175. Introduction to Traditional Korean Thought. (4) Lecture, three hours; discussion, one hour; outside study, eight hours. General survey of Korean thought from the earliest records to the 20th century, including shamanism, Taoism, Buddhism, Christianity, and neo-Confucianism. Korean traditions and those found in India, China, Japan, and the West.

176. Introduction to Korean Confucian Texts. (4) Lecture, three hours. Requisite: course 100C. Reading in Koryo and Choson texts on politics, society, and culture. Coverage varies. Texts may be read in either Sino-Korean or literary Chinese. May be repeated with consent of instructor.

177. Introduction to Modern Korean Thought. (4) Lecture, two hours; discussion, one hour; outside study, nine hours. Requisite: course 50. Survey of Korean thought in the 20th century, including religious thought, political thought, feminism, nationalism, and economic thinking and practice.

180A-180B-180C. Cultural History of Korea. (4) Lecture, three hours; discussion, one hour. Requisite: course 50. Examination of evolution of Korean culture and society within context of political and institutional industry. Consideration of both higher and popular culture. **180A.** Through 1259; **180B.** 1260 through 1876; **180C.** Since 1876.

M183. Korean Folklore. (4) (Same as Folklore M183.) Lecture, three hours. Survey of Korean folklore and its perspectives and methods — oral literature, performing folk arts, social folk custom, and material culture. P/NP or letter grading.

187. Popular and Folk Religion in Korea. (4) Lecture, three hours; outside study, nine hours. Introduction to history, forms, and scholarship concerning folk religion in Korea. Exploration of forms of popular and folk religion in Korea, including shamanism, ancestor worship, and contemporary religions. Consideration of fortune-telling, geomancy, and spirit belief. P/NP (undergraduates), S/U (graduates), or letter grading.

197A. Seminar: Traditional Korea. (4) Seminar, three hours; outside study, nine hours. Selected issues of interpretation in Korean history from earliest times through the mid-19th century. Coverage varies from term to term and includes such topics as state formation, international relations, or "sprouts of capitalism" thesis.

197B. Seminar: Contemporary Korean Society and Culture. (4) Seminar, three hours; outside study, nine hours. Requisite: course 177 or 180C. Selected topics in modern Korean history.

Graduate Courses

200. Bibliography and Methods of Research in Korean. (4) Lecture, three hours. Preparation: reading knowledge of Korean and Chinese. Designed for graduate students. Review of basic Western and modern Korean reference books, with concentration on Korean literature and language, and survey of basic bibliographical material. In addition, introduction to most important primary sources in student's field of specialization.

C205A-C205B-C205C. Reading Korean Academic Texts. (4-4-4) Lecture, three hours; outside study, nine hours. Requisite: course 101C. Intended to improve reading skills for students who have studied Korean to an advanced level, with coverage in Korean of materials on modern Korean history, culture, and society. Each course may be taken independently for credit. Concurrently scheduled with courses C105A-C105B-C105C. S/U or letter grading.

210. Thought and Society in Korea. (4) Readings/discussion, three hours. Preparation: reading knowledge of Korean. Designed for graduate students. Readings in Korean intellectual history and its social, political, and economic background from the rise of neo-Confucianism in the 14th century to the 20th century.

211. Thought and Society in Modern Korea. (4) Discussion, three hours; outside study, nine hours. Preparation: reading knowledge of Korean. Designed for graduate students. Critical examination of list of books central to field of modern Korean history, including such topics as Korean capitalism and communism, intellectual history, social movements, and the Korean War.

215. Korean Literary History. (4) Seminar, three hours; outside study, nine hours. Designed for graduate students. Critical history of development of traditional Korean literature, with emphasis on canon and ideology, literary systems, hierarchy of genres, rise of literary kinds and forms, periodization, and critical issues in literary history. One particular area of focus to be a nationalist canon that governs literary studies in Korea and the West. Letter grading.

C220. Structure of Korean. (4) Lecture, three hours. Preparation: two years of Korean, or one year of Korean and some knowledge of linguistics. Linguistic analysis of Korean for those who concentrate on Korean language. Discussion of major syntactic, semantic, and pragmatic characteristics of Korean in light of linguistic universals. Concurrently scheduled with course CM120.

CM227. Contrastive Analysis of Japanese and Korean. (4) (Same as Japanese CM227.) Lecture, three hours. Preparation: two years of Japanese or Korean, one introductory linguistics course. Critical reading and discussion of selected current research papers in syntax, pragmatics, discourse, and sociolinguistics from perspective of contrastive study of Japanese and Korean. May be repeated for credit with consent of instructor. Concurrently scheduled with course CM127.

230A-230B. Seminars: Literary Translation from Korean. (4) Seminar, three hours. Preparation: reading knowledge of Korean. In consultation with instructor, students select works to be translated. Devoted to skill of producing accurate and readable translations, with emphasis on problems and techniques unique to poetry and prose. At end of term, students expected to produce publishable translations. May be repeated once with consent of instructor. In Progress grading.

235A-235B. Seminars: Topics in Modern Korean Literature. (4) Seminar, three hours. Preparation: at least five years of Korean. Recommended: reading knowledge of Chinese or Japanese. Limited to graduate students. Study of a selected period, movement, theme, or author of 20th-century Korean literature, with critical review of secondary works in Western and Korean languages. May be repeated for credit with consent of instructor. In Progress grading.

240A-240B. Seminars: Classical Korean Fiction. (4-4) Seminar, three hours. Preparation: reading knowledge of Korean. Formal and thematic study of tales of the marvelous, romance, satirical stories, diaries, and *p'ansori* fiction. Status of fiction in society and culture, fiction as imaginative representation of the writer's relationship to real conditions of existence. Latest Western theory of narratology applied in analysis. In Progress grading.

245A-245B. Seminars: Classical Korean Poetry. (4-4) Seminar, three hours. Preparation: reading knowledge of Korean. Critical reading and analysis of classical Korean poetry, including discussion of literary and cultural contexts of poetic genres. Nature of codes, conventions that make meaning possible. Review of latest Korean scholarship. May be repeated once with consent of instructor. In Progress grading.

265A-265B. Seminars: Korean Buddhist Texts. (4-4) Seminar, three hours. Selected topics in Korean Buddhist texts. Coverage varies. In Progress grading.

295A-295B. Seminars: Topics in Traditional Korean Cultural History. (4-4) Seminar, three hours; outside study, nine hours. Preparation: reading knowledge of Korean or literary Chinese. Discussion and research on major topics in Korean cultural history, such as Confucianization of Korean society, Practical Learning movement of late Choson dynasty, or Korean reactions to the West in Eastern learning and enlightenment movements of the 19th century. May be repeated for credit. In Progress grading.

296A-296B. Seminars: Topics in Modern Korean Cultural History. (4-4) Seminar, three hours; outside study, nine hours. Preparation: reading knowledge of Korean. Designed for graduate students. Graduate research seminar on selected topics in modern Korean history. In Progress grading.

Scope and Objectives

The East Asian Studies major is an area studies program of the East Asian region which is divided into three areas of concentration — China, Japan, and Korea. It offers a social science approach, combined with language study and work in the humanities.

Undergraduate Study

East Asian Studies B.A.

Two years of language and a total of 13 upper division courses, including courses in the social sciences, culture, and language, must be taken for graduation. Students must take a minimum of nine courses in the area of their choice. The remainder must be taken in another area of concentration within the major. No more than eight courses may be from a sin-

gle department. Students should select the courses from the lists below. Courses on East Asia not listed below, offered only on a temporary basis, may also be applied toward the major. At the discretion of the adviser, students may be advised to take theory classes applicable to the major requirements. Courses marked with an asterisk are those on East Asia in general.

China Concentration

Preparation for the Major

Required: Chinese 1, 2, 3, 4, 5, 6, History 11A-11B, Sociology 1.

The Major

Required: A minimum of nine courses selected from Art History C115B, C115D, C115E, C115F, Chinese 150A, 150B, 151, 160, 175, 190, and up to three upper division language courses or equivalent, East Asian Languages and Cultures 161, 162, Economics *190, *191, *192, Ethnomusicology C156A, 156B, 157, 158A, 158B, 158C, Geography 186, History 182A, 182B, 183A, 183B, 184, Political Science 135, 159A, 159B, Sociology *188, and a 199 special studies course in Chinese or in any social sciences or humanities department.

Japan Concentration

Preparation for the Major

Required: History 9C, Japanese 1, 2, 3, 4, 5, 6, Sociology 1.

The Major

Required: A minimum of nine courses selected from Anthropology 175S, Art History 114C, C115C, East Asian Languages and Cultures 161, 162, Economics *190, *191, *192, Ethnomusicology 160A, 160B, History 185, 186, 187A, 187B, 187C, Japanese 60, 150, 151, C160, 175, CM182, C195, and up to three upper division language courses or equivalent, Political Science 136, 160, Sociology *188, 189, Theater 102A, and a 199 special studies course in Japanese or in any social sciences or humanities department.

Korea Concentration

Preparation for the Major

Required: Korean 1, 2, 3, 4, 5, 6, 50, Sociology 1.

The Major

Required: A minimum of nine courses selected from Anthropology 175V, Art History 114E, East Asian Languages and Cultures 161, 162, Economics *190, *191, *192, Korean 150, 151, 160, 175, 180A, 180B, 180C, and three upper division language courses or equivalent, Sociology *188, Theater *102E, and a 199 special studies course in Korean or in any social sciences or humanities department.

Aaron Yelowitz, Ph.D.

Scope and Objectives

The economics undergraduate program is designed for students who wish to gain a thor-

ough understanding of both empirical and theoretical approaches to economics. Emphasis is on economic principles applied to resolving interpersonal conflicts of interest and coordinating productive activity in a world of scarce resources. Because students must gain a thorough theoretical and technical competence before extensive study of the applied specializations in the discipline, the analytic core of the major in Economics is closely structured. Some courses are appropriate for nonmajors, but the curriculum is most suitable for students who wish to make the study of economics the primary focus in their undergraduate education.

The undergraduate major provides analytical training in reference to socioeconomic phenomena and provides an excellent theoretical background for those pursuing graduate education in economics, law, management, public administration, journalism, social welfare, architecture and urban planning, and education.

The graduate program is designed primarily for students pursuing the Ph.D. degree. The doctorate is awarded to those students who have achieved the level of study and training required for a professional economist. The degree recognizes students' ability to make scholarly contributions in their fields of specialization and to undertake advanced research in those areas.

Undergraduate Study

Economics B.A.

Preeconomics Major

While students are completing the lower division preparation courses for the major, they may be classified as Preeconomics majors and are eligible to apply for the major once they have completed the preparation courses and at least one 12-unit term in residence at UCLA. Application for the major should be filed at the undergraduate counselor's office in 2253 Bunche Hall by the time students attain 135 quarter units.

Preparation for the Major

Required: Economics 1, 2, 11, M40 (or Statistics M11); English 4 or English Composition 100 or 129B; Mathematics 31A, and 31B or 31E. All courses must be taken for a letter grade. A 2.0 (C) grade is required in each pre-major course. To enter the major, students must have a minimum 2.5 grade-point average in the economics and mathematics preparation courses and a GPA of at least 2.0 in any upper division courses taken for the major before applying.

Repetition of more than one preparation course or of any preparation course more than once results in automatic denial of admission to the major. Transfer credit for any of the above is subject to department approval; consult the undergraduate counselor before enrolling in any courses for the major.

The Major

Required: Nine upper division courses in economics which must include Economics 101, 102, and one course from at least three different fields in economics selected from the major fields list below. All courses must be taken for a letter grade. Economics 100, 110, and 190 may not be included among the nine upper division courses. One or two of the nine courses may be selected from Management 120A, 120B, 130A, 130B, and/or 133.

To graduate, students must have at least a 2.0 grade-point average in their upper division major courses, with grades of C– or better in Economics 101 and 102. All upper division courses for the major must be taken for a letter grade. Transfer credit is subject to department approval; consult the undergraduate counselor before enrolling in any courses for the major.

Major Fields

Economic theory (courses 101, 102, 103A–103Z, 104, 105AH, 105BH, 107); economic development (courses 111, 112); regional economics (course 120); public finance (courses 130, 133, M135, M136); statistics, mathematical economics, and econometrics (courses 142, 143, 144, 145, 146, 147A, 147B, 148); labor economics (courses 150, 151, 152); money and banking (courses 160, 161); government and industry (courses 170, 171, 172, 173, 174, 175, 176, 177); economic institutions (courses 180, 181A, 181B, 182, 183, 184); international economics (courses 191, 192).

Economics B.A./Applied Economics M.S. Dual Program

An intercampus dual degree program has been established between UCLA and UC Santa Cruz which allows students to obtain a B.A. in Economics from UCLA and an M.S. in Applied Economics from UC Santa Cruz in five years. Consult the economics undergraduate counselor for additional information.

Business Economics B.A.

The B.A. program offers a major for students seeking a business orientation in their study of economics. It does not replicate the traditional undergraduate business school curriculum. Instead, it offers a more tightly focused curriculum that is guided by the rigorous logic and integrative perspective of economics. It is designed to prepare students for graduate education in business, economics, and law. The program requires students to include specific courses offered by the department and the John E. Anderson Graduate School of Management (see The Major).

Admission

Enrollment in the program is limited. Applications for admission are handled exclusively by the Department of Economics. To apply, students must have completed at least 72 quarter units (but no more than 135 quarter units), one

12-unit term in residence in regular session at UCLA, and all courses listed under Preparation for the Major. In addition, they must (1) be enrolled in UCLA regular session at the time of application, (2) have a 2.0 (C) minimum grade in each preparation course, (3) have a 3.0 (B) overall average in all preparation courses except English, and (4) have a 2.0 (C) grade-point average in their upper division courses taken for the major before applying (Economics 101 applies on the major preparation grade-point average).

Note: The requisite grade-point averages plus completion of the preparation for the major courses do not guarantee admission to the program. Admission is on a competitive basis, using the above qualifications as minimum standards for consideration. Students must petition to enter the major at the undergraduate counselor's office in 2250B or 2253 Bunche Hall.

Prebusiness Economics Major

While students are completing the preparation courses for the major, they may be classified as Prebusiness Economics majors. (Transfer students who wish to enter UCLA as Prebusiness Economics majors must meet the admission screening requirements. For information, contact the Office of Undergraduate Admissions and Relations with Schools.)

Preparation for the Major

Required: Economics 1, 2, 11, M40 (or Statistics M11), 101; English 4 or English Composition 100 or 129B; Management 1A-1B; Mathematics 31A, and 31B or 31E. All courses must be taken for a letter grade.

Repetition of more than one preparation course or of any preparation course more than once results in automatic denial of admission to the major. Transfer credit for any of the above is subject to department approval.

The Major

Required: Economics 102 and at least two courses from 104, 173, 174, 177, 184; four other upper division courses in economics in at least two different fields (no more than two may be taken in the government and industry field); four upper division courses from Management 108, 120A, 120B, 122, 123, 124, 127A, 130A, 130B, 133, 140, 175. Transfer credit for any of the major courses is subject to department approval. Consult the undergraduate counselor before enrolling in any courses for the major.

All upper division major courses must be taken for a letter grade. To graduate, students must have at least a 2.0 grade-point average in their upper division major courses, with at least a C– in each course. (Economics 101 applies on the preparation for the major, therefore requiring a minimum grade of C.)

Economics/International Area Studies B.A.

The B.A. program is for students who wish to attain specialized knowledge of a particular geographical area in addition to the economics

analysis provided by the major. It should be useful to those who plan careers in international business or government service. The department encourages participation in the University of California Education Abroad Program or other recognized international study programs. Experience in foreign firms or institutions would be an advantage but yields no academic unit credit toward the major.

Admission

Qualified students must apply for the major through the undergraduate counselor in 2253 Bunche Hall. To apply, students must have completed at least 72 quarter units (but no more than 135 units), one 12-unit term in residence in regular session at UCLA, and all courses listed under Preparation for the Major (except for the second year of foreign language). In addition, they must be enrolled in UCLA regular session at the time of application. All courses must be completed for a letter grade. A minimum 2.0 (C) grade is required in each premajor course, with a combined 3.0 GPA in the economics and mathematics courses. Students must also have a 2.0 (C) grade-point average in their upper division courses taken for the major before applying. Language course preparation need not be completed at the time of admission but must be completed before preparing the research paper required in Economics 193. The program as a whole must be approved by the Economics Department counselor before students are admitted to the major.

Preeconomics/International Area Studies Major

While students are completing the preparation courses for the major, they may be classified as Preeconomics/International Area Studies majors.

Preparation for the Major

Required: Economics 1, 2, 11, M40 (or Statistics M11), 101, 102; Mathematics 31A, and 31B or 31E. Students also must complete at least the first year (or equivalent) of the two required years of a modern foreign language which is spoken in the geographical area of their major concentration.

Repetition of more than one preparation course or of any preparation course more than once results in automatic denial of admission to the major. Transfer credit for any of the above is subject to department approval; consult the undergraduate counselor before enrolling in any courses for the major.

The Major

Required: A total of 12 upper division courses selected from economics and the approved noneconomics courses listed below for the concentration. Eight economics courses are required, including Economics 191, 192, 193, and five economics courses from at least two different fields (selected from the major fields listed under the Economics major). Economics 101 and 102 (which are required for the premajor) cannot be used to satisfy this require-

ment. The four remaining upper division courses are social sciences courses related to the concentration and must be chosen from the approved courses listed below. Students are required to include selections from at least two different departments. Economics 193 must be completed in the last year before graduation and includes the preparation of a research paper on the economy of the country or region of the concentration. In addition, students must show two-year proficiency (or equivalent) in a modern foreign language related to their concentration. The noneconomics courses, the research paper, and the language learned must show consistency of purpose.

One or two courses from Management 120A, 120B, 130A, 130B, 133 may be substituted for one or two of the economics electives.

To graduate in the major, students must achieve a minimum 2.0 grade-point average for both economics and noneconomics courses, with a grade of C– or better in each course.

Major Concentrations

When students declare the major, they must also select a concentration that includes a geographical area where the foreign language they have taken is spoken. They must complete four of the approved noneconomics courses listed, including courses from at least two different departments. Students may not use courses that are not on their concentration list unless they have petitioned and received approval in advance. Consult the undergraduate counselor in 2253 Bunche Hall about the petition process.

East Asia

Languages: Chinese, Japanese, Korean

Approved Noneconomics Courses: Anthropology 175S, 175T, Chinese 175, Geography 186, History 182A, 182B, 183A, 183B, 184, 185, 187A, 187B, 187C, 190A, 190B, Japanese 175, Korean 175, 180A, 180B, 180C, Political Science 135, 136, 159A, 159B, 160, Sociology M153, 188, 189

Europe

Languages: French, German, Italian, Portuguese, Spanish

Approved Noneconomics Courses: French 109, 130B, 132, Geography 183, German 100A, 100B, 100C, History 117A, 124A, 124B, 125A, 125C through 125F, 126A through 126F, 128A, 128B, 128C, 129A, 129B, 129C, 130, 132A, 132B, 133A, 133B, 134A, 134B, 141A, 141B, 141C, 142A, 142B, Italian 102B, Political Science 127A, 152A, 152B, 152C, 153A, 153B, 155, 156B

Latin America

Languages: Portuguese, Spanish

Approved Noneconomics Courses: Geography 181, 182A, 182B, History 165A, 166, 167A through 167D, 168, 170A, 171, 172, 173, 174, Political Science 130, 131, 154A, 154B, Sociology 186

Middle East

Languages: Arabic, Hebrew, Persian, Turkish

Approved Noneconomics Courses: Geography 187, History 106C, 107B, 108A, 110B, 111B, Jewish Studies 142, Political Science 132A, 157, Sociology 187, Turkic Languages 180

Former Soviet Union

Languages: Armenian, Russian

Approved Noneconomics Courses: Geography 184, History 112A, 112B, 112C, 113, 124A, 124B, 131A through 131D, Political Science 128A, 128B, 156A, Turkic Languages 180

Individual Concentration

Language, geographical area, and noneconomics courses to be approved in advance by the economics/international area studies faculty adviser

Mathematics/Economics B.S.

See the Mathematics/Economics listing for a description of the major.

Honors Program

The departmental honors program is open to majors in Economics, Business Economics, and Economics/International Area Studies who have a cumulative grade-point average of at least 3.5 in all courses taken at UCLA prior to application.

To qualify for departmental honors at graduation, students must (1) select at least seven of the required upper division economics courses from the approved list designated for departmental honors, (2) complete a senior thesis acceptable to the departmental honors committee, (3) present the thesis in Economics 195H, and (4) complete the major requirements with at least a 3.5 grade-point average in the economics courses. Highest honors are awarded at the discretion of the departmental honors committee based on grade-point average and quality of the senior thesis.

Economics 195H and 199, the courses used for thesis preparation, may be counted as upper division courses toward the field in which the thesis is written (for purposes of satisfying the requirements for the major). Further information and application forms are available from the undergraduate counselor in 2253 Bunche Hall.

Computing Specialization

Majors in Economics, Business Economics, and Economics/International Area Studies may select a specialization in Computing by (1) satisfying all the requirements for a bachelor's degree in the specified major, (2) completing Program in Computing 10A, 10B, Mathematics 61, and two courses from Program in Computing 10C, 15, 30, 60, and (3) completing at least two courses from Economics 104, 143, 144, 145, 146, 147A, 147B, 199, with the additional provision that the courses taken must make substantial use of computers. A grade of C- or better is required in each course, with a combined grade-point average of at least 2.0. Stu-

dents graduate with a bachelor's degree in their major and a specialization in Computing.

Graduate Study

The following constitutes introductory information regarding graduate degree programs and is based on the 1998-99 edition of *Program Requirements for UCLA Graduate Degrees*. Complete, annual editions of *Program Requirements* are available (listed under "Publications") on the Graduate Division website at <http://www.gdnet.ucla.edu>. Students are subject to the degree requirements as published in *Program Requirements* for the year in which they matriculate.

Master's Degree

Admission

The department does not accept students whose sole objective is the Master of Arts degree in Economics.

Areas of Study

Economic theory; econometrics; information and uncertainty; mathematical economics; monetary theory; economic history; public finance; labor economics; industrial organization; international economics; and development economics.

Course Requirements

The department requires nine upper division and graduate-level courses in economics completed while in graduate status at UCLA for the Master of Arts degree in Economics. At least seven of the nine courses must be graduate-level courses in the Economics Department, one of which must be either Economics 207 or 241 or 242. Each course must be completed with a grade of B or better.

With prior approval of the vice chair for graduate affairs, students may offer a maximum of two courses from outside the department. However, these may not substitute for the seven graduate-level economics courses required.

With the prior approval of the vice chair for graduate affairs, four units of Economics 596 may be applied toward the total course requirement and the minimum graduate course requirement.

Comprehensive Examination Plan

In addition to the course requirements, candidates for the M.A. degree must satisfactorily complete a written comprehensive examination requirement that involves passing two examinations. The requirement may be fulfilled by one of the following:

- (1) Master's-level (M) passes in comprehensive examinations for two of the three first-year sequences and a grade of B or better in all three courses in the remaining sequence.
- (2) Master's-level (M) passes in the comprehensive examination for one of the three first-year sequences and in one doctoral field examination.

(3) Master's-level (M) passes in two doctoral field examinations.

Examinations are graded H (Ph.D. honors pass), P (Ph.D. pass), M (M.A. pass), or F (fail).

Thesis Plan

None.

Doctoral Degree

Admission

Applicants to the program leading to the Ph.D. degree in Economics must satisfy the University minimum requirements. It is strongly recommended that applicants have undergraduate training in economics, mathematics, and statistics. Applicants must also submit a full record of prior university experience, three letters of reference, and scores on the Graduate Record Examination (GRE) General Test. International applicants must also submit scores for the Test of English as a Foreign Language (TOEFL).

The department admits students only for the Fall Quarter of each academic year. The deadline for submitting the *Application for Graduate Admission* is December 15.

Major Fields or Subdisciplines

Economic theory; econometrics; information and uncertainty; mathematical economics; monetary theory; economic history; public finance; labor economics; industrial organization; international economics; and development economics.

Course Requirements

In order that the program can be tailored to an individual student's background and interests, there are no formal course requirements in the Ph.D. program. In their first year however, students normally enroll in the standard first-year graduate core sequences in microeconomic theory (Economics 201A-201B-201C), macroeconomic theory (Economics 202A-202B-202C), and quantitative methods (Economics 203A, 203B, 203C).

Written and Oral Qualifying Examinations

Written Examinations. All Ph.D. qualifying examinations are intended to determine competency in the overall field. While the courses offered are intended to prepare students for the field examinations, and while the professors of the courses are normally also the examiners, the qualifying examination is not restricted solely to the material explicitly presented in course lectures or assigned exercises. Students are assisted in acquiring knowledge of the overall field by course reading lists that include recommended supplementary and complementary readings.

The department offers written qualifying examinations in the areas listed below (with preparatory courses shown in parentheses):

Core Sequences. Microeconomic theory (Economics 201A-201B-201C); macroeconomic

theory (Economics 202A-202B-202C); quantitative methods (Economics 203A, 203B, 203C).

Elective Doctoral Fields. Econometrics (Economics 231A, 231B, M232A, 232B); information and uncertainty (Economics 211A-211B, 212A); mathematical economics (Economics 213A-213B, 214A); monetary economics (221A-221B); economic history (Economics 241, 242); public finance (Economics 251A, 251B, 252); labor economics (Economics 261A-261B); industrial organization (Economics 271A-271B, 271C); international economics (Economics 281A, 281B, 281C); development economics (Economics 286A, 286B, 287A, 287B).

Examinations are graded H (Ph.D. honors pass), P (Ph.D. pass), M (M.A. pass), or F (fail).

Students must pass (with a P or better) the qualifying examinations for two of the standard first-year core sequences — microeconomic theory, macroeconomic theory, or quantitative methods — by the end of Spring Quarter of their second year.

Students must satisfy an additional requirement in the remaining first-year core sequence that may be met by (1) earning a Ph.D. pass on the corresponding qualifying examination or (2) earning a grade of B or better in all three courses.

Students must pass (with a P or better) qualifying examinations in three doctoral elective fields (or two fields plus breadth option), usually by the end of the second year. The requirement must be satisfied by the end of the Spring Quarter of their third year.

Written qualifying examinations can be repeated, but students may sit for no more than seven in total.

Qualifying examinations in all core sequences are offered twice a year (September and June). Doctoral field qualifying examinations are offered at least once a year.

By employing the breadth option, students may substitute a field by coursework, defined as three graduate-level courses for one of the three elective fields. Courses used to satisfy the requirement cannot include any courses used in the core sequence requirements nor can they include courses preparatory for the written qualifying examinations which students are using for field requirements. The breadth option must include Economics 207 or 241 or 242. Students may apply courses at the graduate (200) level outside the Economics Department on written preapproval by the vice chair for graduate affairs. Only courses in which a minimum grade of B is earned may be used to satisfy this requirement.

Paper Requirement. A written paper must be completed by the end of the student's third year. The paper is to be read and evaluated by a member of the Economics Department faculty, who must certify in writing that it satisfied this requirement. The paper could be based on or be an extension of an optional or required

paper for a course. Alternatively, the paper could be one presented in a workshop or an outgrowth of a research assistantship or independent study. Ideally, the paper would be related to the student's doctoral dissertation. The materials of the paper may be used as the basis for presentation in a departmental workshop, as well as the basis for the dissertation.

Before advancing to the University Oral Qualifying Examination, students are required to present a paper in a departmental workshop. It is recommended that this be completed by the end of the third year.

Oral Qualifying Examination. The University Oral Qualifying Examination, administered by the student's doctoral committee, is scheduled after successful completion of all written qualifying examinations, course requirements, the written paper and workshop requirements, and the submission of a written dissertation proposal. The proposal should be made available to the committee members at least two weeks prior to the date of the examination. The examination focuses on, but is not be limited to, the dissertation proposal.

Normally, students should attempt the oral examination by the end of the Fall Quarter of the fourth year. The examination must be passed by the end of the Spring Quarter of the fifth year. In case of failure, students may repeat the oral qualifying examination once.

Economics

Lower Division Courses

1. Principles of Economics. (4) Lecture, three hours; discussion, one hour. Not open to students with credit for course 100. Introduction to principles of economic analysis, economic institutions, and issues of economic policy. Emphasis on allocation of resources and distribution of income through the price system.

2. Principles of Economics. (4) Lecture, three hours; discussion, one hour. Not open to students with credit for course 100. Introduction to principles of economic analysis, economic institutions, and issues of economic policy. Emphasis on aggregative economics, including national income, monetary and fiscal policy, and international trade.

5. Introductory Economics. (4) Lecture, three hours. Not open to students with credit for course 1, 2, or 100. Principles of economics as tools of analysis. Presentation of a set of concepts with which to analyze a wide range of social problems that economic theory illuminates. May not be used to fulfill entrance requirements for any Economics Department major.

11. Microeconomic Theory. (4) Lecture, three hours; discussion, one hour. Enforced requisites: courses 1, 2, one course from Mathematics 31B, 31BH, 31E, 32A. Laws of demand, supply, returns, and costs; price and output determination in different market situations.

M40. Introduction to Statistical Methods for Business and Economics. (4) (Formerly numbered 40.) (Same as Statistics M11.) Lecture, three hours; discussion, one hour. Not open to students with credit for Mathematics M170A, 170B, 171, Statistics 10, M100A, or 100B. Elements of statistical analysis. Presentation and interpretation of data; descriptive statistics; theory of probability and basic sampling distributions; statistical inference, including principles of estimation and tests of hypotheses; introduction to regression and correlation. P/NP or letter grading.

41. Theory and Practice of Econometrics. (4) (Formerly numbered 103C.) Lecture, three hours; discussion, one hour. Requisite: course M40 or Statistics 10. Introduction to theory and practice of econometrics to provide sufficient knowledge of statistical and econometric theory to make one an effective consumer and producer of empirical research in economics. Emphasis on intuitive understanding rather than rigorous argument and on applications. P/NP or letter grading.

Upper Division Courses

100. Economic Principles and Problems. (4) Lecture, three hours. Designed for juniors/seniors. Not open to students with credit for course 1, 2, or 5. Principles of economics with application to current economic problems. May not be used to fulfill entrance requirements for any Economics Department major.

101. Microeconomic Theory. (4) Lecture, three hours; discussion, one hour. Requisite: course 11. Theory of factor pricing and income distribution; general equilibrium; implications of pricing process for optimum allocation of resources; interest and capital.

102. Macroeconomic Theory. (4) Lecture, three hours. Requisite: course 101. Theory of income, employment, and price level. Analysis of secular growth and business fluctuations; introduction to monetary and fiscal policy.

103A-103Z. Upper Division Research Seminars: Applications of Economic Theory. (4) Seminar, three hours. Requisite: course 11. Limited enrollment seminars in which students usually write a research paper on a topic selected in consultation with instructor.

M103A. Political and Economic Issues in the Proliferation of Nuclear Weapons. (Same as Political Science M139A.) Lecture, three or four hours; discussion, one hour (optional); outside study, eight or nine hours. Designed for juniors/seniors. Interdisciplinary approach to the problem of nuclear proliferation. Economic aspects of acquisition of nuclear weapons and economic aspects of nuclear energy treating technological, bargaining, and stability issues.

103B. Economics of Energy. Requisite: course 102. Topics include pricing and taxation of exhaustible resources, interactions between energy and the economy, institutions such as OPEC and oil price controls, oil debt and balance of payments, energy conservation, and future technologies.

104. Managerial Economics. (4) Lecture, three hours; discussion, one hour. Requisite: course 11. Enrollment priority to Business Economics majors. Application of economic principles to business decisions. Allocating joint costs. Implicit costs of capacity constraints. Problems in capital budgeting, financing, and pricing. Role of interest rates in business decisions. P/NP or letter grading.

105AH. Topics in Microeconomics (Honors). (4) Lecture, three hours. Requisite: course 101. Designed for departmental honors program students. Introduction to Walrasian and Nash equilibrium. Modeling of selected applied topics such as peak load pricing, pricing of externalities, strategic pricing.

105BH. Topics in Macroeconomics (Honors). (4) Lecture, three hours. Requisite: course 101. Designed for departmental honors program students. Imperfect information-based models of monetary business cycles: theory and evidence. Real business cycle models: role of shocks and interindustrial technology structure in explaining fluctuations. Policy analysis and policy intervention in a world with rational maximizing agents: recent perspectives.

106. Special Topics in Business Economics. (4) Lecture, three hours. Requisite: course 101. Enrollment priority to business economics students. Application of economic analysis to contemporary business. Course may be organized around individual industries or topics of current relevance to business. Alternatively, course may examine problems in major fields of economics (e.g., international, macroeconomics, finance) and their implications for business. May be repeated for credit with topic change.

107. History of Economic Theory. (4) Lecture, three hours. Requisite: course 1 or 100. Survey of economic analysis from Grecian antiquity to the early 20th century, concentrating on the 18th and 19th centuries; special attention to selected writers, including Aristotle, mercantilists, Physiocrats, Hume, Smith, Malthus, Ricardo, Marx, marginalists, and Marshall.

110. Economic Problems of Underdeveloped Countries. (4) Lecture, three hours. Requisite: course 1 or 100. Limited to non-Economics Department majors. Not open for credit to students with credit for course 111 or 112. Survey of major issues of development economics. Economic structure of low-income countries and primary causes for their limited economic growth. Economic goals and policy alternatives open to their leaders. Possible roles of developed countries. May not be applied toward any Economics Department major.

111. Theories of Economic Growth and Development. (4) Lecture, three hours. Requisite: course 11. Growth models, theory of production under constraints, relative factor prices and their impact on choice of technology, investment criteria, role of the market, economic planning in less developed areas.

112. Policies for Economic Development. (4) Lecture, three hours. Requisite: course 102 or 111. Suggested strategies for economic development: inflation, balanced growth, industry vs. agriculture, import substitution, export-oriented expansion, foreign aid, and others. Selected case studies.

120. Introduction to Urban and Regional Economics. (4) Lecture, three hours. Requisite: course 11. Survey of broad range of policy and theoretical issues that are raised when economic analysis is applied in an urban setting. Topics include urbanization and urban growth, housing markets, location decisions of households and firms, transportation, urban labor markets, and local public sector.

130. Public Finance. (4) Lecture, three hours; discussion, one hour. Requisites: courses 11, 101. Role of government in a market economy. Alternative justifications for government intervention. Principles and effects of spending programs (especially social insurance and health), taxation, deficit financing, and federal credit programs. Taxation in an open economy. Properties of public choice mechanisms. P/NP or letter grading.

133. State and Local Finance. (4) Lecture, three hours. Requisites: courses 101, 130. Division of functions and revenues between state and local governments; revenues, expenditures, and indebtedness of these governments. Analyses of state and local tax systems.

134. Environmental Economics. (4) Lecture, three hours. Requisites: courses 11, 101. Application of economic theory to natural and environmental resources problems. Topics include sustainability and natural resource scarcity, steady-state models for renewable resources (land and water, fisheries, forests), externalities and pollution (including use of incentives for pollution control), and nonrenewable resources (minerals). Letter grading.

M135. Economic Models of Public Choice. (4) (Same as Political Science M105.) Lecture, three or four hours; discussion, one hour (optional); outside study, eight or nine hours. Preparation: any lower division political science course. Enforced requisite: course 11. Designed for juniors/seniors. Analysis of methods and consequences of arriving at collective decisions through political mechanisms. Topics include free-rider problem, voting and majority choice, demand revelation, and political bargaining.

M136. Economic Models of Political Conflict and Conflict Resolution. (4) (Same as Political Science M106.) Seminar, three hours; discussion, one hour. Enforced requisite: course 11. Prior political science course desirable but not essential. Designed for juniors/seniors. Biological, cultural, and organizational sources of political conflict. Role of threats, promises, commitments. Models of onset and termination of conflict. Conduct of war: strategy and tactics. P/NP or letter grading.

142. Probabilistic Microeconomics. (4) Lecture, three hours. Requisites: courses 11, 101. Combination of basic probability introduced in course 40 with microeconomic models presented in courses 11 and 101 in order to explain phenomena such as insurance, job search, and stock market behavior. Optimal production and consumption under uncertainty. Review of probability and introduction to alternative measures of risk and risk aversion.

143. Applied Regression Analysis. (4) Lecture, three hours; discussion/computer tutorial, one hour. Requisite: course M40. Not open to students with credit for course 147A or 147B. Review of simple regression; assumptions of classical linear regression model; multiple regression, estimation, and inference; violations of assumptions of classical model (multicollinearity, heteroskedasticity, autocorrelation); autoregressive models, dummy variables. Emphasis on practical experience with regression analysis and interpretation; matrix algebra not required. P/NP or letter grading.

144. Introduction to Mathematical Methods in Economics. (4) Lecture, three hours. Requisite: course 101. Introduction to use of mathematics in economic analysis. Topics include partial differentiation, optimization, integration, and differential and difference equations, with applications to theory of the household and the firm, capital theory, and economic dynamics.

145. Topics in Mathematical Economics. (4) Lecture, three hours. Requisites: courses 101, 144. Possible topics include game theory; competitive equilibrium analysis; examination of market failure and role for market intervention.

146. Linear Models in Economics. (4) Lecture, three hours. Preparation: one linear or matrix algebra course. Not open for credit to students with credit for Mathematics 164 or Electrical Engineering 136. Possible topics include duality theory of linear programming and simplex algorithm, input/output analysis, and two-person zero-sum games.

147A. Introduction to Econometrics. (4) Lecture, three hours; discussion, one hour. Preparation: two calculus courses. Requisites: course 143, or Mathematics M170A and 170B, or Statistics M100A and 100B. Introduction to econometrics, including review of matrix algebra and statistical theory; linear regression model; model specification; data collection; estimation and hypothesis testing; and introduction to simultaneous equations models. Original econometric paper required. P/NP or letter grading.

147B. Applications of Econometrics. (4) Lecture, three hours. Requisite: course 147A. Econometric models and data; forecasting, policy analysis, estimation of simultaneous equations models, applications of econometrics. Major original econometric paper required.

148. Introductory System Theory. (4) Lecture, three hours. Requisites: Mathematics 33A, 33B. Introduction to modeling and analysis of dynamic systems, with emphasis on examples from social and life sciences. Linearity, impulse responses, stability, state variables, algorithms for filtering and control.

150. Wage Theory. (4) Lecture, three hours; discussion, one hour. Requisites: courses 11, 101. Supply and demand for labor. Analysis of government, union, and other constraints on competitive system of wage determination. Wage level and structure. Wages and human capital theory. P/NP or letter grading.

151. Labor, Wages, and Income. (4) Lecture, three hours. Requisites: courses 101, 150. Selected topics in labor theory; income distribution; business cycles and unemployment; investments in human capital and life cycles; migration; human fertility; marriage and divorce, etc.

152. Trade Unions and Professional Associations. (4) Lecture, three hours. Comparative behavior of unions and professional associations; criteria for wage maximization; quantification of gains; analysis of legal framework applying to such organizations.

M158. International Political Economy of Work and Gender. (4) (Same as Women's Studies M123.) Lecture, three hours; outside study, nine hours. Requisite: course 1 or 5 or 100. Analysis of women's economic status in world economy by taking account of interdependencies between household and market activities and between economic systems and legal and political institutions. Introduction of alternative theoretical approaches in social sciences; presentation of empirical evidence.

160. Money and Banking. (4) Lecture, three hours. Requisite: course 102. Principles of money and banking in the U.S.; legal and institutional framework; money supply process; instruments, effects, and practice of monetary policy.

161. Monetary Theory. (4) Lecture, three hours. Requisites: courses 101, 160. Nature of money and monetary exchange; level and term structure of interest rates; level and growth rate of money; transmission of monetary shocks; theory and practice of monetary policy.

170. Monopoly and Competition. (4) Lecture, three hours. Requisite: course 11. Comparison of economic and legal treatments of the competitive process. Monopoly competition, and collusion as economic theory, as antitrust doctrine, and as fact. Source of monopoly. Predatory behavior. Misleading practices in theory and policy. General problem of relationship between private rights of action and competitive entry.

171. Industrial Organization: Theory and Tactics. (4) Lecture, three hours. Requisite: course 11. Study of pricing and output decisions of firms under conditions of less than perfect competition or monopoly; theories of oligopoly and monopolistic competition; information costs and advertising; examination of pricing practices such as price discrimination, tie-in selling, predatory pricing, and resale price maintenance.

172. Economic Analysis of Laws and Legal Institutions. (4) Lecture, three hours. Requisite: course 11. Application of economic theory to legal rule formulation: study of economic nature and consequences of alternative legal arrangements, with special reference to property rights. Application of economic theory to analysis of effects of laws relative to property contracts, torts, crimes, taxation, and constitutional issues. Analysis of legal process.

173. Centralized Markets. (4) Lecture, three hours. Requisite: course 11. Enrollment priority to Business Economics majors. Organization and function of stock, bond, commodity, and foreign exchange markets. Theory and evidence related to efficiency of these markets in evaluating information, to their role in facilitating risk-bearing and capital allocation. Interrelationship between business finance and organized capital markets.

174. Organization of the Firm. (4) Lecture, three hours. Requisite: course 11. Enrollment priority to Business Economics majors. Role of the firm in traditional economic theory and modern developments in the theory of the firm. Functions of ownership and management in face of risk and opportunism. Internal organization of the firm. Problem of separation of ownership from control in the modern corporation. Determinates of firm size, vertical integration, and degree of specialization of activities of firms. Decision making within the firm in a democratic setting.

175. Economics of Transportation. (4) Lecture, three hours. Requisite: course 11. Economic characteristics of transport; functions of the different agencies; pricing and resource allocation in transport; public regulation of transport; urban transport; modern transport problem.

176. Business and Government. (4) Lecture, three hours. Requisite: course 101. Several aspects of interaction between business and government, including regulation of prices, entry, working conditions, natural resource use, policies of taxation, and subsidy of business.

177. Contractual Arrangements in Business. (4) Lecture, three hours. Requisite: course 101. Enrollment priority to Business Economics majors. Economic and legal determinants of contractual arrangements adopted by business. Franchise contracts, rights-of-first refusal, and tie-in contracts. Legal constraints and efficiency of different contractual arrangements.

180. Comparative Systems: Transformation of Socialist Economies. (4) Lecture, three hours. Requisite: course 101. Comparative analysis of capitalist and socialist economies. Models of transition from centrally planned to free market economies. Analysis and critique of actual implementation. Future prospects.

181A. Development of Economic Institutions in Western Europe. (4) Lecture, three hours. Requisite: course 11. European economic history, 900 to 1700. Custom, command, and market modes of organization. Evolution of property rights, contract forms, and monetary arrangements. Decline of feudal institutions, especially serfdom. Open field village and enclosures. Crafts manufacturing and guild organization. Development of banking. Public finances and role of government.

181B. Development of Economic Institutions in Western Europe. (4) Lecture, three hours. Requisite: course 11. European economic history, 1700 to 1914. Industrial revolution in Britain and its spread to the continent. Rise of factories, industrial firms, and unions. Changes in standard of living and demographic consequences. Imperial expansion and decline of Britain. Worldwide diffusion of economic growth and the Gerschenkron hypothesis.

182. Centralized Economics Systems. (4) Lecture, three hours. Requisite: course 101. Introduction to theory of centralized systems and examination of some centralized economies. Considerable attention to economy of the U.S.S.R.; some attention to other economies selected in light of the centralized model and with view to the march of current events.

183. Development of Economic Institutions in the U.S. (4) Lecture, three hours. Requisite: course 11. Study of changing economic conditions in the U.S. from Colonial times to the early 20th century and effects of these changes on American society. Letter grading.

184. History of Enterprise and Entrepreneurship in the American Economy. (4) Lecture, three hours. Enrollment priority to Business Economics majors. Study of role of innovation in history of American enterprise. Examination of specific episodes of salient entrepreneurial innovation, as well as general theoretical and empirical treatments.

M189. Asian Pacific Americans in the U.S. Economy. (4) (Same as Asian American Studies M123.) Lecture, three hours. Examination of several dimensions of Asian American participation, from labor market experience to use of government services to entrepreneurial activity. Attention to linking understanding of Asian American experience to public policies available to address problems of economically disadvantaged. P/NP or letter grading.

190. International Economics. (4) Lecture, three hours. Requisite: course 1 or 100. Limited to non-Economics Department majors. Not open to students with credit for course 191 or 192. General introduction to international economics, based on examination of theory of trade and the means and significance of balance of payments adjustments, with analysis of major issues of international commercial and monetary policy confronting national and international agencies. May not be applied toward any Economics Department major.

191. International Trade Theory. (4) Lecture, three hours; discussion, one hour. Requisite: course 101. Not open to students with credit for course 190. Theory of international trade: bases, direction, terms, volume, and gains of trade. Effects of tariffs, quantitative restrictions, and international integration. Effects of free and restricted trade on economic welfare and political stability. P/NP or letter grading.

192. International Finance. (4) Lecture, three hours; discussion, one hour. Requisite: course 102. Not open to students with credit for course 190. Emphasis on interpretation of the balance of payments and adjustment to national and international equilibria through changes in price levels, exchange rates, and national income. Other topics include making international payments, determination of exchange rates under various monetary standards, capital movements, exchange controls, and international monetary organization. P/NP or letter grading.

193. Research in International Area Studies Seminar. (4) Seminar, three hours. Limited to senior Economics/International Area Studies majors. Students prepare research paper on economy of the country or region of specialization.

195H. Honors Thesis Seminar. (4) Seminar, three hours. Limited to senior departmental honors program students. Seminar in which students present results of their senior theses.

199. Special Studies in Economics. (2 or 4) Requisites: courses 11, 101. Limited to juniors/seniors. May be repeated but may be applied only once toward the major requirements.

Graduate Courses

Foundations of Economics

200. Mathematical Methods in Economics. (4) Lecture, three hours. Should be taken prior to enrollment in course 201A. Examination of mathematical methods used in graduate-level courses in microeconomics, macroeconomics, and quantitative methods. Topics include real analysis, linear algebra and matrices, calculus of many variables, static optimization, convex analysis, and dynamics and dynamic optimization. S/U grading.

201A-201B-201C. Microeconomics. (4-4-4) Lecture, three hours. S/U or letter grading:

201A. Theory of the Firm and Consumer. (4) Lecture, three hours. Two input/two output model. Walrasian equilibrium and Pareto efficiency. Choice over time — consumer savings and firm investment decisions. Choice under uncertainty — state claims model, asset pricing. S/U or letter grading.

201B. Basic Concepts and Techniques of Noncooperative Game Theory and Information Economics. (4) (Formerly numbered 201C.) Lecture, three hours. Nash equilibrium and subgame perfection. Games with incomplete information. Models of strategic market behavior. Screening and signaling. Bargaining models. Theory of the firm. S/U or letter grading.

