles and design considerations of field effect devices and charge-coupled devices.

Mr. Viswanathan (Sp)

221C. Microwave Semiconductor Devices. Prerequisite: course 121A. Physical principles and design considerations of microwave solid-state devices: Schottky barrier mixer diodes, IMPATT diodes, transferred electron devices, tunnel diodes, microwave transistors.

Mr. Pan, Mr. K. Wang (W)

222. Integrated Circuits Fabrication Processes. Prerequisites: courses 118, 121A. Principles of integrated circuits fabrication processes. Technological limitations of integrated circuits design. Topics include bulk crystal and epitaxial growth, thermal oxidation, diffusion, ion-implantation, chemical vapor deposition, dry etching, lithography, and metalization. Introduction of advanced process simulation tools.

Mr. Woo (Sp, odd years)

223. Solid-State Electronics I. Prerequisites: courses 124 and 270, or consent of instructor. Energy band theory, electronic band structure of various elementary, compound, and alloy semiconductors, defects in semiconductors. Recombination mechanisms, transport properties.

Mr. Fetterman, Mr. Pan (F)

224. Solid-State Electronics II. Prerequisite: course 223. Techniques to solve Boltzmann transport equation, various scattering mechanisms in semiconductors, high field transport properties in semiconductors, Monte Carlo method in transport. Optical properties.

Mr. Pan (W, even years)

225. Superlattices and Quantum Wells. Prerequisite: course 223. Theoretical methods for circulating electronics and optical properties of semiconductor quantum wells, superlattices, and tunnel structures. Quantum size effects and low-dimensional systems. Application to semiconductor devices, including negative resistance diodes, transistors, and detectors.

Mr. K. Wang (W, even years)

229. Seminars: Advanced Topics in Solid-State Electronics. Prerequisites: courses 223, 224. Current research areas, such as radiation effects in semiconductor devices, diffusion in semiconductors, optical and microwave semiconductor devices, nonlinear optics, and electron emission.

229S. Advanced Electrical Engineering Seminar (2 units). Prerequisite: successful completion of Ph.D. major field examination or consent of instructor. Seminar on current research topics in solid-state and quantum electronics (Section 1) or in electronic circuit theory and applications (Section 2). Students report on a tutorial topic and on a research topic in their dissertation area. May be repeated for credit. S/U grading.

(F,W,Sp)

230A. Estimation and Detection in Communication and Radar Engineering. Prerequisite: course 131A or equivalent. Applications of estimation and detection concepts in communication and radar engineering; random signal and noise characterizations by analytical and simulation methods; mean square (MS) and maximum likelihood (ML) estimations and algorithms; detection under ML, Bayes, and Neyman/Pearson (NP) criteria; signal-to-noise ratio (SNR) and error probability evaluations.

Mr. Rubin (F)

230B. Digital Communication Systems. Prerequisite: course 230A. Basic concepts of digital communication systems and applications; representation of bandpass waveforms; geometry and optimum receivers in white Gaussian noise; comparisons of digital modulation schemes; transmission over real channels; applications to satellite systems.

Mr. Rubin (Sp)

230C. Algorithms and Processing in Communication and Radar. Prerequisite: course 230A. Concepts and implementations of digital signal processing algorithms in communication and radar systems. Optimum dynamic range scaling for random data. Algorithms for fast convolution and transform. Spectral estimation algorithms. Parallel processing, VLSI algorithms, and systolic arrays.

Mr. Yao (W)

230D. Signal Processing in Communications. Lecture, four hours; other, eight hours. Prerequisite: course 230C. Basic digital signal processing techniques for estimation and detection of signals in communication and radar systems. Optimization of dynamic range, quantization, and state constraints; DFT, convolution, FFT, NTT, Winograd DFT, systolic array; spectral analysis-windowing, AR, and ARMA; system applications.

Mr. Yao

231A. Information Theory: Channel and Source Coding. Prerequisite: course 230A. Fundamental concepts of information theory with applications to digital communications. Block and convolutional codes analyzed from both theoretical and practical implementation viewpoints. Channel coding and theory of data compression (rate distortion theory).

Mr. Rubin (W)

231B. Error Control Codes and Cryptography. Prerequisite: course 231A. Introduction to Galois fields with applications to error control codes and cryptography. Linear block codes, cyclic codes, BCH codes, Reed/Solomon codes, and Goppa codes. Digital circuit implementation of encoders, decoders, and cryptographic systems. Conventional and public key cryptosystems and key management.

Mr. Yao (Sp)

231C. Rate Distortion Theory and Source Coding Techniques. Prerequisites: courses 230A and 231A, or consent of instructor. Sources and distortion measures, rate distortion function and its evaluation for discrete and continuous sources, source coding theorems, comparisons of practical coding systems to theoretical bounds, speech and image quantization.

Mr. Yao (Sp)

231D. Spread Spectrum Communications. Prerequisite: course 231A. Spread spectrum digital communication systems for antijam and multiple-access applications. Basic design approach, models, and general analysis for spread spectrum systems. Direct sequence spread binary-phase-shift keying (BPSK) and frequency-hopped multiple-frequency-shift keying (MFSK) signals. Multiple access in spread spectrum digital radio networks.

Mr. Bambos (Sp)

231E. Algebraic Coding Theory. Prerequisite: course 231A. Fundamentals of linear or parity-check codes and decoding algorithms based on algebraic theory of finite groups and fields; cyclic codes; Hamming; Reed/Muller, Bose/Chaudhuri/Hocquenghem, and Reed/Solomon codes, and corresponding decoding algorithms.

Mr. Yao

232A. Stochastic Modeling with Applications to Telecommunication Systems. Prerequisite: course 131A or equivalent. Introduction to stochastic processes as applied to study of telecommunication systems and traffic engineering. Renewal theory; discrete-time Markov chains; continuous-time Markov jump processes. Applications to traffic and queueing analysis of basic telecommunication system models.

Mr. Rubin (F)

232B. Telecommunication Switching and Queueing Systems. Prerequisite: course 232A. Queue modeling and analysis with applications to space-time digital switching systems and to integrated-service telecommunication systems. Fundamentals of traffic engineering and queueing theory. Queue size, waiting time, busy period, blocking, and stochastic process analysis for Markovian and non-Markovian models.

Mr. Rubin (W)

232C. Telecommunication Architecture and Networks. Prerequisite: course 232B. Analysis and design of integrated-service telecommunication networks and multiple-access procedures. Stochastic analysis of priority-based queueing system models. Queueing networks; network protocol architectures; error control; routing, flow, and access control. Applications to local-area, packet-radio, satellite, and computer communication networks.

Mr. Rubin (Sp)

232D. Telecommunication Networks and Multiple-Access Communications. Prerequisite: course 232B. Performance analysis and design of telecommunication networks and multiple-access communication systems. Topics include architectures, multiplexing and multiple-access, message delays, error/flow control, switching, routing, protocols. Applications to local-area, packet-radio, local-distribution, computer and satellite communication networks.

Mr. Rubin

232E. Graphs and Network Flows. Prerequisite: course 136 or consent of instructor. Solution to analysis and synthesis problems which may be formulated as flow problems in capacity constrained (or cost constrained) networks. Development of tools of network flow theory using graph theoretic methods; application to communication, transportation, and transmission problems.

Mr. Jacobsen (W,Sp)

236A. Linear Programming. Prerequisite: Mathematics 115A or equivalent knowledge of linear algebra. Basic graduate course in linear and combinatorial programming. Simplex method, duality, geometry, decomposition, complementary pivot theory, and quadratic programming; introduction to computational complexity theory.

Mr. Jacobsen (F)

236B. Nonlinear Programming. Prerequisite: course 236A or equivalent. Basic graduate course in nonlinear programming. Convex sets and functions and their basic properties. Kuhn/Tucker points, saddle points, and nonlinear or conjugate duality theory. Development of algorithms and convergence theory.

Mr. Jacobsen (W)

236C. Optimization Methods for Large-Scale Systems. Prerequisite: course 236B. Theory and computational procedures for decomposing large-scale mathematical programming problems. Generalized linear programming, decomposition algorithms, column generation, economic implications. Application to stochastic programming and optimal control. Topics in nonconvex programming; minimizing concave functions on convex polyhedra, reverse convex programming.

Mr. Jacobsen (Sp)

237. Dynamic Programming. Prerequisite: course 232A. Introduction to mathematical analysis of sequential decision processes. Finite horizon model in both deterministic and stochastic cases. Finite-state infinite horizon model. Methods of solution. Detailed examples from inventory theory, finance, and transportation systems.

Mr. Jacobsen (W)

238. Reliability Theory with Applications. Prerequisite: course 131A or equivalent. Basic graduate course in reliability theory. Reliability models for complex systems, coherent structures, modular decomposition, reliability bounds. Constant, monotone hazard functions. Optimization problems in reliability: redundancy allocations, maintenance policies, stress-strength and safety considerations in engineering design. Statistical problems, current topics.

Mr. Jacobsen (Sp)

239AS. Topics in Communication. Prerequisite: consent of instructor. Topics in one or more special aspects of communication systems, such as phase-coherent communication systems, optical channels, time-varying channels, feedback channels, broadcast channels, networks, coding and decoding techniques. May be repeated for credit with topic change.

239BS. Topics in Operations Research. Prerequisite: consent of instructor. Treatment of one or more selected topics from areas such as integer programming; combinatorial optimization; network synthesis; scheduling, routing, location, and design problems; implementation considerations for mathematical programming algorithms; stochastic programming; applications in engineering, computer science, economics. May be repeated for credit with topic change.

240A. Linear Dynamic Systems. Prerequisite: course 142 or equivalent. State-space description of dynamic systems. Deduction of state spaces from input-output data. State controllability and observability. Stability and state feedback stabilizability; state observer.

Mr. Balakrishnan (F)

240B. Linear Optimal Control. Prerequisites: courses 141 or equivalent and 240A, or consent of instructor. Introduction to optimal control, with emphasis on detailed study of LQR, or linear regulators with quadratic cost criteria. Relationships to classical control system design.

Mr. Levan (W)

240C. Optimal Control. Prerequisite: course 240B. Applications of variational methods. Pontryagin's maximum principle, dynamic programming and nonlinear programming to problems of optimal control theory and practical systems.

Mr. P.K.C. Wang (Sp)

241A. Stochastic Processes. Prerequisite: course 131B or equivalent. Fundamentals and applications of second-order theory stochastic processes. Correlation and spectral density. Gaussian process, processing by dynamic systems, Bayes' rule and conditional expectation; mean-square estimation and Kalman filtering.

(F)

241B. Kalman Filtering. Prerequisites: courses 240A, 241A. Statistical estimation theory, estimation of signal parameters in additive noise. Kalman filter theory: basic theory, steady state and frequency domain analyses, on-line estimation and colored noise. Likelihood ratios, Gaussian signals in Gaussian noise.

Mr. Balakrishnan (W)

241C. Stochastic Control. Prerequisites: courses 240B, 241B. Estimation and control of linear discrete-time and continuous-time stochastic systems; separation theorem and applications; Kalman filtering.

Mr. Balakrishnan (Sp)

242. Nonlinear Control. Prerequisite: course 240B. Techniques for studying nonlinear control systems, with emphasis on their stability; Liapunov's direct method; input-output stability; Popov's method; linearization.

Mr. P.K.C. Wang (W)

M243. Biological Control Systems. (Same as Anesthesiology M222.) Prerequisite: course 141 or equivalent. Introduction to application of control theory to modeling and analysis of biological control systems, such as respiratory system, cardiovascular system, and neuromuscular system. Emphasis on solving problems of current interest in biomedicine.

Mr. Ward, Mr. Wiberg

249S. Topics in Control. Prerequisite: consent of instructor. Thorough treatment of one or more aspects of control theory and applications, such as computational methods for optimal control; stability of distributed systems; identification; adaptive control; nonlinear filtering; differential games; applications to flight control, nuclear reactors, process control, biomedical problems. May be repeated for credit with topic change.

260A-260B. Advanced Engineering Electrodynamics. Prerequisites: courses 161, 162A. Advanced treatment of concepts in electrodynamics and their applications to modern engineering problems. Waves in anisotropic, inhomogeneous, and dispersive media. Guided waves in bounded and unbounded regions. Radiation and diffraction, including optical phenomena. Partially coherent waves, statistical media.

Mr. Alexopoulos, Mr. Rahmat-Samii (F, 260A; W, 260B)

261. Microwave and Millimeter Wave Circuits. Prerequisite: course 163A or consent of instructor. Rectangular and circular waveguides, microstrip, stripline, finline, and dielectric waveguide distributed circuits, with applications in microwave and millimeter wave integrated circuits. Substrate materials, surface wave phenomena. Analytical methods for discontinuity effects. Design of passive microwave and millimeter wave circuits.

Mr. Alexopoulos, Mr. Itoh (Sp)

262. Antenna Theory and Design. Prerequisites: courses 162A, 162B. Antenna patterns. Sum and difference patterns. Optimum designs for rectangular and circular apertures. Arbitrary side lobe topography. Discrete arrays. Mutual coupling. Design of feeding networks.

Mr. Alexopoulos,

Mr. Rahmat-Samii (W, even years)

263. Reflector Antennas Synthesis, Analysis, and Measurement. Lecture, four hours; other, eight hours. Prerequisites: courses 260A-260B or equivalent. Reflector pattern analysis techniques. Single and multireflector antenna configurations. Reflector synthesis techniques. Reflector feeds. Reflector tolerance studies, including systematic and random errors. Array-fed reflector antennas. Near-field measurement techniques. Compact range concepts. Microwave diagnostic techniques. Modern satellite and ground antenna applications.

Mr. Rahmat-Samii

266. Computational Methods for Electromagnetics. Prerequisites: courses 162A, 163A. Computational techniques for partial differential and integral equations: finite-difference, finite-element, method of moments. Applications include transmission lines, resonators, integrated circuits, solid-state device modeling, electromagnetic scattering, and antennas.

Mr. Itoh (W)

267. Nonlinear Microwave Circuits. Lecture, four hours; outside study, eight hours. Prerequisites: courses 161, 163A, 163B. Nonlinear device modeling, harmonic balance and Volterra series analysis, application to mixers, frequency multipliers, and amplifiers.

Mr. Maas (W)

270. Quantum Electronics I. Prerequisite: course 123A or consent of instructor. Review of quantum mechanics, approximation methods, interaction of radiation and matter.

Mr. Liu, Mr. Stafsudd (F)

271. Quantum Electronics II. Prerequisite: course 270 or consent of instructor. Optical beams and resonators, interaction of light with atoms (including amplification and saturation), properties of lasers (including power output and mode effects).

Mr. Joshi, Mr. Liu (W)

272. Quantum Electronics III. Prerequisite: course 271 or consent of instructor. Properties of laser oscillators, including transient phenomena, quantum mechanical effects, and behavior of high-gain laser media.

Mr. Joshi, Mr. Liu (Sp)

273. Quantum Electronics IV. Prerequisites: courses 172 and 270, or consent of instructor. Quantization of fields, nonlinear optical susceptibilities, electro-optical and magneto-optical effects, sum-frequency, difference-frequency, and harmonic generation, parametric amplification and oscillation, simulated Raman and Brillouin scattering, four-wave mixing, self-focusing, current research topics in nonlinear optics.

Mr. Liu, Mr. Stafsudd (W)

279S. Quantum Electronics Seminar (2 units). Prerequisite: consent of instructor. Current research topics in quantum electronics, lasers, nonlinear optics, optoelectronics, ultrafast phenomena, fiber optics, and lightwave technology. May be repeated for credit. S/U or letter grading.

Mr. Liu (F,W,Sp)

285A. Plasma Waves and Instabilities. Prerequisites: courses 101, and M185 or Physics M122. Wave phenomena in plasmas described by macroscopic fluid equations. Emphasis on homogeneous plasmas in uniform magnetic fields. Microwave propagation, plasma oscillations, ion acoustic waves, cyclotron waves, hydromagnetic waves, whistlers and helicon waves, and their classification. Illustrative experiments.

Mr. Chen, Mr. Luhmann (W)

285B. Advanced Plasma Waves and Instabilities. Prerequisites: courses M185, and 285A or Physics 222A. Interaction of intense electromagnetic waves with plasmas: waves in inhomogeneous and bounded plasmas, nonlinear wave coupling and damping, parametric instabilities, anomalous resistivity, shock waves, echoes, laser heating. Emphasis on experimental considerations and techniques.

Mr. Chen, Mr. Luhmann (Sp)

M286. Principles of Magnetic Confinement Fusion. (Same as Mechanical, Aerospace, and Nuclear Engineering M237A.) Prerequisites: courses M185, and 285A and 285B or Physics 222A-222B, or consent of instructor. Plasma requirements for controlled fusion. Structure of magnetic fields. Theory of MHD equilibrium and stability. Shear and minimum-B stabilization. Resistive and microinstabilities. Neoclassical diffusion physics of tokamak and tandem-mirror plasmas. Neutral beams and auxiliary heating. Alternate concepts.

Mr. Chen (F, odd years)

M287. Fusion Plasma Physics and Analysis. (Same as Mechanical, Aerospace, and Nuclear Engineering M237B.) Prerequisite: course M185. Fundamentals of plasmas at thermonuclear burning conditions. Fokker-Planck equation and applications to heating by neutral beams, RF, and fusion reaction products. Bremsstrahlung, synchrotron, and atomic radiation processes. Plasma surface interactions. Fluid description of burning plasma. Dynamics, stability, and control. Applications in tokamaks, tandem mirrors, and alternate concepts.

Mr. Chen (W)

M288. Fusion Reactor Technology and Design. (Same as Mechanical, Aerospace, and Nuclear Engineering M237C.) Prerequisites: Mechanical, Aerospace, and Nuclear Engineering 135, 137. Magnetic fusion reactor concepts and technological components, solid and liquid breeder blankets, neutronics, fuel cycles, in-vessel components, radiation shielding, magnets, system design and optimization.

Mr. Chen (Sp)

298. Seminar: Engineering (2 to 4 units). Prerequisites: graduate standing in electrical engineering, consent of instructor. Seminars may be organized in advanced technical fields. If appropriate, field trips may be arranged. May be repeated with topic change.

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

(F,W,Sp)

596. Directed Individual or Tutorial Studies (2 to 8 units). Prerequisites: graduate standing in electrical engineering, consent of instructor. Petition forms to request enrollment may be obtained from assistant dean, Graduate Studies. Supervised investigation of advanced technical problems. S/U grading.

597A. Preparation for M.S. Comprehensive Examination (2 to 12 units). Prerequisites: graduate standing in electrical engineering, consent of instructor. Reading and preparation for M.S. comprehensive examination. S/U grading.

597B. Preparation for Ph.D. Preliminary Examinations (2 to 16 units). Prerequisites: graduate standing in electrical engineering, consent of instructor. S/U grading.

597C. Preparation for Ph.D. Oral Qualifying Examination (2 to 16 units). Prerequisites: graduate standing in electrical engineering, consent of instructor. Preparation for oral qualifying examination, including preliminary research on dissertation. S/U grading.

598. Research for and Preparation of M.S. Thesis (2 to 12 units). Prerequisites: graduate standing in electrical engineering, consent of instructor. Supervised independent research for M.S. candidates, including thesis prospectus. S/U grading.

599. Research for and Preparation of Ph.D. Dissertation (2 to 16 units). Prerequisites: graduate standing in electrical engineering, consent of instructor. Usually taken after student has been advanced to candidacy. S/U grading.

Environmental Science and Engineering (Interdepartmental)

This interdisciplinary graduate program, which leads to the Doctor of Environmental Science and Engineering (D.Env.) degree, provides scientific training in the enlightened management of the environment through a broad range of environmental disciplines. For details on this program, see Chapter 18 on the School of Public Health.

Materials Science and Engineering

5731 Boelter Hall, (310) 825-5534

Professors

Alan J. Ardell, Ph.D.
David L. Douglass, Ph.D.
Bruce S. Dunn, Ph.D.
John D. Mackenzie, Ph.D. (*Nippon Sheet Glass Company Professor of Materials Science*),
Associate Dean
Kanji Ono, Ph.D., *Chair*
Aly H. Shabaik, Ph.D.
Rointan F. Bunshah, D.Sc., *Emeritus*
John H. Lyman, Ph.D., *Emeritus*
George H. Sines, Ph.D., *Emeritus*
Christian N.J. Wagner, Dr.rer.nat., *Emeritus*
Alfred S. Yue, Ph.D., *Emeritus*

Associate Professors

Nancy M. Haegel, Ph.D.
William Klement, Jr., Ph.D.

Assistant Professors

Mark S. Goorsky, Ph.D.
Jenn-Ming Yang, Ph.D.

Lecturer

Carl E. Frahme, Ph.D.

Adjunct Professor

Ryoichi Kikuchi, Ph.D.

Adjunct Associate Professor

Marek A. Przystupa, Ph.D.

Scope and Objectives

At the heart of materials science is an understanding of the microstructure of solids. "Microstructure" is used broadly in reference to solids viewed at the subatomic (electronic) and atomic levels, and the nature of the defects at these levels. The microstructure of solids at various levels profoundly influences the mechanical, electronic, chemical, and biological properties of solids. The phenomenological and mechanistic relationships between microstructure and the macroscopic properties of solids are, in essence, what materials science is all about.

Materials engineering, on the other hand, is concerned with the design, fabrication, and nondestructive testing of engineering materials. Such materials must fulfill simultaneously dimensional, property, quality control, and economic requirements. Several manufacturing steps may be involved: (1) primary fabrication, such as solidification or vapor deposition of homogeneous or composite materials; (2) secondary fabrication, including shaping and microstructural control by operations such as mechanical working, machining, sintering, joining, and heat treatments; and (3) nondestructive testing, which measures the degree of reliability of a processed part.

The department has recently initiated a program in electronic materials which provides a broad-based background in materials science, with opportunity to specialize in the study of those materials used for electronic and optoelectronic applications. The program incorporates several courses in electrical engineering in addition to those in the materials science curriculum.

The undergraduate program leads to the Bachelor of Science degree in Materials Engineering. Students are introduced to the basic principles of metallurgy and ceramic and polymer science as part of the department's materials engineering major. A joint major field, chemistry/materials science, is offered to students enrolled in the Department of Chemistry and Biochemistry (College of Letters and Science). Several courses in the undergraduate curriculum also play an important role in one of the options of the manufacturing engineering program.

The graduate program allows for specialization in one of the following fields: materials

science, metallurgy and metals processing, mechanical metallurgy, and ceramics and ceramics processing.

Bachelor of Science in Materials Engineering

The ABET-accredited materials engineering program is designed for students who wish to pursue a professional career in the materials field and desire a broad understanding of the relationship between microstructure and properties of materials. Metals, ceramics, and polymers, as well as the design, fabrication, and testing of metallic and other materials such as oxides, glasses, and fiber-reinforced composites, are included in the course contents.

The Major

Course requirements are as follows (188 minimum units required):

(1) Six core courses: Chemical Engineering M105A (or Mechanical, Aerospace, and Nuclear Engineering M105A), Civil Engineering 108, Electrical Engineering 100, Materials Science and Engineering 14, Mechanical, Aerospace, and Nuclear Engineering 102, 105D.

(2) Materials Science and Engineering 110, 120, 130, 131, 132, 150, 160, 190; 131L and 161L, plus two additional laboratory units from 111 (one unit of lab credit), 143L, 147L, 191L; Mechanical, Aerospace, and Nuclear Engineering 191A or 192A (satisfies the mathematics requirement); Civil Engineering 106A (satisfies the engineering economics requirement).

(3) Four elective courses from Chemical Engineering C114, Civil Engineering 135A, Electrical Engineering 121A, 123A, 123B, 124, Materials Science and Engineering 111, 121, 122, 143A, 143B, 147B, 147E, 151, 161, 162, Mechanical, Aerospace, and Nuclear Engineering 158A (the design content of the elective courses and the elective laboratory must total eight units).

(4) English 3; Chemistry and Biochemistry 11A, 11B/11BL; Computer Science 10C or 10F; Mathematics 31A, 31B, 32A, 32B, 33A, 33B; Physics 8A/8AL, 8B/8BL, 8C/8CL, 8D/8DL; one life sciences elective course.

(5) A minimum of seven courses from the humanities, social sciences, and/or fine arts approved list (at least three must be upper division; at least three — with two upper division — must be in the same academic department or otherwise reflect coherence with respect to subject matter).

(6) Two free elective courses.

Electronic Materials Option

Course requirements are as follows (194 minimum units required):

(1) Six core courses: Chemical Engineering M105A (or Mechanical, Aerospace, and Nuclear Engineering M105A), Electrical Engineering 10, 101, Materials Science and Engi-

neering 14, Mechanical, Aerospace, and Nuclear Engineering 102, and Civil Engineering 108 or Mechanical, Aerospace, and Nuclear Engineering 105D.

(2) Materials Science and Engineering 110, 121, 122, 130, 131, 131L, 190; Electrical Engineering 121A, 121B, 122BL, 123A, 123B, and two courses from Materials Science and Engineering 132, 150, 160; Mechanical, Aerospace, and Nuclear Engineering 191A or 192A.

(3) Four elective courses from Materials Science and Engineering 111, 143A, 162, Electrical Engineering 110, 124, 172; two laboratory courses from Materials Science and Engineering 161L, 191L, 199, Electrical Engineering 122AL, 172L.

(4) English 3; Chemistry and Biochemistry 11A, 11B/11BL; Computer Science 10C or 10F; Mathematics 31A, 31B, 32A, 32B, 33A, 33B; Physics 8A/8AL, 8B/8BL, 8C/8CL, 8D/8DL; one life sciences elective course.

(5) A minimum of seven courses from the humanities, social sciences, and/or fine arts approved list (at least three must be upper division; at least three — with two upper division — must be in the same academic department or otherwise reflect coherence with respect to subject matter).

Graduate Study

For information on graduate admission to the materials science and engineering program and requirements for the M.S. and Ph.D. degrees, see "Graduate Study" at the beginning of this chapter.

Lower Division Courses

14. Science of Engineering Materials. Lecture, three hours; demonstration, one hour; recitation, one hour. Prerequisites: Chemistry 11A, 11B/11BL, Physics 8A, 8B. Physics 8C may be taken concurrently. General introduction to different types of materials used in engineering designs: metals, ceramics, plastics, and composites, relationship between structure (crystals and microstructure) and properties of technological materials. Illustration of their fundamental differences and their applications in engineering.

Mr. Dunn (F,W,Sp)

15. Introduction to Manufacturing Engineering. Manufacturing processes, materials and design in manufacturing; productivity, competitive aspects of manufacturing, manufacturing planning, production-scheduling, flexible manufacturing systems, economic and social aspects of manufacturing.

Mr. Shabaik (F)

Upper Division Courses

M107A. Principles of Biotechnology. (Same as Psychology M153.) Prerequisite: upper division standing. Principles of biological sciences developed in an engineering design context. Emphasis on how physiological, psychological, and sociological factors affect integration of man into environmental, informational, and managerial systems through engineering design.

Mr. Lyman

110. Introduction to Materials Characterization A (Crystal Structure and X-Ray Diffraction of Material). (Formerly numbered 145A.) Lecture, three hours; laboratory, two hours. Prerequisite: course 14. Modern methods of materials characterization; fundamentals of crystallography, properties of X rays, X-ray diffraction; powder method, Laue method; determination of crystal structures; phase diagram determination; X-ray stress measurements; X-ray spectroscopy; design of materials characterization procedures. Mr. Goorsky (F)

111. Introduction to Materials Characterization B (Electron Microscopy). (Formerly numbered 145B.) Lecture, three hours; laboratory, two hours. Prerequisites: courses 14, 110. Characterization of microstructure and microchemistry of materials; transmission electron microscopy; reciprocal lattice, electron diffraction, stereographic projection, direct observation of defects in crystals, replicas; scanning electron microscopy: emissive and reflective modes; chemical analysis; electron optics of both instruments. Mr. Ardell (W)

120. Electronic Properties of Materials. Prerequisites: courses 14, 110. Introduction to electrical, optical, and magnetic properties of solids. Free electron model, introduction to band theory and Schrodinger wave equation. Crystal bonding and lattice vibrations. Mechanisms and characterization of electrical conductivity, optical absorption, magnetic behavior, and dielectric properties. Ms. Haegel (W)

121. Materials Science of Semiconductors. (Formerly numbered 140A.) Prerequisite: course 120. Structure and properties of elemental and compound semiconductors. Electrical and optical properties, defect chemistry, and doping. Electronic materials analysis and characterization, including electrical, optical, and ion-beam techniques. Heterostructures, band-gap engineering, development of new materials for optoelectronic applications. Ms. Haegel (Sp)

122. Principles of Electronic Materials Processing. (Formerly numbered 140B.) Prerequisite: course 14 or equivalent. Description of basic semiconductor materials for device processing; preparation and characterization of silicon, III-V compounds, and films. Discussion of principles of CVD, MOCVD, LPE, and MBE; metals and dielectrics. Mr. Goorsky (W)

130. Phase Relations in Solids. (Formerly numbered 141.) Prerequisites: course 14, Chemical Engineering M105A or Mechanical, Aerospace, and Nuclear Engineering M105A. Summary of thermodynamic laws, equilibrium criteria, solution thermodynamics, mass-action law, binary and ternary phase diagrams, glass transitions. Mr. Goorsky (Sp)

131. Diffusion and Diffusion-Controlled Reactions. (Formerly numbered 142A.) Prerequisite: course 130. Diffusion in metals and ionic solids, nucleation and growth theory; precipitation from solid solution, eutectoid decomposition, design of heat treatment processes of alloys, growth of intermediate phases, gas-solid reactions, design of oxidation-resistant alloys, recrystallization, and grain growth. Mr. Douglass (F)

131L. Diffusion and Diffusion-Controlled Reactions Laboratory (2 units). (Formerly numbered 142L.) Corequisite: course 131. Design of heat-treating cycles and performing experiments to study interdiffusion, growth of intermediate phases, recrystallization, and grain growth in metals. Analysis of data. Comparison of results with theory. Mr. Douglass (F)

132. Structure and Properties of Metallic Alloys. Prerequisite: course 131. Physical metallurgy of steels, lightweight alloys (Al and Ti), and superalloys. Strengthening mechanisms, microstructural control methods for strength and toughness improvement. Grain boundary segregation. Mr. Ono (Sp)

143A. Mechanical Behavior of Materials. Prerequisite: course 14 or equivalent. Recommended: Civil Engineering 108. Plastic flow of metals under simple and combined loading, strain rate and temperature effects, dislocations, fracture, microstructural effects, mechanical and thermal treatment of steel for engineering applications. Mr. Sines (F,W)

143B. Failure Analysis of Metals. Prerequisite: course 131. Analysis and prevention of failure based on design deficiencies, material selection, metallurgical defects, processing and fabrication errors, improper service conditions. Relationship to heat treatment, corrosion, joining technology, and mechanical behavior. Engineering and legal aspects. Case histories. Mr. Douglass (Sp, even years)

143L. Mechanical Testing Laboratory (2 units). Laboratory, four hours. Prerequisite or corequisite: course 143A. Experimental techniques for measurements of mechanical properties of engineering materials. Elastic constants, tensile, compression and bend testing, fracture toughness, fatigue and creep testing. Mr. Ono, Mr. Sines (W,Sp)

147B. Manufacturing Processes. Prerequisite: course 14. Theoretical basis for cold forming and hot forming processes; rolling, extrusion, and forging. Conventional metal removal. Solidification processes and casting. Powder metallurgy. Mr. Shabaik (F,Sp)

147E. Chemical Metallurgy. Prerequisite: course 130 or Mechanical, Aerospace, and Nuclear Engineering M105A or equivalent course in thermodynamics. Modern process metallurgy used in extraction and refining of metals and alloys. Role of vacuum processing in modernizing and enlarging scope of extractive metallurgy. Design of extractive and refining processes. Properties of vacuum-processed materials. Chemical vapor deposition. Mr. Bunshah (Sp, even years)

147L. Manufacturing Processes Laboratory. Laboratory, eight hours. Prerequisite: course 147B. Experimental investigation, analysis, and design of metal forming processes (forging, extrusion, drawing, and rolling). Force measurements and energy calculations in metal cutting. Experimental investigation of hot and isostatic pressing of powder. Mr. Shabaik (Sp)

149A. Materials and Structures in Nature and in Civilization. Lecture, two hours; laboratory, four hours. Prerequisite for undergraduates: equivalent of preparation in natural sciences and competency in English and mathematics expected of entering college freshmen; for graduate students: consent of instructor. Not open to engineering or physical sciences students. Far-reaching effort at understanding mechanical properties of materials, especially as embodied in structures both by nature and throughout history. Laboratory techniques to determine mechanical behavior of selected materials and structures. Individual experimental project; report and presentation. Mr. Klement (Sp)

149C. Properties of Art Ceramic Materials. Lecture, three hours; laboratory, three hours. Not intended for engineering majors. Composition and properties of art ceramics and glazes. Ceramic raw materials and their functions in bodies and glazes. Design of glazes and methods of expressing composition. Laboratory projects included. Mr. Klement (W)

149E. Ceramic Materials in History and Archaeology. Lecture, two hours; laboratory, two hours. Prerequisite: consent of instructor. Technical introduction to origins and evolution of ceramics and related materials, with emphasis on fabrication processes and raw materials. Laboratory exercises aimed at development of skills necessary for analytical studies (for students in humanities and sciences). Mr. Klement (F)

150. Introduction to Polymers. (Formerly numbered 144.) Lecture, three hours; laboratory, two hours. Prerequisite: consent of instructor. Polymerization mechanisms, molecular weight and distribution, chemical structure and bonding, structure crystallinity, and morphology and their effects on physical properties. Glassy polymers, springy polymers, elastomers, adhesives. Fiber forming polymers, polymer processing technology, plastication. Mr. Yang (W)

151. Structure and Properties of Composite Materials. (Formerly numbered 148A.) Prerequisites: course 14, at least two courses from 132, 143A, 150, 160. Relationship between structure and mechanical properties of composite materials with fiber and particulate reinforcement. Properties of fiber, matrix, and interfaces. Selection of macrostructures and material systems. Mr. Ono (Sp)

160. Introduction to Ceramics and Glasses. (Formerly numbered 146A.) Prerequisite: course 14 or equivalent. Introduction to ceramics and glasses being used as important materials of engineering, processing techniques, and unique properties. Examples of design and control of properties for certain specific applications in engineering. Mr. Mackenzie (F)

161. Processing of Ceramics and Glasses. (Formerly numbered 146B.) Lecture, four hours; discussion, one hour. Prerequisite: course 160. Study of processes used in fabrication of ceramics and glasses for structural applications, optics, and electronics. Processing operations, including modern techniques of powder synthesis, greenware forming, sintering, glass melting. Microstructure properties relations in ceramics. Fracture analysis and design with ceramics. Mr. Mackenzie (W, even years)

161L. Laboratory in Ceramics (2 units). (Formerly numbered 146L.) Laboratory, four hours. Prerequisite: course 160 or equivalent. Recommended corequisite: course 161. Processing of common ceramics and glasses. Attainment of specific properties through process control for engineering applications. Quantitative characterization and selection of raw materials. Slip casting and extrusion of clay bodies. Sintering of powders. Glass melting and fabrication. Determination of chemical and physical properties. Mr. Mackenzie (Sp)

162. Electronic Ceramics. (Formerly numbered 146F.) Prerequisites: course 14, Electrical Engineering 100, or equivalent. Utilization of ceramics in microelectronics; thick film and thin film resistors, capacitors, and substrates; design and processing of electronic ceramics and packaging; magnetic ceramics; ferroelectric ceramics and electro-optic devices; optical wave guide applications and designs. Mr. Dunn (W, odd years)

180B. Machine and Systems Biotechnology. Prerequisite: course M107A or consent of instructor. Quantitative and qualitative methods for assessing man as a component in engineering design applications. Limits and optima of human psychophysiological capabilities applied to display-control design, decision-making problems, and task definition; problems of man/machine interactions in large-scale systems. Mr. Lyman

190. Materials Selection and Engineering Design. (Formerly numbered 140E.) Prerequisites: courses 132, 150, 160. Explicit guidance among the myriad materials available for design in engineering. Properties and applications of steels, nonferrous alloys, polymeric, ceramic, and composite materials, coatings. Materials selection, treatment, and serviceability emphasized as part of successful design. Design projects. Mr. Sines (Sp)

191L. Computer Methods and Instrumentation in Materials Science (2 units). Prerequisites: upper division standing in materials science and engineering, knowledge of BASIC or C or assembly language. Interface and control techniques, real-time data acquisition and processing, computer-aided testing. Mr. Yang (W)

199. Special Studies (2 to 8 units). Prerequisites: senior standing, consent of instructor. Individual investigation of selected topic to be arranged with a faculty member. Enrollment request forms available in department office. Occasional field trips may be arranged. May be repeated for credit. (F,W,Sp)

Graduate Courses

240A. Principles of Materials Science A (Microstructural Thermodynamics). Prerequisites: course 130, Chemical Engineering M105A or Mechanical, Aerospace, and Nuclear Engineering M105A or equivalent. Thermodynamical equilibrium criteria for multi-component systems of materials. Phase transformations and chemical reactions. Properties of solutions; quasicomplex approach. Free energy of binary systems and construction of phase diagrams. Constitution of melts. Thermodynamics of interfaces and defects.

Mr. Kikuchi (W)

240B. Principles of Materials Science B (Structure of Materials). Prerequisite: course 120 or equivalent. Atomic, electronic, and crystalline structure of materials; particles and waves, free electron model, binding in solids; crystal structure, real and reciprocal lattices; amorphous solids, kinematical theory of scattering, electrons in a periodic potential, pseudopotentials, conduction of electrons in solids.

Mr. Dunn, Ms. Haegel (F)

241. Oxidation of Metals. Prerequisite: course 130 or equivalent or consent of instructor. Kinetics and mechanism of gas-solid reactions. Absorption and phase-boundary reactions. Nucleation of reaction products, defect structure of oxides, crystal structure and morphology of oxide films, factors influencing adherence of surface films.

Mr. Douglass (W)

242A. Plasticity Theory Applied to Metalworking I. Prerequisite: Mechanical, Aerospace, and Nuclear Engineering 158A. Fundamental concepts describing mechanics of plastic deformation of homogeneous solids. Yield criteria. Methods of solution, including slip line field, of problems involving plastic deformation, with examples involving plane strain and axisymmetric deformation. Extrusion problem. Application of methods of solution.

Mr. Shabaik (F, odd years)

242B. Material Removal Processes. Prerequisite: course 147B. Classification of material removal processes; single-point, multipoint, and abrasive material removal operations; mechanics of orthogonal and oblique machining; stress, strain, strain rate, and temperature analyses; tool wear, tool life, and tool materials; optimization; automation; and NC machining.

Mr. Shabaik (F, even years)

243A. Fracture of Structural Materials. Prerequisite: Mechanical, Aerospace, and Nuclear Engineering 158A or equivalent. Engineering and scientific aspects of crack nucleation, slow crack growth, and unstable fracture. Fracture mechanics, dislocation models, fatigue, fracture in reactive environments, alloy development, fracture-safe design.

Mr. Ono (Sp, even years)

243B. Design for Fatigue Reliability. Prerequisites: one or more courses from 143A, Mechanical, Aerospace, and Nuclear Engineering 156A, and 158A, or equivalent. Prediction of fatigue life of machines, structures, and vehicles with statistical confidence. Design concepts and fabrication techniques to prevent premature failure. Low-cycle, long-life, and crack growth. Effects of environment, residual stress, over-stressing, and surface treatments. Air Force specifications.

Mr. Sines (F, even years)

243C. Dislocations and Strengthening Mechanisms in Solids. Prerequisite: course 143A or Mechanical, Aerospace, and Nuclear Engineering 158A. Elastic and plastic behavior of crystals, geometry, mechanics, and interaction of dislocations, mechanisms of yielding, work hardening, and other strengthening.

Mr. Ardell, Mr. Ono (F, odd years)

244. Electron Microscopy. Prerequisite: course 111 or equivalent. Essential features of electron microscopy, geometry of electron diffraction, kinematical and dynamical theories of electron diffraction, including anomalous absorption, applications of theory to defects in crystals. Moire fringes, direct lattice resolutions, Lorentz microscopy, laboratory applications of contrast theory.

Mr. Ardell (Sp, even years)

245C. Diffraction Methods in Science of Materials. Prerequisite: course 110 or equivalent. Theory of diffraction of waves (X rays, electrons, and neutrons) in crystalline and noncrystalline materials. Long- and short-range order in crystals, structural effects of plastic deformation, solid-state transformations, arrangements of atoms in liquids and amorphous solids.

Mr. Wagner (Sp, odd years)

246A. Mechanical Properties of Nonmetallic Crystalline Solids. Prerequisite: course 160. Material and environmental factors affecting mechanical properties of nonmetallic crystalline solids, including atomic bonding and structure, atomic-scale defects, microstructural features, residual stresses, temperature, stress state, strain rate, size, and surface conditions. Methods for evaluating mechanical properties.

Mr. Mackenzie (W, odd years)

246B. Structure and Properties of Glass. Prerequisite: course 160. Structure of amorphous solids and glasses. Conditions of glass formation and theories of glass structure. Mechanical, electrical, and optical properties of glass and relationship to structure.

Mr. Mackenzie (W, even years)

246D. Electronic and Optical Properties of Ceramics. Prerequisite: course 160. Principles governing electronic properties of ceramic single crystals and glasses and effects of processing and microstructure on these properties. Electronic conduction, ferroelectricity, and photochromism. Magnetic ceramics. Infrared, visible, and ultraviolet transmission. Unique application of ceramics.

Mr. Dunn, Mr. Mackenzie (Sp, even years)

247A. Solid-State Reactions. Prerequisite: course 131. Phenomenology and atomistic mechanisms of solid-state diffusion. Nucleation theory. Theory of diffusional growth processes, kinetics of diffusional transformations in solids. Precipitation in solids. Spinodal decomposition.

Mr. Ardell (Sp, odd years)

247C. Advanced Solidification. Prerequisite: course 130. Liquid state concept of constitutional supercooling; nucleation from the liquid phase; solute redistribution during liquid-solid transformation; fluid motion; interface morphology; eutectic growth; determination of phase diagrams. Students report on current topics in solidification.

Mr. Yue (Sp, even years)

248A. Experimental Methods in Materials Synthesis. Prerequisite: bachelor's degree in chemistry, physics, or engineering. Techniques used in materials synthesis temperature measurement, vacuum techniques, methods of heating and quenching, consolidation and refining of metals, crystal growth, thin film deposition and thick film deposition. Laboratory experiments and demonstrations.

Mr. Bunshah (F)

248B. Deposition Technologies and Their Applications. Prerequisites: courses 160 and 248A, or consent of instructor. Deposition methods used in high-technology application. Theory and experimental details of physical vapor deposition (PVD), chemical vapor deposition (CVD), plasma spray, electrodeposition. Applications in semiconductor, chemical, optical, mechanical, and metallurgical industries.

Mr. Bunshah (Sp, odd years)

249AA-249AZ. Seminars: Materials Science and Engineering (2 units each). Lectures on current research topics in materials science and engineering. May be repeated for credit. S/U grading.

(F,W,Sp)

250A. Analysis and Design of Composite Materials. Prerequisites: course 151 and one course from 143A, Electrical Engineering 165, Mechanical, Aerospace, and Nuclear Engineering 156A, or 158A. Mechanics of laminated composites, textile structural composites, strength and failure theory, fracture, fatigue and damage tolerance, environmental effects, microcomputer software for composite analysis and design.

Mr. Yang (W, even years)

250B. Advanced Composite Materials. Prerequisites: course 151, B.S. in Materials Science and Engineering or equivalent. Fabrication methods, structure and properties of advanced composite materials. Fibers: resin-, metal-, and ceramic-matrix composites. Physical, mechanical, and nondestructive characterization techniques.

Mr. Ono (W, odd years)

280A-280B. Advanced Biotechnology. Prerequisite: course 180B or Mechanical, Aerospace, and Nuclear Engineering 180A or consent of instructor.

280A. Review and analysis of contemporary bio-science research which bears on problems of engineering component and system design. Emphasis on methodological and scientific factors underlying man/machine/environment interactions. **280B.** Specialized coverage of "human factors" and "human engineering," with orientation toward obtaining design optimization of functions of humans in relation to engineering parameters of environment, communication, and control.

Mr. Lyman (W,Sp)

298. Seminar: Engineering (2 to 4 units). Prerequisites: graduate standing in materials science and engineering, consent of instructor. Seminars may be organized in advanced technical fields. If appropriate, field trips may be arranged. May be repeated with topic change.

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

(F,W,Sp)

596. Directed Individual or Tutorial Studies (2 to 8 units). Prerequisites: graduate standing in materials science and engineering, consent of instructor. Petition forms to request enrollment may be obtained from assistant dean, Graduate Studies. Supervised investigation of advanced technical problems. S/U grading.

597A. Preparation for M.S. Comprehensive Examination (2 to 12 units). Prerequisites: graduate standing in materials science and engineering, consent of instructor. Reading and preparation for M.S. comprehensive examination. S/U grading.

597B. Preparation for Ph.D. Preliminary Examinations (2 to 16 units). Prerequisites: graduate standing in materials science and engineering, consent of instructor. S/U grading.

597C. Preparation for Ph.D. Oral Qualifying Examination (2 to 16 units). Prerequisites: graduate standing in materials science and engineering, consent of instructor. Preparation for oral qualifying examination, including preliminary research on dissertation. S/U grading.

598. Research for and Preparation of M.S. Thesis (2 to 12 units). Prerequisites: graduate standing in materials science and engineering, consent of instructor. Supervised independent research for M.S. candidates, including thesis prospectus. S/U grading.

599. Research for and Preparation of Ph.D. Dissertation (2 to 16 units). Prerequisites: graduate standing in materials science and engineering, consent of instructor. Usually taken after student has been advanced to candidacy. S/U grading.

Oddvar O. Bendiksen, Ph.D.
 Ann R. Karagozian, Ph.D.
 Adrienne G. Lavine, Ph.D.
 Daniel C.H. Yang, Ph.D.

Assistant Professors

Denny K. Miu, Ph.D.
 Zvi Shiller, Ph.D.
 Xiaolin Zhong, Ph.D.

Senior Lecturers

C.H. Chang, M.S.
 Alexander Samson, Ph.D.

Adjunct Professors

Yoseph Bar-Cohen, Ph.D.
 Rudolph X. Meyer, Ph.D.

Adjunct Associate Professor

Sukumar Chakravarthy, Ph.D.

Scope and Objectives

The Mechanical, Aerospace, and Nuclear Engineering Department encompasses professional disciplines that are often divided into separate departments at other engineering schools. Curricula in aerospace engineering and mechanical engineering are offered on the undergraduate and graduate levels, while nuclear engineering is a graduate program. The Gorman Report ranked UCLA's mechanical engineering program tenth in the nation for undergraduate programs.

Because of the scope of the department, faculty research and teaching cover a wide range of technical disciplines. Research in thermal engineering emphasizes basic heat and mass transfer processes as well as thermal hydraulics. Topics in the area of design, dynamics, and control include robotics, mechanism design, control and guidance of aircraft and

spacecraft, helicopter dynamics and aeromechanics, dynamics and control of large space structures. Studies in structural mechanics range from fracture mechanics and wave propagation, structural dynamics and aeroelasticity of helicopters and jet engine blades, computational transonic aeroelasticity to structural optimization and synthesis, and mechanics of composite structures. In the area of fluid mechanics and acoustics, investigations are under way on combustion, flow instabilities, turbulence and thermal convection, aeroacoustics, and unsteady aerodynamics of turbomachines, helicopter rotors, and fixed-wing aircraft. Other areas of research include applied plasma physics, surface modification by plasma, fusion reactor design, experimental tokamak confinement physics; light water reactor safety; reliability and risk assessment methodology; societal risk management; and nuclear materials. The department also has research activity in computer-aided design and manufacturing.

At the undergraduate level, the department offers accredited programs leading to Bachelor of Science degrees in Aerospace Engineering and in Mechanical Engineering. The former includes opportunity to emphasize propulsion, aerodynamics, preliminary design, dynamics and control, or structures and space technology, while the latter includes opportunity to emphasize mechanical systems — design and control; power systems and thermal design; manufacturing processes; or fluids engineering.

At the graduate level, the department offers programs leading to M.S. and Ph.D. degrees in Mechanical Engineering, Aerospace Engineering, and Nuclear Engineering. An M.S. in Manufacturing Engineering is also offered.

Bachelor of Science in Aerospace Engineering

The ABET-accredited aerospace engineering program is concerned with the design and construction of various types of fixed-wing and rotary-wing (helicopters) aircraft used for air transportation and national defense. It is also concerned with the design and construction of spacecraft, the exploration and utilization of space, and related technological fields.

Aerospace engineering is characterized by a very high level of technology. The aerospace engineer is likely to operate at the forefront of scientific discoveries, often stimulating these discoveries and providing the inspiration for the creation of new scientific concepts. Meeting these demands requires the imaginative use of many disciplines, including fluid mechanics and aerodynamics, structural mechanics, materials and aeroelasticity, dynamics, control and guidance, propulsion, and energy conversion.

The Major

Course requirements are as follows (190 minimum units required):

(1) Nine department core courses: Civil Engineering 108, Electrical Engineering 100, Materials Science and Engineering 14, Mechanical, Aerospace, and Nuclear Engineering 102, 103, M105A, 105D, 157, 192A.

(2) Twelve aerospace engineering core courses: Electrical Engineering 102; Mechanical, Aerospace, and Nuclear Engineering 150A, 150B, 150P, 154A, 154B, 154S, 157A, 161A or 169A, 166A, 171A; one mathematics elective from Mechanical, Aerospace, and Nuclear Engineering 191A, 192B, 192C, 193A, Electrical Engineering 103, 131A.

(3) Sixteen technical elective units (which should contain enough design units to satisfy the overall program requirement of at least 24 design units) selected from Mechanical, Aerospace, and Nuclear Engineering 131A/131AL, 132A, 133A (thermodynamics, heat, and mass transfer); 153A (acoustics); 155, 163A, 164, 169A*, Civil Engineering 137L, Electrical Engineering 142 (dynamics and control); Mechanical, Aerospace, and Nuclear Engineering 161A*, 161B, 161C (space technology); 158A, 166C, 168, Civil Engineering 130F (structural and solid mechanics); Mechanical, Aerospace, and Nuclear Engineering 162A, 162C, M192F (design and mechanisms); Materials Science and Engineering 143A, 143L, 147B.

(4) English 3; Chemistry and Biochemistry 11A, 11B/11BL; Computer Science 10F or Program in Computing 3; Mathematics 31A, 31B, 32A, 32B, 33A, 33B; Physics 8A/8AL, 8B/8BL, 8C/8CL, 8D/8DL.

(5) A minimum of 28 units from the humanities, social sciences, and/or fine arts approved list (at least three courses must be upper division; at least three — with two upper division — must be in the same academic department or otherwise reflect coherence with respect to subject matter). It is strongly recommended that you take at least one economics course.

Bachelor of Science in Mechanical Engineering

The ABET-accredited mechanical engineering program is designed to provide a basic knowledge in thermodynamics, fluid mechanics, heat transfer, solid mechanics, mechanical design, dynamics, control, mechanical systems, manufacturing, and materials. The program includes fundamental subjects important to all mechanical engineers, with an option in mechanical systems — design and control; power systems and thermal design; manufacturing processes; or fluids engineering.

*Unless taken as part of the core.

The Major

Course requirements are as follows (192 minimum units required):

(1) Nine department core courses: Civil Engineering 108, Electrical Engineering 100 (also 100L — see item 2 below), Materials Science and Engineering 14, Mechanical, Aerospace, and Nuclear Engineering 102, 103, M105A, 105D, 157, 192A.

(2) Ten mechanical engineering core courses: Electrical Engineering 100L (may be taken concurrently with 100), Materials Science and Engineering 147B, Mechanical, Aerospace, and Nuclear Engineering 131A, 133A, 156A, 162A, 162B, 162M, 169A, 171A.

(3) Twenty technical elective units, of which at least four should be laboratory units, to be selected from one of the subject areas listed below; no more than eight units may be taken from any one of subgroups a, b, c:

Fluids Engineering —

(a) Mechanical, Aerospace, and Nuclear Engineering 157A.

(b) Electrical Engineering 103, Mechanical, Aerospace, and Nuclear Engineering 150A, 150B, 153A, 192B, 192C.

(c) Mechanical, Aerospace, and Nuclear Engineering 136, 150P, 151, 153C, 161A, 161B.

Manufacturing Processes —

(a) Materials Science and Engineering 143L, 147L, 161L, Mechanical, Aerospace, and Nuclear Engineering 163B, 163C, 194B, 195L.

(b) Materials Science and Engineering 143A, Mechanical, Aerospace, and Nuclear Engineering 163A, 164.

(c) Civil Engineering 175, Mechanical, Aerospace, and Nuclear Engineering 155, 174, 194A.

Mechanical Systems — Design and Control —

(a) Civil Engineering 130F, 137L, Materials Science and Engineering 143L, Mechanical, Aerospace, and Nuclear Engineering 162C, 163B, 163C, 194B.

(b) Electrical Engineering 103, 131A, 131B, Mathematics 115A, 115B, 131A, 131B, Mechanical, Aerospace, and Nuclear Engineering 155, 158A, 164, 174, 191A.

(c) Materials Science and Engineering 143A, Mechanical, Aerospace, and Nuclear Engineering 163A, 168, 194A.

Power Systems and Thermal Design —

(a) Mechanical, Aerospace, and Nuclear Engineering 131AL.

(b) Electrical Engineering 103, Mechanical, Aerospace, and Nuclear Engineering 132A, 135, 150A, 192B, 192C.

(c) Mechanical, Aerospace, and Nuclear Engineering 134B, 136, 150P, 151, 161B, 174.

(4) English 3; Chemistry and Biochemistry 11A, 11B/11BL; Computer Science 10C or

10F; Mathematics 31A, 31B, 32A, 32B, 33A, 33B; Physics 8A/8AL, 8B/8BL, 8C/8CL, 8D/8DL; Mechanical, Aerospace, and Nuclear Engineering 94.

(5) A minimum of 24 units from the humanities, social sciences, and/or fine arts approved list (at least three courses must be upper division; at least three — with two upper division — must be in the same academic department or otherwise reflect coherence with respect to subject matter).

(6) Four free technical elective units selected from upper division courses offered by the department; you are strongly encouraged to consult your adviser.

(7) Four free elective units selected from the department, other departments in the school, or outside the school; you may wish to consult your adviser before selecting a course to fulfill this requirement.

Graduate Study

For information on graduate admission to the mechanical, aerospace, and nuclear engineering programs and requirements for the M.S. and Ph.D. degrees, see "Graduate Study" at the beginning of this chapter.

Lower Division Courses

2. Toxic Waste Control. Lecture, three hours; discussion, one hour. Specifically designed to satisfy in part the Letters and Science general education requirement. Intended for students interested in toxic wastes. Topics include sources of toxic substances, effects on public health and environment, technological solutions, public policy, and risk assessment.

Mr. Kastenber (W)

94. Introduction to Computer-Aided Design and Drafting. Lecture, two hours; laboratory, four hours. Fundamentals of computer graphics and two- and three-dimensional modeling on computer-aided design and drafting systems. Students use one or more on-line computer systems to design and display various objects.

Mr. Yang (F,W)

Upper Division Courses

102. Mechanics of Particles and Rigid Bodies. Lecture, three hours; recitation, two hours. Prerequisites: Mathematics 33A, Physics 8A. Newtonian mechanics (statics and dynamics) of particles and rigid bodies. Fundamental concepts of mechanics. Statics, kinematics, and kinetics of particles and rigid bodies. Impulse/momentum and work/energy relationships. Applications.

Mr. Mingori (F,W,Sp)

103. Elementary Fluid Mechanics. Lecture, three hours; recitation, two hours. Prerequisites: Mathematics 32B, 33A, Physics 8B. Introductory course dealing with application of principles of mechanics to flow of compressible and incompressible fluids.

Mr. Kelly (F,W,Sp)

M105A. Introduction to Engineering Thermodynamics. (Same as Chemical Engineering M105A.) Lecture, four hours; recitation, one hour. Prerequisites: Physics 8B, Mathematics 32B. Phenomenological thermodynamics. Concepts of equilibrium, temperature, and reversibility. First law and concept of energy; second law and concept of entropy. Equations of state and thermodynamic properties. Engineering applications of these principles in analysis and design of closed and open systems.

Mr. Dhir (F,W,Sp)

105D. Transport Phenomena. Lecture, four hours; recitation, one hour. Prerequisites: Physics 8B, Mathematics 32B, 33A. Transport phenomena; heat conduction, mass species diffusion, convective heat and mass transfer, and radiation. Engineering applications in thermal and environmental control.

Ms. Lavine (F,W,Sp)

M109A. Engineering and Policy: Resources and Risk. (Same as Civil Engineering M115.) Lecture, two hours; recitation, two hours. Prerequisite: sophomore or higher standing in engineering. Philosophical, sociological, and institutional implications of engineering-based risk and decision making. Emphasis on opportunities for useful development of resources, inherent risks, and responsibilities of engineers in the decision process. Emphasis on thoughtful student discussion.

Mr. Kastenber (W)

131A. Intermediate Heat Transfer. Lecture, four hours; other, eight hours. Prerequisite: course 105D. Steady conduction: two-sided, two-ended, tapered, and circular fins; buried cylinders, thick fins. Transient conduction: slabs, cylinders, products. Convection: transpiration, laminar pipe flow, film condensation, boundary layers, dimensional analysis, working correlations. Surface radiation. Two-stream heat exchangers. Elements of thermal design.

Mr. Catton (F,Sp)

131AL. Thermodynamics and Heat Transfer Laboratory. Laboratory, eight hours; other, four hours. Prerequisites: courses 131A, 157. Experimental study of physical phenomenon and engineering systems using modern data acquisition and processing techniques. Experiments include studies of heat transfer phenomena and testing of a cooling tower, heat exchanger, and internal combustion engine. Students take and analyze data and discuss physical phenomena.

Mr. Mills (Sp)

132A. Mass Transfer. Lecture, four hours; other, eight hours. Prerequisites: courses 105D, 131A. Principles of mass transfer by diffusion. Mass transfer by convection in laminar and turbulent flows. Simultaneous heat and mass transfer. Applications including combustion of solids and volatile fuels, evaporation and condensation, ablation and transpiration cooling, gas absorption and catalysis.

Mr. Mills (F)

133A. Engineering Thermodynamics. Lecture, four hours; other, eight hours. Prerequisites: courses 103, M105A, 105D. Applications of thermodynamic principles to engineering processes. Energy conversion systems. Rankine cycle and other cycles, refrigeration, psychrometry, reactive and nonreactive fluid flow systems.

Mr. Dhir (F,Sp)

M134A. New Energy Technology: Resources, Conversion, Constraints. (Same as Civil Engineering M161.) Prerequisite: course M105A or equivalent in physics or chemistry or consent of instructor. Energy resources: fossil fuels, nuclear fuels, hydro, solar, wind, geothermal, and biomass sources. Conversion methods for power production and other energy uses. Consideration of thermodynamic, economic, and environmental constraints.

Mr. Kastenber

134B. Solar Energy Use and Control. Lecture, four hours; other, eight hours. Prerequisite: course 105D or equivalent or consent of instructor. Nature and availability of solar radiation; review of selected heat transfer topics pertinent to solar energy collection and use; design analysis of nonfocusing solar energy collector-converters and methods of energy storage; selected applications.

Mr. Mills

135. Fundamentals of Nuclear Power. Prerequisite: junior standing. Introduction to nuclear engineering; nuclear physics, neutron cross sections, nuclear fission and fusion; elementary analysis and design of reactors. Criticality, one-group neutron diffusion theory, heat removal, and heterogeneous effects.

Mr. Kastenber (F)

136. Thermal Hydraulic Design of Nuclear and Other Power Systems. Prerequisite: senior standing. Thermal hydraulic design of nuclear and other power systems, power generation and heat removal, power cycle, thermal hydraulic component design, overall plant design, steady state and transient operation.

Mr. Dhir (W)

137. Introduction to Fusion Engineering and Reactor Design. Prerequisite: course 135 or consent of instructor. Fusion reactions, fuel cycle, and operating conditions. Magnetic and inertial confinement, including tokamaks, magnetic mirrors, laser fusion, and selected others. Concepts for and subsystems of fusion reactors. Design of reactors and key subsystems. Application of fusion reactors for electricity, fissionable fuel, and/or chemical fuel production. Mr. Conn

150A. Intermediate Fluid Mechanics. Prerequisite: course 103 or equivalent or consent of instructor. Basic equations governing fluid motion. Fundamental solutions of Navier/Stokes equations. Lubrication theory. Elementary potential flow theory. Boundary layers. Turbulent flow in pipes and boundary layers. Compressible flow: normal shocks, channel flow with friction or heat addition. Mr. Kelly (F,W)

150B. Aerodynamics. Prerequisites: courses 103, 150A, or equivalent. Advanced aspects of potential flow theory. Incompressible flow around thin airfoils (C_L , C_m) and wings (lift, induced drag). Gas dynamics: oblique shocks, Prandtl/Meyer expansion. Linearized subsonic and supersonic flow around thin airfoils and wings. Wave drag. Transonic flow. Mr. Kelly (Sp)

150P. Jet Propulsion Systems. Lecture, four hours; laboratory, two hours. Prerequisites: courses M105A, 150A, or equivalent. Thermodynamic properties of gases, aircraft jet engine components and cycle analysis, combustion systems, performance of rocket vehicles. Ms. Karagozian (F)

151. Performance of Vehicles. Lecture, four hours; other, eight hours. Prerequisites: courses 103, M105A. Transportation systems and their characteristics in terms of speed, range, payload, efficiency, etc. Engines: power available. Vehicles, including automobiles, trains, aircraft, and boats: power required. Engine-vehicle mission matching. Mr. Kelly (Sp)

153A. Engineering Acoustics. Prerequisite: upper division standing in engineering or consent of instructor. Fundamental course in acoustics; propagation of sound; sources of sound. Design of field measurements. Estimation of jet and blade noise with design aspects. Mr. Meecham (W)

153C. Noise and Noise Control Design. Lecture, four hours; other, eight hours. Prerequisite: course 153A or consent of instructor. Practical concepts in design, construction, measurement, and analysis of noise suppression techniques. Equipment, environmental factors in sound propagation, enclosures, sound interaction in structures, mufflers, noise criteria and standards, generation of noise by aircraft, health effects of noise. Mr. Meecham (F)

154A. Preliminary Design of Aircraft. Prerequisite: course 154S. Classical preliminary design of an aircraft, including weight estimation, performance and stability, and control consideration. Term assignment consists of preliminary design of a low-speed aircraft. Mr. Bendiksen, Mr. Friedmann (W)

154B. Design of Aerospace Structures. Prerequisites: courses 154A, 166A. Design of aircraft, helicopter, spacecraft, and related structures. External loads, internal stresses. Applied theory of thin-walled structures. Material selection, design using composite materials. Design for fatigue prevention and structural optimization. Field trips to aerospace companies. Mr. Bendiksen, Mr. Friedmann (Sp)

154S. Flight Mechanics, Stability, and Control of Aircraft. Prerequisites: courses 150A, 150B. Aircraft performance, flight mechanics, stability, and control; some basic ingredients needed for design of an aircraft. Effects of airplane flexibility on stability derivatives. Mr. Friedmann (F)

155. Intermediate Dynamics. Lecture, four hours; other, eight hours. Prerequisite: course 102 or equivalent. Axioms of Newtonian mechanics, generalized coordinates, Lagrange's equation, variational principles; central force motion; kinematics and dynamics of a rigid body. Euler's equations, motion of rotating bodies, oscillatory motion, normal coordinates, orthogonality relations. Mr. Gibson (Sp)

156A. Advanced Strength of Materials. Prerequisite: Civil Engineering 108. Columns and beam columns. Torsion; Airy's stress functions, stress concentrations. Loads on balls, rollers. Rotating disks, thick hollow spheres, thick hollow circular cylinders, curved beams, coiled springs. Mr. Mal (F,Sp)

157. Basic Mechanical Engineering Laboratory. Laboratory, eight hours; other, four hours. Prerequisites: courses 103, M105A, 105D, Civil Engineering 108. Methods of measurement of basic quantities and performance of basic experiments in heat transfer, fluid mechanics, structures, and thermodynamics. Primary sensors, transducers, recording equipment, signal processing, and data analysis. Mr. Mills (F,W,Sp)

157A. Fluid Mechanics/Aerodynamics Laboratory. Laboratory, eight hours. Prerequisites: courses 103, 150A, 150B, and 157, or consent of instructor. Experimental illustration of important physical phenomena in area of fluid mechanics/aerodynamics, as well as hands-on experience with design of experimental programs and use of modern experimental tools and techniques in the field. Mr. Monkewitz (Sp)

158A. Elasticity and Plasticity. Prerequisite: Mathematics 32B. Three-dimensional stress and strain. Criteria for prediction of mechanical failure. Differential equations in three dimensions; analytical, numerical, and experimental solutions of plane state and torsion problems. (Stress function, iteration, strain gages, photoelasticity.) Homogeneous plastic flow, plastic tensile instability. Mr. Mal (W)

161A. Introduction to Astronautics. Prerequisite: course 102. Space-environment of Earth, trajectories and orbits, step rockets and staging, two-body problem, orbital transfer and rendezvous, problem of three-bodies, elementary perturbation theory, influence of Earth's oblateness. Mr. Gibson (F)

161B. Introduction to Space Technology. Lecture, four hours; other, eight hours. Recommended prerequisites: courses 102, 105D, 150P, 161A. Propulsion requirements for typical space missions, thermochemistry of propellants, internal ballistics, regenerative cooling, liquid propellant feed systems, POGO instability. Electric propulsion. Multistage rockets, separation dynamics. Satellite structures and materials, loads and vibrations. Thermal control of spacecraft. Mr. Mingori (W)

161C. Spacecraft Design. Lecture, four hours; other, eight hours. Prerequisite: course 161B. Coverage of preliminary design, by students, of a small spacecraft carrying a lightweight scientific payload with modest requirements for electric power, lifetime, and attitude stability. Students work in groups of three or four, with each student responsible primarily for a subsystem and for integration with the whole. Mr. Bendiksen, Mr. Meyer (Sp)

162A. Introduction to Mechanisms and Mechanical Systems. Lecture, four hours; other, eight hours. Prerequisite: course 102. Analysis and synthesis of mechanisms and mechanical systems. Kinematics, dynamics, and mechanical advantages of machinery. Displacement, velocity, and acceleration analyses of linkages. Fundamental law of gearing and various gear trains. Computer-aided mechanism design and analysis. Mr. Yang (F)

162B. Fundamentals of Mechanical System Design. Lecture, three hours; discussion, 45 minutes; laboratory, two and one-fourth hours; other, six hours. Prerequisites: course 102, Civil Engineering 108. Lecture and laboratory (design) course involving modern design techniques for development of mechanical systems. Theoretical studies precede design of several types of mechanical power transmission components, bolted and welded joints, springs, and bearings. Students design a mechanical system. Mr. Yang (F,W)

162C. Electromechanical System Design Laboratory. Lecture, one hour; laboratory, eight hours; other, three hours. Prerequisite: course 162B. Laboratory and design course consisting of design, development, construction, and testing of complex mechanical and electromechanical systems. The assembled machine is instrumented and monitored for operational characteristics. Mr. Yang (Sp)

162M. Senior Mechanical Engineering Design. Lecture, one hour; laboratory, six hours; other, five hours. Prerequisites: course 162B, Civil Engineering 106A. Must be taken in last two academic terms of students' programs. Analytical design course of a large engineering system culminating in its computer simulation. Design factors include efficiency, economy, safety, reliability, and social impact. Final report of engineering specifications and drawings to be presented by design teams. Mr. Yang (W,Sp)

163A. Introduction to Computer-Controlled Machines. (Formerly numbered 163.) Prerequisite: course 171A (may be taken concurrently). Modeling of computer-controlled machines, including electrical and electronic elements, mechanical elements, actuators, sensors, and overall electromechanical systems. Motion and command generation, servo-controller design, and computer/machine interfacing. Mr. Yang (F)

163B. Interfacing of Computer-Controlled Machines. (Formerly numbered 162L.) Laboratory, eight hours. Prerequisite: course 171A. Recommended: courses 162B, 163A, 163C. Hands-on experience with computer-controlled electromechanical systems, with special emphasis on real-time programming and interfacing techniques of microprocessors and their integration with sensors and actuators. Final design project required. Mr. Miu (Sp)

163C. Robotics and Motion Control Laboratory. (Formerly numbered 163L.) Laboratory, eight hours; outside study, four hours. Prerequisite: course 171A or consent of instructor. Hands-on experience with robotic devices and articulated machines, with emphasis on motion planning and control. Design and implementation of servo control of DC motors, gear trains, multi-axis coordination, programming of industrial robots. Final project required. Mr. Shiller (W)

164. Digital Control of Physical Systems. Prerequisite: course 171A or Electrical Engineering 141. Analysis and design of digital control systems. Discrete-time transfer functions for physical systems. Design using classical methods: performance specifications, frequency response, root locus; compensation. Design using state-space methods: control laws, estimators. Practical considerations: roundoff, sample rate selection, computer implementation. Mr. Mingori (Sp)

166A. Analysis of Flight Structures. Prerequisite: Civil Engineering 108. Introduction to two-dimensional elasticity, stress-strain laws, yield and fatigue; bending of beams; torsion of beams; warping; torsion of thin-walled cross sections: shear flow, shear-lag; combined bending torsion of thin-walled, stiffened structures used in aerospace vehicles; elements of plate theory; buckling of columns. Mr. Friedmann (F,W)

166C. Design of Composite Structures. Prerequisite: course 156A or 166A. History of composites, stress-strain relations for composite materials, bending and extension of symmetric laminates, failure analysis, design examples and design studies, buckling of composite components, nonsymmetric laminates, micromechanics of composites. Mr. Friedmann (W)

168. Introduction to Finite Element Technology. Lecture, four hours; laboratory, four hours; other, four hours. Prerequisites: Civil Engineering 108, Computer Science 10F, Mathematics 33A. Recommended: courses 94 or 194A and 194B, 166A. Introduction to finite element method (FEM) and its matrix formulation; computer implementation of FEM concepts; practical use of FEM codes. Preprocessing and post-processing techniques; graphics display capabilities; geometric and analysis modeling; interactive engineering systems; links with computer-aided design. Recent trends in FEM technology; design optimization. Term projects using FEM computer codes. Mr. Bendiksen (Sp)

169A. Introduction to Mechanical Vibrations. (Formerly numbered M169A.) Lecture, four hours; other, eight hours. Prerequisites: course 102, Civil Engineering 108. Fundamentals of vibration theory and applications. Free, forced, and transient vibration of one and two degrees of freedom systems, including damping. Normal modes, coupling, and normal coordinates. Vibration isolation devices, vibrations of continuous systems. Mr. Bendiksen (F,W)

171A. Introduction to Feedback and Control Systems: Dynamic Systems Control I. Prerequisite: course 191A or 192A or Electrical Engineering 102 or equivalent. Introduction to feedback principles, control systems design, and system stability. Modeling of physical systems in engineering and other fields; transform methods; controller design using Nyquist, Bode, and root locus methods; compensation; computer-aided analysis and design. Mr. Mingori (F,W)

171C. Dynamic Systems Control II. Recommended (but not prerequisite): course 171A or Electrical Engineering 141. State-space models of continuous and discrete-time dynamic systems. Linear algebra of systems; vector spaces; geometric concepts; transformations and matrices; canonical forms. Stability. Controllability and observability. State representation of nonlinear systems; linearization. Emphasis on modeling concepts, applications, and computer-aided problem solving. Mr. Speyer

174. Risk, Reliability, and Quality Assurance. Prerequisite: course 193A or consent of instructor. Introduction to use of probabilistic methods in engineering and systems analysis. Statistical quality control of manufacturing and other engineering processes. Acceptance sampling and decision making. Methods for reliability and risk assessment. Fault and event tree analysis. Mr. Apostolakis (F)

175. Applications of Probabilistic Risk Analysis. Prerequisite: consent of instructor. Applications of probabilistic models for failure of components, subsystems, and systems. Derivation and application of models for source terms, dispersion, dose-response relationships, and cost/benefit relationships. Emphasis on several case studies (e.g., hazardous waste control, energy systems, and high-level radioactive waste). Mr. Kastenber

180A. Environmental Biotechnology. Prerequisite: Materials Science and Engineering M107A or consent of instructor. Physical, physiological, and psychological aspects of interaction between man and thermal, atmospheric, radiant, and mechanical agents and energies in the environment. Biological and physical requirements for engineering control of the environment; applications to complex systems. Mr. Meecham

191A. Laplace Transforms and Applied Complex Variables. Lecture, four hours; discussion, two hours. Prerequisites: Mathematics 32A, 32B, 33A, 33B. Introduction to Laplace transformation: application to electrical and mechanical problems, convolution-type integral equations, difference equations, and simple boundary value problems in partial differential equations. Complex variable theory, contour integrals, residues; application to transform inversion and partial differential equations. Mr. Ghoniem (W)

192A. Mathematics of Engineering. (Formerly numbered M192A.) Prerequisites: Mathematics 33A, 33B. Methods of solving ordinary differential equations in engineering. Review of matrix algebra. Solutions of systems of first- and second-order ordinary differential equations. Introduction to Laplace transforms and their application to ordinary differential equations. Introduction to boundary value problems. Mr. Kastenber (F,W,Sp)

192B. Mathematics of Engineering. Prerequisite: course 192A or equivalent. Analytical methods for solving partial differential equations arising in engineering. Separation of variables, eigenvalue problems, Sturm/Liouville theory. Development and use of special functions. Representation by means of orthonormal functions; Galerkin method. Use of Green's function and transform methods. Mr. Kelly (Sp)

192C. Numerical Methods for Engineering Applications. Recommended (but not prerequisite): Electrical Engineering 103. Basic topics from numerical analysis having wide application in solution of practical engineering problems. Solution of linear and nonlinear systems. Algebraic eigenvalue problem. Least-square methods, numerical quadrature, and finite difference approximations. Numerical solution of initial and boundary value problems for ordinary and partial differential equations. Mr. Zhong (F)

M192F. Numerical Optimization Methods for Engineering Design. (Same as Civil Engineering M140.) Prerequisites: Computer Science 10F, Mathematics 32A, 33A. Recommended: Mathematics 115A. Systematic presentation of numerical optimization methods for engineering design; one-dimensional minimization, unconstrained minimization, linearly constrained minimization, general nonlinear problems, approximation concepts, duality. Optimization problem statements. Advantages and limitations of numerical optimization. Applications to general design in mechanical, aerospace, and manufacturing engineering. Mr. Friedmann (F)

193A. Engineering Probabilistics and Stochastics. Prerequisite: junior standing in engineering. Sets and set algebra; sample spaces; combinatorics; absolute and conditional probability; discrete and continuous random variables; probability distribution, increment, and density functions; Chebyshev's inequality; Laplace/Fourier transforms; law of large numbers; central limit theorems; discrete and continuous stochastic processes. Mr. Meecham

193B. Engineering Statistics. Prerequisite: course 193A or equivalent or consent of instructor. Introductory concepts of statistical decision and estimation. Population parameters, samples, data, statistics. Classical tests of significance and hypotheses. OC-functions and sample sizes. Statistical estimation for one- and two-parameter populations. Bayesian inference, stopping rules. Decision theory, payoffs, losses. Applications. Mr. Apostolakis

194. Introduction to CAD/CAM Systems: Design and Implementation. (Formerly numbered 194A, 194B.) Laboratory, eight hours; outside study, four hours. Prerequisites: course 94 or consent of instructor, FORTRAN programming language. Hands-on experience with CAD/CAM systems design and implementation, with special emphasis on theory of parametric curves and surfaces for design and manufacturing and their computer interactive graphics implementation. Mr. Yang (Sp)

195. Computer Numerical Control and Applications. (Formerly numbered 195A.) Laboratory, eight hours; outside study, four hours. Prerequisite: upper division standing. Fundamentals of numerical control (NC) technology. Programming of computer numerical control (CNC) machines in NC codes and APT language and with CAD/CAM systems. NC postprocessors and distributed numerical control. Operation of CNC lathe and milling machines. Programming and machining of complex engineering parts. Mr. Change (Sp)

195L. Numerically Controlled Manufacturing Machinery Laboratory. Laboratory, eight hours. Prerequisite: consent of instructor. Programming and control of numerically controlled metal cutting machines. Numerically controlled programming in various languages. Postprocessors utilization. Direct interface to computer-aided design. Mr. Yang (Sp)

199. Special Studies (2 to 8 units). Prerequisites: senior standing, consent of instructor. Individual investigation of selected topic to be arranged with a faculty member. Enrollment request forms available in department office. Occasional field trips may be arranged. May be repeated for credit. (F,W,Sp)

Graduate Courses

201. Mechanical, Aerospace, and Nuclear Engineering Seminar (2 units). Prerequisite: graduate standing in engineering. Lectures on current research topics in mechanics and structures. May be repeated for credit. S/U grading. Mr. Speyer

202. Manufacturing Engineering Seminar (2 units). Prerequisite: graduate standing in engineering. Lectures on current research and development in manufacturing engineering. S/U grading. Mr. Yang

231A. Convective Heat Transfer Theory. Prerequisite: course 131A. Conservation equations for flow of real fluids. Analysis of heat transfer in laminar and turbulent, incompressible and compressible flows. Internal and external flows; free convection. Variable wall temperature; effects of variable fluid properties. Analogies among convective transfer processes. Ms. Lavine (W)

231B. Radiation Heat Transfer. Prerequisite: course 131A. Radiant intensity and flux. Radiation properties of gases, vapors, and particulates. Heat transfer by combined conduction, convection, and radiation in nonabsorbing and absorbing media. Applications to industrial, aerospace, energy conversion, and environmental problems. Mr. Pomraning (Sp)

231C. Boiling and Condensation. Prerequisites: courses 131A, 150A, or equivalent. Phenomenological theories of boiling. Hydrodynamic instability of liquid-vapor interfaces and their application to predict maximum and minimum heat fluxes. Forced flow boiling and boiling crisis in pipes. Pool and forced flow boiling of liquid metals. Film and dropwise condensation. Mr. Dhir (W)

231D. Application of Numerical Methods to Transport Phenomena. Prerequisite: course 132A or consent of instructor. Numerical techniques for solving selected problems in heat and mass transfer. Applications include free convection, boundary layer flow, two-phase flow, separated flow, flow in porous media. Effects of concentration and temperature gradients, chemical reactions, radiation, electric and magnetic fields. Mr. Catton (Sp)

231E. Two-Phase Flow Heat Transfer. Prerequisites: courses 131A, 150A. Generalized constitutive equations for various two-phase flow regimes. Interfacial heat and mass transfer. Equilibrium and nonequilibrium flow models. Two-phase flow instability. One-dimensional wave propagation. Two-phase heat transfer applications: convective boiling, pressure drop, critical and oscillatory flows. Mr. Dhir (F)

231F. Advanced Heat Transfer. Prerequisite: course 231A. Advanced topics in heat transfer from current literature. Linear and nonlinear theories of thermal and hydrodynamic instability; variational methods in transport phenomena; phenomenological theories of turbulent heat and mass transport. Mr. Catton (Sp)

232B. Advanced Mass Transfer. Prerequisites: courses 131A, 132A. Formulation of general convective heat and mass transfer problem, including equilibrium and nonequilibrium chemistry. Similar and nonsimilar solutions for laminar flows; solution procedures for turbulent flows. Multicomponent diffusion. Application to hypersonic boundary layer, ablation and transpiration, cooling combustion. Mr. Mills (W)

233A. Advanced Power Production and Propulsion. Prerequisite: course 133A or equivalent. Thermodynamic cycle analysis. Fluid mechanics and thermodynamics of compressors and turbines. Component matching. Atomization and vaporization. Flow and mixing in combustion chambers. Flame stabilization and combustion instabilities. Turbojet and ramjet engines and gas turbines. Rocket propulsion and stability of combustion processes. Mr. Dhir

234A. Topics in Thermal Design. Prerequisites: courses 131A, 132A. Consideration of thermal design problems selected from applications such as heat exchangers, heat shields, heat pipes, thermal environment control, spacecraft temperature control, and solar thermal conversion. Presentations made by the staff and occasionally by invited off-campus specialists. Mr. Mills (Sp)

235A. Nuclear Reactor Theory. Prerequisites: courses 135, 192A. Underlying physics and mathematics of nuclear reactor (fission) core design. Diffusion theory, reactor kinetics, slowing down and thermalization, multigroup methods, introduction to transport theory. Mr. Pomraning

235B. Kinetic Theory of Plasmas and Particle Transport. Prerequisites: course 135 or 137 and Electrical Engineering M185, or consent of instructor. Unified kinetic theory treatment of plasma, neutron, and radiation transport phenomena. Liouville equation, Boltzmann collision integral and H-theorem. Derivation of Fokker/Planck, neutron, and radiation transport equations. Fluid moment equations, dispersion relations, space and time relaxation phenomena. Applications from neutron transport, plasma physics, and radiative transfer. Mr. Conn, Mr. Pomraning

236A. Nuclear Materials Engineering. Prerequisites: course 135 and Materials Science and Engineering 143A, or consent of instructor. Materials requirements for nuclear technologies; radiation effects on mechanical properties, void swelling and creep, fuel and solid breeder swelling and restructuring, gas release, computer codes for swelling and gas release, structural analysis of fission and fusion materials including radiation effects. Mr. Ghoniem (F)

236B. Radiation Effects and Applications in Advanced Technologies. Prerequisites: courses 135 and 192A, or consent of instructor. Fundamentals of radiation damage; atomic collision theory, energy loss of energetic ions, atom displacement, collision cascade. Bulk and surface effects of radiation; applications of radiation effects to fusion materials, micro-electronic materials, and thin films; accelerator technologies. Mr. Ghoniem

236C. Nuclear Reactor Safety. Prerequisites: courses 135, 136, and 235A, or consent of instructor. Safety-related characteristics of thermal and fast nuclear power reactors; design criteria and siting considerations; methods of accident analysis; general risk considerations. Analysis of specific accidents; anticipated transients without scram, loss-of-coolant accidents, and reactivity transients. Mr. Kastenberg (Sp)

236E. Advanced Problems in Reactor Design. Prerequisites: at least four courses from 235A, 235B, 236A, 236B, 236C, 236D. Methods of attack and solution for advanced problems in reactor design, including fuel elements, power reactor cores, pulsed reactors, fuel cycle and fuel management, thermal-hydraulics, shielding, and safety. Mr. Kastenberg

M237A. Principles of Magnetic Confinement Fusion. (Same as Electrical Engineering M286.) Prerequisites: Electrical Engineering M185, and 285A and 285B or Physics 222A-222B, or consent of instructor. Plasma requirements for controlled fusion. Structure of magnetic fields. Theory of MHD equilibrium and stability. Shear and minimum-B stabilization. Resistive and microinstabilities. Neoclassical diffusion physics of tokamak and tandem-mirror plasmas. Neutral beams and auxiliary heating. Alternate concepts. Mr. Conn (F, odd years)

M237B. Fusion Plasma Physics and Analysis. (Same as Electrical Engineering M287.) Prerequisite: Electrical Engineering M185. Fundamentals of plasmas at thermonuclear burning conditions. Fokker/Planck equation and applications to heating by neutral beams, RF, and fusion reaction products. Bremsstrahlung, synchrotron, and atomic radiation processes. Plasma surface interactions. Fluid description of burning plasma. Dynamics, stability, and control. Applications in tokamaks, tandem mirrors, and alternate concepts. Mr. Conn (Sp)

M237C. Fusion Reactor Technology and Design. (Same as Electrical Engineering M288.) Prerequisites: courses 135, 137. Magnetic fusion reactor concepts and technological components, solid and liquid breeder blankets, neutronics, fuel cycles, in-vessel components, radiation shielding, magnets, system design and optimization. Mr. Abdou (F)

239BA-239BZ. Seminars: Current Topics in Transport Phenomena (2 to 4 units each). Prerequisite: consent of instructor. Lectures, discussions, student presentations, and projects in areas of current interest in transport phenomena. May be repeated for credit. S/U grading.

239DA-239DZ. Seminars: Current Topics in Nuclear Engineering (2 to 4 units each). Prerequisite: consent of instructor. Lectures, discussions, student presentations, and projects in areas of current interest in nuclear engineering. May be repeated for credit. S/U grading.

239FA-239FZ. Special Topics in Transport Phenomena (2 to 4 units each). Prerequisites: consent of instructor, additional prerequisites for each offering as announced in advance by department. Advanced and current study of one or more aspects of heat and mass transfer, such as turbulence, stability and transition, buoyancy effects, variational methods, and measurement techniques. May be repeated for credit with topic change.

239GA-239GZ. Special Topics in Nuclear Engineering (2 to 4 units each). Prerequisites: consent of instructor, additional prerequisites for each offering as announced in advance by department. Advanced study in areas of current interest in nuclear engineering, such as reactor safety, risk-benefit trade-offs, nuclear materials, and reactor design. May be repeated for credit with topic change.

239HA-239HZ. Special Topics in Fusion Physics, Engineering, and Technology (2 to 4 units each). Prerequisites: consent of instructor, additional prerequisites for each offering as announced in advance by department. Advanced treatment of subjects selected from research areas in fusion science and engineering, such as instabilities in burning plasmas, alternate fusion confinement concepts, inertial confinement fusion, fission-fusion hybrid systems, and fusion reactor safety. May be repeated for credit with topic change. (W)

250A. Foundations of Fluid Dynamics. Prerequisite: course 150A or consent of instructor. Fundamental theorems of fluid dynamics. Ideal fluids, potential flow, vortex motion, and viscous flow. History of fluid dynamics, illustrated with problems from mechanics, aerodynamics, and geophysics. Mr. Kelly, Mr. Monkewitz (W)

250B. Viscous and Turbulent Flows. Prerequisite: course 150A or consent of instructor. Fundamental principles of fluid dynamics applied to study of fluid resistance. States of fluid motion discussed in order of advancing Reynolds number; wakes, boundary layers, instability, transition, and turbulent shear flows. Mr. Meecham, Mr. Monkewitz (W)

250C. Compressible Flows. Prerequisites: courses 150A, 150B, or equivalent. Effects of compressibility in viscous and inviscid flows. Steady and unsteady inviscid subsonic and supersonic flows; method of characteristics; small disturbance theories (linearized and hypersonic); shock dynamics. Ms. Karagozian (Sp)

250D. Computational Aerodynamics. Lecture, eight hours. Prerequisites: courses 150A, 150B or equivalent, 192C. Introduction to useful methods for computation of aerodynamic flow fields. Coverage of potential, Euler, and Navier/Stokes equations for subsonic to hypersonic speeds. Mr. Zhong (W)

251A. Stratified and Rotating Fluids. Prerequisite: course 150A or equivalent or consent of instructor. Fundamentals of fluid flows with density variations or rotation, illustrated by examples with environmental, geophysical, or technical importance. Linear and finite amplitude wave motion. Flow past bodies; blocking phenomena. Viscous effects. Instabilities. Turbulent shear flows, wakes, plumes, and gravity currents. Mr. Kelly (F, even years)

251B. Marine Hydrodynamics. Prerequisite: course 250A or equivalent or consent of instructor. Application of advanced aspects of potential flow theory to calculate forces and moments on bodies: added mass, force on two-dimensional hydrofoils, drag due to ship waves, response of a body to wave excitation. Mr. Kelly (Sp)

252A. Stability of Fluid Motion. Prerequisite: course 150A or equivalent or consent of instructor. Mechanisms by which laminar flows can become unstable and lead to turbulence of secondary motions. Linear stability theory; thermal, centrifugal, and shear instabilities; boundary layer instability. Nonlinear aspects: sufficient criteria for stability, subcritical instabilities, supercritical states, transition to turbulence. Mr. Kelly (W, odd years)

252B. Statistical Theory of Turbulence. Prerequisite: course 150A or consent of instructor. Development of statistical methods of wide utility in engineering applied to turbulent flows. Topics include stochastic processes, kinematics of turbulence, energy decay. Kolmogorov similarity, analytical theories, and origins of Reynolds stress. Mr. Meecham

252C. Fluid Mechanics of Combustion Systems. Prerequisites: courses 150A, 150B. Recommended: course 250C. Review of fluid mechanics and chemical thermodynamics applied to reactive systems, laminar diffusion flames, premixed laminar flames, stability, ignition, turbulent combustion, supersonic combustion. Ms. Karagozian (W)

253A. Advanced Engineering Acoustics. Advanced studies in engineering acoustics, including three-dimensional wave propagation; propagation in bounded media; Ray acoustics; attenuation mechanisms in fluids. Mr. Meecham

253B. Fundamentals of Aeroacoustics. Prerequisite: course 150A or consent of instructor. Detailed discussion of plane waves, point sources. Nonlinearity, layered and moving media, multiple reflections. Inhomogeneous wave equation. Monopole, dipole, quadrupole source fields from scattering inhomogeneities and turbulence; Lighthill's theory; moving sources. Similarity methods. Selected detailed applications. Mr. Meecham

254A. Special Topics in Aerodynamics. Prerequisites: courses 150A, 150B, 192A, 192B, and 192C, or equivalent, or consent of instructor. Special topics of current interest in advanced aerodynamics. Examples include transonic flow, hypersonic flow, sonic booms, and unsteady aerodynamics. Mr. Zhong

254B. Helicopter Engineering. Prerequisites: course 150A, Civil Engineering 108. Recommended: courses 166A, 169A. Introduction to helicopter engineering covering basic areas of helicopter design, aerodynamics, performance, stability and control, fatigue, and elements of rotor dynamic analysis. Class problem covering preliminary design of a helicopter is central part of course. Mr. Friedmann (F or W)

255A. Advanced Dynamics. Prerequisites: courses 155 and 169A, or consent of instructor. Variational principles and Lagrange's equations. Kinematics and dynamics of rigid bodies; precession and nutation of spinning bodies. Mr. Mingori (F)

255B. Mathematical Methods in Dynamics. Prerequisite: course 255A. Concepts of stability; state-space interpretation; stability determination by simulation, linearization, and Liapunov's direct method; the Hamiltonian as a Liapunov function; nonautonomous systems; averaging and perturbation methods of nonlinear analysis; parametric excitation and nonlinear resonance. Application to mechanical systems. Mr. Gibson (W, odd years)

256A. Mechanics of Deformable Solids. Prerequisites: courses 158A and 166A, or consent of instructor. Kinematics of deformation, strain tensors, invariance, compatibility; conservation laws; stress tensors; equations of motion; boundary conditions; constitutive equations: general theory, linearization, anisotropy; reciprocity linear isotropic elastic problems, plane and generalized plane problems; dynamic problems. Mr. Mal (F)

M256B. Applied Linear Elasticity. (Same as Civil Engineering M230.) Prerequisite: course 256A or consent of instructor. Review of general principles. Equations of linear isotropic elastostatics. Two-dimensional problems. Torsion and bending. Three-dimensional problems. Saint Venant's principles. Reciprocal theorem, variational principles. Mr. Mal (W)

256C. Plasticity, Creep, and Thermal Stresses. Prerequisite: course 156A or 158A or consent of instructor. Incremental plastic stress-strain relations. Stress-strain-time relations commonly used in structural analysis. Unified treatment of plastic strain, creep strain, and thermal strain. Elastic-plastic, and creep analyses of beams, columns, shafts, frames, and plates. Mr. Mai (Sp)

256F. Analytical Fracture Mechanics. Prerequisites: course 156A, 158A, or 166A, and Materials Science and Engineering 243A. Review of modern fracture mechanics, elementary stress analyses; analytical and numerical methods for calculation of crack tip stress intensity factors; engineering applications in stiffened structures, pressure vessels, plates, and shells. Mr. Mai

M257A. Elastic Wave Propagation I. (Same as Earth and Space Sciences M224A.) Prerequisite: course 158A or 166A or consent of instructor. Review of elasticity theory; elastic waves in unbounded media; reflection and refraction of plane elastic waves; surface waves and guided waves in multilayered media; waves generated by concentrated loads; radiation from dislocations; attenuation; representative applications in engineering and seismology. Mr. Mai (W)

M257B. Elastic Wave Propagation II. (Same as Earth and Space Sciences M224B.) Prerequisite: course M257A. Diffraction and scattering of elastic waves by isolated cracks and inclusions; normal mode theories for vibration of finite elastic bodies; dynamic theories of fracture; representative applications in engineering and seismology. Mr. Mai

258. Experimental Techniques in Fluid Mechanics and Thermal Science. Prerequisite: consent of instructor. Survey of wind tunnels and other facilities for research in fluid mechanics, aerodynamics, and heat transfer; analysis of their critical design features. Modern sensors, instruments, and measurement techniques. Signal processing and storage by analog and digital methods. Mr. Monkewitz

259A. Seminar: Advanced Topics in Fluid Mechanics. Prerequisite: consent of instructor. Advanced study of topics in fluid mechanics, with intensive student participation involving assignments in research problems leading to term paper or oral presentation (possible help from guest lecturers). Mr. Kelly (W)

259B. Seminar: Advanced Topics in Solid Mechanics. Prerequisite: consent of instructor. Advanced study in various fields of solid mechanics on topics which may vary from term to term. Topics include dynamics, elasticity, plasticity, and stability of solids. Mr. Mai

260AA-260ZZ. Seminars: Current Topics in Mechanical Engineering (2 to 4 units each). Prerequisite: consent of instructor. Lectures, discussions, and student presentations and projects in areas of current interest in mechanical engineering. May be repeated for credit. S/U or letter grading. (Sp)

261A. Energy and Variational Principles in Structural Mechanics. Prerequisite: course 156A or 158A or 166A. Theory of linear elasticity. Calculus of variations. Principles of minimum potential energy and complementary energy. Stationary variational principles. Energy theorems. Matrix methods of structural analysis, with application to truss and frame problems. Variational principles as basis of finite element methods. Mr. Bendiksen (F)

263A. Electromechanics of Computer-Controlled Machines. Lecture, four hours; other, eight hours. Prerequisite: course 171A. Recommended: courses 163A, 163B, 163C. Mechanics and control problems of computer-controlled electromechanical systems, with special emphasis on analysis of energy flow between mechanical, electrical, and control components when applied to electromagnetic and piezoelectric actuators and control systems with mechanical flexibilities. Mr. Yang (W)

263B. Topics in Modeling and Dynamics of Aerospace Vehicles. Prerequisites: courses 171A, 255A. Recommended: courses 154A, 255B, M269A. Modeling, dynamics, and stability of aerospace vehicles; improvement of performance using active control; applications to spinning and dual-spin spacecraft, space structures, rotordynamics and coupled rotor/fuselage dynamics of helicopters, active control of aircraft modes. Mr. Friedmann, Mr. Mingori (Sp, even years)

263C. Mechanics and Trajectory Planning of Industrial Robots. Lecture, four hours; other, eight hours. Prerequisite: course 163A or consent of instructor. Theory and implementation of industrial robots. Design considerations. Kinematic structure modeling, trajectory planning, and system dynamics. Differential motion and static forces. Individual student study projects. Mr. Yang (W)

263D. Advanced Robotics. Lecture, four hours; outside study, eight hours. Recommended (but not prerequisite): courses 155, 163C, 171A, 263C. Motion planning and control of articulated dynamic systems: nonlinear joint control, experiments in joint control and multi-axes coordination, multibody dynamics, trajectory planning, motion optimization, dynamic performance and manipulator design, kinematic redundancies, motion planning of manipulators in space, obstacle avoidance. Mr. Shiller (Sp)

M267A. Optimum Structural Design. (Same as Civil Engineering M240.) Prerequisite: course 261A or Civil Engineering 235A or consent of instructor. Synthesis of structural systems; analysis and design as optimization problems; techniques for synthesis and optimization; application to aerospace and civil structures. Mr. Felton, Mr. Friedmann (W)

268B. Failure of Structural Systems. Lecture, four hours; other, eight hours. Prerequisite: Civil Engineering 135B. Exploration of a current area of research in depth. Mr. Friedmann (F)

M269A. Dynamics of Structures. (Same as Civil Engineering M237A.) Prerequisite: course 169A. Principles of dynamics. Determination of normal modes and frequencies by differential and integral equation solutions. Transient and steady state response. Emphasis on derivation and solution of governing equations using matrix formulation. Mr. Bendiksen, Mr. Friedmann (F)

269B. Advanced Dynamics of Structures. Prerequisite: course M269A. Analysis of linear and nonlinear response of structures to dynamic loadings. Stresses and deflections in structures. Structural damping and self-induced vibrations. Mr. Friedmann (W)

M269C. Introduction to Probabilistic Dynamics. (Same as Civil Engineering M237C.) Prerequisite: course 169A. Response of structural and mechanical systems to random vibrations. Stationary and non-stationary excitations. Response of systems with random parameters. Discrete and continuous linear systems. Applications to earthquakes, wind sway of buildings, gust response, vibrations due to gearing inaccuracies, train vibrations. Mr. Friedmann (Sp, even years)

269D. Aeroelastic Effects in Structures. Prerequisite: course M269A. Presentation of field of aeroelasticity from unified viewpoint applicable to flight structures, suspension bridges, buildings, and other structures. Derivation of aeroelastic operators and unsteady airloads from governing variational principles. Flow induced instability and response of structural systems. Mr. Bendiksen, Mr. Friedmann (Sp, odd years)

271A. Dynamic Systems Optimal Control. Prerequisite: course 171C or consent of instructor. Optimal control problem formulation. Performance criteria for deterministic dynamic systems. Variational methods and Pontryagin's maximum principle for continuous and discrete-time models. Inequality constraints. Sensitivity analysis. Numerical computation methods for solving boundary value problems of optimal control. Applications in various fields. Mr. Gibson, Mr. Mingori (F)

271B. Dynamic Systems Stochastic Estimation and Control. Prerequisites: courses 171C, 193A, and 271A, or consent of instructor. Applied treatment of optimal state estimation and stochastic control problems for continuous and discrete-time dynamic models with state-space descriptions. Kalman filtering, smoothing, and prediction algorithms. Stochastic optimal controllers; separation principle. Emphasis on efficient numerical computations. Applications in various fields. Mr. Speyer (W)

271C. Dynamic Systems Identification, Stability, and Adaptive Control. Prerequisite: course 271A or consent of instructor. Recommended: course 271B. Nonlinear system stability. Dynamic systems modeling, identification, and parameter estimation techniques. Combined identification and control and self-adaptive control. Mr. Speyer (Sp)

271D. Seminar: Special Topics in Dynamic Systems Control. Prerequisite: consent of instructor. Seminar on current research topics in dynamic systems modeling, control, and applications. Topics selected from process control, differential games, nonlinear estimation, adaptive filtering, industrial and aerospace applications, etc. Mr. Speyer (F)

274. Methods of Probabilistic Safety Assessment. (Formerly numbered 236D.) Lecture, four hours; outside study, eight hours. Prerequisite: course 174 or consent of instructor. Methods for evaluation of risk from large technological systems; advanced statistical methods for data analysis; models of dependent failures; elicitation and use of expert opinions; human reliability models; propagation of uncertainties in physical models; applications to nuclear power plants, waste repositories, and space systems. Mr. Apostolakis (W)

275. Principles and Methods of Risk Management. Lecture, four hours; outside study, eight hours. Prerequisites: courses 174 and 274, or consent of instructor. Considerations regarding balancing of society's resources: risk/benefit, value/impact, and risk management. Methodological problems and approaches. Risk-based decision theory, aspects of risk management: criteria and standards, uncertainty, perception, value of life, and judicial review. Case studies. Mr. Kastenber (Sp)

M291A. Analytical Methods of Engineering I. (Same as Electrical Engineering M208A.) Prerequisites: Mathematics 131A, 132. Application of abstract mathematical methods to engineering problems. Review of elements of measure and integration, L^2 theory — linear spaces and operators. Eigenvalue problems. Introduction to spectral theory — elementary distribution theory. Applications to problems in engineering. Mr. Gibson (W)

M291B. Analytical Methods of Engineering II. (Same as Electrical Engineering M208B.) Prerequisite: course M291A or Electrical Engineering M208A or consent of instructor. Application of modern mathematical methods to engineering problems. Review of spectral theory. Green's functions and eigenvalue problems for second-order ordinary differential equations and their adjoints. Discrete and continuous spectra for ordinary and partial differential equations. Initial and boundary value problems. Mr. Gibson (Sp)

291C. Integral Equations in Engineering. Prerequisite: Mathematics 250B. Introduction to generalized function theory and Green's functions. Conversion of partial equations to integral equations and classification of integral equations. Solution to integral equations with degenerate kernels; discussions of successive approximations and Fredholm and Hilbert/Schmidt theory. Mr. Mai (Sp)

294. Advanced CAD/CAM Systems. Lecture, four hours; outside study, eight hours. Prerequisite: course 194 or consent of instructor. CAD/CAM systems design, with special emphasis on computational geometry, path to trajectory conversion, command generation, controller and interpolator design, and current research topics in CAD/CAM systems. Mr. Yang (W)

295A. Computer-Aided Manufacturing. Prerequisites: courses 94, 163A, 163C, 195L. Analysis of usage of computer in manufacturing. Manufacturing information systems; group technology; computer-aided manufacturing process planning; flexible manufacturing systems. Mr. Yang (F)

295B. Computer-Integrated Manufacturing. Prerequisite: course 295A. Systems analysis and design of computer-integrated manufacturing, including automated factories and flexible manufacturing systems. Mr. Yang (W)

298. Seminar: Engineering (2 to 4 units). Prerequisites: graduate standing in mechanical, aerospace, and nuclear engineering, consent of instructor. Seminars may be organized in advanced technical fields. If appropriate, field trips may be arranged. May be repeated with topic change.

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading. Mr. Speyer (F,W,Sp)

497A-497B. Field Project in Manufacturing Engineering. Lecture, two hours. Prerequisite: consent of instructor. Teams of students perform detailed system analysis and plan design of manufacturing engineering systems at various manufacturing plants. In Progress grading. Mr. Yang (W, 497A; Sp, 497B)

596. Directed Individual or Tutorial Studies (2 to 8 units). Prerequisites: graduate standing in mechanical, aerospace, and nuclear engineering, consent of instructor. Petition forms to request enrollment may be obtained from assistant dean, Graduate Studies. Supervised investigation of advanced technical problems. S/U grading.

597A. Preparation for M.S. Comprehensive Examination (2 to 12 units). Prerequisites: graduate standing in mechanical, aerospace, and nuclear engineering, consent of instructor. Reading and preparation for M.S. comprehensive examination. S/U grading.

597B. Preparation for Ph.D. Preliminary Examinations (2 to 16 units). Prerequisites: graduate standing in mechanical, aerospace, and nuclear engineering, consent of instructor. S/U grading.

597C. Preparation for Ph.D. Oral Qualifying Examination (2 to 16 units). Prerequisites: graduate standing in mechanical, aerospace, and nuclear engineering, consent of instructor. Preparation for oral qualifying examination, including preliminary research on dissertation. S/U grading.

598. Research for and Preparation of M.S. Thesis (2 to 12 units). Prerequisites: graduate standing in mechanical, aerospace, and nuclear engineering, consent of instructor. Supervised independent research for M.S. candidates, including thesis prospectus. S/U grading.

599. Research for and Preparation of Ph.D. Dissertation (2 to 16 units). Prerequisites: graduate standing in mechanical, aerospace, and nuclear engineering, consent of instructor. Usually taken after student has been advanced to candidacy. S/U grading.

Schoolwide Programs, Courses, and Faculty

6426 Boelter Hall, (310) 825-2473

Bachelor of Science in Engineering

Bioengineering Major Field

The bioengineering major field is an interdepartmental program leading to a Bachelor of Science degree in Engineering that may soon be replaced by several new programs in this area. Therefore, applicants may not be admitted to this major but may have an opportunity to pursue one of the new alternatives. For further information, contact the Associate Dean, Student Affairs, 6426 Boelter Hall.

Graduate Study

For information on graduate admission to the schoolwide engineering programs and requirements for the M.S., Engineer, and Ph.D. degrees and certificate of specialization, see "Graduate Study" at the beginning of this chapter.

M.S. and Ph.D. in Engineering

Schoolwide programs, which may admit a limited number of applicants, are available in biocybernetics and man/machine/environment systems.

M.A.-Latin American Studies/ M.S.-Engineering

The school and the Latin American Studies Program have established an articulated degree program through which students may complete requirements for the M.S. in Engineering and the interdepartmental M.A. in Latin American Studies. After successful completion of the program, students are awarded both degrees simultaneously. Articulated programs do not allow course credit to be applied toward more than one degree.

Lower Division Course

97. Introduction to Engineering Disciplines. (Formerly numbered 98.) Lecture, four hours; discussion, four hours; outside study, four hours. Introduction to engineering as a professional opportunity for freshman students by exploring difference between engineering disciplines and functions engineers perform. Development skills and techniques for academic excellence through the team process. Investigation of national need underlying current effort to increase participation of historically underrepresented groups in the U.S. technological work force. P/NP grading. Mr. Jacobsen (F)

Graduate Courses

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading. (F,W,Sp)

470A-470D. The Engineer in the Technical Environment (3 units each). Limited to students in Engineering Executive Program. Theory and application of quantitative methods in analysis and synthesis of engineering systems for purpose of making management decisions. Optimization of outputs with respect to dollar costs, time, material, energy, information, and manpower. Case studies and individual projects.

471A-471B-471C. The Engineer in the General Environment (3 units, 3 units, 1½ units). Limited to students in Engineering Executive Program. Influences of human relations, laws, social sciences, humanities, and fine arts on development and utilization of natural and human resources. Interaction of technology and society past, present, and future. Change agents and resistance to change. In Progress grading for courses 471B-471C only.

472A-472D. The Engineer in the Business Environment (3 units, 3 units, 3 units, 1½ units). Limited to students in Engineering Executive Program. Language of business for the engineering executive. Accounting, finance, business economics, business law, and marketing. Laboratory in organization and management problem solving. Analysis of actual business problems of firm, community, and nation, provided through cooperation and participation with California business corporations and government agencies. In Progress grading (credit to be given on completion of courses 472B and 472D).

473A-473B. Analysis and Synthesis of a Large-Scale System (3 units each). Recitation, two and one-half hours. Limited to students in Engineering Executive Program. Problem area of modern industry or government is selected as class project, and its solution is synthesized using quantitative tools and methods. Project also serves as laboratory in organization for a goal-oriented technical group. In Progress and S/U grading.

495. Teaching Assistant Training Seminar. Prerequisites: graduate standing in engineering, appointment as a teaching assistant. Seminar on communication of engineering principles, concepts, and methods, preparation, organization of material, presentation, use of visual aids, grading, advising, and rapport with students. S/U grading. (F)

501. Cooperative Program (2 to 8 units). Prerequisite: consent of UCLA graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Used to record enrollment of UCLA students in courses taken under cooperative arrangements with USC. S/U grading.

Schoolwide Engineering Faculty

Professors Emeriti

Edward P. Coleman, Ph.D.
J. Morley English, Ph.D.
Alfred C. Ingersoll, Ph.D.
Herbert B. Nottage, Ph.D.
Allen B. Rosenstein, Ph.D.
Bonham Spence-Campbell, E.E.

Graduate School of Architecture and Urban Planning

Richard S. Weinstein, Dean

9

In recent years Los Angeles has emerged as a dominant and growing center of finance and trade, reflecting the continued shift of the national agenda west to the Pacific Rim and south toward Mexico and Latin America. This growth of intense commercial activity has been linked to important developments in the arts, sciences, and communications, producing a regional culture of great ethnic diversity, energy, and momentum. The UCLA Graduate School of Architecture and Urban Planning (GSAUP) has recently established a Center for Regional Policy Studies to address environmental, transportation, social policy, and urban design issues, while a flourishing local architectural culture is receiving increasing international attention.

Professional education and research are the central concerns of GSAUP within a context of rapid professional change and experimentation. Our belief is that a curriculum in architecture and urban planning responsive to the emerging needs of this important region can make a significant contribution to professional development. The school has created the Urban Innovations Group (UIG) as an independent, nonprofit, professionally managed practice arm where faculty and students undertake architectural, urban design, and planning projects on a contract basis. To supplement the classroom experience and to help bring the public and the professional community into active relationship with the school, a series of public lectures, conferences, and various exhibits are scheduled throughout the academic year.

A noted regular faculty is supplemented by distinguished visitors, while the student body is international in character. Developed as a small school with an enrollment of about 350, GSAUP encourages close interaction between faculty and students to maximize the educational experience.

Graduate School of Architecture and Urban Planning

1317 Perloff Hall, (310) 825-3791

The Graduate School of Architecture and Urban Planning (GSAUP) at UCLA offers programs of study leading to the degrees of Master of Architecture (M.Arch.), M.A. in Architecture, M.A. in Urban Planning, Ph.D. in Architecture, and Ph.D. in Urban Planning. Currently, the school offers educational opportunities for a broad spectrum of careers, including a number that are not yet common in practice, but which reflect emerging social needs. It offers a choice of two major programs: Architecture/Urban Design and Urban Planning.

Architecture/Urban Design

B315 Perloff Hall, (310) 825-0525, 825-7857

Professors

Marvin Adelson, Ph.D.
 Samuel Aroni, Ph.D., *Recalled*
 Charles M. Eastman, M.Arch.
 Baruch Givoni, Ph.D., *Recalled*
 Thomas S. Hines, Ph.D.
 Lionel March, Sc.D.
 Murray A. Milne, M.Arch.
 Barton Myers, M.Arch.
 Richard Schoen, M.Arch.
 George Stiny, Ph.D.
 Thomas R. Vreeland, Jr., M.Arch., *Recalled*
 Richard S. Weinstein, M.A., *Dean*

Associate Professors

Franklin Israel, M.Arch.
 F. Eugene Kupper, M.Arch.
 Jurg Lang, Dipl.Arch., *Program Head*
 Robin Liggett, Ph.D. (*Distinguished Teaching Award*)
 George Rand, Ph.D.
 Ben Refuerzo, M.Arch.

Assistant Professors

Diane Favro, Ph.D.
 Terry Knight, Ph.D.
 Sylvia Lavin, Ph.D.
 Dagmar Richter, M.A. (Diplom.)

Lecturer

Berge Aran, Ph.D.

Adjunct Professors

Charles Jencks, Ph.D.
 Robert J. Yudell, M.Arch.

Degrees Offered

Architecture	M.Arch. I, M.Arch. II, M.A., Ph.D.
Urban Planning	M.A., Ph.D.

Adjunct Associate Professors

Kuppaswamy Iyengar, M.Arch.
 Barton Phelps, M.Arch.

Scope and Objectives

Architecture/Urban Design at UCLA offers four degree programs tailored to the needs of different groups of students: M.Arch. I, M.Arch. II, M.A., and Ph.D.

M.Arch. I is a three-year first professional degree program which is accredited by the National Architectural Accrediting Board (NAAB). It does not assume any prior background in architecture. Students who do have some prior architecture background (e.g., a four-year undergraduate degree) may also enter the program and may petition to waive certain required courses and substitute more advanced electives in their place. M.Arch. I graduates normally pursue professional careers in architectural practice.

M.Arch. II is an advanced professional degree program for students who already hold a first professional degree in architecture. It provides opportunities for intensive concentration in a variety of areas of professional specialization.

The M.A. and Ph.D. degree programs provide opportunities to pursue research and scholarship in the field of architecture. Graduates typically pursue academic or applied research and consulting careers.

Master of Architecture I

Admission

The M.Arch. I program is open to students holding a bachelor's degree (or its equivalent) comparable in standards and content to a bachelor's degree from the University of California. Applications are accepted from students with a variety of backgrounds. No academic or experiential training in architecture is required, although some students have had experience in the field prior to admission.

Applicants are required to submit three letters of recommendation, academic transcripts, a statement of purpose, and a "creative" portfolio. No admission tests are required. In addition to the application for graduate admission,

applicants should submit the "Departmental Supplement," available from the Admissions Office, Graduate School of Architecture and Urban Planning, B102 Perloff Hall, UCLA, Los Angeles, CA 90024-1467.

For information on the proficiency in English requirements for international graduate students, refer to "Graduate Admission" in Chapter 3.

Major Fields or Subdisciplines

No in-depth specialization is required within the context of the M.Arch. I program. However, you are required to concentrate several elective courses within a single curricular area. A minimum of three elective courses must be taken within this curricular area, including two courses in theory and one studio application, during the second year of study.

Specializations are currently available in the following areas: urban design; policy, programming, and evaluation (including social building); technology (including energy conserving design); design theory and methods (including computer-aided design); history, analysis, and criticism of architecture.

Course Requirements

You must complete a minimum of 27 courses, at least 24 of which must be four-unit courses at the graduate level (200 and 400 series). The total number of units required is 108. The required courses, listed below, must be taken in the sequence indicated.

First Year

Fall: Courses 200, 411, 421
 Winter: Courses 412, 431, 436
 Spring: Courses 413, 432, 442

Second Year

Fall: Courses 414, 433, elective (in sequence), elective
 Winter: Courses 415, 441, elective (in sequence)
 Spring: Courses 402 or 403, 201, elective

Third Year

Fall: Courses 415 or 402 or 403, 291, elective
 Winter: Courses 461, 498, elective
 Spring: Course 597A, elective

You must complete an elective sequence consisting of at least three related courses, terminating in a 402 or 403 advanced studio (normally in Spring Quarter of your second year). The elective sequence is intended to allow you to gain in-depth knowledge of a chosen area of specialization and to apply that knowledge in a design studio. Elective sequences are offered in the following areas: (1) urban design, (2) policy, programming, and evaluation, (3) technology, (4) design theory and methods, including CAD, (5) history, analysis, and criticism of architecture. Details of currently available and approved elective sequences may be obtained from the graduate adviser.

In addition to completing an elective sequence, you are expected to explore a variety of topics by taking additional elective courses within the Architecture/Urban Design Program, in the Urban Planning Program, or outside GSAUP. You are required to take at least 28 units of elective coursework, including the elective sequence. At least 16 units must be taken within the Graduate School of Architecture and Urban Planning.

Students with undergraduate degrees in architecture or undergraduate degrees with majors in architecture may, at the end of their first term, petition the curriculum committee for advanced standing. Students granted advanced standing may have their residence requirement shortened to two years (six terms), have their unit requirement reduced to 72 units, and may be permitted to waive specified required courses.

If you can demonstrate that you already have adequate background in topics covered by specific required courses, you may petition to waive those courses and replace them with electives. However, permission to waive required courses does not reduce the minimum number of 27 courses required for the M.Arch. I degree nor does it reduce the nine-term residence requirement. The petition should be addressed to the faculty member responsible for that course and may be granted at the faculty member's discretion, possibly by means of a special examination.

You must enroll in eight units of Architecture and Urban Planning 597A, which may not be taken until all other required courses have been successfully completed. You may also apply eight units of course 596A toward the elective course requirements for graduation. Eight of the 16 units may be applied toward the graduate course requirement. All independent 500-series work must be undertaken with the guidance and approval of an Architecture/Urban Design Program faculty member and is graded on an S/U basis.

Comprehensive Examination Plan

You are required to successfully complete a comprehensive examination in any one of the following areas: (1) architectural design, (2) urban design, (3) policy, programming, and eval-

uation, (4) technology, (5) design theory and methods, (6) history, analysis, and criticism of architecture. The examinations are administered by the appropriate curriculum area committees.

Master of Architecture II

Admission

The M.Arch. II program emphasizes advanced studies in architecture and requires that applicants hold a five-year B.Arch. degree or equivalent.

You must state your major area of specialization on your application, as you are admitted to a specific concentration area and may change only by petition to the advanced graduate studies curriculum committee. A minimum of four academic terms in residence is required. This is a full-time program, and you are expected to remain continuously in residence until all academic work is completed, unless a leave of absence is granted.

If your native language is not English, you are required to score at least 580 on the Test of English as a Foreign Language (TOEFL). In addition, you must take the English as a Second Language Placement Examination (ESLPE) on arrival at UCLA and, beginning in your first term in residence, take any required English as a Second Language courses. Because such courses may not be applied toward the minimum course requirement, you should expect to spend additional time in residence. Refer to "Proficiency in English" under "Graduate Admission" in Chapter 3 for further information.

Major Fields

You are required to select your major area at the time of application to the program and must take a minimum of 24 units of coursework in that area. The six major areas include architectural design; urban design; policy, programming, and evaluation; technology; design theory and methods, including CAD; and history, analysis, and criticism of architecture.

Course Requirements

A minimum of 44 units of coursework (normally 11 four-unit courses) is required. At least 32 units must be at the graduate level; eight units of Architecture and Urban Planning 597A or eight units of course 598A are to be included in the 32 units. The remaining 12 units may be either upper division or graduate courses. No more than eight units of 596 courses may be applied toward the requirements for graduation.

Students in architectural design are required to complete at least 12 units of advanced design studio work plus 12 units of approved seminar courses.

Students in urban design must complete at least 12 units of advanced design studio work plus 12 units of approved seminar courses.

Students in the other four major areas (policy, programming, and evaluation; technology; design theory and methods, including CAD; history, analysis, and criticism of architecture) are required to complete an approved sequence of three core courses consisting of two lecture/seminar courses which establish substantive foundations and a project course (Architecture and Urban Planning 403) which explores applications, plus 12 units of elective courses in the major area.

There may be more than one approved core sequence in each of the areas. The curriculum committee establishes and publishes a list of approved core sequences, which is reviewed and revised as necessary on a yearly basis. In special cases you may propose core sequences not on the list for approval by the committee.

Thesis Plan

Under this plan you may submit either a research project or a design project. A three-person thesis committee must be established at least one term before presentation of the thesis, and you must take at least eight units of Architecture and Urban Planning 598A. The thesis must be submitted within two years after entry into the program.

Comprehensive Examination Plan

Under this plan you are required to establish a comprehensive examination committee at least one term before taking the examination and to receive approval of an examination topic from that committee. You are then required to take at least eight units of Architecture and Urban Planning 597A. The examination consists of a research project or design project on the approved topic. The examination must be submitted within two years after entry into the program.

Master of Arts in Architecture

Admission

This program offers an academic degree and prepares students to do specialized research or teaching in fields related to the architecture and urban design professions. Applicants are required to hold a bachelor's degree (or its equivalent) comparable in standards and content to a bachelor's degree from the University of California. They should possess the experience and knowledge that would allow them to do advanced research in whatever aspect of architecture they plan to explore within the context of the master's program.

Applicants are required to submit three letters of recommendation, academic transcripts, a statement of purpose, and a "creative" portfolio. No admission tests are required. In addition to the application for graduate admission, applicants should submit the "Departmental Supplement," available from the Admissions Office, Architecture/Urban Design, Graduate School of Architecture and Urban Planning.

For information on the proficiency in English requirements for international graduate students, refer to "Graduate Admission" in Chapter 3.

Major Fields or Subdisciplines

There are four major areas of concentration: policy, programming, and evaluation; technology; design theory and methods; and history, analysis, and criticism of architecture. In addition, you have the option of the open M.A. wherein you structure your own area of interest from the courses offered by the school.

Degree Requirements

(1) Candidates for the M.A. are expected to be in residence at UCLA for at least two years and undertake six terms of study.

(2) You must select and pursue one area of specialization.

(3) A thesis or a comprehensive project is required. When the committee members have signed the thesis proposal, you may take at least four and no more than eight units of Architecture and Urban Planning 598A and begin work on the thesis itself. The course should be taken at some point during your last year of study.

(4) You are required to complete a minimum of 16 courses (64 units) of graduate or upper division work, at least five (20 units) of which must be 200-series courses and at least two (eight units) of which must be 500-series courses. No more than 20 units of 500-series courses may be applied toward the total unit requirement for the degree.

(5) Up to seven courses may be taken from upper division or graduate courses offered campuswide.

(6) The University of California minimum requirements for the Master of Arts degree must be completed.

(7) You must enroll in at least four and no more than eight units of course 598A. You may also apply 12 units of course 596A toward the unit requirements for graduation.

(8) Courses in the 400 series may not be applied toward the graduate course requirement for the M.A. degree, but a limited number may be applied toward the elective course requirements.

Thesis or Comprehensive Examination Plan

M.A. students can choose to present a design project as a comprehensive examination (see M.Arch. I) or to do a research thesis. They should make this determination at least three months prior to the anticipated date of graduation.

Ph.D. in Architecture

Admission

Applicants must hold a bachelor's degree from an accredited college or university. It is anticipated that most applicants will have completed a first professional degree in architecture (a five-year B.Arch. or a professional M.Arch. degree). Students with degrees in other fields are also encouraged to apply but may, at the discretion of the Ph.D. program committee, be required to complete specific coursework as a condition of admission.

Applicants are required to submit three letters of recommendation, academic transcripts, a statement of purpose, a proposed program of studies, a short biographical resumé, and examples of research and/or creative work. An interview may also be required.

Applicants whose native language is other than English are required to pass the Test of English as a Foreign Language (TOEFL) before entering. Refer to "Proficiency in English" under "Graduate Admission" in Chapter 3 for further information.

Criteria considered for admission include (1) evidence of capacity for original scholarship and research in architecture, and ability to achieve eminence in the field, (2) an outstanding academic record, including grades (3.5 minimum GPA), Graduate Record Examination (GRE) scores, and references, (3) demonstration in the work submitted of adequate communication skills, particularly writing skills, and (4) presentation of a clear and realistic statement of purpose.

Preliminary Evaluation of Research Skills

— Students who have any background deficiencies in research skills essential for work in their chosen areas of Ph.D. specialization (e.g., mathematics, statistics, or computing) are required to round out their knowledge early in their residence. The Ph.D. program committee conducts a formal evaluation of each student before the end of the first year in residence to assure adequacy of research skills. In order to undergo the evaluation you must have made up any background deficiencies and present a research paper or other evidence of capacity for original work.

If you are unable to satisfy the committee of the adequacy of your research skills, you will either be given specific advice on how to make up remaining deficiencies and be reevaluated at a later date, or else be advised to leave the program. If you do not satisfy the committee by the end of the sixth term, you are subject to termination from the program.

Major Fields

Students are required to undertake programs of study that include one major area selected from the following: policy, programming, and evaluation; technology; design theory and methods, including CAD; and history, analysis, and criticism of architecture.

Majors outside these areas, or combinations of some of them, may be undertaken, subject to the approval of the Ph.D. program committee if supported by qualified faculty members willing to provide the necessary instruction and guidance.

Minor Field Requirement

You are required to include in your program of study at least one minor field, which must be from outside the Architecture/Urban Design Program (i.e., outside the school or within the Urban Planning Program). The objectives of the minor field requirement are to assure adequate academic breadth in your preparation and to encourage participation in the general intellectual life of the University. Students planning their minor field courses are advised accordingly.

The normal method of demonstrating competence in the minor field is to complete at least 16 units of coursework, which represents a unified course of study in that field, with grades of B or better. If a qualified Architecture/Urban Design Program faculty member is willing to provide the necessary supervision, the Ph.D. program committee may accept an alternative method of completing this requirement (e.g., a substantial research project).

Mathematics, Computing, or Foreign Language Requirement

You are expected to develop adequate skills in mathematics, computing, or foreign languages, as appropriate to your field of specialization, and are strongly advised to complete this requirement as early as possible. One of the following is required.

Foreign Language Requirement — You must fulfill one of the following:

(1) Satisfactory reading knowledge of two foreign languages relevant to your field of specialization as demonstrated by one of the following methods: (a) a Graduate School Foreign Language Test (GSFLT) score of 500 or better, (b) a passing grade on the Departmental Language Examination, or (c) taking and completing with grades of B or better two courses from French 3, German 3, Italian 3, Spanish 5.

(2) Superior knowledge of one foreign language relevant to your field of specialization as demonstrated by one of the following methods: (a) a GSFLT score of 600 or better, (b) distinction on the Departmental Language Examination, or (c) taking and completing with a grade of B or better one course from French 5, German 6, Italian 5, Spanish 25.

(3) English, if your language of education is not English.

Mathematics or Computing Requirement

— Proficiency in mathematics and computing as demonstrated by passing an approved group of four graduate or upper division courses in mathematics, statistics, and/or computing with grades of B or better. The courses must not over-

lap in content and normally require prerequisites which may not be applied toward the four-course requirement.

Courses applied toward this requirement may not also be applied toward a major or minor field requirement.