201C. General Equilibrium and Welfare Economics. (4) (Formerly numbered 201B.) Lecture, three hours. Meaning of competition in general equilibrium. Decentralization and appropriation roles of prices. Increasing returns. Public goods. Pecuniary and nonpecuniary externalities. Mechanism design. S/U or letter grading.

202A-202B-202C. Macroeconomics. (4-4-4) Lecture, three hours:

202A. Dynamics and Growth Theory. Essential techniques and concepts from dynamical mathematics and neoclassical growth theory. Linear and nonlinear dynamical systems. Dynamic programming and control theory. Stochastic dynamics. Determinacy of equilibrium. Descriptive, optimal, and overlapping generations models of accumulation. Stochastic growth theory. Increasing returns and applications to economic development.

202B. Business Cycles. Survey of representative agent and complete market models of short-run fluctuations. Facts about fluctuations and long-term growth. Real business cycle theory. Calibrating and simulating dynamic models. Asset prices, money, and inflation. Taxation of factor incomes. Cyclical aspects of employment.

202C. Topics in Macroeconomics. Heterogeneous-agent models of endogenous fluctuations and growth. General equilibrium techniques in macroeconomics. Overlapping fluctuations model with national debt. Fiscal policy. Externalities, indeterminacy, and growth. Expectations and business cycles. Money and monetary policy. Historical overview of mainstream macroeconomics. Wicksell and Keynes. Monetarist controversy. New classical and new Keynesian macroeconomics.

203A. Probability and Statistics for Econometrics. (4) Lecture, three hours. Provides statistical tools necessary to understand econometric techniques. Random variables, distribution and density functions, sampling, estimators, estimation techniques, hypothesis testing, and statistical inference. Use of economic problems and examples. S/U or letter grading.

203B. Introduction to Econometrics: Single Equation Models. (4) Lecture, three hours. Estimation of basic linear regression model, testing hypotheses, generalized least squares, serial correlation, heteroskedasticity, multicollinearity, error-in-variables, distributed lags, qualitative dependent variables, and forecasting. S/U or letter grading.

203C. Introduction to Econometrics: Systems Models. (4) Lecture, three hours. Multivariate regression, simultaneous equation estimation, identification, and latent variables. S/U or letter grading.

204A-204Z. Applications of Economic Theory. (4 each) Lecture, three hours:

M204L-M204M-M204N. Seminars: Pharmaceutical Economics and Policy (1 unit, 1 unit, 2 units). (Same as Health Services M204A-M204B-M204C.) Seminar, three hours every other week for three terms. Requisites: courses 201A-201B-201C, Health Services M236. Limited to graduate public health and economics students. Various topics in economics of pharmaceutical industry, including rates of innovation, drug regulation, and economic impact of pharmaceuticals. In Progress and S/U or letter grading.

205. Economic Modeling. (4) Lecture, three hours. Development of modeling skills by considering a sequence of economic issues (e.g., peak load pricing, regulation, monopoly, capital asset pricing, Pareto efficiency). Emphasis on multivariate constrained optimization. S/U or letter grading.

207. History of Economic Thought. (4) Lecture, three hours. Topics from classical economics, including work of Smith, Ricardo, and Mill, and developments from the 1870s, including contributions of major figures of the marginalist revolution, the socialist controversy, and history of welfare economics. S/U or letter grading.

Economic Theory

211A-211B. Economics of Uncertainty, Information, and Games. (4) Lecture, three hours. Preparation: introductory probability. Requisite: course 201C. Theory of individual decision making under uncertainty, applied to topics such as asset pricing models, adverse selection, moral hazard, bargaining, signaling, auctions, and search. S/U or letter grading.

212A-212Z. Topics in Advanced Theory. (4) Lecture, three hours. Current research in microeconomic theory. Content varies. Courses in this sequence not ordinarily given every year. May be repeated for credit. S/U or letter grading:

212A. Search Theory. Preparation: calculus, introductory probability. Price searching, queueing, Brownian motion, martingales, and applications to the theory of the firm.

212B. Applied Game Theory. Preparation: calculus, introductory probability. Use of theory of Bayesian games to study bargaining, monetary theory, and oligopoly. Use of theory of mechanisms to study auction design and imperfectly competitive markets.

213A-213B. General Equilibrium and Game Theory. (4) Lecture, three hours. Requisite: course 201C. Selected advanced theoretical topics of current interest and introduction to modern mathematical economics, including general equilibrium theory and game theory. S/U or letter grading.

214A-214Z. Topics in Mathematical Economics. (4 each) Lecture, three hours. Prerequisite: course 213B. Current research in mathematical economics. Content varies. Ordinarily only two courses in this sequence given every year. May be repeated for credit. S/U or letter grading:

214A. General Equilibrium Theory. Prerequisite: course 201C. Core convergence theorem, cooperative and noncooperative approach to competitive equilibrium theory, perfectly competitive equilibria, the no-surplus condition, and applications to mechanism theory and incomplete market models.

M214B. Game Theory. (Same as Mathematics M261 and Political Science M208A.) Lecture, three hours. Designed for graduate economics, mathematics, and political science students. Bargaining theory, the core, the value, other solution concepts. Applications to oligopoly, general exchange and production economies, and allocation of joint costs.

M215. Topics in Applied Game Theory. (4) (Same as Political Science M208B.) Lecture, three hours. Preparation: calculus or introductory probability. Designed for graduate economics and political science students. Survey and applications of major solution concepts to models of bargaining, oligopoly, cost allocation, and voting power. S/U or letter grading.

218A-218B-218C. Proseminars: Economic Theory. (4-4-4) Seminar, three hours. Quarterly seminars for predissertation and dissertation writers. Discussion of advanced topics and recent developments in game theory, information and uncertainty, and general equilibrium theory. Presentation of recent papers published and unpublished in economic theory as well as research of instructor and students. In-class presentation expected. S/U grading.

219A-219B-219C. Workshops: Economic Theory and Mathematical Economics. (4-4-4) Lecture, three hours. Workshops for predissertation and dissertation writers. Research in progress presented, discussed, and criticized by visiting experts, UCLA faculty members, advanced graduate students. Research paper required. S/U grading.

Also see Management 200 (game theory and information economics), 203A (decision theory), 203B (economics of information)

Monetary Economics

221A-221D. Monetary Economics I to IV. (4 each) Lecture, three hours. S/U or letter grading:

221A. Prerequisites: courses 202A-202B-202C. Dynamic methods in business cycles and economic growth. Multiperiod life-cycle models. Sustainable public deficits. Money and inflationary finance. Human capital. Endogenous fluctuations and regime switching. Econometrics of multiple equilibrium models. Political economy of government deficits and inflation.

221B. Emphasis on theoretical, historical, and policy aspects of monetary economics. Financial intermediation, bank panics, asset price volatility, game theoretic models of policy, inflation, implication of monopolistic competition, search and coordination failures, central bank operations, and evolution of monetary institutions.

221C. Prerequisites: courses 202A-202B-202C. Emphasis on quantitative dynamic models useful in study of equilibrium business cycles and public finance. Recursive competitive equilibria in representative agent overlapping-generation models, including models with money, taxes, liquidity constraints, and other distortions.

221D. Prerequisites: courses 202A-202B-202C. Emphasis on applied macroeconomics, with topic change each year. Students select a particular data set to study. Each week class studies an article from recent work in applied macroeconomics or applied econometrics which teaches a technique or suggests a theoretical restriction on the data. Subgroups of students report back to class using the technique on their selected data set.

222A-222Z. Topics in Monetary Economics. (4 each) Lecture, three hours. Current research in monetary economics. Content varies. May be repeated for credit. S/U or letter grading:

M222A. Control and Coordination in Economics. (4) (Same as Computer Science M222.) Lecture, three hours. Recommended preparation: appropriate mathematics course. Designed for graduate economics and engineering students. Stabilization policies, short- and long-run dynamics and stability analysis; decentralization, coordination in teams; certainty equivalence and separation theorems; stochastic and learning models. Bayesian approach to price and output rate adjustment. S/U or letter grading.

228A-228B-228C. Proseminars: Monetary Economics. (4-4-4) Seminar, three hours. Workshops for predissertation and dissertation writers. Literature surveys or research in progress presented, discussed, and criticized by visiting experts, UCLA faculty members, advanced graduate students. Research paper or presentation required. S/U grading.

229A-229B-229C. Workshops: Monetary Economics. (4-4-4) Lecture, three hours. Workshops for predissertation and dissertation writers. Research in progress presented, discussed, and criticized by visiting experts, UCLA faculty members, advanced graduate students. Research paper required. S/U grading.

Also see Management 239A, 239B, 239C (Ph.D. sequence in finance), 239D (advanced topics in finance), 239X-239Y-239Z (finance workshops)

Econometrics

231A. Econometrics: Single Equation Models. (4) Lecture, three hours. Linear regression model, specification error, functional form, autocorrelation, nonlinear estimation, distributed lags, nonnormality, univariate time series, qualitative dependent variables, aggregation, structural change, and errors-in-variables. S/U or letter grading.

231B. System Models. (4) Lecture, three hours. Multivariate regression, errors-in-variables, simultaneous equations, identification, proxy variables, latent variables, factor analysis of panel data, asymptotic distribution theory. S/U or letter grading.

232A-232Z. Topics in Econometrics. (4 each) Lecture, three hours. Prerequisites: courses 231A, 231B. Current research in econometrics. Content varies. Courses in this sequence not ordinarily given every year. May be repeated for credit. S/U or letter grading:

M232A. Bayesian Econometrics. (Same as Political Science M208E.) Subjective probability, introduction to decision theory, Bayesian analysis of regression, sensitivity analysis, simplification of models, criticism.

232B. Time Series. Stationary stochastic processes, Box/Jenkins methods, spectral analysis, forecasting, rational expectation models, analysis of macroeconomic data.

239A-239B-239C. Workshops: Econometrics. (4-4-4) Lecture, three hours. Workshops for predissertation and dissertation writers. Research in progress presented, discussed, and criticized by visiting experts, UCLA faculty members, advanced graduate students. Research paper required. S/U grading.

Economic History

241. Economic History of Western Europe. (4) Lecture, three hours. Designed for graduate students. Seminar on European economic history, with emphasis on evolution of institutions and growth. Serfdom, medieval agriculture and the agricultural revolution, demographics, industrial revolution, imperial expansion, and decline of Britain. S/U or letter grading.

242. Economic History of the U.S. (4) Lecture, three hours. Seminar on American economic history. Onset of industrialization, relative economic backwardness of the South, slavery, technological change, rise in industrial concentration, women in the labor force, development of financial markets. S/U or letter grading.

243A-243Z. Topics in Economic History. (4) Lecture, three hours. Current research in economic history. Content varies. May be repeated for credit. S/U or letter grading.

249A-249B-249C. Von Grep Workshops: History of Entrepreneurship in the U.S. Economy. (4) Lecture, three hours. Designed for graduate students. Workshops for advanced graduate students. Research in progress discussed by visiting experts, UCLA faculty members, graduate students. S/U grading.

Public Finance

251A. Theory and Policy of Taxation. (4) Lecture, three hours. Examination of influence of taxation on economic efficiency and incidence of taxation in first part of course. Topics include tax equivalences, Ramsey rules, and alternative forms of taxation. Special tax provisions, tax incentives, and progressivity in taxation in second part of course. S/U or letter grading.

251B. Cost-Benefit Analysis of Public Projects and Programs. (4) Lecture, three hours. Prerequisite: course 251A. Presentation of those aspects of applied capital theory that are relevant in decisions concerning investment projects in first part of course. Differences between social and private benefits and costs (shadow prices) for foreign exchange, capital, and labor, with applications to public investment decisions, in second part of course. S/U or letter grading.

252. Economics of Federalism. (4) Lecture, three hours. Theories of perfect games and social organization. Role of government, collective goods, collective defense, local public goods, spillovers, and intergovernmental relations. S/U or letter grading.

253A-253Z. Topics in Public Finance. (4 each) Lecture, three hours. Current research in public finance. Content varies. Topics include Social Security taxes and programs, unemployment insurance, public provision of medical care, theory of public goods, and theory of public choice. May be repeated for credit. S/U or letter grading.

254A-254B-254C. Workshops: Public Economics. (4-4-4) Lecture, three hours. Designed for graduate students. Workshops for advanced graduate students. Research in progress discussed by graduate students, UCLA faculty members, visiting experts. S/U grading.

Labor Economics

261A-261B. Labor Economics I, II. (4-4) Lecture, three hours. S/U or letter grading:

261A. Wage determination in competitive labor markets. Extension of wage determination to schooling and occupational choice, life-cycle earnings profiles, discrimination, minimum wage legislation, and unionism. Emphasis on empirical literature.

261B. Prerequisite: course 261A. Models of life-cycle learning and work behavior, with particular emphasis on recent literature examining labor force behavior and experience of women.

262A-262Z. Topics in Labor Economics. (4 each) Lecture, three hours. Current research in labor economics. Content varies. May be repeated for credit. S/U or letter grading.

268A-268B-268C. Proseminars: Labor and Population. (4-4-4) Seminar, three hours. Quarterly seminars for predissertation and dissertation writers working on empirical issues in areas of labor and population, broadly defined. Presentation of work-in-progress or background material for proposed thesis topics, to be discussed and criticized by faculty and fellow students. Presentation or research paper required. S/U grading.

269A-269B-269C. Workshops: Labor Economics. (4-4-4) Lecture, three hours. Workshops for predissertation and dissertation writers. Research in progress presented, discussed, and criticized by visiting experts, UCLA faculty members, advanced graduate students. Research paper required. S/U grading.

Industrial Organization

271A-271B. Industrial Organization, Price Policies, and Regulation I, II. (4-4) Lecture, three hours. S/U or letter grading.

271A. Major economic aspects of property rights system. The firm and the market compared from perspective of alternative arrangements for allocating resources. Traditional problems of competition, monopoly, and industrial concentration. Brief analysis of those portions of antitrust policy bearing on industrial structure.

271B. Requisite: course 271A. Study of firm organization and pricing under conditions of less than perfect competition; information costs and advertising; economic and legal analysis of marketing practices such as discrimination, tie-in selling, resale price maintenance, exclusive dealing, and territorial arrangements.

271C. Mathematical Theory in Industrial Organization. (4) Lecture, three hours. Requisites: courses 201A-201B-201C. Formal modeling of theory of industrial organization: principal-agent problem, entry deterrence, endogenous price discrimination, monopolistic competition, new approaches to rationality. S/U or letter grading.

272A-272Z. Topics in Industrial Organization. (4 each) Lecture, three hours. Current research in industrial organization. Content varies. May be repeated for credit. S/U or letter grading.

273A. Public Utility Regulation. (4) Lecture, three hours. Theory, practice, and consequences of regulation in electric power, gas, water, telecommunications, broadcasting, and other regulated industries; experiences of unregulated monopoly and public enterprises by way of contrast. S/U or letter grading.

278A-278B-278C. Proseminars: Industrial Organization and Regulation. (4) Seminar, three hours. Quarterly seminars for predissertation and dissertation writers to discuss advanced topics and recent developments in industrial organization and regulation. Presentation of work-in-progress for feedback from faculty and fellow students. Presentation or research paper required. S/U grading.

279A-279B-279C. Workshops: Business Organization. (4) Workshops for predissertation and dissertation writers. Research in progress presented, discussed, and criticized by visiting experts, UCLA faculty members, advanced graduate students. Research paper required. S/U grading.

Also see Management 262 (pricing policy)

International Economics

281A. International Trade Theory. (4) Lecture, three hours. Theoretical and empirical analysis of micro-economic relationships among countries. Determinants of commodity and factor flows, prices, and factor rewards. Effects of trade barriers. S/U or letter grading.

281B. International Finance. (4) Lecture, three hours. Theory and evidence on balance of payments, exchange rate determination, international transmission of inflation and business cycles, macroeconomic policy in open economies, alternative monetary systems. S/U or letter grading.

281C. International Economics. (4) Lecture, three hours. Theoretical and empirical analysis of interrelation between flows of capital, people, and goods. Applications to current policy. S/U or letter grading.

282A-282Z. Topics in International Economics. (4 each) Lecture, three hours. Current research in international economics. Content varies. May be repeated for credit. S/U or letter grading.

284. Soviet Economic Theory and Organization. (4) Lecture, three hours. Overall strategy of planning used by U.S.S.R. planners and specific planning methods, interpreted broadly to cover not only instructions and objectives but also institutional arrangements. Intended and unintended outcomes of the methods. S/U or letter grading.

285A-285B-285C. Workshops: International Economics. (4-4-4) Lecture, three hours. Workshops for predissertation and dissertation writers. Research in progress presented, discussed, and criticized by visiting experts, UCLA faculty members, advanced graduate students. Research paper required. S/U grading.

Development Economics

286A. Economic Development. (4) Lecture, three hours. Requisites: courses 201C, 202C. Study of theoretical and empirical problems related to developing countries. Emphasis on relation between international trade and economic development, dynamic aspects of commercial policies, inflation, stabilization, structural adjustment, growth and migration. S/U or letter grading.

286B. Cost-Benefit Analysis of Development Projects. (4) Lecture, three hours. Requisite: course 286A. Methodology for evaluating investment projects, with special attention to types of issues that arise in developing countries. Discussion of social versus private evaluation criteria; applications to highway, electricity, and irrigation projects. S/U or letter grading.

287A-287Z. Topics in Development Economics. (4 each) Lecture, three hours. Current research in development economics. Content varies. Courses in this sequence not ordinarily given every year. May be repeated for credit. S/U or letter grading.

287A. Economic Problems of Latin America. Economic history of Latin America. The great depression, import substitution and industrialization, inflation and growth, free market experiments, and economic integration.

287B. Economic Development in East Asia. Recent economic history of East Asia, focusing on postwar development of Japan, Korea, and China. Emphasis on role of international investment and trade, especially with the U.S., in area's economic development.

287C. Topics in Economic Development. Designed for graduate students. Topics in monetary and exchange rate policy in developing countries. Students expected to develop analytical tools and underlying policy issues.

288A-288B-288C. Proseminars: International and Development Economics. (4-4-4) Seminar, three hours. Quarterly seminars for predissertation and dissertation writers on current issues in international trade and finance and development economics. Presentation of work-in-progress for feedback from faculty and other graduate students. Presentation or research paper required. S/U grading.

Urban Economics

291A-291B. Urban Economics. (4-4) Lecture, three hours. Course 291A is requisite to 291B. Implications of urbanization for economic analysis. Development of theory in course 291A; emphasis on policy in 291B. Use of monocentric model of urban land use to introduce location and transportation costs. Examination of housing, transportation, and local public services.

293A-293Z. Topics in Urban Economics. (4 each) Lecture, three hours. Current research in urban and regional economics. Content varies. Serves as forum for presentation of papers on urban economics by students, UCLA faculty members, and visitors. May be repeated for credit. S/U or letter grading.

Special Studies

375. Teaching Apprentice Practicum. (1 to 4) Preparation: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

495. Teaching College Economics. (2) Discussion, one hour; laboratory, three hours. Designed for graduate students. Required of all new teaching assistants. Classroom practice in teaching, with individual and group instruction on related educational methods, materials, and evaluation. May be repeated for credit. S/U grading.

596. Individual Study. (2 to 8) Directed individual study or research. S/U grading.

597. Individual Study: Graduate Examinations. (2 to 8) Directed individual study in preparation for M.A. comprehensive examination or Ph.D. qualifying examinations. S/U grading.

599. Individual Research: Ph.D. Dissertation. (2 to 8) Preparation: advancement to Ph.D. candidacy. Directed individual research in preparation of Ph.D. dissertation. S/U grading.

Adjunct Professors

Howard Gadlin, Ph.D.
 Harry Handler, Ph.D.
 Russell Jacoby, Ph.D.
 Jane S. Permaul, Ed.D.
 Harold L. Pruet, Ph.D.
 Linda P. Rose, Ph.D.
 Eugene Tucker, Ed.D.

Adjunct Associate Professor

Philip Ender, Ph.D.

Scope and Objectives

As one of the top-ranked public graduate programs in education in the nation, the Department of Education is guided by a commitment to integrate theory and practice and to improve educational practice and policy. The department attracts prominent scholars and is internationally recognized for its research centers in evaluation, higher education, child development, and urban education. Whether students choose to pursue a Ph.D., an Ed.D., a master's degree, or a services or instructional credential, they graduate with a broad understanding of educational theory and tested practice.

Undergraduate Study

For information on the special certificate program through which students may waive the Multisubject Assessment for Teachers (MSAT) in California, see the Diversified Liberal Arts Program (DLAP) and contact a DLAP counselor in the College of Letters and Science, A316 Murphy Hall, (310) 206-6681.

Education Studies Minor

The Education Studies minor is intended to address the diverse information needs of the UCLA undergraduate community to (1) allow students to learn more about the multitude of contemporary professional research issues confronting the field of education, (2) help un-

derstand the complex interactions between the legal, social, political, and economic forces which influence and shape educational policies in America, (3) provide an introductory course sequence for students who wish eventually to pursue careers in education either as teachers or researchers, and (4) provide an analysis of current educational practices by which UCLA students can become better consumers of educational services as future parents, taxpayers, and citizens.

To enter the minor, students must have completed 32 units with a minimum overall 2.3 (C+) grade-point average and file an admission application with the education studies academic adviser in the Office of Student Services, 1009 Moore Hall. Applicants are expected to have a real commitment to inquiry into issues vital to education.

Required Lower Division Courses (eight units): Two policy and issues courses from Education 91A through 91E, with grades of C+ or better.

Required Upper Division Courses (20 units): Two behavioral and social sciences perspective courses from Education M108, 180, C191A through 191F; two elective courses from M102, 125A, M148; and one professional topics course from 197A through 197Z.

In addition to or in lieu of electives, students may select a concentration in community education leadership by completing three courses from Education 192A, 197E, 197K through 197N.

Students with a 3.0 grade-point average may, after acceptance of a separate application, also select a concentration in advanced studies by taking Education 197X and 199 in addition to the course requirements for the minor.

All minor courses must be taken for a letter grade. Successful completion of the minor is indicated on the transcript and diploma.

Graduate Study

The following constitutes introductory information regarding graduate degree programs and is based on the 1998-99 edition of *Program Requirements for UCLA Graduate Degrees*. Complete, annual editions of *Program Requirements* are available (listed under "Publications") on the Graduate Division website at <http://www.gdnet.ucla.edu>. Students are subject to the degree requirements as published in *Program Requirements* for the year in which they matriculate.

Master's Degrees

The Department of Education offers the Master of Arts (M.A.) degree in Education and the Master of Education (M.Ed) degree and participates in concurrent and articulated degree programs.

Master of Arts

Admission

The M.A. in Education is an academic master's degree designed to meet the needs of individu-

als preparing for careers in basic research or for advanced graduate study.

Qualifications for admission to a program of study in education, in addition to the University requirements for admission, are (1) scores on the quantitative, verbal, and analytical sections of the Graduate Record Examination (GRE) and (2) at least three letters of recommendation documenting qualifications and/or professional experience.

Acceptance into a particular division is dependent on the availability of openings in that division and the applicant's desired emphasis area; preference is given to applicants with relevant background and experience. Admission to an initial advanced degree program occurs simultaneously with admission to graduate standing and to the Department of Education. No screening examination (other than described above) and no specific coursework are required for admission to a degree program. The department has an application form which must be completed in addition to the one used by the Graduate Division. Application forms and departmental brochures are available from the Office of Student Services, Graduate School of Education and Information Studies.

Law/Education

The Department of Education and the School of Law offer a concurrent degree program that allows students to design a program of study leading to the J.D. and any advanced degree in education (M.Ed., M.A., Ed.D., or Ph.D.). If the program meets the degree requirements in both schools, students are awarded both degrees on its completion. The program is not accepting applications for 1999-00.

Areas of Study

The Master of Arts emphases in divisions 2 through 5 are the following:

Educational Psychology

Counseling, developmental studies in education, learning and instruction

Higher Education and Work

Education training, public policy analysis, research in higher education, and teaching in higher education

Social Research Methodology

Applied statistics and psychometrics, quantitative and qualitative research, evaluation methodology, and economic analysis

Social Sciences and Comparative Education

Social sciences, comparative and international education

Curricular Divisions

Contact the Office of Student Services regarding faculty member(s) to be consulted with respect to enrollment and research opportunities and/or course sequencing in each division or emphasis field.

Division 1: Administration, Curriculum, and Teaching Studies

Education M102, C191A, 206A, C206D, 220A, 220B, 223, 224, 229, 240, 241, 242, 246A, 251D, 260, 262B, 262F, 273A, 277, 400, 401, 402, 403, 420A, 422, 423, 424A, 424B, 424G, 440C, 441A, 441B, 442B, 443, 444B, 447, 448A, 448B, 470A, 470B, 490A.

Division 2: Educational Psychology

Education 125A, 191F, 197F, 197G, 205, 212A, 212B, 212C, 213A, 213B, 213C, 214A, 214B, 214D, 214E, 214F, M215, 216, M217A through 217D, 217F, M217G-M217H-M217I, 225A, 225B, 227A, 227B, 227C, 232, 236, 256A, 256B, 257, 258A, 258B, 267, 271A, 280A, 280B, M281A, M281B, M281C, 415A, 415B, 421A, 421D, 421F, 425, 433A, 433B, 501.

Division 3: Higher Education and Work

Education M148, 180, 192A, 192B, 209A, 209C, 209D, 234, 238, 239, 249B, 259A, 261F, 263, 410A-410B, 431A, 431B, 432, 462.

Division 4: Social Research Methodology

Education 200B, 200C, 202, 206C, 211A, 211B, 211C, 219, 221, M222A, 222B, 222C, 228, 230A, 230B-230C, 230X, 231A through 231E, 245, 251A, 251C, 251E, 255A-255B-255C, 272, 411A, 411B, 412A, 412B, 460.

Division 5: Social Sciences and Comparative Education

Education M108, 200A, M201C, C203, 204A through 204F, C207, 208A, 208C, C244, 252A, 252B, M252C, 253A through 253I, 254, 300.

Teacher Education

Education 264, 311, 312, 315A-315B, 316A-316B, 318A-318B-318C, 320A-320B, 330A through 330D, 360A-360B-360C, 406A-406B-406C, 407A-407B, 413A, 413B, 481, 489, 491A, 492.

Academic Interinstitutional Programs

Formal discontinuance pending.

Special Studies

Education 296A-296F, 299A-299B-299C, 310, 375, 498A-498B-498C, 499A-499B-499C, 596, 597, 598, 599.

Course Requirements

A minimum of nine upper division and graduate courses (36 units) must be completed in graduate standing although no specific upper division courses are necessary. Six courses (24 units) must be taken in the Education 200 and 500 series; no more than two 500-series courses (eight units) may be applied toward the divisional course minimum and toward the graduate course minimum.

Two research methods courses approved by the faculty adviser must be selected. Additional courses to complete the 36-unit requirement may be selected from offerings in Education and/or other departments with consent of the assigned faculty adviser and division head. Courses must be completed with grades of C or better and with an overall grade-point average of at least 3.0.

Contact the Office of Student Services regarding faculty member(s) to be consulted with respect to enrollment and research opportunities and/or course sequencing in each division or emphasis field.

Comprehensive Examination Plan

The comprehensive examination is concerned with central topics in the selected division and field of emphasis. Questions are comprehensive in nature and are designed to measure the breadth and depth of knowledge, as well as ability to focus that knowledge on specific problems.

The comprehensive examination is offered twice yearly, once in Fall Quarter and once in Spring Quarter.

Students may be passed, passed with honors, or failed on this examination. Students who fail are given a second opportunity to take the examination at the discretion of their adviser and a third opportunity on a two-thirds majority of all divisional faculty voting on this issue. No fourth sitting for the examination is permitted.

Students who fail the comprehensive examination, but who have been allowed to retake it, may do so at any scheduled sitting with consent of the divisional faculty.

Thesis Plan

Under this plan, students prepare a thesis which is a report of the results of original investigation. Before beginning work on the thesis, students must obtain approval of the subject and general plan from the Department of Education and the thesis committee chair.

The thesis committee must be formed and a petition for advancement to candidacy for the M.A. must be filed no later than one quarter prior to completion of course requirements for the degree.

The thesis and dissertation adviser and the Graduate Division publication, *Regulations for Thesis and Dissertation Preparation*, provide guidance in the final preparation of the manuscript. The department does not require a formal examination in connection with the thesis plan.

Master of Education

Admission

The M.Ed. is a professional degree program designed for individuals preparing for mid-level professional positions in schooling or for advanced professional graduate study. Qualifications for admission to a program of study in education, in addition to the University requirements for admission are (1) scores on the quantitative, verbal, and analytical sections of the Graduate Record Examination (GRE) and (2) at least three letters of recommendation documenting qualifications and/or professional experience.

The following requirements are applicable in accordance with selected emphases:

Administrative and Policy Studies in Education. Possession of a valid instructional credential is

preferred. Applicants with a demonstrated commitment to improving American schooling are sought for admission.

Bilingual/Cross-Cultural Education. Completion of an approved program of professional preparation leading to a preliminary instructional credential is required, as is classroom experience (as a teacher or aide) for at least two years, at any level of schooling. Evidence of professional competence and conscientiousness, as well as the necessary second-language proficiency, are also required.

Curriculum and the Study of Schooling. Persons with above-average capabilities and interest in curriculum and instruction are sought. Experience as a practitioner in the emphasis field is advantageous.

Teacher Education. This is a two-year program leading to qualification for a Multiple or Single Subject Instructional Credential and a Master of Education degree. Individuals with the highest qualifications in all subject areas, particularly mathematics, science, and the humanities, are sought. Experience in working with children is advantageous.

Certificate (Credential) Programs

The California Commission on Teacher Credentialing has authorized the Department of Education to offer professional programs that lead to the (1) Multiple Subject Instructional Credential with the Cross-Cultural Language and Academic Development (CLAD)/Bilingual Cross-Cultural Language and Academic Development (BCLAD) emphasis; (2) Single Subject Instructional Credential with the CLAD/BCLAD emphasis; and (3) Administrative Services Credential. Credential programs 1 and 2 are taken concurrently with the M.Ed. in teacher education; credential program 3 is taken with the M.Ed. in administrative program studies in education.

M.A. Latin American Studies/M.Ed

The Department of Education and the Latin American Studies Program offer an articulated degree program that allows students to combine study for the M.A. in Latin American Studies and the M.Ed., with an emphasis in curriculum. Articulated programs do not allow course credit to be applied toward more than one degree. The program is not accepting applications for 1999-00.

Law/Education

See the Admission section under Master of Arts for information on the concurrent degree program in law and education. The program is not accepting applications for 1999-00.

Areas of Study

Administrative and policy studies in education; bilingual/cross-cultural education; curriculum and the study of schooling; teacher education.

Course Requirements

A minimum of nine upper division and graduate courses (36 units) must be completed in graduate standing although no specific upper

division courses are necessary. At least five courses (20 units) must be in the professional education (400) series. No 500-series courses may be applied toward the degree. Education 597 may be taken on an optional basis. A field experience minimally approximating one course is required for all M.Ed. emphases.

Information regarding specific course requirements in a selected M.Ed. emphasis may be obtained from the Office of Student Services.

Comprehensive Examination Plan

The comprehensive examination for the M.Ed. degree in administrative and policy studies in Education is offered three times per year (Fall, Spring, and Summer Quarters). The M.Ed. examination in curriculum and the study of schooling is offered in Fall and Spring Quarters. The M.Ed. examination in teacher education is offered only during the summer. The examination consists of

(1) A written examination designed to assess comprehension of professional knowledge basic to the selected field of emphasis, including key concepts and principles, major theoretical positions, and fundamental issues and understanding of the broad educational context in which the selected professional field resides.

(2) A performance component for the M.Ed. in curriculum and the study of schooling designed to assess competency in the solution of problems in the selected professional field and is a test of whether knowledge can be applied in a real or simulated professional setting.

Information regarding examination foci for any selected M.Ed. emphasis is available from the faculty adviser.

Students may be passed, passed with honors, or failed on the examination. Students who fail the examination are given a second opportunity to take the examination at the discretion of their adviser and a third opportunity on a two-thirds majority of all divisional faculty voting on this issue. No fourth sitting for the examination is allowed.

Students who fail the comprehensive examination, but who have been allowed to retake it, may do so at any scheduled sitting with consent of the divisional faculty.

Thesis Plan

None.

Doctoral Degrees

The Department of Education offers the Doctor of Philosophy degree in Education and the Doctor of Education degree.

Doctor of Philosophy

Admission

The Doctor of Philosophy (Ph.D.) in Education is a strongly research-oriented academic degree designed for individuals preparing for careers in basic research or college-level instruction. Major foci include theory, research methodology, basic studies, and in-depth

knowledge in education and an approved cognate field.

To be admitted to the Ph.D. program, students must have a bachelor's degree or equivalent. Applicants must also have demonstrated academic excellence and the potential for scholarly research. Students are admitted by a division and must formally apply for a change of division.

Qualifications for admission to a program of study in education, in addition to the University requirements for admission, are (1) scores on the quantitative, verbal, and analytical sections of the Graduate Record Examination (GRE) and (2) at least three letters of recommendation documenting qualifications and/or professional experience.

Acceptance into a particular division is dependent on the availability of openings in that division and the applicant's desired emphasis area; preference is given to applicants with relevant background and experience. Admission to an initial advanced degree program occurs simultaneously with admission to graduate standing and to the Department of Education. No screening examination (other than described above) and no specific coursework are required for admission to a degree program. The department has an application form that must be completed in addition to the one used by the Graduate Division. Application forms and departmental brochures are available from the Office of Student Services, Graduate School of Education and Information Studies.

Law/Education

See the Admission section under Master of Arts for information on the concurrent degree program in law and education.

Joint Ph.D. Program in Special Education

A joint Ph.D. program in Special Education is offered by UCLA and California State University, Los Angeles. The goals of the joint program are (1) the stimulation and preparation of research workers of high competence in the various fields of special education; (2) improved preparation for potential teachers of exceptional individuals; and (3) improved preparation of personnel for research and in policy formation in the public schools of California. Students seeking information regarding emphases and requirements should consult the joint doctoral adviser at UCLA (1029B Moore Hall) or the chair of the Department of Special Education at CSULA.

Major Fields or Subdisciplines

All divisions: administration, curriculum, and teaching; educational psychology; higher education and organizational change; social research methodology; social sciences and comparative education.

Course Requirements

A program of study for a Ph.D. student is determined by the student and the faculty adviser and must conform to division and department requirements. A minimum of 18 courses is re-

quired as indicated below. At least 10 of the total courses must be in the 200 series:

(1) A sequential three-quarter research practicum (Education 299A-299B-299C) designed to provide an overview of research in the field of study. Students complete a research paper by the end of the sequence.

(2) Five courses from offerings in the student's selected division.

(3) Three upper division or graduate courses from other academic departments of the University related to the student's proposed area of research (the cognate).

(4) Appropriate research methods courses to enable demonstration of intermediate/advanced level competence in at least one area of research methodology. The requirement is satisfied by completing three methodology courses as specified in the list approved by the department; the approved list is available in the Office of Student Services.

The remainder of the courses to complete the required total may be chosen by the student; such courses must be in compliance with the selected division's guidelines and must be approved by the student's faculty adviser. Divisional course requirements may be waived, under exceptional circumstances, by the division on petition by students and their advisers to the division head. Wherever additional academic background is needed, a faculty adviser may require other coursework.

Written and Oral Qualifying Examinations

Doctoral Screening Examination. A written examination is taken after completion of appropriate coursework determined by the division. The examination is concerned with central topics in the selected division and field of emphasis. Questions are comprehensive in nature and are designed to measure the breadth and depth of knowledge, as well as to focus that knowledge on specific problems.

Students taking the doctoral screening examination ordinarily are not allowed to take more than nine courses before taking the examination. This limit is intended to ensure that students demonstrate basic competencies as early as possible in their doctoral training.

All students admitted to a doctoral program without a master's degree are required to take the doctoral screening examination.

In a first sitting for the examination, students may be passed with honors, passed at the master's level (the terminal master's), or failed. Students passed at the master's level are given one further opportunity to pass at the doctoral level; students who fail are given a second opportunity to take the examination at the master's level only.

Students who fail the doctoral screening examination, but who have been allowed to retake the examination, must do so at the next sitting. They can take up to 12 units per quarter until

they have successfully completed the examination. Of these 12 units only four may be a doctoral 200- or 400-level course; the remainder must be the 597 course. After satisfying the above requirements, students are eligible to take the following qualifying examinations:

Doctoral Written Qualifying Examination. The written qualifying examination is offered twice yearly, once in Fall Quarter and once in Spring Quarter. The examination tests the core knowledge of the division and emphasis the student has selected. The questions on the examination reflect a research and theoretical orientation. Students may be passed, passed with honors, or failed on the examination. Students who fail this examination are given a second opportunity to take the examination at the discretion of their adviser and a third opportunity on a two-thirds majority of all divisional faculty voting on this issue. No fourth sitting for the examination is allowed.

Students who fail the doctoral written qualifying examination, but who have been allowed to retake it, may do so at any scheduled sitting with consent of the divisional faculty.

University Oral Qualifying Examination. The oral examination is conducted by the student's doctoral committee, which selects topics from both education and the cognate discipline(s) that are related to the student's written research proposal. On a majority vote of the doctoral committee, the University Oral Qualifying Examination may be repeated once.

Doctor of Education

Admission

The Doctor of Education (Ed.D.) is a professional degree designed to meet the needs of individuals preparing for careers of leadership and applied research in the schools and community educational programs. Major foci include practice, applied studies, and knowledge related to professional skills.

To be admitted into the Ed.D. program, applicants must have a bachelor's degree or equivalent; at least two years of successful professional experience in education or equivalent (may be completed prior to advancement to candidacy for all divisions except the administration, curriculum, and teaching studies division which requires the experience as a prerequisite to admission); and demonstrated evidence of potential for professional leadership. Students are admitted by a division and must formally apply for a change of division.

Law/Education

See the Admission section under Master of Arts for information on the concurrent degree program in law and education.

Major Fields or Subdisciplines

The Ed.D. is offered for emphases in divisions 1 through 4. Administration, curriculum, and teaching studies emphases are offered for school administrators, education policy analysts, curriculum developers and directors of

curriculum, and teacher educators. Educational psychology emphases are offered for those interested in practical issues related to special education, educational technology, and computer-assisted instruction. Higher education and work emphases focus on administration in relation to corporate or proprietary education and training, community colleges, and continuing education. Social research methodology emphases are applied measurement and evaluation leadership.

Course Requirements

A program of study for an Ed.D. student is determined by the student and faculty adviser and must meet division and department requirements. A minimum of 18 courses is required as indicated below:

(1) Three research methods courses, with no more than two introductory (first tier) courses and at least one intermediate/advanced (second tier) course, selected from the departmental list approved for the Ed.D.

(2) Nine education courses, of which at least six must be from the Education 400 series; all courses must be approved by the faculty adviser.

(3) Three supplemental courses selected from offerings in the department (outside the student's field of emphasis) or in another UCLA professional school or department.

(4) A sequential three-quarter field practicum (Education 499A-499B-499C). Divisional course requirements may be waived, under exceptional circumstances, by the division on petition by students and their advisers to the division head. Whenever additional academic background is needed, a faculty adviser may require other coursework.

Written and Oral Qualifying Examinations

Doctoral Screening Examination. A written examination is taken after the completion of appropriate coursework determined by the division. The examination is concerned with central topics in the selected division and field of emphasis. Questions are comprehensive in nature and are designed to measure the breadth and depth of knowledge, as well as to focus that knowledge on specific problems.

Students taking the doctoral screening examination ordinarily are not allowed to take more than nine courses before taking the examination. This limit is intended to ensure that students demonstrate basic competencies as early as possible in their doctoral training.

All students admitted to a doctoral program without a master's degree are required to take the doctoral screening examination.

In a first sitting for the examination, students may be passed, passed with honors, passed at the master's level (the terminal master's), or failed. Students passed at the master's level are given one further opportunity to pass at the doctoral level; students who fail are given a

second opportunity to take the examination at the master's level only.

Students who fail the doctoral screening examination, but who have been allowed to retake the examination, must do so at the next sitting. They can take up to 12 units per quarter until they have successfully completed the examination. Of these 12 units, only four may be a doctoral 200- or 400-level course; the remainder must be the 597 course. After satisfying the above requirements, students are eligible to take the following qualifying examinations:

Doctoral Written Qualifying Examination. The written qualifying examination is offered twice yearly, once in Fall Quarter and once in Spring Quarter. The examination tests the core knowledge of the division and emphasis the student has selected. The questions on the examination reflect a professional orientation. Students may be passed, passed with honors, or failed on this examination. Students who fail are given a second opportunity to take the examination at the discretion of their adviser and a third opportunity on a two-thirds majority of all divisional faculty voting on this issue. No fourth sitting for the examination is allowed.

Students who fail the doctoral written qualifying examination, but who are allowed to retake it, may do so at any scheduled sitting with consent of the divisional faculty.

University Oral Qualifying Examination. The oral examination is conducted by the student's doctoral committee, which selects topics from education that are related to the student's written dissertation proposal. On majority vote of the doctoral committee, the University Oral Qualifying Examination may be repeated once.

Education

Lower Division Courses

91A. Infant Care and Development. (4) (Using scientific methods to answer questions about how to raise children, educational researchers, psychologists, and anthropologists try to replace myths and anecdotes with a verifiable understanding of children's development and problems and choices that parents face in raising children.

91B. Child Care: Research, Practice, and Policy. (4) Examination of psychological research on influences of early child care on children's concurrent and subsequent development, with this research linked to basic research in developmental psychology and education. Discussion of influence of research on the policy process.

91C. Elementary and Secondary Education. (4) Designed for juniors/seniors. Social sciences overview of major policy issues in American public education. General introduction to social sciences research in analysis of educational policy issues and to methods for exploring major policy issues. Topics include school finance, equal educational opportunity, testing and evaluation, teacher compensation, and school law.

91D. The Teaching Profession. (4) Designed for juniors/seniors. Introduction to the field of education. Experts within Department of Education and experienced school personnel present a variety of topics in education and provide opportunity to visit diverse educational settings.

91E. Perspectives of the American College. (4) Examination of historical conditions that have shaped American higher education and consequent differential characteristics, trends, and practices that bear on dynamics and impacts of contemporary colleges. Emphasis on interrelated research, academic, social, and policy issues underlying the diverse system of American higher education.

Upper Division Courses

M102. The Mexican American and the Schools. (4) (Same as Chicana and Chicano Studies M102.) Review of research and teaching strategies. Analysis of school policies and practices and their effect on development of Mexican American and Chicano youth and communities.

M108. Sociology of Education. (4) (Same as Sociology M175.) Requisite: Sociology 1. Study of social processes and interaction patterns in educational organizations; relationship of such organizations to aspects of society, social class, and power; social relations within school, college, and university; formal and informal groups, subcultures in educational systems; roles of teachers, students, and administrators. Fieldwork may be required.

125A. Education of Exceptional Individuals. (4) Requisite: Psychology 10. Introduction to the field of special education, with emphasis on psychology of individual differences, learning characteristics of exceptional individuals, and application of research and theory to special education problems.

140. Time and Behavior in Educational Organizations. (4) (Formerly numbered 197H.) Designed for juniors/seniors. Overview of role that time plays in understanding behavior in school and social organizations, with specific emphasis on understanding management of change process. Exploration of behavioral issues such as gang membership, midlife crisis, school reform, teacher burnout, and student at-risk behaviors.

M148. Women in Higher Education. (4) (Same as Women's Studies M148.) Designed for juniors/seniors. Education and career development of women in higher education. Specifically, emphasis on undergraduate and graduate women; women faculty and administrators; curricula, programs, and counseling services designed to enhance women's educational and career development, affirmative action, and other recent legislation.

180. Social Psychology of Higher Education. (4) Overview of significant studies in social psychology of higher education. Focus on institutional characteristics and students' interpersonal and intrapersonal processes, with special emphasis on identifying and explaining effects of college experience on student development and achievement.

183A. Contextual Leadership for Education and Community Service. (4) (Formerly numbered 197M.) Conceptual, case study, and experiential investigation of leadership within educational environments and the community. Investigation of how context and environment influence leaders, what leadership effectiveness means, and how to become effective leaders.

183B. Problem Solving for Leadership and Change. (4) (Formerly numbered 197E.) Study of concepts and tools that contribute to creative problem solving and its relationship to leadership and change, drawing from both life and social sciences disciplines as well as professional studies of education and related fields.

183C. Strengths-Based Learning. (4) (Formerly numbered 197E.) Conceptual analysis of theories that point to improved learning and academic achievement. Relevant theory and research from cognitive psychology provide context. Practical applications of theory through classroom activities and experiential assignments.

C191A. Philosophy of Education: Ethics and Values. (4) Study of ethics and value theory in teaching and learning, educational organization and policy, and curriculum design and validation. Concurrently scheduled with course C206D.

191B. Issues in Education: Historical Perspective. (4) Lecture, three hours; discussion, one hour. Exploration of such controversial issues in American education as access, diversity, parental choice, cultural literacy, teacher empowerment, and role of popular media in historical perspective.

C191C. Economics of Education. (4) Introductory course in microeconomic and macroeconomic techniques applied to education. Methodologies illustrated principally in context of current issues in American education. Concurrently scheduled with course C244.

C191D. Politics of Education. (4) Political dimensions of education institutions as organizations. Relationships between education institutions and political institutions in society. Political theory as a foundation for public policy analysis; interest groups in education policy formation and implementation. Concurrently scheduled with course C207.

C191E. Educational Anthropology. (4) Recommended preparation: Anthropology 9. Study of education through research and method of the cultural anthropologist. Interdependence of culture and education, with emphasis on cross-cultural studies of enculturation, schooling, values, cognition, language, and cultural change. Concurrently scheduled with course C203.

191F. Educational Psychology. (4) Broad overview of educational psychology, with examination of relationship of teaching and learning; various perspectives as to how children learn; issues of teaching and learning that arise based on child's social class, ethnic background, gender, age, and level of ability.

191G. Adolescent Psychosocial Development: Problems and Potentialities. (4) (Formerly numbered 197C.) Adolescence as developmental stage involving construction of personal identity, a narrative dialogical mental structure underlying meaning and direction, life choices, and integration of values and commitments. Current prevention approaches to youth deviance and dysfunction.

191H. Education and Law. (4) (Formerly numbered 197L.) Exploration of American legal system and how it influences education. Introduction to legal reasoning and analysis and examination of past and current controversies to discover patterns and synthesize policy implications.

192A. Theory and Practice of Teaching and Learning Function. (4) (Formerly numbered 192.) Lecture, three hours. Requisite: course 180. Analysis of learning theory and teaching practice in light of research on student characteristics, learning environments, student/instructor interaction, and outcomes of instruction. Application of theory and research to practice.

192B. Teaching Practicum in Social Psychology of Higher Education. (4) (Formerly numbered 181.) Lecture, three hours. Requisite: course 192A. Examination of intellectual and personal development of college students through differential environments and instructional experiences. Students assist in teaching and preparation of instructional materials for course 180.

192C. Dynamics of Peer Teaching. (4) (Formerly numbered 197N.) Proficiency in learning principles and procedures relevant to peer teaching in a variety of circumstances provided and undergraduates trained to present College of Letters and Science academic support workshops to their peers with intent of enhancing academic and career perspectives.

192D. Development of Academic Workshops. (4) (Formerly numbered 197N.) Requisite: course 192C. Survey of issues in bilingualism and language assessment, study of language, linguistic competence/proficiency, biliteracy, review of current language assessment instruments. Preparation and analysis of naturalistic data using concepts developed through readings and discussion.

192E. Evaluation of Peer Teaching. (4) (Formerly numbered 197N.) Requisite: course 192D. Continuation of course 192D. Survey of issues in bilingualism and language assessment, study of language, linguistic competence/proficiency, biliteracy, review of current language assessment instruments. Preparation and analysis of naturalistic data using concepts developed through readings and discussion.

193A. Community Service Learning. (4) (Formerly numbered 197K.) Lecture, two hours; discussion, two hours; fieldwork, five hours. Based on experiential-education learning theory, course involves undergraduates in promoting academic achievement of high school and junior high school students through tutoring and curriculum development, addressing cognitive and motivation theory and service learning.

193B. Academic Motivation. (4) (Formerly numbered 197L.) Study of critical theories of learning and motivation with applications to academic performance. Exploration of how to improve academic motivation through fieldwork observations and study of research on achievement motivation. Attribution theory, intrinsic motivation, generative learning, self-efficacy, locus of control, and learned helplessness.

194A. Language, Literacy, and Human Development. (6 to 8) Lecture, three hours; laboratory, two hours (optional); field practicum, two hours. Provides opportunities to combine theory and practice in study of human development in educational contexts. Use of ethnographic methods to document learning. Focus on relationship between theories of development, culture, and language. May be taken independently for credit. Letter grading.

194B. Culture, Gender, and Human Development. (6 to 8) Lecture, three hours; laboratory, two hours (optional); field practicum, two hours. Provides opportunities to combine theory and practice in study of human development in educational contexts. Use of ethnographic methods to document learning. Focus on relationship between theories of development, culture, and gender. May be taken independently for credit. Letter grading.

194C. Culture, Communications, and Human Development. (6 to 8) Lecture, three hours; laboratory, two hours (optional); field practicum, two hours. Provides opportunities to combine theory and practice in study of human development in educational contexts. Use of ethnographic methods to document learning. Focus on relationship between theories of development, culture, and technologies. May be taken independently for credit. Letter grading.

197A-197Z. Current Issues in Education. (4) Lecture, three to four hours. Limited to juniors/seniors. Variable topics course organized on selected current issues basis, integrating field observations and readings through seminar discussions. Consult *Schedule of Classes* for topics and instructors:

197F. Laboratory in Education of Exceptional Individuals. Lecture, one hour; laboratory, six to eight hours. Requisite: course 125A. Six to eight hours per week of observation, research, and teaching of children with severe behavioral/emotional disorders and/or mental retardation in UCLA Neuropsychiatric Institute and Hospital School.

197G. Advanced Laboratory in Education of Exceptional Individuals. Lecture, one hour; laboratory, six to eight hours. Requisite: course 197F. Six to eight hours per week of research, teaching, and multidisciplinary team participation with children with severe behavioral/emotional disorders and/or mental retardation in UCLA Neuropsychiatric Institute and Hospital School.

199. Special Studies. Limited to seniors. To be arranged with faculty member who directs the study.

Graduate Courses

200A. Historical Research and Writing. (4) Methods of historical research and writing for students who are or who will be engaged in research and in report or paper or thesis writing, regardless of their field of interest.

200B. Survey Research Methods in Education. (4) Requisite: course 210A. Problems of conceptualization, organization, and gathering nonexperimental and quasi-experimental quantitative and qualitative data.

200C. Analysis of Survey Data in Education. (4) Lecture, three hours; laboratory, two hours. Requisite: course 200B. Introduction to techniques of processing and analyzing nonexperimental and quasi-experimental quantitative data.

M201C. History of American Education. (4) (Same as History M264.) History of educational thought and of social forces impinging on American education from the 1880s to the present. Analysis of relation between these ideas and forces, and aims and practices of American education today.

202. Evaluation Theory. (4) Prevalent evaluation theories, systems for categorizing these theories, and process of theory development in educational evaluation.

C203. Educational Anthropology. (4) Recommended preparation: Anthropology 9. Study of education through research and method of the cultural anthropologist. Interdependence of culture and education, with emphasis on cross-cultural studies of enculturation, schooling, values, cognition, language, and cultural change. Concurrently scheduled with course C191E.

204A. Introduction to Education and the Social Sciences. (4) Interdisciplinary course intended to introduce students to study of educational issues, texts, and movements of thought through social sciences and comparative perspectives.

204B. Introduction to Comparative Education. (4) Examination of conceptual and methodological questions underlying comparative education. Particular attention to development of the field and to styles of social analysis which may be applied to comparative and cross-national studies in education.

204C. Education and National Development. (4) Designed for graduate students. Analysis of various social sciences perspectives and methodologies (including modernization, dependency, Marxist, neo-Marxist, liberation theology, and world-system theories of change and development) and changing notions of role of education in development of less-industrialized countries of the world.

204D. Minority Education in Cross-Cultural Perspective. (4) Historical and contemporary analyses of educational policies with regard to ethnic, religious, and linguistic minorities through selected national and international case studies. Introduction to cross-cultural education in representative countries in relation to social, political, and economic systems.

204E. International Efforts in Education. (4) Designed for graduate students. Critical analysis of complex world of "development cooperation," with particular reference to bilateral and multilateral efforts in education.

204F. Nonformal Education in Comparative Perspective. (4) Comparative and international study of organized and systematic educational activity for children, youth, and adults carried on outside of schools. Types of programs include, among others, consciousness raising, community action, skills training, literacy, and extension programs.

205. Computers in the Educational Process. (4) Introduction to theory, experimentation, evaluation, and future of computer systems in education, with emphasis on computer-assisted instruction (CAI), and use of computers to teach programming and to foster development of writing, computational, and filing skills.

206A. Philosophy of Education: Introduction. (4) Systematic introduction to the field, indicating ways in which philosophy serves to elucidate educational aims, content, methods, and values.

206C. Introduction to Conceptual Analysis. (4) Conceptual analysis of recurrent and contemporary themes in the field. Emphasis on development of logical and linguistic skills used in analysis of educational problems and issues.

C206D. Philosophy of Education: Ethics and Values. (4) Study of ethics and value theory in teaching and learning, educational organization and policy, and curriculum design and validation. Concurrently scheduled with course C191A.

C207. Politics of Education. (4) Preparation: one approved research methods course required for master's or doctoral degree. Political dimensions of education institutions as organizations. Relationships between education institutions and political institutions in society. Political theory as a foundation for public policy analysis; interest groups in education policy formation and implementation. Concurrently scheduled with course C191D.

208A. Perspectives on the Sociology of Education. (4) Sociological perspectives on current issues in educational policy and practice, including desegregation, decentralization, equality of educational opportunity, structure of educational organization, teacher/student relationships, reform in education at elementary, secondary, postsecondary levels.

208C. Explanation in the Social Sciences and Educational Research. (4) Lecture, two hours; discussion, two hours. Designed for graduate students. Overview of basic strategies and forms of explanation relevant to inquiry in education from vantage point of various social and behavioral sciences disciplines.

209A. History of Higher Education. (4) Examination of development of postsecondary education in the U.S., with attention to social context and to scope and variety of institutions.

209C. Problems in Research and Evaluation in Higher Education. (4) Critical review of research and evaluation studies of higher education, with special attention to need for studies of new programs and problems, and to design and methodology of evaluative research.

209D. System of Higher Education. (4) Analysis of structure and function of American postsecondary education from systems perspective. Emphasis on structure of system and comparative characteristics (faculties, student bodies, finances, outputs) of different types of institutions.

211A. Measurement of Educational Achievement and Aptitude. (4) Requisite: course 230A. Critical study of tests of achievement and aptitude, with emphasis on group tests; relation of achievement to aptitude; social implications of measurement of intelligence; elements of validity and reliability. S/U or letter grading.

211B. Measurement in Education: Underlying Theory. (4) Requisite: course 211A. Measurement theory as applied to testing, focusing primarily on classical test theory; implications of theories for test construction and selection; current status of validity and reliability theory.

211C. Item Response Theory. (4) Requisites: courses 211B, 230C. Item response theory, applications to educational achievement tests, item bias, test information, test equating, computerized adaptive testing. S/U or letter grading.

212A. Learning and Education. (4) Models of learning, modeling, reinforcement, motivation, encoding, memory, transfer, individual differences, and instruction.

212B. Motivation and Affect in Educative Process. (4) Requisites: courses 212A, 230A. Review of theoretical and empirical literature on motivational factors in school settings and conditions for acquisition of affective outcomes. S/U or letter grading.

212C. Cognition and Creativity in Education. (4) Requisite: course 212A. Review of theoretical and empirical literature on cognitive processes in school learning, including knowledge acquisition, comprehension, metacognition, and creativity.

213A. Counseling Psychology in School and Community. (4) Analysis and in-class application of student personnel service theory and methods, with emphasis on student assessment and development, task groups, and evaluation.

213B. Legal and Ethical Issues in Counseling Psychology. (4) Requisite: course 213A. Ethical and legal codes relevant to psychological services in schools and community; relation of value systems and personality; case studies in implications of personal values in counseling situations.

213C. Group Counseling Theory and Process. (4) Lecture, three hours; discussion, one hour. Requisites: courses 213A, 214A, 214B. Group productivity, leadership in groups, social perception, attitude formation, and effect of behavior changes in individuals and groups. Evaluation of social, psychological, and educational principles related to therapeutic experiences of individuals in small groups.

213D. Assessment in Counseling and Student Affairs. (4) Overview of assessment issues and methods used in counseling and student affairs activities. Emphasis on concepts of testing and measurement, applications of measurement theory, and contemporary issues that are significant in influencing assessment in student affairs programs.

214A. Counseling Theory and Practice. (4) Alternatives in counseling practice in relation to theories of personality development and functioning, research on effectiveness of counseling, professional issues in counseling, educational aspects of counseling.

214B. Advanced Counseling Theory and Practice. (4) Limited to advanced degree candidates whose major interest is counseling and to selected high school and college counselors. Counseling procedures, educational planning, and methods for helping students handle personal problems that interfere with school progress; critical evaluation of procedures.

214D. Career Counseling. (4) Depth study of current theories, principles, problems, and practices of career counseling.

214E. Substance Abuse and Addiction. (4) Theory and practice of prevention and intervention in substance abuse and addiction from perspective of counseling and educational practice.

214F. Student Problems: Social Context. (4) Designed to assist students in understanding the configuration of social forces that lead to student dysfunctions. Consideration of a number of contemporary social problems that are of concern to school counselors, educators in general, and behavioral scientists.

M215. Personality, Motivation, and Attribution. (4) (Same as Psychology M239.) Current research and theory relating personality variables (e.g., attributional styles, self-esteem) to motivational concerns such as persistence and intensity of behavior. Perceived causes of outcomes in achievement and affiliative domains.

216. Counseling Models from a Cross-Cultural Perspective. (4) Requisite: course 213A. Research related to psychological, educational, and sociological characteristics of counseling clients within a cross-cultural perspective and implications for counseling models. Evaluation of counseling practices through analysis of school, community, and mental health settings.

M217A. Social Development and Education. (4) (Same as Psychology M242D.) Biological and familial, school, and other influences on the child; development in context of current research and theoretical models; consideration of theoretical and methodological research on family, peer group, and school; application of developmental theory and research to educational practice.

217B. Cognitive Development and Education. (4) Designed for graduate students. Critical review of theories and research in cognitive development, focusing on work of Piaget and Vygotsky, and relation of this work to issues in educational practice.

M217C. Personality Development and Education. (4) (Same as Psychology M245.) Review of research and theory of critical content areas in personality development that bear on school performance: achievement motivation, self-concept, aggression, sex differences, empathy, and other social behaviors; review of status of emotional behavior in personality theory and development.

217D. Language Development and Education. (4) Research and theory on how children develop their first language; sociolinguistic and psycholinguistic issues in preschool and primary years; bilingual and dialectical issues.

217F. Human Development and the Educational Process. (4) Cognitive and social development; cultural, family, peer, and schooling influences on human development; application of developmental theory and research to educational practice.

M217G-M217H-M217I. Child Abuse and Neglect. (2-2-1). (Same as Community Health Sciences M245A-M245B-M245C, Dentistry M300.5A-M300.5B-M300.5C, Law M281A-M281B, Medicine M290A-M290B, Nursing M290A-M290B-M290C, and Social Welfare M290E-M290F-M290G.) Lecture, two hours. Course M217G is requisite to M217H, which is requisite to M217I. Intensive interdisciplinary study of child physical and sexual abuse and neglect, with lectures by faculty members of the Schools of Dentistry, Law, Medicine, Nursing, and Public Health and the Departments of Education and Psychology, as well as by the relevant public agencies. S/U or letter grading.

219. Laboratory: Advanced Topics in Research Methodology. (4) Provides assistance in design of research and interpretation of data to advanced students from other divisions. Coverage of special topics not included in other courses on research methods.

220A. Inquiry into Schooling: Organization and Change. (4) Critical analysis of issues in reconstruction of schooling; concepts of function and structure of schooling; organization theory; systems approaches in analysis of organization development and change.

220B. Inquiry into Schooling: Curricular Problems and Policy Issues. (4) Inquiry into curriculum of schooling. Critical analysis of relationship of curricular decision making to social system and contextual variables.

221. Computer Analyses of Empirical Data in Education. (4) Lecture, two hours; laboratory, two hours. Requisites: courses 209C (section 1), 230A. Designed to develop conceptual and technical skills needed for designing and executing empirical research utilizing statistical packages. Each student conducts two original studies. Equal emphasis on techniques of data analysis and interpretation of results. S/U or letter grading.

M222A. Laboratory for Naturalistic Observations: Developing Skills and Techniques. (4) (Same as Anthropology M236Q, Psychiatry M235, and Psychology M295.) Skill of observing and recording behavior in natural settings, with emphasis on field training and practice in observing behavior. Discussion of some uses of observations and their implications for research in social sciences. Students expected to integrate observational work into their current research interests.

222B. Design Issues in Naturalistic Research. (4) Lecture, three hours; discussion, one hour. Requisite: course M222A. Issues in conceptualization and design of naturalistic research studies, particularly within educational settings. Specific topics include problem definition and focus, units of observation, sampling, controlled comparisons and meaningful variation, and reliability/validity concerns in observational research. Special attention to ethnographic studies.

222C. Qualitative Data Reduction and Analysis. (4) Lecture, two hours; discussion, two hours. Requisite: course M222A or 222B. Theory of and practice in qualitative data reduction and analysis. Discussion of data storage and retrieval systems, data manipulation techniques such as typologies and attribute spaces, and specific analytic perspectives. Interfacing qualitative and quantitative data.

222D. Qualitative Inquiry: Special Topics. (4) Lecture, four hours. Requisite: course M222A. Special topics course on some field or aspect of qualitative inquiry different from or covered in more depth than topics and techniques in courses M222A, 222B, and 222C. Topics may include classroom language ethnography, advanced ethnographic writing, discourse analysis, and microethnography. Letter grading.

223. Aesthetics and the Curriculum. (4) Lecture, two hours; discussion, two hours. Examination of various ideas and theories in aesthetics and application of these in schooling contexts.

224. Problems and Issues in Bilingual and Multicultural Education. (4) Introduction to development and implementation of bilingual and multicultural programs in the U.S. Analysis of program goals, models, typologies, and effectiveness.

225A. Issues in Education of Exceptional Individuals. (4) Designed for graduate students. Analysis of major research regarding contemporary trends, issues, and programs for the exceptional; consideration of commonalities and differences among exceptional individuals.

225B. Advanced Issues in Education of Exceptional Individuals. (4) Synthesis of developmental and educational theory relevant to study of exceptional individuals, including consideration of historical context of current research and applied issues in special education.

226. Seminar: Special Topics in Writing, Rhetoric, and Educational Methodology. (4) Special topics seminar on writing in education that could focus on history of writing about education, social and political dimensions of it, its variation by discipline, and its uses in professional and public contexts.

227A. Research on Learning Characteristics of Exceptional Individuals. (4) Requisite: course 225B. Overview of research and theory regarding learning characteristics of exceptional individuals and discussion of application of this work to educational practice.

227B. Research on Cognitive and Language Characteristics of Exceptional Individuals. (4) Requisite: course 227A. Review of empirical and theoretical literature regarding language and cognitive development of exceptional individuals; focus on intervention programs developing language and cognition.

227C. Research on Behavioral and Social Characteristics of Exceptional Individuals. (4) Requisite: course 227B. Analysis of social and emotional development of exceptional individuals and development of social competence in special education programs.

228. Observation Methods and Longitudinal Studies. (4) Lecture, two hours; discussion, two hours. Requisite: course 230A. Design of observational and longitudinal studies. Formulation of study conclusions concerning influences on children's development. Conduct of observations; processing and analysis of data. Use of portable computers for recording observations. S/U or letter grading.

229. Seminar: Special Topics in Urban Schooling. (4) Research on selected topics in fields of administration, policy, curriculum, and teaching studies and on conceptualization of hypotheses and research programs on division topics and issues.

230A. Introduction to Research Design and Statistics. (4) (Formerly numbered 210A.) Designed for graduate students. Key concepts and issues in design and conduct of social sciences research. Introduction to descriptive statistics and fundamentals of statistical inference.

230B-230C. Linear Statistical Models in Social Science Research. (4-4) (Formerly numbered 210C, 218A.) Lecture, four hours. Requisite: course 230A or passing score on screening examination. Integrated and unified approach to applications of linear statistical models in regression, analysis of variance, and experimental and quasi-experimental designs. In Progress and letter grading (credit to be given only on completion of course 230C).

230X. Applied Research Design and Statistics for Social Sciences. (4) (Formerly numbered 210B.) Requisite: course 230A or passing score on screening examination. Introduction to commonly used statistical methods in social sciences, including regression, analysis of variance, contingency tables. Emphasis on application and interpretation.

231A. Multivariate Analysis. (4) (Formerly numbered 210D.) Requisites: courses 230B-230C. Review of multiple regression analysis, analysis of covariance. Introduction to matrix algebra. Introduction to multivariate normal distribution. Multivariate analysis of variance. Linear discriminant function. Analysis of repeated measurements. Canonical correlation. Principal components.

231B. Factor Analysis. (4) (Formerly numbered 210E.) Requisites: courses 211B, 231A. Exploratory factor analysis, rotations, confirmatory factor analysis, multiple-group analysis.

231C. Analysis of Categorical and Other Nonnormal Data. (4) (Formerly numbered 218D.) Requisites: courses 230B-230C. Regression analysis with dichotomous and polytomous dependent variables, log-linear modeling, coefficients of association for categorical variables, factor analysis, and structural equation modeling.

231D. Advanced Quantitative Models in Nonexperimental Research: Multilevel Analysis. (4) (Formerly numbered 218B.) Requisites: courses 230B-230C. Examination of conceptual, substantive, and methodological issues in analyzing multilevel data (i.e., on individuals in organizational settings such as schools, corporations, hospitals, communities); consideration of alternative analytical models.

231E. Structural Equation Modeling. (4) (Formerly numbered 218C.) Requisites: courses 231A, 231B. Extends path analysis (causal modeling) by considering models with measurement errors and multiple indicators of latent variables. Confirmatory factor analysis, covariance structure modeling, and multiple-group analysis. Identification, estimation, testing, and model building considerations.

232. Instructional Analysis. (4) Theoretical and empirical analysis of instructional variables as they relate to diverse types of instructional strategies. Development of skill in techniques of conducting instructional research.

233A. Professional Writing in Education. (4) Designed for first- and second-year doctoral students and intended to assist in professional development as writers, with focus on style and organization, scholarly genres, modes of discourse, and broader issues of conceptualization and method.

233B. Professional Writing in Education. (4) Designed for students at proposal or dissertation stage, with focus on development, organization, and coherence of these scholarly documents, their conceptualization and method, and issues of audience and style.

234. Education and Social Stratification. (4) Relationship between education and components of social stratification, including occupations and earnings. Competing theories used in studying education and social stratification; relevant research. Conclusions regarding individual career decisions, social policies, and theories of society.

236. Human Abilities. (4) Requisite: course 230A. Nature, development, and measurement of intellectual abilities and their relations to learning and instruction. Review of research and theory of models of ability and test development. S/U or letter grading.

237. Law and Urban Education. (4) (Formerly numbered 229.) Lecture, four hours. Examination of recent legal controversies that may impact ability of urban educators to meet needs of students in a multicultural society, with special emphasis on such equity-related issues as desegregation, school finance, standardized testing, and rights of language minority students. Letter grading.

238. Cross-National Analysis of Higher Education. (4) Comparative study of national systems of higher education: their division of work, basic values, structures of authority, modes of national integration, and types of change.

- 239. Organization and Governance of Educational Systems. (4)** Academic organizations, precollegiate and postsecondary, are most appropriately studied as complex, professionalized organizations. Emphasis on characteristics of educational institutions and systems as organizations: environmental relations, governance structures, processes, and patterns of decision making and policy-making.
- 240. Cultural Foundations of U.S. Education: Policy and Practice. (4)** Designed for graduate students. Cultural foundations of persistent and troubling issues and tensions in American educational policy-making and practice.
- 241. Research Methodology in School Administration. (4)** Examination of research problems and strategies in school administration.
- 242. Quantitative Foundations for Educational Policy and Planning. (4)** Introductory research course focusing on quantitative foundations for descriptive, tactical, and strategic policy analysis in education.
- C244. Economics of Education. (4)** Introductory course in microeconomic and macroeconomic techniques applied to education. Methodologies illustrated principally in context of current issues in American education. Concurrently scheduled with course C191C.
- 245. Seminar: Cost-Benefit Analysis in Education. (4)** Conceptual and theoretical underpinnings of cost-benefit analysis, critical analysis of current cost-benefit studies, and procedures for conduct of cost-benefit studies.
- 246A. Decision Analysis and Advanced Computer Methods for Educational Policy and Planning. (4)** Requisite: course 242. How information technology and decision analysis impact K-12 schooling, higher education, and technical training/workplace settings. With research paper, oral presentation, and two research briefs, students can pursue decision analysis areas of special interest to their professional and career objectives.
- 247. Special Topics in Law and Educational Policy. (4)** (Formerly numbered 447.) Lecture, four hours. Policy-based inquiry with focus on specific law-related debates that inevitably influence both K-12 and higher education communities. Identification of strategies that have been successfully employed by those who have sought to use law to shape educational policy. Letter grading.
- 249B. Seminar: Institutional Research and Program Evaluation. (4)** Critical review of institutional evaluation studies, with consideration of scope of information needed for various purposes and problems of interrelating this information to appraise overall institutional functioning and effectiveness.
- 250A. Organizations and Systems of Higher Education. (4)** Designed for graduate students. Two-course sequence designed to orient new students to issues, ideas, and literature that constitute the division, with emphasis on underlying social and political issues that shape higher education and organizational change.
- 250B. Topical Issues in Higher Education. (4)** Designed for graduate students. Two-course sequence designed to orient new students to issues, ideas, and literature that constitute the division, with emphasis on underlying social and political issues that shape higher education and organizational change.
- 250C. Theoretical Frameworks of Higher Education. (4)** (Formerly numbered 410C.) Designed for graduate students. Overview of various social sciences theories used to analyze institutions and issues of contemporary higher education. Explanation of how theory and methodology affect research design and framing of research questions in studies of higher education.
- 251A. Seminar: Philosophy of Education, Epistemology. (4)** Seminar, four hours. S/U or letter grading.
- 251C. Seminar: Philosophy of Education, Social Science Problems — Methodological Perspectives. (4)** Requisite: course 206C.
- 251D. Seminar: Philosophy of Education, Problems in Ethics and Values. (4)** Requisite: course C206D.
- 251E. Seminar: Philosophy of Education, Selected Issues. (4)** Seminar, four hours. S/U or letter grading.
- 252A. Seminar: Educational Organizations. (4)** Requisite: course 208A.
- 252B. Seminar: Education and Social Change. (4)** Requisite: course 208A.
- M252C. Human Resources and Economic Development. (4)** (Same as Community Health Sciences M236.) Lecture, four hours. Examination, in context of the developing countries, of interactions among economic development, population growth, levels of health and nutritional status, and educational investments. S/U or letter grading.
- 253A. Seminar: Current Problems in Comparative Education. (4)** Seminar, four hours. S/U or letter grading.
- 253B. Seminar: African Education. (4)** Designed for graduate students. Contemporary issues in African educational systems, including questions of access and equity, quality and efficiency, relevance and responsiveness, links between schools and communities, and policy and practice in education.
- 253C. Seminar: Asian Education. (4)** Seminar, four hours. S/U or letter grading.
- 253D. Seminar: Latin American Education. (4)** Seminar, four hours. S/U or letter grading.
- 253E. Seminar: European Education. (4)** Seminar, four hours. S/U or letter grading.
- 253F. Seminar: Education in Revolutionary Societies. (4)** Multidisciplinary and comparative study of socialist educational theory examined through writings of Marx, Lenin, Mao, and others. Implementation of this theory in specific case studies, along with comparative assessments of nonsocialist nations.
- 253G. Seminar: The Asian American and Education. (4)** Basic issues and topics related to Asian Americans in the field of education. Examples of issues and topics include Asian Americans and the community, socioeconomic status, education-to-work transition, language and culture question.
- 253H. Seminar: The Chicano/Hispanic and Education. (4)** Basic issues and topics related to the Chicano and other Hispanic groups in education. Review of literature on specific educational levels and Chicano/Hispanic student progress (e.g., early childhood, elementary, higher education; specific topics: assessment, access, tracking, segregation; implications for schooling).
- 253I. Education and Social Change in the Middle East and Islamic World. (4)** Critical and analytic examination of historical and current role of traditional and modern (Western) education in affecting social, political, and economic changes in countries of the Middle East and Islamic world (including Pacific Rim, South and Central Asia).
- 254. Seminar: History of Education. (4)** Requisite: course M201C. Study of current movements in historiography of education and critical reading of texts in history of education.
- 255A-255B-255C. Seminars: Special Topics. (4)** May be repeated for credit. **255A.** Measurement; **255B.** Design; **255C.** Data Analysis.
- 256A. Seminar: Special Topics in School Learning. (4)** Seminar, four hours. S/U or letter grading.
- 256B. Seminar: Special Topics in Development. (4)** Seminar, four hours. S/U or letter grading.
- 257. Seminar: Research in Counseling Psychology. (4)** In-depth analysis of selected research approaches/areas in counseling psychology.
- 258A. Seminar: Problems in Instructional Research. (4)** Seminar, four hours. S/U or letter grading.
- 258B. Seminar: Problems in Instructional Development. (4)** Seminar, four hours. S/U or letter grading.
- 259A. Seminar: Research on Characteristics of Students. (4)** Analysis of concepts, methodology, and conclusions or implications underlying and resulting from major research on student characteristics. Emphasis on differential impact of higher education on student and faculty development.
- 260. Seminar: Principles of Curriculum and Instruction. (4)** Seminar, four hours. S/U or letter grading.
- 261F. Seminar: Cognitive and Personal Development of College Students. (4)** Examination of cognitive development of college students; issues of personal and social development, including leadership, and interpersonal relations and skills.
- 262B. Seminar: Reading. (4)** Seminar, four hours. S/U or letter grading.
- 262F. Seminar: Research Topics in Bilingual/Multicultural Education. (4)** Seminar, four hours. S/U or letter grading.
- 263. Seminar: Higher Education. (4)** Seminar, four hours. S/U or letter grading.
- 264. Seminar: Teacher Education. (4)** Research, issues, and practices in preservice and in-service teacher preparation, evaluation, and certification. Social, philosophical, and methodological issues and current trends in America and abroad. Opportunities to observe, participate in, and discuss teacher education programs.
- 265. Higher Education Policy. (4)** Requisites: courses 250A, 250B. Understanding public policy for higher education requires understanding of both issues and policy process. Review of major topics on which the U.S. government is active, as well as key actors and their influence.
- 266. Feminist Theory and Social Sciences Research. (4)** Examination of how diverse feminist social theories of last quarter century have both challenged and strengthened conventional social sciences theories and their methodologies. Introduction especially to feminist standpoint theory, a distinctive critical theory methodology now widely used in social sciences.
- 267. Seminar: Educational Technology. (4)** Seminar, four hours. S/U or letter grading.
- 268. Theorizing Reading: Rhetorics of Academic Discourse. (4)** Lecture, two hours; discussion, two hours. Designed for graduate students. Introduction to theoretical approaches to reading, such as post-structuralist, feminist, deconstruction, reader reception, and semiotics, and to core ideas of some leading theorists of reading, such as Roland Barthes, Wolfgang Iser, Barbara Johnson, Stanley Fish, and Gayatri Spivak.
- 269. Representations of Education in Cinema. (4)** Lecture, two hours; discussion, two hours. Designed for graduate students. Exploration of ways in which we draw on diverse "texts," particularly films set in or around schools, to illuminate contemporary issues in American secondary education (e.g., issues pertaining to representation of teachers, students, parents, and administrators and curriculum in popular films about high school and adolescents).
- 270. Introduction to Cultural Studies. (4)** Lecture, four hours. Investigation of current trends in cultural studies through examination of different methods of cultural interpretation, seminal texts in cultural studies, and practical criticism engaging popular artifacts of media culture. Emphasis on developing critical media literacy as a goal of cultural studies. Letter grading.
- 271A. Proseminar: Educational Psychology. (2)** Introduction to a variety of research issues in the field of educational psychology, including topics related to human development, learning and instruction, counseling, and special education, and to different methodological approaches used to study them. S/U grading.

272. Case-Study Research in Education Policy and Practice. (4) Use of case-study methods in education research, providing opportunities for applying methodological skills to actual case-study research projects. Focus on single and multiple case studies that investigate issues in education policy and practice.

273A. Structure and Dynamics of Educational System. (4) Lecture, two hours; discussion, two hours. Overview of school administration, teaching, curriculum, and policy studies. Focus on American education as an institutional system wherein federal, state, and local policy, school administration, curriculum theory and design, and teaching are inextricably connected in the delivery of education.

273B. Social Foundations of Education. (4) Introduction to literature on multiculturalism and teachings in diverse social, cultural, and economic contexts. Exploration of debates over multiculturalism and teaching for democratic citizenship by review of a diverse number of anthropological, sociological, educational curricula and literatures.

274. Science, Technology, and Social Research after Eurocentrism. (4) A philosophy of natural sciences for social scientists which examines challenges to conventional research assumptions raised by multicultural and postcolonial science and technology studies that have emerged since World War II. Focus on sciences and technologies in third-world development projects, comparative ethnoscience movements, and new theories of knowledge and how to do maximally objective research emerging from these literatures.

275. Race and Education. (4) Designed for graduate students. Examination of role of race in educational policy-making. Exploration of a broad interpretation of how schools contribute to racial stratification and inequality by linking sociological and sociopsychological theories of race, racial attitudes, and conflict to historical policy analysis.

276. Contemporary Theories of Writing. (4) Review of current theories of writing and literacy research and examination of relationships among writing and literacy, culture, and human development. In particular, examination of history of writing research over last three decades as part of a broader intellectual history.

277. Language in the Classroom. (4) (Formerly numbered 424C.) Seminar/fieldwork. Survey of language and literacy theories and examination of relationship between literacy learning and social practices of classrooms/schools. Study and utilization of qualitative methods of inquiry and discourse analysis.

278. Social Contexts of Literacy Learning. (4) Survey of range of sociocultural theories of learning and literacy, in particular, theories of literacy and language socialization, cultural historical theories of human development, and their relevance to school-based literacy.

280A. Seminar: Selected Topics in Special Education. (2 to 6) Focus on research and clinical problems in special education. Introduction to a range of clinical services and research strategies. Exploration of current topics in the field.

280B. Seminar: Exceptional Individuals. (4) Limited to doctoral students.

282. Students at Risk: Reconsideration. (4) Designed for second-year graduate students. Notion of "at risk" has become standard element of biomedical/public health and educational/social sciences discourse. Consideration of "risk" from range of disciplines and modes of inquiry.

283. Social Research in a Multicultural and Postcolonial World. (4) A philosophy of social sciences that focuses on how to think fruitfully about two issues: (1) inevitability of nonneutral procedures and results of research conducted within a liberal state that must be committed to value-neutrality and (2) challenges that multicultural and postcolonial social theory have raised to conventional research theories and methodologies.

288. Research Apprenticeship Course. (2) Discussion, two hours. Course facilitates a mentorship model of training Ph.D. students in education, with focus on development of graduate student research topics. Assignment of common readings related to these topics; students have opportunity to offer and receive feedback. May be repeated for credit. S/U grading.

290. Educational Policy Analysis: Research, Theory, and Practice. (4) Broad overview of development of educational policy from the 1950s to the present. Examination of current issues and debates within educational policy in the U.S. through different theoretical lenses. Exploration of major bodies of research on educational policy and alternative paradigms.

291. Organizational and Leadership Theory in Education. (4) Introduction to contemporary and historical conceptions of organization and leadership in context of formal schooling. Exploration of these conceptions through inquiry into school and college settings.

292. Curriculum Theory, Research, and Practice. (4) Survey of history of theories and perspectives shaping what is taught in schools, providing graduate students broad understanding of various values, beliefs, and power relations shaping K-12 curriculum in the U.S.

293. Teaching Studies: Research and Theory into Practice. (4) Exploration of historical, theoretical, and empirical perspectives related to teaching and teacher education, providing graduate students with broad overview of relevant literature and current issues shaping teaching profession in the U.S.

296A-296F. Seminars: Research Topics in Education (2-2). Discussion, three hours. Advanced study and analysis of current topics in education. Discussion of current research and literature in research specialty of faculty member teaching course. S/U grading.

299A-299B-299C. Research Practicum: Education (4 to 8 each). May be repeated for credit.

300. Dissertation Writing Workshop: Interdivisional Seminar. (4) Seminar, one hour; discussion, two hours; laboratory, one hour. Limited enrollment. Introduction for doctoral candidates to dissertation writing as a genre that can be analyzed or broken down with its constituent parts and, vice versa, which is constructed out of materials that can be identified and analyzed. S/U grading.

309. Methodologies for English Language Learners. (4) (Formerly numbered 309A.) Lecture, two hours; discussion, two hours. Limited to credential program students. Pedagogy for bilingual and English development instruction. Topics include legal foundations of bilingual programs, educational issues, organizational approaches, and communicative approach; strategies and activities. Discussion of competencies needed by all content area teachers of English language, including strategies for teaching in and through English. Letter grading.

310. Professional Communication for Graduate Students in Education. (2) Writing workshop on students' papers in progress to ensure professional standards. Analysis and group discussion of rhetorical and stylistic principles. May be repeated once. S/U grading.

311. Principles and Methods of Computer Literacy and Classroom Application — K-12. (2) Lecture, one hour; laboratory, 30 minutes. Introduction to use of computers in educational environment. Discussion of issues on why and how to integrate computers into curriculum and hands-on practice which allows students to demonstrate skills discussed. S/U grading.

312. Basic Principles of Curriculum and Instruction. (4) Analysis and practice of basic principles and concepts for planning, conducting, and evaluating units of curriculum and instruction. Emphasis on study and utilization of a variety of instructional strategies and their application in elementary and secondary schools.

314A. Principles and Methods for Curriculum, Instruction, and Leadership in Mathematics. (6 to 12) Problem solving, curriculum development, implementation of California Mathematics Framework, strategies for encouraging women and minorities into mathematics, and leadership development. S/U grading.

315A-315B. Principles and Methods for Teaching Reading for Multiple Subject Instruction. (2-2) Course 315A is requisite to 315B. Reading instruction in elementary schools. Analysis of reading problems and programs; study of relationships between language/culture/cognition and reading. Examination and development of instructional programs; analysis and practice of alternative instructional methods. Observation and participation in schools. S/U grading.

316A-316B. Principles and Methods for Teaching Reading for Single Subject Instruction. (2-2) Course 316A is requisite to 316B. Reading instruction in secondary schools. Analysis of reading problems and programs; study of relationships between language/culture/cognition and reading. Examination and development of instructional programs; analysis and practice of alternative instructional methods. Observation and participation in schools. S/U grading.

318A-318B-318C. Principles and Methods for Multiple Subject Instruction. (2-2) (Formerly numbered 318A-318B.) Lecture, two hours; laboratory, one hour. Examination and development of instructional programs; analysis and practice of alternative instructional methods. Focus on subjects commonly taught in elementary schools. S/U grading.

320A-320B. Principles and Methods for Single Subject Instruction. (2-2) Course 320A is requisite to 320B. Examination and development of instructional programs; analysis and practice of alternative instructional methods. Focus on subjects commonly taught in secondary schools. Observation and participation in schools. S/U grading.

327. Principles and Methods for Teaching Spanish Effectively. (6 to 12) Emphasis on proficiency-based foreign language teaching methods incorporating language assessment skills, modeling, hands-on experiences, and development of teaching and teacher-training materials. S/U grading.

330A. Observation and Participation. (2 to 6) Site-based fieldwork, 10 to 15 hours. Students are assigned to school sites with racially, culturally, and linguistically diverse student populations. Throughout observation and participation period, students analyze effective strategies for achieving learning for all students, including sociocultural approaches and appropriate use of educational technology. S/U grading.

330B-330C. Student Teaching (2 to 6 each). (Not the same as courses 330B, 330C prior to Fall Quarter 1996.) Site-based fieldwork, 10 to 15 hours. Requisite: course 330A. Students are assigned to student teach in school sites with racially, culturally, and linguistically diverse student populations. Throughout student teaching period, students as novice teachers plan, implement, and assess daily lessons and units, as well as actively engage in reflecting on issues specific to school/community relations. S/U grading.

330D. Classroom Residency and Teaching. (8) Site-based fieldwork, 10 to 15 hours. Students are employed by local school districts to teach as residents in school sites with racially, culturally, and linguistically diverse student populations. Students also work in collaborative teams through the Teacher Education Program to initiate a change project in their local school and/or complete a case study on the project. S/U grading.

360A-360B-360C. Team Seminars (6-6-6) (Formerly numbered 360.) Seminar, four hours; laboratory, two hours. Analysis and practice of basic principles and concepts of planning, conducting, and evaluating units of curriculum and instruction. Emphasis on study and utilization of constructivist strategies and their application in elementary and secondary schools. Examination of different methods of computer literacy and teaching subject matter. Students conduct ethnographic inquiry of the local community of their demonstration school. S/U grading.

375. Teaching Apprentice Practicum. (1 to 4) Preparation: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

400. Foundations of Education Policy Analysis. (4) Principles of decision making and policy formation, implementation, and analysis in context of the educational system. Critical perspectives include effectiveness and equity of educational delivery systems and programs, and complex nature of educational governance in contemporary America.

401. Structure and Functions of Schools as Complex Organizations. (4) Critical analysis of alternative assumptions about organizations, how they function, and why people in organizations behave as they do. Application to special circumstances of schools and to contemporary issues and problems in school leadership, improvement, and reform.

402. Curriculum Principles and Practices. (4) Critical analysis of major concepts, underlying assumptions, policy issues, and processes in development and implementation of curriculum in the educational setting. Problems in formulation of purposes, selection of learning experiences, organization of curriculum, and curriculum evaluation.

403. Teaching: Principles and Problems. (4) Current knowledge concerning good teaching and theoretical/conceptual, empirical, and/or ideological bases for these assertions. Alternative models of classroom teaching, their assumptions, and evidence of worth. Current policy issues and problems in generating and sustaining effective teaching.

406A-406B-406C. Social Foundations and Cultural Diversity in American Education (2-2-2). (Formerly numbered 100A-100B.) Intensive consideration of American society, particularly its racial and cultural diversity. Topics include historical development of American society, manifestations of cultures, and ways to learn about students' cultures. Examination of issues of racism, ethnic and gender differences, perspectives of cultural diversity, and impact on educational and classroom instruction.

407A-407B. Psychological Foundations of Education. (4-4) (Formerly numbered 112.) Analysis of learning processes in school situations. Processes of human motivation, affective, cognitive, social, and personal development of children and adolescents, evaluation of learning, individual differences, and implications of relevant theory and research.

409. Language Structure, Acquisition, and Development. (4) (Formerly numbered 409A.) Lecture, four hours. Limited to credential program students. Theoretical foundations of language structure and first and second language acquisition, with focus on major themes of current research that provide a framework for schooling of English language learners. Rationale for bilingual/English language acquisition and development programs. Historical and current theories and models of language. Letter grading.

410A-410B. Issues in Higher Education and K-12. (4) Two-course sequence providing overview of higher education systems. **410A.** Designed to develop knowledge, understanding, and sensitivity to contemporary critical and emerging issues that impact higher education, with focus on both theory and practice. Study of relationships between issues in K-12 schooling and higher education. **410B.** Exploration of issues that effect both higher education and K-12 schooling, including restructuring and reform, standards, access and accountability, and new technologies. Emphasis on both theory and practice.

411A. Introduction to Educational Evaluation. (4) Introduction to systematic evaluation as it applies to appraising educational programs. Consideration of program evaluation as means of improving quality of educationally relevant decisions.

411B. Procedural Problems in Evaluation. (4) Assessment methodologies appropriate for evaluation problems. Writing evaluation proposals, developing program monitoring procedures, selecting appropriate evaluation design strategies, coping with ethical considerations in evaluation, framing the decision context, and reporting evaluation results.

412A. Criterion-Referenced and Norm-Referenced Test Construction. (4) Requisite: course 211A. Construction of criterion- and norm-referenced assessment instruments. Appropriateness of different assessment devices considered in relation to research, development, and evaluation.

412B. Intersecting Dimensions of Teaching and Testing. (4) Designed to develop acquisition of insights and skills based on symbiotic relationship between assessment and instruction when high-stakes educational achievement tests are used.

413A. Methodology for Primary Language Instruction. (3) Lecture, two hours; discussion, one hour. Offered and required for Spanish and Korean BCLAD credential. Consideration of models for developing cultural and language skills of home speakers of language of emphasis; practice in use of activities to develop student ability to use language for real-world and academic purposes in culturally appropriate ways. Consideration of models for teaching academic content in primary language for delivery of core curriculum to bilingual students.

413B. Culture of Emphasis. (3) Lecture, two hours; discussion, one hour. Offered and required for Spanish and Korean BCLAD credential. Conducted in Spanish and Korean. Discussion of commonalities of culture of emphasis in its home country or countries; major historical periods and events; values, belief systems, and expectations; migration and immigration; historical and contemporary demography.

414E. Administration of Student Affairs. (4) Overview of general knowledge and processes essential to effectively administer a program or service under student affairs. Examination of relationship between environmental factors and strategies for governing, planning, and managing student affairs programs and services.

415A. Assessment in Counseling Psychology. (4) Requisites: courses 211A, 230A. Overview of rationale for and procedures used by counseling psychologists for assessing individuals in a multicultural society. Emphasis on standardized cognitive assessment instruments and specialized techniques for diagnosis, evaluation, and development of counseling strategies for at-risk populations. S/U or letter grading.

415B. Advanced Assessment in Counseling Psychology. (4) Requisite: course 415A. Advanced course in assessment for counseling psychologists. Survey and demonstration of instruments of achievement, affective, and personality appraisal, with emphasis on testing and interplay between assessment and psychological functioning for reducing risks of failure in academic, personal, and social areas.

420A. Principles of Curriculum. (4) Critical examination of basic concepts underlying determination of objectives, selection and organization of learning experiences, and evaluation process.

421A. Programs and Research in Early Childhood Education. (4) Preparation: one course from development series. Examination of child care programs and research in early childhood education, including review of relation of research in developmental psychology and education to goals of early childhood education and day care.

421D. Parents and Community Agents in Child Development. (4) Preparation: one course from development series. Critical review of theoretical basis and effectiveness of training programs for parents of young and elementary school-aged children; relation of preschool parent programs to family development and role of programs in the community.

421F. Issues in Application of Child Development and Educational Research to Social Policy. (4) Relationships among policymakers and social scientists in development, implementation, and evaluation of policies affecting children and their families. Students learn to design and conduct interviews, analyze legislative documents, and present analyses to policymakers.

422. Inquiry into Schooling: Basic Issues. (4) Critical examination of basic issues and problems in organization and reconstruction of precollegiate schooling. Consideration of historical development and changing functions of schooling in American society; school organization; schooling alternatives; problems in management of educational change.

423. The Humanistic Curriculum. (4) Consideration of philosophical and cultural foundations of humanistic curricular strategies. Review of techniques and procedures of affective education with a view to their place in overall theory of teaching and learning.

424A. Social Studies in the Curriculum. (4) Advanced study in social studies curriculum development; problems in defining objectives and organizing single and multidisciplinary programs; critical review of literature on cognitive and affective learning in social science, with emphasis on experimental study of instructional programs.

424B. Reading in the Curriculum. (4) Requisite: course 230A. Study of reading curricula and instructional procedures, with emphasis on rationale and research underlying their development and research comparing their effectiveness. S/U or letter grading.

424G. Curriculum Design for Bilingual Education. (4) Advanced study of curriculum design for bilingual educational programs. Philosophical basis for bilingual programs; theories of learning and instruction applied to bilingual learner; language assessment; development of instructional component; program evaluation.

425. Principles for Teaching Exceptional Individuals. (4) (Formerly numbered 125B.) Approaches for teaching exceptional individuals in special and regular education programs. Principles and assumptions underlying alternative approaches. Emphasis on individualizing curriculum and classroom management. Field observation in local schools. Letter grading.

431A. Administration in Higher Education. (4) Overview of college and university administration and introduction to policy research and analysis in postsecondary institutions. Case studies of administrative problems, policies, and practices. Management information systems, resource allocation, and issues related to responsibility, authority, and participation in administrative decisions.

431B. Curriculum and Instruction in Higher Education. (4) Principles of curriculum and instruction in postsecondary programs. Theory and practices in goal setting, testing, media selection, and related instructional responsibilities. Preparing to teach college-level students.

432. Seminar: Professional Topics in Higher Education. (4) Seminar, four hours. S/U or letter grading.

433A. Instructional Product Development. (4) Examination of procedures employed in systematic development of instructional products. Students acquire competencies associated with those procedures.