Course Requirements

Generally you are required to take sufficient coursework to provide adequate preparation for the qualifying examination and the dissertation.

Each student in the program is required to take a proseminar in architectural theory, normally in Fall Quarter of the first year. The proseminar is intended to establish a general orientation to the field of architecture that will ensure that you have an appropriate foundation for the acquisition of competence in the theory, methods, and history of architecture. In consultation with your adviser, you are expected to take whatever additional coursework is necessary to reach the required level.

Holders of a professional degree in architecture before admission to the program must complete four terms in residence and 48 units of coursework in order to become eligible to take the qualifying examination. If you have an M.Arch. I, M.Arch. II, or M.A. degree in Architecture from UCLA, the Ph.D. program committee may, at its discretion, reduce these requirements to three terms in residence and 36 units of coursework. All other candidates are required to complete six terms in residence and 72 units of coursework.

Half of the units must be graduate courses in architecture/urban design, and an overall GPA of 3.0 or better must be maintained. In exceptional cases, and with prior approval of the Ph.D. program committee, upper division courses may be applied toward these requirements. At least 32 units must be in 200-series courses.

Each of the major field core sequences of three to five courses includes one project course (Architecture and Urban Planning 403), which focuses on the practical application of research results to architectural problems and provides opportunity to explore interrelations between the research and professional concerns of the field.

Students who are admitted to the Ph.D. program without having the background of a professional degree in architecture are required to take, in addition to the other course requirements, at least 24 units of graduate-level courses in architecture as recommended by their adviser and approved by the Ph.D. program committee.

No more than eight units of course 596A may be applied toward degree requirements, but eight units of course 597A and as many units of course 599A as necessary may be applied.

Qualifying Examinations

After successful completion of (1) the preliminary evaluation of research skills, (2) the mathematics, computing, or foreign language requirements, and (3) the coursework requirements, you may apply to take the qualifying examinations. They consist of a comprehensive written examination in the major field, a written examination in the minor field (this may be waived under certain circumstances), and an oral examination focusing primarily on your proposed dissertation. The qualifying examinations should be completed in one term and must not extend over more than two terms.

The major and minor field examinations are conducted by a five-member examination committee. The written examination in the major field is a substantial exercise followed by an oral presentation to the committee. The work must demonstrate your ability to teach an introductory course in the field and contribute to the progress of the field through scholarship and research. The written examination in the minor field is a short exercise and may be waived for candidates who hold a recognized master's degree in the field in which the minor is located, or at the discretion of the examination committee on the basis of outstanding grades (at least two A grades out of the four minor field courses).

The University Oral Qualifying Examination, conducted by the doctoral committee, takes place after successful completion of the two written qualifying examinations. It explores your proposed dissertation topic and your ability to undertake the proposed work successfully. After passing the oral examination, you are advanced to candidacy (the C.Phil. degree is not awarded) and may begin work on your dissertation.

Final Oral Examination

The examination involves a verbal defense of the completed dissertation before the doctoral committee.

Upper Division Courses

187. Planning and Designing Our Cities. Introduction to urban planning and urban design, with emphasis on methods and tools used in practice. Overview of planning field; physical planning for redevelopment, for projects in expanding areas, and for new towns. Lectures (with illustrated examples), field visits, and presentation of students' own projects create framework for expanding understanding of urban planning and design process. Mr. Kamnitzer

190. Human Environment: Introduction to Architecture and Urban Planning. Kinds of problems that arise in creating and maintaining an environment for urban activities, and approaches and methods of architecture and urban planning in helping to cope with such problems. Complexities involved in giving expression to human needs and desires in provision of shelters and movement systems, to possibilities and limitations of technology and building forms, and to issues involved in relating the human-made to the natural environment. Students encouraged to comprehend major urban issues both as citizens and as potential technical experts. Mr. Rand (F)

199. Special Studies (2 to 8 units). Prerequisite: consent of instructor. Independent research or investigation on a selected topic to be arranged with a faculty member. May be repeated for credit.

Graduate Courses

200. History of Architecture. (Formerly numbered 200A-200B-200C.) Lecture, three hours. Introduction to history of Western architecture and the urban environment from antiquity to the modern era. Lectures and readings on major architectural monuments and urban issues in relation to their theoretical, philosophical, and sociopolitical contexts. Ms. Favro, Ms. Lavin

201A. Theory of Architecture (2 units). (Formerly numbered 201.) Lecture, 90 minutes. Exploration of conceptual and historical structures that shape current issues in architectural theory. Readings in primary texts serve as framework for understanding the nature of speculative inquiry in an architectural context. Ms. Lavin (F)

201B. Theory of Form (2 units). (Formerly numbered 201.) Lecture/studio, 90 minutes. Exploration of theories of form and composition through lectures and exercises.

203. Decision Making in Planning and Design. Lecture, three hours. Exploration of challenges of decision making in general and in the design professions, which have far-reaching effects not only on clients but also on professionals' own prospects. Psychological and mathematical approaches for improving decision quality. Mr. Adelson

204. Imaging the Future. Seminar, three hours. Introduction to social and technological forecasting, including nature and limitations of forecasting, ideology and values in forecasting, review of integrative forecasting techniques, and role of forecasting in environmental planning, design, and management processes. Mr. Adelson

219. Special Topics in the Built Environment (2 to 8 units). Lecture, three hours. Seminar on topics in the built environment selected by the faculty. May be repeated for credit.

224A-224B. Formal Theory of Composition. Lecture, three hours. Examination of design as a formal enterprise in which rules are adopted and then followed to compose, describe, and evaluate designs. Development in detail of historical, contemporary, and new examples in architecture, painting, sculpture, and other fine and applied arts. Ms. Knight (F,W)

225A-225F. Fundamentals of Architectural Composition (2 units each). Lecture, 90 minutes. Prerequisite: consent of instructor. Modular course provides three series of lectures concerned with historical aspects in parallel with three on mathematical foundations. May be taken in any combination to suit student needs. Mr. March

226A. Introduction to Graphics Programming. Lecture, three hours. Design-oriented introduction to computer graphics programming using PASCAL language. Ms. Liggett (F)

226B. Computer-Aided Design and Modeling. Function and structure of modern CAD systems; practical and theoretical aspects of their use and evaluation; two- and three-dimensional geometry; attributes and customization. Mr. Eastman

227A. Computer Programming of Applications in Architecture and Urban Planning. Lecture, three hours. Prerequisite: course 226A. Logic and problem solving using PASCAL and C. Review of algorithms, data structures, and applications. Ms. Liggett (W)

227B. Geometric Modeling. Lecture, three hours. Prerequisite: course 227A or equivalent. Theory and implementation for computer modeling of three-dimensional shapes and volumes; various representations; transformations, surface modeling. Mr. Eastman

227C. User Interaction Techniques in Design. Lecture, three hours. Prerequisite: course 227A or equivalent. Software algorithms and techniques for implementing modern computer-user interfaces; raster operations; cognitive models; window management systems. Mr. Eastman

227D. Data Base Modeling in Design. Lecture, three hours. Review of range of information and knowledge potentially used in design. Knowledge representation, abstractions, and constructs. Logical structure of design information. Development of knowledge used in areas of design, how it can be identified, analyzed, and structured.

Mr. Eastman

228A-228B-228C. Computational Foundations of Architectural Design. (Formerly numbered 228A-228B.) Lecture, three hours. Prerequisite: consent of instructor. Introduction to composition and description of architectural designs in algorithmic processes; alternative representations of shapes and their corresponding algebras; shape grammars and languages of designs/description schemes.

Mr. Stiny (F,W,Sp)

242. Climate Responsive Design. Prerequisite: professional degree in architecture or consent of instructor. Theory and method of design of buildings which specifically respond to local climate; intensive course in building climatology for advanced graduate studies students.

Mr. Milne

243. Energy Modeling. Prerequisites: one course in building climatology and one course in environmental controls. Geometric description of a building and computerized modeling of its instantaneous energy flows, using one of the large energy analysis computer programs such as DOE 2.1B.

Mr. Milne

247A. Introduction to Energy/Resource-Conserving Solar Design. Lecture, three hours. Energy and alternative resource-conscious design integration into architectural and urban design: passive, active, and photovoltaic solar/wind systems and recycling; development, conservation, and limits to growth.

Mr. Schoen

247B. Energy/Resource-Conserving Solar Design and Practice. Lecture, three hours. Prerequisites: course 247A and one climatology course, or consent of instructor. Extension of concepts and sizing of integrated systems introduced in course 247A; stand-alone approaches particularly in developing countries; impacts of global warming, deforestation on architecture; recycling; programming for project studio 403B.

Mr. Schoen

248A-248B. Passively Integrated Solar Systems. Prerequisites: courses 242 and 442, or consent of instructor. Analysis of different passively integrated solar systems for heating and cooling buildings, considering their anticipated performance and suitability for different climates and building types. Focus on quantitative aspects, including calculations of performance in terms of energy saving and expected indoor comfort conditions. **248A.** Heating; **248B.** Cooling.

Mr. Givoni (W,Sp)

255A-255B. Climatic Issues in Urban Design. Seminar, three hours. In-depth examination of impact of urban design (e.g., urban density, urban profile, public parks) on some aspect of urban climate, such as urban temperature, wind field, solar radiation availability, etc.

Mr. Givoni

258. Urban Morphology. Lecture, three hours. Exploration of urban space from structuralist perspective. Primary emphasis on relationships between socioeconomic, experiential, and formal structures of the urban environment.

Mr. Aran

271. Elements of Urban Design. Lecture, three hours. Introduction of basic knowledge of elements and methods of urban design. Multidisciplinary approach leading to understanding of political, socio-economic, and technological framework of urban systems and its dynamic interrelations.

Mr. Lang (F)

272. Real Estate Development for Planners and Architects. Introduction to real estate development process specifically geared to students in planning, urban design, and architecture. Financial decision model, market studies, designs, loan package, development plan, and feasibility study. Lectures and projects integrate development process with proposed design solutions which are iteratively modified to meet economic feasibility tests.

Mr. Eizenberg, Mr. Richman (W)

274. Introduction to Physical Planning. Lecture, 90 minutes; discussion, 90 minutes. Overview of physical planning, land use, site analysis, and surveys; general plans and community plans; environmental review; zoning and ordinances; social impacts.

Ms. Goldstein (W)

278. Qualitative Research Methods for Planners and Designers. Lecture, 90 minutes; discussion, 90 minutes. Emphasis on conceptualizing research projects using grounded theory; relation to survey data. Techniques include content analysis, user needs analysis, participant observation, questionnaire construction, interview techniques. Projects include students' own research.

279. Housing for Developing Countries. Discussion, three hours. Considerations of sociocultural, economic, and political factors, materials, structural systems, shelter accessories, and manufacturing technologies related to priorities of developing countries in housing policies and planning and design of shelter.

280. City Studies. Discussion, three hours. Through writings of Sitte, Hegemann, Collen, Rowe, and Rossi, course explores how this body of theory about design of cities evolved and was applied during the 19th and 20th centuries in London, Berlin, Paris, Vienna, New York, Washington, and Chicago. In later part of course, Los Angeles and how it developed from 1900 on.

Mr. Vreeland

281A. Introduction to History of the Built Environment in the U.S. Lecture, two hours; discussion, one hour. Open to advanced undergraduates with consent of instructor. Introduction to history of physical forms of urbanization in America; survey of economic, political, social, and aesthetic forces behind creation of built environments.

Ms. Loukaitou-Sideris (W)

281B. Advanced Seminar: History of the Built Environment. Discussion, three hours. Prerequisite: course 281A. Extended discussion of research methods and writing techniques suitable for advanced students working toward completion of some research on history of the built environment in the U.S.

282A. Roots of Modernism. Lecture, three hours. Overview of developments in Western architecture during the 18th and 19th centuries, covering Romantic and historicist trends of the 1700s, eclectic preferences of the 1800s, and turn-of-the-century premodern developments including art nouveau.

Mr. Jencks

282B. Modern and Postmodern Architecture. Lecture, three hours. Examination of 20th-century architectural developments from revolutionary concepts of modern movement, including their manifestations in international style, to current eclectic trends of postmodernism.

Mr. Jencks

283. History of the American Household and American Home. Lecture, 90 minutes; discussion, 90 minutes. Prerequisite: course 281A or consent of instructor. Introduction to history of housing design in the U.S., emphasizing changing roles of women and men from Colonial times to the present and effects of these social changes on physical form of the dwelling and settlement. Discussion of concerns of professional architects and planners, as well as activity of bankers, builders, and homemakers.

286A-286B. Ancient Architecture. Lecture, three hours. Study of architectural developments from archaic Greece to the late Roman Empire. Examination of ancient buildings as functional constructs whose appearance was determined by aesthetic, religious, social, political, urban, and technological factors.

Ms. Favro

287. Architecture in Europe and the Middle East, 400-1500. Lecture, three hours. Prerequisite: consent of instructor. Study of East/West relationships, cultural concerns, and social interactions as seen through some major urban and architectural developments in Europe and the Middle East.

Mr. Aran

288A-288B. Renaissance and Baroque Architecture. Lecture, three hours. Examination of European architecture from the 15th to 17th century, with primary focus on developments in the Italian peninsula. Examination of Renaissance and baroque structures contextually, exploring changing cultural and theoretical values as well as aesthetic characteristics.

Ms. Favro

289. Special Topics in Architecture and Urban Design (2 to 4 units). Prerequisite: consent of instructor. Selected academic topics initiated by students, student teams, or faculty and directed by a faculty member. May be repeated for credit.

290. History and Theory of Landscape. Lecture, three hours. Historical introduction to principles of garden and landscape design. Exploration of key issues through case studies of gardens, landscape architecture, and vernacular landscape.

Mr. Phelps

291. Theory of Architectural Programming. (Formerly numbered 291A-291B.) Lecture, three hours. Exploration of concepts and methods of architectural programming and its interrelation to design process; planning of design process; various techniques for determination of program contents, basic conditions, resources, and constraints; identification of solution types for given situations.

Mr. Rand (F)

292. Social Meaning of Space. Discussion, three hours. Evolution of concept of space from its origins in ritual and primitive social organizations, concentrating on the child's evolving conception of space, literature on perceptual development, and studies of adaptation to spatial order of the human-made environment.

Mr. Rand

294A-294B. Environmental Psychology. Lecture, three hours. Introduction to models, concepts, and theories concerning impact of the environment on human behavior, perception, and thought. Review of research results concerning space perception, cognitive mapping, preferences and attitudes toward the environment, effects of crowding and stress, personal space and territoriality.

Mr. Rand

296. Proseminar: Architectural Theory. Seminar, three hours. Orientation for Ph.D. students to tradition of architectural theory, scholarship, and research and to current research directions and questions, through intensive reading and critical discussion.

297. Group Process in Design. Lecture, two hours; discussion, two hours; laboratory, two hours. Prerequisite: consent of instructor. Designed to equip students with knowledge and skills needed to work effectively in design processes with other professionals and with client and user groups in organizational and other settings where interaction is important in determining design outcomes.

Mr. Adelson

298A-298D. Research Practicum in Architecture (2 to 4 units each). Prerequisite: consent of instructor. In-depth examination of research methods in the various major fields. May be repeated for credit:

298A. Research Practicum in Policy, Programming, and Evaluation.

298B. Research Practicum in Technology.

298C. Research Practicum in Design Theory and Methods.

298D. Research Practicum in History, Analysis, and Criticism of Architecture.

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

401. Projects in Architecture. Studio, eight hours. Prerequisite: consent of instructor. Students may choose from a number of different projects in relevant problem areas to be offered by faculty members. May be repeated for credit. (F,W,Sp)

402. Projects in Urban Design. Studio, eight hours. Prerequisite: consent of instructor. Students may choose from a number of different projects in relevant problem areas to be offered by faculty members. May be repeated for credit. (F,W,Sp)

403A-403D. Projects with Specific Topics. Studio, eight hours. Prerequisites: prior courses of particular sequence or consent of instructor. May be repeated for credit.

403A. Projects in Policy, Programming, and Evaluation.

403B. Projects in Technology.

403C. Projects in Design Theory and Methods.

403D. Projects in History, Analysis, and Criticism of Architecture. (F,W,Sp)

404. Joint Planning/Architecture Studio. Lecture, one hour; discussion, one hour; studio, four hours. Opportunity to work on joint planning/architecture project for a client. Outside speakers; field trips. Examples of past projects include Third Street Housing, Santa Monica; "New American House" for nontraditional households; guide to setting up shelters for homeless in Los Angeles County; working with resident leaders at Los Angeles City public housing development. Ms. Leavitt (Sp)

411. Introductory Design Studio. Studio, 12 hours. Prerequisite: consent of instructor. Architectural composition is initially studied in terms of its separate elements. After each is studied by means of a manipulative exercise which allows for experimentation of its intrinsic possibilities, students then undertake a series of closely controlled exercises dealing with combining the elements. Design of a small building in which previously acquired knowledge is synthesized into a single design in latter part of course. (F)

412. Building Design Studio. Studio, 12 hours. Prerequisite: course 411. Design of project starts with exploration of architectural program in relation to design process and, particularly, implications of program on architectural forms and concepts. In second phase, structural elements are introduced to fulfill program requirements and to support and further develop intended forms and concepts. (W)

413. Building Design with Landscape Studio. Studio, 12 hours. Prerequisite: course 412. Building design and site planning in relation to water, landforms, and plants in natural landscape, with special attention to natural light, heat, and ventilation. (Sp)

414. Major Building Design I (4 to 6 units). Studio, 12 hours. Prerequisite: second-year standing. Design projects which enable students to concentrate on specific architectural issues, with emphasis either on treatment in breadth of large-scale projects or exploration in depth and detail of smaller-scale projects. Students learn to integrate structure, environmental controls, physical context, and cultural environment in design of buildings and to present their ideas in graphic or model form. (F)

415. Major Building Design II. Studio, 12 hours. Prerequisite: course 414. Design projects which enable students to concentrate on specific architectural issues, with emphasis either on treatment in breadth of large-scale projects or exploration in depth and detail of smaller-scale projects. Students learn to integrate structure, mechanical systems, physical context, and cultural environment in design of buildings and to present their ideas in graphic or model form. Special emphasis on integration of environmental control systems.

416. Comprehensive Design Studio (4 to 8 units). Studio, 12 hours. Prerequisites: completion of required coursework up to first term of third year, consent of instructor. Course completes regular required sequence of design work, preparing students for third-year thesis preparation. Comprehensive design projects are structured to test students on integration of structural aspects, mechanical systems, site planning, and climatic considerations within their design solutions. (F)

428. Advanced Architectural Drawing (2 to 4 units). (Formerly numbered 422.) Discussion, three hours; studio, three hours. Prerequisites: courses 421A-421B or consent of instructor. Emphasis on exploration of interrelationship between drawing and design. Development of more advanced design strategies and modes of graphic exploration and presentation. (W)

431. Structures I. (Formerly numbered 431A-431B.) Lecture, three hours. Prerequisites: basic algebra, geometry, trigonometry, consent of instructor. Introduction to structural behavior and structural statics. Operations with forces and factors, both algebraically and graphically. Equilibrium of force systems; polygon of forces and funicular polygon. Internal actions; axial force and bending moment. Reactions, stability, and statical determinacy. Determinate frames. Plane trusses; analysis and design. Mr. Iyengar (F,W)

432. Structures II. Lecture, three hours. Prerequisites: courses 431A-431B, consent of instructor. Mechanics of structures and structural elements. Elastic materials: stress, strain, and stress-strain relations. Theory of bending: curvature, stress and strain distributions, centroid, moments of inertia, resisting and plastic moments. Design of beams for bending, shear, and deflections. Torsion members. Instability and design of columns. Design for combined bending and compression. Tensile structures; cables, pneumatic structures. Slabs and plates; shells and folded plates. Mr. Iyengar (Sp)

433. Structures III. Lecture, three hours. Prerequisites: course 432, consent of instructor. Introduction to statically indeterminate analysis. Structural materials and loads. Wind loads: distribution with height, design for comfort, structure behavior under lateral loads. Steel construction and concepts for high-rise structures. Structural case studies in timber and steel. Introduction to earthquakes: seismology, magnitude, intensity, history. Seismic instrumentation. Case studies of recent earthquakes and damage. Earthquake design concepts and seismic code requirements. Mr. Iyengar (F)

434. Structures IV. Lecture, three hours. Prerequisites: course 433, consent of instructor. Considerations of concrete structures. Materials of construction: cement aggregates, concrete mix design. Construction methods and structural systems. Reinforced concrete theory: elastic and ultimate strength analysis and design of beams, columns, and slabs. Case studies of concrete structures. Economics of high-rise concrete apartment buildings.

436. Building Construction. (Formerly numbered 436A-436B.) Limited to M.Arch. I students. Principles of structure and enclosure; basic nature, production, classification of primary building materials. Building elements explored for formal and functional properties; production and assembly possibilities in factory and field, application and role within building. Hands-on project. Mr. Schoen (W)

437. Construction Documents. Studio, eight hours. Prerequisite: one course in basic building construction (such as 436) or consent of instructor. Office/field communications explored through design of simple structure and creation of key working drawings and outline specifications. Introduction to CADD (computer-aided design and drafting) systems.

Mr. Schoen (Sp)

438. Systems Building. Prerequisite: consent of instructor. Discussion and survey of past and present developments in Europe, the U.S.S.R., and the U.S. Impacts, demands, socioeconomic and legal constraints, user needs, performance specifications. Systems engineering and design. Measurement regulation, modular coordination, closed systems, open systems, design of systems, subsystems, components, elements, and materials. (W)

441. Environmental Control Systems. Prerequisite: consent of instructor. Design of mechanical systems necessary for functioning of large buildings: air handling, fire and life safety, plumbing, vertical and horizontal circulation, communication and electrical power distribution, analysis of interaction of these systems and their integrated effects on architectural form of a building. (W)

442. Building Climatology. Prerequisite: basic physics. Design of buildings which specifically respond to local climate; utilization of natural energies, human thermal comfort; sun motion and sun control devices; use of plant materials and landform to modify microclimate. Mr. Milne (Sp)

444. Light and the Visual Environment. Prerequisite: one course in building climatology or consent of instructor. Exploration of extent to which physical form of a building controls the luminous environment of its occupants; design of naturally and artificially illuminated interior spaces; parameters of human visual comfort. Mr. Milne

445. Architectural Acoustics (2 to 4 units). Lecture, three hours. Prerequisite: consent of instructor. Applied course in acoustical designing in architecture, including design of partitions to provide good sound insulation. Acoustical materials. Acoustical design of auditoriums. Control of noise in HVAC systems.

448. Communication and Diffusion of Innovation. Seminar, three hours. Innovation in the building industry and design professions. Successful creation and introduction of innovative products, processes, and technologies. Students expected to contribute to the meager literature of the field through case studies and projects. Visitors and field trips. Mr. Schoen

461. Architectural Practice. Seminar, three hours. Historical development of the profession; role of architect in contemporary society, current forms of practice and emerging trends. Contractual relationships, ethical responsibility, office management and promotion. Case studies of practical process.

490. Urban Innovations Group Workshop (4 to 8 units). Laboratory. Prerequisite: consent of workshop staff. Applied research and development work in Urban Innovations Group workshop under supervision of workshop staff. Client-oriented projects concerned with significant urban, social, or technical problems of the physical environment. May be repeated for credit.

496. Special Projects in Architecture (2 to 8 units). Prerequisite: consent of instructor. Projects initiated either by individual students or student teams and directed by a faculty member. May be repeated for credit.

497. Special Projects in Urban Design (2 to 8 units). Prerequisite: consent of instructor. Projects initiated either by individual students or student teams and directed by a faculty member. May be repeated for credit.

498. Program Development (4 to 8 units). Studio, six to 10 hours. Prerequisite: consent of instructor. Structural investigation of relationship between verbal description and architectural design. S/U grading.

596A. Directed Individual Research and Study in Architecture and Urban Design (2 to 8 units). May be repeated for credit. S/U grading.

597A. Preparation for Comprehensive Examination or Ph.D. Qualifying Examinations (2 to 8 units). Prerequisite: consent of instructor. May be repeated for credit. S/U grading.

598A. Preparation in Architecture/Urban Design for Master's Thesis (2 to 8 units). Prerequisite: consent of instructor. May be repeated for credit. S/U grading.

599A. Ph.D. Dissertation Research in Architecture (2 to 8 units). Prerequisite: doctoral standing. May be repeated for credit. S/U grading.

Urban Planning

1118A Perloff Hall, (310) 825-8957, 825-7331

Professors

Leland S. Burns, Ph.D.
John Friedmann, Ph.D., *Program Head*
Allan D. Heskin, Ph.D., LL.B.
Donald Shoup, B.E.

Michael Storper, Ph.D.
Martin Wachs, Ph.D. (*Distinguished Teaching Award*)
Peter Kamnitzer, M.Pl., M.Arch., *Emeritus*

Associate Professors

Leobardo Estrada, Ph.D.
Margaret FitzSimmons, Ph.D. (*Distinguished Teaching Award*)
J. Eugene Grigsby III, Ph.D.
Susanna B. Hecht, Ph.D.
Jacqueline Leavitt, Ph.D.
Robin Liggett, Ph.D. (*Distinguished Teaching Award*)
Paul Ong, Ph.D.

Assistant Professors

Raul Hinojosa-Ojeda, Ph.D.
Anastasia Loukaitou-Sideris, Ph.D.
Julie Roque, Ph.D.

Scope and Objectives

The professional urban planner works on the creation and management of the urban environment, including its physical, economic, and social elements. Housing, transportation, air and water quality, the preservation of historic communities, and the development of community-level economic and employment programs are some of the tasks undertaken by recent graduates of the UCLA Urban Planning Program. Graduates have taken positions in local, state, and national governments, and increasingly with private companies whose products and services affect the urban environment. While most UCLA graduates find positions in the U.S., the program offers the opportunity to specialize in development planning abroad, including rural development, and many graduates have found positions in Latin America, Africa, and Asia.

The program offers a two-year Master of Arts degree and a Ph.D. Concurrent degree programs allow students to combine study for an M.A. in Urban Planning with work toward an M.B.A. in the John E. Anderson Graduate School of Management, a J.D. in the School of Law, or an M.A. in Latin American Studies.

The Urban Planning Program at UCLA takes pride in its collegial atmosphere. It features a lively mix of students from diverse academic

backgrounds, drawn from many foreign countries and from every avenue of American life. It includes many members of racial and ethnic minority groups. A number of student organizations provide an interesting program of extracurricular activities.

Requirements for Graduate Degrees

Admission

The Urban Planning Program admits students in Fall Quarter only, and you should begin the application process a year in advance.

Prospective applicants may obtain a detailed program statement and Graduate Division application by writing to Admissions Office, Graduate School of Architecture and Urban Planning, B102 Perloff Hall, UCLA, Los Angeles, CA 90024-1467.

A statement of purpose, letters of recommendation, grade-point averages, and relevant experience are all considered in the review process for admission. Applicants must submit transcripts from each college or university attended and are encouraged to submit Graduate Record Examination (GRE) scores. The Test of English as a Foreign Language (TOEFL) is required of applicants whose native language is not English, unless they have completed at least two years of university-level coursework at an English-language institution. A score of 600 on the TOEFL is expected; applicants with a score below 550 are not considered for admission. Refer to "Proficiency in English" under "Graduate Admission" in Chapter 3 for further information.

Work samples (research papers and/or copy of the master's thesis) are required of doctoral applicants. Work samples (reports, research papers, slides, etc.) for master's applicants are optional. A maximum of two work samples may be submitted and will be returned only to applicants who enclose a self-addressed, stamped envelope.

Areas of Concentration

You should select an area of concentration by the end of your first term in the program. The areas of concentration distinguish between different kinds of issues and contexts in which planners characteristically become engaged, as a professional career or a field of research. They are not meant to be mutually exclusive. The four areas of concentration are:

Urban and Regional Development — This area of policy concentration concerns the interrelated aspects of area development in highly industrialized and developing countries. The perspective on questions of area development is that of political economy and spatial analysis. Industrialization, urbanization, and rural development are major focal points of interest. Within this area, you are expected to select an emphasis on either developing or advanced economies.

Social Policy and Analysis — The analysis of social services includes questions of production and distribution — how efficiently are services provided, who pays, and who benefits? These questions lead to more fundamental ones about the functions of planning and social policy. Social policy comprises the whole context of social actions which together determine the distribution of goods, services, and opportunities between rich and poor, men and women, young and old, and people of different ethnic and social origins. You may specialize in transportation, housing and real estate development, social services and social policy, or information decision systems.

Environmental Analysis and Policy — The natural environment is both the context within which all human activities take place and a social product of those activities. Environmental planning begins as an attempt to mitigate often unforeseen consequences of economic growth and expansion where these seem to threaten social well-being and continuing political consensus. A special feature of this area of concentration is its emphasis on problems arising from the intensive use of environmental resources, viewed from the perspective of political economy.

The Built Environment — This area of concentration represents a blending of urban planning and architecture. It deals with the social and economic forces affecting the three-dimensional built environment on an urban scale. Within this area, you can select a specialization in community planning and development or physical development and public policy.

Additional Areas of Concentration — In special circumstances, you may devise your own area in consultation with appropriate faculty members. Final approval of the proposed additional area of concentration must be obtained from the program head.

International Development Studies

If you wish to focus your studies on policy and planning problems of newly industrializing countries, you can do so in the context of one of the major areas of concentration. Several faculty members have extensive experience abroad and a continuing research interest in these areas. Coursework is currently offered in rural development, urbanization policies, housing, the environmental and social impacts of resource-based development, the role of women in development, and alternative development models. In addition, a number of courses are concerned with the evolving world economy, general development issues, and related ideological questions.

In its several area studies centers, UCLA has major institutional resources that facilitate research and furnish a rich environment in which to study development issues in a global context. Opportunities for work exist with interna-

tional agencies, voluntary agencies, and foreign governments. Doctoral students generally pursue careers in teaching, research, and consulting.

Master of Arts in Urban Planning

The M.A. degree is fully accredited by the Planning Accreditation Board, a joint undertaking of the American Institute of Certified Planners and the Association of Collegiate Schools of Planning.

Course Requirements

You must complete a minimum of 72 units. Students generally take 12 units per term, completing the program in two years.

Core Course Requirement — The core areas comprise knowledge common to all areas of planning, regardless of your specific focus. Six core courses (24 units) are required, including Architecture and Urban Planning 207 and 220A (waivers by examination), 220B, two core courses in theory and context, and one additional course selected from those remaining on the core courses list in methods, theory and context, and/or practice.

On entering the program, you must pass examinations indicating competence in basic mathematics and microeconomics before enrolling in courses 220A and 207 respectively. Copies of sample examinations are mailed with admission offers to applicants accepted into the program. An undergraduate course in college algebra or precalculus should provide suitable background to pass the basic mathematics examination. An undergraduate course in microeconomics should be sufficient preparation for the microeconomics examination.

You are strongly encouraged to prepare for the examinations before enrolling so you can take courses 207 and 220A (offered only once per year in Fall Quarter) during your first term of studies.

Area Course Requirement — You must select an area of concentration. A list of courses is prepared for each area of concentration, from which you are required to select at least six (24 units); two are generally specified.

Fieldwork Requirement — Master's students who come to the Graduate School of Architecture and Urban Planning without substantial prior experience in planning are required to complete eight units (300 total hours) of fieldwork. Fieldwork is defined as clinical or "real world" experience with a planning office, a private organization involved in planning, a community action agency, or applied research within a clinical context (excluding conventional university-based research projects). Details on fulfilling this requirement are available in the program office.

You are encouraged to seek waivers for requirements which have been met in your previous education.

Thesis or Comprehensive Examination Plan

In partial fulfillment of the requirements for the M.A. degree, you are required to complete either a thesis or one of two comprehensive examination plans (Plan A or Plan B) during your second year of study. Each option has its own deadline for selection, and once a deadline has passed, you are limited to options with subsequent deadlines.

Thesis Plan — The master's thesis is intended to provide the opportunity for independent scholarly research and should be the length and quality of a publishable journal article. If you select this option, in order to meet established deadlines, you must begin thesis work no later than Fall Quarter of your second year. Academic credit for thesis preparation is given through Architecture and Urban Planning 205 (four units required in Fall Quarter) and 598P (eight units over two terms).

Comprehensive Examination Plan A (Client-Oriented Project) — A client-oriented project is recommended for students who are more interested in practical application of what they have learned in their coursework than in scholarly research. The time span and magnitude of the final project approximates that of the thesis. Academic credit for project involvement is given through Architecture and Urban Planning 597P (four units each in Winter and Spring Quarters of your second year of studies).

As an alternative under Plan A, you may take courses 217A-217B (group comprehensive project sequence), offered Winter and Spring Quarters, to fulfill the comprehensive examination requirement.

Comprehensive Examination Plan B (Two-Week Examination) — Examinations for all areas of concentration are normally offered during the break between Winter and Spring Quarters. A committee of three faculty members (appointed by the area of concentration coordinator) offers, reads, and grades the examination. No course credit is received.

Concurrent Degree Programs

J.D./M.A.-Urban Planning

The Graduate School of Architecture and Urban Planning and the School of Law offer a concurrent plan of study providing an integrated curriculum for students planning to specialize in the legal aspects of urban problems. Education in planning offers an overview of theories and methods that permit identification and treatment of urban problems; education in law offers insight into the institutional causes and possibilities for treatment of these problems. Students pursue studies in both schools and receive both the J.D. and M.A. degrees at the end of four years.

Students interested in the program must apply and be admitted to the School of Law, the Ur-

ban Planning Program, and the Graduate Division. For additional information, contact the graduate counselor in the Urban Planning Program.

M.A.-Latin American Studies/M.A.-Urban Planning

The Urban Planning Program and the Latin American Studies Program offer a 2½- to 3-year concurrent plan of study leading to an M.A. degree in each program. Issues related to migration and settlement, comparative urbanization, human resources development and distribution, and rural economics are all of direct concern to planners and other policymakers working in Latin America. The degree program provides an integrated curriculum through which students can develop professional knowledge and skills while receiving advanced area studies and language training.

Students should apply through the Urban Planning Program. Further details may be obtained from the graduate counselor in the Urban Planning Program.

M.B.A./M.A.-Urban Planning

The Graduate School of Architecture and Urban Planning and the John E. Anderson Graduate School of Management offer a three-year concurrent degree program designed for students who seek careers which draw on general and specialized skills in urban planning and management. By providing knowledge of the workings of both the private and public sectors, the program enables individuals who have acquired these skills to move easily between careers in private industry and public service.

Students must contact both the M.B.A. Admissions Office, John E. Anderson Graduate School of Management, and the Graduate School of Architecture and Urban Planning Admissions Office. Further details may be obtained from the graduate counselor in the Urban Planning Program.

Ph.D. in Urban Planning

A more detailed description of the program is available from the graduate counselor.

Admission

Students admitted to the Ph.D. program must have a master's degree in planning or a closely related field and a minimum 3.5 grade-point average in all graduate work completed. Employment experience in planning or a closely related field is strongly recommended.

In your statement of purpose, you should address the following questions: (1) career plans and how a Ph.D. in planning will contribute to those plans, (2) your intended area of concentration, and (3) specific research interests and dissertation plans. Before you can be accepted into the program, two faculty members must agree to assume responsibility for guiding you in your studies.

Foreign Language Requirement

A foreign language is not required either for admission to or completion of the doctoral program. However, students who are expecting to do dissertation research abroad are strongly advised to obtain the necessary language skills prior to beginning such research.

Course Requirements and Qualifying Examinations

You must demonstrate a high level of competence in an area of concentration and in planning theory and history as measured by coursework and doctoral examinations. In addition, you must satisfy requirements in research methods and outside coursework and are required to take Architecture and Urban Planning 208 to aid in preparation of dissertation research and writing.

Planning Theory and History Requirement

Planning theory is concerned with the ways that philosophers and social scientists have examined the question of how scientific and technical knowledge are to be joined to practice and action, with particular emphasis on the field of urban and regional planning. Planning history looks at how planning has evolved in the U.S., Western Europe, and elsewhere in the world as a form of institutionalized practice.

Two advanced courses, Architecture and Urban Planning 210B and 210C, are required during the first year and must be passed with grades of A- or better. You may choose to waive the two courses by taking a six-hour comprehensive written examination.

Area of Concentration Requirements/Examination

The area of concentration is defined as a subject in which you are prepared to teach a sequence of courses and to conduct advanced research. The area should be generally recognized by academics in other planning schools and should be substantially broader than a dissertation topic.

You must prepare for an area of concentration examination by submitting for approval a plan of study to your advisory committee and to the coordinator of doctoral studies, preferably no later than the beginning of Winter Quarter of your first year. The plan must include (1) a short description of the area selected for study, (2) an indication of your major focus of research, (3) a short bibliography, and (4) a list of suggested courses and research papers through which you propose to prepare for the area examination. The list of courses must include a minimum of three from *outside* the department and three methods courses (see below). Once approved, the plan is filed with the graduate counselor. The normal time for completion of the area of concentration requirement is two academic years.

The examination has two parts — written and oral. Both examinations must be taken in the same term. You may receive academic credit

to prepare for the examination by enrolling in Architecture and Urban Planning 597P.

Research Methods Requirement

You must first demonstrate competence in statistical methods at the master's level (Architecture and Urban Planning 220B or equivalent) either by completing course 220B with a grade of B+ or better or by submitting a waiver petition with appropriate documentation.

Additionally, as part of your plan of study, you must take a preapproved set of three advanced courses in research methods. These courses must be closely related to your area of concentration and must be completed with grades of B+ or better. You may petition to waive this requirement on the basis of prior coursework.

Oral Qualifying Examination

After successful completion of all requirements in planning theory and history, the area of concentration, research methods, and outside coursework, you are required to take the University Oral Qualifying Examination at which you defend your dissertation proposal. The examination is administered by a committee consisting of a minimum of five faculty members, two of whom must be from outside the school, and should be taken no later than the end of your third year of doctoral study. To assist in the development of the proposal, you are required to complete Architecture and Urban Planning 208, preferably by the end of your first year.

Dissertation/Final Oral Examination

The doctoral committee guides you in preparing the dissertation, which is to be a monograph representing an original contribution to planning knowledge.

The final oral examination, taken only at the discretion of the doctoral committee, involves a defense of the completed dissertation.

Upper Division Courses

179. Variable Topics in Urban Planning (2 to 8 units). Lecture, three hours. Variable topics course in selected subjects in social policy and public services, urban and regional development, natural environment and resources, and the built environment. May be repeated for credit.

187. Planning and Designing Our Cities. See listing under "Architecture/Urban Design."

Mr. Kamnitzer

C189. Environmentalism: Past, Present, and Future (4 to 6 units). Discussion, three hours; optional field study, five to 10 hours. Exploration of history, politics, and theories of environmental movements, dynamics of race, class, and gender in relation to environmental agendas, and potential role of environmentalism in reshaping our society. Readings, discussion, and research papers. Offered annually as a graduate research seminar and biannually as an undergraduate upper division lecture and field studies program. Concurrently scheduled with course C265.

Mr. Gottlieb (Sp)

190. Human Environment: Introduction to Architecture and Urban Planning. See listing under "Architecture/Urban Design."

Mr. Rand (F)

197. Planning for Minority Communities. Lecture, three hours. Introduction to inner-city policy issues on three separate levels: (1) each student develops a comprehensive inner-city urban program using materials from Alternatives Inner-City Future Exercise, (2) each student is expected to identify value assumptions and theories of social justice implicit or explicit in alternative intervention programs, and (3) each student is expected to participate in class discussions that emphasize minority issues which affect implementation.

Mr. Hinojosa-Ojeda (W)

199. Special Studies (2 to 8 units). See listing under "Architecture/Urban Design."

Graduate Courses

M202A. Public Control of Land Development (3 to 6 units). (Same as Law M286.) Lecture, three hours. Analysis of legal and constitutional constraints on land-use planning and development; administrative and environmental regulatory processes, including relationship between law and planning, formulating land-use legislation, zoning, subdivision controls, eminent domain, taxation, urban development, environmental law, and negotiation. Theory and doctrine applied to case studies; research project/paper and/or examination required.

Mr. Kushner (W)

M202B. Governance: State, Regional, and Local (3 to 6 units). (Same as Law M285.) Lecture, three hours. Analysis of structure and function of local, regional, and state government in historical and institutional context: organization, finance, intergovernmental relations, role of judiciary, public services, lawmaking, citizen participation through initiatives and referenda, and government tort liability.

M202C. Seminar: Urban Affairs (3 to 6 units). (Same as Law M526.) Seminar, two hours; two field trips. Consideration of selected aspects of housing law and policy, including current federal and state housing subsidies; remedies of housing consumers; impacts of market discrimination against children, racial minorities, and women; and local governmental laws influencing cost and supply, such as antispeculation and rent control legislation. Catalytic role of economic and community development in expansion of housing supply also considered.

Mr. McGee

205. Research Seminar for Master's Thesis. Discussion, three hours. Prerequisite: second-year standing in M.A. program. Required course for all second-year M.A. students who select thesis option rather than one of comprehensive examination options, aimed at aiding students in preparation of their theses. Organized as workshop with periodic reports and discussions of proposed research. S/U grading.

Mr. Burns (F)

206A. Urban Data Analysis: Demographic Applications. Lecture, three hours; laboratory, one hour. Prerequisites: one graduate-level statistics course, familiarity with one of the packaged statistics programs. Development of basic demographic methods of analysis in a policy context, providing parallel development of content, data sources, and applications. Topics include data sources and errors, mortality, fertility, age structure, and their effects on planning policy.

Mr. Estrada (Sp)

206B. Urban Data Analysis: Planning Models. Lecture, three hours; laboratory, one hour. Prerequisite: course 206A or equivalent. Advanced course in urban data analysis which builds on course 206A. Examination of relationship between demographic and other socioeconomic processes, with emphasis on planning models. Topics include internal and international migration, crime activity, transportation demand, and economic activity forecasting.

Mr. Levine (F)

207. Public Resource Allocation. Lecture, three hours. Prerequisite: passing score on microeconomics examination given first day of class. Practical use of economics in analyzing public resource allocation problems. Topics include review of marginal analysis, difference between equity and efficiency, public goods and free rider problem, environmental pricing, public service pricing, and conflicts between individual and collective rationality.

Mr. Hinojosa-Ojeda (F)

208. Seminar: Advanced Research Methods. Lecture, three hours. Prerequisites: doctoral standing, consent of instructor. Required of Ph.D. students in or following second year. Process of developing dissertation proposal; introduction to alternative conceptions of science (or rigorous scholarship) now apparent in various social science paradigms. S/U grading.

Ms. FitzSimmons (Sp)

209. Special Topics in Planning Theory (2 to 8 units). Lecture, three hours. Seminar on topics in planning theory selected by faculty. May be repeated for credit.

210A. History of Planning Thought since 1800. Lecture, three hours. Historical introduction to major ideas and theories of planning which have influenced its development from the early 19th century to the present.

Ms. Sandercock (F)

210B. Comparative History of Planning Practice. (Formerly numbered 212.) Lecture, three hours. Limited to Ph.D. and advanced M.A. students. History of city planning, its critics, and profession of planning through the 19th and 20th centuries. Comparison of evolution of the field in several countries, especially English-speaking countries.

Ms. Sandercock (W)

210C. Colloquium in Planning Theory. (Formerly numbered 210B.) Lecture, one hour; discussion, two hours. Prerequisite: course 210A. Limited to Ph.D. students. Introduction to some central theoretical issues of contemporary planning.

Mr. Friedmann (Sp)

211. Law and the Quality of Urban Life. Lecture, three hours. Introduction to law as an urban system, directed primarily toward those interested in intersection of law and policy: broad array of urban issues examined, as is law's role as a partial cause and cure of urban problems. Examination of law as a changing process rather than a collection of principles, so that students develop facility to interact with law and lawyers in a positive and forceful manner.

Mr. Heskin (F)

214. Ethics in Planning. Examination of ethical dimensions of planning at many levels, including issues of bribery and corruption, aspects of client/sponsor and employer/employee relationships, collection, use, and release of information, and ethical aspects of administrative discretion. Ethical aspects of planning methods, concept of environmental ethics, and evolution of code of ethics in planning profession.

Mr. Richman (F)

M215. Spatial Statistics. (Formerly numbered M215B.) (Same as Geography M272.) Lecture, two hours; discussion, one hour; laboratory, one hour. Prerequisite: consent of instructor. Specific techniques useful in analysis of spatial data and modeling of spatial distributions.

Ms. Fan (W)

217A-217B. Comprehensive Planning Project. Prerequisite: second-year standing. Comprehensive project brings together students of varying backgrounds and interests in joint solution of an urban planning problem. Each project spans two terms. Successful completion of project meets requirements of Comprehensive Examination Plan A of master's program.

(W/Sp)

218. Graphics and Urban Information. Lecture, two hours; studio, one hour. Presentation of basic graphic methods and tools for conceptualization, analysis, and documentation of the built environment. Development of fundamental skills of graphic ideation and communication.

Ms. Loukaitou-Sideris (F)

219. Special Topics in the Built Environment (2 to 8 units). See listing under "Architecture/Urban Design."

220A. Quantitative Analysis in Urban Planning I. Lecture, three hours. Prerequisite: passing score on basic mathematics proficiency examination given first day of class. Introduction to mathematical and statistical concepts and methods with applications in urban planning. Review of basic mathematical concepts fundamental to planning methods; linear and nonlinear functions focusing on growth curves and mathematics of finance; data measurement and display; descriptive statistics and probability. Introduction to use of computer as a tool in analysis of planning-related data.

Ms. Liggett (F)

220B. Quantitative Analysis in Urban Planning II. Lecture, three hours. Prerequisite: course 220A or equivalent (demonstrated by passing score on mathematics proficiency examination given first day of course 220A). Introduction to concepts of statistical inference and modeling, with emphasis on urban planning applications. Topics include sampling, hypothesis testing, analysis of variance, correlation, and simple and multiple regression. Use of computer as a tool in statistical analysis and modeling.

Ms. Liggett (W)

221. Evaluation Methods. Lecture, three hours. Prerequisites: courses 207, 220A. Examination of methods used to evaluate efficiency and effectiveness of government programs and investment projects. Theory and practice of evaluation, with emphasis on techniques of cost-effectiveness analysis, cost-benefit analysis, discounting, sensitivity analysis, target efficiency, fiscal audits, and evaluation design.

Ms. Roque, Mr. Shoup (Sp)

222. Introduction to the Planning Profession. Lecture, three hours. Lecture/project course offering introduction to the planning profession and to Urban Planning Program at UCLA. Overview of forces that shaped its practice over time and exploration of various professional roles for planners. Planning education viewed as response to changing needs and as catalyst for emerging roles for professional planners. Generally taken Fall Quarter of first year of M.A. program.

Ms. Leavitt

223. Professional Development Seminar. Lecture, 90 minutes; discussion, 90 minutes. Recommended prerequisite: course 222. Problems of professional practice. Development of methods which integrate theory and practice through readings and individual and collective analyses of each student's fieldwork experience. Students must be working in a field setting to enroll. Job fair is held at end of Fall Quarter to place students in field settings. Students combine course 223 with one term of course 490 or 496F to meet fieldwork requirement. S/U grading.

Mr. Estrada (W)

226A. Introduction to Graphics Programming. See listing under "Architecture/Urban Design."

Ms. Liggett (F)

227A. Computer Programming of Applications in Architecture and Urban Planning. See listing under "Architecture/Urban Design."

Ms. Liggett (W)

229. Special Topics in Planning Methods (2 to 8 units). Seminar on topics in planning methodology selected by faculty. May be repeated for credit.

M231. Urban Housing and Community Development (3 to 6 units). (Same as Law M287.) Lecture, three hours; discussion, one hour. Examination of past 40 years of federal and state programs to stem urban decline and improve housing in the U.S.; comparison and contrast of legal and policy initiatives in areas of public housing, housing segregation, mortgage subsidies, landlord/tenant law, urban renewal, and community organizing. Research paper required.

Mr. Sanders (Sp)

232A. Introduction to Regional Planning: Evolution of Regional Planning Doctrines. Lecture, three hours. Critical and historical survey of evolution of regional planning theory and practice, with particular emphasis on relations between regional planning and developments within Western social and political philosophy. Major concepts include regions and regionalism, territorial community, and social production of space.

Mr. Soja (F)

232B. Spatial Planning: Regional and International Development. Examination of theory and practice of spatial planning at regional, national, and international scales, including evaluation of regional growth strategies, national settlement policy, growth center concepts, and normative-ideological issues involved in international development planning. Generally taken in first year.

233. Political Economy of Urbanization. Introduction to basic concepts and analytical approaches of urban political economy, with major emphasis on American urban problems. Topics include historical geography of urbanization, development and transformation of urban spatial structure, suburbanization and metropolitan political fragmentation, urban fiscal crisis, and role of urban social movements.

Ms. Hamilton (W)

235A-235B. Urbanization and Rural Development in Third World Countries. Lecture, 90 minutes; discussion, 90 minutes. Prerequisite for course 235A: course 266 or consent of instructor; for course 235B: course 235A or consent of instructor. Questions of urbanization and planning in first term; rural development in second term. Case studies from Latin America, Africa, and Asia. Lectures, student presentations, and policy debates.

Mr. Friedmann (W/Sp)

235C. Research Seminar: Alternative Development. Discussion, three hours. Prerequisites: courses 235A-235B or 267A and 267B. Thesis and dissertation research seminar, consisting of review of major issues in an alternative development, specifically in poor countries, addressing issues in urban and rural development, with focus on one or more of following: inclusive democracy, appropriate economic growth, gender equality, and environmental sustainability; guest lectures and student presentations. S/U grading.

Mr. Friedmann

236A. Urban and Regional Economic Development I. Lecture, three hours. Introduction to industrial change and effect on urban and regional development theory and policy. Major topics include role of industrialization in economic development, explanations of regional industrial growth and decline, rise and fall of Fordism and its regional patterns, new forms of industrialization with particular emphasis on flexible production, and debates regarding political economy of industrialization.

Mr. Stopper (W)

236B. Urban and Regional Economic Development II. Lecture, three hours. Prerequisite: course 236A. Examination of local economic development theory and history and issues associated with different public policies. Topics include changing patterns of employment, job creation, job retention, and forms of income redistribution aimed at stabilizing a community's economy, with particular concern for women, minorities, and the poor.

Mr. Wolff (Sp)

236C. Urban and Regional Economic Development III. Discussion, three hours. Prerequisite: course 236B. Advanced seminar in community economic development, involving case study analysis, fieldwork, and individual student projects.

Ms. Haas (F)

238. Advanced Seminar: Urban and Regional Development. Lecture, two hours; discussion, two hours. Prerequisite: doctoral standing or consent of instructor. Advanced research seminar on major issues in urban and regional development theory and/or policy. Topics usually reflect faculty research projects and change from year to year. May be repeated for credit.

Mr. Soja (W)

239. Special Topics in Urban and Regional Development Policy (2 to 8 units). Lecture, three hours. Seminar on topics in urban and regional development policy selected by faculty. May be repeated for credit.

241A. Urban Transportation Planning I. Lecture, three hours. Historical development of urban transportation planning and current political and administrative frameworks for planning; relationship between transportation systems and urban form, historical review of automobile and public transit systems; urban highway and transit planning programs; financing of urban transportation; environmental and social impacts of transportation systems; current policy dilemmas; controlling the automobile, promoting mass transit, energy issues.

Ms. Deakin (F)

UCLA's inverted fountain near Franz Hall.

241B. Urban Transportation Planning II. Prerequisites: courses 207, 220B, and 241A, or consent of instructor. Economic and social basis for travel; basic data sources for examining urban travel and transportation; techniques of forecasting and analyzing travel; mathematical models of travel; trip generation, trip distribution, modal split, traffic assignment, and route choice; uses of forecasts and approaches to transportation system and project evaluation.

Ms. Deakin (W)

241C. Urban Transportation Planning III. Lecture, three hours. Prerequisites: courses 207 and 220B, or consent of instructor. Financing street and highway systems; public transit finance, including fare and subsidy policy; transportation system management and transportation demand management; ridesharing; transportation programs to meet needs of elderly and disabled.

Ms. Deakin (Sp)

M242A. Topics in Asian American Studies: Asian Migration to the U.S. (Same as Asian American Studies M297B.) Prerequisite: graduate standing or consent of instructor. Emphasis on Asia as main regional source for international migrants. Topics include patterns and theories of international migration and their relevance to the Asian experience, sending and receiving country perspectives, research and policy issues. S/U or letter grading.

M242B. Topics in Asian American Studies: Urbanization in Asia — Policy Issues and Problems. (Same as Asian American Studies M297C.) Prerequisite: graduate standing or consent of instructor. Urbanization in less-developed countries in Asia with specific reference to its peculiar features and characteristics, and relationship of urbanization to the development process. Topics include urbanization development, structural and policy determinants of urbanization, urban policy and strategies, and country case studies. S/U or letter grading.

244. Housing Markets. Lecture, three hours. Ways that housing markets should but sometimes do not work in developed economies. Interaction of demand factors such as population distribution, household formation, income, and credit, as well as their particular impacts on groups of the population. Topics include filtering, housing search, segregation, pricing, production efficiency, organization of construction industry, market failure, and appropriate policy responses.

Mr. Burns (F)

245. Urban Public Finance. Lecture, three hours. Prerequisites: courses 207 and 220A, or consent of instructor. Theory and practice of urban public finance, with emphasis on methods used to fund public infrastructure. Topics include fiscal impact analysis of real estate development, effects of taxes on land-use decisions, benefit assessments to finance neighborhood public investment, private and intergovernmental contracting as method of supplying urban public services, tax increment finance for urban redevelopment, and municipal bond market.

Mr. Shoup (W)

246. Housing in Social and Economic Development Policy. Lecture, three hours. Seminar on position of housing in national and regional development strategies, with focus on policies for Third World nations. Topics include nature of housing "need," market responses, evolution of housing policy, theory of intervention, alternative policies for increasing housing supply. Numerous case studies.

Mr. Burns (W)

249. Special Topics in Social Policy and Analysis (2 to 8 units). Lecture, three hours. Seminar on topics in social policy and analysis selected by faculty. May be repeated for credit.

250. Introduction to Social Policy. Lecture, three hours. Analysis of demographic changes, history, needs, and ideological debates which affect development of social policy in the U.S., compared with Western Europe.

Mr. Estrada (W)

251. Planning for Multiple Publics. Lecture, three hours. Exploration of planning needs of various social groups in urban settings, using existing literature and research studies to determine appropriate mechanisms of planning for multiple publics. Analysis of communities in Los Angeles metropolitan area to gain insights into practical, theoretical, and methodological problems of planning for multiple publics. Generally taken in first year.

Mr. Grigsby (F)

254. Survey Methods in Planning. Lecture, three hours. Prerequisite: course 220B or equivalent. Use of surveys in planning. Conducting of a small area survey, with emphasis on methods to obtain quality data appropriate for planning: questionnaire development, sample design, interviewing, data processing, and analysis. Presentation of survey to planners or public agencies.

Mr. Levine (W)

256. Social Impact Analysis. Lecture, three hours. Exploration of ways of assessing and determining social impacts on communities resulting from large-scale planning projects. Students develop mitigation measures to address identified adverse consequences.

Mr. Grigsby

260A. Political Economy and the Environment. Lecture, three hours. Debate about environmental policy is increasingly couched in economic terms. Environmental issues have become questions of political economy, as they influence international and domestic policy and reflect on functioning of market system. Examination of assumptions and implications of alternative approaches to political economy, as these pertain to questions of environmental policy.

Ms. FitzSimmons (W)

260B. Politics, Institutions, and the Environment. Lecture, three hours. Planners face some important dilemmas in designing institutions and policies intended to correct or prevent disruptions of the environment. Introduction to these problems, focusing on essential theoretical questions that must be addressed in attempts to control environmental problems in our society. Review of recent developments in environmental policy in light of growing environmental movements; evaluation of current approaches to environmental problems, considering their institutional forms and epistemological foundations.

Ms. Roque (Sp)

261. Land-Use Control: Economic and Structural Perspectives. Lecture, two hours; discussion, one hour. Prerequisites: courses 260A and 260B, or consent of instructor. Comparison of regulatory methods of land-use control to command or planning methods. Basics of land use as a commodity in first part: land economics, land markets. Development, historically, of a structuralist perspective on use of land in cities and regions in second part. Land-use regulation (in third part) in light of first two, to see how effective it is in steering course of land development. Regulatory approach compared with real planning.

Ms. Deakin (W)

M262A. Toxics Reduction: Science, Engineering, and Policy Issues. (Formerly numbered 262A.) (Same as Chemical Engineering M290U and Environmental Health Sciences M249.) Lecture, three hours. Prerequisites: courses 260A and 260B, or consent of instructor. Public health experts, industrial engineers, and planners are being asked to assess risks biologically active chemicals present and to take such risks into account in planning process. Examination of potential for toxics reduction and current state of government and industry activities in this area.

Mr. Froines, Ms. Roque (W)

262B. Urban Environmental Problems: Water Resources. Lecture, three hours. Water is life and wealth in California, which has world's most extensive long-distance, interbasin water transfer system. To date, water resources planning has been devoted almost exclusively to adding facilities for water delivery. But conflicts over additional developments have basically precluded further extension of this system, despite growing pressures to increase supplies. Examination of environmental impacts, geography, use of water, and consideration of resource planning.

Mr. Gottlieb (Sp)

263. Natural Resource Conservation. Discussion, three hours. Prerequisites: courses 260A and 260B, or consent of instructor. Exploration, through reading, discussion, and student presentations, of meaning of resource conservation, its desirability, and ways of achieving it. Emphasis on integrated management of public lands, though students may attend particularly to a specific resource (minerals, water, timber, wilderness).

Ms. FitzSimmons (F)

M264. Environmental Law (3 to 6 units). (Same as Law M290.) Lecture, three to three and one-half hours. Examination of the field of environmental law through analysis of various legal issues and public policy: legal consequences of public decision-making strategies and allocation of primary responsibility for various environmental decisions. Focus on air pollution and Clean Air Act as a means of illustrating policy issues underlying the field.

Mr. Yamamoto (Sp)

C265. Environmentalism: Past, Present, and Future (4 to 6 units). (Formerly numbered 265.) Discussion, three hours; optional field study, five to 10 hours. Exploration of history, politics, and theories of environmental movements, dynamics of race, class, and gender in relation to environmental agendas, and potential role of environmentalism in reshaping our society. Readings, discussion, and research papers. Offered annually as a graduate research seminar and biannually as an undergraduate upper division lecture and field studies program. Concurrently scheduled with course C189.

Mr. Gottlieb (Sp)

266. City and Countryside in the Third World. Lecture, three hours. Review of basic literature and schools of thought on development theory through analysis of impact of mercantilism, colonialism, capitalism, and socialism on various urban and rural social and economic structures in the Third World. Presentation, through evaluation of theoretical writings and case studies, of complexity and diversity of developing countries. Emphasis on linkages between policy and rural and urban impacts. Gives students important background for courses 267A, 267B, and many of the other planning courses addressing Third World issues.

Ms. Hecht

267A. Resource-Based Development Planning. Discussion, three hours. Recommended (but not prerequisite): course 266. Some major issues associated with development of specific natural resources. Topics include nature of particular resource (or region associated with it), its previous management, involvement of the state, corporations, and local groups, and environmental and social impact of its development.

Ms. Hecht

267B. Rural Development Issues. Lecture, three hours. Recommended (but not prerequisite): course 266. Development more thoroughly of themes raised in earlier courses. Topics may include peasants, development and rural women, agricultural ecology, comparative land reform, agrarian revolution, and special problems of tropical development. May be repeated for credit with consent of instructor.

Ms. Hecht

268. Advanced Seminar: Environmental Analysis and Policy. Discussion, three hours. Prerequisite: consent of instructor. Exploration of broad issues related to environmental and resource planning. Generally intended for second-year M.A. and Ph.D. students. May be repeated for credit.

Mr. Gottlieb (F)

269. Special Topics in Environmental Analysis and Policy (2 to 8 units). Lecture, three hours. Seminar on topics in environmental analysis and policy selected by faculty. May be repeated for credit.

270. Homelessness: Housing and Social Service Issues. Lecture, 90 minutes; discussion, 90 minutes; one field trip. Review of current status of homelessness: who homeless are, what social services and housing are available, programs — existing and proposed — appropriate architecture, management, and sources of funding. Outside speakers include providers of services to the homeless.

Ms. Leavitt (F)

272. Real Estate Development for Planners and Architects. See listing under "Architecture/Urban Design."

Mr. Eizenberg, Mr. Richman (W)

273. Site Planning. Lecture, 90 minutes; laboratory, 90 minutes. Introduction to principles of site planning for urban areas. Mr. Kamnitzer

274. Introduction to Physical Planning. See listing under "Architecture/Urban Design."

Ms. Goldstein (W)

275. Inner-City Housing Policies: Old and New Approaches. Lecture, 90 minutes; discussion, 90 minutes. Study of federal and local housing policy as it affects inner cities, with emphasis on New York and Los Angeles. Examination of research on housing conditions and community development policies, with particular emphasis on alternatives such as resident-controlled housing; analysis of rehabilitation policies; review of new concepts and current legislative proposals. Mr. Heskin, Ms. Leavitt (F)

276. Planning Workshop (4 to 8 units). Lecture, one hour; discussion, one hour; laboratory, four hours. Prerequisite: consent of instructor. Planning projects with focus on physical planning.

277. Historic Preservation: Principles and Practices. Lecture, 90 minutes; discussion, 90 minutes. Overview of preservation field, including history and theory, current legislation, tax incentives, preservation planning, landmark and district surveys and designations, adaptive reuse, citizen involvement, and social issues.

278. Qualitative Research Methods for Planners and Designers. See listing under "Architecture/Urban Design."

281A. Introduction to History of the Built Environment in the U.S. Lecture, two hours; discussion, one hour. Open to advanced undergraduates with consent of instructor. Introduction to history of physical forms of urbanization in America; survey of economic, political, social, and aesthetic forces behind creation of built environments. Ms. Loukaitou-Sidaris (W)

281B. Advanced Seminar: History of the Built Environment. Discussion, three hours. Prerequisite: course 281A. Extended discussion of research methods and writing techniques suitable for advanced students working toward completion of some research on history of the built environment in the U.S.

283. History of the American Household and American Home. Lecture, 90 minutes; discussion, 90 minutes. Prerequisite: course 281A or consent of instructor. Introduction to history of housing design in the U.S., emphasizing changing roles of women and men from Colonial times to the present and effects of these social changes on physical form of the dwelling and settlement. Discussion of concerns of professional architects and planners, as well as activity of bankers, builders, and homemakers.

284. Looking at Los Angeles. Discussion, three hours. Introduction to physical form and history of Los Angeles, with emphasis on visual observation of the city as a skill for architects and planners. Field trips throughout the city.

285. Great Planning Debates: Gender. Lecture, 90 minutes; discussion, 90 minutes. Seminar on substantial literature on complex relationships between gender, race, and class in urban planning. Alternative theories describe an inadequate fit between American households, housing, and services and document environmental inequities women and children face in contemporary cities. Students prepare oral seminar reports on topics such as social service provision, housing, transportation planning, economic development, and safe public spaces. Ms. Sandercock (Sp)

375. Teaching Apprentice Practicum (1 to 4 units). See listing under "Architecture/Urban Design."

404. Joint Planning/Architecture Studio. Lecture, one hour; discussion, one hour; studio, four hours. Opportunity to work on joint planning/architecture project for a client. Outside speakers; field trips. Examples of past projects include Third Street Housing, Santa Monica; "New American House" for nontraditional households; guide to setting up shelters for homeless in Los Angeles County; working with resident leaders at Los Angeles City public housing development. Ms. Leavitt (Sp)

490. Urban Innovations Group Workshop (4 to 8 units). See listing under "Architecture/Urban Design."

494. Supervised Independent Teaching (2 to 8 units). Supervised individual teaching experience. May be repeated for credit. S/U grading.

496F. Field Projects (2 to 8 units). May be repeated for credit. S/U grading.

501. Cooperative Program (2 to 8 units). Prerequisite: consent of UCLA graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Used to record enrollment of UCLA students in courses taken under cooperative arrangements with USC. S/U grading.

596P. Research in Planning (2 to 8 units). May be repeated for credit.

597P. Preparation for M.A. Comprehensive Examination or Ph.D. Qualifying Examinations (2 to 8 units). May be repeated for credit. S/U grading.

598P. Preparation for M.A. Thesis in Urban Planning (2 to 8 units). May be repeated for credit. S/U grading.

599P. Ph.D. Dissertation Research in Planning (2 to 8 units). May be repeated for credit. S/U grading.

Graduate School of Education

Theodore R. Mitchell, Dean

10

As the number one public graduate school of education in the nation, the UCLA Graduate School of Education (GSE) is widely recognized for its integration of theory and practice. Since GSE is at the forefront in academic excellence, research, and innovative programs, all levels of education from preschool through graduate school are benefited.

The school attracts prominent scholars and is internationally known for its research centers in evaluation, higher education, history, child development, and other fields. GSE endeavors to improve educational practice, enhance theoretical and applied research, expand the study of educational policy, and advance the education of professional leaders and specialists.

Students come from throughout the world to study with the school's renowned faculty. Whether students choose to pursue a Ph.D., an Ed.D., a master's degree, or a services or instructional credential, they will graduate with a broad understanding of educational theory and tested practice.

Alumni of the school can be found all over the world — on faculties of major universities, in research, in administration, in curriculum development, in the classroom, and in government agencies.

Madeline Hunter, Ph.D.
Leslie Koltai, Ed.D.

Adjunct Associate Professor

Philip Ender, Ph.D.

Degrees Offered

Master of Education (M.Ed.)
Master of Arts (M.A.) in Education
Doctor of Education (Ed.D.)
Doctor of Philosophy (Ph.D.) in Education

Requirements for Graduate Degrees

Admission

Qualifications for admission to a program of study in education, in addition to the University requirements for admission, are:

- (1) Scores on the quantitative and verbal sections of the Graduate Record Examination (GRE). (Note: The Miller Analogies and Doppelt Mathematical Reasoning Test may be substituted for the GRE.)
- (2) At least three letters of recommendation documenting qualifications and/or professional experience.

Acceptance into a particular division is dependent on the availability of openings in that division and the applicant's desired emphasis area; preference is given to applicants with relevant background and experience.

Admission to a degree program occurs simultaneously with admission to graduate standing and to the Graduate School of Education. No screening examination (other than described above) and no specific coursework are required for admission to a degree program.

The Graduate School of Education has an application form for teaching credential, master's, and doctoral degree programs which must be completed in addition to the one used by UCLA Graduate Application Processing.

Application forms and departmental brochures are available from the Office of Student Services, Graduate School of Education, 1605 Maxxam Building, UCLA, Los Angeles, CA 90024-1521.

For information on the proficiency in English requirements for international graduate students, refer to "Graduate Admission" in Chapter 3.

Curricular Divisions

Administration, Curriculum, and Teaching Studies

M102, C191A, 206A, C206D, 220A, 220B, 223, 224, 240, 241, 242, 246A, 246B, 251D, 260, 262A, 262B, 262F, 262J, 273A, 400, 401, 402, 403, 420A, 422, 423, 424A, 424B, 424C, 424G, 437A, 440C, 441A, 441B, 442B, 443, 444A, 444B, 447, 448A, 448B, 470A, 470B, 490A

Educational Psychology

125A, 125B, 197F, 197G, 205, 212A, 212B, 212C, 213A, 213B, 213C, 214A, 214B, 214D, 214E, 214F, M215, 216, M217A through 217D, 217F, M217G-M217H-M217I, 225A, 225B, 226, 227A, 227B, 227C, 232, 236, 237, 256A, 256B, 257, 258A, 258B, 261A, 267, 271A, 280A, 280B, M281A, M281B, M281C, 415A, 415B, 421A, 421C, 421D, 421F, 425, 433A, 433B, 501

Higher Education and Work

M148, 180, 181, 192, 209C, 209D, 214C, M231, 234, 235, 238, 239, 247, 248, 249A, 249B, 259A, 259B, 261E, 261F, 262I, 263, 334, 410A-410B, 430, 431A, 431B, 431C, 432, 437B, 461A, 461B, 461C, 462

Social Research Methodology

200B, 200C, 202, 206C, 210A through 210E, 211A, 211B, 211C, 218A through 218D, 219, 221, M222A, 222B, 222C, 228, 245, 251A, 251C, 251E, 255A-255B-255C, 272, 411A, 411B, 412A, 412B, 460

Social Sciences and Comparative Education

M108, 200A, M201C, C203, 204A through 204F, C207, 208A, 208C, C244, 252A, 252B, M252C, 253A through 253H, 254, 300

Teacher Education

100, 112, 264, 309A-309B, 311, 312, 315A-315B, 316A-316B, 318A-318B, 320A-320B, 324A through 324D, 330A through 330D, 360, 481, 489, 491A, 492

Academic Interinstitutional Programs

313A-313B, 313C-313D, 314A-314B, 317A, 317B, 317C, 319, 321A through 321D, 322A, 322B, 323, 326, 327, 328, 329, 331, 332

Special Studies

299A-299B-299C, 310, 375, 498A-498B-498C, 499A-499B-499C, 596, 597, 598, 599

Undergraduate Specialization in Education Program

91A through 91E, 191B through C191E, 197, 199

Specific degree programs and participating divisions or emphases are indicated below. Contact the Office of Student Services regarding faculty member(s) to be consulted with respect to enrollment and research opportunities and/or course sequencing in each program.

Master of Education — Administrative and policy studies in education; bilingual/cross-cultural education; curriculum and the study of schooling; teacher education.

Master of Arts in Education — All divisions, except administration, curriculum, and teaching studies.

Doctor of Education — All divisions, except social sciences and comparative education.

Doctor of Philosophy in Education — All divisions.

Master of Education

The Master of Education (M.Ed.) *professional* degree program is designed for individuals preparing for mid-level professional positions in schooling or for advanced professional study; it is the appropriate degree to provide professional foundation study in preparation for the Ed.D. program.

Admission

Requirements are applicable in accordance with the selected field of emphasis:

(1) *Administrative and Policy Studies in Education* — Possession of a valid instructional

credential is preferred. Students with a demonstrated commitment to improving American schooling are sought for admission.

(2) *Bilingual/Cross-Cultural Education* — Completion of an approved program of professional preparation leading to a preliminary instructional credential is required, as is classroom experience — as a teacher or aide — for at least two years, at any level of schooling. Evidence of professional competence and conscientiousness, as well as the necessary second-language proficiency, are also required.

(3) *Curriculum and the Study of Schooling* — Persons with above-average capabilities and interest in curriculum and instruction are sought. Experience as a practitioner in the emphasis field is advantageous.

(4) *Teacher Education* — This is a four-term program leading to qualification for a Multiple or Single Subject Instructional Credential and a Master of Education degree. Experience in working with children is advantageous.

Course Requirements

A minimum of nine upper division and graduate courses (36 units) must be completed in graduate standing. Check with your respective division to determine specific course requirements. At least five courses (20 units) must be in the professional education (400) series. No 500-series courses may be applied toward the degree. A directed field experience (Education 498A or 498B or 498C) is required of all M.Ed. students. Courses must be completed with grades of C or better and with a cumulative grade-point average of at least 3.0.

Information regarding specific course requirements in a selected M.Ed. program may be obtained from the Office of Student Services.

Comprehensive Examination Plan

There is no thesis plan offered in this program. Comprehensive examinations for M.Ed. degrees are offered three times a year, once in Fall, Spring, and Summer Quarters, with the exception of the curriculum and the study of schooling examination which is offered only in Fall and Spring Quarters. They consist of:

(1) A written examination designed to assess (a) comprehension of the professional knowledge basic to the selected field of emphasis, including key concepts and principles, major theoretical positions, and fundamental issues and (b) understanding of the broad educational context in which the selected professional field resides.

(2) For curriculum and the study of schooling students, a performance component designed to assess competency in the solution of problems in the selected professional field; a test of whether knowledge can be applied in a real or simulated professional setting.

Information regarding examination foci for any selected M.Ed. program is available from the

assigned faculty adviser. The comprehensive examination may be repeated a second time if failed the first time. If you fail the examination twice, you must obtain approval of your academic adviser and division to take the examination a third time. No fourth sitting is allowed.

Master of Arts in Education

The Master of Arts (M.A.) *academic* degree program in Education is designed to meet the needs of individuals preparing for careers in basic research or for advanced graduate study; it is the appropriate prerequisite education degree to the Ph.D. degree program.

Course Requirements

A minimum of nine upper division and graduate courses (36 units) must be completed in graduate standing. Check with your respective division to determine specific course requirements. Six courses (24 units) must be taken in the Education 200 and 500 series. No more than two 500-series courses (eight units) may be applied toward the divisional course minimum and toward the graduate course minimum.

Two research methods courses approved by your faculty adviser are required. Additional courses to complete the 36-unit requirement may be selected from offerings in Education and/or other departments with consent of the assigned faculty adviser and division head. Courses must be completed with grades of C or better and with a cumulative grade-point average of at least 3.0.

Thesis Plan

Under this plan, you prepare a thesis which is a report of the results of original investigation. Before beginning work on the thesis, you must obtain approval of the subject and general plan from the Graduate School of Education and your thesis committee chair.

The theses and dissertations adviser and the Graduate Division publication, *Regulations for Thesis and Dissertation Preparation*, provide guidance in the final preparation of the manuscript. The department does not require a formal examination in connection with the thesis plan.

Comprehensive Examination Plan

The comprehensive examination is concerned with central topics in the selected division and field of emphasis. Questions are comprehensive in nature and are designed to measure the *breadth and depth of knowledge, as well as ability to focus that knowledge on specific problems.* The examination is offered twice yearly, once in Fall Quarter and once in Spring Quarter, and may be repeated a second time if failed the first time. If you fail the examination twice, you must obtain approval of your academic adviser and division to take the examination a third time. No fourth sitting is allowed.

Doctor of Education

The Doctor of Education (Ed.D.) *professional* degree program is designed to meet the needs of individuals preparing for careers of leadership and applied research in the schools and community educational programs. Major foci include practice, applied studies, and knowledge related to professional skills.

Admission

To be admitted, you must have a bachelor's degree, at least two years of successful professional experience in education or equivalent (may be completed prior to advancement to candidacy for all divisions except the administration, curriculum, and teaching studies division which requires the experience as a prerequisite to admission), and demonstrated evidence of potential for professional leadership. You are admitted by a division and must formally apply for a change of division.

Course Requirements

A minimum of 18 courses is required, as follows:

- (1) Three research methods courses, with no more than two introductory (first tier) courses and at least one intermediate/advanced (second tier) course, selected from the departmental list approved for the Ed.D.
- (2) Nine education courses, of which at least six must be from the Education 400 series; all courses must be approved by the faculty adviser.
- (3) Three supplemental courses selected from offerings in the school (outside your field of emphasis) or in another UCLA professional school or academic department.
- (4) A sequential three-term field practicum (Education 499A-499B-499C) in which you engage in field research activities and submit a field research paper or similar product by the end of the sequence.

You may select the remainder of the courses (to complete the required total), which must be in compliance with your division's guidelines and must be approved by your faculty adviser.

Whenever academic background is needed, a faculty adviser may recommend additional coursework. Courses must be completed with grades of B- or better and with a cumulative grade-point average of at least 3.0.

Screening and Qualifying Examinations

The written doctoral screening examination, taken after you complete appropriate coursework determined by your division, is concerned with central topics in your division and field of emphasis. Questions are comprehensive in nature and are designed to measure your breadth and depth of knowledge, as well as to focus that knowledge on specific problems. All students admitted to a doctoral pro-

gram without a master's degree are required to take the doctoral screening examination. If you are required to take this examination, you are ordinarily not allowed to complete more than nine courses prior to taking the examination (to ensure that you demonstrate basic competencies as early as possible in your doctoral training).

After satisfying the above requirements, you are eligible to take the following qualifying examinations:

- (1) A written examination which tests the core knowledge of the division and emphasis you have selected. The questions reflect a professional orientation. The examination may be repeated a second time if failed the first time. If you fail the examination twice, you must obtain approval of your academic adviser and division to take the examination a third time. No fourth sitting is allowed.
- (2) The University Oral Qualifying Examination, conducted by the doctoral committee, which employs topics from education that are related to your written research proposal.

At the present time both written examinations are offered twice yearly, once in Fall Quarter and once in Spring Quarter.

For further information on the screening and qualifying examinations, contact the Office of Student Services.

Dissertation/Final Oral Examination

The dissertation, required of every candidate for the Ed.D. degree, must embody the results of your independent investigation and must contribute to professional knowledge in education and the improvement of school practice.

The decision as to whether a final oral examination is required is at the discretion of the doctoral committee. The final oral examination may be open to faculty, students, and other interested professionals at the discretion of the dissertation chair and the student.

Ph.D. in Education

The Doctor of Philosophy (Ph.D.) in Education is a strongly research-oriented *academic* degree designed for individuals preparing for careers in basic research or college-level instruction. Major foci include theory, research methodology, basic studies, and in-depth knowledge in education and an approved cognate field.

Admission

To be admitted, you must have a bachelor's degree and must demonstrate academic excellence and the potential for scholarly research. You are admitted by a division and must formally apply for a change of division.

Foreign Language Requirement

The school does not have a foreign language requirement for the Ph.D.; however, the social

sciences and comparative education division requires that, once admitted, you must demonstrate reading competence in a language other than English.

Course Requirements

The program of study is determined by you and the faculty adviser and must conform to division and school requirements. A minimum of 18 courses is required as indicated below; at least 10 must be in the 200 series:

- (1) A sequential three-term research practicum (Education 299A-299B-299C) designed to provide an overview of research in the field of study. You complete a research paper by the end of the sequence.
- (2) Five courses from offerings in your selected division.
- (3) Three upper division or graduate courses from other academic departments of the University related to your proposed area of research (the cognate).
- (4) Three research methods courses, with no more than two introductory (first tier) courses and at least one intermediate/advanced (second tier) course, selected from the departmental list approved for the Ph.D.

You may select the remainder of the courses (to complete the required total), which must be in compliance with your division's guidelines and must be approved by your faculty adviser.

Whenever academic background is needed, a faculty adviser may recommend additional coursework. Courses must be completed with grades of B- or better and a cumulative grade-point average of at least 3.0.

Screening and Qualifying Examinations

The written doctoral screening examination, taken after you complete appropriate coursework determined by your division, is concerned with central topics in your division and field of emphasis. Questions are comprehensive in nature and are designed to measure your breadth and depth of knowledge, as well as to focus that knowledge on specific problems. All students admitted to a doctoral program without a master's degree are required to take the doctoral screening examination. If you are required to take this examination, you are ordinarily not allowed to complete more than nine courses prior to taking the examination (to ensure that you demonstrate basic competencies as early as possible in your doctoral training).

After satisfying the above requirements, you are eligible to take the following qualifying examinations:

- (1) A written examination which tests the core knowledge of the division and emphasis you have selected. The questions reflect a research and theoretical orientation. The examination may be repeated a second time if failed the first

time. If you fail the examination twice, you must obtain approval of your academic adviser and division to take the examination a third time. No fourth sitting is allowed.

(2) The University Oral Qualifying Examination, conducted by the doctoral committee, which employs topics from both education and the cognate discipline(s) that are related to your written research proposal.

At the present time both written examinations are offered twice yearly, once in Fall Quarter and once in Spring Quarter.

For further information on the screening and qualifying examinations, contact the Office of Student Services and the respective divisions.

Dissertation/Final Oral Examination

The dissertation, required of every candidate for the Ph.D. degree, must embody the results of your independent investigation, must contribute to the body of theoretical knowledge in education, and must draw on interrelations of education and the cognate discipline(s).

The decision as to whether a final oral examination is required is at the discretion of the doctoral committee. The final oral examination may be open to faculty, students, and other interested professionals at the discretion of the dissertation chair and the student.

Cooperative Degree Programs

General information regarding the following cooperative degree programs is available from the Office of Student Services, 1605 Maxxam Building.

J.D./Education Program

The Graduate School of Education and the School of Law offer a concurrent plan which allows students to design a program of study leading to the J.D. and any advanced degree in education (M.Ed., M.A., Ed.D., or Ph.D.). If the program meets the degree requirements in both schools, students are awarded both degrees on its completion. (This program is not currently available.)

M.A.-Latin American Studies/M.Ed.

The Graduate School of Education and the Latin American Studies Program offer an articulated degree program which allows students to combine study for the M.A. in Latin American Studies and the M.Ed., with an emphasis in curriculum. Articulated programs do not allow course credit to be applied toward more than one degree.

UCLA/CSULA Joint Ph.D. in Special Education

A joint Ph.D. program in Special Education is offered by UCLA and California State University, Los Angeles. The goals of the joint program

are (1) the stimulation and preparation of research workers of high competence in the various fields of special education, (2) improved preparation for potential teachers of exceptional individuals, and (3) improved preparation of personnel for research and in policy formation in the public schools of California. Specific information regarding emphases and requirements is available from the joint doctoral adviser at UCLA (1546 Maxxam Building) or the chair of the Department of Special Education at CSULA.

Certificate (Credential) Programs

The California Commission on Teacher Credentialing has authorized the Graduate School of Education to offer professional programs that lead to (1) the Multiple Subject Instructional Credential, (2) the Single Subject Instructional Credential, (3) the Bilingual Emphasis Instructional Credential, and (4) the Administrative Services Credential.

Lower Division Courses

91A. Infant Care and Development. (Formerly numbered 98D.) Using scientific methods to answer questions about how to raise children, educational researchers, psychologists, and anthropologists try to replace myths and anecdotes with a verifiable understanding of children's development and problems and choices that parents face in raising children. Mr. Blurton Jones

91B. Child Care: Research, Practice, and Policy. (Formerly numbered 98B.) Examination of psychological research on influences of early child care on children's concurrent and subsequent development, with this research linked to basic research in developmental psychology and education. Discussion of influence of research on the policy process. Ms. Howes

91C. Elementary and Secondary Education. (Formerly numbered 98B.) Prerequisites: consent of department, upper division standing preferred. Social sciences overview of major policy issues in American public education. General introduction to social sciences research in analysis of educational policy issues and to methods for exploring major policy issues. Topics include school finance, equal educational opportunity, testing and evaluation, teacher compensation, and school law. Mr. Bruno

91D. The Teaching Profession. (Formerly numbered 98C.) Prerequisites: consent of department, upper division standing preferred. Introduction to the field of education. Experts within Graduate School of Education and experienced school personnel present a variety of topics in education and provide opportunity to visit diverse educational settings. Ms. Kourilsky

91E. Perspectives of the American College. Examination of historical conditions that have shaped American higher education and consequent differential characteristics, trends, and practices that bear on dynamics and impacts of contemporary colleges. Emphasis on interrelated research, academic, social, and policy issues underlying the diverse system of American higher education. Mr. Trent

Upper Division Courses

100. Cultural Foundations of Education. Prerequisite: consent of instructor. Analysis of significant problems and issues in contemporary American education using historical, philosophical, sociological, and organizational perspectives, including those of particular minority groups in the U.S. Patterns of intergroup and school/community relations. (W)

M102. The Mexican American and the Schools. (Same as Chicana and Chicano Studies M102.) Prerequisite: consent of instructor. Review of research and teaching strategies. Analysis of school policies and practices and their effect on development of Mexican American and Chicano youth and communities. Mr. Solorzano (W)

M108. Sociology of Education. (Same as Sociology M175.) Prerequisite: Sociology 1. Study of social processes and interaction patterns in educational organizations; relationship of such organizations to aspects of society, social class, and power; social relations within school, college, and university; formal and informal groups, subcultures in educational systems; roles of teachers, students, and administrators. Fieldwork may be required.

112. Psychological Foundations of Education. Prerequisite: consent of instructor. Analysis of learning processes in school situations. Processes of human motivation, affective, cognitive, social, and personal development of children and adolescents, evaluation of learning, individual differences, and implications of relevant theory and research for instructional practices. (F)

125A. Education of Exceptional Individuals. Prerequisite: Psychology 10 or equivalent. Introduction to the field of special education, with emphasis on psychology of individual differences, learning characteristics of exceptional individuals, and application of research and theory to special education problems. (F,Sp)

125B. Principles for Teaching Exceptional Individuals. Prerequisite: consent of instructor. Approaches for teaching exceptional individuals in special and regular education programs. Principles and assumptions underlying alternative approaches. Emphasis on individualizing curriculum and classroom management. (W)

M148. Women in Higher Education. (Same as Women's Studies M148.) Prerequisite: upper division standing. Education and career development of women in higher education. Specifically, emphasis on undergraduate and graduate women; women faculty and administrators; curricula, programs, and counseling services designed to enhance women's educational and career development, affirmative action, and other recent legislation. Ms. Astin

180. Social Psychology of Higher Education. Overview of significant studies in social psychology of higher education. Focus on institutional characteristics and students' interpersonal and intrapersonal processes, with special emphasis on identifying and explaining effects of college experience on student development and achievement. Mr. Trent and the Staff

181. Advanced Topics in Social Psychology of Higher Education. Lecture, three hours; discussion, one hour. Prerequisites: course 180, consent of instructor. Critical analysis of social psychological inquiry into college attendance, preparation, persistence, and outcomes. Examination of intellectual and personal development of individuals vis-à-vis differential college environments and instructional experiences with respect to students' gender, culture, motivation, involvement, and expectations. Mr. Anderson, Mr. Trent (Sp)

C191A. Philosophy of Education: Ethics and Values. Study of ethics and value theory in teaching and learning, educational organization and policy, and curriculum design and validation. Concurrently scheduled with course C206D.

191B. Issues in Education: Historical Perspective. (Formerly numbered C191B.) Lecture, three hours; discussion, one hour. Prerequisite: consent of instructor. Exploration of such controversial issues in American education as access, diversity, parental choice, cultural literacy, teacher empowerment, and role of popular media in historical perspective. Mr. S. Cohen

C191C. Economics of Education. Introductory course in microeconomic and macroeconomic techniques applied to education. Methodologies illustrated principally in context of current issues in American education. Concurrently scheduled with course C244. Mr. Bruno, Mr. Jamison (W)

C191D. Politics of Education. Political dimensions of education institutions as organizations. Relationships between education institutions and political institutions in society. Political theory as a foundation for public policy analysis; interest groups in education policy formation and implementation. Concurrently scheduled with course C207. Mr. Hawkins, Mr. Torres (Sp)

C191E. Educational Anthropology. Recommended (but not prerequisite): Anthropology 9. Study of education through research and method of the cultural anthropologist. Interdependence of culture and education, with emphasis on cross-cultural studies of enculturation, schooling, values, cognition, language, and cultural change. Concurrently scheduled with course C203. (Sp)

192. Theory and Practice of the Teaching and Learning Function. Lecture, three hours; practicum placement. Prerequisite: consent of instructor. Analysis of learning theory and teaching practice in light of research on student characteristics, learning environments, student/instructor interaction, and outcomes of instruction. Application of theory and research to practice. Mr. Barbee, Mr. Trent (F)

197A-197Z. Current Issues in Education. (Formerly numbered 197.) Lecture, three to four hours. Prerequisite: upper division standing. Variable topics course organized on selected current issues basis, integrating field observations and readings through seminar discussions. Consult *Schedule of Classes* for topics and instructors:

197F. Laboratory in Education of Exceptional Children. (Formerly numbered 325A.) Lecture, one hour; laboratory, six to eight hours. Prerequisite: course 125A or consent of instructor. Six to eight hours per week of observation, research, and teaching of children with severe behavioral/emotional disorders and/or mental retardation in UCLA Neuropsychiatric Institute and Hospital School.

197G. Advanced Laboratory in Education of Exceptional Children. (Formerly numbered 325B.) Lecture, one hour; laboratory, six to eight hours. Prerequisite: course 197F. Six to eight hours per week of research, teaching, and multidisciplinary team participation with children with severe behavioral/emotional disorders and/or mental retardation in UCLA Neuropsychiatric Institute and Hospital School.

199. Special Studies. Prerequisites: senior standing, consent of instructor. To be arranged with faculty member who will direct the study.

Graduate Courses

200A. Historical Research and Writing. Methods of historical research and writing for students who are or who will be engaged in research and in report or paper or thesis writing, regardless of their field of interest. Mr. S. Cohen

200B. Survey Research Methods in Education. Prerequisite: course 210A or equivalent. Problems of conceptualization, organization, and gathering non-experimental and quasi-experimental quantitative and qualitative data. Mr. O'Shea

200C. Analysis of Survey Data in Education. Lecture, three hours; laboratory, two hours. Prerequisite: course 200B. Introduction to techniques of processing and analyzing nonexperimental and quasi-experimental quantitative data. Mr. O'Shea

M201C. History of American Education. (Formerly numbered CM201C.) (Same as History M264.) History of educational thought and of social forces impinging on American education from the 1880s to the present. Analysis of relation between these ideas and forces, and aims and practices of American education today. Mr. S. Cohen (Sp)

202. Evaluation Theory. Prevalent evaluation theories, systems for categorizing these theories, and process of theory development in educational evaluation. Mr. Alkin (W)

C203. Educational Anthropology. (Formerly numbered 203.) Recommended (but not prerequisite): Anthropology 9. Study of education through research and method of the cultural anthropologist. Interdependence of culture and education, with emphasis on cross-cultural studies of enculturation, schooling, values, cognition, language, and cultural change. Concurrently scheduled with course C191E. (Sp)

204A. Introduction to Education and the Social Sciences. Prerequisite: consent of division. Interdisciplinary course intended to introduce students to study of educational issues, texts, and movements of thought through social sciences and comparative perspectives. Mr. S. Cohen, Mr. Jamison, Mr. O'Shea, Mr. Solorzano (F)

204B. Introduction to Comparative Education. Examination of conceptual and methodological questions underlying comparative education. Particular attention to development of the field and to styles of social analysis which may be applied to comparative and cross-national studies in education. Mr. Nakanishi, Mr. Nkinyangi, Mr. Rust, Mr. Torres

204C. Education and National Development. Prerequisite: graduate standing or consent of instructor. Analysis of various social sciences perspectives and methodologies (including modernization, dependency, Marxist, neo-Marxist, liberation theology, and world-system theories of change and development) and changing notions of role of education in development of less-industrialized countries of the world. Mr. Hawkins, Mr. Nkinyangi (W)

204D. Minority Education in Cross-Cultural Perspective. Historical and contemporary analyses of educational policies with regard to ethnic, religious, and linguistic minorities through selected national and international case studies. Introduction to cross-cultural education in representative countries in relation to social, political, and economic systems. Mr. Nakanishi, Mr. Solorzano

204E. International Efforts in Education. Prerequisite: graduate standing or consent of instructor. Critical analysis of complex world of "development cooperation," with particular reference to bilateral and multilateral efforts in education. Mr. Nkinyangi (Sp)

204F. Nonformal Education in Comparative Perspective. Comparative and international study of organized and systematic educational activity for children, youth, and adults carried on outside of schools. Types of programs include, among others, consciousness raising, community action, skills training, literacy, and extension programs. Mr. Torres (F)

205. Computers in the Educational Process. Introduction to theory, experimentation, evaluation, and future of computer systems in education, with emphasis on computer-assisted instruction (CAI), and use of computers to teach programming and to foster development of writing, computational, and filing skills. Ms. Dorr (F)

206A. Philosophy of Education: Introduction. Systematic introduction to the field, indicating ways in which philosophy serves to elucidate educational aims, content, methods, and values. Mr. Weinberg

206C. Introduction to Conceptual Analysis. Conceptual analysis of recurrent and contemporary themes in the field. Emphasis on development of logical and linguistic skills used in analysis of educational problems and issues.

C206D. Philosophy of Education: Ethics and Values. (Formerly numbered 206D.) Study of ethics and value theory in teaching and learning, educational organization and policy, and curriculum design and validation. Concurrently scheduled with course C191A.

C207. Politics of Education. (Formerly numbered 207.) Prerequisite: one approved research methods course required for master's or doctoral degree at GSE. Political dimensions of education institutions as organizations. Relationships between education institutions and political institutions in society. Political theory as a foundation for public policy analysis; interest groups in education policy formation and implementation. Concurrently scheduled with course C191D. Mr. Hawkins, Mr. Torres (Sp)

208A. Perspectives on the Sociology of Education. Sociological perspectives on current issues in educational policy and practice, including desegregation, decentralization, equality of educational opportunity, structure of educational organization, teacher/student relationships, reform in education at elementary, secondary, postsecondary levels. Mr. O'Shea (F)

208C. Explanation in the Social Sciences and Educational Research. Lecture, two hours; discussion, two hours. Prerequisite: graduate standing or consent of instructor. Overview of basic strategies and forms of explanation relevant to inquiry in education from vantage point of various social and behavioral sciences disciplines. Mr. Blurton Jones

209C. Problems in Research and Evaluation in Higher Education. Critical review of research and evaluation studies of higher education, with special attention to need for studies of new programs and problems, and to design and methodology of evaluative research. Mr. Astin and the Staff

209D. System of Higher Education. Analysis of structure and function of American postsecondary education from systems perspective. Emphasis on structure of system and comparative characteristics (faculties, student bodies, finances, outputs) of different types of institutions. Mr. Astin and the Staff

210A. Introduction to Research Design and Statistics. Fundamentals of research design. Language of research. Planning and conduct of research. Interpretation and reporting of research outcomes. Introduction to descriptive statistics: mean, median, mode, variance. Introduction to normal curve. (F,W)

210B. Statistical Inference. Prerequisite: knowledge of research designs and univariate descriptive statistics. Regression, correlation, inference, normal curve tests, t-tests, simple and factorial analysis of variance, and selected nonparametric tests. Mr. Handler and the Staff (F,W,Sp)

210C. Analysis of Variance. Prerequisite: course 210B or equivalent. Completely randomized designs, randomized block designs, nested designs, and their combinations into advanced factorial designs using fixed, random, and mixed models. Analysis of covariance, introduction to multiple regression and quasi-experimental designs. Mr. Ender and the Staff (W,Sp)

210D. Multivariate Analysis. Prerequisite: course 210C or equivalent. Review of multiple regression analysis, analysis of covariance. Introduction to matrix algebra. Introduction to multivariate normal distribution. Multivariate analysis of variance. Linear discriminant function. Analysis of repeated measurements. Canonical correlation. Principal components. Mr. Ender and the Staff

210E. Factor Analysis. Prerequisites: courses 210D, 211B. Exploratory factor analysis, rotations, confirmatory factor analysis, multiple-group analysis. Mr. Muthén

211A. Measurement of Educational Achievement and Aptitude. Prerequisite: course 210A. Critical study of tests of achievement and aptitude, with emphasis on group tests; relation of achievement to aptitude; social implications of measurement of intelligence; elements of validity and reliability. (F)

211B. Measurement in Education: Underlying Theory. Prerequisite: course 211A. Measurement theory as applied to testing, focusing primarily on classical test theory; implications of theories for test construction and selection; current status of validity and reliability theory. Mr. Burstein, Ms. Webb (W)

211C. Item Response Theory. Prerequisites: courses 210C, 211B, or equivalent. Item response theory, applications to educational achievement tests, item bias, test information, test equating, computerized adaptive testing. Mr. Muthén

212A. Learning and Education. Models of learning, modeling, reinforcement, motivation, encoding, memory, transfer, individual differences, and instruction. (F)

212B. Motivation and Affect in Educative Process. Prerequisites: courses 210A, 212A. Review of theoretical and empirical literature on motivational factors in school settings and conditions for acquisition of affective outcomes. Ms. Graham (W)

212C. Cognition and Creativity in Education. Prerequisite: course 212A. Review of theoretical and empirical literature on cognitive processes in school learning, including knowledge acquisition, comprehension, metacognition, and creativity. Mr. Wittrock (Sp)

213A. Counseling Psychology in School and Community. Prerequisite: graduate standing or consent of instructor. Analysis and in-class application of student personnel service theory and methods, with emphasis on student assessment and development, task groups, and evaluation. Mr. Healy (F)

213B. Legal and Ethical Issues in Counseling Psychology. Prerequisite: course 213A. Ethical and legal codes relevant to psychological services in schools and community; relation of value systems and personality; case studies in implications of personal values in counseling situations. Mr. Berry (Sp)

213C. Group Counseling Theory and Process. Lecture, three hours; discussion, one hour. Prerequisites: courses 213A, 214A, and 214B, or consent of instructor. Group productivity, leadership in groups, social perception, attitude formation, and effect of behavior changes in individuals and groups. Evaluation of social, psychological, and educational principles related to therapeutic experiences of individuals in small groups. Mr. Berry, Ms. Tidwell (W)

214A. Counseling Theory and Practice. Alternatives in counseling practice in relation to theories of personality development and functioning, research on effectiveness of counseling, professional issues in counseling, educational aspects of counseling. Mr. Healy, Mr. Skager (F)

214B. Advanced Counseling Theory and Practice. Limited to advanced degree candidates whose major interest is counseling and to selected high school and college counselors. Counseling procedures, educational planning, and methods for helping students handle personal problems that interfere with school progress; critical evaluation of procedures. Mr. Healy (W)

214C. Principles of Career Planning. Examination of nature of careers across ages and ethnic and sexual groups in order to determine implications for career planning in postindustrial society. Mr. Healy (Sp)

214D. Career Counseling. Depth study of current theories, principles, problems, and practices of career counseling. Mr. Berry, Mr. Healy (Sp)

214E. Substance Abuse and Addiction. Prerequisite: course 214A or equivalent. Theory and practice of prevention and intervention in substance abuse and addiction from perspective of counseling and educational practice. Mr. Skager (W)

214F. Student Problems: Social Context. Designed to assist students in understanding the configuration of social forces that lead to student dysfunctions. Consideration of a number of contemporary social problems that are of concern to school counselors, educators in general, and behavioral scientists. Mr. Skager, Mr. Weinberg (Sp)

215. Personality, Motivation, and Attribution. (Same as Psychology M239.) Current research and theory relating personality variables (e.g., attributional styles, self-esteem) to motivational concerns such as persistence and intensity of behavior. Perceived causes of outcomes in achievement and affiliative domains.

216. Counseling Models from a Cross-Cultural Perspective. Prerequisite: course 213A or consent of instructor. Research related to psychological, educational, and sociological characteristics of counseling clients within a cross-cultural perspective and implications for counseling models. Evaluation of counseling practices through analysis of school, community, and mental health settings. Mr. Berry, Ms. Tidwell (F)

M217A. Social Development and Education. (Formerly numbered 217A.) (Same as Psychology M242D.) Biological and familial, school, and other influences on the child; development in context of current research and theoretical models; consideration of theoretical and methodological research on family, peer group, and school; application of developmental theory and research to educational practice. Ms. Howes (W)

217B. Cognitive Development and Education. Prerequisite: graduate standing. Critical review of theories and research in cognitive development, focusing on work of Piaget and Vygotsky, and relation of this work to issues in educational practice. Mr. Saxe (F)

M217C. Personality Development and Education. (Same as Psychology M245.) Review of research and theory of critical content areas in personality development that bear on school performance: achievement motivation, self-concept, aggression, sex differences, empathy, and other social behaviors; review of status of emotional behavior in personality theory and development. Ms. Dorr, Ms. Feshbach (Sp)

217D. Language Development and Education. Research and theory on how children develop their first language; sociolinguistic and psycholinguistic issues in preschool and primary years; bilingual and dialectical issues. Ms. Valadez

217F. Human Development and the Educational Process. Cognitive and social development; cultural, family, peer, and schooling influences on human development; application of developmental theory and research to educational practice. Ms. Howes, Mr. Saxe, Ms. Stipek (W)

M217G-M217H-M217I. Child Abuse and Neglect (2 units each). (Same as Community Health Sciences M245A-M245B-M245C, Dentistry M300.5A-M300.5B-M300.5C, Law M281A-M281B, Medicine M290A-M290B, Nursing M290A-M290B-M290C, and Social Welfare M290E-M290F-M290G.) Prerequisite: consent of instructor. Intensive interdisciplinary study of child physical and sexual abuse and neglect, with lectures by faculty members of the Schools of Dentistry, Education, Law, Medicine, Nursing, and Public Health and the Department of Psychology, as well as by the relevant public agencies.

218A. Multiple Regression Analysis. Prerequisite: course 210B. Regression-based techniques for analyzing quantitative data; multiple regression methods, multiple correlation, partial correlation; introduction to general linear model, with direct application to educational inquiry. Mr. Burstein, Ms. Webb (W,Sp)

218B. Advanced Quantitative Models in Non-experimental Research: Multilevel Analysis. Prerequisites: course 218A or equivalent, consent of instructor. Examination of conceptual, substantive, and methodological issues in analyzing multilevel data (i.e., on individuals in organizational settings such as schools, corporations, hospitals, communities); consideration of alternative analytical models. Mr. Burstein, Mr. Muthén (W)

218C. Structural Equation Modeling. Prerequisites: courses 210D, 210E, 218B, or equivalent. Extends path analysis (causal modeling) by considering models with measurement errors and multiple indicators of latent variables. Confirmatory factor analysis, covariance structure modeling, and multiple-group analysis. Identification, estimation, testing, and model building considerations. Mr. Muthén

218D. Analysis of Categorical and Other Nonnormal Data. Prerequisites: courses 210D, 210E. Regression analysis with dichotomous and polytomous dependent variables, log-linear modeling, coefficients of association for categorical variables, factor analysis, and structural equation modeling. Mr. Muthén

219. Laboratory: Advanced Topics in Research Methodology. Provides assistance in design of research and interpretation of data to advanced students from other divisions. Coverage of special topics not included in other courses on research methods. Mr. Burstein, Mr. Ender (F,W,Sp)

220A. Inquiry into Schooling: Organization and Change. Critical analysis of issues in reconstruction of schooling; concepts of function and structure of schooling; organization theory; systems approaches in analysis of organization development and change. Ms. Oakes

220B. Inquiry into Schooling: Curricular Problems and Policy Issues. Inquiry into curriculum of schooling. Critical analysis of relationship of curricular decision making to social system and contextual variables. Ms. Crabtree, Ms. Kourilsky

221. Computer Analyses of Empirical Data in Education. Lecture, two hours; laboratory, two hours. Prerequisites: courses 209C (section 1), 210A, or equivalent. Designed to develop conceptual and technical skills needed for designing and executing empirical research utilizing statistical packages. Each student conducts two original studies. Equal emphasis on techniques of data analysis and interpretation of results. Mr. Astin (W)

M222A. Laboratory for Naturalistic Observations: Developing Skills and Techniques. (Same as Anthropology M236Q, Psychiatry M235, and Psychology M295.) Skill of observing and recording behavior in natural settings, with emphasis on field training and practice in observing behavior. Discussion of some uses of observations and their implications for research in social sciences. Students expected to integrate observational work into their current research interests. Mr. Levine (W)

222B. Design Issues in Naturalistic Research. Lecture, three hours; discussion, one hour. Prerequisite: course M222A or consent of instructor. Issues in conceptualization and design of naturalistic research studies, particularly within educational settings. Specific topics include problem definition and focus, units of observation, sampling, controlled comparisons and meaningful variation, and reliability/validity concerns in observational research. Special attention to ethnographic studies. Mr. Levine (Sp)

222C. Qualitative Data Reduction and Analysis. Lecture, two hours; discussion, two hours. Prerequisite: course M222A or 222B or consent of instructor. Theory of and practice in qualitative data reduction and analysis. Discussion of data storage and retrieval systems, data manipulation techniques such as typologies and attribute spaces, and specific analytic perspectives. Interfacing qualitative and quantitative data. Mr. Levine (F)

223. Aesthetics and the Curriculum. Lecture, two hours; discussion, two hours. Examination of various ideas and theories in aesthetics and application of these in schooling contexts. Mr. Weinberg

224. Problems and Issues in Bilingual and Multicultural Education. Introduction to development and implementation of bilingual and multicultural programs in the U.S. Analysis of program goals, models, typologies, and effectiveness. Ms. Valadez

- 225A. Issues in Education of Exceptional Individuals.** Prerequisite: graduate standing. Analysis of major research regarding contemporary trends, issues, and programs for the exceptional; consideration of commonalities and differences among exceptional individuals. Ms. Kasari (F)
- 225B. Advanced Issues in Education of Exceptional Individuals.** Prerequisite: consent of instructor. Synthesis of developmental and educational theory relevant to study of exceptional individuals, including consideration of historical context of current research and applied issues in special education. (F)
- 226. Research in Education of Learning Handicapped Individuals.** Prerequisite: course 225A or consent of instructor. Research on education of individuals with learning handicaps, with emphasis on assessment and instructional modifications.
- 227A. Research on Learning Characteristics of Exceptional Individuals.** Prerequisite: course 225B. Overview of research and theory regarding learning characteristics of exceptional individuals and discussion of application of this work to educational practice. Ms. Kasari (Sp)
- 227B. Research on Cognitive and Language Characteristics of Exceptional Individuals.** Prerequisite: course 227A. Review of empirical and theoretical literature regarding language and cognitive development of exceptional individuals; focus on intervention programs developing language and cognition. (W)
- 227C. Research on Behavioral and Social Characteristics of Exceptional Individuals.** Prerequisite: course 227B. Analysis of social and emotional development of exceptional individuals and development of social competence in special education programs. Mr. Hewett (F)
- 228. Observation Methods and Longitudinal Studies.** Lecture, two hours; discussion, two hours. Prerequisites: course 210A or equivalent, consent of instructor. Design of observational and longitudinal studies. Formulation of study conclusions concerning influences on children's development. Conduct of observations; processing and analysis of data. Use of portable computers for recording observations. Mr. Blurton Jones
- M231. Structure of Occupations.** (Same as Sociology M231.) Lecture, two hours; discussion, two hours. Shifts in occupational structure of the U.S., changing skill requirements for jobs, effects of automation on work environments, and role of formal and informal education in preparing people for occupations.
- 232. Instructional Analysis.** Prerequisite: consent of instructor. Theoretical and empirical analysis of instructional variables as they relate to diverse types of instructional strategies. Development of skill in techniques of conducting instructional research. Ms. Baker (W)
- 234. Education and Social Stratification.** Relationship between education and components of social stratification, including occupations and earnings. Competing theories used in studying education and social stratification; relevant research. Conclusions regarding individual career decisions, social policies, and theories of society.
- 235. Education and Work.** Review of theoretical and empirical literature on issues concerning interface of education and work. Review of alternatives in school-to-work transition of youth and appraisal of present vocational training and manpower development programs.
- 236. Human Abilities.** Prerequisite: course 210B or equivalent. Nature, development, and measurement of intellectual abilities and their relations to learning and instruction. Review of research and theory of models of ability and test development. Ms. Webb
- 237. Principles for Effective Media.** Prerequisites: courses 210A and 212A, or consent of instructor. Elucidation of theoretical principles underlying effective media content and media utilization. Consideration of particular differences among print, computers, and audiovisual media, in and out of schools. Role of research in development of such materials. Ms. Baker, Ms. Dorr
- 238. Cross-National Analysis of Higher Education.** Comparative study of national systems of higher education: their division of work, basic values, structures of authority, modes of national integration, and types of change.
- 239. Organization and Governance of Educational Systems.** Academic organizations, precollegiate and postsecondary, are most appropriately studied as complex, professionalized organizations. Emphasis on characteristics of educational institutions and systems as organizations: environmental relations, governance structures, processes, and patterns of decision making and policy-making. Mr. Koltai, Ms. McDonough
- 240. Cultural Foundations of U.S. Education: Policy and Practice.** Prerequisite: graduate standing or consent of instructor. Cultural foundations of persistent and troubling issues and tensions in American educational policy-making and practice. Ms. Oakes
- 241. Research Methodology in School Administration.** Prerequisite: consent of instructor. Examination of research problems and strategies in school administration. Mr. Erickson
- 242. Economic Analysis for Educational Policy and Planning.** Prerequisite: graduate standing. Introductory course focusing on concepts and quantitative methods from economics, statistics, and operations research applied to educational policy and planning issues. Instruction in programming microcomputers for instruction (BASIC) and management information systems (dBASE). Mr. Bruno
- C244. Economics of Education.** (Formerly numbered 244.) Introductory course in microeconomic and macroeconomic techniques applied to education. Methodologies illustrated principally in context of current issues in American education. Concurrently scheduled with course C191C. Mr. Bruno, Mr. Jamison (W)
- 245. Seminar: Cost-Benefit Analysis in Education.** Conceptual and theoretical underpinnings of cost-benefit analysis, critical analysis of current cost-benefit studies, and procedures for conduct of cost-benefit studies. Mr. Alkin, Mr. Jamison (Sp)
- 246A. Seminar: Mathematical Modeling in Educational Policy Analysis.** Prerequisite: course 242 or consent of instructor. Stochastic and deterministic modeling techniques as applied to educational policy and planning issues. Mathematics review and instruction in use of MPS (Mathematical Programming System) and development of software for Monte Carlo computer simulation studies in education. Mr. Bruno
- 246B. Seminar: Operations Research — Systems Analysis in Education.** Prerequisite: course 242 or consent of instructor. Application of advanced mathematical modeling techniques of operations research to educational policy and planning. Design of computer-based management information systems in education using dBASE. Mr. Bruno
- 247. Seminar: Personnel Training for Corporate Setting.** Lecture, two hours; discussion, two hours. Survey of major topics on personnel training methods used by organizations to facilitate learning of job-related behavior on part of their employees. Topics include needs assessment, maximizing trainees' learning, training methods, and evaluating training programs.
- 248. Seminar: Perspectives on Lifelong Learning.** From interdisciplinary perspective, lifelong learning is studied theoretically and as an area of educational research, policy, and practice. Conceptual distinctions among major proponents of lifelong learning and implications for schooling.
- 249A. Seminar: National Evaluations of Postsecondary Education.** Critical review of national evaluation studies of higher education, including programs of general education and professional and graduate school programs; emphasis on design, methodology, and interpretation of large-scale evaluation studies. Mr. Astin
- 249B. Seminar: Institutional Research and Program Evaluation.** Critical review of institutional evaluation studies, with consideration of scope of information needed for various purposes and problems of interrelating this information to appraise overall institutional functioning and effectiveness. Mr. Trent
- 251A. Seminar: Philosophy of Education, Epistemology.** Prerequisite: consent of instructor. (W)
- 251C. Seminar: Philosophy of Education, Social Science Problems — Methodological Perspectives.** Prerequisite: course 206C or consent of instructor. (Sp)
- 251D. Seminar: Philosophy of Education, Problems in Ethics and Values.** Prerequisite: course C206D or consent of instructor.
- 251E. Seminar: Philosophy of Education, Selected Issues.**
- 252A. Seminar: Educational Organizations.** Prerequisite: course 208A or consent of instructor.
- 252B. Seminar: Education and Social Change.** Prerequisite: course 208A or consent of instructor. (Sp)
- M252C. Human Resources and Economic Development.** (Formerly numbered 252C.) (Same as Community Health Sciences M236.) Examination, in context of the developing countries, of interactions among economic development, population growth, levels of health and nutritional status, and educational investments. Mr. Jamison (Sp)
- 253A. Seminar: Current Problems in Comparative Education.** (Sp)
- 253B. Seminar: African Education.** Prerequisite: graduate standing or consent of instructor. Contemporary issues in African educational systems, including questions of access and equity, quality and efficiency, relevance and responsiveness, links between schools and communities, and policy and practice in education. Mr. Nkinyangi (Sp)
- 253C. Seminar: Asian Education.** Mr. Hawkins (Sp)
- 253D. Seminar: Latin American Education.** Mr. Torres (W)
- 253E. Seminar: European Education.** Mr. Rust
- 253F. Seminar: Education in Revolutionary Societies.** Multidisciplinary and comparative study of socialist educational theory examined through writings of Marx, Lenin, Mao, and others. Implementation of this theory in specific case studies, along with comparative assessments of nonsocialist nations. Mr. Hawkins, Mr. Rust
- 253G. Seminar: The Asian American and Education.** Basic issues and topics related to Asian Americans in the field of education. Examples of issues and topics include Asian Americans and the community, socioeconomic status, education-to-work transition, language and culture question. Mr. Nakanishi (F)
- 253H. Seminar: The Chicano/Hispanic and Education.** Basic issues and topics related to the Chicano and other Hispanic groups in education. Review of literature on specific educational levels and Chicano/Hispanic student progress (e.g., early childhood, elementary, higher education); specific topics: assessment, access, tracking, segregation; implications for schooling. Mr. Solorzano (Sp)
- 254. Seminar: History of Education.** Prerequisite: course M201C. Study of current movements in historiography of education and critical reading of texts in history of education. Mr. S. Cohen
- 255A-255B-255C. Seminar: Special Topics.** Prerequisite: consent of instructor. May be repeated for credit. **255A.** Measurement; **255B.** Design; **255C.** Data Analysis.

- 256A. Seminar: Special Topics in School Learning.** Prerequisite: consent of instructor.
Ms. Graham, Mr. Wittrock (F)
- 256B. Seminar: Special Topics in Development.** Prerequisite: consent of instructor.
Ms. Feshbach, Ms. Howes, Mr. Saxe, Ms. Stipek
- 257. Seminar: Research in Counseling Psychology.** Prerequisite: consent of instructor. In-depth analysis of selected research approaches/areas in counseling psychology.
Mr. Skager and the Staff
- 258A. Seminar: Problems in Instructional Research.** Mr. Levine, Mr. Wittrock (Sp)
- 258B. Seminar: Problems in Instructional Development.** (Sp)
- 259A. Seminar: Research on Characteristics of Students.** Analysis of concepts, methodology, and conclusions or implications underlying and resulting from major research on student characteristics. Emphasis on differential impact of higher education on student and faculty development.
Mr. Trent
- 259B. Seminar: Research on Characteristics of Educational Environments.**
- 260. Seminar: Principles of Curriculum and Instruction.**
- 261A. Seminar: Early Childhood Education.** Prerequisite: course 421A.
- 261E. Seminar: Education and Work.**
- 261F. Seminar: Cognitive and Personal Development of College Students.** Examination of cognitive development of college students; issues of personal and social development, including leadership, and interpersonal relations and skills.
Ms. Astin
- 262A. Seminar: The Social Studies.**
Ms. Gutierrez
- 262B. Seminar: Reading.** Ms. Gutierrez
- 262F. Seminar: Research Topics in Bilingual/Multicultural Education.** Prerequisite: consent of instructor.
Ms. Valadez
- 262I. Seminar: Contemporary Issues in Education and Work.** Mr. Wilms
- 262J. Seminar: Economic Education.** Ms. Kourilsky
- 263. Seminar: Higher Education.**
- 264. Seminar: Teacher Education.** Prerequisite: consent of instructor. Research, issues, and practices in preservice and in-service teacher preparation, evaluation, and certification. Social, philosophical, and methodological issues and current trends in America and abroad. Opportunities to observe, participate in, and discuss teacher education programs.
Ms. Kourilsky (W)
- 267. Seminar: Educational Technology.** Ms. Baker, Ms. Dorr (F)
- 271A. Proseminar: Educational Psychology (2 units).** Introduction to a variety of research issues in the field of educational psychology, including topics related to human development, learning and instruction, counseling, and special education, and to different methodological approaches used to study them. S/U grading.
Ms. Stipek
- 272. Case-Study Research in Education Policy and Practice.** Use of case-study methods in education research, providing opportunities for applying methodological skills to actual case-study research projects. Focus on single and multiple case studies that investigate issues in education policy and practice.
Ms. Oakes, Ms. Wells
- 273A. Structure and Dynamics of Educational System.** Lecture, two hours; discussion, two hours. Overview of school administration, teaching, curriculum, and policy studies. Focus on American education as an institutional system wherein federal, state, and local policy, school administration, curriculum theory and design, and teaching are inextricably connected in the delivery of education.
Mr. Bruno, Ms. Kourilsky, Mr. Weinberg

280A. Seminar: Selected Topics in Special Education (2 to 6 units). Prerequisite: consent of instructor. Focus on research and clinical problems in special education. Introduction to a range of clinical services and research strategies. Exploration of current topics in the field. (Sp)

280B. Seminar: Exceptional Individuals. Prerequisite: doctoral standing. (F,W,Sp)

M281A. Seminar: Human Behavioral Ecology. (Same as Anthropology M229A and Psychiatry M279A.) Lecture, one hour; discussion, three hours. Prerequisite: consent of instructor. Examination of predictive models from animal behavioral ecology used to study human diet and subsistence; settlement patterns and territoriality; sharing and helping; reproduction and mortality. Comparison with other economic and ecological approaches in anthropology.
Mr. Blurton Jones

M281B. Seminar: Reproduction, Families, and Parenting. (Same as Anthropology M229B and Psychiatry M279B.) Prerequisite: consent of instructor. Guided forum for graduate students to discuss and broaden their studies of human reproduction and child rearing from varied viewpoints. Representation and debate of theories, questions, and methods from social and biological sciences.
Mr. Blurton Jones

M281C. Seminar: Selected Topics in Human Ethology. (Same as Anthropology M229C and Psychiatry M279C.) Lecture, one hour; discussion, three hours. Prerequisite: consent of instructor. Consideration of appropriateness and contributions of using animal behavior methodology in study of human behavior. Analysis: describing and recording behavior; causation; development, especially longitudinal studies; adaptation; evolutionary origins.
Mr. Blurton Jones

299A-299B-299C. Research Practicum: Education (4 to 8 units each). May be repeated for credit. (F,W,Sp)

300. Dissertation Writing Workshop: Interdivisional Seminar. Lecture, one hour; discussion, two hours; laboratory, one hour. Prerequisite: consent of instructor. Limited enrollment. Introduction for doctoral candidates to dissertation writing as a genre that can be analyzed or broken down with its constituent parts and, vice versa, which is constructed out of materials that can be identified and analyzed. S/U grading.
Mr. S. Cohen (W)

309A-309B. Principles and Methods of Bilingual/Reading Instruction (2 to 4 units each). Prerequisite: consent of instructor. Course 309A is prerequisite to 309B. Spanish reading instruction/English as a second language instruction as appropriate. Analysis of problems and programs related to bilingual classrooms. Relationships between Spanish language/Hispanic culture/cognition and reading. Examination and development of bilingual instructional models. S/U grading. (F,W)

310. Professional Communication for Graduate Students in Education (2 units). Prerequisite: consent of instructor. Writing workshop on students' papers in progress to ensure professional standards. Analysis and group discussion of rhetorical and stylistic principles. May be repeated once. S/U grading.

311. Principles and Methods of Computer Literacy and Classroom Application — K-12 (2 units). Lecture, one hour; laboratory, 30 minutes. Prerequisite: consent of department. Introduction to use of computers in educational environment. Discussion of issues on why and how to integrate computers into curriculum and hands-on practice which allows students to demonstrate skills discussed. S/U grading. (W,Sp)

312. Basic Principles of Curriculum and Instruction. Prerequisite: consent of instructor. Analysis and practice of basic principles and concepts for planning, conducting, and evaluating units of curriculum and instruction. Emphasis on study and utilization of a variety of instructional strategies and their application in elementary and secondary schools. (F)

313A-313B. Principles and Methods for Teaching Elementary Mathematics (6 to 12 units each). Prerequisite: consent of instructor. Course 313A is prerequisite to 313B. Problem-solving strategies and geometry for elementary teachers. Use of concrete materials, computers, calculators, cooperative learning, and content for elementary teachers. S/U grading.

313C-313D. Principles and Methods for Teaching Secondary Mathematics (6 to 12 units each). Prerequisite: consent of instructor. Course 313C is prerequisite to 313D. Problem-solving strategies in algebra, geometry, and trigonometry for secondary mathematics teachers. Use of concrete materials, computers, calculators, cooperative learning, and content for secondary teachers. S/U grading.

314A-314B. Principles and Methods for Curriculum, Instruction, and Leadership in Mathematics (6 to 12 units each). Prerequisite: consent of instructor. Course 314A is prerequisite to 314B. Problem solving, curriculum development, implementation of California Mathematics Framework, strategies for encouraging women and minorities into mathematics, and leadership development. S/U grading.

315A-315B. Principles and Methods for Teaching Reading for Multiple Subject Instruction (2 units each). Prerequisite: consent of instructor. Course 315A is prerequisite to 315B. Reading instruction in elementary schools. Analysis of reading problems and programs; study of relationships between language/culture/cognition and reading. Examination and development of instructional programs; analysis and practice of alternative instructional methods. Observation and participation in schools. S/U grading. (F,W)

316A-316B. Principles and Methods for Teaching Reading for Single Subject Instruction (2 units each). Prerequisite: consent of instructor. Course 316A is prerequisite to 316B. Reading instruction in secondary schools. Analysis of reading problems and programs; study of relationships between language/culture/cognition and reading. Examination and development of instructional programs; analysis and practice of alternative instructional methods. Observation and participation in schools. S/U grading. (F)

317A. Principles and Methods for Teaching Elementary Science — K-2 (6 to 12 units). Prerequisite: consent of instructor. Conceptual teaching of science and incorporation of science process skills for grades K-2. Demonstrations, hands-on experiences, and development of teaching materials. S/U grading.

317B. Principles and Methods for Teaching Elementary Science — 3-4 (6 to 12 units). Prerequisite: consent of instructor. Conceptual teaching of science and incorporation of science process skills for grades 3-4. Demonstrations, hands-on experiences, and development of teaching materials. S/U grading.

317C. Principles and Methods for Teaching Elementary Science — 5-6 (6 to 12 units). Prerequisite: consent of instructor. Conceptual teaching of science and incorporation of science process skills for grades 5-6. Demonstrations, hands-on experiences, and development of teaching materials. S/U grading.

318A-318B. Principles and Methods for Multiple Subject Instruction (2 units each). Prerequisite: consent of instructor. Course 318A is prerequisite to 318B. Examination and development of instructional programs; analysis and practice of alternative instructional methods. Focus on subjects commonly taught in elementary schools. Observation and participation in schools. S/U grading. (F,W)

319. Principles and Methods for Teaching Composition — 1-12 (6 to 12 units). Prerequisite: consent of instructor. Drawing from current research and theory, participating teachers expand their repertoire of techniques for teaching writing and literature. Focus on drawing on expertise of classroom teachers and becoming teacher-writers in addition to writing teachers. S/U grading.

320A-320B. Principles and Methods for Single Subject Instruction (2 units each). Prerequisite: consent of instructor. Course 320A is prerequisite to 320B. Examination and development of instructional programs; analysis and practice of alternative instructional methods. Focus on subjects commonly taught in secondary schools. Observation and participation in schools. S/U grading.

321A. Principles and Methods for Teaching Physics — 7-12 (6 to 12 units). Prerequisite: consent of instructor. Conceptual teaching of physics and incorporation of science process skills for grades 7-12. Demonstrations, hands-on experiences, and development of teaching materials. S/U grading.

321B. Principles and Methods for Teaching Chemistry — 7-12 (6 to 12 units). Prerequisite: consent of instructor. Conceptual teaching of chemistry and incorporation of science process skills for grades 7-12. Demonstrations, hands-on experiences, and development of teaching materials. S/U grading.

321C. Principles and Methods for Teaching Earth and Space Sciences — 7-12 (6 to 12 units). Prerequisite: consent of instructor. Conceptual teaching of Earth and space sciences and incorporation of science process skills for grades 7-12. Demonstrations, hands-on experiences, and development of teaching materials. S/U grading.

321D. Principles and Methods for Teaching Life Sciences — 7-12 (6 to 12 units). Prerequisite: consent of instructor. Conceptual teaching of life sciences and incorporation of science process skills for grades 7-12. Demonstrations, hands-on experiences, and development of teaching materials. S/U grading.

322A. Principles and Methods for Using Computers in Science Instruction — K-12 (6 to 12 units). Prerequisites: courses 317A, 317B, and 317C, or 321A, 321B, 321C, and 321D, consent of instructor. Use of computers and current proven computer software to teach science content and process conceptually at all grade levels. Development of teaching units. S/U grading.

322B. Principles and Methods for Peer Leaders in Science Classrooms — K-12 (6 to 12 units). Prerequisites: courses 317A, 317B, and 317C, or 321A, 321B, 321C, and 321D, consent of instructor. Develops qualities in teachers necessary for leadership positions in science education at all grade levels. Exploration of leadership roles; leadership behavior practice. S/U grading.

323. Teacher-Researcher: Principles of Classroom Research (6 to 12 units). Prerequisite: consent of instructor. Guidance of teachers conducting research in their language arts classroom, K through community college, with emphasis on naturalistic research techniques, research relevant to proposed studies, research conducted by other teacher-researchers, publication of findings. S/U grading.