433B. Technological Development in Educational Media. (4) Requisite: course 433A. Theory, current problems, and anticipated trends in instrumentation and systems development for instructional applications and research, including computer-aided instruction, communication satellites, and other advanced systems; theory and laboratory practice with instrumentation in educational research.

440C. Administration of the Instructional Program. (4) Examination of current educational problems in society and strategies of their solution through curriculum policy and practice; instructional design and operation; in-service training of teaching staffs.

441A. Instructional Supervision A. (4) Analysis of teaching in light of research-substantiated elements of instruction: task analysis, appropriate objectives, principles that increase motivation, rate and degree of learning, retention and transfer, monitoring and adjusting instruction to meet needs and capacities of learners.

441B. Instructional Supervision B. (4) Requisite: course 441A. Basic techniques of script-taping instructional episodes, planning teacher conferences through analysis of script-tapes, conducting and analyzing growth-evoking teacher conferences. Conducting mini-lessons to demonstrate elements of good instruction.

442B. Legal Aspects of Educational Management and Practice. (4) Examination of structures and kinds of law governing educational systems in the U.S.; constitutional dimensions of church/state relations; employees' civil rights and legal aspects of hiring, firing, and negotiating procedures; student attendance, control, and civil rights.

443. Policy Analysis in Education. (4) Overview of political, economic, and legal context of educational policy formation. Included in examination are issues that impact on minorities (e.g., bilingual education, desegregation, affirmative action, role of subdominants in policy-making process).

444B. Equality of Educational Opportunity through Desegregation and Finance Case Law. (4) Requisite: course 442B. Concentrated review of definition of equality of educational opportunity as it is being developed by the courts in cases concerning desegregation and educational finance.

447. Seminar: Educational Policy and Planning, Special Studies. (1 to 4) S/U or letter grading.

448A. Urban School Leadership. (4) Analysis of problems of urban school leadership. Emphasis on changing nature of the urban principalship, with considerable attention to role of other school and community agencies that interact with the urban school leader.

448B. Urban Leadership Laboratory. (4) Analysis of and opportunity to practice human and technical skills requisite for success as an urban school leader. Topics include negotiations, conflict resolution, applied computer technology, and effective communication. Activities include gaming, simulation, computer programming, and group dynamics.

460. Seminar: Special Issues in Evaluation. (4) Topics and instructors vary each term. Recent emphases included evaluation utilization and cost-effectiveness evaluation.

462. Seminar: Community College. (4) Topics include problems and practices in community college formation, instruction, student flow, administration, and/or evaluation.

470A. Seminar: Large Systems and Individual Schools. (4) Seminar, four hours. S/U or letter grading.

470B. Seminar: Educational Government. (4) Seminar, four hours. S/U or letter grading.

481. Knowledge and Inquiry in the Classroom. (4) Logical features of instruction and their application to inquiry techniques in teaching and learning. Various conceptions of truth, belief, and fact and opinion, and their application to classroom learning situations.

489. Instructional Strategies in Education. (4) Methods for academic instruction, including research and active participation in the adversary approach, forms of debate, role playing, interaction process analysis, and feedback instruments. Practical emphasis on social sciences and humanities instruction, K-12.

490A. Instructional Decision Making. (4) Analysis of instructional models relevant to public school education. Assumptions, procedures, and constraints of each strategy considered in terms of learner and task variables. Laboratory experiences in classroom settings permit students systematically to apply and evaluate alternative instructional strategies.

491A. Curricular Decision Making. (4) Examination of alternative solutions for practical problems that classroom teachers face in making curricular decisions. Analysis of the influence of psychological, societal, and institutional factors in curricular decisions.

492. Evaluation of Teaching and Learning. (4) Relationship between appraisal instruments and information required for making decisions about teachers, pupils, and materials. Recent developments in evaluation of teaching and learning; use of modern appraisal techniques in classroom settings.

498A-498B-498C. Directed Field Experience (4 to 8 each). May be repeated for credit.

499A-499B-499C. Advanced Directed Field Experience (4 to 8 each). May be repeated for credit.

501. Cooperative Program in Special Education (2 to 8). Preparation: consent of UCLA academic adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Limited to UCLA doctoral students in special education. Used to record enrollment in practicum courses taken under cooperative arrangements with USC. S/U grading.

596. Directed Independent Study. (6 to 12) Individual study or research for graduate students. May be repeated for credit.

597. Preparation for Master's Comprehensive Examinations or Doctoral Qualifying Examinations. (6 to 12) Individual study for master's comprehensive examinations or for Ph.D. or Ed.D. qualifying examinations. May be repeated for credit. S/U grading.

598. Thesis Research. (6 to 12) Research for and preparation of master's thesis. May be taken for a maximum of 12 units. S/U grading.

599. Dissertation Research. (6 to 12) Research for and preparation of doctoral dissertation. May be repeated for credit. S/U grading.

ELECTRICAL ENGINEERING

*School of Engineering and Applied
Science*

UCLA
58-121 Engineering IV
Box 951594
Los Angeles, CA 90095-1594
(310) 825-2647
<http://www.ee.ucla.edu/>

William J. Kaiser, Ph.D., *Chair*
Ioannis Kanellakopoulos, Ph.D., *Vice Chair*
Nhan Levan, Ph.D., *Vice Chair*
Oscar M. Stafsudd, Ph.D., *Vice Chair*
John D. Villasenor, Ph.D., *Vice Chair*

Professors

Asad A. Abidi, Ph.D.
A.V. Balakrishnan, Ph.D.
Elliott R. Brown, Ph.D.
Frank M.C. Chang, Ph.D.
Harold R. Fetterman, Ph.D.
Tatsuo Itoh, Ph.D. (*TRW Professor of Electrical Engineering*)
Stephen E. Jacobsen, Ph.D., *Associate Dean*
Rajeev Jain, Ph.D.
Chandrashekhar J. Joshi, Ph.D.
William J. Kaiser, Ph.D.
Nhan Levan, Ph.D.
Jia-Ming Liu, Ph.D.
Dee-Son Pan, Ph.D.
C. Kumar N. Patel, Ph.D.
Yahya Rahmat-Samii, Ph.D.
Vwani P. Roychowdhury, Ph.D.
Izhak Rubin, Ph.D.
Henry Samuelli, Ph.D.

Oscar M. Stafsudd, Ph.D.
John D. Villasenor, Ph.D.
Chand R. Viswanathan, Ph.D.
Kang L. Wang, Ph.D.
Paul K.C. Wang, Ph.D.
Alan N. Willson, Jr., Ph.D., *Associate Dean*
Jason C.S. Woo, Ph.D.
Ming-C. Wu, Ph.D.
Eli Yablonovitch, Ph.D.
Kung Yao, Ph.D.

Professors Emeriti

Frederick G. Allen, Ph.D.
Francis F. Chen, Ph.D.
Robert S. Elliott, Ph.D.
Ellis F. King, M.S.
Richard E. Mortensen, Ph.D.
H.J. Orchard, M.Sc.
Frederick W. Schott, Ph.D.
Gabor C. Temes, Ph.D.
Donald M. Wiberg, Ph.D.
Jack Willis, B.Sc.

Associate Professors

Abeer A.H. Alwan, Ph.D.
Bahram Jalali, Ph.D.
Ioannis Kanellakopoulos, Ph.D.
Helen R.L. Na, Ph.D.
Gregory J. Pottie, Ph.D.
Behzad Razavi, Ph.D.
Ali H. Sayed, Ph.D.
Mani B. Srivastava, Ph.D.
Ingrid M. Verbauwhede, Ph.D.

Assistant Professors

Babak Daneshrad, Ph.D.
Jack W. Judy, Ph.D.
William H. Mangione-Smith, Ph.D.
Fernando G. Paganini, Ph.D.
Lieven Vandenberghe, Ph.D.
Richard D. Wesel, Ph.D.
C.-K. Ken Yang, Ph.D.

Adjunct Professors

Nicolaos G. Alexopoulos, Ph.D.
Donald Arnush, Ph.D.
Giorgio Franceschetti, Ph.D.
Paul T. Greiling, Ph.D.
Brian H. Kolner, Ph.D.
Neville C. Luhmann, Jr., Ph.D.
Joel Schulman, Ph.D.
Pyotr Y. Ufimtsev, Ph.D.

Adjunct Associate Professors

Nicholas Bambos, Ph.D.
Kenneth W. Iliff, Ph.D.
Warren B. Mori, Ph.D.
Kristofer S.J. Pister, Ph.D.

Adjunct Assistant Professors

Charles Chien, Ph.D.
Robert J. Greenberg, Ph.D.

Scope and Objectives

The Electrical Engineering Department emphasizes teaching and research in the fields of communications and telecommunications, control systems, electromagnetics, integrated circuits and systems, microwave and millimeter wave electronics, operations research, photonics and optoelectronics, plasma electronics, signal processing, and solid-state electronics. In each of these fields, the department has state-of-the-art research programs exploring exciting new concepts and developments. Undergraduate students receive a B.S. degree in Electrical Engineering. Graduate research and training programs leading to the M.S. and Ph.D. degrees are also offered.

Laboratories are available for research in the following areas: analog and digital electronics,

hybrid integrated circuits, integrated semiconductor devices, microwave and millimeter wave electronics, solid-state electronics, fiber optics, lasers and quantum electronics, and applied plasma physics. The department is associated with the Center for High-Frequency Electronics and the Institute of Plasma and Fusion Research, two research centers at UCLA.

Undergraduate Study

Electrical Engineering B.S.

The ABET-accredited electrical engineering curriculum gives an excellent background for either graduate study or employment. The two main objectives are to provide (1) a deep and fundamental education in electrical engineering as well as in basic sciences and mathematics and (2) specialized education in one branch of electrical engineering so that students develop expertise in it.

The Major

Course requirements are as follows (188 minimum units required):

(1) One engineering breadth course from Civil and Environmental Engineering 108, Materials Science and Engineering 14, Mechanical and Aerospace Engineering 102, 103, M105A (or Chemical Engineering M105A).

(2) Electrical Engineering 10, M16 (or Computer Science M51A), 101, 102, 103, 110, 113, 115A, 121A, 131A, 132A, 141, 161, 172, Mathematics 113 or 132, Mechanical and Aerospace Engineering 192A.

(3) Any five major field elective courses selected from those offered by the Electrical Engineering Department, including at minimum four units of laboratories and one design course. With approval of the adviser, two may be selected from courses related to electrical engineering in other departments.

(4) Chemistry and Biochemistry 20A, 20B, 20L; Computer Science 32; Electrical Engineering 1, 2, 5C (or Computer Science 31); Mathematics 31A, 31B, 32A, 32B, 33A, 33B; Physics 1A, 1B, 4AL, 4BL.

(5) SEAS general education (GE) course requirements. See Curricular Requirements in the College and Schools section of this catalog for details. Electrical Engineering majors are also required to satisfy the ethics and professionalism requirement by completing Engineering 95 or History 2A, which may be applied toward either the humanities or social sciences section of the GE requirements.

Biomedical Engineering Option

Course requirements are as follows (195 minimum units required):

(1) Electrical Engineering 10, M16 (or Computer Science M51A), 101, 102, 103, 110, 113, 115A, 121A, 131A, 132A, 141, 161, Mathematics 113 or 132, Mechanical and Aerospace Engineering 103, M105A, 192A.

(2) Life Sciences 1 (satisfies SEAS GE life sciences requirement), 2, 3.

(3) Four technical elective courses, including two bioengineering courses selected from the Electrical Engineering Department or other departments in the school and two courses selected from Electrical Engineering 114, 115B, 115C, 142, 172.

(4) Chemistry and Biochemistry 20A, 20B, 20L, 30, 30L; Electrical Engineering 1, 2, 5C (or Computer Science 31); Mathematics 31A, 31B, 32A, 32B, 33A, 33B; Physics 1A, 1B, 4AL, 4BL.

(5) SEAS general education (GE) course requirements. See Curricular Requirements in the College and Schools section of this catalog for details. Electrical Engineering majors are also required to satisfy the ethics and professionalism requirement by completing Engineering 95 or History 2A, which may be applied toward either the humanities or social sciences section of the GE requirements.

Computer Engineering Option

Course requirements are as follows (189 minimum units required):

(1) One engineering breadth course from Civil and Environmental Engineering 108, Materials Science and Engineering 14, Mechanical and Aerospace Engineering 102, 103, M105A (or Chemical Engineering M105A).

(2) Computer Science 111, 180, Electrical Engineering 10, M16 (or Computer Science M51A), 101, 102, 103, 110, 113, 115A, 115C, 116B, M116C (or Computer Science M151B), M116D (or Computer Science M152B), M116L (or Computer Science M152A), 121A, 131A, Mathematics 113 or 132, Mechanical and Aerospace Engineering 192A.

(3) Three technical elective courses, with at least one from item a and one from item b: (a) Electrical Engineering 132A, either Computer Science 118 or Electrical Engineering 132B; (b) Electrical Engineering 114, 115B, 115D, 141, 142.

(4) Chemistry and Biochemistry 20A; Computer Science 32, 33; Electrical Engineering 1, 2, 5C (or Computer Science 31); Mathematics 31A, 31B, 32A, 32B, 33A, 33B; Physics 1A, 1B, 4AL, 4BL.

(5) SEAS general education (GE) course requirements. See Curricular Requirements in the College and Schools section of this catalog for details. Electrical Engineering majors are also required to satisfy the ethics and professionalism requirement by completing Engineering 95 or History 2A, which may be applied toward either the humanities or social sciences section of the GE requirements.

Graduate Study

The following constitutes introductory information regarding graduate degree programs and is based on the 1998-99 edition of *Program Requirements for UCLA Graduate Degrees*.

Complete, annual editions of *Program Requirements* are available (listed under "Publications") on the Graduate Division website at <http://www.gdnet.ucla.edu>. Students are subject to the degree requirements as published in *Program Requirements* for the year in which they matriculate.

Master's Degree

The Department of Electrical Engineering offers the Master of Science (M.S.) degree in Chemical Engineering.

Admission

In addition to meeting the requirements of the Graduate Division, applicants to the M.S. program are required to take the General Test of the Graduate Record Examination (GRE).

For requirements for the Graduate Certificate of Specialization, see Engineering Schoolwide Programs.

Application forms, including a departmental supplement to the application, may be obtained at <http://www.ee.ucla.edu>. Forms are also available by writing to the Electrical Engineering Department, 56-125B Engineering IV, Box 951594, Los Angeles, CA 90095-2647, or to the Office of the Associate Dean for Academic and Student Affairs, School of Engineering and Applied Science, UCLA, 6426 Boelter Hall, Box 951601, Los Angeles, CA 90095-1601. Students are encouraged to apply online.

Areas of Study

Communications and Telecommunications

Communication and telecommunication principles and engineering applications; channel and source coding; spread spectrum communication; cryptography; estimation and detection; algorithms and processing in communication and radar; satellite communication systems; stochastic modeling in telecommunication engineering; mobile radio engineering; telecommunication switching, queuing system, communication networks, local-area, metropolitan-area, and wide-area computer communication networks.

Control Systems

State-space theory of linear systems, optimal control of deterministic linear and nonlinear systems, stochastic control, Kalman filtering, stability theory of linear and nonlinear feedback control systems, and computer-aided design of control systems.

Electromagnetics

Electromagnetic theory; propagation and scattering; antenna theory measurement and design; microwave and millimeter wave sources; integrated microwave and millimeter wave circuits; printed circuit antennas; integrated and fiber optics; holography; electromechanics.

Integrated Circuits and Systems

Analysis and design of analog and digital integrated circuits; architecture and layout of large-scale integrated processors; high-speed ana-

log and digital integrated circuit design; implementations of signal processing algorithms; device and circuit intersections; computer aids for VLSI design and synthesis.

Operations Research

Continuous and combinatorial optimization theory, including linear and nonlinear programming, network flows, graphs, and integer programming, and applications to problems of engineering design; applied stochastic processes, including renewal theory, Markov processes, fluctuation theory, stochastic dynamic programming, and applications to telecommunication and computer networks.

Photonics and Optoelectronics

Laser principles including saturation, power, pulse evolution in amplifiers and oscillators, resonator modes, beam propagation, coherence phenomena, specific laser systems, and typical applications, and optical logic circuits.

Optoelectronic principles including electro-optics, magneto-optics, acousto-optics, nonlinear optics, opto-optics, modulation, deflection, detection, holography, Brillouin scattering and Raman scattering.

Plasma Electronics

Fundamental plasma waves and instability; interaction of microwaves and laser radiation with plasmas; plasma diagnostics; controlled nuclear fusion.

Signal Processing

Digital signal processing theory; analysis and design of digital filters; digital speech processing; digital image processing; multirate digital signal processing; adaptive filtering; neural networks; communications signal processing.

Solid-State Electronics

Solid-state physical electronics; semiconductor device physics and design.

Course Requirements

At least nine courses are required, of which at least five must be graduate courses. In the thesis plan, seven of the nine must be formal courses, including at least four from the 200 series. The remaining two may be 598 courses involving work on the thesis. In the comprehensive examination plan, no units of 500-series courses may be applied toward the minimum course requirement. A majority of the courses must be in or related to electrical engineering and belong to one of the following specialized major fields described below.

Note: The following undergraduate courses are required for the B.S. degree in Electrical Engineering and cannot be used for the master's degree: Electrical Engineering 10, 110, 115A, 121A, 121B, 132A, 141, 161.

Undergraduate Courses. No lower division courses may be applied toward graduate degrees. In addition, the following upper division courses are not applicable toward graduate degrees: Chemical Engineering M105A, 199; Civil Engineering 106A, 108, 199; Computer Science M152A, M152B, 171L, 199; Electrical

Engineering 100, 101, 102, 103, 110L, M116D, M116L, 199; Materials Science and Engineering 110, 120, 130, 131, 131L, 132, 150, 160, 161L, 190, 191L, 199; Mechanical and Aerospace Engineering 102, 103, M105A, 105D, 199.

Communications and Telecommunications

Requisite. B.S. degree in Engineering or equivalent.

Minimum Course Requirements. Nine four-unit courses, of which at least six must be graduate courses.

Thesis Plan. Electrical Engineering 230A, 232A; two additional 200-level electrical engineering courses in the communications and telecommunications engineering area; three or more courses, of which at least two must be 200-level electrical engineering courses, subject to the approval of the student's adviser. Eight units (two courses) of Electrical Engineering 598 must be taken to cover the research work and preparation of the thesis. Both 598 courses count toward the minimum of nine courses.

Comprehensive Examination Plan. Electrical Engineering 230A, 232A; two additional 200-level electrical engineering courses in the communications and telecommunications engineering area; five or more courses, of which at least two must be 200-level electrical engineering courses, subject to the approval of the student's adviser.

Control Systems

Requisite. A B.S. degree in Electrical Engineering or equivalent.

Thesis Plan. Seven graduate-level courses, of which at least five must be chosen from the list of courses covering the control systems fundamentals, and a thesis. The remaining courses are subject to the approval of the student's adviser. In addition, eight units (two courses) of Electrical Engineering 598 must be taken to cover the research work and thesis preparation.

Comprehensive Examination Plan. Nine courses, of which seven must be graduate level, and at least five must be chosen from the following list of courses covering the control systems fundamentals. The remaining courses are subject to the approval of the student's adviser.

Basic graduate courses in control systems: Electrical Engineering M240A, 240B, M240C, 241A, 241B, 241C, M242A.

Electromagnetics

Requisite. B.S. degree in Electrical Engineering or equivalent.

Thesis Plan. Eight units (two courses) of Electrical Engineering 598 must be offered to cover the research work and preparation of the thesis. Both 598 courses count toward the minimum of nine courses, but only one can count toward the requirement of five graduate-level

courses. A minimum of four graduate courses is to be selected from the Group II list.

The remaining courses may, subject to the approval of the student's adviser, be chosen as free electives from the 100 or 200 series in order to meet the overall requirements given above.

Comprehensive Examination Plan. At least seven courses must be chosen from those listed below in Groups I and II, and at least four of the seven courses must be chosen from Group II.

The remaining two courses may, subject to the approval of the student's adviser, be chosen as free electives from the 100 or 200 series in order to meet the overall requirements given above.

Group I: Electrical Engineering 162A, 162B, 163A, 163B, 163C, 172, M185.

Group II: Electrical Engineering 221C, 260A, 260B, 261, 262, 270.

Integrated Circuits and Systems

Requisite. B.S. degree in Electrical Engineering containing courses in electronics and integrated circuits equivalent to Electrical Engineering 115B, 115C, and 121A. A written qualifying examination may be used to verify the background of beginning M.S. students who have not taken the courses. Those not passing the examination must take the 100-level courses before proceeding with graduate-level courses.

Minimum Course Requirements. Nine courses, of which at least five must be at the graduate level. A thesis must be completed under the direction of a faculty adviser.

Thesis Plan. All of the courses listed in Group I must be completed. In addition, three courses must be chosen from Groups II and III with, at most, one taken from Group III. The remaining two are free electives.

Group I: Electrical Engineering 215A, 215B, M216A.

Group II: Electrical Engineering 115D, 212A, 213A, 215D, 221A, 221B.

Group III: Computer Science 251A, 252A, 258D.

Free Electives. With some exceptions, all 100- and 200-level courses are acceptable as free electives subject to the approval of the faculty adviser. However, it is strongly recommended that courses from the fields of signal processing, solid-state, or communications be used as the free electives. Undergraduate School of Engineering and Applied Science core courses and Electrical Engineering 10, 110, 115A, 121A, 141, and 161 may not be used as free electives.

The normal courseload approved by a faculty adviser is such that it requires a full-time presence on campus and, as a rule, precludes part-time off-campus employment. The M.S.

program should normally take four quarters and a summer for completion.

Operations Research

Minimum Course Requirements. At least nine courses, of which at least five must be at the graduate level. For the requisite structure, consult the department.

In consultation with an adviser, students may elect the thesis plan or the comprehensive examination plan. M.S. students in either plan must take at least three courses from Group I and at least two courses from Group II.

Group I: Optimization (Mathematical Programming): Electrical Engineering 232E, 236A, 236B, 236C.

Group II: Applied Stochastic Processes and Dynamic Programming: Electrical Engineering 232A, 232B, 232C, 237.

Thesis Plan. Under the thesis plan, students offer eight units (two courses) of Electrical Engineering 598 to represent thesis preparation and research. Only four of these units may be used to satisfy the graduate course requirement; however, the eight units can be used to satisfy the total course requirement.

Comprehensive Examination Plan. Under the comprehensive examination plan, students may not apply any 500-level courses toward the course requirements.

Photonics and Optoelectronics

Requisite. A B.S. degree in Engineering or Physics or equivalent.

Thesis Plan. Electrical Engineering 270, 271, either 272 or 273, 598 (twice), and four additional courses, of which at least one must be a 200-level course.

Comprehensive Examination Plan. Electrical Engineering 270, 271, either 272 or 273, and six additional courses, of which at least two must be 200-level courses.

Additional Courses. With a few exceptions, all 100- and 200-level courses in the *UCLA General Catalog* are acceptable, subject to the approval of the adviser. The exceptions are the following courses (which are not acceptable for any M.S. program in Electrical Engineering): (1) all school undergraduate core courses and (2) all department undergraduate core courses. Consult the departmental adviser for lists of the courses.

Plasma Electronics

Requisite. A B.S. degree in Engineering or Physics or equivalent.

Thesis Plan. Electrical Engineering M185, 285A, 285B, 598 (twice), and four additional courses from the list below. Of these, at least two must be 200-series courses, of which at least one must be in electrical engineering. If Electrical Engineering M185 was taken as an undergraduate, it may be replaced by any engineering course on the list below.

Comprehensive Examination Plan. Electrical Engineering M185, 285A, 285B, and six addi-

tional courses from the list below. Of these, at least three must be in the 200 series and at least one must be in electrical engineering. Of the remainder, at least one other course must be in engineering. If Electrical Engineering M185 was taken as an undergraduate, it may be replaced by any course on the list below. Other courses may be substituted with the consent of the department adviser.

Additional Courses. Electrical Engineering 115A, 115AL, 115B, 115BL, 115C, 122AL, 123A, 123B, 124, 162A, 163A, 163B, 164AL, 172, M208A, M208B, 270, 271, 272, M287; Mechanical and Aerospace Engineering 135, 150A, 150B, 250A, 252A, 252B; Physics 160, 180E, 222A, 222B, 222C, 231A, 231B.

Signal Processing

Requisite. B.S. degree in Electrical Engineering.

Course Requirements. Nine four-unit courses, of which at least seven must be at the graduate level (200 series). A thesis must also be completed under the direction of a faculty adviser. Eight units (two courses) of Electrical Engineering 598 can be used to cover the research work and preparation of the thesis. Both Electrical Engineering 598 courses count toward the minimum of nine courses, but only one can count toward the seven graduate-level courses that are required. All four courses listed in Group I must be completed. At least two courses must be chosen from Group II. The two courses from Group II may be substituted by other 200-level electrical engineering courses with the approval of the student's faculty adviser. The remaining courses may be chosen as free electives and/or Electrical Engineering 598.

Group I: Electrical Engineering 210, 211A, 212A, 214A.

Group II: Electrical Engineering 211B, 212B, 213A, 214B, M216A.

Free Electives. All 100- and 200-level courses in the *UCLA General Catalog* are acceptable with the exception of undergraduate core courses in the School of Engineering and Applied Science and undergraduate Electrical Engineering Department core courses. The choice of free electives must be approved by the faculty adviser.

Solid-State Electronics

Requisite. B.S. degree in Engineering or equivalent.

Minimum Course Requirements. Nine courses, of which at least five must be at the graduate level. The program must include all core courses listed below with the remaining courses chosen from the options list. Additional options may be used with the consent of the adviser.

Eight units (two courses) of Electrical Engineering 598 must be included to cover the research work and preparation of the thesis. Both 598 courses count toward the minimum

of nine courses, but only one can count toward the five required graduate-level courses.

Solid-State Physical Electronics Requirements. Core: Electrical Engineering 123B, 124, and 223. Options: at least two courses from Electrical Engineering 221A, 221B, 221C, 224, and 225, with the remaining courses from graduate courses and those upper division courses that are not required for the B.S. degree in Electrical Engineering, on approval of the graduate adviser.

Semiconductor Device Physics and Design Requirements. Core: Electrical Engineering 123B, 124, 221A, 221B. Options: At least two courses from Electrical Engineering 221C, 222, 223, 224, 225, and 298 (in solid-state electronics), with the remaining courses from graduate courses and those upper division courses that are not required for the B.S. degree in Electrical Engineering, on approval of the graduate adviser.

Comprehensive Examination Plan

Communications and Telecommunications

A written comprehensive examination is administered by the communications and telecommunications field committee. In case of failure, students may be reexamined once with the consent of the graduate adviser. The examination may be given as part of the written Ph.D. preliminary examination in the communications and telecommunications field.

Control Systems

A written comprehensive examination administered by a three-person committee, which is chaired by a member of the controls field committee, must be taken during the last quarter of study toward the M.S. degree. In case of failure, students may be reexamined once with the consent of the graduate adviser.

Electromagnetics

A common six- to eight-hour comprehensive examination is offered once every quarter to students in this M.S. program. The examination must be taken during the quarter at the end of which students are expected to graduate. In case of failure, students may be reexamined once with the consent of the graduate adviser.

Integrated Circuits and Systems

The comprehensive examination plan is not offered.

Operations Research

Students take a common written examination during their last quarter of coursework. This examination is normally offered at the end of the Fall and Spring Quarters. In case of failure, students may be reexamined once with the consent of the graduate adviser.

Photonics and Optoelectronics

Consult the department. In case of failure of the comprehensive examination, students may be reexamined once with the consent of the graduate adviser.

Plasma Electronics

Consult the department. The majority of M.S. candidates proceed to the Ph.D. The Ph.D. qualifying examination may be taken to satisfy the M.S. comprehensive examination requirement.

Signal Processing

The comprehensive examination plan is not offered.

Solid-State Electronics

The comprehensive examination plan is not offered.

Thesis Plan

Consult the department for information on the thesis plan for the areas of communications and telecommunications, control systems, electromagnetics, operations research, photonics and optoelectronics, and plasma electronics.

Integrated Circuits and Systems

Students are expected to find a faculty adviser to direct a research project which culminates in an M.S. thesis. The thesis research must be conducted in the Integrated Circuits and Systems Laboratory concurrently with the coursework.

Signal Processing

A thesis must be completed under the direction of a faculty adviser.

Solid-State Electronics

A thesis is required. Consult the department for details.

Doctoral Degree**Admission**

In addition to meeting the requirements of the Graduate Division, applicants to the Ph.D. degree in Electrical Engineering are required to take the General Test of the Graduate Record Examination (GRE).

Students entering the Engineer or Ph.D. program normally should have completed the requirements for the master's degree with at least a 3.25 grade-point average and have demonstrated creative ability. Normally the M.S. degree is required for admission to the Ph.D. program. Exceptional students, however, can be admitted to the Ph.D. program without having the M.S. degree.

For information on completing the Engineer degree, see Engineering Schoolwide Programs.

Application forms, including a departmental supplement to the application, may be obtained at <http://www.ee.ucla.edu>. Forms are also available by writing to the Electrical Engineering Department, 56-125B Engineering IV, Box 951594, Los Angeles, CA 90095-1594, or to the Office of the Associate Dean for Academic and Student Affairs, School of Engineering and Applied Science, UCLA, 6426 Boelter Hall, Box 951601, Los Angeles, CA 90095-

1601. Students are encouraged to apply on-line.

Major Fields or Subdisciplines

Communications and telecommunications; control systems; electromagnetics; integrated circuits and systems; operations research; photonics and optoelectronics; plasma electronics; signal processing; solid-state electronics.

Course Requirements

There is no formal course requirement for the Ph.D. degree, and students may theoretically substitute coursework by examinations. Normally, however, students take courses to acquire the knowledge needed for the written and oral preliminary examinations. The basic program of study for the Ph.D. degree is built around one major field and two minor fields. A detailed syllabus describing each major field can be obtained in the department office. The major field has a scope corresponding to a body of knowledge contained in six courses, at least four of which are graduate courses, plus the current literature in the area of specialization. Each major field named above is described in a Ph.D. major field syllabus. Each minor field normally embraces a body of knowledge equivalent to three courses, at least two of which are graduate courses. Grades of B- or better, with a grade-point average of at least 3.33 in all courses included in the minor field, are required. If students fail to satisfy the minor field requirements through coursework, a minor field examination may be taken (once only). The minor fields are usually chosen to support the major field and are usually subsets of other major fields.

Written and Oral Qualifying Examinations

The written qualifying examination is known as the Ph.D. preliminary examination in the School of Engineering and Applied Science. After mastering the body of knowledge defined in the major field, students take a preliminary examination in the major field. The examination typically consists of both a written part and an oral part, and students pass the entire examination and not in parts. The oral part does not exceed two hours, and in some major fields is not required at all. Students who fail the examination may repeat it once only, subject to the approval of the major field committee. The major field examination, together with the three courses in each of the two minor fields, should be completed within six quarters after admission to the Ph.D. program.

After passing the written qualifying examination described above, students are ready to take the University Oral Qualifying Examination, which should occur within three quarters after completing the written examination. The nature and content of the examination are at the discretion of the doctoral committee, but ordinarily include a broad inquiry into the student's preparation for research. The doctoral

committee also reviews the prospectus of the dissertation at the oral qualifying examination

Note: Doctoral Committees. A doctoral committee consists of a minimum of four members. Three members, including the chair, are "inside" members and must hold appointments at UCLA in the student's major department in the School of Engineering and Applied Science. The "outside" member must be a UCLA faculty member outside the student's major department.

Electrical Engineering**Lower Division Courses**

1. Physics for Electrical Engineers. (4) Lecture, three hours; recitation, one hour; outside study, eight hours. Requisites: Mathematics 32B, 33B, Physics 1A, 1B. Introduction to modern physics and electromagnetism with an engineering orientation. Emphasis on mathematical tools necessary to express and solve Maxwell equations. Relation of these concepts to waves propagating in free space, including dielectrics and optical systems. Letter grading.

2. Physics for Electrical Engineers. (4) (Not the same as course 2 prior to Winter Quarter 1999.) Lecture, three hours; recitation, one hour; outside study, eight hours. Requisite: course 1. Introduction to modern physics necessary to understand solid-state devices, including elementary quantum theory, Fermi energies, and concept of electrons in solids. Derivation of electrical properties of holes and junctions. Letter grading.

3. Principles and Advances in Electrical Engineering. (4) (Formerly numbered 2.) Lecture, three hours; outside study, nine hours. Open to freshmen and sophomores outside the School of Engineering and Applied Science. Designed to meet general education requirements of nonengineering students. Particularly intended for humanities and arts students. Topics include elementary treatment of fundamental concepts and advances in electrical engineering. Letter grading.

5C. Introduction to UNIX and C. (4) Lecture, three hours; recitation, one hour; laboratory, five hours; outside study, three hours. Introduction to UNIX environment and C programming language. UNIX basics: file structure and manipulation. Technical document preparation. C-shell programming. Elementary C language concepts: input/output, variable types, operators, statements, arrays, and functions. Letter grading.

10. Circuit Analysis I. (4) Lecture, three hours; recitation, one hour; outside study, eight hours. Requisite: course 1 or Physics 1C. Corequisite: Mathematics 33A. Introduction to linear circuit analysis. Resistive circuits, Kirchhoff laws, operational amplifiers, node and loop analysis, Thevenin and Norton theorem, capacitors and inductors, duality, first-order circuits, step response, second-order circuits, natural response, forced response. Letter grading.

M16. Logic Design of Digital Systems. (4) (Same as Computer Science M51A.) Lecture, four hours; recitation, two hours; outside study, six hours. Requisite: Physics 1C. Introduction to digital systems. Specification and implementation of combinational and sequential systems. Standard logic modules and programmable logic arrays. Specification and implementation of algorithmic systems: data and control sections. Number systems and arithmetic algorithms. Error control codes for digital information. Letter grading.

Upper Division Courses

100. Electrical and Electronic Circuits. (4) Lecture, three hours; recitation, one hour; outside study, eight hours. Requisites: course 1 or Physics 1C, Mathematics 33A, 33B. Electrical quantities, linear circuit elements, circuit principles, signal waveforms, transient and steady state circuit behavior, semiconductor diodes and transistors, small signal models, and operational amplifiers. Letter grading.

101. Engineering Electromagnetics. (4) Lecture, four hours; recitation, one hour; outside study, seven hours. Requisites: course 1 or Physics 1C, Mathematics 32A and 32B, or 33A and 33B. Electromagnetic field concepts, waves and phasors, transmission lines and Smith chart, transient responses, vector analysis, introduction to Maxwell equations, static and quasi-static electric and magnetic fields. Letter grading.

102. Systems and Signals. (4) Lecture, four hours; recitation, one hour; outside study, seven hours. Requisites: course 1 or Physics 1C, Mathematics 33A, 33B. Elements of differential equations, first- and second-order equations, variation of parameters method and method of undetermined coefficients, existence and uniqueness. Systems: input/output description, linearity, time-invariance, and causality. Impulse response functions, superposition and convolution integrals. Laplace transforms and system functions. Fourier series and transforms. Frequency responses, responses of systems to periodic signals. Sampling theorem. Letter grading.

103. Applied Numerical Computing. (4) Lecture, three hours; recitation, one hour; outside study, 11 hours. Requisites: course 5C or Computer Science 31 or Civil Engineering 15 or Mechanical and Aerospace Engineering 20, Mathematics 33B. Introduction to numerical analysis and computing techniques: root finding, matrix computations for systems of linear equations, systems of nonlinear equations, numerical methods for ordinary differential equations, least squares, eigenvalue/eigenvector problem, applications to engineering problems. Letter grading.

110. Circuit Analysis II. (6) Lecture, three hours; recitation, one hour; laboratory, four hours; outside study, 10 hours. Requisite: course 10. Corequisite: course 102. Sinusoidal excitation and phasors, AC steady state analysis, AC steady state power, network functions, poles and zeros, frequency response, mutual inductance, ideal transformer, application of Laplace transforms to circuit analysis. Introduction to use of measuring instruments in laboratory sessions, enabling experimental verification of circuit laws. Letter grading.

110L. Circuit Measurements Laboratory. (2) Laboratory, four hours; outside study, two hours. Requisite: course 10 or 100. Experiments with basic circuits containing resistors, capacitors, inductors, and op-amps. Ohm's law, voltage and current division, Thevenin and Norton equivalent circuits, superposition, transient and steady state analysis, and frequency response principles. Letter grading.

113. Digital Signal Processing. (4) Lecture, three hours; recitation, one hour; outside study, nine hours. Requisites: courses 102, 110. Relationship between continuous-time and discrete-time signals. Z-transform. Discrete Fourier transform. Fast Fourier transform. Structures for digital filtering. Introduction to digital filter design techniques. Letter grading.

113L. Digital Signal Processing Laboratory. (2) Laboratory, four hours; outside study, two hours. Requisite: course 113. Recommended: Computer Science 151B. Real-time implementation of digital signal processing algorithms on digital processor chips. Experiments involving A/D and D/A conversion, aliasing, digital filtering, sinusoidal oscillators, Fourier transforms, and finite wordlength effects. Letter grading.

114. Introduction to Speech and Image Processing. (4) Lecture, three hours; recitation, one hour; outside study, eight hours. Requisite: course 113. Basic principles of data acquisition, filtering, feature extraction, transforms. Acoustic theory of speech production, speech analysis techniques, and modeling perceptual mechanisms in first half of course; image representation and basic image processing techniques in second half. Lecture supplemented by computer laboratory assignments. Letter grading.

115A. Analog Electronic Circuits I. (4) Lecture, three hours; recitation, one hour; outside study, eight hours. Requisite: course 110. Semiconductor diode and transistor circuits. Operational amplifier systems. Equivalent circuit modeling of semiconductor devices. Design of single-stage amplifiers using SPICE circuit simulation tools. SPICE analysis of small and large signal operation of nonlinear circuits and systems. Letter grading.

115AL. Analog Electronics Laboratory I. (2) Laboratory, four hours; outside study, two hours. Requisite: course 110L. Recommended: course 115A. Experimental determination of device characteristics, resistive diode circuits, single-stage amplifiers, compound transistor stages, effect of feedback on single-stage amplifiers. Letter grading.

115B. Analog Electronic Circuits II. (4) Lecture, three hours; recitation, one hour; outside study, eight hours. Requisite: course 115A. Electron device/circuit/environment interactions, with emphasis on multi-stage amplifiers. Tuned amplifier considerations. Non-linear situations requiring graphical method of solution. Emphasis on design techniques, including economics, reliability, and realization of performance specifications. Letter grading.

115BL. Analog Electronics Laboratory II. (4) Laboratory, four hours; outside study, eight hours. Requisite: course 115AL. Recommended: course 115B. Experimental and computer studies of multistage, wideband, tuned, and power amplifiers, and multiloop feedback amplifiers. Introduction to thick film hybrid techniques. Construction of amplifier using hybrid thick film techniques. Letter grading.

115C. Digital Electronic Circuits. (4) Lecture, three hours; recitation, one hour; outside study, eight hours. Requisites: course 115A, Computer Science M51A. Recommended: courses 115B, 121A. Transistor-level digital circuit analysis and design. Modern logic families (TTL, ECL, NMOS, CMOS), integrated circuit (IC) layout, MSI digital circuits (flipflops, registers, counters, PLAs, etc.), computer-aided simulation of digital circuits. Letter grading.

115D. Design Studies in Electronic Circuits. (4) Lecture, four hours; outside study, eight hours. Requisites: courses 115B, 115C, 118. Applications of distributed circuits. Operational amplifier applications and limitations. Power amplifiers. Feedback and stability. Precision analog circuits. Letter grading.

116B. VLSI System Design. (4) Lecture, three hours; recitation, one hour; laboratory, four hours; outside study, four hours. Requisites: courses 115C, M116C (or Computer Science M151B), M116D (or Computer Science M152B). Familiarity with digital circuit, logic design, and computer architecture assumed. VLSI design from a system perspective, with focus on (1) core VLSI architecture concepts such as datapath design, clocking, power, speed, area trade-off, input/output packaging, etc. and (2) behavioral, register-transfer, logic, and physical-level structured VLSI design using CAD tools and hardware description languages such as VHDL. Letter grading.

M116C. Computer Systems Architecture. (4) (Formerly numbered 116C.) (Same as Computer Science M151B.) Lecture, four hours; recitation, two hours; outside study, six hours. Requisites: course M16 or Computer Science M51A, Computer Science 33. Recommended: course M116L or Computer Science M152A. Machine organization and design, formal descriptions, comparative study of machine instruction sets and formats, data representation and floating-point, addressing structures, mechanization of procedure calls, memory organization and management, microprogramming, input/output (I/O) processing and interrupts, and reliability aspects. Letter grading.

M116D. Digital Design Project Laboratory. (4) (Same as Computer Science M152B.) Laboratory, four hours; recitation, two hours; outside study, six hours. Requisite: course M116C or Computer Science M151B. Design and implementation of complex digital subsystems using field-programmable gate arrays (e.g., processors, special-purpose processors, device controllers, and input/output interfaces). Students work in teams to develop and implement designs and to document and give oral presentations of their work. Letter grading.

M116L. Introductory Digital Design Laboratory. (2) (Same as Computer Science M152A.) Laboratory, four hours; outside study, two hours. Requisite: course M16 or Computer Science M51A. Hands-on design, implementation, and debugging of digital logic circuits, use of computer-aided design tools for schematic capture and simulation, implementation of complex circuits using programmed array logic, design projects. Letter grading.

121A. Physical Principles of Semiconductor Devices. (4) Lecture, three hours; recitation, one hour; outside study, eight hours. Requisites: course 2 or Physics 1C, Materials Science 14. Introduction to physics of semiconductors; survey of equilibrium and nonequilibrium electronic processes in semiconductors; principles of operation and design of p-n junction devices. Fabrication of semiconductor devices. Letter grading.

121B. Principles of Semiconductor Device Design. (4) Lecture, three hours; recitation, one hour; outside study, eight hours. Requisite: course 121A. Introduction to principles of operation of bipolar and MOS transistors, equivalent circuits, high-frequency behavior, voltage limitations. Letter grading.

122AL. Semiconductor Devices Laboratory. (4) Lecture, one hour; laboratory, six hours; outside study, five hours. Requisites: courses 121A, 121B (may be taken concurrently). Design fabrication and characterization of p-n junction and transistors. Students perform various processing tasks such as wafer preparation, oxidation, diffusion, metallization, and photolithography. Letter grading.

123A. Fundamentals of Solid-State I. (4) Lecture, three hours; recitation, one hour; outside study, eight hours. Requisite: course 2 or Physics 1C. Limited to junior/senior engineering majors. Fundamentals of solid-state, introduction to quantum mechanics and quantum statistics applied to solid-state. Crystal structure, energy levels in solids, and band theory and semiconductor properties. Letter grading.

123B. Fundamentals of Solid-State II. (4) Lecture, three hours; outside study, nine hours. Requisite: course 123A. Discussion of solid-state properties, lattice vibrations, thermal properties, dielectric, magnetic, and superconducting properties. Letter grading.

124. Semiconductor Physical Electronics. (4) Lecture, three hours; recitation, one hour; outside study, eight hours. Requisite: course 123A. Band structure of semiconductors, experimental probes of basic band structure parameters, statistics of carriers, carrier transport properties at low fields, excess carrier transport properties, carrier recombination mechanisms, heterojunction properties. Letter grading.

129D. Semiconductor Processing and Device Design. (4) Lecture, two hours; laboratory, four hours; outside study, six hours. Requisites: courses 121A, 121B. Introduction to CAD tools used in integrated circuit processing and device design. Device structure optimization tool is based on PISCES; process integration tool is based on SUPREM. Course familiarizes students with the tools. Using CAD tools, a CMOS process integration to be designed. Letter grading.

131A. Probability. (4) Lecture, four hours; recitation, one hour; outside study, 10 hours. Requisites: course 102, Mathematics 32B, 33B. Introduction to basic concepts of probability, including random variables and vectors, distributions and densities, moments, characteristic functions, and limit theorems. Applications to communication, control, and signal processing. Introduction to computer simulation and generation of random events. Letter grading.

131B. Introduction to Stochastic Processes. (5) Lecture, four hours; outside study, 11 hours. Requisite: course 131A. Introduction to concepts of stochastic processes, emphasizing continuous- and discrete-time stationary processes, correlation function and spectral density, linear transformation, and mean-square estimation. Applications to communication, control, and signal processing. Introduction to computer simulation and analysis of stochastic processes. Letter grading.

132A. Introduction to Communication Systems. (4) Lecture, four hours; recitation, one hour; outside study, seven hours. Requisites: courses 102, 131A. Properties of signals and noise. Baseband pulse and digital signaling. Bandpass signaling techniques. Communication systems: digital transmission, frequency-division multiplexing and telephone systems, satellite communication systems. Performance of communication systems in presence of noise. Letter grading.

132B. Data Communications and Telecommunication Networks. (5) Lecture, four hours; recitation, one hour; outside study, 10 hours. Requisite: course 131A. Layered communications architectures. Queueing system modeling and analysis. Error control, flow and congestion control. Packet switching, circuit switching, and routing. Network performance analysis and design. Multiple-access communications: TDMA, FDMA, polling, random access. Local, metropolitan, wide area, integrated services networks. Letter grading.

136. Introduction to Engineering Optimization Techniques. (4) Lecture, four hours; recitation, one hour; outside study, seven hours. Requisites: course 103, Mathematics 32A, 33A. Introduction to optimization techniques for engineering and science students. Minimization of unconstrained functions of several variables: steepest descent, Newton/Raphson, conjugate gradient, and quasi-Newton methods. Rates of convergence. Methods for constrained minimization: introduction to linear programming and gradient projection methods. Lagrangian methods. Students expected to use SEASnet computers. Letter grading.

141. Principles of Feedback Control. (4) Lecture, three hours; recitation, one hour; laboratory, one hour; outside study, seven hours. Requisite: course 102. Classical methods of analysis and design of feedback control systems as applied to problems selected from engineering, biology, and related areas. Letter grading.

142. Linear Systems: State-Space Approach. (4) Lecture, four hours; outside study, eight hours. Requisite: course 102. State-space methods of linear system analysis and synthesis, with application to problems in networks, control, and system modeling. Letter grading.

150DL. Photonic Sensor Design Laboratory. (4) Lecture, two hours; laboratory, four hours; outside study, eight hours. Limited to seniors. Multidisciplinary course with lectures and laboratory experiments on optical sensors. Fundamentals of intensity and interference-based transducers, polarimeters, multiplexing and sensor networks, physical and biomedical sensors. Design and implementation of optical gyroscope, computer interfacing, and signal processing. Letter grading.

151A. Micromachining and Design of Microelectromechanical Systems. (4) Lecture, three hours; laboratory, four hours; outside study, five hours. Requisites: Chemistry 10B or 20B, Physics 6C or 8C. Introduction to micromachining technologies and microelectromechanical systems (MEMS). Different methods of micromachining and how these methods can be used to produce a variety of MEMS, including microsensors and microactuators. Students fabricate a variety of MEMS in a microfabrication laboratory. Letter grading.

151DL. Microelectromechanical Systems Design. (4) (Formerly numbered 151D.) Lecture, two hours; laboratory, two hours; outside study, eight hours. Requisites: courses 115A, 115B. Microelectromechanical systems design, combining lecture and laboratory instruction on microsensor and microactuator fundamental operating principles and high-resolution electronic measurement methods for transducers. Emphasis on design of transducers and interface systems using device and system-level tools. Letter grading.

161. Electromagnetic Waves. (4) Lecture, four hours; recitation, one hour; outside study, seven hours. Requisite: course 101. Time-varying fields and Maxwell equations, plane wave propagation and interaction with media, energy flow and Poynting vector, guided waves in waveguides, phase and group velocity, radiation and antennas. Letter grading.

162A. Wireless Communication Links and Antennas. (4) Lecture, three hours; discussion, one hour; outside study, eight hours. Requisite: course 161. Basic properties of transmitting and receiving antennas and antenna arrays. Array synthesis. Adaptive arrays. Friis transmission formula, radar equations. Cell-site and mobile antennas, bandwidth budget. Noise in communication systems (transmission lines, antennas, atmospheric, etc.). Cell-site and mobile antennas, cell coverage for signal and traffic, interference, multipath fading, ray bending, and other propagation phenomena. Letter grading.

162B. Antenna Design II. (4) Lecture, three hours; recitation, one hour; outside study, eight hours. Requisite: course 162A. Radiation patterns of horns, slots, and microstrip antennas. Equivalent source representations. Synthesis of sum and difference patterns. Dolph/Chebyshev excitation. Design of slot arrays with mutual coupling. Design of traveling wave antennas, reflectors, and lenses. Letter grading.

163A. Introductory Microwave Circuits. (4) Lecture, three hours; recitation, one hour; outside study, eight hours. Requisite: course 161. Transmission lines description of waveguides, impedance transformers, power dividers, directional couplers, filters, hybrid junctions, nonreciprocal devices. Letter grading.

163B. Microwave and Millimeter Wave Active Devices. (4) Lecture, three hours; discussion, one hour; outside study, eight hours. Requisites: courses 121A, 121B. MESFET, HEMT, HBT, IMPATT, Gunn, small signal models, noise model, large signal model, load-pull method, parameter extraction technique. Letter grading.

163C. Active Microwave Circuits. (4) Lecture, three hours; outside study, nine hours. Requisites: courses 115A, 161. Theory and design of microwave transistor amplifiers and oscillators; stability, noise, distortion. Letter grading.

164AL. Microwave Measurements Laboratory. (2) Lecture, one hour; laboratory, two hours; outside study, three hours. Requisite: course 161. Measurement techniques and instrumentation for active and passive microwave components; cavity resonators, waveguides, wavemeters, slotted lines, directional couplers. Design, fabrication, and characterization of microwave circuits in microstrip and coaxial systems. Letter grading.

164BL. Active Microwave Circuit Design Laboratory. (2) Lecture, one hour; laboratory, two hours; outside study, three hours. Requisite: course 161. Application of contemporary analytic design techniques to development of microwave amplifiers and oscillators incorporating state-of-the-art commercially available microwave transistors (silicon bipolar and GaAs MESFET). Letter grading.

172. Introduction to Lasers and Quantum Electronics. (4) Lecture, three hours; recitation, one hour; outside study, eight hours. Requisite: course 101. Physical applications and principles of lasers, Gaussian optics, resonant cavities, atomic radiation, laser oscillation and amplification, cw and pulsed lasers. Letter grading.

172L. Laser Laboratory. (4) Laboratory, four hours; outside study, eight hours. Requisite or corequisite: course 172. Properties of lasers, including saturation, mode-locking, and relaxation effects. Laser applications, including optics, modulation, communication, holography, interferometry, and nonlinear effects. Letter grading.

173. Photonic Devices. (4) Lecture, three hours; recitation, one hour; outside study, eight hours. Requisite: course 101. Introduction to basic principles of photonic devices. Topics include crystal optics, dielectric optical waveguides, waveguide couplers, electro-optic devices, magneto-optic devices, acousto-optic devices, second-harmonic generation, optical Kerr effect, optical switching devices. Letter grading.

173L. Photonics and Communication Laboratory. (4) Laboratory, four hours; outside study, eight hours. Requisite: course 102. Recommended: course 132A. Introduction to measurement of basic photonic devices, including LEDs, lasers, detectors, and amplifiers; fiber-optic fundamentals and measurement of fiber systems. Modulation techniques, including A.M., F.M., phase and suppressed carrier methods. Letter grading.

174. Semiconductor Optoelectronics. (4) Lecture, three hours; recitation, one hour; outside study, eight hours. Requisite: course 172. Introduction to semiconductor optoelectronic devices for optical communications, interconnects, and signal processing. Basic optical properties of semiconductors, pin photodiodes, avalanche photodiode detectors (APD), light-emitting diodes (LED), semiconductor lasers, optical modulators and amplifiers, and typical photonic systems. Letter grading.

175. Fourier Optics. (4) Lecture, three hours; recitation, one hour; outside study, eight hours. Requisites: courses 102, 161. Two-dimensional linear systems and Fourier transforms. Foundation of diffraction theory. Analysis of optical imaging systems. Spatial filtering and optical information processing. Wavefront reconstruction and holography. Letter grading.

176. Lasers in Biomedical Applications. (4) Lecture, three hours; recitation, one hour; outside study, eight hours. Requisite: course 101. Study of different types of laser systems and their operation. Examination of their roles in current and projected biomedical applications. Specific capabilities of laser radiation to be related to each example. Letter grading.

M185. Introduction to Plasma Electronics. (4) (Same as Physics M122.) Lecture, three hours; outside study, nine hours. Requisite: course 101 or Physics 110A. Senior-level introductory course on electrodynamics of ionized gases and applications to materials processing, generation of coherent radiation and particle beams, and renewable energy sources. Letter grading.

190D. Systems Design. (4) Lecture, two hours; laboratory, two hours; outside study, eight hours. Requisites: courses 113, 132A, 141. Advanced systems design integrating communications, control, and signal processing subsystems. Different project to be assigned yearly in which student teams create high-performance designs that manage trade-offs among subsystems. Letter grading.

199. Special Studies (2 to 8 units). Tutorial, to be arranged. Limited to seniors. Individual investigation of selected topic to be arranged with a faculty member. Enrollment request forms available in department office. Only two units may be applied toward degree; the two units must be approved by petition and can be used only as a replacement for a regular electrical engineering laboratory course. Students may take additional 199 courses, but they may not be applied toward degree. Letter grading.

Graduate Courses

M208A. Analytical Methods of Engineering I. (4)

(Same as Mechanical and Aerospace Engineering M291A.) Lecture, four hours; outside study, eight hours. Requisites: Mathematics 131A, 132. Application of abstract mathematical methods to engineering problems. Review of elements of measure and integration, L_2 theory — linear spaces and operators. Eigenvalue problems. Introduction to spectral theory — elementary distribution theory. Applications to problems in engineering. S/U or letter grading.

M208B. Analytical Methods of Engineering II. (4)

(Same as Mechanical and Aerospace Engineering M291B.) Lecture, four hours; outside study, eight hours. Requisite: course M208A or Mechanical and Aerospace Engineering M291A. Application of modern mathematical methods to engineering problems. Review of spectral theory. Green's functions and eigenvalue problems for second-order ordinary differential equations and their adjoints. Discrete and continuous spectra for ordinary and partial differential equations. Initial and boundary value problems. S/U or letter grading.

208C. Semigroups of Linear Operators and Applications. (4)

Lecture, four hours; outside study, eight hours. Requisite: course M208B. Semigroups of linear operators over Hilbert spaces. Generator and resolvent, generation theorems, Laplace inversion formula. Dissipative operators and contraction semigroups. Analytic semigroups and spectral representation. Semigroups with compact resolvents. Parabolic and hyperbolic systems. Controllability and stabilizability. Applications. S/U or letter grading.

210. Adaptive Filtering. (4)

Lecture, four hours; outside study, eight hours. Requisites: courses 113, 131B, Mathematics 115A. Optimal filtering and estimation, Wiener filters, linear prediction. Steepest descent and stochastic gradient algorithms. Frequency-domain adaptive filters. Method of least squares, recursive least squares, fast fixed-order and order-recursive (lattice) filters. Misadjustment, convergence, and tracking analyses, stability issues, finite precision effects. Connections with Kalman filtering. Nonlinear adaptive filters. Letter grading.

211A. Digital Image Processing I. (4)

Lecture, three hours; laboratory, four hours; outside study, five hours. Preparation: computer programming experience. Requisite: course 113. Fundamentals of digital image processing theory and techniques. Topics include two-dimensional linear system theory, image transforms, and enhancement. Concepts covered in lecture applied in computer laboratory assignments. Letter grading.

211B. Digital Image Processing II. (4)

Lecture, three hours; laboratory, four hours; outside study, five hours. Requisite: course 211A. Advanced digital image processing theory and techniques. Topics include modeling, restoration, still-frame and video image compression, tomographic imaging, and multiresolution analysis using wavelet transforms. Letter grading.

212A. Theory and Design of Digital Filters. (4)

Lecture, three hours; outside study, nine hours. Requisite: course 113. Approximation of filter specifications. Use of design charts. Structures for recursive digital filters. FIR filter design techniques. Comparison of IIR and FIR structures. Implementation of digital filters. Limit cycles. Overflow oscillations. Discrete random signals. Wave digital filters. Letter grading.

212B. Multirate Systems and Filter Banks. (4)

Lecture, three hours; outside study, nine hours. Requisite: course 212A. Fundamentals of multirate systems; polyphase representation; multistage implementations; applications of multirate systems; maximally decimated filter banks; perfect reconstruction systems; paraunitary filter banks; wavelet transform and its relation to multirate filter banks. Letter grading.

213A. Advanced Digital Signal Processing Circuit Design. (4)

Lecture, three hours; outside study, nine hours. Requisites: courses 212A, M216A. Digital filter design and optimization tools, architectures for digital signal processing circuits; integrated circuit modules for digital signal processing; programmable signal processors; CAD tools and cell libraries for application-specific integrated circuit design; case studies of speech and image processing circuits. Letter grading.

214A. Digital Speech Processing. (4)

Lecture, three hours; laboratory, two hours; outside study, seven hours. Requisite: course 113. Theory and applications of digital processing of speech signals. Mathematical models of human speech production and perception mechanisms, speech analysis/synthesis. Techniques include linear prediction, filter bank models, and homomorphic filtering. Applications to speech synthesis, automatic recognition, and hearing aids. Letter grading.

214B. Advanced Topics in Speech Processing. (4)

Lecture, three hours; computer assignments, two hours; outside study, seven hours. Requisite: course 214A. Advanced techniques used in various speech-processing applications, with focus on speech recognition by humans and machine. Physiology and psychoacoustics of human perception. Dynamic Time Warping (DTW) and Hidden Markov Models (HMM) for automatic speech recognition systems, pattern classification, and search algorithms. Aids for hearing impaired. Letter grading.

215A. Analog Integrated Circuit Design. (4)

Lecture, four hours; outside study, eight hours. Requisite: course 115B. Analysis and design of analog integrated circuits. MOS and bipolar device structures and models, single-stage and differential amplifiers, noise, feedback, operational amplifiers, offset and distortion, sampling devices and discrete-time circuits, bandgap references. Letter grading.

215B. Advanced Digital Integrated Circuits. (4)

Lecture, three hours; outside study, nine hours. Requisites: courses 115C, M216A. Analysis and comparison of modern logic families (CMOS, bipolar, BiCMOS, GaAs). MSI digital circuits (flipflops, registers, counters, PLAs). VLSI memories (ROM, RAM, CCD, bubble memories, EPROM, EEPROM) and VLSI systems. Letter grading.

215C. Analysis and Design of RF Circuits and Systems. (4)

Lecture, four hours; outside study, eight hours. Requisite: course 215A. Principles of RF circuit and system design, with emphasis on monolithic implementation in VLSI technologies. Basic concepts, communications background, transceiver architectures, low-noise amplifiers and mixers, oscillators, frequency synthesizers, power amplifiers. Letter grading.

215D. Analog Microsystem Design. (4)

Lecture, four hours; outside study, eight hours. Requisite: course 215A. Analysis and design of data conversion interfaces and filters. Sampling circuits and architectures, D/A conversion techniques, A/D converter architectures, building blocks, precision techniques, discrete- and continuous-time filters. Letter grading.

M216A. LSI in Computer System Design. (4)

(Same as Computer Science M258A.) Lecture, four hours; laboratory, four hours. Limited to graduate computer science and electrical engineering students. LSI/VLSI design and application in computer systems. Fundamental design techniques that can be used to implement complex integrated systems on a chip. S/U or letter grading.

M216B-M216C. LSI in Computer System Design. (4-4)

(Same as Computer Science M258B-M258C.) Lecture, four hours; laboratory, four hours. Requisite: course M216A. LSI/VLSI design and application in computer systems. In-depth studies of VLSI architectures and VLSI design tools. In Progress and S/U or letter grading.

M217. Biomedical Imaging. (4)

(Formerly numbered 217.) (Same as Biomedical Engineering M217.) Lecture, three hours; laboratory, two hours; outside study, seven hours. Requisite: course 114 or 211A. Mathematical principles of medical imaging modalities: X-ray, computed tomography, positron emission tomography, single photon emission computed tomography, magnetic resonance imaging. Topics include basic principles of each imaging system, image reconstruction algorithms, system configurations and their effects on reconstruction algorithms, specialized imaging techniques for specific applications such as flow imaging. Letter grading.

219A. Special Topics in Circuits and Signal Processing. (4)

Lecture, three hours; outside study, nine hours. Advanced treatment of topics selected from research areas in circuit theory, integrated circuits, or signal processing. Letter grading.

221A. Physics of Semiconductor Devices I. (4)

Lecture, four hours; outside study, eight hours. Requisite: course 121A. Physical principles and design considerations of junction devices. S/U or letter grading.

221B. Physics of Semiconductor Devices II. (4)

Lecture, four hours; outside study, eight hours. Requisite: course 121A. Principles and design considerations of field effect devices and charge-coupled devices. S/U or letter grading.

221C. Microwave Semiconductor Devices. (4)

Lecture, four hours; outside study, eight hours. Requisite: course 121A. Physical principles and design considerations of microwave solid-state devices: Schottky barrier mixer diodes, IMPATT diodes, transferred electron devices, tunnel diodes, microwave transistors. S/U or letter grading.

222. Integrated Circuits Fabrication Processes. (4)

Lecture, four hours; outside study, eight hours. Requisites: courses 118, 121A. Principles of integrated circuits fabrication processes. Technological limitations of integrated circuits design. Topics include bulk crystal and epitaxial growth, thermal oxidation, diffusion, ion-implantation, chemical vapor deposition, dry etching, lithography, and metalization. Introduction of advanced process simulation tools. S/U or letter grading.

223. Solid-State Electronics I. (4)

Lecture, four hours; outside study, eight hours. Requisites: courses 124, 270. Energy band theory, electronic band structure of various elementary, compound, and alloy semiconductors, defects in semiconductors. Recombination mechanisms, transport properties. S/U or letter grading.

224. Solid-State Electronics II. (4)

Lecture, four hours; outside study, eight hours. Requisite: course 223. Techniques to solve Boltzmann transport equation, various scattering mechanisms in semiconductors, high field transport properties in semiconductors, Monte Carlo method in transport. Optical properties. Letter grading.

225. Superlattices and Quantum Wells. (4)

Lecture, four hours; outside study, eight hours. Requisite: course 223. Theoretical methods for circulating electronics and optical properties of semiconductor quantum wells, superlattices, and tunnel structures. Quantum size effects and low-dimensional systems. Application to semiconductor devices, including negative resistance diodes, transistors, and detectors. S/U or letter grading.

229. Seminar: Advanced Topics in Solid-State Electronics. (4)

Seminar, four hours; outside study, eight hours. Requisites: courses 223, 224. Current research areas, such as radiation effects in semiconductor devices, diffusion in semiconductors, optical and microwave semiconductor devices, nonlinear optics, and electron emission. S/U or letter grading.

229S. Advanced Electrical Engineering Seminar. (2)

Seminar, two hours; outside study, six hours. Preparation: successful completion of Ph.D. major field examination. Seminar on current research topics in solid-state and quantum electronics (Section 1) or in electronic circuit theory and applications (Section 2). Students report on a tutorial topic and on a research topic in their dissertation area. May be repeated for credit. S/U grading.

230A. Estimation and Detection in Communication and Radar Engineering. (4) Lecture, four hours; outside study, eight hours. Requisite: course 131A. Applications of estimation and detection concepts in communication and radar engineering; random signal and noise characterizations by analytical and simulation methods; mean square (MS) and maximum likelihood (ML) estimations and algorithms; detection under ML, Bayes, and Neyman/Pearson (NP) criteria; signal-to-noise ratio (SNR) and error probability evaluations. S/U or letter grading.

230B. Digital Communication Systems. (4) Lecture, four hours; outside study, eight hours. Requisites: courses 132A, 230A. Basic concepts of digital communication systems; representation of bandpass waveforms; signal space analysis and optimum receivers in Gaussian noise; comparison of digital modulation methods; synchronization and adaptive equalization; applications to modern communication systems. S/U or letter grading.

230C. Algorithms and Processing in Communication and Radar. (4) Lecture, four hours; outside study, eight hours. Requisite: course 230A. Concepts and implementations of digital signal processing algorithms in communication and radar systems. Optimum dynamic range scaling for random data. Algorithms for fast convolution and transform. Spectral estimation algorithms. Parallel processing, VLSI algorithms, and systolic arrays. S/U or letter grading.

230D. Signal Processing in Communications. (4) Lecture, four hours; outside study, eight hours. Requisite: course 230C. Basic digital signal processing techniques for estimation and detection of signals in communication and radar systems. Optimization of dynamic range, quantization, and state constraints; DFT, convolution, FFT, NTT, Winograd DFT, systolic array; spectral analysis-windowing, AR, and ARMA; system applications. S/U or letter grading.

231A. Information Theory: Channel and Source Coding. (4) Lecture, four hours; outside study, eight hours. Requisite: course 230A. Fundamental concepts of information theory with applications to digital communications. Entropy, information, and data compression; noisy compression (rate distortion theory); channel capacity; block and convolutional codes and decoding algorithms. Letter grading.

231D. Spread Spectrum Communications. (4) Lecture, four hours; outside study, eight hours. Requisite: course 231A. Spread spectrum digital communication for personal communication systems. Review of digital modulations, channel coding; fading channels and diversity techniques; direct sequence and frequency-hopped spread spectrum systems; multiple-access schemes; application to cellular radio. Letter grading.

231E. Channel Coding Theory. (4) Lecture, four hours; outside study, eight hours. Requisite: course 231A. Fundamentals of linear codes and decoding algorithms based on theory of finite fields such as Bose/Chaudhuri/Hocquenghem and Reed/Solomon codes; introduction to combined coding and modulation such as lattice codes and trellis coded modulation; constellation shaping; applications. Letter grading.

232A. Stochastic Modeling with Applications to Telecommunication Systems. (4) Lecture, four hours; outside study, eight hours. Requisite: course 131A. Introduction to stochastic processes as applied to study of telecommunication systems and traffic engineering. Renewal theory; discrete-time Markov chains; continuous-time Markov jump processes. Applications to traffic and queueing analysis of basic telecommunication system models. S/U or letter grading.

232B. Telecommunication Switching and Queueing Systems. (4) Lecture, four hours; outside study, eight hours. Requisite: course 232A. Queue modeling and analysis with applications to space-time digital switching systems and to integrated-service telecommunication systems. Fundamentals of traffic engineering and queueing theory. Queue size, waiting time, busy period, blocking, and stochastic process analysis for Markovian and non-Markovian models. S/U or letter grading.

232C. Telecommunication Architecture and Networks. (4) Lecture, four hours; outside study, eight hours. Requisite: course 232B. Analysis and design of integrated-service telecommunication networks and multiple-access procedures. Stochastic analysis of priority-based queueing system models. Queueing networks; network protocol architectures; error control; routing, flow, and access control. Applications to local-area, packet-radio, satellite, and computer communication networks. S/U or letter grading.

232D. Telecommunication Networks and Multiple-Access Communications. (4) Lecture, four hours; outside study, eight hours. Requisite: course 232B. Performance analysis and design of telecommunication networks and multiple-access communication systems. Topics include architectures, multiplexing and multiple-access, message delays, error/flow control, switching, routing, protocols. Applications to local-area, packet-radio, local-distribution, computer and satellite communication networks. S/U or letter grading.

232E. Graphs and Network Flows. (4) Lecture, four hours; outside study, eight hours. Requisite: course 136. Solution to analysis and synthesis problems which may be formulated as flow problems in capacity constrained (or cost constrained) networks. Development of tools of network flow theory using graph theoretic methods; application to communication, transportation, and transmission problems. S/U or letter grading.

233B. Systems and Hardware Design for Wireless Communications. (4) Lecture, four hours; outside study, eight hours. Requisites: courses 113, M216A, 230B. Multidisciplinary course bringing together aspects of wireless data communications, signal processing, and baseband hardware design. Topics include wireless signal propagation and channel modeling, complete receiver design: timing, carrier and AGC acquisition and tracking, multipath mitigation, and hardware implementation of key receiver blocks. A selected wireless standard at center of course, with emphasis on design and implementation of end-to-end system for that standard. Letter grading.

233C. Mobile Multimedia Information Systems. (4) Lecture, four hours; outside study, eight hours. Requisites: course 232C, Computer Science 218. Interdisciplinary course covering mobile networked computing, wireless communication, and multimedia processing for systems capable of ubiquitous transport and processing of multimedia information. Topics include radio propagation, wireless channels, cellular systems, network mobility management, low-power portable node architecture, middle ware, OS, and application issues. Letter grading.

236A. Linear Programming. (4) Lecture, four hours; outside study, eight hours. Requisite: Mathematics 115A or equivalent knowledge of linear algebra. Basic graduate course in linear optimization. Geometry of linear programming. Duality. Simplex method. Interior-point methods. Decomposition and large-scale linear programming. Quadratic programming and complementary pivot theory. Engineering applications. Introduction to integer linear programming and computational complexity theory. Letter grading.

236B. Nonlinear Programming. (4) Lecture, four hours; outside study, eight hours. Requisite: course 236A. Basic graduate course in nonlinear programming. Convex sets and functions. Engineering applications and convex optimization. Lagrange duality, optimality conditions, and theorems of alternatives. Unconstrained minimization methods. Convex optimization methods (interior-point methods, cutting-plane methods, ellipsoid algorithm). Lagrange multiplier methods and sequential quadratic programming. Letter grading.

236C. Optimization Methods for Large-Scale Systems. (4) Lecture, four hours; outside study, eight hours. Requisite: course 236B. Theory and computational procedures for decomposing large-scale optimization problems: cutting-plane methods, column generation, decomposition algorithms. Techniques for global continuous optimization: branch-and-bound methods, reverse convex programming, bilinear and biconvex optimization, genetic algorithms, simulated annealing. Introduction to combinatorial optimization. Letter grading.

237. Dynamic Programming. (4) Lecture, four hours; outside study, eight hours. Requisites: courses 232A, 236A or 236B. Introduction to mathematical analysis of sequential decision processes. Finite horizon model in both deterministic and stochastic cases. Finite-state infinite horizon model. Methods of solution. Examples from inventory theory, finance, optimal control and estimation, Markov decision processes, combinatorial optimization, communications. Letter grading.

239AS. Topics in Communication. (4) Lecture, four hours; outside study, eight hours. Topics in one or more special aspects of communication systems, such as phase-coherent communication systems, optical channels, time-varying channels, feedback channels, broadcast channels, networks, coding and decoding techniques. May be repeated for credit with topic change. S/U or letter grading.

239BS. Topics in Operations Research. (4) Lecture, four hours; outside study, eight hours. Treatment of one or more selected topics from areas such as integer programming; combinatorial optimization; network synthesis; scheduling, routing, location, and design problems; implementation considerations for mathematical programming algorithms; stochastic programming; applications in engineering, computer science, economics. May be repeated for credit with topic change. S/U or letter grading.

M240A. Linear Dynamic Systems. (4) (Formerly numbered 240A.) (Same as Chemical Engineering M280A and Mechanical and Aerospace Engineering M270A.) Lecture, four hours; outside study, eight hours. Requisite: course 141 or Mechanical and Aerospace Engineering 171A. State-space description of linear time-invariant (LTI) and time-varying (LTV) systems in continuous and discrete time. Linear algebra concepts such as eigenvalues and eigenvectors, singular values, Cayley/Hamilton theorem, Jordan form; solution of state equations; stability, controllability, observability, realizability, and minimality. Stabilization design via state feedback and observers; separation principle. Connections with transfer function techniques. Letter grading.

240B. Linear Optimal Control. (4) Lecture, four hours; outside study, eight hours. Requisites: courses 141, M240A. Introduction to optimal control, with emphasis on detailed study of LQR, or linear regulators with quadratic cost criteria. Relationships to classical control system design. S/U or letter grading.

M240C. Optimal Control. (4) (Formerly numbered 240C.) (Same as Chemical Engineering M280C and Mechanical and Aerospace Engineering M270C.) Lecture, four hours; outside study, eight hours. Requisite: course 240B. Applications of variational methods, Pontryagin maximum principle, Hamilton/Jacobi/Bellman equation (dynamic programming) to optimal control of dynamic systems modeled by nonlinear ordinary differential equations. Letter grading.

241A. Stochastic Processes. (4) Lecture, four hours; outside study, eight hours. Requisite: course 131B. Fundamentals and applications of second-order theory stochastic processes. Correlation and spectral density. Gaussian process, processing by dynamic systems, Bayes rule and conditional expectation; mean-square estimation and Kalman filtering. S/U or letter grading.

241B. Kalman Filtering. (4) Lecture, four hours; outside study, eight hours. Requisites: courses M240A, 241A. Statistical estimation theory, estimation of signal parameters in additive noise. Kalman filter theory: basic theory, steady state and frequency domain analyses, on-line estimation and colored noise. Likelihood ratios, Gaussian signals in Gaussian noise. S/U or letter grading.

241C. Stochastic Control. (4) Lecture, four hours; outside study, eight hours. Requisites: courses 240B, 241B. Estimation and control of linear discrete-time and continuous-time stochastic systems; separation theorem and applications; Kalman filtering. S/U or letter grading.

M242A. Nonlinear Dynamic Systems. (4) (Formerly numbered 242.) (Same as Chemical Engineering M282A and Mechanical and Aerospace Engineering M272A.) Lecture, four hours; outside study, eight hours. Requisite: course M240A or Chemical Engineering M280A or Mechanical and Aerospace Engineering M270A. State-space techniques for studying solutions of time-invariant and time-varying nonlinear dynamic systems with emphasis on stability. Liapunov theory (including converse theorems), invariance, center manifold theorem, input-to-state stability and small-gain theorem. Letter grading.

243. Robust and Optimal Control by Convex Methods. (4) Lecture, four hours; outside study, eight hours. Requisite: course 240B. Multivariable robust control, including H₂ and H-infinity optimal control and robust performance analysis and synthesis against structured uncertainty. Emphasis on convex methods for analysis and design, in particular linear matrix inequality (LMI) approach to control. Letter grading.

249S. Topics in Control. (4) Seminar, four hours; outside study, eight hours. Thorough treatment of one or more aspects of control theory and applications, such as computational methods for optimal control; stability of distributed systems; identification; adaptive control; nonlinear filtering; differential games; applications to flight control, nuclear reactors, process control, biomedical problems. May be repeated for credit with topic change. S/U or letter grading.

250A. MEMS Device Physics and Fabrication. (4) Lecture, three hours; discussion, one hour; outside study, eight hours. Recommended preparation: integrated circuit processing knowledge. Introduction to physics and fabrication of microelectromechanical systems (MEMS) components. Surface, bulk, and other silicon micromachining principles. Material deposition and etching methods. Electronic, mechanical, and thermal properties of materials for MEMS. Fundamental transducer and actuator principles. Letter grading.

250B. MEMS System Design. (4) Lecture, three hours; discussion, one hour; outside study, eight hours. Requisite: course 250A. Introduction to microelectromechanical systems (MEMS) design methods, design rules, and state-of-the-art foundry capabilities. Capabilities and limitations of integration methods for MEMS electronics, sensors, and actuators. Electronic systems for MEMS transducers and actuators. Computer-aided design methods for MEMS integration. Design project required. Letter grading.

250C. Microsensors and Microinstruments. (4) Lecture, three hours; laboratory, three hours; outside study, six hours. Requisite: course 250B. Fundamentals of microelectromechanical systems (MEMS) microsensors and microinstruments. Measurement principles for MEMS transducers. Design methods and design constraints for sensitivity and stability. Implementation of control methods for improving measurement sensitivity, linearity, and reproducibility. Design project required, with emphasis on integration of sensors and actuators. Letter grading.

259S. Seminar: Microelectromechanical Systems. (2) Seminar, two hours; outside study, four hours. Seminar on microelectromechanical systems (MEMS). Letter grading.

260A-260B. Advanced Engineering Electrodynamics. (4-4) Lecture, four hours; outside study, eight hours. Requisites: courses 161, 162A. Advanced treatment of concepts in electrodynamics and their applications to modern engineering problems. Waves in anisotropic, inhomogeneous, and dispersive media. Guided waves in bounded and unbounded regions. Radiation and diffraction, including optical phenomena. Partially coherent waves, statistical media. S/U or letter grading.

261. Microwave and Millimeter Wave Circuits. (4) Lecture, four hours; outside study, eight hours. Requisite: course 163A. Rectangular and circular waveguides, microstrip, stripline, finline, and dielectric waveguide distributed circuits, with applications in microwave and millimeter wave integrated circuits. Substrate materials, surface wave phenomena. Analytical methods for discontinuity effects. Design of passive microwave and millimeter wave circuits. S/U or letter grading.

262. Antenna Theory and Design. (4) Lecture, four hours; outside study, eight hours. Requisites: courses 162A, 162B. Antenna patterns. Sum and difference patterns. Optimum designs for rectangular and circular apertures. Arbitrary side lobe topography. Discrete arrays. Mutual coupling. Design of feeding networks. S/U or letter grading.

263. Reflector Antennas Synthesis, Analysis, and Measurement. (4) Lecture, four hours; outside study, eight hours. Requisites: courses 260A-260B. Reflector pattern analysis techniques. Single and multireflector antenna configurations. Reflector synthesis techniques. Reflector feeds. Reflector tolerance studies, including systematic and random errors. Array-fed reflector antennas. Near-field measurement techniques. Compact range concepts. Microwave diagnostic techniques. Modern satellite and ground antenna applications. S/U or letter grading.

266. Computational Methods for Electromagnetics. (4) Lecture, four hours; outside study, eight hours. Requisites: courses 162A, 163A. Computational techniques for partial differential and integral equations: finite-difference, finite-element, method of moments. Applications include transmission lines, resonators, integrated circuits, solid-state device modeling, electromagnetic scattering, and antennas. S/U or letter grading.

270. Applied Quantum Mechanics. (4) Lecture, four hours; outside study, eight hours. Preparation: modern physics (or course 123A), linear algebra, and ordinary differential equations courses. Principles of quantum mechanics for applications in lasers, solid-state physics, and nonlinear optics. Topics include eigenfunction expansions, observables, Schrödinger equation, uncertainty principle, central force problems, Hilbert spaces, WKB approximation, matrix mechanics, density matrix formalism, and radiation theory. Letter grading.

271. Classical Laser Theory. (4) Lecture, four hours; outside study, eight hours. Requisite: course 172. Microscopic and macroscopic laser phenomena and propagation of optical pulses using classical formalism. Letter grading.

272. Dynamics of Lasers. (4) Lecture, four hours; outside study, eight hours. Requisite: course 271. Ultrashort laser pulse characteristics, generation, and measurement. Gain switching, Q switching, cavity dumping, active and passive mode locking. Pulse compression and soliton pulse formation. Nonlinear pulse generation: soliton laser, additive-pulse mode locking, and parametric oscillators. Pulse measurement techniques. Letter grading.

273. Nonlinear Optics. (4) Lecture, four hours; outside study, eight hours. Requisites: courses 172, 270. Nonlinear optical susceptibilities. Coupled-wave formulation. Crystal optics, electro-optics, and magneto-optics. Sum- and difference-frequency generation. Harmonic and parametric generation. Stimulated Raman and Brillouin scattering. Four-wave mixing and phase conjugation. Field-induced index changes and self-phase modulation. Letter grading.

279S. Special Topics in Quantum Electronics. (4) Lecture, four hours; outside study, eight hours. Current research topics in quantum electronics, lasers, nonlinear optics, optoelectronics, ultrafast phenomena, fiber optics, and lightwave technology. May be repeated for credit. S/U or letter grading.

285A. Plasma Waves and Instabilities. (4) Lecture, four hours; outside study, eight hours. Requisites: courses 101, and M185 or Physics M122. Wave phenomena in plasmas described by macroscopic fluid equations. Microwave propagation, plasma oscillations, ion acoustic waves, cyclotron waves, hydro-magnetic waves, drift waves. Rayleigh/Taylor, Kelvin/Helmholtz, universal, and streaming instabilities. Application to experiments in fully and partially ionized gases. Letter grading.

285B. Advanced Plasma Waves and Instabilities. (4) Lecture, four hours; outside study, eight hours. Requisites: courses M185, and 285A or Physics 222A. Interaction of intense electromagnetic waves with plasmas: waves in inhomogeneous and bounded plasmas, nonlinear wave coupling and damping, parametric instabilities, anomalous resistivity, shock waves, echoes, laser heating. Emphasis on experimental considerations and techniques. S/U or letter grading.

M287. Fusion Plasma Physics and Analysis. (4) (Same as Mechanical and Aerospace Engineering M237B.) Lecture, four hours; outside study, eight hours. Requisite: course M185. Fundamentals of plasmas at thermonuclear burning conditions. Fokker-Planck equation and applications to heating by neutral beams, RF, and fusion reaction products. Bremsstrahlung, synchrotron, and atomic radiation processes. Plasma surface interactions. Fluid description of burning plasma. Dynamics, stability, and control. Applications in tokamaks, tandem mirrors, and alternate concepts. S/U or letter grading.

296. Seminar: Research Topics in Electrical Engineering. (2) Seminar, two hours; outside study, four hours. Advanced study and analysis of current topics in electrical engineering. Discussion of current research and literature in research specialty of faculty member teaching course. May be repeated for credit. S/U grading.

298. Seminar: Engineering. (2 to 4) Seminar, to be arranged. Limited to graduate electrical engineering students. Seminars may be organized in advanced technical fields. If appropriate, field trips may be arranged. May be repeated with topic change. S/U or letter grading.

375. Teaching Apprentice Practicum. (1 to 4) Tutorial, to be arranged. Preparation: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

475C. Manufacturing Systems. (4) Lecture, four hours; outside study, eight hours. Requisite: Mechanical and Aerospace Engineering 475B. Modeling and analysis of manufacturing systems. Assembly and transfer lines. Facility layout and design. Group technology and flexible manufacturing systems. Planning and scheduling. Task management, machine setup, and operation sequencing. Manufacturing system models. Manufacturing information systems. Social, economic, environmental, and regulatory issues. Letter grading.

596. Directed Individual or Tutorial Studies (2 to 8 units). Tutorial, to be arranged. Limited to graduate electrical engineering students. Petition forms to request enrollment may be obtained from assistant dean, Graduate Studies. Supervised investigation of advanced technical problems. S/U grading.

597A. Preparation for M.S. Comprehensive Examination (2 to 12 units). Tutorial, to be arranged. Limited to graduate electrical engineering students. Reading and preparation for M.S. comprehensive examination. S/U grading.

597B. Preparation for Ph.D. Preliminary Examinations (2 to 16 units). Tutorial, to be arranged. Limited to graduate electrical engineering students. S/U grading.

597C. Preparation for Ph.D. Oral Qualifying Examination (2 to 16 units). Tutorial, to be arranged. Limited to graduate electrical engineering students. Preparation for oral qualifying examination, including preliminary research on dissertation. S/U grading.

598. Research for and Preparation of M.S. Thesis (2 to 12 units). Tutorial, to be arranged. Limited to graduate electrical engineering students. Supervised independent research for M.S. candidates, including thesis prospectus. S/U grading.

599. Research for and Preparation of Ph.D. Dissertation (2 to 16 units). Tutorial, to be arranged. Limited to graduate electrical engineering students. Usually taken after students have been advanced to candidacy. S/U grading.

Professors Emeriti

Edward P. Coleman, Ph.D.
J. Morley English, Ph.D.
Alfred C. Ingersoll, Ph.D.
Herbert B. Nottage, Ph.D.
Allen B. Rosenstein, Ph.D.
Bonham Spence-Campbell, E.E.

Graduate Study

The following constitutes introductory information regarding graduate degree programs and is based on the 1998-99 edition of *Program Requirements for UCLA Graduate Degrees*. Complete, annual editions of *Program Requirements* are available (listed under "Publications") on the Graduate Division website at <http://www.gdnet.ucla.edu>. Students are subject to the degree requirements as published in *Program Requirements* for the year in which they matriculate.

Master's Degree

The Engineering Executive Program offers the Master of Engineering (M.Engr.) degree.

Admission

The Engineering Executive Program enrolls a limited number of students in a two-year work-study program. It is specifically designed for experienced professionals who intend to go on to high-level executive positions in industry and government.

In addition to the University minimum requirements, the following are required: (1) five years of responsible full-time professional experience in engineering; (2) some formal study in statistics; (3) the Graduate Record Examination

(GRE) General Test and Subject Test in Engineering, Mathematics, Business, or a related field. A screening interview with the coordinator of the Engineering Executive Program is required.

More information can be obtained from the Office of Academic and Student Affairs, 6426 Boelter Hall, School of Engineering and Applied Science, (310) 825-1704.

Areas of Study

Engineering management.

Course Requirements

A total of 12 graduate courses are required for the Master of Engineering degree: Engineering 470A-470B-470C, 471A-471B-471C, 472A through 472D, 473A-473B.

Undergraduate Courses. No lower division courses may be applied toward graduate degrees. In addition, the following upper division courses are not applicable toward graduate degrees: Chemical Engineering M105A, 199; Civil Engineering 106A, 108, 199; Computer Science M152A, M152B, 171L, 199; Electrical Engineering 100, 101, 102, 103, 110L, M116D, M116L, 199; Materials Science and Engineering 110, 120, 130, 131, 131L, 132, 150, 160, 161L, 190, 191L, 199; Mechanical and Aerospace Engineering 102, 103, M105A, 105D, 199.

Individual departments within the school may impose certain restrictions on the applicability of other undergraduate courses toward graduate degrees. Students should consult with the graduate adviser on departmental requirements and restrictions.

Comprehensive Examination Plan

Consult the department.

Thesis Plan

None.

Engineer Degree

The School of Engineering and Applied Science offers an Engineer (Engr.) degree at a level equivalent to completion of preliminaries in the Ph.D. program. The Engineer degree represents considerable advanced training and competence in the engineering field but does not require the research effort involved in a Ph.D. dissertation.

Admission

For information on admission to the program, see the Admission section for the corresponding departmental doctoral program.

Areas of Study

Consult the department.

Course Requirements

Requirements for the Engineer degree are identical to those of the Ph.D. degree up to and including the oral preliminary examination, except that the Engineer degree is based on coursework. The minimum requirement is 15 (at least nine graduate) courses beyond the

bachelor's degree, with at least six courses in the major field (minimum of four graduate courses) and at least three in each minor field (minimum of two graduate courses in each).

The Ph.D. and Engineer degree programs are administered interchangeably in the sense that students in the Ph.D. program may either exit with an Engineer degree or earn the Engineer degree enroute to one of the Ph.D. degrees offered by the school. Similarly, students in the Engineer degree program may continue to the Ph.D. after receiving the Engineer degree. The time spent in either of the two programs applies toward the minimum residence requirements and to the time limitation for the other program.

Written and Oral Qualifying Examinations

Requirements for the Engineer degree are identical to those of the Ph.D. in Engineering up to and including the oral preliminary examination, except that the Engineer degree is based on coursework.

Graduate Certificate of Specialization

A certificate of specialization is available in all areas of specialization offered by the School of Engineering and Applied Science, except computer science. Requirements for admission are the same as for the M.S. degree.

Each graduate certificate program consists of five courses, at least two of which must be at the 200 level. No work completed for any previously awarded degree or credential may be applied toward the certificate. Successful completion of a certificate program requires an overall minimum B average in all courses applicable to the certificate. In addition, graduate certificate candidates are required to maintain a minimum B average in 200-series courses used in the certificate program. A minimum of three quarters of academic residence is required. The time limitation for completing the requirements of a certificate program is two calendar years. Details regarding the certificate programs may be obtained from each department office.

Courses completed for a Certificate of Specialization in the School of Engineering and Applied Science may subsequently be applied toward master's or doctoral degrees.

Engineering

Lower Division Courses

95. Ethical and Professional Issues in Engineering and Computer Science. (4) Lecture, four hours; outside study, eight hours. Selected lectures, discussion, and oral and written reports related to profession of engineering. Lectures by practicing engineers, case studies, and small group projects on issues that involve conflicting demands on society. Letter grading.

97. Introduction to Engineering Disciplines. (4)

Lecture, four hours; discussion, four hours; outside study, four hours. Introduction to engineering as a professional opportunity for freshman students by exploring difference between engineering disciplines and functions engineers perform. Development of skills and techniques for academic excellence through the team process. Investigation of national need underlying current effort to increase participation of historically underrepresented groups in the U.S. technological work force. P/NP grading.

Graduate Courses

375. Teaching Apprentice Practicum. (1 to 4) Tutorial, to be arranged. Preparation: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

470A-470D. The Engineer in the Technical Environment. (3-3-3-3) Lecture, three hours. Limited to Engineering Executive Program students. Theory and application of quantitative methods in analysis and synthesis of engineering systems for purpose of making management decisions. Optimization of outputs with respect to dollar costs, time, material, energy, information, and manpower. Case studies and individual projects. S/U or letter grading.

471A-471B-471C. The Engineer in the General Environment. (3-3-1.5) Lecture, three hours (courses 471A-471B)/90 minutes (course 471C). Limited to Engineering Executive Program students. Influences of human relations, laws, social sciences, humanities, and fine arts on development and utilization of natural and human resources. Interaction of technology and society past, present, and future. Change agents and resistance to change. S/U or letter grading (course 471A); In Progress and S/U or letter grading (courses 471B-471C).

472A-472D. The Engineer in the Business Environment. (3-3-3-1.5) Lecture, three hours (courses 472A-472B-472C)/90 minutes (course 472D). Limited to Engineering Executive Program students. Language of business for the engineering executive. Accounting, finance, business economics, business law, and marketing. Laboratory in organization and management problem solving. Analysis of actual business problems of firm, community, and nation, provided through cooperation and participation with California business corporations and government agencies. In Progress and S/U or letter grading (credit to be given on completion of courses 472B and 472D).

473A-473B. Analysis and Synthesis of a Large-Scale System. (3-3-3) Lecture, two and one-half hours. Limited to Engineering Executive Program students. Problem area of modern industry or government is selected as class project, and its solution is synthesized using quantitative tools and methods. Project also serves as laboratory in organization for a goal-oriented technical group. In Progress and S/U grading.

495. Teaching Assistant Training Seminar. (4) Seminar, four hours; outside study, eight hours. Preparation: appointment as a teaching assistant. Limited to graduate engineering students. Seminar on communication of engineering principles, concepts, and methods, preparation, organization of material, presentation, use of visual aids, grading, advising, and rapport with students. S/U grading.

501. Cooperative Program. (2 to 8) Tutorial, to be arranged. Preparation: consent of UCLA graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Used to record enrollment of UCLA students in courses taken under cooperative arrangements with USC. S/U grading.

David Stuart Rodes, Ph.D.

Adjunct Professors

Carolyn See, Ph.D.
Murray Roston, Ph.D.

Scope and Objectives

The Department of English is dedicated to the study of the literatures and cultures of those parts of the world in which English is the primary language, and to the study of the history and structure of the English language itself. Although committed to no single method or approach, the department encourages an emphasis on British, American, and world literary history and requires of its undergraduate majors a firsthand acquaintance with many of the more influential writers who have helped during the past millennium to make English a global language that possesses richly diverse and highly influential literary cultures. Within the department, students are able to pursue a variety of approaches to the study of literary culture beyond the strictly historical — literary criticism, for example, or those that draw on the resources of such disciplines as sociology, psychology, and philosophy. Within the B.A. degree in English, qualified students may elect a concentration either in creative writing or in world literature. The department also offers a Bachelor of Arts degree in American Literature and Culture.

An understanding and appreciation of literature can furnish lifelong rewards. In addition to such personal benefits, the department seeks to impart the capacity to make balanced critical judgments and the ability to write the English language persuasively, with point and effect. Such skills are essential to success in a variety of professions for which the major in English can provide excellent preparation, including law, administration, business, and teaching.

A graduate program leading to the Master of Arts degree is available for students who wish to continue the study of literature at an advanced level. A parallel program continues to the Ph.D. degree. Because the Ph.D. program

may require five years or more, it is intended only for qualified students who are seriously committed to advanced literary scholarship and, in some cases, to a career in college or university teaching.

Undergraduate Study

Admission to Courses in English

Students must have completed the Subject A requirement before taking any courses in English (other than English Composition A or 2). For further information regarding Subject A, see the Undergraduate Study section of this catalog.

Extra-Departmental Requirement in Foreign Literature or Foreign Language

All English majors must have completed either (1) level five or equivalent in any one foreign language or (2) level three or equivalent in one foreign language and two additional courses in foreign language or foreign literature, including foreign literature in translation (see course listings under Foreign Literature in Translation later in this chapter). Italian 46 may not be applied. Transfer students who have satisfied the College of Letters and Science foreign language requirement at the high school level through the IGETC program may satisfy the departmental requirement with five foreign literature in translation courses. The courses may be taken on a P/NP grading basis.

English B.A.

The Bachelor of Arts degree has concentrations in creative writing and in world literature. An international students program in English is also offered.

Preparation for the Major

Required: English Composition 3, English 4, 10A, 10B, 10C taken in the stated sequence (each course is a requisite for the next course). A grade of C or better is required in each course.

The Major

Required: Twelve upper division English courses, including 141A or 141B, 142A, 142B, 143, at least one course from each of the 150 and 180 series, one course from 160 through 164, and five additional courses of which three must be selected from 140A, 140B, 142C, or 150A through M197D.