324A. Observation and Participation: Multiple Subject Instruction (2 to 6 units). Prerequisite: consent of instructor. Six hours per week of observation and participation in classrooms in which multiple subjects are taught, normally in elementary schools. Preparation for supervised teaching. S/U grading. (F)

324B. Supervised Teaching: Multiple Subject Instruction (2 to 10 units). Prerequisites: course 324A, consent of instructor. Practice teaching under daily supervision of a teacher in a classroom in which multiple subjects are taught, normally in an elementary school. S/U grading. (W)

324C. Supervised Teaching: Multiple Subject Instruction (2 to 10 units). Prerequisites: course 324B, consent of instructor. Advanced practice teaching under daily supervision of a teacher in a classroom in which multiple subjects are taught, normally in an elementary school. S/U grading. (Sp)

324D. Supervised Teaching: Multiple Subject Instruction (2 to 10 units). Prerequisites: course 324C, consent of instructor. Advanced practice teaching under daily supervision of a teacher in a classroom in which multiple subjects are taught, normally in an elementary school. S/U grading.

326. Principles and Methods for Teaching English/Language Arts — K-12 (6 to 12 units). Prerequisite: consent of instructor. Emphasis on teaching a literature-based language arts program incorporating process skills, modeling, hands-on experiences, and development of teaching and teacher-training materials. S/U grading.

327. Principles and Methods for Teaching Spanish Effectively (6 to 12 units). Prerequisite: consent of instructor. Emphasis on proficiency-based foreign language teaching methods incorporating language assessment skills, modeling, hands-on experiences, and development of teaching and teacher-training materials. S/U grading.

328. Principles and Methods for Integrating Content and Language Instruction (6 to 12 units). Prerequisite: consent of instructor. Theoretical rationale for integrating language teaching and content instruction for ESL students at intermediate or advanced level in English. Various Sheltered English techniques described, modeled, and used in hands-on workshops involving peer and expert coaching. S/U grading.

329. Integrating the Elementary School Curriculum — K-6 (6 to 12 units). Prerequisite: consent of instructor. Open to credentialed teachers. Interdisciplinary strategies emphasizing reading and writing in the content areas, relating science and mathematics, and promoting enrichment follow-up activities in other disciplines such as social studies and art. S/U grading.

330A. Observation and Participation: Single Subject Instruction (2 to 6 units). Prerequisite: consent of instructor. Six hours per week of observation and participation in classrooms in which single subjects are taught, normally in secondary schools. Preparation for supervised teaching. S/U grading. (F)

330B. Supervised Teaching: Single Subject Instruction (2 to 10 units). Prerequisites: course 330A, consent of instructor. Practice teaching under daily supervision of a teacher in a classroom in which a single subject is taught, normally in a secondary school. S/U grading. (W)

330C. Supervised Teaching: Single Subject Instruction (2 to 10 units). Prerequisites: course 330B, consent of instructor. Advanced practice teaching under daily supervision of a teacher in a classroom in which a single subject is taught, normally in a secondary school. S/U grading. (Sp)

330D. Supervised Teaching: Single Subject Instruction (2 to 10 units). Prerequisites: course 330C, consent of instructor. Advanced practice teaching under daily supervision of a teacher in a classroom in which a single subject is taught, normally in a secondary school. S/U grading.

331. History and Geography Themes in U.S. History and World History Courses (6 to 12 units). Prerequisite: consent of instructor. Emphasis on new curricular reform elements written into the 1987 California Framework. Lectures, seminars, and demonstrations on fundamental issues in history, with examples derived from the History/Social Science Framework. S/U grading.

332. The Immigrant Experience (6 to 12 units). Prerequisite: consent of instructor. Readings, films, interviews, and field trips to foster understanding of composition, origins, landscape expression, and ambitions of Los Angeles' new populations, since this city is the destination of many immigrant groups entering the U.S. S/U grading.

334. Supervised Teaching: Higher Education. Mr. A. Cohen

360. Teaching Clinical Practicum. Discussion, two hours; fieldwork, two hours. Prerequisite: consent of instructor and director of Teacher Education Laboratory. Seminar and directed field experience. Examination and analysis of different methods of subject matter instruction. (F,W,Sp)

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

400. Foundations of Education Policy Analysis. Prerequisite: consent of instructor. Principles of decision making and policy formation, implementation, and analysis in context of the educational system. Critical perspectives include effectiveness and equity of educational delivery systems and programs, and complex nature of educational governance in contemporary America. Mr. Bruno, Ms. Wells

401. Structure and Functions of Schools as Complex Organizations. Prerequisite: consent of instructor. Critical analysis of alternative assumptions about organizations, how they function, and why people in organizations behave as they do. Application to special circumstances of schools and to contemporary issues and problems in school leadership, improvement, and reform. Ms. Beck, Mr. Erickson

402. Curriculum Principles and Practices. Prerequisite: consent of instructor. Critical analysis of major concepts, underlying assumptions, policy issues, and processes in development and implementation of curriculum in the educational setting. Problems in formulation of purposes, selection of learning experiences, organization of curriculum, and curriculum evaluation. Ms. Oakes, Mr. Weinberg

403. Teaching: Principles and Problems. Prerequisite: consent of instructor. Current knowledge concerning good teaching and theoretical/conceptual, empirical, and/or ideological bases for these assertions. Alternative models of classroom teaching, their assumptions, and evidence of worth. Current policy issues and problems in generating and sustaining effective teaching. Ms. Kourilsky

410A-410B. Fundamental Issues in Higher Education, Work, and Adult Development. Course 410A is prerequisite to 410B. Two-course sequence designed to orient new students to issues, ideas, and literature that constitute the division. Emphasis on underlying social and political issues that shape higher education, work, and adult development.

411A. Introduction to Educational Evaluation. Introduction to systematic evaluation as it applies to appraising educational programs. Consideration of program evaluation as means of improving quality of educationally relevant decisions. Mr. Alkin

411B. Procedural Problems in Evaluation. Assessment methodologies appropriate for evaluation problems. Writing evaluation proposals, developing program monitoring procedures, selecting appropriate evaluation design strategies, coping with ethical considerations in evaluation, framing the decision context, and reporting evaluation results. Mr. Alkin, Mr. Burstein

412A. Criterion-Referenced and Norm-Referenced Test Construction. Prerequisite: course 211A. Construction of criterion- and norm-referenced assessment instruments. Appropriateness of different assessment devices considered in relation to research, development, and evaluation.

412B. Intersecting Dimensions of Teaching and Testing. Prerequisite: consent of instructor. Designed to develop acquisition of insights and skills based on symbiotic relationship between assessment and instruction when high-stakes educational achievement tests are used. Ms. Hunter

415A. Assessment in Counseling Psychology. Prerequisites: courses 210A, 211A. Overview of rationale for and procedures used by counseling psychologists for assessing individuals in a multicultural society. Emphasis on standardized cognitive assessment instruments and specialized techniques for diagnosis, evaluation, and development of counseling strategies for at-risk populations. Ms. Tidwell

415B. Advanced Assessment in Counseling Psychology. Prerequisites: course 415A, consent of instructor. Advanced course in assessment for counseling psychologists. Survey and demonstration of instruments of achievement, affective, and personality appraisal, with emphasis on testing and interplay between assessment and psychological functioning for reducing risks of failure in academic, personal, and social areas. Ms. Tidwell

420A. Principles of Curriculum. Critical examination of basic concepts underlying determination of objectives, selection and organization of learning experiences, and evaluation process. Ms. Crabtree

421A. Programs and Research in Early Childhood Education. Prerequisite: one course from development series. Examination of child care programs and research in early childhood education, including review of relation of research in developmental psychology and education to goals of early childhood education and day care. Ms. Howes

421C. Research and Evaluation of Early Childhood Programs. Prerequisite: course 421A or equivalent or consent of instructor. Critical review of evaluation models (e.g., summative, formative, implementation) and their utility for improving and evaluating quality of child-related programs.

421D. Parents and Community Agents in Child Development. Prerequisite: one course from development series. Critical review of theoretical basis and effectiveness of training programs for parents of young and elementary school-aged children; relation of preschool parent programs to family development and role of programs in the community. Ms. Feshbach

421F. Issues in Application of Child Development and Educational Research to Social Policy. Relationships among policymakers and social scientists in development, implementation, and evaluation of policies affecting children and their families. Students learn to design and conduct interviews, analyze legislative documents, and present analyses to policymakers. Ms. Dorr, Ms. Feshbach, Ms. Stipek

422. Inquiry into Schooling: Basic Issues. Critical examination of basic issues and problems in organization and reconstruction of precollegiate schooling. Consideration of historical development and changing functions of schooling in American society; school organization; schooling alternatives; problems in management of educational change. Ms. Oakes

423. The Humanistic Curriculum. Consideration of philosophical and cultural foundations of humanistic curricular strategies. Review of techniques and procedures of affective education with a view to their place in overall theory of teaching and learning. Mr. Weinberg

424A. Social Studies in the Curriculum. Advanced study in social studies curriculum development; problems in defining objectives and organizing single and multidisciplinary programs; critical review of literature on cognitive and affective learning in social science, with emphasis on experimental study of instructional programs. Ms. Crabtree

424B. Reading in the Curriculum. Prerequisite: course 210A. Study of reading curricula and instructional procedures, with emphasis on rationale and research underlying their development and research comparing their effectiveness. Ms. Gutierrez

424C. Language in the Curriculum. Advanced study in school language curriculum; application to improvement of curriculum in the field. Ms. Gutierrez

424G. Curriculum Design for Bilingual Education. Prerequisite: consent of instructor. Advanced study of curriculum design for bilingual educational programs. Philosophical basis for bilingual programs; theories of learning and instruction applied to bilingual learner; language assessment; development of instructional component; program evaluation. Ms. Valadez

425. Appraisal of Exceptional Individuals. Prerequisites: courses 225A, 415A, or equivalent. Individual appraisal of exceptional individuals; analysis of tests and diagnostic procedures, case studies.

430. Higher Education and the Labor Market. Benefits of education from an economic perspective; labor market for college graduates; college as preparation for work; manpower forecasting and Ph.D. demand and supply; policies toward doctoral labor market and adults in postsecondary education.

431A. Administration in Higher Education. Overview of college and university administration and introduction to policy research and analysis in postsecondary institutions. Case studies of administrative problems, policies, and practices. Management information systems, resource allocation, and issues related to responsibility, authority, and participation in administrative decisions. Mr. Koltai and the Staff

431B. Curriculum and Instruction in Higher Education. Principles of curriculum and instruction in postsecondary programs. Theory and practices in goal setting, testing, media selection, and related instructional responsibilities. Preparing to teach college-level students. Mr. A. Cohen

431C. Innovative Forms and Practices in Higher and Continuing Education. New institutional forms (e.g., external degree programs and other nontraditional approaches to higher education, neighborhood learning centers, and peoples' colleges). Methodological innovations such as computer-assisted instruction, credit by examination, and independent study. Mr. A. Cohen

432. Seminar: Professional Topics in Higher Education. Ms. Astin and the Staff

433A. Instructional Product Development. Prerequisite: consent of instructor. Examination of procedures employed in systematic development of instructional products. Students acquire competencies associated with those procedures. Ms. Baker, Ms. Dorr (W)

433B. Technological Development in Educational Media. Prerequisite: course 433A. Theory, current problems, and anticipated trends in instrumentation and systems development for instructional applications and research, including computer-aided instruction, communication satellites, and other advanced systems; theory and laboratory practice with instrumentation in educational research. Ms. Baker, Ms. Dorr (Sp)

437A. Principles of Curriculum in Economic Education. Theories, principles, and concepts related to understanding the business and economic system; their application to teaching in secondary school. Ms. Kourilsky

437B. Corporate Educational Programs. History and scope of corporate training programs; current educational problems in training programs within industry as they are affected by automation and technological change.

440C. Administration of the Instructional Program. Examination of current educational problems in society and strategies of their solution through curriculum policy and practice; instructional design and operation; in-service training of teaching staffs. Mr. Erickson

441A. Instructional Supervision A. Analysis of teaching in light of research-substantiated elements of instruction: task analysis, appropriate objectives, principles that increase motivation, rate and degree of learning, retention and transfer, monitoring and adjusting instruction to meet needs and capacities of learners. Ms. Hunter

441B. Instructional Supervision B. Prerequisite: course 441A or equivalent. Basic techniques of script-taping instructional episodes, planning teacher conferences through analysis of script-tapes, conducting and analyzing growth-evoking teacher conferences. Conducting mini-lessons to demonstrate elements of good instruction. Ms. Hunter

442B. Legal Aspects of Educational Management and Practice. Examination of structures and kinds of law governing educational systems in the U.S.; constitutional dimensions of church/state relations; employees' civil rights and legal aspects of hiring, firing, and negotiating procedures; student attendance, control, and civil rights. Mr. Biegel

443. Policy Analysis in Education. Prerequisite: consent of instructor. Overview of political, economic, and legal context of educational policy formation. Included in examination are issues that impact on minorities (e.g., bilingual education, desegregation, affirmative action, role of subdominants in policy-making process).

444A. Legal Aspects of Access to Public Education. Prerequisite: course 442B or consent of instructor. Study of access to public education focused on issues of affirmative action, testing, tracking, bilingual/bicultural education, special education, correctional education, and malpractice suits.

444B. Equality of Educational Opportunity through Desegregation and Finance Case Law. Prerequisite: course 442B or consent of instructor. Concentrated review of definition of equality of educational opportunity as it is being developed by the courts in cases concerning desegregation and educational finance.

447. Seminar: Educational Policy and Planning, Special Studies (1 to 4 units). Prerequisite: consent of instructor.

448A. Urban School Leadership. Prerequisite: consent of instructor. Analysis of problems of urban school leadership. Emphasis on changing nature of the urban principalship, with considerable attention to role of other school and community agencies that interact with the urban school leader. Mr. Knox

448B. Urban Leadership Laboratory. Prerequisite: consent of instructor. Analysis of and opportunity to practice human and technical skills requisite for success as an urban school leader. Topics include negotiations, conflict resolution, applied computer technology, and effective communication. Activities include gaming, simulation, computer programming, and group dynamics. Mr. Caldwell, Mr. Erickson

460. Seminar: Special Issues in Evaluation. Topics and instructors vary each term. Recent emphases included evaluation utilization and cost-effectiveness evaluation. Mr. Alkin

461A. Seminar: Adult and Continuing Education. Broad-ranging review of theory and practice in the field, with particular attention to college and university continuing education, but also to programs provided by industry, the professions, public schools, and other institutions. Mr. Freedman

461B. Seminar: Adult Education in Other Countries.

461C. Seminar: Community Service and Development Programs in Postsecondary Education.

462. Seminar: Community College. Topics include problems and practices in community college formation, instruction, student flow, administration, and/or evaluation. Mr. A. Cohen, Mr. Koltai

470A. Seminar: Large Systems and Individual Schools. Prerequisite: consent of instructor. Mr. Handler

470B. Seminar: Educational Government. Prerequisite: consent of instructor. Mr. Handler

481. Knowledge and Inquiry in the Classroom. Prerequisite: consent of instructor. Logical features of instruction and their application to inquiry techniques in teaching and learning. Various conceptions of truth, belief, and fact and opinion, and their application to classroom learning situations. Mr. Weinberg (W)

489. Instructional Strategies in Education. Prerequisite: consent of instructor. Methods for academic instruction, including research and active participation in the adversary approach, forms of debate, role playing, interaction process analysis, and feedback instruments. Practical emphasis on social sciences and humanities instruction, K-12. Ms. Kourilsky

490A. Instructional Decision Making. Prerequisite: consent of instructor. Analysis of instructional models relevant to public school education. Assumptions, procedures, and constraints of each strategy considered in terms of learner and task variables. Laboratory experiences in classroom settings permit students systematically to apply and evaluate alternative instructional strategies. Ms. Kourilsky, Mr. Weinberg

491A. Curricular Decision Making. Prerequisite: consent of instructor. Examination of alternative solutions for practical problems that classroom teachers face in making curricular decisions. Analysis of the influence of psychological, societal, and institutional factors in curricular decisions.

492. Evaluation of Teaching and Learning. Prerequisite: consent of instructor. Relationship between appraisal instruments and information required for making decisions about teachers, pupils, and materials. Recent developments in evaluation of teaching and learning; use of modern appraisal techniques in classroom settings.

498A-498B-498C. Directed Field Experience (4 to 8 units each). May be repeated for credit. (F,Sp)

499A-499B-499C. Advanced Directed Field Experience (4 to 8 units each). May be repeated for credit.

501. Cooperative Program in Special Education (2 to 8 units). Prerequisite: consent of UCLA academic adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Limited to UCLA doctoral students in special education. Used to record enrollment in practicum courses taken under cooperative arrangements with USC. S/U grading.

596. Directed Independent Study (6 to 12 units). Individual study or research for graduate students. May be repeated for credit.

597. Preparation for Master's Comprehensive Examinations or Doctoral Qualifying Examinations (6 to 12 units). Individual study for master's comprehensive examinations or for Ph.D. or Ed.D. qualifying examinations. May be repeated for credit. S/U grading.

598. Thesis Research (6 to 12 units). Research for and preparation of master's thesis. May be repeated for a maximum of 12 units. S/U grading.

599. Dissertation Research (6 to 12 units). Research for and preparation of doctoral dissertation. May be repeated for credit. S/U grading.

School of Law

Susan Westerberg Prager, Dean

By any standard, the UCLA School of Law is recognized as one of the nation's great law schools. This reputation is based on excellence in scholarship, a rigorous educational program, and the quality of the faculty which includes eminent authorities in all major fields of law.

The educational program at the UCLA School of Law is rigorous and competitive, but it takes place in a humane environment where there is a genuine spirit of community. The student body of the school is intellectually distinguished, interesting, and culturally diverse.

The school's strong clinical program offers courses in lawyering skills such as interviewing, counseling, negotiation, and trial advocacy. UCLA students, alumni, and faculty have collaborated to pioneer clinical legal education. Students see more focus on the attorney/client relationship; they see more of what will ultimately face them as lawyers and policymakers.

An extensive and diversified student extern program, one of the most highly regarded moot court programs in the nation, and a basic philosophy that teaches law students to think clearly and analytically, but with compassion, all contribute to the distinction of the school.

School of Law

General Information:
1242 Law, (310) 825-4841

Admissions Office:
71 Dodd Hall, (310) 825-2080

Professors

Richard L. Abel, LL.B., Ph.D.
Norman Abrams, J.D.
Reginald H. Alleyne, Jr., LL.B., LL.M.
Alison G. Anderson, J.D. (*Distinguished Teaching Award*)
Peter Arenella, J.D.
Michael R. Asimov, LL.B. (*Distinguished Teaching Award*), Associate Dean
Craig Becker, J.D., Acting
Paul B. Bergman, J.D. (*Luckman Distinguished Teaching Award*)
David A. Binder, LL.B.
Gary Blasi, M.A., Acting
Grace Ganz Blumberg, J.D., LL.M.
George H. Brown, J.D., M.B.A., Acting
Taimie L. Bryant, Ph.D., J.D., Acting
Daniel J. Bussel, J.D., Acting
Evan Caminker, J.D., Acting
Kimberle W. Crenshaw, J.D., LL.M.
David Dolinko, J.D., Ph.D.
Jesse J. Dukeminier, J.D. (*Richard C. Maxwell Professor of Law; Distinguished Teaching Award*)
Julian N. Eule, J.D., LL.M., Associate Dean
William E. Forbath, M.Phil., J.D.
Susan Fletcher French, J.D.
Robert Garcia, J.D., Acting
Susan Cordell Gillig, J.D., Assistant Dean
Carole E. Goldberg-Ambrose, J.D.
Robert D. Goldstein, M.Ed., J.D.
Kenneth W. Graham, Jr., J.D. (*Distinguished Teaching Award*)
Joel F. Handler, J.D.
Kenneth L. Karst, LL.B. (*David G. Price and Dallas P. Price Professor of Law; Distinguished Teaching Award*)
William A. Klein, LL.B.
Leon Letwin, LL.B., LL.M.
Wesley J. Liebeler, J.D.
Christine A. Littleton, J.D.
Daniel H. Lowenstein, LL.B.
Mari J. Matsuda, J.D., LL.M.
Henry W. McGee, Jr., J.D., LL.M.
William M. McGovern, Jr., LL.B.
Carrie J. Menkel-Meadow, J.D.
Albert J. Moore, J.D.
Herbert Morris, LL.B., D.Phil.
Stephen R. Munzer, B.Phil., J.D.
Grant S. Nelson, J.D.
Frances E. Olsen, J.D., S.J.D.
Susan Westerberg Prager, M.A., J.D., Dean
Cruz Reynoso, LL.B.
Arthur I. Rosett, LL.B.
Richard H. Sander, Ph.D., J.D., Acting
Gary T. Schwartz, J.D.
John K. Setear, J.D., Acting
Clyde S. Spillenger, J.D., M.A., M.Phil., Acting
Samuel C. Thompson, Jr., M.A., J.D., LL.M.
Phillip R. Trimble, M.A., LL.B.
Jonathan D. Varat, J.D.
William D. Warren, J.D., J.S.D. (*Connell Professor of Law; Distinguished Teaching Award*)
Lucie E. White, J.D.

John S. Wiley, M.A., J.D. (*Distinguished Teaching Award*)
Stephen C. Yeazell, M.A., J.D. (*Distinguished Teaching Award*)
Eric M. Zolt, M.B.A., J.D. (*Distinguished Teaching Award*)

Professors Emeriti

Benjamin Aaron, LL.B.
John A. Bauman, LL.B., LL.M., Jur.Sc.D.
Harold W. Horowitz, LL.B., LL.M., S.J.D.
Edgar A. Jones, Jr., LL.B.
Robert L. Jordan, LL.B.
Richard C. Maxwell, LL.B. (*Distinguished Teaching Award*)
David Mellinkoff, Jr., LL.B.
Rollin M. Perkins, J.D., J.S.D.
Murray L. Schwartz, LL.B., LL.D.
James D. Sumner, Jr., LL.B., LL.M., J.S.D.
Harold E. Verrall, M.A., LL.B., S.J.D.
Kenneth H. York, LL.B.

Assistant Professor

Myra K. Saunders, M.L.S., J.D., in Residence, Law Librarian

Lecturers

Donald Biederman, J.D., LL.M.
Stuart Biegel, J.D.
Benjamin Bycel, M.A., J.D.
Raquelle de la Rocha, J.D.
Patrick Del Duca, D.E.A., J.D., Ph.D., dott di giur.
William J. Flanagan, M.Div., J.D.
Cassandra S. Franklin, J.D.
Paul L. Gardner, J.D.
Martha Karsh, J.D.
Andrew M. Katzenstein, J.D., LL.M.
Elizabeth D. Kemper, J.D.
Kenneth N. Klee, J.D.
Gordon L. Klein, J.D.
Kristine S. Knaplund, J.D.
John R. Liebman, J.D.
Ellen L. Lutz, M.A., J.D.
Marlene Maerowitz, J.D.
Eric S. Mischel, M.A., J.D.
Alice Neff, M.A., J.D.
Owen Olpin, J.D.
Neil Orloff, M.B.A., J.D.
Laura Streimer, J.D.
Carson Taylor, J.D.
Suzanne Tragert, J.D.
Tracy Westen, M.A., J.D.
Pamela Woods, J.D.
Andrew J. Yamamoto, J.D.

Visiting Professors

Steven K. Derian, M.A., J.D.
Stanley A. Goldman, J.D.
Neil Gotanda, J.D., LL.M.
Mark Grady, J.D.
James Kushner, J.D.

The School of Law, one of two academic units at UCLA which operate on a semester (rather than quarter) system, offers a three-year curriculum leading to the J.D. degree. The school is accredited by the California Committee of Bar

Examiners, is a member of the Association of American Law Schools, and is on the approved list of the American Bar Association. Graduates of the school are qualified to apply for admission to practice in any state in the U.S.

The school is designed to produce lawyers who are well-prepared for the various private and public roles which are assigned to members of the legal profession. Students do not undertake a specific major but have the opportunity to enroll in a wide variety of courses dealing with various legal fields.

Degrees Offered

Juris Doctor (J.D.)
Master of Laws (LL.M.)

Juris Doctor Degree

Admission

Students beginning their professional work are admitted only in Fall Semester. You must have received a bachelor's degree from a university or college of approved standing before beginning work in the school. You are also required to take the Law School Admission Test (LSAT). The admissions committee considers grades and test scores and, in appropriate cases, such additional factors as ability in languages other than English, work experience or career achievement, previous positions of leadership or other special achievements, ethnic background, prior community or public service, unusual life experiences, overcoming a physical handicap or other disadvantage, career goals, economic disadvantages, and any other characteristic which may indicate that you will contribute to the educational and other benefits of a diversified student body.

For detailed information about the academic programs offered by the School of Law, the fees, and the semester-system calendar by which it operates, obtain the *Announcement of the UCLA School of Law* by contacting the Admissions Office, School of Law, 71 Dodd Hall, UCLA, Los Angeles, CA 90024-1476.

For information on the proficiency in English requirements for international graduate students, refer to "Graduate Admission" in Chapter 3.

Residence and Unit Requirements

Candidates for the degree of Juris Doctor must pursue resident law school study for six semesters and successfully complete 87 units. The residence requirements may be satisfied as follows: (1) six semesters in regular session in this school or (2) two semesters in regular session (or equivalent) in a school which is accredited by the American Bar Association, coupled with four semesters in regular session (or equivalent) in this school.

Every first-year student is required to take the full schedule of required courses; second- and third-year students are required to take a minimum of 12 hours and may not take more than 16 hours each semester. The second- and third-year curriculum is elective, except for a required course in professional responsibility. In addition to the courses in the regular law school curriculum, students may take two courses for credit in other disciplines within the University. Graduate students may enroll in upper division law courses on a limited basis. Law courses are not open to non-UCLA students.

Attendance and Grades — The right to take examinations and the privilege of continuing as a student in the school are conditioned on regular classroom attendance. Information on the grading system, which is based on a numerical scale of 50 to 100, may be obtained from the Office of the Assistant Dean for Students. Standards for satisfactory performance and for graduation are prescribed by the faculty and are published separately. They may also be obtained from the above office.

Curriculum

The school offers courses of instruction within the school and supervised educational experiences outside it in an effort to enable its students to think intelligently and to prepare them for careers of practice and public service. To this end the school employs several instructional techniques in a variety of subject areas.

In the first year of their legal education students are exposed to an intensive study of legal reasoning in a series of fields which have historically dominated legal thought. In conjunction with these courses students also receive training in the use of legal bibliography and in effective legal writing and oral advocacy.

In the second and third years students have an opportunity to engage in a number of different fields of law and law-related study.

Concurrent Degree Programs

The School of Law offers three concurrent degree programs which allow you to fulfill the requirements of the J.D. and another graduate degree simultaneously.

Education Program/J.D.

The School of Law and the Graduate School of Education offer a concurrent plan which allows students to design a program of study leading to the J.D. and any advanced degree in education (M.Ed., M.A., Ed.D., or Ph.D.). If the program meets the degree requirements in both schools, students are awarded both degrees on its completion. (This program is not currently available.)

M.A.-Urban Planning/J.D.

The School of Law and the Graduate School of Architecture and Urban Planning offer a concurrent plan of study providing an integrated curriculum for students planning to specialize in the legal aspects of urban problems. Education in planning offers an overview of theories and methods that permit identification and treatment of urban problems; education in law offers insight into the institutional causes and possibilities for treatment of these problems. Students pursue studies in both schools and receive both the J.D. and M.A. degrees at the end of four years.

Students interested in the program must apply and be admitted to the School of Law, the Urban Planning Program, and the Graduate Division.

M.B.A./J.D.

The School of Law and the John E. Anderson Graduate School of Management offer a concurrent program which enables students to prepare for careers where law and management overlap and where understanding of both fields is necessary. Examples of such areas would include public service, international trade, industrial relations, corporate law, and specialized areas of management consulting. The program makes it possible to earn the J.D. and M.B.A. in four academic years. Students interested in such a program should apply to both schools simultaneously.

Master of Laws Degree

The school offers a graduate law program leading to the Master of Laws (LL.M.) degree to outstanding American and international students interested in pursuing graduate studies. Law school graduates with outstanding records who may be interested in this program should contact the Admissions Office for further information.

Other Programs

Clinical Program

The school permits students to participate in clinical training. These activities consist of fieldwork in a variety of federal and state agencies accompanied by seminars in the school which seek to analyze and expand the agency experience.

Extern Program

The school offers an extern program which gives students the opportunity to work for judges or in legal agencies away from the school for as long as six months (including the summer), for which they receive academic credit. Extern programs have been offered in Washington, DC, San Francisco, and New York.

First-Year Courses

The first year of law school is designed to introduce students to legal analysis using a variety of substantive fields. Each of the following courses is required of all first-year students.

100. Contracts (5 units). Law governing private agreements. Analysis of criteria for determining whether or not a particular promise or voluntary agreement is legally enforceable and survey of major legal issues affecting enforceable agreements, including when a contract becomes binding, what persons acquire rights under a contract, conditions under which performance is required or excused, what constitutes breach of contract, remedies available for breach of contract. Problems of interpreting contract language, role of contract in a market society, conflict between commercial need for certainty and demands of individual fairness, and relationship between contract law and other areas of law. Ms. Anderson, Mr. Asimow, Mr. Brown, Mr. Busset, Ms. Littleton, Mr. McGovern, Mr. Rosett, Mr. Setear

110. Legal Research and Writing (5 units). Course teaches first-year students how to find the law, how to analyze it, and how to communicate their conclusions in writing. Focus on skills of analyzing legal authority, developing arguments to solve specific problems where there is conflicting authority, and structuring legal writing which is clear, informative, and persuasive. Use of writing assignments to develop these skills. Presentation of oral argument on one research assignment. Ms. Franklin, Ms. Knaplund, Ms. Maerowitz, Mr. Mischel, Ms. Tragert, Ms. Woods

110B. Facts, Clients, and Lawyers (3 units). Coverage of both substantive law and theory and practice of fact investigation, organized around a case, with students representing plaintiff and defendant. Preparation of short research and writing assignments and exercises involving doctrinal and factual aspects of case. Interviewing techniques and nature of lawyer/client relationship. Opportunity to interview clients or lay and expert witnesses from witness program. Mr. Binder, Ms. Maerowitz, Ms. Woods

120. Criminal Law I (4 units). Selected topics in substantive criminal law. Consideration of principles underlying definition of crime such as requirements of actus reus and mens rea and general doctrines such as ignorance of fact and ignorance of law, causation, attempt, complicity, and conspiracy. Inquiry into principles of justification and excuse, with particular attention to doctrines of necessity, intoxication, insanity, diminished capacity, and automatism. Emphasis on basic theory of criminal law and relationship between doctrines and various justifications for imposition of punishment.

Mr. Arenella, Mr. Dolinko, Mr. Garcia, Mr. Letwin

130. Property (5 units). Analysis of property as a social institution and particularly of dynamics of the system for recognizing and protecting competing claims to resources. Historical development of various kinds of interests in property, housing, landlord and tenant, public and private land-use planning and development, and sale and financing of real estate. Ms. Blumberg, Ms. Bryant, Mr. Dukeminier, Ms. French, Mr. Lowenstein, Mr. Munzer, Mr. Nelson, Mr. Sander

140. Torts (5 units). Personal injury law as it has developed within the Anglo-American legal tradition. Concept of negligence, refinements of negligence law, and doctrine of intentional torts. Contemporary rules of strict liability. Alternatives to the tort system in treating need for victim compensation as a societal problem. Effort to identify basic purposes which tort law system achieves or should achieve.

Mr. Abel, Ms. Anderson, Mr. Grady,
Ms. Matsuda, Ms. Olsen, Mr. Schwartz

145. Civil Procedure (5 units). Processes that courts follow in deciding disputes in noncriminal cases. Way in which conflicts are framed for courts, stages through which litigation goes, division of power among various decision makers in the legal system and between state and federal courts, territorial limitations on exercise of judicial power, principles that define consequences of a decision once a court has finished with a case, and special opportunities and problems of litigations involving multiple disputants. Ways in which our beliefs about fairness (in particular those embodied in U.S. Constitution) and pressure for efficiency shape design of the process.

Mr. Alleyne, Mr. Becker, Mr. Bergman,
Mr. Binder, Mr. Caminker, Mr. Forbath,
Ms. Goldberg-Ambrose, Ms. White, Mr. Yeazell

148. Constitutional Law I (4 units). Ways in which U.S. Constitution distributes power among various units of government in the American political system and limits exercise of those powers. Structural limitations on government: division of powers between the nation and states in the federal system, and separation of powers among the three branches (legislative, executive, and judicial) of national government. Civil War Amendments (13th, 14th, 15th) as limits on states and as sources of congressional power. Proper role of judiciary in limiting action of other branches of government.

Mr. Caminker, Mr. Eule,
Mr. Goldstein, Mr. Karst, Mr. Lowenstein, Mr. Varat

Second- and Third-Year Courses*

All of the courses in the second- and third-year curriculum are elective with the exception of the legal profession requirement, which is a requisite for graduation. Students may fulfill the requirement either by preparing a paper in consultation with a faculty member or by completing one of the sections of Law 312. The different sections vary in emphasis.

312. The Legal Profession (2 to 3 units). Course has two central themes. One is distribution of legal services, including topics such as social structure of the profession, different roles and specialties of law practice, and how the profession is regulated. Second theme is the lawyer's representation of clients, including legal, professional, ethical, moral, and political problems arising out of the lawyer's various roles — representative of client, officer of the court, member of a profession. Various sections may offer different emphases with respect to rules regulating the profession (ABA Model Code of Professional Responsibility and ABA Model Rules of Professional Conduct) and in course requirements. Some sections require a paper in lieu of or in addition to an examination.

Mr. Abel, Ms. de la Rocha,
Mr. Dolinko, Ms. Menkel-Meadow,
Mr. Reynoso, Mr. Sander

Elective Courses

200A. Constitutional Political Economy. Course 148 is a "zoo" class, with separate cages for each of the different animals (types of cases) where doors of the cages are never open so that the animals can mingle with each other. An attempt to open the cages to see if there is a unified and principled way of thinking about constitutional law and a look at many cases already considered in course 148. Use of some economics (mostly public choice theory), history, rational choice theory, and common sense.

Mr. Liebel

201. Constitutional Law II. First Amendment's guarantees of freedoms of speech, press, and assembly, and First Amendment's prohibition of establishment of religion and its guarantee of free exercise of religion. Proper role of judiciary in American system of government.

Mr. Eule, Mr. Forbath,
Mr. Goldstein, Mr. Karst, Mr. Lowenstein, Mr. Varat

202. Constitutional Criminal Procedure. Study of Fourth-, Fifth-, and Sixth-Amendment constitutional restraints on activities of law enforcement officers during investigatory stage of the criminal process. How Supreme Court has attempted to resolve tension between individual rights and crime control needs in its decisions regulating the following law enforcement practices: investigative detention, arrest, police interrogation, searches and seizure, and eyewitness identification. Possible coverage of rights to counsel and to a jury.

Mr. Abrams, Mr. Arenella, Mr. Dolinko,
Mr. Garcia, Mr. Goldstein, Mr. McGee

205. Wills and Trusts. Law of intestate succession, wills, will substitutes, trusts, class gifts, powers of appointment, Rule Against Perpetuities, and introduction to estate and gift taxation and law of trust and estate administration.

Mr. Dukeminier,
Ms. French, Ms. Knaplund, Mr. McGovern

207. Community Property. Detailed examination of California community property system which regulates property relations between husband and wife during marriage and at its termination by divorce or death. Community property raises many questions about nature of marriage and various forms of gainful human activity.

Ms. Anderson,
Ms. Blumberg, Mr. Bycel, Ms. Prager

208. Real Property Secured Transactions. Examination of operation of California's land security system, tracing the security device from common law mortgage to modern deed of trust and land sale contract. Fundamental problems of land security in realistic context of case and statutory law of a single jurisdiction, with emphasis on planning aspects.

Mr. Warren

209. Real Estate Finance. Law governing financing of land transactions from both a national and California perspective, including real estate mortgage, California Deed of Trust, installment land contracts, other mortgage substitutes, receivers, foreclosure, priorities in California antideficiency legislation, secondary mortgage market, construction financing, leasehold mortgages, shopping center developments, and condominiums.

Mr. Nelson

211. Evidence. Focus on usual range of evidentiary topics — relevance, hearsay, character evidence, testimonial privileges, documentary evidence, and problems in examination of witnesses. Exploration of various ways of treating these issues, with emphasis on approaches of Federal Rules of Evidence and California Evidence Code.

Mr. Goldman, Mr. Graham, Mr. Letwin

212. Federal Courts. Selected problems in jurisdiction of federal courts, including justiciability and federal judicial function; federal habeas corpus; federal-question jurisdiction of federal district courts; intervention by federal courts in state proceedings.

Mr. Caminker, Mr. Karst, Mr. Varat

214. Civil Rights Litigation. Exploration of issues arising in civil rights litigation across a range of substantive areas, including police brutality, race and sex discrimination, and free speech. Focus on Reconstruction-era civil rights acts, in particular on 42 U.S.C. section 1983 and analysis of recurring legal problems arising in suits against state and local governments and their officers for violation of federal constitutional and statutory rights. Topics include relationship between state and federal courts, state action requirement, 11th Amendment, municipal liability, official immunities, damages and injunctive relief, and attorney fees.

Mr. Becker

214. Civil Rights. Survey course intended to review both the casual and remedial relationship of law to racial discrimination. Brief review of historic development of race as a legal issue; past and current developments in housing, voting, and education. Identification of various competing visions of racial equality reflected in civil rights legislation, in case law, and in the very definition of discrimination. Review of several critiques of antidiscrimination law, with special attention to those questioning effectiveness of seeking racial reforms through law.

Ms. Crenshaw, Mr. Gotanda

215. Law and the Poor. Major income-maintenance programs in the U.S.: Aid to Families with Dependent Children, Disability, Food Stamps, Supplemental Security Income, Social Security, and General Relief. Emphasis on interactions of moral attitudes toward the poor and structure and implementation of law, policy, and administration. The deserving and undeserving poor, moral behavior, race, gender, work, and welfare. Current welfare reform consensus, including California GAIN program and recently enacted Family Support Act. Students required to spend one day working with the public counsel advocating for general relief recipients.

Mr. Handler

216. Administrative Law. Much of modern government is administered by agencies of government other than legislatures or courts. Substantive sources of (and limits on) administrative authority. Procedural norms with which agencies must comply in the course of adjudication or rule-making. Judicial review as a technique for correcting administrative error or abuse. Individual's right to procedural due process in individual's interactions with public agencies.

Mr. Schwartz

M217. Topics in Legal Philosophy. (Same as Philosophy M256.) Prerequisite: consent of instructor. Examination of topics such as concept of law, nature of justice, problems of punishments, legal reasoning, and obligation to obey the law. May be repeated for credit with consent of instructor.

Mr. Munzer

220. Federal Taxation I. Fundamentals of federal income taxation, particularly as they apply to individuals. Gross income, deductions, year in which income is properly reported and deductions properly taken, and various other topics.

Mr. Asimow, Mr. Klein, Mr. Zolt

221. Federal Taxation II. Prerequisite: course 220. Course 230 may be taken concurrently. Application and extension of principles in course 220 to shareholder/corporation relationships. Federal income tax consequences of formation, reorganization, and liquidation of corporations, distributions to shareholders, and sales of shareholder interests.

Mr. Asimow, Mr. Zolt

221. Federal Taxation II. Prerequisite: course 220. Examination on a comparative basis of basic principles of federal income taxation affecting corporations, partnerships, and S corporations. C corporations are entities taxed separately and distinctly from their shareholders; partnerships and S corporations are generally not subject to tax. Organization, operation, and sales and liquidation of the three entities.

Mr. Thompson

222. Federal Taxation III. Federal taxation of gifts and decedents' estates; federal income taxation of trusts and estates. Emphasis on tax planning techniques. Of considerable importance to anyone who expects to practice in areas of tax planning, estate planning, family law, and probate, among others.

Mr. Katzenstein

*The School of Law maintains its own course numbering system; course numbers as shown here do not correspond to Graduate Division course numbering definitions.

224. U.S. Taxation of International Transactions. U.S. taxation of (1) international activities of U.S. citizens and corporations and (2) U.S. activities of foreign citizens and corporations. Particular emphasis on impact of federal income taxation on cross-border acquisitions. Mr. Thompson

228A. Corporate Securities and Antitrust Aspects of Mergers and Acquisitions. Prerequisite: course 220. Recommended: course 221. Interdisciplinary approach to study of mergers and acquisitions, looking at antitrust aspects, the Hart/Scott/Rudino premerger notification provisions, corporate law aspects, basic federal securities law considerations, and financial, tax, and accounting aspects. Mr. Thompson

228B. Tax Aspects of Mergers and Acquisitions. Prerequisites: courses 220, 230. Recommended: course 221. Various aspects of taxation of mergers and acquisitions, including (1) taxable stock acquisitions, (2) taxable asset acquisitions, (3) leveraged buyouts, (4) tax-free acquisitive reorganizations, and (5) limitations on carryover of losses. Examination of current proposed revisions of the mergers and acquisitions and leveraged buyout provisions of the Code. Mr. Thompson

228C. Antitrust Aspects of Mergers and Acquisitions. Examination of impact of antitrust laws and Hart/Scott/Rudino premerger notification provisions on mergers and acquisitions. Consideration of some international antitrust aspects. Survey of some of the literature dealing with motivations for mergers and acquisitions. Mr. Thompson

230. Business Associations. Focus on how problems of joint economic ventures are resolved in the law of agency, partnership, and corporation. Federal securities laws and their impact on planning business ventures. Ms. Anderson, Mr. Asimow, Mr. Klein

234. Law and Accounting. Prerequisite: consent of instructor (for students with more than two undergraduate or any graduate accounting courses). Recommended for students with no prior accounting training. Basic principles of financial reporting and analysis applied by business enterprises. Examination of how firms record transactions and summarize their economic activities in the form of financial statements. Consideration of various financial concepts of relevance to attorneys, including income measurement, liability determination, and enterprise valuation. Accounting and financial aspects of capital structure decisions involving bonds, equity securities, and leases. Mr. G. Klein

236. Securities Regulations I. Prerequisite: course 230. Basic approach of federal securities law, including disclosure-oriented provisions of Securities Act of 1933 and Securities Exchange Act of 1934, and fraud and civil liability provisions of both acts. Impact of federal securities law on merger and acquisition process, including tender offers and leveraged buyouts. Mr. Thompson

236A. Securities Regulations II: Securities and Corporate Aspects of Mergers and Acquisitions. Prerequisite: course 230. Examination of impact of federal securities law and state corporate laws on merger and acquisition process, including tender offers and leverage buyouts. Mr. Thompson

240. Antitrust I. Economic analysis related to price fixing, market division, joint ventures, tying arrangements, reciprocity, requirements contracts, mergers, and monopolization. Mr. Liebele, Mr. Wiley

245. Antitrust II. Prerequisite: course 240. Historic Sherman Act monopolization and merger cases. Economic underpinnings of oligopoly theory, which presumably forms basis for current antitrust policy toward concentrated industries; validity of so-called "Market Concentration Doctrine." Current antitrust efforts aimed at monopoly and "shared monopoly." Mr. Liebele

247. Law and Economics. Economics background not required. Basic theory of voluntary exchange and conditions necessary for a voluntary exchange system to maximize community welfare, applied to various types of legal problems in attempt to gauge extent to which legal rules contribute to (or hinder) maximization of such welfare. Mr. Liebele, Mr. Sander

248. Bankruptcy. Examination of Bankruptcy Code and related statutes from viewpoint of what commercial lawyer should know about the field in order to advise clients in planning and carrying out business transactions. Emphasis on liquidation of debtors' estates in bankruptcy, reorganization of business debtors in Chapter 11, rehabilitation of individual debtors in Chapter 13, planning business transactions to withstand trustee's avoiding powers — voidable preferences, fraudulent transfers (including leveraged buyouts and intercorporate guarantees), and equitable subordination of claims. Mr. Warren

248. Bankruptcy. Bankruptcy Code and related statutes, administration of debtors' estates, reorganization of debtors' businesses, avoiding powers of the trustee in bankruptcy. Treatment of consumer debtor in bankruptcy. Mr. Bussel

250. Commercial Law: Chattel Security and Commercial Paper. Detailed examination of Uniform Commercial Code. Study of Article 9 of the Code, law governing security interests in personal property. Business collateral such as equipment, inventory, accounts receivable, and chattel paper, as well as financing of purchases by nonbusiness consumers. Treatment of secured transactions in bankruptcy and use of letters of credit in commercial transactions, law of negotiable instruments (Article 3 of the Code), bank collection process (Article 4), and wire transfers (Article 4A). Mr. Jordan, Mr. Warren

252. Unfair Competition and Business Torts. Survey of five ways in which law regulates the competitive process, encourages innovation, and governs rights of creators and consumers: patent, copyright, trademark, false advertising, and business tort law. Patent law covered very briefly, primarily for comparative purposes rather than as a complete introduction to that area. "Business torts" includes interference with contracts and business advantage, trade secret theft, right of publicity, and RICO — popular federal racketeering statute. Mr. Wiley

255. Tort Law: Tort Crisis, Tort Theory, and Tort Reform. Modern tort law — recent developments in tort doctrine and tort practice that may have led to a crisis in the 1980s; academic scholarship that has endeavored to explain, at the theoretical level, what happened in the 1980s; and range of reforms that have been enacted by state legislatures or proposed for tort scholars. Mr. Schwartz

259. Labor Arbitration. Practice, procedures, and substantive law of labor arbitration, with emphasis on what labor arbitrators actually do in their interpretation of collective bargaining agreements. Procedural content of labor arbitration: Who are the labor arbitrators? How are they mutually selected by unions and employers? How might the fact that the arbitrator is mutually selected and mutually paid by the union and employer bear on arbitrator's decision-making process? Utility of using the labor arbitration model as a dispute resolution mechanism outside the labor environment: domestic disputes, landlord/tenant disputes, etc. Mr. Alleyne

260. Labor Law I. Fundamental law governing unions and other collective activity among workers in the private sector — the National Labor Relations Act (NLRA). How principles developed under NLRA have been applied in the public sector. Analysis of a series of topics, including organizing, union elections, collective bargaining, picketing, strikes, lockouts, and arbitration. Development of the law and how the law has structured relations between labor and management and contributed to current state of unions in the U.S. Mr. Alleyne, Mr. Becker

261. Employment Law. Prerequisite: course 260 or consent of instructor. Collective bargaining in the public sector (government employment at federal, state, and local levels). Differences and similarities in private and public sectors, and responses of federal and state legislatures and of courts to special problems of collective bargaining in the public sector. Mr. Alleyne, Mr. Becker

263. Employment Discrimination. Title VII of 1964 Civil Rights Act and similar statutes prohibit discrimination based on race, sex, national origin, religion, age, and handicap. Examination of substantive and procedural law that has developed under these statutes; consideration of social policy goals and assumptions underlying that development. Specific topics include disparate treatment and disparate impact theories of discrimination, employment testing and test validation, statistical proof, equal pay and comparable worth, affirmative defenses (business necessity, bona fide occupational qualifications, bona fide seniority systems), affirmative action and reverse discrimination, obligations of government contractors, class actions, and administrative and judicial remedies. Mr. Alleyne, Ms. Littleton

264. Workers' Compensation and Workers' Injuries. Study of ways in which law responds to phenomenon of workers' injuries and occupational disease. Labor market and unionization, workers' compensation, federal OSHA job-safety regulation program, and limited but significant number of tort issues that workers' injuries provoke. Workers' compensation considered both as a compensation program and as a tort-like rule of strict liability. Mr. Schwartz

267. Indian Law. Special legal status of American Indians and Indian tribes and tension between moral/legal claims and political forces. Sources and scope of federal, state, and tribal power on Indian reservations; property law concepts unique to Indian tribes and Indians; rights to American Indians in relation to federal, state, and tribal governments and federal trust relationship to Indians. Ms. Goldberg-Ambrose

270. International Law. Role of law and legal institutions in international relations and in government foreign affairs decision making, particularly on the part of the U.S. Effect of public international law on domestic law and private activity. How international law is applied in the world. Essentials of treaty law and customary international law. U.S. Constitutional structures affecting foreign relations and allocation of responsibility for decision making within the international system, and how conflicts in assertion of jurisdiction are resolved. Review of substantive rules of the law of sea and legal regime governing use of airspace. Major limitations on exercise of authority by states (doctrines of sovereign immunity, acts of state and diplomatic immunity) and responsibility of states for fair treatment of aliens, international human rights law, and role of individual in the system. Particular problems of terrorism, international environmental law, international organizations, and rules related to use of force. Mr. Trimble

271. International Business Transactions. Legal framework of international trade, investment, and distribution of goods and services. How legal activities, such as negotiation of a contract, litigation or arbitration of a claim, distribution of goods through agents, distributors, and licensees, or pursuit of a law practice are affected by international dimensions of the work. Mr. Frossett, Mr. Trimble

273. Human Rights. International human rights law from jurisprudential and practical perspectives. Introduction to history and normative content of international human rights law, law-making process, how abuses are spotlighted, and extent to which meaningful sanctions exist. Human rights as an element of U.S. foreign policy and remedies available to victims in U.S. courts. Use of contemporary world events to explore questions such as whether human rights norms are universally applicable, whether certain rights trump other rights, and extent to which conflicting rights can be harmonized. Ms. Lutz

274. Trademark and Unfair Competition Law. Basic principles of trademark and unfair competition law. Topics include philosophical and public policy considerations underlying trademark and unfair competition law; how trademark rights are acquired, maintained, and lost; process for registering trademarks; infringement of trademark rights; dilution of trademarks; false advertising; right of publicity; remedies for violation of trademark rights; and gray market and other international aspects of trademark rights.

Mr. Gardner, Mr. Wiley

278. Comparative Law: Japanese Law and Society. Selected topics in Japanese law and society. Introduction to Japanese legal and social context, legal profession, and judicial system. Exploration of four or five case studies of groups in Japan which have sought to improve their situation through use of legal and extralegal avenues, including victims of environmental pollution, Koreans in Japan, Burakumin (minority group subordinated on basis of ancestors' occupation and residence).

Ms. Bryant

M281A-M281B. Child Abuse and Neglect (2 units each). (Formerly numbered M282A-M282B.) (Same as Community Health Sciences M245A-M245B-M245C, Dentistry M300.5A-M300.5B-M300.5C, Education M217G-M217H-M217I, Medicine M290A-M290B, Nursing M290A-M290B-M290C, and Social Welfare M290E-M290F-M290G.) Prerequisite: consent of instructor. Intensive interdisciplinary study of child physical and sexual abuse and neglect, with lectures by faculty members of the Schools of Dentistry, Education, Law, Medicine, Nursing, and Public Health and the Department of Psychology, as well as by the relevant public agencies.

Mr. Goldstein

282. Education and the Law. Exploration of recent controversies on student rights at K-12 and college levels. Topics include education malpractice, student drug testing, discriminatory harassment, and parameters of right to receive information and ideas. Examination of efforts to maximize equal educational opportunity by analyzing such volatile areas as standardized testing, bilingual education, rights of disabled (including rights of AIDS-infected students), homogeneous ability grouping, and interscholastic athletics.

Mr. Biegel

M285. Governance: State, Regional, and Local (2 to 4 units). (Same as Architecture and Urban Planning M202B.) Analysis of structure and function of local, regional, and state government in historical and institutional context: organization, finance, intergovernmental relations, role of judiciary, public services, lawmaking, citizen participation through initiatives and referenda, and government tort liability.

Mr. Schwartz

M286. Public Control of Land Development (2 to 4 units). (Same as Architecture and Urban Planning M202A.) Analysis of legal and constitutional constraints on land-use planning and development; administrative and environmental regulatory processes, including relationship between law and planning, formulating land-use legislation, zoning, subdivision controls, eminent domain, taxation, urban development, environmental law, and negotiation. Theory and doctrine applied to case studies; research project/paper and/or examination required.

Mr. Kushner, Mr. McGee

M287. Urban Housing and Community Development (2 to 4 units). (Same as Architecture and Urban Planning M231.) Examination of past 40 years of federal and state programs to stem urban decline and improve housing in the U.S.; comparison and contrast of legal and policy initiatives in areas of public housing, housing segregation, mortgage subsidies, landlord/tenant law, urban renewal, and community organizing. Research paper required.

Mr. McGee, Mr. Sander

290. Environmental Law: Regulatory Environmental Programs. Examination of air pollution, water pollution, and hazardous waste. Differences in the regulatory approaches and policies that underlie these differences. Environmental problems routinely faced by corporations. Development of strategies for dealing with problems in such areas as standard setting, permitting, and enforcement.

Mr. Orloff

M290. Environmental Law (2 to 4 units). (Same as Architecture and Urban Planning M264.) Examination of the field of environmental law through analysis of various legal issues and public policy; legal consequences of public decision-making strategies and allocation of primary responsibility for various environmental decisions. Focus on air pollution and Clean Air Act as a means of illustrating policy issues underlying the field.

Mr. Yamamoto

290A. International Environmental Law. Role that international law currently plays, or might play, in determining answers to questions about humankind's impact on the global environment. Skills of interpretation, drafting, negotiation, and transactional design relevant to attorneys practicing law of any sort.

Mr. Setear

292. Water Law. How society allocates and protects a crucial natural resource — water. Law treats water differently from land and other natural resources, permitting reexamination and critique of many commonly held assumptions about property (such as asserted advantages of exclusive property rights). How law allocates water among competing consumptive and in-stream uses (including recreational use and preservation) and protects water quality under state and federal law. History and politics of water development in U.S.; relevant role of market in reallocating water; constitutional protection of water rights; environmental limits on water development (including Endangered Species Act); Native American water rights; interstate and international disputes over water; institutional influences on water use; and public rights of access to water resources.

Mr. Olpin

299. Federal Criminal Law Enforcement. Federal criminal enforcement against white collar crime, organized crime, and political corruption. Emphasis on federal crimes such as RICO (civil RICO also), money laundering, mail fraud, Hobbs Act, and Travel Act. Federal system of penalties, including criminal forfeiture and federal sentencing guidelines. It is essential for lawyers representing business persons to be familiar with federal criminal laws. Gives students a basic understanding of federal criminal system, ways in which federal criminal law differs from its state counterparts, and how federal and state criminal enforcement systems relate to each other.

Mr. Abrams

300. Remedies. Kinds and nature of relief afforded by courts to litigants in civil litigation. Theory and general principles governing award of compensatory damages, equitable remedies, and restitution. Substantive law of restitution and history of equity jurisdiction.

Mr. Bauman,

Ms. Littleton, Mr. Nelson, Mr. Reynoso

M301. Art Law. (Formerly numbered 301.) (Same as Art History M270.) Prerequisite: consent of instructor. Knowledge of fine arts, arts management, or international law desirable. Limited enrollment; management and art history students may cross-register with consent of instructors. Legal issues related to the fine arts. Consideration of U.S. domestic law as well as international treaties and foreign law in addressing such controversial issues as the international trade in art, art in public places, and moral rights. Distinguished guest speakers and one field trip.

302. Intellectual Property Law. Introduction to law of patents, copyrights, and trademarks. Doctrines of patentable subject matter, nonobviousness, and patent infringement. Basic legal concepts, such as copyright distinction between idea and expression, and trademark distinction between valid marks and unprotectable generic words. Readings on theory and history of intellectual property protection, with some readings from law and economics literature.

Mr. Grady

305. Entertainment Law. Analysis of a variety of legal problems encountered in representing performers, writers, producers, and directors, and companies with which they deal. Ways in which rights are acquired and exploited, as well as ways in which proceeds of such exploitation are allocated. Rights of privacy and publicity. Roles of attorneys, agents, managers, and promoters in representation of creative talents.

Mr. Biederman

306. Patent Law. Basic principles of patent law. Topics include philosophical and public policy considerations underlying patent law; what is patentable; requirements for patentability; operation of U.S. Patent Office, including procedures for applying for patents; patent applicants' duties of candor and disclosure to Patent Office and consequences for failing to discharge that duty; infringements of patents, including analytical framework for determining whether a patent is infringed; and remedies for patent infringement.

Mr. Gardner

313. Conflict of Laws. Problems arising in multistate transactions in the federal system, including choice law, recognition and enforcement of judgments, and bases of jurisdiction of state courts.

Mr. Horowitz, Mr. Trimble

315. Asian Americans and Legal Ideology. Prerequisite: some background in Asian American studies; technical knowledge of law not required. Advanced undergraduates with credit in Asian American studies may enroll. Asian American experience as it relates to American legal system, considering dominant and oppositional concepts of law. Consideration of primary historical documents to examine ways Asian Americans have been victims of the legal system, as well as astute manipulators of the legal system. Liberal legal concepts of property, rights, equality, and due process have held promise for Asian Americans, but some observers argue that recourse to law is ultimately harmful to goal of genuine community empowerment. Power-sharing notions of justice that move beyond liberal concepts of rights suggested as more progressive alternatives. History of Asian American participation in civil rights movement and current debate over affirmative action and multiculturalism.

Mr. Gotanda

316. Disability Law. Examination of federal and state statutory and constitutional rights of persons with disabilities and elderly persons, including review of problems and issues related to employment, education, access, housing, transportation, independent living, and medical treatment — both right to die and right to treatment (Baby Jane Doe). Laws examined include Americans with Disabilities Act, Rehabilitation Act, Education of All Handicapped Children's Act.

317. Family Law. Conjugal relationships (i.e., marriage and cohabitation). Legal principles and social policies governing creation, maintenance, and dissolution of conjugal relationships. Consideration of parent/child relationship limited to divorce-related child custody and support and legal status of children born out of wedlock.

Ms. Blumberg, Ms. Olsen

319. Election Law. Recommended prerequisite or co-requisite: course 201. Ways in which laws governing the political process affect and reflect political power relationships. Right to vote, reapportionment, political parties, bribery, campaign finance, incumbency, and ballot propositions.

Mr. Lowenstein

325. Law and Psychiatry. Law affecting the many persons identified as seriously mentally ill has rapidly changed in past 30 years, especially with respect to standards for involuntary civil commitment: rights of those committed, including right to treatment and to decline treatment; guardianship; doctor/patient confidentiality; discrimination against the mentally handicapped; insanity and related defenses; competence to stand trial; and criminal dispositions. Attitudes concerning psychiatrists, psychotherapy, and mental illness have also changed. Exploration of these changes, with emphasis on impact of constitutional adjudication on the law of civil commitment; different world views of psychiatrists and lawyers regarding dependence and paternalism, and liberty and constraint; whether imposition of legal rules on medical practices has diminished human suffering.

Mr. Goldstein

326. Health Law and Administration. Major programs in health care financing (Medicare, Medicaid, private insurance, medically indigent) and health care organization (private practice, HMOs, preferred providers, etc.). Effects of cost containment and administration's pro-competitive strategy. Topics include the professions, hospitals, quality control (including malpractice), antitrust, alternative approaches to health care, medical experimentation, special health problems of the poor, the elderly, women, minorities, and the defective newborn.

Mr. Handier

327. Communications Law. Survey course on laws related to major industries regulated by the Federal Communications Commission (broadcasting, cable, and television). Content and structural regulation of mass media, including fairness doctrine, political speech, and ownership restrictions. Review of policy basis for regulation and proposals for change. Regulation of nonbroadcast video technologies, including cable and satellites. Review of common carrier regulation as applied to examination of telecommunications industry and role of competition.

Mr. Westen

329. Women and the Law. Ways in which court decisions, statutes, and operation of legal system reflect ideas about what women and men are like and what their roles in life should be. "Protective" labor legislation, voting rights, equal protection of the laws, Equal Rights Amendment, control of childbearing, employment discrimination, and either topics in criminal law (rape, prostitution) or topics in family law (marriage obligation and grounds for divorce).

Ms. Littleton

329. Women and the Law: Feminist Jurisprudence. Critical examination of laws affecting women, including laws related to employment discrimination, sexual harassment, divorce, child custody, incest, abortion, surrogacy, domestic violence, pornography, prostitution, and rape. Challenge to conventional understandings of role of law; how race and class differences influence way law intervenes in lives of women; role of legal discourse in constructing and maintaining gender differences; significance of feminist theory to legal theory.

Ms. Olsen

331. Immigration Law. Overview of immigration and naturalization process from practitioner's point of view. Nonimmigrant and immigrant visas, consular practice, deportation/exclusion proceedings, naturalization and citizenship, constitutional issues related thereto, and specific remedies available.

332. Children and the Law. Judicial and legislative allocation of power and responsibility between parents and the state, child's economic situation within the family, child custody, adoption, medical treatment of minors, status of the fetus, parental right to discipline children, neglect and abuse, state-enforced limitations on the liberty of minors and juvenile delinquency.

Ms. Blumberg, Mr. Goldstein

335. Religious Legal Systems. Literature and institutions of a religious legal system. Offered from time to time by different instructors in Canon law, Islamic law, and Rabbinic legal tradition. Content varies depending on particular tradition under study; emphasis on concerns common to a legal system based on divine authority. Extent of human authority to interpret and modify the received law to meet new circumstances, relation between law and morality, and interaction between religious and secular law.

Mr. Rosett

337. American Legal History, 1776-1984. History of legal and constitutional thought, together with history of law's part in social and political change and in everyday life. Consideration of a wide variety of texts and events, with emphasis on "separation" of law and politics, law's relation to other normative orders in society, ambiguities of legal "freedom" and "equality," problems of interpretation in law and history. Revolution and constitution-making, creation of judicial review, courts and rise of industrial capitalism, black slavery and freedom, achievements and limits of a century of liberal legal reform (comparing experiences of women's, labor, and civil rights movements), legal realism and rise of the administrative state, history of lawyering.

Mr. Forbath

348. European Community Law. For more than thirty years a unique set of legal institutions has been developing to support economic and political integration of Western Europe. In recent years the process has been accelerated with the aim of completing integration of the internal market by 1992 and of achieving greater political and monetary union. Examination of structures and institutions of the communities, law-making processes they use, and their approach to several salient substantive economic problems.

Mr. Del Duca, Mr. Rosett

400. Pretrial Lawyering Process: Civil (Clinical). Training and practical experience in the full range of skills used by lawyers during pretrial phases of civil litigation process. Interviewing, case planning, investigation, counseling, pleading, formal discovery, negotiation, and lawyer decision-making skills. Subjects presented through demonstration, simulated problems, and videotaped role-play sessions conducted in connection with interviewing, counseling, and depositions. Fieldwork offers opportunity to employ lawyering skills in a law office setting under supervision of experienced legal services attorneys.

Ms. Franklin, Ms. Menkel-Meadow, Mr. Moore, Ms. Woods

400. Pretrial Lawyering Process: Housing Discrimination (Clinical). Prerequisite: consent of instructor. Limited to 12 students. Use of federal fair housing litigation as vehicle to give students hands-on training in civil lawyering skills, including client interviewing and counseling, case planning, fact investigation, pleading, discovery, motions practice, and structuring of complex remedies. Practice of these skills through lecture/discussion, simulated videotaped exercises, written problems, and group projects. Introduction to federal and California fair housing laws and underlying policy issues that those laws address. Ethical dimensions of adversarial lawyering; uses of litigation to address broad social justice issues; challenges of lawyering across differences of gender, ethnicity, and class.

Ms. White

402. Fact Investigation and Discovery in Complex Litigation (Clinical). Theoretical and practical aspects of discovery in both civil and criminal cases. Rational and nonrational processes involved in proving facts. Relationship between proof at trial and investigation of a case. Development of proficiency in interviewing witnesses, drafting interrogatories and other discovery requests, and taking depositions in simulated cases.

Mr. Binder, Ms. Gillig, Mr. Moore

403. Interviewing, Counseling, and Negotiation (Clinical). Basic interviewing, counseling, and negotiation concepts in litigation context. Exploration of these concepts through role-plays and analysis of readings that attempt to offer models of what lawyers do or should do. Interviewing, counseling, and negotiation taught by in-depth class critique of videotaped demonstrations of lawyers performing legal skills and tasks. Simulated out-of-class exercises critiqued by instructor. Field experience (eight hours per week) at UCLA Student Legal Services and other legal service organizations. Students interview and counsel clients about landlord/tenant disputes, debt collection matters, general consumer problems, some criminal law issues, and family law matters.

Mr. Binder, Ms. Gillig

404. Clinical Semester (Clinical). Students spend one term working full time in a small law firm housed in the Law School Clinic. Under faculty supervision, each student appears in court to argue motions and try cases. Students interview and counsel clients, write and argue motions, prepare written discovery, take depositions, and try at least one case in court. Substantive law areas include housing discrimination, denial of unemployment benefits, and consumer fraud. Students also participate in class sessions and simulated videotaped exercises designed to develop lawyering skills. Subjects include interviewing, counseling, motion practice, civil discovery including depositions, negotiation, trial preparation, and trial advocacy.

Mr. Binder, Mr. Blasi, Mr. Taylor

405. Trial Advocacy (Clinical). Designed to provide training in the full range of skills needed by a trial advocate. Year-long series of classes emphasizing development of courtroom advocacy and other lawyering skills: case planning, direct and cross-examination of witnesses, opening statement and closing argument, client and witness interviewing, case investigation, negotiation, and examination of expert witnesses. In Fall Semester role-play exercises are legal or nonlegal in nature, capped off with a mock trial. During Spring Semester students actually appear in court and represent indigent clients under direct supervision of instructors.

Mr. Bergman, Mr. Derian, Mr. Moore

405. Simulated Trial Advocacy (Clinical). Prerequisite or corequisite: course 211. Enrollment priority to third-year students. First half of year-long course 405. Theoretical and practical aspects of trial process; training in skills needed to represent clients in pretrial and trial litigation. Principal function of trials — resolution of disputed questions of fact — and trial lawyer's role in presenting persuasive evidence to judges and jurors who perform that function. Development of specific skills in such tasks as interviewing, fact investigation and analysis, conducting direct and cross-examinations, making opening statements and closing arguments, using exhibits, and making and responding to evidentiary objections, presented through combination of lecture, discussion, demonstration, and simulated role-play exercises. Presentation of a videotaped mock trial at end of semester (no fieldwork component).

Mr. Bergman, Mr. Derian, Mr. Moore

406. Public Policy Advocacy (Clinical). Role of lawyers in public policy advocacy in context of developing and implementing a strategy for dealing with an actual public policy issue that represents real clients or client groups. Students work jointly on at least one public policy issue. Examination of public policy litigation and nonlitigation approaches to achieving client goals; organizational, political, cultural, and public relations contexts in which such advocacy is carried out. Attention to ethical and professional issues unique to such representation. Use of simulated and actual videotaped exercises to teach lawyering skills applicable to advocacy, including working with clients and client groups to develop effective strategies utilizing all available resources and methods, interviewing clients and witnesses, conducting fact investigation and organizing factual information, developing and utilizing experts and expert witnesses, and evaluating merits of both litigation and nonlitigation approaches.

Mr. Blasi, Mr. Taylor

407. Mediation and Alternative Dispute Resolution (Clinical). Issues, principles, and skills implicated in use of nonadversarial methods of dispute resolution. Theories and various approaches to conflict resolution, including comparisons among and between adjudication, arbitration, mediation, med-arb, mini-trials, and community dispute centers. Some of the difficulties with alternative dispute resolution, including role of law, inequality among the parties, consent, motivation, enforcement, and effects of alternative dispute resolution. Comparative study of dispute institutions in other political and legal systems. Through skills training and role-play exercises students learn and practice skills necessary to conduct mediation and arbitration sessions.

Ms. Menkel-Meadow

408. Legal Negotiation (Clinical). Theoretical and practical aspects of process of negotiating transactions and disputes in our legal system. Negotiation theory, using both legal and behavioral sciences materials; differences between litigation and transactional negotiations; context in which particular negotiation strategies and tactics are successfully employed; ethical and normative implications of negotiating; role negotiation plays in our legal system, both in dispute resolution and in legal planning; negotiating, both from planning and behavioral perspectives.

Ms. Menkel-Meadow

409. Negotiation and Mediation (Clinical). Theoretical and practical aspects of negotiating and mediating transactions and disputes in our legal system. Negotiation and mediation theory, using both legal and behavioral sciences materials; differences between litigation and transactional matters; context in which particular negotiation and mediation strategies and tactics are successfully employed; ethical and normative implications of negotiations and mediations; role negotiation and mediation plays in our legal system, both in dispute resolution and in legal planning; development of proficiency in negotiation and mediation, both from planning and behavioral perspectives. Ms. Gillig, Ms. Menkel-Meadow

412. Street Law: American Legal Education (Clinical). Students teach law in school classrooms under supervision of a high school teacher and develop own individual curriculum. Students do practice teaching, receive instruction in a variety of teaching methods, and use these methods with their high school classes. Seminar discussion focuses on extent to which teaching is similar to practicing law, and students analyze situations that arise in the teaching of law to its practice. Communication difficulties that frequently arise among lawyers, clients, and laypeople. Mr. Bergman

416. Sex, Violence, and Law (Clinical). Prerequisites: course 211, consent of instructor. Examination of intersection of sexuality, violence, and law, including rape (developing concepts of rape, use of rape trauma syndrome to prove that a rape occurred or to defend a woman charged with killing her rapist, and admissibility of character evidence and evidence of prior sexual conduct) and homicide (sexual homicide, battered woman syndrome, postpartum disorders and infanticide, and evolving notions of murder, "diminished capacity," self-defense, and culpability). Theoretical issues and real-life aspects of prosecuting a sex crime, defending a client charged with a sex offense, representing a person who is the victim of sex abuse, and shaping legislation and policy in these areas. Recurring themes include potential tension between lawyer's role as an advocate and personal values; relationships among values, doctrine, facts, and evidence; claimed differences between men and women; significance of race; value of expert testimony; and political and social implications of recent developments in these areas. Mr. Garcia

436. Community-Based Advocacy with Poor Women (Clinical). Prerequisite: consent of instructor. Limited to eight students. Weekly seminar and supervised fieldwork with a community group in south-central Los Angeles. Recent scholarship envisions poverty lawyering as a multidimensional "collaboration" between professional advocates and community groups. These and other recent theories about race, poverty, and advocacy brought into the real world through work with a group of African American and Latina Head Start parents in south-central Los Angeles. Discussion of readings on such topics as life experiences of poor women of color, social welfare law and its impacts on poor women, and potential of law and lawyering to support processes of community building among poor women in south-central Los Angeles. Students work with Head Start group to provide basic legal education, advocacy, and lay advocacy training to women on such issues as housing, welfare, and educational rights and to seek pro-active responses to long-term community needs. Ms. White

445. Planning and Drafting Small Estates (Clinical). Substantive law of estates, wills, trusts, and tax as those laws relate to testamentary disposition of small estates. Interviewing, drafting, and counseling techniques. Students are assigned clients and interview them to determine their estate planning needs. Students discuss with a supervising probate attorney the kind of estate plan needed and then draft an appropriate plan and review it with the attorney. Mr. Bergman, Mr. Binder, Ms. Gillig

500. Seminar: Constitutional Law. Selected topics in constitutional law. Mr. Karst, Mr. Varat

501. Seminar: Tax Systems in Transition. Prerequisite: course 220. Tax policy issues in context of designing tax systems for countries making transition from a planned to market economy. Review of major tax issues facing government officials in countries in Central and Eastern Europe and former Soviet republics. Mr. Zolt

503. Seminar: Criminal Law. Aspects of capital punishment, including finality of judgments, collateral attacks on state court judgments, and selected jury trial issues. Mr. Letwin

503. Seminar: Criminal Law — Moral Culpability Jurisprudence. Readings from moral philosophy, moral psychology, and criminal law excuse theory. Examination of competing accounts of when it is appropriate to impose moral blame on individuals for breaching norms governing their behavior. Special attention to two constitutive elements of moral culpability analysis: attributes people must possess to qualify as appropriate addressees of moral norms (moral agency) and conditions under which it is fair to attribute their actions to them (moral responsibility for action). Specific criminal law issues that implicate moral culpability analysis, including execution of adolescents and mentally retarded offenders, criminal responsibility of moral psychopaths, and defenses of duress and provocation. Mr. Arenella

503. Seminar: Criminal Law — Police Reform. Prerequisite: consent of instructor. Various avenues for achieving police reform, including litigation under civil rights statutes, control of police under the U.S. Constitution, police rule-making, and political process. Students work on police misconduct litigation. Mr. Garcia

503. Seminar: Criminal Law — Rape. Legal definition of rape, procedural rules applied in administration of rape statutes, and sentences provided for rape offenses. In order to determine and critically evaluate empirical and moral responsibilities of prosecutors and defense attorneys, rape cases are also examined, as are civil alternatives to rape prosecutions. Ms. Goldberg-Ambrose

504. Seminar: Property — Human Embodiment and Property Rights in Body Parts. Examination of such issues as nature of human embodiment and parts; identity and individuation of transplanted organs across time; intelligibility of the idea of property rights in the body; whether body parts should be allowed to either be given away or sold, whether during life or on death, and relatedly, whether there should be a "market" for body parts; and roles of consent and government regulation. Mr. Munzer

506. Seminar: Business Associations — Corporate Debt, Use and Terms. Study of use of debt in financing business and terms of debt obligations: conflicts between debtholders and equityholders and bond covenants. Topics include determinants of financial structure, various bond covenants and terms of loan agreements, types of debt instruments, junk bonds, consequences of default, and relationships among duration, control, and risk. Mr. Klein

507. Seminar: Workplace Sexual Harassment. Examination of a range of legal problems flowing from charges of on-the-job sexual harassment, including distinctive problems of proof in arbitration and judicial proceedings, conflicts between judicial remedies for alleged harassment victims and labor arbitration remedies for accused harassers, and standards of judicial review of labor arbitration awards in sexual harassment disputes. Mr. Alleyne

512. Seminar: Selected Problems in Social Welfare and Health Law. Prerequisite: consent of instructor. Limited enrollment. Year-long research seminar on topics selected by students with consent of instructor, with emphasis on empirical-policy research outside the School of Law and preferably in the community. Joint class meetings to discuss topics, methods of approach, and preliminary findings, but most of work to be independent research. Mr. Handler

513. Seminar: Environmental Law — Regulation of Land Use/Environment of Mexico-U.S. Border Zone. Consideration of institutions of governance in Mexico and the U.S. which control environmental pollution and which shape land use and urbanization in the border area. Attention to asymmetry in role of state and federal government in formulation of policy in both nations, as well as decline in living conditions and social indicators on U.S. side of the border. Mr. McGee

514. Seminar: Comparative Family Law. Prerequisite: consent of instructor. Focus on Japanese family law, with emphasis on problems of comparative legal analysis; interplay between legal norms and historical, religious, sociocultural, and economic factors. Topics include family registration, adoption, selection of marital partner, breach of contract to marry, divorce, abortion, and juvenile delinquency. Ms. Bryant

516. Seminar: International Law — Trade Law. Public international law affecting private economic activity in areas of trade, investment, and monetary affairs. Roles of several international organizations, such as GATT, IMF, World Bank, UNCTAD, and United Nations Center on Transnational Corporations. U.S. law governing negotiation and implementation of international agreements. Trade law: rules and procedures of GATT and U.S. implementation of GATT obligations through its domestic legislation, including Trade Act of 1974. Functions of International Monetary Fund and World Bank in international trade and investment; problems involving the developing world, including GSP (tariff preferences for developing countries), commodity problems, and access to supplies of important products. Proposals to regulate international investment, including work of UNCTAD and the United Nations Center on TNC, and proposed "Codes of Conduct" designed to govern activities of multinational corporations. Mr. Trimble

M519. Seminar: Comparative Japanese Law — Selected Readings. (Formerly numbered 519.) (Same as Japanese M196.) Prerequisite: reading knowledge of Japanese at third-year level. Designed to introduce students to a variety of Japanese-language legal materials. Reading of law review articles and other sources as time permits (e.g., selections from contracts, cases, or treatises); titles vary from term to term. Classroom work may be coordinated with outside research projects with consent of instructor.

522. Seminar: Private Land-Use Planning. Constitutional, statutory, and public policy limits on private ordering in the land-use arena. Limits on racial and religious discrimination, gender and life-style discrimination, restraints on trade and competition, restraints on alienation, and limits on interferences with privacy and personal autonomy examined primarily in context of subdivision covenants and homeowner associations. Ms. French

M524. Seminar: Philosophy of Law. (Same as Philosophy M257.) Prerequisite: consent of instructor. Selected topics in philosophy of law. May be repeated for credit with consent of instructor.

M526. Seminar: Urban Affairs (2 to 4 units). (Same as Architecture and Urban Planning M202C.) Consideration of selected aspects of housing law and policy, including current federal and state housing subsidies; remedies of housing consumers; impacts of market discrimination against children, racial minorities, and women; and local governmental laws influencing cost and supply, such as antispeculation and rent control legislation. Catalytic role of economic and community development in expansion of housing supply also considered. Mr. McGee

528. Seminar: Indian Law — Tribal Legal Systems. Historical and contemporary study of tribal legal systems. Examination of classic studies by anthropologists and legal historians of traditional tribal governing structures and dispute-settling mechanisms. Comparison with contemporary tribal constitutions, codes, and practices. Consideration of methodological questions posed by comparative legal study. Ms. Goldberg-Ambrose

531. Seminar: Law and Development in Latin America. Role of law in economic, political, and social change in the developing countries of Latin America, compared to function of law and policy in the U.S. in allocation of wealth and natural resources. Consideration of the civil law tradition in Latin America. Examination of nexus between existing socioeconomic relationships and legal institutions; exploration of role of law as an instrument of both reform and counter-revolution. Mr. McGee

535. Seminar: Arbitrated Alcohol and Drug Workplace Disputes. Study of evolving arbitral and judicial standards in drug and alcohol workplace disputes. Topics include sufficiency of just-cause to test employees for drugs; disputes over accuracy of urine and blood analysis tests for drugs; role of rehabilitation as a factor in the decision to discipline for drug or alcohol abuse; differing (and possibly discriminatory) treatment of drug-abuse offenders vis-à-vis alcohol abuse offenders; appropriate linkage of off-duty ingestion with on-duty impairment; appropriate impact on the arbitrator of drug and alcohol criminal law procedural and proof standards; judicial review standards for drug and alcohol-abuse arbitral awards, including effect of the public-policy exception to usual insulation of arbitration awards from review on the merits. Mr. Alleyne

536. Seminar: Appellate Advocacy. Study of appellate advocacy before state and federal courts, including writs and appeals in civil and criminal matters. Role, structure, and practices of appellate courts. Students participate in written and oral advocacy. Mr. Eule, Mr. Reynoso

540. Seminar: Legislative Advocacy. Designed to acquaint students with theoretical and empirical aspects of legislative process, how that process works and how it might be improved, and roles played and techniques used by legislative advocates. Structured around a semester-long simulation in which students are assigned roles as either legislators or lobbyists. Possible topic is extent to which telephone companies should be permitted to provide customers with information services. Readings of academic writings on legislative process and substantive materials related to the simulation. Mr. Liebman, Mr. Lowenstein

545. Seminar: Civil Rights — Antisubordination Theories. Prerequisite: course 214, 263, 329, or 583. Advanced seminar designed for students pursuing original research on civil rights topics. Reading and discussion of legal and interdisciplinary materials dealing with antisubordination theory, including interconnection between various forms of subordination (issues of race, gender, sexuality, class, and disability). Ms. Matsuda

545. Seminar: Civil Rights — Voting Rights. Exploration of tension between antidiscrimination law and principles of democratic majoritarianism. Examination of voting rights; ways in which judges and legislators have attempted to provide remedies for racially based exclusions from political and social institutions while upholding American concepts of democracy. Ms. Crenshaw

552. Seminar: Bankruptcy. Prerequisite: course 248 or 250. Examination of business reorganization provisions of Chapter 11 of U.S. Bankruptcy Code, requiring students to become intimately familiar with Chapter 11 business reorganization law in a practical problem-solving format. Review of complex issues of reorganization law. Students prepare briefs in response to problems and advocate their positions. Mr. Klee

553. Seminar: Race, Gender, and the Law. Interdisciplinary seminar on legal, social, and political implications of intersection of race and gender, focusing on intersectional dilemmas as manifested in case materials on black women. Use of intersection of race and gender as a means for thinking about approaches to other intersections. Discussion of historical and sociological studies and some literary works. Ms. Crenshaw

555. Seminar: Critical Legal Theory. In last five years a body of legal theory has emerged, here and in Europe, that draws on Marxist and other radical traditions. Survey of that literature, including bourgeois legal form, relation of law and capitalism (especially their historical interdependence), theory of capitalist state, meaning of "rule of law" under capitalism and socialism, and law and ideology. Application of these theoretical insights to concrete issues in contemporary American law (e.g., in torts, contract, labor, family, and criminal law). Questions of role of law in transition to, and under, socialism. Mr. Abel

555. Seminar: Feminist Legal Theory. Assumes familiarity with basic concepts of sex discrimination law, gender, and feminism. Current scholarship on law and feminism. Ms. Littleton

555. Seminar: Feminist Legal Theory — Toward Feminist Jurisprudence. Focus on impact that feminist legal theory has on legal philosophy. Reading of works in feminist legal theory and discussion of effects these theoretical formulations have on legal issues of importance to men and women. Ms. Olsen

555. Seminar: Legal Theory — Economic Democracy. Over the past decade, economic democracy has enjoyed a renaissance. One often hears that U.S. economy needs more democracy — for practical as well as principled reasons. What kinds of economic gains — in terms of efficiency and competitiveness — may result from less hierarchical, more flexible, and participatory ways of allocating power in various sectors? What kinds of human/political/existential gains? What risks and losses? And what part have, and what part might, lawyers, legal doctrine, and law reform play in these endeavors? Examination of a number of areas of past and present experimentation: industrial, housing, and agricultural cooperatives — their champions and critics; workers' control in large enterprises via pension finance, directorships, worker ownership, and public development authorities — and champions and critics of these ideas. Mr. Forbath

559. Seminar: Sports Law. Legal issues pertaining to professional and amateur sports. Representative issues include federal labor issues (particularly those raised by collective bargaining and arbitration processes); antitrust issues (including those raised by attempt to control franchise movement, player drafts, and other player restraints); issues raised by individual player/club contracts (including contract terminations and remedies); issues raised by player/agent relationships; issues raised by the NCAA's regulation of amateur sports; and sex discrimination. Mr. Derian

564. Seminar: Evidence. Prerequisite: course 211. Selected topics include plain error doctrine, problems raised by testimony of young children, relationship between scientific conclusions of experts and character evidence, problems in relation to "other crimes" evidence, and expert testimony under federal rules. Mr. Letwin

565. Seminar: American Legal History, 1776-1986. Recommended (but not prerequisite): course 337. Designed for students interested in doing original historical research. Reading of historians whose work illuminates important interpretive or methodological problems. Progress reports and presentations. Mr. Forbath

570. Seminar: Graduate Students — Legal Process and Philosophy. Prerequisite: LL.M. candidate. In Fall Semester, overview of legal system in the U.S. and comparison with other legal traditions, particularly that of civil law. Emphasis on role of lawyer and operation of procedural law in resolution of disputes by the courts. In Spring Semester, presentation of research projects which form basis for thesis. Mr. Handler

571. Seminar: Legal Education. Examination of American legal education, including nature of classroom experience, scope of curriculum, various pedagogical approaches, balance between theory and practice, relationship of law schools to legal profession, role of law school faculty, etc. Ms. Anderson

571. Seminar: National Security and the Law. National and international legal considerations and restraints affecting formulation of foreign policy and protection of national security. Decision-making process, including constitutional balance between executive and legislative branches, foreign power of the president, War Powers Resolution and Treaty Power. Role of bureaucratic politics. Congressional regulation of foreign policy and its attempts to subject intelligence activities to the rule of law. Problem of protecting national security information in a free society and other rights issues. Role of international law affecting national security, including United Nations Charter, and multilateral and bilateral arms control obligations. Mr. Trimble

572. Seminar: Teaching Assistants. Limited to and required of all teaching assistants for course 110. Helps TAs carry out their work as student editors, counselors, and teachers. Teaching techniques and problems of student/teacher relationship, particularly as they relate to evaluating student writing. Focus on writing and critique of writing. Assignments on prose style, organization, and structure of legal analysis. Ms. Franklin, Ms. Maerowitz, Ms. Woods

576. Seminar: Arms Control and Legal Process. Examination of role of law, lawyers, and legal process in arms control. Topics include nuclear test ban, non-proliferation, SALT/START/Euromissiles, chemical warfare, and space weapons in order to understand policies and assumptions underlying existing and proposed arms control treaties. Explains how U.S. government decision making works and dynamics of an international negotiation. Verification and compliance issues. Mr. Trimble

578. Seminar: Law and Computers. Prerequisite: consent of instructor. No computer experience required. Selected topics involving law on the one hand and computers on the other, including expert systems and artificial intelligence, protection of computer software and hardware as intellectual property, privacy, and use of computers in various legal settings, such as delivery of legal services to the poor, legal education, and investigation of complex criminal cases. Mr. Garcia

581A-581B. Seminar: Child Abuse and Neglect. Prerequisite: consent of instructor. Limited to Fellows of the Interdisciplinary Training Program in Child Abuse. Augments lectures offered in courses M281A-M281B with discussions of lectures, additional readings, presentation of research and field placement experiences, field trips, and interdisciplinary practice. Mr. Goldstein

582. Seminar: Theories of Process. Exploration of goals of a procedural system. Is litigation about resolving disputes and keeping the peace? About preserving a delicate political compromise? About furthering substantive goals? About finding the truth? Or about the authoritative promulgation of norms? Each has been proposed as a central goal of civil procedure, and the choice among them has consequences for general design of procedure and procedural details. Writers on this topic include Blackstone, Bentham's attack on Blackstone, modern proponents of alternative dispute resolution, economic analysts of litigation, those who argue that civil litigation has replaced religion as a moral oracle, and those who use comparative law as a way of analyzing American procedure. Using both classical and modern writings on procedure, seminar aims to develop a framework for discussing and criticizing existing procedural system and proposed changes in it. Mr. Yeazell

587. Seminar: Asian Americans and Legal Ideology. Prerequisite: some background in Asian American studies; technical knowledge of law not required. Advanced undergraduates with credit in Asian American studies may enroll. Asian American experience as it relates to American legal system, considering dominant and oppositional concepts of law. Consideration of primary historical documents to examine ways Asian Americans have been victims of the legal system, as well as astute manipulators of the legal system. Liberal legal concepts of property, rights, equality, and due process have held promise for Asian Americans, but some observers argue that recourse to law is ultimately harmful to goal of genuine community empowerment. Power-sharing notions of justice that move beyond liberal concepts of rights suggested as more progressive alternatives. History of Asian American participation in civil rights movement and current debate over affirmative action and multiculturalism. Ms. Matsuda

588. Seminar: International Law and the New World Order. The Soviet empire has crumbled. The U.S. has led a United Nations-endorsed, multilateral, military operation in the Persian Gulf against an aggressor state. Western Europe, and much of North America, has traveled far down the road to becoming single economic units. Do these and related events portend a "new world order?" Exploration of these questions by paying attention to questions involving use of force, arms control, global environmental problems, economic integration, North/South problems, and the United Nations. Mr. Setear

589. Seminar: Securities Litigation. Prerequisite: course 230 or consent of instructor. Recommended: course 236. Civil and criminal enforcement of federal securities law. Liability under Securities Act of 1933 and Securities Exchange Act of 1934, including civil and criminal penalties for insider trading, SEC enforcement actions, and liability arising out of tender offers. Tactical considerations for class-action shareholders, issuer and director defendants, and settlement strategies. Mr. Brown

Graduate School of Library and Information Science

Beverly P. Lynch, Dean

12

Our society has become a world of information. Over half of the nation's workforce is now directly engaged in producing, processing, and distributing information in one form or another. Education, scientific and technical development, banking and financial management, government and corporate management — all depend increasingly on accurate, relevant, and readily available information. New technologies have produced a wealth of forms in which we may distribute and transfer information. Printed media have been supplemented by photographic, audiovisual, and computer-processible forms. As a result, libraries and information systems of all kinds have become crucial agencies for the management of the resulting flood of information.

The field of library and information science is concerned with the processes involved in these information agencies and, more generally, in the use of information in our society. How are records with essential information, whatever their form may be, to be acquired, preserved, organized, retrieved, and made available? How is information best used in making decisions and in meeting the goals of society as a whole, as well as those of specific organizations?

Education in the field must provide competence with both old and new methods for the processing of information and old and new approaches to the management of libraries, information centers, and information systems in organizations of all kinds. It is this goal to which UCLA's Graduate School of Library and Information Science is dedicated.

Visiting Professor

Robert M. Warner, Ph.D.

Visiting Associate Professor

Carmel Maguire, M.A.

Applicants may write to the Graduate School of Library and Information Science, 101 Graduate School of Library and Information Science Building, UCLA, Los Angeles, CA 90024-1520, for the school's announcement and application materials.

Degrees Offered

Master of Library Science (M.L.S.)
Post-M.L.S. Certificate of Specialization
Doctor of Philosophy (Ph.D.) in Library and Information Science

Master of Library Science

Admission

Students are admitted in Fall Quarter only. In addition to Graduate Division requirements and application procedures (see Chapter 3), the school requires:

- (1) A statement of purpose.
- (2) Graduate School of Library and Information Science application materials provided in the school's announcement.
- (3) An official report of a score on the General Test of the Graduate Record Examination (GRE) taken within the past five years (may be waived for holders of a master's or doctoral degree from an accredited U.S. institution).
- (4) For international students whose native language is not English, an official report of scores received on the Test of English as a Foreign Language (TOEFL), including the Test of Written English (TWE).
- (5) Three letters of recommendation.
- (6) Satisfaction of the following entrance requirements: (a) a college-level course in statistics (three semester units or four quarter units) within the last five years with a minimum grade of C. The course must have covered descriptive and inferential statistics. In exceptional circumstances it is possible to meet this requirement by passing a competency examination in statistics administered by GSLIS; (b) a college-level course in computer programming (three semester units or four quarter units) within the last five years with a minimum grade of C. Most standard languages such as PL/1, FORTRAN, COBOL, PASCAL, or BASIC are acceptable, as is a college-level course in the use of data management systems such as dBASE3, KNOWLEDGEMAN, CONDOR, or C. At least one third of the course grade should be based on programming assignments. In ex-

ceptional circumstances it is possible to meet this requirement by passing a competency examination in computer programming administered by GSLIS.

Entrance requirements should be completed before you begin the M.L.S. program. However, one requirement may be satisfied in Fall Quarter of your first year.

Applicants not meeting the required grade-point average of 3.0 may be admitted in exceptional cases if GRE scores, letters of recommendation, or other factors indicate unusual promise. While work experience is not a requirement for admission, consideration is given to such experience in reviewing the total application.

The committee on M.L.S. and certificate admissions may request a report of an interview conducted by the graduate adviser or a person designated by the dean as qualified to conduct an interview.

For further information on the proficiency in English requirements for international graduate students, refer to "Graduate Admission" in Chapter 3.

Course Requirements

As a full-time student, you are normally required to enroll in three courses (12 quarter units) per term in order to complete the program in six terms. Part-time enrollment may be permitted if you are working in a library or information center, but you must complete the program in 10 terms.

Eighteen courses (72 quarter units) are required for graduation from the M.L.S. program. You take 20 units of core courses, four research methods units, and 48 elective units. Coursework must provide evidence both of basic professional competencies and of knowledge in a field of specialized competence.

Basic Professional Competence — The requirement is met by completing five core courses (Library and Information Science 200, 201, 203, 220, 441) and at least one graduate-level research methodology course such as 205, 240, 241, 260, 261, or 290. In certain cases, prior coursework or work experience may justify replacing a course by a validation examination administered by the school, but this is not encouraged and should be used only for the purpose of increasing the extent to which you pursue a specialization.

Only in unusual cases will librarianship coursework taken elsewhere satisfy the basic competency requirements.

Specialized Competence — Completion of a course of study is required as evidence of knowledge of a field of specialization in information policy, information access, information systems, libraries and other information institutions, or information organization. The field of specialization and the specialized course program must be approved by a faculty adviser. The requirement ordinarily is met by the completion of 12 additional courses, which may include internships. Relevant coursework in other departments or schools is encouraged. You may petition to have prior graduate-level coursework applied to your specialization.

During the second year, you may apply for an internship of one to three terms either on campus or off campus at a library or information center. The internship is a regularly scheduled course and may be applied toward the 18 required courses.

No more than eight units of course 596 may be applied toward the total course requirement; only four units may be applied toward the minimum requirements of the Graduate Division. In order to enroll in any S/U graded course, including 500-series courses, you must be in good academic standing.

Comprehensive Examination Plan

A comprehensive examination consisting of two components is required. The written test breadth component is offered in Fall, Winter, and Spring Quarters and is designed to demonstrate your understanding of library and information science services as a totality. It does not cover the basic professional competencies individually but deals with the field in a unified form. To be eligible to take the written test component, you must complete one year of academic residency, satisfy all outstanding entrance requirements, and complete (or be in the process of completing) all five core courses and the research methods course.

The specialization component of the comprehensive examination requires you to complete an elective course in which a major paper (normally in the area of your specialization) is produced. A grade of B or better must be earned in the course; you may not use the same course to satisfy both the paper and the research methods requirements.

Cooperative Degree Programs

To participate in a cooperative program, you must make application to and be admitted by both this school and the other UCLA school or department. Fulfilling the combined set of program requirements normally takes three years.

M.A.-History/M.L.S.

This concurrent degree program of the Graduate School of Library and Information Science and the Department of History allows you to combine historical study with the tools of the

information professional and to obtain two degrees — the M.L.S. and the M.A. in History. The best sequence of coursework should be discussed with the advisers from this school and the History Department.

M.A.-Latin American Studies/M.L.S.

This specialization is an articulated degree program of the Graduate School of Library and Information Science and the Latin American Studies Program. You can obtain two degrees — the M.L.S. and the M.A. in Latin American Studies. However, no course may be used for credit toward more than one degree. The program provides broad training in library and information science, as well as the opportunity to explore and analyze on an advanced level the social, political, and cultural issues characteristic of Latin American societies.

M.B.A./M.L.S.

A concurrent degree program jointly sponsored by the Graduate School of Library and Information Science and the John E. Anderson Graduate School of Management, this specialization is designed to provide an integrated set of courses for students who seek careers which draw on general and specialized skills in the two professional fields. Students should request application materials from both the M.B.A. Admissions Office, John E. Anderson Graduate School of Management, and the Graduate School of Library and Information Science.

Post-M.L.S. Certificate of Specialization

The Post-M.L.S. Certificate of Specialization Program meets the need for specialized training in various areas of information policy, information access, information systems, libraries and other information institutions, and information organization, as well as research competence. The certificate is designed for holders of the M.L.S. degree who either (1) want to redirect their careers and need the structure of a nine-course program and specialization paper to accomplish this, (2) want to update knowledge and skills across the discipline and require the structure of a nine-course program and specialization paper to accomplish those goals, or (3) recently graduated from a less comprehensive M.L.S. degree program than that offered by UCLA and did not have the opportunity to specialize.

Admission requirements vary slightly for each field of specialization, but the basic requirements are a bachelor's (or higher) degree in letters and science, an M.L.S. degree from an American Library Association-accredited school, and unconditional admission to graduate standing by the UCLA Graduate Division.

Your course program may begin in any term of the academic year. If you are admitted for a preliminary term to complete prerequisite

courses, that term is not counted toward the minimum residence requirements.

Part-time enrollment is encouraged to provide flexibility for the working librarian. Opportunities for relevant coursework outside the department and internships, both on and off campus, are available.

Five general areas of specialization have been authorized: information policy, information access, information systems, libraries and other information institutions, and information organization. Further specialization within these fields is possible. A minimum of nine courses (100-, 200-, 400-, and 500-series) must be completed in the Graduate School of Library and Information Science and other departments of the University.

In addition to taking coursework in your area of specialization, you must complete a paper or project in that area, which demonstrates a considerable amount of work and thought and is of publishable quality. The specialization paper or project is required even if you have an advanced academic degree in which a thesis or dissertation was a requirement and must be approved by your faculty adviser.

Ph.D. Degree

Admission

Students are admitted in Fall Quarter only. In addition to Graduate Division requirements and application procedures, the school requires:

- (1) A master's degree or the equivalent from an institution of recognized standing, representing academic preparation equivalent to that required for a comparable degree from the University of California.
- (2) Evidence of basic professional competence. This would be satisfied by an M.L.S. degree from a program accredited by the American Library Association or by completing Library and Information Science 200, 201, 203, 220, 441.
- (3) Satisfaction of the following entrance requirements: (a) reading knowledge of a foreign language, which may be met by completing three quarters or two semesters of college-level study in the language with minimum grades of C or by passing the Graduate School Foreign Language Test (GSFLT) with a minimum score of 500. The school will accept a passing grade on a foreign language test administered by another UCLA department that meets that department's graduate degree requirements or, for languages not covered by the GSFLT, the passing of a reading test supervised by the appropriate UCLA foreign language department; (b) a statistics requirement, satisfied by completing a college-level course with a minimum grade of C; (c) a computer programming requirement, met either by completing a college-level course with a minimum grade of C or by passing a proficiency examination administered by the school (most standard languages such as PL/1, FORTRAN, COBOL, PASCAL, and BASIC are acceptable,

as is a college-level course in the use of data management systems such as dBASE3, KNOWLEDGEMAN, CONDOR, or C).

(4) A statement of purpose which identifies your proposed area of specialization, accompanied by appropriate evidence of qualifications for pursuing a doctoral program (in the form of published work, master's thesis, or two research papers, written in English).

(5) A total score of 1,200 or better on the General Test of the Graduate Record Examination (GRE), with at least 500 in each of the two parts (verbal and quantitative). The examination must have been completed within five years prior to application for admission.

(6) For international students, the same scores of tests listed in item 4 under the M.L.S. degree.

(7) Three letters of recommendation.

(8) Graduate School of Library and Information Science application materials provided in the school's announcement.

While work experience in a library or other information organization is not a requirement for admission, consideration is given to such experience in evaluation of candidates.

Major Fields or Subdisciplines

You are expected to specialize in a subfield in one of three major fields:

- (1) Information storage and retrieval systems.
- (2) Policies and issues in library and information science.
- (3) Information seeking and use.

The school strictly limits the specific subfields which, at any time, are accepted for doctoral work.

Course Requirements

Courses required in your first year include a doctoral seminar in each area of the written qualifying examinations (Library and Information Science 273, 274, 275) and a research sequence (courses 290 and 276) leading to the completion of a research project. In addition, you take a variety of other courses, both inside and outside the school, relevant to your individual program.

Qualifying Examinations

You are required to pass written qualifying examinations in each of the three areas of study listed above, including coverage of historical aspects in at least one of the areas as well as technical aspects. These are scheduled during one week in a term. If you fail one of the sections of the three-part examination, it may be repeated. Should you fail two sections, all three must be repeated.

After passing the written examinations, you are required to pass the University Oral Qualifying Examination, which is based on your dissertation proposal.

You are encouraged to start work on your proposal while taking courses in preparation for the written qualifying examinations. The proposal should, in most cases, be completed within one year after passing the written examinations.

The oral examination covers the significance of your selected research topic, the methodology and feasibility of your research, and the depth of your knowledge in the specific field of your proposed dissertation research.

Your doctoral committee decides, after the oral examination, whether the examination has been passed. If the proposal is not accepted, you do not pass the examination.

Dissertation/Final Oral Examination

The third formal requirement of the program is that you research, write, and defend a dissertation. The final oral examination, required of all Ph.D. students in the school, is administered by members of the doctoral committee, who also evaluate the dissertation.

Upper Division Courses

Courses 110 and 140 may not be applied toward the M.L.S. degree; courses in the 111 series may be applied toward the M.L.S. degree with approval of faculty advisers.

100. Perspectives on Literacy. Lecture, two hours; discussion, two hours. Prerequisite: sophomore standing. Open to M.L.S. students and to graduate students from other schools/departments. Interdisciplinary introduction to literacy as a historical, social, and political issue. Topics include culture and literacy, historical development of literate societies, social definitions of illiteracy, literacy campaigns, literacy as a national and local policy issue.

110. Information Resources and Libraries. Prerequisite: sophomore standing or consent of instructor. Not open for credit to M.L.S. students. Introduction to bibliographic and information resources and relevant research methodology, covering both general and specialized materials. Designed to facilitate knowledgeable use of libraries and efficient retrieval of information. Some sections focus on specific subject areas (such as science and technology).

111A-M111E. Ethnic Groups and Their Bibliographies. Introduction to bibliographical and research tools and methods for students with interests in ethnic groups. **111A.** American Indian History and Culture; **111B.** African American History and Culture; **111C.** Latino History and Culture; **111D.** Asian American History and Culture; **M111E.** Jewish History and Culture. (Same as Jewish Studies M111E.) Sections on other ethnic groups may be added. Offered in collaboration with the several centers for ethnic studies. May not be repeated for credit.

124. Information Access Systems. Exploration of new and established channels for providing information to the general public, including videotex, electronic publishing, data bases, information utilities, computer mail and bulletin boards, and conventional library operations. Each information technology studied on basis of its history, economics, technical characteristics, relation to other media, and potential for social change.

Graduate Courses

Upper division undergraduate students must obtain consent of the instructor to enroll in 200-series courses and consent of the dean of the school to enroll in 400-series courses.

Graduate students from other schools or departments who wish to take courses in the Graduate School of Library and Information Science also must obtain consent of the instructor prior to enrolling.

The following courses are offered infrequently: 229A, 230, 241, 246, 262, 282, 464, 466, 486, 487C, 487D.

200. Information in Society. Lecture, two hours; discussion, two hours. Examination of processes by which information and knowledge are created, integrated, disseminated, organized, used, and preserved. Topics include history of communication technologies, evolution of literacy, development of information professions, and social issues related to information access.

201. Information Structures. Required core course. Introduction to various systems and tools used to organize materials and provide access to them, with emphasis on generic concepts of organization, classification, hierarchy, arrangement, and display of records. Provides background for further studies in cataloging, reference, information retrieval, and data base management.

M202. Folklore Archiving. (Same as Folklore M202.) Lecture, two hours; laboratory, two hours. Exploration and analysis of alternative data indexing, storage, and retrieval systems and procedures for folklore archival collections, supplemented by firsthand experience in creating and managing data bases, utilizing both manual and computerized techniques.

203. Design of Library and Information Services. Lecture, two hours; discussion, two hours. Principles and methods for planning and designing user-driven library and information services. Principles and methods for assessing information needs of designated populations and for designing services that meet those needs.

205. Research Methodology in History of Bibliography, Library and Information Science. Introduction to historiography as it relates to librarianship. Identification of key primary and secondary source material for writing history in the field. Critical analysis and review of selected biographical literature on librarians and information specialists, as well as influential histories of various areas in the profession. Problem-oriented approach.

206A-206Z. Seminars: Historical Topics (2 to 4 units each). Special studies in a variety of historical problems. Topics and units may vary according to the subject.

207. Seminar: International and Comparative Librarianship. Library development and service patterns in European and other countries; comparisons of these with librarianship in the U.S. International library organizations and programs.

210. Seminar: Descriptive and Bibliographical Cataloging. Prerequisites: courses 410, 411, or equivalent. Specialized studies in selected areas of descriptive and bibliographical cataloging (e.g., purposes, principles, instructional development, potentialities of automation). May be repeated once.

211. Seminar: Subject Control of Library Materials. Prerequisites: courses 410, 411, or equivalent. Study of selected problems in design and use of verbal headings and classification systems. Manual and mechanized systems. May be repeated once.

220. Information Access. Prerequisites: courses 200, 201. Provides fundamental knowledge and skills enabling information professionals to link users with information. Overview of structure of literature in different fields; information-seeking behavior of user groups; communication with users; development of search strategies using print and electronic sources.

221. Bibliography of Science, Engineering, and Technology. Prerequisites: courses 420, 421. Scientific and technical literature, with emphasis on special types of publications, research material, reference and bibliographical aids to the physical sciences. Importance, purpose, and nature of technical literature searches. Flow of information among scientists.

222. Bibliography of the Health and Life Sciences. Prerequisites: courses 420, 421. Literature of the medical and life sciences: reference and bibliographical works; periodicals and other serials; abstracting and indexing services; audiovisuals; notable books in history of biomedical sciences; organization of the literature; patterns of publication; applications of technological developments in control of biomedical literature.

223. Literature of the Social Sciences. Prerequisites: courses 420, 421. Seminar on literature of the social sciences, including review of classics in the various fields, monumental source collections, periodicals, bibliographies, catalogs, indexes, abstracts, bibliographic and nonbibliographic data bases, etc. Trends in scholarly and popular writing. Interdisciplinary nature of the literature.

224. Literature of the Humanities and Fine Arts. Prerequisites: courses 420, 421. Seminar on literature of the humanities and fine arts, including review of classics in the various fields, comparisons of editions, periodicals, bibliographical apparatus, and reviewing media. Trends in scholarly and popular writing.

M225. Latin American Research Resources. (Same as History M265 and Latin American Studies M200.) Seminar, three hours. General and specialized materials in fields concerned with Latin American studies. Library research techniques provide experience and competency required for future bibliographic and research sophistication as basis for enhanced research results.

228. Legal Bibliography. Introduction to source materials of the law, with emphasis on primary authority, but covering as well secondary authority and indexes and finding aids which the lawyer and professional law librarian use to gain access to legal information.

229A. African American Bibliography. Prerequisite: consent of instructor. Resources for study of African American history, culture, and literature. Problems of identification, description, subject analysis. Bibliographical and reference apparatus.

M229B. Africana Bibliography and Research Methods. (Same as African Area Studies M229B.) Problems and techniques of research methodologies related to Africana studies. Emphasis on relevant basic and specialized reference materials, using full range of available information resources, including library collections of books, serials, and computerized data bases.

M229C. Introduction to Slavic Bibliography (2 units). (Same as Slavic M229.) Prerequisite: consent of instructor. Introduction to Slavic and East European bibliography for the humanities and social sciences. Emphasis to be determined by requirements and background of enrolled students. Topics include relevant library terminology and concepts; survey of languages and transliteration systems; acquisition of Slavic and East European library materials; Slavic and East European scholarship in the West; relevant reference sources, archival resources, and research methods; survey of on-line data bases; compilation of bibliographies. S/U grading.

230. History of Publishing and the Book Trade. Publishing and book trade history, with particular reference to libraries and book collecting, changing aspects of book production and distribution within the setting of cultural history.

231. Contemporary Information Industry and Distribution of Information. Examination of major institutions and processes of information production and distribution in contemporary society — informational context in which libraries operate. Emphasis on changing market structures; emerging roles of nontraditional information providers such as financial intermediaries, computer and telecommunications companies, and entertainment industry conglomerates; and new media of publication and dissemination.

240. Principles of Information Systems Analysis and Design. Theories and principles of special systems development, including determination of requirements, technical design and evaluation, and internal organization.

241. Measurement and Evaluation of Information Systems and Services. Prerequisite: one research methods course. Recommended: one library automation course. Information systems and services from points of view of their cost and effectiveness in meeting desired objectives. Review of principles of costing. Study of literature in which measures have been developed to evaluate effectiveness of document collections, reference and information retrieval services, document delivery systems, networking, and technical services, including circulation, acquisitions, and document description.

242. Information Retrieval Systems. Survey of principal vocabularies, methods of file organization, and search strategies in control of information in computerized form.

243. Human/Computer Communication. Survey of issues related to human/computer communication. Role of the computer in society, psychological aspects of user behavior, and applications of interactive computer systems considered for their significance to systems design and user training. Students perform several on-line assignments and write term paper on one of the topics covered in course.

245. Data Base Management Systems. Theories, principles, and practicalities of data base systems, including data models, retrieval mechanisms, evaluation methods, and storage, efficiency, and security considerations.

246. Social Aspects of Information-Oriented Society. Analysis of social evolution of information-oriented societies. Historical factors and current trends explored through discussion of selected international and domestic issues. Implications for information policy.

247. User-Centered Design of Information Retrieval Systems. Lecture, two hours; discussion, two hours. Prerequisites: courses 201 and 220, or consent of instructor. Design implications of interaction between users and the features of automated information systems and interfaces that are specific to the information-seeking process. Emphasis on search strategy and subject access through use of thesauri and other vocabularies.

249. Seminar: Special Topics in Information Science. Prerequisites: course 400 and one from 240, 242, 243, or 405, or consent of instructor. Content varies from term to term to allow emphasis on specialized topics in information science, such as vocabulary development, file organization, searching procedures, indexing and classification, bibliographic and linguistic text processing, and measures of relevance and system effectiveness. May be repeated for credit with consent of instructor.

251. Reading and Reading Interests. Interests of the common reader, excluding children, with special reference to types of library patrons. Fiction and subject categories, popular and standard: philosophy, religion, social sciences, art, music, literature, history, science. Influence of paperbacks, best sellers, and current interest books on reading habits.

253. Contemporary Children's Literature. Reading interests and correlative types of literature surveyed with reference to growth and development of children. Emphasis on role of the librarian in responding to needs and abilities of children through individualized reading guidance.

260. Historical Bibliography. Early records and the manuscript period; history of the printed book and of periodical publications and newspapers, including materials, methods, and production. Parallel history of scholarship, the book trade, and book collecting in ancient, medieval, and modern Western civilization.

261. Analytical Bibliography. Recommended (but not prerequisite): course 260 or equivalent in background or experience. History and methods of analytical bibliography, with emphasis on recent scholarship. The book as a physical object and its relationship to transmission of the text. Emphasis on handpress books. Theories of Bradshaw, Proctor, Greg, McKerron, Pollard, Esdaile, Bowers, Stevenson, Hinman, McKenzie, and others.

262. Seminar: Historical Bibliography. Prerequisite: course 260 or consent of instructor. Special studies in history of books and publishing. Topics vary from term to term to allow emphasis on a particular historical period, geographical area, or other specific aspect, such as a form of publication, genre, or material of production (e.g., paper or type). May be repeated for credit with consent of instructor.

271. Seminar: Intellectual Freedom (2 or 4 units). Prerequisite: consent of instructor. Investigation of the idea of intellectual freedom: historical and constitutional bases; civil liberties and civil rights; censorship and other restraints on freedom of speech, the press, the arts, and access to ideas and information. S/U grading.

272. Research Seminar: Library and Information Science. Prerequisite: doctoral standing or consent of instructor. Emphasis on recent contributions to theory, research, and methodology. May be repeated for credit. S/U grading.

273. Doctoral Seminar: Information Storage and Retrieval Systems. Prerequisite: doctoral standing or consent of instructor. Intellectual principles for organization of information, including principles for design of systems for acquiring, organizing, and retrieving information. Also includes system-specific user studies to extent that design of information systems is predicated on their evaluation and use.

274. Doctoral Seminar: Policies and Issues in Library and Information Science. Prerequisite: doctoral standing or consent of instructor. Examination of social, political, and economic influences in development of library and information science and management of information organizations and resources.

275. Doctoral Seminar: Information Seeking and Use. Prerequisite: doctoral standing or consent of instructor. Examination of behavioral and cognitive aspects of inquirer's information needs and uses, including inquirer's characteristics, information problems, psychological needs, and uses of information and information technologies, and aspects of question negotiation.

276. Doctoral Course: Research Design. Seminar, three to four hours. Prerequisites: course 290 and doctoral standing, or consent of instructor. Analysis and evaluation of research from library and information science.

280. Information-Seeking Behavior. Study of factors and influences, both individual and social, associated with human beings needing, using, and acting on information. Topics include information theory, human information processing, information flow among social and occupational groups, and research on information needs and uses.

281. Information Resources for Business. Prerequisites: courses 420 and 421, or consent of instructor. Introduction to information needs of the business world. Business guides, encyclopedias, directories, yearbooks, indexes, loose-leaf services, government publications, data bases, and other sources of business literature.

282. Records Management (2 units). Principles of records control from creation to disposition. Designed as overview of records and information management to make students aware of information processing problems of business and how a coordinated records and information management program can improve information access and utilization.

289. Information Services in Culturally Diverse Communities. Issues in provision of information services in a multiethnic and multilingual society. Understanding role of information institutions in promoting cultural diversity and preserving ethnic heritage.

290. Research Methodology. Prerequisite: consent of instructor. Role of research in bibliography, librarianship, and information science. Identification and design of research problems. Historical, statistical, analytical, and descriptive techniques.

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

400. Information Professions. Historical and comparative overview of information professions and functions of libraries and information centers in society. Unity of librarianship and information science, highlighted through discussions of computer applications to information storage and retrieval systems, natural language text processing, and automation of various library processes. S/U grading.

402. Fundamentals of Bibliography. Development and fundamentals of several branches of bibliography: historical, physical (analytical or critical, descriptive), enumerative, or systematic; and organization, control, and elements of bibliographical apparatus. New techniques and tools, theory, methods, and trends in bibliographical research in relationship to librarianship.

405. Automation of Library Processes. Overview of major components of library automation: on-line catalogs, serials, acquisitions, and circulation systems, integrated systems, data conversion, library networks, and developments in new technologies such as local-area networks and optical disks. Emphasis on practical skills and field experience in library automation; liberal use of guest speakers currently involved in automation projects.

410. Descriptive Cataloging. Entry and description of library materials. Constitution, structure, and form of the library catalog. Cataloging services, tools, and procedures. Cataloging rules and their application.

411. Introduction to Subject Access: Alphabetic-Subject and Systematic Indexing. Lecture/discussion. Prerequisite: course 410. Overview of major alphabetic-subject and systematic indexing languages and their use in manual and on-line environments, including theory and application of Library of Congress subject headings and of Dewey decimal and Library of Congress classifications.

412. Cataloging and Classification of Nonbook Materials. Prerequisites: courses 410, 411. Problems in cataloging and classification of selected non-book materials (e.g., films, maps, pictorial works, sound recordings) as separate collections and integrated collections.

413. Thesaurus Construction (2 units). Overview of major thesauri in use in manual and on-line environments. Emphasis on their construction and evaluation and principles underlying their design.

414. Principles of Indexing and Abstracting (2 units). Basic professional techniques, concepts, and methods of indexing monographs, serials, and specialized materials, of preparing informative and indicative abstracts, and of analyzing secondary abstracting and indexing services as library reference tools.

420. Information Resources and Services I. History and philosophy of information resources and services. Introduction to reference process (including question negotiation and development of search strategies) and to information resources in print and electronic formats. Presentation of basic on-line searching skills; students use several data bases.

421. Information Resources and Services II. Prerequisite: course 420. Topics include evaluation of reference sources and services; communication of information in a multicultural environment; user education/bibliographic instruction; economic and administrative issues; types of information services offered in different settings. Study of print and electronic versions of selected tools.

425. Computer-Based Information Resources. Prerequisites: courses 420, 421. Emphasis on use of reference and resource data bases. File structure and hardware requirements. Analyses of information needs of scientists and business/labor, coupled with investigations into specific data bases addressing those needs.

426. User Education/Bibliographic Instruction: Theory and Technique. History, theory, methods, and materials of user education/bibliographic instruction in libraries and other information retrieval environments. Examination of a variety of user education/bibliographic instruction theories and methodologies, including overview of planning and administration. Identification of problems in user education/bibliographic instruction. Applications of methods of teaching use of libraries and information resources.

429. Printing for Bibliographers. Prerequisites: course 260 or 261, consent of instructor. Printing processes as related to bibliography and librarianship. Discussions, demonstrations, and experiments in design, composition, and presswork, with special emphasis on the 19th-century handpress. S/U grading.

430. Collection Development and Acquisition of Library Materials. Background of publishing and the book trade (new and antiquarian) pertinent to collection development in public, school, academic, and special libraries. Theory and practice of collection development and management. Organization and administration of acquisitions departments.

441. Management Issues in Libraries and Other Information Agencies. Prerequisite: consent of instructor. Principles of management, emphasizing management techniques applicable to libraries of various types and to library systems. Special attention to management of human as well as technical resources.

442. Library Personnel Administration. Basic principles of personnel management. Survey of current personnel practices in libraries; how basic principles apply or need to be modified to fit the library setting.

446. Library Services and Literature for Youth. Overview of literature and programs which are of interest to young adults (seventh grade and above). Discussion of special problems in working with young people and psychology of the teenager.

461. College, University, and Research Libraries. Organization, administration, collections, facilities, finances, and problems of college and university libraries and their relationships within institutions of which they are a part. Functions of research libraries and work of their staffs in serving scholars.

463. Public Libraries. Government, organization, and administration of municipal, county, and regional public libraries; developments in changing patterns of public library service.

464. School Libraries. Elementary and secondary school libraries as multimedia instructional materials centers. Relationships of school libraries to school programs and curricula. Emphasis on administration, planning materials, services, and equipment.

465. Library Services and Programs for Children. Philosophy and objectives of children's services in public and school libraries. Emphasis on services to groups and techniques of program planning which incorporate storytelling, puppetry, nonprint media, etc.

466. Storytelling to Children and Adults, Oral Interpretation of Literature. Practical storytelling to children and adults in various situations, with emphasis on the folktale, and oral interpretation with emphasis on modern imaginative literature. Readings and discussion of function of folklore and fantasy in literature, society, child development, and library programming. Students required to choose, learn, and tell stories in class and in a library or community setting and to read stories aloud.

467. Seminar: Current Topics in Public Library Administration. Prerequisite: course 463 or consent of instructor. Special studies in public librarianship, with strong emphasis on techniques and problems of public library administration. Topics, which vary to allow in-depth examination of current issues and individually selected concerns, emphasize those aspects of management which are distinctive of public libraries. Particular attention to funding and budgetary matters, impact of new technologies, and marketing of public library services.

470. Special Libraries and Information Centers. Organization, administration, collections, facilities, finances, and problems of special libraries and of special collections within general libraries. Methods of handling nonbook materials. Current trends in documentation and mechanization.

471. Health and Life Sciences Libraries. Organization, administration, services, and problems of health and life sciences libraries; relationships with institutions of which they are a part and with the community. Several field trips.

472. Law Librarianship. Introduction to profession of law librarianship; organization of professional associations and their activities; character and distribution of law libraries throughout the U.S.; distinctive characteristics of law library problems and their solutions.

473. Government Information. Introduction to nature and scope of government information promulgated by the federal government, as well as by state, municipal, international, and foreign governments. Problem-oriented approach.

485. American Archives and Manuscripts. Prerequisite: consent of instructor. Identification, description, subject analysis, and organization of records contained in archives and manuscript collections. Administration. User requirements. Problems of acquisition, legal title, literary property, preservation, accessibility, and use.

486. Issues and Problems in Preservation of Library Materials. Prerequisite: course 430 or consent of instructor. Introduction to library conservation and preservation, with emphasis on preservation administration. Topics include composition of and treatment options for library materials, establishing preservation programs, environmental standards, handling and use of library materials, disaster preparedness, preservation self-studies and surveys, security, collection management, fund-raising, and regional and national programs.

487A-487Z. Special Studies in Library and Information Science (2 to 4 units each). Examination of specialized topics of professional interest. Topics and units vary according to subject and may include conservation of materials, business information sources, problems in library management, current issues in cataloging, etc.:

487A. Scholarly Communication and Bibliometrics. Prerequisites: graduate or senior undergraduate (by petition) standing, one or more courses in statistics. Recommended (but not prerequisite): course 280. Survey of current theory, method, and empirical studies at intersection of scholarly communication (study of how scholars in any field use and disseminate information through formal and informal channels) and bibliometrics (application of mathematics and statistical methods to books and other media of communication).

487B. Expert Systems: Knowledge-Based Computer Programs in Reference Service. Strongly recommended (but not prerequisite): courses 420, 421. Artificial intelligence (AI) is the intersection of several disciplines, including cognitive science, computer science, decision sciences, linguistics, mathematics, neuroscience, philosophy, and psychology.

487C. Advanced Legal Bibliography. Examination of legal materials and research techniques not covered in course 228, including current and historical English legal materials, foreign and international law sources, administrative law materials, and special subject areas such as taxation, labor, securities, antitrust. Special emphasis on legislative history sources and research techniques and computer-assisted legal research. New legal research techniques and tools.

487D. Seminar: Current Issues in Librarianship. Prerequisite: consent of instructor. Identification, analysis, and discussion of critical issues currently facing the profession. May be repeated once.

487F. Special Studies in Children's Literature. Historical perspective that compares and contrasts aspects of children's literature in Britain and the U.S.

487G. Social Implications of Computer Technology. Seminar course in which students and instructor study and report on impact of computerization on education, government and politics, library services, medical services, business and finance, arts and humanities, employment, privacy, and other areas of interest.

491. Interpersonal Communication Issues in Library Systems. Examination of interpersonal communication patterns in library management and staff relations, in resource sharing, and in providing information services. Emphasis on relationships within an organizational environment and on effective communication styles in decision making, managing conflict, and implementing change. S/U grading.

495. Training and Supervision of Teaching Assistants (2 units). Hours to be arranged (20 hours per term). Prerequisite: appointment as a teaching assistant or Extension Division instructor. Orientation, preparation, and supervision of graduate students who are involved in teaching an undergraduate or Extension course. Syllabus revision and materials preparation. Classroom observation. S/U grading.

497. Fieldwork in Libraries or Information Organizations (4 or 8 units). Supervised field experience in approved library or information organization. Concentration must be on managerial or other professional problems of the site. Students spend full time in the field for most of the period. S/U grading.

498. UCLA Internship. Prerequisite: consent of instructor. Supervised professional training in one or more departments or units of UCLA Library System or other University information centers. Minimum of 120 hours per term, including weekly critiques of bibliographical, administrative, and service problems. May be repeated twice. S/U grading.

499. Off-Campus Internship. Prerequisite: consent of instructor. Supervised professional training in a library or information center approved by faculty of the school. Minimum of 120 hours per term, including weekly critiques of bibliographical, administrative, and service problems. May be repeated twice. S/U grading.

596. Directed Individual Study or Research (2 to 8 units). Prerequisite: consent of instructor. Directed special studies in fields of bibliography, librarianship, and information science. Variable conference time depending on nature of study or complexity of research. S/U grading.

597. Directed Studies for Ph.D. Qualifying Examinations (2 to 12 units). S/U grading.

599. Ph.D. Research and Writing (2 to 12 units). S/U grading.

John E. Anderson Graduate School of Management

J. Clayburn La Force, Dean

13

Because the world is changing rapidly and unpredictably, today's professional manager must learn the concepts and principles of management that make adjustments to new conditions possible. At UCLA's John E. Anderson Graduate School of Management (AGSM), which is consistently ranked among the best such schools in the nation, students prepare to become first-rate managers with both specialized skills and a broad understanding of the general economic, business, and managerial environment. This background enables them to become effective and efficient directors of organizations and people whether they are in the private, public, or not-for-profit sector.

Specifically, AGSM offers the business community a wide range of continuing education programs that provide state-of-the-art information in a variety of fields. Through its faculty, the school advances the art and science of management by engaging in basic research in all fields of management and by educating scholars who can continue to create this new knowledge.

AGSM students come from diverse professional and educational backgrounds and seek equally diverse personal and professional goals. Whether they choose to pursue the professional M.B.A., the academic M.S., or a Ph.D. in Management, they graduate with a broad understanding of people and organizations and with a sound technical background in the economic and mathematical concepts of management planning and decision making.

 Ernest J. Scalberg, Ph.D. (*Policy and Organization*)
 Leonard Weil, B.A. (*Finance*)

The John E. Anderson Graduate School of Management at UCLA offers a variety of programs leading to graduate degrees at the master's and doctoral levels. These include both an academic (M.S.) and professional (M.B.A.) master's, as well as a 21-month Executive M.B.A. Program designed for working managers who are moving from specialized areas into general management and a three-year Fully Employed M.B.A. Program for emerging managers. A Ph.D. in Management is also offered, as are a certificate Executive Program and research conferences and seminars for experienced managers.

The school does not offer an undergraduate major in management; however, several undergraduate courses in management are offered. Enrollment in Management 120A, 120B, 122, 124, 130, 133, and 140 is open only to students in the business economics program (see Chapter 5 for details on this program). Enrollment in other courses, although open to all University students who have completed the prerequisites, is limited, and non-AGSM students are advised not to count on gaining admission to them in order to meet the requirements of other departments or programs.

Degrees Offered

Master of Business Administration
(M.B.A.)
Master of Science (M.S.) in
Management
Doctor of Philosophy (Ph.D.) in
Management

Master of Business Administration

The two-year, full-time program leading to the Master of Business Administration (M.B.A.) degree is designed to prepare managers for business enterprises and for public/not-for-profit organizations.