Students are encouraged to choose additional electives from courses 140A through M197D. English 140A is especially recommended if they plan graduate work in literature. They may wish to select several courses in the relevant classical and postclassical foreign literatures and thought.

Optional Concentrations and Special Programs

The department offers optional concentrations in creative writing and in world literature, as well as a special program for international stu-

dents. For all programs, the regular Preparation for the Major sequence as well as the departmental foreign language requirement apply. Because of the specialized nature of these programs, students should consult the departmental counselor before selecting and declaring one of them as a concentration.

Creative Writing Concentration

The creative writing concentration consists of English 142A and 142B and a minimum of 10 additional upper division English courses: three creative writing courses from 133 or 134, taken in a single genre (poetry or short story), three literature courses paralleling the creative writing genre, and four electives selected from courses 140A through 190. Students may declare this program as a concentration only after they have completed three creative writing workshops in a single genre. Students may not enroll in more than one workshop (course 133, 134, or 135) per term or in more than two workshops with the same instructor. No student may take for credit more than three workshops in any one creative writing genre. Students planning to select this program should contact the departmental counselor for further details.

World Literature Concentration

The world literature concentration consists of nine upper division courses in English or American literature and six upper division courses in foreign literatures (at least one of which must be taught in the original language). The nine English courses must include 141A, 141B, or 143; 142A and 142B; at least one course from the 150 series; and four electives selected from courses 140A through 190 (students intending graduate work in literature are especially encouraged to take English 140A). A listing of acceptable courses may be obtained from the department.

International Students Program

The department offers a special program in English to bona fide international students whose native language is other than English. For this program, students must satisfy all requirements listed under Preparation for the Major; they may fulfill the departmental foreign language requirement with their own native language. The following 12 courses are required for the program itself: English as a Second Language 103, 106, 109; two courses from English 100 through 199; 122; 142A, 142B; and four additional courses from 140A through M197D. Students who complete this program and wish to pursue graduate study should consult the departmental counselor about programs of study and requirements for admission.

American Literature and Culture B.A.

Preparation for the Major

Required: English Composition 3, English 4, 10A, 10B, 10C taken in the stated sequence (each course is a requisite for the next course).

A grade of C or better is required in each course.

The Major

Required: Thirteen upper division courses, including six in American literature selected from English 170A through 179, two of which must be devoted to literature written before 1900 (courses 170A, 170B, 171A, 171B, 173A, 174A); two courses from 142A, 142B, 143; one seminar from 187, 188, 189, or when treating American topics, 180X; one course from M102A, M102B, 103, M104A, M104B, M104C, M105A, M105B, 106, M107A (also M107C when treating American topics or figures), or 109; and three courses from 100 through 199 or from courses pertaining to American culture offered by other departments (of those courses applied toward the major from outside the Department of English, all three must usually come from one department or program and appear on a list of approved courses for the major).

Honors Program

Admission

The honors program is open to majors with a 3.5 departmental and a 3.25 overall grade-point average. Students with lower GPAs may petition for admission to the program, but these grade-point averages must be achieved before graduation in order to qualify for honors. Students should apply by Winter Quarter of the junior year. For application forms and further information, contact the departmental counselor.

Requirements

All honors students are required to take English 140A during the junior year and one seminar from the English 180 through 189 sequence, preferably before the senior year. In Spring Quarter of the junior year, they must take course 199HA. During Fall and Winter Quarters of the senior year, they take courses 199HB and 199HC, in which they write a thesis under the direction of a faculty member. The thesis determines whether they receive high honors, honors, or no honors.

Waiver for Instructional Credential in English

Students interested in obtaining a single subject secondary school credential in English should consult with a departmental counselor regarding the requirements for a waiver from the English Single Subject Assessment Test (SSAT) and the Praxis Examination, both of which are required by the California Commission on Teacher Credentialing. Students should meet with a departmental counselor as early in their undergraduate careers as possible, because the program does require additional courses beyond the major requirements. Students interested in elementary school education are strongly urged to participate in the Diversified Liberal Arts Program (DLAP), administered by the College Counseling Service,

A316 Murphy Hall. For additional information on courses leading to the credential, consult the Department of Education at (310) 825-8328.

English Minor

The English minor is designed for students who wish to enhance their major program with the benefits of intensive study of English language and literatures, including a better understanding and appreciation of literatures in English and improvement in critical thinking, reading, and writing skills.

To enter the minor, students must have an overall grade-point average of 2.0 or better, have completed English 10A with a grade of C or better, and (if not already completed) be enrolled in course 10B. Students should be aware that requisites for course 10A are English Composition 3 and English 4. For further information, contact the Undergraduate Counseling Office in 2222 Rolfe Hall, (310) 825-1389.

Required Lower Division Courses (15 units): English 10A, 10B, and 10C, with grades of C or better.

Required Upper Division Courses (20 units): Five courses selected from English 100 through M197D, including course 142A and one other course that focuses on literature in English written before 1900.

All minor courses must be taken for a letter grade, with an overall grade-point average of 2.0 or better. Successful completion of the minor is indicated on the transcript and diploma.

Graduate Study

The following constitutes introductory information regarding graduate degree programs and is based on the 1998-99 edition of *Program Requirements for UCLA Graduate Degrees*. Complete, annual editions of *Program Requirements* are available (listed under "Publications") on the Graduate Division website at <http://www.gdnet.ucla.edu>. Students are subject to the degree requirements as published in *Program Requirements* for the year in which they matriculate.

Master's Degree

Admission

The department does not accept students whose sole objective is the Master of Arts (M.A.) degree in English.

Areas of Study

Literatures in English. See Course Requirements below.

Course Requirements

All graduate students in the M.A. program are required to take a minimum of 12 units or three courses per quarter.

Though all students are admitted directly into the Ph.D. program, students can decide to leave the program with an M.A. if they complete an acceptable thesis. Nine letter-graded English courses are required for the M.A. degree; these courses must be at the graduate level (200 or above).

All students at any stage of the program may take courses for S/U grades, but such courses cannot be used to satisfy any requirements for a degree. The work required for an S must be agreed on in advance with the instructor of the course.

Comprehensive Examination Plan

Students in the Ph.D. program receive the M.A. after they have satisfied one foreign language requirement and passed the first qualifying examination (see Written and Oral Qualifying Examinations under Doctoral Degree below).

Thesis Plan

Students elect the thesis plan for the M.A. after a maximum of two years in the program. They must request a committee from the vice chair a minimum of two quarters before completion of the program. The committee consists of three faculty members who meet as a group with the student to consider the thesis proposal. The thesis must not be less than 40 pages (10,000 words) nor more than 60 pages (15,000 words) in length.

Doctoral Degree

Admission

All students who are admitted into the graduate program of the Department of English at UCLA enter the first phase of the doctoral program, successful completion of which results in the Master of Arts degree in English. Those who enter UCLA with the master's degree may waive certain course requirements but must pass the first qualifying examination (which also grants admission into the second phase of the doctoral program). Those who decide they want a terminal Master of Arts degree from UCLA must write a thesis.

Admission to the program leading to the Ph.D. degree in English is based on a thorough review of the applicant's academic record. Ordinarily, holders of the B.A. are expected to meet these minimum requirements: an undergraduate major or program that prepares one for advanced study of literature; a grade-point average in English courses and in the junior and senior years of at least 3.5; and a score on the Graduate Record Examination (GRE) within the last five years of above 650 on both the verbal section of the General Test and the Literature in English Subject Test, or a combined score of 1,300. Applicants who hold the M.A. are expected to have a grade-point average of at least 3.7 in all graduate courses and a corre-

spondingly higher score on the Subject Test. Applicants must submit a minimum of three letters of recommendation attesting to their ability to succeed in graduate study. A writing sample is also required. Care should be taken with the statement of purpose and the writing sample, since the quality of thought and argument these exhibit, as well as their style, weigh significantly in admissions decisions. For an application, write to the department.

Major Fields or Subdisciplines

Literatures in English.

Course Requirements

Fourteen letter-graded courses are required. The courses must be at the graduate level (200 or better). With the approval of the vice chair, Ph.D. students may take up to three of the courses in departments other than English (such as literature in another language, history, art history, Afro-American studies, film). English 201A and 201B are highly recommended.

Students take the first qualifying examination and to pursue the doctorate take English 596 each quarter, either under an individual professor or the vice chair. Students who elect to write an M.A. thesis take English 598 each quarter.

Breadth. Of the 14 letter-graded courses for the Ph.D., students are required to take a minimum of three courses in periods before 1800 and three in periods after 1800. Courses that straddle this chronological break, such as most of those in Romanticism, may satisfy either the pre- or the post-1800 requirement, but not both. (Classes in literary theory do not ordinarily satisfy the breadth requirement.)

Philology. All Ph.D. students must take English 210 or any two courses from 211, 212, or 213. When offered, either English 214 or 240 may be substituted for 210.

All students at any stage of the program may take courses for S/U grades, but such courses cannot be used to satisfy any requirements for a degree. The work required for an S must be agreed on in advance with the instructor of the course.

Written and Oral Qualifying Examinations

First Stage Evaluation. At the beginning of the second year in the program, the graduate committee reviews students' files, which include the faculty's written reports on coursework as well as grades, and instructs the vice chair to advise students as to their progress in the program. Students who entered the program with an M.A. may petition the committee to grant credit toward the 14 course requirement for graduate courses taken elsewhere; at the committee's discretion, a maximum of six such courses may be credited toward the UCLA degree.

First Qualifying Examination. After students satisfy the 14-course requirement (including the breadth requirement and the philology requirement), ordinarily sometime early in their

third year, they take the first qualifying examination. In anticipation of the oral portion of this examination, students are asked to designate the three fields in which they are examined. At least two of these fields must be historical, chosen in most cases from among the following: Anglo-Saxon, Middle English, Renaissance, earlier 17th century, Restoration and 18th century, Romantic, Victorian, 20th-century British, earlier American, 19th-century American, 20th-century American. If students wish, the third field may be a genre or a special field: novel, drama, poetry, literary criticism, folklore/mythology, Celtic studies, African American literature, women's writing, history of the language, rhetoric, Asian American literature. The graduate committee also considers petitions for third fields designed by students themselves and not specified on this list.

Taking into account the fields designated, the vice chair appoints three faculty members to serve as the examining committee. Before it is appointed, students, without giving an explanation, may exempt one person from the committee. Students are told the names of their committee members approximately two weeks before the examination. At that time, students submit to them the written work from any two seminars that they feel best reflects their performance. In most cases, this means two substantial seminar papers. The committee's review of these papers constitutes the first stage of the examination. A two-hour oral examination in the three fields designated constitutes the second stage of this examination. On the basis of overall performance, the committee decides whether students passed the examination as a whole and submits the results to the graduate committee. Students may retake the examination once, but before any failed examination is retaken, the graduate committee reviews the record as a whole and offers, through the vice chair, advice on how students should proceed.

There are no fixed reading lists for the oral examination; the department believes that part of students' intellectual maturity at this stage should be the capacity to determine what needs to be read in a particular field. Students need to remember that an oral examination can move readily from texts that they have not read to ones that they have. For general guidance, however, the department does provide extensive lists of suggested works in each field, doing so in full recognition that most students are not able to "master" the entire lists, and that they may well use the oral examination to demonstrate knowledge of works that do not appear on the lists at all.

Second Stage. As soon as possible after successful completion of the first qualifying examination, students select a dissertation director and begin to prepare the dissertation prospectus. Once students advance to this stage, they may take up to eight units of English 597 either under an individual professor or the vice chair, so that they can concentrate on the prospec-

tus. Students are also encouraged to take any seminars that might prove useful.

Second Qualifying Examination. After students pass the second language requirement, and they and their dissertation director conclude that they are sufficiently prepared (but no later than three quarters after they have passed the first qualifying examination), they take the second qualifying examination (also called the University Oral Qualifying Examination). The examination is administered by a committee of four, consisting of a chair and two other members from the English Department and one member from outside the department, nominated and appointed according to the regulations governing doctoral committees. The departmental members may but need not be the same as those on the first qualifying examination committee.

At least two weeks before the examination, students must submit their prospectus to each member of the committee. The prospectus must be a substantially researched overview of the proposed dissertation. The second qualifying examination, which normally lasts for about two hours, focuses on the issues raised by the proposed dissertation and attempts to ascertain both the feasibility of the project and students' preparation for it. Though this examination concentrates on the prospectus, students should be prepared to discuss a wide range of works that bear on the proposed dissertation. Students are encouraged to consult their committee in advance of the examination. The grading on the examination is pass or fail. Candidates may, at the discretion of the committee, repeat the examination, but only one repetition is allowed.

Third Stage. When students pass the second qualifying examination, they may advance to candidacy and receive the Candidate in Philosophy (C.Phil.) degree. Students now proceed with the writing of the dissertation and enroll each quarter in English 599. Students are encouraged to enroll in seminars in their field whenever they are offered. All course requirements (oral reports and term papers) may be satisfied through work connected with the dissertation.

English

Lower Division Courses

4. Critical Reading and Writing. (4) Lecture, four hours. Enforced requisite: English Composition 3. Introduction to literary analysis, with close reading and carefully written exposition of selections from principal modes of literature: poetry, prose fiction, and drama. Minimum of four papers (three to five pages each) and two in-class essays. P/NP or letter grading.

4H. Critical Reading and Writing (Honors). (4) Enforced requisite: English Composition 3. Introduction to literary analysis, with close reading and carefully written exposition of selections from principal modes of literature: poetry, prose fiction, and drama. Minimum of four papers (three to five pages each) and two in-class essays.

10A. English Literature to 1660. (5) Lecture, three hours; discussion, one hour. Preparation: satisfaction of Subject A requirement. Enforced requisites: English Composition 3, English 4. Study of selected works of the period, beginning with selections from Old English poetry and including writings by Chaucer, Spenser, Shakespeare, Donne, and Milton. Minimum of three papers (three to five pages each) or equivalent.

10B. English Literature, 1660 to 1832. (5) Lecture, three hours; discussion, one hour. Preparation: satisfaction of Subject A requirement. Enforced requisites: English Composition 3, English 4, 10A. Study of selected works of the period, including writings by Dryden, Pope, Swift, Wordsworth, and Keats. Minimum of three papers (three to five pages each) or equivalent.

10C. English Literature, 1832 to the Present. (5) Lecture, three hours; discussion, one hour. Preparation: satisfaction of Subject A requirement. Enforced requisites: English Composition 3, English 4, 10A, 10B. Study of selected works of the period, including writings by Tennyson, Arnold, Browning, Joyce, and Eliot. Minimum of three papers (three to five pages each) or equivalent.

20. Introduction to Creative Writing. Preparation: satisfaction of Subject A requirement, submission of creative or expository writing samples to a screening committee. Enforced requisite: English Composition 3. Designed to introduce fundamentals of creative writing. Emphasis either on poetry, fiction, or drama, depending on wishes of instructor(s) during any given term. Readings from assigned texts and weekly writing assignments required.

70. Major British Authors before 1800. Preparation: satisfaction of Subject A requirement. Not open for credit to English majors or students with credit for course 10A or 10B. Study of selected masterpieces of English literature before 1800, including works of such writers as Chaucer, Shakespeare, Donne, Milton, Swift, Pope, Johnson, and Fielding.

75. Major British Authors, 1800 to the Present. (4) Preparation: satisfaction of Subject A requirement. Not open for credit to English majors or students with credit for course 10B or 10C. Study of selected masterpieces of English literature from 1800 to the present, including works of such writers as Wordsworth, Coleridge, Keats, Tennyson, Dickens, Browning, Yeats, Joyce, and Eliot.

80. Major American Authors. (4) Preparation: satisfaction of Subject A requirement. Not open for credit to English majors or students with credit for any courses in the 170 series. Introduction to the chief American authors, with emphasis on poetry, nonnarrative prose, and short fiction of such writers as Poe, Dickinson, Emerson, Whitman, Twain, Frost, and Hemingway.

85. The American Novel. (4) Lecture, three hours; discussion, one hour. Preparation: satisfaction of Subject A requirement. Not open for credit to English majors or students with credit for any 170-series courses. Development, with emphasis on form, of the American novel from its beginning to the present day. Includes works of such novelists as Hawthorne, Fitzgerald, Faulkner, Ellison, and Morrison. P/NP or letter grading.

88A-88Z. Lower Division Seminars: Special Topics in English. (4 each) Seminar, three hours. Limited to 15 students. Content varies; see departmental counselor for information. P/NP or letter grading. **88A.** Medieval Literature; **88B.** Renaissance Literature; **88C.** 17th-Century Literature; **88D.** 18th-Century Literature; **88E.** Romantic Literature; **88F.** Victorian Literature; **88G.** 20th-Century British Literature; **88H.** Colonial American Literature; **88I.** 19th-Century American Literature; **88J.** 20th-Century American Literature; **88K.** History of English Language; **88L.** Folklore and Mythology; **88M.** Literature and Society.

90. Shakespeare. (4) Preparation: satisfaction of Subject A requirement. Not open for credit to English majors or students with credit for course 142A or 142B. Survey of Shakespeare's plays, including comedies, tragedies, and histories, selected to represent Shakespeare's breadth, artistic progress, and total dramatic achievement.

95A. Introduction to Poetry. (4) Preparation: satisfaction of Subject A requirement. Recommended for instructional credential candidates. Study of critical issues (metrics, diction, figurative language, symbolism, irony and ambiguity, form and structure) and aesthetic issues, including evaluative criteria, followed by close critical analysis of a selection of representative poems. P/NP or letter grading.

95B. Introduction to Drama. (4) Preparation: satisfaction of Subject A requirement. Examination of representative plays; readings may range from Greek to modern drama. Emphasis on critical approaches to dramatic text; study of issues such as plot construction, characterization, special uses of language in drama, methods of evaluation. P/NP or letter grading.

95C. Introduction to Fiction. (4) Preparation: satisfaction of Subject A requirement. Introduction to prose narrative, its techniques and forms. Analysis of short and long narratives and of critical issues such as plot, characterization, setting, narrative voice, realistic and nonrealistic forms. P/NP or letter grading.

96. The Short Story in England and America. (4) Preparation: satisfaction of Subject A requirement. Historical survey of the short story as a genre, from the 19th century to the present. P/NP or letter grading.

97H. Honors Seminar for Freshmen and Sophomores. (4) Seminar, three hours. Enforced requisites: English Composition 3, English 4. Limited to 15 students. Recommended for lower division students who anticipate entering English honors program during their junior year. Content varies; see departmental counselor for information.

Upper Division Courses

100. Introduction to Special Topics and Genres. (4) Preparation: satisfaction of Subject A requirement. Study of a particular topic, genre, or subgenre in literature such as satire, biography, parody, or a specialized classification of literature. May be repeated for credit. P/NP or letter grading.

M101A. Lesbian and Gay Literature before Stonewall. (4) (Formerly numbered 101.) (Same as Lesbian, Gay, Bisexual, and Transgender Studies M101A and Women's Studies M101A.) Lecture, four hours. Preparation: satisfaction of English Composition requirement. Survey of lesbian and gay literature in English from earlier periods through the 1960s. Works by such authors as Walt Whitman, Oscar Wilde, Radclyffe Hall, E.M. Forster, Willa Cather, Virginia Woolf, James Baldwin, Christopher Isherwood, William S. Burroughs, John Rechy, Audre Lorde, and Edward Albee. P/NP or letter grading.

M101B. Lesbian and Gay Literature after Stonewall. (4) (Formerly numbered 101.) (Same as Lesbian, Gay, Bisexual, and Transgender Studies M101B and Women's Studies M101B.) Lecture, four hours. Preparation: satisfaction of English Composition requirement. Survey of lesbian and gay literature in English since 1969, year of Stonewall Riots in New York City, commonly recognized as beginning of modern lesbian and gay culture. Works by such authors as Adrienne Rich, Jane Rule, Maureen Duffy, Brigid Brophy, Larry Kramer, Bertha Harris, Edmund White, Rita Mae Brown, Alan Hollinghurst, and Emma Donahue. P/NP or letter grading.

M102A. Asian American Literature to 1980. (4) (Formerly numbered M102.) (Same as Asian American Studies M112A.) Preparation: satisfaction of Subject A requirement. Survey of Asian American literature from early period of formation to cultural nationalist movement of late 1960s and 1970s. Works of such authors as Edith Eaton, Carlos Bulosan, Hisaye Yamamoto, Louis Chu, and Maxine Hong Kingston included. P/NP or letter grading.

M102B. Asian American Literature since 1980. (4) (Formerly numbered M102.) (Same as Asian American Studies M112B.) Preparation: satisfaction of Subject A requirement. Survey of contemporary Asian American literature with emphasis on its growing ethnic diversity following influx of new immigrants. Works of such authors as Theresa Cha, Bharati Mukherjee, David Wong Louie, Garrett Hongo, and Jessica Hagedorn included. P/NP or letter grading.

103. Jewish American Fiction. (4) Preparation: satisfaction of Subject A requirement. Study of the fiction of Jewish writers in America, such as Bellow, Malamud, and Roth, focusing on encounter of Jewish ethical ideals and social values with the contemporary environment.

M104A. Early Afro-American Literature. (4) (Same as Afro-American Studies M104A.) Preparation: satisfaction of Subject A requirement. Introductory survey of black American literature from the 18th century through World War I, including oral and written forms (folktales, spirituals, sermons; fiction, poetry, essays), by authors such as Phillis Wheatley, David Walker, Frances Harper, Frederick Douglass, Harriet Jacobs, Paul Laurence Dunbar, Charles W. Chesnut, Booker T. Washington, and Pauline Hopkins.

M104B. Afro-American Literature from the Harlem Renaissance to the 1960s. (4) (Same as Afro-American Studies M104B.) Preparation: satisfaction of Subject A requirement. Introductory survey of 20th-century black American literature from New Negro Movement of post-World War I period to the 1960s, including oral materials (ballads, blues, speeches) and fiction, poetry, and essays by authors such as Jean Toomer, Nella Larsen, Zora Neale Hurston, Richard Wright, Ann Petry, James Baldwin, and Ralph Ellison.

M104C. Afro-American Literature since the 1960s. (4) (Same as Afro-American Studies M104C.) Preparation: satisfaction of Subject A requirement. Introductory survey of diverse forms of Afro-American literary expression produced from rise of Black Arts Movement of the 1960s to the present by writers such as Amiri Baraka, Nikki Giovanni, Alice Walker, Etheridge Knight, Toni Morrison, Martin Luther King, Jr., Paule Marshall, Ernest Gaines, Ishmael Reed, and Audre Lorde. P/NP or letter grading.

M105A. Early Chicana/Chicano Literature. (4) (Formerly numbered M105.) (Same as Chicana and Chicano Studies M105A.) Preparation: satisfaction of Subject A requirement. Survey of Chicana/Chicano literature from the 16th century through Zoot Suit Riots (1943), including both oral and written forms of literary expression (corridos, folktales, essays, memoirs, novels, and poetry) by such authors as Cabeza de Vaca, Juan Seguin, Americo Paredes, and Maria Ruiz Amparo Burton. P/NP or letter grading.

M105B. Recent Chicana/Chicano Literature. (4) (Formerly numbered M105.) (Same as Chicana and Chicano Studies M105B.) Preparation: satisfaction of Subject A requirement. Survey of Chicana/Chicano literature since 1943, beginning with reactions to Zoot Suit Riots and continuing through Chicana/Chicano Movimiento to contemporary literature. Drama, novels, memoirs, essays, and poetry by such authors as Luis Valdez, Cherrie Moraga, Sandra Cisneros, Rodolfo Anaya, Rolando Hinojosa, Oscar Zeta Acosta, and Ana Castillo. P/NP or letter grading.

106. Native American Literary Studies. (4) Preparation: satisfaction of Subject A requirement. Study of Native American oral cultures through translated documents (song-poems, life-stories, myths, tales, dream visions, speeches) and/or images in writing about Native Americans (poetry, fiction, history, anthropology, sociology).

M107A. American Women Writers. (4) (Same as Women's Studies M107A.) Preparation: satisfaction of Subject A requirement. Survey of literary works by American women writers, with emphasis on roles of women, portrayal of nature and society, and evolution of forms and techniques in writing by American women.

M107B. British Women Writers. (4) (Same as Women's Studies M107B.) Preparation: satisfaction of Subject A requirement. Survey of literary works by British women writers, with emphasis on roles of women, portrayal of nature and society, and evolution of forms and techniques in writing by British women.

M107C. Special Topics in Women and Literature. (4) (Same as Women's Studies M107C.) Preparation: satisfaction of Subject A requirement. Variable specialized studies course in women and literature, with emphasis on a period, genre, particular theme, or nonnational literary grouping.

108A-108B. The English Bible as Literature. (4) Preparation: satisfaction of Subject A requirement. Principal literary monuments of the Old and New Testaments in King James Version. **108A.** Old Testament; **108B.** New Testament.

108C. The English Bible as Literature: Special Topics. (4) Preparation: satisfaction of Subject A requirement. Study of the English Bible, with attention to particular literary themes, motifs, and genres. Possible discussion of influence of the Bible on discrete periods or individual authors in English literature. May be repeated for credit.

109. Interdisciplinary Approaches to Literature. (4) Preparation: satisfaction of Subject A requirement. Study of British or American literature in relation to other disciplines such as history, politics, philosophy, psychology. May be repeated for credit.

110. Studies in Individual Authors. (4) Preparation: satisfaction of Subject A requirement. Specialized study of the work of a single poet, dramatist, prose writer, or novelist. May be repeated for credit.

M111A. Literature of Myth and Oral Tradition. (4) (Same as Folklore M111.) Preparation: satisfaction of Subject A requirement. Study of myth, dramatic origins, oral epic, folktales, and ballad, emphasizing Indo-European and Semitic examples.

M111B. Anglo-American Folk Song. (4) (Same as Ethnomusicology M124 and Folklore CM106.) Survey of Anglo-American balladry and folk song, with attention to historical development, ethnic background, and poetic and musical values.

M111C. British Folklore and Mythology. (4) (Same as Folklore M121.) Preparation: satisfaction of Subject A requirement. Designed for juniors/seniors. Survey of folklore of the peoples of Britain, with attention to their history, function, and regional differences.

M111D. Celtic Mythology. (4) (Same as Folklore M122.) Lecture, three hours; discussion, one hour. Survey of early materials, chiefly literary, for study of mythic traditions of the Celtic peoples, ranging from ancient Gaul to medieval Ireland and Wales.

M111E. Survey of Medieval Celtic Literature. (4) (Same as Folklore M112.) Preparation: satisfaction of Subject A requirement. Knowledge of Irish or Welsh not required. General course dealing with Celtic literature from earliest times to the 14th century.

M111F. Celtic Folklore. (4) (Same as Folklore M127.) Requisite: Folklore 101. Folkloric traditions of modern Ireland, Scotland, and other Celtic countries, with attention to current techniques of folkloristic research.

M111G. Oral Traditions in Africa. (4) (Same as Folklore M155.) Designed for juniors/seniors. Survey of African folk traditions: folktale, epic, heroic poetry, and folk song.

112. Children's Literature. (4) Preparation: satisfaction of Subject A requirement. Study of historical backgrounds and development of types of children's literature, folklore and oral tradition, levels of interest, criticism and evaluation, illustration and bibliography.

113. Literature for Adolescents and Young Adults. (4) Preparation: satisfaction of Subject A requirement. Analysis and evaluation of literature intended mainly for students in junior and senior high schools. Review of mature books that are popularly suggested for this age group; study of interests and reading habits of young adults.

114. World Literatures in English. (4) Preparation: satisfaction of Subject A requirement. Survey of contemporary literature from English-speaking regions of the world, reviewing major genres from several countries and making cross-comparisons with the literatures. Generalizations concerning the nature of the English used by such writers. May be repeated for credit.

115A. American Popular Literature. (4) Preparation: satisfaction of Subject A requirement. Study of main currents of popular and cultural taste as reflected in such genres as dime novels, detective fiction, and Western stories.

115B. British Popular Literature. (4) Preparation: satisfaction of Subject A requirement. Readings in the literature of the British masses, from 16th-century broadsides to contemporary novels. Examination of social functions of literature.

116. Science Fiction. (4) Preparation: satisfaction of Subject A requirement. Study of science fiction and speculative literatures.

117. Detective Fiction. (4) Preparation: satisfaction of Subject A requirement. Study of British and American detective fiction and the literature of detection.

118. Film and Literature. (4) Preparation: satisfaction of Subject A requirement. Study of interdisciplinary relationships between film and literature, including theme and structure, and focusing on cinematic adaptations of literary works.

119. Literature of California and the American West. (4) Preparation: satisfaction of Subject A requirement. Study of literature in English dealing with exploration, settlement, and emergent cultural awareness of the Western U.S. P/NP or letter grading.

121. History of the English Language. (4) Preparation: satisfaction of Subject A requirement. Study directed toward English majors of main features in grammatical, lexical, and phonetic condition of the English language from Indo-European time to the present.

122. Introduction to Structure of Present-Day English. (4) Preparation: satisfaction of Subject A requirement. Introduction to techniques of linguistic description as applied to pronunciation, grammar, and vocabulary of modern English.

133. Creative Writing: Poetry. (4) (Formerly numbered 133A-133B-133C.) Preparation: satisfaction of Subject A requirement, submission of writing samples. Requisites: English Composition 3, English 4. Weekly exercises in writing of poetry, with practice in standard forms and meters and study of techniques. Classroom discussion based on student use. Enrollment in more than one section per term not permitted. May be repeated for a total of 12 units. No more than eight units may be completed with same instructor. P/NP or letter grading.

134. Creative Writing: Short Story. (4) (Formerly numbered 134A-134B-134C.) Preparation: satisfaction of Subject A requirement, submission of writing samples. Requisites: English Composition 3, English 4. Three average-length stories to be completed each term. Some stories may, with instructor's consent, be substantial revisions of other stories presented. Classroom discussion based on stories presented. Enrollment in more than one section per term not permitted. May be repeated for a total of 12 units. No more than eight units may be completed with same instructor. P/NP or letter grading.

135. Creative Writing: Drama. (4) (Formerly numbered 135A-135B-135C.) Preparation: satisfaction of Subject A requirement, submission of writing samples. Requisites: English Composition 3, English 4. Exploration of capacity of each student to write for the theater. Class discussion of student writing, individual conferences, rehearsed readings, and laboratory productions. Enrollment in more than one section per term not permitted. May be repeated for a total of 12 units. No more than eight units may be completed with same instructor. P/NP or letter grading.

137. Advanced Computer Techniques for Students of English. (4) Preparation: satisfaction of Subject A requirement. Requisites: English Composition 3, English 4, 10A, 10B, 10C, Program in Computing 1, 10A. Concurrent instruction in writing computer programs for literary study and in the kinds of literary research that can be aided by computers. BASIC is taught; students must know how to operate a computer. Principles of computer science neither assumed nor taught.

140A. Criticism: History and Theory. (4) Requisites: courses 10A, 10B. Study of some major historical documents and theoretical statements in history of literary criticism, including works by such writers as Plato, Aristotle, Horace, Sidney, Dryden, Johnson, Kant, Coleridge, Wordsworth, Shelley, Arnold, James, Croce, and T.S. Eliot, with emphasis on major critical positions posed and developed by these writers, basis of their theoretical positions, and practical consequences of those positions. Possible discussion of recent trends in criticism.

140B. Criticism: Special Topics. (4) Requisites: courses 10A, 10B. Study of limited periods and specialized issues and approaches in history of literary criticism, including moral, biographical, sociological, psychological, formal, structural, and deconstructionist. Area of concentration determined by instructor and listed in *Schedule of Classes*. Some study of literary texts, to illuminate the value and practical application of the approach, may be required.

141A. Chaucer: *The Canterbury Tales*. (4) Requisites: courses 10A, 10B. Introductory study of Chaucer's language, versification, and historical and literary background, including analysis and discussion of his long major poem, *The Canterbury Tales*. Satisfies department's Chaucer requirement.

141B. Chaucer: *Troilus and Criseyde* and Selected Minor Works. (4) Requisites: courses 10A, 10B. Intensive study of *Troilus and Criseyde* and selected minor works of Chaucer, such as *The Book of the Duchess*, *The House of Fame*, *The Parliament of Fowls*, etc. Satisfies department's Chaucer requirement.

142A. Shakespeare: Poems and Early Plays. (4) Lecture, four hours; discussion, one hour. Requisites: courses 10A, 10B. Intensive study of selected poems and representative comedies, histories, and tragedies through *Hamlet*.

142B. Shakespeare: Later Plays. (4) Lecture, four hours; discussion, one hour. Requisites: courses 10A, 10B. Intensive study of representative problem plays, major tragedies, Roman plays, and romances.

142C. Shakespeare: Selected Topics. (4) Requisites: courses 10A, 10B. Designed for students interested in further study of Shakespeare. Limits of investigation set by individual instructors.

143. Milton. (4) Requisites: courses 10A, 10B. Study of major works of Milton, with emphasis on *Paradise Lost*.

150A. Early Medieval Literature. (4) Preparation: satisfaction of Subject A requirement. Requisites: English Composition 3, English 4, 10A, 10B. Reading knowledge of Old English not required. Major prose and poetry of Anglo-Saxon England (600 to 1100), including epic, romance, history, saints' lives, and travel literature. Texts and topics include *Beowulf*, Vikings, poems on women, Bede, and King Alfred. P/NP or letter grading.

150B. Later Medieval Literature. (4) (Formerly numbered 150.) Requisites: courses 10A, 10B. Reading and historical explication of major writers of the 14th and 15th centuries (e.g., the Gawain-poet, Langland, Gower, Malory, miracle and morality plays, prose, and lyrics). The more difficult texts read in modernized form.

151. Elizabethan Literature. (4) Requisites: courses 10A, 10B. Study of English literature of the 16th century, with special emphasis on development and interrelationships of poetry, prose, fiction, and literary theory and criticism during reign of Elizabeth I.

152A. Drama from the Beginning to 1576. (4) Requisites: courses 10A, 10B. English drama from its Latin and Anglo-Norman roots to opening of first public playhouse. P/NP or letter grading.

152B. Drama, 1576 to 1642. (4) Requisites: courses 10A, 10B. Non-Shakespearean English drama from opening of first public playhouse to closing of the theaters. P/NP or letter grading.

153. Literature of the Early 17th Century, 1600 to 1660. (4) Requisites: courses 10A, 10B. Study of major works as literary documents and as products of 17th-century thought. Work of Milton excluded.

154. Literature of the Restoration and Earlier 18th Century, 1660 to 1730. (4) Requisites: courses 10A, 10B. Study of major works as literary documents and as products of the Restoration and earlier 18th-century thought.

155. Literature of the Later 18th Century, 1730 to 1798. (4) Requisites: courses 10A, 10B. Study of major works as literary documents and as products of later 18th-century thought.

156. Drama, 1660 to 1842. (4) Requisites: courses 10A, 10B. Survey of English drama from the Restoration to the Licensing Act.

157. The Novel to 1832. (4) Requisites: courses 10A, 10B. Survey of works of major English novelists from Defoe through Scott.

160. Earlier Romantic Literature. (4) Preparation: satisfaction of Subject A requirement. Requisites: English Composition 3, English 4, 10A, 10B, 10C. Intensive study of writings by Blake, Wollstonecraft, W. Wordsworth, Coleridge, and Austen, with collateral readings from such authors as Godwin, Burke, Paine, Radcliffe, Edgeworth, Baillie, C. Smith, Burns, Southey, D. Wordsworth, Lamb, DeQuincey, and Scott.

161. Later Romantic Literature. (4) Preparation: satisfaction of Subject A requirement. Requisites: English Composition 3, English 4, 10A, 10B, 10C. Intensive study of writings by Byron, Keats, Percy Shelly, and Mary Shelley, with collateral readings from such authors as Hazlitt, Hunt, Landor, Clare, Moore, Peacock, Landon, Aikin, Hemans, and Prince.

162. Earlier Victorian Poetry and Prose. (4) Preparation: satisfaction of Subject A requirement. Requisites: English Composition 3, English 4, 10A, 10B, 10C. Study of poetry and prose of the Victorian age from passage of the first Reform Bill through the high Victorian period, including such authors as Tennyson, Browning, Arnold, Carlyle, Mill, and Newman.

163. Later Victorian Poetry and Prose. (4) Preparation: satisfaction of Subject A requirement. Requisites: English Composition 3, English 4, 10A, 10B, 10C. Study of poetry and prose of the later Victorian age from Pre-Raphaelitism through the aesthetic and decadent movements, along with other intellectual trends, including such authors as Ruskin, Swinburne, Pater, Hopkins, Hardy, Wilde, and Yeats.

164. The Novel, 1832 to 1900. (4) Preparation: satisfaction of Subject A requirement. Requisites: English Composition 3, English 4, 10A, 10B, 10C. Survey of major English novelists from Dickens through Hardy.

165. 20th-Century British Poetry. (4) Preparation: satisfaction of Subject A requirement. Requisites: English Composition 3, English 4, 10A, 10B, 10C. Survey of major British poets, including Yeats, Eliot, Auden, and Hughes, from 1900 to the present.

166. 20th-Century British Fiction. (4) Preparation: satisfaction of Subject A requirement. Requisites: English Composition 3, English 4, 10A, 10B, 10C. Survey of major British novelists and short story writers, including Conrad, Joyce, Woolf, and Lawrence, from 1900 to the present.

167. Drama, 1842 to 1945. (4) Preparation: satisfaction of Subject A requirement. Requisites: English Composition 3, English 4, 10A, 10B, 10C (for Theater and Film and Television majors the 10A, 10B, 10C requisites are waived). Survey of British and American drama, with its principal continental influences, from 1842 through World War II.

- 168. Drama, 1945 to the Present. (4)** Preparation: satisfaction of Subject A requirement. Requisites: English Composition 3, English 4, 10A, 10B, 10C. Study of British and American drama, with its principal continental influences, since World War II.
- 170A. American Literature to 1775. (4)** Preparation: satisfaction of Subject A requirement. Requisites: English Composition 3, English 4, 10A, 10B, 10C. Historical survey of American literature through the Colonial period. P/NP or letter grading.
- 170B. American Literature, 1775 to 1832. (4)** Preparation: satisfaction of Subject A requirement. Requisites: English Composition 3, English 4, 10A, 10B, 10C. Historical survey of American literature during Revolutionary and early republic periods. P/NP or letter grading.
- 171A. American Literature, 1832 to 1865. (4)** Preparation: satisfaction of Subject A requirement. Requisites: English Composition 3, English 4, 10A, 10B, 10C. Historical survey of American literature from Jacksonian era to end of the Civil War. P/NP or letter grading.
- 171B. American Literature, 1866 to 1912. (4)** Preparation: satisfaction of Subject A requirement. Requisites: English Composition 3, English 4, 10A, 10B, 10C. Historical survey of American literature from end of the Civil War to founding of *Poetry* magazine. P/NP or letter grading.
- 172A. American Literature, 1912 to 1945. (4)** Preparation: satisfaction of Subject A requirement. Requisites: English Composition 3, English 4, 10A, 10B, 10C. Historical survey of American literature from founding of *Poetry* magazine to end of World War II. P/NP or letter grading.
- 172B. American Literature since 1945. (4)** Preparation: satisfaction of Subject A requirement. Requisites: English Composition 3, English 4, 10A, 10B, 10C. Historical survey of American literature since end of World War II. P/NP or letter grading.
- 173A. American Fiction to 1900. (4)** Preparation: satisfaction of Subject A requirement. Requisites: English Composition 3, English 4, 10A, 10B, 10C. Study of American fiction (both novels and short stories) from its beginning to end of the 19th century. P/NP or letter grading.
- 173B. American Fiction, 1900 to 1945. (4)** Preparation: satisfaction of Subject A requirement. Requisites: English Composition 3, English 4, 10A, 10B, 10C. Study of American novels and short stories from beginning of the 20th century to end of World War II. P/NP or letter grading.
- 173C. American Fiction since 1945. (4)** Preparation: satisfaction of Subject A requirement. Requisites: English Composition 3, English 4, 10A, 10B, 10C. Study of American novels and short stories since end of World War II. P/NP or letter grading.
- 174A. American Poetry to 1900. (4)** Preparation: satisfaction of Subject A requirement. Requisites: English Composition 3, English 4, 10A, 10B, 10C. Study of American poetry from Puritan period through end of the 19th century. P/NP or letter grading.
- 174B. American Poetry, 1900 to 1945. (4)** Preparation: satisfaction of Subject A requirement. Requisites: English Composition 3, English 4, 10A, 10B, 10C. Study of American poetry from beginning of the 20th century to end of World War II. P/NP or letter grading.
- 174C. American Poetry since 1945. (4)** Preparation: satisfaction of Subject A requirement. Requisites: English Composition 3, English 4, 10A, 10B, 10C. Study of American poetry since end of World War II. P/NP or letter grading.
- 175. American Nonfictional Prose. (4)** Preparation: satisfaction of Subject A requirement. Requisites: English Composition 3, English 4, 10A, 10B, 10C. Study of American nonfictional prose (essays, autobiographies, travel narratives, and other). Particular genre and/or historical period vary with instructor. P/NP or letter grading.
- 176. American Drama. (4)** Preparation: satisfaction of Subject A requirement. Requisites: English Composition 3, English 4, 10A, 10B, 10C. Study of American drama from its beginning to the present day. Historical period may vary with instructor. P/NP or letter grading.
- 177. Special Topics in American Literature. (4)** Preparation: satisfaction of Subject A requirement. Requisites: English Composition 3, English 4, 10A, 10B, 10C. Focused study of some aspect or theme in American literature. May be repeated for credit. P/NP or letter grading.
- 178. Perspectives in Study of American Culture. (4)** Preparation: satisfaction of Subject A requirement. Requisites: English Composition 3, English 4, 10A, 10B, 10C. Interdisciplinary study of American literature in its relationships to other disciplines, including art, architecture, film, history, music, politics, and various social sciences, with emphasis on application of literary methodology to historical survey of American culture. May be repeated for credit.
- 179. American Literature in Comparative Context. (4)** Preparation: satisfaction of Subject A requirement. Requisites: English Composition 3, English 4, 10A, 10B, 10C. Study of some aspect of American literature and its relationships to other national literature. P/NP or letter grading.
- 180. Specialized Studies in Medieval Literature. (4)** Preparation: satisfaction of Subject A requirement. Requisites: English Composition 3, English 4, 10A, 10B, 10C. Consult *Schedule of Classes* for author, period, genre, or subject to be studied in a specific term. May be repeated for credit.
- 180X. Specialized Studies in Literature. (4)** Preparation: satisfaction of Subject A requirement. Requisites: English Composition 3, English 4, 10A, 10B, 10C. Consult *Schedule of Classes* for author, period, genre, or subject to be studied in a specific term. May be repeated for credit.
- 181. Specialized Studies in Renaissance Literature. (4)** Preparation: satisfaction of Subject A requirement. Requisites: English Composition 3, English 4, 10A, 10B, 10C. Consult *Schedule of Classes* for author, period, genre, or subject to be studied in a specific term. May be repeated for credit.
- 182. Specialized Studies in 17th-Century Literature. (4)** Preparation: satisfaction of Subject A requirement. Requisites: English Composition 3, English 4, 10A, 10B, 10C. Consult *Schedule of Classes* for author, period, genre, or subject to be studied in a specific term. May be repeated for credit.
- 183. Specialized Studies in 18th-Century Literature. (4)** Preparation: satisfaction of Subject A requirement. Requisites: English Composition 3, English 4, 10A, 10B, 10C. Consult *Schedule of Classes* for author, period, genre, or subject to be studied in a specific term. May be repeated for credit.
- 184. Specialized Studies in Romantic Literature. (4)** Preparation: satisfaction of Subject A requirement. Requisites: English Composition 3, English 4, 10A, 10B, 10C. Consult *Schedule of Classes* for author, period, genre, or subject to be studied in a specific term. May be repeated for credit.
- 185. Specialized Studies in Victorian Literature. (4)** Preparation: satisfaction of Subject A requirement. Requisites: English Composition 3, English 4, 10A, 10B, 10C. Consult *Schedule of Classes* for author, period, genre, or subject to be studied in a specific term. May be repeated for credit.
- 186. Specialized Studies in 20th-Century British Literature. (4)** Preparation: satisfaction of Subject A requirement. Requisites: English Composition 3, English 4, 10A, 10B, 10C. Consult *Schedule of Classes* for author, period, genre, or subject to be studied in a specific term. May be repeated for credit.
- 187. Specialized Studies in Colonial American Literature. (4)** Preparation: satisfaction of Subject A requirement. Requisites: English Composition 3, English 4, 10A, 10B, 10C. Consult *Schedule of Classes* for author, period, genre, or subject to be studied in a specific term. May be repeated for credit.
- 188. Specialized Studies in 19th-Century American Literature. (4)** Preparation: satisfaction of Subject A requirement. Requisites: English Composition 3, English 4, 10A, 10B, 10C. Consult *Schedule of Classes* for author, period, genre, or subject to be studied in a specific term. May be repeated for credit.
- 189. Specialized Studies in 20th-Century American Literature. (4)** Preparation: satisfaction of Subject A requirement. Requisites: English Composition 3, English 4, 10A, 10B, 10C. Consult *Schedule of Classes* for author, period, genre, or subject to be studied in a specific term. May be repeated for credit.
- 190. Literature and Society. (4)** Preparation: satisfaction of Subject A requirement. Requisites: English Composition 3, English 4, 10A, 10B, 10C. Intensive study of some aspect of relationship between literature and social, economic, or political history. May be repeated for credit. P/NP or letter grading.
- 196. Interracial Encounters in Contemporary American Literature. (4)** Preparation: satisfaction of Subject A requirement. Requisites: English Composition 3, English 4. Study of recent literary and cinematic texts produced by people from different ethnic backgrounds living in the U.S. and providing comparative cultural perspectives on living in a multiethnic society. P/NP or letter grading.
- M197A. Topics in Afro-American Literature. (4)** (Formerly numbered M197.) (Same as Afro-American Studies M197A.) Variable specialized studies course in Afro-American literature. Topics include the Harlem Renaissance; Afro-American Literature in the Nadir, 1890 to 1914; Contemporary Afro-American Fiction. May be repeated for credit. P/NP or letter grading.
- M197B. Topics in Chicana/Chicano Literature. (4)** (Same as Chicana and Chicano Studies M197B.) Preparation: satisfaction of Subject A requirement. Variable specialized studies course in Chicana/Chicano literature. Topics include labor and literature; Chicana/Chicano visions of Los Angeles; immigration, migration, and exile; autobiography and historical change; Chicana/Chicano journalism; literary New Mexico; specific literary genres. May be repeated for credit. P/NP or letter grading.
- M197C. Topics in Asian American Literature. (4)** (Same as Asian American Studies M197C.) Preparation: satisfaction of Subject A requirement. Variable specialized studies course in Asian American literature. Topics include specific genres (autobiography, poetry, or drama); specific nationalities within the Asian American community; and themes related to such problems as generational differences, gender politics, or interethnic encounters. May be repeated for credit. P/NP or letter grading.
- M197D. Special Topics in Lesbian and Gay Literature. (4)** (Same as Lesbian, Gay, Bisexual, and Transgender Studies M197D.) Preparation: satisfaction of English Composition requirement. Variable specialized studies course in lesbian and gay literature. Topics focus on a particular problem or issue in terms of its relationship to lesbian and gay culture and writing. May be repeated for credit. P/NP or letter grading.
- 199. Special Studies in English. (2 to 4)** Intensive directed research project. To enroll or obtain information, see departmental counselor.
- 199HA. Honors Seminar. (4)** Requisite: course 140A. Introduction to research techniques and study of various approaches and applications of critical methodology as it relates to interpretation and evaluation of texts.
- 199HB-199HC. Honors Tutorial. (4-4)** Requisite: course 199HA. Tutorial in which students write theses under direction of a faculty member. In Progress grading.
- 199I. Independent Studies for Internships. (2 to 4)** Independent studies course to be supervised jointly by Field Studies Office and faculty supervisor. Further supervision to be provided by business for which student is doing internship. P/NP grading.

Graduate Courses

200. Approaches to Literary Research. (4) Bibliographical tools of English and American literary scholarship; introduction to descriptive bibliography and basic methods of research. Periods covered vary.

201A. Criticism and Interpretation from Classical Era to the Renaissance. (4) Lecture, three hours. Examination of major texts in history of critical theory and interpretation from pre-Socratics to Descartes, including classical literary criticism (Plato, Aristotle, Horace, Longinus), biblical hermeneutics (Bible, Midrash, St. Paul, St. Augustine, St. Thomas Aquinas), and medieval and Renaissance theories of interpretation (Dante, Boccaccio, Sidney).

201B. Aesthetics and Criticism from the Enlightenment to Decadence. (4) Lecture, three hours. Continuation of course 201A, proceeding from neo-classical and Enlightenment critical theory through Victorian and decadent aesthetic and literary criticism. Readings may include texts by Rousseau, Dryden, Pope, Hume, Kant, Schiller, the Schlegels, Coleridge, Hegel, Schelling, Arnold, Pater, Wilde, and Nietzsche. Letter grading.

201C. Developments and Issues in Modern Critical Thought. (4) Lecture, three hours. Study of major figures and ideas in modern and contemporary critical theory. Readings vary from year to year but may include such figures as Freud, Durkheim, Saussure, Heidegger, Shklovskii, Benjamin, Adorno, Levi-Strauss, Lacan, Barthes, Derrida, Deleuze, Fanon, Foucault, Irigaray, Lyotard, Bourdieu, and Bhabha. S/U or letter grading.

202. Enumerative and Descriptive Bibliography. (4) Problems in bibliography, texts, and editions, with practical application in compiling bibliographies, editing texts, and approaching literature through textual criticism.

203. Computers and Literary Research. (4) Prior knowledge in this area not required. Practice in writing and using computer programs for analysis of literary style, content, and authorship.

204. History of Rhetoric. (4) Reading of basic texts in history of rhetoric and selections from standard commentaries. Survey of classical period and medieval-to-modern period in alternate years.

M205. Perspectives in American Folklore Research. (4) (Same as Folklore CM205.) Lecture, three hours. Requisite: Folklore 101. Examination of American folklore studies compared and contrasted with investigations in other countries, with emphasis on principal conceptual schemes and research orientations employed in study of folklore in American society.

210. History of the English Language. (4) Detailed study of history, characteristics, and changing forms of the language from its origin until about 1900.

211. Old English. (4) Study of Old English grammar, lexicon, phonology, and pronunciation to enable students to read the literature silently and aloud. Reading of as much of the more interesting Old English prose and poetry as can be read in a term.

212. Middle English. (4) Requisite: course 211. Detailed study of linguistic aspects of Middle English and of representative examples of the better prose and poetry.

213. Early Modern English. (4) Detailed study of phonology, morphology, syntax, and vocabulary of English between 1450 and 1750. Description and analysis of changes in the language in relation to intellectual, political, and social characteristics of the period.

214. Modern English. (4) Description and analysis of modern English phonology, grammar, and vocabulary, using theory and techniques of contemporary linguistics. Survey of the evolution of American English and account of characteristic phonological and grammatical features of major regional varieties of English around the world.

216A-216B. Old Irish. (4) Studies in grammar. Readings in the glosses and other texts. Comparative considerations.

217A-217B. Medieval Welsh. (4) Studies in grammar. Readings in the Mabinogi and other texts. Comparative considerations.

218. Celtic Linguistics. (4) Survey of salient features of Celtic linguistic stock in its Gaelic and British branches, with reference to position of Celtic within Indo-European languages.

230. Workshop: Creative Writing. (2 to 4) Preparation: submission of writing samples in specified genre (poetry, fiction, or drama). May be repeated but may not satisfy more than one of the nine courses required for first qualifying examination nor any of the five courses required for second qualifying examination.

M235. African Myth and Ritual. (4) (Same as Folklore M235.) Seminar on methods of analyzing African and African Diaspora myth and ritual.

240. Studies in History of the English Language. (4) Individual seminars dealing with any single historical period from Old English period to the present or development of a particular linguistic characteristic (phonology, syntax, semantics, dialectology) through various periods. May be repeated for credit.

241. Studies in Structure of the English Language. (4) Topics in various aspects of structure of modern English, especially syntax and semantics. May be repeated for credit.

242. Language and Literature. (4) Application of linguistics to literary analysis. Individual seminars dealing with a historical period (medieval and Renaissance, neoclassical, or 19th century and modern), specific authors, or contributions of specific groups of linguists to literary analysis. May be repeated for credit.

M243A. The Ballad. (4) (Same as Folklore M243A.) Study of English and Scottish popular ballads and their American derivatives, with some attention to European analogues. May be repeated for credit.

M243B. Problems in Ballad Scholarship. (4) (Same as Folklore M243B.) Requisite: course M243A. Intensive investigation of a problem or problems in study of the popular ballad. May be repeated for credit.

244. Old and Medieval English Literature. (4) Studies in poetry and prose of Old and medieval English literature; limits of investigation set by individual instructor. May be repeated for credit.

245. Chaucer. (4) May be repeated for credit.

246. Renaissance Literature. (4) Studies in poetry and prose of Renaissance English literature, exclusive of Shakespeare; limits of investigation set by individual instructor. May be repeated for credit.

247. Shakespeare. (4) May be repeated for credit.

248. Earlier 17th-Century Literature. (4) Studies in poetry and prose of 17th-century English literature up to the Restoration; limits of investigation set by individual instructor. May be repeated for credit.

249. Milton. (4) Studies in poetry and prose of John Milton; limits of investigation set by individual instructor. May be repeated for credit.

250. Restoration and 18th-Century Literature. (4) Studies in English poetry and prose, 1660 to 1800; limits of investigation set by individual instructor. May be repeated for credit.

251. Romantic Writers. (4) May be repeated for credit.

252. Victorian Literature. (4) Studies in English poetry and prose of the Victorian period; limits of investigation set by individual instructor. May be repeated for credit.

253. Contemporary British Literature. (4) May be repeated for credit.

254. American Literature to 1900. (4) Studies in Colonial and 19th-century American literature; limits of investigation set by individual instructor. May be repeated for credit.

255. Contemporary American Literature. (4) Studies in contemporary American poetry and prose; limits of investigation set by individual instructor. May be repeated for credit.

256. Studies in the Drama. (4) Studies in drama as a genre from its beginning to the present; limits of investigation set by individual instructor. May be repeated for credit.

257. Studies in Poetry. (4) Studies in various themes and forms of poetry from Old English to the present; limits of investigation set by individual instructor. May be repeated for credit.

258. Studies in the Novel. (4) Studies in evolution of the genre from its beginning to the present; limits of investigation set by individual instructor. May be repeated for credit.

259. Studies in Criticism. (4) May be repeated for credit.

260. Studies in Literature and Its Relationship to the Arts and Sciences. (4) Studies in interrelationships of literature, arts, and sciences; limits of investigation set by individual instructor. May be repeated for credit.

M260A. Topics in Asian American Literature. (4) (Same as Asian American Studies M297A.) Lecture, three hours. Graduate seminar that examines and critically evaluates writings of Asian Americans. May be repeated for credit.

261. Studies in Chicana/Chicano Literature. (4) Seminar, three hours. Intensive research and study of major themes, authors, and issues in Chicana/Chicano literature and culture. Examination of political, aesthetic, economic, and cultural context that emerges in Chicana/Chicano discourse; limits of investigation set by individual instructor. May be repeated for credit.

M262. Studies in Afro-American Literature. (4) (Same as Afro-American Studies M200E.) Intensive research and study of major themes, issues, and writers in Afro-American literature. Discussions and research on aesthetic, cultural, and social backgrounds of Afro-American writing. May be repeated for credit.

263. Celtic Literature. (4) Lecture, three hours. Preparation: knowledge of one of the ancient or modern Celtic languages. Studies in poetry and prose of early and modern Celtic literatures, chiefly Irish and Welsh; limits of investigation set by individual instructor. May be repeated for credit.

264. Studies in Rhetoric. (4) Discussion, three hours. Special topics in classical and modern rhetoric, including substantial practice in rhetorical analysis of literary texts. May be repeated for credit.

265. Postcolonial Literatures. (4) Seminar, three hours. Study of aesthetic, historical, and social backgrounds to literatures of former British colonies that became independent after 1947. General issues related to way imperialism, colonialism, and postcolonialism have helped to shape and have been shaped by literature in English. May be repeated for credit.

M266. Cultural World Views of Native America. (4) (Same as American Indian Studies M200B.) Seminar, three hours. Exploration of written literary texts from oral cultures and other expressive cultural forms — dance, art, song, religious and medicinal ritual — in selected Native American societies, as these traditional and tribal contexts have been translated into contemporary literary texts (fiction, poetry, essay, and drama). Survey, from secondary sources, of interdisciplinary methodological approaches taken from literary analysis, structural anthropology, folklore, linguistics, and ethnomusicology. May be repeated for credit with instructor and/or topic change.

272. Current Issues in Teaching English. (4) Focus on one of a variety of topics of special current interest. May be repeated for credit.

M298. Interdisciplinary Studies in the 17th and 18th Centuries. (4) (Same as History M298.) Topics vary according to participating faculty. May be repeated for credit.

M299. Interdisciplinary American Studies. (6) (Same as History M299.) Discussion, four hours. Readings, discussion, and papers on a common theme, team-taught by faculty from different departments. Topics vary according to participating faculty. May be repeated for credit with consent of instructors.

375. Teaching Apprentice Practicum. (1 to 4) Preparation: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May not be substituted for any departmental enrollment requirements. May be repeated for credit. S/U grading.

495E. Teaching with Technology. (2 to 4) Seminar, two hours. Enables graduate student instructors to approach challenges of teaching with technology on two fronts: by familiarizing them with range of possible applications and by carrying out a research project on a technology topic of their choice. S/U grading.

501. Cooperative Program (2 to 8 units). Preparation: consent of UCLA graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Used to record enrollment of UCLA students in courses taken under cooperative arrangements with USC. S/U grading.

596. Directed Individual Study. (2 to 4) Limited to students preparing for first qualifying examination or engaging in intensive directed research project. May not be applied toward any course requirement for degree. Consult graduate counselor to enroll or obtain information. S/U grading.

597. Preparation for Ph.D. Examinations. (4 to 12) Limited to second-stage Ph.D. students preparing for second qualifying examination. S/U grading.

598. M.A. Research and Thesis Preparation. (4 or 8) Limited to graduate students. May not be applied toward any course requirement for degree. S/U grading.

599. Ph.D. Dissertation Research. (4 or 8) Limited to Ph.D. students unable to enroll in seminars in their fields or to students concurrently enrolled in such seminars. (Exception to this rule must be requested by petition.) S/U grading.

Yiddish

Upper Division Courses

101A. Elementary Yiddish. (4) Lecture, four hours. Introduction to grammar; instruction in listening, speaking, reading, and writing skills. P/NP or letter grading.

101B. Elementary Yiddish. (4) Lecture, four hours. Requisite: course 101A. P/NP or letter grading.

101C. Elementary Yiddish. (4) Lecture, four hours. Requisite: course 101B. P/NP or letter grading.

102A-102B. Accelerated Elementary Yiddish (6-6). Lecture, five hours; laboratory, one hour. Covers material in courses 101A, 101B, 101C in two terms rather than three. P/NP or letter grading.

104. Advanced Yiddish. (4) Lecture, three hours. Requisite: course 101C. Grammatical exercises, reading and linguistic analysis of texts, conversation. P/NP or letter grading.

121A. 20th-Century Yiddish Poetry in English Translation. (4) Lecture, three hours. Designed for juniors/seniors. Readings in 20th-century Yiddish poetry and drama. P/NP or letter grading.

121B. 20th-Century Yiddish Prose and Drama in English Translation. (4) Lecture, three hours. Designed for juniors/seniors. Readings in 20th-century Yiddish prose. P/NP or letter grading.

121C. Special Topics in Yiddish Literature in English Translation. (4) Lecture, three hours. Varying topics of importance and relevance to Yiddish literary study. Reading and analysis of a wide range of 19th- and 20th-century literature. P/NP or letter grading.

131A. Modern Yiddish Poetry. (4) Lecture, three hours. Requisite: course 104. Readings in modern Yiddish poetry. P/NP or letter grading.

131B. Modern Yiddish Prose and Drama. (4) Lecture, three hours. Requisite: course 104. Readings in modern Yiddish prose and drama. P/NP or letter grading.

131C. Special Topics in Yiddish Literature. (4) Lecture, three hours. Requisite: course 131A or 131B. Varying topics of importance and relevance to Yiddish literary study. Reading and analysis of a wide range of 19th- and 20th-century literature. P/NP or letter grading.

199. Special Studies in Yiddish. (2 to 4) Tutorial, to be arranged. Independent studies course for students who desire more intensive or specialized investigation of material covered in a regular course and who present such a course as a requisite. P/NP or letter grading.

Graduate Courses

596. Directed Individual Study or Research in Yiddish. (4) Tutorial, to be arranged with faculty member who directs the study or research (course section to be identified by two-letter code using initials of sponsoring instructor — see department for I.D. number). May be repeated once. S/U grading.

597. Preparation for Ph.D. Qualifying Examinations. (4) Tutorial, to be arranged with faculty member who directs the study (see department for I.D. number). S/U grading.

Scope and Objectives

Students need writing proficiency at every stage of their university careers. Although UCLA does not have a composition major, this program offers a series of courses introducing the varieties of university discourse and providing instruction in basic to high-level skills. Besides courses which satisfy the University's Subject A and English Composition requirements, the program offers writing courses linked with courses in other departments, intermediate and advanced courses in exposition, and language and composition courses for teachers. Special programs include the First-Year Intensive Program (FIPW) and the Transfer Intensive Program (TIP).

Undergraduate Study

Subject A

Every student who does not satisfy the Subject A requirement by presenting transfer credit or acceptable test scores is required to take, as early as possible during the first year in residence, either English Composition A or 2. Placement in these courses is determined by performance on the Subject A Examination. For more information regarding Subject A, see Undergraduate Degree Requirements in the Undergraduate Study section of this catalog.

English Composition

Lower Division Courses

A. Introduction to University Discourse (No credit). Lecture, five hours. Preparation: appropriate score on Subject A Examination. Displaces four units on student's Study List but yields no credit toward a degree. First course in reading university-level texts and framing written responses that employ a range of rhetorical strategies from paraphrase to analysis. Emphasis on revision, developing syntactic variety and academic vocabulary, and editing for grammar and style. Completion of this course with a grade of C or better or demonstration of minimum competence on Subject A Examination is requisite to course 2.

2. Approaches to University Writing. (4) Requisite: course A (C or better) or appropriate score on Subject A Examination. Second course in university-level discourse, with analysis and critique of university-level texts. Emphasis on revision for argumentative coherence and effective style. Completion of this course with a grade of C or better meets Subject A requirement.

3. English Composition, Rhetoric, and Language .

(4) Lecture, three hours. Preparation: satisfaction of Subject A requirement. Enforced requisite: course 2 or English as a Second Language 35 (C or better). Rhetorical techniques and skillful argument. Analysis of varieties of academic prose and writing of a minimum of five formal papers (three to five pages each). Completion of this course with a grade of C or better satisfies English Composition requirement. P/NP or letter grading.

3H. English Composition, Rhetoric, and Language (Honors). (4)

Lecture, three hours. Preparation: satisfaction of Subject A requirement. Rhetorical techniques and skillful argument. Analysis of varieties of academic prose and writing of a minimum of five formal papers (three to five pages each).

Upper Division Courses

100. Interdisciplinary Academic Writing. (4) Preparation: satisfaction of Subject A and English Composition requirements. Designed for sophomores/juniors/seniors. Course in academic writing suitable for both lower and upper division students that helps them develop academic papers with a range of complexity and length. Focus on conventions of academic prose and genres across the disciplines. Written assignments include common forms of academic writing such as argument, research paper, and/or critical essay.

110W. Writing Adjunct. (4) Preparation: satisfaction of Subject A and English Composition requirements. Students must be concurrently enrolled in a course offered in conjunction with course 110W (consult *Schedule of Classes* for courses so designated). Writing assignments use materials from adjunct course and reflect and develop analytic writing skills needed in that course. May be repeated for credit with consent of instructor. P/NP or letter grading.

120A. Language Study for Teachers: Elementary School. (4) Preparation: satisfaction of Subject A and English Composition requirements. Survey of topics in English linguistics of special interest to elementary school teachers. Subjects include approaches to English grammar; language acquisition and development; language attitudes; regional and social dialects of American English; bilingual schooling; contribution of English language study to teaching of reading, writing, spelling, and literature.

120B. Language Study for Teachers of English: Secondary School. (4) Preparation: satisfaction of Subject A and English Composition requirements. Review of terminology of English grammar and survey of development of modern grammars. Introduction to basic concepts in bilingual and multilingual education, sociolinguistics, dialectology, and stylistics, especially as applied to analysis and evaluation of writing assigned in secondary school. P/NP or letter grading.

120C. Language Study for Teachers of Subjects Other Than English: Secondary School. (4) Preparation: satisfaction of Subject A and English Composition requirements. Introduction for teachers of subjects other than English to basic concepts in language acquisition, dialectology, sociolinguistics, and composition.

129A-129D. Academic Writing in the Disciplines. (4) Designed for juniors/seniors. Advanced study of writing conventions in specific disciplinary areas, with focus on analysis and development of writing expertise in common discursive forms, stylistic patterns, and research practices in the given discipline. Each course may be taken independently for credit. P/NP or letter grading. **129A.** Literature; **129B.** Social Sciences. Lecture, three hours; discussion, one hour; **129C.** Physical and Life Sciences; **129D.** Fine Arts.

130A. Composition for Teachers: Elementary School. (4) Preparation: satisfaction of Subject A and English Composition requirements. Preparation for future elementary school teachers of English composition in writing and criticism of the kinds of prose discourse usually taught in primary schools.

130B. Composition for Teachers: Secondary School. (4) Preparation: satisfaction of Subject A and English Composition requirements. Preparation for future secondary school teachers of English composition in writing and criticism of the kinds of prose discourse usually taught in secondary schools.

131A-131D. Specialized Writing. (4) Preparation: satisfaction of Subject A and English Composition requirements. Designed for juniors/seniors. Advanced writing course designed to help students develop stylistic, formal, and argumentative sophistication in various rhetorical contexts, including different sections that emphasize rhetorical values of major professions and research areas. Each course may be taken independently for credit. P/NP or letter grading. **131A.** Law and Politics; **131B.** Business and Social Policy; **131C.** Medicine and Public Health; **131D.** Media and Communications.

132A-132D. Topics in Rhetoric and Writing. (4-4-4) Preparation: satisfaction of Subject A and English Composition requirements. Designed for juniors/seniors. Study of specific topics in relationship between rhetoric/writing and social or political history. Each course may be taken independently for credit. P/NP or letter grading. English majors who wish to use course to satisfy departmental prerequisites must take it for a letter grade. **132A.** Gender and Writing; **132B.** Autobiographical Writing; **132C.** Cultural Studies; **132D.** Variable Topics.

136A-136B-136C. Practical Writing and Editing. (4-4-4) Lecture, three hours. Preparation: satisfaction of Subject A requirement, one course from 131 series. Requisite: course 3. Sequence in practical writing and editing ability specifically designed to prepare students for a career. Analysis of prose and literary styles necessary to the variety of writing in professional, nonacademic fields combined whenever possible with practical experience in a variety of writing internships and training in a wide range of editorial skills. In Progress grading for courses 136A-136B only.

197F. Rhetoric in Modern American Culture. (4) Seminar, three hours. Requisite: course 100. One-term field studies course designed to provide students with academic background in and firsthand knowledge of media writing. P/NP or letter grading.

199W. Independent Studies in Writing. (2 to 4) Independent studies course supervised by faculty member. Fieldwork and/or internship may also be supervised by Field Studies Office or organization offering internship.

Graduate Courses

300. Teaching English. (4) Required of candidates for single subject credential in English. Study of theories of rhetoric, composition, reading, and literature as they apply to secondary school English curriculum.

495A-495B. Supervised Teacher Preparation (2-2). Seminar, one hour; laboratory, 30 minutes. In Progress and S/U grading. **495A.** Required of all applicants for a teaching assistantship in English. Practical concerns of designing a course, creating assignments, grading papers, and holding conferences for English Composition 3 classes. **495B.** Must be taken concurrently with first teaching assignment. Examination of specialized problems which occur in teaching English Composition 3 and introduction to techniques for teaching English Composition 2 and ESL.

495C. Supervised Teacher Preparation. (2) Requisites: courses 495A-495B. S/U grading.

Diane M. Perry, Ph.D. (*International Environmental Health*)

Scope and Objectives

The Department of Environmental Health Sciences focuses its research and educational activities on the protection of human health from biological, chemical, and physical hazards in the environment. Its graduates are highly trained scientists and professionals capable of identifying and measuring agents of environmental concern; evaluating the health, environmental, and all other impacts of such agents; developing means for their effective management; and evaluating alternative policies directed at improving and protecting environments. Such training is accomplished through several degree programs which offer specialized study in selected academic areas of environmental health sciences such as air pollution, environmental chemistry, environmental management, environmental toxicology, industrial hygiene, and water quality. Graduates of the department pursue careers in the private or public sector as researchers, educators, managers, policymakers, and/or practitioners.

The department offers M.S. and Ph.D. degrees in Environmental Health Sciences and, through the School of Public Health, the M.P.H. and Dr.P.H. degrees with a specialization in environmental health sciences (see Public Health Schoolwide Programs). In addition, a unique doctoral degree (Doctor of Environmental Science and Engineering — D.Env.) is offered by the interdepartmental Environmental Science and Engineering Program which is administered through the department.

Graduate Study

The following constitutes introductory information regarding graduate degree programs and is based on the 1998-99 edition of *Program Requirements for UCLA Graduate Degrees*. Complete, annual editions of *Program Requirements* are available (listed under "Publications") on the Graduate Division website at <http://www.gdnet.ucla.edu>. Students are subject to the degree requirements as published in *Program Requirements* for the year in which they matriculate.

Master's Degree

The Department of Environmental Health Sciences offers the Master of Science (M.S.) degree in Environmental Health Sciences. For information on the Master of Public Health (M.P.H.) degree, see Public Health Schoolwide Programs.

Admission

Applicants to the M.S. program should have a bachelor's (or master's) degree in chemistry, physics, biology, engineering, or other appropriate field. Preparation should include at least three quarters of general chemistry (including quantitative analysis) and two quarters of organic chemistry and/or biochemistry, mathematics through calculus, three quarters of biological sciences, and three quarters of physics. Substitutions for these requirements are considered for applicants with an otherwise superior academic background.

Additional admission requirements for the M.S. in Environmental Health Sciences are the same as for the M.P.H. See the M.P.H. admission section under Public Health Schoolwide Programs.

Areas of Study

Consult the graduate adviser.

Course Requirements

Students must complete at least one year of graduate residence at the University of California and a minimum of 10 full courses, at least five of which must be graduate courses in the 200 or 500 series. Only one 596 course (four units) and one 598 course (four units) may be applied toward the total course requirement; only four units of either course may be applied toward the minimum graduate course requirement. Environmental Health Sciences 597 may not be applied toward the degree requirements. No more than 18 full courses are required for the degree.

Mandatory schoolwide core courses include Biostatistics 100A, 100B, and Epidemiology 100. Each core course may be waived for students who have taken a similar course elsewhere and can pass the waiver examination.

Mandatory departmental core courses include Environmental Health Sciences 200A, 200B, 201, 210, 410A, 410B, M411, and 598 (a maximum of one course may be applied toward the minimum total course requirement). In addition, elective courses should be selected in the student's area of specialization (e.g., air pollution, environmental chemistry, environmental management, environmental toxicology, industrial hygiene, water quality). Each core course may be waived for students who have taken a similar college-level course elsewhere and can pass the waiver examination.

Only courses in which a grade of C- or better is received may be applied toward the requirements for a master's degree. Students must maintain an average of no less than 3.0 (B) in

all courses required or elected during graduate residence at the University of California.

In addition to the above course requirements, students must complete a thesis (Plan I) or a project and a comprehensive examination (Plan II).

Comprehensive Examination Plan

If the comprehensive examination/report option (Plan II) is approved, candidates complete a research activity (Environmental Health Sciences 596) of at least eight units in addition to the course requirements and prepare an in-depth written report which must be approved by the adviser and one other faculty member. A written comprehensive examination on the major area of study must be passed. The examination is prepared by a committee of at least three faculty members. If the examination is failed, students may be reexamined once.

Thesis Plan

If the thesis option (Plan I) is approved, a thesis committee of three faculty members is established. The committee approves the thesis prospectus before the students file for advancement to candidacy. The thesis must be acceptable to the thesis committee.

Doctoral Degree

Admission

In addition to the University minimum requirements, the department requires for the Ph.D. degree in Environmental Health Sciences (1) a bachelor's degree in chemistry, physics, biology, engineering, or other appropriate field. Preparation should include at least one year of chemistry (including organic chemistry or biochemistry), physics, biology, and mathematics through calculus; (2) a master's degree in a related field with a grade-point average of at least 3.5 for graduate studies; (3) satisfactory performance on the Graduate Record Examination (GRE); and (4) a score of at least 580 on the Test of English as a Foreign Language (TOEFL) for students whose undergraduate degree is from an institution whose primary language of instruction is not English.

Alternatively, for students who do not have a master's degree and wish to pursue a doctoral degree, the department requires (1) a junior/senior grade-point average of 3.25 (or other evidence of exceptional scholarship); (2) satisfactory performance on the Graduate Record Examination (GRE); (3) acceptance by a doctoral adviser in the department subsequent to filing the application for admission; and (4) a score of at least 580 on the Test of English as a Foreign Language (TOEFL) for students whose undergraduate degree is from an institution whose primary language of instruction is not English.

Major Fields or Subdisciplines

Consult the graduate adviser.

Course Requirements

The courses needed to pass the written examination in the major field depend on the field chosen.

Courses in the major field as recommended by the adviser and guidance committee are required, as are courses in a minor field related to environmental health sciences in a department outside the School of Public Health that grants a Ph.D. or in the Department of Biostatistics. This usually consists of three or four full courses, as specified by the department offering the minor.

For students who do not have a master's degree in the field of public health, the minimum course requirements also include a full course in epidemiology, two full courses in biostatistics, and Environmental Health Sciences 200A and 200B.

Written and Oral Qualifying Examinations

Before advancement to candidacy, students must pass a written examination in the major field and the University Oral Qualifying Examination. Normally no more than one reexamination is allowed. Students must also complete the requirements in the minor field set forth by the offering department.

A doctoral committee, consisting of at least four faculty members who hold professorial appointments at UCLA, is nominated when students are ready to take the University Oral Qualifying Examination. Two of the faculty must be tenured. Three of the four must hold appointments in the Department of Environmental Health Sciences; one must be an outside member who holds an appointment in another department at UCLA; one of the four must be from the minor field.

At least two members of the doctoral committee (one from the Department of Environmental Health Sciences and one from another department) must hold the Ph.D. degree. The doctoral committee administers the oral qualifying examination after students have successfully completed the written examination, advises students on the course of study and reviews the dissertation.

After passing the University Oral Qualifying Examination, students may be advanced to candidacy and commence work on a dissertation in the principal field of study. The doctoral committee guides progress toward completion of the dissertation.

Environmental Health Sciences

Upper Division Courses

100. Introduction to Environmental Health. (4) Lecture, three hours; discussion, one hour. Preparation: one course each in chemistry and biology. Introduction to environmental health, including coverage of sanitary principles and chronic and acute health effects of environmental contaminants. P/NP or letter grading.

199. Special Studies. (2 to 4) Tutorial, to be arranged. Preparation: submission of written proposal outlining course of study. Limited to seniors. Individual undergraduate guided studies under direct faculty supervision. Study to be structured by instructor and student at time of initial enrollment. Only four units may be taken each term. P/NP or letter grading.

Graduate Courses

200A-200B. Foundations of Environmental Health Sciences. (8-8) Lecture, eight hours. Multidisciplinary aspects of environmental health sciences in context of public health for environmental health majors. Letter grading. **200A.** Preparation: one year of undergraduate biology, calculus, chemistry, and physics. **200B.** Requisite: course 200A.

200C. Foundations of Environmental Health Sciences: Introduction, History, and Science Review. (2) Lecture, two hours. Preparation: one year of undergraduate biology, calculus, chemistry, and physics. Introduction and historical overview of field of environmental health sciences, as well as review of underlying sciences for environmental health. Letter grading.

200D. Foundations of Environmental Health Sciences: Environmental Chemistry. (1) Lecture, one hour. Preparation: one year of undergraduate biology, calculus, chemistry, and physics. Introduction to definition and relationship of instrumental methods and water and air quality to environmental chemistry; measurements, instruments, spectroscopy, mass spectrometry, chromatography, hyphenated methods and complex matrices, radioactivity, and labeled compounds. Letter grading.

200E. Foundations of Environmental Health Sciences: Physical Agents. (1) Lecture, one hour. Preparation: one year of undergraduate biology, calculus, chemistry, and physics. Introduction to physical agents, including noise, thermal environment, ionizing radiation, and nonionizing radiation. Letter grading.

200F. Foundations of Environmental Health Sciences: Microbiology. (1) Lecture, one hour. Preparation: one year of undergraduate biology, calculus, chemistry, and physics. Introduction and overview of microbial ecology, description of classification of microorganisms, bacterial physiology, basic virology population interactions, biochemical and biogeochemical cycling, microorganism environments. Letter grading.

200G. Foundations of Environmental Health Sciences: Physiology, Pathology, Toxicology. (3) Lecture, three hours. Preparation: one year of undergraduate biology, calculus, chemistry, and physics. Introduction to principles of toxicology, disposition of toxicants, mechanisms of toxic interactions, nonorgan-directed toxicity, target organ toxicity. Letter grading.

200H. Foundations of Environmental Health Sciences: Exposure Assessment. (1) Lecture, one hour. Preparation: one year of undergraduate biology, calculus, chemistry, and physics. Introduction to exposure assessment of air pollution in urban areas, occupational exposure assessment for epidemiological inferences, exposure characteristics, air pollution and excess mortality, assessment of exposure to mixture chemicals. multimedia and ecological exposure assessment. Letter grading.

200I. Foundations of Environmental Health Sciences: Occupational Health. (1) Lecture, one hour. Preparation: one year of undergraduate biology, calculus, chemistry, and physics. Introduction to scope and magnitude of occupational health and safety (OHS) problem, history and characteristics of work environment, law and policy in OHS, occupational epidemiology and toxicology, ergonomics and injury, and recognition, evaluation, control, and prevention in industrial environment. Letter grading.

200J. Foundations of Environmental Health Sciences: Air Pollution. (1) Lecture, one hour. Preparation: one year of undergraduate biology, calculus, chemistry, and physics. Introduction to air pollution system, structure, properties, and composition of atmosphere, indoor air pollution, atmospheric lifetimes and fates of airborne chemicals, photochemical smog, greenhouse effect, and stratosphere chemistry and ozone depletion. Letter grading.

200K. Foundations of Environmental Health Sciences: Water Quality. (1) Lecture, one hour. Preparation: one year of undergraduate biology, calculus, chemistry, and physics. Introduction to water cycle, hazardous and nuisance chemicals in aquatic environment, eutrophication, biodegradation in streams and lakes, water treatment, waste treatment and water reuse, and fate of hazardous chemicals in environment. Letter grading.

200L. Foundations of Environmental Health Sciences: Ecology. (1) Lecture, one hour. Preparation: one year of undergraduate biology, calculus, chemistry, and physics. Introduction to populations and population growth, communities and ecosystems, biodiversity and conservation, and ecological effects of pollution. Letter grading.

200M. Foundations of Environmental Health Sciences: Environmental Management/Policy. (1) Lecture, one hour. Preparation: one year of undergraduate biology, calculus, chemistry, and physics. Introduction to environmental evaluation and decision making, environmental regulation and control methods, evaluating effectiveness of regulations, and public decisions with environmental consequences. Letter grading.

200N. Foundations of Environmental Health Sciences: Risk Assessment. (1) Lecture, one hour. Preparation: one year of undergraduate biology, calculus, chemistry, and physics. Introduction to principles and policy issues related to risk assessment, cancer risk assessment, noncarcinogen risk assessment, regulatory reform, and future issues in risk assessment. Letter grading.

200O. Foundations of Environmental Health Sciences: Integration and Conclusions. (1) Lecture, one hour. Preparation: one year of undergraduate biology, calculus, chemistry, and physics. Use of multidisciplinary and interdisciplinary case histories to integrate information provided in courses 200C through 200N, including environmental management and policy, environmental chemistry, physical agents, microbiology, physiology, pathology, toxicology, exposure assessment, occupational health, air pollution, water quality, and risk assessment. Letter grading.

201. Seminar: Health Effects of Environmental Contaminants. (2) Seminar, two hours. Requisites: courses 200A, 200B, 210, 230, 250. Emphasis on health effects of air, water, environmental pollutants on man and review of research literature. May be repeated for credit. S/U or letter grading.

202. Seminar: Environmental Chemistry. (2) Seminar, one hour. Requisites: courses 200A, 200B, 410A, 410B. Environmental chemistry aspects of environmental health sciences through multimedia analyses and biological and microbiological analyses. May be repeated for credit. Letter grading.

203. Seminar: Ecotoxicology. (2) Seminar, two hours. Discussion of various topics in ecotoxicology. Topics vary from term to term and include aspects of environmental chemistry, toxicology, and ecology. May be repeated for credit. S/U grading.

204. Seminar: Exposure Assessment. (2) Seminar, two hours. Discussion of various topics in exposure assessment. Topics vary by term and include aspects of population activity, microenvironments, types of monitoring (outdoor, indoor, personal, biomarkers), and multimedia sources of exposure. S/U grading.

205. Environmental Health Sciences Doctoral Seminar. (2) Seminar, two hours. Limited to environmental health sciences doctoral students. Presentation of current research of environmental health sciences doctoral students. May be repeated for credit. S/U grading.

210. Public Health and Environmental Microbiology. (4) Lecture, three hours. Preparation: one course each in biology, organic chemistry, and biochemistry. Basic principles: cycling of matter, fates of natural and man-made compounds in the environment, wastewater and drinking water microorganisms and treatment, and public health microorganisms. S/U or letter grading.

211. Science and Politics of Environmental Regulation: Coastal Pollution — Sources and Solutions. (4) Lecture, three hours. Designed for graduate students. Overview of environmental regulations that protect coastal resources, regulatory agencies that have jurisdiction over coastal resources, past and current coastal pollution problems in the U.S., solving pollution problems through treatment, advocacy, enforcement, restoration, remediation, and watershed management. Letter grading.

212. Applied Ecology. (4) Lecture, four hours. Preparation: one ecology course. Application of ecological theory and principles to solve environmental problems, including conservation biology, assessment of environmental impacts, and restoration ecology and mitigation of environmental impacts. Letter grading.

220. Biological Effects of Air Pollution. (4) Lecture, three hours; discussion, one hour. Preparation: one course each in chemistry and biology. Survey of biological effects and assessment methods of air contaminants present in urban, industrial, and occupational environments. S/U or letter grading.

225. Atmospheric Transport and Transformations of Airborne Chemicals. (4) Lecture, four hours. Preparation: one year of calculus, one course each in physics, organic chemistry, and physical chemistry. Designed for science, engineering, and public health students. Role of regional or long-range transport, and atmospheric lifetimes and fates of airborne chemicals in phenomena such as photochemical smog, acid deposition, stratospheric ozone depletion, accumulation of greenhouse gases, and regional and global distribution of volatile toxic compounds. S/U or letter grading.

230. Environmental Management. (4) Lecture, four hours; discussion, one hour. Requisites: Economics 100, Mathematics M112, 115A, Political Science 140A, 142B. Introduction to foundations and principles of environmental management, decision making, and evaluation of environmental policies and programs. Letter grading.

231. Environmental Decision Systems Analysis. (4) Lecture, four hours; discussion, one hour. Requisite: course 230. Techniques and models of systems analysis and concepts of general system theory as applied to comprehensive study, planning, evaluation, and management of environmental decision systems. Experimentation with relevant computer programs. S/U or letter grading.

232. Environmental Policy Decision Making. (4) Lecture, four hours. Requisites: courses 230, 231. Foundations, principles, and modeling of environmental policy decision making. Critical analysis of normative and behavioral models of action choices for protection and enhancement of environmental health, and development of an alternative model. S/U or letter grading.

234. Critical Readings in Environmental Policy for Scientists and Engineers. (4) Lecture, one hour; discussion, three hours. Requisite: course 230 or 235. Designed for graduate science and engineering students. Critical analysis of environmental policies, regulations, and decisions and their scientific basis. Literature revision, classroom presentation, and research paper required. Letter grading.

235. Quantitative Methods for Environmental Assessment. (4) Lecture, four hours; discussion, one hour. Preparation: bachelor's degree in science, engineering, or public health, one term of statistics, one year of advanced mathematics. Introduction to quantitative methods for evaluating health effects and environmental impacts of human activities; concepts of environmental assessments and planning. Assignments include statistics analysis, risk assessment, economic methods. Examples from U.S. and California regulations, policy, project environmental assessments. Letter grading.

M239. Pollution Prevention. (2) (Same as Urban Planning M262C.) Seminar, one hour. Designed for graduate students. Series of talks by academics, policymakers, industry representatives, and public interest advocates addressing opportunities for and obstacles to adopting principles of pollution prevention, including several case studies of specific policy and industry initiatives in this area. S/U grading.

240. Fundamentals of Toxicology. (4) Lecture, four hours. Preparation: one course each in biology, organic chemistry, and biochemistry. Essential aspects of toxicology, with emphasis on the human species. Absorption, distribution, excretion, biotransformation, as well as basic toxicologic processes and organ systems. Letter grading.

241. Environmental Toxicology: Trace Contaminants. (4) Lecture, three hours; discussion, one hour. Preparation: one organic chemistry course. Essentials of toxicology in relation to trace contaminants. S/U or letter grading.

242. Toxicodynamics. (4) (Formerly numbered 298C.) Lecture, two hours; discussion, two hours. Requisite: course 240. Examination of biochemical, cellular, and molecular mechanisms by which chemicals induce toxicity in a wide spectrum of organ systems and in a number of pathological conditions. Letter grading.

243. Embryology and Teratology. (4) Lecture, four hours. Requisite: course 240. Description of normal mammalian embryology at whole animal, cellular, and molecular levels and of biological, chemical, or physical perturbations of normal processes which produce congenital malformations. Letter grading.

M249. Toxics Reduction: Science, Engineering, and Policy Issues. (4) (Same as Chemical Engineering M290U and Urban Planning M262A.) Lecture, three hours. Requisites: Urban Planning 260A, 260B. Public health experts, industrial engineers, and planners are being asked to assess risks biologically active chemicals present and to take such risks into account in planning process. Examination of potential for toxics reduction and current state of government and industry activities in this area. S/U or letter grading.

250. Introduction to Occupational Safety and Health. (4) Lecture, four hours. Scientific, legal policy, and historical issues in occupational health. Introduction to various related disciplines (e.g., occupational medicine, nursing, industrial hygiene, toxicology, epidemiology, health education). S/U or letter grading.

251. Introduction to Occupational Medicine. (3) Lecture, three hours. Requisite: course 250. Introduction to health effects of occupational exposures, including recognition, evaluation, and prevention of occupational diseases. Emphasis on concepts of disease mechanisms, manifestations, and prevention. Letter grading.

252D. Properties and Measurement of Airborne Particles. (4) Lecture, four hours. Preparation: one year each of chemistry, physics, and calculus. Basic theory and application of aerosol science to environmental health, including properties, behavior, sampling, and measurement of aerosols and quantitative problems. S/U or letter grading.

252E. Identification and Measurement of Gases and Vapors. (4) Lecture, three hours; discussion, one hour; other, two hours. Preparation: one year each of chemistry, physics, and calculus. Requisite: course 250. Theoretical and practical aspects of industrial hygiene sampling and measurement of gases and vapors. Letter grading.

252F. Industrial Hygiene Measurements Laboratory. (3) Laboratory, three hours. Corequisites: courses 252D, 252E. Limited to industrial hygiene majors. Laboratory methods for sampling, measurement, and analysis of gases, vapors, and aerosols found in occupational environment. S/U or letter grading.

252G. Industrial and Environmental Hygiene Assessment. (4) Lecture, one hour; discussion, two hours; laboratory, two hours; other, four hours. Requisites: courses 200A, 200B, 250, 252D, 252E, 252F. Environmental and industrial hygiene sampling strategies and assessment via walk-through surveys, lectures, group discussion, actual field measurements, laboratory calibrations, and analyses and reports, with emphasis on chemical, physical, and ergonomic hazards. Letter grading.

253. Physical Agents in the Work Environment. (2) Lecture, two hours. Preparation: one year of physics. Requisite: course 250. Physics, measurement methods, health effects, and control methods for radiation (ionizing and nonionizing), noise, and heat in the workplace environment. S/U or letter grading.

254. Health Hazards of Industrial Processes. (4) Lecture, two hours; four field trips. Requisites: courses 250, 255. Industrial processes and operations and occupational health hazards that arise from them. S/U or letter grading.

255. Control of Airborne Contaminants in Industry. (4) Lecture, two hours; laboratory, two hours. Preparation: one year of physics. Requisites: courses 250, 252D. Principles and applications of control technology to industrial environments, including general and local exhaust ventilation, air cleaning equipment, and respiratory protection. S/U or letter grading.

256. Biological and Health Surveillance Monitoring in Occupational/Environmental Health. (4) Lecture, three hours; discussion, one hour; assignments, three hours. Principles and applications of biological monitoring and health surveillance to assess occupational and environmental exposures to organic and inorganic chemicals and physical factors. Letter grading.

257. Critical Review of Scientific Basis of Occupational Standards. (4) Seminar, four hours. Requisites: courses 240, 250, 251, Epidemiology 100. Designed to provide students with opportunity to review scientific basis for association of selected occupational exposures with disease. Special emphasis on critical evaluations of the literature. Attention specifically to interface of science and regulatory standards. S/U or letter grading.

258. Identification and Analysis of Hazardous Wastes. (4) Lecture, three hours; discussion, one hour; laboratory, one hour; one field trip. Requisites: courses 250, 252E, Biostatistics 100A. Designed to define, identify, label, and quantify hazardous wastes and how workers should be protected. Provides a critical understanding of all analytical aspects of hazardous wastes, health aspects, and regulation and practice of handling hazardous wastes. Letter grading.

259. Occupational Ergonomics. (2) Lecture, two hours. Requisite: course 250. Exploration of ergonomic principles for study of worker's safety, health, and performance. Letter grading.

259C. Seminar Series: Occupational Ergonomics. (2) Seminar, two hours. Requisites: courses 250, 259. Emphasis on research methodology as applied to prevention and control of worker-related musculoskeletal disorders. Topics include applied anthropometry, biomechanical modeling, strength measurement, postural analysis, fatigue, and medical surveillance of cumulative trauma disorders. S/U grading.

259D. Occupational Safety. (3) Lecture, three hours. Designed for graduate students. Design and modification of products and industrial manufacturing processes to eliminate or control hazards arising out of mechanical, electrical, thermal, chemical, and potential energy sources. Discussion of case studies in industrial manufacturing, construction, and agriculture. Letter grading.

259E. Occupational Safety and Health Program Management. (4) Lecture, four hours. Designed for graduate students. Introduction to application of management principles and techniques for management of safety and health and loss control programs. Letter grading.

261. Chemical Behavior of Aquatic Systems. (4) Lecture, three hours. Requisites: courses 200A, 200B, Chemistry 20A, 20B, Mathematics 3A. Chemistry of ocean waters, rivers, groundwaters, and water treatment systems. Topics include thermodynamics of natural waters, acids and bases, carbon dioxide cycle, solubility reactions, oxidation and reduction, plus applied problems. Letter grading.

262. Environmental Microbiology. (4) Lecture, three hours. Preparation: one course each in microbiology and biochemistry. Basic concepts of eutrophication, indicator organisms, aquatic microbes; assessment of biological treatment practices in water reuse and/or purification. S/U or letter grading.

263. Geochemistry of Groundwater. (2) Lecture, two hours. Requisites: Biostatistics 100A, Chemistry 20A, 103, Earth and Space Sciences 1. Geochemistry of groundwater as impacted by geologic environment and other natural factors and changes in composition due to water use. Letter grading.

264. Fate and Transport of Organic Chemicals in the Aquatic Environment. (4) Lecture, four hours. Preparation: bachelor's degree in science, engineering, geophysics, chemistry, biology, or public health. Evaluation of how and where and in what form and concentration organic pollutants are distributed in aquatic environments. Study of mass transport mechanisms moving organic chemicals between phases, biological degradation and accumulation, and chemical reactions. Effect of humic substances on these processes. S/U or letter grading.

400. Field Studies in Environmental Health Sciences. (2 or 4) Fieldwork, to be arranged. Field observation and studies in selected community environmental health organizations. Students must file field placement and program training documentation on form available from Student Affairs Office. May not be applied toward M.S. minimum course requirement; four units may be applied toward 44-unit minimum total required for M.P.H. degree. Letter grading.

401. Environmental Measurements. (4) Lecture, two hours; laboratory, four hours. Requisites: courses 200A, 200B, Chemistry 20A, 30L. Instrumental methods for laboratory and field applications to assess quantity of environmental pollutants in air, food, and water, and to assess degree of exposure to such factors as noise and radiation. Letter grading.