The program aims to develop general management perspectives and knowledge while imparting expertise in student-selected fields of specialization. Along with mastery of subject matter, the M.B.A. program stresses integrating the lessons of various academic disciplines and functional fields, translating theory into practice, questioning the past and planning for the future, and self-guided learning as a continuing basis for effective managerial work.

Admission

Although no specific undergraduate major is required for entrance, you must complete matrix algebra and differential calculus before entering the M.B.A. program and be familiar with the basic operations of a Macintosh or MS/DOS-based microcomputer. You are required to take the Graduate Management Admission Test (GMAT). Any questions about the GMAT should be addressed to Educational Testing Service, Box 966, Princeton, NJ 08541, (609) 771-7590. The local phone number in Los Angeles is (818) 578-1971.

International applicants who hold degrees from universities or colleges where English is not the primary language are required to take the Test of English as a Foreign Language (TOEFL). Refer to "Proficiency in English" under "Graduate Admission" in Chapter 3 for further information.

You must complete the M.B.A. Application and all accompanying documents and requests for information. Admission is for Fall Quarter only;

completed applications, with full documentation, must be filed with AGSM by March 25.

Consideration is given to your academic record; score on the GMAT and, for applicants whose native language is not English, score on the TOEFL; potential for management as evidenced by work experience and community, extracurricular, or other experience; and letters of recommendation. Preference is given to applicants who have had full-time management-related work experience since completing their bachelors' degrees. Those few students admitted directly from baccalaureate programs who choose to work before entering graduate school will have their admission honored for three years.

Small group information sessions are offered by the M.B.A. Admissions Office several days a week throughout most of the year on an appointment basis. Call 825-6944 to arrange attendance.

Applications and information about the M.B.A. program are available in the M.B.A. Program Office, 3371 Anderson Graduate School of Management, UCLA, Los Angeles, CA 90024-1448.

Areas of Study

Accounting; business economics; finance; human resources/human systems development; information systems; management science; marketing; operations and technology management; policy and organization. Interdisciplinary studies are offered in arts management, entertainment management, entrepreneurial studies, finance and real estate, international business and comparative management, and public/not-for-profit management.

Course Requirements

The three required elements of the M.B.A. program are the management core, advanced (area and free) electives, and the management field study, totaling 24 courses (96 units). Management core subjects cover the fundamentals of disciplines which underlie the practice of management. Advanced electives provide specialized knowledge and skills for a particular field of management work.

Management Core — The management core consists of 11 courses on subjects basic to the practice of management, including Management 402, 403, 405, 408, 409, 410, 411, 412, 420, and two courses from 404, 406, 407.

Advanced Electives — These focus on one or more fields of specialization within the broad realm of management. Students design programs of study to meet their specific academic needs and professional goals. Eight electives must be selected from regular AGSM courses, and you are encouraged to emphasize two or more areas of study.

You must also select at least three additional free electives, subject only to general University regulations. These electives normally must be taken while enrolled in the program. They

may support or complement the remainder of your program of study.

A maximum of two four-unit 596 courses and one 454 course may be applied toward the 96-unit requirement. These are considered free electives.

Management Field Study — The two-term management field study project (courses 444A-444B) consists of teams of three to five students who serve as management consultants to business firms or other organizations. Conclusions are summarized in a report which serves in lieu of a comprehensive final examination for members of the team. The field study is judged by standards applicable to professional management consulting.

Extracurricular Activities

A variety of student organizations promotes both professional competence in many areas and the development of contacts among students, alumni, faculty, and business executives. Many opportunities are presented for students to become involved in planning events with executives in both the public and private sectors, to participate in day-long programs at various organizations, and to meet with company representatives and alumni. Extracurricular activities are an integral part of life at AGSM, and all students are encouraged to participate.

Concurrent Degree Programs

J.D./M.B.A.

The John E. Anderson Graduate School of Management and the School of Law offer a concurrent program which enables students to prepare for careers where law and management overlap and where understanding of both fields is necessary. Examples of such areas would include public service, international trade, industrial relations, corporate law, and specialized areas of management consulting. The program makes it possible to earn the J.D. and M.B.A. in four academic years. Students interested in such a program should apply to both schools simultaneously.

M.A.-Latin American Studies/M.B.A.

The John E. Anderson Graduate School of Management and the Latin American Studies Program jointly sponsor a three-year concurrent degree program designed for individuals preparing for careers in international management with a special focus on the Latin American region. Establishment of the program was predicated on the belief that individuals employed in the area of international business and management are better equipped to meet the challenges of their employment with complementary preparation in language and regional studies. Students should request application materials from the M.B.A. Admissions Office and the Latin American Studies Program.

M.A.-Urban Planning/M.B.A.

The John E. Anderson Graduate School of Management and the Graduate School of Architecture and Urban Planning offer a three-year concurrent degree program designed for students who seek careers which draw on general and specialized skills in urban planning and management. By providing knowledge of the workings of both the private and public sectors, the program enables individuals who have acquired these skills to move easily between careers in private industry and public service. Students must contact both the M.B.A. Admissions Office, John E. Anderson Graduate School of Management, and the Graduate School of Architecture and Urban Planning Admissions Office.

M.L.S./M.B.A.

A concurrent degree program jointly sponsored by the John E. Anderson Graduate School of Management and the Graduate School of Library and Information Science, this specialization is designed to provide an integrated set of courses for students who seek careers which draw on general and specialized skills in the two professional fields. Students should request application materials from both the M.B.A. Admissions Office, John E. Anderson Graduate School of Management, and the Graduate School of Library and Information Science.

M.N./M.B.A.

The John E. Anderson Graduate School of Management and the School of Nursing offer a concurrent degree program designed for students interested in employment in all sectors of the health care delivery system, including hospitals, corporate health care headquarters, home health care agencies, and long-term care facilities, as well as policy-making bodies and consulting firms. Students must request application materials from both the M.B.A. Admissions Office, John E. Anderson Graduate School of Management, and the School of Nursing Student Affairs Office.

M.P.H./M.B.A.

The John E. Anderson Graduate School of Management and the School of Public Health, Department of Health Services, offer a three-year concurrent degree program designed for students who desire a management career in health care and related fields. The program reflects the combined interest of employers, faculty, and students who recognize the increasing challenges facing managers in the health care industry and the need for highly skilled and sensitive individuals who can creatively take on these challenges. Students should request application materials from both the M.B.A. Admissions Office, John E. Anderson Graduate School of Management, and the Health Services Management Program, UCLA School of Public Health. GMAT scores are required for admission.

M.S.-Computer Science/M.B.A.

The John E. Anderson Graduate School of Management and the Department of Computer Science in the School of Engineering and Applied Science offer a concurrent degree program which enables students to complete requirements for the M.S. in Computer Science and the M.B.A. in three academic years. Students should request application materials from both the M.B.A. Admissions Office, John E. Anderson Graduate School of Management, and the Department of Computer Science.

Executive M.B.A. Program

Designed for mid-career managers with strong records of achievement, the Executive M.B.A. Program enables executives to obtain high quality advanced management education while continuing in their full professional roles. The program has a class size of approximately 60 participants with superior academic records and a minimum of eight years of work experience and five years of managerial experience.

The intensive two-year course of study leads to a regular M.B.A. degree. The emphasis is on general management training, increased competence in management specialties, organizational and interpersonal skills, and sophisticated understanding of the integration of businesses and their environments.

Classes are held at AGSM on Fridays and Saturdays every other week, with three- to five-day residential sessions held at conference sites at the beginning and end of the program. Further information and application materials may be obtained by writing to Executive M.B.A. Program, 4383 Anderson Graduate School of Management, UCLA, Los Angeles, CA 90024-1481.

Fully Employed M.B.A. Program

Designed for the emerging manager, this three-year part-time program offers students the opportunity to focus on finance, marketing, or general management. A typical student has four to seven years of work experience and is either in a managerial position or shows strong potential for assuming a position in management.

The curriculum has three main components — management core, elective tracks, and management field study — all designed to equip the emerging manager with the skills and knowledge necessary to accept the challenges of today's complex and dynamic business world. The management core focuses on functional skills as well as the organization's internal and external environments. Three broad elective tracks are offered in finance, marketing, and general management; you can tailor elective courses to meet your personal career needs. A management field study takes place during your third year, providing you with the opportunity to put concepts and skills to work

through a consulting study of an actual client organization.

The program has a class size of approximately 65 students. Classes meet weekly one weekday afternoon and Saturday mornings. Courses available through the regular M.B.A. program during the elective track phase meet at various times. Classes are scheduled to begin in September and end three years later in June. Two weekend residentials are held, one at the beginning of both the first and second years of the program. Further information and application materials may be obtained by writing to Fully Employed M.B.A. Program, 4383 Anderson Graduate School of Management, UCLA, Los Angeles, CA 90024-1481.

M.S./Ph.D. Programs**Admission**

All applicants are required to take the Graduate Management Admission Test (GMAT) or the Graduate Record Examination (GRE). International applicants who hold a degree from a non-English-speaking university are required to take the Test of English as a Foreign Language (TOEFL). Refer to "Proficiency in English" under "Graduate Admission" in Chapter 3 for further information. Three letters of recommendation must be submitted with the completed application. All application materials, including transcripts, should be sent directly to the M.S./Ph.D. Programs Office, 3379 Anderson Graduate School of Management, UCLA, Los Angeles, CA 90024-1481.

Applications are accepted for Fall Quarter admission only; the deadline for submission of applications and complete documentation is January 15.

Program information and application materials may be obtained from the M.S./Ph.D. Programs Office.

All applicants to the M.S. or Ph.D. program are strongly urged to arrange an interview with at least one faculty member in their proposed area of concentration or major field area. The interview should take place before February 1. Interviews are informational only and have no bearing on admissions decisions.

Master of Science Degree

The academic master's program is a full-time program which leads to the Master of Science degree in Management. Some students enter the program with the goal of eventual acceptance into the doctoral program; for others, the M.S. is a terminal degree. In either case, the program's emphasis is on advanced specialized training and the development of research capability.

Major Field

Management science.

Course Requirements

A maximum of 16 courses may be required. The four prerequisite courses and three managerial core course requirements may be waived on the basis of prior coursework. Nine graduate courses (methodological core, depth field, and four units of Management 598) are required and cannot be waived.

(1) Prerequisites (four courses): Mathematics 32B, Statistics M152A, 152B, and two terms of computer programming.

(2) Managerial Core (three courses): Management 403, 405, 408.

(3) Methodological Core (five courses; deviations may be approved by the chair of the management science academic unit): Management 203A, 210A, 210B, 210C, 216A.

(4) Depth Field: Three courses which support your thesis research.

(5) Master's Thesis (one course): Four units of Management 598.

Four units of course 596 may be applied toward the minimum graduate course requirement.

Thesis Plan

A thesis is required for the Master of Science degree. Students generally establish a thesis committee during their fifth term. Plans for the thesis should be presented to the committee for approval at the beginning of the sixth term.

Ph.D. Degree

The doctoral program is a research-oriented degree program which leads to the Ph.D. in Management. The program includes intensive training in research methods applicable to problems of organizations in the public and private sectors. It prepares students for careers in university teaching and research or as staff specialists in business firms and other organizations. The program offers students substantial opportunities to discover their own, unique scholarly focus and competence.

Major Fields

Accounting; business economics; finance; human resources/human systems development; information systems; international business and comparative management; management science; marketing; operations and technology management; policy and organization.

Course Requirements

The research preparation requirement consists of two parts: (1) a course requirement and (2) a research paper. You are required to take five research courses which are not part of the major field area. These courses must be completed before taking the oral qualifying examination and may not be waived by prior gradu-

ate work. The research paper must be submitted to and accepted by the research paper committee no later than Spring Quarter of your third year of study.

The breadth requirement consists of eight courses which are clearly outside your major field area. You should use these courses to become more knowledgeable about the basic elements of several other management disciplines and functional areas or to define a minor field or research and teaching proficiency. Three of these courses may be waived by prior coursework. They must be completed before you take the oral qualifying examination.

Students, in consultation with a major field adviser, design a course of study which prepares them to pass the major field examination.

Qualifying Examinations

Proficiency in the major field area is determined by a written examination, supplemented in some areas by an oral examination. The major field examination must be passed by the end of Spring Quarter of your third year of study.

You are required to present the substance of your dissertation proposal in a formal seminar to which all Ph.D. students and faculty are invited.

When all the preliminary requirements have been fulfilled (coursework, research paper, major field examination, seminar), the University Oral Qualifying Examination can be held; if passed, you are advanced to candidacy. The oral qualifying examination must be passed within four and one-half years of the date of entrance into the program.

Candidate in Philosophy Degree

You are eligible to receive the C.Phil. degree on advancement to candidacy for the Ph.D.

Doctoral Dissertation/Final Oral Examination

You are expected to present a dissertation of substantial magnitude which makes a significant contribution to the advancement of knowledge in your selected field of study. The dissertation must be completed and accepted within seven and one-half years from your date of entry into the program.

The school requires that you defend your dissertation at a final oral examination.

Lower Division Courses

1A-1B. Elementary Accounting. Prerequisite: sophomore standing. Course 1A is prerequisite to 1B. Introduction to accounting theory and practice. Recording, analyzing, and summarizing procedures used in preparing balance sheets and income statements in first term. Payroll and tax accounting, partnership and corporation accounts, manufacturing and cost accounting, and supplementary statements in second term.

Upper Division Courses

108. Business Law. Essentials of contracts. Examination of legal forms of business organizations, especially partnerships and corporations. Introduction to federal securities law and antitrust.

120A. Intermediate Financial Accounting I. Prerequisite: course 1B. Intermediate-level course in theory and practice of financial accounting. Underlying concepts of asset valuation and income measurement. Measurement and reporting of current and long-term assets, including cash and marketable securities, inventories, plant assets and depreciation, and intangibles.

120B. Intermediate Financial Accounting II. Prerequisite: course 120A. Intermediate-level course in theory and practice of financial accounting. Underlying concepts of liability recognition and expense, including leases, bonds, and pensions. Shareholder's equity, including earnings per share. Accounting for changing prices.

122. Cost Accounting. Prerequisites: course 1B, Economics 40, or equivalent. Nature, objectives, and procedures of cost accounting and control; job costing and process costing; accounting for manufacturing overhead; cost budgeting; cost reports; joint-product costing; distribution cost; standard costs; differential cost analysis; profit-volume relationships and break-even analysis.

123. Auditing. Prerequisite: course 120B. Concepts and problems in verification of financial and related information, including ethical, legal, and other professional issues. Historical developments and current concerns.

124. Advanced Accounting. Prerequisites: courses 120A, 120B. Partnerships and joint ventures; installment sales and consignment sales; home office and branch relationships; corporate combinations; preparation of consolidated statements; foreign branches and subsidiaries; receiverships; estates and trusts; governmental units; actuarial science.

127. Federal Income Taxation. Prerequisite: course 1B. Recommended: course 120A. Basic concepts of federal income taxation pertaining to individuals; income and deductions, areas of special tax procedures pertaining to gains and losses from sales and exchanges. Tax considerations in business and investment decisions.

128. Special Topics in Accounting. Lecture, three hours. Prerequisite: consent of instructor. Selected topics in public accounting, including mergers and acquisitions, public-company status and the going-public process, role of the partner, serving an entrepreneurial client, fund accounting, and filing and accounting of payroll and quarterly tax returns. Discussion of a case study of current interest in the accounting profession. Mr. Miller

130. Business Finance. Lecture, three hours; discussion, one hour. Prerequisites: course 120A or 120B, Economics 40, or equivalent. Study of forms and sources of financing business firms large and small, corporate and noncorporate. Emphasis on financial planning and developing judgment in formulating decisions on financial problems. Financial problems considered in their social, legal, and economic effects. Mr. Andersen

133. Investment Principles and Policies. Prerequisite: course 130. Principles underlying investment analysis and policy; salient characteristics of governmental and corporate securities; policies of investment companies and investing institutions; relation of investment policy to money markets and business fluctuations; security price-making forces; construction of personal investment programs. Mr. Shelton

140. Elements of Production and Operations Research. Prerequisites: Mathematics 3A, 3B, 3C, 3E, Economics 40, or equivalent. Principles and decision analysis related to effective utilization of factors of production in manufacturing and nonmanufacturing activities. Analytical models and methods for allocation, transportation, inventories, replacement, scheduling, and facilities design. Mr. Erlenkotter and the Staff

150. Elements of Industrial Relations. Principles and methods of effectively utilizing human resources in organizations. Relationship between social, economic, and other environmental factors and current problems in industrial relations. Mr. Hutchinson

175. Elements of Real Estate and Urban Land Economics. Examination of business decision making as related to logical forces shaping cities and influencing real estate market functions and land uses. Emphasis on decision making as it relates to appraising, building, financing, managing, marketing, and using urban property. Mr. Mittelbach

182. Leadership Principles and Practice. Knowledge and skills leading to effectiveness in interpersonal relations. Understanding oneself as a leader and others as individuals and as members of working groups. Understanding of group process, including group leadership. Lectures and "sensitivity training" laboratory.

190. Management Theory and Policy. Prerequisite: course 130. Study of basic concepts and theory of management. Emphasis on operational analysis of manager's role in all types of organizations. Management issues in areas of planning, organizing, staffing, directing, and controlling. Mr. Carrabino and the Staff

197. Special Topics in Management. Topics of special interest to undergraduate students. Specific subjects may vary each term depending on particular interest of instructors or students. May be repeated for credit.

Graduate Courses

Graduate courses are ordinarily open to students admitted in graduate standing. As a condition for enrollment, you must submit to the instructor in charge of the course evidence of satisfactory preparation for the work proposed.

200. Advanced Microeconomics. Seminar, three hours. Prerequisite: course 405 or consent of instructor. Economist's approach to organization and competitive interaction. Topics include game theory, threat credibility, incentive contracts, information advantages, and entry deterrence.

201A. Business Forecasting. Seminar, three hours. Prerequisites: courses 402, 406. Role of business forecasting in managerial planning. Principles and methods of forecasting. Evaluation of reliability of existing forecasting techniques. Coverage of both short- and long-term forecasting of industry, regional, and national business trends.

201B. Econometrics and Business Forecasting. Lecture, three hours. Prerequisite: consent of instructor. Development of standard topics in applied econometric modeling. Emphasis on assumptions underlying classical normal linear regression model, special problems in application, and interpretation of results. Practical applications extensively developed in student projects.

202A. Regulation. Lecture, three hours. Prerequisite: course 405 or consent of instructor. Reasons for government intervention in theory and practice. Effect of regulation on business. How regulation and deregulation occur. Areas include public utilities, banking, pollution, and the political process.

202B. Analytics of Competitive Strategy. Discussion, three hours. Prerequisites: courses 402 and 405, or consent of instructor. Development and analysis of strategies to maximize value in competitive and cooperative situations. Problems include competitive bidding, tacit collusion, and strategies in repeated settings. Mr. P'ng

202C. Empirical Studies in Industrial Organization. Prerequisite: course 202B. Investigation of factors influencing size of industries, their size distribution, and conditions of entry and exit. Implications of such industry characteristics, derived for decisions having to do with firm output, prices, advertising, and research/development. Mr. Weston

203A. Economics of Decision. Prerequisites: rudiments of economic theory, calculus, probability, and statistics. Basics of single-person decision theory from a normative viewpoint. Expected utility theory with objective and subjective probability. Departures from expected utility behavior. Introduction to multi-person decision theory.

Mr. Bikhchandani, Mr. Erlenkotter

203B. Economics of Information. Discussion, three hours. Prerequisites: rudiments of economic theory of the firm, calculus, probability, and statistics; course 203A or consent of instructor. Optimal decision and information rules. Amount, cost, and value of information. Risk aversion, stochastic dominance, and their impact on economic decisions in a stochastic environment. Mr. Lippman

205A. International Business Economics. Prerequisites: courses 405 and 406, or consent of instructor. International business environment, international economic institutions, national and regional trade policies and developments, trends in foreign markets, and international monetary problems, studied for their influence on organization and operation of the international corporation. Mr. Mitchell

205B. Comparative Market Structure and Competition. Prerequisite: course 205A or consent of instructor. Comparative study of public policies toward competition, market structures, and competitive practices in key industries in selected countries.

205C. Business Forecasting for Foreign Economies. Prerequisite: course 201A or consent of instructor. Forecasting changes in business activity, population, industrial structure, productivity, Gross National Product and its components for selected countries.

207. Resource Administration of Nonmarket Activities. Seminar, three hours. Prerequisite: course 405 or consent of instructor. Examination of behavior of managers in profit vs. not-for-profit sectors to determine critical variables that explain observed differences in behavior. Use of methodology of microeconomics, particularly utility maximization.

208. Public Services and Private Functions. Prerequisites: courses 405 and 406, or consent of instructor. Sources and uses of federal, state, and local revenues and their impact on public and private resource allocation. Examination of proper roles of government and private sector in financing and provision of public goods and services.

209. Selected Topics in Business Economics. Prerequisite: consent of instructor. Special topics in business economics. Current developments in theory or practice in business economics. May be repeated for credit.

210A. Mathematical Programming. Discussion, three hours. Prerequisite: linear algebra. Comprehensive development of theory and computational methods of linear programming, with applications to a variety of areas. Mr. Graves

210B. Applied Stochastic Processes. Discussion, three hours. Prerequisite: Mathematics M150A or Electrical Engineering 131A. Fundamentals of stochastic processes, including Poisson processes, renewal theory, and Markov chains. Sequential stochastic (usually Markovian) decision processes in discrete and continuous time. Emphasis on problem formulation and characterization and computations of optimal policies, often via dynamic programming; applications to inventory, queueing, maintenance, reliability, and replacement problems. Mr. Lippman, Mr. Mamer

210C. Network Flows and Integer Programming. Prerequisite: linear programming. Theory and techniques of discrete and network-related mathematical programming models in management science. Applications to various allocation, coordination, operating, and planning problems. Emphasis on fundamentals, efficient computational methods, and keys to successful practical applications. Mr. Geoffrion

211A. Nonlinear Mathematical Programming. Prerequisites: course 210A, Mathematics 32A, or equivalent. Theory, methods, and application of optimization of nonlinear systems. Review of classical optimization methods; optimality and duality theory for convex programs; main computational approaches to convex programming; survey of current computer codes and computational experience. Mr. Graves

211B. Large-Scale Mathematical Programming. Prerequisite: course 210A or equivalent. Theory and computational methods for optimizing large-scale linear and nonlinear programs. Exploitation of special structures with combinatorial, dynamic, multidivisional, and stochastic aspects to obtain practical solution procedures in spite of large numbers of variables and/or constraints. Mr. Graves

212A. Management Science Models I. Prerequisites: course 407, Mathematics 31B. Broad survey of deterministic models of management science, including solution methods and applications management. Solution methods include linear programming, network optimization, integer programming, nonlinear programming, and dynamic programming. Application areas include corporate planning, finance, marketing, production and operations management, distribution, and project management. Mr. Erlenkotter, Mr. Geoffrion

212B. Management Science Models II. Prerequisites: course 212A, Mathematics 32A, or equivalent. Broad survey of nonlinear, time-staged, and probabilistic models for managerial decision making. Application areas include finance, marketing, production, facilities design, and energy systems. Mr. Erlenkotter, Mr. Mamer

212C. Management Science Models III. Prerequisites: courses 212A, 212B. In-depth reviews of actual management science applications. Emphasis on professional skills needed for successful practical applications.

213A. Intermediate Probability and Statistics. Prerequisite: course 402 or equivalent. Introduction to probability theory and hypothesis testing as applied to management. SAS programs used in this course and its sequels. Mr. Mamer, Mr. Morrison, Mr. Tang

213B. Statistical Methods in Management. Prerequisite: course 213A or consent of instructor. Introduction to parameter and interval estimation, simple and multiple linear regression and correlation, fixed, random, and mixed effects analysis of variance models and nonparametric statistics, all as they apply to management studies. Mr. Cooper, Mr. Hanssens, Mr. MacQueen

213C. Introduction to Multivariate Analysis. Prerequisite: course 213B or consent of instructor. Introduction to use of multivariate models in management research to organize and represent information; interpretation of coefficients from multivariate exploratory models (e.g., principal axes and factor analysis models); survey of multivariate statistical procedures (e.g., multiple discriminant analysis, multivariate analysis of variance, canonical correlation, and confirmatory factor models). Mr. Cooper, Mr. Hanssens, Mr. Morrison

214B. Behavioral Science Models. Prerequisite: consent of instructor. Formulation, analysis, and interpretation of mathematical models in behavioral sciences. Emphasis on stochastic process models for aspects of individual and group behavior such as learning, problem solving, classification, communication, bargaining, and social exchange systems. Mr. MacQueen

215D. Time-Series Analysis. Prerequisite: course 213B or consent of instructor. Univariate Box/Jenkins analysis, transfer functions, and intervention analysis. Relationship between econometric and time-series models, Granger causality, multiple time-series analysis. Numerous computer applications in modeling and forecasting. Mr. Hanssens

216A. Simulation of Operational Systems. Discussion, three hours. Prerequisite: background in FORTRAN, PL/1, PL/C, or other batch computing language available on campus and in basic statistics (course 402 or equivalent) and modeling (course 407 or equivalent). Computer simulation methodology, including design, validation, operating procedures, and analysis of results of simulation experiments. Applications of simulation to management problems.

217A. Statistical Decision Theory. Prerequisite: course 213A or equivalent. Relationships among statistical decision theory, game theory, and classical statistical inference, with emphasis on sequential analysis and dynamic decision processes; axiomatic foundations, Bayes' and minimax solutions, applications to selected models of dynamic decision problems in business. Mr. MacQueen

217B. Game Theory. Prerequisite: course 213A or equivalent. Nature of models for rational behavior in presence of conflicts of interests, zero-sum and nonzero-sum games, two-person and many-person games, state of the art, philosophical and computational limitations, relations with individual and group decision making. Mr. MacQueen

218A. Selected Topics in Management Science (1 to 4 units). Prerequisite: consent of instructor. Newly developing topics and viewpoints. Topics have included reliability and optimal maintenance theory, large-scale distribution/inventory systems, and Markovian decision processes under uncertainty. May be repeated for credit.

218C. Selected Topics in Business Statistics (1 to 4 units). Prerequisite: consent of instructor. Special topics in statistical methods. Current developments in statistical theory and practice. Analysis of recent literature. Topics and instructors announced in advance. May be repeated for credit.

218X-218Y-218Z. Current Issues in Management Science (1 to 4 units each). Lecture, one hour; discussion, three hours. Prerequisite: consent of instructor. Current issues and research on a variety of topics in general area of management science. May be repeated for credit. S/U grading.

220A. Intermediate Financial Accounting I. Prerequisite: course 403 or consent of instructor. Concepts and principles of financial accounting. Intended to enhance students' understanding of published corporate financial statements. Emphasis on assets and revenue recognition. Mr. Miller

220B. Intermediate Financial Accounting II. Prerequisite: course 220A or consent of instructor. Concepts and principles of financial accounting. Intended to enhance students' understanding of published corporate financial statements. Emphasis on liabilities and owners' equity. Ms. Ely, Mr. Miller

220C. Advanced Financial Accounting. Prerequisites: courses 220A and 220B, or consent of instructor. Continuation of courses 220A and 220B, with emphasis on a range of topics, including accounting for partnerships, mergers, combinations, and parent/subsidiary relationships. Review of litigation procedures, including reorganizations, receiverships, and bankruptcy. Mr. Farrell

221. Current Issues in Accounting. Prerequisite: consent of instructor. Forum for discussion of contemporary issues in accounting and information systems, in colloquium format. Drawing on prominent speakers in the field, course requires students to formulate a position paper on each topic presented. Mr. Buckley

222. Cost Accounting. Prerequisite: course 403. Nature, objectives, and procedure of cost accounting and control; job costing and process costing; joint product costing, standard costs; theories of cost allocation and absorption; uses of cost accounting data for management decision making. Mr. Suh

223. Auditing. Prerequisite: course 403. Theory and practice underlying auditors' examination and reporting on financial statements, including professional ethics, internal control, and selection and application of auditing procedures, with emphasis on generally accepted auditing standards. Mr. Miller

226. International Accounting. Prerequisite: course 403. Comparative analysis of accounting concepts and practices in other countries; study of contrasts between various systems; problems of accounting for international corporations, including transfers of funds and income measurement; accounting influences on economic development. Mr. Farrell

227A. Taxation Principles and Policy. Discussion, three hours. Prerequisite: course 403. Study of fundamental income tax problems encountered in business, investment, employment, and personal decisions. Special emphasis on structuring real estate and securities transactions. Current trends in law and policy. Mr. Klein

227B. Taxation and Business Planning. Discussion, three hours. Prerequisite: course 403. Study of tax issues arising in formation, operation, and termination of a corporation. Specific emphasis on structuring shareholders' transactions involving dividends, redemptions, liquidations, acquisitions, and capital structure.

228. Evaluating Financial Statement Information. Lecture, three hours. Prerequisites: courses 220A or 220B, 230, 402. Issues of accounting information evaluation, with special emphasis on uses of financial statements by decision makers external to the firm (e.g., investors, creditors). Topics include load decisions, bankruptcy prediction, and interpreting earnings.

229A. Special Topics in Accounting. (Formerly numbered 229C.) Lecture, three hours. Prerequisite: doctoral standing or consent of instructor. Examination in depth of problems or issues of current concern in accounting, such as application of information economics and principal-agent model to accounting.

229B. Empirical Research in Accounting. Lecture, three hours. Prerequisites: training in econometrics and doctoral standing, or consent of instructor. Introduction to empirical accounting literature, focusing on role that accounting information plays in formation of capital market prices.

229X-229Y-229Z. Accounting Workshops (1 unit, 1 unit, 2 units). Discussion, two hours. Prerequisite: doctoral standing. Designed to develop ability to critically evaluate research in fields relevant to study of accounting. Papers presented in colloquium format by leading scholars in accounting. Active participation and intellectual interchange encouraged through discussion of papers during colloquium. May be repeated for credit. S/U grading.

230. Theory of Finance. Prerequisite: course 408. Decision making under uncertainty, theory of asset prices, and efficiency of capital markets. Development of most recent theoretical constructs and application to fundamental issues in corporate financial management (such as capital budgeting, capital structure, and dividend policy). Mr. Titman

231A. Profit Sector Financial Policy. Prerequisite: course 230. Identifying and solving financial problems through use of cases. Application of financial theory and financial techniques to business problems, using written reports and classroom discussion. Mr. May, Mr. Titman, Mr. Weston

231B. Nonprofit Sector Financial Policy. Discussion, three hours. Prerequisite: course 408. Identifying and solving financial problems for all types of nonprofit organizations, with attention to funds accounting, budgeting and control, investment decision making when market valuation cannot be used as a criterion, and sources of funds for nonprofit organizations. Use of cases. Mr. Eiteman

231C. Working Capital Management. Lecture, three hours. Prerequisite: course 230. More detailed advanced coverage of short-range problems of financial management. Coverage of current assets, current liabilities, and their interrelationships.

231E. Managing Finance and Financing the Emerging Enterprise. Prerequisites: courses 230, 403, 408, second-year standing. Emphasis on financial, control, and investment issues confronting rapidly growing companies in entrepreneurial settings. Consideration and selection of financing vehicles which may be appropriate to securing organizations' money requirements. Mr. Cockrum

232A. Investment Management. Lecture, three hours. Prerequisite: course 230. Behavior of investment markets and pricing of securities. Topics include security analysis, management of fixed income securities, portfolio management, and equity investment strategies. Material on operation of securities markets and institutional details of trading also included. Mr. Roll

232D. Option Markets. Prerequisite: course 230. Organization and role of organized put and call markets, arbitrage and hedging relationships, valuation of options, implementation of option trading strategies, perspective of corporate securities as options, function of options in securities markets, and innovations in option markets. Students learn fundamentals of hedging and spreading by playing an option trading game and writing a term paper analyzing their trading strategies. Mr. Geske

233A. Money and Capital Markets. Prerequisite: course 230. Application of interest theory and flow funds analysis to price determination process in markets for bonds, mortgages, stocks, and other financial instruments. Study of funds flow from credit markets. Analysis of costs of capital in individual industries. Mr. Cornell, Mr. Roll

233B. Financial Institutions. Lecture, three hours. Prerequisites: courses 230, 408. Study of financial policies and practices of commercial banks, savings and loan associations, pension funds, insurance companies, and other major financial institutions. Review of current major problems facing senior managers of these financial institutions. Mr. Andersen, Mr. Roll

233C. Speculative Markets. Prerequisite: course 230. Study of theory and evidence of capital market efficiency, including stock market, bond market, commodity future markets, options market, money markets, and foreign exchange markets. Mr. Hirshleifer

234A. International Financial Markets. Lecture, three hours. Prerequisites: courses 230, 408. Conceptual understanding of foreign exchange market, Eurocurrency market, international bond market, and equity markets in various countries. Emphasis on underlying economic principles, although where relevant, institutional features helpful in understanding structure and operations of the markets to be dealt with in detail. Mr. Eiteman

234B. Financial Management of Multinational Corporations. Lecture, three hours. Prerequisite: course 230. Financial management of multinational firms from perspective of a financial vice president or other financial officer within the company. Topics include measuring foreign exchange risk, managing that risk with both contractual and operating strategies, foreign investment decisions, capital budgeting and cost of capital in an international perspective, political risk, working capital management, and performance evaluation and control. Mr. Chowdhry

235A. Problems in Insurance Management. Discussion, three hours. Prerequisite: consent of instructor. Advanced consideration of problems of insurance management. Actuarial, underwriting, investment, marketing, and regulatory problems related to insurance activities. Mr. Hofflander

238. Special Topics in Finance. Prerequisites: course 230, consent of instructor. Intended for master's students. Selected topics in finance theory, empirical studies, and financial policy. May be repeated for credit with instructor change.

239A. Theory of Exchanges under Uncertainty. Prerequisites: course 230, consent of instructor. Foundations of theory of exchange developed as introduction to theoretical literature on pricing of capital assets. Primarily intended for Ph.D. students, but well-prepared master's students may find course useful in their career preparation. Mr. Geske

239B. Theory of Investment under Uncertainty. Prerequisites: courses 230 and 239A, or consent of instructor. Foundations of theory of firm capitalization and investment decisions, with special attention to questions of exchange and allocative efficiency. Primarily intended for Ph.D. students, but well-prepared master's students may find course useful in their career preparation.

239C. Empirical Research in Finance. Prerequisites: course 230, training in econometrics, consent of instructor. In-depth study of empirical research in the field of finance, with emphasis on market efficiency, capital asset pricing, and option pricing. Primarily intended for Ph.D. students, but well-prepared master's students may find course useful in their career preparation. Mr. Roll

239D. Ph.D. Seminar: Finance. Prerequisites: course 230, courses in the 239 series. Intended for Ph.D. students. Advanced topics in finance theory and empirical research. May be repeated for credit with instructor change.

239X-239Y-239Z. Finance Workshops (1 unit, 1 unit, 2 units). Discussion, 90 minutes. Prerequisite: doctoral standing. Designed to develop ability to critically evaluate finance research. Papers presented in colloquium format by leading scholars in finance. Active participation and intellectual interchange encouraged through discussion of papers in sessions prior to workshop, as well as during colloquium. May be repeated for credit. S/U grading.

240A. The Operating Manager. Definition and analysis of problems of production planning, inventory management, quality control, system design, and implementation from operating manager's perspective, primarily through case studies. Course is integrative in nature, rather than one of developing new methodologies and techniques. Mr. Buffa

240B. Operations Planning, Scheduling, and Control. Prerequisite: course 407 or consent of instructor. Forecasting, inventory planning, aggregate planning, job-shop scheduling models, and automated manufacturing systems, with emphasis on managerial relevance and usefulness of models in solving or providing insights into real-world problems.

240C. Design of Operational Systems. Prerequisite: course 407. Issues, concepts, objectives, and criteria in determination of capabilities, characteristics, and configurations of manufacturing and service systems. Examination of analytic and synthesizing methodologies for selection of capacity, location, technology, processes, material movement and storage systems, facilities, work group structures, and jobs. Mr. Andrews

240D. Operations Strategy and Policy. Discussion, three hours. Definition and scope of operations strategy and its relation to corporate strategy, importance of productivity and its amplification in global competition, positioning the system to match market requirements, capacity decisions, product and process technology, work force and job design, strategic implications of operating decisions, suppliers and vertical integration. Case analyses involving strategic issues in manufacturing and nonmanufacturing situations. Mr. Buffa

240E. Managing Entrepreneurial Operations. (Formerly numbered 245.) Lecture, three hours. Prerequisite: second-year standing or consent of instructor. Exploration of operating issues involved in managing entrepreneurial enterprises. Integrative course, building on methodologies, principles, and concepts provided in prerequisite functional and strategic core courses. Use of extensive readings and case studies to develop skills and philosophical basis for applying managerial concepts to entrepreneurial operations.

241A. Managing Technology for Competitive Advantage. Advanced technologies such as robotics, computer-integrated manufacturing, computer-aided design and manufacturing (CAD/CAM), and flexible manufacturing systems. Effects of technological innovation on operations managers at both strategic and operational levels. Course is integrative in nature. Mr. Shirley

241B. Project Management. Prerequisite: course 407 or equivalent. Management of development projects. Decision-making environment, economic analysis, network analysis, scheduling, and control of development projects. Sequential and aggregate development decisions. Mr. Yost

242A. Models for Operations Planning, Scheduling, and Control. Prerequisite: doctoral standing or consent of instructor. Survey of research studies and recent literature in operations planning, scheduling, and control. Emphasis throughout on formal models and their applications. Aggregate planning, work force scheduling, inventory management, and detailed operations scheduling and control.

242B. Models for Operations Systems Design. Prerequisite: doctoral standing. Survey of research literature on models for design of manufacturing and service systems, including long-range forecasting, operational economies, capacity, location, facilities, processes/technology, work, and work structures. Mr. Andrews, Mr. Erlenkotter

243A. Planning for Facilities Systems. Prerequisite: course 212A or equivalent. Planning of location, expansion, and replacement for interdependent systems of facilities. Examination of spatial and dynamic economic considerations. Applications in selected industries and public systems. Mr. Erlenkotter

243B. Inventory Theory. Prerequisite: course 210B or consent of instructor. General discussion of inventory models, with emphasis on characterizing the form of optimal policies and efficient computational methods. Consideration of deterministic, stochastic, discrete-time, and continuous-time models. Mr. Tang

243C. Scheduling Models for Intermittent Systems. Prerequisite: course 407. Scheduling models and results for single machine, flow shop, job shop, and resource-constrained project networks. Approaches include classical models, recent heuristic approaches, current research in coordinated interaction of computer models, and man/machine interaction.

243X-243Y-243Z. Operations and Technology Management Seminars (1 unit, 1 unit, 2 units). Discussion, 90 minutes to three hours. Prerequisite: doctoral standing. Required of all students in operations and technology management concentration during first two years of their Ph.D. work. Student and faculty presentations of ongoing research. May be repeated for credit. Mr. Buffa

244X-244Y-244Z. Research in Operations and Technology Management (1 unit, 1 unit, 2 units). (Formerly numbered 244.) Prerequisite: doctoral standing. Normally taken in first and second years of doctoral study. Survey of research literature in operations and technology management. Seminar reports dealing with special topics. May be repeated for credit with topic change.

246A. Strategy/Policy Analysis and Formulation in Public and Private Nonprofit Sectors. Prerequisite: completion of management analysis requirement for M.B.A. program. Application of several techniques for strategy/policy analysis and formulation. Specific topics include forecasting/scenario writing, multiple objective decision making, cost analysis, risk/benefit analysis, and social experimentation. Limitations of methodologies examined and concepts illustrated through current applications and case studies.

246B. Budgeting and Resource Allocations in Public Sector. Prerequisites: courses 403 and 408, or consent of instructor. Resource allocation objectives/techniques used in federal, state, and local government. Budget analyzed as a planning device, vehicle for allocational decision making, financial control mechanism, crucible for political choice. Provides some insight into staff functions performed by those responsible for resource allocation.

246C. Management in Public and Private Nonprofit Sectors. Prerequisite: graduate standing. Examination of roles and management systems of the three sectors of U.S. society; unique aspects and managerial issues of public and private nonprofit organizations and of their political, social, and technical environments. Financial, marketing, and operational considerations and evaluation, control, and ethical issues of service delivery systems. Mr. Andrews

247A. Environment of the Art World. Prerequisite: consent of instructor. Consideration and analysis of political, social, economic, and environmental forces in American society as they affect existence and development of arts institutions in the U.S. Exploration of present policies and trends and potential future developments.

247B. Role of Management in Artistic Decision Making. Prerequisite: consent of instructor. Descriptive study of criteria for decision making in artistic institutions, including role of the institution in society, economic environment of the arts, and artistic value systems of arts organizations.

247C. Legal Environment of Arts Management. Prerequisite: consent of instructor. Exploration of way in which law and the arts relate, role of the lawyer vis-à-vis artist and arts manager, policy underpinnings of the law and effect on the arts, and unsolved problems and issues in areas of interaction.

248A. Strategic Management in the Entertainment Industry. Discussion, three hours. Prerequisites: courses 403, 405, 406, 408, and 420, or consent of instructor. Examination of financial and strategic aspects of transactions and company management in the entertainment industry. Cases and topics include organizational behavior and decision making in creative companies; trends in industry structure and competitive economics; accounting issues; institutional and private investment in motion pictures; theatrical distribution, international and ancillary markets (pay TV, videocassettes, syndication).

249A. Special Topics in Public and Private Nonprofit Management. Prerequisite: consent of instructor. Studies of advanced subjects of current interest in public/not-for-profit management. Emphasis on recent developments and application of specialized knowledge to public/not-for-profit problems. Topics vary each term. May be repeated for credit with topic change.

249B. Special Topics in Arts Management. Prerequisite: consent of instructor. Examination of current issues in management of artistic organizations. Relevant combinations of lectures, discussions, case studies, and team research projects.

250A. Labor Relations: Process and Law. Prerequisite: graduate standing. Consideration, at advanced level, of collective bargaining process, labor/management agreement, administration of the contract, law of labor/management relations, union structure and goals, and influence of external labor markets on labor relations. Mr. Fogel, Mr. Jacoby, Mr. Mitchell

250B. Human Resource Management: Process and Law. Prerequisite: course 250A. Systematic exposure to theoretical and empirical literature concerning administrative and legal aspects of human resource management. Topics include processes of managing human resources and impact of governmental policies on employer/employee relations.

Mr. Fogel, Mr. Jacoby

250C. Behavioral Foundations of Human Resource Management. Prerequisite: course 250B or consent of instructor. Topics include development and training; human resource accounting; behavioral foundations of participating management; motivation, productivity, and satisfaction; designing reward systems; and evaluation of organization effectiveness. Emphasis on understanding, predicting, and influencing human behavior in organizations. Mr. Flamholtz, Mr. Massarik

251. Managing Human Resources. Management of people in organizations, intended for managers as well as personnel specialists. Organized at three related but distinct levels of analysis: (1) day-to-day utilization of people as organizational resources to achieve optimal productivity, satisfaction, retention, and development; (2) personnel management function or system that performs specialized human resource functions; and (3) issues facing top management which involve management of human resources, including strategic planning for human resources, union/management relations, and design of corporate culture. Mr. Flamholtz

252. Systems of Employee/Management Participation. Prerequisite: consent of instructor. Designed to provide understanding of systems of employee/management participation around the world (apart from traditional collective bargaining systems). Specific concepts such as worker participation in decision making, industrial democracy, joint consultation, workers' councils, profit sharing. Mr. Kleingartner

253. Employee Discipline, Discharge, and Grievance/Appeal Settlement. Prerequisite: graduate standing. Analysis of conflict in the employment relationship; theoretical and empirical findings. Principles and philosophies that underlie resolution of labor/management impasses, with emphasis on grievance procedures, arbitration, mediation, and fact-finding. Mr. Fogel

255. Comparative Industrial Relations. Prerequisite: course 409 or elementary knowledge of labor economics. At national and international levels, historical and contemporary analytical comparison of industrial relations systems within their political, social, and economic environments. Institutions, philosophies, and ideologies of labor, management, and government, and interaction of their power relationships; substance and manner of determination of "web of rules" governing rights and obligations of the parties; and resolution of conflicts. Mr. Hutchinson

256. Seminar: Human Resource Management and Industrial Relations. Discussion, three hours. Prerequisites: courses 250A, 250B, 250C. Capstone seminar for students interested in human resource management and industrial relations. Visiting lecturers emphasize recent developments in the field; students prepare seminar papers.

257. Labor/Management Relations in Public and Nonprofit Sectors. Prerequisite: graduate standing. Analysis of labor/management relations in government, including public education, and in nonprofit institutions (i.e., artistic, cultural, recreational, and health care). Emphasis on negotiations and group relationships rather than on public personnel administration. Mr. Kleingartner

258. Selected Topics in Industrial Relations (1 to 4 units). Prerequisite: doctoral standing or consent of instructor. Examination in depth of problems or issues of current concern in industrial relations. Emphasis on recent contributions to theory, research, and methodology. Of special interest to advanced Ph.D. candidates, academic staff, or distinguished visiting faculty. May be repeated for credit.

259A. Individuals and Groups in Human Systems. Lecture, three hours. Introduction for doctoral students to classic and current research in human behavior. Exploration of determinants of human behavior, including influence of culture and developmental change, interpersonal dynamics of power and leadership, group formation and change, intergroup relations, and human systems development. Mr. Fogel

259B. Advanced Studies in Human Resource Management. Lecture, three hours. Introduction for doctoral students to leading theories, concepts, and empirical evidence about management of human resources. Main conceptual frameworks grounded in several social sciences and generally presented in certain "classics" included in course reading list.

259C. Labor Markets and Public Policy. (Formerly numbered 254.) Lecture, three hours. Prerequisite: one microeconomics course. Survey of major topics in economic analysis of labor markets and public policy, including labor force trends and measurement, compensation determination, productivity, internal labor markets, human capital, unions, collective bargaining, unemployment, and minority and female labor market experience. Mr. Jacoby, Mr. Mitchell

260A. Advanced Marketing Management. Prerequisite: course 411 or consent of instructor. Decision-oriented course concerned with solution of product, price, promotion, and distribution channel problems. Extensive use of case studies. Ms. Scott

260B. Marketing Strategy and Planning. Lecture, three hours. Prerequisite: course 411 or consent of instructor. Development of a framework for strategic marketing planning. Analysis of a few, yet powerful, conceptual frameworks which have broad application. Within framework of the strategic marketing plan, development of key elements in annual marketing planning process. Mr. Raju

261A. Management in the Distribution Channel. Lecture, three hours. Prerequisite: course 411 or consent of instructor. Examination of decisions in the distribution channel. Issues of power in the distribution channel and trade-offs between alternative channel systems.

261B. International Marketing Management. Lecture, three hours. Prerequisite: course 411 or consent of instructor. Opportunities, distinctive characteristics, and emerging trends in foreign markets, including exploration of alternative methods and strategies; organizational planning and control; impact of social, cultural, economic, and political differences; and problems of adapting American marketing concepts and methods. Mr. Hanssens

262. Price Policies. Lecture, three hours. Prerequisite: course 411 or consent of instructor. Consideration of such concepts as product classification, demand, competition, and costs, as they apply to price making. Theory of price leadership, geographical pricing, price discrimination, price warfare, and leader pricing studied in relation to price-making process. In addition, attention to price policies of individual firms in which these concepts are applicable. Mr. P'ng

263A. Consumer Behavior. Prerequisite: course 411 or consent of instructor. Study of nature and determinants of consumer behavior. Emphasis on influence of sociopsychological factors such as personality, small groups, demographic variables, social class, and culture on formation of consumers' attitudes, consumption, and purchasing behavior. Mr. Kassarian

264A. Marketing Research: Design and Evaluation. Prerequisite: course 411 or consent of instructor. Methods of measuring and predicting forces affecting marketing, including quantitative aspects of demand, consumer reaction to product characteristics, effectiveness of advertising and other promotional devices, influence of rewards and organizational systems on sales efficiency, and effectiveness of competitors' strategies. Mr. Cooper

264B. Advanced Marketing Research. Lecture, three hours. Prerequisite: course 264A or consent of instructor. Advanced topics in marketing research, with emphasis on quantitative tools to aid marketing decision making. Topics include demand and market share forecasting, conjoint analysis, market segmentation and cluster analysis, brand positioning and competitive market structures, and assessing market response to price, advertising, promotion, distribution, and sales force. Mr. Bucklin, Mr. Hanssens

264C. Seminar: Multidimensional Scaling. Prerequisite: consent of instructor. Seminar providing for study of recent developments in metric and nonmetric multidimensional scaling. Mr. Cooper

265A. Marketing and the Law. Lecture, three hours. Prerequisite: course 411 or consent of instructor. Detailed study of legislative enactments (federal, state, or local) which influence operation of institutions engaged in marketing activities, together with analysis of judicial decisions which have interpreted these laws. Mr. Kassarian

265B. Social Issues in Marketing. Lecture, three hours. Prerequisite: course 411 or consent of instructor. Environmental impact of marketing in society; study of theories, methods, and relationships for evaluating transaction behavior in a scientific and humanistic context; macroanalytic perspectives in marketing.

266A. Product Management. Lecture, three hours. Prerequisite: course 411. Development of a framework for identifying and appraising alternative growth strategies of the firm. Product addition, modification, and deletion decisions, and processes by which these decisions can be made in an optimal manner.

266B. Advertising Policy. Lecture, three hours. Prerequisites: courses 263A and 411, or consent of instructor. Study of formulation of advertising policies, involving analysis of cases dealing with role of advertising in marketing, definition of advertising objectives, strategy, appropriation policy, media selection, evaluating advertising results, and organization of advertising function.

268. Selected Topics in Marketing. Lecture, three hours. Prerequisite: course 411 or consent of instructor. Study of selected areas of marketing knowledge and thought. Specific subjects vary each term depending on particular interests of instructor and students. Individual projects and reports. May be repeated for credit.

269A. Theory in Marketing. Prerequisite: consent of instructor. Serves as mechanism to introduce students to development of marketing thought. Issues pertaining to general topic of theory development and testing. Prepares students for conducting theoretically grounded research in marketing.

269B. Research in Marketing Management. Prerequisite: consent of instructor. Intended for Ph.D. students. Study of research issues associated with marketing management decisions. Recent research in areas of strategic marketing, marketing segmentation, new product development and introduction, pricing strategies, channel policy, promotion decisions, and sales force management examined critically. Review of both quantitative and behavioral approaches to studying these issues. Mr. Hanssens, Ms. Scott

269C. Quantitative Research in Marketing. Prerequisite: consent of instructor. Intended for Ph.D. students in management and related fields. Students are assumed to have good background in marketing principles and to be familiar with probability, statistics, mathematical programming, and econometrics. Review of a range of quantitative models as applied in marketing research. Mr. Hanssens

269D. Behavioral Research in Marketing. Prerequisite: consent of instructor. Empirical research in consumer behavior surveyed and critically evaluated from theoretical as well as practical perspectives. Intended for Ph.D. students who will be conducting research in consumer behavior or related areas. Mr. Kassarian, Ms. Scott

269E. Special Research Topics in Marketing. Prerequisite: doctoral standing. Advanced selected topics in marketing, with emphasis on thorough examination of one or two topics in current research and theory. May be repeated for credit.

269X-269Y-269Z. Workshops: Marketing (1 unit, 1 unit, 2 units). Prerequisite: doctoral standing. Required of all students during first two years of their Ph.D. work. Series consists of a number of leading scholars in marketing and related disciplines who make presentations to marketing faculty and Ph.D. students. Active participation and intellectual interchange, which helps students gain a richer perspective on the field of marketing. In Progress grading.

270A. Information Systems Applications. Prerequisite: course 404. Basic concepts and uses of information systems in organizations. Use of information technology in support of individual and organizational information processing. Description of types of applications (e.g., functional, strategic). Evaluation of systems. Analysis of their impacts. Mr. Swanson

270B. Information Systems for Planning and Control. Prerequisites: courses 403 and 404, or consent of instructor. Design of systems to support management planning and control. Approaches and techniques employed at strategic, managerial, and operational levels. Special consideration of accounting and budgeting methods. Impact of planning and control information on human behavior.

Mr. McDonough, Mr. Silver, Mr. Swanson

270C. Measurement in Information Systems. Prerequisite: course 404. Role of measurement in management information and decision support systems. Logic and technique of measurement. Applications in individual, organizational, and societal performance. Mr. Swanson

270D. Simulation for Management. Discussion, three hours. Prerequisites: knowledge of computer programming and basic statistics, consent of instructor. Design, implementation, and use of discrete-event simulation models using a general purpose simulation language (e.g., SIMSCRIPT). Emphasis on managerial use of simulation and presentation of results (e.g., statistical analysis, graphics, animation). Extensive programming assignments.

270E. Expert Systems for Management. Prerequisite: second-year M.B.A. or doctoral standing or consent of instructor. Examination of expert systems for management, including rule and frame-based systems, certain and uncertain inference, expert system feasibility and development, available commercial systems, and current applications. Project that develops an expert system required. Mr. Sprowls

271A. Information Systems Technology. Discussion, three hours. Prerequisite: course 404. Survey of computer hardware, software, telecommunications, and data base technology. Specification and configuration of computer-based systems for management applications. Methods for costing system hardware and software and for assessing computer performance. Trade-off analysis of comparative computer configurations. Mr. Frand, Mr. Lientz

271B. On-Line and Network-Based Systems. Prerequisites: courses 271A and 272A, or consent of instructor. Distributed processing. Networked mini-computer systems. Data communication technology. Data security in computer networks. Cost/benefit analysis for design, configuration, and implementation of on-line and computer networks. Applications to computer utilities; command and control systems; and commercial, medical, and government networks. Mr. Lientz

271C. Data Base Management Systems. Discussion, three hours. Prerequisites: courses 271A and 272A, or consent of instructor. Features and capabilities of generalized data base management systems, including system classification, comparison of software features, and evaluation of specific systems. Emphasis on management uses of such systems. Field study project may be required.

Mr. Silver, Mr. Sprowls

272A. Information Systems Development. Discussion, three hours. Prerequisite: course 404. Concepts and methodologies of systems analysis to determine user requirements. Overview of data base management systems, with emphasis on the relational model. Project required, using a microcomputer-based CASE tool and relational dbms.

Mr. Frand, Mr. Sprowls

273A. Information Systems Management. Discussion, three hours. Prerequisite: course 404. Managing information systems within organizations. Role of chief information officer. Frameworks for understanding information systems function. Issues of planning, project management, computer operations, security, end-user computing, distributed and departmental computing, managing information systems professionals, costing of services, organizational structures.

274A. Special Topics in Information Systems. Prerequisite: consent of instructor. Examination in depth of issues or problems concerned with theory and practice of computing and management and use of information systems. Course may have a single theme or may deal with a number of topics. May be repeated for credit.

274B. Frontiers in Information Systems. Prerequisite: doctoral standing or consent of instructor. Examination in depth of problems or issues of current concern in information systems. Emphasis on recent contributions to theory, research, and methodology. May be repeated for credit. Mr. Greenberger

274X-274Y-274Z. Current Research in Information Systems (1 unit, 1 unit, 2 units). Discussion, two hours. Prerequisite: doctoral standing. Year-long sequence associated with Information Systems Colloquium Series. Regularly scheduled presentations of current research and state-of-the-art developments in information systems field. Study and discussion of research presented. May be repeated for credit. S/U grading. Mr. Swanson

275. Urban Land and Real Estate Markets. (Formerly numbered 275B.) Lecture, three hours. Prerequisite: course 405 or consent of instructor. Development and use of economic and management principles and methods to analyze and project urban land uses and land values; study of demand for and supply of industrial, commercial, retail, recreational, and residential space in context of urban development, real estate decision making, and the regulatory environment. Mr. Mittelbach

276A. Theory of Urban Property Valuation. Discussion, three hours. Prerequisite: course 408 or equivalent. Use of systems approach to prepare feasibility and valuation studies which systematically analyze factors which create value in private or public property developments. Analysis of particular social, economic, political, and physical forces which can influence property values. Students encouraged to use computer-based analysis. Mr. Mittelbach

276B. Comparative and International Urban Land Studies. Discussion, three hours. Analysis of private and public decisions shaping urban growth and change in developed and developing nations. Emphasis on economic, social, and institutional forces influencing urban structure, land-use patterns, growth of jobs, and distribution of jobs and people in the built environment. Not offered every year. Mr. Mittelbach

277A. Housing Market Systems. Discussion, three hours. Prerequisite: consent of instructor. Concepts, models, and methods to study and forecast local, regional, and national housing markets; consumer and investor behavior; residential land development and building; primary and secondary residential mortgage markets; private and public forces influencing housing costs and prices. Mr. Mittelbach

277B. Housing Policy. Discussion, three hours. Prerequisite: consent of instructor. Alternate housing strategies, policies, and programs; housing for low and moderate income groups; urban renewal; community services to improve housing environment; stimulating innovation and efficiency in production, distribution, and delivery of residential capital and housing services; roles of private enterprise. Mr. Mittelbach

278A. Urban Real Estate Financing and Investing. Discussion, three hours. Prerequisite: consent of instructor. Investor-oriented course in which real estate and business trends are evaluated to determine alternative real estate investment opportunities. Use of current financial, economic, and investment theories and techniques to real estate investment opportunities in case studies and short case problems to illustrate development of investment strategies. Mr. Mittelbach

278B. Sources, Uses, and Flows of Real Estate Capital. Discussion, three hours. Analysis of money, capital, and mortgage markets to determine potential availability and costs of mortgage money from alternative sources. Evaluation of various sources of funds to determine factors influencing decisions to make mortgage loans. Examination of all types of lending instruments, particularly mortgage instruments, and mortgage-based securities for their impacts on real estate investment decisions. Mr. Mittelbach

279A. Special Studies in Urban Land Economics. Limited to master's or Ph.D. candidates working on thesis- or dissertation-related research. May be repeated for credit.

279B. Selected Topics in Urban Land Economics. Discussion, laboratory, and fieldwork. Prerequisite: second-year graduate standing or consent of instructor. Designed for students who wish to pursue a particular topic in housing, real estate, or urban land economics in depth on individual or cooperative basis. All work is computer-based; however, students are provided introduction to use of computers (preferably PCs) in various kinds of real estate analysis. May be repeated for credit.

279X-279Y-279Z. Urban Research and Development (2 to 4 units each). Prerequisite: graduate standing or consent of instructor. Exploration of urban and its problems; prospects and prescriptions for delivery of a quality life. Macroscopic and microscopic exploration as related to problems of a selected urban area.

280A. Important Studies in Human Systems. Prerequisite: doctoral standing or consent of instructor. Survey of seminal studies of human systems. Summarization and critique of literature focal to evolution and current status of the field. Review of such topics as personality, motivation, group and intergroup behavior, systems theory, and organizational design and development. Mr. Massarik

280B. Survey of Research Philosophies and Methods. Prerequisite: doctoral standing or consent of instructor. Broad introduction to objectivist and subjectivist philosophies of science, and psychology and sociology of science. Critique of laboratory and field experiments; field studies, analytical and descriptive methods; interview, participant observation, questionnaire, and unobtrusive methods of data collection.

280C. Personal and Professional Development. Prerequisite: doctoral standing or consent of instructor. Provides setting where students may explore their own professional values in process of testing and learning values and standards important in human systems Ph.D. program and held by the broader community of system researchers and interveners. Mr. Culbert

280D. Research Design for Human Systems Studies. Prerequisite: course 280A or 280C or consent of instructor. Temporal and logical sequences in process of designing studies of human systems, including optimizing the fit of research topic, observation, and data collection methods and data analysis techniques. Actively involves students in preparation of research proposals.

280F. Human Systems Research Seminar. Prerequisite: course 280D or consent of instructor. Exploration of various research methods and problems encountered in applying them. Students are actively involved in seminar reports and in class critique of course members' dissertation research designs. May be repeated for credit.

281A. Sociotechnical Systems. Prerequisite: graduate standing. Introduction to systems concepts and view of work organizations as interacting social and technical systems open to forces from the surrounding environment. Focus on developing sociotechnical systems analytic approach and understanding advantages of this approach for designing and managing organizations. Mr. Davis

281B. People in Organizations. Prerequisite: graduate standing. Introduction to different philosophical perspectives for understanding human behavior. Theories and concepts important for understanding human behavior in organizations, as well as managerial implications of individual, group, and social behavior. Special attention to knowledge about satisfaction motivation and productivity in organizations.

282. Task Group Processes. Prerequisite: course 281A or 281B or consent of instructor. Structures, processes, and interrelations of work groups in sociotechnical systems. Emphasis on understanding how group activities interrelate with physical/technical environment. Imparts practical knowledge of task group functioning through class exercises and field observations. Mr. Culbert

284A. Organization Design. Prerequisite: course 281A or consent of instructor. Survey of organizational design theories and methods, including bureaucratic, participative, and cognitive models. Development of specific methods ranging from microdesign of jobs to macrodesign of total organizational structures. Special emphasis on sociotechnical and differentiation/integration models. Mr. Davis

284B. Organization Development. Prerequisite: course 281B or consent of instructor. Effects of managerial practices on individual self-fulfillment and organizational effectiveness. Theories of organization change and action/research methods of organization development practitioners. Theory merged with practice through seminar discussions of field observations.

285A. Leadership, Motivation, and Power. Prerequisite: course 281B or consent of instructor. Theoretical and practical approaches to influencing and motivating people. Relative effectiveness of various leadership styles, different motivation theories, and power tactics from managerial point of view. Use of experience-based learning methods to aid diagnosis and understanding of one's own influence styles. Mr. Culbert

285B. Managerial Interpersonal Communication. Prerequisite: course 281B or consent of instructor. Organizational, interpersonal, and personality factors affecting managerial communications. Styles and modes of communication in one-to-one, group, and indirect communication settings. Opportunities offered to deepen understanding of one's own communication styles and skills. Mr. McDonough

287. Sensitivity Training Groups and Their Facilitation. Prerequisite: consent of instructor through prior application to department. Development of cognitive and experiential understanding of dynamics of sensitivity training groups and their facilitation. Relevant theory, research findings, and case studies; translation of these inputs into practice.

288B. Selected Topics in Behavioral Science. Prerequisite: doctoral standing or consent of instructor. Philosophies and theories of human behavior fundamental to study of individual, group, organizational, and cultural behavior. Exploration in depth of selected theoretic positions, extending and consolidating behavioral science knowledge and applications. May be repeated for credit. Mr. Tannenbaum

288C. Current Issues in Sociotechnical Systems and Organization Design. Prerequisite: doctoral standing or consent of instructor. Current topics in analysis and design of organizations as sociotechnical systems engaged with various technologies and environments, emphasizing design approaches emanating primarily from Europe and the U.S. In-depth comparisons of selected job and organizational design approaches. May be repeated for credit.

288D. Current Issues in Human Systems Change and Development through Consulting. Prerequisite: doctoral standing or consent of instructor. Current topics in philosophy, art, and technology of improving organizations and increasing managerial effectiveness through consulting interventions. In-depth treatment of consultant entry and leaving, diagnosing, process consultation, consciousness raising, team building, values, etc., depending on student and faculty preferences. May be repeated for credit.

288F. Selected Topics in Organizational Behavior. Prerequisite: doctoral standing or consent of instructor. Psychological and social psychological aspects of human behavior and performance in organizations. Theoretical models, empirical findings, and applications of such topics as attitudes and values, cognitive and perceptual processes, behavioral conflict, and individual change processes. May be repeated for credit.

288G. Current Issues in Human Systems Studies. Prerequisite: doctoral standing or consent of instructor. In-depth study of theory and research pertaining to a particular subject matter or such topics as cross-cultural, organization change, action, and multivariate research, depending on student and faculty interest. May be repeated for credit.

288X-288Y-288Z. Behavioral and Organizational Sciences Workshops (1 unit, 1 unit, 2 units). Discussion, two hours. Prerequisite: doctoral standing. Designed to expose Ph.D. students to research within the field while at same time requiring that each Ph.D. student develop a critical framework for evaluating and integrating recent research. May be repeated for credit. S/U grading. Mr. Massarik

290. Organization Theory. Prerequisite: course 423 or consent of instructor. Analysis of theory and practice of managerial function of organizing through study of the literature, case analyses, and seminar discussion. Individual projects and reports. Mr. McKelvey

291. Planning and Control. Prerequisite: course 423 or consent of instructor. Analysis of theory and practice of managerial function of planning and control. Implementation of objectives through policy formulation, decision making, and control. Individual projects and reports.

292A. Research and Development Policy. Examination of research and development as a process and as an element of a goal-oriented organization. Factors affecting invention and innovation; transfer of technology; organizational and behavioral considerations; coupling of science, technology, and organizational goals; assessing of forecasting technological futures. Mr. Goodman

292B. Models of Organization Behavior. Prerequisite: consent of instructor. Theoretical frameworks for developing explanatory and predictive models of complex organizations. Exercises in constructing formal models, usually in mathematical or stochastic form and, where appropriate, using materials from field studies to develop empirical tests. These models may be used to discover implications for systems changes recommended in sociotechnical field study.

292C. Comprehensive Planning in Public Sector. Prerequisite: consent of instructor. Evolving modes of planning under complexity, with particular emphasis on public sector. Development of policy through standard setting, bargaining, and regulating governing relationships; reality and value judgments; social and technical dimensions of alternatives; and social and technological forecasting.

293A. Political Environment of American Business. (Formerly numbered 293.) Lecture, three hours. Prerequisite: consent of instructor. Evaluation of certain criticisms made by business of the American political system. Designed to provide clearer understanding of principal features of American politics, especially as they influence business enterprise. Mr. Wilson

M293B. Morality of Capitalism. (Formerly numbered 293B.) (Same as Political Science M211.) Lecture, three hours. Prerequisite: consent of instructor. Examination of major philosophical writings that defend or criticize capitalism on basis of principles of right conduct and just social arrangements (i.e., on moral grounds). Mr. Wilson

293C. Ethical Considerations in Business. (Formerly numbered 298D.) Lecture, three hours. Prerequisite: consent of instructor. Examination of a range of ethical considerations in business decisions involving the individual, corporation, society, and international business. Analysis of cases for classroom presentation and discussion. Mr. Cockrum

294A. Strategy Formulation and Implementation. Prerequisite: consent of instructor. Case course dealing with strategy decisions and their implementation, executive action, and administrative behavior involved in managing total enterprises. Students are confronted with complex company situations to develop ideas essential to overall managerial direction.

294B. Environmental Impacts on Management. Prerequisite: consent of instructor. Examination of ways in which business, government, labor, and consumer organizational managers might respond to external environmental problems. Methods studied for developing and evaluating alternative managerial solutions which permit organizations to assist in improving current and future environmental quality.

295A. Entrepreneurship and Venture Initiation. Prerequisite: consent of instructor. Exploration in entrepreneurship particularly concerned with formation and operation of new business ventures. Significant and crucial aspects of exploring new business opportunities and starting a business. Mr. Schöllhammer

295B. Small Business Management. Prerequisite: consent of instructor. Exploration of crucial aspects in managing small business enterprises. Emphasis on identification and analysis of characteristic operating problems of small firms and application of appropriate methods or techniques for their solution. Mr. Schöllhammer

295C. Corporate Entrepreneurship. Prerequisite: consent of instructor. Inquiry into nature of entrepreneurship and effective implementation of entrepreneurial strategies in large industrial enterprises. Emphasis primarily on managerial effects aimed at identification, development, and exploitation of technical and organizational innovations, management of new product or process developments, and effective new venture management in a corporate context. Mr. Schöllhammer

296A. International Business Management. Discussion, three hours. Prerequisite: course 205A or consent of instructor. Identification, analysis, and resolution of managerial issues of policy and action within context of a multinational corporation, with emphasis on problems of adaptation to different sociological, cultural, legal, political, and economic environmental characteristics on planning, structuring of organizational relationships, coordination and control in multinational firms. Mr. de la Torre, Mr. Schöllhammer

296B. International Comparative Management Research. Prerequisite: doctoral standing or consent of instructor. In-depth study of theory and research pertaining to international business and comparative management. Emphasis on recent research developments and methodological issues. Imparts knowledge on design and conduct of international comparative management research.

297A. Comparative and International Management. Prerequisite: course 412 or consent of instructor. Comparative study of practice of management in selected foreign countries, as affected by their social environments and development of management theory.

297B. International Business Policy. Prerequisites: course 205A, consent of instructor. Analysis of key managerial problems encountered in a multinational corporation. Concepts and theories acquired in other courses in international business and comparative management, applied to a series of complex cases and simulations of international business operation. Mr. de la Torre

297C. International Business Law. Prerequisites: courses 205A, 296A. Legal environments in which international business operates; overseas business relationships and organizations; antitrust, taxation, transfer of capital, and technology regulations; patent, trademark, and copyright safeguards; arbitration of international business disputes; expropriation of foreign investments; international business and government relations.

297D. International Business Negotiations. Prerequisite: course 296A. Exploration of international business negotiations of multinational enterprises with governmental agencies and foreign-based firms on a wide range of issues, such as establishment/dissolution of joint ventures, extent of foreign ownership/management control, terms/conditions for technology transfer, investment incentives. Mr. de la Torre

298A. Special Topics in Management Theory. Prerequisite: doctoral standing or consent of instructor. Examination in depth of problems or issues of current concern in management theory. Emphasis on recent contributions to theory, research, and methodology. Of special interest to advanced Ph.D. candidates, academic staff, or distinguished visiting faculty. May be repeated for credit.

298B. Special Topics in International and Comparative Management. Prerequisite: doctoral standing or consent of instructor. Examination in depth of problems or issues of current concern in international and comparative management. Emphasis on recent contributions to theory, research, and methodology. Of special interest to advanced Ph.D. candidates, academic staff, or distinguished visiting faculty. May be repeated for credit.

298C. Special Topics in Sociotechnical Systems. Prerequisite: doctoral standing or consent of instructor. Examination in depth of problems or issues of current concern in sociotechnical systems. Emphasis on recent contributions to theory, research, and methodology. Of special interest to advanced Ph.D. candidates, academic staff, or distinguished visiting faculty. May be repeated for credit.

298D. Special Topics in Management (1 to 4 units). Prerequisite: doctoral standing or consent of instructor. Examination in depth of problems or issues of current concern in management. Emphasis on recent contributions to theory, research, and methodology. Of special interest to advanced Ph.D. candidates, academic staff, or distinguished visiting faculty. May be repeated for credit.

298X-298Y-298Z. Management Strategy and Policy Workshops (1 unit, 1 unit, 2 units). Discussion, three hours. Prerequisite: doctoral standing. Designed to develop ability to critically evaluate research in fields relevant to study of management strategy and policy. Papers presented in colloquium format by leading scholars in management strategy and policy. Active participation and intellectual interchange encouraged through discussion of papers in sessions prior to workshop, as well as during colloquium. May be repeated for credit. S/U grading. Mr. Goodman

299M. Ph.D. Seminar: Research Methodology. Discussion, three hours. Prerequisite: doctoral standing. Methodological issues in management research. Emphasis on identification of research opportunities and formulation and evaluation of a research proposal. Alternative goals, settings, and designs. Hypothesis development and testing. Measurement. Implementation considerations.

299R. Research Methods in Management. Prerequisite: doctoral standing. Provides feedback and evaluation of papers prepared for research requirement. Quarterly meetings to discuss expectations of research committee and Doctoral Office. Students must enroll the term in which they are submitting their research paper. May be repeated for credit. S/U grading.

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

The following courses are acceptable toward the M.B.A., M.S., and Ph.D. degrees within the limitations and conditions prescribed by the curricula of the John E. Anderson Graduate School of Management.

400. Mathematics for Management. Prerequisite: graduate standing. Fundamental mathematics for business, including topics from matrix algebra, probability, and calculus, with applications to model building and decision making in business firms. S/U grading.

401. Managerial Economics. Prerequisite: graduate standing. Introduction to measurement and determination of economic activity in the aggregate and to role of prices in decision making of the organization. National income accounting, basic economic policy, markets and prices, competition and monopoly, applications.

402. Data Analysis, Statistics, and Decision Making. Prerequisite: graduate standing. In-depth introduction to probability, decision theory, and statistical inference, with emphasis on solution to actual business problems. Mr. Mamer

403. Financial Accounting. Lecture, three hours. Prerequisite: graduate standing. Introduction to fundamental financial accounting methods and procedures, with emphasis on financial statements. Provides basis for firm understanding of "the language of business" — accounting. Mr. Buckley, Ms. Ely

404. Information Systems. Prerequisite: graduate standing. Introduction to information systems in organizations from perspective of general manager. Managerial and strategic uses of information systems, information technology that underlies these systems, and ways such systems are developed and managed. Mr. Silver, Mr. Swanson

405. Managerial Economics. Analysis of decision making in the firm, competitive policies and market structure, revenue and cost behavior.

Mr. Bikhchandani, Mr. Osborne, Mr. P'ng

406. Macroeconomics and Forecasting. Prerequisite: graduate standing. Sales, costs, and profit forecasting. General business forecasting and cyclical mechanisms. Mr. Kimbell

407. Managerial Model Building. Prerequisite: course 400 or 402 or equivalent. Survey of uses of formal modeling approaches in managerial decision making. Emphasis on model types and formulations, and use of solutions obtained from computer routines. Application areas include finance, marketing, production, and public systems.

408. Managerial Finance. Analysis of main decision areas of managerial financial management, aimed at principles generally applicable to all types of organizations. Emphasis on financial planning and control, sources of funds, developing objectives and standards which lead to effective allocation and use of organization's resources. Mr. Hofflander

409. Human Resource Management and Industrial Relations. Prerequisite: graduate standing. Designed for prospective general managers who want to learn about critical issues and strategic questions involved in managing human resources. Emphasis on four key policy areas that define human resource management: employee influence, human resource flows, rewards systems, and work systems.

410. Operations and Technology Management. Lecture, three hours. Prerequisites: courses 402, 403, 405, 408, 411. Principles and decision analysis related to effective utilization of factors of production in manufacturing and nonmanufacturing activities for both intermittent and continuous systems. Production organizations, analytical models and methods, facilities design, and design of control systems for production operations. Mr. Buffa, Mr. Shirley, Mr. Yost

411. Elements of Marketing. Principles of market-driven managerial decision making: definition of target markets, assessment of consumer needs, demand forecasting, market segmentation, and customer behavior. Management of marketing function: product and pricing decisions, channels of distribution, sales force, and advertising.

Mr. Goodstein, Ms. Heisley

412. Management of Organizations. Prerequisite: graduate standing. Integrative approach to theory and practice of management in complex organizations, emphasizing managerial roles in designing organizational structures, creating/maintaining planning, control, information, incentive systems, different patterns of human interaction such structures and systems tend to produce. Mr. McKelvey, Mr. Ouchi

413A. Programming for Management Applications. Lecture, three hours. Prerequisite: graduate standing. Building management application systems. Programming in a high-level procedural language. Software specification, design, coding, testing, implementation, and maintenance. Extensive programming assignments.

413B. System Building with Advanced Tools. Prerequisite: graduate standing. Building management application systems with advanced software tools. Very high-level languages. Report writers. Query and graphics languages. Application generators. Extensive hands-on assignments.

414. Managerial Problem Solving: Individual. Prerequisite: graduate standing. Study and practice of individual decision making and problem solving, including impacts of personality, motivation, interpersonal communication, and various decision-making techniques. Relationships among the individual, managerial roles, and complex organizations as they influence the managerial process.

420. Management Policy. Prerequisite: course 412. Evaluation and formulation of organization's overall policies and strategies. Economic, heuristic, and social process approaches to policy formulation, environmental analysis, and organizational appraisal. Senior manager's role in managing the policy process. Mr. Postrel, Mr. Rumelt

421A. Management Communications I (1 unit). Lecture, 30 minutes; laboratory, one hour. Strategies and techniques for more effective individually written managerial communications such as memos, reports, decision recommendations, etc. Emphasis on analytically based persuasive writing. S/U grading. Ms. Forman

421B. Management Communications II (1 unit). Lecture, 30 minutes; laboratory, one hour. Strategies and techniques for more effective preparation of group writing assignments in managerial contexts where multiple audiences are important. Issues include achieving a single voice, establishing appropriate tone, incorporation of multiple points of view, etc. S/U grading. Ms. Forman

422. Analysis and Communications. Discussion, three hours. Prerequisite: graduate standing. Study and practice of oral and written management communications, including audience analysis, persuasion, revising and editing, presentation of technical information, and uses of computer technology. Organized around writing and speaking exercises. Personal attention to students' written communications and oral presentations. Ms. Forman

423. Advanced Management Theory. Advanced study of management theory in formally organized enterprise through significant readings; discussion of advanced approaches and techniques developed from applying theory; use of theory to integrate methods and findings of quantitative and behavioral sciences; lectures on sophisticated application of management theory in practice.

441. Managerial Problem Solving: Complex Systems. Prerequisite: course 414. Study of organizational and interorganizational problem solving, including identification, formulation, data collection, forecasting, assumption testing, solution methods, implementation, evaluation, control, and dealing with conflict and ambiguity. Organization of projects in which problem solving is experienced at various levels of complexity.

444A-444B. Management Field Study. Must be taken in two consecutive terms in second year (or its equivalent) for part-time students. Supervised study of an organization, including establishment of client consultant relationship, identification of problem or strategic question, design of study, collection and analysis of data, development and reporting of implementable recommendations. In Progress grading.

450. Fieldwork in Behavioral Science Management Development (4 or 8 units). Prerequisites: course 287, consent of instructor. Supervised practical fieldwork in all phases of laboratory education for management development, such as sensitivity training laboratories, creativity and personal growth laboratories, simulated managerial behavior laboratories, etc.

451. Fieldwork in Organizational Development (2 to 12 units). Prerequisite: course 284B or 450 or consent of instructor. Supervised practical fieldwork in organizational development consultation in interpersonal, group, intergroup, total organization, and interorganizational settings.

452. Fieldwork in Technical Assistance for Minority Business Enterprise (1 to 4 units). Prerequisite: completion of first year of master's program or consent of instructor. Supervised field experience in business consulting and other forms of technical assistance for business firms and management in ethnic communities; seminars and other shared learning experiences in transmitting business administration technology to the urban ghetto.

453. Fieldwork in Arts Management (4 to 12 units). Prerequisite: consent of instructor. Supervised field experience and practical work in all phases of an arts organization (pictorial, performing, or community), concentrating on its managerial problems and its relationship to the community and society in general.

454. Fieldwork in Organizations. Prerequisites: completion of two terms of M.B.A. program, consent of supervising faculty and director of M.B.A. program. Supervised, nonpaid practical experience or fieldwork in an organization as an intern or fellow. Execution of predetermined assignment(s) pursuant to a defined program of study which may include formal classwork. May not be repeated for credit.

495. Preparation for Teaching Business and Management. Prerequisites: graduate standing, consent of instructor. Study of problems and methods in teaching management. Seminars, workshops, and practice teaching. May not be applied toward M.B.A., M.S., or Ph.D. degree requirements. S/U grading.

The following individual study or research courses (501 through 599) may be used, within limitations and conditions prescribed by the school, to satisfy minimum higher degree requirements.

501. Cooperative Program (2 to 8 units). Prerequisite: consent of UCLA AGSM graduate adviser and assistant dean, and host campus instructor, department chair, and graduate dean. Used to record enrollment of UCLA students in courses taken under cooperative arrangements with USC. S/U grading.

596A-596N. Research in Management (1 to 8 units each). Prerequisite: consent of director of master's program or director of Ph.D. program by special petition. Directed individual study or research. May be repeated.

597. Preparation for Qualifying Examinations (4 or 12 units). Prerequisite: consent of director of master's program or director of Ph.D. program by special petition. Preparation for master's comprehensive examination or Ph.D. qualifying examinations.

598. Thesis Research in Management (4 or 12 units). Prerequisite: consent of director of master's program by special petition. Research for and preparation of master's thesis. May be repeated. S/U grading.

599. Ph.D. Dissertation Research in Management (4 or 12 units). Prerequisite: consent of director of Ph.D. program by special petition. Research for and preparation of Ph.D. dissertation.

Executive M.B.A. Program

Admission to the Executive M.B.A. Program is prerequisite for enrollment in the following courses:

461. Managerial Problem Solving (2 units). Focus on individual problem-solving and decision-making skills. Alternative conceptual frameworks presented for augmenting individual's diagnostic and decision-making skills. Use of readings, cases, decision simulations, and discussions to explore areas of charting job and career progress, working with others, and shaping the work culture. Mr. Ouchi

462. Economic Analysis for Managers. Policy-oriented problems in antitrust, tax securities, and environmental regulation. Concepts of microeconomic theory illustrated. Topics include traditional antitrust regulations, new trends in antitrust, private versus government antitrust, securities regulation, environmental regulations, and a business firm's optimal response to regulation.

463. Data Analysis and Management Decisions under Uncertainty. Survey of statistical model building, with emphasis on managerial interpretation of statistical summary of data. Classical statistics covered through multiple regression to support courses in finance and marketing that follow. Fundamental approaches to decision making under uncertainty.

464. Managerial Accounting. Familiarizes the manager with functions of accounting by focusing on use of external financial reports for evaluating corporate performance and use of accounting information for internal planning and control. Mr. Buckley

465. Quantitative Methods for Managers. Survey of modeling approaches to managerial planning and decisions. Emphasis on ability to recognize situations where models can be used advantageously, to work effectively with model building specialists, and to make good use of models once they have been developed.

466A-466B. Financial Policy for Managers (4 units, 2 units). Modern financial management deals with decision making under uncertainty for corporate financial management, for portfolio investment decisions, for financial institutions, and for international financial management. Focus on learning sound theoretical tools and applying them in casework.

467. Management Issues in Information Systems (2 units). Growing role of information systems in the corporation and how they change ways of doing business. Examples from airlines, health, computer, communications, distribution, and publishing industries. Strategic, organizational, and societal implications.

468. Economic Forecasting (2 units). Macroeconomic theory and its application to business forecasting. Major economic indicators and their historical description of the U.S. economy; theoretical tools that business economists use to analyze impacts of monetary and fiscal policy; macroeconomic techniques applicable to business decisions. Mr. Kimbell

469. Management of Human Resources. Introduction to major areas of human resource management — personnel management, labor economics, labor law, and labor relations — accomplished by examining some major concepts, theories, and research related to each of these topic areas, as well as some practical problems for managers posed by each.

Mr. Flamholtz

470A. Introduction to Action Research and Policy Analysis (2 units). Provides methods of organizational and strategic analysis to determine relationship of the organization with its environment.

Mr. Goodman

470B. Strategic Overview (2 units). Preparation of a strategic overview of a selected international company entailing collection and analysis of primary and secondary data, including (but not limited to) interviews of corporate executives, corporate financial and marketing data, industry reports, and customer and competitor interviews and/or surveys.

Mr. Goodman

470C. Action Research Project (2 units). Further research and analysis of one of the strategic issues facing the selected company and identified in the strategic overview (course 470B).

Mr. Goodman

470D. Seminar: Policy Analysis (2 units). Site visit to selected company, presentation of final reports, and evaluation of student efforts by corporate personnel.

Mr. Goodman

472. Marketing Strategy and Policy. Strategic marketing decisions, including development of marketing objectives and strategies and implementation of these strategies through pricing, channel, promotion, and new product decisions.

Ms. Scott

473. Managerial and Organizational Processes. Development of an understanding of workings of large, complex organizations, with emphasis on macroanalytic, rather than on microanalytic, approach.

Mr. Ouchi

474. Operations and Technology Management: Systems, Strategies, and Policies. Lecture, three hours. Analysis of strategic and operating policies and decisions for systems that produce goods and services. Examination of role of comprehensive planning, inventories, scheduling of resources, distribution systems, and system location. Comprehensive operating problems.

Mr. Buffa, Mr. Yost

475. International Managerial Policies and Strategies. Study of economic and business decisions in an international context, with emphasis on formulation and implementation of management strategies in multinational enterprises. Application of concepts of international economic analysis and exploration of international corporate strategies.

Mr. de la Torre, Mr. Schöllhammer

476. Competitive Strategy and Business Policy. Study of general management task of forging a corporate competitive strategy. Emphasis on economics of business rivalry within a variety of industrial settings and implications of changing environments on business strategy.

Mr. Rumelt

477. The Manager and Business/Society Relationships. While organizations may, to some extent, choose their immediate environments, there are broad environmental factors and trends that affect most, if not all, organizations. Examination of emerging trends in key areas of government regulation, labor relations, international trade, basic economic structure, and social responsibility.

Mr. Wilson

478. Selected Topics in Management (2 units). Examination of selected problems and issues in an area of current concern in management.

Mr. Schöllhammer

School of Social Welfare

Rosina M. Becerra, Dean

14

The UCLA School of Social Welfare is one of the nation's great professional schools of social work. Its mission is to contribute to the understanding of the social, economic, and political forces which are shaping our individual and communal lives and to use that knowledge to help in developing appropriate social policy and social work practice responses — whether under public, voluntary, occupational, or proprietary auspices.

Social workers are employed as planners, policy analysts, administrators, and direct service providers in all of the human services, including health, family and child welfare, mental health, services to the aged, manpower development and training, etc. Social workers are concerned with the causes, treatment, and prevention of personal and social ills and with the broader trends in the society which impact on the well-being of individuals, families, and communities. The school's objective is to prepare its graduates not only for practice as it is but for imaginative leadership in creating the social work practice of the future.

School of Social Welfare

247 Dodd Hall, (310) 825-2892

Professors

Rosina M. Becerra, Ph.D., *Dean*
 Jeanne M. Giovannoni, Ph.D.
 Yehekel Hasenfeld, Ph.D.
 Doris S. Jacobson, Ph.D.
 Harry H.L. Kitano, Ph.D. (*UCLA Alumni and Friends
 of Japanese Ancestry Professor of Japanese
 American Studies*)
 Jack Rothman, Ph.D.
 Leonard Schneiderman, Ph.D.
 Fernando M. Torres-Gil, Ph.D.
 Jerome Cohen, Ph.D., *Emeritus*
 Nathan E. Cohen, Ph.D., *Emeritus*
 Maurice F. Connery, D.S.W., *Emeritus*
 Alfred H. Katz, D.S.W., *Emeritus*
 Elliot T. Studt, D.S.W., *Emeritus*
 Harry Wasserman, D.S.W., *Emeritus*

Associate Professors

A.E. Benjamin, Ph.D.
 Diane de Anda, Ph.D.
 James E. Lubben, D.S.W.
 Ruth E. Zambrana, Ph.D.
 Alex J. Norman, D.S.W., *Emeritus*

Assistant Professors

Karin A. Elliott Brown, Ph.D.
 Bonnie Burman, Ph.D.
 Rachelle A. Dorfman, Ph.D.
 Alfreda P. Iglehart, Ph.D.
 Ailee Moon, Ph.D.
 Judith Rosenthal, D.S.W.

Academic Coordinators

Terrence J. Roberts, Ph.D., *Assistant Dean, Student
 Services*
 Gloria Waldinger, D.S.W., *Director, Postgraduate
 Education*

Fieldwork Consultants

Wanda S. Ballenger, M.S.W.
 Jane E. Kurohara, M.S.W.
 Mitchell T. Maki, M.S.W.
 Joseph A. Nunn, Ph.D., *Director*
 Joy Sigmund Rubin, M.S.W.
 Katherine M. Kolodziejski, Ph.D., *Emerita*
 Winifred E. Smith, M.S.W., *Emerita*

Degrees Offered

Master of Social Welfare (M.S.W.)
 Doctor of Philosophy (Ph.D.) in
 Social Welfare
 Doctor of Social Welfare (D.S.W.)*

The UCLA School of Social Welfare offers an M.S.W. program in Social Welfare and a doctoral program of study leading to the Ph.D. The pro-

grams are designed to prepare candidates who wish to train for careers in teaching, research, administration, and high-level practice positions. Courses are scheduled in the School of Social Welfare and in schools and departments of related disciplines and professions.

Master of Social Welfare

Admission

In addition to University minimum graduate admission requirements, the master's program of the School of Social Welfare requires a minimum of five courses in social sciences or a combination of social science and social welfare subjects as prerequisite undergraduate preparation for graduate study in the field of social work. Completion of courses in psychology and sociology is expected, but an elementary statistics course with a grade of B or better is required.

A grade-point average of 3.0 or better is required in all courses taken during the junior and senior years. However, applicants with a GPA below 3.0 may be considered when there is clear evidence of capacity for academic achievement and professional development. In addition, the school applies the following criteria in the selection of candidates: personal suitability for professional education and potential for successful social work practice, a satisfactory state of health, and an adequate financial and personal plan to permit completion of degree requirements.

The General Test of the Graduate Record Examination (GRE) is required, as are official transcripts from every school attended since high school. GRE results must be submitted prior to any evaluation of the application for admission. GRE scores must be less than five years old and may be repeated to achieve a higher score, if desired. The highest GRE General Test score achieved is evaluated for admission. In addition, international students whose native language is other than English and whose higher education was not obtained in an English-speaking institution are required to take the Test of English as a Foreign Language (TOEFL). Refer to "Proficiency in English" under "Graduate Admission" in Chapter 3 for further information. The school may request that you take specified additional examinations to assist in the assessment of candidacy for admission.

Three letters of recommendation are required. In addition, an autobiographical statement and a professional concepts and goals statement must accompany the application.

Prospective students must apply simultaneously to (1) the School of Social Welfare and (2) UCLA Graduate Application Processing. Both applications and the school brochure can be obtained by writing to School of Social Welfare Admissions, 247 Dodd Hall, UCLA, Los Angeles, CA 90024-1452, or by calling 825-7737.

Major Fields or Subdisciplines

Direct social work practice with individuals, families, and small groups, and social welfare planning/administration are offered as social work methods. Concentrations are available in child and family welfare, health and aging, and mental health.

Course Requirements

A total of 76 units in courses in the School of Social Welfare is required, including three courses in social welfare policy and services, three courses in the human behavior and social environment sequences, six courses in methods of social work practice, four courses in social welfare research, plus five terms of field instruction. Appropriate substitutions or waivers may be made by the dean. You may, with consent of the dean, take courses in other graduate schools of the University in fulfillment of the degree requirements.

With consent of the instructor and dean, you may substitute tutorial studies of comparable material in the 500 series for either required or elective courses. Only Social Welfare 596A and 597A may be taken. A maximum of nine units of 500-series courses may be applied toward the entire graduate course requirement for the degree.

Practicum Requirements

There is a concurrent field placement in each of the two years. Time spent in placement may vary according to guidelines established by the school, but approximately 1,300 hours are required.

Thesis Plan

While no University-approved master's thesis is required for the M.S.W. degree, the curriculum requires theoretical courses in research methodology. As a component of the second-year research course, the satisfactory completion of an individual research project, or participation in a group research project concerned with a social welfare problem, is required.

*Not admitting new students at this time.

Comprehensive Examination Plan

All M.S.W. candidates must pass an oral comprehensive examination in Spring Quarter of the second year of study. The examination may cover the entire range of the program.

Ph.D. Degree

Admission

In addition to the University minimum requirements, the school requires completion of an M.S.W. degree program with a superior record from an accredited school of social work. This requirement may be waived if an applicant possesses a postgraduate degree and professional experience in a related field. Such candidates, however, may be required to fulfill specified requirements in the M.S.W. program in addition to the normal doctoral requirements.

Admission criteria include the quality of your performance in previous undergraduate and graduate study, capacity for doctoral-level scholarship, ability to express yourself clearly in writing, success in professional employment and other pertinent experience, results of the Graduate Record Examination (GRE), and personal qualifications indicating suitability for advanced study and research.

The General Test of the GRE is required, as are official transcripts from every school attended since high school. In addition, international students whose native language is other than English and whose higher education was not obtained in an English-speaking institution are required to take the Test of English as a Foreign Language (TOEFL). Refer to "Proficiency in English" under "Graduate Admission" in Chapter 3 for further information. The school may request that you take specified additional examinations to assist in the assessment of candidacy for admission.

Three letters of recommendation and a type-written statement of professional and educational objectives are required. To exemplify your communication skills, you may submit any of the following: published articles, master's thesis, or other theoretical/research-oriented unpublished papers.

Although a personal interview is not required as part of the application procedure, whenever possible a conference is arranged with a member of the doctoral faculty.

Prospective students must apply separately to the School of Social Welfare and to UCLA Graduate Application Processing. Both applications and the school brochure are available by writing to the School of Social Welfare Ph.D. Program, 247 Dodd Hall, UCLA, Los Angeles, CA 90024-1452.

Major Fields or Subdisciplines

The program trains research-oriented scholars to advance the field of social welfare and social work through research and knowledge development, and to assume leadership roles in ac-

ademic, policy, and practice settings. The curriculum is organized into three major areas — specialization in a substantive area of social welfare, integration of social and behavioral science knowledge into social welfare, and research methods. Programs of study are planned in relation to the special and individual needs and interests of the students.

Course Requirements

There is a minimum core of required courses which includes two seminars on practice theory and research, two seminars on social welfare policy, and two graduate-level courses in statistics. In addition, you are required to take (1) at least three graduate-level courses in the social and behavioral sciences outside the school related to your specialization in social welfare, (2) three courses in advanced research methods, and (3) three terms of research internship.

Every effort is made to individualize the curriculum around your area of interest and plans for dissertation. In order to achieve this goal, a variety of patterns is used, including tutorials, small seminar groups, special courses in the M.S.W. program, and courses in other departments and schools of the University. You must complete course requirements and your dissertation within a maximum of 20 terms of full-time enrollment.

Qualifying Examinations

The qualifying examinations consist of two parts — (1) an examination in a substantive field of social welfare, reviewing current theory and research, that is given at the end of your first year and (2) a series of two major papers demonstrating your knowledge and analytical skills in (a) application of social and behavioral science knowledge to social welfare and (b) utilization of research methods to a problem area. Each paper must be evaluated by a two-member committee.

The qualifying examinations are graded on a pass/fail basis, and passing them is prerequisite to pursuing the dissertation. If you fail one or more components, you may be permitted to retake the examination(s) only on recommendation of the doctoral committee.

Advancement to doctoral candidacy follows successful completion of the written qualifying examinations and the University Oral Qualifying Examination which covers the dissertation proposal and related areas. It is administered by the doctoral committee, which consists of three faculty members from within the school and two from other University departments.

Dissertation/Final Oral Examination

The dissertation must be an independent and original investigation which contributes to the existing body of knowledge in social welfare. The choice of topic and methodological development of your proposal must be approved by

your dissertation committee, according to the regulations of the Graduate Division.

After acceptance of the dissertation in its final form, you may be required to take a final oral examination which covers the field within which your dissertation falls.

Graduate Courses

Consult the school for curriculum updates.

201A-201B. Dynamics of Human Behavior (3 units each). Biopsychosocial factors associated with individual and group behavior and development as applicable in social functioning of individuals and groups. Emphasis on theoretical issues and research evidence which contribute to a unified theory of human development.

202A-202B. Dynamics of Human Behavior (2 units each). Prerequisites: courses 201A-201B. Deviations and pathologies or stresses in physical, emotional, and social areas of human functioning as those problems relate to role and function of the social worker.

203. Integrative Theory and Research in Human and Social Behavior (2 units). Prerequisite: consent of instructor. Integrative course which brings together theory and practice of social work in a variety of topic areas relevant to the profession. Includes identification of problem areas and populations-at-risk requiring further examination. S/U grading.

205A. Cross-Cultural Awareness (2 units). Designed to aid students in development of professional perspectives that will allow them to work effectively with members of myriad cultural groups, to discuss with clarity alternative concepts of culture in determination of individual behavior responses, and to identify their own personal cultural values and assumptions. S/U grading.

205B. Group Conflict and Change (2 units). Study of phenomena of group conflict and change as they appear in the social welfare matrix of groups, communities, and social institutions; relationship between conflict and social and cultural change; major research contributions in understanding of these phenomena.

220. History and Philosophy of Social Welfare (2 units). History of social work as a field: body of knowledge, method and process, and point of view analyzed within context of economic, political, social, philosophical, and scientific climate of the period.

221A. Social Welfare Policy and Services I (2 units). Nature, roles, and history of welfare institutions in different societies; applicable social system theory with special reference to values as seen by different components of the welfare system; theory and research about needs met and not met, about various welfare policies and organizational forms, and about social change to prevent needs.

221B. Social Welfare Policy and Services II (2 units). Understanding of significant theoretical constructs and relevant empirical evidence dealing with how organizations develop and maintain their internal functions. Development of beginning skill in organizational analysis. Special attention to organizational analysis of social welfare services.

223. Seminar: Social Work Profession (2 units). Nature and role of social work in contemporary society; relationships with other professions; probable future trends in the profession; social work ethics, professional organizations, certification licensing; professional responsibility for continued self-criticism and improvement of the profession. S/U grading.

225A-225B. Social Welfare Policy. Discussion, three hours. Prerequisites: doctoral standing and/or consent of instructor.

225A. Formulation and Analysis. Examination of principal issues in development, formulation, and adoption of U.S. social welfare policies, with particular focus on income distribution and redistribution. Emphasis on analysis of social policy issues and conceptual frameworks for analysis.

225B. Implementation and Evaluation. Examination of issues in implementation and evaluation of social welfare policies, particularly those pertaining to provision, organization, and delivery of social services, including auspices funding, distribution, criteria for effectiveness, and use of quantitative methods in policy analysis.

230A. Theory of Direct Social Work Practice I (3 units). Lecture, two hours; laboratory, two hours. Corequisite: required social work practicum. Introduction to theory of social work with individuals and small groups and to principles of practice which are derivative of this and related theory. Laboratory provides environment in which to learn specific clinical skills. S/U or letter grading.

230B-230C. Theory of Direct Social Work Practice II, III (2 units each). Corequisite: required social work practicum. Introduction to theory of social work with individuals and small groups and to principles of practice which are derivative of this and related theory.

231A-231B-231C. Advanced Theory of Direct Social Work Practice IV, V, VI (2 units each). Corequisite: required social work practicum. Advanced level, critical analysis of theories, concepts, and principles underlying social casework practice. Specific attention to deviation and stress as conditions affecting functioning of individuals and groups, and to diagnostic knowledge and competence required in rehabilitation and prevention.

240A. Theory of Social Work Practice in Administration, Planning, and Community Organization I (3 units). Lecture, two hours; laboratory, two hours. Corequisite: required social work practicum. Historical and theoretical developments in administration, planning, and community organization; understanding the community as a social system, administration of organizations; role of the practitioner in identification, analysis, and evaluation of needs, existing programs, policies, structures, and strategies of intervention. Computer skills taught for analysis. S/U or letter grading.

240B-240C. Theory of Social Work Practice in Administration, Planning, and Community Organization II, III (2 units each). Corequisite: required social work practicum. Historical and theoretical developments in administration, planning, and community organization; understanding the community as a social system, administration of organizations; role of the practitioner in identification, analysis, and evaluation of needs, existing programs, policies, structures, and strategies of intervention.

241A-241B-241C. Advanced Theory of Social Work Method (Administration, Planning, and Community Organization) IV, V, VI (2 units each). Corequisite: required social work practicum. Emphasis on various patterns of community action for attaining social welfare objectives; research and field experience directed toward study of social problems within context of community planning; emerging patterns of physical, economic, and social planning within framework of social change theory.

245A-245B. Development of Social Work Practice Theory. Discussion, three hours. Prerequisites: doctoral standing and/or consent of instructor.

245A. Epistemology of Practice. Guiding scientific models of practice theories; process of emergence, development, and change of practice theories; intellectual foundations of practice theories; how professionals learn, apply, accumulate, and modify their practice knowledge; science and practice interplay.

245B. Models of Social Work Practice Research. Research for practice, with major emphasis on methods of intervention research which seek to design, test, evaluate, and disseminate innovative intervention technologies.

258. Critical Problems in Social Welfare (2 units). Prerequisites: doctoral standing and/or consent of instructor. Current problems in the field of social welfare. Specific topics vary depending on research and educational interests and needs of class. May be repeated for credit. S/U grading.

280. Social Welfare Research (2 units). Sources, nature, and uses of social work theory and research-based knowledge and of broader social data relevant to social welfare activities. Critical analysis of major methods of developing scientific knowledge.

281A-281B-281C. Advanced Social Welfare Research (2 units each). Individual or group research projects requiring intensive examination and analysis of a social problem area, directed toward development of research knowledge and techniques for social work practice. In Progress grading.

285A-285B-285C. Research in Social Welfare. Prerequisites: doctoral standing and/or consent of instructor. Review of areas of research of concern to social workers, with special attention to design, instrument construction, data collection, data processing, data reduction, analysis, and interpretation. Designs studied include survey, panel, experimental observation, and theory development research.

286A-286B-286C. Survey of Research Methods. Prerequisites: doctoral standing and/or consent of instructor. Basic concepts underlying research methods. Content includes theoretical and conceptual approaches to research problem formulation; research design, including experimental, comparative, and survey; sampling; statistical methods; methods of observation and techniques of data analysis.

290A-290B-290C. Seminars: Social Work (2 units each). Series of seminars dealing with trends in social work and social welfare, with focus on current social problems affecting individuals, groups, and communities and new patterns of intervention based on recent demonstrations and research.

M290D. Women, Health, and Aging: Policy Issues (2 or 4 units). (Same as Health Services M241.) Lecture, three hours; discussion, one hour. Prerequisites: two upper division social sciences courses, two upper division biological sciences courses, or equivalent, consent of instructor. Social and economic context of older women's aging, major physical and psychological changes older women experience, delivery of health services to this population, and policies that respond to their health needs.

M290E-M290F-M290G. Child Abuse and Neglect (2 units each). (Same as Community Health Sciences M245A-M245B-M245C, Dentistry M300.5A-M300.5B-M300.5C, Education M217G-M217H-M217I, Law M281A-M281B, Medicine M290A-M290B, and Nursing M290A-M290B-M290C.) Prerequisite: consent of instructor. Intensive interdisciplinary study of child physical and sexual abuse and neglect, with lectures by faculty members of the Schools of Dentistry, Education, Law, Medicine, Nursing, and Public Health and the Department of Psychology, as well as by the relevant public agencies.

401A-401B-401C. Practicum: Social Work (2 units, 4 units, 4 units). Laboratory, 20 hours. Educationally directed practicum conducted in selected health, welfare, and educational facilities. Provides opportunities for students to test their theoretical knowledge and to acquire a disciplined practice foundation in the profession. In Progress and S/U grading.

402A-402B-402C. Advanced Practicum: Social Work (6 units, 4 units, 2 units). Laboratory, 24 hours. Prerequisites: courses 401A-401B-401C. Practicum in social work, arranged for students in keeping with their major field of study. In Progress and S/U grading.

490. Professional Communication for Social Welfare (2 units). Writing workshop on students' papers in progress, with an eye toward scholarly publication. Analysis and group discussion of rhetorical and stylistic principles. May be repeated once. S/U grading.

501. Cooperative Program (2 to 8 units). Prerequisite: consent of UCLA graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Used to record enrollment of UCLA students in courses taken under cooperative arrangements with USC. S/U grading.

596A. Special Study and Research for M.S.W. Candidates (2 to 8 units). Individual programming for selected students to permit pursuit of a subject in greater depth.

596B. Special Study and Research for Ph.D. Candidates (2 to 8 units). Prerequisites: doctoral standing and/or consent of instructor. S/U or letter grading.

597A. Preparation for M.S.W. Comprehensive Examination (2 to 8 units). Prerequisite: consent of instructor.

597B. Preparation for Ph.D. Qualifying Examinations (2 to 8 units). Prerequisites: doctoral standing and/or consent of instructor. S/U grading.

599. Ph.D. Dissertation Research in Social Welfare (2 to 8 units). Prerequisites: doctoral standing and/or consent of instructor. S/U grading.

School of Dentistry

Henry M. Cherrick, Dean

15

The UCLA School of Dentistry has developed a national and international reputation for its teaching and research activities. Challenging educational, training, and research programs prepare the dental student for a professional career dedicated to patient treatment and service. The curriculum is carefully designed to prepare students for changes in treatment modalities and health care delivery systems. Students become actively involved in preventive and clinical dental care immediately in their training and soon make valuable contributions to the clinical health team. The clinical instruction system emphasizes a patient care approach in which each patient is treated comprehensively. Students interact with their colleagues, faculty, and dental auxiliary personnel in much the same way as they later will interact in a private or group practice.

Opportunity exists for dental students to undertake programs designed to meet their special needs; fourth-year electives encourage more advanced training in an area of particular interest. In addition to basic and applied research programs within the school, students participate in community service programs such as the Wilson-Jennings-Bloomfield UCLA Venice Dental Center, the Downtown Los Angeles Children's Dental Clinic, and the Mobile Dental Clinic, the latter in conjunction with the University of Southern California. A graduate program and a number of postdoctoral specialty programs foster new lines of research which lead to better treatment options. An active continuing education program directed by UCLA faculty members provides a variety of short courses for members of the dental profession and their auxiliaries.

School of Dentistry

A3-042 Dentistry, (310) 206-1718

The UCLA School of Dentistry, which occupies facilities in the Center for the Health Sciences, offers a D.D.S. (Doctor of Dental Surgery) degree program, a number of postdoctoral programs, and Oral Biology M.S. and Ph.D. degree programs. Articulated D.D.S. and M.S. or certificate programs are also available. This catalog provides detailed information only on the M.S. and Ph.D. programs in Oral Biology, for which admission to the School of Dentistry is not required.

Degrees Offered

Doctor of Dental Surgery (D.D.S.)
Master of Science (M.S.) in
Oral Biology
Doctor of Philosophy (Ph.D.) in
Oral Biology

Predental Program

The UCLA School of Dentistry offers two upper division courses for predental students. Dentistry 199 and 199H are individual special studies courses for UCLA undergraduates with definitive research interests and abilities applicable to dentistry. The subject areas include oral biology, clinical research, and dental health policy. Interested students should contact the associate dean of research at 825-6401 to obtain the names and areas of interest of participating School of Dentistry faculty.

Also refer to Chapter 5 for details on the three-year predental curriculum offered by the College of Letters and Science.

Upper Division Courses

199. Individual Special Studies (2 to 8 units). Prerequisite: consent of department. Studies in dentistry and related subject areas appropriate for the training of particular students, with required reading assignments or laboratory work leading to a final oral or written examination. P/NP or letter grading.

Mr. Clark

199H. Individual Special Studies (Honors) (2 to 8 units). Prerequisite: consent of department. Studies in dentistry and related subject areas appropriate for the training of particular students, with required paper submitted at end of course in addition to final examination (paper to be of publication quality as judged by course mentor). P/NP or letter grading.

Mr. Clark

D.D.S. Degree Program

The UCLA dental curriculum leading to the degree of Doctor of Dental Surgery (D.D.S.) is based on the quarter system. The course of study usually takes four academic years of approximately nine months each, with three required Summer Quarters between the first/second, second/third, and third/fourth years. The curriculum is designed to provide students with clinical competence and broad experience in all phases of clinical dentistry within the four years.

The dental curriculum consists of three principal areas: basic health sciences courses, didactic dental courses, and clinical experience. The first two years of the curriculum are chiefly devoted to didactic, laboratory, and general clinical coursework. The final two years emphasize training and instruction in the clinical fields, including endodontics, fixed prosthodontics, operative dentistry, oral diagnosis and treatment planning, oral radiology, oral and maxillofacial surgery, anesthesiology, orthodontics, pediatric dentistry, periodontics, and removable prosthodontics.

For further details on the D.D.S. program and a listing of the courses offered, see the *Announcement of the UCLA School of Dentistry*, available from the Office of Student Affairs and Admissions, School of Dentistry, A3-042 Dentistry, UCLA, Los Angeles, CA 90024-1762.

Postdoctoral Programs

The School of Dentistry offers the following opportunities for postdoctoral study: a one-year general practice residency program; a one-year advanced education in general dentistry program; a one-year residency in maxillofacial prosthodontics; a four-year oral and maxillofacial surgery residency training program; a three-year combined orthodontic/pediatric dentistry program; and two-year programs in the specialties of orthodontics, pediatric dentistry, periodontics, prosthodontics, endodontics, and orofacial pain and dysfunction.

Information on these postdoctoral programs can be obtained by writing directly to Postdoctoral Programs, School of Dentistry, A3-042 Dentistry, UCLA, Los Angeles, CA 90024-1762.

Professors

George W. Bernard, D.D.S., Ph.D.
Charles N. Bertolami, D.D.S., D.Med.Sc.
Colin K. Franker, Ph.D.
Louis J. Goldberg, D.D.S., Ph.D., *Chair*
Douglas Junge, Ph.D.
No-Hee Park, D.M.D., Ph.D.
John A. Yagiela, D.D.S., Ph.D.

Associate Professors

Robert A. Lindemann, D.D.S., M.Ed., M.S.
Lawrence E. Wolinsky, D.D.S., Ph.D.

Assistant Professors

Susan A. Kinder, D.M.D., M.D.S.
Kenneth T. Miyasaki, D.D.S., M.S., Ph.D.
Igor Spigelman, Ph.D.

Adjunct Professor

Bernard G. Sarnat, M.D., M.S., D.D.S.

Adjunct Assistant Professors

Jaime Bulkacz, D.D.S., Dr.Odont., Ph.D.
Christine L. Quinn, D.D.S., M.S.

Scope and Objectives

Oral biology is that area of knowledge which deals with the development, structure, and function of the oral tissues and their interrelationships with other organ systems in normal and disease states. It is a multidisciplinary field that includes cell biology, morphology, molecular biology, biochemistry, neuroscience, immunology, microbiology, and virology. The objective of the graduate program is to provide students with a sound foundation in these areas in order to pursue an academic or research career.

Requirements for Graduate Degrees

Admission

Applicants must have a B.S., D.D.S., or D.M.D. degree, or the equivalent, with strong background in basic sciences, including two years of chemistry (inorganic, organic, and biological chemistry), one year of biology, and one year of physics. The Graduate Record Examination (GRE) and the Dental Aptitude Test (DAT) are not required but may be submitted. Three let-

ters of recommendation and a statement of purpose describing your background, work experience, interests, and career goals are required as part of the admissions packet. There is no separate application form other than that required by UCLA Graduate Application Processing. International students are considered individually after evaluation of their curriculum and training and must take an English language proficiency examination. Refer to "Proficiency in English" under "Graduate Admission" in Chapter 3 for further information. Contact the Graduate Adviser, Oral Biology Section, School of Dentistry, 63-050 Dentistry, UCLA, Los Angeles, CA 90024-1668, for more information and program brochures.

Major Fields and Subdisciplines

Bacterial and fungal pathogenesis, biochemistry, calcified tissue metabolism and developmental biology, immunology, neuroscience, pharmacology and therapeutics, and virology.

Course Requirements

All graduate students must take the five core courses — Oral Biology 201A-201B-201C, Biology 100A, and Biomathematics 170A. Additional course requirements are listed under each program.

Master of Science Degree

Course Requirements

In addition to the five required core courses listed above for all students, you must complete Oral Biology 202, 260, and several elective courses.

Courses 596 and 598 are required 500-series courses. You are eligible to take two to eight units at a time on an S/U grading basis as many times as needed. A maximum of eight units of 500-series courses may be applied toward the total course requirement, of which four units may be applied toward the minimum graduate course requirement.

Thesis Plan

The master's thesis is intended to demonstrate your ability to design and carry out a research project and then to analyze and present the resulting data. The thesis must be prepared according to high standards of experimental design and data analysis. The subject of the thesis must be approved by the faculty adviser, who will direct the work of the thesis, and the thesis committee. At the end of your first year of study, you should prepare and send to the graduate adviser a brief description of the proposed research project.

The thesis should be prepared mainly in consultation with your faculty adviser, although other committee members are available for assistance.

Final Oral Examination

The final oral examination, administered by the thesis committee, is required of all candidates and is a defense of the thesis.

Ph.D. Degree

Course Requirements

In addition to the five required core courses listed above for all students, you must complete two other required courses and a minimum of two electives in your area of emphasis in your second year. Laboratory rotations and seminars are also required.

Teaching Experience

All doctoral students are expected to participate in teaching activities by assisting the faculty in a one-term oral biology course offered to dental students. You must participate fully in the planning and delivery of the course.

Qualifying Examinations

After completing the required core courses, you take a broad essay-type written examination in the major areas of oral biology and cell biology administered by the graduate training committee. After passing the written qualifying examination, you are expected to select an area of emphasis for further study.

At the end of your second year of study, you submit a proposal for the University Oral Qualifying Examination that outlines your disserta-

tion research and provides a review of the literature, a statement of aims of the research, and a description of your planned research activities. The examination is administered by your doctoral committee. After passing the oral examination, you are advanced to candidacy and may begin work on your dissertation.

Dissertation/Final Oral Examination

You must submit a report of an original research study which meets the approval of your doctoral committee.

The final oral examination, administered by the doctoral committee, is required of all candidates and is a defense of the dissertation.

Articulated Degree Programs

You may apply for a combined D.D.S./M.S., advanced certificate training/M.S., or advanced certificate training/Ph.D. by making simultaneous application for graduate standing in Oral Biology and for admission to the School of Dentistry and to the certificate program. To participate you must be accepted by both of the concerned units.

Graduate Courses

201A-201B-201C. Advanced Oral Biology (3 units each). Prerequisite: consent of instructor:

201A. Ontogenesis. Evolutionary perspective of cellular development from simple molecules that were formed during the first billion years of the Earth to development of cells, tissues, and organs of invertebrates and vertebrates. Development of vertebrate feeding apparatus from a comparative anatomical and physiological point of view, followed by embryogenesis of orofacial and dental structures of humans.

Mr. Bernard and the Staff (F)

201B. Homeostasis in Oral Systems. Normal regulatory functions of various oral systems. Topics include immune systems, mechanisms of salivary secretion and nonspecific salivary protective mechanisms, integrated behavior of sensory and motor systems, mechanisms of deposition and resorption of bone, dentin, and enamel, ionic and hormonal influences on bone regulation.

Mr. Junge and the Staff (W)

201C. Pathobiology. Molecular basis for pathogenic processes in tissues of the oral cavity. Topics include microbially mediated demineralization of hard tissues, soft tissue infections, carcinogenesis, colonization of mucosal substrates by opportunists, etc.

Mr. Franker and the Staff (Sp)

202. Principles and Methods of Research. Discussion, two hours. Prerequisite: consent of instructor. Examination and discussion of various approaches to research methodology, from formation of hypotheses to experimental testing and analysis and interpretation of data. Library work to be studied from standpoint of obtaining background information and writing a paper. Hypotheses based on class members' interests to be critiqued and elaborated into research proposals. Research faculty to speak informally on their individual approaches to scientific investigation.

Mr. Junge and the Staff (F)

M203. Oral Embryology and Histology. (Same as Anatomy M229.) Lectures and laboratory instruction in development and histological structure of facial region and oral and peri-oral organs and tissues.

Mr. Bernard and the Staff (Sp)

204. Mechanisms and Relief of Pain (2 units). (Not the same as course 204 prior to Winter Quarter 1993.) Advanced treatment of neuroanatomical, neurophysiological, and biochemical bases of pain perception. Topics include classical pain theories, pain receptors and pathways, endogenous mechanisms of pain modulation, and pharmacological basis for treatment of pain disorders. Lecture series followed by student presentations of relevant literature and discussion of current advances in pain research.

Mr. Junge, Mr. Spigelman

211. Biology of the Temporomandibular Joint (2 units). Anatomy, histology, physiology, and biomechanics of the temporomandibular joint (TMJ) and related musculature. Pain mechanisms, sensorimotor integration, and motor mechanisms in TMJ function, and current methods of TMJ imaging.

Ms. Bibb, Mr. Clark, and the Staff (W)

226A-226B. Craniofacial Growth and Development (2 units each). Prerequisite: strong background in histology and embryology. Students acquire, from scientific literature discussed in lecture/seminar format, advanced knowledge of relevant aspects of human biology as they apply to classic and current concepts of principles governing growth and development of craniofacial region. Students required to present seminars on assigned topics which aid their understanding and analysis of course content that has application to their specific and professional fields. In Progress grading.

Mr. Dixon and the Staff (F,W)

227. Dental Embryology and Histology (2 units). Description and interpretation of important stages in development of the orofacial apparatus and histological features of its component tissues. Critique of scientific literature relevant to course content and analysis of current state of knowledge about selected features of the orofacial apparatus which are of significance to clinical dental specialists.

Mr. Dixon (F)

228. Dental Pharmacology and Therapeutics (2 units). Lecture, three hours. Survey of pharmacology, with particular emphasis on how drugs interact with dentistry. General principles of drug action and drug effects on autonomic and central nervous systems.

Mr. Yagiela (F)

260. Oral Biology Seminar (2 units). Seminar, one hour; outside research, one hour. Research seminar to discuss faculty and student research of oral biology and related disciplines. Discussion of basic sciences related to oral biology, involving participants in important areas of investigation. S/U grading.

Mr. Junge and the Staff (F,W,Sp)

M293. Major Concepts in Oncology. (Same as Microbiology and Immunology M293 and Pathology M293.) Lecture, three hours. Prerequisite: graduate standing or consent of instructor. Designed for graduate students contemplating research in oncology. Topics include cancer pathophysiology, genetics, membranes, macromolecular synthesis and control, cell cycle, growth control; physical, chemical, and viral oncogenesis, epidemiology of cancer; tumor immunology; principles of cancer surgery, radiation therapy, and chemotherapy. S/U or letter grading.

Mr. Hankinson (W)

596. Directed Individual Study or Research (2 to 8 units). S/U grading.

597. Preparation for Ph.D. Qualifying Examinations (4 to 8 units). S/U grading.

598. Thesis Research and Preparation (2 to 8 units). S/U grading.

599. Research for and Preparation of Ph.D. Dissertation (4 to 8 units). S/U grading.

School of Medicine

Sidney A. Golub, Interim Dean

16

A modern school of medicine exists in many minds and in many places. It includes many more disciplines than all those available to such physicians as Copernicus and John Locke, famous for discoveries well beyond medicine then or now. UCLA School of Medicine faculty and students may be found in the Molecular Biology Institute and in the Department of Physiology, in the clinics, wards, and operating rooms of the UCLA Medical Center and Los Angeles County Harbor-UCLA Medical Center, in the Health Sciences Computer Center, in the Louise Darling Biomedical Library, and in dozens of other clinical and scientific facilities.

Regarded by many physicians and medical faculty to be among the best in the nation, UCLA's School of Medicine encompasses a wide range of clinical specialties, including neurology, obstetrics and gynecology, ophthalmology, pediatrics, radiation oncology, and surgery. Graduate work leading to the M.S. and/or Ph.D. degrees is offered through the Graduate Division, either separately or in conjunction with the M.D. program, in 10 different disciplines.

Each department of the school is staffed by a distinguished faculty of respected researchers and practitioners. They have at their disposal some of the most technologically advanced equipment and facilities, including two of the nation's 56 hospital-based biomedical cyclotrons producing shortlived radioisotopes for research and diagnostic nuclear medicine procedures.

School of Medicine

12-109 Center for the Health Sciences, (310) 825-6081

The UCLA School of Medicine offers an M.D. degree program, several allied health programs in affiliation with other hospitals and universities, and a number of postgraduate medical training programs. In addition to specialties in medicine, neurology, obstetrics and gynecology, ophthalmology, pediatrics, radiation oncology, and surgery, which lead to the M.D. degree, a range of master's and doctoral degrees is offered through the Graduate Division.

M.D. Degree Program

The four-year curriculum leading to the degree of Doctor of Medicine (M.D.) at UCLA is designed to develop a comprehensive scientific and humane approach to patient care that includes basic sciences, preventive medicine, diagnosis, and therapeutics. Clinical skills are taught in the context of anatomical, molecular, pathophysiological, and psychosocial factors in health, disease, and treatment.

During the first two years, which are devoted mainly to the basic sciences with only periodic, brief clinical exposure, instruction is primarily in the form of lectures and laboratory sessions, demonstrations, and tutorials. In the last two years, instruction in patient care is given in the form of required and elective clinical clerkships at the UCLA Medical Center or at one of many affiliated hospitals.

All of the medical school departments participate in the medical curriculum leading to the M.D. degree. If you are interested in details on the M.D. curriculum and a listing of courses offered in each department, or if you wish to make application to the M.D. program, you should obtain a copy of the *Announcement of the UCLA School of Medicine* from the Office of Student Affairs, School of Medicine, 12-109 CHS, UCLA, Los Angeles, CA 90024-1720. You are also referred to Chapter 5 of this catalog for details on the four-year premedical studies program offered by the College of Letters and Science.

Graduate Programs

Master's and/or doctoral degrees are offered through the UCLA Graduate Division in the following fields: anatomy, biological chemistry, biomathematics, biomedical physics (Department of Radiological Sciences), experimental pathol-

Graduate Degrees Offered

Anatomy and Cell Biology	M.S., C.Phil., Ph.D.
Anesthesiology (Nurse Anesthesia)	M.S.
Biological Chemistry	M.S., Ph.D.
Biomathematics	M.S., Ph.D.
Microbiology and Immunology	M.S.*, Ph.D.
Neuroscience	Ph.D.
Pathology (Experimental Pathology)	M.S., Ph.D.
Pharmacology	M.S.*, Ph.D.
Physiology	M.S.*, Ph.D.
Psychiatry and Biobehavioral Sciences	
Clinical Psychology Internship	Certificate
Radiological Sciences (Biomedical Physics)	M.S., Ph.D.

*The department only admits applicants whose objective is the Ph.D.

ogy, microbiology and immunology, neuroscience, nurse anesthesia, pharmacology, and physiology. Detailed information on these programs, for which admission to the School of Medicine is not required, is provided in the departmental listings which follow.

For information on the proficiency in English requirements for international graduate students, refer to "Graduate Admission" in Chapter 3.

Additional Programs

Articulated Degree Programs

The School of Medicine offers an articulated degree program in conjunction with the Graduate Division which allows you to earn both the M.D. and Ph.D. in six to seven years, depending on your course of study and research. The Ph.D. may be awarded in one of several medical science fields. For more information, contact the Medical Scientist Training Program at 825-8117 or 206-5964.

In addition, an arrangement with the School of Public Health enables you to pursue the M.P.H. degree while attending medical school. Interested students should consult the Student Affairs Office in the School of Public Health.

Allied Health Programs

Programs in allied health include animal care technician, dental assistant, dental hygienist, dietetics technician, emergency medical technician, social work, pharmacy, respiratory therapist, vocational nurse, nurse anesthetist, operat-

ing room nurse, physician's assistant, physical therapist, radiologic technologist, radiation therapy technologist, and ultrasound technologist.

Information regarding these programs may be obtained from the Office of Allied Health Programs in the UCLA Center for the Health Sciences (825-6711).

Postgraduate Medical Training Programs

Postgraduate training programs, including residencies, are available at several off-campus sites in addition to those offered at the UCLA Medical Center. Programs offered at the allied institutions broaden the scope of the teaching programs by providing extensive clinical facilities, special population settings, and diverse practice modes. Information about these programs is available from the Office of Student Affairs, UCLA School of Medicine.

Adjunct Assistant Professor

Robert B. Trelease, Ph.D.

Scope and Objectives

The Department of Anatomy and Cell Biology offers advanced training leading to the Ph.D. degree. The great majority of students graduating with a doctoral degree in anatomy and cell biology can look forward to an academic

career in medical and dental schools or research institutes and, in accord with this, the department strives to produce graduates soundly qualified both for teaching of anatomical subjects at this level and for the conduct of productive research in cell biology and neurobiology. An informational brochure may be obtained by writing to the Vice Chair, Department of Anatomy and Cell Biology, 73-235 CHS, UCLA, Los Angeles, CA 90024-1763.

Requirements for Graduate Degrees

Admission

Applicants must have a bachelor's degree in a physical or biological science or in a premedical curriculum. Introductory courses in zoology, one year of general and organic chemistry, and one year of college physics are required. Courses in comparative anatomy, embryology, cell biology, genetics, and elementary statistics are highly recommended.

You must submit (1) transcripts of grades for all college-level work, (2) the results of the Graduate Record Examination (GRE), including the Subject Test in Biology or in your undergraduate major, (3) at least three letters of recommendation from professors stressing potential for successful completion of graduate studies and creative independent research, and (4) an essay describing your background, work experience, interests, and career goals. Selected applicants are asked to an interview with the graduate program committee composed of faculty members and graduate students.

Major Fields or Subdisciplines

The major fields in which graduate research may be undertaken include (1) cell biology (including immunology), (2) molecular biology, and (3) neuroscience.

Master of Science Degree

The M.S. degree in Anatomy and Cell Biology is awarded only under exceptional circumstances.

Course Requirements

A total of 36 units of coursework is required, 20 of which must be in graduate-level courses. Eight units of Anatomy and Cell Biology 597 or 598 may be applied toward the total requirement, but only four units may be applied toward the minimum graduate course requirement. All M.S. candidates must take two courses selected from 201 (seven units), M202 (four units), 207 (12 units), and 209A (five units); courses M203A-M203B (eight units); one departmental seminar; other courses essential to the student's program; courses in the minor field (for those under the comprehensive plan). If course 201 (seven units) is selected, tutorial course 254 (two units) must be taken concurrently, making a nine-unit requirement.

Thesis or Comprehensive Examination Plan

You may elect either the thesis or examination plan. For the thesis plan, a committee of the adviser and two department members approves the thesis proposal after all coursework is completed. All members participate in criticism and approval of the eventual thesis; there is no oral defense. Under the comprehensive examination plan, you must demonstrate in a written examination a grasp of the general principles of the required coursework, as well as an understanding of some related field that is relevant to your objectives.

Ph.D. Degree

Course Requirements

- (1) You are required to take for credit the following courses or course combinations: Anatomy and Cell Biology 201 and 254; M202 (neuroscience students also take M220A-M220B); 209A, 209B, 209C; M270A-M270B-M270C. One of the following course sequences is also required: Physiology M212 or Biological Chemistry M267.
- (2) Participation in at least three seminars, one of which should be in the Department of Anatomy and Cell Biology.
- (3) Completion of such other courses as are essential for your research interest.
- (4) Participation in a "Meet the Professor" series.
- (5) Rotation through two research laboratories, one term each, with course 290 or 596 credit (two units).

Teaching Experience

Since the anatomy profession generally imposes relatively heavy teaching obligations, students are required to gain teaching experience in at least one of the major anatomy courses.

Qualifying Examinations

The written comprehensive examination is intra-departmental and intended to explore your ability to discuss broad questions that transcend the limitations of individual courses yet may call on information and strategies derived from them. All students must take the examination at the end of the first year. After passing this examination and spending perhaps a year in a laboratory, taking seminars, and reading in the field of research interest, you must take a University Oral Qualifying Examination before an ad hoc doctoral committee which evaluates your knowledge of the research field and ability to formulate a practicable and significant research program.

The Anatomy and Cell Biology Department may decline to admit any student to the qualifying examination if, in its judgment, the student is inadequately prepared, is not sufficiently interested in those fields of research in which the department can offer sufficient guidance, or is for other reasons not adaptable to the program.

Candidate in Philosophy Degree

You are eligible to receive the C.Phil. degree on advancement to candidacy for the Ph.D. and are encouraged to do so.

Final Oral Examination

After you complete the research and writing of the dissertation, you are required to give a final public seminar on your findings. You must also defend your dissertation in a final oral examination before the doctoral committee in closed session.

Upper Division Courses

102. Gross Anatomy of the Human Body (8 units). Lecture, three hours; laboratory, nine hours. Prerequisites: dental or graduate student standing, consent of instructor. Systemic and topographical human anatomy, with dissection of human cadaver. Emphasis on head and neck. P/NP grading.

Ms. Taylor and the Staff (W)

104. Histology and Cell Biology (6 units). Lecture, four hours; laboratory, six hours. Prerequisite: dental student standing or consent of course chair. Required of freshman dental students. Lectures, demonstrations, and laboratories dealing with structural organization of cells, tissues, and organs at microscopic level. Nervous system included.

Mr. Campbell and the Staff (F)

106. Functional Neuroanatomy. Lecture/laboratory, three two-hour sessions. Prerequisite: dental student standing or consent of instructor. Lectures, demonstrations, and laboratories dealing with structure and functional organization of nervous system.

Mr. Harper and the Staff (Sp)

199. Individual Special Studies (2 to 8 units). Prerequisite: consent of instructor. Studies in anatomy and related subject areas appropriate for training of particular students, which may include reading assignments or laboratory work leading to a final oral or written report. S/U or letter grading.

Graduate Courses

201. Microscopic Anatomy and Cell Biology (7 units). Lecture/laboratory, two to three three-hour sessions (16-week semester). Prerequisite: medical student standing or consent of instructor. Microscopic study of structure and function of tissues and cells, with special reference to the human body.

Ms. Dirksen and the Staff (F)

M202. Neuroanatomy: Structure and Function of Nervous System. (Same as Neuroscience M201.) Lecture, three hours; laboratory, three hours. Prerequisites: Biology 166 or 171 or equivalent, consent of instructor. Anatomy of central and peripheral nervous system at the cellular histological and regional systems level. Emphasis on contemporary experimental approaches to morphological study of nervous system in discussions of circuitry and neurochemical anatomy of major brain regions. Consideration of representative vertebrate and invertebrate nervous systems.

Mr. Scheibel (F)

M203A-M203B. Basic Neurology. (Formerly numbered 203A-203B.) (Same as Physiology M203A-M203B.) Prerequisites: medical student standing or enrollment in qualified graduate program, consent of instructor. Runs throughout School of Medicine's second semester. Lectures, conferences, demonstrations, and laboratory procedures necessary to understand functions of nervous system. To receive credit, both courses must be taken together in same academic year. In Progress grading.

Mr. Schlag and the Staff (W,Sp)

M204. Cellular and Molecular Developmental Neurobiology. (Same as Biology M280, Neuroscience M204, Physiology M204, and Psychiatry M204.) Lecture, three hours; discussion, one hour. Prerequisites: Neuroscience M201, M202, and M203, or Biological Chemistry 201A-201B, or consent of instructor. Cellular and molecular processes that regulate development of nervous systems of vertebrates and invertebrates. Topics include regional specification in early neurogenesis, generation of neuronal diversity, cell surface interactions and growth factors, neuronal and glial proliferation and migration, axonal outgrowth and guidance, synaptogenesis, trophic interaction, plasticity, regeneration, and aging.

Mr. de Vellis and the Staff (W)

205A-205B. Gross and Developmental Anatomy for Medical Students (5 units each). Lecture/laboratory, three four-hour sessions (16 weeks beginning in August). Prerequisites: medical student standing, consent of department for non-anatomy majors. Gross anatomy, embryology, and radiological anatomy of the human body as taught by lectures, demonstrations, and dissection. **205A.** Limbs, Thorax, and Abdomen (first eight weeks); **205B.** Pelvis, Head, and Neck. Graduate students may take each course independently.

Mr. Adinolfi and the Staff (F)

207. Gross and Developmental Anatomy for Graduate Students (12 units). Lecture/laboratory, three four-hour sessions (16-week semester). Prerequisite: consent of instructor. Gross anatomy, embryology, and radiological anatomy of the human body as taught by lectures, demonstrations, and dissection. Trunk and extremities; head and neck.

Mr. Adinolfi and the Staff (F)

209A. Cell Molecular Structure and Function (5 units). (Formerly numbered 209.) Lecture, four hours; discussion, one hour. Prerequisites: biochemistry, consent of instructor. Introduction to cell biology for graduate students in basic medical sciences. Topics include membrane structure, assembly, and function; biogenesis of organelles, intercellular junctions, endocytosis, extracellular matrix, cytoskeleton and motility, intercellular and intracellular signaling, immunity and gene structure, function and replication.

Mr. Bok and the Staff (F)

209B. Special Topics in Cell Biology (3 units). Lecture, two hours; discussion, one hour. Prerequisite: course 209A or consent of instructor. Lecture and interactive teaching on assigned journal articles. Topics vary based on current areas of exciting research.

Ms. Dirksen (W)

209C. Methods in Cell Molecular Structure and Function (5 units). Lecture, one hour; discussion, two hours; laboratory, eight hours. Prerequisites: courses 209A, 209B, consent of instructor. Students gain firsthand experience in selected methods for cell and molecular neurobiology and in interpretation of data.

Mr. Bok and the Staff

211. Cellular Basis of Learned Behavior (2 units). Lecture/discussion, one two-hour session; laboratory, to be arranged. Prerequisites: microscopic anatomy, mammalian physiology. Anatomy and physiology of cerebral processes in alerting, learning, focusing attention, and memory.

Mr. Woody (F)

M220A-M220B. Structural Neurobiology. (Same as Neuroscience M220A-M220B.) Lecture, two hours; interactive teaching based on assigned journal articles, one hour. Prerequisite: course M202. S/U or letter grading. **M220A.** Fine structure of nervous system elements and methods of molecular analysis. **M220B.** Advanced topics dealing with integrating structure at systems level.

Mr. Kruger and the Staff (W,Sp)

M221. Cellular and Molecular Neurochemistry. (Formerly numbered M240.) (Same as Biological Chemistry M221, Neuroscience M240, Pharmacology M221, and Psychiatry M221.) Lecture, three hours; discussion, one hour. Prerequisite: biochemistry. Contemporary neurochemistry topics — metabolic specialization and compartments, metabolism and function of ion channels; structure and function of neurotransmitters. Inborn errors and molecular genetics, molecular imaging, aging, and regeneration. Receptor effector coupling. S/U or letter grading.

Mr. de Vellis, Mr. Olsen (W)

M229. Oral Embryology and Histology. (Same as Oral Biology M203.) Lectures and laboratory instruction in development and histological structure of facial region and oral and peri-oral organs and tissues.

Mr. Bernard and the Staff (Sp)

234. Seminar: Developmental Neuroendocrinology (2 units). Prerequisite: graduate standing or consent of instructor. Psychological and physiological processes intertwine, and one important aspect of psychoneuroimmunological research is characterization of mechanisms that underlie these interactions. Examination of current literature on neuroimmune interaction from a developmental perspective. S/U or letter grading.

Ms. Taylor (F)

M235. Neuroactive Peptides: Molecular Biology to Function (2 units). (Formerly numbered M246.) (Same as Medicine M235 and Neuroscience M246.) Prerequisite: consent of instructor. Presentation of current knowledge of gut and brain peptides by surveying their chemistry, anatomy, and physiology. Experimental approaches used to study biologically active peptides. Review of current information about each of the major gut and brain peptides. S/U or letter grading.

Mr. Brecha, Ms. Sternini (Sp, odd years)

251. Problems in Developmental and Comparative Immunology (2 units). Prerequisite: consent of instructor. Review of current literature emphasizing early development and evolution of immune competence.

Mr. Cooper (W)

252. Seminar: Basic and Quantitated Neurophysiology (2 units). Lecture, 90 minutes; discussion, 90 minutes. Prerequisite: consent of instructor. Lecture series on basic neurophysiology. Early lectures by invited specialists on their specific fields. Later lectures by each student on a topic selected and prepared in collaboration with instructor.

Mr. Segundo (Sp, even years)

253. Communication and Coding in Nervous Systems. Lecture/discussion, one two-hour and two 90-minute sessions. Prerequisite: consent of instructor. Presentation, discussion, and critique of efforts to quantify neuronal function where essence of mathematics is expressed in qualitative and physiologically meaningful terms (e.g., stability, neurons as analyzers of spike trains, identification of synaptic operators).

Mr. Segundo (Sp, odd years)

254. Structure and Function of Cells and Tissues (2 units). Lecture, one hour; discussion, one hour. Prerequisites or corequisites: course 201, consent of instructor. Current topics on structural and functional aspects of microscopic anatomy; term paper required. May be repeated for credit. S/U grading.

Ms. Dirksen and the Staff (F)

M255A-M255D. Seminars: Neural and Behavioral Endocrinology (3 units, 2 units, 3 units, 2 units). (Same as Psychology M294A-M294D.) Lecture, three hours. Topics include hormonal biochemistry and pharmacology. Hypothalamic/hypophyseal interactions, both hormonal and neural. Structure and function of the hypothalamus. Hormonal control of reproductive and other behaviors. Sexual differentiation of brain and behavior. Stress: hormonal, behavioral, and neural aspects. Aging of reproductive behaviors and function. In Progress grading.

Mr. Arnold (Sp, M255B, M255D),

Mr. Micevych (W, M255A, M255C)

256. Seminar: Cell Structure and Function (2 units). Prerequisite: consent of instructor. Selected topics in cell biology emphasizing those areas which are of current interest. Discussions on recent literature in cell and molecular biology. S/U grading.
Mr. Schweitzer and the Staff (Sp)

258. Seminar: Neuroscience (2 units). Prerequisite: basic neurology. Topics of current interest or ongoing research projects; examination of both content and method of presentation. May be repeated for credit.
Mr. Scheibel (F, odd years; W, even years)

M261. Neuronal Circuit Analysis (2 units). (Same as Neuroscience M261.) Lecture, two hours; discussion, one hour. Prerequisite: consent of instructor. Seminar with strong emphasis on specific reading assignments. Integrated view of neuronal circuit analysis at advanced level; layout and performance of a variety of networks serving cognitive or motor functions.
Mr. Schlag (W)

265. Evolution of Cancer (2 units). Prerequisite: consent of instructor. Review of current literature emphasizing appearance of tumors and neoplasms in representative invertebrates, fishes, amphibians, and reptiles. Theories of cancer development from the evolutionary viewpoint.
Mr. Cooper (W)

M270A-M270B-M270C. Cell, Molecular, and Integrative Biology Seminars (1 unit each). (Formerly numbered 270.) (Same as Physiology M270A-M270B-M270C.) Prerequisite: graduate standing or consent of instructor(s). Presentation of weekly seminars on current topics in cell and molecular biology by faculty members from Anatomy and Cell Biology, Physiology, and other UCLA departments, in addition to invited lecturers. S/U grading.
Mr. de Vellis, Mr. Grinnell (F,W,Sp)

290. Tutorials in Anatomy (2 units). Tutorial, one hour. Prerequisite: consent of instructor. Individual study with a faculty member leading to submission of a scientific document (usually a review article) on a topic of mutual interest to instructor and student. S/U grading.
(F,W,Sp)

390A-390B. Peer Review System (2 units each). Prerequisite: advancement to candidacy in integrative or systems biology or consent of instructor. Introduction to peer review system for evaluation of research proposals. After consideration of grant review process, each student prepares abbreviated grant application which is evaluated in a mock peer review session moderated by the faculty. In Progress and S/U grading.
Mr. Gorski (W,Sp, odd years)

495A-495F. Preparation for Teaching in Anatomical Sciences (2 to 4 units each). Prerequisites: graduate standing, consent of vice chair and instructor. Observation and practice of methods of teaching in anatomy, including preparation of material, participation in laboratory instruction, and presentation of review sessions, all with peer and faculty criticism. Gross anatomy, microscopic anatomy, and neuroanatomy subject fields included. Maximum of three 495 courses may be taken; none may be repeated. May not be applied toward degree requirements. S/U grading.

501. Cooperative Program (2 to 8 units). Prerequisite: consent of UCLA graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Used to record enrollment of UCLA students in courses taken under cooperative arrangements with USC. S/U grading.

596. Directed Individual Study or Research (2 to 12 units).

597. Preparation for M.S. Comprehensive Examination or Ph.D. Qualifying Examinations (2 to 12 units).

598. Thesis Research for M.S. Candidates (2 to 12 units).

599. Dissertation Research for Ph.D. Candidates (2 to 12 units).

Medical History Division

Professors

Ynez V. O'Neill, Ph.D., *in Residence*
Leslie R.C. Agnew, M.D., *Emeritus*
Mary A.B. Brazier, Sc.D., *Emerita, in Residence*
Franklin D. Murphy, M.D., Sc.D., *Emeritus*

Associate Professor

Robert G. Frank, Jr., Ph.D., *Division Chief*

Lecturer

Elizabeth R. Lomax, M.D., Ph.D.

Upper Division Courses

107A-107B. Historical Development of Medical Sciences. Lecture, three hours. Major contributions of medicine and medical personalities from earliest times. **107A.** Contributions of medicine and medical personalities from earliest times through 1650. **107B.** Subject in the period from 1650 through the 19th century. Illustrated lectures, class discussion, and required readings from selected texts.
Mr. Frank (Sp), Ms. O'Neill (W)

M108A-M108B. History of Biological Sciences. (Same as History M195F-M195G.) Lecture, three hours. **M108A.** Biological Sciences from Ancient Times to the Early 19th Century; **M108B.** Biological Sciences from the Early 19th Century to the Mid-20th Century.
Mr. Frank (F,W)

135. Popular Beliefs and Medicine. Lecture, three hours. Investigation of some basic health beliefs and traditions that can potentially conflict with biomedicine and exploration of educational resources necessary to prepare health care students for the clinical situation. P/NP or letter grading.
Ms. O'Neill (W)

Graduate Courses

240A-240B. History of Medical Sciences (2 units each). Lecture, one hour. Survey of development of scientific and medical thought from ancient times to the present.
(F,W)

246. History of Neurophysiology: Its Impact on Psychology and Medicine (2 to 4 units). Lecture, one hour; seminar, two hours. Development of experimental neurophysiology from its scientific roots in the 17th century through recognition of the excitability of nervous system, to use of this characteristic in revealing functions of central nervous system. Discussion of interaction of neurophysiological ideas with contemporaneous philosophy and medicine. Lectures may be taken independently.
Ms. Lomax, Ms. O'Neill (Sp)

250. History of Medical Psychology (2 units). Lecture, one hour. Examination of themes underlying modern mental health theories. Beginning with review of contemporary thinking, lectures focus on various factors shaping present concepts of mental disorders and provide a framework for understanding current issues.
Ms. Lomax, Ms. O'Neill (W)

596. Directed Individual Studies in Medical History (2 to 12 units). Investigation of subjects in medical history selected by students with advice and direction of instructor. Individual reports and conferences.

Scope and Objectives

The Department of Anesthesiology in the School of Medicine and the County of Los Angeles/Olive View Medical Center offer a program leading to the M.S. degree in Nurse Anesthesia which is administratively housed on the campus of the Olive View Medical Center. This program prepares qualified registered nurses in the specialty of anesthesiology and qualifies the graduate to sit for the certification examination given by the Council on Certification of Nurse Anesthetists. The graduate attains a high level of clinical competence combined with an extensive body of didactic knowledge relevant to the specialty. The program is designed to lead to careers in the clinical practice of nurse anesthesiology, with the opportunity to participate in research in the area.

Master of Science in Nurse Anesthesia

Admission

The following admission requirements must be met:

- (1) A Bachelor of Science degree in Nursing or other appropriate undergraduate degree.
- (2) Graduation from an accredited nursing program satisfactory to the program and to the UCLA Graduate Division. You may be required to enroll in certain additional undergraduate courses prior to final consideration by the program.
- (3) Mandatory evidence of status as a registered nurse in the State of California.
- (4) Completion of a minimum of one year of experience as a graduate nurse in an acute care area of nursing, preferably an intensive care unit.
- (5) Professional and academic competence attested through three letters of recommendation.

(6) Graduate Record Examination (GRE) General Test results submitted to the program.

(7) Successful completion of the following undergraduate-level courses: (a) inorganic chemistry, organic chemistry, and biochemistry, (b) introductory physics, (c) biology, (d) anatomy, (e) physiology, (f) English, (g) psychology, (h) statistics, and (i) a course in methods of research (highly recommended).

(8) A scholarship record satisfactory to the Graduate Division and the Nurse Anesthesia Program. Transcripts must be sent to both.

(9) Preinterview with the program director or designee, observation in clinical practicum, and final interview with the admissions committee.

Approximately 10 students are selected for admission in Fall Quarter by the admissions committee which meets annually in January. Information regarding the program may be obtained by writing to the Nurse Anesthesia Program, Olive View Medical Center, 14445 Olive View Drive, Sylmar, CA 91342. All applicants must apply to both the department and UCLA Graduate Application Processing. Separate applications are needed.

Foreign Language Requirement

There is no foreign language requirement for the M.S. degree.

Course Requirements

A total of 36 units of coursework is required, 20 of which must be in graduate-level courses. Required courses include Anesthesiology 215A, 215B, 220, 221, 223, 225, 290, 597 or 598A, 598B, Education 210B, Physiology 100, and four units from the Anesthesiology 210A, 210B, 210C sequence.

Course 598B may be repeated twice, but only four units of 500-series courses may be applied toward the graduate course requirement. Letter grading may be used in 500-series courses.

Professional courses (22 units) are required for certification eligibility and graduation: Anesthesiology 400A through 400G, 401, 402A, 402B.

Thesis Plan

If you elect this option, your thesis committee is established during the second year of the program. The thesis proposal is written and approved during Winter or Spring Quarter of your second year. You must complete a successful public oral defense of your thesis for graduation.

Comprehensive Examination Plan

Students electing this option must demonstrate theoretic and clinical competence in the field. This option is generally recommended for students continuing to doctoral degree study. The oral examination is general in scope and may include information from all aspects of the curriculum. A written comprehensive examina-

tion is also required for course completion. Examinations are offered quarterly.

Other Requirements

(1) You must complete all requirements for the Master of Science degree in a minimum of 10 terms, but no more than 12 terms, of consecutive full-time enrollment.

(2) The program does not discriminate on any basis unless a handicap is determined by the admissions committee to preclude the safe clinical practice of anesthesia.

(3) You must complete a minimum of 550 cases as the primary anesthetist.

(4) You must meet all program requirements for graduation to qualify for the certification examination of the Council on Certification of Nurse Anesthetists.

Graduate Courses

210A. Chemistry and Physics of Nurse Anesthesia I (2 units). Lecture, two hours; discussion, one hour. Prerequisite: consent of instructor. Study of principles of chemistry and physics as applied specifically to practice of anesthesia. Mr. Griffis (F)

210B. Chemistry and Physics of Nurse Anesthesia II (2 units). Lecture, two hours; discussion, one hour. Prerequisite: consent of instructor. Continuation of study of principles of chemistry and physics as applied specifically to practice of anesthesia. Mr. Griffis (F)

210C. Chemistry and Physics of Nurse Anesthesia III (2 units). Lecture, two hours; discussion, one hour. Prerequisite: consent of instructor. Continuation of study of chemistry and physics as related to anesthesia management, with specific emphasis on biochemistry as related to acid-base balance and theories of narcosis. Mr. Griffis (F)

215A. Pharmacology of Nurse Anesthesia I. Lecture, four hours; discussion, one to two hours. Introduction to basic pharmacological principles as applied to administration of anesthesia. Study of uptake and distribution, mechanism of action, fate, and toxicology as related to anesthetic agents. Ms. Gold and the Staff (F)

215B. Pharmacology of Nurse Anesthesia II. Lecture/discussion. Study of pharmacology of adjunct drugs influencing anesthesia administration, including their uptake and distribution, mechanism of action, fate, biotransformation, and toxicology. Ms. Gold and the Staff (W)

220. Respiratory Anatomy and Physiology for Nurse Anesthetists (2 units). (Formerly numbered 220A.) Lecture, two hours; discussion, one hour. Prerequisite: consent of instructor. Study of structure and function of respiratory system, with emphasis on anatomy and physiology at cellular level. Ms. Mann (W)

221. Cardiovascular Anatomy and Physiology for Nurse Anesthetists (2 units). Lecture, two hours; discussion, one hour. Prerequisite: consent of instructor. Integrated study of anatomy and physiology of C-V system as related to management of anesthesia administration. Ms. Grogan (W)

M222. Biological Control Systems. (Same as Electrical Engineering M243.) Prerequisite: Electrical Engineering 141 or equivalent. Introduction to application of control theory to modeling and analysis of biological control systems, such as respiratory system, cardiovascular system, and neuromuscular system. Emphasis on solving problems of current interest in biomedicine. Mr. Wiberg

223. Anatomy and Physiology of Endocrine and Excretory Systems for Nurse Anesthetists (2 units). Lecture, two hours; discussion, one hour. Prerequisite: consent of instructor. Integrated study of endocrine and excretory systems as related to management of anesthesia administration. Mr. Foster (Sp)

225. Anatomy and Physiology of Nervous System for Nurse Anesthetists (2 units). (Formerly numbered 225A.) Lecture, two hours; discussion, one to two hours. Prerequisite: consent of instructor. Integrated study of anatomy and physiology of nervous system as related to management of anesthesia administration. Mr. Foster (W)

290. Anesthesia Seminar for Nurse Anesthetists (2 units). Discussion, two to three hours. Discussion of research methods, basic statistics, and critical scientific paper analyses in relation to anesthesia research and practice. Ms. Waugaman (F)

400A. Basic Clinical Anesthesia for Nurse Anesthetists I (2 units). Lecture, three hours; laboratory, 30 hours. Prerequisites: courses 402A, 402B. Correlation of techniques of anesthesia administration with basic science knowledge as applied in the clinical area with supervised practice. S/U grading. Ms. Vercellino (Sp)

400B. Basic Clinical Anesthesia for Nurse Anesthetists II (2 units). Lecture, two hours; laboratory, 30 hours. Prerequisite: course 400A. Continuation of practice of techniques of anesthesia administration as applied in the clinical area with supervised practice. S/U grading. Ms. Vercellino (F)

400C. Basic Clinical Anesthesia for Nurse Anesthetists III (2 units). Lecture, two hours; laboratory, 30 hours. Prerequisite: course 400B. Continuation of techniques of anesthesia administration as applied in the clinical area with supervised practice. S/U grading. Ms. Vercellino (W)

400D. Clinical Anesthesia for Nurse Anesthetists IV (2 units). Lecture, two hours; laboratory, 30 hours. Prerequisite: course 400C. Practice of refinements of anesthesia techniques, with emphasis on specialized areas of anesthesia administration in supervised practice. S/U grading. Ms. Vercellino (W)

400E. Clinical Anesthesia for Nurse Anesthetists V (2 units). Lecture, two hours; laboratory, 30 hours. Prerequisite: course 400D. Practice of refinements of anesthesia techniques, with emphasis on specialized areas of anesthesia administration in supervised practice. S/U grading. Ms. Vercellino (Sp)

400F. Clinical Anesthesia for Nurse Anesthetists VI (2 units). Lecture, two hours; laboratory, 30 hours. Prerequisite: course 400E. Practice of refinements of anesthesia techniques, with emphasis on specialized areas of anesthesia administration in supervised practice. S/U grading. Ms. Vercellino (Sp)

400G. Clinical Anesthesia for Nurse Anesthetists VII (2 units). Lecture, two hours; laboratory, 30 hours. Prerequisite: course 400F. Practice of refinements of anesthesia techniques, with emphasis on specialized areas of anesthesia administration in supervised practice. S/U grading. Ms. Vercellino (F)

401. Legal Aspects and Bioethics (2 units). Lecture, two hours; discussion, 30 minutes to one hour. Prerequisite: consent of department. Introduction to history, bioethics, and legal aspects of nurse anesthesia. Exploration of psychology related to the patient undergoing surgery and anesthesia. Ms. Waugaman (W)

402A. Fundamentals of Anesthesia Practice for Nurse Anesthetists. (Formerly numbered 402.) Lecture, four hours; discussion, one to two hours. Prerequisite: consent of instructor. Introduction to basic principles of anesthesia administration, including preanesthetic assessment, physical examination, techniques and procedures, and anesthesia for specialized techniques and surgery. Mr. Foster (F)

402B. Fundamentals of Anesthesia Practice for Nurse Anesthetists (2 units). Lecture, two hours; discussion, one hour. Prerequisite: consent of instructor. Continuation of techniques and procedures, and anesthesia for specialized techniques and surgery. Mr. Foster (W)

597. Preparation for M.S. Comprehensive Examination (2 units). Prerequisite: consent of instructor. Opportunity to pursue comprehensive study in anesthesiology and related areas on individual basis, with opportunity for discussion of material with instructor. S/U grading. Mr. Foster, Ms. Waugaman (Sp)

598A. Research in Anesthesia I (2 units). Prerequisite: consent of instructor. Opportunity to pursue anesthesia research outlets for thesis preparation. Independent research of quality suitable for publication required. May be selected instead of oral comprehensive examination for completion of M.S. program. S/U grading. Mr. Foster, Ms. Waugaman (Sp)

598B. Research in Anesthesia II (2 units). Prerequisite: consent of instructor. Opportunity to pursue anesthesia research outlets for thesis preparation. Independent research of quality suitable for publication required. May be selected instead of oral comprehensive examination for completion of M.S. program. May be repeated twice for credit. S/U grading. Mr. Foster, Ms. Waugaman (F,W)

Adjunct Professors

Kathryn L. Calame, Ph.D.
James C. Paulson, Ph.D.

Scope and Objectives

The biological chemistry graduate program prepares students for careers as independent research scientists and scholars. Laboratory research is the central element. Biological chemistry has grown to include studies of cellular and molecular biology, molecular genetics and genetic engineering, biotechnology, and many aspects of the health sciences. The research activities of the department include these areas as well as the "classic" topics of metabolism, enzymology, and biomolecular structure. Courses and seminar programs are designed to provide students with the necessary background and approach to encourage their continuing growth in these rapidly changing areas of science.

Interaction with other graduate programs provides access to scientists in a variety of related disciplines. Through its primary affiliation with the School of Medicine, the department is also involved in the basic education of students who will be physicians, dentists, and other health professionals. Many of these students become involved in laboratory research in the department. In part because of this breadth of experience students find careers in many aspects of basic and applied scientific research and education. The department emphasizes study for the Ph.D., but candidates for the M.S. degree may be accepted under special circumstances.

Requirements for Graduate Degrees

Admission

In addition to the University's minimum requirements, which include a bachelor's degree (preferably in chemistry or a biological science), students should normally have completed the following: general chemistry, quantitative chemistry, organic chemistry (with laboratory), general physics, mathematics through calculus, and general biology (or bacteriology, botany, zoology, biochemistry, or molecular biology). More advanced courses in these areas are also recommended where possible.

You are expected to take the Graduate Record Examination (GRE) General Test, preferably in October or before, but no later than December of the year prior to expected admission. It is strongly recommended that you also take the GRE Subject Test in either Biology or Chemistry. In exceptional circumstances, the GRE test requirements may be waived by the departmental graduate admissions committee. If your native language is other than English, you are expected to take an appropriate examination which tests proficiency in English (e.g., TOEFL) prior to the time of application to this department.

There is no separate application form required for admission to the department, but at least three letters of recommendation are required. Have them sent directly to the Graduate Information Office at the address below.

Departmental brochures and information may be obtained by writing to the Graduate Information Office, Department of Biological Chemistry, 33-257 CHS, UCLA, Los Angeles, CA 90024-1737.

Course Requirements

All graduate students must take the four core courses (Biological Chemistry M248, M253, M255, and M267) unless excused by the graduate adviser. (See additional course requirements under each degree program.)

Written Qualifying Examination

After completing the core course requirements (see above), you must take the departmental written examination (usually given in July). This examination is formulated by the departmental graduate student guidance committee from questions submitted by the various faculty members, who also evaluate your answers to the questions. The committee evaluates your overall performance on the examination and makes a recommendation to the departmental faculty of one of the following: (1) pass at the Ph.D. level of achievement; (2) pass at the master's level of achievement; (3) fail.

The departmental faculty can approve or change the recommended action and can authorize a reexamination in case of failure (consent is rarely given to take the test a third time). The faculty may also recommend or require additional coursework or other evidence indicating competence in specific areas prior to taking the examination a second time, or before taking final action on the results of the written examination.

Master of Science Degree

Course Requirements

In addition to the core course requirements described above for all students, elective courses must be taken to complete the total of nine courses (36 units) required for the degree.

No more than two courses (eight units) in the 500 series may be applied toward the total course requirement, and only one (four units) of the two courses may be applied toward the minimum graduate course requirement (20 units) for the degree.

With consent of the graduate adviser, Biological Chemistry 596, 597, and 598 may be taken if they are appropriate to your program. Course 596 is graded on an S/U or letter basis; 597 and 598 are graded S/U only.

Comprehensive Examination Plan

In general, the department prefers students to enter directly into the Ph.D. program, but if you enter the master's program, the comprehen-

sive examination plan is preferred. Only in exceptional situations is a student approved for the thesis plan. In either plan you must pass the departmental written examination at the master's level of achievement (see above). Only course requirements and the written examination are needed to complete the comprehensive examination plan.

Thesis Plan

In addition to coursework, a written thesis is required. A thesis committee helps you plan the thesis research, determines the acceptability of the thesis, administers a final examination (if deemed appropriate), and recommends appropriate action on the granting of the degree. In the event of an unacceptable thesis or performance on the final examination (if one is given), the thesis committee determines if it is appropriate for additional time to be granted to rewrite the thesis or to be reexamined.

Ph.D. Degree

Admission

Students are not required to obtain a master's degree prior to admission into the doctoral program and do not usually obtain a master's degree as part of the normal progress toward the Ph.D.

Course Requirements

In addition to the general course requirements listed above, students in the Ph.D. program are expected to complete:

(1) Biological Chemistry 220A-220B-220C (each term during the first year). You must arrange for at least two rotations in the laboratories of different faculty members to help in the selection of a research adviser.

(2) A total of six units of elective courses in addition to the core courses described above. One of the courses must be a scientific language/instrumentation course (e.g., computer language, statistics, electron microscopy). Elective courses may be selected from those offered by any department.

(3) Courses 596, 597, and/or 599 during terms in which research (596, 599) or study for written or oral examinations (597) is part of your program. Course 599 is for students who have passed their oral examinations; course 596 is for those who have not.

Teaching Experience

All students in the doctoral program are expected to participate in teaching activities by assisting the faculty in a laboratory for medical students (usually one day a week for one term during the second year).

Qualifying Examinations

If you have passed the departmental written examination at the Ph.D. level of achievement (see above), you should consult with the department chair, who is responsible for nominat-

ing faculty members to serve on your doctoral committee.

The University Oral Qualifying Examination, which must be passed before you can be advanced to candidacy, consists of the presentation and defense of two short research proposals to the doctoral committee. One proposal should be unrelated to your dissertation research. The other proposal should discuss your proposed dissertation research. The doctoral committee determines whether you pass the examination and whether reexamination is allowed in case of failure. The examination may be repeated only once. It is expected that students will complete the University Oral Qualifying Examination by the beginning of the third year of graduate work.

Final Oral Examination

The doctoral committee may elect to waive the final oral examination.

Articulated Degree Program

Students may apply for the M.D./Ph.D. program by making simultaneous application for graduate standing in this department and for admission to the School of Medicine. Acceptance by both of the concerned units is necessary. Certain changes in the requirements (e.g., fewer required courses) allow some savings in time compared to separate M.D. and Ph.D. degrees.

Graduate Courses

201A-201B. Biological Chemistry (5 units each). (Formerly numbered 201, 202, 203.) Prerequisites: organic chemistry; consent of instructor required for nonmedical students. Primarily for first-year medical students and runs throughout School of Medicine's second semester. General biochemistry with emphasis on mammalian systems. Structure, function, and metabolism of major cellular components. To receive credit, both courses must be taken together in same academic year. In Progress grading. (W,Sp)

204. Biological Chemistry Laboratory (3 units). Discussion, one hour; laboratory, six hours. Prerequisite: consent of instructor required for nonmedical students. Experiments illustrating techniques and procedures in medically related biochemistry; analysis of experimental results. S/U or letter grading.

Mr. Edmond, Mr. Rome, and the Staff (Sp, eight weeks)

205. Biological Chemistry and Nutrition Lecture (Dental Students) (6 units). (Formerly numbered 205A-205B, 205C.) Lecture, six hours; computer laboratory. Prerequisite: dental student standing. Biochemical and genetic factors influencing normal and disease states: structure and metabolism of cellular constituents, intermediary metabolism and its regulation, endocrine and neurobiochemical mechanisms, connective tissue/mineralization. Includes computer laboratory and self-instruction on dietary assessment in dentistry. Ms. Zamenhof and the Staff (F)

220A-220B-220C. Research Laboratory Rotations (2 to 8 units each). Prerequisite: consent of instructor. Students arrange apprenticeships in laboratories of one or more departmental faculty members and engage in a research project under close faculty direction. Allows students to acquire in-depth laboratory experience in specific research areas and facilitates an informed decision on their part in selection of thesis/research adviser. S/U or letter grading.

Mr. Edwards, Mr. Payne, and the Staff (F, 220A; W, 220B; Sp, 220C)

M221. Cellular and Molecular Neurochemistry. (Formerly numbered M221A.) (Same as Anatomy M221, Neuroscience M240, Pharmacology M221, and Psychiatry M221.) Lecture, three hours; discussion, one hour. Prerequisite: biochemistry. Contemporary neurochemistry topics — metabolic specialization and compartments, metabolism and function of ion channels; structure and function of neurotransmitters. Inborn errors and molecular genetics, molecular imaging, aging, and regeneration. Receptor effector coupling. S/U or letter grading. Mr. de Vellis, Mr. Olsen (W)

M223. Membrane Molecular Biology (6 units). (Same as Physiology M223.) Lecture, five hours. Prerequisites: course M253 or consent of instructor, graduate or selected upper division undergraduate standing. Advanced course in molecular aspects of membrane physiology and biochemistry covering lipids and physical chemistry of biological membranes; membrane biogenesis and targeting of proteins to membranes; pumps, carriers, and channels; receptors and transmembrane signaling.

M233. Principles, Practices, and Policies in Biotechnology (2 units). (Same as Biology M233, Chemical Engineering M233, Chemistry M233, Microbiology M233, Microbiology and Immunology M233, and Radiological Sciences M233.) Prerequisite: graduate standing or consent of instructor. Presentation of technologies, regulatory practices, and policies required for product development and review of current opportunities for new technology development. Topics include fermentation processes, pilot and large-scale bioprocess technologies, scaleup strategies, industrial recombinant DNA processes, hybridomas, protein engineering, peptide mimetics and rational drug design, medical and microscopic imaging, and intellectual property issues. S/U or letter grading. Mr. Fox, Ms. Morrison

M248. Molecular Genetics. (Same as Biology M248 and Microbiology M248.) Lecture, three hours; discussion, one hour. Prerequisite: consent of instructor. Basic concepts in modern genetics, with examples from both eukaryotic and prokaryotic systems. Emphasis on use of genetic techniques for addressing fundamental questions in biochemistry and molecular biology. Topics include mutagenesis, mutant selection, recombination, genetic mapping, complementation, transposable elements, gene organization, genetic regulation, and molecular evolution.

Mr. Johnson and the Staff (Sp)

M253. Macromolecular Structure (6 units). (Same as Chemistry M253.) Lecture/discussion, five hours. Prerequisites: courses 201A-201B, or Chemistry 110A, 153A, 153B, 153C, and 156, or equivalent. Chemical and physical properties of proteins and nucleic acids. Structure cloning and analysis of DNA; biosynthesis and processing of RNA; biosynthesis, purification, structure, and analysis of proteins; correlation of structure and biological properties.

Mr. Glitz and the Staff (F)

M255. Biological Catalysis (2 units). (Same as Chemistry M255.) Prerequisites: Chemistry 110A and 153A, or equivalent, or consent of instructor. Reaction mechanisms in molecular biology; experimental approaches for study of enzymes, including kinetics, isotopic labeling, stereochemistry, chemical modification, and spectroscopy; design of pharmacologically active agents and artificial enzymes.

Mr. Sigman (Sp)

M257. Physical Chemistry of Biological Macromolecules (2 units). (Same as Chemistry M257.) Prerequisites: Chemistry 110A and 153A, or consent of instructor. Theory of hydrodynamic, thermodynamic, and optical techniques used to study structure and function of biological macromolecules. (W)

M263. Metabolism and Its Regulation. (Same as Chemistry M263.) Lecture, three hours. Prerequisites: courses 201A-201B, or Chemistry 153B, 153C, or 156, and 110A, or equivalent, or consent of instructor. Thermodynamic and kinetic aspects of metabolism; regulatory properties of enzymes; metabolic regulation; consideration of comparative aspects of metabolism in relation to physiological function. (Sp)

M264A-M264B-M264C. Molecular Basis of Atherosclerosis: Selected Topics (2 units each). (Same as Chemistry M264A-M264B-M264C.) Prerequisite: consent of instructor. Biochemistry, morphology, and physiology of atherosclerosis. Emphasis on chemistry of lipoproteins and role of plasma lipoproteins in regulation of tissue lipid metabolism and development of atherosclerosis. Each course may be taken independently for credit.

Mr. Edwards (F, M264A; W, M264B; Sp, M264C)

M266A-M266B-M266C. Seminars: Molecular Embryology (2 units each). (Same as Biology M266A-M266B-M266C.) Prerequisite: consent of instructor. Advanced course in developmental genetics and biochemistry, with emphasis on early development. Intended mostly for students actively working or highly interested in embryology. S/U grading.

Mr. De Robertis, Mr. Zipursky

M267. Macromolecular Metabolism and Subcellular Organization (6 units). (Same as Chemistry M267.) Lecture/discussion, five hours. Prerequisites: courses 201A-201B or Chemistry 153B and 153C, or equivalent, or consent of instructor. Recommended: course M253. Cell cycle DNA replication and repair; structure and properties of cellular organelles; regulation of cell division; cell transformation; normal and aberrant expression of oncogenes; molecular aspects of development. Mr. McEntee and the Staff (W)

M298. Seminar: Current Topics in Molecular Biology (2 units). (Same as Biology M298, Chemistry M298, Microbiology M298, Microbiology and Immunology M298, and Molecular Biology M298.) Prerequisite: consent of instructor and graduate adviser of interdepartmental Molecular Biology Ph.D. Program. Each student conducts or participates in discussions on assigned topics. May be repeated for credit. (F,W,Sp)

596. Directed Individual Study and Research (2 to 12 units). Hours to be arranged. Prerequisite: consent of instructor. S/U or letter grading.

597. Preparation for Examinations (2 to 4 units). Prerequisite: consent of graduate adviser. Individual study for Ph.D. qualifying examinations or M.S. comprehensive examination. S/U grading.

598. Preparation of M.S. Thesis. Prerequisite: consent of graduate adviser. Preparation of research data and writing of M.S. thesis. S/U grading.

599. Research for and Preparation of Ph.D. Dissertation (2 to 12 units). Prerequisite: consent of graduate adviser. Preparation of research data and writing of Ph.D. dissertation. S/U grading.

Biomathematics

AV-617 Center for the Health Sciences, (310) 825-5018

Professors

Abdelmonem A. Afifi, Ph.D.
Robert M. Elashoff, Ph.D.
H.K. Huang, D.Sc.
Donald J. Jenden, Ph.D. (h.c.), B.Sc., M.B., B.S.
Robert I. Jennrich, Ph.D.
Kenneth L. Lange, Ph.D., *Chair*
Roderick J.A. Little, Ph.D., *Vice Chair*
Carol M. Newton, M.D., Ph.D.
Michael E. Phelps, Ph.D.
Wilfrid J. Dixon, Ph.D., *Emeritus*
Frank J. Massey, Jr., Ph.D., *Emeritus*

Associate Professor

Elliot M. Landaw, M.D., Ph.D.

Assistant Professor

A. James Sneyd, Ph.D.

Lecturers

Jeffrey Gornbein, Ph.D.
Noel Wheeler, Ph.D.

Adjunct Professors

Edward C. DeLand, Ph.D.
Janet D. Elashoff, Ph.D.
Alan B. Forsythe, Ph.D.
Arthur Peskoff, Ph.D.

Adjunct Assistant Professors

Eli Engel, M.D., Ph.D.
Karim F. Hirji, Ph.D.

Scope and Objectives

As biology advances rapidly in quantitative research methods, both the need for and possibility of closely associated theoretical research increases. On numerous medical and medical science frontiers — such as genetics, molecular biology, oncology, pharmacology, neurosciences, and physiology — biomathematics is contributing both in its basic research and the development of specialized computer software to support investigation and health care. UCLA has one of the few departments in this relatively new, rapidly evolving field.

The Department of Biomathematics welcomes both undergraduate and graduate students in other majors to its courses in biomedical computing, modeling, and statistics. Premedical majors with mathematical/computer interests can receive early guidance toward an M.D./Ph.D. program in Biomathematics. The department is responsible for statistical and biomathematical training in the medical curriculum.

The department's orientation is away from abstract modeling and toward theoretical research vital to the advancement of current biomedical research frontiers. The doctoral program reflects this in requirements for advanced training in a biomedical research specialty and for the mathematical and computing skills required to contend realistically with complex phenomena encountered in biology and medicine. The art of biomathematical research is developed individually from the first year on. The master's program adapts to the various needs of researchers desiring supplemental biomathematical training, people preparing to provide methodological support to researchers in biology or medicine, or students pursuing a stepwise approach to graduate training in biomathematics.

Requirements for Graduate Degrees

Admission

High academic achievement in one scientific or mathematical field is required. It is not necessary to be proficient in both mathematics and biology, though some prior preparation in both fields is desirable. Both the General and Subject Tests of the Graduate Record Examination (GRE) should be taken. At least three letters of recommendation are required from faculty competent to evaluate your qualifica-

tions for pursuing graduate study and a creative research career; additional letters are welcomed and may be requested.

In addition to completing the UCLA Graduate Application Processing forms, you are required to complete a departmental application form, which should be sent directly to the department. All communications with the department, including requests for brochures and for the departmental forms, should be sent to the Chair, Graduate Admissions Committee, Department of Biomathematics, AV-617 CHS, UCLA, Los Angeles, CA 90024-1766.

You are admitted to either program after you have achieved admission to the Graduate Division and have been approved by the departmental graduate admissions committee.

Master of Science Degree

Course Requirements

You must complete five graduate-level courses in biomathematics, three of which must be selected from Biomathematics 201, 202, 203, 204. If you successfully completed any of the five courses as an undergraduate, you may petition the department to apply them toward this requirement of specific background in biomathematics, but in accord with Academic Senate regulations they cannot be applied toward the minimum requirements stated below for the master's degree.

A minimum of nine upper division and graduate courses (36 units) taken in graduate standing is required for the degree, at least five (20 units) of which must be at the graduate level. No more than two 596 courses may be applied toward the required nine courses, and none may be applied toward the graduate course requirement.

Thesis Plan

You generally are required to follow the comprehensive examination plan. Permission to undertake a thesis plan must be given by the departmental advisory committee, which must approve the thesis committee, as well as your plans for the thesis.

Comprehensive Examination Plan

A written comprehensive examination administered by a committee consisting of at least three faculty members appointed by the chair, with approval of the advisory committee, covers material presented in your coursework. This is usually the written comprehensive examination for the doctoral program given during the summer, but in exceptional cases a special committee and written examination are provided.

Ph.D. Degree

Major Fields or Subdisciplines

Each student completes the requirements for a field of special emphasis in biology. Presently approved fields of special emphasis for which

courses of study have been developed include genetics, immunology, molecular biology, neurosciences, pharmacology, and physiology. Others may be added in response to students' requests.

Course Requirements

The following courses are required:

Biomathematics — 201, 202, 203, 204, and eight units from 205, 206, 207, 208A, 209.

Mathematics — Five graduate courses with a grade-point average of 3.6 or better from an approved list, with two substitutions possible if especially appropriate to your research field. (Consent may be given by the advising committee to count prior graduate courses for full or partial completion of this requirement.)

Biology — Courses required for the field of major biological emphasis.

Independent Research — Each student is encouraged to take at least four units of Biomathematics 596 with a member of the Biomathematics Department each year prior to taking the written comprehensive examination. As you progress, there is increasing emphasis on research and encouragement to publish. Failure to advance in capacity for independent, creative research is a primary indication for recommended withdrawal from the program.

The following courses are recommended:

Mathematics — By individual study or coursework, you should have strength in differential equations, probability and statistics, and real and complex analysis. Offerings in the Department of Mathematics are especially recommended.

Statistics — Additional training in biostatistics is highly recommended (see offerings in the School of Public Health).

Computer Methods — You must be a facile programmer and acquainted with numerical methods needed for your area of research. The numerical analysis sequence in the Department of Mathematics and computing courses in biomathematics are suggested.

Biology and Biological Chemistry — A broad background is expected, from molecular to organ-system levels. This probably will be provided in requirements for the field of major biological emphasis; supplemental coursework will be advised, if needed.

Teaching Experience

One teaching preceptorship (Biomathematics 596) is required. You participate fully in the planning and delivery of one course in the Biomathematics Department. The emphasis is on your training in all aspects of preparing for and offering a course; this is not a service-oriented teaching assistantship.

Qualifying Examinations

In the summer, the department offers a written comprehensive examination to test your

competence in biomathematics. Full-time students must take this by the end of two academic years of study and part-time students by the end of three.

The qualifying examination in the field of major biological emphasis usually is the regular comprehensive examination for doctoral students in that field and is taken prior to the examination that advances them to candidacy. Students entering with a Ph.D. in a biological field are exempt from the above requirements. Students with an M.D. are exempt from the required coursework; exemption from the examination may be granted by the advising committee in consultation with advisers from the specialty area.

The University Oral Qualifying Examination, administered by the doctoral committee appointed by the dean of the Graduate Division, critically probes the quality, scope, and feasibility of your proposed dissertation work. It explores the integration and strength of biomathematical, mathematical, and biological expertise in your intended area of research. You advance to candidacy after passing this examination.

Final Oral Examination

A final oral examination is required of all candidates and is a defense of the dissertation, administered by the doctoral committee.

Upper Division Courses

106. Introduction to Cellular Modeling. Lecture, four hours; computer laboratory, two hours. Prerequisites: Mathematics 32A, some computer programming, consent of instructor (undergraduates). Designed for upper division science majors and biomedical graduate students. Introduction to modeling cells and cell systems, including intracellular biochemical networks, applications to cancer research. How to develop one's own computer models using IMSL mathematics subroutines. Ms. Newton (W)

108. Introduction to Modeling in Neurobiology. Lecture, four hours; computer laboratory, two hours. Prerequisites: Mathematics 32A, some computer programming, consent of instructor (undergraduates). Designed for upper division science majors and biomedical graduate students. Survey of wide variety of topics in neurobiological modeling, current neuronal modeling systems. Development of skills to formulate and program one's own studies using IMSL mathematics subroutines. P/NP or letter grading. Ms. Newton (Sp)

110. Elements of Biomathematics. Lecture, three hours; laboratory, three hours. Prerequisite: calculus. Analysis of deterministic models. Conditions under which deterministic and probabilistic descriptions of biological phenomena are appropriate. Both approaches are applied to selected examples in physiology and biology. Mr. Engel (F)

120A-120B. Computing and Informatics in Biology and Medicine (2 units each). Lecture, two hours; laboratory, one hour; self-instruction in computing, to be arranged. Prerequisite: consent of instructor. Biomedically oriented introduction (for students with heavy laboratory schedules) to basic computing concepts, use of widely available software on microcomputers and large computers, survey of biomedical applications/data bases, programming. P/NP or letter grading.

Mr. McCoy, Ms. Newton (F, 120A; W, 120B)

M153A-M153B. Introduction to Computational Statistics. (Same as Biostatistics M153A-M153B and Statistics M153A-M153B.) Lecture, three hours; discussion, one hour. Prerequisites: Mathematics 115A, Statistics 152B. Linear and nonlinear regression analysis using package programs. Emphasis on relation between statistical theory, numerical results, and analysis of data. **M153A.** BMDP, SAS, and SPSS regression programs; general linear model theory; linear regression analysis; transforming and weighting; regression diagnostics; model building. **M153B.** Analysis of variance and covariance; nonlinear regression programs, analysis, and applications; maximum likelihood analysis; robust regression.

Mr. Jennrich (F, M153A; W, M153B)

CM156. Human Genetics. (Same as Biology CM156.) Lecture, three hours; discussion, one hour. Prerequisites: Biology 100A, 108 or equivalent, Chemistry 153A, 153L. Application of genetic principles in human populations, with emphasis on cytogenetics, biochemical genetics, population genetics, and family studies. Lectures and readings in the literature, with focus on current questions in the fields of medical and human genetics and methodologies appropriate to answer such questions. Concurrently scheduled with course CM256.

Mr. Merriam

160. Introductory Biomathematics for Medical and Biological Research. Lecture, four hours; discussion, 90 minutes. Elementary statistics course that focuses on statistical concepts and critiques the literature, with emphasis on clinical research. Output from statistical computer packages discussed in class, but students do not use the computer themselves. Topics include descriptive statistics, t-tests, confidence intervals, linear regression and correlation, analysis of variance, nonparametric statistics, basic experimental design, sample size determination, article interpretation. (W)

170A. Computer-Based Introductory Biomathematics for Medical and Biological Experimenters. Lecture, four hours; discussion, 90 minutes. Intensive elementary statistics course emphasizing design of experiments and analysis of data using statistical packages. Statistical topics similar to course 160 — descriptive statistics, t-tests, confidence intervals, linear regression and correlation, analysis of variance, nonparametric statistics, basic experimental design, sample size determination — but students also show how to use the computer and run statistical software packages. Practical aspects of data collection and cleaning. (F)

170B. Statistical and Mathematical Modeling in Medical and Biological Research. Lecture, four hours; discussion, 90 minutes. Second course in biomathematical methods. Topics include randomization methods, intermediate experimental design, contingency table analysis, analysis of variance, multiple linear regression, nonlinear regression, methods of classification, model checking, basic mathematical models including compartment models, and statistical computer software. Students have opportunity to design their own experiments and analyze them on the computer, and to analyze previously collected data. (Sp)

172. Clinical Trials. Lecture, three hours; discussion, two hours. Prerequisite: Biostatistics 100C or 100D or Statistics 152B or equivalent. Topics include steps in bringing a possible therapy to clinical use; design of studies in animals to assess antitumor response; randomization, historical controls, p-values, size of study, stratification, and points; ethics of human experimentation; informed consent; three phases of human studies; indications for various types of controls, prognostic factors, survivorship studies, design of prognostic studies; organization of a clinical trial — administration, comparability, protocols, nursing and clinical standards, data collection and management. Mr. Elashoff (W)

190HA-190HB. Honors Research in Biomathematics. Prerequisites: upper division standing, consent of instructor and department chair. Individual research in some aspect of biomathematics designed to acquaint students in depth with mathematical models and computer applications in biology. Must be taken for at least two terms and for a total of at least eight units. Thesis required. (F,W,Sp)

199. Special Studies in Biomathematics (2 to 8 units). Prerequisites: upper division standing, consent of instructor. Special studies in biomathematics, including either reading assignments or laboratory work or both, designed for proper training of students. (F,W,Sp)

Graduate Courses

200. Research Frontiers in Biomathematics (2 units). Prerequisite: consent of instructor. Series of presentations by faculty members on research frontiers in biomathematics. S/U grading. (F, even years)

201. Deterministic Models in Biology. Prerequisite: knowledge of linear algebra and differential equations. Examination of conditions under which deterministic approaches can be employed and conditions where they may be expected to fail. Topics include compartmental analysis, enzyme kinetics, physiological control systems, and cellular/animal population models. Ms. Newton (F)

202. Fourier Analysis in Biology. Prerequisite: knowledge of calculus, linear algebra, and probability. Introduction to theory of Fourier transforms and Fourier series from point of view of generalized functions. Elementary applications to differential equations, quantum mechanics, image reconstruction, X-ray crystallography, branching processes, and time series. Brief review of computational techniques based on fast Fourier transform. Mr. Lange (W)

203. Stochastic Models in Biology. Prerequisite: Mathematics M150A or equivalent experience in probability. Mathematical description of biological relationships, with particular attention to areas where conditions for deterministic models are inadequate. Examples of stochastic models from genetics, physiology, ecology, and a variety of other biological and medical disciplines. Mr. Lange (Sp)

204. Biomedical Data Analysis. Prerequisite: consent of instructor. Quantity and quality of observations have been greatly affected by present-day extensive use of computers. Problem-oriented study of latest methods in statistical data analysis and use of such arising in laboratory and clinical research. Mr. Little (W)

205. Electric Potential Problems in Membranes, Cells, and Tissues. Prerequisite: knowledge of differential equations and electrostatics, or consent of instructor. Review of electrostatics; potential problems in rectangular, spherical, and cylindrical coordinates; modeling subthreshold electrical properties of cells; microelectrode measurements of intracellular potentials; boundary conditions for current flow across membranes; eigenfunction expansions and singular perturbation analysis of intracellular and extracellular potential distribution in spherical and cylindrical cells and syncytia; computation of potential barriers for ions traversing a membrane pore. Mr. Peskoff (Sp)

206. Cellular Modeling in Oncology. Lecture, four hours; computer laboratory, two hours. Prerequisites: ordinary, partial differential equations, and one computer programming course or consent of instructor. Stochastic, deterministic models of growth of cellular systems (tumor, immune, blood) and effects of therapy studied mathematically and by computer simulations. Survey of current literature to emphasize topics relevant to evolving tumors (e.g., heterogeneity, surveillance) and treatment optimization. S/U or letter grading. Ms. Newton (W)

207. Models in Genetics. (Formerly numbered 207A, 207B.) Lecture, three hours; discussion, one hour. Prerequisite: upper division probability and statistics; knowledge of basic genetics principles helpful. Topics include population genetics, genetic epidemiology, gene mapping, design of genetics experiments, DNA sequence analysis, and molecular phylogeny. Content varies from year to year. (F, odd years)

208A. Modeling in Neurobiology for Mathematicians. (Formerly numbered 208.) Lecture, four hours; laboratory, two hours. Prerequisites: introductory ordinary, partial differential equations, programming experience. Introduction to electrochemical bases for nerve function and mathematical and computational methods for studying this, appropriate for physicists, engineers, and mathematicians. Survey of current leading research areas and software systems. S/U or letter grading. Ms. Newton

208B. Modeling in Neurobiology for Biologists. (Formerly numbered 208.) Lecture, four hours; laboratory, two hours. Prerequisites: lower division calculus, some elementary programming experience. Introduction to neuronal modeling, including how to formulate models and study them with existing computer software (e.g., NODUS) or one's own simple programs that use IMSL subroutines. Survey of current leading research areas. S/U or letter grading. Ms. Newton

209. Problems in Fluid and Electrolyte Management (2 units). Prerequisites: biochemistry, physiology, FORTRAN equivalent. Principles of fluid and electrolyte balance and acid-base chemistry. Brief review of fluid and electrolyte metabolism and mechanisms of physiologic control, with reference to research literature. Development and demonstration of principles for management of acute imbalance, using computer-based patient simulation. Depending on each student's interests, special topics include analysis of patient data, design of parenteral and dialysate fluids, mathematical principles, patient simulation using on-line patient data, or analysis of physiologic mechanisms. Mr. DeLand (F)

220. Kinetic and Steady State Models in Pharmacology and Physiology. Recommended: knowledge of linear algebra, differential equations, and statistics. Designed for biologists and theoreticians. Modeling and data analysis in pharmacokinetics, enzyme kinetics, and endocrinology. Topics include compartmental and noncompartmental approaches, steady state analysis of transport and binding processes, and optimal experiment design. Mr. Landaw (Sp)

M230. Computed Tomography: Theory and Applications. (Same as Radiological Sciences M230.) Prerequisite: consent of instructor. Computed tomography is a three-dimensional imaging technique being widely used in radiology and is becoming an active research area in biomedicine. Basic principles of computed tomography (CT), various reconstruction algorithms, special characteristics of CT, physics in CT, and various biomedical applications. Mr. S.C. Huang (W)

M231. Statistical Methods for Categorical Data. (Same as Biostatistics M210.) Lecture, three hours; discussion, one hour. Prerequisites: Biostatistics 100B or 110B, Statistics 152C or equivalent. Statistical techniques for analysis of categorical data; discussion and illustration of their applications and limitations. Mr. Hirji (Sp)

M232. Statistical Analysis of Incomplete Data. (Same as Biostatistics M232.) Lecture, three hours; discussion, one hour. Prerequisites: Biostatistics 110C, Statistics 152C, or equivalent. Discussion of statistical analysis of incomplete data sets, with material from sample survey, econometric, biometric, psychometric, and general statistical literature. Topics include treatment of missing data in statistical packages, missing data in ANOVA and regression imputation, weighting, likelihood-based methods, and nonrandom nonresponse models. Emphasis on application of methods to applied problems, as well as on underlying theory. Mr. Little (Sp, odd years)

M234. Applied Bayesian Inference. (Same as Biostatistics M234.) Lecture, three hours; discussion, one hour. Prerequisites: Biostatistics 200C, M250A, Statistics 152C. Bayesian approach to statistical inference, with emphasis on biomedical applications and concepts rather than mathematical theory. Topics include large sample Bayes inference from likelihoods, noninformative and conjugate priors, empirical Bayes, Bayesian approaches to linear and nonlinear regression, model selection, Bayesian hypothesis testing, and numerical methods. S/U or letter grading. Mr. Little

CM256. Human Genetics. (Same as Biology CM256.) Lecture, three hours; discussion, one hour. Prerequisites: Biology 100A, 108 or equivalent, Chemistry 153A, 153L. Application of genetic principles in human populations, with emphasis on cytogenetics, biochemical genetics, population genetics, and family studies. Lectures and readings in the literature, with focus on current questions in the fields of medical and human genetics and methodologies appropriate to answer such questions. Concurrently scheduled with course CM156. Independent research project required of graduate students. Mr. Merriam (Sp)

M270. Optimal Parameter Estimation and Experiment Design for Biomedical Systems. (Same as Computer Science M296B and Medicine M270D.) Lecture, four hours; outside study, eight hours. Prerequisite: Computer Science M296A or consent of instructor. Estimation methodology and model parameter estimation algorithms for quantifying (fitting) dynamic system models to real-world data. Theory and algorithms for designing optimal experiments for developing and quantifying models, with special focus on data sampling schedule design. Exploration in PC laboratory of applications software for model building and optimal experiment design. Mr. Landaw

M280. Statistical Computing. (Same as Biostatistics M280 and Mathematics M280.) Lecture, three hours. Prerequisites: Mathematics 115A, Statistics 152C, or equivalent. Introduction to theory and design of statistical programs: computing methods for linear and nonlinear regression, dealing with constraints, robust estimation, and general maximum likelihood methods. Mr. Jennrich (F)

M281. Survival Analysis. (Same as Biostatistics M215.) Lecture, three hours; discussion, one hour. Prerequisites: Biostatistics 100C, Statistics 152C, or equivalent. Statistical methods for analysis of survival data. Mr. Elashoff (F)

596. Directed Individual Study or Research in Biomathematics (2 to 12 units). Individual study on topics not yet covered by offerings of department. May be repeated for credit with topic change. (F,W,Sp)

597. Preparation for M.S. or Ph.D. Comprehensive Examination or Ph.D. Qualifying Examinations (2 to 8 units). Prerequisite: consent of graduate adviser. Individual study. S/U grading. (F,W,Sp)

599. Research for and Preparation of Ph.D. Dissertation (2 to 12 units). Prerequisite: consent of instructor. S/U grading.

Medicine

37-120 Center for the Health Sciences, (310) 825-6275

Chairs

Alan M. Fogelman, M.D., *Senior Chair*
Robert K. Oye, M.D., *Vice Chair, Clinical Affairs*
Dennis J. Slamon, M.D., *Vice Chair, Finance*
Mary C. Territo, M.D., *Vice Chair, Academic Affairs*
Jan H. Tillisch, M.D., *Vice Chair, Education and Administration*

Scope and Objectives

The principal goal of the Department of Medicine is to educate students in the expert diagnosis and compassionate management of human illness. Building on the biochemical, physiological, and behavioral foundations of the preclinical experience, students are taught *information acquisition* through history taking, physical examination, and laboratory evaluation; *information synthesis* through achieving a differential diagnosis and evaluative plan; and *medical decision making* for continued evaluation and therapy. Students are encouraged and guided in developing a caring physician/patient relationship.

Instruction in the department is provided in the second, third, and fourth years of medical school, with the third and fourth years constituting a continuum of clinical experience. Students become integrated into a ward team and have significant ambulatory care experiences. They apply and extend their clinical skills, medical knowledge, and judgment in the care of patients assigned to them under the immediate supervision of house officers and attending staff.

The department offers a broad range of advanced clinical clerkships in general and subspecialty ambulatory and hospital-based internal medicine at all the major affiliated centers.

For further details on the Department of Medicine and a listing of the courses offered, see the *Announcement of the UCLA School of Medicine*.

Upper Division Course

199. Special Studies (2 to 8 units). Prerequisite: consent of instructor. Individual projects carried out under direction of a faculty member. Special studies in medicine with appropriate objectives, readings, laboratory work, or other assignments designed for proper training of students. P/NP or letter grading.

Microbiology and Immunology

43-204 Center for the Health Sciences, (310) 206-5148

Professors

Benjamin Bonavida, Ph.D. (*Immunology*)
Irvin S.Y. Chen, Ph.D. (*Virology*)
Asim Dasgupta, Ph.D. (*Virology*), *Vice Chair for Academic Affairs*
John L. Fahey, M.D. (*Immunology*)
Sydney M. Finegold, M.D., *in Residence* (*Bacteriology*)
Sidney H. Golub, Ph.D. (*Immunology*)
Marcus A. Horwitz, M.D. (*Bacteriology*)
Dexter H. Howard, Ph.D. (*Mycology*)
Michael Lovett, M.D., Ph.D. (*Bacteriology*)
Debi P. Nayak, B.V.Sc., Ph.D. (*Virology*)

Jack G. Stevens, D.V.M., Ph.D. (*Virology*); *M. Philip Davis Professor of Microbiology and Immunology*), *Chair*
Jerrold A. Turner, M.D. (*Parasitology*)
Randolph Wall, Ph.D. (*Immunology*)
Felix O. Wettstein, Ph.D. (*Virology*), *Vice Chair for Administration*

Professors Emeriti

Ruth A. Boak, M.D., Ph.D.
David McVickar, M.D., Ph.D.
James N. Miller, Ph.D. (*Distinguished Teaching Award*)
Margret I. Sellers, Ph.D. (*Distinguished Teaching Award*)
Henry E. Weimer, Ph.D.
Telford H. Work, M.D., M.P.H., D.T.M.&H.
Stephen Zamenhof, Ph.D.

Associate Professors

Rafi Ahmed, Ph.D. (*Virology*)
Lawrence T. Feldman, Ph.D. (*Virology*)
Ronald H. Stevens, Ph.D. (*Immunology*)

Assistant Professors

David A. Campbell, Ph.D. (*Parasitology*)
Patricia J. Johnson, Ph.D. (*Parasitology*)
Mitchell Kronenberg, Ph.D. (*Immunology*)
Otoniel Martinez-Maza, Ph.D. (*Immunology*)
Jeffery F. Miller, Ph.D. (*Bacteriology*)
Robert L. Modlin, M.D. (*Immunology*)
Olaf Schneewind, M.D. (*Bacteriology*)
Stephen T. Smale, Ph.D. (*Immunology*)

Lecturers

Margery L. Cook, Ph.D. (*Virology*)
Maurice L. White, Ph.D. (*Bacteriology*)

Adjunct Assistant Professor

Betty Wu-Hsieh, Ph.D. (*Immunology/Mycology*)

Scope and Objectives

The desire to explain natural phenomena, including disease, is the basis for most students' interest in biological sciences. The Microbiology and Immunology Department in the UCLA School of Medicine is disease oriented. The emphasis is on pathogenesis of infection, malignancy, and immunological response of the host to these changes of immunological dysfunction. All tools available from molecular biology to morphological methods are applied to these problems.

Microbiology and immunology are interwoven disciplines. Microbiology has played a central role in all aspects of biological sciences, including morphogenesis, genetics, developmental biology, physiology, biochemistry, and cell biology. An understanding of microbiology is thus fundamental to biological research. Immunology, once a branch of microbiology, is now a major biological discipline and a basic component of disease-oriented microbiology.

The graduate program in microbiology and immunology is closely associated with advanced (postdoctoral) training in research, clinical and public health diagnostic work, and industrial applications. Careers in microbiology and immunology include industrial appointments and clinical laboratory supervision in both government agencies and private enterprises, and academic positions.

Master of Science Degree

The department does not accept students whose sole objective is a master's degree.

Ph.D. Degree

Admission

In addition to the University minimum requirements, the following items are required:

- (1) A bachelor's degree with a major in either the biological or physical sciences.
- (2) At least a B+ in chemistry, physics, and mathematics; at least a B average in biology (upper division and prior graduate study).
- (3) Three favorable letters of recommendation.
- (4) Graduate Record Examination (GRE) General Test and Subject Test in Biology.
- (5) Acceptable statement of purpose.
- (6) An interview with members of the department graduate student committee when indicated.

For departmental brochures and/or application forms, write to the Graduate Student Office, Department of Microbiology and Immunology, 43-239 CHS, UCLA, Los Angeles, CA 90024-1747.

Major Fields or Subdisciplines

You are expected to be competent in both microbiology and immunology. However, you must do your thesis work in one of the following divisions: immunology, medical microbiology, or virology.

Foreign Language Requirement

There is no foreign language requirement for the degree.

Course Requirements

- (1) Microbiology and Immunology 208, M226A-M226B, M285B are required and must be completed during your first year of study.
- (2) Course 596 is required. You complete at least two laboratory rotations during your first year of study.
- (3) Chemistry and Biochemistry M253 and two courses in molecular biology (Microbiology and Immunology 250, 264) are required.
- (4) Additional course requirements are determined by your major field and your preceptor.

Teaching Experience

Teaching experience is encouraged but not required.

Qualifying Examinations

The departmental written qualifying examination is to be taken at the end of your first year of graduate study. The examination consists of written tests in all three areas of study (immunology, microbiology, and virology). You select

one area as your major and the other two as your minor areas. The examination in microbiology (major or minor) covers the fields of bacteriology, and either mycology or parasitology. The examinations require factual knowledge, the ability to analyze experimental work, and the capacity to design problem-solving experiments and are graded on a pass/fail basis. Each examination may be repeated once if not passed. The makeup examination is administered no earlier than three months and no later than six months after the failure, unless specified remedial work requires a longer period for proper preparation.

You must complete the University Oral Qualifying Examination within three years (nine terms) after entering the program. Advancement to candidacy is awarded after successful completion of this examination. If inadequacies are encountered, you may be required to repeat the examination.

The topic of your research proposal must be in a different area and use a different approach from that of your thesis project and research, but within the fields of interest in the department. You must be able to explain the research and results and demonstrate general knowledge of microbiology and immunology.

Dissertation/Final Oral Examination

The details of the dissertation requirement are supervised by your professor and doctoral committee. The dissertation must demonstrate an original and independent contribution to scientific knowledge acceptable for publication in a major scientific journal and be presented in the University-required format.

The final oral examination is optional with the doctoral committee. However, you are required to present a special seminar based on your dissertation.

Upper Division Courses

M185A. Fundamentals of Immunology. (Formerly numbered CM185.) (Same as Biology M185A and Microbiology M185A.) Lecture, three hours; discussion, one hour. Prerequisite: Biology 108 or equivalent. Recommended prerequisites or corequisites: Biology 100A, 100B, Chemistry 153A, 153L. Introduction to experimental immunobiology and immunology; cellular and molecular aspects of humoral and cell immune reactions.

Mr. Clark, Mr. Sercarz (F)

199. Directed Individual Research Studies in Microbiology and Immunology (2 to 8 units). Prerequisites: senior standing, consent of instructor (based on written research proposal). Individual research projects carried out under direction of a professor. (F,W,Sp)

Graduate Courses

Undergraduates may enroll in some graduate courses with consent of instructor.

201. Microbiology and Immunology (8 units). Lecture/laboratory. Limited to medical students. Study of infectious agents of human disease, with emphasis on host/parasite relationships and immunologic phenomena in immunity and disease, including identification of bacteria, fungi, animal parasites, and viruses, and principles of prevention, treatment, and laboratory diagnosis. (F)

202A. Fundamentals of Immunology (2 units). Prerequisite: consent of instructor. Introduction to experimental immunobiology and immunochemistry; cellular and molecular aspects of humoral and cell-mediated immune functions. (F)

202B. Medical Bacteriology (2 units). Prerequisite: consent of instructor. Characteristics of bacteria rickettsiae and chlamydiae associated with diseases of humans; host/parasite interactions and immunity; identification and laboratory diagnosis; principles of prevention and treatment; introduction to microbial genetics as it pertains to pathogenicity. (F)

202C. Medical Virology (2 units). Prerequisite: consent of instructor. Biological properties of animal viruses; replication; methods of detection; interactions with host cells and multicellular hosts, introduction to tumor viruses. (F)

202D. Medical Mycology and Parasitology (2 units). Prerequisite: consent of instructor. Morphology, physiology, and pathogenicity of fungi which cause human and animal diseases. Study of morphology, biology, host/parasite relationship, public health problems, and control of protozoa, helminths, and arthropods parasitic in and on humans and animals. (F)

208. Molecular Biology of Animal Viruses. Lecture, three hours. Prerequisites: courses in general biochemistry and general microbiology, including virology (consent of instructor may be obtained in special cases). Recommended for advanced undergraduate students with a major in public health, biology, or microbiology and for graduate students with interest in any field of biology or chemistry. Overview of animal viruses, including viral structure, virus cell interaction, virus replication, and viral oncogenesis. Special emphasis on understanding the molecular mechanism involved in control and regulation of replication, transcription, and translation of viral genome and its complex interaction with host. Mr. Nayak (Sp)

210. Medical Mycology (3 units). Lecture, four hours. Prerequisite: consent of instructor. Study of morphology, physiology, and pathogenicity of fungi causing human and animal diseases. Mr. Howard (Sp)

210L. Medical Mycology (2 units). Laboratory, four hours. Prerequisite: consent of instructor. Required of undergraduate students. Laboratory application of principles discussed in course 210. Mr. Howard (Sp)

M215. Interdepartmental Course: Tropical Medicine (2 units). (Same as Medicine M215, Pathology M215, and Pediatrics M215.) Lecture, two and one-half hours. Prerequisites: basic courses in microbiology and parasitology of infectious diseases in School of Medicine or Public Health. Study of current knowledge about diseases prevalent in tropical areas of the world. Major emphasis on infectious diseases, with coverage of problems in nutrition and exotic noninfectious diseases. Syllabus supplements topics covered in classroom. S/U grading. Mr. Turner (Sp, alternate years)

M223. Membrane Research Seminar (2 units). (Same as Microbiology M223.) Prerequisite: consent of instructor. Critical discussions of current literature in membrane research, with emphasis on relationship between structure and function in lipid bilayers. May be repeated for credit. Ms. Wisnieski

M226A-M226B. Principles of Microbial Pathogenesis. (Same as Biology M226A-M226B and Microbiology M226A-M226B.) Lecture, one hour; discussion, three hours. Prerequisites: courses 202A, 202B, 202C, and 202D, or equivalent, or consent of instructor. Lecture/discussion format designed to analyze basic pathogenesis of infections. Emphasis on molecular and cellular approaches to understand host-microbial interaction. **M226A.** Bacterial and Mycotic Infections; **M226B.** Parasitic and Viral Infections.

Mr. Johnson (Sp, M226B), Mr. Miller (W, M226A)

M233. Principles, Practices, and Policies in Biotechnology (2 units). (Same as Biological Chemistry M233, Biology M233, Chemical Engineering M233, Chemistry M233, Microbiology M233, and Radiological Sciences M233.) Prerequisite: graduate standing or consent of instructor. Presentation of technologies, regulatory practices, and policies required for product development and review of current opportunities for new technology development. Topics include fermentation processes, pilot and large-scale bioprocess technologies, scaleup strategies, industrial recombinant DNA processes, hybridomas, protein engineering, peptide mimetics and rational drug design, medical and microscopic imaging, and intellectual property issues. S/U or letter grading.

Mr. Fox, Ms. Morrison

250. Cell and Molecular Biology. Lectures and student seminar presentations. Review of selected current topics in molecular and cellular biology. Topics include recent experimental results on organization, expression, and regulation of genes in eukaryotic cells. S/U or letter grading. (W)

251. Selected Topics on History of Microbiology (2 units). Lecture, one hour; discussion, one hour. Consideration of history of infectious diseases, their host/parasite relationships, etiology, pathogenesis, epidemiology, diagnosis, and immunity. S/U or letter grading. Mr. Howard (W)

M252. Seminar: Microbial Pathogenesis (2 units). (Same as Microbiology M252.) Prerequisite: consent of instructor. Limited to 10 students. Student presentations and critical discussion of current literature on various aspects of microbial pathogenesis. May be repeated for credit. S/U or letter grading.

Mr. Miller, Ms. Miller

M256. Seminar: Viral Oncology (2 units). (Same as Pathology M256.) Advanced research seminar designed to consider current developments in the field. Selection of current subjects and publications dealing with tumor viruses, oncogenesis, development, and cellular regulation. Mr. Baluda

M258A. Molecular Genetic Mechanisms of Immune Response (2 units). (Same as Biology M258A and Microbiology M258A.) Lecture, two hours; discussion, two hours. Prerequisite: course 202A or M285B or Biology CM185B or consent of instructor. Reading and discussion of current research articles on immunoglobulin I and II, oncogenes of immune system, T cell antigen receptor, and loci affecting differentiation. S/U or letter grading. Mr. Kronenberg, Mr. Wall (W, five weeks)

M258B. Biology of B Cells: Development, Repertoire, and Activation (2 units). (Same as Biology M258B and Microbiology M258B.) Lecture, two hours; discussion, two hours. Prerequisite: course 202A or M285B or Biology CM185B or consent of instructor. Reading and discussion of current research articles on B cell development, repertoire, and growth and differentiative regulation. S/U or letter grading. Mr. Braun, Mr. Stevens (W, five weeks)

M258C. T Cells and the MHC (2 units). (Same as Biology M258C and Microbiology M258C.) Lecture, two hours; discussion, two hours. Prerequisite: course 202A or M285B or Biology CM185B or consent of instructor. Reading and discussion of current research articles on structure of human and murine MHC chromosomal regions and genes, T cell recognition of mite products and foreign antigens, MHC polymorphism, MHC-like systems, MHC-linked genes, MHC and disease, and nonimmune function of MHC. S/U or letter grading.

Mr. Bonavida, Mr. Clark (Sp, five weeks)

M258D. Molecular Interactions in Immune Responses (2 units). (Formerly numbered M258F.) (Same as Biology M258D and Microbiology M258D.) Lecture, two hours; discussion, two hours. Prerequisite: course 202A or M285B or Biology CM185B or consent of instructor. Reading and discussion of current research articles on immunochemistry of antibodies, antigens, and complement, antigenic recognition, antibody restriction. S/U or letter grading.

Ms. Morrison (F, five weeks)

M258E. Immunopathology: Immunology of Disease (2 units). (Formerly numbered M258D.) (Same as Biology M258E and Microbiology M258E.) Lecture, two hours; discussion, two hours. Prerequisite: course 202A or M285B or Biology CM185B or consent of instructor. Reading and discussion of current research articles on tolerance and autoimmunity, autoimmune disease models, immune complex disease, immediate hypersensitivity and its cellular basis, and natural and acquired immune deficiency disease. S/U or letter grading.

Mr. Porter (Sp, five weeks, alternate years)

M258F. Immune Regulation (2 units). (Formerly numbered M258E.) (Same as Biology M258F and Microbiology M258F.) Lecture, two hours; discussion, two hours. Prerequisite: course 202A or M285B or Biology CM185B or consent of instructor. Reading and discussion of current research articles on idotype networks, suppressor T cells, tolerance at T and B cell levels, and Ir gene control. S/U or letter grading.

Mr. Sercarz (F, five weeks)

M260. Immunology Forum (2 units). (Same as Microbiology M260.) Prerequisite: course M185A. Broad range of current topics in immunology presented and discussed at advanced frontier level. Continuing UCLA-wide, general graduate-level seminar involving faculty, postdoctoral immunologists, and graduate students from diverse departments. S/U grading.

Mr. Kronenberg (F,W,Sp)

M262A. Seminar: Current Topics in Immunobiology of Cancer (2 units). (Formerly numbered 262.) (Same as Biology M293A and Microbiology M262A.) Prerequisite: consent of instructor. Review of recent literature in immunology, biology, and biochemistry of cancer, with emphasis on fundamental studies involving cell-mediated immunity, humoral response, tumor specific antigens, and new techniques. Discussion of reports on scientific meetings. May be repeated for credit. S/U grading. Mr. Bonavida (F,W,Sp)

M262B. Immunology of AIDS (2 units). (Same as Biology M293B, Epidemiology M214, and Microbiology M262B.) Lecture, one hour; discussion, one hour. Prerequisites: courses 202A, 202B, 202C, 202D, M258B, M258C, or equivalent, consent of instructor. Lecture and student discussion of assigned publications. Topics include specific anti-HIV immune responses, activation of immune system by HIV, and basic mechanisms that underlie HIV-induced immunodeficiency. S/U or letter grading.

Mr. Bonavida, Ms. Giorgi (W)

M262C. Biological Individuality and Immunity (2 units). (Formerly numbered 254.) (Same as Biology M293C and Microbiology M262C.) Prerequisite: course M258C. Review of current literature in the field of immunogenetics, with emphasis on fundamental studies involving genetic and immunologic principles and techniques. Selected topics discussed and results interpreted; conclusions and experimental methods evaluated. (Sp, alternate years)

M262D. Selected Topics in Immunology (2 units). (Same as Biology M293D and Microbiology M262D.) Prerequisite: consent of instructor. Student participation in discussions related to various topics in immunology. May be repeated for credit. S/U or letter grading. (F,W,Sp)

M263. Molecular and Cellular Immunology Seminar (2 units). (Same as Microbiology M263.) Prerequisite: consent of instructor. Critical discussions of current literature in T and B cell immunology, with emphasis on molecular mechanisms.

Mr. Kronenberg, Mr. Sercarz (F,W,Sp)

264. Molecular Microbiology and Cell Biology (2 units). Prerequisite: consent of instructor. Discussion of selected current topics related to microbiology and cell biology, with special emphasis on understanding of basic phenomena at the molecular level. S/U grading. (F)

270. Immunology in Disease (2 units). Lecture, one hour; discussion, one hour. Prerequisite: basic immunology. Introduction to role of immune processes in disease for students with prior knowledge of basic immunology. Topics include immunodeficiency, immediate hypersensitivity reactions, autoimmune disease, and immune complex-mediated diseases, together with transplantation immunology, tumor immunology (re role of immunity in infection). Students prepare a 20- to 30-minute presentation on a selected topic. Mr. Fahey (W, alternate years)

274. Interactions of Immune System and Nervous System (2 units). Lecture, one hour; discussion, one hour. Prerequisites: graduate or postdoctoral standing in immunology, behavioral sciences, or neurosciences, consent of instructor. Limited to 10 students. Study of existing knowledge of interrelationships between central and peripheral nervous system and immune system. Review of research on CNS effects on immune function and vice versa, as well as human and animal studies linking stress to immune changes.

Mr. Fahey, Ms. Kemeny

M275. Biology of HIV (2 units). (Formerly numbered 275.) (Same as Epidemiology M228.) Prerequisites: Biostatistics 100A and Epidemiology 100 or equivalent, two biology courses, consent of instructor. Overview of virologic and immunologic aspects of HIV disease for epidemiology or other health disciplines. Brief discussion of clinical manifestations and biosafety in the laboratory. S/U or letter grading. Ms. Giorgi (Sp)

M285B. Immunology. (Same as Biology CM285B and Microbiology CM285B.) Lecture, three hours; discussion, two hours. Prerequisite: course M185A or equivalent. Suitable for undergraduate students with a grade of C or better in course M185A or equivalent, or for graduate students. Advanced treatment of major issues in contemporary immunology, using analysis of experiments as basis for discussion.

Mr. Aguilera, Mr. Kronenberg, Mr. Sercarz (W)

M293. Major Concepts in Oncology. (Same as Oral Biology M293 and Pathology M293.) Lecture, three hours. Prerequisite: graduate standing or consent of instructor. Designed for graduate students contemplating research in oncology. Topics include cancer pathophysiology, genetics, membranes, macromolecular synthesis and control, cell cycle, growth control; physical, chemical, and viral oncogenesis, epidemiology of cancer; tumor immunology; principles of cancer surgery, radiation therapy, and chemotherapy. S/U or letter grading. Mr. Hankinson (W)

M298. Seminar: Current Topics in Molecular Biology (2 units). (Same as Biological Chemistry M298, Biology M298, Chemistry M298, Microbiology M298 and Molecular Biology M298.) Prerequisite: consent of instructor and graduate adviser of interdepartmental Molecular Biology Ph.D. Program. Each student conducts or participates in discussions on assigned topics. May be repeated for credit. (F,W,Sp)

596. Directed Individual Study or Research (2 to 8 units). Laboratory, to be arranged. Prerequisite: consent of graduate adviser. S/U grading.

597. Preparation for Ph.D. Qualifying Examinations (2 to 6 units).

599. Research for and Preparation of Ph.D. Dissertation (2 to 12 units). Research on an original problem in the field of microbiology and immunology to be selected by graduate student with advice of adviser. Fields of study may be in bacteriology, immunology, mycology, parasitology, virology, tumor biology, or cell biology.

Molecular Biology (Interdepartmental)

The Ph.D. degree program in Molecular Biology draws its staff members from participating departments in the health and life sciences and from the Molecular Biology Institute. For details on this interdisciplinary program, see Chapter 5 on the College of Letters and Science.

Neurology

C-128 Reed Neurological Research Center, (310) 206-6584

Chair

Robert C. Collins, M.D.

Vice Chairs

John C. Mazziotta, M.D., Ph.D.
Mark A. Goldberg, M.D., Ph.D., in Residence
(Harbor-UCLA)
Wallace W. Tourtellotte, M.D., Ph.D., in Residence
(Wadsworth VA)
Claude G. Wasterlain, M.D., in Residence
(Sepulveda VA)

Scope and Objectives

Neurology is the medical science dealing with the normal and diseased nervous system. Neurological disorders are often associated with significant disability, morbidity, and mortality. Their higher incidence in association with greater longevity of the population, increased awareness, improved diagnostic methods, and other factors place neurological disorders among the major medical problems today. The Department of Neurology and the Reed Neurological Research Center provide means for a coordinated basic science and clinical research approach to neurological disorders, patient care, and neurological education.

The department instructs medical students throughout the four years. Emphasis in the first year is on basic aspects of neuroanatomy, chemistry, and physiology; in the second year, neurological history taking and neurological examination of afflicted patients are stressed. The third year consists of a clerkship, and the fourth year provides electives in neurology, including an advanced clinical clerkship.

For further details on the Department of Neurology and a listing of the courses offered, see the *Announcement of the UCLA School of Medicine*.

Upper Division Course

199. Special Studies (2 to 8 units). Discussion, one to two hours; laboratory, four to six hours. Prerequisite: consent of instructor. Individual projects carried out under direction of a faculty member. Special studies in neurology, with appropriate objectives, readings, laboratory work, or other assignments designed for proper training of students.

Neuroscience (Interdepartmental)

Catia Sternini, M.D. (Medicine)

Associate Researcher

Dennis J. McGinty, Ph.D. (Anatomy and Cell Biology)

Scope and Objectives

The goal of the interdepartmental program is to educate students for careers in neuroscience research and teaching. Students completing this program should be able to address both traditional and novel problems in neuroscience, armed with contemporary concepts and techniques. The program recognizes that neuroscience studies the structure and organization of nervous systems; intercellular and intracellular communication, including the cellular

and molecular basis of neurotransmitter production and reception; development, including the molecular and cellular basis of trophic interactions; behavior; cognition; and the neurobiological and molecular bases of neurological and neuropsychiatric disorders.

Ph.D. Degree

Admission

All applicants must satisfy the University minimum requirements. In addition, Graduate Record Examination (GRE) scores are required. Recommended preparation includes mathematics through calculus and courses in general chemistry, organic chemistry, biochemistry, physics, basic biology, and physiology. Three letters of recommendation are required.

Information regarding the program may be obtained by writing to the Neuroscience Office, 73-360 CHS, UCLA, Los Angeles, CA 90024-1761.

Major Fields or Subdisciplines

Molecular neuroscience, cellular neuroscience, systems neuroscience, behavioral neuroscience, clinical neuroscience.

Course Requirements

Basic course requirements include Neuroscience M201, M202, M203, M204, M205, 210A-210B-210C, 211A-211B-211C, one biostatistics course, and three additional advanced neuroscience courses. Each first-year student must also obtain research experience in the laboratories of at least two Neuroscience faculty members.

Teaching Experience

Teaching experience is required for the degree and is available through teaching assistantships or other means.

Qualifying Examinations

A written qualifying examination is required following completion of the core requirements. The objective of this examination is to test your basic knowledge and ability to relate knowledge in different neuroscience areas. After passing the written qualifying examination, you and your adviser select your doctoral committee to administer the University Oral Qualifying Examination.

When you have passed the oral examination, you are advanced to candidacy and may begin work on the dissertation.

Final Oral Examination

The final oral examination is required.

Graduate Courses

M201. Neuroanatomy: Structure and Function of Nervous System. (Same as Anatomy M202.) Lecture, three hours; laboratory, three hours. Prerequisites: Biology 166 or 171 or equivalent, consent of instructor. Anatomy of central and peripheral nervous system at the cellular histological and regional systems level. Emphasis on contemporary experimental approaches to morphological study of nervous system in discussions of circuitry and neurochemical anatomy of major brain regions. Consideration of representative vertebrate and invertebrate nervous systems. Mr. Scheibel (F)

M202. Cellular Neurophysiology. (Formerly numbered 202.) (Same as Physiological Science M202.) Lecture, three hours; discussion, one hour. Prerequisites: Biology 166 or 171 or equivalent, Physiological Science 111A or M180A or Physics 6B or equivalent. Advanced course in cellular physiology of neurons. Action and membrane potentials, channels and channel blockers, gates, ion pumps and neuronal homeostasis, synaptic receptors, drug-receptor interactions, transmitter release, modulation by second messengers, and sensory transduction. Mr. Fain (F)

M203. Molecular Neurobiology. (Same as Psychiatry M203.) Lecture, three hours; discussion, one hour. Prerequisites: Biological Chemistry 201A-201B or equivalent, basic biochemistry, consent of instructor. Introduction to neurochemistry for neuroscience students. Topics include protein structure and function, lipid structure and metabolism, nucleic acids/molecular biology. Mr. Campagnoni

M204. Cellular and Molecular Developmental Neurobiology. (Same as Anatomy M204, Biology M280, Physiology M204, and Psychiatry M204.) Lecture, three hours; discussion, one hour. Prerequisites: courses M201, M202, and M203, or Biological Chemistry 201A-201B, or consent of instructor. Cellular and molecular processes that regulate development of nervous systems of vertebrates and invertebrates. Topics include regional specification in early neurogenesis, generation of neuronal diversity, cell surface interactions and growth factors, neuronal and glial proliferation and migration, axonal outgrowth and guidance, synaptogenesis, trophic interaction, plasticity, regeneration, and aging. Mr. de Vellis, Ms. Macklin, Mr. Zipursky (W)

M205. Behavioral and Systems Neuroscience. (Same as Physiological Science M205 and Psychology M205Z.) Lecture, three hours. Prerequisites: courses M201, M202, M203, and M204, or consent of instructor. Introduction to fundamentals of behavioral and systems neuroscience, with emphasis on role of behavioral analysis in understanding the functioning of nervous system and identifying anatomical circuits, cell physiological processes, and molecular mechanisms that mediate behaviorally defined functions. Mr. Gallistel

210A-210B-210C. Introduction to Current Literature in Neuroscience (2 units each). Critical discussion of current research literature related to topics of the five core courses in neuroscience graduate curriculum. S/U grading. **210A.** Corequisites: courses M201, M202, M203. **210B.** Corequisite: course M204. **210C.** Corequisite: course M205.

211A-211B-211C. Evaluation of Research Literature in Neuroscience (2 units each). Prerequisites: courses M201, M202, M203, M204, and M205, or consent of instructor. Advanced critical analysis of current research in neuroscience. S/U grading.

215. Seminar: Neuroscience (2 units). (Formerly numbered 233.) Topics of current importance presented for discussion. S/U grading.

M220A-M220B. Structural Neurobiology. (Same as Anatomy M220A-M220B.) Lecture, two hours; interactive teaching based on assigned journal articles, one hour. Prerequisite: course M201. S/U or letter grading. **M220A.** Fine structure of nervous system elements and methods of molecular analysis. **M220B.** Advanced topics dealing with integrating structure at systems level. Mr. Kruger and the Staff (W,Sp)

M240. Cellular and Molecular Neurochemistry. (Formerly numbered M221A.) (Same as Anatomy M221, Biological Chemistry M221, Pharmacology M221, and Psychiatry M221.) Lecture, three hours; discussion, one hour. Prerequisite: biochemistry. Contemporary neurochemistry topics — metabolic specialization and compartments, metabolism and function of ion channels, structure and function of neurotransmitters. Inborn errors and molecular genetics, molecular imaging, aging, and regeneration. Receptor effector coupling. S/U or letter grading. Mr. de Vellis, Mr. Olsen (W)

M246. Neuroactive Peptides: Molecular Biology to Function (2 units). (Formerly numbered M235.) (Same as Anatomy M235 and Medicine M235.) Prerequisite: consent of instructor. Presentation of current knowledge of gut and brain peptides by surveying their chemistry, anatomy, and physiology. Experimental approaches used to study biologically active peptides. Review of current information about each of the major gut and brain peptides. S/U or letter grading. Mr. Brecha, Ms. Sternini

M247. Neural Control of Cardiopulmonary Function. (Same as Physiological Science M247.) Lecture, two hours; discussion, two hours. Prerequisites: Physiological Science 111A, 111B or 133 or 142 or M180A, M180B or equivalent. Cardiorespiratory homeostasis is accomplished via central nervous system (CNS) control of respiratory and circulatory pumping systems. Focus on CNS mechanisms underlying (1) generation of respiratory rhythm, sympathetic and parasympathetic tone, (2) determination of patterns of motor outflow, and (3) responses to changes in behavioral state or afferent signals. Emphasis on critical reading of literature. Mr. Feldman

254. Interdisciplinary Research Seminar (2 units). Lectures and discussions on many different disciplinary approaches to knowledge of brain function in order to broaden experience of students studying in fields other than that of lecturer; new information in depth from students in fields closely related to subject discussed. S/U grading.

M255. Functional Organization of Behavior (2 units). (Formerly numbered M201A-M201B-M201C.) (Same as Psychiatry M255.) Prerequisite: consent of instructor. Changes in neuronal properties supporting changes in learned behavior. Different types of learning. Role of neurotransmitters and second messengers in changing ion channels of neurons to support associative learning versus long-term potentiation of neurotransmission. S/U or letter grading. Mr. Woody

257. Structure and Function of Limbic System (2 units). (Formerly numbered M204.) Prerequisite: consent of instructor. Current knowledge of mammalian limbic system presented by surveying studies of its developmental anatomy, intrinsic synaptic organization, synaptic chemistry, afferent and efferent circuits, and dysfunctions in memory and cognition association with limbic system function. S/U or letter grading. Mr. Babb

M258. Functional Neuropsychology (2 units). (Formerly numbered M216.) (Same as Psychiatry M258.) Lecture, two hours; discussion, one hour. Prerequisites: graduate standing, consent of instructor. Interdisciplinary course integrating current research publications in neuroanatomy, molecular neurobiology, synaptic neurophysiology, event-related potentials, neuropsychology of amnesia, and cognitive psychology of normal memory into a realistic model. S/U or letter grading. Mr. Scheibel

M259. Neurobiology of Sleep (3 units). (Formerly numbered M217.) (Same as Psychiatry M249 and Psychology M296.) Lecture, one hour; discussion, two hours. Critical review of primary research publications concerning neural basis of sleep. Discussion of neural and biochemical control of REM and NREM sleep after reviewing sleep behavior and phenomenology, including developmental and comparative aspects. Presentation of relevant clinical phenomena. S/U or letter grading.

Mr. McGinty, Mr. Siegel

M260. Neuromuscular Factors in Movement Regulation. (Same as Physiological Science M260.) Prerequisite: Physiological Science 138 or consent of instructor. Interaction of neural and muscular factors in regulation of muscle fiber properties and importance of these properties in neural strategies of movement regulation. S/U or letter grading.

Mr. Edgerton

M261. Neuronal Circuit Analysis (2 units). (Same as Anatomy M261.) Lecture, two hours; discussion, one hour. Prerequisite: consent of instructor. Seminar with strong emphasis on specific reading assignments. Integrated view of neuronal circuit analysis at advanced level; layout and performance of a variety of networks serving cognitive or motor functions.

Mr. Schlag (W)

M262. Neural Systems for Motor Control. (Formerly numbered M240.) (Same as Physiological Science M240.) Prerequisite: Physiological Science C143 or consent of instructor. Advanced topics on neural mechanisms related to control of posture, locomotion, and highly skilled arm and hand movements. Emphasis on role of movement-dependent feedback at spinal segments and within sensorimotor areas of cerebral cortex, with respect to modification of motor output.

Ms. Smith

M263. Neuronal Mechanisms Controlling Rhythmic Movements. (Formerly numbered M243.) (Same as Physiological Science M263.) Prerequisite: Physiological Science 145 or consent of instructor. Advanced topics on brainstem mechanisms responsible for controlling cyclic and stereotypic movements such as mastication and locomotion. Emphasis on cellular neurophysiology and interaction between neuronal networks. Introduction to primary literature and techniques used in these areas. Students expected to critically evaluate data and conclusions drawn.

Mr. Chandler

M265A-M265B-M265C. Seminars: Neural Control of Movement (2 to 4 units each). (Same as Physiological Science M294A-M294B-M294C.) Prerequisite: course M247 or M262 or M263 or consent of instructor. Selected topics on neural determinants of movement behavior. Students required to present two-hour seminar.

M266A-M266B-M266C. Seminars: Cellular Neuroscience (2 to 4 units each). (Same as Physiological Science M295A-M295B-M295C.) Prerequisite: course M202 or consent of instructor. Selected topics in sensory transduction, cellular integration, synaptic processing, central nervous system function, and learning. Students required to present two-hour seminar.

Mr. Fain, Mr. Feldman, Mr. Glanzman

271. Neurobiology of Disease (2 units). (Formerly numbered 200A-200B-200C.) Analysis of clinical neurological and psychiatric disorders from perspective of basic neuroscience.

Mr. Collins

M273. Neural Basis of Memory. (Same as Psychiatry M270.) Lecture, two hours; discussion, one hour. Anatomical, physiological, and neurological data integrated into models for how behavioral phenomena of memory arise. Discussion of invertebrate memory, cortical conditioning, hippocampus and declarative memory, and frontal lobes and primary memory.

Mr. Halgren, Mr. Woody

596. Directed Individual Study or Research (2 to 12 units). Prerequisite: consent of instructor.

Mr. Tobin

597. Preparation for Ph.D. Qualifying Examinations (2 to 12 units). Prerequisite: consent of instructor.

Mr. Tobin

599. Dissertation Research for Ph.D. Candidates (4 to 12 units). Designed for students requiring special instruction or time to work on dissertation.

Mr. Tobin

Obstetrics and Gynecology

27-117A Center for the Health Sciences, (310) 206-2056

Chair

Roy M. Pitkin, M.D.

Vice Chairs

Jonathan S. Berek, M.D. (UCLA Medical Center)

Charles R. Brinkman III, M.D. (Harbor-UCLA)

Ezra C. Davidson, M.D., in Residence (King/Drew)

George Mikhail, M.D. (Olive View)

Lawrence Platt, M.D. (Cedars-Sinai)

Scope and Objectives

The medical student program in obstetrics and gynecology is designed to provide firm background in the essentials of women's health. Through a combination of didactic instruction and supervised clinical experience, students acquire the relevant clinical skills of history taking and physical examination and learn reproductive physiology from infancy to the postmenopausal period; antepartum, intrapartum, and postpartum obstetric care; and recognition and management of various gynecologic disorders. Third-year students work in ambulatory clinics and on inpatient services during a six-week core clerkship. Greater depth of experience is provided by elective clerkships during the fourth year which emphasize subspecialties such as maternal/fetal medicine, reproductive endocrinology, gynecologic oncology, and family planning.

For further details on the Department of Obstetrics and Gynecology and a listing of the courses offered, see the *Announcement of the UCLA School of Medicine*.

Ophthalmology

2-142 Stein Eye Institute, (310) 825-5053

Chair

Bradley R. Straatsma, M.D.

Vice Chairs

Sherwin J. Isenberg, M.D. (Harbor-UCLA)

Bartly J. Mondino, M.D. (Wasserman Professor of Ophthalmology)

Arthur L. Rosenbaum, M.D.

Scope and Objectives

Ophthalmology is the medical science that encompasses knowledge concerning the eyes and the visual system. Derived from many basic and clinical fields, this knowledge must be synthesized by the physician and applied to the prevention, diagnosis, medical management, and surgical therapy of ocular disease.

In response to the steadily increasing incidence and growing importance of ocular disorders, the Department of Ophthalmology and the Jules Stein Eye Institute (including the Doris Stein Eye Research Center) are closely coordinated to form a comprehensive center for research in the sciences related to vision, for the care of patients with disease of the eyes and related structures, and for education in the broad field of ophthalmology.

The Department of Ophthalmology provides instruction to medical students during the second, third, and fourth years. Through lectures, demonstrations, discussions, and the opportunity to observe patients and review data on cases with a variety of ocular conditions, students gain knowledge and experience in ophthalmology.

For further details on the Department of Ophthalmology and a listing of the courses offered, see the *Announcement of the UCLA School of Medicine*.

Pathology and Laboratory Medicine

1P-109D Center for the Health Sciences, (310) 825-5719

Professors

Marcel A. Baluda, Ph.D.

Judith A. Berliner, Ph.D., in Residence

Alistair J. Cochran, M.D., in Residence

Richard A. Gatti, M.D., in Residence

Faramarz Naeim, M.D., in Residence

Donald E. Paglia, M.D.

Lawrence D. Petz, M.D., in Residence

David D. Porter, M.D.

Denis O. Rodgerson, Ph.D., in Residence

Dorothy L. Rosenthal, M.D., in Residence

George S. Smith, M.D., Acting Chair

Julien L. Van Lancker, M.D.

M. Anthony Verity, M.D.

Roy L. Walford, M.D., Emeritus

Associate Professors

Sanford H. Barsky, M.D.

Jonathan Braun, M.D., Ph.D.

Thomas A. Drake, M.D., in Residence

Oliver Hankinson, Ph.D., in Residence

James H. McBride, Ph.D., in Residence

Harry V. Vinters, M.D.

Assistant Professors

Linda G. Baum, M.D., Ph.D.
Wayne W. Grody, M.D., Ph.D., *in Residence*
Nir Kossovsky, M.D.
Elizabeth A. Wagar, M.D.

Adjunct Associate Professors

Rita B. Effros, Ph.D.
Neil Sidell, Ph.D.

Scope and Objectives

Pathology is, by definition, the science of disease. Its main purpose is to unravel disease mechanisms. Without it, progress in prevention, diagnosis, and therapy are left to chance. Yet, among medical disciplines, it is one of the youngest because scientific concepts of disease, based on direct observation of diseased organs, developed only in the last 150 years.

Once normal molecules, cells, and organs have been damaged, the result of the injury manifests itself by distortions of behavior at the molecular, cellular, and organ levels. The study of these injuries and reactions to injuries constitutes a body of knowledge well worth mastering for its own sake. Students, however, must also learn to use the existing tools or develop the new tools needed to dissect the events that follow injury. Although education in methodology is not, in principle, different in pathology from that in all other biomedical sciences, it is very different in scope.

A combined education in breadth and depth is indispensable; it is this education, as it is applied to injuries and reaction to injuries, that is the goal of the Ph.D. program in Experimental Pathology.

Master of Science Degree

Students are only accepted into the program for the purpose of obtaining a Ph.D. in Experimental Pathology. However, the department also awards an M.S. degree in Experimental Pathology in cases where a student is unable to finish the full Ph.D. program but whose completed work is adequate to the standards and minimum requirements set for a master's degree.

The general requirements for the M.S. degree include completion of the core courses (Pathology and Laboratory Medicine 231A, 233, 234A-234F, 250A-250B-250C) and six elective units required of all experimental pathology graduate students. A total of eight units of 500-series courses may be applied toward the 36 units required for the degree; four units may be applied toward the 35-unit graduate course requirement.

You must pass the written qualifying examination at the master's level. A thesis is also required, which encompasses individual research.

Ph.D. in Experimental Pathology**Admission**

In addition to the University minimum requirements, Graduate Record Examination (GRE) General Test scores and three letters of recommendation are required. There is no application form in addition to the one used by UCLA Graduate Application Processing. Because of the sequencing of classes, applicants are generally considered for admission to Fall Quarter only. For departmental brochures, write to the Chair, Department of Pathology and Laboratory Medicine, 1P-109D CHS, UCLA, Los Angeles, CA 90024-1732.

Students intending to take advanced degrees in the Department of Pathology and Laboratory Medicine must have a bachelor's degree in physical or biological sciences or in the pre-medical curriculum. M.D.s are also encouraged to apply. Minimum course requirements for admission normally include one year of calculus, physics, general chemistry, organic chemistry, and biological sciences. One course each in biological chemistry, cell biology, molecular biology, immunology, and genetics is highly recommended and is required before taking the written qualifying examination. In some cases, deficiencies in the prerequisites may be fulfilled in the first year of study.

Course Requirements

Required: Pathology and Laboratory Medicine 231A, 233, 234A-234F, 250A-250B-250C. Third-year students are required to attend the graduate seminar but do not present papers. Three laboratory rotations (course 596) must be taken to intelligently select a thesis adviser. In addition you must select six units from remaining pathology courses and related biomedical areas of interest at the upper division or graduate level. Additional electives may be required by your adviser and thesis committee.

Teaching Experience

You may assist for one or two terms in medical or dental pathology courses to gain teaching experience.

Qualifying Examinations

After the core course requirements are completed (usually at the end of the second year), a comprehensive written qualifying examination covering core courses and required basic knowledge is administered. If examiners feel that some questions should be elaborated on orally, you must do this within three months of the written examination. If failed, the examination may be repeated.

Six months to one year after completion of the written examination, the University Oral Qualifying Examination is administered by the doctoral committee. This examination normally includes discussion of the subject matter of your proposed dissertation topic. You are expected to have done preliminary work before the ex-

amination and to demonstrate wide and comprehensive knowledge of your special subject. After passing, you are advanced to candidacy.

Final Oral Examination

All candidates are required to defend their dissertation at an oral examination open to the public. The purpose of the dissertation is to demonstrate ability for independent investigation and proficiency in the field.

Upper Division Course

199. Special Studies (2 units). Supervised laboratory research, 10 hours. Prerequisite: consent of instructor. Students select instructor among eligible research faculty and carry out independent laboratory research project under instructor supervision. P/NP or letter grading.

Graduate Courses

200A. Dental Pathology (3 units). Lecture, 90 minutes; laboratory, three hours. Prerequisite: consent of instructor. Fundamental causes of disease processes, using as examples selected lesions or diseases of major organ systems. Ms. Bhuta and the Staff (F)

M215. Interdepartmental Course: Tropical Medicine (2 units). (Same as Medicine M215, Microbiology and Immunology M215, and Pediatrics M215.) Lecture, two and one-half hours. Prerequisites: basic courses in microbiology and parasitology of infectious diseases in School of Medicine or Public Health. Study of current knowledge about diseases prevalent in tropical areas of the world. Major emphasis on infectious diseases, with coverage of problems in nutrition and exotic noninfectious diseases. Syllabus supplements topics covered in classroom. S/U grading. Mr. Turner (Sp, alternate years)

231A. Pathological Anatomy and Physiology (6 units). Lecture, two hours; discussion, six hours; laboratory, four hours; other, six hours. Prerequisites: graduate standing, completion of curriculum satisfying basic requirements for study of human pathology. Lectures, demonstrations, and individual study of a student loan collection of microscopic slide preparations and of specimens from recent autopsies. Kodachrome photomicrographs and projection of microslides. Concentration in area of general pathology. Mr. Braun and the Staff (F)

231B-231C. Pathophysiology of Disease (6 units each). Prerequisites: course 200A, graduate standing, completion of curriculum satisfying basic requirements for study of human pathology. Lectures, demonstrations, and individual study of a student loan collection of microscopic slide preparations and of specimens from recent autopsies. Kodachrome photomicrographs and projection of microslides. Concentration in area of general pathology. In Progress grading. Mr. Naeim and the Staff (W,Sp)

232. Topics in Vertebrate Neurobiology (2 units). Introduction to cell biology of vertebrate central nervous system, with special reference to its development, structure, and potential disease processes.

233. General Pathology Seminar (3 units). Lecture, two hours; discussion, one hour. Corequisite: course 231A. Designed to provide students with in-depth understanding of topics in course 231A. Reading and discussion of current publications pertaining to general pathology, with emphasis on cell injury/cell death and inflammation/fibrosis. Ms. Berliner (F)

234A-234F. Molecular and Cellular Foundations of Disease (2 units each). Lecture, 90 minutes; discussion, 90 minutes. Prerequisites: graduate standing, background in biochemistry, molecular biology, and genetics. Investigation of the disease process. Two topics (four weeks each) offered per term; topics include genetic and metabolic disorders, infectious diseases, oncology, immunology, and nutritional diseases. Mr. McBride and the Staff (W,Sp)

242A-242B. Molecular Mechanisms in Disease (2 units each). Prerequisites for course 242A: course 231A, consent of instructor; for course 242B: course 242A, consent of instructor. Description of molecular events resulting from administration of injurious chemical and physical agents (u.v., X rays, carcinogens, toxins, etc.) and from reactions to injuries (e.g., necrosis, degeneration, hyperplasia, neoplasia, inflammation, etc.) and interpretation of structural and functional disturbances in terms of molecular alterations. Mr. Van Lancker and the Staff

244. Cellular Pathology. Prerequisite: Anatomy 209A or equivalent. Discussion of structure function relationships in cells and extracellular matrix. Emphasis on ultrastructural changes in disease and theories of how these changes are mediated. Ms. Berliner, Ms. Frank

245. Environmental Pathology. Prerequisites: graduate standing, consent of instructor. Designed to explore interrelationships of man with his total environment. Presentation of series of special topics to discuss effect on man of changes in compositions of air, water, soil, and other materials. S/U grading.

250A-250B-250C. Pathology Graduate Student Seminars (2 units each). Limited to and required of all students in experimental pathology. Review and discussion of current literature and research in special topics of experimental pathology. Ms. Berliner and the Staff (W,Sp)

251. Pathology Graduate Student Laboratory Seminar (2 units). Prerequisite: consent of instructor. Consists of 10 two-hour seminars, conducted by Pathology and Laboratory Medicine Department staff and guest lecturers, which may include demonstrations of apparatus and methods dealing with new and advanced experimental techniques of value in experimental pathology. Subjects include biochemistry, biological and morphological techniques in tissue fractionation, tissue culture, and radioautography (electron microscopy, etc.) that are frequently used in study of disease mechanisms. Mr. Hankinson, Mr. Rodgerson

254. Seminar: Experimental Neuropathology (1 unit). Prerequisite: consent of instructor. Weekly seminar series presented by experts working at forefront of research on diseases of nervous system. New experimental approaches and laboratory model systems for studying diseases such as Alzheimer's and Huntington's diseases, epilepsy, neuroblastoma, and multiple sclerosis. S/U grading. Mr. Sidell, Mr. Venty

255. Mapping the Human Genome (2 units). Prerequisite: consent of instructor. Basic molecular genetic and cytogenetic techniques of gene mapping. Selected regions of human genomic map scrutinized in detail, particularly gene families and clusters of genes that have remained linked from mouse to human. Discussion of localizations of disease genes. S/U or letter grading. Mr. Gatti (Sp)

M256. Seminar: Viral Oncology (2 units). (Same as Microbiology and Immunology M256.) Advanced research seminar designed to consider current developments in the field. Selection of current subjects and publications dealing with tumor viruses, oncogenesis, development, and cellular regulation. Mr. Baluda

M257. Introduction to Toxicology. (Same as Pharmacology M257.) Prerequisite: Pharmacology 241 or consent of instructor. Biochemical and systemic toxicology, basic mechanisms of toxicology, and interaction of toxic agents with specific organ systems. (Sp)

M258. Pathologic Changes in Toxicology. (Same as Pharmacology M258.) Designed to give students experience in learning normal histology of tissues which are major targets of toxin and the range of pathologic changes that occur in these tissues (liver, bladder, lung, kidney, nervous system, and vascular system). Ms. Berliner (F,W)

262. Biology of Aging (2 units). Lecture, one hour; discussion, one hour. Prerequisite: graduate standing. Introduction to biology of aging, with emphasis on mammalian and cellular aging — survival curves, biochemical, immunological, immunogenetic, and neuroendocrine alterations over the life cycle, accelerated aging, life-extension strategies; major theories of aging. S/U or letter grading. Ms. Effros, Mr. Walford (W)

M293. Major Concepts in Oncology. (Same as Microbiology and Immunology M293 and Oral Biology M293.) Lecture, three hours. Prerequisite: graduate standing or consent of instructor. Designed for graduate students contemplating research in oncology. Topics include cancer pathophysiology, genetics, membranes, macromolecular synthesis and control, cell cycle, growth control; physical, chemical, and viral oncogenesis, epidemiology of cancer; tumor immunology; principles of cancer surgery, radiation therapy, and chemotherapy. S/U or letter grading. Mr. Barsky, Mr. Hankinson (W)

596. Directed Individual Study or Research (4 to 12 units). Individual research with members of the staff or of other departments, the latter for purpose of supplementing programs available in department. S/U grading.

597. Preparation for Qualifying Examinations (2 to 8 units). Prerequisite: one year of pathology coursework. Individual study for qualifying examinations. S/U grading.

599. Preparation of Ph.D. Dissertation (2 to 8 units). Prerequisite: completion of qualifying examinations and majority of Ph.D. research. Writing and completion of dissertation. S/U grading.

Pediatrics

22-373 Davies Children's Center,
(310) 825-4128

Chairs

William F. Friedman, M.D. (*James H. Nicholson Professor of Pediatric Cardiology*), Executive Chair

Solomon A. Kaplan, M.D., *Executive Vice Chair*
Robert B. Ettenger, M.D., *Vice Chair, Clinical Affairs*,
UCLA Medical Center

E. Richard Stiehm, M.D., *Vice Chair, Academic Affairs*, UCLA Medical Center

S. Douglas Frasier, M.D., *Chair, Olive View*
Rosemary D. Leake, M.D., *Chair, Harbor-UCLA*
David L. Rimoin, M.D., Ph.D., *Chair, Cedars-Sinai*
Robert J. Schlegel, M.D., *Chair, King/Drew*

Scope and Objectives

The Department of Pediatrics encompasses four teaching hospitals: UCLA, Harbor-UCLA, King/Drew, and Cedars-Sinai Medical Centers. The UCLA Medical Center integrates its clinical program and teaching activities with the Olive View Medical Center. The clinical fundamentals course offers medical students detailed instruction in the techniques of the clinical examination of pediatric patients.

The required six-week clinical clerkship in pediatrics is given at one of the four medical centers. In-depth electives in the Department of Pediatrics are listed in the *School of Medicine Handbook of Clinical Courses*, as are the advanced clinical clerkships.

For further details on the Department of Pediatrics and a listing of the courses offered, see the *Announcement of the UCLA School of Medicine*.

Pharmacology

23-278 Center for the Health Sciences, (310) 825-5596

Professors

Steven L. Barriere, Pharm.D.
Jorge R. Barrio, Ph.D.
Gautam Chaudhuri, M.D.
Arthur K. Cho, Ph.D., *Vice Chair*
Matthew E. Conolly, M.D.
Daniel X. Freedman, M.D.
Bernard K-K. Fung, Ph.D., *in Residence*
Mark A. Goldberg, M.D., Ph.D., *in Residence*
Louis J. Ignarro, Ph.D.
Donald J. Jenden, Ph.D. (h.c.), B.Sc., M.B., B.S.
Richard W. Olsen, Ph.D.
Michael E. Phelps, Ph.D. (*Jennifer Jones Simon Professor of Biophysics*), Chair
Werner E. Flacke, M.D., *Emeritus*
Robert George, Ph.D., *Emeritus*
William L. Hewitt, M.D., *Emeritus*
Peter Lomax, M.D., D.Sc., *Emeritus*
Dermot B. Taylor, M.D., *Emeritus*

Associate Professors

Don H. Catlin, M.D.
Sherril G. Howard, Ph.D.

Assistant Professor

Jon M. Fukuto, Ph.D.

Lecturer

Joseph H. Beckerman, Pharm.D.

Adjunct and Visiting Professors

Yi-Han Chang, Ph.D., *Adjunct*
Roger W. Russell, Ph.D., *Visiting*

Adjunct Associate Professor

M. David Fairchild, Ph.D.

Adjunct Assistant Professor

Robert N. Pechnick, Ph.D.

Scope and Objectives

The Department of Pharmacology offers instruction for undergraduate, graduate, and medical students. It includes systematic study of the effects of drugs in normal and pathological states, the mechanisms by which these effects are exerted, and the factors influencing their absorption, distribution, and biological disposition. Consideration is also given to the medical and social problems created by the increasing use of drugs by both the medical profession and the public.

Although the department offers only graduate degrees, upper division undergraduate courses are offered with enrollment restrictions as indicated in the course descriptions.

Master of Science Degree

The Pharmacology Department offers the Ph.D. degree, and students may obtain the M.S. degree; however, the department normally does not admit candidates for the M.S. degree only.

Ph.D. Degree

Admission

In addition to meeting University requirements for graduate admission, you must have received a bachelor's degree in a biological or physical science or in the premedical curriculum. Graduate Record Examination (GRE) scores, Test of English as a Foreign Language (TOEFL) scores for international students, and three letters of recommendation are also required.

In suitable cases, students who have course deficiencies may be admitted to graduate standing, but any deficiencies must be removed within a specified time. The following courses must be taken at UCLA only if mastery of the subject matter has not been demonstrated at the time of admission by completion of an equivalent course within 36 months with a grade of B or better, as evaluated by the faculty graduate training committee: Pharmacology 211A-211B, M258, Biological Chemistry 201A-201B or Chemistry and Biochemistry 153B and 153C, Physiology 201A-201B, and one biostatistics course.

Prospective students may write for a departmental brochure to the Graduate Student Office, Department of Pharmacology, 23-226 CHS, UCLA, Los Angeles, CA 90024-1735.

Major Fields or Subdisciplines

Cardiovascular pharmacology, chemical pharmacology, clinical pharmacology, immunopharmacology, neuroendocrine pharmacology, neuropharmacology, psychopharmacology.

Course Requirements

Required: Pharmacology 200 (three terms), 234A-234B, 237A-237B, 241, 251 (must be taken every term), Anatomy and Cell Biology M203A-M203B.

All coursework should be completed by the end of the sixth term and prior to taking the departmental comprehensive examinations.

The Pharmacology Department provides a system of laboratory rotations (course 200) in order to familiarize students with a variety of pharmacological research areas and techniques. During your first six terms in the department, you participate in projects of your choosing. If possible, two of these are during the regular academic year and the third during the summer. You also become familiar with the literature relevant to the various research projects and thus establish a basis for the selection of your own research area. If you have already chosen a research area at the time you enter the department, you may benefit by working in the related laboratory during the

previous summer. This would provide an uninterrupted period of over two months to work on a research project.

As part of course 200 you must submit a report of your activities in the various research groups by the end of the term. The report should include the nature of the project, how you participated, the results obtained, and a critical evaluation of the project.

Teaching Experience

Seminar presentations are required of all students in the graduate program.

Qualifying Examinations

Examinations are given in all courses except seminars and research. These are in the form of written examinations, oral examinations, term papers, and/or laboratory practicals.

After completing the first two years of study, you are required to take a departmental comprehensive examination consisting of a written part and an oral part. You are then recommended for continuation toward the Ph.D. degree, for further remedial study, or for termination. Questions are intended to test for a rational, analytical approach to problem solving and for ability to integrate material learned in different courses. You are expected to know basic principles of pharmacology and the status of topics of current interest in pharmacology.

After passing the departmental comprehensive examination, you must take the University Oral Qualifying Examination within 18 months. This examination is administered by the doctoral guidance committee. Most questions concentrate on the background literature, experimental methods, and implications of your field of interest and dissertation project. When you pass this examination, you are eligible to petition the Graduate Division for advancement to Ph.D. candidacy.

If you fail any one of the above required examinations, you may be reexamined at a later date determined by the guidance committee.

Final Oral Examination

A final oral examination is administered after submission of the dissertation.

Articulated Degree Program

The Department of Pharmacology offers an articulated M.D./Ph.D. program with the UCLA School of Medicine. Candidates must be accepted by the School of Medicine Admissions Office in order to qualify.

Upper Division Courses

110. Drugs: Mechanisms, Uses, and Misuse. Lecture, four hours (seven weeks); discussion, four hours (three weeks). Prerequisites: Biology 5, 6, 9, or equivalent. Introduction to pharmacology for undergraduate students, emphasizing principles underlying mechanism of action of drugs, their development, control, rational use, and misuse. Mr. Jenden (W)

M115. Introduction to Pharmacology and Therapeutics (2 units). (Same as Nursing M115.) Prerequisite for non-nursing students: consent of instructor. Systematic review of major drug groups used therapeutically, the most commonly used members in each group, differences among them, and their mechanisms of action. Mr. Jenden and the Staff

199. Special Studies (2 to 8 units). Prerequisite: consent of instructor and department chair. Special studies in pharmacology, including either reading assignments or laboratory work or both, designed for proper training of students. (F,W,Sp)

Graduate Courses

200. Introduction to Laboratory Research (2 to 4 units). Prerequisite: consent of instructor. Individual projects in laboratory research for beginning graduate students. At end of each term students submit to their supervisor a report covering research performed. Pharmacology graduate students must take this course three times during their first two years in residence. (F,W,Sp)

203. Clinical Pharmacology (2 units). Lecture, zero to two hours; discussion, zero to two hours. Prerequisites: courses 211A-211B. Series of lectures and case presentations designed to illustrate principles of pharmacology in a clinical context, and solution of practical therapeutics by reference to pharmacokinetics, mechanisms of action, and disposition of drugs. Mr. Conolly in charge (Sp)

211A-211B. Principles of Pharmacology (4 units, 2 units). Lecture, three to eight hours; discussion, zero to nine hours. Prerequisites: mammalian physiology, biochemistry. Systematic consideration of principles governing interaction between drugs and biological systems and of principal groups of drugs used in therapeutics. Particular attention on modes of action, pharmacokinetics, and disposition to provide a scientific basis for their rational use in medicine. Mr. Ignarro in charge (F,W)

212A-212B. Graduate Commentary: Clinical Pharmacology (2 units each). Prerequisites: mammalian physiology, biochemistry. Supplementation of topics covered in course 203. Primarily for graduate students.

M221. Cellular and Molecular Neurochemistry. (Formerly numbered M221A.) (Same as Anatomy M221, Biological Chemistry M221, Neuroscience M240, and Psychiatry M221.) Lecture, three hours; discussion, one hour. Prerequisite: biochemistry. Contemporary neurochemistry topics — metabolic specialization and compartments, metabolism and function of ion channels; structure and function of neurotransmitters. Inborn errors and molecular genetics, molecular imaging, aging, and regeneration. Receptor effector coupling. S/U or letter grading. Mr. de Vellis, Mr. Olsen (W)

234A-234B-234C. Experimental Methods in Pharmacology (2 units each). Prerequisite: consent of instructor. Survey of experimental methods and instrumentation used in analysis, identification, and study of mechanisms of action of pharmacologically active compounds. Mr. Chang, Mr. Fukuto (F,W,Sp)

236. Neuropharmacology. Prerequisite: neurophysiology. Advanced neuropharmacology, including actions and modes of action of drugs acting on central nervous system, interactions between drugs and nervous tissue, movements of drugs through blood brain barrier, and distribution to central nervous system; problems of central transmission. (W)

237A-237B-237C. Research Frontiers in Cellular and Molecular Pharmacology. Prerequisites: course 241, consent of instructor. Detailed examination of mechanisms of drug action at organismal, tissue, cellular, and molecular levels, emphasizing receptors, receptor/effector coupling, neurotransmitters, autonomic and central nervous system pharmacology. Mr. Chang, Ms. Howard, Mr. Olsen (F,W,Sp)

238. Behavioral Toxicology. Prerequisite: consent of instructor. Lectures and discussions designed to examine effects of exposures to a wide variety of chemical and physical agents on behavior of total organism as it adjusts to changes in its physical and social environments. Such effects may be reflected as subtle disturbances of behavior before classic symptoms of toxic states become apparent. Consideration to methodologies by which such disturbances may be measured, to state of present knowledge, and to application of knowledge in regulating risks of both prenatal and postnatal exposure. Particular emphasis on relevance of this knowledge to human behavior. (Sp)

241. Introduction to Chemical Pharmacology. Prerequisite: organic and biological chemistry. Introduction to general principles of pharmacology. Role of chemical properties of drugs in their distribution, metabolism, and excretion. Mr. Cho (F)

251. Seminar: Pharmacology (2 units). Seminars presented by students, faculty, and guest lecturers on a variety of topics. S/U grading.

Mr. Cho, Mr. Olsen

253. Seminar: Environmental Toxicology (2 units). Prerequisite: consent of instructor. Oral reports and discussions of current research on chemical pollutants in environment, their effects on biological systems, and mechanism of these effects.

Mr. Jenden (F,W,Sp)

M257. Introduction to Toxicology. (Same as Pathology M257.) Prerequisite: course 241 or consent of instructor. Biochemical and systemic toxicology, basic mechanisms of toxicology, and interaction of toxic agents with specific organ systems.

Mr. Cho, Mr. Froines (Sp)

M258. Pathologic Changes in Toxicology. (Same as Pathology M258.) Designed to give students experience in learning normal histology of tissues which are major targets of toxin and the range of pathologic changes that occur in these tissues (liver, bladder, lung, kidney, nervous system, and vascular system).

Ms. Berliner (F,W)

261. Introduction to Clinical Pharmacology (2 units). Prerequisite: consent of instructor. Lectures, case presentations, and discussions designed to acquaint graduate students with special problems and effects encountered in clinical use of drugs, including absorption, metabolism and excretion, drug interactions and interference with clinical laboratory analysis. (W)

291. Special Topics in Pharmacology (2 to 4 units). Prerequisite: consent of instructor. Examination in depth of topics of current importance in pharmacology. Emphasis on recent contributions of special interest to advanced Ph.D. candidates, academic staff, or visiting faculty. May be taken twice for credit. (F,W,Sp)

596. Directed Individual Research in Pharmacology (4 to 12 units).

599. Research for and Preparation of Ph.D. Dissertation (4 to 12 units).

Alan D. Grinnell, Ph.D.
Earl Homsher, Ph.D., *Acting Chair*
H. Ronald Kaback, M.D.
Yoshiaki Kidokoro, M.D., Ph.D., *in Residence*
Glenn A. Langer, M.D. (*Castera Professor of Cardiology*)

Michael S. Letinsky, Ph.D.
Kenneth D. Philipson, Ph.D., *in Residence*
Gordon Ross, M.D.
Eduardo H. Rubinstein, M.D., Ph.D.
George Sachs, M.D., D.Sc. (*Leon J. Tiber, M.D., and David S. Alpert, M.D., Professor of Medicine*)
Oscar U. Scremin, M.D.
John McD. Tormey, M.D., *Vice Chair for Instruction*
Julio Vergara, Ph.D.
Susan A. Ward, D.Phil., M.A.
Ernest M. Wright, D.Sc., *Chair*
Jennifer S. Buchwald, Ph.D., *Emerita*
Donald B. Lindsley, Ph.D., *Emeritus*
Wilfried F.H.M. Mommaerts, Ph.D., *Emeritus*
Ralph R. Sonnenschein, M.D., *Emeritus*
Bernice M. Wenzel, Ph.D., *Emerita*

Associate Professors

Sally J. Krasne, Ph.D.
Emeran A. Mayer, M.D.

Assistant Professors

Diane M. Papazian, Ph.D.
Nancy L. Wayne, Ph.D.

Lecturer

Jessie O. Washington, D.V.M.

Adjunct Professor

Arthur Peskoff, Ph.D.

Academic Coordinator

Kenneth P. Roos, Ph.D.

Scope and Objectives

Physiology is the science of the functional activities of the human body. This covers a wide range, including observations on humans and experiments on animals and model systems in order to understand principles. Physiology is the science most directly relevant to human medicine in all its specialties and to understanding all environmental factors affecting human life. It is also a pure science of great challenge because of the complexity of its problems and its extensive interaction with mathematical, physical, biochemical, and engineering sciences, as well as with other branches of biology.

Within the prescribed curriculum, students may specialize in cellular and molecular physiology, theoretical and mathematical physiology, neurobiology, communication and information, organ systems and integrative phenomena, and behavioral physiology.

In a recent survey conducted by the Conference Board of the Associated Research Councils, UCLA's Physiology Department was judged fifth best in the nation in terms of the quality of its faculty. In addition to the Ph.D. program, the department offers postdoctoral training in research and welcomes students interested in articulated M.D./Ph.D. programs.

Ph.D. Degree

Admission

Candidates for admission to graduate standing in the Department of Physiology are expected to pursue the Ph.D. degree. The department does not admit candidates for the M.S. degree. Ph.D. students must conform to the general admission requirements set by the Graduate Division and have received a bachelor's degree in a biological or physical science or in the premedical curriculum. In general, at the time of admission, you should have completed courses in mathematics through calculus and differential equations, physics, chemistry (including quantitative analysis, physical and organic chemistry), and biology or zoology.

In certain cases, at the discretion of the department, students lacking some of the preparation but having a strong background in areas pertinent to physiology may be admitted to graduate standing, provided that deficiencies are made up. Successful completion of the first-year curriculum requires knowledge of physical chemistry (at least equivalent to Chemistry and Biochemistry 110A and 156) and differential equations (equivalent to Mathematics 33A). It is strongly recommended that these or equivalent courses be taken prior to admission. If not, these deficiencies must be removed within a specified time after admission, which would likely extend the first-year curriculum into the second year.

The Graduate Record Examination (GRE) General Test is required as well as the Subject Test in Biology or in your major field. Medical College Admission Test (MCAT) scores are accepted in lieu of the GRE. Three letters of recommendation are required and should be addressed to the Director of Graduate Studies. Completion of a master's program is not required.

An application packet and/or departmental brochure is available from the Graduate Student Office, Department of Physiology, 53-237 CHS, UCLA, Los Angeles, CA 90024-1751.

Major Fields or Subdisciplines

Major fields include cellular physiology and biophysics, molecular physiology, and integrative physiology. Subdisciplines include cellular and molecular electrophysiology, membrane transport, cellular signal transduction, channel and transporter structure and function, muscle physiology, fundamental neurophysiology, neuromuscular physiology, and cardiovascular, gastrointestinal, respiratory, and reproductive physiology.

Course Requirements

The graduate training program consists of a core requirement (Neuroscience M202, M205, Physiology 201A-201B, 205) which must be completed within your first two years of study. A second series of at least three courses applicable to your research interest(s) and one advanced course in physiology outside your major area of interest

Physiology

53-237 Center for the Health Sciences, (310) 825-6717

Professors

Francisco J. Bezanilla, Ph.D.
Allan J. Brady, Ph.D.
Michael H. Chase, Ph.D., *in Residence*
Sergio Ciani, Ph.D.
Jared M. Diamond, Ph.D., *Executive Vice Chair*
George Eisenman, M.D.
Joy S. Frank, Ph.D., *in Residence*

are also required. Your curriculum must be approved by the graduate committee and your faculty adviser. One laboratory rotation is required within the first two years, prior to taking the written comprehensive examination.

Qualifying Examinations

The written comprehensive examination is given at the end of your formal coursework (including the core curriculum and specialty courses); it may contain an oral section. Recommendations following the examination are based on competence revealed by the examination, performance in coursework during the year, and recommendations of faculty members. Marginal performance in all areas with excellence in none is not considered acceptable.

Following successful completion of the departmental comprehensive examination, you must select a sponsor who acts as chair of your doctoral committee and directs your thesis research project. The committee members conduct the University Oral Qualifying Examination to establish that you are capable of conducting a productive research project. At this point in your training, you normally will have completed all formal coursework, will have passed the departmental comprehensive examination, and will have devoted approximately a year to a research project. After successful completion of the oral qualifying examination, you are advanced to candidacy.

Final Oral Examination

The final oral examination is optional with the doctoral committee.

Upper Division Courses

100. Elements of Human Physiology (6 units). Prerequisite: dental student standing or consent of instructor. Primarily for first-year dental students. Major organic body functions. With special supplementation, a suitable introduction to the field for graduate students for whom the 201A-201B course sequence is too extensive. Mr. Brady (F)

199. Special Studies (1 to 8 units). Prerequisite: consent of instructor. Special studies in physiology, including either reading assignments or laboratory work or both, designed for proper training of students.

Graduate Courses

201A-201B. Organ System Physiology (6 units each). Lecture, six hours; laboratory, three and one-half hours. Prerequisite: medical student standing or enrollment in qualified graduate program, consent of instructor. Recommended corequisites: courses M203A-M203B. Runs throughout School of Medicine's second semester. Lectures, laboratories, and conferences. Properties of biological membranes. Contractility of muscle. Epithelial transport. Cardiovascular, renal, respiratory, and gastrointestinal systems. Fluid and electrolyte balance. To receive credit, both courses must be taken together in same academic year. In Progress grading. Mr. Torney and the Staff (Sp)

M203A-M203B. Basic Neurology. (Formerly numbered 203A-203B.) (Same as Anatomy M203A-M203B.) Prerequisites: medical student standing or enrollment in qualified graduate program, consent of instructor. Runs throughout School of Medicine's second semester. Lectures, conferences, demonstrations, and laboratory procedures necessary to understand functions of nervous system. To receive credit, both courses must be taken together in same academic year. In Progress grading.

Mr. Letinsky, Mr. Schlag, and the Staff (W,Sp)

M204. Cellular and Molecular Developmental Neurobiology. (Same as Anatomy M204, Biology M280, Neuroscience M204, and Psychiatry M204.) Lecture, three hours; discussion, one hour. Prerequisites: Neuroscience M201, M202, and M203, or Biological Chemistry 201A-201B, or consent of instructor. Cellular and molecular processes that regulate development of nervous systems of vertebrates and invertebrates. Topics include regional specification in early neurogenesis, generation of neuronal diversity, cell surface interactions and growth factors, neuronal and glial proliferation and migration, axonal outgrowth and guidance, synaptogenesis, trophic interaction, plasticity, regeneration, and aging. (W)

M212. Introduction to Cellular Physiology and Biophysics (6 units). (Same as Biology M237 and Physiological Science M212.) Lecture, five hours. Prerequisite: graduate standing; for upper division undergraduates: consent of instructor. Development of fundamental physiological and biophysical concepts associated with all membranes, membrane channels and transporters, membrane potential, membrane excitability, electrical signal transmission and transduction, and muscle contraction and their application to study of basic cellular processes. Emphasis in laboratory on development of skills using computer programming languages, spreadsheets, and graphics for modeling and analysis of cellular processes. Mr. Ciani and the Staff (W)

220. Methods in Cell Physiology (6 units). (Formerly numbered 213.) Prerequisite: consent of instructor. Linear circuit analysis, including admittance, transfer admittance, transfer function, and filters using transform methods. Application of these concepts to electronic analog circuits in lectures and laboratory, with emphasis on operational amplifiers. Applications to electrophysiology include microelectrode amplifiers, voltage clamp and patch clamp techniques, with circuit analysis and noise considerations. Digital electronics cover logic gates, sequential circuits, and A/D and D/A conversion, with introduction to sampling theory.

Mr. Bezanilla, Mr. Vergara (F)

221. Cell Physiology: Excitability (6 units). (Formerly numbered 214.) Prerequisite: course 220 or consent of instructor. In-depth coverage of general properties of excitable cells, linear cable properties, nonlinear conductance changes, and generation and propagation of the nerve impulse. Voltage gating and gating currents, as well as relationship between macroscopic conductance and single channel properties discussed in analytical detail using original publications. Mr. Bezanilla, Mr. Vergara (W)

222. Cell Physiology: Cellular Interaction. (Formerly numbered 215.) Prerequisite: consent of instructor. Simple and complex cellular interactions in nervous system. Study of synaptic transmission to higher-level cell-cell interactions, culminating in examination of mechanisms of central nervous system functions. Mr. Letinsky (Sp)

M223. Membrane Molecular Biology (6 units). (Same as Biological Chemistry M223.) Lecture, five hours. Prerequisites: Biological Chemistry M253 or consent of instructor, graduate or selected upper division undergraduate standing. Advanced course in molecular aspects of membrane physiology and biochemistry covering lipids and physical chemistry of biological membranes; membrane biogenesis and targeting of proteins to membranes; pumps, carriers, and channels; receptors and transmembrane signaling. Mr. Kaback, Ms. Papazian, and the Staff (W)

224. Transport Systems in Cell Membranes. (Formerly numbered 217B.) Prerequisite: consent of instructor. Properties of pumps and carriers in cell membranes and ion (Na, K, H, and Ca) transport across plasma membranes of single cells and epithelia. Mr. Sachs, Mr. Wright

225. Ionic Selectivity and Molecular Architecture of Channels (6 units). Lecture, three hours; laboratory, three hours; reading period, 12 hours; independent microcomputer graphics. Prerequisite: consent of instructor. Integration of crystallographic knowledge of molecular architecture of ion binding sites in proteins with functional information about ion permeation and binding in channels covering ion selectivity principles at an advanced level. Half lecture, half microcomputer laboratory on molecular graphics. Mr. Eisenman (Sp)

226. Excitation-Contraction Coupling in Muscle (2 to 6 units). (Formerly numbered 221A.) Prerequisite: consent of instructor. Detailed study of relationship between membrane excitation and contractile activation in muscle. Mr. Vergara (Sp)

227. Biochemistry and Mechanics of Muscle (2 to 6 units). (Formerly numbered 221B.) Prerequisite: consent of instructor. Detailed study of biochemistry, energetics, and contractile mechanisms in muscle. Mr. Brady, Mr. Homsher

228. Epithelia: Structure and Function (2 units). Prerequisite: consent of instructor. Lectures and seminars on physiology of epithelia cells, with particular emphasis on membrane transport. S/U grading. Mr. Wright (W)

229. Ion Permeation and Gating Kinetics of Channels and Carriers in Biological Membranes. Lecture, three hours; discussion, one hour. Prerequisite: graduate standing or consent of instructor. Theoretical methods for modeling ion permeability and gating kinetics of membrane channels and carriers. For description of fluxes, analysis of approaches based on electrodiffusion and statistical mechanics. For study of gating, analysis in depth of current transients, current fluctuations, and single-channel currents. S/U grading. Mr. Ciani (W)

250A-250B-250C. Critical Topics in Physiology (2 to 8 units each). (Formerly numbered 212A-212B-212C.) Prerequisite: consent of instructor. Advanced treatment of critical topics in physiology by staff for graduate and postdoctoral students in biomedical sciences.

260. Use of Laboratory Animals in Research. Prerequisite: consent of instructor. Introductory course for graduate students in medical and biological sciences, covering principles and practical problems in handling and use of common laboratory animal species. Mr. Washington

M270A-M270B-M270C. Cell, Molecular, and Integrative Biology Seminars (1 unit each). (Same as Anatomy M270A-M270B-M270C.) Prerequisite: graduate standing or consent of instructor(s). Presentation of weekly seminars on current topics in cell and molecular biology by faculty members from Anatomy and Cell Biology, Physiology, and other UCLA departments, in addition to invited lecturers. S/U grading. Mr. de Vellis, Mr. Grinnell (F,W,Sp)

596. Directed Individual Study or Research (2 to 12 units). Prerequisite: consent of instructor.

597. Preparation for M.S. Comprehensive Examination or Ph.D. Qualifying Examinations (2 to 12 units). Prerequisite: consent of instructor.

598. Thesis Research for M.S. Candidates (2 to 12 units). Prerequisite: consent of instructor.

599. Dissertation Research for Ph.D. Candidates (2 to 12 units). Prerequisite: consent of instructor.

Leslie A. Brothers, M.D., *in Residence*
 Rochelle Caplan, M.D., *in Residence*
 Spencer Eth, M.D., *in Residence*
 Christopher Evans, Ph.D., *in Residence (Biobehavioral Sciences)*
 Kym Faull, Ph.D., *in Residence (Biobehavioral Sciences)*
 Melissa Hines, Ph.D., *in Residence (Biobehavioral Sciences)*
 Bruce L. Kagan, M.D., Ph.D., *in Residence*
 Margaret Kemeny, Ph.D., *in Residence (Biobehavioral Sciences)*
 Christopher Kessler, M.D., *in Residence*
 Gregory B. Leong, M.D., *in Residence*
 Andrew F. Leuchter, M.D., *in Residence*
 Peter B. Lucas, M.D., *in Residence*
 Nigel Maidment, Ph.D., *in Residence (Biobehavioral Sciences)*
 David J. Martin, Ph.D., *in Residence (Medical Psychology)*
 James T. McCracken, M.D., *in Residence*
 Martin E. Mueller, M.D., *in Residence*
 Todd F. Sadow, M.D., *in Residence*
 Karen J. Saywitz, Ph.D., *in Residence (Biobehavioral Sciences)*
 Joan F. Scheibel, M.D., Ph.D., *in Residence (Medical Psychology)*
 Andrew Shaner, M.D., *in Residence*
 Barbara Silver, M.D., *in Residence*
 Tony L. Strickland, Ph.D., *in Residence (Biobehavioral Sciences)*
 Margaret L. Stuber, M.D., *in Residence*
 Jerome Vaccaro, M.D., *in Residence*
 Wilfred G. Van Gorp, Ph.D., *in Residence (Biobehavioral Sciences)*
 Walter B. Van Vort, M.D., *in Residence*
 James A. Waschek, Ph.D., *in Residence (Biobehavioral Sciences)*
 Joseph B. Watson, Ph.D., *in Residence (Biobehavioral Sciences)*

Lecturers

Veronica Abney, M.S.W. (*Social Work*)
 James C. Allen, M.A. (*Mental Health Administration*)
 Linda A. Andron, M.S.W. (*Social Work*)
 Barbara A. Bass, M.S.W. (*Social Work*)
 Diane J. Bass, M.S.W. (*Social Work*)
 M. Christina Benson, M.D.
 Elizabeth A. Carlin, Ph.D., M.S.W. (*Social Work*)
 Emma Conner, M.S.W. (*Social Work*)
 Virginia K. Cruz, D.S.W. (*Social Work*)

Christine Donovan, M.S.W. (*Social Work*)
 Angela Farrell, M.S.W. (*Social Work*)
 David J. Fisher, Ph.D. (*Biobehavioral Sciences*)
 Florence Frisch, M.S.W. (*Social Work*)
 Charlotte Gelb, M.S.W. (*Social Work*)
 Mary Lou Gottlieb, M.S.W. (*Social Work*)
 Joan E. Johnson, M.S.W. (*Social Work*)
 Martha B. Jura, Ph.D. (*Biobehavioral Sciences*)
 David T.A. Kaplan, M.S.W. (*Social Work*)
 Barbara Korne, M.S.W., L.C.S.W. (*Social Work*)
 Cynthia Lopez, M.S.W. (*Social Work*)
 Myrtle Mandiberg, M.A. (*Biobehavioral Sciences*)
 Rosemarie Matic, B.S. (*Physical Therapy*)
 Miriam A. Meyer, M.S.W. (*Social Work*)
 Wendy L. Morrell, M.S.W. (*Social Work*)
 Natalie R. Newman, M.A. (*Biobehavioral Sciences*)
 Terri A. Price, M.A. (*Biobehavioral Sciences*)
 Janice Roper, R.N., Ph.D. (*Nursing*)
 Olga Samuel, M.S.W. (*Social Work*)
 Alice Sutton, M.S.W. (*Social Work*)
 J. Mark Thompson, M.D.
 Olivia Unger, M.A. (*Occupational Therapy*)
 Donna Warren, R.N., M.N., C.S. (*Nursing*)
 Lillian L. Weitzner, M.S.W. (*Social Work*)

Professor of Clinical Psychiatry

Don E. Flinn, M.D., *Vice Chair*

Adjunct and Clinical Professors

Jambur V. Ananth, M.D., *Adjunct*
 James Birren, Ph.D., *Adjunct (Biobehavioral Sciences)*
 Annette M. Brodsky, Ph.D., *Adjunct (Medical Psychology)*
 John R. Elpers, M.D., *Adjunct*
 Calvin J. Frederick, Ph.D., *Adjunct (Medical Psychology)*
 Irene T. Goldenberg, Ed.D., *Adjunct (Medical Psychology)*
 Roderic Gorney, M.D., Ph.D., *Adjunct*
 Saul I. Harrison, M.D., *Adjunct*
 Christoph M. Heinicke, Ph.D., *Adjunct (Medical Psychology)*
 Jean C. Holroyd, Ph.D., *Adjunct (Medical Psychology)*
 Melvin R. Lansky, M.D., *Adjunct*
 Edward H. Liston, M.D., *Adjunct*
 Judd Marmor, M.D., *Adjunct*
 Charles P. McCreary, Ph.D., *Clinical (Medical Psychology)*
 James F. McGinnis, Ph.D., *Adjunct (Biobehavioral Sciences)*
 James G. Miller, M.D., Ph.D., *Adjunct*
 Armando Morales, D.S.W., *Adjunct (Social Work)*
 Paul R. Munford, Ph.D., *Adjunct (Medical Psychology)*
 Michel Philippart, M.D., *Adjunct*
 Kiki V. Roe, Ph.D., *Adjunct (Medical Psychology)*
 Abraham Rosenberg, Ph.D., *Adjunct (Biobehavioral Sciences)*
 Iraj Siassi, M.D., *Adjunct*
 Paul F. Slawson, M.D., Ph.D., *Adjunct*
 Theodore Van Putten, M.D., *Adjunct*

Adjunct, Visiting, and Clinical Associate Professors

Marion Baer, Ph.D., *Visiting (Biobehavioral Sciences)*
 Christiane A.M. Baltaxe, Ph.D., *Adjunct (Biobehavioral Sciences)*
 Warren S. Brown, Ph.D., *Adjunct (Biobehavioral Sciences)*
 V. Charles Charuvastra, M.D., *Adjunct*
 Milton S. Davis, Ph.D., M.D., *Adjunct*
 L. Jaime Fitten, M.D., *Adjunct*
 Frank Gawin, M.D., *Visiting*
 Jacquelyn Green, M.D., *Visiting*
 Victor Haddox, M.D., J.D., *Adjunct*
 Jeffrey S. Hammer, M.D., *Clinical*
 Behnaz Jalali, M.D., *Clinical*
 Keh-Ming Lin, M.D., *Adjunct*
 Bruce Naliboff, M.D., *Clinical*
 Mary J. O'Connor, Ph.D., *Adjunct (Medical Psychology)*

Bruce Picken, M.D., *Visiting*
 James J. Preis, J.D., *Adjunct (Law)*
 Warren R. Procci, M.D., *Adjunct*
 H. Rebecca Rausch, Ph.D., *Adjunct (Neuropsychology)*
 Albert Sattin, M.D., *Clinical*
 James E. Spar, M.D., *Clinical*
 Jeffery N. Wilkins, M.D., *Adjunct*
 Boghos Yeravianian, M.D., *Visiting*

Adjunct, Visiting, and Clinical Assistant Professors

Mahmoud Ajang, M.D., *Clinical*
 Lori Altshuler, M.D., *Clinical*
 Sylvia Askin-Edgar, M.D., *Clinical*
 Beth Bernstein, M.D., *Clinical*
 Vivien K. Burt, M.D., Ph.D., *Clinical*
 Alexander Bystritsky, M.D., Ph.D., *Clinical*
 Pamela Diefenbach, M.D., *Visiting*
 Armen Djenderedjian, M.D., *Clinical*
 Barry Guze, M.D., *Clinical*
 Neil Hartman, M.D., Ph.D., *Clinical*
 Madison G. Hinchman, D.S.W., *Adjunct (Social Work)*
 Yih-Ing Hser, Ph.D., *Adjunct (Psychology)*
 Daniel Kaufman, Ph.D., *Adjunct (Biobehavioral Sciences)*
 Albert-Jan Kettneris, M.D., *Clinical*
 Bryan King, M.D., *Clinical*
 Ralph Jan Koek, M.D., *Clinical*
 Ricardo P. Mendoza, M.D., *Clinical*
 Robert E. Neshkes, M.D., *Clinical*
 Daniel A. Plotkin, M.D., *Clinical*
 Vijay M. Ranganath, M.D., *Clinical*
 Rochelle Reno, Ph.D., *Adjunct (Medical Psychology)*
 Robert P. Rose, M.D., Ph.D., *Clinical*
 Jacob Samler, M.D., *Clinical*
 Elizabeth Schmid, M.D., *Clinical*
 Julia Schwartz, M.D., *Clinical*
 Pranav Shah, M.D., *Clinical*
 Daniel Siegel, M.D., *Visiting*
 Lanny L. Snodgrass, M.D., Ph.D., *Adjunct*
 Paula Stoessel, Ph.D., *Visiting*
 Thomas Strouse, M.D., *Clinical*
 David L. Sultzer, M.D., *Clinical*
 Martin Szuba, M.D., *Clinical*
 Douglas Tucker, M.D., *Clinical*
 William C. Wirshing, M.D., *Adjunct*
 Frisca L. Yan-Go, M.D., *Clinical*

Scope and Objectives

The Department of Psychiatry and Biobehavioral Sciences offers interdisciplinary courses related to the mental health professions of the biobehavioral sciences in addition to its programs for psychiatry interns and residents and for medical students (courses for medical students are listed in the *Announcement of the UCLA School of Medicine and the School of Medicine Handbook of Clinical Courses*).

Enrollment in department courses is limited to registered UCLA students, students registered in programs officially affiliated with UCLA, and students enrolled concurrently through UCLA Extension. Students who meet these requirements, but who are not affiliated with a departmental training program, must also meet required course prerequisites determined by specific educational programs. Additional information is available from the department office.

Programs

The **Developmental Disabilities Immersion Program** is cosponsored by the Department of Psychology, the Department of Psychiatry and Biobehavioral Sciences, and the Office of Instructional Development — Field Studies Development. Each year a group of 30 students is selected for the program which runs during Winter/Spring Quarters. Students participate in courses, fieldwork, and research at selected University and community facilities serving persons with developmental disabilities. Required courses include Psychology/Psychiatry M180A, M180B, M181A-M181B. Students also take other courses related to developmental disabilities. Many of the courses fulfill psychology undergraduate major requirements. Student individualized research projects are also part of the immersion experience. Students interested in the program should contact the Office of Instructional Development — Field Studies Development (70 Powell Library Building) or the Psychology Undergraduate Advising Office (1531 Franz Hall).

The department offers a 12-month **Clinical Psychology Internship**, which is a Graduate Division certificate program. Students enrolled in clinical psychology programs at APA-approved universities are eligible to apply. Applications are accepted through December 1. The primary goals of the internship are to provide a year of intensive exposure to a wide variety of clinical and human services experiences and to maximize the personal growth of each professional. Students interested in this certificate program should contact the Psychology Internship Training Office, 68-265 NPI&H (825-6606).

Information on clinical practicums which are offered in conjunction with other educational institutions and UCLA departments may be obtained from the department office.

Upper Division Courses

M112. Laboratory for Naturalistic Observations: Developing Skills and Techniques. (Same as Anthropology M136Q.) Prerequisite: consent of instructor. Skill of observing and recording behavior in natural settings, with emphasis on field training and practice in observing behavior. Group and individual projects. Discussion of some of the uses of observations and their implications for research in social sciences. (W)

M119. Evolution of Intelligence. (Same as Psychology M119K.) Lecture, two hours; discussion, two hours. Prerequisites: Psychology 15 or 115, introductory statistics course, junior or senior standing, consent of instructor. Intelligence treated as neural information-processing capacity; its evolution in vertebrates correlated with evolution of enlarged brains. Quantitative approaches in evolutionary biology and neurosciences. Mr. Jerison (W)

M142. Advanced Statistical Methods in Psychology. (Same as Psychology M142.) Lecture, two hours; discussion, 90 minutes. Prerequisite: Psychology 41. Survey of statistical techniques commonly used in psychology, education, and behavioral and social sciences: correlational techniques, analysis variance, and multiple regression. Mr. Nihira (W)

175. Women Physicians: Gender Issues in Professional Socialization and Practice. Seminar, three hours. Professional socialization of women in medicine, with focus on gender issues in developmental stages of medical training and practice (premed, medical school, internship, residency, and various specialty areas of medical practice). Women trainees and physicians in various careers participate in class presentations. Ethnographic research project based on clinical preceptorship experience required.

Mr. Coombs

M180A. Contemporary Problems in Mental Retardation. (Same as Psychology M180A.) Prerequisites: Psychology 10, 41, and 127 or 130. Corequisites: courses M181A-M181B. Limited to Immersion Program students. Presentation of concepts, issues, and research techniques in the area of mental retardation. Biological, psychological, and community questions concerning causes and treatment of developmental disabilities, as well as systems for care and training of retarded individuals. Lectures, directed reading, and discussion.

Mr. Galbraith (W)

M180B. Contemporary Issues in Mental Retardation. (Same as Psychology M180B.) Prerequisite: course M180A. Limited to Immersion Program students. Psychoeducational issues in mental retardation relating literature to ongoing field experiences through lectures, discussions, media, and six student papers.

Mr. Fluharty (Sp)

M181A-M181B. Research in Contemporary Problems in Mental Retardation. (Same as Psychology M181A-M181B.) Corequisites: courses M180A, M180B. Research experience. In Progress grading.

Mr. Fluharty and the Staff (W,Sp)

M190. Ethology: Physiology of Behavior and Learning in Animals. (Same as Psychology M119J.) Prerequisites: Psychology 115, junior standing. Basic course for undergraduate students which integrates systematic overview of common forms of behavioral plasticity and standard training procedures in laboratory animals (in behavioral, neurophysiological, and pharmacological studies) with broad biological, evolutionary perspective.

Mr. Soltysik (W)

199. Special Studies in Psychiatry (2 to 4 units). Prerequisite: consent of instructor and department chair, based on written proposal outlining course of study (to be structured by instructor and student at time of initial enrollment). Additional information and course proposal forms are available in Office of Education, C9-456 NPI&H.

Mr. Yager

Graduate Courses

200. Colloquium: Biobehavioral Sciences (1 unit). Prerequisite: consent of instructor. Vehicle for continuing education on recent advances in various scientific fields relevant to behavior in its biobehavioral and biosocial contexts. Forum for pertinent interdisciplinary discussion. Speakers present information from their area of competence and express their ideas on relevance of this material to broader issues of behavior.

Mr. West

M203. Molecular Neurobiology. (Same as Neuroscience M203.) Lecture, three hours; discussion, one hour. Prerequisites: Biological Chemistry 201A-201B or equivalent, basic biochemistry, consent of instructor. Introduction to neurochemistry for neuroscience students. Topics include protein structure and function, lipid structure and metabolism, nucleic acids/molecular biology.

Mr. Campagnoni (F)

M204. Cellular and Molecular Developmental Neurobiology. (Same as Anatomy M204, Biology M280, Neuroscience M204, and Physiology M204.) Lecture, three hours; discussion, one hour. Prerequisites: Neuroscience M201, M202, and M203, or Biological Chemistry 201A-201B, or consent of instructor. Cellular and molecular processes that regulate development of nervous systems of vertebrates and invertebrates. Topics include regional specification in early neurogenesis, generation of neuronal diversity, cell surface interactions and growth factors, neuronal and glial proliferation and migration, axonal outgrowth and guidance, synaptogenesis, trophic interaction, plasticity, regeneration, and aging.

Mr. de Vellis, Ms. Macklin (W)

205. Madness in the Enlightenment: Care and Cure of Mental Illness in the Age of Reason. Prerequisites: graduate standing, consent of instructor. Exploration of writings of physicians and reformers of the Enlightenment who studied the mentally ill, treated them, and recorded their theories, findings, and recommendations between ca. 1750 and 1850.

Ms. Weiner

207A-207B-207C. Hypnosis Seminars (2 units each). Prerequisite: psychology intern, psychiatry resident, member of (or trainee in) one of the licensed mental health professions, or consent of instructor. Experiential seminar intended to prepare mental health professionals for clinical applications, involving didactics, demonstration, practice, and feedback. Following training in inductions and development of classic hypnotic phenomena (e.g., age regression, hypnoanesthesia), focus on psychotherapeutic applications, including direct symptom removal, behavioral methods, and hypnoanalysis. Emphasis on developing skill for application in clinical practice. S/U grading.

Ms. Holroyd (F,W,Sp)

208A-208B-208C. Clinical Neuropsychology (2 units each). Lecture, 90 minutes. Prerequisites: graduate or postgraduate standing, consent of instructor. Introduction and review of neuropsychological concepts, including functional neuroanatomical systems of the brain, analytic and synthetic activities of the brain, effects of generalized and focal brain impairment on behavior, and introduction to use of neuropsychological test instruments.

Mr. Asarnow (W)

M210. Seminar: Psychocultural Studies. (Formerly numbered M210A-M210B.) (Same as Anthropology M234.) Seminar, three hours. Devoted to present state of research in psychocultural studies. Survey of work in child development and socialization, personality, psychobiology, transcultural psychiatry, deviance, learning, perception, cognition, and psychocultural perspectives on change.

Mr. Kernan (W)

M211. Sociocultural Perspectives on Mental Retardation. (Same as Anthropology M234R.) Lecture, three hours. Prerequisite: consent of instructor. Exploration of concepts such as "intelligence," "competence," and "adaptive behavior" in varying non-Western societies as background to study of the phenomenon of mental retardation in the West, particularly the U.S. Topics include cross-cultural perspectives, history of institutional confinement, policies of deinstitutionalization and normalization, and current issues involving adaptation and "quality of life." Discussion of topics such as communicative competence, work, crime, deviance, sexuality, and marriage. May be repeated for credit.

Mr. Edgerton

M213A-M213B. The Individual in Culture. (Same as Anthropology M235A-M235B.) Lecture, three hours. Course M213A is prerequisite to M213B. In Progress grading.

(W,Sp)

M214. Cross-Cultural Studies of Socialization and Children. (Same as Anthropology M236P.) Seminar, three hours. Selected topics in cross-cultural study of socialization and child training. Methods, ethnographic data, and theoretical orientations. Emphasis on current research.

Mr. Weisner (F)

M219A-M219B. Basic Core Courses: Mental Retardation Research (2 units each). (Same as Anthropology M237A-M237B.) Lecture, two hours; discussion, two hours. Prerequisite: consent of instructor. Required of all MRRC trainees. Systematic overview of mental retardation and sciences basic to this field of study. Language, methods, aims, and contributions of various disciplines that contribute to the field. Last two weeks of second term are spent discussing and preparing multidisciplinary research designs with potential for prevention or amelioration of mental retardation. S/U grading.

Mr. Buchwald, Mr. Edgerton, Mr. Levine

M221. Cellular and Molecular Neurochemistry. (Formerly numbered M221A.) (Same as Anatomy M221, Biological Chemistry M221, Neuroscience M240, and Pharmacology M221.) Lecture, three hours; discussion, one hour. Prerequisite: biochemistry. Contemporary neurochemistry topics — metabolic specialization and compartments, metabolism and function of ion channels; structure and function of neurotransmitters. Inborn errors and molecular genetics, molecular imaging, aging, and regeneration. Receptor effector coupling. S/U or letter grading.

Mr. de Vellis, Mr. Olsen (W)

M222. Transcultural Psychiatry. (Same as Anthropology M234P.) Lecture, three hours. Prerequisite: consent of instructor. Consideration of psychiatric topics in cross-cultural perspective, such as studies of drug use, deviance, suicide, homicide, behavioral disorders, "culture specific" syndromes, non-Western psychiatries, and questions of "sick" societies. May be repeated for credit.

Mr. Edgerton

223A-223B-223C. MMPI Seminars and Case Conferences (2 units each). (Formerly numbered 223.) Prerequisite: psychology intern, psychiatry resident, or consent of instructor. Seminar and case conference on interpretation of Minnesota Multiphasic Personality Inventory (MMPI) — theory, principles, and research into personality types.

Mr. Caldwell (F,W,Sp)

226A-226B. Childhood Psychopathology Research Seminars (2 units each). Seminar, 90 minutes. Current research in causes and behavioral manifestations of childhood psychopathology. Discussion on diagnosis and etiology of childhood disturbances.

Ms. Sigman, Mr. Tanguay (F,W)

228. Behavioral Medicine. Seminar, three hours. Review of behavioral sciences knowledge and techniques relevant to understanding physical health and illness and discussion of application of this knowledge and these techniques to prevention, diagnosis, treatment, and rehabilitation. Integration of behavioral and biomedical approaches.

Mr. McCreary, Mr. Shapiro (F)

231. Hispanic Mental Health Issues and Treatment (2 units). Prerequisite: consent of instructor. Mental health issues and needs of Hispanics through seminars and videotapes dealing with historical comparison of psychiatry in Mexico and the U.S., analysis of various theoretical perspectives regarding biopsychosocial behavior; distinguishing psychodynamic from cultural factors in treatment of Spanish-speaking patients; treatment of Hispanic families, couples, undocumented persons, and criminal justice system clientele.

Mr. Morales (W)

232A-232B-232C. Human Sexual Dysfunction (2 units each). Prerequisite: consent of instructor. One-year training and research course in direct behavioral treatment of human sexual dysfunction. Combination of didactic material and supervised experience.

Mr. Golden (F,W,Sp)

M234. Affective Disorders (2 or 4 units). (Formerly numbered M234A-M234B.) (Same as Psychology M280.) Seminar, two hours. General topics related to primary affective disorders (depression, manic depressive illness), including diagnosis, pharmacology, epidemiology, psychology, phenomenology, biology, and treatment. Students enrolled for four units are assigned a more intensive reading list and required to make a presentation or prepare a research paper.

Ms. Hammen

M235. Laboratory for Naturalistic Observations: Developing Skills and Techniques. (Same as Anthropology M236Q, Education M222A, and Psychology M295.) Skill of observing and recording behavior in natural settings, with emphasis on field training and practice in observing behavior. Discussion of some uses of observations and their implications for research in social sciences. Students expected to integrate observational work into their current research interests. (W)

236A-236B-236C. Psychology Interns Seminars (1 unit each). Seminar, 90 minutes. Current topics in clinical psychology. Group-selected topics for discussion pertaining to psychopathology, diagnostic evaluation, and modalities of treatment. S/U grading.

Ms. Holroyd (F,W,Sp)

237. Seminar: Behavioral Neuroimmunology (1 unit). (Formerly numbered M237.) Lecture, one hour per month; discussion, 30 minutes per month. Series of lectures presented the second Wednesday of each month throughout academic year by invited speakers. S/U grading.

Ms. Kemeny, Mr. Liebeskind, Mr. Solomon

240. Assessment and Treatment of Afro-American Families (3 units). Seminar, two hours. Prerequisites: graduate standing, consent of instructor. Aids mental health professionals and trainees in evaluation and treatment of Afro-American families in terms of their cultural milieu, historical background, and economic status. Didactic presentations by instructors and invited guests form basis for supervised evaluation and case management with an Afro-American child and family.

Ms. Bass, Ms. Tucker, Ms. Wyatt (Sp)

242. Parent and Child Psychotherapy Seminar (1 unit). Prerequisites: current experience in psychoanalytically oriented child psychotherapy, consent of instructor. Seminar meets throughout year. During Summer Quarter emphasis on initial clinical and research evaluation as well as early treatment of the child and family. During Fall, Winter, and Spring Quarters instructors use videotaped sessions and notes from their own clinical work to discuss such topics as diagnostic criteria, family system treatment formulations stressing work with parents and children, and such theoretical and technical issues as transference, resistance, overdetermined nature of symptoms, and termination. Student presentations encouraged in order to amplify clinical and theoretical issues and to become familiar with ongoing cases which are part of a systematic outcome study.

Ms. McDowell

243A-243B-243C. Mental Retardation Interdisciplinary Core Curriculum (1 unit each). Lecture, 90 minutes. Prerequisite: consent of instructor. Survey series on major topic areas of mental retardation, covering epidemiology, nosology, assessment, health care delivery systems, basic genetics, nutrition, direct care, and special deficits. Presented in interdisciplinary framework as generic information independent of discipline. S/U grading.

Mr. Forness, Ms. Sena (F,W,Sp)

245A-245B. Psychological Assessment of Severely Handicapped Children (3 units each). Lecture, 90 minutes; laboratory, two hours. Course 245A is prerequisite to 245B. Psychological assessment of the preschool child. Specific emphasis on assessment of children with developmental disabilities and children who are generally thought to be "untestable." Practical orientation, involving two hours per week of supervised testing. S/U grading.

Ms. Freeman (F,W)

M246. Psychological Aspects of Mental Retardation. (Same as Psychology M246.) Lecture, 90 minutes. Discussion of psychological aspects of mental retardation, including classification, description, etiology, theory, prevention, treatment, assessment, modern and future developments, and input from other disciplines (ethics, law, religion, welfare systems).

Mr. Tymchuk (F)

247A-247B-247C. Neurological and Psychological Bases of Behavior (1 unit each). Discussion, two hours. Prerequisites: graduate standing, consent of instructor. Discussion of advances in neurophysiology and neuropsychology, with particular reference to modern developmental studies. Faculty members or advanced students present results of their research work in context of available literature; intense discussion during and after presentation. S/U grading.

Mr. Levine (F,W,Sp)

M249. Neurobiology of Sleep (3 units). (Same as Neuroscience M259 and Psychology M296.) Lecture, one hour; discussion, two hours. Critical review of primary research publications concerning neural basis of sleep. Discussion of neural and biochemical control of REM and NREM sleep after reviewing sleep behavior and phenomenology, including developmental and comparative aspects. Presentation of relevant clinical phenomena. S/U or letter grading.

Mr. Siegel (F)

M250. Medical Anthropology in Public Health. (Same as Anthropology M266, Community Health Sciences M232, and Nursing M250.) Seminar, three hours. Cross-cultural aspects of human behavior as they relate to perception, treatment, incidence, and prevalence of disease and illness.

Ms. Browner, Ms. Scrimshaw

253. Seminar: Child Development (1 unit). Prerequisite: consent of instructor. Theories of development, systems of child development, and chronological aspects of child development. Presentation of assigned readings by students plays major role in each session.

Mr. Cantwell

254. Counseling Families of Handicapped Children (2 units). (Formerly numbered M254.) Lecture, one hour; discussion, 30 minutes. Techniques and issues in counseling families through evaluation, feedback, and treatment. Social and psychological stresses on family unit, professional's reactions, community resources, and issues of genetic counseling, placement, and developmental crises.

Ms. Cruz, Ms. Gottlieb

M255. Functional Organization of Behavior (2 units). (Formerly numbered M201A-M201B-M201C.) (Same as Neuroscience M255.) Prerequisite: consent of instructor. Changes in neuronal properties supporting changes in learned behavior. Different types of learning. Role of neurotransmitters and second messengers in changing ion channels of neurons to support associative learning versus long-term potentiation of neurotransmission. S/U or letter grading.

Mr. McGuire, Mr. Woody (F)

256. Basic Clinical Child Psychopathology (1 unit). Prerequisite: consent of instructor. Weekly seminars covering basic clinical aspects of child psychopathology. Readings provided for basis of discussion on topics including interviewing of parents and children, diagnosis, and related syndromes.

Mr. Cantwell

257A-257B-257C. Communication Disorders Associated with Developmental Disabilities and Psychiatric Disorders (3 units each). Laboratory, 90 minutes; didactic, 90 minutes. Didactic and practical training in communication and its dysfunction as these relate to language disabilities seen in interdisciplinary medical setting. Provides background for graduate and postdoctoral students who plan to engage in clinical work and/or clinical research in which language disturbances of childhood and adulthood are relevant.

Ms. Baltaxe (F,W,Sp)

M258. Functional Neuropsychology (2 units). (Formerly numbered M216.) (Same as Neuroscience M258.) Lecture, two hours; discussion, one hour. Prerequisites: graduate standing, consent of instructor. Interdisciplinary course integrating current research publications in neuroanatomy, molecular neurobiology, synaptic neurophysiology, event-related potentials, neuropsychology of amnesia, and cognitive psychology of normal memory into a realistic model. S/U or letter grading.

Mr. Halgren (F)

259. Legal and Ethical Issues with Vulnerable Populations (3 units). Lecture, 90 minutes; laboratory, three and one-half hours. Discussion of current laws dealing with vulnerable populations (e.g., children, developmentally disabled people, elderly people); philosophies, ethics, ethical codes, issues, and how to resolve them. Use of videotapes and discussion of cases.

Mr. Tymchuk (W)

260. The Chronically Medically Ill Child and Family. Lecture, three hours; seminar, one hour. Examination from a biopsychological perspective of ramifications of chronic illness affecting life-style and development of the child and family, including examination of relevant theoretical models and research. Clinical application to assessment and intervention strategies.

Ms. Betz (F,Sp)

261. Psychopathology of Mental Retardation (1 unit). Seminar, 90 minutes. Prerequisite: consent of instructor. Review of current research findings and clinical practice concerning dually diagnosed populations. Nosology, theoretical issues, assessment and therapeutic interventions pertaining to populations with mental retardation and emotional problems.

Ms. Sena

262A-262B-262C. Clinical Fieldwork in Developmental Disabilities and Chronic Illness (1 to 4 units each). Prerequisites or corequisites: courses 243A-243B-243C, consent of instructor. Placement and supervision of clinical and consultation activities of interdisciplinary trainees in various community agencies, hospitals, or other related settings serving developmentally disabled or chronically medically ill children, youth, or adults. Supervision done jointly by community personnel on site, in collaboration with interdisciplinary faculty. S/U grading.

Mr. Forness

264. Biofeedback: Theory, Research, and Clinical Application. Seminar, two hours; laboratory, one hour. Introduction to concepts and techniques of biofeedback, including review of experimental literature and applications to various clinical problems (hypertension, headache, pain and anxiety, sexual dysfunction, cardiac arrhythmias, neuromuscular disorders, etc.). Training in use of portable biofeedback devices. Consideration of research and clinical issues.

Mr. Shapiro (W)

265. Mind and Brain in Evolution (2 units). Prerequisite: consent of instructor. Review of fossil evidence on organic evolution of the brain and implications of that evidence for evolution of mind and intelligence, with emphasis on quantitative approaches. Although some implications for cognitive psychology and individual differences are considered, the evolutionary analysis is "above the species level."

Mr. Jerison (Sp)

266A-266B-266C. Psychophysiological Research (1 unit each). (Formerly numbered 266.) Seminar, 90 minutes. Prerequisite: consent of instructor. Advanced seminar and discussion of ongoing laboratory research, involving concepts, experimental design, measurement, and data analysis. Current topics include regulation of physiological and subjective reactions to stress, psychophysiological research on diabetes, discrimination and control of blood pressure, and behavioral regulation of postural hypotension.

Mr. Shapiro (F,W,Sp)

M270. Neural Basis of Memory. (Same as Neuroscience M273.) Lecture, two hours; discussion, one hour. Anatomical, physiological, and neurological data integrated into models for how behavioral phenomena of memory arise. Discussion of invertebrate memory, cortical conditioning, hippocampus and declarative memory, and frontal lobes and primary memory.

Mr. Halgren, Mr. Woody

M272. Psychological Anthropology. (Same as Anthropology M234Q.) Lecture, three hours. Prerequisite: consent of instructor. Various psychological issues in anthropology, both theoretical and methodological. Areas of interest include such things as culture and theory, culture and personality, and culture psychiatry. Discussion of questions relating to symbolic and unconsciousness process as they relate to culture. Topics vary from term to term. May be repeated for credit.
Mr. Edgerton (F)

M273. Advanced Seminar: Medical Anthropology. (Same as Anthropology M263Q, Community Health Sciences M244, and Nursing M273.) Seminar, three hours. Prerequisite: consent of instructor. Limited to 15 students. Examination of interrelationships between society, culture, ecology, health, and illness. Bases for written critical analysis and class discussion provided through key theoretical works.
Ms. Browner (Sp)

274. Neurophysiology and Behavior (3 units). Prerequisites: graduate standing, consent of instructor. Analysis of strategies and approaches used to study behavior of mammalian organisms. Special emphasis on recent developments in electrophysiological recording techniques in behaving animals and how such developments relate to classical concepts of brain function.
Mr. Levine (Sp)

275A-275B. Sociobiology Seminar (2 units each). Prerequisite: consent of instructor. Review of sociological theory as it applies to adult bonding behavior: kin-selection theory, reciprocal altruism theory, mate selection theory, and bond strategy theory. Bonds viewed primarily from biological rather than psychological perspective. In Progress grading.
Mr. McGuire (F,W)

276. Neurocognitive Plasticity in Adults (3 units). Critical examination at multiple levels of brain function changes with aging — from structural changes at cellular, neurochemical, neuroanatomical, and neurophysiological levels on one hand to functional changes in sensory, motor, mnemonic, and intellectual abilities at other. Evaluation of behavioral, pharmacological, and transplantation techniques to enhance or restore function.
Mr. Halgren, Mr. Sydulko (Sp)

M279A. Seminar: Human Behavioral Ecology. (Same as Anthropology M229A and Education M281A.) Lecture, one hour; discussion, three hours. Prerequisite: consent of instructor. Examination of predictive models from animal behavioral ecology used to study human diet and subsistence; settlement patterns and territoriality; sharing and helping; reproduction and mortality. Comparison with other economic and ecological approaches in anthropology.
Mr. Blurton Jones

M279B. Seminar: Reproduction, Families, and Parenting. (Same as Anthropology M229B and Education M281B.) Prerequisite: consent of instructor. Guided forum for graduate students to discuss and broaden their studies of human reproduction and child rearing from varied viewpoints. Representation and debate of theories, questions, and methods from social and biological sciences.
Mr. Blurton Jones

M279C. Seminar: Selected Topics in Human Ethology. (Same as Anthropology M229C and Education M281C.) Lecture, one hour; discussion, three hours. Prerequisite: consent of instructor. Consideration of appropriateness and contributions of using animal behavior methodology in study of human behavior. Analysis: describing and recording behavior; causation; development, especially longitudinal studies; adaptation; evolutionary origins.
Mr. Blurton Jones

M280. Seminar: Reproduction and Women's Health. (Same as Anthropology M269P, Community Health Sciences M241, and Nursing M280.) Seminar, three hours. Analysis, using a cross-cultural approach, of sociocultural and political economic factors that affect reproduction and women's health. Topics include relationships between women's domestic and extra-domestic roles and their health, and impact of new reproductive technologies. May be repeated for credit.
Ms. Browner (F)

281. Behavioral Therapy in an Educational Setting. Lecture, one hour; laboratory, six to 10 hours. Prerequisite: consent of instructor. Supervised experience in classroom working with exceptional children. Theoretical background furnished through one-hour weekly lecture.
Mr. Forness

285A-285B-285C. Intermediate Family Therapy (3 units each). Seminar, two hours. Prerequisite: consent of instructor. Theories and techniques of family therapy. History, foundations, and indications and contraindications for family therapy and diagnosis. Observations and demonstrations. Students encouraged to bring videotapes of their family therapy cases for discussion.
Ms. Goldenberg

298. Current Topics in Biobehavioral Sciences (1 to 4 units). Prerequisite: consent of instructor. Current issues in biobehavioral sciences offered on selective basis depending on instructor interest and topical relevancy of problems. Consult *Schedule of Classes* for topics and instructors. May be repeated for credit.

403. Individual Case Supervision (1 to 4 units). Prerequisite: consent of instructor and department chair (based on written proposal to be structured by instructor and student prior to enrollment; additional information and proposal forms available in Office of Education, C9-456 NPI&H). One-to-one supervision of individual therapy cases, including analyses of patient data, supervision of ongoing treatment, informal didactic sessions on personality theory, and applications to patient management.

414. Emergency Treatment Attending Rounds (1 unit). Prerequisites: assignment to Emergency Treatment Unit, consent of instructor. Cases seen in emergency room during preceding night, reviewed by a consultant and emergency treatment staff. Exploration of assessment techniques, methods of intervention, and alternate modes of treatment.
Ms. Burt

416. Treatment Planning Meetings (1 unit). Prerequisite: consent of instructor. Treatment and management problems posed by inpatient psychiatry. Discussion of clinical psychopathology, treatment plans, and interdisciplinary skills. Emphasis on formulating accurate diagnostic assessments and planning effective treatment programs utilizing therapeutic methods of the milieu (somatic therapies, behavioral techniques, family therapy, group process, individual and dyadic treatment, etc.).

424. Ward Milieu Meeting (1 unit). Prerequisite: consent of instructor. Milieu course meetings designed to explore experientially and didactically multiple aspects of group process on a psychiatric inpatient unit.

425. Teaching Case Conference (1 unit). Prerequisite: consent of instructor. Review of diagnosis and treatment of full spectrum of disorders, with expert off-unit consultants.

429. Child Outpatient Team (1 unit). Prerequisite: consent of instructor. Weekly team meetings to coordinate clinical activities of trainees in Child Outpatient Department. Discussion of literature and theories related to selected cases. S/U grading.

449. Parent Training Intervention Workshop (2 units). Lecture, 90 minutes; discussion, one hour. Prerequisite: consent of instructor. Advanced clinical trainees learn behavioral techniques of assessment and treatment of parent/child problems. Lectures, case presentations, and workshops on various skills necessary.
Mr. Frankel

462. School Intervention by Child Psychiatrists. (Formerly numbered 462A-462B-462C.) Seminar, two hours. Prerequisite: consent of instructor. Knowledge of children in schools through (1) field experience, (2) a didactic program, (3) group supervision. Each trainee selects a local elementary or junior high school as site of field experience in consultation. Supervision focuses on assessing needs of the school and initiating the consultation. Seminars consider theories of consultation, systems theory as applied to schools, organization of school systems, professional roles represented in the school (e.g., teachers, counselors, principals, etc.), and their special problems. In Progress grading.
Mr. Cantwell

465. Pediatric Psychopharmacology (1 unit). Prerequisite: child psychiatry fellow or consent of instructor. Designed for all fellows in child psychiatry. Background of childhood psychopharmacology; clinical evaluation of psychotropic drugs with children; clinical indications for various psychotropic drugs. Clinical supervision of individual cases provided along with seminars and discussions of various articles.
Mr. Shekim

471. Grand Rounds (No credit). Prerequisite: second-year resident in Child Service, child psychiatry fellow, or consent of instructor. Each month one second-year child psychiatry fellow presents a major clinical problem. Senior faculty discussants preside. The presenting trainees expected to cover pertinent literature and to assemble critical elements of information on case or problem at hand. Most sessions eligible for Continuing Medical Education credit.

M472A. Nursing Care of Developmentally Disabled. (Same as Nursing M410A.) Lecture, one hour; discussion, one to two hours; laboratory, 10 hours minimum. Prerequisite: consent of instructor. Study of the handicapping conditions of childhood and their effects on the individual and family. Content based on normative developmental models with consideration for sociocultural diversity. Emphasis on prevention, systematic assessment, and planning of care for the individual and family. Introduction to implementation of intervention strategies. Series of three courses integrates didactic material and clinical experience.
Ms. Betz (F)

M472B. Nursing Care of Developmentally Disabled. (Same as Nursing M410B.) Lecture, one hour; discussion, one to two hours; laboratory, 10 hours minimum. Prerequisites: course M472A and/or consent of instructor. Study of philosophical and conceptual models affecting care delivery for developmentally disabled. Emphasis on intervention strategies necessary for primary, secondary, and tertiary prevention.
Ms. Betz (W)

M472C. Nursing Care of Developmentally Disabled. (Same as Nursing M410C.) Lecture, one hour; discussion, one to two hours; laboratory, 10 hours minimum. Prerequisites: course M472B and/or consent of instructor. Exploration and participation in assessment, planning, and delivery of health care to developmentally disabled in a variety of settings. Emphasis on expanded role of the nurse.
Ms. Betz (Sp)

478. Clinical Genetics Rounds (No credit). Prerequisites: medical graduate, consent of instructor. Weekly clinical rounds on patients seen in the wards during preceding week. House staff and others involved in clinical work may attend. Usually in-depth discussion of medical and genetic aspects of one or more disorders presented.
Ms. Crandall

479. Genetics Clinic Presentation (No credit). Prerequisite: consent of instructor. Weekly clinical teaching session on patients seen in preceding genetics clinic. In-depth discussion on genetics of each disorder.
Ms. Crandall and the Staff

480. Analysis of Human Chromosome Studies (1 unit). Prerequisite: consent of instructor. Chromosome karyotypes prepared in cytogenetics laboratory during preceding week presented and discussed with reference to clinical findings. Teaching includes interpretation of abnormal karyotypes and technical aspects of routine and special chromosome stains.
Mr. Sparkes

481. Chromatography Review (No credit). Prerequisites: premedical course or biochemistry, consent of instructor. Weekly session with presentation of amino acid chromatography carried out during preceding week. Interpretation of abnormal chromatograms together with technical aspects of tests used.
Mr. Cederbaum

485. Medical Genetics Seminar (No credit). Prerequisites: introductory course, consent of instructor. Weekly lecture series intended for those interested in genetics or in specific topic to be presented. Speakers are invited for their expertise or research in some special area related to genetics and may be from UCLA or elsewhere. Discussion and questions from audience encouraged.

Ms. Crandall and the Staff

596P. Individual Studies in Psychiatry (2 to 12 units). Prerequisite: consent of instructor and department chair, based on written proposal outlining course of study (to be structured by instructor and student at time of initial enrollment). Additional information and course proposal forms available in Office of Education, C9-456 NPI&H. Directed individual research and study in psychiatry at graduate level.

Mr. Yager

Radiation Oncology

B265 UCLA Medical Plaza 200,
(310) 825-9304

Chairs

Robert G. Parker, M.D., *Chair*
Guy J.F. Juillard, M.D., *Vice Chair, Clinical Affairs*
H. Rodney Withers, M.D., D.Sc., *Vice Chair, Research*

Scope and Objectives

The Department of Radiation Oncology includes clinical divisions at the UCLA Medical Plaza and Medical Center, Wadsworth VA Medical Center, and divisions of experimental radiation biology and medical radiation physics. Research and teaching facilities are available at the UCLA Medical Plaza, UCLA Medical Center, and Wadsworth VA. The primary clinical mission of the department is the management of patients who have cancer, although ionizing radiations also are used for preparing patients for bone marrow transplantations and for altering the immune systems of patients with a range of illnesses. Knowledge of the disease in question, the comparative efficacy of radiation therapy and other methods, radiation biology and pathophysiology, and the physical characteristics of varying radiations is essential.

Research interests range from clinical problems through cellular kinetics, radiation modifiers, radiation chemistry, molecular biology, immunology, and basic and applied physics. The educational programs serve medical, dental, nursing, and radiation therapy technologist students, and community and postgraduate physicians who are qualifying for certification in radiation oncology by the American Board of Radiology.

For further details on the Department of Radiation Oncology and a listing of the courses offered, see the *Announcement of the UCLA School of Medicine*.

Radiological Sciences

1V-365 Center for the Health Sciences, (310) 825-7811

Professors

Zoran L. Barbaric, M.D. (*Diagnostic Radiology*), *Executive Vice Chair*

Ricky Taira, Ph.D., *in Residence (Medical Imaging)*

Lecturers

Lan H. Kobe, M.S. (*Radiation Oncology*)
Nancy M. McCreary, M.S. (*Radiation Oncology*)
Marilyn C. Wexler, M.S. (*Radiation Oncology*)

Adjunct Professors

L. Stephen Graham, Ph.D. (*Nuclear Medicine*)
F. Eugene Holly, Ph.D. (*Radiation Oncology*)

Adjunct and Clinical Associate Professors

Robert F. Ackermann, Ph.D., *Adjunct (Nuclear Medicine, Biophysics)*
Martin W. Herman, Ph.D., *Adjunct (Diagnostic Radiology)*
Carolyn Kimme-Smith, Ph.D., *Adjunct (Diagnostic Radiology)*
Lawrence E. Williams, Ph.D., *Adjunct (Medical Imaging)*

Adjunct, Visiting, and Clinical Assistant Professors

Keh-Shih Chuang, Ph.D., *Clinical (Medical Imaging)*
Alek Hayrapetian, Ph.D., *Visiting (Diagnostic Radiology)*
Hazel L. Lewis, Ph.D., *Adjunct (Radiation Oncology)*
James C. Liu, Ph.D., *Adjunct (Radiation Oncology)*
David Metcalf, Ph.D., *Adjunct (Radiation Oncology)*
Peter J. Rosemark, Ph.D., *Adjunct (Radiation Oncology)*
Robert E. Wallace, Ph.D., *Adjunct (Radiation Oncology)*
W.S. Bobby Weinberg, Ph.D., *Visiting (Diagnostic Radiology)*
James S. Whiting, Ph.D., *Adjunct (Medical Imaging)*

Scope and Objectives

The biomedical physics graduate program in the Department of Radiological Sciences offers training in four specialties: biophysics, medical imaging, medical physics, and radiation biology. Specialized facilities for training and research are available in the departmental clinical laboratories, the Laboratory of Biomedical and Environmental Sciences, the Image Processing Laboratory, and a number of associated hospitals. Highly specialized equipment includes the biomedical cyclotron, the radiation oncology cyclotron, the picture archiving and communication system (PACS), the positron emission tomography (PET) scanners, the stereotactic gamma irradiator, and many VAX and Sun computers with image processor systems. Students are trained to work both as professional medical physicists and as independent investigators.

Graduates in biomedical physics can expect to engage in any combination of clinical service, consultation, research, and teaching. Biomedical physicists are usually employed in hospitals frequently associated with a medical school, where they are members of the academic staff. They are also in demand in high-technology private industry engaging in research and development of diagnostic equipment. In government agencies, biomedical physicists are involved in the formulation and enforcement of regulations applied to the use of radiation in health care delivery.

Requirements for Graduate Degrees

Admission

In addition to the University's minimum requirements, candidates for admission are required to have a bachelor's degree with a major in a science. Also, it is expected that all applicants will have had (1) one year of college physics (calculus-based), plus the equivalent of Physics 8E, (2) two years of college mathematics (through differential equations), equivalent to Mathematics 31A, 31B, 32A, 32B, 33A, 33B, (3) one year of college chemistry and one term of biochemistry, (4) one course each in anatomy and physiology, (5) at least one computer science course, and (6) one sta-

tics course. Deficiencies in the above courses must be removed prior to advancement to candidacy.

Scores from the Graduate Record Examination (GRE) General Test, taken in the last three years, should be sent to the department. Three letters of recommendation are required. If you already have a master's degree, one of the letters should be from your adviser.

A brochure describing the program in biomedical physics may be obtained from the Department of Radiological Sciences, Biomedical Physics Graduate Program, 1V-365 CHS, UCLA, Los Angeles, CA 90024-1721.

Master of Science in Biomedical Physics

Course Requirements

A minimum of eleven courses, including eight core courses (Radiological Sciences 200A, 200B, 203, 204, 205, 207, 209, and 260A or 260B), course 208A or 208B, and Biostatistics 100A and 100B, are required for the M.S. degree. In addition, you must take three clinical rotations (Radiological Sciences 202A-202B-202C).

For students with a medical physics background or a career objective other than a practicing medical physicist, a more sharply focused curriculum may be advised.

Courses 596 and 598 may be applied toward the degree. Eight units of 500-series courses may be applied toward the total course requirement, four units toward the minimum graduate course requirement.

Thesis or Comprehensive Examination Plan

You are required to write a thesis (Plan I) based on a research project or to pass a comprehensive examination (Plan II) consisting of material selected from the core courses. The examination is offered at least once a year and may be repeated once.

Ph.D. in Biomedical Physics

Admission

Admission to the doctoral program requires (1) selecting a specialty, (2) passing either all of the core courses with grades of B or better or the M.S. comprehensive examination, and (3) passing a written specialty qualifying examination which may be repeated once. Completion of a master's program is not required.

Qualifying Examinations

The qualifying examination for admission to the Ph.D. program should be taken by the end of your sixth term in residence. Once the qualifying examination is passed and you have selected a research topic in your specialty for the dissertation, you should, within a reasonable time frame agreed on with the dissertation ad-

viser, form a doctoral committee and schedule the University Oral Qualifying Examination. This examination covers your mastery of the biomedical physics curriculum, particularly the areas of the proposed dissertation topic.

If you do not complete the dissertation within four years after taking the written qualifying examination, you may be required to take it again.

Final Oral Examination

The final oral examination, or dissertation defense, is required.

Upper Division Course

199. Directed Individual Study or Research for Undergraduate Students (2 to 4 units). Prerequisite: consent of graduate adviser (based on written proposal outlining course of study or research). Directed individual study in biomedical physics for undergraduate students to be structured by faculty member and student at time of initial enrollment.

Mr. Norman (F,W,Sp)

Graduate Courses

200A. Physics and Chemistry of Nuclear Medicine. Lecture, one hour; laboratory, three hours. Prerequisite: consent of instructor. Nuclear structure, statistics of radioactive decay, nuclear radiations and their interaction with matter, nuclear decay processes, nuclear reactions, and compartment models. Physical and chemical properties of radioactive preparations used in nuclear medicine.

Mr. Hoffman (F)

200B. Nuclear Medicine Instrumentation. Lecture, one hour; laboratory, three hours. Prerequisite: course 200A. Introduction to nuclear medicine instrumentation, including well ionization chambers, probe and well scintillation detectors, scintillation cameras, and single photon emission computed tomography.

Mr. Graham (W)

201. Medical Radiation Accelerator Design. Lecture, three hours. Prerequisite: course 203. Overview of physical principles involved in design of current particle accelerators (electron, proton, heavy particle) and analysis of characteristics of current accelerators and facility design.

Mr. Smathers (Sp)

202A-202B-202C. Applications of Medical Physics to Clinical Problems. Selected studies in clinical use of radioisotopes:

202A. Nuclear Medicine. Prerequisite: course 200B or consent of instructor.

(F,W,Sp)

202B. Diagnostic Radiology. Prerequisites: courses 200A, 205, and 208A-208B, or consent of instructor.

(F,W,Sp)

202C. Radiation Therapy. Prerequisites: courses 203, 204, 207, and 208A-208B, or consent of instructor.

(F,W,Sp)

203. Physics of Radiation Therapy. Prerequisites: course 207, consent of instructor. Radiation quantities and units. Radiation dosimetry, clinical applications in treatment planning. Methods of measuring radiation quantities. Calibration of radiation therapy equipment.

Mr. Smathers (Sp)

204. Introductory Radiation Biology. Effect of ionizing radiation on chemical and biological systems.

Mr. McBride (W)

205. Physics of Diagnostic Radiology. Production of X rays, basic interactions between X rays and matter, X-ray system components, physical principles of medical radiography, radiographic image quality, fluoroscopy, image intensifiers, special procedures, X-ray protection. Laboratory experiments illustrate basic theory.

Mr. Taira (F)

206. Advanced Instrumentation. Prerequisites: courses 200A, 200B, 205, 209, 210. Introduction to recent advances in digital diagnostic imaging systems. Topics centered on instrumentation include film digitizers, image equipment interfaces, computed radiography (CR), digital subtraction angiography (DSA), computed tomography (CT), magnetic resonance imaging (MRI), and picture archiving and communication systems (PACS).

Mr. Ho (Sp)

207. Dosimetry and Health Physics. Lecture, three hours. Prerequisite: consent of instructor. Dosimetry of ionizing radiation, concepts in radiation protection, recommendation of national council on radiation protection and measurements, maximum permissible dose levels. Shielding calculations. Layout and design of radiographic installation.

(F)

208A-208B. Medical Physics Laboratory. Prerequisites: courses 203, 205. Techniques for measuring ionizing and nonionizing radiation, applications to problems in radiological sciences.

Mr. Herman, Ms. Kimme-Smith
(W, 208A; Sp, 208B)

209. Digital Techniques in Radiological Sciences. Lecture, three hours; laboratory, one hour. Prerequisites: one course in FORTRAN or another computer language, consent of instructor. Basic principles of digital technology used in radiological sciences. Concepts and experience necessary to undertake radiological research in a diverse computing environment. Discussion of relationship between computers and diagnostic equipment with regard to data acquisition, equipment interfacing, and data analysis.

Mr. Stewart (F)

210. Principles of Medical Imaging. Prerequisites: courses 200A, 200B, 205, 209. Study of image representation in spatial and frequency domains. Methods of measuring PSF, LSF, ESF, MTF, and signal to noise ratio. Other topics include Fourier method, histogram analysis, filter design, sampling theory, optics and system analysis, image compression, and ROC analysis.

(W)

211. Medical Ultrasound. Lecture, 90 minutes; laboratory, two hours. Prerequisite: at least one calculus course; for non-Radiological Sciences Department students: consent of instructor. Designed to teach graduate biomedical physics students to calibrate ultrasound medical imaging equipment, to evaluate new instrumentation and research in the field, and to initiate their own research into clinical ultrasound studies.

Ms. Kimme-Smith (Sp)

212. Biochemical Basis of Positron Emission Tomography (PET). Lecture, three hours; discussion, one hour. Prerequisite: consent of instructor. Introduction to biochemical processes and application of radioisotopes to study metabolism noninvasively by positron emission tomography (PET). Validation of kinetic models to derive quantitative information from PET. Introduction to clinical and experimental application of PET.

Mr. Buxton (F)

213. Quantitative Autoradiography. Lecture, three hours; discussion, one hour. Prerequisite: consent of instructor. Application of quantitative autoradiography for estimating brain and heart functions. Topics include 2-deoxyglucose method for metabolic rate; iodoantipyrine method for blood flow; amino acid method for protein synthesis; quantitative receptor autoradiography; neuroanatomy and neurophysiology of autoradiogram and PET scan interpretation.

Mr. Ackermann (Sp)

214. Medical Image Processing Systems. Prerequisites: courses 209, 210, consent of instructor. Architecture, design, and programming of medical image processing systems. Use and development of benchmark programs to evaluate performance of image processing systems. Provides experience with at least five different image processing systems.

(Sp)

215. Breast Imaging Physics and Instrumentation. Lecture, three hours; laboratory, two hours. Prerequisites: course 205, consent of instructor. Advanced clinical imaging techniques in mammography, including X-ray generators, tubes, xerography, ultrasound, MRI, and digital units. Quality control, dose measurements on dedicated, recently manufactured equipment. Ms. Kimme-Smith (F)

216. Fundamentals of Dosimetry. Lecture, three hours; laboratory, one hour. Prerequisite: consent of instructor. Review of fundamental interactions of radiation with matter and introduction to fundamentals of radiation dosimetry. Overview of dosimetry instrumentation as well as radiation sources in laboratory. Mr. Smathers (W)

217. Statistics and Data Analysis in Biomedical Physics. Lecture, three hours; laboratory, two hours. Prerequisites: Mathematics 31A, 31B, 32A, 32B, 33A, 33B. Introduction to computer-based statistical concepts, data analysis, and experimental design within biomedical physics research. Standard statistical packages and various statistical computing algorithms on relevant data sets within the radiological sciences. Mr. Sayre

218. Radiologic Functional Anatomy. Lecture, three hours; discussion, two hours. Prerequisite: consent of instructor. Introduction to human anatomy as visualized through radiological and nuclear medicine imaging modalities such as X ray, CT, MRI, sonogram, PET, and SPECT. Ms. Chugani

219. Principles and Applications of Magnetic Resonance Imaging. Lecture, three hours; laboratory, one hour. Prerequisite: consent of instructor. Basic principles of magnetic resonance (MR), imaging physics, and contrast mechanisms. Emphasis on hardware, Fourier transform imaging methods, structure of pulse sequences, various scanning parameters and reduction of artifacts. Introduction to MR spectroscopy, MR angiography, and fast imaging techniques. Mr. Sinha

M230. Computed Tomography: Theory and Applications. (Same as Biomathematics M230.) Prerequisite: consent of instructor. Computed tomography is a three-dimensional imaging technique being widely used in radiology and is becoming an active research area in biomedicine. Basic principles of computed tomography (CT), various reconstruction algorithms, special characteristics of CT, physics in CT, and various biomedical applications. Mr. S.C. Huang (W)

M233. Principles, Practices, and Policies in Biotechnology (2 units). (Same as Biological Chemistry M233, Biology M233, Chemical Engineering M233, Chemistry M233, Microbiology M233, and Microbiology and Immunology M233.) Prerequisite: graduate standing or consent of instructor. Presentation of technologies, regulatory practices, and policies required for product development and review of current opportunities for new technology development. Topics include fermentation processes, pilot and large-scale bioprocess technologies, scaleup strategies, industrial recombinant DNA processes, hybridomas, protein engineering, peptide mimetics and rational drug design, medical and microscopic imaging, and intellectual property issues. S/U or letter grading. Mr. Fox, Ms. Morrison

260A-260B-260C. Seminars: Medical Physics (2 units each). Joint critical study by students and instructors of fields of knowledge pertaining to medical physics. Periodic contributions made by visiting scientists. Discussion of research in progress. May be repeated. (W,Sp)

266A-266B-266C. Seminars: Nuclear Medicine (2 units each). Topics of current interest in nuclear medicine. Intended for physicians, radiation physicists, and graduate students. S/U grading. (F,W,Sp)

268. Radiopharmaceutical Chemistry. Lecture, two hours; discussion, two hours. Biochemical principles of radiopharmaceutical design, utilization, and synthesis, with emphasis on positron-emitting labeled radiopharmaceuticals for PET. Application of radiopharmaceuticals to in vivo quantitative estimation of biochemical and pharmacological parameters in humans with PET (i.e., membrane transport, metabolism, biosynthesis, and neurotransmission). Mr. Barrio (Sp)

269. Seminar: Medical Imaging (1 unit). Prerequisite: consent of instructor. Continuous registration required of students in medical imaging specialty. Topics of current interest in medical imaging, with lecturers from the department, other universities, and private industry. (F,W,Sp)

495. Special Studies in Biomedical Physics. Discussion, two hours; laboratory, four hours. Prerequisite: consent of instructor. Teaching assistance in graduate laboratory courses under supervision of a faculty member. S/U grading.

596. Research in Biomedical Physics (4 to 12 units). Directed individual study or research. Only one 596 course may be applied toward M.S. degree requirements. May be repeated for credit.

597. Preparation for Ph.D. Qualifying Examinations. May not be applied toward M.S. degree requirements. May not be repeated. S/U grading.

598. Research for and Preparation of M.S. Thesis (4 to 12 units). Two 598 courses (or 598 and 596 combined) may be applied toward M.S. degree requirements. May be repeated. S/U grading.

599. Research for Ph.D. Dissertation (4 to 12 units). Prerequisite: successful completion of screening examinations. Research for and preparation of Ph.D. dissertation. May be repeated. S/U grading.

Surgery

72-131 Center for the Health Sciences, (310) 825-7017

Executive Chair

Michael J. Zinner, M.D. (*William P. Longmire, Jr., Distinguished Professor of Surgery*)

Executive Vice Chair

E. Carmack Holmes, M.D.

Vice Chairs

Rinaldo F. Canalis, M.D., *Acting (Harbor-UCLA)*

Leonard Makowka, M.D. (*Cedars-Sinai*)

Edward P. Passaro, Jr., M.D. (*Wadsworth VA*)

Howard A. Reber, M.D. (*Sepulveda VA*)

J. Thomas Rosenthal, M.D.

Jesse E. Thompson, Jr., M.D. (*Olive View*)

Scope and Objectives

The Department of Surgery instructs medical students during all four years of medical school. Students are expected to obtain broad knowledge of diseases treated by surgical means and to understand the pathology of these conditions, the therapy that may be applied, and the anticipated results of treatment. They are also encouraged to learn about the impact of surgical illness on the patient and the patient's family and environment.

Third-year students participate in a 12-week core clerkship in clinical surgery, assigned to either Harbor-UCLA Medical Center or a combination of UCLA, Wadsworth VA, and Olive View Medical Centers. Each facility has a special orientation depending on the patient population and the individual staff. During the fourth year students may elect to take additional clinical rotations with increasing responsibilities. Additional in-depth elective courses are offered in collaboration with other departments.

For further details on the Department of Surgery and a listing of the courses offered, see the *Announcement of the UCLA School of Medicine*.

Upper Division Course

199. Special Studies (2 to 8 units). Prerequisite: consent of instructor. Individual projects carried out under direction of a faculty member. Special studies in surgery, with appropriate objectives, readings, laboratory work, or other assignments designed for proper training of students. P/NP or letter grading.

School of Nursing

Ada M. Lindsey, Dean

17

The excellent reputation of the UCLA School of Nursing has been achieved by the faculty, students, and graduates. The school is recognized nationally and internationally for its fine undergraduate and graduate programs.

Faculty members are selected for their expertise, both in clinical areas of specialization and in research, and for their ability to transmit knowledge. In addition, highly skilled nurses practicing in many clinical settings are affiliated with the school and participate in the educational process.

In the curriculum, strong emphasis is placed on clinical competency and research. Faculty members are particularly cognizant of the needs of patients who represent a broad ethnic, racial, and cultural spectrum and have provided an emphasis on cultural diversity within the curricula. The School of Nursing has especially good technological support established to enhance the learning; for example, computer, media, and print resources are available for student use and are integral to the environment.

Students are selected for their capabilities, background, and potential for contributions to the profession and are prepared as highly competent professional nurses. Alumni, employed at all levels in many employment settings in different geographical areas, well represent the School of Nursing.

The school offers outstanding educational opportunities. Faculty, staff, and administration are proud of the accomplishments and recognition of the school and its graduates and that the school continues to be in the forefront in preparing the future leaders in nursing.

Frances M. Wiley, R.N., M.N.

The UCLA School of Nursing gives direction to interested potential applicants through monthly open counseling sessions. If you are interested in the academic programs offered, you are urged to attend a counseling session or request a copy of the *Announcement of the UCLA School of Nursing* by writing to the Student Affairs Office, School of Nursing, 2-200 Factor Building, UCLA, Los Angeles, CA 90024-1702 (825-7181).

History and Accreditation

In 1949 The Regents of the University authorized the School of Nursing as one of the professional schools of the UCLA Center for the Health Sciences. This action paved the way for the development of an undergraduate basic program in nursing leading to the Bachelor of Science degree and made possible the establishment of a graduate program leading to the Master of Science degree. In 1965 the Master of Nursing degree was established as an alternate option to the M.S. degree. The Master of Science degree program was discontinued in 1971. The Regents approved the Doctor of Nursing Science degree program in 1986, and in Fall Quarter 1987 the first doctoral students were admitted.

The baccalaureate program has been continuously approved by the California Board of Registered Nursing since 1949. The School of Nursing became an agency member of the Department of Baccalaureate and Higher Degree Programs of the National League for Nursing in 1952. The Accrediting Service of the National League for Nursing has granted full accreditation to the programs since 1954.

Degrees Offered

Bachelor of Science (B.S.)
 Master of Nursing (M.N.)
 Doctor of Nursing Science (D.N.Sc.)

Bachelor of Science Degree

The baccalaureate program leading to the Bachelor of Science degree provides for a close interweaving of general and professional education. The physical, social, and emotional health aspects of nursing are emphasized throughout the curriculum. Clinical nursing ex-

perience under the guidance of faculty members is provided in hospitals, outpatient clinics, homes, and community health centers.

Credit by examination is available to qualified students on review of previous education.

Admission

The School of Nursing strives to attain a culturally and ethnically diverse student population. Admission, beginning in the junior year, is based on scholarship, diverse life experiences, and disadvantage. You must have completed a minimum of 84 quarter units, with grades of C or better in prerequisite courses and an overall grade-point average of 2.8 or better. Three letters of recommendation are also required. Diverse life experiences, including previous employment, volunteer work, and community service which reflect leadership, responsibility, multicultural involvement, multi-lingual abilities, and other unusual skills and knowledge are evaluated. Consideration is also given to social and economic disadvantage such as educational background, heavy work schedule during school, housing conditions, family responsibilities, and mastery of physical handicaps. Completed applications should reflect clearly identified career goals and documentation of your potential in nursing.

Applications for acceptance to the baccalaureate program must be filed no later than November 30 for the next Fall Quarter. The School of Nursing admits 50 students each Fall Quarter. In addition to the regular *UC Application for Undergraduate Admission and Scholarships* which must be returned in the self-addressed envelope included in the packet, an application must be filed with the school by November 30. This application is available directly from the Student Affairs Office, School of Nursing, 2-200 Factor Building, UCLA, Los Angeles, CA 90024-1702.

You can find a discussion of the prenursing curriculum and prehealth advising in "Preparing for a Professional School" in Chapter 5.

Degree Requirements

The Bachelor of Science degree is granted on fulfillment of the following requirements.

(1) You must complete 44 required courses (191 quarter units; unit value of courses ranges from two to eight units) of college work and satisfy the general University requirements.

(2) Of the required 44 courses, at least 20 courses must be in general education, including the courses listed under the "Prenursing Curriculum" in Chapter 5 on the College of Letters and Science.

(3) You must complete at least 24 courses (107 quarter units) of upper division coursework toward the degree, including Nursing 101, 104A, 104B, 105, 109, M115, 120A through 120E, 120G, 184, one course from 190A through 190E, 190F, 192, 193, 195, four electives, Biostatistics 100A, Epidemiology 100.

(4) You must maintain an overall grade-point average of C (2.0) or better in all courses taken while a student in the School of Nursing.

(5) You must complete all required nursing courses in the school and receive grades of C or better in the following courses: Nursing 101, 105, 109, 120A through 120E, 120G, one course from 190A through 190E, 190F.

(6) You must be enrolled in the School of Nursing during your final three terms in residence; the last nine courses must be completed while so enrolled.

Study Lists — You may not enroll in more than four courses per term unless a petition is approved in advance by the assistant dean.

Honors

Dean's Honors

Dean's Honors are awarded annually to undergraduate students completing the academic year with distinction. To be eligible you must achieve an overall grade-point average of 3.75 on a minimum of 36 graded units of work completed during the academic year.

Honors at Graduation

Honors are awarded at graduation to students with a superior overall grade-point average. The levels of honors and the requirements for each level are: *summa cum laude*, an overall average of 3.85; *magna cum laude*, 3.65; *cum laude*, 3.5. To be eligible you must have completed at least 98 University of California units for a letter grade.

School of Nursing Faculty Award

The Faculty Award for excellence in nursing, established in 1965, is awarded to a student graduating from the bachelor's and the master's program with the highest grade-point average in all nursing courses.

Master of Nursing Degree

In the Master of Nursing (M.N.) degree program, students contribute to improving nursing care through the application of advanced knowledge in nursing research, theory, and clinical practice. Throughout the program, the structure for nurse/client relationships and research is provided by the nursing process. This is a deliberative problem-solving activity which includes assessment,

diagnosis, intervention, and evaluation. In addition to their clinical specialization sequence, students may elect courses in teaching, consultation, and/or administration as preparation to meet their specific career goals.

Admission

You must provide evidence of the following:

(1) Graduation from a recognized college or university having a National League for Nursing-accredited baccalaureate nursing program satisfactory to the School of Nursing and to the Graduate Division OR

Graduation with a baccalaureate degree in nursing from an international institution with a nursing program satisfactory to the School of Nursing and to the Graduate Division. You may be required to enroll in certain undergraduate nursing courses which generally may not be applied toward requirements for advanced degrees OR

Registered nurse with a baccalaureate degree in a health-related field. You may be required to enroll in certain undergraduate nursing courses which generally may not be applied toward requirements for advanced degrees.

(2) Status as a licensed registered nurse in the State of California.

(3) An upper division statistics course or a lower division statistics course with content equivalent to Biostatistics 100A, to be completed before entering the school.

(4) An upper division nursing research course taken at an NLN-accredited institution and equivalent to Nursing 193, to be completed before entering the school.

(5) An upper division physical assessment course equivalent to Nursing 192, to be completed before entering the school.

(6) Professional and/or academic competence in nursing attested through three letters of recommendation.

(7) A scholarship record satisfactory to the Graduate Division and to the School of Nursing.

(8) A minimum score of 550 on the Test of English as a Foreign Language (TOEFL) for applicants from foreign countries in which English is not the primary language and medium of instruction, whether licensed registered nurses in the U.S. or not (scores must be submitted prior to consideration for admission). Refer to "Proficiency in English" under "Graduate Admission" in Chapter 3 for further information.

(9) A passing score on the Commission on Graduates of Foreign Nursing Schools (CGFNS) examination for international applicants who are not licensed registered nurses in the U.S., prior to consideration for admission.

In addition to the Graduate Division application, you must file the *Application for Admission to the School of Nursing*, available

through the Student Affairs Office, School of Nursing, 2-200 Factor Building, UCLA, Los Angeles, CA 90024-1702. The application deadline for Fall Quarter is March 15. For information on admission to graduate standing, see Chapter 3.

Major Fields or Subdisciplines

The School of Nursing offers graduate studies in the following areas.

Maternal-Child Health/Primary Ambulatory Care Section

Nurse Practitioner Specialty
Family
Gerontology
Occupational Health

Maternity Clinical Nursing Specialty
Neonatal Critical Care Nurse Practitioner
Pediatrics Clinical Nursing Specialty

Medical-Surgical/Physiological Nursing Section

Medical-Surgical Nursing Specialty
Cardiopulmonary
Chronic Care
Critical Care
Oncology

Psychiatric-Mental Health/Nursing Administration Section

Nursing Administration Specialty
Psychiatric-Mental Health Nursing Specialty

Degree Requirements

(1) A minimum of six core courses (24 units) and additional coursework in the 100, 200, and 400 series is required for each area of clinical specialization. Five core courses (20 units) are required for the nursing administration specialty. A total of eight units of 500-series courses may be applied toward the total course requirement for the degree.

(2) A minimum grade-point average of 3.0 is required. Grades of B are required in graduate clinical nursing courses in order to advance to the next clinical course in a series.

(3) A minimum of three terms of full-time enrollment (eight units per term) is required for academic residence.

(4) Successful completion of a comprehensive examination is required.

Course Requirements

You must successfully complete the following:

(1) Core courses: (a) research in nursing (Nursing 204); (b) nursing theory, cultural diversity (Nursing 203, 209A, 209B); (c) management, consultation, and professional issues (Nursing 220A — not required for administration students — and 220B).

(2) Clinical practice (Nursing 401, 402, 403, 405, 416, 417, 420A through 429C). Clinical course requirements vary for each specialty area; not all courses are required in each specialty.

(3) Clinical specialization.

Additional course requirements vary according to specialty area listed below.

Maternal-Child Health/Primary Ambulatory Care Section

Family Nurse Practitioner Specialty — This specialty prepares family nurse practitioners to take a leadership role in the care of individuals throughout the life span. The focus is on collaborative practice to assure comprehensive quality health care and health maintenance in outpatient, work site, nursing home, or home health settings. Emphasis is on the assessment, treatment, and evaluation of the client's responses to actual or potential health problems which may be chronic or acute and include primary prevention. Special options are available in occupational health or gerontology, with additional coursework. Required courses include Nursing 203, 204, 209A, 209B, 220A, 220B, 264, 402, 429A-429B, 429C.

Gerontology Nurse Practitioner — Courses in the gerontology nurse practitioner option focus on the knowledge and skills needed for leadership roles in primary health care for older adults in ambulatory and long-term care facilities, at home, and in alternative settings. Required courses include those listed under the family nurse practitioner specialty above, Nursing 221, 425A.

Occupational Health Nurse Practitioner — This option integrates principles of occupational health assessment and care with primary ambulatory care of the adult. Practitioners evaluate the individual as seen within the work setting as well as within the family group. Primary focus and emphasis are on health status assessment, health promotion, illness/accident prevention, hazard control, screening, surveillance, and rehabilitation of adult workers.

Requirements are met through a combination of courses and experiences specific to the delivery of occupational health care services. Required courses include those listed under the family nurse practitioner specialty above, Nursing 412, Environmental Health Sciences 250, 251, Epidemiology 100.

Maternity Clinical Nursing Specialty — The goal of this specialty is to develop clinical specialists who take a leadership role in the nursing management of the childbearing family in all phases of the reproductive cycle. Students develop individualized plans of study to meet their personal and professional goals. Guided options include management of low-risk pregnancy, alternative birthing options, perinatal nursing, and basic neonatal intensive care. Required courses include Nursing 203, 204, 209A, 209B, 212, 220A, 220B, 223, 422A, 422B, 422C.

Neonatal Critical Care Nurse Practitioner — The primary goal of this option is the expansion of knowledge and clinical expertise necessary for neonatal critical care nurse practitioners.

By combining newly learned physiological, developmental, and psychosocial knowledge, nurses can become highly skilled and caring practitioners for newborns. Two or more years of experience in a Level III nursery are highly recommended. Required courses include Nursing 203, 204, 209A, 209B, 212, 220A, 220B, 223, 264, 403, 420A, 420B, 420C.

Pediatrics Clinical Nursing Specialty — The goal of this specialty is to develop clinical specialists who take a leadership role in the nursing management of a selected group of neonates, children, and families. Guided options include neonates, children, and families experiencing acute/critical illness, chronic illness, developmental disabilities, or oncology. Required courses include Nursing 203, 204, 209A, 209B, 212, 220A, 220B, 223, 421A, 421B, 421C.

Medical-Surgical/Physiological Nursing Section

Medical-Surgical Nursing Specialty — The graduate of the medical-surgical nursing program is a specialist who takes leadership in the care of one or more specific groups of clientele whose health problems may be classified according to biological systems, pathology, acuity levels, medical treatment modalities, physical functions, or psychophysiological functions. Graduate students choose from existing clinical options (i.e., cardiopulmonary, chronic care, critical care, and oncology), and within each option they develop individualized plans of study to meet personal and career objectives.

Cardiopulmonary — This option is designed to prepare clinical nurse specialists to meet an increasing demand for improved health services for patients with cardiopulmonary diseases. Several years of experience in acute coronary/pulmonary care settings (medical and/or surgical) and/or in cardiac/pulmonary rehabilitation are highly recommended before entering this option. Graduates are expected to function as cardiopulmonary nurse clinicians, teachers, consultants, or research associates. Required courses include Nursing 203, 204, 209A, 209B, 210, 211, 214, 215, 220A, 220B, 423A, 423B, 423C.

Chronic Care — This option enables clinical nurse specialists to gain advanced skills in the assessment and interpretation of patient data and in the care of clients and families during various points in the chronic illness trajectory. The role of clinical nurse specialists in leadership positions, case management, and on interdisciplinary teams is an integral part of the option. Graduates are expected to function as expert clinicians, teachers, consultants, or research associates in a variety of health care settings. Required courses include Nursing 203, 204, 209A, 209B, 220A, 220B, 232, 233, 423A, 423B, 423C.

Critical Care — The goal of this option is to prepare clinical nurse specialists in general critical care nursing. Students are encouraged to develop clinical focus in critical care. At least two

years of prior experience in critical care nursing are highly recommended. Graduates are expected to function as critical care clinicians, educators, consultants, or researchers and to become leaders in a variety of health care settings. Required courses include Nursing 203, 204, 209A, 209B, 216, 217, 220A, 220B, 423A, 423B, 423C.

Oncology — This option prepares oncology clinical nurse specialists to provide and direct nursing care for critically and chronically ill cancer patients and their families in a variety of settings and in all phases of the health/illness continuum (prevention, treatment, rehabilitation). Graduates are expected to function as educators and consultants in all aspects of nursing care to patients with cancer and their families, nurses, and others in the broad field of oncology. Critique and application of research findings to clinical cancer nursing care are integrated throughout the program. Individualized plans for clinical practicums are available. Required courses include Nursing 203, 204, 209A, 209B, 220A, 220B, 416, 417, 423A, 423B, 423C.

Psychiatric-Mental Health/Nursing Administration Section

Nursing Administration Specialty — This option focuses on organizational theory, health services and financial management, and the practice of nursing administration. Students gain the basic knowledge and skills required of nursing administrators in a volatile health care environment. Nursing content develops the knowledge of advanced management practice needed to plan and evaluate nursing services. Health services and financial management content provides a framework for organizing, directing, and coordinating health care resources. The program requires six terms of full-time study, and a 10-week spring administrative residency. Stipends for the residency program are provided by the institutions in which the residency is completed.

In addition to the required courses in the School of Nursing, students in this program take courses in the School of Public Health, Department of Health Services, and the John E. Anderson Graduate School of Management. Required courses include Nursing 203, 204, 209A, 209B, 219, 220B, 428A, 428B, 428C, and three health services management/financial management courses (Management 409, Health Services 436, and one organizational theory course).

Psychiatric-Mental Health Nursing Specialty — The primary intent of this specialization is to prepare clinicians who can function in leadership, educational, research, practice, and consultative roles in mental health settings serving individuals, groups, and families from diverse cultural backgrounds. The specific bases for practice are theories and research on personality development, function and dysfunction, biopsychosocial theories of mental illness, and psychotherapeutic approaches to nursing assessment, diagnosis, and treatment of clients' responses to mental health problems.

This specialty prepares graduates for practice as mental health nurse counselors serving individuals, groups, and families with acute or chronic mental health problems. Students, in consultation with faculty members, select an area of focus among the following settings and/or populations: psychiatric or community mental health settings with adults or children, consultation liaison, or ethnic mental health. Required courses include Nursing 203, 204, 209A, 209B, 220A, 220B, 405, 424A, 424B, 424C.

Comprehensive Examination Plan

The comprehensive examination is given in written form and is scheduled each term. You are eligible to take the examination during the term in which you are advanced to candidacy and may repeat the examination, in its entirety or in part, twice. You must complete all requirements for the degree within one calendar year after advancement to candidacy.

Concurrent Degree Program

M.B.A./M.N.

The School of Nursing and the John E. Anderson Graduate School of Management offer a concurrent degree program designed for students interested in employment in all sectors of the health care delivery system, including hospitals, corporate health care headquarters, home health care agencies, and long-term care facilities, as well as policy-making bodies and consulting firms. Students must request application materials from both the M.B.A. Admissions Office, John E. Anderson Graduate School of Management, and the School of Nursing Student Affairs Office.

Doctor of Nursing Science Degree

The Doctor of Nursing Science (D.N.Sc.) degree program is research oriented with a focus on clinical nursing research. The goal is the development of scholars who, through the conduct of original research and the generation of theory, will build the knowledge base for professional practice. The curriculum allows students to obtain the theoretical and scientific knowledge necessary for scholarly pursuit in nursing.

Admission

Priority is given to graduates of accredited master's degree programs in nursing. Individuals admitted to doctoral study with a bachelor's degree in nursing and a master's degree in a non-nursing field are required to make up clinical specialty deficiencies by taking clinical courses in one of the current master's clinical specialty programs. Such courses may be taken concurrently with doctoral courses. Individuals admitted to doctoral study with a bachelor's degree in nursing are required to complete a program of master's courses in nursing at UCLA as a prerequisite to entry into doctoral courses.

Applications are reviewed on an individual basis by the doctoral program committee. Applicants whose application materials indicate a high potential for success in the doctoral program are interviewed. Preference is given to applicants who demonstrate (1) capacity for original scholarship and nursing research as evidenced by prior publications, (2) consistent research objectives and career goals, (3) research objectives congruent with those of the faculty in the School of Nursing, and (4) scholarly verbal and written communication skills.

You must provide evidence of the following:

- (1) A master's degree in nursing; a Bachelor of Science degree in Nursing and a master's degree in a non-nursing* field; or a Bachelor of Science degree in Nursing*. Degrees must be from a National League for Nursing-accredited program satisfactory to the School of Nursing and to the Graduate Division.
- (2) A scholarship record satisfactory to the Graduate Division and to the School of Nursing, with a minimum grade-point average of 3.5.
- (3) A combined verbal, quantitative, and analytic score of 1,500 on the Graduate Record Examination (GRE), taken within the past five years. Exceptions to this score may be considered when there is compelling evidence in other areas.
- (4) An upper division statistics course with content equivalent to Biostatistics 100A, 100D, or Biomathematics 170A.
- (5) A graduate nursing research course with content equivalent to Nursing 204.
- (6) A graduate nursing theory course with content equivalent to Nursing 203.
- (7) A minimum score of 550 on the Test of English as a Foreign Language (TOEFL) for applicants from foreign countries in which English is not the primary language and medium of instruction (scores must be submitted prior to consideration for admission). Refer to "Proficiency in English" under "Graduate Admission" in Chapter 3 for further information.
- (8) A passing score on the nursing and English portions of the Commission on Graduates of Foreign Nursing Schools (CGFNS) examination for international applicants who are not licensed as registered nurses in the U.S., prior to consideration for admission.
- (9) Status as a licensed registered nurse; prior to entry into any clinical practicum, evidence of current licensure as a registered nurse in the State of California is mandatory.
- (10) Four letters of reference affirming your potential for scholarly, investigative, and creative endeavors in nursing.
- (11) Examples of scholarly papers and/or creative works.

(12) A statement of educational objectives, specific focus of research, and program and career goals.

(13) Curriculum vitae.

In addition to the Graduate Division application, you must file the *Application for Admission to the School of Nursing*, available through the Student Affairs Office, School of Nursing, 2-200 Factor Building, UCLA, Los Angeles, CA 90024-1702. Application deadlines for Fall Quarter are December 15 (priority) and February 1 (final). For information on admission to graduate standing, see Chapter 3.

Areas of Study

Students in the doctoral program focus their study in one of three areas: (1) *sociocultural diversity* — formulation, investigation, and evaluation of social and cultural similarities and differences that influence the perceptions of health and illness, the treatment of illness, and the utilization of health services; (2) *psychophysical environment* — formulation, analysis, and investigation of the effects of the psychological and physical environments (both internal and external) on health/illness states, on cooperation with treatment regimens, and on preventing hospitalization and rehospitalization; (3) *health/illness continuum* — formulation, analysis, and evaluation of measures to enhance the patient's ability to promote, maintain, or regain health states and to combat illness states.

Degree Requirements

You must meet the University minimum standards for doctoral degrees. School of Nursing requirements are as follows:

- (1) Completion of core and cognate courses required for your area of focus.
- (2) Successful completion of a written qualifying examination and the University Oral Qualifying Examination.
- (3) Completion of a dissertation.
- (4) Successful oral dissertation defense.

Course Requirements

Core Courses

The following core courses are required of all students in the program:

- (1) Nursing science (Nursing 202, 206A, 206B).
- (2) Nursing research (Nursing 207, 208, 299A-299D).
- (3) One statistics sequence (Biostatistics 251, or Psychology 252A and 253, or Sociology 210A-210B, or equivalent, subject to approval of your faculty adviser and the doctoral program committee chair).
- (4) One major area of study course (Nursing 226 or 227 or 228).

*Students who are accepted with deficiencies are required to complete appropriate master's courses.

Cognate Courses

A minimum of 24 units of cognate courses relevant to your major area of study (*sociocultural diversity, psychophysical environment, or health/illness continuum*) is required and must be approved by your adviser and the doctoral program committee.

Qualifying Examinations

The written qualifying examination must be passed after completion of the basic core courses. The examination evaluates three areas of knowledge: the basic concepts of nursing science, nursing research methods and analysis, and the basic concepts of your selected area of study. Normally no more than one reexamination is permitted.

The University Oral Qualifying Examination, taken after completing the course requirements, evaluates your dissertation proposal. You are responsible for obtaining the consent of five or more faculty members to serve on your doctoral committee.

After passing the University Oral Qualifying Examination, you may apply for advancement to candidacy. Formal notice is contingent on approval by the chair of the doctoral committee and the dean of the Graduate Division.

Final Oral Examination

When the dissertation is completed and approved by all committee members, a meeting for oral defense, which may be open to the public, is scheduled. All members of the committee, both certifying and noncertifying, must be present. You are expected to respond to any substantive and/or methodological questions raised during the meeting.

Upper Division Courses

101. Introduction to Art and Science of Nursing (8 units). Lecture, four hours; laboratory, 12 hours; autotutorial laboratory, variable. Introduction to nursing theory and practice. Content includes the following modules: nursing process, pharmacology, interpersonal and technical skills. Methodology includes laboratory, lectures, autotutorial laboratory, and clinical application. Ms. Currier and the Staff

104A. Behavior of Man in Health and Illness (2 units). Prerequisite: consent of instructor. Limited to nursing students. Examination of health/illness continuum from framework of social and biological sciences. Content includes role theory, developmental theory, transcultural communication theory, and other theories relevant to nursing practice. Ms. Mintz-Binder (F)

104B. Behavior of Man in Health and Illness. Lecture, two hours; discussion, two hours. Prerequisite: course 104A. Examination of health/illness continuum from framework of illness as a stressor and possible responses to such stress. Content includes anxiety, pain, cognitive disturbances, loss, and other responses relevant to nursing practice. Ms. Mintz-Binder (W)

105. Human Physiology. (Formerly numbered M105.) Lecture, four hours; discussion, one hour. Prerequisite: nursing student standing or consent of instructor. Required of third-year nursing students. Lecture and discussion, with emphasis on a correlative approach to anatomy and physiology of human body. Ms. Kasper

109. Communication in Health Care (3 units). Lecture, two hours; laboratory, three hours. Prerequisite for non-nursing students: consent of instructor. Study of basic communication and group process theory and its application to practice. Laboratory experience, with emphasis on development of each individual's ability to communicate effectively in a dyad and in a small group. Ms. Braham

M115. Introduction to Pharmacology and Therapeutics (2 units). (Same as Pharmacology M115.) Prerequisite for non-nursing students: consent of instructor. Systematic review of major drug groups used therapeutically, the most commonly used members in each group, differences among them, and their mechanisms of action. Mr. Jenden and the Staff

120A. Child and Family Nursing (5 units). Lecture, two hours (10 weeks); laboratory, 18 hours (five weeks). Prerequisites: courses 101, 105, 109, 120C-120D, 120G. Clinical application of nursing theory in community situations: acute care, convalescent, and ambulatory. Theoretical content includes pathophysiology, pharmacology, and treatment modalities. Application of theoretical concepts of growth and development related to nursing care of the child and its family. Ms. Fredrickson, Ms. Opas

120B. Maternity Nursing (5 units). Lecture, two hours (10 weeks); laboratory, 18 hours (five weeks). Prerequisites: courses 101, 105, 109, 120C-120D, 120G. Clinical application of nursing theory in community situations: acute care, convalescent, and ambulatory. Theoretical content includes pathophysiology, pharmacology, and treatment modalities. Application of theoretical concepts of reproduction to nursing care of the family. Ms. Ludington, Ms. Phillips

120C-120D. Medical-Surgical Nursing of Adults and Older Adults I, II (6 units each). Lecture, six hours (five weeks); laboratory, 18 hours (five weeks). Prerequisites: courses 101, 105, 109. Clinical application of nursing theory in community situations: acute care, convalescent, and ambulatory. Theoretical content includes pathophysiology, pharmacology, and treatment modalities. Application of theoretical content, including aging process, related to medical-surgical nursing care of the adult/older adult patient. Ms. Currier, Ms. Wilson (W)

120E. Psychiatric/Mental Health Nursing (5 units). Lecture, two hours (10 weeks); laboratory, 18 hours (five weeks). Prerequisites: courses 101, 105, 109, 120C-120D. Corequisite: course 120G. Clinical application of nursing theory in community situations: acute care, convalescent, and ambulatory. Theoretical content includes pathophysiology, pharmacology, and treatment modalities. Application of mental health content related to nursing care of individuals, groups, or communities. Ms. Mintz-Binder

120G. Medical-Surgical Nursing of Adults and Older Adults III (5 units). Lecture, two hours (10 weeks); laboratory, 18 hours (five weeks). Prerequisites: courses 120C-120D. Clinical application of nursing theory in community situations: acute care, convalescent, and ambulatory. Theoretical content includes pathophysiology, pharmacology, and treatment modalities. Application of theoretical content, including aging process, related to medical-surgical nursing care of the adult/older adult patient. Ms. Currier, Ms. Wilson (Sp)

M158. Health in Culture and Society. (Same as Anthropology M168.) Prerequisite: upper division standing. Examination of theories and methods of medical anthropology in relation to cross-cultural health systems, role networks, attitude and belief systems of the participants. Emphasis on interaction networks in health care systems.

184. Evolution and Dynamics of the Nursing Profession (3 units). Study of evolution of nursing, focusing on historical, ethical, moral, legal, and institutional ramifications of nursing practice. In addition, rights, obligations, and societal and institutional expectations of the professional nurse. Ms. Ver Steeg

189. Human Sexuality. Lecture, three hours; discussion, one hour. Prerequisite: consent of instructor. Lectures, discussions, and case presentations considering human sexuality, its joys and pleasures, pitfalls and problems. Interdisciplinary approach encompassing anatomic, physiologic, psychologic, and social aspects of heterosexual and homosexual relationships, including development of gender identity, intercourse, pregnancy, abortion, contraception, and venereal disease. Ms. Ludington and the Staff

190A. Advanced Child and Family Nursing (7 units). Lecture, two hours; laboratory, 15 hours. Prerequisites: courses 101, 104A, 104B, 120A through 120E, 120G. Clinical concentration in nursing care of the child and its family. Theoretical content integrates concepts related to management of pediatric client care in acute and ambulatory settings. Application of theoretical concepts of growth and development of the child and family. Ms. Opas and the Staff

190B. Advanced Maternity Nursing (7 units). Lecture, two hours; laboratory, 15 hours. Prerequisites: courses 101, 104A, 104B, 120A through 120E, 120G. Clinical concentration in nursing care of the childbearing family. Theoretical content further refines theories, concepts, and nursing practice related to the childbearing family. Application of theoretical concepts of reproduction to nursing care of the family.

190C. Critical Care Nursing (7 units). Lecture, two hours; laboratory, 15 hours. Prerequisites: courses 101, 104A, 104B, 120A through 120E, 120G. Clinical concentration related to nursing in the critical care setting. Theoretical content includes pathophysiology, pharmacology, advanced nursing skills, and treatment modalities in selected clinical situations. Application of theoretical content related to nursing care of the acutely ill medical and surgical adult patient in emergent and critical phases of illness. Ms. Bahr

190D. Perioperative Nursing (7 units). Lecture, two hours; laboratory, 15 hours. Prerequisites: courses 101, 104A, 104B, 120A through 120E, 120G. Clinical concentration related to nursing in the operating room setting. Theoretical content further refines theories, concepts, and practice of perioperative nursing. Application of theoretical content related to nursing care of the patient undergoing surgical intervention. Ms. Lewis

190E. Advanced Psychiatric/Mental Health Nursing (7 units). Lecture, two hours; laboratory, 15 hours. Prerequisites: courses 101, 104A, 104B, 120A through 120E, 120G. Clinical concentration in area of mental health nursing. Theoretical concepts and application related to mental health of the adult, geriatric, child, or adolescent client. Experiences include those in inpatient psychiatric nursing, outpatient day treatment programs, individual and child therapy, hospice programs, and crisis intervention units. Ms. Mintz-Binder

190F. Community Health Nursing (7 units). Lecture, two hours; laboratory, 15 hours. Prerequisites: courses 101, 104A, 104B, 120A through 120E, 120G. Clinical concentration in community health nursing settings: home health, public health, occupational health, and schools. Theoretical content focuses on the community as a context for understanding the relationship between health status of individuals and groups with the psychophysical environment.

192. Physical Assessment. Lecture, three hours; laboratory, three hours. Prerequisites: courses 101, 105, 109. Designed to provide in-depth review and synthesis of physical assessment skills and knowledge covering the life span. Individual study, use of audiovisual aids, physical assessment skills practice in laboratory, and the required text are mandatory. Ms. Fredrickson and the Staff

193. Introduction to Research. Introduction to planning a research project based on a simple question. Rules for definition of terms, alternative methods of writing purposes, selecting a sample, choosing a data collection instrument, planning for data analysis, protection of human rights, reading research reports, and writing a research proposal. Ms. Vredevoe and the Staff

194. Computer Systems in Health Care. Lecture, three hours; laboratory, three hours; field trips. Introductory course in review and evaluation of computer systems in nursing administration, education, and practice. Ms. Chang

195. Nursing Management (3 units). Lecture, two hours; field study, three hours. Corequisite: one course in 190 series. Management theory applied to nursing practice. Acquisition of basic knowledge of management concepts and skills as practiced in a health care setting. Ms. Lewis

196. Issues in Providing Health Care to Culturally Diverse Populations. Lecture, three hours; discussion, one hour. Prerequisite for non-nursing students: consent of instructor. Theoretical and experiential course designed to provide a base for understanding issues of providing health care to culturally diverse populations, with emphasis on strategies to facilitate intercultural/intracultural communication and intergroup/intragroup dynamics in health care settings.

199. Special Studies in Nursing (2 to 16 units). Prerequisites: senior standing and/or consent of instructor. Individual study of a problem in the field of nursing. May be repeated for credit, but only four units may be applied toward degree requirements. P/NP or letter grading.

Graduate Courses

Research in Nursing, Nursing Theory, and Cultural Diversity

202. Philosophical Foundations of Science of Nursing. Prerequisite: doctoral standing or consent of instructor. Designed to explore major schools of thought in contemporary Western philosophy of science, with emphasis on ways in which these schools may and do influence nursing science and practice. Ms. Omery

203. Theoretical Frameworks for Nursing Practice. Comparative study of selected conceptual models of nursing and the recipient of nursing, with particular emphasis on regulatory model, adaptation model, supplementary model, and complementary model.

204. Research in Nursing: Advanced Course. Prerequisite: course 193 or equivalent upper division basic research methodology course. Complex research designs and analysis of multiple variables, with emphasis on techniques for control of variables, data analysis, and interpretation of results. Analysis in depth of interrelationship of theoretical frameworks, design, sample selection, data collection instruments, and data analysis techniques. Content discussed in terms of clinical nursing research problems. Ms. Vredevoe and the Staff

205A. Qualitative Research Methods in Nursing. Prerequisite: course 204. Emphasis on nursing research designs utilizing field method approach, ethnomethodology, and/or inductive methods. Ms. Omery

205B. Quantitative Research Methods in Nursing. Prerequisite: course 204. Emphasis on nursing research designs requiring statistical analysis of data. Ms. Vredevoe

206A. Nursing Theory Development: Issues and Methods. Lecture, two hours; seminar, two hours. Prerequisites: course 203 and Philosophy 227 or 232 or equivalent. Issues and methods of developing nursing theories and models, including characteristics, significance, and function of theories and models, and rationale for theory development in nursing. In Progress grading (credit to be given only on completion of course 206B). Ms. Flaskerud

206B. Nursing Theory Development: Application and Integration. Lecture, two hours; seminar, two hours. Prerequisite: course 206A. Issues involved in application and integration of nursing theory in practice, education, administration, and research, including characteristics, significance, and function of nursing theories and models in testing nursing theories. Ms. Flaskerud

207. Research in Nursing: Measurement of Clinical Variables. Lecture, two hours; discussion, two hours. Prerequisites: courses 204, and 205A or 205B or equivalent. Analysis of methods of measurement of physiological and psychosocial variables relevant to clinical nursing research, with emphasis on purposes, underlying assumptions, strengths, and limitations of measurement techniques. Analysis of techniques to develop reliability, validity, sensitivity of measurement instruments. Ms. Dracup

208. Research in Nursing: Measurement of Outcomes. Discussion, three hours; field application, six to eight hours. Prerequisites: courses 206A, 207. Measurement theories, including topics related to scaling and tool development as they apply to outcomes. Emphasis on opportunity to develop knowledge and skills through course content and individualized direct involvement in a clinical research project. Ms. Padilla

209A. Human Responses to Illness. Lecture, three hours; discussion, one hour. Introductory graduate-level nursing theory course, with emphasis on psychological, sociocultural, and role-related responses to illness. Designed to provide conceptual base that nurses can use in assessing, diagnosing, planning, and intervening in these human responses to illness. Ms. Anderson

209B. Human Responses to Illness. Lecture, three hours. Current concepts and research on human physiological responses to illness in critical, long-term, and ambulatory settings. Physiological responses involve protective, regulatory, and sensory/arousal mechanisms. Ms. Kasper

210. Respiratory Physiology as It Relates to Nursing. Lecture, three hours; discussion, one hour; seminars. Prerequisite: upper division human physiology course. Advanced treatment of topic presented in lectures and seminars, with emphasis on current research. Application of knowledge to nursing problems. Ms. Seraydarian

211. Cardiovascular Physiology as It Relates to Nursing. Lecture, three hours; discussion, one hour; seminars. Prerequisite: upper division human physiology course. Advanced treatment of topic presented in lectures and seminars, with emphasis on current research. Application of knowledge to nursing problems. Ms. Seraydarian

212. Discontinuities in Family Health during Reproductive Years. Lecture, two hours; discussion, one hour. Overview of selected problems with health connotations that are potentially disruptive to the family during childbearing years. Selected problems examined in depth. Pertinent variables affecting family's definition of situation, resources, strategies for coping, and utilization of professional services; their relevance for nursing practice. Ms. Reeder

214. Human Responses to Cardiovascular Illness. Corequisite: course 211. Introduction to basic methods of assessing cardiovascular function in health and illness, with emphasis on their application in clinical nursing practice. Ms. Dracup, Ms. Nyamathi

215. Human Responses to Respiratory Illness. Corequisite: course 210. Exploration of selected problems, trends, and issues in respiratory care designed for the clinical nurse specialist. Basic methods of assessing respiratory function in health and disease, with emphasis on commonly seen respiratory diseases. Acute, chronic, and rehabilitative focus.

216. Human Responses to Critical Care I. Lecture, three hours; discussion, one hour. Prerequisites: courses 203, 204, 209A. Pathophysiologic concepts and nursing management of critically ill adults. Nursing aspects of selected dysfunctions and implications for critical care clinical nurse specialists. Ms. Omery and the Staff

217. Human Responses to Critical Care II. Lecture, three hours; discussion, one hour. Prerequisites: courses 209B, 216. Builds on pathophysiologic concepts and nursing management of critically ill adults presented in course 216. Emphasis on synthesis of research, theory, and experiential knowledge and skills to provide advanced preparation for critical care clinical nurse specialists. Ms. Omery and the Staff

219. Essentials of Accounting and Budgeting in Health Care Organizations. Prerequisite: graduate standing in nursing administration or consent of instructor. Introduction to concepts, issues, and techniques of accounting and budgeting with which a nurse administrator must be familiar. Major topics include cost behavior and analysis, cost accounting, forecasting, capital, operating and cash budgets, and budgetary control systems. Ms. McCombs

220A. Essentials of Nursing Management. Lecture, two hours; discussion, one hour; laboratory, three hours. Study of management theories and their application to administration of nursing services in health care facilities. Emphasis on basic management functions of planning, organizing, staffing, leading, and controlling. Use of group process, lecture, and discussion. Ms. Lewis

220B. Consultation and Professional/Ethical Issues. Lecture, three hours; discussion, one hour. Recommended prerequisites: course 220A, one graduate-level clinical practice course. Study of theories and practices of professional role development in realm of consultation and professional and ethical issues as foundation for advanced nursing practice. Lectures, panel presentations, and group discussion. Ms. van Servellen

221. Theoretical Frameworks for Developmental Problems, Middle and Later Years. Aspects of life span development relevant to understanding health needs in middle and later years. Changes in biological, cognitive, and psychosocial processes; implications for prevention and rehabilitative care. Ms. Newman

223. Management of Developmental Problems, Early Years. Lecture, two hours; discussion, two hours. Study of selected human developmental theories, hypotheses, and concepts as they relate to children. Problems relevant to nursing examined through critique of pertinent literature. Ms. Gottesman, Ms. Zah

225. Problems in Environmental Management. Prevention and treatment of nursing problems related to conditions of the psychophysical and social environment.

226. Psychophysical Environmental Influences on Health/Illness Behaviors and Health Outcomes. Lecture, two hours; discussion, two hours. Prerequisites: courses 206A, 206B. Study of theory and research on stress and coping, adverse physical aspects of the environment, personal space and privacy, territoriality and crowding, and perception and cognition, with emphasis on health outcomes of nursing interventions. Ms. Nyamathi

227. Nursing's Role in Health/Illness Continuum. Lecture, three hours; discussion, one hour. Prerequisites: courses 206A, 206B. Application of theory/research to health/illness-related phenomena of behaviors occurring as health status changes, self-definition as healthy or ill, regimen compliance, sick-role, and societal influences on sick-role. Ms. Reeder

228. Sociocultural Variations in Health and Illness. Lecture, two hours; discussion, two hours. Prerequisites: courses 206A, 206B. Relationship of sociocultural factors to health systems and diagnosis and treatment of illness, ethnomedical systems, and integration of sociocultural variables into clinical nursing research. Ms. Flaskerud

232. Human Responses to Chronic Illness I. Lecture, three hours; discussion, one hour. Prerequisites: courses 204, 209A, 209B. Focus on pathophysiologic concepts and nursing management of chronically ill adults, addressing nursing aspects of selected dysfunctions and implications for chronic care clinical nurse specialists. Ms. Faherty and the Staff

233. Human Responses to Chronic Illness II. Lecture, three hours; discussion, one hour. Prerequisite: course 232. Continuation of critical examination of pathophysiological concepts and nursing management of chronically ill adults presented in course 232. Focus on synthesis of research, theory, and experiential knowledge and skills, providing advanced preparation for chronic care clinical nurse specialists.

Ms. Faherty and the Staff

M250. Medical Anthropology in Public Health. (Same as Anthropology M266, Community Health Sciences M232, and Psychiatry M250.) Seminar, three hours. Cross-cultural aspects of human behavior as they relate to perception, treatment, incidence, and prevalence of disease and illness.

Ms. Browner, Ms. Scrimshaw

264. Seminar: Primary Ambulatory Care (2 units). Corequisite: course 402 or consent of instructor. Discussion of concepts of team practice, interprofessional and intraprofessional relationships, legal issues, and socioeconomic aspects of primary care.

Ms. Ver Steeg

M273. Advanced Seminar: Medical Anthropology. (Same as Anthropology M263Q, Community Health Sciences M244, and Psychiatry M273.) Seminar, three hours. Prerequisite: consent of instructor. Limited to 15 students. Examination of interrelationships between society, culture, ecology, health, and illness. Bases for written critical analysis and class discussion provided through key theoretical works.

Ms. Browner (Sp)

M280. Seminar: Reproduction and Women's Health. (Same as Anthropology M269P, Community Health Sciences M241, and Psychiatry M280.) Seminar, three hours. Analysis, using a cross-cultural approach, of sociocultural and political economic factors that affect reproduction and women's health. Topics include relationships between women's domestic and extra-domestic roles and their health, and impact of new reproductive technologies. May be repeated for credit.

Ms. Browner

M290A-M290B-M290C. Child Abuse and Neglect (2 units each). (Same as Community Health Sciences M245A-M245B-M245C, Dentistry M300.5A-M300.5B-M300.5C, Education M217G-M217H-M217I, Law M281A-M281B, Medicine M290A-M290B, and Social Welfare M290E-M290F-M290G.) Prerequisite: consent of instructor. Intensive interdisciplinary study of child physical and sexual abuse and neglect, with lectures by faculty members of the Schools of Dentistry, Education, Law, Medicine, Nursing, and Public Health and the Department of Psychology, as well as by the relevant public agencies.

299A-299D. Nursing Research Seminars (1 to 4 units each). Lecture, one hour; discussion, one to four hours. Prerequisites: courses 206A, 206B, 208, research design course and statistics sequence in cognate area. Seminars to assist students throughout execution of their dissertations, beginning with selection of a researchable problem and culminating in communication and dissemination of their research. S/U grading.

Functional Preparation

375. Teaching Apprentice Practicum (1 to 4 units). Prerequisite: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

Clinical Practice

401. Nursing Assessment and Intervention. Lecture, two hours; laboratory, four to eight hours. Prerequisite or corequisite: course 203. Instruction and experience in systematic assessment of patients for identification of nursing problems. Discussion and evaluation of major modes of interventive practice.

402. Primary Diagnosis for Nurse Practitioners. Lecture, three hours; laboratory, three hours. Prerequisites: course 192 or equivalent, admission to nurse practitioner specialty area of primary ambulatory care section, consent of instructor. Collection, analysis, and reporting of data used by the nurse practitioner in identification of patient problems. Principles and practice in history taking, physical examination, laboratory, and other diagnostic methodology. Pathology and pathophysiology integrated in a systems approach.

Ms. Keenan and the Staff

403. Assessment and Care of High-Risk Neonates. Lecture, two hours; laboratory, six hours. Prerequisite: consent of instructor. Overview of concepts and techniques of nursing assessment of the at-risk fetus/neonate and related clinical implications for nurse practitioners.

Ms. Gottesman and the Staff

405. Assessment in Psychiatric Nursing. Lecture, two hours; laboratory, six hours. Preparatory course for advanced clinical practice. Critical examination of concepts and strategies which affect assessment of psychological behavior.

Ms. Wuerker

M410A. Nursing Care of Developmentally Disabled. (Same as Psychiatry M472A.) Lecture, one hour; discussion, one to two hours; laboratory, 10 hours minimum. Prerequisite: consent of instructor. Study of the handicapping conditions of childhood and their effects on the individual and family. Content based on normative developmental models with consideration for socio-cultural diversity. Emphasis on prevention, systematic assessment, and planning of care for the individual and family. Introduction to implementation of intervention strategies. Series of three courses integrates didactic material and clinical experience.

Ms. Betz (F)

M410B. Nursing Care of Developmentally Disabled. (Same as Psychiatry M472B.) Lecture, one hour; discussion, one to two hours; laboratory, 10 hours minimum. Prerequisites: course M410A and/or consent of instructor. Study of philosophical and conceptual models affecting care delivery for developmentally disabled. Emphasis on intervention strategies necessary for primary, secondary, and tertiary prevention.

Ms. Betz (W)

M410C. Nursing Care of Developmentally Disabled. (Same as Psychiatry M472C.) Lecture, one hour; discussion, one to two hours; laboratory, 10 hours minimum. Prerequisites: course M410B and/or consent of instructor. Exploration and participation in assessment, planning, and delivery of health care to developmentally disabled in a variety of settings. Emphasis on expanded role of the nurse.

Ms. Betz (Sp)

412. Perspectives of Occupational Health Nursing Practice (3 units). Lecture, three hours; two half-day field experiences per term. Prerequisite: consent of instructor. Presentation of current concepts in occupational health within a nursing framework. Analysis of elements of worksite health programs; discussion of nursing's leadership role in ensuring a safe and healthful workplace.

Ms. Glazner

416. Concepts in Cancer Nursing. Lecture, three hours; clinical observation and field trips, three hours. Exploration and clinical application of concepts in oncology — biology, epidemiology, prevention, diagnosis, psychosocial impact, and treatment of cancer — to nursing care. Integration of concepts into theoretical frameworks for cancer nursing assessment. Individualized clinical observations and field trips.

Ms. Sarna and the Staff

417. Advanced Concepts in Cancer Nursing. Lecture, three hours; clinical observation and field trips, three hours. Prerequisite: course 416 or consent of instructor. Clinical application of advanced concepts in oncology — pathophysiology, epidemiology, prevention, diagnosis, psychosocial impact, treatment, symptom distress, and rehabilitation — to nursing care of patients with specific malignancies. Conceptual and scientific exploration of nursing care problems. Individualized clinical observations and field trips.

Ms. Sarna and the Staff

420A. Clinical Care of Intermediate and Recovering High-Risk Neonates (3 to 10 units). Lecture, three hours; discussion, one hour; laboratory, 18 hours. Prerequisite: course 403. First clinical practicum in care of high-risk neonates. Emphasis on development and refinement of clinical nursing skills in management of intermediate and recovering neonates.

Ms. Carey and the Staff

420B. Clinical Care of Critically Ill High-Risk Neonates (3 to 10 units). Lecture, three hours; discussion, one hour; laboratory, 18 hours. Prerequisite: course 420A. Second clinical practicum in care of high-risk neonates. Emphasis on development and refinement of clinical nursing skills in delivery room stabilization of newborns and care of critically ill neonates.

Ms. Carey and the Staff

420C. Advanced Clinical Care of High-Risk Neonates (8 units). Lecture, one hour; discussion, one hour; laboratory, 18 hours. Prerequisite: course 420B. Offers students opportunity to assume greater independence in managing care of high-risk neonates at all levels of care.

Ms. Carey and the Staff

421A. Clinical Nursing Care of Children (8 units). Lecture, two hours; discussion, one hour; laboratory, 15 hours. Prerequisites: courses 203, 223. Application of a theoretical model and the nursing process to a specific, identifiable client population in a pediatric setting, with special emphasis on assessment and diagnosis. Content covers each aspect of nursing process.

Ms. Gottesman, Ms. Zahr

421B. Advanced Clinical Nursing Care of Children (8 units). Lecture, two hours; discussion, one hour; laboratory, 15 hours. Prerequisite: course 421A. Role of the clinical nurse specialist in pediatric nursing, with emphasis on practitioner component of the role. Students identify a selected population for whom direct care is planned and implemented within a conceptual framework for nursing interventions. Emphasis on development of a researchable clinical question.

Ms. Gottesman, Ms. Zahr

421C. Clinical Specialization in Nursing Care of Children (8 units). Lecture, two hours; discussion, one hour; laboratory, 15 hours. Prerequisite: course 421B. Required for pediatric clinical nursing specialty. Practitioner role is continued in this course to foster consolidation of knowledge and skills. Emphasis on consultation, staff development, research, and patient advocacy dimensions of the clinical nurse specialist role.

Ms. Gottesman, Ms. Zahr

422A. Clinical Maternity Nursing (8 units). Lecture, two hours; discussion, one hour; laboratory, 15 hours. Prerequisite: course 203. Emphasis on developing skill in utilization of assessment, intervention, and evaluation phases of nursing process with childbearing families. Examination of family-centered orientations and theoretical models as they relate to development of nursing practice and care giving.

Ms. Koniak-Griffin, Ms. Reeder

422B. Advanced Clinical Maternity Nursing (8 units). Lecture, two hours; discussion, one hour; laboratory, 15 hours. Prerequisite: course 422A. Knowledge and clinical expertise refined and extended, with emphasis on high-risk conditions in the reproductive process. Emphasis on prescriptive, intervention, and evaluative phases of nursing process and on teaching, counseling skills, and collegial relations.

Ms. Ludington and the Staff

422C. Clinical Specialization in Maternity Nursing (6 units). Discussion, one hour; laboratory, 15 hours. Prerequisite: course 422B. Required for maternity nursing specialization. Advanced clinical practice to foster consolidation of knowledge and skills. Emphasis on consultation and staff development dimensions of clinical nurse specialist role.

Ms. Koniak-Griffin, Ms. Ludington

423A. Advanced Clinical Medical-Surgical Nursing (8 units). Lecture, two hours; laboratory, 18 hours. Prerequisites: courses 203, 204, 209A, 209B, 220A (may be taken concurrently). Advanced course in theory and practice of nursing care of adults. Emphasis on critical evaluation, integration, and application of scientific and theoretical knowledge within an advanced nursing practice role. Focus on acutely ill patients.

Ms. Nyamathi and the Staff

423B. Advanced Clinical Medical-Surgical Nursing (8 units). Lecture, two hours; laboratory, 18 hours. Prerequisite: course 423A. Study of clinical specialization and other expanding roles in nursing. Emphasis on continued refinement and extension of professional knowledge and skills in a selected clinical area in care of patients with chronic health problems. Practicum planned in congruence with students' career goals.

Ms. Dracup and the Staff

423C. Clinical Specialization in Medical-Surgical Nursing (6 units). Discussion, two hours (five weeks); laboratory, 15 hours (10 weeks). Prerequisite: course 423B. Required for medical-surgical nursing specialization. Advanced knowledge and clinical skills provided to equip students to perform in clinical nurse specialist roles. Emphasis on practitioner, educator, consultant, and researcher roles.

424A. Clinical Psychiatric Nursing (5 units). Lecture, one hour; discussion, two hours; laboratory, six hours. Prerequisites: course 405, consent of instructor. Focus on process of psychotherapy, with specific emphasis on knowledge and skills of assessment and individual therapy practice.

Ms. Wuerker and the Staff

424B. Advanced Clinical Psychiatric Nursing (8 units). Discussion, three hours; laboratory, 15 hours. Prerequisite: course 424A. Refinement and extension of understanding of the process of psychotherapy of individuals, groups, and families.

Ms. van Servellen and the Staff

424C. Clinical Specialization in Psychiatric Nursing (10 units). Discussion, two hours; laboratory, 24 hours. Prerequisite: course 424B. Supervised internship. Students select setting and population.

Ms. van Servellen and the Staff

425A. Advanced Clinical Gerontological Nursing. Lecture/discussion, three hours; laboratory, three hours. Prerequisite: one graduate nursing theory course. Principles and practice of assessment of psychosocial variables in health problems of the elderly. Emphasis on integrated understanding of multiple variable influences in total health. Application of knowledge and skills of psychosocial nursing intervention in rehabilitation of the chronically ill aged.

Ms. Mendelsohn, Ms. Newman

425B. Clinical Specialization in Gerontological Nursing (8 units). Discussion, three hours; laboratory, 30 hours maximum. Prerequisite: course 425A. Extension and demonstration of competencies in planning and implementation of nursing programs in health problems of the elderly.

428A. Clinical Nursing Management. Lecture, one hour; discussion, 30 minutes; laboratory, seven and one-half hours. Prerequisite: one organizational theory course. Application of management theory in a health care setting, with emphasis on organizing nursing care of groups of patients. Students work with nurse managers in developing a unit philosophy, objectives, policies, standards of practice, and care evaluation mechanisms.

428B. Advanced Clinical Nursing Management. Lecture, one hour; discussion, 30 minutes; laboratory, seven and one-half hours. Prerequisite: course 428A. Examination of role of the nurse in managing scarce resources, with emphasis on patient classification systems, staffing, and assignment of nursing personnel. Cost-effective management of human and financial resources explored extensively.

428C. Nursing Administration Residency (8 units). Prerequisites: courses 428A, 428B. Required field residency experience. Students apply management theory to administration of nursing services in a variety of health care settings. Provides organizational-based environment in which students can develop skills in management practice.

429A-429B. Preceptorships in Primary Ambulatory Care Nursing (9 units each). Lecture, four hours; laboratory, 15 hours. Prerequisites: courses 264, 402. Theory and clinical practice in nursing management and evaluation of health problems in selected ambulatory population. Emphasis on health maintenance. Attention to developmental and cognitive needs of clients in relation to family, social, and cultural structures.

Ms. Davis-Sharts and the Staff

429C. Advanced Preceptorship in Primary Ambulatory Care Nursing (10 units). Lecture, three hours; laboratory, 21 hours. Prerequisites: courses 429A-429B. Required of students who want to meet requirements for preparation as a nurse practitioner as established by California Board of Registered Nursing. Emphasis on refinement and extension of assessment, management, and evaluation skills, family health care, and community health concepts. Placements provide opportunity for in-depth focus on a specific group of health problems.

Ms. Davis-Sharts and the Staff

Special Studies

501. Cooperative Program (2 to 8 units). Prerequisite: consent of UCLA assistant dean and graduate dean, and host campus instructor, department chair, and graduate dean. Used to record enrollment of UCLA students in courses taken under cooperative arrangements with USC. No more than eight units may be applied toward M.N. degree minimum total course requirement; may not be applied toward minimum graduate course requirement. S/U grading.

596. Directed Individual Study or Research (4 to 8 units). Prerequisite: consent of instructor. Opportunity for individual graduate students in nursing to pursue special studies or research interests. May be repeated for credit, but only four units may be applied toward graduate degree requirements. S/U grading.

597. Individual Study for Comprehensive Examination (4 to 8 units). May be repeated once for credit, but only four units may be applied toward M.N. degree requirements. S/U grading.

598. Research for Thesis (4 to 8 units). Prerequisite: consent of instructor. May be repeated for credit, but only four units may be applied toward M.N. degree requirements. S/U grading.

599. Research for and Preparation of D.N.Sc. Dissertation (2 to 8 units). Individualized faculty supervision of doctoral dissertation research by student's chair. May be repeated for credit, but only eight units may be applied toward doctoral degree requirements. S/U grading.

School of Public Health

Abdelmonem A. Afifi, Dean

18

The emergence of public health as an independent discipline dates back over a century, when the field was concerned mainly with the epidemic of communicable diseases and some facets of sanitation. Changes in socioeconomic conditions, life-style, and other factors have brought such issues as accidents, aging, air pollution, alcoholism, drug addiction, smoking, mental health, homicide, and sexually transmitted diseases to the fore as community health problems. In time the following general statement evolved — “The mission of public health is to fulfill society’s interest in assuring conditions in which people can be healthy.”

Public health professionals can promote the health of the community through (1) research into the development of methodologies in biostatistics, epidemiology, demography, and techniques of prevention, (2) investigations into factors which influence health behavior, quality of and access to health care, health education, nutrition, environmental problems, and problems of special population groups such as mothers, children, and minorities, and (3) development of research into new areas that impact on the health of the community. Public health professionals are also responsible for translating knowledge of disease and health enhancement into resolution of health problems in the community. They are committed to the prevention of disease, promotion of health, and improvement in the quality of life.

To fulfill its national and international mission, the school (1) educates new professionals and leaders for the private and public sectors, (2) prepares researchers and educators of future professionals, (3) conducts research to define, protect, and improve conditions for a healthy public, and (4) contributes knowledge, expertise, and service to the community. It is the goal of the school to ensure that the protection and improvement of the public’s health is accomplished by the most efficient and effective means, consistent with equity for all individuals in the state, the nation, and the world.

School of Public Health

16-071 Center for the Health Sciences, (310) 825-5516

The School of Public Health offers graduate programs leading to both academic and professional degrees in five departments. The Department of Biostatistics develops statistical and analytical techniques for public health use. The Department of Community Health Sciences has two divisions: behavioral sciences and health education, concerned with the study and implementation of behavior which prevents disease and enhances health, and population and family health, which identifies health problems of and promotes health in high-risk groups such as women, children, and the poor. The Department of Environmental Health Sciences elucidates health hazards in the general environment and in the workplace. The Department of Epidemiology is concerned with the nature, extent, and distribution of disease and health in populations. The Department of Health Services deals with the organization, financing, quality, and distribution of health care services. The school is also responsible for the administration of the interdepartmental degree program in environmental science and engineering.

Admission

In addition to requiring that applicants hold a bachelor's degree from an accredited U.S. institution or an equivalent degree or professional title from an international institution, each department in the school has limitations and additional requirements. Detailed information can be found in the departmental listings which follow. Help in deciding on a department is available in the school's Student Affairs Office.

For information on the proficiency in English requirements for international graduate students, refer to "Graduate Admission" in Chapter 3.

Other Requirements

Requirements to fulfill each degree objective vary according to the degree and the department. See the departmental listings which follow for specific requirements and procedures.

Degrees Offered

Biostatistics	M.S., Ph.D.
Environmental Health Sciences	M.S., Ph.D.
Environmental Science and Engineering	D.Env.
Epidemiology	M.S., Ph.D.
Health Services	M.S., Ph.D.
Preventive Medicine and Public Health	M.S.*
Public Health	M.P.H., M.S.**, Dr.P.H., Ph.D.**

*Not admitting new students at this time.

**Offered through the Community Health Sciences Department.

Biostatistics

51-254 Center for the Health Sciences, (310) 825-5250

Professors

Abdelmonem A. Afifi, Ph.D., *Dean*
 Potter C. Chang, Ph.D.
 William G. Cumberland, Ph.D.
 Robert M. Elashoff, Ph.D., *Chair*
 Donald Guthrie, Ph.D., *in Residence*
 Robert I. Jennrich, Ph.D.
 Peter A. Lachenbruch, Ph.D.
 Virginia A. Clark, Ph.D., *Emerita*
 Wilfrid J. Dixon, Ph.D., *Emeritus*
 Olive Jean Dunn, Ph.D., *Emerita*
 Raymond J. Jessen, Ph.D., *Emeritus*
 Frank J. Massey, Jr., Ph.D., *Emeritus*

Associate Professors

Dorota M. Dabrowska, Ph.D.
 Virginia F. Flack, Ph.D.
 Nathaniel Schenker, Ph.D.
 Jeremy M.G. Taylor, Ph.D., *in Residence*

Assistant Professors

Robert E. Weiss, Ph.D.
 Weng Kee Wong, Ph.D.

Lecturers

Martin L. Lee, Ph.D.
 Jean L. Mickey, Ph.D., *Emerita*

Adjunct Associate Professor

James W. Sayre, Dr.P.H.

Adjunct Assistant Professor

David W. Gjertson, Ph.D.

Scope and Objectives

In recent years biostatistics has become one of the most stimulating areas of applied statistics. The field encompasses the methodology

and theory of statistics as applied to problems in the life and health sciences. Biostatisticians are trained in the skilled application of statistical methods to the solution of problems encountered in public health and medicine. They collaborate with scientists in nearly every area related to health and have made major contributions to our understanding of AIDS, cancer, and immunology, as well as other areas. Further, biostatisticians spend a considerable amount of time developing and evaluating the statistical methodology used in those projects. The Department of Biostatistics offers M.S. and Ph.D. degrees in Biostatistics and, through the School of Public Health, the M.P.H. and Dr.P.H. degrees with a specialization in biostatistics. All students receive a balanced education, blending theory and practice.

Requirements for Graduate Degrees

Admission

Application forms and the *Announcement of the UCLA School of Public Health* may be obtained by writing to the Office of Student Affairs, School of Public Health, 16-071 CHS, UCLA, Los Angeles, CA 90024-1772. Both the School of Public Health Application for Admission to Graduate Status and the *UCLA Application for Graduate Admission* must be completed. Three letters of recommendation (with at least two from former professors) are required before an application is considered complete. It is your responsibility to ensure that the application file is complete.

The preferred deadline for graduate applications is December 15, 1992, for Fall Quarter 1993 admission. *Applications received after the deadline have considerably reduced opportunities for financial aid and housing.*

Applicants must meet the University minimum requirement of an acceptable bachelor's degree with a B (3.0) average in upper division coursework and/or prior graduate study. Exceptionally qualified applicants may be considered on an individual basis. Majors in mathematics, computer science, or a field of application in biostatistics are preferred. Your undergraduate preparation should include calculus and linear algebra. If your undergraduate coursework has been deficient in breadth of fundamental training, you must take specified undergraduate courses after admission. Prior field experience is not required as a condition of admission, although a background of public health experience may be considered in your evaluation.

Applicants must also perform satisfactorily on a recent (within the last five years) Graduate Record Examination (GRE). The Medical College Admission Test (MCAT), Dental Admission Test (DAT), or Graduate Management Admission Test (GMAT) may be accepted in lieu of the GRE under certain circumstances. Strong emphasis is placed on the quantitative and analytical components of the GRE; the department does not have a minimum combined score requirement.

Refer to the UCLA *Application for Graduate Admission* for the Test of English as a Foreign Language (TOEFL) requirement for international applicants.

Master of Science Degree

The Master of Science is a research-oriented degree within the general field of biostatistics. Teaching experience is not required.

See Schoolwide Programs at the end of this chapter for information on the M.P.H. degree.

Admission

In addition to the general requirements for admission, your undergraduate preparation should include Mathematics 31A, 31B, 32A, 32B, 33A, 33B (second-year calculus), or the equivalent.

Course Requirements

The M.S. degree requires a minimum of nine graduate and upper division courses, of which at least five must be graduate courses in the 200 and 500 series. The five required graduate courses must be in biostatistics or mathematical statistics, including at least three courses in biostatistics.

Areas of Specialization

Areas of specialization and typical course plans are listed below.

Biostatistics

Unless previously taken, the following courses must be included in the degree program: Biostatistics 110A, 110B, 110C, M153A, 200A, 200B-200C, 240, 402A, 402B; any two courses from M210 through 219; Statistics M152A, 152B-152C.

Other courses in biostatistics or mathematical statistics, or in related areas such as biology, physiology, public health, management, or mathematics, may be selected with your adviser's consent.

A written report and written comprehensive examination covering the above course material are required.

Biostatistical Health Data Management

Unless previously taken, the following courses must be included in the degree program: Program in Computing 1, Biostatistics 110A, 110B, 110C, M153A, 200A, 200B-200C, 403, 404 or 405, 420, 421, Statistics M152A, 152B-152C. One public health course in a department other than Biostatistics is selected with your adviser's consent.

Other courses in biostatistics or mathematical statistics, or in related areas such as biology, physiology, public health, management, or mathematics, are selected with your adviser's consent.

A written report and written comprehensive examination covering the above course material are required.

Comprehensive Examination Plan

The thesis plan is not used. The written comprehensive examination is taken during Spring Quarter of the academic year of your Biostatistics 200A, 200B-200C sequence. Normally no more than one reexamination after failure is allowed. If you do not take the reexamination at the time specified by the department, you forfeit your right to reexamination.

Ph.D. Degree

The Ph.D. is an advanced research degree that emphasizes depth of knowledge and research skills. The dissertation must demonstrate your ability for independent scholarly investigation.

There is no foreign language requirement for the Ph.D.; teaching experience is recommended but not required.

See Schoolwide Programs at the end of this chapter for information on the Dr.P.H. degree.

Admission

Qualifications for admission are those currently specified by the Graduate Division (see Chapter 3). Normally, students receive an M.S. in Biostatistics or Statistics before admission to the Ph.D. program. Undergraduates with sufficient coursework in mathematics and statistics are considered for admission directly into the Ph.D. program.

Course Requirements

There are no specific course requirements. However, your program of study must be approved by the department and must include, at the graduate level, three areas of knowledge:

biostatistics, mathematical statistics, and a third field of application such as biology, epidemiology, infectious diseases, medicine, microbiology, pharmacology, physiology, psychology, zoology, or public health. You are encouraged to participate in the biostatistics consulting laboratory for one term each year. Recommendation for the degree is based on your attainments rather than on the completion of specified courses.

Screening/Qualifying Examinations

Biostatistics requires a written screening examination of all students entering the doctoral program. The examination must be successfully completed before the end of your first year in the program (if not taken prior to entering the program).

Written qualifying examinations in biostatistics and mathematical statistics are taken before advancement to candidacy.

The University Oral Qualifying Examination is taken before advancement to candidacy and after successful completion of the written examinations. Administered by the doctoral committee, it involves a proposal of the dissertation topic. A failed examination may be repeated once. The timing of reexaminations is specified by the department in the case of written examinations or by your committee in the case of the oral examination. If you do not take the reexaminations at the specified time, you forfeit your right to reexamination.

Final Oral Examination

A final oral examination is required.

Upper Division Courses

100A. Introduction to Biostatistics. (Formerly numbered Public Health 100A.) Lecture, three hours; discussion, one hour; laboratory, one hour. Prerequisites: upper division standing, one biological or physical sciences course. Students who have completed courses in statistics may enroll only with consent of instructor. Not open for credit to students with credit for course 110A. Introduction to methods and concepts of statistical analysis. Sampling situations, with special attention to those occurring in biological sciences. Topics include distributions, tests of hypotheses, estimation, types of error, significance and confidence levels, sample size.

100B. Introduction to Biostatistics. (Formerly numbered Public Health 100B.) Lecture, three hours; discussion, one hour; laboratory, one hour. Prerequisite: course 100A or equivalent. Not open for credit to students with credit for course 110B. Introduction to analysis of variance, linear regression, and correlation analysis.

100C. Introduction to Biostatistics. (Formerly numbered Public Health 100C.) Lecture, three hours; discussion, one hour; laboratory, one hour. Prerequisite: course 100B or equivalent. Design of experiments, analysis of variance, multiple and polynomial regression analysis with biomedical applications.

100D. Introduction to Biostatistics. (Formerly numbered Public Health 100D.) Lecture, three hours; laboratory, two hours. Prerequisite: course 100B or equivalent. Introduction to concepts of probability used in biomedical sciences. Enumeration statistics and nonparametric methods. Comparison of nonparametric with analogous parametric tests. Discussion of power and sample size.

110A. Basic Biostatistics. (Formerly numbered 101A.) Lecture, three hours; discussion, one hour; laboratory, one hour. Prerequisite: Mathematics 31B or equivalent. Not open for credit to students with credit for course 100A. Basic concepts of statistical analysis applied to biological sciences. Topics include random variables, sampling distributions, parameter estimates, statistical inference.

110B. Basic Biostatistics. (Formerly numbered 101B.) Lecture, three hours; discussion, one hour; laboratory, one hour. Prerequisite: course 110A. Not open for credit to students with credit for course 100B. Topics include elementary analysis of variance, simple linear regression; topics related to analysis of variance and experimental designs.

110C. Basic Biostatistics. (Formerly numbered 101C.) Lecture, three hours; discussion, one hour; laboratory, one hour. Prerequisite: course 110B or equivalent. Not open for credit to students with credit for course 100C or 100D. Introduction to multiple regression; topics related to analysis of variance and experimental designs.

M153A-M153B. Introduction to Computational Statistics. (Formerly numbered M101D-M101E.) (Same as Biomathematics M153A-M153B and Statistics M153A-M153B.) Lecture, three hours; discussion, one hour. Prerequisites: Mathematics 115A, Statistics 152B. Linear and nonlinear regression analysis using package programs. Emphasis on relation between statistical theory, numerical results, and analysis of data. **M153A.** BMDP, SAS, and SPSS regression programs; general linear model theory; linear regression analysis; transforming and weighting; regression diagnostics; model building. **M153B.** Analysis of variance and covariance; nonlinear regression programs, analysis, and applications; maximum likelihood analysis; robust regression.

199. Special Studies (2 to 4 units). (Formerly numbered Public Health 199.) Prerequisites: senior standing, consent of instructor and department chair (based on written proposal outlining course of study). Individual undergraduate guided studies under direct faculty supervision. Study to be structured by instructor and student at time of initial enrollment. Only four units may be taken each term.

Graduate Courses

200A. Biostatistics. (Formerly numbered Public Health 200A.) Lecture, three hours; discussion, one hour; laboratory, one hour. Prerequisites: course 100C or 110C, or one other statistics course. Study design sampling, determination of sample size, data screening, types of measurements and determination of appropriate analysis, and unidimensional scale construction. S/U grading for nonmajors only.

200B-200C. Biostatistics. (Formerly numbered Public Health 200B-200C.) Lecture, three hours; discussion, one hour; laboratory, one hour. Prerequisites: courses M153A, 200A, linear algebra, advanced calculus. **200B.** Multiple linear regression, including model validation, influence of observations, regression diagnostics; discriminant analysis; principal components; factor analysis. **200C.** Measures of association and analysis of categorical data, theory of generalized linear models.

M210. Statistical Methods for Categorical Data. (Formerly numbered M201E.) (Same as Biomathematics M231.) Lecture, three hours; discussion, one hour. Prerequisites: course 100B or 110B, Statistics 152C or equivalent. Statistical techniques for analysis of categorical data; discussion and illustration of their applications and limitations.

212. Distribution Free Methods. (Formerly numbered 201F.) Lecture, three hours; discussion, one hour. Prerequisites: course 100B or 110B, Statistics 152C, or equivalent. Theory and application of distribution free methods in biostatistics.

213. Statistical Simulation Techniques. (Formerly numbered 201G.) Lecture, three hours; discussion, one hour. Prerequisites: course 100C, Statistics 152C, one computer programming course. Techniques for simulating important statistical distributions, with applications in biostatistics.

214. Finite Population Sampling. (Formerly numbered 201H.) Lecture, three hours. Prerequisite: course 100D or Statistics 152C. Theory and methods for sampling finite populations and estimating population characteristics.

M215. Survival Analysis. (Formerly numbered M201K.) (Same as Biomathematics M281.) Lecture, three hours; discussion, one hour. Prerequisites: course 100C, Statistics 152C, or equivalent. Statistical methods for analysis of survival data.

216. Introduction to Statistical Methods for Biological Assays. (Formerly numbered 201M.) Lecture, three hours. Prerequisites: course 110C, Statistics 152C. Topics include standard statistical procedures for estimation of relative potency, density of microorganisms, and density of radioactivity, models used for these procedures, and statistical considerations for designing such assays.

219. Special Topics: Supplemental Topics. (Formerly numbered 201J.) Lecture, three hours; discussion, one hour. Prerequisite: course 100C. Topics in biostatistics not covered in other courses.

230. Statistical Graphics. (Formerly numbered 202J.) Lecture, three hours; discussion, two hours. Prerequisites: courses 110A, 110B, 110C, 200A, or equivalent. Graphical data analysis emphasizes use of visual displays of quantitative data to gain insight into data structure by exploring patterns and relationships, and to enhance classical numerical analyses, especially assumption validity checking. Principles of graph construction, graphical methods, and perception issues.

231. Simultaneous Statistical Inference. (Formerly numbered 202G.) Lecture, three hours; discussion, one hour. Prerequisites: courses 200C, M250A, Statistics 152C. Methods and theory of simultaneous statistical inference.

M232. Statistical Analysis of Incomplete Data. (Formerly numbered M202F.) (Same as Biomathematics M232.) Lecture, three hours; discussion, one hour. Prerequisites: course 110C, Statistics 152C, or equivalent. Discussion of statistical analysis of incomplete data sets, with material from sample survey, econometric, biometric, psychometric, and general statistical literature. Topics include treatment of missing data in statistical packages, missing data in ANOVA and regression imputation, weighting, likelihood-based methods, and nonrandom nonresponse models. Emphasis on application of methods to applied problems, as well as on underlying theory.

233. Statistical Methods in AIDS (2 units). (Formerly numbered 202K.) Prerequisites: courses 110A, 110B, 110C, M215, Mathematics M150A-150B, 151, or equivalent. Coverage of methods necessary to address statistical problems in AIDS research, including projection methods for the size of AIDS epidemic and methods for estimating incubation distribution.

M234. Applied Bayesian Inference. (Formerly numbered M202H.) (Same as Biomathematics M234.) Lecture, three hours; discussion, one hour. Prerequisites: courses 200C, M250A, Statistics 152C. Bayesian approach to statistical inference, with emphasis on biomedical applications and concepts rather than mathematical theory. Topics include large sample Bayes inference from likelihood, noninformative and conjugate priors, empirical Bayes, Bayesian approaches to linear and nonlinear regression, model selection, Bayesian hypothesis testing, and numerical methods. S/U or letter grading.

240. Seminar: Biostatistics (2 units). (Formerly numbered 204E.) Prerequisites: course 200B, two courses from M210 through 219. Current developments of methodology and problems in applications of biostatistics.

245. Advanced Seminar: Biostatistics (2 units). (Formerly numbered 204F.) Prerequisite: course 200C. Current research in biostatistics. May be repeated for credit. S/U grading.

M250A-M250B. Linear Statistical Models. (Formerly numbered M205A-M205B-M205C.) (Same as Mathematics M279A-M279B.) Lecture, three hours; discussion, one hour. Prerequisites: course 110C, Statistics 152C, or equivalent. Topics include linear algebra applied to linear statistical models, distribution of quadratic forms, Gauss/Markov theorem, fixed and random component models, balanced and unbalanced designs.

251. Multivariate Biostatistics. (Formerly numbered 206A-206B.) Lecture, three hours. Prerequisite: course M250A or equivalent. Multivariate analysis as used in biological and medical situations. Topics from component analysis, factor analysis, discriminant analysis, analysis of dispersion, canonical analysis.

255. Advanced Topics and Probability in Biostatistics. Lecture, three hours; discussion, one hour. Prerequisites: Mathematics 276A-276B or consent of instructor. Topics include conditioning, modes of convergence, basic limit results for empirical processes, von-Mises calculus, and notions of efficiency in statistics. Applications cover M-L-R estimation in two-sample and regression models, goodness of fit methods, smoothing techniques, and bootstrap.

270. Stochastic Processes. (Formerly numbered 207E.) Lecture, three hours. Prerequisites: upper division mathematics, including statistics and probability. Stochastic processes applicable to medical and biological research.

271. Mathematical Epidemiology. (Formerly numbered 207F.) Lecture, three hours. Prerequisites: course 270 or equivalent, upper division mathematics (including statistics and probability). Mathematical theory of epidemiology with deterministic and stochastic models and problems involved in applying the theory.

273. Statistical Methods for Research Biological Assays. (Formerly numbered 207H.) Prerequisite: course 216. Topics include statistical methods developed for research assays for which standard procedures do not apply.

275. Advanced Survival Analysis. (Formerly numbered 207K.) Lecture, three hours; discussion, one hour. Prerequisites: Mathematics 276A-276B. Recommended: course M215, Mathematics 276C. Censoring and truncation, single sample problems, K-sample comparisons, Cox regression model, hazard rate and density estimation, estimation in Markov chains and Markov renewal processes, multivariate models, competing risks.

276. Inferential Techniques that Use Simulation. (Formerly numbered 207M.) Lecture, three hours; discussion, one hour. Prerequisites: Mathematics 276A-276B. Recommended: Biostatistics 213. Theory and application of recently developed techniques for statistical inference that use computer simulation. Topics include bootstrap, multiple imputation, data augmentation, stochastic relaxation, and sampling/importance resampling algorithm.

277. Robustness and Modern Nonparametrics. Lecture, three hours. Prerequisite: Mathematics 276A. Topics include M-estimation, influence curves, breakdown point, bootstrap, jackknife, smoothing, nonparametric regression, generalized additive models, density estimation.

M280. Statistical Computing. (Formerly numbered M207J.) (Same as Biomathematics M280 and Mathematics M280.) Lecture, three hours. Prerequisites: Mathematics 115A, Statistics 152C, or equivalent. Introduction to theory and design of statistical programs: computing methods for linear and nonlinear regression, dealing with constraints, robust estimation, and general maximum likelihood methods.

285. Advanced Topics: Recent Developments. (Formerly numbered 207L.) Lecture, three hours; discussion, one hour. Prerequisite: course 200C. Advanced topics and developments in biostatistics not covered in Biostatistics M210 through 219 or 270 through 276 or in other courses. Possible topics include time-series analysis, classification procedures, correspondence analysis, etc.

295. Application of Statistical Theories in Biomedical Research. (Formerly numbered 105.) Lecture, three hours; discussion, one hour. Prerequisite: Statistics 152C or 154B. Review of statistical theories essential to biostatistics. Illustration of applications by examples. Topics include delta method, order statistics, asymptotic properties of MLEs, iterative algorithms for MLEs, generalized likelihood ratio tests for categorical data, and transformations.

400. Field Studies in Biostatistics (2 or 4 units). (Formerly numbered Public Health 400.) Field observation and studies in selected community organizations for health promotion or medical care. Students must file field placement and program training documentation on form available from Student Affairs Office. May not be applied toward M.S. minimum course requirement; four units may be applied toward 44-unit minimum total required for M.P.H. degree.

402A. Principles of Biostatistical Consulting (2 units). (Formerly numbered Public Health 402A.) Lecture, one hour; discussion, one hour. Prerequisites: course 100B or 110B and Statistics 152B. Presentation of structural format for statistical consulting. Role of statistician and client. Reviews of actual statistician/client interactions and case studies.

402B. Biostatistical Consulting. (Formerly numbered Public Health 402B.) Discussion, two hours; laboratory, two hours. Prerequisites: courses 100C, 402A. Principles and practices of biostatistical consulting. May be repeated for credit. S/U grading.

403. Computer Management of Health Data. (Formerly numbered Public Health 403.) Lecture, three hours; laboratory, two hours. Prerequisites: at least one statistics course, two research methodology courses, Program in Computing 1 or equivalent, consent of instructor. Concepts of health data management, design and maintenance of large data bases on tapes or disks; computing tools and techniques facilitating data retrieval for statistical analysis, tabulation and report generation useful to biostatisticians, health planners, and other health professionals.

404. Principles of Sampling. (Formerly numbered Public Health 404.) Lecture, three hours; discussion, one hour. Prerequisites: course 100B, Epidemiology 100, or equivalent. Statistical aspects of design and implementation of a sample survey. Techniques for analysis of data, including estimates and standard errors. Avoiding improper use of survey data.

405. Demographic Materials and Methods. (Formerly numbered Public Health 405.) Lecture, three hours; laboratory, two hours. Prerequisites: course 100A or 110A, Epidemiology 100 or 200, or equivalent. Sources of demographic information; description of human populations; calculation and interpretation of statistics used to measure and describe population growth, structure, geographic distribution, mortality, natality, and migration.

406. Applied Multivariate Biostatistics. (Formerly numbered Public Health 406.) Lecture, three hours; laboratory, one hour. Prerequisites: course 100B, at least two other upper division research courses. Use of multiple regression, principal components, factor analysis, discriminant function analysis, logistic regression, and canonical correlation in biomedical data analysis. S/U grading optional for nondivision majors.

410. Statistical Methods in Clinical Trials. (Formerly numbered 401E.) Lecture, three hours; discussion, two hours. Prerequisite: course 100C or 100D or Statistics 152C or equivalent. Design of studies in animals to assess antitumor response; randomization, historical controls, p-values, size of study, and stratification in human experimentation; various types of controls; prognostic factors, survivorship studies, and design of prognostic studies; organization of clinical trials — administration, comparability, protocols, clinical standards, data collection and management. S/U grading optional for nondivision majors.

411. Statistical Methods for Longitudinal Data. (Formerly numbered 401F.) Lecture, three hours. Prerequisites: course 100C or 100D or Statistics 152C or equivalent, Epidemiology 100. Design and analysis of longitudinal or panel studies. S/U grading optional for non-division majors.

412. Statistical Methods for Case-Control Studies. (Formerly numbered 401G.) Lecture, three hours. Prerequisites: courses 100C and 100D, or 110C. Statistical designs, sampling statistics, and analytic models of case-control studies. Special topics such as exploratory analyses, multiplicity of analyses, cross-validation, small sample performance of variance estimators, measurement error in the covariates, and incomplete data.

419. Special Topics: Applied Statistics. (Formerly numbered 401H.) Lecture, three hours; discussion, one hour. Prerequisite: course 100C. Special topics in applied statistics not covered in other courses in professional series.

420. Data Base Management Systems. (Formerly numbered 203A.) Lecture, three hours; laboratory, two hours. Prerequisite: course 403 or equivalent. Data base and data base models applied to medical and public health studies; design of data bases for efficient data retrieval and statistical analysis using package data base management and statistical package programs.

421. Systems Analysis for Health Data. (Formerly numbered 203B.) Lecture, three hours; laboratory, two hours. Prerequisite: course 420. Health data computer processing as a total system; review of selected health information systems, statistical packages, and computer languages; design, development, testing, and maintenance of a computer system for managing health data.

495. Teacher Preparation in Biostatistics (2 units). (Formerly numbered Public Health 495.) Prerequisites: 18 units of cognate courses in area of specialization, consent of department chair. May not be applied toward master's degree minimum total course requirement. May be repeated for credit. S/U grading.

501. Cooperative Program (2 to 8 units). (Formerly numbered Public Health 501.) Prerequisite: consent of UCLA graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Used to record enrollment of UCLA students in courses taken under cooperative arrangements with USC. No more than eight units may be applied toward master's degree minimum total course requirement; may not be applied toward minimum graduate course requirement. S/U grading.

502. UCLA/Hawaii Western Consortium Exchange (4 to 16 units). (Formerly numbered Public Health 502.) Prerequisite: consent of UCLA graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Used to record enrollment of UCLA students in courses taken at University of Hawaii, Manoa, as part of UCLA/UH Western Consortium Exchange Program. Only the equivalent of eight quarter units taken at UH may be applied toward degree. Extra units may be applied toward department requirements by petition to Public Health Student Affairs Office. UH letter-graded courses appear on UCLA transcript with letter grades, while UH Cr/NCr-graded courses appear as S/U grades. Grade points from these courses are not counted in UCLA grade-point average.

596. Directed Individual Study or Research (2 to 8 units). (Formerly numbered Public Health 596.) Prerequisite: graduate standing. Individual guided studies under direct faculty supervision. Only four units may be applied toward M.P.H. and M.S. minimum total course requirement. May be repeated for credit.

597. Preparation for Master's Comprehensive or Doctoral Qualifying Examinations (2 to 8 units). (Formerly numbered Public Health 597.) Prerequisite: graduate standing. May not be applied toward any degree course requirements. May be repeated for credit. S/U grading.

598. Master's Thesis Research (2 to 8 units). (Formerly numbered Public Health 598.) Only four units may be applied toward M.P.H. and M.S. minimum total course requirement; may not be applied toward minimum graduate course requirement. May be repeated for credit. S/U grading.

599. Doctoral Dissertation Research (2 to 8 units). (Formerly numbered Public Health 599.) May not be applied toward any degree course requirements. May be repeated for credit. S/U grading.

Community Health Sciences

Professors

- Carol S. Aneshensel, Ph.D. (*Behavioral Sciences and Health Education*)
 Emil Berkanovic, Ph.D. (*Behavioral Sciences and Health Education*), *Chair and Division Head*
 Linda B. Bourque, Ph.D. (*Population and Family Health*), *Vice Chair and Division Head*
 E. Richard Brown, Ph.D. (*Behavioral Sciences and Health Education*)
 John Edmond, Ph.D. (*Nutritional Sciences*)
 Osman M. Galal, M.D., Ph.D. (*Population and Family Health*)
 Michael S. Goldstein, Ph.D. (*Behavioral Sciences and Health Education*)
 Gail G. Harrison, Ph.D. (*Population and Family Health*)
 Isabelle F. Hunt, Dr.P.H., R.D. (*Nutritional Sciences*)
 Dean T. Jamison, Ph.D. (*Population and Family Health*)
 Snehendu B. Kar, Dr.P.H., M.Sc. (*Behavioral Sciences and Health Education, Population and Family Health*)
 Joel D. Kopple, M.D., *in Residence* (*Nutritional Sciences*)
 Virginia C. Li, Ph.D., M.P.H., (*Behavioral Sciences and Health Education*)
 Alfred K. Neumann, M.D., M.A., M.P.H., F.A.B.P.M. (*Population and Family Health*)
 Charlotte G. Neumann, M.D., M.P.H. (*Population and Family Health*)
 John F. Schelle, Ph.D., *in Residence* (*Behavioral Sciences and Health Education*)
 Susan C. Scrimshaw, Ph.D. (*Population and Family Health*), *Associate Dean for Academic Programs*
 Judith M. Siegel, Ph.D., M.S.Hyg. (*Behavioral Sciences and Health Education*), *Associate Dean for Student Affairs*

Professors Emeriti

- Roslyn B. Alfin-Slater, Ph.D. (*Nutritional Sciences*)
 Judith Blake, Ph.D. (*Population and Family Health*); *Fred H. Bixby Professor Emerita of Population Policy*
 Edward B. Johns, Ed.D. (*Behavioral Sciences and Health Education*)

Alfred H. Katz, D.S.W., M.S. (*Population and Family Health*)

Edward L. Rada, Ph.D. (*Behavioral Sciences and Health Education*)

Marian E. Swendseid, Ph.D. (*Nutritional Sciences*)

Daniel M. Wilner, Ph.D. (*Behavioral Sciences and Health Education*)

Associate Professors

Neal Halfon, M.D., M.P.H. (*Population and Family Health*)

David Heber, M.D., Ph.D. (*Nutritional Sciences*)

Donald E. Morisky, Sc.D., M.S.P.H. (*Behavioral Sciences and Health Education*)

Michael G. Ross, M.D., M.P.H., in Residence (*Population and Family Health*)

Assistant Professors

Deborah C. Glik, Sc.D. (*Behavioral Sciences and Health Education*)

Dawn M. Upchurch, Ph.D. (*Population and Family Health*)

Steven P. Wallace, Ph.D. (*Behavioral Sciences and Health Education*)

Lecturers

Helene G. Brown, B.S. (*Behavioral Sciences and Health Education*)

Marianne Parker Brown, M.P.H. (*Behavioral Sciences and Health Education*)

Michael R. Cousineau, Dr.P.H. (*Behavioral Sciences and Health Education*)

Janis S. Fislser, Ph.D. (*Nutritional Sciences*)

Paul M. Fleiss, M.D., M.P.H. (*Population and Family Health*)

Patrice E.F. Jelliffe, R.N., M.P.H. (*Population and Family Health*), *Researcher*

Celia Kaplan, Dr.P.H. (*Population and Family Health*)

Joanne Leslie, Ph.D. (*Population and Family Health*)

Ronald L. Linder, Ed.D. (*Behavioral Sciences and Health Education*)

Mario Panaqua, B.A. (*Nutritional Sciences*)

Sora Park, M.P.H. (*Behavioral Sciences and Health Education*)

Adjunct and Visiting Professors

Linda J. Beckman, Ph.D., M.S., *Adjunct (Behavioral Sciences and Health Education)*

Edith M. Carlisle, Ph.D., *Adjunct (Nutritional Sciences), Researcher*

Wen-Pin Chang, M.D., M.P.H., D.M.Sc., *Visiting (Population and Family Health)*

James M. Iacono, Ph.D., *Adjunct (Nutritional Sciences)*

Adjunct Associate Professor

Daniel H. Ershoff, Dr.P.H. (*Behavioral Sciences and Health Education*)

Adjunct Assistant Professors

Martin Anderson, M.D. (*Population and Family Health*)

Barbara A. Berman, Ph.D. (*Behavioral Sciences and Health Education*)

Roger A. Clemens, Dr.P.H. (*Nutritional Sciences*)

Dierdre S. Gifford, M.D. (*Population and Family Health*)

Stewart A. Laidlaw, Ph.D. (*Nutritional Sciences*)

Kevin J. Malotte, Ph.D. (*Behavioral Sciences and Health Education*)

Jose Quiroga, M.D. (*Population and Family Health*)

Audrey Saftlas, Ph.D. (*Population and Family Health*)

Susan B. Sorenson, Ph.D. (*Population and Family Health*)

Antronette K. Yancey, M.D., M.P.H. (*Population and Family Health*)

Assistant Field Program Supervisor

Marta G. Sorini, M.P.H.

Scope and Objectives

The objective of the Department of Community Health Sciences is to develop, integrate, and apply biomedical, psychological, and social approaches to the promotion and preservation of health. In order to accomplish this, the breadth of the instructional and research programs encompasses the following interrelated professional disciplines: (1) populations — their demographic characteristics, mental, physical, and reproductive health status, and health behaviors. Vulnerable groups, particularly women and children, are of particular concern; (2) nutrition — the understanding of underlying biologic mechanisms and their implications for improving the nutritional status of populations, especially groups at high risk, with emphasis on underprivileged communities, women, and children; (3) health and illness — health education, disease prevention, and health promotion: the influence of health behavior and social forces on disease and its distribution in the population, and the development of health education and community organization strategies to prevent disease and promote health through changing health behavior and public policy. The department believes that strategies which successfully address such needs incorporate academic and professional expertise in these three areas.

Within the department, the **behavioral sciences and health education division** studies the social and psychological factors which are related to health status and strategies for effective prevention of disease and promotion of health. Areas of study and research interest include health-relevant behaviors (e.g., cancer, HIV infections and other communicable diseases, contraception, health behavior of special populations such as minorities, the aged, etc.); program evaluation; the social organization and politics of health policy (e.g., access to health services, problems of long-term care, public policy and its impact on health, etc.); and health education modalities (e.g., patient education, community education, community organization and participation, occupational and international health education). The division offers master's and doctoral degrees.

Doctoral students prepare for careers in teaching and research in universities, colleges, and research institutions. M.P.H. students prepare for careers in community organization; patient, occupational, community, and international health education; and program planning, implementation, and evaluation. Worksites include local, state, national, and international public and voluntary health organizations and health facilities such as primary health care, ambulatory care, and hospital settings.

The **population and family health division** uses a multidisciplinary approach that focuses on training for leadership in national and international service and research concerning health problems of, and programs and policies

for, families. The curriculum encompasses not only the traditional emphasis on pregnant women and young children, but also deals with older children and adolescents and aspects of women's health throughout the life course. The program also includes consideration of population dynamics and growth, fertility patterns, reproductive outcomes, family planning, and nutrition and public policy in these domains. The international track emphasizes the health and nutrition of pregnant and lactating mothers and young children and primary health care in less technically developed Third World countries. The national (domestic) track emphasizes the health of women, children, and adolescents, especially among groups that are economically or socially disadvantaged, including cultural factors in diverse populations. The division offers programs leading to the M.P.H. and Dr.P.H. degrees.

Requirements for Graduate Degrees

Admission

Note: The nutritional sciences division is not admitting new students for the M.S. and Ph.D. with specialization in nutritional sciences at this time.

Application forms and the *Announcement of the UCLA School of Public Health* may be obtained by writing to the Office of Student Affairs, School of Public Health, 16-071 CHS, UCLA, Los Angeles, CA 90024-1772. Both the School of Public Health Application for Admission to Graduate Status and the *UCLA Application for Graduate Admission* must be completed. Three letters of recommendation are required, two from former professors and one from an employer (if no employer, three former professors) before an application is considered complete. It is your responsibility to ensure that the application file is complete.

The preferred deadline for graduate applications is December 15, 1992, for Fall Quarter 1993 admission. *Applications received after the deadline have considerably reduced opportunities for admission, financial aid, and housing.*

Applicants must meet the University minimum requirement of an acceptable bachelor's degree with a B (3.0) average in upper division coursework and/or prior graduate study. Exceptionally qualified applicants may be considered on an individual basis. No screening examination is required for admission. If your undergraduate coursework has been deficient in breadth of fundamental training, you must take specified undergraduate courses after admission. Except for the population and family health division, prior health-related experience is not required as a condition of admission, although a background of public health experience may be considered in your evaluation. In addition, you must be accepted by and accommodated in a division of the Department of Community Health Sciences.

Applicants must also perform satisfactorily on a recent (within the last five years) Graduate Record Examination (GRE). The Medical College Admission Test (MCAT) or Dental Admission Test (DAT) may be accepted in lieu of the GRE by some divisions under certain circumstances. (Note: The population and family health division requires GRE scores. MCAT or DAT scores are accepted *only* for applicants *already holding* M.D. or D.D.S. degrees.) Applicants at the master's level require a minimum GRE combined (verbal and quantitative) score of 1,100. Applicants at the doctoral level need a minimum GRE combined (verbal and quantitative) score of 1,200. The analytical section is not required.

Refer to the *UCLA Application for Graduate Admission for the Test of English as a Foreign Language (TOEFL)* requirement for international applicants.

Master's Applicants

Your prior program of study should include adequate preparation in mathematics, physical sciences, biological sciences, and social sciences, and typically includes two courses each in mathematics, biological sciences, social sciences; one course in physical sciences; and others that constitute an adequate preparation for the proposed area of specialization.

If your prior work in the biological, physical, mathematical, and social sciences does not constitute adequate preparation for your proposed area of specialization, you must include courses in those sciences in your graduate program; these may not be applied toward the minimum requirements for the degree.

Specific Concentration Requirements

Applicants interested in *population and family health* are expected to have some prior experience in the health field (paid or volunteer) and preferably a bioscience or behavioral science background.

Master of Science in Public Health

The Master of Science is a research-oriented degree within the general field of public health. It includes the preparation of a thesis or comprehensive examination/major written report. Teaching experience is not required.

See Schoolwide Programs at the end of this chapter for information on the M.P.H. degree.

Course Requirements

You must complete at least one year of graduate residence at the University of California and a minimum of 10 full courses, at least five of which must be graduate courses in the 200 or 500 series. Only one 596 course (four units) and one 598 course (four units) may be applied toward the total course requirement; only four units of either course may be applied toward the minimum graduate course requirement. Community Health Sciences 597 may not be

applied toward the degree requirements. No more than 18 full courses may be required for the degree.

Required school core courses include Biostatistics 100A, 100B, and Epidemiology 100. Each core course may be waived if you have taken a similar course elsewhere and can pass the waiver examination.

Only courses in which you receive a grade of C- or better may be applied toward the requirements for a master's degree. You must maintain an average of no less than 3.0 (B) in all courses required or elected during graduate residence at the University of California.

Area of Specialization

The area of specialization and a typical course plan, in addition to mandatory courses, are listed below.

Behavioral Sciences and Health Education

Community Health Sciences 210, 212, 217, 270, 482, and four to six divisional core courses (selected from an approved list) are required. Electives must be selected in consultation with an adviser. Normal program length is six terms.

Thesis Plan

If the thesis option is approved, a thesis committee is established. The committee approves the thesis prospectus before you file for advancement to candidacy. The thesis must be acceptable to the thesis committee.

Comprehensive Examination/Report Plan

If the comprehensive examination/report option is approved, a guidance committee of three faculty members is appointed. A written comprehensive examination on your major area of study must be passed. If you fail, you may be reexamined once.

The preparation of a major written research report is required; it must be approved by the guidance committee which also must certify successful completion of all degree requirements.

Master of Science in Preventive Medicine and Public Health

The program is not admitting new students at this time.

Ph.D. in Public Health

The Ph.D. is an advanced research degree that emphasizes depth of knowledge and research skills. The dissertation must demonstrate your ability for independent scholarly investigation.

There is no foreign language requirement for the Ph.D.; teaching experience is recommended but not required.

See Schoolwide Programs at the end of this chapter for information on the Dr.P.H. degree.

Admission

In addition to the University minimum requirements, the department requires (1) satisfactory performance on the Graduate Record Examination (GRE), (2) completion of the M.S. in a field of public health or an appropriately related field (students with an M.P.H. need to satisfy the course requirements of the M.S. in a field of public health before or after admission), (3) at least a 3.0 junior/senior undergraduate grade-point average, at least a 3.5 GPA in graduate studies or demonstrated superiority in graduate work, and at least a B in each of the mandatory core courses, (4) a positive recommendation by a division in the department to the School of Public Health, (5) approval by the admissions policy committee and the department chair. Screening examinations may be required by each division.

In the behavioral sciences and health education division, you must satisfy the divisional core requirements for the M.P.H. or M.S. in a field of public health (depending on your background) at a level acceptable for the doctoral program. Coursework may be waived by examination if equivalent courses have been taken elsewhere.

Major Field or Subdiscipline

Behavioral sciences and health education.

Course Requirements

The courses needed to pass the written examination in your major field depend on the division and field you select.

The minor must be in a field cognate to the major field in public health. A strong minor is required, with at least four full graduate courses (16 units) or equivalent from a department that grants a Ph.D. Biostatistics is the only department considered cognate to a major in public health.

Qualifying Examinations

Before advancement to candidacy, you must pass a written examination in the major field, complete the requirements in a minor field, and pass an oral qualifying examination on the major and minor fields. Normally no more than one reexamination is allowed. When you are ready to take the University Oral Qualifying Examination, a doctoral committee is nominated.

After passing the University Oral Qualifying Examination, you may be advanced to candidacy and commence work on a dissertation in your principal field of study. The doctoral committee guides your progress toward completion of the dissertation.

Final Oral Examination

A final oral examination is required of all candidates.

Lower Division Course

Behavioral Sciences and Health Education

19. Peer Health Counselor Training. (Formerly numbered Public Health 19.) Limited to students in Peer Health Counselor Program. Analysis of student health care issues as related to campus health care delivery system and to health care consumer. Identification of health needs, determination of appropriate resources, delivery of preventive and self-care education, and delineation of peer health counselor's role. Ms. Park

Upper Division Courses

Behavioral Sciences and Health Education

100. Behavioral Sciences and Health Education. (Formerly numbered 183.) Lecture, three hours; discussion, one hour. Development of broad appreciation of psychosocial factors as they affect health and their implications for public health. Review of theories, models, and modalities of health education for health promotion and disease prevention interventions.

Population and Family Health

130. Nutrition and Health (2 units). (Formerly numbered 161.) Prerequisites: one biology course, one chemistry course, consent of instructor. Not open for credit to nutrition majors. Basic and clinical nutrition theory and practice for students in health sciences curricula.

131. Family Health and Population: Principles and Issues. (Formerly numbered 171A.) Prerequisite: consent of instructor. Biosocial aspects of family formation, reproductive physiology and behavior, "at risk" aspects of pregnancy and childbirth, and primary women's health care services. Physical aspects of growth; physical, intellectual, and social development from infancy to older childhood and adolescence.

132. Health, Disease, and Health Services in Latin America. (Formerly numbered 174E.) Prerequisite: consent of instructor. Introduction to health, disease, and health services in Latin America, with emphasis on epidemiology, health administration, medical anthropology, and nutrition.

133. Public Health in People's Republic of China (2 units). (Formerly numbered 174H.) Prerequisite: consent of instructor. Historical overview of policies and implementation of public health in People's Republic of China from 1949 to the present. Emphasis on relevance for public health in other developing countries. Mr. Neumann

134. Legal Aspects of Family Health (2 units). (Formerly numbered 178.) Prerequisite: consent of instructor. Analysis and clarification of legal issues involving family health services, including family planning, sterilization, abortion, dental care for children, battered child laws, mental hospitalization, personnel and standards for care and implementation of sound health programs.

Nutritional Sciences

161. Nutrition. (Formerly numbered 162.) Lecture, three hours. Prerequisites: one organic chemistry course, Biology 9 or equivalent. Designed for students intending to enter nutritional sciences graduate professional program. Introductory course in nutrition covering metabolic aspects of carbohydrates, fats, proteins, vitamins, and minerals. Digestion and absorption of nutrients, energy and protein requirements, minerals and vitamin metabolism. P/NP or letter grading.

166A. Therapeutic Nutrition (2 units). (Formerly numbered Public Health 166A.) Prerequisites: course 161 or equivalent, consent of instructor. Recent findings in the field of diet and disease and modifications made in normal diet for pathological conditions. Ms. Carlisle

166B. Therapeutic Nutrition (2 units). (Formerly numbered Public Health 166B.) Prerequisites: course 166A, consent of instructor. Recent findings in the field of diet and disease and modifications made in normal diet for pathological conditions. Ms. Carlisle

Behavioral Sciences and Health Education

187. Health Education for Teacher Credentials (2 units). (Formerly numbered Public Health 187.) Limited to students in teacher education credential program. Required for California State Instructional Credential. Teaching/learning process as applied to personal and community health. Topics include psychoactive drugs (alcohol, tobacco, and narcotics), human sexuality, nutrition, and community health resources. Mr. Linder

189. Community Cancer Education. (Formerly numbered Public Health 189.) Lecture, three hours; project and fieldwork, one hour. Prerequisites: Biology 30 or equivalent, consent of instructor. Exploration of process of cancer education through community resources, culminating in student-generated community field-study proposal and presentation. Ms. Brown

Special Studies

M197A. Introduction to Indo-American Studies. (Same as Asian American Studies M197A.) Lecture, three hours. Prerequisite: junior or senior standing in Asian American studies or at least one course in Southeast Asian or Indian history or consent of instructor. Introductory study of Indian American immigration experiences in the U.S., including historical background, demographics, immigration policies and effects, and adaptation experiences. Class projects include sample survey of quality of life, annotated bibliography, and review of creative works. Mr. Kar (Sp)

199. Special Studies (2 to 4 units). (Formerly numbered Public Health 199.) Prerequisites: senior standing, consent of instructor and department chair (based on written proposal outlining course of study). Individual undergraduate guided studies under direct faculty supervision. Study to be structured by instructor and student at time of initial enrollment. Only four units may be taken each term.

Graduate Courses

Population and Family Health

200. Global Health Problems. Lecture, two hours; discussion, two hours. Prerequisite: consent of instructor. Overview of health profile of the world in the 20th century. Global health problems and methods by which they have been dealt in context of the Alma Ata goal of "health for all by year 2000." Mr. Galal, Mr. Neumann

Behavioral Sciences and Health Education

210. Introduction to Social Research Methods in Health. (Formerly numbered 181.) Lecture, four hours; assignments, eight hours. Prerequisites: Biostatistics 100A or equivalent, consent of instructor. Basic methods and techniques in designing and conducting health research using a variety of methods. Discussions of students' own research plans. Ms. Bourque, Mr. Morisky, Ms. Siegel

211. Program Planning and Administrative Relationships in Health Education. (Formerly numbered 216.) Lecture, two hours; discussion, one hour. Prerequisites: courses 217, 271, 482, Health Services 100, consent of instructor. Study of administration concepts; relationships and applicability to health education settings. Responsibility and authority for health education in organizations and other groups. Ms. Li and the Staff

212. Advanced Social Research Methods in Health. (Formerly numbered 281.) Lecture, two hours; laboratory, two hours. Prerequisites: course 210, Biostatistics 100A, 406, consent of instructor. Problems of health survey design and data collection; measurement issues in data analysis and interpretation; use of computer for analysis of large-scale survey data using various statistical techniques.

213. Research in Community and Patient Health Education. (Formerly numbered 295B.) Lecture, three hours; discussion, two hours. Prerequisites: course 270, consent of instructor. Application of conceptual, theoretical, and evaluation skills to community-based health education risk-reduction programs. Computer applications, data management, and research methodologies taught through microcomputer and mainframe computer management and analysis of program data bases. Mr. Morisky

214. Issues in Program Evaluation. (Formerly numbered 289.) Discussion, three hours; reading and research paper, one hour. Prerequisite: course 212 or consent of instructor. Advanced seminar which explores problems of planning and implementing evaluation research in context of local demonstration projects. Mr. Berkanovic

215. Advanced Topics in Health Survey Research Methods. (Formerly numbered 291.) Lecture, two hours; discussion, two hours. Prerequisite: course 212 or consent of instructor. Special topics in health survey research methods. Design of special purpose surveys; recent interviewing techniques; diaries and memory aids; measurement error, including response bias, social desirability, response validity; telephone interviewing; obtaining data on sensitive issues; ethics and confidentiality of survey research data. Mr. Goldstein

Population and Family Health

M216. Qualitative Research Methodology. (Formerly numbered M273.) (Same as Anthropology M284.) Discussion, three hours; laboratory, one hour. Prerequisite: consent of instructor. Intensive seminar/field course in qualitative research methodology. Emphasis on using qualitative methods and techniques in research and evaluation related to health care. Ms. Scrimshaw

Behavioral Sciences and Health Education

217. Introduction to Research and Program Evaluation. (Formerly numbered 211.) Lecture, two hours; discussion, two hours. Prerequisites: course 210 and Biostatistics 100A, or consent of instructor. Introduction to principles of research methods and program evaluation as they are applied to public health programs in the community. Mr. Berkanovic and the Staff

Population and Family Health

218. Questionnaire Design and Administration. (Formerly numbered 217.) Lecture, two hours; discussion, one hour; laboratory, one hour; outside assignments. Prerequisites: course 210, consent of instructor. Design, testing, field use, and administration of data collection instruments, with particular emphasis on questionnaires. Ms. Bourque

230. Family and Sexual Violence. (Formerly numbered 276E.) Lecture, three hours; community, three to four hours. Prerequisite: consent of instructor. Examination of rape, incest, and spouse and elder abuse. Presentation of definitions, causes, outcomes of research on family and sexual violence, as well as response of social service, medical, and criminal justice systems. Ms. Sorenson

231. Maternal and Child Nutrition. (Formerly numbered 270.) Prerequisite: course 131 or consent of instructor. Nutrition of mothers, infants, and children in countries at various levels of socioeconomic development; measures for prevention and treatment of protein/calorie malnutrition; relationship between nutrition and mental development; impact of ecological, socioeconomic, and cultural factors on nutrition, nutrition education, and service. Ms. Neumann

M232. Medical Anthropology in Public Health. (Formerly numbered M271.) (Same as Anthropology M266, Nursing M250, and Psychiatry M250.) Seminar, three hours. Cross-cultural aspects of human behavior as they relate to perception, treatment, incidence, and prevalence of disease and illness.

Ms. Scrimshaw

233. Seminar: Current Issues in Maternal and Child Health (2 units). (Formerly numbered 272.) Prerequisite: consent of instructor. New knowledge and approaches in selected health and social problems of families, women of childbearing age, and children, including early development, day care, and genetic counseling.

234. Adolescent Health and Health Behavior. (Formerly numbered 272D.) Lecture, two hours; discussion, two hours; assignments, eight hours. Prerequisite: consent of instructor. Adolescent health and health behaviors within a conceptual framework integrating developmental, social, and cultural factors.

Ms. Aneshensel

235. The Family and Mental Health. (Formerly numbered 272E.) Lecture, two hours; discussion, two hours; assignments, eight hours. Prerequisite: consent of instructor. Emphasis on how social organization of the family, relationships among family members, and extrafamilial roles of family members contribute to or detract from psychological well-being of spouses, parents, and children.

Ms. Aneshensel

M236. Human Resources and Economic Development. (Formerly numbered M272J.) (Same as Education M252C.) Examination, in context of the developing countries, of interactions among economic development, population growth, levels of health and nutritional status, and educational investments.

Mr. Jamison (Sp)

M237A-M237B. Population Policy and Fertility. (Formerly numbered M274A-M274B.) (Same as Sociology M287A-M287B.) Lecture, three hours; discussion, one hour. Prerequisite: consent of instructor. Course M237A is prerequisite to M237B. Analysis of research concerning major issues in population policy, with special emphasis on human fertility.

M237C. Seminar: Population Policy and Fertility. (Formerly numbered M274C.) (Same as Sociology M287C.) Seminar, three hours; discussion, one hour. Prerequisites: courses M237A-M237B, consent of instructor. Review of current literature in population policy and fertility in conjunction with student research reports. May not be repeated for credit.

239. Human Lactation: Biological and Public Health Significance (2 units). (Formerly numbered 275.) Prerequisite: course 231 or consent of instructor. Biological and economic aspects of human lactation in industrialized and developing countries.

M240. Culture and Human Reproduction. (Formerly numbered M276.) (Same as Anthropology M262P.) Lecture, two hours; discussion, two hours. Prerequisite: consent of instructor. Exploration of human behavior related to reproduction. Cross-cultural exploration of biological and behavioral factors, with particular reference to human adaptation.

Ms. Scrimshaw

M241. Seminar: Reproduction and Women's Health. (Formerly numbered M276D.) (Same as Anthropology M269P, Nursing M280, and Psychiatry M280.) Seminar, three hours. Analysis, using a cross-cultural approach, of sociocultural and political economic factors that affect reproduction and women's health. Topics include relationships between women's domestic and extra-domestic roles and their health, and impact of new reproductive technologies. May be repeated for credit.

Ms. Browner

242. Advanced Seminar: Population and Family Health (2 units). (Formerly numbered 279.) Prerequisites: doctoral standing, consent of instructor. Current research in population and family health. May be repeated for credit. S/U grading.

243A-243B-243C. Seminars: Preventive Medicine (2 units each). (Formerly numbered 279D-279E-279F.) Prerequisite: consent of instructor. Three-term sequence devoted to analysis of current issues, practices, research literature, and policy and trends in preventive medicine. Discussion of administrative, epidemiologic, and clinical methods. S/U grading.

Mr. Neumann

M244. Advanced Seminar: Medical Anthropology. (Formerly numbered M279H.) (Same as Anthropology M263Q, Nursing M273, and Psychiatry M273.) Seminar, three hours. Prerequisite: consent of instructor. Limited to 15 students. Examination of interrelationships between society, culture, ecology, health, and illness. Bases for written critical analysis and class discussion provided through key theoretical works.

Ms. Browner (Sp)

M245A-M245B-M245C. Child Abuse and Neglect (2 units each). (Formerly numbered M272F-M272G-M272H.) (Same as Dentistry M300.5A-M300.5B-M300.5C, Education M217G-M217H-M217I, Law M281A-M281B, Medicine M290A-M290B, Nursing M290A-M290B-M290C, and Social Welfare M290E-M290F-M290G.) Prerequisite: consent of instructor. Intensive interdisciplinary study of child physical and sexual abuse and neglect, with lectures by faculty members of the Schools of Dentistry, Education, Law, Medicine, Nursing, and Public Health and the Department of Psychology, as well as by the relevant public agencies.

246. Women's Roles and Family Health. Lecture, two hours; discussion, one hour. Prerequisite: consent of department. Rapidly changing roles of women throughout the world are having important effects on women's own health and that of their families. Analysis of multidisciplinary research from both developing and industrialized countries to provide basis for in-depth discussion of programmatic and policy implications.

Ms. Leslie

Nutritional Sciences

250. Clinical Nutrition Laboratory (2 units). (Formerly numbered 165.) Discussion, one hour; laboratory, four hours. Prerequisites: one quantitative analysis course or equivalent, one year of organic chemistry, Biology 9, consent of instructor. Analytical procedures for determining various constituents of blood and urine.

Mr. Eckhert

260A. Advanced Nutrition: Vitamins. (Formerly numbered 260E.) Lecture, three hours; discussion, one hour. Prerequisites: Biological Chemistry 205 or equivalent, consent of instructor. Comprehensive treatment of vitamin nutrition and metabolic-nutrient interactions.

Mr. Eckhert

260B. Advanced Nutrition: Proteins (2 units). (Formerly numbered 260F.) Prerequisites: course 161 or equivalent, Biostatistics 100A, Biological Chemistry 205 or Chemistry 153C (may be taken concurrently), consent of instructor. Comprehensive treatment of protein nutrition and metabolic-nutrient interactions.

Mr. Laidlaw

260C. Advanced Nutrition: Lipids (2 units). (Formerly numbered 260G.) Prerequisites: course 161 or equivalent, Biostatistics 100A, Biological Chemistry 205 or Chemistry 153C (may be taken concurrently), consent of instructor. Comprehensive treatment of lipid nutrition and metabolic-nutrient interactions.

Mr. Heber

260D. Advanced Nutrition: Minerals (2 units). (Formerly numbered 260H.) Prerequisites: Biological Chemistry 205 or equivalent, consent of instructor. Comprehensive treatment of mineral nutrition and metabolic-nutrient interactions.

Ms. Carlisle

261A. Laboratory Instrumentation and Methods. (Formerly numbered Public Health 261A.) Lecture, two hours; laboratory, six hours. Prerequisites: organic or physical chemistry or biochemistry, consent of instructor. Biochemical techniques and instrumentation used in environmental and nutritional sciences, including absorption, atomic absorption and fluorescence spectroscopy, gas chromatography, HPLC, electrophoresis, radioisotopes, and centrifugation.

Mr. Panaqua

261B. Advanced Laboratory Techniques in Nutritional Science. (Formerly numbered Public Health 261B.) Lecture, one hour; laboratory, six hours. Prerequisites: course 261A, consent of instructor. Current biochemical methods emphasizing design of nutritional experiments.

262. Seminar: Nutrition (2 units). (Formerly numbered Public Health 262.) Prerequisites: course 161, one course in 260 series. Review of current literature in nutritional science. Emphasis on methodology and data evaluation. May be repeated for credit.

263. Seminar: Public Health Nutrition (2 units). (Formerly numbered Public Health 263.) Prerequisites: course 161, one nutrition course in 200 or 400 series. Review of literature in selected areas of public health nutrition. May be repeated for credit.

264A. Clinical Nutrition Problems (2 units). (Formerly numbered 264E.) Prerequisites: one or more 200-level nutrition courses, Biological Chemistry 205. Nutrition and nutrient-metabolic interactions in various disease states such as gastrointestinal disorders, renal disease, and liver disease.

Ms. Alfin-Slater, Mr. Kopple, Ms. Swendseid

264B. Clinical Nutrition Problems (2 units). (Formerly numbered 264F.) Prerequisites: one or more 200-level nutrition courses, Biological Chemistry 205. Nutrition and nutrient-metabolic interactions in various disease states such as cardiovascular disease, diabetes, and obesity.

Ms. Alfin-Slater, Mr. Kopple, Ms. Swendseid

265. Doctoral Research Seminar: Nutritional Sciences (2 units). (Formerly numbered Public Health 265.) Prerequisites: at least one course in 260 series, doctoral standing, consent of instructor. Limited to doctoral students. Presentation of research projects. Emphasis on data evaluation. May be repeated for credit. S/U grading.

M266. Nutritional Epidemiology. (Same as Epidemiology M266.) Lecture, two hours; discussion, one hour; laboratory, one hour. Prerequisites: Biostatistics 100D or 110C, Epidemiology 201A-201B, one prior nutrition course, consent of instructor. Designed to prepare students for conduct of research relating diet to health. Topics include methods of diet assessment, error in measurement of diet, methods of adjusting for energy intake in epidemiologic analysis, and analysis of epidemiologic data relating diet to disease.

M267. Structure and Function of Nutrients Implicated in Etiology of Chronic Disease. (Same as Epidemiology M276.) Lecture, two hours; discussion, one hour; laboratory, one hour. Prerequisite: one prior organic chemistry course. Basic nutrition course for public health and science majors.

Behavioral Sciences and Health Education

270. Behavioral Sciences and Health. (Formerly numbered 182.) Lecture, three hours. Prerequisite: one social sciences course. Basic concepts in behavioral sciences pertinent to health and medical care; cultural and social class variations in health status; health team and community relations; community decision making in public health.

Mr. Goldstein, Mr. Kar

271. Health-Related Behavior Change. (Formerly numbered 280.) Prerequisite: course 270 or consent of instructor. Unified behavioral science approach to natural determinants of change, as foundation for planned change in health-related behavior at community, group, and individual levels.

Ms. Siegel

272. Social Epidemiology. (Formerly numbered 283E.) Lecture, two hours; discussion, one hour. Prerequisite: Epidemiology 100 or consent of instructor. Relationship between sociological, cultural, and psychosocial factors in etiology, occurrence, and distribution of morbidity and mortality. Emphasis on lifestyles and other socioenvironmental factors associated with general susceptibility to disease and subsequent mortality.

Ms. Siegel

273. Social Epidemiology of Chronic Disease. (Formerly numbered 283H.) Lecture, two hours; discussion, one hour. Prerequisite: Epidemiology 100 or consent of instructor. Relationship between sociological, cultural, and psychosocial factors in etiology, occurrence, and distribution of chronic diseases. Topics include hypertension, coronary heart disease, and cancer. Emphasis on life-styles and other socioenvironmental factors associated with chronic diseases. Ms. Siegel

M274. Health Professions. (Formerly numbered M283F.) (Same as Sociology M249A.) Lecture, three hours. Prerequisite: course 270 or consent of instructor. Sociological examination of concepts "health" and "illness" and role of various health professionals, especially physicians. Attention to meaning of professionalization and professional/client relationships within a range of organizational settings. Mr. Goldstein

M275. Health and Illness Behavior. (Formerly numbered M283G.) (Same as Sociology M249B.) Prerequisites: course 270 and Epidemiology 100, or consent of instructor. Sociocultural factors affecting differential patterns of health behavior, illness behavior, and sick-role behavior. Mr. Berkanovic

276. Alcohol and Drug Abuse: Social Policy Perspectives (3 units). (Formerly numbered 292.) Prerequisite: consent of instructor. Alternative models of alcohol and other drug addictions examined and implications assessed for public policy regarding their control. Prevention efforts and findings from California and national surveys, with primary emphasis on alcohol use and abuse.

277. Advanced Community Health Education. (Formerly numbered 295A.) Lecture, two hours; discussion, two hours. Prerequisite: course 270. Before planning the educational components of a health program, one must assess behaviors and factors influencing the health problem. Conceptual, theoretical, and evaluative skills developed and applied in constructing a community-based educational program. Mr. Morisky

278. Social and Behavioral Perspectives on Work and Health. (Formerly numbered 297.) Prerequisites: course 470 and Environmental Health Sciences 250, or consent of instructor. Discussion of current social and behavioral research, issues, and perspectives on work and health.

279. Advanced Community Organization Seminar. (Formerly numbered 487.) Seminar, three hours. Prerequisite: course 487 or consent of instructor. Advanced seminar on theoretical and practical problems in community organization, with readings and term projects focusing on participation, leadership, outreach, coalitions, and related issues of community organization and social change applied to health problems. Mr. Brown

280. International Health Education: Training and Development. (Formerly numbered 489.) Prerequisites: course 270 and one upper division research methods or epidemiology course, or consent of instructor. Introduction to an international perspective of health education and health promotion. Survey of current developments in health education in both developed and developing countries. Ms. Li

281. Alcoholism and Drug Abuse among Women. (Formerly numbered 293.) Prerequisite: consent of instructor. Discussion of psychosocial aspects of abuse of alcohol and other drugs among women. Topics include etiology, prevention, treatment, hormonal influences, and role of the family. Emphasis on current theoretical perspectives and research findings.

282. Communications in Health Promotion and Education. (Formerly numbered Public Health 282.) Lecture, two hours; discussion, two hours. Prerequisites: course 270, consent of instructor. Design, implementation, and evaluation of interpersonal communication strategies for health promotion programs. Equal emphasis on communication theories, models, and empirical research literature and on specific applications in health programs and case studies. Mr. Kar

283. Aging and Health Behavior. (Formerly numbered 283I.) Discussion, three hours. Prerequisite: course 270 or consent of instructor. Graduate seminar intended to explore sociocultural determinants of health-related behaviors among the aged. Mr. Berkanovic

284. Ecology of Mental Health. (Formerly numbered Public Health 284.) Lecture, three hours. Prerequisites: course 270, Epidemiology 100, and Biostatistics 100A, or consent of instructor. Analysis of occurrence and distribution of mental disorders in the community and relationships to social structure. Problems of classification, definition, measurement in sociopsychiatric epidemiology, sociocultural and social-psychological factors in mental disorders. Mr. Goldstein

285. Aging, Health, and Society. Lecture, three hours; discussion, one hour. General introduction to major social issues affecting health of the elderly in America. Leading gerontological theories and major issues that affect the aged, showing how those theories and issues influence health status, health promotion, and illness among the elderly. Mr. Wallace (W)

286. Seminar: Behavioral Sciences and Health (2 to 4 units). (Formerly numbered Public Health 286.) Lecture, two hours. Prerequisite: consent of instructor. Recent significant contributions of behavioral sciences to understanding health and illness, with selected and varying topics each term. May be repeated for credit. S/U grading. Mr. Berkanovic, Mr. Goldstein

288. Current Problems in Health Education. (Formerly numbered Public Health 288.) Lecture, one hour; discussion, three hours. Prerequisites: course 270 and three other public health and/or social sciences courses, or consent of instructor. Current problems and findings in health education content areas, such as nutrition, mental health, family health, consumer health, safety, and communicable and chronic diseases.

290. Race, Class, Culture, and Aging. (Formerly numbered 298.) Lecture, three hours; discussion, one hour. Prerequisite: consent of instructor. Experience of aging for African American, Latino, and Asian elderly examined in context of their families, communities, and the nation. Exploration of cultural and structural influences on health and lived experiences of those elders. Mr. Wallace

291. Health Policy and the Aged. Lecture, three hours; discussion, one hour. Prerequisite: consent of instructor. Examination of political, economic, and social forces that shape health policy for the aged, identifying failings in those policies within framework of broader health policy problems. Mr. Wallace

292. Communications and Media Development in Health Promotion/Education. Lecture, three hours; field practice, one hour. Prerequisites: course 270 or prior social sciences courses or consent of instructor. Selected aspects of communications planning, social marketing, mass media, and communications evaluation theory and practice. Ms. Glik

293. Social and Behavioral Research in AIDS: Roundtable Discussion (2 units). (Formerly numbered 298.) Review and discussion of research programs directed toward identification of psychosocial, biobehavioral, environmental, and community factors related to prevention and control of AIDS/HIV. Mr. Morisky

294. Social and Behavioral Factors of AIDS/HIV: A Global Perspective. (Formerly numbered 298.) Prerequisites: course 100 and Epidemiology 100 or prior social sciences courses, or consent of instructor. Overview of social and behavioral factors which influence both the transmission as well as prevention of HIV/AIDS throughout the world. Mr. Morisky

400. Field Studies in Public Health (2 or 4 units). (Formerly numbered Public Health 400.) Prerequisite: consent of instructor. Field observation and studies in selected community organizations for health promotion or medical care. Students must file field placement and program training documentation on form available from Student Affairs Office. May not be applied toward M.S. minimum course requirement; four units may be applied toward 44-unit minimum total required for M.P.H. degree.

411. Introduction to Cancer Control Research. (Formerly numbered 288A.) Prerequisites: Medicine M293 and three courses in behavioral sciences and health education core, or consent of instructor. Provides students with working knowledge of cancer control objectives for the nation, rationale and various phases of cancer control research, and presentation of cancer control interventions, including smoking cessation/prevention, cancer screening, and dietary and psychosocial interventions. Ms. Bastani, Ms. Gritz

Population and Family Health

M417. Injury Prevention Strategies and Countermeasures (2 units). (Same as Epidemiology M417 and Health Services M417.) Prerequisites: Epidemiology 100 or equivalent, consent of instructor. Lectures with discussion on injury prevention strategies and countermeasures, including critical review of effectiveness in the public health context. Emphasis on major public health injury problems from assaultive, self-inflicted, or unintentional causes. S/U or letter grading. Mr. Kraus, Ms. Sorenson

430A. International Health Agencies and Programs. (Formerly numbered 470A.) Prerequisite: consent of instructor. Historical development and functions of international health organizations. Key problems and trends in international health. Bilateral programs, medical/religious missions, private foundations, and others disseminating information, money, and services. Mr. Neumann

430B. Advanced Issues in International Health. (Formerly numbered 470B.) Lecture, two hours; discussion, two hours. Prerequisite: consent of instructor. In-depth focus on major health care issues confronting recipient less-developed countries and donors of technical and financial assistance. Mr. Neumann

431. Women's Health: Principles, Programs, and Policies. (Formerly numbered 471A.) Prerequisite: consent of instructor. In-depth consideration of health services, programs, and issues relevant to nonreproductive women's health care. Subjects include health status of women, endocrinological issues, chronic diseases, cancer, surgery in women, psychosocial and life-style issues, and women's health services. Ms. Upchurch

M432. Perinatal Health Care: Principles, Programs, and Policies. (Formerly numbered 432.) (Same as Obstetrics and Gynecology M432.) Lecture, three hours; discussion, one hour. Prerequisite: consent of instructor. Comprehensive examination of perinatal health care, including perinatal epidemiology, outcome measures, public programs, controversies surrounding new technology, regionalization, organization of services at federal, state, and county levels, and medical/legal issues. Ms. Gifford

433. Family Planning: Public Health Principles, Programs, and Policies. (Formerly numbered 471C.) Prerequisite: consent of instructor. Critical review of public health issues in area of family planning, abortion, and sterilization, with emphasis on health care problems, delivery of services, and public programs. Ms. Upchurch

434A. Maternal and Child Health in Developing Areas. (Formerly numbered 472A.) Prerequisite: course 231 or consent of instructor. Major health problems of mothers and children in developing areas, stressing causation, management, and prevention. Particular reference to adapting programs to limited resources in cross-cultural milieu. Mr. Galal, Ms. Neumann

434B. Recent Developments in Maternal and Child Health in Disadvantaged Countries (2 units). (Formerly numbered 472B.) Prerequisite: course 231 or consent of instructor. Analytic in-depth consideration of recent advances in the field of international maternal and child health, with special reference to developing countries.

435. Overseas Refugee Health Programs (2 units). (Formerly numbered 472D.) Lecture, one hour; discussion, one hour. Prerequisite: course 231 or consent of instructor. Comprehensive overview of health problems of overseas refugee situations and of programs designed to deal with these special circumstances.

436. Child Health in the U.S. (Formerly numbered 473D.) Lecture, three hours; discussion, one hour; one field trip, three hours. Prerequisite: consent of instructor. Examination of health problems affecting infants, children, and adolescents in the U.S. and exploration of alternatives of priorities, approaches, services, and policies aimed at ameliorating these problems. Mr. Halfon

437. Preventive Medicine and the Family. (Formerly numbered 473E.) Lecture, two hours; discussion, two hours. Prerequisite: consent of instructor. Comprehensive review and evaluation of scientific background and application of principles of preventive medicine, with primary focus on the family and the disadvantaged. Mr. Neumann

438. Research Seminar: Community Child Health Services (2 units). (Formerly numbered 473F.) Discussion, one hour; laboratory, one hour; field trips, two hours. Prerequisite: consent of instructor. Examination and development of evaluation strategies for existing community child health services at the local level and development of evaluation strategies for selected topics in programmatic areas. Emphasis on collaborative research and consultation skills, with participation of local health department personnel.

439. Health Services in Child Day Care. (Formerly numbered 473G.) Lecture, two hours; discussion, two hours; one field trip, three hours. Prerequisite: consent of instructor. Assessment of needs, planning, and development of health and nutrition services for young children in day care and related child development programs.

440. Child Health Policy. (Formerly numbered 473H.) Lecture, three hours; discussion, one hour. Prerequisite: consent of instructor. Analysis of development and characteristics of child health programs and policies; issues related to health services for children examined according to chronological development of child; relationship of health programs to programs of nutrition, day care, education, and welfare; strategies for achieving change and politics of developing a child health policy. Mr. Halfon

441. Planning and Development of Family Health Programs. (Formerly numbered 475.) Lecture, two hours; discussion, two hours. Prerequisite: consent of instructor. Theory, guidelines, and team exercise for planning community health/family planning projects in the U.S. and in developing countries. Phases include community needs identification; goal setting; budget and work plan development; funding; staffing; evaluation design; data and cost analysis; and project presentation. Mr. Neumann

442. Analysis of Family Health and Fertility Data. (Formerly numbered 476D.) Lecture, three hours; discussion, two hours; assignments, 12 hours. Prerequisites: course 210, consent of instructor. Analysis and interpretation of large-scale data sets, case studies, and experimental data in area of applied family health and fertility. Computer used as a tool in management and analysis of data necessary for interpreting and preparing research articles. Ms. Bourque

443. Assessment of Family Nutrition. (Formerly numbered 477.) Prerequisite: course 231 or consent of instructor. Assessment of nutritional status of families in developing countries, with special reference to limited resources, terrain, and cross-cultural considerations, stressing anthropometric methods and techniques. Ms. Harrison, Ms. Neumann

444. Anthropometric and Dietary Aspects of Nutritional Assessment. (Formerly numbered 478.) Lecture, two hours; laboratory, two hours. Prerequisite: course 443 or consent of instructor(s). Practical skills in anthropometric and dietary assessment, including selection of appropriate methods, data gathering and handling, and analysis and presentation. Ms. Neumann

445. Food and Nutrition Planning: Policies and Programs in World Context. (Formerly numbered 479.) Lecture, two hours; discussion, two hours. Prerequisite: course 434A or consent of instructor. Discussion of policies regarding improvement of food supplies and their global impact on health of disadvantaged families, including review of effect of many factors, with emphasis on need for multidisciplinary action, food and nutrition planning, and external assistance. Ms. Jelliffe

446. Nutrition Education and Training: Third World Considerations. (Formerly numbered 479D.) Lecture, two hours; discussion, one hour; student participation, one hour. Prerequisite: course 434A or consent of instructor. Problems and priorities in nutrition education and training for families and health workers in Third World countries, including new concepts in primary health care services, mass media, communications, and governmental and international interventions. Ms. Jelliffe

Nutritional Sciences

460. Principles of Public Health Nutrition. (Formerly numbered Public Health 460.) Prerequisites: course 262 or 263, Biostatistics 100A, Health Services 100 (may be taken concurrently), consent of instructor. Survey of methods of evaluating and improving nutritional status of population groups. Ms. Hunt

461. Computer Use in Nutritional Assessment. (Formerly numbered Public Health 461.) Lecture, two hours; laboratory, six hours. Prerequisites: courses 161 or equivalent, 460, Biostatistics 100A, Epidemiology 100 (may be taken concurrently), consent of instructor. Collection and computer analysis of data for purpose of nutritional assessment of population groups.

462. Nutritional Assessment: Laboratory Assays (2 units). (Formerly numbered Public Health 462.) Lecture, one hour; laboratory, three hours. Prerequisites: courses 161, 250, or equivalent, one course in 260 series. Biochemical methods for evaluating nutritional status of individuals or population groups. Techniques for measuring vitamins, minerals, lipids, and proteins.

463A. Preparation for Practicum: Public Health Nutrition. (Formerly numbered Public Health 463A.) Discussion, two hours; fieldwork, 10 hours. Prerequisites: courses 250, 460 (may be taken concurrently), Epidemiology 100, Chemistry 153C, consent of instructor. Students analyze a public health nutrition problem and prepare to conduct and evaluate the public health nutrition practicum. Ms. Hunt

463B. Practicum: Public Health Nutrition. (Formerly numbered Public Health 463B.) Discussion, two hours; laboratory or fieldwork, 10 hours. Prerequisites: courses 400 (may be taken concurrently), 460, 461, 463A, consent of instructor. Students analyze a public health nutrition problem and conduct and evaluate the public health nutrition practicum. Ms. Hunt

464. Diet, Nutrition, and Risk Reduction of Chronic Disease. Lecture, three hours; discussion, one hour. Prerequisites: Epidemiology 100 or 200, Pathology M293, consent of instructor. Role of food nutrients and nonnutrients in reducing risk of several chronic diseases such as cancer, heart disease, high blood pressure, and atherosclerosis. Current recommendations for dietary change to improve health prospects. Role of nutrition in national health priorities.

Behavioral Sciences and Health Education

470. Introduction to Occupational Health Education. (Formerly numbered 294.) Lecture, one hour; discussion; two hours; outside assignment, one hour. Prerequisites: course 270, two sociology or anthropology courses or equivalent, consent of instructor. Health education theory and practice as applied to occupational health and safety. Emphasis on design and evaluation of education programs dealing with health and safety issues for workplace settings.

474. Self-Care and Self-Help in Community Health. (Formerly numbered Public Health 474.) Lecture, two hours; discussion, two hours. Prerequisite: consent of instructor. Review of background, principles, concepts, programs, and research concerning the emerging field of self-care in health. Mr. Katz

480. Health Education in Clinical Settings. (Formerly numbered Public Health 480.) Lecture, two hours; discussion, two hours. Prerequisites: courses 271, 282, Health Services 100, consent of instructor. Analysis of role, methods, and techniques of health education pertaining to hospitals, clinics, and patient education. Observation and discussion of clinical activities in the medical center in relation to the process of health education.

482. Practicum: Health Education (4 or 8 units). (Formerly numbered Public Health 482.) Discussion, two hours; fieldwork, 20 to 40 hours. Prerequisites: courses 270, 271, consent of instructor. Study of community and group-felt needs as reflected in behavior. Analysis of data for understanding, planning, implementing, and evaluating need-directed health education and medical care programs. Ms. Sorini

483. Social Interventions for Health Promotion and Evaluation. (Formerly numbered Public Health 483.) Lecture, two hours; discussion, one hour; seminar, one hour. Prerequisites: courses 270, 271, or equivalent, one social sciences or research methods course, consent of instructor. Selected social intervention strategies for health promotion and health education programs. Emphasis on theories, working assumptions, methodologies, and impacts of selected strategies within contexts of planned change in health-related behaviors. Mr. Kar

487. Community Organization for Health. (Formerly numbered 287.) Lecture, three hours; fieldwork, four to six hours. Prerequisites: course 270, three public health, sociology, or anthropology courses or equivalent. Theory and practice of community organizations, including models and strategies of community organization and their application to health problems and health policy. Particular attention to use of community organization for health promotion and to change public policy. Mr. Brown

Special Studies

490. Professional Writing for Public Health (2 units). (Formerly numbered Public Health 490.) Prerequisite: consent of instructor. Practice in writing reports, grant proposals, abstracts, and article-length research papers. Analyzing rhetorical and stylistic features of essays in various professional journals to help participants improve both their prose style and their editorial abilities. S/U or letter grading.

495. Teacher Preparation in Public Health (2 units). (Formerly numbered Public Health 495.) Prerequisites: 18 units of cognate courses in area of specialization, consent of department chair. May not be applied toward master's degree minimum total course requirement. May be repeated for credit. S/U grading.

501. Cooperative Program (2 to 8 units). (Formerly numbered Public Health 501.) Prerequisite: consent of UCLA graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Used to record enrollment of UCLA students in courses taken under cooperative arrangements with USC. No more than eight units may be applied toward master's degree minimum total course requirement; may not be applied toward minimum graduate course requirement. S/U grading.

502. UCLA/Hawaii Western Consortium Exchange (4 to 16 units). (Formerly numbered Public Health 502.) Prerequisite: consent of UCLA graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Used to record enrollment of UCLA students in courses taken at University of Hawaii, Manoa, as part of UCLA/UH Western Consortium Exchange Program. Only the equivalent of eight quarter units taken at UH may be applied toward degree. Extra units may be applied toward department requirements by petition to Public Health Student Affairs Office. UH letter-graded courses appear on UCLA transcript with letter grades, while UH Cr/NCR-graded courses appear as S/U grades. Grade points from these courses are not counted in UCLA grade-point average.

596. Directed Individual Study or Research (2 to 8 units). (Formerly numbered Public Health 596.) Prerequisites: graduate standing, consent of instructor. Individual guided studies under direct faculty supervision. Only four units may be applied toward M.P.H. and M.S. minimum total course requirement. May be repeated for credit.

597. Preparation for Master's Comprehensive or Doctoral Qualifying Examinations (2 to 8 units). (Formerly numbered Public Health 597.) Prerequisites: graduate standing, consent of instructor. May not be applied toward any degree course requirements. May be repeated for credit. S/U grading.

598. Master's Thesis Research (2 to 8 units). (Formerly numbered Public Health 598.) Prerequisite: consent of instructor. Only four units may be applied toward M.P.H. and M.S. minimum total course requirement; may not be applied toward minimum graduate course requirement. May be repeated for credit. S/U grading.

599. Doctoral Dissertation Research (2 to 8 units). (Formerly numbered Public Health 599.) Prerequisite: consent of instructor. May not be applied toward any degree course requirements. May be repeated for credit. S/U grading.

Environmental Health Sciences

56-070 Center for the Health Sciences, (310) 825-7675

Professors

Climis A. Davos, Ph.D., *Chair*
Curtis D. Eckhart, Ph.D.
John R. Froines, Ph.D.
William C. Hinds, Sc.D.
Robert A. Mah, Ph.D.
Mohammad G. Mustafa, Ph.D.
Irwin H. Suffet, Ph.D.
Arthur M. Winer, Ph.D.

Associate Professors

Richard Ambrose, Ph.D.
Shane Que Hee, Ph.D.
Jane L. Valentine, Ph.D.

Assistant Professor

L. Donald Duke, Ph.D.

Lecturers

Larry Baresi, Dr.P.H.
Frank C. Gomez, Dr.P.H.
Mario Panaqua, B.A.
Walter Wegst, Ph.D.

Visiting Professor

Akula Venkatram, Ph.D.

Adjunct and Visiting Assistant Professors

Douglas M. Mackay, Ph.D., *Visiting*
Edward J. O'Neill, M.D., M.P.H., *Adjunct*
Diane M. Perry, Ph.D., *Adjunct*
Diane L. Saber, Ph.D., *Adjunct*

Scope and Objectives

The Department of Environmental Health Sciences focuses its research and educational activities on the protection of human health from biological, chemical, and physical hazards in the environment. Its graduates are highly trained scientists and professionals capable of identifying and measuring agents of environmental concern; evaluating the health, environmental, and all other impacts of such agents; developing means for their effective management; and evaluating alternative policies directed at improving and protecting environments. Such training is accomplished through several degree programs which offer specialized study in selected academic areas of environmental health sciences such as air pollution, environmental chemistry, environmental management, environmental toxicology, industrial hygiene, and water quality. Graduates of the department pursue careers in the private or public sector as researchers, educators, managers, policymakers, and/or practitioners.

The department offers M.S. and Ph.D. degrees in Environmental Health Sciences and, through the School of Public Health, the M.P.H. and Dr.P.H. degrees with a specialization in environmental health sciences. In addition, a unique doctoral degree (Doctor of Environmental Science and Engineering — D.Env.) is offered by the interdepartmental Environmental Science and Engineering Program which is administered through the department.

Requirements for Graduate Degrees

Admission

Descriptive brochures and applications for the department, as well as for the Environmental Science and Engineering program, may be obtained together with the *Announcement of the UCLA School of Public Health* by writing to the Administrator, Environmental Health Sciences Department, 56-070 CHS, UCLA, Los Angeles, CA 90024-1772.

The preferred deadline for graduate applications is December 15, 1992, for Fall Quarter 1993 admission. *Applications received after the deadline have considerably reduced opportunities for admission, financial aid, and housing.*

Master's Applicants

The department requires the following:

- (1) A bachelor's (or master's) degree in chemistry, physics, biology, engineering, or other ap-

propriate field. Preparation should include at least one year of chemistry (including organic chemistry or biochemistry), physics, biology, and mathematics through calculus.

- (2) A junior/senior grade-point average of at least 3.0.

- (3) A combined (verbal and quantitative) Graduate Record Examination (GRE) score of at least 1,100.

- (4) A score of at least 550 on the Test of English as a Foreign Language (TOEFL) for international students whose native language is other than English.

Doctoral Applicants

The department requires the following:

- (1) A bachelor's degree in chemistry, physics, biology, engineering, or other appropriate field. Preparation should include at least one year of chemistry (including organic chemistry or biochemistry), physics, biology, and mathematics through calculus.

- (2) A junior/senior grade-point average of at least 3.0.

- (3) A master's degree in a related field with a grade-point average of at least 3.5 for graduate studies.

- (4) A combined (verbal and quantitative) Graduate Record Examination (GRE) score of at least 1,200.

- (5) A score of at least 550 on the Test of English as a Foreign Language (TOEFL) for international students whose native language is other than English.

Master of Science Degree

The Master of Science is a research-oriented degree which includes the preparation of a thesis or comprehensive examination and a major written report. Academic areas of concentration include air pollution, environmental chemistry, environmental management, environmental toxicology, industrial hygiene, and water quality.

See Schoolwide Programs at the end of this chapter for information on the M.P.H. degree.

Course Requirements

You must complete at least one year of graduate residence at the University of California and a minimum of 10 full courses, at least five of which must be graduate courses in the 200 or 500 series. However, you must also take additional courses as required by your area of concentration. No more than 18 full courses may be required for the degree. Only one 596 course (four units) and one 598 course (four units) may be applied toward the total course requirement; only four units of either course may be applied toward the minimum graduate course requirement. Environmental Health Sciences 597 may not be applied toward the degree requirements.

Required school core courses include Biostatistics 100A, 100B, and Epidemiology 100. Required department core courses include Environmental Health Sciences 101, 201 (may be repeated for credit), 210, 230, 240, 250, 410, M411, 598 (courses 101 and 210 are not required of industrial hygiene majors). Each core course may be waived if you have taken a similar course elsewhere and can pass the waiver examination.

Only courses in which you receive a grade of C- or better may be applied toward the requirements for a master's degree. You must maintain an average of no less than 3.0 (B) in all courses required or elected during graduate residence at the University of California.

Thesis Plan

If the thesis option is approved, a thesis committee is established. The committee approves the thesis prospectus before you file for advancement to candidacy. The thesis must be acceptable to the thesis committee.

Comprehensive Examination/Report Plan

If the comprehensive examination/report option is selected, you complete a research activity (Environmental Health Sciences 596) of at least eight units and prepare an in-depth written report on it which must be approved by your adviser and one other faculty member approved by the department chair. A written comprehensive examination on your major area of study, prepared by a committee of at least three faculty members, must also be passed. If you fail, you may be reexamined once.

Ph.D. Degree

The Ph.D. is an advanced research degree that emphasizes depth of knowledge and research skills. The dissertation must demonstrate your ability for independent scholarly investigation. Academic areas of concentration include air pollution, environmental chemistry, environmental management, environmental toxicology, industrial hygiene, and water quality.

There is no foreign language requirement for the Ph.D.

See Schoolwide Programs at the end of this chapter for information on the Dr.P.H. degree.

Course Requirements

You must fulfill the minimum requirements of the Graduate Division (see "Requirements for Graduate Degrees" in Chapter 3). Courses in your major field as recommended by your adviser and guidance committee are required, as are courses in a minor field related to environmental health sciences in a department outside the School of Public Health that grants a Ph.D. or in the Department of Biostatistics. This usually consists of three or four full courses, as specified by the department offering the minor.

Qualifying Examinations

Before advancement to candidacy, you must pass a departmental written examination in the major field and an oral qualifying examination. Normally no more than one reexamination is allowed. You must also complete the requirements in the minor field set forth by the offering department. When you are ready to take the University Oral Qualifying Examination, a doctoral committee is nominated.

After passing the University Oral Qualifying Examination, you may be advanced to candidacy and commence work on a dissertation in your principal field of study. The doctoral committee guides your progress toward completion of the dissertation.

Final Oral Examination

A final oral examination is required of all candidates.

Upper Division Courses

100. Introduction to Environmental Health. (Formerly numbered 155.) Lecture, three hours; discussion, one hour. Prerequisites: one course each in chemistry and biology, consent of instructor. Introduction to environmental health, including coverage of sanitary principles and chronic and acute health effects of environmental contaminants.

Mr. Eckhart, Mr. Mustafa

101. Environmental Health. (Formerly numbered 150.) Lecture, three hours; discussion, one hour. Prerequisites: one course each in chemistry and biology, consent of instructor. Broad coverage of environmental health, including airborne and waterborne pollutants; pollutants from urban industrial and agricultural wastes; pollution from pesticide chemicals, mining, and energy production and consumption; chemical food additives; and occupational exposure to chemical and physical hazards.

Mr. Mustafa

199. Special Studies (2 to 4 units). (Formerly numbered Public Health 199.) Prerequisites: senior standing, consent of instructor and department chair (based on written proposal outlining course of study). Individual undergraduate guided studies under direct faculty supervision. Study to be structured by instructor and student at time of initial enrollment. Only four units may be taken each term.

Graduate Courses

201. Seminar: Health Effects of Environmental Contaminants (2 units). (Formerly numbered 255.) Prerequisites: courses 101, 210, 230, 250, consent of instructor. Emphasis on health effects of air, water, environmental pollutants on man and review of research literature. May be repeated for credit.

Mr. Mah

210. Public Health and Environmental Microbiology. (Formerly numbered 153.) Lecture, three hours. Prerequisites: one course each in biology, organic chemistry, and biochemistry, consent of instructor. Basic principles: cycling of matter, fates of natural and man-made compounds in the environment, wastewater and drinking water microorganisms and treatment, and public health microorganisms.

Mr. Mah

211. Science and Politics of Environmental Regulation. (Formerly numbered 259B.) Lecture, three hours. Prerequisite: consent of instructor. Analysis of how science, law, administration, economics, and politics influence state and national environmental regulation from formulation to implementation, including rule making, public participation, federalism, enforcement, and judicial review.

220. Biological Effects of Air Pollution. (Formerly numbered 152.) Lecture, three hours; discussion, one hour. Prerequisites: one course each in chemistry and biology, consent of instructor. Survey of biological effects and assessment methods of air contaminants present in urban, industrial, and occupational environments.

Mr. Mustafa

225. Atmospheric Transport and Transformations of Airborne Chemicals. (Formerly numbered 250B.) Prerequisites: science, engineering, or public health major, one year of calculus, and one course each in physics, organic chemistry, and physical chemistry, or consent of instructor. Role of regional or long-range transport, and atmospheric lifetimes and fates of airborne chemicals in phenomena such as photochemical smog, acid deposition, stratospheric ozone depletion, accumulation of greenhouse gases, and regional and global distribution of volatile toxic compounds.

Mr. Venkatram, Mr. Winer

230. Environmental Management. (Formerly numbered 154.) Lecture, four hours; discussion, one hour. Prerequisites: Economics 100, Political Science 142 or 143, Mathematics 112A, 115A, or equivalent. Introduction to foundations and principles of environmental management, decision making, and evaluation of environmental policies and programs.

Mr. Davos

231. Environmental Decision Systems Analysis. (Formerly numbered 254.) Lecture, four hours; discussion, one hour. Prerequisite: course 230. Techniques and models of systems analysis and concepts of general system theory as applied to comprehensive study, planning, evaluation, and management of environmental decision systems. Experimentation with relevant computer programs.

Mr. Davos

232. Environmental Policy Decision Making. (Formerly numbered 454.) Prerequisites: courses 230, 231, consent of instructor. Foundations, principles, and modeling of environmental policy decision making. Critical analysis of normative and behavioral models of action choices for protection and enhancement of environmental health, and development of an alternative model.

Mr. Davos

240. Environmental Toxicology. (Formerly numbered 253A.) Lecture, four hours; discussion, one hour. Prerequisite: one organic chemistry course. Essentials of toxicology, dose response, physical, chemical, or biological agents that adversely affect man and environmental quality.

Mr. Froines

241. Environmental Toxicology: Trace Contaminants. (Formerly numbered 253B.) Lecture, three hours; discussion, one hour. Prerequisite: one organic chemistry course. Essentials of toxicology in relation to trace contaminants.

Mr. Froines

M249. Toxics Reduction: Science, Engineering, and Policy Issues. (Same as Architecture and Urban Planning M262A and Chemical Engineering M290U.) Lecture, three hours. Prerequisites: Architecture and Urban Planning 260A and 260B, or consent of instructor. Public health experts, industrial engineers, and planners are being asked to assess risks biologically active chemicals present and to take such risks into account in planning process. Examination of potential for toxics reduction and current state of government and industry activities in this area.

Mr. Allen, Mr. Froines, Mr. Gottlieb, Ms. Roque

250. Introduction to Occupational Safety and Health. (Formerly numbered 156.) Prerequisite: consent of instructor. Scientific, legal policy, and historical issues in occupational health. Introduction to various related disciplines (e.g., occupational medicine, nursing, industrial hygiene, toxicology, epidemiology, health education).

Mr. Froines

251. Occupational Disease. (Formerly numbered 256.) Prerequisites: course 250, consent of instructor. Introduction to health effects of occupational exposures, including recognition, evaluation, and prevention of occupational diseases. Emphasis on concept of disease mechanisms, manifestations, and classification relevant to professionals in disciplines related to occupational health.

Mr. Froines, Mr. Harber

252D. Properties and Measurement of Airborne Particles. (Formerly numbered 257E.) Prerequisites: one year each of chemistry, physics, and calculus. Basic theory and application of aerosol science to environmental health, including properties, behavior, sampling, and measurement of aerosols and quantitative problems. Mr. Hinds

252E. Identification and Measurement of Gases and Vapors (2 units). (Formerly numbered 257F.) Prerequisites: one year each of chemistry, physics, and calculus. Theoretical and practical aspects of industrial hygiene sampling of gases and vapors. Mr. Que Hee

252F. Industrial Hygiene Measurements Laboratory (3 units). (Formerly numbered 257G.) Corequisites: courses 252D, 252E. Limited to industrial hygiene majors. Laboratory methods for sampling, measurement, and analysis of gases, vapors, and aerosols found in occupational environment. Mr. Hinds, Mr. Que Hee

253. Physical Agents in the Work Environment (2 units). (Formerly numbered 157H.) Prerequisites: course 250, one year of physics, consent of instructor. Physics, measurement methods, health effects, and control methods for radiation (ionizing and nonionizing), noise, and heat in the workplace environment. Mr. Hinds, Mr. Wegst

254. Health Hazards of Industrial Processes. (Formerly numbered 157G.) Lecture, two hours; four field trips. Prerequisites: courses 250, 255, consent of instructor. Industrial processes and operations and occupational health hazards that arise from them. Mr. Froines, Mr. Hinds, Mr. Que Hee

255. Control of Airborne Contaminants in Industry. (Formerly numbered 257H.) Lecture, two hours; laboratory, two hours. Prerequisites: courses 250, 252D, one year of physics, consent of instructor. Principles and applications of control technology to industrial environments, including general and local exhaust ventilation, air cleaning equipment, and respiratory protection. Mr. Hinds

256. Biological Monitoring in Occupational Health (2 units). (Formerly numbered 257I.) Prerequisites: course 250, Biostatistics 100A, consent of instructor. Principles and application of biological monitoring for assessment of occupational exposure to organic and inorganic chemicals. Mr. Que Hee

257. Critical Review of Scientific Basis of Occupational Standards. (Formerly numbered 259A.) Prerequisites: courses 240, 250, 251, Epidemiology 100, consent of instructor. Designed to provide students with opportunity to review scientific basis for association of selected occupational exposures with disease. Special emphasis on critical evaluations of the literature. Attention specifically to interface of science and regulatory standards.

258. Identification and Analysis of Hazardous Waste (2 units). (Formerly numbered 258C.) Prerequisites: courses 250, 252E, Biostatistics 100A, consent of instructor. Designed to define, identify, label, and quantify hazardous wastes and how workers should be protected. Provides a critical understanding of all analytical aspects of hazardous waste. Mr. Que Hee

261. Chemical Behavior of Aquatic Systems. (Formerly numbered 251.) Lecture, three hours. Prerequisites: course 101, Chemistry 11A, 11B, Mathematics 3A. Chemistry of ocean waters, rivers, groundwaters, and water treatment systems. Topics include thermodynamics of natural waters, acids and bases, carbon dioxide cycle, solubility reactions, oxidation and reduction, plus applied problems. Ms. Valentine

262. Environmental Microbiology. (Formerly numbered 252.) Lecture, three hours. Prerequisites: one course each in microbiology and biochemistry. Basic concepts of eutrophication, indicator organisms, aquatic microbes; assessment of biological treatment practices in water reuse and/or purification. Mr. Mah

263. Geochemistry of Groundwater (2 units). (Formerly numbered 151A.) Prerequisites: Biostatistics 100A, Chemistry 11A, 103, Earth and Space Sciences 1, consent of instructor. Geochemistry of groundwater as impacted by the geologic environment and other natural factors and changes in composition due to water use.

264. Fate and Transport of Organic Chemicals in the Aquatic Environment. (Formerly numbered 213.) Prerequisite: bachelor's degree in science, engineering, geophysics, chemistry, biology, or public health. Evaluation of how and where and in what form and concentration organic pollutants are distributed in aquatic environments. Study of mass transport mechanisms moving organic chemicals between phases, biological degradation and accumulation, and chemical reactions. Effect of humic substances on these processes. Mr. Suflet

400. Field Studies in Environmental Health Sciences (2 or 4 units). (Formerly numbered Public Health 400.) Prerequisite: consent of instructor. Field observation and studies in selected community environmental health organizations. Students must file field placement and program training documentation on form available from Student Affairs Office. May not be applied toward M.S. minimum course requirement; four units may be applied toward 44-unit minimum total required for M.P.H. degree.

401. Environmental Measurements. (Formerly numbered 450.) Lecture, two hours; laboratory, four hours. Prerequisites: course 101, Chemistry 11A, 11CL, consent of instructor. Instrumental methods for laboratory and field applications to assess quantity of environmental pollutants in air, food, and water, and to assess degree of exposure to such factors as noise and radiation. Ms. Valentine

410. Instrumental Methods in Environmental Health Sciences. (Formerly numbered 458.) Lecture, two hours; laboratory, six hours. Prerequisites: one year each of physics, chemistry, and biology. Laboratory techniques and instrumentation used in preparation and analysis of biological, environmental, and occupational samples. Mr. Panaqua, Mr. Que Hee, Mr. Suflet

M411. Environmental Health Sciences Seminar (2 units). (Same as Environmental Science and Engineering M411.) Prerequisite: consent of instructor. Required of graduate students in environmental health sciences for one term each year. Current topics in environmental health sciences and environmental science and engineering. May be repeated for credit. S/U grading.

461. Water Quality and Health. (Formerly numbered 451.) Lecture, three hours; discussion, one hour. Prerequisites: courses 101, 401, consent of instructor. Introduction to water quality, with coverage of hydrology, water chemistry, and various chemical contaminants that may affect human health. Various treatment methods and health implications. Ms. Valentine

462. Environmental Hygiene and Appropriate Technologies (2 units). (Formerly numbered 452.) Prerequisite: consent of instructor. Environmental sanitation of water supplies in rural and developing areas. Review of water quality problems and solutions for nonurban, developing community. Technical, socioeconomic, and cultural problems associated with maintenance and delivery of high water quality.

470. Environmental Hygiene Practices (2 units). (Formerly numbered 457.) Prerequisites: courses 101, 230, 401, Epidemiology 100, consent of instructor. Field principles and practices of environmental sanitation as applicable to the sanitarian. Topics include theory, code enforcement, and inspection procedures for applicable environmental topic areas. Mr. Gomez

495. Teacher Preparation in Environmental Health Sciences (2 units). (Formerly numbered Public Health 495.) Prerequisites: 18 units of cognate courses in area of specialization, consent of department chair. May not be applied toward master's degree minimum total course requirement. May be repeated for credit. S/U grading.

501. Cooperative Program (2 to 8 units). (Formerly numbered Public Health 501.) Prerequisite: consent of UCLA graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Used to record enrollment of UCLA students in courses taken under cooperative arrangements with USC. No more than eight units may be applied toward master's degree minimum total course requirement; may not be applied toward minimum graduate course requirement. S/U grading.

502. UCLA/Hawaii Western Consortium Exchange (4 to 16 units). (Formerly numbered Public Health 502.) Prerequisite: consent of UCLA graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Used to record enrollment of UCLA students in courses taken at University of Hawaii, Manoa, as part of UCLA/UH Western Consortium Exchange Program. Only the equivalent of eight quarter units taken at UH may be applied toward degree. Extra units may be applied toward department requirements by petition to Public Health Student Affairs Office. UH letter-graded courses appear on UCLA transcript with letter grades, while UH Cr/N/Cr-graded courses appear as S/U grades. Grade points from these courses are not counted in UCLA grade-point average.

596. Directed Individual Study or Research (2 to 8 units). (Formerly numbered Public Health 596.) Prerequisites: graduate standing, consent of instructor. Individual guided studies under direct faculty supervision. Only four units may be applied toward M.P.H. and M.S. minimum total course requirement. May be repeated for credit.

597. Preparation for Master's Comprehensive or Doctoral Qualifying Examinations (2 to 8 units). (Formerly numbered Public Health 597.) Prerequisites: graduate standing, consent of instructor. May not be applied toward any degree course requirements. May be repeated for credit. S/U grading.

598. Master's Thesis Research (2 to 8 units). (Formerly numbered Public Health 598.) Prerequisite: consent of instructor. Only four units may be applied toward M.P.H. and M.S. minimum total course requirement; may not be applied toward minimum graduate course requirement. May be repeated for credit. S/U grading.

599. Doctoral Dissertation Research (2 to 8 units). (Formerly numbered Public Health 599.) Prerequisite: consent of instructor. May not be applied toward any degree course requirements. May be repeated for credit. S/U grading.

Field Program Supervisor

Robert G. Lindberg, Ph.D. (*Environmental Health Sciences*)

Scope and Objectives

Enlightened management of the environment is necessary to maintain a suitable quality of life. Such management requires scientists trained in a multiplicity of environmental disciplines. These interdisciplinary, interactive skills are developed through the UCLA graduate Environmental Science and Engineering Program, leading to the Doctor of Environmental Science and Engineering (D.Env.) degree.

The goal of the program is to prepare professional environmental analysts to deal with the complexities of various courses of action on the environment and resources, to develop recommendations for sound environmental policies, and to devise means to implement policies adopted.

The present focus of the program, that of interdisciplinary training in the environmental sciences and its application, is a successful one. Graduates have been employed in technical assessment and management positions with governmental agencies, consulting firms, and industrial firms concerned with environment-related projects.

No undergraduate major is offered; however, studies can be arranged along several routes.

Students with majors in the natural sciences, geography/environmental studies, public health, or engineering who have environmental or energy problem solving as a professional goal may wish to supplement their course preparation in consultation with the program faculty.

Although participating faculty members are mainly from the College of Letters and Science and the School of Engineering and Applied Science, the program is administered through the School of Public Health.

Doctor of Environmental Science and Engineering

Admission

In addition to meeting University minimum standards, you must have an excellent scholastic record (3.0 GPA in undergraduate work and 3.5 in graduate work) and must be acceptable to the interdepartmental committee. Your overall academic record, including a minimum combined Graduate Record Examination (GRE) score of 1,200, must reflect exceptional verbal and quantitative skills. Three letters of recommendation are required. You must hold a master's degree in engineering, public health, or one of the natural sciences to be formally admitted to the program.

Students with graduate training in fields of science and engineering who have not earned a master's degree may be considered for admission. In these cases you must show evidence of graduate training equivalent to the master's degree, including some research experience. Students with a bachelor's degree may be informally affiliated with the program while earning a master's degree in one of the participating departments.

All students must have taken the following preparation courses: (1) one year of introductory biology with laboratory; (2) one year of general chemistry with laboratory, including analytical methods, and one term of organic chemistry; (3) one course or equivalent experience in elementary programming and use of computer hardware and software; (4) one course in introductory geology with laboratory; (5) one year of calculus and one course in elementary statistics; (6) one year of introductory physics with laboratory. Any of the courses may be taken after you arrive at UCLA.

As English language skills are essential to completion of the curriculum, applicants for whom English is a second language are required to score successfully on the Test of English as a Foreign Language (TOEFL). If you are accepted into the program with identified language deficiencies, you must remove the deficiencies before being advanced to candidacy.

Subject to available funds, the program offers fellowships or graduate student researcher appointments to eligible first-year students. Prospective students may write for descriptive brochures to the Environmental Science and En-

gineering Program, School of Public Health, 46-081 CHS, UCLA, Los Angeles, CA 90024-1772.

Major Fields or Subdisciplines

Specialties within the program include, but are not limited to, the assessment and management of hazardous substances in the air, soil, and water environments, migration of contaminants in groundwater, health risks of toxic substances, and environmental problems common to the U.S. and Latin American countries. Research projects are conducted on a wide range of air and water pollution problems with biological and health impacts. Also, you may slant your work toward greater emphasis either on the science engineering aspect or on the science policy aspect of your specialty.

Course Requirements

Course requirements consist of core courses, breadth courses, the environmental science and engineering seminar, and problems courses.

Core and Breadth Courses — Sixteen courses are required (one of which may be waived based on prior coursework), including four core courses offered by the program faculty. At least seven courses must be at the graduate level. Courses are selected from the following categories, with electives chosen in consultation with your faculty adviser.

Environmental Science — Seven courses, including Environmental Health Sciences 225 (core), 240, 264 (core), aquatic environmental biology (core), and electives in environmental biology, microbiology, or ecology, in environmental geology, and in atmospheric sciences.

Environmental Engineering — Five courses, including engineering hydrology, water quality control systems, and three electives.

Environmental Management, Law, and Policy — Four courses, including environmental and health risk assessment (core), environmental law and policy, and two electives.

Seminar — You are required to enroll in Environmental Science and Engineering M411 twice per year.

Problems Courses — Problems courses constitute intensive multidisciplinary team research projects directed toward the solution of current environmental problems. Before proceeding to the problems course sequence, you must have completed a minimum of three core courses and seven breadth courses and have the approval of the program faculty. Twenty-four quarter units of the Environmental Science and Engineering 400 series (problems course sequence) are required and may be met by completing three consecutive terms (eight units per term) on a single theme, or as a minimum, at least two consecutive terms devoted to a single theme plus one term of participation or activity approved by the faculty. Enrollment in more than one problems course per term is not allowed. Normally problems course credit is earned only through courses

offered by the program. However, you may petition the faculty for permission to earn problems course credit through multidisciplinary environmental projects offered in other departments at UCLA.

Qualifying Examinations

The written qualifying examination is normally taken during your second year in residence, after completing the core courses and most of the breadth courses. If all or parts of the examination are failed, one and only one repeat is allowed — at the next offering. The written examination covers the material in the core courses, the breadth courses, and selected topics in classical and contemporary subjects in the program's areas of interest.

When you have completed all other course requirements and are in the final term of the problems courses, a doctoral committee is established. The committee conducts the University Oral Qualifying Examination, which explores the depth, breadth, and extent of your preparation, with appropriate emphasis on practical problems and situations. After successful completion of the oral examination and the problems course requirements, you are advanced to candidacy.

In case of failure, you may repeat the oral examination once after completing any additional coursework or individual study the doctoral committee may recommend.

Internship

Once you have been advanced to candidacy, an 18- to 24-month internship in your field of interest is arranged at an outside institution. Arrangements for the internship are primarily your responsibility and must be approved by the doctoral committee, the interdepartmental committee, and the dean of the Graduate Division. Supervision during the field training experience is by your doctoral committee and the field program supervisor. During the internship, you must register for eight units of a 599 course in each academic-year term.

Dissertation/Final Oral Examination

A dissertation is required and should be a scholarly treatment of the problem area in which you have worked, but not a description of the totality of the experience. It should show evidence of critical thought and originality. No later than nine months after advancement to candidacy and the beginning of the internship, you are required to present a written prospectus, including an outline, of the dissertation and defend it before your doctoral committee. After completing the internship, you must return to UCLA to present an open seminar.

A final oral examination may be required at the option of your doctoral committee, focusing primarily on your internship experience and a defense of your dissertation. If the dissertation and your performance on the final oral examination are judged satisfactory, you are award-

ed the degree of Doctor of Environmental Science and Engineering (D.Env.).

Graduate Courses

400A. Environmental Science and Engineering Problems Course (8 units). Prerequisite: consent of instructor and program chair. Primarily intended for students enrolled in environmental science and engineering doctoral program. Multidisciplinary technical and socioeconomic analysis and prognosis of significant current environmental problems. In Progress grading (credit to be given only on completion of course 400C).

400B. Environmental Science and Engineering Problems Course (8 units). Prerequisites: successful completion of course 400A, consent of instructor and program chair. Multidisciplinary technical and socioeconomic analysis and prognosis of significant current environmental problems. In Progress grading (credit to be given only on completion of course 400C).

400C. Environmental Science and Engineering Problems Course (8 units). Prerequisites: successful completion of course 400B, consent of instructor and program chair. Multidisciplinary technical and socioeconomic analysis and prognosis of significant current environmental problems.

400D. Environmental Science and Engineering Problems Course (8 units). Prerequisite: successful completion of course 400C and of internship approved by Environmental Science and Engineering Interdepartmental Committee. Multidisciplinary technical and socioeconomic analysis and prognosis of significant current environmental problems.

410. Environmental Science and Engineering Workshop (2 units). Prerequisite: consent of instructor. Primarily intended for students enrolled in environmental science and engineering doctoral program. Development of analytical or experimental skills essential to solution of environmental problems studied within courses 400A through 400D.

M411. Environmental Health Sciences Seminar (2 units). (Formerly numbered 411.) (Same as Environmental Health Sciences M411.) Prerequisite: consent of instructor. Required of graduate students in environmental health sciences for one term each year. Current topics in environmental health sciences and environmental science and engineering. May be repeated for credit. S/U grading.

501. Cooperative Program (2 to 8 units). Prerequisite: consent of UCLA graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Used to record enrollment of UCLA students in courses taken under cooperative arrangements with USC. S/U grading.

596. Directed Individual or Tutorial Studies (2 to 8 units). Prerequisite: consent of instructor and program chair. Supervised investigation of advanced environmental problems. S/U grading.

Adjunct Assistant Professors

James J. Korelitz, Ph.D.
Roberta M. Malmgren, Dr.P.H.
Marc A. Strassburg, Dr.P.H.

Scope and Objectives

Epidemiology has been defined as the study of the distribution and determinants of disease and injury in human populations. Epidemiologists study variations of disease in relation to such factors as age, sex, race, occupational and social characteristics, place of residence, susceptibility, exposure to specific agents, or other pertinent characteristics. Also of concern are the temporal distribution of disease, examination of trends, cyclical patterns, and intervals between exposure to causative factors and onset of disease. The scope of the field extends from study of the patterns of disease to the causes of disease and to the control or prevention of disease. What distinguishes epidemiology from other clinical sciences is the focus on health problems in population groups rather than in individuals.

Epidemiology is a young field with constantly expanding boundaries. The range of activities that may be at least partly epidemiologic includes determination of the health needs of populations, investigation and control of disease outbreaks, study of environmental and industrial hazards, evaluation of preventive or curative programs or treatments, and evaluation of the effectiveness and efficiency of intervention or control strategies. Many tools of epidemiology are borrowed from other fields such as microbiology, immunology, medicine, statistics, demography, and medical geography.

There is a growing core of purely epidemiologic methodology which includes not only statistical methodology and principles of study design, but a unique way of thinking that is be-

yond the rote memorization of rules. The contribution of epidemiology to any study involving groups of people is being increasingly recognized and demanded.

Epidemiologists may work in many settings, including international health agencies, state and local health departments, federal government agencies and health programs, health maintenance organizations, colleges and universities, and numerous research projects privately and publicly sponsored.

The objectives of the Department of Epidemiology fall into three broad categories — research, teaching, and community service. Degrees offered include the M.S. and Ph.D. in Epidemiology and, through the School of Public Health, the M.P.H. and Dr.P.H. with a specialization in epidemiology.

Requirements for Graduate Degrees

Admission

Application forms, the *Announcement of the UCLA School of Public Health*, and the *Epidemiology Handbook* may be obtained by writing to the Office of Student Affairs, School of Public Health, 16-071 CHS, UCLA, Los Angeles, CA 90024-1772. Both the School of Public Health Application for Admission to Graduate Status and the *UCLA Application for Graduate Admission* must be completed. Three letters of recommendation are required, two from former professors and one from an employer (if no employer, three former professors) before an application is considered complete. It is your responsibility to ensure that the application file is complete.

The preferred deadline for graduate applications is December 15, 1992, for Fall Quarter 1993 admission. *Applications received after the deadline have considerably reduced opportunities for admission, financial aid, and housing.*

Applicants must meet the University minimum requirement of an acceptable bachelor's degree with a B (3.0) average in upper division coursework and/or prior graduate study. Exceptionally qualified applicants may be considered on an individual basis. No screening examination is required for admission. If your undergraduate coursework has been deficient in breadth of fundamental training, you must take specified undergraduate courses after admission. Prior field experience is not required as a condition of admission, although a background of public health experience may be considered in your evaluation. In addition, you must be accepted by the Department of Epidemiology.

Applicants must also perform satisfactorily on a recent (within the last five years) Graduate Record Examination (GRE) General Test. Medical College Admission Test (MCAT) or Dental Admission Test (DAT) scores are accepted *only* for applicants *already holding* M.D. or D.D.S. degrees. Applicants at the master's level require a minimum GRE combined (verbal and quantita-

tive) score of 1,100. Applicants at the doctoral level need a minimum GRE combined (verbal and quantitative) score of 1,200. The analytical section is not required.

Refer to the *UCLA Application for Graduate Admission* for the Test of English as a Foreign Language (TOEFL) requirement for international applicants.

Master's Applicants

Your prior program of study should include adequate preparation in mathematics, physical sciences, biological sciences, and social sciences, and typically includes two courses each in mathematics, biological sciences, social sciences; one course in physical sciences; and others that constitute an adequate preparation for the proposed area of specialization.

If your prior work in the biological, physical, mathematical, and social sciences does not constitute adequate preparation for your proposed area of specialization, you must include courses in those sciences in your graduate program; these may not be applied toward the minimum requirements for the degree.

Master of Science Degree

The Master of Science is a research-oriented degree within the general field of epidemiology. It includes the preparation of a thesis or comprehensive examination/major written report. Teaching experience is not required.

See Schoolwide Programs at the end of this chapter for information on the M.P.H. degree.

Course Requirements

You must complete at least one year of graduate residence at the University of California and a minimum of 56 units (38 units of core courses and 18 units of electives), at least 20 units of which must be in the 200 or 500 series. A maximum of one course from Epidemiology 290 or 291 and one 596 course (four units) may be applied toward the total course requirement. If you intend to write a thesis, four units of course 598 may also be applied toward the 18-unit elective requirement.

Required core courses include Epidemiology 200, 201A-201B, 220, 290 or 291, Biostatistics 100A or 110A, 100B or 110B; one additional statistics course (four units) in regression or multivariate methods to be approved by the department; and Biostatistics 403 or Epidemiology 410A-410B or equivalent. Equivalent courses must be approved by the department. Each core course may be waived if you have taken a similar course elsewhere and can pass the waiver examination. A waiver course does not reduce the unit requirements. Elective courses include all those offered by the department with the exception of those stated above.

All courses included for advancement to candidacy, except Epidemiology 290 or 291, must be taken for a letter grade (not on an S/U grading basis). You must maintain an average of no

less than 3.0 (B) in all courses required or elected during graduate residence at the University of California. In addition, you must maintain an average of no less than 3.0 (B) in courses 200, 201A-201B, and 220.

A thesis or comprehensive examination must be completed before graduation.

Thesis Plan

If the thesis option is approved, a thesis committee of three faculty members is appointed by the dean of the Graduate Division on recommendation of the department. The committee approves the thesis prospectus before you file for advancement to candidacy. The thesis must be acceptable to the thesis committee.

Comprehensive Examination Plan

If the comprehensive examination option is selected, a guidance committee of three departmental faculty members is appointed. A comprehensive examination on your major area of study must be passed. If you fail, you may be reexamined once.

Master of Science in Preventive Medicine and Public Health

The program is not admitting new students at this time.

Ph.D. Degree

The Ph.D. is an advanced research degree that emphasizes depth of knowledge and research skills. The dissertation must demonstrate your ability for independent scholarly investigation.

There is no foreign language requirement for the Ph.D.; teaching experience is recommended but not required.

See Schoolwide Programs at the end of this chapter for information on the Dr.P.H. degree.

Admission

In addition to the University minimum requirements, the department requires (1) satisfactory performance on the Graduate Record Examination (GRE), (2) at least a 3.0 junior/senior undergraduate grade-point average and at least a 3.5 GPA in graduate studies, and (3) approval by the department admissions committee, an academic adviser, and the department chair.

Course Requirements

You must fulfill the course requirements for the M.S. degree in Epidemiology with an average of no less than 3.3 (B+) in Epidemiology 200, 201A-201B, and 220. Equivalent courses taken at other institutions may be used to fulfill these requirements subject to approval by the department. Continuation in the doctoral program is contingent on satisfying the 3.3 (B+) grade-point requirement. You must also take courses 202A, 202B or one additional statis-

tics course beyond the M.S. requirements, at least three terms of course 292, and one pathobiology course (four units). The statistics and pathobiology courses must be approved by the department. In addition, you must take at least 12 units of graduate-level courses (excluding 500-level courses) outside the department, which must be selected with the approval of your academic adviser. If you have prior postbaccalaureate coursework, you may petition for substitution of part or all of the 12-unit requirement. Recommendation for the degree is based on your attainments rather than on the completion of specific courses.

Qualifying Examinations

Before advancement to candidacy, you must pass the departmental written doctoral examination and the University Oral Qualifying Examination. Normally no more than one reexamination is allowed for the written examination. A doctoral committee is nominated and, if approved, administers the University Oral Qualifying Examination. After completing the course requirements and passing both the written and oral examinations, you may be advanced to candidacy and complete work on a dissertation in your principal field of study.

Final Oral Examination

A final public defense of your dissertation is required.

Upper Division Courses

100. Principles of Epidemiology. (Formerly numbered 112.) Lecture, two hours; discussion, four hours. Prerequisite: one full biological sciences course. Not open for credit to students with credit for course 200. Introduction to epidemiology, including factors governing health and disease in populations. Ms. Coulson, Mr. Kraus

199. Special Studies (2 to 4 units). (Formerly numbered Public Health 199.) Prerequisites: senior standing, consent of instructor and department chair (based on written proposal outlining course of study). Individual undergraduate guided studies under direct faculty supervision. Study to be structured by instructor and student at time of initial enrollment. Only four units may be taken each term.

Graduate Courses

200. Epidemiology I. (Formerly numbered 114.) Lecture, two hours; laboratory, four hours. Prerequisites: Biostatistics 100A (may be taken concurrently), one full biological sciences course, consent of instructor. Not open for credit to students with credit for course 100. Introduction to epidemiology, including factors governing health and disease in populations. Mr. Frerichs, Ms. Visscher

201A-201B. Epidemiologic Methods I and II (6 units each). (Formerly numbered 211A-211B.) Lecture, four hours; discussion, two hours; other, 12 hours. Prerequisites: Biostatistics 100A, 100B, at least two upper division biology or social sciences courses, consent of instructor. Recommended but not required: course 100 or 200 or equivalent. Comprehensive coverage of concepts, principles, and methods in epidemiology, with emphasis on study design, statistical analysis, and causal inference. Theoretical and quantitative emphasis, focusing on investigation of disease etiology and other causal relationships in public health. Mr. Morgenstern

202A-202B. Epidemiology: Theory and Methodology. (Formerly numbered 211C-211D.) Prerequisites for course 202A: course 201B; for course 202B: course 202A, consent of instructor. Advanced principles and methods of epidemiologic analysis. Topics include relating prevalence and incidence, analysis of clustering and seasonality; measures of effect, sources of bias, regression to the mean, estimation and hypothesis testing in epidemiology; models for risk and rates; cohort analysis. S/U or letter grading. Mr. Greenland

203. Topics in Theoretical Epidemiology (2 units). (Formerly numbered 223.) Prerequisite: consent of instructor. Selected topics from current research areas in epidemiologic theory and quantitative methods. Topics selected from biologic models, epidemiologic models, problems in inference, model specification problems, design issues, analysis issues, and confounding. May be repeated for credit with consent of instructor. S/U grading. Mr. Greenland

204. Advanced Applied Epidemiology. Prerequisites: courses 201A-201B. Students submit written reviews of published research articles in applied epidemiology to be discussed in seminar format. Issues include study design, analysis, and causal inferences. New studies to be proposed and critiqued. S/U or letter grading. Mr. Haile

210. Public Health Research Using Available Data (2 units). (Formerly numbered 227.) Lecture, one hour; discussion, one hour. Prerequisites: courses 100, 410A or Biostatistics 403 or equivalent, Biostatistics 100A, consent of instructor. Presentations and discussions of availability, concepts, content, and usefulness of already collected data in public health research. Major emphasis on public data such as National Center for Health Statistics surveys, vital statistics, census, etc. Ms. Coulson

M214. Immunology of AIDS (2 units). (Formerly numbered Public Health M214.) (Same as Biology M293B, Microbiology M262B, and Microbiology and Immunology M262B.) Lecture, one hour; discussion, one hour. Prerequisites: Microbiology and Immunology 202A, 202B, 202C, 202D, M258B, M258C, or equivalent, consent of instructor. Lecture and student discussion of assigned publications. Topics include specific anti-HIV immune responses, activation of immune system by HIV, and basic mechanisms that underlie HIV-induced immunodeficiency. S/U or letter grading.

220. Principles of Infectious Disease Epidemiology. (Formerly numbered 210.) Lecture, three hours. Prerequisites: course 100 or 200 or equivalent, consent of instructor. Ascertainment of infection, transmission, and epidemiological parameters rather than clinical and pathological aspects. Specific diseases discussed in depth to illustrate epidemiologic principles. Mr. Ash

223A. Protozoal Diseases of Man. (Formerly numbered 218A.) Prerequisite: consent of instructor. May be taken concurrently with course 223B. Comprehensive overview of systematics, morphology, biology, host/parasite relationships, public health problems, and control of protozoa parasitic in man and animals. Mr. Ash (odd years)

223B. Protozoal Diseases of Man (2 units). (Formerly numbered 218B.) Laboratory, four hours. Prerequisite or corequisite: course 223A. Laboratory methods of diagnosis and microscopic recognition of protozoa parasitic in man and animals. Intestinal protozoa and organisms occurring in blood and tissues of their hosts and pathology associated with these infections. Mr. Ash (odd years)

224A. Helminthic Diseases of Man. (Formerly numbered 220A.) Prerequisite: consent of instructor. May be taken concurrently with course 224B. Comprehensive overview of systematics, morphology, biology, host/parasite relationships, public health problems, and control of nematodes, trematodes, and cestodes parasitic in man and animals. Mr. Ash (even years)

224B. Helminthic Diseases of Man (2 units). (Formerly numbered 220B.) Laboratory, four hours. Prerequisite: consent of instructor. Diagnosis and practical microscopic recognition of nematodes, trematodes, and cestodes parasitic in man and animals. Pathology produced by these infections. Mr. Ash (even years)

227. AIDS: A Major Public Health Challenge. (Formerly numbered 212D.) Prerequisites: course 100 or 200 or equivalent, Biostatistics 100A or 110A, consent of instructor. Presentation of epidemiologic, biologic, psychological, and clinical characteristics of AIDS and HIV-1 infection. Discussion of policy implications and intervention strategies. S/U or letter grading. Mr. Detels

M228. Biology of HIV (2 units). (Same as Microbiology and Immunology M275.) Prerequisites: course 100 and Biostatistics 100A or equivalent, two biology courses, consent of instructor. Overview of virologic and immunologic aspects of HIV disease for epidemiology or other health disciplines. Brief discussion of clinical manifestations and biosafety in the laboratory. S/U or letter grading. Ms. Giorgi

230. Epidemiology of Sexually Transmitted Diseases. (Formerly numbered 212L.) Prerequisites: course 100 or 200, consent of instructor. Sexually transmitted diseases; medical/biological aspects, epidemiology and control in developed and developing countries. S/U or letter grading. Ms. Visscher

240. Cardiovascular Epidemiology. (Formerly numbered 212E.) Lecture, two hours; discussion, two hours. Prerequisite: consent of instructor. Topics include definition, pathogenesis, descriptive epidemiology, magnitude of risk factors, strategies for prevention, lipoprotein metabolism, epidemiology of diabetes, hypertension, and chronic lung disease. Mr. Longnecker

241. Epidemiology of Neurologic Disease (2 units). (Formerly numbered 212G.) Prerequisites: course 100 or 200, consent of instructor. Epidemiologic characteristics of selected chronic neurologic diseases, with particular emphasis on etiology and possible control. Ms. Visscher

242. Epidemiology of Cancer. (Formerly numbered 215A.) Prerequisites: course 100 or 200, consent of instructor. Etiological concepts and mechanisms. Pathogenesis, diagnosis, and classification of neoplastic diseases. Epidemiologic principles and methods as applied to cancer. Classical studies in cancer epidemiology. Models of causal association. Mr. Haile

243. Epidemiology of Cancer (2 units). (Formerly numbered 215B.) Lecture, one hour; discussion, one hour. Prerequisites: course 242, consent of instructor. Current issues in cancer epidemiology, including etiologic research, screening programs, prevention. Mr. Haile

244. Research Methods in Cancer Epidemiology (2 units). (Formerly numbered 225.) Prerequisites: course 100, Biostatistics 100A, consent of instructor. Biologic, quantitative, philosophical, and administrative considerations in epidemiologic cancer research. Hypothesis specification and choice of study design. Uses of descriptive epidemiology, cohort studies, case control studies. Clustering, screening, and cancer control. Means of identifying subjects and controls. Design of instruments. Sources of bias and confounding. Mr. Mack

245. Cancer Epidemiology in Developing Countries. (Formerly numbered 212M.) Lecture, two hours; discussion, two hours. Prerequisites: course 100 or 200, Biostatistics 100A, consent of instructor. Regional distribution and pattern of cancer in the developing world. Descriptive and analytical parts of course pave way to concepts of cancer prevention and control and how it can be achieved in countries with limited resources and a multitude of competing health problems. Mr. Ibrahim

246. Epidemiology of Aging (2 units). Prerequisites: course 100 or 200 or equivalent, consent of instructor. Epidemiologic methods of estimating present and future burdens of aging: morbidity, disability, and dependency. Epidemiology of major disabling conditions affecting the elderly. Evaluation of possible intervention strategies. Methodologic issues in geriatric epidemiology. S/U or letter grading. Ms. Malmgren

251. Epidemiology of Nonintentional Injuries. (Formerly numbered 212L.) Lecture, three hours; discussion, two hours. Prerequisites: course 100 or 200, Biostatistics 100A, consent of instructor. Pertinent epidemiology methods for study of nonintentional trauma, including that from motor vehicle crashes, occupational exposures, falls, and other major external causes, which focus on research approaches, data sources, analytical techniques. Substantive findings on related subproblem areas presented for critical review. Mr. Kraus

252. Epidemiology of Assault, Homicide, and Suicide (2 units). (Formerly numbered 212K.) Lecture, two hours; discussion, one hour. Prerequisites: course 100 or 200, consent of instructor. Presentation and evaluation of epidemiologic research approaches to study of violent injury, including description of incidence, study design, risk factor analysis, and control evaluation. Mr. Kraus

253. Acute Traumatic and Chronic Repetitive Injuries from Work-Related Exposures (2 units). Lecture, two hours; discussion, one hour. Prerequisites: course 100 or equivalent, Biostatistics 100A, consent of instructor. Lectures and discussions on magnitude, scope, research approaches, and intervention strategies for work-related acute traumatic and chronic repetitive (musculoskeletal) injuries. Emphasis on injury research methods for all external causes of injury, utilizing epidemiology for high-risk group and risk-factor identification and injury prevention. S/U or letter grading. Mr. Kraus

260. Environmental Epidemiology. (Formerly numbered 213.) Lecture, two hours; discussion, one hour; independent study, three hours. Prerequisites: course 100 or 200, consent of instructor. Methodological problems and approaches of epidemiology for assessing health impact of major types of environmental exposure. Mr. Spivey

261. Occupational Epidemiology. (Formerly numbered 212J.) Lecture, two hours; discussion, two hours. Prerequisites: course 100 or 200 or equivalent, consent of instructor. Methodological considerations, approaches, and limitations in epidemiological studies of occupational groups and environments. Mr. Kraus

263. Genetic Epidemiology (2 units). (Formerly numbered 226.) Prerequisites: course 100 or 200, consent of instructor. Proper design, analysis, interpretation, and application of analytical methods used by genetic epidemiologists, including studies of familial prevalence, twins, migrants, genetic marker-disease associations, and more complex analyses of genetic models. Mr. Haile

M266. Nutritional Epidemiology. (Formerly numbered M262.) (Same as Community Health Sciences M266.) Lecture, two hours; discussion, one hour; laboratory, one hour. Prerequisites: courses 201A-201B, Biostatistics 100D or 110C, one prior nutrition course, consent of instructor. Designed to prepare students for conduct of research relating diet to health. Topics include methods of diet assessment, error in measurement of diet, methods of adjusting for energy intake in epidemiologic analysis, and analysis of epidemiologic data relating diet to disease. Mr. Longnecker

270. Epidemiology and Health Policy (2 units). (Formerly numbered 217.) Prerequisites: courses 100 or 201A-201B, Biostatistics 100B or 110B, Health Services 100, consent of instructor. Application of epidemiologic methods and findings in health services research, population health planning, and health policy to provide framework for integrating causal inference with decision making. Emphasis on conceptual and methodologic issues confronting researchers, clinicians, planners, administrators, and legislators. Mr. Morgenstern

M276. Structure and Function of Nutrients Implicated in Etiology of Chronic Disease. (Same as Community Health Sciences M267.) Lecture, two hours; discussion, one hour; laboratory, one hour. Prerequisite: one prior organic chemistry course. Basic nutrition course for public health and science majors. Mr. Longnecker

280. Parasitic Diseases and Global Health. (Formerly numbered 212F.) Prerequisite: consent of instructor. Overview of major human parasitic diseases in terms of their biology, occurrence, distribution, and transmission in nature; diseases they cause and impact they have on health of populations; interaction with other disease states; and interventional strategies for their control. Mr. Ash

281. Epidemiology for Developing Countries. (Formerly numbered 415.) Prerequisites: courses 100 and/or 200, Biostatistics 100A, consent of instructor. Uses of epidemiology for assessing the burden of illness in the community, establishing program priorities, and developing disease intervention or prevention strategies. Mr. Frerichs

282. Rapid Epidemiologic Surveys in Developing Countries. (Formerly numbered 418.) Prerequisites: courses 100 and/or 200, Biostatistics 100A, 100B, consent of instructor. Microcomputer-assisted planning and organizing of epidemiologic surveys in developing countries, including teaching of methods for two-stage cluster sampling, training interviewers, and use of microcomputers to develop questionnaires, select sample population, process and analyze data, and prepare final report. Mr. Frerichs

290. Seminar: Epidemiology — Infectious and Tropical Disease (2 units). (Formerly numbered 222.) Prerequisite: consent of instructor. Review of research on specific diseases of public health importance. May be repeated for credit. S/U grading.

291. Seminar: Epidemiology — Methodology (2 units). (Formerly numbered 221.) Prerequisites: course 100 or 200, consent of instructor. Review of current epidemiologic research contained in recent medical literature. May be repeated for credit. S/U or letter grading.

292. Advanced Seminar: Epidemiology (2 units). (Formerly numbered 229.) Prerequisites: course 201B, consent of instructor. Current research in epidemiology. May be repeated for credit. S/U grading.

293. International HIV/AIDS Seminar (2 units). Prerequisite: consent of instructor. Ongoing discussion of worldwide pandemic of HIV/AIDS, with emphasis on problems of surveillance, reporting, and intervention. Discussion of recent literature. Presentations by fellows from other countries. S/U grading. Mr. Detels

400. Field Studies in Epidemiology (2 or 4 units). (Formerly numbered Public Health 400.) Prerequisite: consent of instructor. Field observation and studies in selected community organizations for health promotion or medical care. Students must file field placement and program training documentation on form available from Student Affairs Office. May not be applied toward M.S. minimum course requirement; four units may be applied toward 44-unit minimum total required for M.P.H. degree.

410A. Management of Epidemiologic Data (2 units). (Formerly numbered Public Health 410A.) Prerequisites: course 100, Biostatistics 100A (one course may be taken concurrently with consent of instructor). Concepts, collection, and management of data, with particular emphasis on data bases in chronic infectious diseases. Introduction to personal computers and appropriate software for epidemiologic studies. Ms. Coulson

410B. Management of Epidemiologic Data (2 units). (Formerly numbered Public Health 410B.) Prerequisites: course 410A or equivalent, consent of instructor. Data management for various epidemiologic study designs, confidentiality concerns; data management systems; introduction to mainframe computer. Ms. Coulson

411. Research Resources in Epidemiology (2 units). (Formerly numbered Public Health 411.) Lecture, one hour; discussion, one hour. Prerequisites: course 100 or 200, Biostatistics 100A, consent of instructor. Instruction and practical experience in use of varied bibliographic aids and sources of information, building of reference files, and presentation of research findings for publication. Ms. Coulson, Ms. Deeney

414. Practical Epidemiologic Investigations (2 to 4 units). (Formerly numbered Public Health 414.) Lecture, one to two hours; laboratory, one to two hours. Prerequisites: course 100 or 200 or equivalent, consent of instructor. Practical approaches to epidemic investigations presented through problem sets based on actual outbreaks. Data collection, analysis, and written presentation of findings. Mr. Strassburg and the Staff

M417. Injury Prevention Strategies and Countermeasures (2 units). (Formerly numbered Public Health 417.) (Same as Community Health Sciences M417 and Health Services M417.) Prerequisites: course 100 or equivalent, consent of instructor. Lectures with discussion on injury prevention strategies and countermeasures, including critical review of effectiveness in the public health context. Emphasis on major public health injury problems from assaultive, self-inflicted, or unintentional causes. S/U or letter grading. Mr. Kraus

495. Teacher Preparation in Epidemiology (2 units). (Formerly numbered Public Health 495.) Prerequisites: 18 units of cognate courses in area of specialization, consent of department chair. May not be applied toward master's degree minimum total course requirement. May be repeated for credit. S/U grading.

501. Cooperative Program (2 to 8 units). (Formerly numbered Public Health 501.) Prerequisite: consent of UCLA graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Used to record enrollment of UCLA students in courses taken under cooperative arrangements with USC. No more than eight units may be applied toward master's degree minimum total course requirement; may not be applied toward minimum graduate course requirement. S/U grading.

502. UCLA/Hawaii Western Consortium Exchange (4 to 16 units). (Formerly numbered Public Health 502.) Prerequisite: consent of UCLA graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Used to record enrollment of UCLA students in courses taken at University of Hawaii, Manoa, as part of UCLA/UH Western Consortium Exchange Program. Only the equivalent of eight quarter units taken at UH may be applied toward degree. Extra units may be applied toward department requirements by petition to Public Health Student Affairs Office. UH letter-graded courses appear on UCLA transcript with letter grades, while UH Cr/NCR-graded courses appear as S/U grades. Grade points from these courses are not counted in UCLA grade-point average.

596. Directed Individual Study or Research (2 to 8 units). (Formerly numbered Public Health 596.) Prerequisites: graduate standing, consent of instructor. Individual guided studies under direct faculty supervision. Only four units may be applied toward M.P.H. and M.S. minimum total course requirement. May be repeated for credit.

597. Preparation for Master's Comprehensive or Doctoral Qualifying Examinations (2 to 8 units). (Formerly numbered Public Health 597.) Prerequisites: graduate standing, consent of instructor. May not be applied toward any degree course requirements. May be repeated for credit. S/U grading.

598. Master's Thesis Research (2 to 8 units). (Formerly numbered Public Health 598.) Prerequisite: consent of instructor. Only four units may be applied toward M.P.H. and M.S. minimum total course requirement; may not be applied toward minimum graduate course requirement. May be repeated for credit. S/U grading.

599. Doctoral Dissertation Research (2 to 8 units). (Formerly numbered Public Health 599.) Prerequisite: consent of instructor. May not be applied toward any degree course requirements. May be repeated for credit. S/U grading.

Health Services

31-269 Center for the Health Sciences, (310) 825-2594

Professors

Ronald M. Andersen, Ph.D. (*Fred W. and Pamela K. Wasserman Professor of Health Services*),
Associate Chair
Robert H. Brook, M.D., Sc.D.
E. Richard Brown, Ph.D.
Jonathan E. Fielding, M.D., M.P.H.
Patricia A. Ganz, M.D.
Charles E. Lewis, M.D., Sc.D.
Marvin Marcus, D.D.S.
Stuart O. Schweitzer, Ph.D., *Chair*
Paul R. Torrens, M.D., M.P.H.
Lester Breslow, M.D., M.P.H., *Emeritus*
Carl E. Hopkins, Ph.D., M.P.H., *Emeritus*
Milton I. Roemer, M.D., M.P.H., *Emeritus*
Max H. Schoen, D.D.S., Dr.P.H., *Emeritus*
William Shonick, Ph.D., *Emeritus*

Associate Professors

Emily K. Abel, Ph.D.
Glenn A. Melnick, Ph.D.
Thomas H. Rice, Ph.D.
Robert O. Valdez, Ph.D.

Assistant Professors

Roshan Bastani, Ph.D., *in Residence*
Gerald F. Kominski, Ph.D.

Lecturers

Michael Bobrow, A.I.A.
Geraldine Dallek, M.P.H.
William Gurtner, M.H.A.
Joe Hafey, M.P.A.
Arleen Liebowitz, Ph.D.
Joyce Mann, Ph.D.

Adjunct and Visiting Professors

Ellen Alkon, M.D., M.P.H., *Adjunct*
William Comanor, Ph.D., *Visiting*
Molly J. Coye, M.D., M.P.H., *Visiting*
Caswell A. Evans, Jr., D.D.S., M.P.H., *Adjunct*
Arlene Fink, Ph.D., *Adjunct*
Jacqueline B. Kosecoff, Ph.D., *Adjunct*
Eric J. McLaughlin, Ph.D., *Visiting*
Ruth J. Roemer, J.D., *Adjunct, Researcher*

Adjunct and Visiting Associate Professors

Raymond D. Goodman, M.D., M.P.H., *Adjunct*
Shoshanna Sofaer, Dr.P.H., *Visiting*

Adjunct Assistant Professors

Fred De Jong, Ph.D.
John Lammers, Ph.D.

Assistant Field Program Supervisor

Diana W. Hilberman, M.S.P.H.

Scope and Objectives

What distinguishes health services as a field of study is a shared societal perspective, rather

than a shared academic discipline. Faculty members come from such diverse fields as economics, management, law, statistics, operations research, planning, medicine, history, sociology, and political science. They are unified by the commitment to apply disciplinary training to the solution of problems in the delivery, financing, and evaluation of health services, focusing on a population or organization rather than an individual. Health services research and training programs aim to help us make better use of our health resources in meeting the health promotion, disease prevention, medical treatment, and rehabilitation needs of the community.

The Department of Health Services offers both practice-oriented and research-oriented graduate programs. The primary professional degree, the M.P.H., includes specializations in various aspects of health administration, including management, planning, policy, and health services organization. For broader, more advanced professional training in health administration, a Dr.P.H. program is available. Graduates of the professional degree programs work in organizations involved in the delivery, financing, and evaluation of health services, both in the private and public sectors.

For those interested in careers in research and teaching, the department offers M.S. and Ph.D. degrees in Health Services. These programs maintain close ties with related activities in the Schools of Dentistry and Medicine, including the Robert Wood Johnson Clinical Scholars Program, the Program in Prevention, and the Cancer Control Division. The RAND/UCLA Center for Health Policy Study and the RAND/UCLA Center for Health Care Financing Research afford opportunities for joint activities with the RAND Health Sciences Program. Graduates of the academic degree programs pursue careers in universities, as well as in public and private agencies involved in health services research and health policy analysis.

Requirements for Graduate Degrees

Admission

Application forms may be obtained by writing to the Office of Student Affairs, School of Public Health, 16-071 CHS, UCLA, Los Angeles, CA 90024-1772, or to the Department of Health Services, 31-269 CHS, UCLA, Los Angeles, CA 90024-1772. Both the School of Public Health Application for Admission to Graduate Status and the UCLA *Application for Graduate Admission* must be completed. Three letters of recommendation are required, two from former professors and one from an employer (if no employer, three former professors) before an application is considered complete. It is your responsibility to ensure that the application file is complete.

The preferred deadline for graduate applications is December 15, 1992, for Fall Quarter 1993 ad-

mission. *Applications received after the deadline have considerably reduced opportunities for admission, financial aid, and housing.*

Applicants must meet the University minimum requirement of an acceptable bachelor's degree with a B (3.0) average in upper division coursework and/or prior graduate study. Exceptionally qualified applicants may be considered on an individual basis. No screening examination is required for admission. If your undergraduate coursework has been deficient in breadth of fundamental training, you may be required to take specified undergraduate courses after admission. Prior field experience is not required as a condition of admission, although a background of public health experience may be considered in your evaluation. In addition, you must be accepted by and accommodated in the Department of Health Services.

Applicants must also perform satisfactorily on a recent (within the last five years) Graduate Record Examination (GRE). The Medical College Admission Test (MCAT), Dental Admission Test (DAT), or Graduate Management Admission Test (GMAT) may be accepted in lieu of the GRE under certain circumstances. GMAT scores are accepted only for applicants to the joint M.B.A./M.P.H. program. Applicants at the master's level require a minimum GRE combined (verbal and quantitative) score of 1,100. Applicants at the doctoral level need a minimum GRE combined (verbal and quantitative) score of 1,200. The analytical section is not required.

Refer to the UCLA *Application for Graduate Admission* for the Test of English as a Foreign Language (TOEFL) requirement for international applicants.

Master's Applicants

Your prior program of study should include adequate preparation in mathematics, physical sciences, biological sciences, and social sciences, and typically includes two courses each in mathematics, biological sciences, social sciences; one course in physical sciences; and others that constitute an adequate preparation for the proposed area of specialization.

If your prior work in the biological, physical, mathematical, and social sciences does not constitute adequate preparation for your proposed area of specialization, you must include courses in those sciences in your graduate program; these may not be applied toward the minimum requirements for the degree.

Master of Science Degree

The Master of Science is a research-oriented degree within the general field of health services. It includes the preparation of a thesis or comprehensive examination/major written report. Teaching experience is not required.

See Schoolwide Programs at the end of this chapter for information on the M.P.H. degree.

Course Requirements

You must complete at least one year of graduate residence at the University of California and 17 full courses, at least five of which must be graduate courses in the 200 or 500 series. Only one 596 course (four units) and one 598 course (four units) may be applied toward the total course requirement; only four units of either course may be applied toward the minimum graduate course requirement (10 courses). Health Services 597 may not be applied toward the degree requirements.

Required school core courses include Biostatistics 100A, 100B, and Epidemiology 100. Each core course may be waived if you have taken a similar course elsewhere and can pass the waiver examination.

Required department core courses include Health Services 200A-200B-200C, 237A-237B, 237C. You are strongly encouraged to take Biostatistics 200A, 200B, and Epidemiology 201A-201B. Elective courses should be selected from the 200 or 500 series in consultation with your adviser.

Only courses in which you receive a grade of C- or better may be applied toward the requirements for a master's degree. You must maintain an average of no less than 3.0 (B) in all courses required or elected during graduate residence at the University of California.

Thesis Plan

If the thesis option is approved, a thesis committee is established. The committee approves the thesis prospectus before you file for advancement to candidacy. The thesis must be acceptable to the thesis committee.

Comprehensive Examination/Report Plan

If the comprehensive examination/report option is approved, a guidance committee of three faculty members is appointed. A written comprehensive examination on your major area of study must be passed. If you fail, you may be reexamined once.

The preparation of a major written research report is required; it must be approved by the guidance committee which also must certify successful completion of all degree requirements.

Master of Science in Preventive Medicine and Public Health

The program is not admitting new students at this time.

Ph.D. Degree

The Ph.D. is an advanced research degree that emphasizes depth of knowledge and research skills. The dissertation must demonstrate your ability for independent scholarly investigation.

There is no foreign language requirement for the Ph.D.; teaching experience is recommended but not required.

See Schoolwide Programs at the end of this chapter for information on the Dr.P.H. degree.

Admission

In addition to the University minimum requirements, the department requires (1) satisfactory performance on the Graduate Record Examination (GRE), (2) completion of the M.S. in Health Services or an appropriately related field (students with an M.P.H. need to satisfy the course requirements of the M.S. in Health Services before or after admission), (3) at least a 3.0 junior/senior undergraduate grade-point average, at least a 3.5 GPA in graduate studies or demonstrated superiority in graduate work, and at least a B in each of the mandatory core courses, (4) a positive recommendation by the department to the School of Public Health, (5) approval by the doctoral admissions committee and the department chair. Screening examinations may be required.

Course Requirements

In addition to the requirements for the M.S. in Health Services, you must take Health Services 249H, Biostatistics 200A, 200B, and Epidemiology 201A-201B. A cognate with at least three courses (12 units) from a department that grants a Ph.D. degree is also required. Cognate courses must be at the graduate level and should be core theory and research courses for the discipline selected. Acceptable cognate areas include economics, epidemiology, history, political science, psychology, and sociology.

Qualifying Examinations

Before advancement to candidacy, you must pass a written examination in the major field, complete the requirements in a minor field, and pass an oral qualifying examination on the major and minor fields. Normally no more than one reexamination is allowed. When you are ready to take the University Oral Qualifying Examination, a doctoral committee is nominated.

After passing the University Oral Qualifying Examination, you may be advanced to candidacy and commence work on a dissertation in your principal field of study. The doctoral committee guides your progress toward completion of the dissertation.

Final Oral Examination

A final oral examination is required of all candidates.

Upper Division Courses

100. Health Services Organization. (Formerly numbered 130.) Lecture, four hours; discussion, one hour. Prerequisite: four units of social sciences. Structure and function of American health care system; issues and forces shaping its future.

131. Structure and Function of Health Care Facilities. (Formerly numbered Public Health 131.) Lecture, two hours; discussion, two hours. Prerequisites or corequisites: course 100, consent of instructor. Introduction to structure, organization, and function of health care facilities.

132. Financial and Managerial Accounting for Health Services Organizations. (Formerly numbered 141.) Prerequisites: course 100 or equivalent, consent of instructor. Introduction to financial and managerial accounting and its application to the health services industry.

133. Introduction to Health Economics. (Formerly numbered 148.) Prerequisite: consent of instructor. Presentation of tools of economic analysis. Topics include introductory concepts of microeconomics, theory of demand for health insurance and health care, substitution of health personnel, hospital cost functions, and costs and benefits of health programs. Mr. Salehi

134. Introduction to Comprehensive Health Planning. (Formerly numbered Public Health 134.) Lecture, four hours; fieldwork, four hours. Prerequisite: one upper division microeconomics, statistics, calculus, or political science course. Concepts underlying health planning, state of the art, and some relevant literature. Mr. Melnick

136. Introduction to Health Services Research. (Formerly numbered 136A.) Prerequisites: Biostatistics 100A or equivalent, consent of instructor. Review of the field of health services research. Uses of quantitative methods and applications of conceptual/theoretical constructs (as well as methodologies) from social and behavioral sciences and epidemiology to studies of workings of health services. Mr. Lewis

199. Special Studies (2 to 4 units). (Formerly numbered Public Health 199.) Prerequisites: senior standing, consent of instructor and department chair (based on written proposal outlining course of study). Individual undergraduate guided studies under direct faculty supervision. Study to be structured by instructor and student at time of initial enrollment. Only four units may be taken each term.

Graduate Courses

200A-200B-200C. Health Systems Organization and Financing. (Formerly numbered 230A-230B.) Lecture, four hours; discussion, two hours. In-depth analysis of health services systems in the U.S., using relevant theories, concepts, and models. **200A-200B.** Prerequisite: health services major. **200C.** Prerequisites: courses 200A-200B, and health services major or consent of instructor.

Mr. Andersen, Mr. Torrens

M204A-M204B-M204C. Seminars: Pharmaceutical Economics and Policy. (Formerly numbered M204.) (Same as Economics M204L-M204M-M204N.) Seminar, three hours every other week for three terms. Prerequisites: Economics 201A-201B-201C or equivalent, graduate standing in public health or economics, consent of instructor. Various topics in economics of pharmaceutical industry, including rates of innovation, drug regulation, and economic impact of pharmaceuticals. In Progress grading. Mr. Comanor, Mr. Intriligator, Mr. Schweitzer

231. History of Public Health. (Formerly numbered 435.) Discussion, three hours. Prerequisite: doctoral standing or consent of instructor. Emphasis on topics which illuminate current issues in public health policy. Discussion of historical perspectives on health care providers, health care institutions, health care reform movements, public health activities, childbirth, and AIDS. Ms. Abel

232. Governmental Health Services and Trends. (Formerly numbered Public Health 232.) Prerequisites: course 100, two additional upper division social or behavioral sciences courses, consent of instructor. Systematic analysis of interface between organized programs of personal health services and governmental agencies at all jurisdictional levels. Study of changing relationships between traditional public health and newer medical care and quality control functions. Mr. Shonick

233. Health Policy Analysis. (Formerly numbered Public Health 233.) Lecture, two hours; discussion, two hours. Prerequisites: course 100 or equivalent, three social sciences courses, consent of instructor. Conceptual and procedural tools for analysis of health policy, emphasizing role of analysis during various phases of the life cycle of public policy.

Mr. Valdez

234. Health Services Organization and Management Theory. (Formerly numbered 430.) Prerequisites: courses 100 or equivalent, 131, two upper division social sciences courses or equivalent, consent of instructor. Application of contemporary organization and management theory to systems that provide personal health care services. Environmental characteristics, missions/goals, structure and processes of health services organizations.

235. Law, Social Change, and Health Service Policy. (Formerly numbered Public Health 235.) Prerequisites: course 100, two upper division political science or sociology courses or equivalent, consent of instructor. Legal issues affecting policy formulation for environmental, preventive, and curative health service programs.

Ms. Roemer

236. Microeconomic Theory of the Health Sector. (Formerly numbered 238.) Lecture, four hours; discussion, two hours. Prerequisites or corequisites: Biostatistics 100A or equivalent and intermediate microeconomics. Microeconomic aspects of the health care system, including health manpower substitution, choice of efficient modes of treatment, market efficiency, and competition.

Mr. Kominski

237A-237B. Special Topics in Health Services Research Methodology. (Formerly numbered Public Health 237A-237B.) Lecture, one hour; discussion, three hours. Prerequisites: course 100, Biostatistics 100A, 100B, 100C, or equivalent, consent of instructor. In-depth consideration of problems in application of statistical and other quantitative methods in health services research. Critique of adequacy of study designs, appropriateness of analyses, and degree to which conclusions are supported by data. S/U grading.

Mr. Valdez

237C. Issues in Health Services Methodologies. Prerequisites: courses 237A-237B, doctoral student standing. Intended to assist students in understanding the research process and its application in study of health services in the U.S. Introduction to issues related to reporting, disseminating, and documenting research findings. S/U grading.

Mr. Valdez

238. Politics of Health Care. (Formerly numbered 138.) Prerequisite: course 100 or equivalent. Concepts and procedures for political analysis; national, state, and local politics in health care; examination of selected case studies.

Mr. Valdez and the Staff

239. Aging and Long-Term Care. (Formerly numbered Public Health 239.) Prerequisites: courses 100, 238, Community Health Sciences 270, or equivalent, consent of instructor. Long-term care of the chronically ill elderly examined from perspective of political and sociodemographic trends, including populations at risk, policy options, and alternative forms of care such as nursing homes, home care, and care by informal support systems.

Ms. Abel

240. Health Care Issues in International Perspective. (Formerly numbered Public Health 240.) Prerequisites: two health administration courses, two upper division social sciences courses, or equivalent, consent of instructor. Analysis of crucial issues in health care; manpower policy, economic support, health facilities, patterns of health service delivery, regulation, planning, and other aspects of health care systems probed in settings of European welfare states, developing nations, and socialist countries.

Mr. Roemer

M241. Women, Health, and Aging: Policy Issues (2 or 4 units). (Formerly numbered Public Health M241.) (Same as Social Welfare M290D.) Lecture, three hours; discussion, one hour. Prerequisites: two upper division social sciences courses, two upper division biological sciences courses, or equivalent, consent of instructor. Social and economic context of older women's aging, major physical and psychological changes older women experience, delivery of health services to this population, and policies that respond to their health needs.

Ms. Abel

244. Seminar: Health Services and Policy Evaluation. (Formerly numbered Public Health 244.) Prerequisites: Biostatistics 100A, 100B, basic courses in program evaluation and health services organization, or equivalent, doctoral standing, consent of instructor. Seminar applying alternative evaluation research theories and methods to health service organizations and systems. Topics include linking evaluation criteria to policy decisions, theories, and previous research; political and organizational context of evaluation; utilization of findings; and meta-evaluation. S/U or letter grading.

245. Society's Response to Aging. (Formerly numbered Public Health 245.) Prerequisites: two health services courses, two upper division social sciences courses, or equivalent, consent of instructor. Examination of central issues of health care delivery to the elderly in the U.S. Topics include demographic trends, economic characteristics, health status, demand for care, health care financing, long-term care, and continuum of care for the aged.

246. Seminar: Special Populations — Health Service Policy Issues. (Formerly numbered 448.) Prerequisites: courses 200A-200B-200C, 232, 238, or equivalent, consent of instructor. Limited to doctoral students or M.S. and M.P.H. students with advanced degrees. Doctoral-level seminar which focuses on health services for selected priority population groups, integrating scientific, organizational, economic, ethical, and political evidence as a basis for public policy. Different populations may be selected for attention each year.

Mr. Brown

247. Research Topics in Health Economics. (Formerly numbered Public Health 247.) Prerequisites: courses 100, 236, 446 or equivalent, consent of instructor. Seminar in economic analysis of current health services issues. Critical examination of studies pertaining to health manpower, health care costs and controls, diffusion of technology, and cost-benefit analysis of health programs.

Mr. Schweitzer

248. Small Area Planning for Resources for Personal Health Service. (Formerly numbered Public Health 248.) Lecture, three hours; laboratory, two hours. Prerequisites: courses 100, 134, or equivalent, consent of instructor. General planning theory and health planning theory, methods, and experience with planning for personal health care resources for small geographic areas. Determining needs and estimating required utilization levels and health care resources. Survey of elements of different disciplines used in areawide health planning. Laboratory projects and exercises designed to implement studies of health planning theory and methods.

249A-249Z. Special Topics in Health Services (2 to 4 units each). (Formerly numbered Public Health 249A-249Z.) Prerequisites: consent of instructor, additional prerequisites for each offering as announced in advance by department. Advanced seminars covering current issues and special topics in health policy, health financing, and organization and administration of health services. Sections offered on regular basis, with topics announced in preceding term. May be repeated for credit with topic change:

249D. Principles of Organization Leadership: Applications in Public Health and Welfare. Lecture, three hours; discussion, three hours. Prerequisite: M.P.H. or M.S. degree or equivalent or consent of instructor. Examination of principles and models of organization leadership, including presentation by current leaders in the fields of health and welfare. Theories and empirical investigations of leadership qualities.

Mr. Andersen, Mr. Lammers

249E. Health Policy Seminar. (Formerly numbered Public Health 249E.) Prerequisites: courses 200A-200B-200C (may be taken concurrently), 236, Biostatistics 100A, 100B, or equivalent, consent of instructor. Limited to doctoral students and M.S. or M.P.H. students with advanced degrees. Public policy concerning payment for medical care services and characteristics of the market for those services: demand for care, fee-for-service and prepaid payment systems, regulation of price and capital investment, private sector efforts to control health care costs.

249F. Quality Assessment and Assurance. (Formerly numbered Public Health 249F.) Prerequisites: course 100, Biostatistics 100A, Epidemiology 100, one additional health services or epidemiology course, or equivalent, consent of instructor. Fundamental issues in quality assessment, quality assurance, and measurement of health status.

Mr. Brook

249G. Medical Technology — Development, Diffusion, Assessment, and Health Services. (Formerly numbered Public Health 249G.) Prerequisites: courses 200A-200B-200C, 238, or equivalent, one upper division policy analysis course. Doctoral-level seminar focusing on public policies that pertain to advancement of medical science and development of new technologies and promotion and regulation of their use.

Mr. Kominski

249H. Current Research Issues. Discussion, two hours. Prerequisite: doctoral student standing. Review of articles in health services journals nominated as the best published during 1990. Analysis of articles to determine contribution to theory, methods, and/or implications for management or policy in health services organizations or health services as a field. S/U or letter grading.

Mr. Andersen, Mr. Rice

249I. Research Methodology. Lecture, one hour; discussion, three hours. Prerequisites: courses 237A-237B, doctoral student standing. Theory-driven model building and specification, operationalization, data definition and documentation, data screening and transformation techniques, use of indexes and scales, and data reduction methods. Some hands-on measurement and analysis work. Research project with term-paper analysis required. Course builds on concepts and research methods learned in courses 237A-237B, 237C.

Mr. De Jong

400. Field Studies in Health Services (2 or 4 units). (Formerly numbered Public Health 400.) Prerequisite: consent of instructor. Field observation and studies in selected community organizations for health promotion or medical care. Students must file field placement and program training documentation on form available from Student Affairs Office. May not be applied toward M.S. minimum course requirement; four units may be applied toward 44-unit minimum total required for M.P.H. degree.

M417. Injury Prevention Strategies and Countermeasures (2 units). (Formerly numbered Public Health 417.) (Same as Community Health Sciences M417 and Epidemiology M417.) Prerequisites: Epidemiology 100 or equivalent, consent of instructor. Lectures with discussion on injury prevention strategies and countermeasures, including critical review of effectiveness in the public health context. Emphasis on major public health injury problems from assaultive, self-inflicted, or unintentional causes. S/U or letter grading.

Mr. Kraus

422A-422B. Practices of Evaluation in Health Services: Theory and Methodology (2 units each). (Formerly numbered 136B-136C.) Lecture, four hours; discussion, one hour. Prerequisites: course 136 or equivalent, consent of instructor. Introduction to health services evaluation. Examination and performance of specific evaluation procedures. Conducting of health services investigations, reporting results and methodologies. In Progress grading.

Ms. Bastani

431. Managerial Processes in Health Service Organizations. (Formerly numbered Public Health 431.) Lecture, one hour; laboratory, three hours. Prerequisites: course 234, consent of instructor. Managerial skills and behaviors applied to components of organizations at several levels: individual, interpersonal, group, intergroup, system, and interorganization. Unique features of health service organizations are stressed as applications are presented.

Mr. Lammers

432. Integrative Seminar: Health Services Management. (Formerly numbered Public Health 432.) Prerequisite: course 431. Residents and preceptors are responsible for presenting cases of actual administrative problems for solution by teams of students and faculty.

433. Health Service Organization Policy and Strategy. (Formerly numbered Public Health 433.) Lecture, three hours; discussion, one hour. Prerequisites: courses 131, 234, 400 (at least six units), or equivalent, consent of instructor. Conceptual, analytical, and technical aspects of policy and strategy formulation in health service organizations. Special attention to structure and dynamics of competitive markets, corporate-level strategic planning and marketing, managerial ethics and values, organizational creativity/innovation.

Mr. Gurtner

434. Employer/Employee Health Management. (Formerly numbered Public Health 434.) Lecture, two hours; discussion, two hours. Prerequisites: course 100, a combination of three graduate courses in health planning, hospital finance, health policy, health insurance, occupational health, health services research, and health information systems, or equivalent, consent of instructor. Preview and analysis of how employer and employee groups provide, sponsor, and manage health-related services for others.

Mr. Fielding

435. Management Science for Health Planning and Administration. (Formerly numbered 132.) Lecture, three hours; laboratory, two hours. Prerequisites: Biostatistics 100A and either Biostatistics 403 or Management 404, or equivalent, consent of instructor. Introduction to use of quantitative analyses to support managerial and operational decisions in health services organizations. Topics include mathematical models for structuring decisions, resource allocation, inventory control, task sequencing, scheduling, and forecasting. Use of microcomputers.

436. Financial Management of Health Service Organizations. (Formerly numbered Public Health 436.) Prerequisites: courses 131, 132, 234, or equivalent, consent of instructor. Application of financial management and accounting principles to health care facilities, including unique financial characteristics of health care facilities, third-party reimbursement, cost finding and rate setting, operational and capital budgeting, auditing, and risk management.

Mr. Kominski

437. Legal Environment of Health Services Management (2 units). (Formerly numbered Public Health 437.) Prerequisites: course 131 or equivalent, consent of instructor. General survey of legal aspects of health services management, including governance, agency, informed consent, medical malpractice, contracts, negligence, and case law relating to health facility operations.

438. Issues and Problems of Local Health Administration (2 units). (Formerly numbered Public Health 438.) Prerequisites: course 100, Epidemiology 100, one additional health services course, or equivalent, consent of instructor. Analysis of organizational issues currently faced by local health departments in increasing scope and quality of services; exploration of administrative problems and inter-agency relationships.

Ms. Alkon

439. Dental Care Administration (2 units). (Formerly numbered Public Health 439.) Prerequisites or corequisites: Biostatistics 100A, Epidemiology 100, or equivalent, consent of instructor. In-depth examination of several specific dental care policy issues: manpower, relationship of treatment to disease, national health program strategies, and evaluation mechanisms.

Mr. Marcus

440A. Health Information Systems: Organization and Management. (Formerly numbered Public Health 440A.) Lecture, two hours; laboratory, three hours. Prerequisites: courses 200A-200B-200C or equivalent, consent of instructor. Principles of and systems related to organization and management of a health facility's health information system.

440B. Health Information Systems: Organization and Management. (Formerly numbered Public Health 440B.) Lecture, two hours; laboratory, three hours. Prerequisites: course 440A or equivalent, consent of instructor. Health and administrative research using clinical records. Principles of planning for routine and special studies. Individual investigation in methods of obtaining and processing data to meet needs of programs in institution and agency. Introduction to principles of medical auditing; analysis of medical and health services.

441. Ambulatory Care in the U.S. (Formerly numbered Public Health 441.) Seminar, three hours. Prerequisites: courses 132, 200A-200B-200C, and Management 403, or equivalent, or consent of instructor. Introduction to organization and management concepts, problems, and issues in ambulatory health services, including financial management and information systems requirements.

Mr. Valdez

442. Managed Health Care: Quality and Cost. (Formerly numbered Public Health 442.) Lecture, three hours. Prerequisite: consent of instructor. Overview of issues related to growth, management, and planning of managed health care systems. Review of role of HMOs and PPOs, as well as discussion of managed care as a solution.

Mr. Lammers

443A. Preventive Medicine in Public Health Practice. (Formerly numbered 413.) Lecture, two hours; discussion, two hours. Prerequisites: courses 100 or 200A-200B-200C, Biostatistics 100A, Epidemiology 100, graduate standing, consent of instructor. Development, current status, and potential of preventive medicine in public health practice, focusing on risk indicator approach (exercise, alcohol, stress, etc.), with consideration of program settings, delivery problems, and issues.

Mr. Fielding

443D. Advanced Hospital Financial Management Simulation. (Formerly numbered Public Health 443D.) Lecture, one hour; discussion, one hour; laboratory, two hours. Prerequisites: courses 100, 132, 436, consent of instructor. Practical aspects of hospital management decisions in a changing environment examined through computer simulation, with particular attention to economic projections, demand patterns, investment programs, and health care regulations.

443E. Advanced Hospital Financial Management Seminar. (Formerly numbered Public Health 443E.) Prerequisites: courses 100, 131, 132, 436, or equivalent, consent of instructor. Hospital financial management, including reimbursement management, capital financing, and capital investment analysis, discussed and analyzed with respect to students' individual residency sites.

444. Applied Methodology in Health Planning. (Formerly numbered Public Health 444.) Lecture, three hours; fieldwork, four hours. Prerequisites: courses 200A-200B-200C, or equivalent, consent of instructor. Demonstration of methodology of health planning by involving students in formulation of actual health plan for existing agency in Los Angeles area.

Mr. Melnick

445. Strategic Planning and Marketing in Health Care. (Formerly numbered 242.) Lecture, three hours; discussion, one hour. Prerequisites: courses 200A-200B-200C, Biostatistics 100A, 100B, or equivalent, consent of instructor. Survey course covering theory and applications of strategic planning and marketing concepts as they apply to health care organizations. Lectures and discussion of case studies for which students must prepare in advance, fieldwork, and micro-computer exercises.

Mr. Melnick

446. Financing Health Care. (Formerly numbered Public Health 446.) Prerequisites: course 100, Economics 1, 2, or equivalent, consent of instructor. Patterns of health care financing by consumers, providers, third-party intermediaries; trends in health service use; expenditures, national health insurance, and international comparisons of health financing.

Mr. Schweitzer

447. State Health Policy Issues. (Formerly numbered Public Health 447.) Seminar, three hours. Prerequisite: course 238. Focus on health policy development and implementation at state government level, with emphasis on financing, direct provision, and regulation of health care services, facilities, equipment technology, and manpower. Exploration of inter-governmental relationships.

447D. Management of Health Maintenance Organizations. (Formerly numbered Public Health 447D.) Lecture, three hours. Prerequisites: courses 100, 134, or equivalent, consent of instructor. Alternative approaches to fee-for-service for paying, providing, or arranging for delivery of health care services, and relating these approaches to national health policy.

447E. Health Insurance Principles and Programs. (Formerly numbered Public Health 447E.) Prerequisites: courses 100, 232, one additional health services course, or equivalent, consent of instructor. Examination of social, actuarial, and commercial assumptions underlying private health insurance. Comparison with government-sponsored health insurance. Analysis of diversity of voluntary medical care insurance plans under different sponsorships and with varied scopes of coverage and benefits and their implications for public and private medical care developments.

Mr. Shonick

M448. Health Policy Issues for Dental Professionals (2 units). (Formerly numbered M449.) (Same as Dentistry M422.) Prerequisites: course 100 or equivalent, Biostatistics 100A or equivalent, Epidemiology 100, consent of instructor. Current public health policy issues in dental health, including cost, financing, role of government, and quality assurance. S/U grading.

M448D. Case Studies in Dental Practice (2 units). (Formerly numbered M449D.) (Same as Dentistry M433A.) Provides students with practice methodology for evaluation of dental care settings. Didactic and field experience, providing foundation for evaluation of programs. S/U grading.

Mr. Marcus

495. Teacher Preparation in Health Services (2 units). (Formerly numbered Public Health 495.) Prerequisites: 18 units of cognate courses in area of specialization, consent of department chair. May not be applied toward master's degree minimum total course requirement. May be repeated for credit. S/U grading.

501. Cooperative Program (2 to 8 units). (Formerly numbered Public Health 501.) Prerequisite: consent of UCLA graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Used to record enrollment of UCLA students in courses taken under cooperative arrangements with USC. No more than eight units may be applied toward master's degree minimum total course requirement; may not be applied toward minimum graduate course requirement. S/U grading.

502. UCLA/Hawaii Western Consortium Exchange (4 to 16 units). (Formerly numbered Public Health 502.) Prerequisite: consent of UCLA graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Used to record enrollment of UCLA students in courses taken at University of Hawaii, Manoa, as part of UCLA/UH Western Consortium Exchange Program. Only the equivalent of eight quarter units taken at UH may be applied toward degree. Extra units may be applied toward department requirements by petition to Public Health Student Affairs Office. UH letter-graded courses appear on UCLA transcript with letter grades, while UH Cr/Ncr-graded courses appear as S/U grades. Grade points from these courses are not counted in UCLA grade-point average.

596. Directed Individual Study or Research (2 to 8 units). (Formerly numbered Public Health 596.) Prerequisites: graduate standing, consent of instructor. Individual guided studies under direct faculty supervision. Only four units may be applied toward M.P.H. and M.S. minimum total course requirement. May be repeated for credit.

597. Preparation for Master's Comprehensive or Doctoral Qualifying Examinations (2 to 8 units). (Formerly numbered Public Health 597.) Prerequisites: graduate standing, consent of instructor. May not be applied toward any degree course requirements. May be repeated for credit. S/U grading.

598. Master's Thesis Research (2 to 8 units). (Formerly numbered Public Health 598.) Prerequisite: consent of instructor. Only four units may be applied toward M.P.H. and M.S. minimum total course requirement; may not be applied toward minimum graduate course requirement. May be repeated for credit. S/U grading.

599. Doctoral Dissertation Research (2 to 8 units). (Formerly numbered Public Health 599.) Prerequisite: consent of instructor. May not be applied toward any degree course requirements. May be repeated for credit. S/U grading.

Schoolwide Programs

16-071 Center for the Health Sciences, (310) 825-5516

Master of Public Health

The M.P.H. is a professional degree in the field of public health. You are expected to focus on public health practice and to acquire a broad knowledge related to professional skills. Teaching experience is not required.

Admission

Application forms and the *Announcement of the UCLA School of Public Health* may be obtained by writing to the Office of Student Affairs, School of Public Health, 16-071 CHS, UCLA, Los Angeles, CA 90024-1772. Both the School of Public Health Application for Admission to Graduate Status and the *UCLA Application for Graduate Admission* must be completed. Three letters of recommendation (with at least two from former professors) are required before an application is considered complete. It is your responsibility to ensure that the application file is complete.

The preferred deadline for graduate applications is December 15, 1992, for Fall Quarter 1993 admission. *Applications received after the deadline have considerably reduced opportunities for admission, financial aid, and housing.*

Applicants must meet the University minimum requirement of an acceptable bachelor's degree with a B (3.0) average in upper division coursework and/or prior graduate study. Exceptionally qualified applicants may be considered on an individual basis. If your undergraduate coursework has been deficient in breadth

of fundamental training, you must take specified undergraduate courses after admission. Prior field experience is not required as a condition of admission, although a background of public health experience may be considered in your evaluation.

Applicants must also perform satisfactorily on a recent (within the last five years) Graduate Record Examination (GRE). The Medical College Admission Test (MCAT), Dental Admission Test (DAT), or Graduate Management Admission Test (GMAT) may be accepted in lieu of the GRE under certain circumstances.

Refer to the *UCLA Application for Graduate Admission* for the Test of English as a Foreign Language (TOEFL) requirement for international applicants.

Your prior program of study should include adequate preparation in mathematics, physical sciences, biological sciences, and social sciences, and typically includes two courses each in mathematics, biological sciences, social sciences; one course in physical sciences; and others that constitute an adequate preparation for the proposed area of specialization.

If your prior work in the biological, physical, mathematical, and social sciences does not constitute adequate preparation for your proposed area of specialization, you must include courses in those sciences in your graduate program; these may not be applied toward the minimum requirements for the degree.

Applicants must be one of the following:

(1) Holders of a bachelor's degree from an accredited institution. Preparation in the sciences basic to public health must be adequate. Such sciences may include various combinations of (a) life sciences, (b) physical sciences and mathematics, (c) social sciences, (d) behavioral sciences. You are not expected to be prepared in all four of these fields, but a background in a suitable combination of these sciences is required.

(2) Qualified physicians at UCLA in the General Preventive Medicine Residency.

(3) Qualified students in the Latin American or African Area Studies articulated degree program or in the School of Dentistry, Management, or Medicine.

Specific Concentration Requirements

(1) Students concentrating in *biostatistics* should have completed at least one year of calculus. Majors in mathematics, statistics, computer science, or a field of application in biostatistics are preferred.

(2) Students concentrating in *environmental health sciences* should have a bachelor's (or master's) degree in chemistry, physics, biology, engineering, or other appropriate field. Coursework should include one year of general chemistry (including quantitative analysis) and two quarters or one semester of organic chemistry and/or biochemistry, mathematics through calculus, one year of biological sci-

ences, and one year of physics. Substitutions for these requirements will be considered for applicants with an otherwise superior academic background.

(3) Applicants to the one-year *health services organization* program must have a prior doctoral degree (M.D., D.D.S., J.D., Ph.D., or equivalent). Applicants with doctoral degrees from other countries should plan to take the two-year program; satisfactory performance on the GRE is required, and a personal interview is recommended.

Course Requirements

You must complete at least one year of graduate residence at the University of California and a minimum of 11 full courses, at least six of which must be graduate courses and at least two of which must be 400-series courses. Only one 596 course (four units) may be applied toward the six graduate courses; 597 and 598 courses may not be applied toward the degree. No more than 18 full courses may be required for the degree.

Required school core courses include Biostatistics 100A or 110A, Community Health Sciences 100, Environmental Health Sciences 100 or 101, Epidemiology 100 (200 for epidemiology majors), and Health Services 100 (200A-200B-200C for health services majors). Each core course may be waived if you have taken a similar college-level course elsewhere and can pass the waiver examination.

The remaining courses are determined by your choice of an area of specialization as described below and include the requirement of one course in the 400 series. Field training in an approved public health program of up to 10 weeks (a minimum of four units but no more than eight) is required of candidates who have not had prior relevant field experience.

In addition to the core courses, at least three courses (two or four units) outside your area of specialization are strongly recommended.

Only courses in which you receive a grade of C- or better may be applied toward the requirements for a master's degree. You must maintain an average of no less than 3.0 (B) in all courses required or elected during graduate residence at the University of California.

Areas of Specialization

Areas of specialization and typical course plans, in addition to mandatory courses, are listed below.

Biostatistics

Required department courses include Biostatistics 110A, 110B, and 110C (in exceptional circumstances, courses 100A, 100B, 100C, and 100D may be substituted); 200A; 402A, 402B (satisfies the field training requirement); three courses from 403, 404, 405, 406; 410 or 411 or 412. Epidemiology 201A and 201B are recommended. Elective courses should be selected in *public health, biomathematics, or mathematics.*

Students whose mathematics preparation does not include sufficient calculus must take courses in the Mathematics Department while in the M.P.H. program.

Community Health Sciences

Behavioral Sciences and Health Education — Community Health Sciences 210, 211, 217, 270, 271, 282, 482 (eight units), and 487 are required. In addition, four of five elective courses from the list of specialty areas are required. Individual and experimental courses may not be applied toward the required course units. Additional courses may be elected, in consultation with your faculty adviser, from within the department or in other schools/colleges at UCLA. Normally two years or six terms are needed to complete the course requirements. Candidates with a prior doctoral degree or advanced preparation in a related field may complete an M.P.H. degree in one year. It is possible for students to elect an additional area of concentration in another division.

Nutritional Sciences — (Note: The nutritional sciences division is not admitting new students at this time.) Emphasis is on community nutrition. Required courses include Chemistry and Biochemistry 153C or Biological Chemistry 201A-201B, Community Health Sciences 250 or 261A, 260A, 260B, 260C, 260D, 262 or 263 (may be repeated for credit), 400, 460, 461, 463A, 463B.

Of the courses listed above, at least six graduate courses (at least two must be in the 400 series) and at least one seminar course (262, 263) are required.

A minimum of 58 units is required. You must take one seminar during your course of study. If residence is extended beyond four terms, more than one seminar are required.

M.P.H. students may be eligible to undertake two areas of specialization — nutritional sciences, and behavioral sciences and health education. If you plan to follow this track, you should first have your plan approved by your academic adviser in the nutritional sciences division and then submit a petition to the behavioral sciences and health education division. Students with dual areas of specialization are assigned an academic adviser in each division. In addition to the school and nutritional sciences division requirements, you must take Community Health Sciences 210, 211, and three courses from 271, 277, 282, 487. You must pass one comprehensive examination covering both areas (about 75 percent of the questions are from nutritional sciences, with 25 percent from behavioral sciences and health education). If you successfully complete the above requirements, you are eligible for membership in the Society for Public Health Education.

Population and Family Health — Emphasis is on population, family health, family planning, reproductive and women's health, maternal and child health, and international health (in-

cluding applied nutrition, aspects of training methodologies and curriculum design, communications strategies, community and primary health care). You are required to complete at least 20 units (for health professionals) or 24 units (for generalists) of divisional courses (including Community Health Sciences 596), plus courses 210, 400. Elective courses are selected in consultation with your faculty adviser.

Students with a professional degree may graduate with an M.P.H. in one academic year (48 units). Students without a professional health degree need four to six terms (60 units) of study.

Environmental Health Sciences

You can obtain the M.P.H. with a concentration in air pollution, environmental chemistry, environmental management, environmental toxicology, industrial hygiene, and water quality.

Required department core courses include Biostatistics 100B, Environmental Health Sciences 201, 210, 230, 240, 250, 401 (or 410). You also must take at least 12 additional units in the department at the 200 level or above and additional courses as required by your area of concentration. A total of eight units must be in the 400 series.

Epidemiology

The Biomedical Knowledge Screening Examination is required of all students except those with a prior doctorate in the health sciences (M.D., D.D.S., D.V.M., D.N.Sc.).

Required department core courses include Biostatistics 100B, Epidemiology 201A-201B, 220, 400 (for predoctoral students), 596 (for postdoctoral students). At least eight additional units must be selected from epidemiology courses in infectious and tropical diseases (M214, 223A, 223B, 224A, 224B, 227, M228, 230, 290), quantitative methods (202A, 202B, 203), chronic diseases (240, 241, 242, 243, 244), problems of developing countries (245, 280, 281, 282), injuries (251, 252, 253, M417), and other topics (210, 246, 260, 261, 263, M266, 270, M276, 410A, 410B, 411, 414).

You must also submit a report demonstrating competence in epidemiology. For predoctoral students the report may not be submitted prior to completion of course 400, which must be taken after completion of course 201B. Course 596, for postdoctoral students, may be taken concurrently with 201B. Students holding a doctorate in an appropriate biomedical science may petition for waiver of course 400.

Health Services

Required department core courses include Health Services 200A-200B-200C.

Policy and Management — This is a two-year program requiring 18 full courses, a summer internship in a local health care organization, and a major written research report. Required courses include Health Services 400, 422A-

422B, Biostatistics 100B, Health Services 236 or Management 403, and five courses from Health Services 131, 134, 231, 233, 234, 235, 236, 239, 240, 244, 431, 433, 434, 435, 436, 441, 444, 446, 447E. You must select at least two additional electives and are encouraged to choose courses outside the department and/or School of Public Health.

M.P.H./M.B.A. — This is a three-year concurrent degree program requiring a minimum of 12 full courses (48 units) in the School of Public Health and a summer internship in a local health care organization. Required courses include Health Services 400 and 422A-422B. Management 402 may be substituted for Biostatistics 100A. For further information, refer to the listing under "Cooperative Degree Programs" later in this section.

Health Services Organization — This is a one-year program requiring a minimum of 12 full courses (48 units). Admission is limited to students with prior doctoral-level degrees (M.D., Ph.D., J.D., D.D.S., or equivalent). Health Services 236 or Management 403 is required.

Comprehensive Examination Plan

You must pass two comprehensive examinations, one in your area of specialization and a centrally administered written examination in the general field of public health. If you fail either examination, you may be reexamined once.

The schoolwide core course comprehensive examination is administered twice each academic year, usually the first Saturday in May and November. The examination in your major field is administered by your department/division.

Field Training

Field training in an approved public health program is required of candidates who have not had prior relevant field experience. A minimum of four units, but no more than eight, is required.

Interdepartmental International Health Studies

The school offers several options for international or domestic students interested in international health. Faculty in all departments are actively involved in health-related programs in foreign settings, and many departments on campus have international, health-related interests and courses relevant to health occupations in cross-cultural settings.

If you are interested, specify the department/division most relevant to your skills area on your application, clearly indicating your international interests. You will be given an appropriate adviser and directed to additional faculty members interested in internationally oriented training, service, and research.

Applicants with particular interest in primary health care, including maternal and child health, family planning, applied nutrition, family health program planning, administration and evalua-

tion, and refugee health, are advised to apply to the population and family health division of the Community Health Sciences Department.

Cooperative Degree Programs

Following are descriptions of combined programs of study leading to the M.P.H. degree. In the articulated degree programs listed below, no course may be used for credit toward more than one degree.

M.A.-African Area Studies/M.P.H.

The School of Public Health and the African Area Studies Program have an articulated degree program whereby you can work sequentially for the master's degree in African area studies and the Master of Public Health. By planning the major field emphasis in public health while working toward the M.A. in African Area Studies, it may be possible to shorten the amount of time it would normally take to complete both degrees.

Students interested in this articulated program should write to the Assistant Graduate Adviser, African Area Studies Program, UCLA African Studies Center, and/or the Office of Student Affairs, UCLA School of Public Health.

M.A.-Latin American Studies/M.P.H.

The School of Public Health and the Latin American Studies Program have arranged an articulated degree program, organized to permit specializations within the M.A. and the M.P.H. degrees, with the award of both degrees after approximately three years of graduate study. Qualified students apply to the graduate adviser of the Latin American Studies M.A. degree program and to a relevant area of public health, such as (1) environmental and nutritional sciences, (2) epidemiology, (3) health education, (4) population and family health.

Potential applicants should contact the Graduate Adviser, Latin American Studies, UCLA Latin American Center, and/or the Public Health/Latin American Studies Articulated Degree Program Adviser, UCLA School of Public Health.

M.B.A./M.P.H.

The School of Public Health, Department of Health Services, and the John E. Anderson Graduate School of Management offer a three-year concurrent degree program designed for students who desire a management career in health care and related fields. The program reflects the combined interest of employers, faculty, and students who recognize the increasing challenges facing managers in the health care industry and the need for highly skilled and sensitive individuals who can creatively take on these challenges. Students should request application materials from both the M.B.A. Admissions Office, John E. Anderson Graduate School of Management, and the Health Services Management Program, UCLA

School of Public Health. GMAT scores are required for admission.

Preventive Medicine Residency Program

An accredited residency in general preventive medicine is available to physicians through the School of Public Health. The residency is designed to prepare qualified physicians for leadership roles in preventive medicine and public health practice, research, and teaching. Completion of the program can lead to board eligibility in general preventive medicine and public health — a specialty recognized by the American Board of Preventive Medicine.

The residency currently consists of at least two years of work but may be completed over a longer period of time. The first part is comprised of formal studies leading to the Master of Public Health degree (generally in family health, epidemiology, or health services). Other areas (e.g., maternal and child health) may be considered on an individual basis. Application must be made simultaneously to the School of Public Health for admission to the M.P.H. program and to the Preventive Medicine Residency Program.

The second part consists of supervised field training in preventive medicine and public health, which is individually organized for each resident's particular interests and needs. A variety of opportunities is available through UCLA, including close working relationships with the Los Angeles County Department of Health Services, the Jonsson Comprehensive Cancer Center, Cedars-Sinai Medical Center, Saint John's Community Clinic, Venice Family Clinic, other city and county health departments in the state, Canyon Ranch in Tucson, and the Institute for Aerobic Research in Dallas. New affiliations are developed as the need arises. Residents may also undertake studies toward qualification for a more advanced degree in public health — the Dr.P.H. or Ph.D. — or do research in collaboration with members of the faculty. Physician applicants who have completed M.P.H. studies at an accredited school of public health may be admitted directly into the field training part, although physicians who will complete their M.P.H. training at UCLA are preferred. A license to practice medicine in California is a prerequisite to field training. Many residents are working members of health departments or other preventive medicine public health agencies and complete the program over a period of several years. For further information, contact the Office of Student Affairs, UCLA School of Public Health.

Doctor of Public Health

The Doctor of Public Health (Dr.P.H.) is the highest professional degree for the public health generalist. You are expected to focus on public health practice and to acquire broad knowledge related to professional skills. The dissertation is of an applied, practical, prob-

lem-solving nature and must demonstrate your ability for independent investigation.

There is no foreign language requirement; teaching experience is recommended but not required.

Admission

In addition to the University minimum requirements, each department requires (1) satisfactory performance on the Graduate Record Examination (GRE), (2) completion of the M.P.H. or a master's degree in an appropriately related field (if the master's degree is in a field other than public health, you must have taken the equivalent of the M.P.H. mandatory core courses or include them in your course of study after admission), (3) at least a 3.0 junior/senior undergraduate grade-point average, at least a 3.5 GPA in graduate studies or demonstrated superiority in graduate work, and at least a B in each of the mandatory core courses, (4) a positive recommendation by a department to the School of Public Health, (5) approval by the admissions policy committee and the associate dean for Student Affairs. Screening or evaluation examinations may be required by each department.

Course Requirements

The course requirements in the major field depend on the department/division and the field you select. You must take a minimum of six full courses (four must be at the 200 or 400 level) in at least two School of Public Health departments/divisions other than your major department/division.

The major department/division also requires an additional area of concentration which may be either inside or outside the school. In departments/divisions that allow it, an equivalent field experience completed while a doctoral student and approved by the guidance committee may be substituted for the additional area of concentration.

Areas of Specialization

Areas of specialization and typical course plans, in addition to courses required for the master's degree, are listed below.

Biostatistics

The Dr.P.H. requires a research orientation for which the coursework for the M.S. in Biostatistics is more appropriate preparation than the coursework for the M.P.H.

The following courses, if not already taken, should be included: Biostatistics 200B-200C, any four courses from M210 through 219 and 270 through 277, M250A-M250B, 403, 404 or 405, two courses from 410 or 411 or 412, 420; Statistics M152A, 152B-152C. All registered doctoral students enroll in Biostatistics 402B for one term each year. This may be used as the additional area of concentration referenced below.

In addition, six full courses (four must be at the 200 or 400 level) in at least two School of Public Health departments/divisions other than Biostatistics are required for breadth. The department also requires an additional area of concentration which may be either inside or outside the school.

Electives, selected in consultation with your adviser, should be chosen from courses in mathematics, biomathematics, survey research methods, operations research, computer data processing, and other appropriate areas.

Community Health Sciences

Behavioral Sciences and Health Education —

At least four advanced research methods/statistics courses and at least five advanced courses from a list designed and offered by the division are required. In addition, six full courses (four must be at the 200 or 400 level) in at least two School of Public Health departments/divisions other than your major division are required for breadth; four of these must be in only one other department/division. Two terms of research experience prior to beginning the dissertation are required, as is participation in Community Health Sciences 286 (*divisional doctoral seminar*) and 288. Elective courses should be selected in consultation with your adviser. Written qualifying examinations in both the major and minor areas of concentration are required.

Nutritional Sciences — (Note: The nutritional sciences division is not admitting new students at this time.) Recommended courses include Biological Chemistry 201A-201B, Community Health Sciences 260A, 260B, 260C, 260D, 261A, 262 or 263 (may be repeated for credit and must be taken once per year), 265 (may be repeated for credit and must be taken each term), 400, 460, 461, 463A, 463B, 495, 596, 599 (latter three may be repeated for credit). Conversational Spanish is also recommended.

In addition, six full courses (four must be at the 200 or 400 level) in at least two School of Public Health departments/divisions other than your major division are required for breadth. The major division also requires an additional area of concentration which may be either inside or outside the school (e.g., biology, biostatistics).

Population and Family Health — Course content for the major field includes courses needed for the divisional M.P.H., the divisional doctoral seminar, and two advanced courses in research methodology. Beyond the master's degree requirements, a minimum of 48 units (four terms with an average of 12 units each) is required. Of these, at least 20 units must be in this division, in addition to the divisional doctoral seminar.

In addition, six full courses (four must be at the 200 or 400 level) in at least two School of Public Health departments/divisions other than your major division are required for breadth

(you may petition to include up to two 100-level courses). The major division also requires 18 units in an additional area of concentration which may be either inside or outside the school.

Environmental Health Sciences

You can obtain the Dr.P.H. with a concentration in air pollution, environmental chemistry, environmental management, environmental toxicology, industrial hygiene, and water quality. You must take a minimum of six full courses (four must be at the 200 or 400 level) in at least two School of Public Health departments/divisions other than Environmental Health Sciences.

The department also requires additional courses in your major field as recommended by your adviser and guidance committee and courses in a minor field outside the department.

Epidemiology

The recommended program includes additional courses in biostatistics, demography, and epidemiology beyond those required for the M.P.H.

You must take a minimum of six full courses (four must be at the 200 or 400 level) in at least two School of Public Health departments/divisions other than Epidemiology. The department also requires an additional area of concentration which may be either inside or outside the school. An equivalent field experience completed while a doctoral student and approved by your guidance committee may be substituted for the additional area of concentration.

A detailed course plan is developed in consultation with your faculty adviser in the department and in your minor area.

Health Services

The Dr.P.H. has a professional comprehensive orientation and prepares students for leadership positions in health services administration. An M.P.H. degree or equivalent is required, and full-time work experience in some aspect of public health is highly recommended. With full-time study, you may complete the Dr.P.H. in three years.

In your first two years you are normally expected to complete 18 full courses (72 units) beyond the M.P.H. degree to develop mastery in (1) basic tools of social analysis, (2) health and disease in populations, (3) promotion of health and prevention of disease, and (4) health systems and their management. The specific course program depends on your previous coursework and experience. Your third year includes a residency in a public or private health services organization, seminar courses (eight units) devoted to principles and strategies of health services leadership, and preparation of a problem-solving dissertation related to your residency experience.

Screening/Qualifying Examinations

No screening examination is required in any department except Biostatistics, which requires a written screening examination of all students entering the doctoral program, to be taken before the end of your first year in the program (if not taken prior to entering the program). Courses covered by this and other examinations are determined in consultation with your adviser and the department faculty.

Before advancement to candidacy, you must pass written examinations in your major field prepared and administered by the department faculty. Normally no more than one reexamination after failure is allowed. The doctoral committee is nominated after you have made a tentative decision on a dissertation topic. The doctoral committee administers the University Oral Qualifying Examination after you have successfully completed the written examinations.

Final Oral Examination

A final oral examination is required of all candidates.

Appendix

Nondiscrimination

The University of California, in compliance with Title VI of the Civil Rights Act of 1964, Title IX of the Education Amendments of 1972, Section 504 of the Rehabilitation Act of 1973, and the Age Discrimination Act of 1975, does not discriminate on the basis of race, color, national origin, religion, sex, handicap, or age in any of its policies, procedures, or practices; nor does the University discriminate on the basis of sexual orientation. This nondiscrimination policy covers admission and access to, and treatment and employment in, University programs and activities, including but not limited to academic admissions, financial aid, educational services, and student employment.

Inquiries regarding the University's equal opportunity policies may be directed to the Campus Counsel, 3149 Murphy Hall, UCLA, Los Angeles, CA 90024-1405, 825-4042. Speech and hearing-impaired persons may call TDD 206-6083.

Inquiries regarding Americans with Disabilities Act (ADA) or 504 Compliance may be directed to Dr. Douglas Martin, Special Assistant to the Chancellor/Coordinator of ADA and 504 Compliance, 2248 Murphy Hall, UCLA, Los Angeles, CA 90024-1405, 825-2242 Voice or TDD 206-3349.

Students may complain of any action which they believe discriminates against them on the ground of race, color, national origin, religion, sex, sexual orientation, handicap, or age and may contact the Office of the Dean of Students, 1206 Murphy Hall, for further information and procedures.

Student Conduct: Violation of University Policies

Students are subject to disciplinary action for several types of misconduct or attempted misconduct, including but not limited to dishonesty such as cheating, multiple submission (i.e., the resubmission of any work which has been previously submitted for credit in identical or similar form in one course to fulfill any of the requirements of another course without the prior consent of the current instructor), plagiarism, or knowingly furnishing false information to the University; forgery, alteration, or misuse of University documents, keys, or identifications; theft of, damage to, or destruction of any property of the University or property of others while on University premises; unauthorized entry to or use of University properties, equipment, or resources; disruption of teaching, research, administration, disciplinary procedures, or other University activities; physical abuse, threats of violence, or conduct that threatens the health or safety of any person on University property or in connection with official University functions; disorderly conduct; disturbing the peace; sexual harassment; the use of "fighting words" when they constitute harassment; the use, possession, sale, distribution, or manufacture of alcohol on University properties or at official University functions which is unlawful or otherwise prohibited by, or not in compliance with, University policy or campus regulations; the unlawful use, possession, sale, distribution, or manufacture of controlled substances, identified in Federal and State Laws or Regulations, on University proper-

ties or at official University functions; and violations of other University policies or campus rules and regulations.

Further information on these infractions and on the procedures concerning student discipline are contained in the *University of California Policies Applying to Campus Activities, Organizations, and Students, Parts A and B; Universitywide Student Conduct Harassment Policy; UCLA Student Conduct Code of Procedures; and UCLA Activity Guidelines*. Copies of these documents are available in the Office of the Dean of Students (1206 Murphy Hall), Center for Student Programming (161 Kerckhoff Hall), and Student Psychological Services (A3-062 CHS).

In addition, the Office of the Dean of Students publishes "Official Notices" in the *Daily Bruin* at various times during the year. Such notices are important, and *all students are held responsible* for the information in them.

Rape and Other Forms of Sexual Assault

UCLA will not tolerate sexual assault in any form, including acquaintance or date rape. Where there is probable cause to believe that the campus regulations prohibiting sexual assault have been violated by a student, the campus will pursue disciplinary actions which may include sanctions up to and including dismissal from the University.

A student accused of sexual assault can be prosecuted under California criminal statutes *and* disciplined under the campus student conduct policies and regulations. Even if the

It should be noted that a wide variation in starting salaries exists within each discipline based on job location, type of employer, personal qualifications of the individual, and employment conditions at the time of job entry.

criminal justice authorities choose not to prosecute, the campus can pursue disciplinary action.

Definitions

A student who individually, or in concert with others, participates in any of the following misconduct is subject to University discipline. (Refer to the *University of California Policies Applying to Campus Activities, Organizations, and Students, Part A* and the *UCLA Student Conduct Code of Procedures* which are available from the Office of the Dean of Students, 1206 Murphy Hall.) The following language describes specific conduct which, at UCLA, may subject a student to University discipline:

Physical abuse, threats of violence, rape, and other forms of sexual assault or other conduct that threatens the health or safety of any person on University property or in connection with official University functions. More specifically:

Rape

For the purposes of this policy, rape refers to those actions defined as rape by the California Penal Code. The acts summarized below are among the behaviors prohibited by the California Penal Code:

- (1) Sexual intercourse against a person's will accomplished by force or threats of bodily injury.
- (2) Sexual intercourse against a person's will where the person has reasonable fear that she (or he) or another will be injured if she (or he) does not submit to the intercourse.
- (3) Sexual intercourse where the person is incapable of giving consent, or is prevented from resisting, which includes, but is not limited to, instances in which the complainant is prevented from resisting due to alcohol or drugs administered by or with the knowledge of the accused.

Other Forms of Sexual Assault

The act of sexual assault includes forced sodomy (anal intercourse); forced oral copulation (oral-genital contact); forced penetration by a foreign object, including a finger; and sexual battery (the unwanted touching of an intimate part of another person for the purpose of sexual arousal). These also include situations where the accused sexually assaults a complainant incapable of giving consent, including where the complainant is prevented from resisting due to alcohol or drugs administered by or with the knowledge of the accused.

Note: For the purpose of this policy, students should understand that:

- (1) Forced intercourse or other unwanted sexual contact is defined as rape or sexual assault whether the assailant is a stranger or an acquaintance of the complainant.
- (2) Intoxication of the assailant shall not diminish the assailant's responsibility for sexual assault.

If You Have Been Raped or Sexually Assaulted

Take care of your safety and health needs:

(1) **Immediately call the police department.** If possible, call the UCLA Police Department at 825-1491 or 911.

(2) **Get medical attention.** Campus police will provide transportation to the Santa Monica Hospital Medical Center Emergency Room for emergency medical treatment and evidence collection. A counselor from the Santa Monica Rape Treatment Center will be available at that time, free of charge.

Utilize campus and community support services:

(1) **Contact a Rape Services Consultant (RSC)** at the Women's Resource Center. RSCs have expertise in working with people who have been raped or sexually assaulted. They can discuss options and alternatives, help identify the most appropriate support services, and provide information about medical care, psychological counseling, academic assistance, legal options, how to file a police report, and how to file a complaint through the Office of the Dean of Students. RSCs are available to assist any UCLA student regardless of where or when the assault occurred. For assistance, contact the Women's Resource Center at 206-8240 or go to 2 Dodd Hall and ask to speak to an RSC.

(2) **Contact the Rape Treatment Center** at Santa Monica Hospital Medical Center (319-4000) for free emergency medical treatment and counseling services.

Campus Discipline Process When the Assailant Is a Student

Those who believe that they have been raped or otherwise sexually assaulted by a student on University properties or in conjunction with an official University function may file a complaint directly with the Office of the Dean of Students, 1206 Murphy Hall.

Cases referred to the Office of the Dean of Students will be treated under the hearing procedures set forth in the *UCLA Student Conduct Code of Procedures*. If the allegation is of rape or other forms of sexual assault and the case is referred to the Student Conduct Committee, the following *additional* procedures shall also apply:

(1) The complainant shall be entitled, for support, to have up to two persons of the complainant's choice accompany the complainant to the hearing. A support person may be called as a witness, and the fact that he or she is to act as a witness shall not preclude that person's attendance throughout the entire hearing. If a support person is also a witness, the committee chair (or the hearing officer) may require him or her to testify before the complainant. Neither of these persons shall be entitled to represent or defend the complainant. Similar rights shall be afforded to the accused student.

(2) The complainant shall have the right to be present during the entire hearing notwithstanding the fact that the complainant is to be called as a witness.

(3) Evidence of the complainant's past sexual history, including opinion evidence, reputation evidence, and evidence of specific instances of the complainant's sexual conduct, shall not be admissible by the accused student unless the committee chair or hearing officer makes a specific finding of relevance after an offer of proof by the accused student. Under no circumstances is past sexual history admissible to prove consent. The offer of proof must be made and resolved by the panel before the complainant testifies.

(4) The hearing shall be closed to spectators.

Harassment

Sexual Harassment

Every member of the campus community should be aware that the University is strongly opposed to sexual harassment and that such behavior is prohibited both by law and by University policy.

Definition

Unwelcome sexual advances, requests for sexual favors, and other verbal or physical conduct of a sexual nature constitute sexual harassment when:

- (1) Submission to such conduct is made either explicitly or implicitly a term or condition of instruction, employment, or participation in other University activity;
- (2) Submission to or rejection of such conduct by an individual is used as a basis for evaluation in making academic or personnel decisions affecting an individual; OR
- (3) Such conduct has the purpose or effect of unreasonably interfering with an individual's performance or creating an intimidating, hostile, or offensive University environment.

In determining whether the alleged conduct constitutes sexual harassment, consideration will be given to the record as a whole and to the totality of the circumstances, including the nature of the sexual advances and the context in which the alleged incidents occurred (*University of California Policies Applying to Campus Activities, Organizations, and Students, Part B, Section 40.21*).

Complaint Resolution

Experience has demonstrated that many complaints of sexual harassment can be effectively resolved through informal intervention. Individuals who experience what they consider to be sexual harassment are advised to confront the alleged offender immediately and firmly.

Additionally, an individual who believes that she or he has been sexually harassed may contact the alleged offender's supervisor and/or a Sexual Harassment Information Center

counselor for help and information regarding sexual harassment complaint resolution or grievance procedures at one of the locations listed below as determined by the complainant's status at the University at the time of the alleged incident:

- (1) Ombuds Office, 1172 PCPC, 825-7627 (for faculty, staff, students)
- (2) Women's Resource Center, 2 Dodd Hall, 825-3945 (for students)
- (3) Office of Residential Life, Residential Life Building, 825-3401 (for students)
- (4) Office of International Students and Scholars, 105 Men's Gym, 825-1681 (for international students)
- (5) Student Psychological Services, 4223 Math Sciences, 825-4207, or A3-062 Center for the Health Sciences, 825-7985 (for students)
- (6) Office of Vice Chancellor — Academic Personnel, 2147 Murphy Hall, 206-9345 (for faculty, including non-Senate academic appointees and student academic appointees when acting in the capacity of their non-Senate appointments)
- (7) Campus Human Resources/Employee and Labor Relations Division, 2126 Ueberroth Building, 825-0661 (for campus staff employees and students when acting in the capacity of their staff appointments)
- (8) Medical Center Human Resources Office, 200 Security Pacific Building, 825-0644 (for Medical Center staff employees and students when acting in the capacity of their staff appointments)
- (9) UCLA Extension, 770 UCLA Extension (UNEX), 825-2674 (for UCLA Extension faculty, staff employees, and students)

Other Forms of Harassment

The University strives to create an environment which fosters the values of mutual respect and tolerance and is free from discrimination based on race, ethnicity, sex, religion, sexual orientation, disability, age, and other personal characteristics. Certainly harassment, in its many forms, works against those values and often corrodes a person's sense of worth and interferes with one's ability to participate in University programs or activities. While the University is committed to the free exchange of ideas and the full protection of free expression, the University also recognizes that words can be used in such a way that they no longer express an idea, but rather injure and intimidate, thus undermining the ability of individuals to participate in the University community (President Gardner, September 21, 1989). The *University of California Policies Applying to Campus Activities, Organizations, and Students, Parts A and B* (hereafter referred to as *Policies*) presently prohibit a variety of conduct by students which, in certain contexts, may be regarded as harassment or intimidation.

For example, harassing expression which is accompanied by physical abuse, threats of violence, or conduct that threatens the health or safety of any person on University property or in connection with official University functions may subject an offending student to University discipline under the provisions of Section 51.16 of the *Policies*.

Similarly, harassing conduct, including symbolic expression, which also involves conduct resulting in damage to or destruction of any property of the University or property of others while on University premises may subject a student violator to University discipline under the provisions of Section 51.12 of the *Policies*.

Further, under specific circumstances described in the *Universitywide Student Conduct Harassment Policy*, students may be subject to University discipline for misconduct which may consist solely of expression. Copies of this *Policy* are available in the Office of the Dean of Students, 1206 Murphy Hall, or in any of the Harassment Information Centers listed below:

- (1) Ombuds Office, 1172 PCPC, 825-7627
- (2) Women's Resource Center, 2 Dodd Hall, 825-3945
- (3) Office of Residential Life, Residential Life Building, 825-3401
- (4) Office of International Students and Scholars, 105 Men's Gym, 825-1681
- (5) Student Psychological Services, 4223 Math Sciences, 825-4207, or A3-062 Center for the Health Sciences, 825-7985
- (6) Office of Fraternity and Sorority Relations, 118 Men's Gym, 825-6322

Complaint Resolution

One of the necessary measures in our efforts to assure an atmosphere of civility and mutual respect is the establishment of procedures which provide effective informal and formal mechanisms for those who believe that they have been victims of any of the above misconduct.

Many incidents of harassment and intimidation can be effectively resolved through informal means. For example, an individual may wish to confront the alleged offender immediately and firmly. An individual who chooses not to confront the alleged offender and who wishes help, advice, or information is urged to contact any of the Harassment Information Centers listed immediately above.

In addition to providing support for those who believe they have been victims of harassment, Harassment Information Centers offer persons the opportunity to learn about the phenomena of harassment and intimidation; to understand the formal and informal mechanisms by which misunderstandings may be corrected and, when appropriate, student perpetrators may be disciplined; and to consider which of the available options is the most useful for the particular circumstances.

With regard to the *Universitywide Student Conduct Harassment Policy*, complainants should be aware that not all conduct which is offensive may be regarded as a violation of this *Policy* and may, in fact, be protected expression. Thus, the application of formal institutional discipline to such protected expression may not be legally permissible. Nevertheless, the University is committed to reviewing any complaint of harassing or intimidating conduct by a student and intervening on behalf of the complainant to the extent possible.

Faculty Code of Conduct

The entire Faculty Code of Conduct can be found in the *UCLA Faculty Handbook, Supplement A (1987)*, pages 32-35 (copies are available in the Academic Senate Office, 3125 Murphy Hall). Section IIA outlines faculty obligations to students and reads as follows:

Teaching and Students

Ethical Principles — "As a teacher, the professor encourages the free pursuit of learning in students: holds before them the best scholarly standards of the discipline; demonstrates respect for the student as an individual and adheres to the proper role as intellectual guide and counselor; makes every reasonable effort to foster honest academic conduct and to assure that the evaluation of students reflects their true merit; respects the confidential nature of the relationship between professor and student; avoids any exploitation of students for private advantage and acknowledges significant assistance from them; and protects their academic freedom." (from 1966 AAUP statement)

Types of Unacceptable Conduct

(1) Failure to meet the responsibilities of instruction, including (a) arbitrary denial of access to instruction, (b) significant intrusion of material unrelated to the course, (c) significant failure to adhere, without legitimate reason, to the rules of the faculty in the conduct of courses, to meet class, to keep office hours, or to hold examinations as scheduled, (d) evaluation of student work by criteria not directly reflective of course performance, (e) undue and unexcused delay in evaluating student work.

(2) Discrimination against a student on political grounds, or for reasons of race, religion, sex, sexual orientation, ethnic origin, national origin, ancestry, marital status, medical condition, status as a Vietnam-era veteran or disabled veteran or, within the limits imposed by law or University regulations, because of age or citizenship or for other arbitrary or personal reasons.

(3) Use of the position or powers of a faculty member to coerce the judgment or conscience of a student or to cause harm to a student for arbitrary or personal reasons.

(4) Participating in or deliberately abetting disruption, interference, or intimidation in the classroom.

Charges of Violation

If a student has reason to believe that a faculty member has violated the code, the student may consult with a member of the Academic Senate Grievance and Disciplinary Procedures Committee (3125 Murphy Hall, 825-3852) for help in deciding on appropriate action. If the student believes that formal discipline may be warranted, the alleged violator should be reported to the chair of the department and to the dean of the division or school with a request that a charge be filed with the Academic Senate Charges Committee. If the dean, in consultation with the vice chancellor of Academic Personnel, determines that there are not sufficient grounds for the administration to file a charge, the student may, after discussing the matter with a member of the Academic Senate Grievance and Disciplinary Procedures Committee, file such a charge in person.

Residence for Tuition Purposes

If you have not been living in California with intent to make it your permanent home for more than one year immediately before the residence determination date for each term in which you propose to attend the University, you must pay a nonresident tuition fee in addition to all other fees. The residence determination date is the day instruction begins at the last of the University of California campuses to open for the quarter, and for schools on the semester system, the day instruction begins for the semester.

Law Governing Residence

The rules regarding residence for tuition purposes at the University of California are governed by the California Education Code and implemented by Standing Orders of The Regents of the University of California. Under these rules adult citizens and certain classes of aliens can establish residence for tuition purposes. There are particular rules that apply to the residence classification of minors (see below).

Who Is a Resident?

If you are an adult student (at least 18 years of age), you may establish residence for tuition purposes in California if (1) you are a U.S. citizen, (2) you are a permanent resident or other immigrant, or (3) you are a nonimmigrant who is not precluded from establishing a domicile in the U.S. Nonimmigrants who are not precluded from establishing domicile in the U.S. include those who hold valid visas of the following types — A, E, H-1 (issued after October 1, 1991), I, K, L, or O-1. To establish residence you must be physically present in California for more than one year, and you must have come here with the intent to make California your home as opposed to coming to this state to go to school. Physical presence within the state solely for educational

purposes does not constitute the establishment of California residence, regardless of the length of your stay. You must demonstrate your intention to make California your home by severing your residential ties with your former state of residence and establishing those ties with California. If these steps are delayed, the one-year durational period will be extended until you have demonstrated both presence and intent for one full year. Effective Fall Quarter/Semester 1993, if your parents are not residents of California, you will be required to be financially independent in order to be a resident for tuition purposes. Your residence cannot be derived from your spouse or your parents.

Requirements for Financial Independence

You are considered "financially independent" if one or more of the following apply: (1) you are at least 24 years of age by December 31 of the calendar year for which you are requesting residence classification; (2) you are a veteran of the U.S. Armed Forces; (3) you are a ward of the court or both parents are deceased; (4) you have legal dependents other than a spouse; (5) you are married, or a graduate student or a professional student, and you were not claimed as an income tax deduction by your parents or any other individual for the tax year immediately preceding the term for which you are requesting resident classification; or (6) you are a single undergraduate student and you were not claimed as an income tax deduction by your parents or any other individual for the two tax years immediately preceding the term for which you are requesting resident classification, and you can demonstrate self-sufficiency for those years. (Note: Financial dependence is not a factor in residence status for graduate student instructors, graduate student teaching assistants, research assistants, junior specialists, postgraduate researchers, graduate student researchers, and teaching associates who are employed 49 percent or more of full time in the term for which classification is sought.)

Establishing Intent to Become a California Resident

Indications of your intent to make California your permanent residence can include the following: registering to vote and voting in California elections; designating California as your permanent address on all school and employment records, including military records if you are in the military service; obtaining a California driver's license or, if you do not drive, a California Identification Card; obtaining California vehicle registration; paying California income taxes as a resident, including taxes on income earned outside California from the date you establish residence; establishing a California residence in which you keep your personal belongings; and licensing for professional practice in California. The absence of these indicia in other states during any period for which you claim residence can also serve

as an indication of your intent. Documentary evidence is required, and all relevant indications will be considered in determining your classification. Your intent will be questioned if you return to your prior state of residence when the University is not in session.

General Rules Applying to Minors

If you are an unmarried minor (under age 18), the residence of the parent with whom you live is considered to be your residence. If you have a parent living, you cannot change your residence by your own act, by the appointment of a legal guardian, or by the relinquishment of your parent's right of control. If you live with neither parent, your residence is that of the parent with whom you last lived. Unless you are a minor alien present in the U.S. under the terms of a nonimmigrant visa which precludes you from establishing domicile in the U.S., you may establish your own residence when both your parents are deceased and a legal guardian has not been appointed. If you derive California residence from a parent, that parent must satisfy the one-year durational residence requirement.

Specific Rules Applying to Minors

(1) **Divorced or Separated Parents** — You may be able to derive California resident status from a California resident parent if you move to California to live with that parent on or before your 18th birthday. If you begin residing with your California parent after your 18th birthday, you will be treated like any other adult student coming to California to establish residence.

(2) **Parent of Minor Moves from California** — You may be entitled to resident status if you are a minor U.S. citizen or eligible alien whose parent(s) was a resident of California who left the state within one year of the residence determination date if (a) you remained in California after your parent(s) departed, (b) you enroll in a California public postsecondary institution within one year of your parent(s) departure, and (c) once enrolled, you maintain continuous attendance in that institution. Financial independence is not required in this case.

(3) **Two-Year Care and Control** — You may be entitled to resident status if you are a U.S. citizen or eligible alien and you have lived continuously with an adult who is not your parent for at least two years prior to the residence determination date. The adult with whom you are living must have been responsible for your care and control for the entire two-year period and must have been residing in California during the one year immediately preceding the residence determination date.

Exemptions from Nonresident Tuition

(1) **Member of the Military** — If you are a member of the U.S. military stationed in California on active duty, unless you are assigned for educational purposes to a state-supported institution of higher education, you may be

exempt from the nonresident tuition fees until you have lived in California long enough to become a resident. You must provide the on-campus residence deputy with a statement from your commanding officer or personnel officer stating that your assignment to active duty in California is not for educational purposes. The letter must include the dates of your assignment to the state.

(2) **Spouse or Other Dependents of Military Personnel** — You are exempt from payment of the nonresident tuition fee if you are a spouse or a natural or adopted child or stepchild who is a dependent of a member of the U.S. military stationed in California on active duty. The exemption is available until you have lived in California long enough to become a resident. You must petition for a waiver of the nonresident tuition fee each term you are eligible. If you are enrolled in an educational institution and the member of the military is transferred on military orders to a place outside California where he or she continues to serve in the Armed Forces, or the member of the military retires from active duty immediately after having served in California on active duty, you may retain this exemption under conditions listed above.

(3) **Child or Spouse of Faculty Member** — To the extent funds are available, if you are an unmarried dependent child under age 21 or the spouse of a member of the University faculty who is a member of the Academic Senate, you may be eligible for a waiver of the nonresident tuition fee. Confirmation of the faculty member's membership on the Academic Senate must be secured each term this waiver is granted.

(4) **Child or Spouse of University Employee** — You may be entitled to resident classification if you are an unmarried dependent child or the spouse of a full-time University employee whose assignment is outside California (e.g., Los Alamos Scientific Laboratory). Your parent's or spouse's employment status with the University must be ascertained each term.

(5) **Child of Deceased Public Law Enforcement or Fire Suppression Employee** — You may be entitled to a waiver of the nonresident tuition fee if you are the child of a deceased public law enforcement or fire suppression employee who was a California resident at the time of his or her death and who was killed in the course of fire suppression or law enforcement duties.

(6) **Dependent Child of a California Resident** — If you have not been an adult resident of California for more than one year and are the natural or adopted dependent child of a California resident who has been a resident for more than one year immediately prior to the residence determination date, you may be entitled to a waiver of the nonresident tuition until you have resided in California the minimum time necessary to become a resident, so long as continuous attendance is maintained at an institution.

Temporary Absences

If you are a nonresident student who is in the process of establishing a residence for tuition purposes and you return to your former home during noninstructional periods, your presence in the state will be presumed to be solely for educational purposes and only convincing evidence to the contrary will rebut this presumption. **Students who are in the state solely for educational purposes will NOT be classified as residents for tuition purposes regardless of the length of their stay.**

If you are a student who has been classified as a resident for tuition purposes and you leave the state temporarily, your absence could result in the loss of your California residence. The burden will be on you (or your parents if you are a minor) to verify that you did nothing inconsistent with your claim of a continuing California residence during your absence. Steps that you (or your parents) should take to retain a California residence include:

- (1) Continue to use a California permanent address in all records — educational, employment, military, etc.
- (2) Continue to satisfy California tax obligations. If you are claiming California residence, you are liable for payment of income taxes on your total income from the date you establish your residence in the state, including income earned in another state or country.
- (3) Retain your California voter's registration and vote by absentee ballot.
- (4) Maintain a California driver's license and vehicle registration. If it is necessary to change your driver's license or vehicle registration, you must change them back within the time prescribed by law.

Petition for Resident Classification

You MUST PETITION IN PERSON at 1113 Murphy Hall for a change of classification from nonresident to resident status. All changes of status must be initiated prior to the first day of classes for the term for which you intend to be classified as a resident.

Time Limitation on Providing Documentation

If additional documentation is required for residence classification but is not readily accessible, you will be allowed until the end of the applicable term to provide it.

Incorrect Classification

If you were incorrectly classified as a resident, you are subject to a nonresident classification and to payment of all nonresident tuition fees not paid. If you concealed information or furnished false information and were classified incorrectly as a result, you are also subject to University discipline. Resident students who become nonresidents must immediately notify the campus residence deputy.

Inquiries and Appeals

Inquiries regarding residence requirements, determination, and/or recognized exceptions should be directed to the Residence Deputy, Office of the Registrar, 1113 Murphy Hall, 405 Hilgard Avenue, Los Angeles, CA 90024-1429 (825-3447) or to the Legal Analyst — Residence Matters, 300 Lakeside Drive, 7th Floor, Oakland, CA 94612-3565. NO OTHER UNIVERSITY PERSONNEL ARE AUTHORIZED TO SUPPLY INFORMATION RELATIVE TO RESIDENCE REQUIREMENTS FOR TUITION PURPOSES.

You are cautioned that this summary is NOT a complete explanation of the law regarding residence. A copy of the regulations adopted by The Regents of the University of California is available for inspection in 1113 Murphy Hall. Note that changes may be made in the residence requirements between the publication of this statement and the relevant residence determination date. Any student, following a final decision on residence classification by the residence deputy, may appeal in writing to the legal analyst within 45 days (effective Fall Quarter/Semester 1992) of notification of the residence deputy's final decision.

Privacy Notice

All of the information requested on the Statement of Legal Residence form is required (by the authority of Standing Order 110.2 (a)-(d) of The Regents of the University of California) for determining whether or not you are a legal resident for tuition purposes. Registration cannot be processed without this information. The Registrar's Office on campus maintains the requested information. You have the right to inspect University records containing the residence information requested on the form.

Financial Aid Minimum Progress Standards

Federal regulations require UCLA to establish, publish, and apply standards of satisfactory academic progress for financial aid eligibility. Students who fail to meet minimum progress standards become ineligible to receive financial aid until they are in compliance with the standards.

Undergraduate Students

Qualitative Standard

The qualitative standard is enforced by your college or school. You are notified by your academic department if you fall below the required grade-point average (GPA).

Quantitative Standard

This standard is enforced by the Financial Aid Office on the basis of the number of units (including remedial courses) successfully completed within any given number of regular session terms. It may differ from your college/school requirement.

All students receiving aid as full-time students must be enrolled in at least 12 units in order to obtain funds. To be eligible for financial aid, you must successfully complete at least 24 units in each of your first two academic years at UCLA to maintain satisfactory academic progress. Thereafter, you must successfully complete 84 units by the end of your ninth term, 120 units by the end of your twelfth term, 156 units by the end of your fifteenth term, and 180 units by the end of your seventeenth term.

The measurement of progress occurs during the academic year. The schedule above is adjusted appropriately for students ending an academic year with a different number of terms completed than is listed above. If you enter UCLA in advanced standing, the number of terms for which you are eligible for aid is reduced proportionally to the number of transfer units credited to your record. For example, if you are credited with 84 transfer units, you would have only eight terms of financial aid eligibility as an undergraduate at UCLA. The annual evaluation of progress is measured against the beginning section of the first scale (i.e., you are required to complete 24 units in your first full academic year of enrollment). Individual situations that cause transfer students to begin their enrollment with a deficiency are accommodated through both the advising and appeal process.

If you are a continuing student at UCLA at the time you apply for financial aid, your progress is measured by the previous schedule in order to determine your eligibility (i.e., you must have successfully completed 48 units if you attended UCLA for six terms). As in the case of transfer students, you would then have only 11 terms of financial aid eligibility.

After 17 terms of enrollment as a full-time student or the equivalent as a part-time student, no further need-based financial aid is granted.

Nonstandard Enrollment

Part-time students' progress is measured by an appropriately modified schedule, and aid is similarly modified. Summer enrollment must be counted proportionally as a period of enrollment if you apply the units earned toward graduation. Summer enrollment is reviewed as part of the following academic year. Accommodation is made for students enrolled in a joint degree program.

Successful Completion

To successfully complete units, you must receive a grade of A, B, C, D, or P (S for graduate students) in a course. You are given temporary credit for an IP grade pending receipt of the final grade in the course. Grades of F, I, and NP (U for graduate students) do not earn completed units. An I grade that is replaced with a passing grade does earn units. Repeated courses for which completed units were previously credited do not earn completed units. DR (Deferred Report) grades do not earn units unless replaced by passing grades.

Withdrawal and Cancellation

Withdrawal from a term in which you receive financial aid applies as a term attended and works to your disadvantage on the units-per-term schedule. Cancellation of your registration (prior to the first day of classes), however, does not apply as a term attended. Refund and payback of aid received is based on published schedules and the date you officially withdraw or cancel.

Disqualification and Reinstatement

The Financial Aid Office monitors satisfactory progress annually after Winter Quarter grades are recorded. Your progress is measured according to the number of terms you have attended at UCLA and the number of units you have successfully completed.

If you have not met the requirements shown on the schedule, your financial aid is discontinued until the deficiencies are satisfied. You may use Summer Sessions to make up deficiencies. Reinstatement can also occur during an academic year.

Your financial aid eligibility is reinstated for the term following the term in which you reestablish compliance with the units-per-term schedule. For example, if you successfully complete 16 units in Fall Quarter and therefore make up your deficiency, you become eligible for consideration for assistance in Winter and Spring Quarters. Financial aid is then awarded on the basis of your need and the availability of funds.

Appeal Process

If you fail to meet the satisfactory progress standards due to reasons such as debilitating illness, prolonged hospitalization, death in your immediate family, or other such mitigating circumstances, you may appeal your disqualification.

To appeal, submit a letter to the Financial Aid Appeal Committee setting forth the circumstances and how they affected your ability to meet the requirements. Based on the rationale and evidence you provide, the committee may reinstate your eligibility.

Students with mitigating circumstances should appeal as soon as possible. If you wait to make an appeal until after you have been notified that your aid has been discontinued, there may not be sufficient funds available in all of the programs for which you usually qualify.

Graduate Students

Qualitative Standards

The qualitative standard is enforced by the dean of the Graduate Division in consultation with your department.

Quantitative Standard

To be eligible for financial aid as a full-time student, you must successfully complete at least eight units per term of enrollment. Approved study loads of less than eight units re-

sult in proportionally reduced aid for that term and are charged against your maximum period of eligibility at the appropriate proportional rate.

Disqualification and Appeal Process

If you fail to meet the qualitative and quantitative requirements, your financial aid is discontinued until the deficiencies are made up. Appeals are reviewed by your academic department, the dean of the Graduate Division, and/or the Financial Aid Appeal Committee.

Period of Eligibility

The degree program to which you are admitted determines the maximum number of terms for which you can receive need-based financial aid. Terms for which no need-based aid is received are considered when determining your remaining number of terms of financial aid eligibility.

If you are in a credential program or a professional master's program (other than Master of Fine Arts), you are eligible for a maximum of nine terms of need-based financial aid. The professional master's degrees include LL.M., M.Arch., M.A.T., M.B.A., M.C.L., M.E., M.Ed., M.J., M.L.S., M.N., M.P.A., M.P.H., M.S.P., M.S.W.

If you are in a Master of Fine Arts program, you are eligible for a maximum of 12 terms of need-based financial aid. If you are in an M.A. or M.S. program, a doctoral program, or a combination master's/doctoral program, you are eligible for a maximum of 27 terms of need-based financial aid. Students who change their program may be accommodated through an extension of terms of eligibility. The extension should be secured at the time the program change is made.

Professional Schools

Students attending the Schools of Dentistry, Law, and Medicine are covered by criteria established by the respective school.

Grading Regulations

Assigning a Grade

The instructor in charge of a course is responsible for determining the grade of each student in the course. The standards for evaluating student performance are based on the course description as approved by the appropriate course committee.

The final grade in the course is based on the instructor's evaluation of the student's achievement in the course. When on an examination or other work submitted by a student, the student is suspected of having engaged in plagiarism or otherwise having cheated, the suspected infraction is to be reported to the appropriate administrative officer of the University for consideration of disciplinary proceedings against the student. Until such proceedings, if any, have been completed, the grade DR (Deferred Report) is as-

signed for that course. If in such disciplinary proceedings it is determined that the student did engage in plagiarism or otherwise cheat, the administrative officer, in addition to imposing discipline, reports back to the instructor of the course involved, the nature of the plagiarism or cheating. In light of that report, the instructor may replace the grade DR with a final grade that reflects an evaluation of that which may fairly be designated as the student's own achievement in the course as distinguished from any achievement that resulted from plagiarism or cheating.

Grade Complaints

A grade may be appealed, on any reasonable grounds, to the instructor, the chair of the department, and the dean of the division or school.

If the student believes that the instructor has violated the Faculty Code of Conduct by assigning the grade on any basis other than academic, the matter should first be taken up with the instructor. If the matter is not resolved, the student may go for counsel to the Ombuds Office or may follow the procedures for the formal filing of charges (see "Faculty Code of Conduct" earlier in the Appendix). If a charge is sustained by the Academic Senate Committees on Charges and on Privilege and Tenure, an ad hoc committee will be appointed within two weeks to review the disputed grade, and any warranted change will be made within four weeks.

Correction of Grades

All grades, except DR, I, and IP, are final when filed by the instructor in the end-of-term course report. However, the Registrar's Office is authorized to change a final grade (1) on written request of an instructor, provided that a clerical or procedural error is the reason for the change or (2) on written request of the chair of the UCLA Academic Senate in cases where it has been determined by the Committee on Privilege and Tenure that an instructor has assigned a grade on any basis other than academic grounds. No change of grade may be made on the basis of reexamination or, with the exception of the I and IP grades, the completion of additional work. Any grade change request made more than one year after the original filing must be validated for authenticity of the instructor's signature by the department chair. Any grade change request made by an instructor who has left the University must be countersigned by the department chair. All grade changes are recorded on the transcript.

Policy on Alternate Examination Dates

In compliance with Section 92640(a) of the California Education Code, the University must accommodate requests for alternate examination dates at a time when that activity would not violate a student's religious creed. This requirement does not apply in the event that administering the test or examination at an alternate time would impose an undue hardship which could not reasonably be avoided.

Accommodation for alternate examination dates will be worked out directly and on an individual basis between the student and the faculty member involved.

(1) In general, students should make such requests of the instructor during the first two weeks of any given academic term, or as soon as possible after a particular examination date is announced by the instructor.

(2) Students unable to reach a satisfactory arrangement with their instructor should contact the Ombuds Office, 1172 PCPC, or the Office of the Dean of Students, 1206 Murphy Hall, for assistance.

(3) Instructors who have questions or who wish to verify the nature of the religious event or practice involved should contact the Ombuds Office or the Office of the Dean of Students for assistance.

Undergraduate Final Examinations

The instructor in charge of an undergraduate course is responsible for assigning the final grade in the course. The final grade shall reflect the student's achievement in the course and shall be based on adequate evaluation of that achievement. The instructor's method of evaluation must be announced at the beginning of the course. The method may include a final written examination, a term paper, a final oral examination, a take-home examination, or other evaluation device. Evaluation methods must be of reasonable duration and difficulty and must be in accord with applicable departmental policies. Final written examinations may not exceed three hours' duration and will be given only at the times and places established and published by the department chair and the Registrar's Office.

No student shall be excused from assigned final examinations except as provided above in the policy on alternate examination dates.

At the end of the term in which a student is expected to be graduated, a student's major department may examine him or her in the field of the major, may excuse the student from final examinations in courses offered by the department during that term and, with the approval of the appropriate Committee on Courses, assign a credit value to such general examination.

An instructor shall, if he or she wishes, release to individual students their original final examinations (or copies). This may be done by any method which insures the students' right to privacy. Otherwise, the instructor shall retain final examination materials, or a copy thereof, until the end of the next succeeding regular term of instruction, during which period students shall have access to their examinations.

Disclosure of Student Records

Pursuant to the Federal Family Educational Rights and Privacy Act of 1974, the California

Education Code as amended in 1976, and the University of California Policies Applying to the Disclosure of Information from Student Records, students at UCLA have the right (1) to inspect and review records pertaining to themselves in their capacity as students, except as the right may be waived or qualified under the Federal and State Laws and the University Policies, (2) to have withheld from disclosure, absent their prior consent for release, personally identifiable information from their student records, except as provided by the Federal and State Laws and the University Policies, (3) to inspect records maintained by the University of disclosures of personally identifiable information from their student records, (4) to seek correction of their student records through a request to amend the records or, if such request is denied, through a hearing, and (5) to file complaints with the U.S. Department of Education regarding alleged violations of the rights accorded them by the Federal Act.

The University may release or publish, without the student's prior consent, items in the category of "public information," which are name, mailing and/or permanent address, telephone numbers, major field of study, dates of attendance, and degrees and honors received. You can limit public access to this information and designate if you wish to receive mailings that the University considers optional by completing the "Privacy Release" section of the Data Change Request on the quarterly Registration Form. Official University mailings are sent to all students, while optional mailings are sent only to students with no designated limitations.

To restrict the release or publication of the following information — the most recent previous educational institution attended, participation in officially recognized activities (including but not limited to intercollegiate athletics), and the name, weight, and height of participants on intercollegiate athletic teams — complete the Decline to Release form available in the Registration/Enrollment Office, 1113 Murphy Hall.

Student records which are the subject of the Federal and State Laws and the University Policies may be maintained in a wide variety of offices. Students are referred to the *UCLA Campus and CHS Directory* which lists all the offices which may maintain student records, together with their campus address and telephone number. Students have the right to inspect their student records in any such office subject to the terms of the appropriate Federal and State Laws and the University Policies. Inspection of records maintained by the Registrar's Office is by appointment only, with 24-hour advance notice. Call 206-0482 or inquire at 1134 Murphy Hall.

A copy of the Federal and State Laws, the University Policies, and the *UCLA Campus and CHS Directory* may be inspected in the office of the Information Practices Coordinator, 2330 Murphy Hall. Information concerning these matters and students' hearing rights is also available there.

In addition to the public information described here, information related to your Social Security number, sex and marital status, and the name(s), address(es), and telephone number(s) of your parents or next of kin are made available to the UCLA University Relations Department for use in alumni, development, and public relations activities. To restrict the release of this additional information, fill out a Request for University Relations Information Restriction form available in the Registration/Enrollment Office, 1113 Murphy Hall.

UCLA Graduation Rates

Graduation rates have shown a steady increase over the last eight years. While a little less than two thirds of freshmen who entered UCLA in Fall Quarter 1980 graduated in at least six years, the figure has risen to over 70 percent for the 1985 entering class. In addition, over the last two years of available data, graduation rates have increased for both four- and five-year periods. The five-year graduation rate of 66 percent for the 1986 class is higher than any other five-year rate. The 28 percent four-year rate for the 1987 class portends even higher five- and six-year rates over the next two years.

Students attending public universities often average five years to earn a bachelor's degree. Many enroll for a sixth year to prepare for graduate or professional school admission. Additional reasons students take more than four years to complete their degrees include employment and time taken for internships, travel, or field studies. Also, the data show elapsed time. Actual enrollment averages 13 to 14 terms. In addition, many students who do not earn a degree at UCLA have transferred to another UC campus or university. Usually, less than 15 percent of the students leave UCLA in poor academic standing.

Campus Security Information

UCLA Police Department

The UCLA Police Department (825-1491), located at Westwood Plaza and Circle Drive South, has 66 sworn California State Police Officers empowered by the State of California with the authority to enforce all state and local laws. UCLA police officers patrol the campus 24 hours a day, 365 days a year. They enforce all applicable local, state, and federal laws (with special emphasis on the laws involving alcohol and controlled substances), arrest violators, investigate and suppress crime, and provide a full range of police services.

The department is linked by computer to city, state, and federal criminal justice agencies that provide access to information concerning criminal records, wanted persons, stolen property, and vehicle identification. The Detective Bureau handles all criminal investigations, and detectives conduct interviews, arrest vio-

lators, execute search warrants, and file cases with the city and county prosecutors' offices.

To assist in prevention and apprehension efforts, the department employs unarmed security guards to patrol the Center for the Health Sciences and UCLA Medical Center. These guards provide on-site security and assistance for all who use the facilities.

In addition, the department employs approximately 200 student community service officers (CSOs) who are the "eyes and ears" (trained observers) of the department and act as non-intervention visual deterrents to crime. CSOs wear high-visibility uniforms and carry two-way police radios. They are dispatched by the department's Communications Center and provide a direct link to police, fire, or medical aid. The CSO Division provides over 20 different safety and security programs but is most well-known for the Campus Escort Service and the Evening Van Service. The Campus Escort Service operates every day of the year from dusk to 1 a.m. Individuals requesting the service call the Communications Center; a CSO is then dispatched to walk them safely to their destination. The service is available to UCLA students, staff, faculty, and visitors and operates on campus and in the nearby residential areas. The Evening Van Service provides a safe and convenient mode of transportation around campus at night. The vans run on specific routes similar to a municipal bus system.

Incident Reporting

The UCLA Police Department has primary jurisdiction over the UCLA campus and the Center for the Health Sciences. The City of Los Angeles Police Department does not handle calls for service on campus. All requests for police service should be made to the UCLA Police Department (Circle Drive South and Westwood Plaza). All crime occurring on campus and in the Center for the Health Sciences should be reported immediately to the department to ensure appropriate action is taken. The University endorses a policy that strongly encourages victims to report all incidents to the UCLA Police Department anytime

of the day or night. Crimes occurring off campus should be reported immediately to the law enforcement agency with proper jurisdiction over that area.

Police, fire, or medical EMERGENCIES can be reported by dialing **911** from any telephone on campus. All telephones (University, private, public) located on University grounds are tied into the 911 emergency system. Emergencies can also be reported by using the blue-hooded Emergency Reporting Telephones located throughout the campus.

NONEMERGENCY calls for service can be made by contacting the UCLA Police Department at 825-1491.

Crime Prevention

Crime prevention provides the best measure of protection. Therefore, the UCLA Police Department supports a proactive Crime Prevention Unit that works closely with community members to make UCLA a safer place to work, live, and learn. The unit gives presentations on vehicle and residential security, personal safety, office and equipment security, and rape prevention. Brochures and literature on crime prevention and personal safety are available. Throughout the year, the crime prevention officer and the student housing offices present personal safety workshops and many other crime awareness programs.

The Women's Resource Center (WRC) and the Crime Prevention Unit provide presentations on sexual assault issues. Topics include acquaintance rape education and prevention, personal safety and prevention techniques, recovery from sexual assault, clear communications, pornography, and the continuum of violence and rape in society. The educational programs, tailored to meet the needs of individual audiences, include films, discussion groups, lectures, role-plays, and communication exercises. The WRC reaches students through the residence halls, sororities, fraternities, athletic teams, student clubs, and various student functions. Services include crisis intervention and advocacy for victims of sexual assault;

FBI Crime Index Offenses — Los Angeles

short-term counseling and referrals for survivors, their families, and friends; support groups for rape survivors; and self-defense classes and a lending library. The WRC works closely with the student housing offices and the police department to increase campus safety.

Several programs have been designed to increase the level of crime awareness and campus safety at UCLA. All incidents of criminal activity which pose a potential threat to the campus are brought immediately to the attention of the community through *Campus Alert Bulletins*. With the combined efforts of the Crime Prevention Unit, the Women's Resource Center, and the CSOs, incidents of sexual assault on campus have been reduced.

Alcohol and Substance Abuse Education

Students with alcohol or substance abuse problems create safety and health risks for themselves and others. Such abuses also can result in a wide range of emotional and behavioral problems. Therefore, UCLA makes available to every student a variety of alcohol and substance abuse awareness programs which are designed to discourage the use of illicit substances and to educate students on the merits of legal and responsible alcohol consumption. Student Psychological Services (825-

7985) provides counseling and referral assistance to students who are troubled by alcohol or substance abuse problems. The service is completely confidential and free to regularly enrolled students. All information and counseling will be treated in accordance with University policies and state and federal laws. Your decision to seek assistance will not be used in connection with any academic determination or as a basis for disciplinary proceedings.

Policies

UCLA has been designated drug free, and only under certain conditions is alcohol consumption permitted (none is permitted at athletic events). In keeping with its educational mission, the University assumes the responsibility to better inform the UCLA community about alcohol and substance abuse.

The sale, manufacture, distribution, or possession of any controlled substance without a prescription is illegal under both state and federal laws. Such laws are strictly enforced by the UCLA Police Department. Student violators are subject to University disciplinary action, criminal prosecution, fine, and imprisonment.

The sale, consumption, and distribution of alcohol on the UCLA campus is restricted by the UCLA alcohol policy and California State Law.

Organizations or groups violating alcohol or substance policies or laws may be subject to sanctions by the University.

Residential Housing

UCLA is the size of a small city and provides residential housing to approximately 18,000 students. Housing facilities range from apartments designed for students with children to multi-student apartment complexes to high-rise student residence halls. The UCLA Police Department and student housing staff work hand in hand to create a safe and comfortable living and learning environment.

Campuswide security and safety programs for residents are held throughout the year to increase crime potential awareness and improve campus safety. To keep residents immediately informed of major crime or threats to the campus, *Crime Alert Bulletins* are posted in residential areas by the housing staff. However, residents must take an active role to ensure their own safety by exercising simple common-sense crime prevention techniques. Because the campus is open 24 hours a day, visitation to residence halls and apartments is not restricted. All residence halls have 24-hour access control on entrance doors, and during the evening hours access control monitors are stationed at each entrance. Police officers and CSOs are also assigned to the residence halls.

UCLA-affiliated organizations that maintain off-campus facilities come under the jurisdiction of their local police department. The UCLA Police Department does not compile statistical data on criminal activity that occurs in such facilities, including off-campus housing facilities *not operated by the University*. Information related to specific locations should be requested from the law enforcement agency with proper jurisdiction over those areas.

Safety Tips

The nature of the studies and research done at UCLA requires many of the campus buildings to be open 24 hours. Because the campus is so large and adjacent to the greater Los Angeles community, individuals with criminal intent find it easy to access the University grounds. Regardless of the time of day or night and no matter where you are on campus, be alert and aware of your surroundings and exercise good commonsense safety precautions. If you park on campus, remember to lock your vehicle and consider investing in a steering wheel locking device and/or alarm. Take advantage of all of the safety services provided by the University and the UCLA Police Department. Use the Campus Escort Service when walking at night. Keep your room and apartment doors locked at all times. Most important, if you need assistance, do not hesitate to contact the UCLA Police Department.

Endowed Chairs

Although UCLA is a public institution, private gifts are increasingly important in maintaining the quality of the University's three missions of teaching, research, and community service. Among the principal forms of private support are endowed professorships or "chairs," which support the educational and research activities of distinguished members of the faculty.

As this catalog goes to press, UCLA has 105 endowed chairs which have been approved by The Regents of the University of California, as follows. (* Asterisks indicate new chairs which have been approved by The Regents since publication of the 1991-92 *UCLA General Catalog*.)

College of Letters and Science

Maurice Amado Chair in Sephardic Studies
 Armenian Educational Foundation Chair in Modern Armenian History
 Arthur Andersen and Company Alumni Chair in Business Economics
 Henry J. Bruman Chair in German History
 Ralph Bunche Chair in International Studies
 James S. Coleman Chair in International Development Studies
 Courtaulds Chair in Chemistry
 Mr. and Mrs. C.N. Flint Professorship of Philosophy
 Gloria and Paul Griffin Chair in Philosophy
 Armand Hammer Chair in Leonardo Studies
 Marvin Hoffenberg Chair in American Politics and Public Policy
 Endowed Chair in Modern European History
 Franklin D. Murphy Chair in Italian Renaissance Studies
 Narekatsi Chair in Armenian Studies
 1939 Club Chair
 President's Chair in Developmental Immunology
 Hans Reichenbach Chair in Philosophy of Science
 David S. Saxon Presidential Chair in Physics
 Louis B. Slichter Chair in Geophysics and Planetary Physics
 Charles Speroni Chair in Italian Literature and Culture
 UCLA Alumni and Friends of Japanese Ancestry Chair in Japanese American Studies
 UCLA Foundation Chair
 Saul Winstein Chair in Organic Chemistry

School of the Arts

 California Chair in Real Estate and Land Economics
 Edward W. Carter Chair in Business Administration
 James A. Collins Chair in Management
 Warren C. Corder Chair in Money and Financial Markets
 Ernst and Young Chair in Accounting
 Henry Ford II Chair in International Management
 Goldyne and Irwin Hearsh Chair in Money and Banking
 IBM Chair in Computers and Information Systems
 Harry and Elsa Kunin Chair in Business and Society
 William E. Leonhard Chair in Management
 Chauncey J. Medberry Chair in Management
 Paine Chair in Management
 Times Mirror Chair in Management Strategy and Policy

School of Social Welfare

Marjorie Crump Chair in Social Welfare

School of Medicine

William S. Adams, M.D., Chair in Medicine
 Louis D. Beaumont Chair in Surgery
 Bowyer Professorship of Medical Oncology
 Judson Braun Chair in Biological Psychiatry
 Joseph Campbell Chair in Child Psychiatry
 *Iris Cantor Chair in Breast Imaging
 Edward W. Carter Chair in Internal Medicine
 Castera Chair in Cardiology
 Tony Coelho Chair in Neurology
 Crump Chair in Medical Engineering
 M. Philip Davis Chair in Microbiology and Immunology
 Distinguished Professor in Medicine Chair
 *Dumont-UCLA Chair in Transplantation Surgery
 Max Factor Family Foundation Chair in Nephrology
 Charles Kenneth Feldman Chair in Ophthalmology
 Dolly Green Chair in Ophthalmology
 Maud Cady Guthman Chair in Cardiology
 Chizuko Kawata Chair in Cardiology
 *George F. Kneller Chair in Family Medicine
 *Grace and Walter Lantz Chair in Ophthalmology
 Eleanor I. Leslie Chair in Neuroscience
 William P. Longmire, Jr., Chair in Surgery
 Della Martin Chair in Psychiatry
 James H. Nicholson Chair in Pediatric Cardiology
 Samuel J. Pearlman, M.D., and Della Z. Pearlman Chair in Head and Neck Surgery
 Thomas P. and Katherine K. Pike Chair in Alcohol Studies
 *Elizabeth R. and Thomas E. Plott Chair in Gerontology
 *Leo G. Rigler Chair in Radiological Sciences
 Augustus S. Rose Chair in Neurology
 Jennifer Jones Simon Chair in Biophysics
 Norman F. Sprague Chair in Molecular Oncology
 *Frances and Ray Stark Chair in Ophthalmology
 *Francis Stark Chair in Neurology
 Jules Stein Chair in Ophthalmology
 W. Eugene Stern Chair in Neurosurgery
 Ruth and Raymond Stotter Chair in Neurosurgery
 Dorothy and Leonard Straus Chair in Gastroenterology
 Streisand Chair in Cardiology
 Leon J. Tiber, M.D., and David S. Alpert, M.D., Chair in Medicine
 *Richard D. and Ruth P. Walter Chair in Neurology
 Wasserman Professorship of Ophthalmology

School of Public Health

Fred H. Bixby Chair in Population Policy
 Fred W. and Pamela K. Wasserman Chair in Health Services

How to Reach UCLA

By Automobile:
 San Diego Freeway northbound; exit Wilshire Boulevard toward Westwood; left on Westwood Boulevard.
 San Diego Freeway southbound; exit Sunset Boulevard; left on Sunset Boulevard; right on Westwood Plaza.

By Bus:
 Schedule information is available by calling the following numbers:
 Culver City Municipal Bus Line:
 (310) 202-5731 or 559-8310
 Southern California Rapid Transit District:
 (213) 626-4455
 Santa Monica Municipal Bus Line:
 (310) 451-5445