410A. Instrumental Methods in Environmental Sciences. (4) Lecture, four hours; discussion, two hours; other, two hours. Preparation: one year each of physics, chemistry, and biology. Theory and principles of instrumental methods through lectures and group discussions. Letter grading.

410B. Instrumental Methods Laboratory in Environmental Health Sciences. (4) Lecture, one hour; discussion, one hour; laboratory, four hours; other, two hours. Preparation: one year each of physics, chemistry, and mathematics. Requisites: courses 200A, 200B. Laboratory techniques and instrumentation used in preparation and analysis of biological, environmental, and occupational samples. Letter grading.

M411. Environmental Health Sciences Seminar. (2) (Same as Environmental Science M411.) Seminar, two hours. Required of graduate environmental health sciences students for one term each year. Current topics in environmental health sciences and environmental science and engineering. May be repeated for credit. S/U grading.

461. Water Quality and Health. (4) Lecture, three hours; discussion, one hour. Requisites: courses 200A, 200B, 401. Introduction to water quality, with coverage of hydrology, water chemistry, and various chemical contaminants that may affect human health. Various treatment methods and health implications. S/U or letter grading.

462. Environmental Hygiene and Appropriate Technologies. (2) Lecture, two hours. Environmental sanitation of water supplies in rural and developing areas. Review of water quality problems and solutions for nonurban, developing community. Technical, socioeconomic, and cultural problems associated with maintenance and delivery of high water quality. S/U or letter grading.

470. Environmental Hygiene Practices. (2) Lecture, two hours. Prerequisites: courses 200A, 200B, 230, 401, Epidemiology 100. Field principles and practices of environmental sanitation as applicable to the sanitarian. Topics include theory, code enforcement, and inspection procedures for applicable environmental topic areas. S/U or letter grading.

495. Teacher Preparation in Environmental Health Sciences. (2) Seminar, two hours. Preparation: 18 units of cognate courses in area of specialization. May not be applied toward master's degree minimum total course requirement. May be repeated for credit. S/U grading.

501. Cooperative Program. (2 to 8) Tutorial, to be arranged. Preparation: consent of UCLA graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Used to record enrollment of UCLA students in courses taken under cooperative arrangements with USC. No more than eight units may be applied toward master's degree minimum total course requirement; may not be applied toward minimum graduate course requirement. S/U grading.

596. Directed Individual Study or Research. (2 to 8) Tutorial, to be arranged. Limited to graduate students. Individual guided studies under direct faculty supervision. Only four units may be applied toward M.P.H. and M.S. minimum total course requirement. May be repeated for credit. S/U or letter grading.

597. Preparation for Master's Comprehensive or Doctoral Qualifying Examinations. (2 to 8) Tutorial, to be arranged. Limited to graduate students. May not be applied toward any degree course requirements. May be repeated for credit. S/U grading.

598. Master's Thesis Research. (2 to 8) Tutorial, to be arranged. Only four units may be applied toward M.P.H. and M.S. minimum total course requirement; may not be applied toward minimum graduate course requirement. May be repeated for credit. S/U grading.

599. Doctoral Dissertation Research. (2 to 8) Tutorial, to be arranged. May not be applied toward any degree course requirements. May be repeated for credit. S/U grading.

Scope and Objectives

The UCLA Environmental Science and Engineering (ESE) Program was founded in 1973 by Nobel laureate Dr. Willard Libby, who perceived a need to train environmental scientists, engineers, and policymakers in a more interdisciplinary manner than is afforded by traditional Ph.D. programs. As the program enters its third decade, Dr. Libby's vision has in fact been realized with the evolution of the program from an experimental approach into a key component of the overall effort to train environmental professionals at UCLA.

To date the program has awarded the Doctor of Environmental Science and Engineering (D.Env.) degree to over 170 students, and UCLA remains unique in the country in awarding such a degree. Many graduates have gone on to occupy critical positions in environmental research, remediation, and policy throughout the major environmental agencies in California and the nation. Other graduates have risen to senior positions in private sector companies conducting environmental research and remediation. Still other graduates are applying scientific solutions to environmental problems at national laboratories such as Oak Ridge and Lawrence Livermore Laboratories and at research institutes such as the RAND Corporation.

Although many participating interdepartmental faculty members are from the College of Letters and Science and the School of Engineering and Applied Science, the program is administered through the School of Public Health where a core faculty is based in the Department of Environmental Health Sciences. No

undergraduate major or master's degree is offered.

The program is designed to train multidisciplinary professionals with an appropriate balance of breadth and specific skills, based on a strong master's-level foundation in a science or engineering discipline. The curriculum consists of formal coursework across a full spectrum of relevant physical, biological, social, and engineering disciplines, as well as interdisciplinary research training through nine-month problems courses. Because the D.Env. degree is not a specialized research degree in the manner of a Ph.D., the usual extended research training period in residence at UCLA associated with a Ph.D. is replaced by an 18- to 24-month internship in an appropriate government agency, national laboratory, or private industry, during which in-depth study of an environmental problem leads to a dissertation.

Graduate Study

The following constitutes introductory information regarding graduate degree programs and is based on the 1998-99 edition of *Program Requirements for UCLA Graduate Degrees*. Complete, annual editions of *Program Requirements* are available (listed under "Publications") on the Graduate Division website at <http://www.gdnet.ucla.edu>. Students are subject to the degree requirements as published in *Program Requirements* for the year in which they matriculate.

Doctoral Degree

Admission

In addition to meeting University minimum standards, applicants to the program leading to the Doctor of Environmental Science and Engineering (D.Env.) degree must have an excellent scholastic record and must be acceptable to the admissions committee. Generally, applicants must have achieved a grade-point average of at least 3.0 in undergraduate work and 3.5 in graduate work. The overall academic record, including Graduate Record Examination (GRE) scores and Test of English as a Foreign Language (TOEFL) scores when applicable, must reflect exceptional verbal and quantitative skills and drive toward academic achievement. The program is also interested in special qualities, awards, and achievements not reflected in the student's academic record. All applicants must file a narrative statement indicating how their professional goals can be met through the D.Env. program and submit three letters of recommendation.

In general, students entering the D.Env. program should have received a master's degree in some field of the sciences or engineering. Generalist master's degrees in such areas as environmental sciences or public health and master's degrees in the social sciences, or medical degrees may be accepted for admission if the applicant presents a record with appropriate courses in the sciences and mathe-

matics and other special qualifications such as research experience.

Before being accepted unconditionally into the program, all students must have taken the following courses, which are considered preparation for the program: (1) biology — one year of introductory biology with laboratory; (2) chemistry — one year of general chemistry with laboratory, including analytical methods, and one quarter of organic chemistry, no laboratory required; (3) computer science — one course or equivalent experience in elementary programming and use of computer hardware and software; (4) geology — one course in introductory geology with laboratory; (5) mathematics — one year of calculus plus one course in elementary statistics; (6) physics — one year of introductory physics with laboratory. Any of the courses may be taken after students have arrived at UCLA.

Admission to the program is made through recommendation of a faculty committee who has reviewed the applicant's file and by concurrence of the program director and the Graduate Division. Subject to available funds, the program offers fellowships to eligible first-year students. Prospective students may write for descriptive brochures to the Director, Environmental Science and Engineering Program.

Major Fields or Subdisciplines

Specialties within the program include, but are not limited to, the assessment and management of hazardous substances in the air, soil, and water environments; migration of contaminants in groundwater; health risks of toxic substances; mitigation of adverse effects on the biological environment; and environmental problems common to the U.S. and Mexico. Also, students may slant their work toward greater emphasis either on the science engineering side or on the science policy side of their specialty.

Course Requirements

Course requirements consist of core courses, breadth courses, environmental science and engineering seminar, and problems courses.

Core and Breadth Courses. Sixteen course requirements must be satisfied, one of which can be waived based on prior coursework. Four of these are core courses (Environmental Health Sciences 212, 225, 235, 264) offered by program faculty. At least seven courses must be at the graduate level. Breadth electives are selected from a list of approved courses. Courses that are not on the list must be approved by the core faculty before they can be used to fulfill a breadth requirement. All core and breadth courses must be taken on a letter grade basis (not S/U). Courses must be taken from the following categories:

Environmental Science (seven courses). Courses which describe the characteristics of terrestrial, air, and water environments; the biota; the geological, biological, chemical, hydrological, and atmospheric processes of the environment; and the interrelationships be-

tween these compartments. Minimum requirements are as follows: Environmental Health Sciences 212, 225, 240, 264, an elective in environmental biology, microbiology, or ecology, an elective in environmental geology, and an elective in atmospheric sciences.

Environmental Engineering (five courses). Courses in engineering, mathematics, and the applied physical and life sciences covering topics such as modeling of environmental systems, fate and effects of environmental contaminants, design and evaluation of pollution control systems, plus courses which describe the tools and methods needed to address environmental problems, such as field and laboratory analytical methods, statistics, computer science, and advanced applied mathematics. Minimum requirements are as follows: Civil and Environmental Engineering 150, 155, and three electives.

Environmental Management, Law, and Policy (four courses). Courses which relate to the social and institutional factors relevant to environmental problem solving such as the development and implementation of regulations; dynamics of public participation; and socioeconomic analysis of current and historical trends in environmental and energy policy. Minimum requirements are as follows: Environmental Health Sciences 235, Urban Planning M264, and two electives.

Credit for Prior Work. Entering environmental science and engineering students may already have completed some of the required courses in their undergraduate and graduate work. One of the 16 required courses (including electives) can be waived based on prior coursework. Any other course requirement satisfied by previous work must be replaced with an elective in any field of environmental science and engineering that is pertinent to the goals of the student. Thus, a minimum of 15 courses must be completed after admission to the program. A minimum of 12 courses must be taken at UCLA or another University of California campus.

Environmental Science and Engineering Seminar and Effective Technical Writing Course. While completing core and breadth requirements, full-time students normally enroll in 18 units per quarter, including Environmental Science and Engineering M411 (seminar) which is required for two quarters each academic year. All students enroll in Environmental Science and Engineering 412 during the first year.

Problems Courses. Problems courses constitute intensive multidisciplinary applied team research directed toward the solution of current environmental problems. Students are required to quantify and measure necessary parameters, perform critical evaluations, edit and process technical and socioeconomic information, meet deadlines, and communicate through a final report to the competent lay person as well as to the technical specialist. Usually two or three faculty from different academic disciplines oversee a team of student researchers. Before proceeding to the problems

courses, students must have completed all but six of the required courses, successfully passed all core courses taken (with grades of B– or better), and maintained a cumulative GPA of 3.0 for all classes taken after entering the program. Twenty-four quarter units of the combined Environmental Science and Engineering 400 and 410 series courses must be completed during the three quarters prior to advancement to candidacy. The requirement may be met by completing three consecutive quarters (eight units per quarter) on a single theme, or as a minimum, at least two consecutive quarters devoted to a single theme plus one quarter participation or activity approved by the faculty. Enrollment in more than one problems course per quarter is not allowed. No more than eight units of other coursework may be taken when enrolled in a problems course.

Normally, problems course credit is only earned through courses offered by the program. However, students may petition the faculty for permission to earn problems course credit through multidisciplinary environmental projects offered in other departments at UCLA.

Written and Oral Qualifying Examinations

A two-tiered examination sequence, consisting of written and oral examinations, is required for advancement to candidacy for the D.Env. degree. The examinations must be successfully completed before the internship can begin. The purpose of the examinations is to test the student's understanding of the core and breadth areas, the master's field, current issues in the environmental field, and subjects covered in students' problems course experience. The written examination is administered by the core faculty of the program. The written examination may be repeated once. The University Oral Qualifying Examination is administered by the doctoral committee, a four-person faculty committee that guides students through the remainder of the program. Generally, the doctoral committee is appointed during the second year of the student's tenure at UCLA. The oral examination may be repeated once.

Internship. After advancement to candidacy, students begin an internship in their field of interest at an outside institution. Arrangements for the internship are the students' responsibility but program faculty assist. The institution and the nature of the appointment must be approved by the doctoral committee and the Environmental Science and Engineering Program director. Supervision during the field training experience is by the doctoral committee and the field program supervisor. A letter of agreement between UCLA and the institution is required. During each long session quarter of internship, students must register at UCLA for eight units of Environmental Health Sciences 599.

No later than nine months after advancement to candidacy, at the beginning of the internship, candidates are required to present a written

prospectus of the dissertation and defend it before the doctoral committee.

Environmental Science and Engineering

Graduate Courses

400A. Environmental Science and Engineering Problems Course. (8) Discussion, eight hours. Primarily designed for environmental science and engineering doctoral students. Multidisciplinary technical and socioeconomic analysis and prognosis of significant current environmental problems. In Progress grading (credit to be given only on completion of course 400C).

400B. Environmental Science and Engineering Problems Course. (8) Discussion, eight hours. Requisite: course 400A. Multidisciplinary technical and socioeconomic analysis and prognosis of significant current environmental problems. In Progress grading (credit to be given only on completion of course 400C).

400C. Environmental Science and Engineering Problems Course. (8) Discussion, eight hours. Requisite: course 400B. Multidisciplinary technical and socioeconomic analysis and prognosis of significant current environmental problems. S/U or letter grading.

400D. Environmental Science and Engineering Problems Course. (8) Discussion, eight hours. Preparation: successful completion of internship approved by doctoral committee and program director. Requisite: course 400C. Multidisciplinary technical and socioeconomic analysis and prognosis of significant current environmental problems. S/U or letter grading.

410A-410B-410C. Environmental Science and Engineering Workshops. (2-2-2) Discussion, two hours. Primarily designed for environmental science and engineering doctoral students who are conducting problems courses. Development of multidisciplinary skills essential to solution of environmental problems studied within courses 400A through 400D. Development of presentation skills. S/U grading.

M411. Environmental Health Sciences Seminar. (2) (Same as Environmental Health Sciences M411.) Seminar, two hours. Required of graduate environmental health sciences students for one term each year. Current topics in environmental health sciences and environmental science and engineering. May be repeated for credit. S/U grading.

412. Effective Technical Writing. (2) (Formerly numbered 298.) Lecture, one hour. Designed for environmental science and engineering doctoral students. Essentials of grammar, punctuation, syntax, organization, and format needed to produce well-written journal articles, research reports, memoranda, letters, and résumés. Emphasis on accuracy, clarity, conciseness, and avoidance of common errors in advanced technical writing, using critique, exercises, and examples. S/U grading.

501. Cooperative Program. (2 to 8) Tutorial, to be arranged. Preparation: consent of UCLA graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Used to record enrollment of UCLA students in courses taken under cooperative arrangements with USC. S/U grading.

596. Directed Individual or Tutorial Studies. (2 to 8) Tutorial, to be arranged. Supervised investigation of advanced environmental problems. S/U grading.

Scope and Objectives

Epidemiology has been defined as the study of the distribution and determinants of disease and injury in human populations. Epidemiologists study variations of disease in relation to such factors as age, sex, race, occupational and social characteristics, place of residence, susceptibility, exposure to specific agents, or other pertinent characteristics. Also of concern are the temporal distribution of disease, examination of trends, cyclical patterns, and intervals between exposure to causative factors and onset of disease. The scope of the field extends from study of the patterns of disease to the causes of disease and to the control or prevention of disease. What distinguishes epidemiology from other clinical sciences is the focus on health problems in population groups rather than in individuals.

Epidemiology is a young field with constantly expanding boundaries. The range of activities that may be at least partly epidemiologic includes determination of the health needs of populations, investigation and control of disease outbreaks, study of environmental and industrial hazards, evaluation of preventive or curative programs or treatments, and evaluation of the effectiveness and efficiency of intervention or control strategies. Many tools of epidemiology are borrowed from other fields such as microbiology, immunology, medicine, statistics, demography, and medical geography.

There is a growing core of purely epidemiologic methodology which includes not only statistical methodology and principles of study design, but a unique way of thinking that is beyond the rote memorization of rules. The contribution of epidemiology to any study involving groups of people is being increasingly recognized and demanded.

Epidemiologists may work in many settings, including international health agencies, state and local health departments, federal government agencies and health programs, health maintenance organizations, colleges and universities, and numerous research projects privately and publicly sponsored.

The objectives of the Department of Epidemiology fall into three broad categories — research, teaching, and community service. Degrees offered include the M.S. and Ph.D. in Epidemiology and, through the School of Public Health, the M.P.H. and Dr.P.H. with a specialization in epidemiology (see Public Health Schoolwide Programs).

Graduate Study

Students are subject to the degree requirements as published in *Program Requirements* for the year in which they matriculate.

Master's Degree

The Department of Epidemiology offers the Master of Science (M.S.) degree in Epidemiology. For information on the Master of Public Health (M.P.H.) degree, see Public Health Schoolwide Programs.

Admission

Admission requirements for the M.S. in Epidemiology are the same as for the M.P.H. See the M.P.H. admission section under Public Health Schoolwide Programs.

Areas of Study

Consult the graduate adviser.

Course Requirements

Students must complete at least one year of graduate residence at the University of California and a minimum of 56 units: 38 units of core courses and 18 units of elective courses. At least 20 units must be in the 200 or 500 series. A maximum of one seminar from Epidemiology 290 (two units) or 291 (two units), and one 596 course (four units) may be applied toward the total course requirements. If students intend to write a thesis, four units of Epidemiology 598 (thesis research) may also be applied toward the 18-unit elective requirement.

Mandatory core courses are Epidemiology 200, 201A-201B, 220, 290 or 291, Biostatistics 100A or 110A, 100B or 110B; one additional statistics course (four units) in regression or multivariate methods that is approved by the Department of Epidemiology; and Biostatistics 403A or Epidemiology 410A and 410B or equivalent. Equivalent courses must be approved by the department. Each core course may be waived if a similar course has been taken elsewhere and students pass the waiver examination. A waiver course does not reduce the unit requirements. Elective courses include all those offered by the department with the exception of those stated above.

All courses included for advancement to candidacy, except Epidemiology 290 or 291, must be taken for a letter grade (not S/U). Students must maintain an average of no less than 3.0 (B) in all courses required or elected during graduate residence at the University of California. In addition, students must maintain an average of no less than 3.0 (B) in Epidemiology 200, 201A, 201B, and 220.

Comprehensive Examination Plan

If the comprehensive examination option is approved, a guidance committee of three Department of Epidemiology faculty is appointed. A comprehensive examination on the major area of study must be passed. If failed, the examination may be repeated once.

Thesis Plan

If the thesis option is approved, a thesis committee of three faculty is appointed by the dean of the Graduate Division on recommendation of the department. The chair of the committee and at least one other member must hold academic appointments in the Department of Epidemiology. The committee approves the thesis prospectus before students file for advancement to candidacy. The thesis must be acceptable to the thesis committee.

Doctoral Degree

Admission

In addition to the University minimum requirements, the department requires for the Ph.D. degree in Epidemiology (1) satisfactory performance on the Graduate Record Examination (GRE); (2) at least a 3.0 junior/senior grade-point average and at least a 3.5 grade-point average in graduate studies; and (3) approval

by the department admissions committee, an academic adviser, and the department chair.

Major Fields or Subdisciplines

Consult the graduate adviser.

Course Requirements

Students must fulfill the course requirements for the M.S. degree in Epidemiology with an average of no less than 3.3 (B+) in Epidemiology 200, 201A-201B, and 220. Equivalent courses taken at other institutions may be used to fulfill these requirements subject to approval by the department. Continuation in the doctoral program is contingent on satisfying the 3.3 (B+) average grade-point requirement in the four core courses or their equivalent. Students must also take Epidemiology 202A, M212 or one additional statistics course beyond the M.S. requirements (four units), one course on pathobiology (four units), and at least three quarters of Epidemiology 292. The statistics and pathobiology courses must be approved by the department. In addition, students must take at least 12 units of graduate-level courses (excluding 500-level courses) outside the department, which must be selected with the approval of the academic adviser. Students with prior postbaccalaureate coursework may petition for substitution of part or all of the 12-unit requirement. Recommendation for the degree is based on the attainments of the candidate rather than on the completion of specific courses.

Written and Oral Qualifying Examinations

Before advancement to candidacy, students must pass the written doctoral examination of the Department of Epidemiology and the University Oral Qualifying Examination. Normally for the written doctoral examination no more than one reexamination is allowed. A doctoral committee, consisting of at least four faculty members who hold professorial appointments at UCLA, is nominated to the dean of the Graduate Division and, if approved, administers the oral qualifying examination after successful completion of the written examination. Two of the faculty must be tenured. Three of the four must hold appointments in the Department of Epidemiology; at least one must hold an appointment in another department at UCLA.

After completing the course requirements and passing both the written doctoral examination and the oral qualifying examination, students may be advanced to candidacy and complete work on a dissertation in the principal field of study.

Epidemiology

Lower Division Course

88. Lower Division Seminar: Special Topics in Epidemiology. (4) Seminar, three hours; outside study, nine hours. Preparation: satisfaction of Subject A requirement. Variable topics seminar which examines specific issues or problems and ways that professionals in epidemiology approach study of them. Students define, prepare, and present their own research projects with guidance of a professional school faculty member. Letter grading.

Upper Division Courses

100. Principles of Epidemiology. (4) Lecture, two hours; discussion, four hours. Preparation: one full biological sciences course. Not open for credit to students with credit for course 200. Introduction to epidemiology, including factors governing health and disease in populations. P/NP or letter grading.

199. Special Studies. (2 to 4) Tutorial, to be arranged. Preparation: submission of written proposal outlining course of study. Limited to seniors. Individual undergraduate guided studies under direct faculty supervision. Study to be structured by instructor and student at time of initial enrollment. Only four units may be taken each term. P/NP or letter grading.

Graduate Courses

200. Epidemiology I. (4) Lecture, two hours; laboratory, four hours. Preparation: one full biological sciences course. Requisite: Biostatistics 100A (may be taken concurrently). Not open for credit to students with credit for course 100. Introduction to epidemiology, including factors governing health and disease in populations. Letter grading.

201A-201B. Epidemiologic Methods I, II. (6-6) Lecture, four hours; discussion, two hours; outside study, 12 hours. Preparation: at least two upper division biology or social sciences courses. Recommended preparation: course 100 or 200. Requisites: Biostatistics 100A, 100B. Comprehensive coverage of concepts, principles, and methods in epidemiology, with emphasis on study design, statistical analysis, and causal inference. Theoretical and quantitative emphasis, focusing on investigation of disease etiology and other causal relationships in public health. Letter grading.

202A. Epidemiology: Theory and Methodology. (4) Lecture, four hours. Requisite: course 201B. Advanced principles and methods of epidemiologic analysis. Topics include relating prevalence and incidence, analysis of clustering and seasonality; measures of effect, sources of bias, regression to the mean, estimation and hypothesis testing in epidemiology; models for risk and rates; cohort analysis. S/U or letter grading.

203. Topics in Theoretical Epidemiology. (2) Lecture, two hours. Selected topics from current research areas in epidemiologic theory and quantitative methods. Topics selected from biologic models, epidemiologic models, problems in inference, model specification problems, design issues, analysis issues, and confounding. May be repeated for credit with consent of instructor. S/U grading.

204. Logic, Causation, and Probability. (4) Lecture, four hours. Preparation: two terms of statistics or probability and statistics. Recommended requisite: course 201B. Principles of deductive logic and causal logic using counterfactuals. Principles of probability logic and probabilistic induction. Causal probability logic using directed acyclic graphs. S/U or letter grading.

210. Public Health Research Using Available Data. (2) Lecture, one hour; discussion, one hour. Requisites: courses 100, 410A or Biostatistics 403, Biostatistics 100A. Presentations and discussions of availability, concepts, content, and usefulness of already collected data in public health research. Major emphasis on public data such as National Center for Health Statistics surveys, vital statistics, census, etc. S/U or letter grading.

M211. Statistics for Epidemiology. (4) (Same as Biostatistics M211.) Lecture, four hours. Preparation: two terms of statistics (such as Biostatistics 100A, 100B). Requisites: courses 201A-201B. Concepts and methods tailored for analysis of epidemiologic data, with emphasis on tabular and graphical techniques. Expansion of topics introduced in courses 201A-201B and introduction of new topics, including principles of epidemiologic analysis, trend analysis, smoothing and sensitivity analysis. S/U or letter grading.

M212. Statistical Modeling in Epidemiology. (4) (Formerly numbered 202B.) (Same as Biostatistics M209.) Lecture, four hours. Preparation: two terms of statistics (three terms recommended). Recommended: course 204 or M211. Principles of modeling, including meanings of models, a priori model specification, translation of models into explicit population assumptions, model selection, model diagnostics, hierarchical (multilevel) modeling. S/U or letter grading.

220. Principles of Infectious Disease Epidemiology. (4) Lecture, three hours. Requisite: course 100 or 200. Ascertainment of infection, transmission, and epidemiological parameters rather than clinical and pathological aspects. Specific diseases discussed in depth to illustrate epidemiologic principles. S/U or letter grading.

221. Prevalent and Emerging Infectious Diseases in the World. (4) Lecture, four hours. Requisites: course 100 or 200, Biostatistics 100A, 100B. Designed for graduate students and medical doctors seeking broad knowledge and detail on prevalent and emerging infectious diseases, including influenza/acute respiratory infections, cholera/diarrheal disease, tuberculosis, hepatitis B, malaria, measles, neonatal tetanus, HIV/AIDS, pertussis (whooping cough). S/U or letter grading.

222. Arthropods as Vectors of Human Diseases. (4) Lecture, four hours. Requisites: courses 100 or 200, 220. Comprehensive overview of morphology, systematics, natural history, host/vector/pathogen relationships, and spectrum of diseases carried by arthropods for graduate students, public health professionals, and medical doctors seeking information on global prevalence of arthropod-borne diseases. Letter grading.

223A. Protozoal Diseases of Man. (4) Lecture, four hours. May be taken concurrently with course 223B. Comprehensive overview of systematics, morphology, biology, host/parasite relationships, public health problems, and control of protozoa parasitic in man and animals. S/U or letter grading.

223B. Protozoal Diseases of Man. (2) Laboratory, four hours. Requisite or corequisite: course 223A. Laboratory methods of diagnosis and microscopic recognition of protozoa parasitic in man and animals. Intestinal protozoa and organisms occurring in blood and tissues of their hosts and pathology associated with these infections. S/U or letter grading.

224A. Helminthic Diseases of Man. (4) Lecture, four hours. May be taken concurrently with course 224B. Comprehensive overview of systematics, morphology, biology, host/parasite relationships, public health problems, and control of nematodes, trematodes, and cestodes parasitic in man and animals. S/U or letter grading.

224B. Helminthic Diseases of Man. (2) Laboratory, four hours. Diagnosis and practical microscopic recognition of nematodes, trematodes, and cestodes parasitic in man and animals. Pathology produced by these infections. S/U or letter grading.

227. AIDS: A Major Public Health Challenge. (4) Lecture, four hours. Requisites: course 100 or 200, Biostatistics 100A or 110A. Presentation of epidemiologic, biologic, psychological, and clinical characteristics of AIDS and HIV-1 infection. Discussion of policy implications and intervention strategies. S/U or letter grading.

M228. Biology of HIV. (4) (Same as Microbiology and Immunology M275.) Lecture, three hours. Preparation: two biology courses. Requisites: course 100, Biostatistics 100A. Overview of virologic and immunologic aspects of HIV disease for epidemiology or other health disciplines. Brief discussion of clinical manifestations and biosafety in the laboratory. Letter grading.

230. Epidemiology of Sexually Transmitted Diseases. (4) Lecture, four hours. Requisite: course 100 or 200. Sexually transmitted diseases; medical/biological aspects, epidemiology and control in developed and developing countries. S/U or letter grading.

240. Cardiovascular Epidemiology. (2) Lecture, two hours. Topics include definition, pathogenesis, descriptive epidemiology, magnitude of risk factors, strategies for prevention, lipoprotein metabolism, and epidemiology of diabetes, hypertension, and chronic lung disease. Letter grading.

241. Epidemiology of Neurologic Disease. (2) Lecture, two hours. Requisite: course 100 or 200. Epidemiologic characteristics of selected chronic neurologic diseases, with particular emphasis on etiology and possible control. S/U or letter grading.

242. Cancer Epidemiology. (4) Lecture, four hours. Requisite: course 100 or 200. Introduction to basic concepts of cancer and molecular and genetic epidemiology. Review of current epidemiologic research in cancer in recent medical and epidemiological literature. Research proposal on a cancer-related topic required. S/U or letter grading.

246. Epidemiology of Aging. (2) Lecture, two hours. Requisite: course 100 or 200. Epidemiologic methods of estimating present and future burdens of aging: morbidity, disability, and dependency. Epidemiology of major disabling conditions affecting the elderly. Evaluation of possible intervention strategies. Methodologic issues in geriatric epidemiology. S/U or letter grading.

247. Epidemiology of Injuries in the Elderly. (2) Lecture, two hours. Requisite: course 100. Description of frequency of, risk factors for, and possibilities of preventing injuries in the elderly populations. Comparison of injury outcomes (morbidity and mortality) in younger vs. older populations. Emphasis on methodologic issues of studying elderly people. S/U or letter grading.

248. Psychiatric Epidemiology. (4) Lecture, four hours. Requisite: course 100 or 200. Introduction to basic concepts and research methods in psychiatric epidemiology. Topics include case definition, study design, instrumentation, and epidemiology of selected psychiatric disorders. Letter grading.

251. Epidemiology of Nonintentional Injuries. (4) Lecture, three hours; discussion, two hours. Requisites: course 100 or 200, Biostatistics 100A. Pertinent epidemiologic methods for study of nonintentional trauma, including that from motor vehicle crashes, occupational exposures, falls, and other major external causes, which focus on research approaches, data sources, analytical techniques. Substantive findings on related subproblem areas presented for critical review. Letter grading.

252. Epidemiology of Assault, Homicide, and Suicide. (2) Lecture, two hours; discussion, one hour. Requisite: course 100 or 200. Presentation and evaluation of epidemiologic research approaches to study of violent injury, including description of incidence, study design, risk factor analysis, and control evaluation. S/U or letter grading.

253. Acute Traumatic and Chronic Repetitive Injuries from Work-Related Exposures. (2) Lecture, two hours; discussion, one hour. Requisites: course 100, Biostatistics 100A. Lectures and discussions on magnitude, scope, research approaches, and intervention strategies for work-related acute traumatic and chronic repetitive (musculoskeletal) injuries. Emphasis on injury research methods for all external causes of injury, utilizing epidemiology for high-risk group and risk-factor identification and injury prevention. S/U or letter grading.

M255. Keeping Children Safe: Causes and Prevention of Pediatric Injuries. (2) (Same as Community Health Sciences M255.) Lecture, two hours. Injuries have been leading killer of children in the U.S. for decades. Children have specific risk factors for injuries, many of which are preventable. Presentation of approaches to research and prevention of pediatric injuries. Letter grading.

259. Disaster Epidemiology. (2) Lecture, two hours. Requisites: course 100 or 200, Community Health Sciences 295. Introduction to epidemiologic methodology to study disasters and their health outcomes, including surveillance, loss estimation, risk factor assessment, intervention, and evaluation. Letter grading.

260. Environmental Epidemiology. (2) Lecture, one hour; discussion, one hour. Requisite: course 100 or 200. Methodological problems and approaches of epidemiology for assessing health impact of major types of environmental exposure. Letter grading.

261. Occupational Epidemiology. (4) Lecture, two hours; discussion, two hours. Requisite: course 100 or 200. Methodological considerations, approaches, and limitations in epidemiological studies of occupational groups and environments. S/U or letter grading.

262. Seminar: Environmental and Occupational Cancer Epidemiology. (2) Seminar, two hours. Requisite: course 100 or 200. Discussion of examples of recent epidemiologic studies, with focus on environmental and occupational exposures, especially in areas where controversies have arisen such as for electromagnetic fields and childhood leukemia, and bladder cancer and trihalomethanes levels of drinking water. S/U or letter grading.

268. Introduction to Pharmacoepidemiology. (2) Lecture, two hours. Requisite: course 200. Pharmacoepidemiology is application of epidemiologic knowledge, reasoning, and methods to study of effects and uses of drugs. Survey of contemporary roles of pharmacoepidemiology in drug development and public health, with historical background of its evolution and projections of future prospects. S/U or letter grading.

270. Epidemiology and Health Policy. (2) Lecture, two hours. Requisites: courses 100 or 201A-201B, Biostatistics 100B or 110B, Health Services 100. Application of epidemiologic methods and findings in health services research, population health planning, and health policy to provide framework for integrating causal inference with decision making. Emphasis on conceptual and methodologic issues confronting researchers, clinicians, planners, administrators, and legislators. S/U or letter grading.

280. Parasitic Diseases and Global Health. (4) Lecture, four hours. Overview of major human parasitic diseases in terms of their biology, occurrence, distribution, and transmission in nature; diseases they cause and impact they have on health of populations; interaction with other disease states; and intervention strategies for their control. S/U or letter grading.

290. Seminar: Epidemiology — Infectious and Tropical Disease. (2) Seminar, two hours. Review of research on specific diseases of public health importance. May be repeated for credit. S/U or letter grading.

291. Seminar: Epidemiology — Methodology. (2) Seminar, two hours. Requisite: course 100 or 200. Review of current epidemiologic research contained in recent medical literature. May be repeated for credit. S/U or letter grading.

292. Advanced Seminar: Epidemiology. (2) Seminar, two hours. Requisite: course 201B. Current research in epidemiology. May be repeated for credit. S/U grading.

293. International HIV/AIDS Seminar. (2) Seminar, two hours. Ongoing discussion of worldwide pandemic of HIV/AIDS, with emphasis on problems of surveillance, reporting, and intervention. Discussion of recent literature. Presentations by fellows from other countries. S/U grading.

294. Epidemiology and Policy of Occupational and Environmental Health Issues. (2) Seminar, two hours. Requisite: course 100 or any other epidemiology course. Introduction to demands that go beyond "pure science," with focus on issues such as risk communication, potential influence (and ethics) of oversight panels and external review groups on presenting results and conclusions, and interest of government agencies. S/U grading.

295. Seminar: Epidemiology — Cancer. (2) Seminar, two hours. Requisite: course 100 or 200. Introduction of basic concepts of cancer epidemiology and review of current epidemiological research in cancer in recent medical and epidemiological literature. May be repeated for credit. S/U or letter grading.

400. Field Studies in Epidemiology. (2 or 4) Fieldwork, to be arranged. Field observation and studies in selected community organizations for health promotion or medical care. Students must file field placement and program training documentation on form available from Student Affairs Office. May not be applied toward M.S. minimum course requirement; four units may be applied toward 44-unit minimum total required for M.P.H. degree. Letter grading.

401. Database Theory and Practical Applications in Injury Epidemiology. (2) Lecture, two hours. Requisite: course 201A. Exploration of theory and practical strategies for database construction and manipulation, selection, and use of desktop-computing database applications using a variety of examples from epidemiological research. Letter grading.

402. Advanced Data Analysis in Occupational and Environmental Epidemiology. (4) Lecture, two hours; laboratory, two hours. Preparation: one data management course. Requisites: courses 201A-201B, or 201A and 261. Development of strategies for analyzing data in occupational and environmental settings. Use of multivariate data analysis techniques typically used in occupational cohort studies, nested case-control studies, and ecologic studies in environmental epidemiology. S/U or letter grading.

410A. Management of Epidemiologic Data. (2) Lecture, two hours. Requisites: course 100, Biostatistics 100A (one course may be taken concurrently with consent of instructor). Concepts, collection, and management of data, with particular emphasis on databases in chronic infectious diseases. Introduction to personal computers and appropriate software for epidemiologic studies. S/U or letter grading.

410B. Management of Epidemiologic Data. (2) Lecture, two hours. Requisite: course 410A. Data management for various epidemiologic study designs, confidentiality concerns; data management systems; introduction to mainframe computer. S/U or letter grading.

411. Research Resources in Epidemiology. (2) Lecture, one hour; discussion, one hour. Requisites: course 100 or 200, Biostatistics 100A. Instruction and practical experience in use of varied bibliographic aids and sources of information, building of reference files, and presentation of research findings for publication. S/U or letter grading.

412. Public Health Surveillance. (2) Lecture, two hours. Requisites: course 100 or 200, Biostatistics 100A. Overview of public health surveillance methodology, including (1) design, implementation, and evaluation of surveillance systems, (2) analysis and interpretation of surveillance data, and (3) application of surveillance methods to specific health-related outcomes. Letter grading.

414. Practical Epidemiologic Investigations. (2 to 4) Lecture, one to two hours; laboratory, one to two hours. Requisite: course 100 or 200. Practical approaches to epidemic investigations presented through problem sets based on actual outbreaks. Data collection, analysis, and written presentation of findings. S/U or letter grading.

415. Epidemiology for Developing Countries. (4) Lecture, four hours. Requisites: courses 100 and/or 200, Biostatistics 100A. Practical use of epidemiology, microcomputers, and spreadsheet models for estimating morbidity and mortality, developing intervention or prevention strategies, and setting program priorities in Third World settings. Letter grading.

417. Injury Prevention Strategies and Countermeasures. (2) (Formerly numbered M417.) Lecture, two hours. Requisite: course 100. Lectures with discussion on injury prevention strategies and countermeasures, including critical review of effectiveness in the public health context. Emphasis on major public health injury problems from assaultive, self-inflicted, or unintentional causes. S/U or letter grading.

418. Rapid Epidemiologic Surveys in Developing Countries. (4) Lecture, four hours. Requisites: courses 100 and/or 200, Biostatistics 100A. Presentation of how to do health surveys in Third World countries. Practical assistance for planning and organizing surveys, including use of microcomputers to develop and test the questionnaire, select the sample, process and analyze data, and prepare final report. Letter grading.

419. Applications in Musculoskeletal Epidemiology. (4) Lecture, two hours; laboratory, two hours. Requisites: course 100 or 200 (may be taken concurrently), Biostatistics 100A. Introduction to principles and practical issues of epidemiologic data analysis for addressing musculoskeletal-related hypotheses. Use of data sets from relevant components of National Health Interview Survey and from musculoskeletal-related epidemiologic studies. Use of SAS programming language, with applications in both UNIX and Windows. Letter grading.

495. Teacher Preparation in Epidemiology. (2) Seminar, two hours. Preparation: 18 units of cognate courses in area of specialization. May not be applied toward master's degree minimum total course requirement. May be repeated for credit. S/U grading.

501. Cooperative Program. (2 to 8) Tutorial, to be arranged. Preparation: consent of UCLA graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Used to record enrollment of UCLA students in courses taken under cooperative arrangements with USC. No more than eight units may be applied toward master's degree minimum total course requirement; may not be applied toward minimum graduate course requirement. S/U grading.

596. Directed Individual Study or Research. (2 to 8) Tutorial, to be arranged. Limited to graduate students. Individual guided studies under direct faculty supervision. Only four units may be applied toward M.P.H. and M.S. minimum total course requirement. May be repeated for credit. S/U or letter grading.

597. Preparation for Master's Comprehensive or Doctoral Qualifying Examinations. (2 to 8) Tutorial, to be arranged. Limited to graduate students. May not be applied toward any degree course requirements. May be repeated for credit. S/U grading.

598. Master's Thesis Research. (2 to 8) Tutorial, to be arranged. Only four units may be applied toward M.P.H. and M.S. minimum total course requirement; may not be applied toward minimum graduate course requirement. May be repeated for credit. S/U grading.

599. Doctoral Dissertation Research. (2 to 8) Tutorial, to be arranged. May not be applied toward any degree course requirements. May be repeated for credit. S/U grading.

Scope and Objectives

Ethnomusicology is a research field that combines the various techniques of musical analysis with the methods of the social sciences and humanities (i.e., the study of cultural systems including music). Although originally focused on folk, tribal, and Asian classical music traditions, ethnomusicology at UCLA includes the study of all styles of music in the world, including popular music, jazz, and even Western classical music when approached from a cultural analysis perspective. The undergraduate

and graduate programs in ethnomusicology provide students with broad knowledge of world musics and methods currently used in their study.

The object of systematic musicology, a multi-disciplinary field, is to answer fundamental questions on the nature and properties of music, not only as art but as empirical phenomena. At UCLA, this research orientation integrates the perspectives of aesthetics and philosophy, music theory, acoustics, sociology, psychology, organology, and semiotics, any of which can be cross-cultural, focusing on the systems or models discernible through these disciplines.

Undergraduate Study

Ethnomusicology B.A.

Admission

Applicants are reviewed individually, based on a questionnaire, grade-point average, two letters of recommendation, test scores, a personal statement of purpose, and an interview/audition. Applicants who are unable to travel to UCLA have the option of submitting a videotape of musical performance, following departmental guidelines.

Preparation for the Major

Required: Ethnomusicology 10A-10B-10C, 20A-20B-20C, and 12 units of performance organizations or private instruction in music (courses 91A-91Z or 92).

The Major

Ethnomusicology

Required: (1) Group A — Ethnomusicology 175 or 181, M180, 190; (2) group B — seven courses selected from 106A through M126, 128, 130 through 147, C156A through 170, 172A, 172B, 173, 174, C179, 199E, 199S; (3) group C — 12 units from courses 191A-191Z or 192.

Jazz Studies Concentration

Required: Ethnomusicology M110A, M111, 120A or 120B, M127, M129A-M129B-M129C, M180 or 181, M186, 12 units of course 171, 12 units of course M177, Music History 150, and three elective courses from Ethnomusicology 106A, 106B, M108A, 108B, M110B, 113 through M126, 128, 130 through 170, 172A through 175, C179, M180, 181, 190, 199E, 199S.

Graduate Study

The following constitutes introductory information regarding graduate degree programs and is based on the 1998-99 edition of *Program Requirements for UCLA Graduate Degrees*. Complete, annual editions of *Program Requirements* are available (listed under "Publications") on the Graduate Division website at <http://www.gdnet.ucla.edu>. Students are subject to the degree requirements as published in *Program Requirements* for the year in which they matriculate.

Master's Degree

The Department of Ethnomusicology offers the Master of Arts (M.A.) degree in Ethnomusicology.

Admission

Applicants to the M.A. program must have completed a bachelor's degree in music or a field related to ethnomusicology. Applicants whose degree is not in music are required to provide evidence of their musical aptitude and ability.

Applicants are required to submit, in addition to the regular Graduate Division requirements, (1) a statement of purpose, (2) three letters of recommendation, (3) a research or term paper, and (4) proof of musical background or performance ability (a degree in music, official transcripts showing at least two years of music coursework, including music history and theory, or an in-person audition or monitored recording in any musical tradition). No application can be considered until all of the above materials have been received.

Dossiers are reviewed by the faculty to assess each applicant's potential as a graduate student in this field at UCLA.

Admission Timetable

Note: Applicants for fellowships must adhere to the earlier deadlines; all monies are awarded by March 15.

December 30 — Application for admission/fellowship is due.

January 15 — Supplementary application materials are due.

February 28 — Late applications received by February 28 are reviewed only if there is space available in the program.

By March 15 — Notice of acceptance or denial is sent.

Applicants on a waiting list for admission are notified as soon as a decision can be reached. Failure to meet any deadline may result in a delay in action or no action on an application for admission, as well as that for a fellowship or assistantship.

Areas of Study

The Department of Ethnomusicology offers the M.A. degree in the field of ethnomusicology, with an optional specialization in systematic musicology. Degrees in composition, performance, and historical musicology are offered through other departments.

Course Requirements

Students are required to complete a minimum of nine courses, five of which must be at the graduate level. Only four units of Ethnomusicology 596, and four units of 597 or 598 may be applied toward the total course requirement. No more than four units of all types of 500-series courses may be applied toward the minimum graduate course requirement. Upper division courses that may be applied toward the minimum of nine courses include Music

106B, 109A, 109B, 109C, 112A, 112B, 116, 117, 118A, 118B, 123A, 123B, 123C, 151A, 151B, 156, C175 (four units only), and Ethnomusicology 106A, 106B, 106C, 113, M126, 128, 130, 136A, 136B, 146, 147, C156A, 156B, 157, 158A, 158B, 158C, 160A, 160B, 170, 173, M180, 181. Ethnomusicology 598 serves to guide the preparation of the thesis and should normally be taken during the last quarters of residence.

Ethnomusicology. In addition to a five-course core (Ethnomusicology 200, 201A-201B, 281A, and 282), students must take two courses in one or more music culture areas (i.e., music of Japan, China), one course from the Department of Anthropology, and one elective from the department's graduate or upper division offerings, selected courses in Western music, a related discipline, or particular area outside the department approved by the student's mentor. Students who have not taken Ethnomusicology 20A-20B-20C or the equivalent before entering are required to audit these courses. Course 290 may be taken but cannot count toward M.A. course requirements. One quarter of Ethnomusicology 292F may be counted to satisfy one of the electives. Students must enroll in a minimum of two quarters of ethnomusicology performance organizations (Ethnomusicology 91A-91Z), which are not applied to their degree.

Specialization in Systematic Musicology. In addition to a six-course core (Ethnomusicology 200, C203, one course from 271, 273, 275, 283, or Musicology 269, and two terms of Ethnomusicology 279), students must take one course in a music culture area, two electives from the department's graduate or upper division offerings, and selected courses in Western music, a related discipline, or particular area outside the department approved by their mentors.

Comprehensive Examination Plan

To choose the comprehensive examination plan option, students must first submit a research paper written during their master's studies as evidence of their writing and scholarly abilities. For ethnomusicology, competence in the field is then tested with two written examinations: (1) theory and method in ethnomusicology and (2) a world music culture area or approved topic reflecting the course of study. For systematic musicology, competence is tested with a take-home examination on a topic to be determined by the student's major adviser. A discussion of the general field of systematic musicology is included in the final oral examination. The examinations are administered by a three-member committee, no more than one of whom shall be outside the department. The comprehensive examination is normally completed within three years of beginning M.A. coursework. Any failed examinations may be retaken only once, during the next two quarters. The department requires a final oral examination under both the comprehensive and thesis plans.

Thesis Plan

For students who choose this plan, the thesis is an extended essay or other equivalent presentation involving the original investigation of a problem or subject of limited scope, approved by the program committee in the student's area. The presentation must demonstrate significant style, organization, creativity, and depth of understanding of the subject.

A three-year limit from the beginning of the M.A. coursework is normally imposed for the completion of the thesis. Students who do not meet this deadline are required to take the comprehensive examination at the end of their third year in order to be considered for advancement to the Ph.D. program.

The thesis topic and the composition of the master's committee are approved by the program committee in the student's area before nomination to the Graduate Division. The department requires a final oral examination under both thesis and comprehensive examination plans.

Doctoral Degree

Admission

Applicants to the program leading to the Ph.D. degree in Ethnomusicology must normally have completed an M.A. or equivalent degree in one of the following: ethnomusicology, systematic musicology, Western music, a non-Western music tradition, a related discipline, or area studies with a music specialization. Applicants who are accepted but whose qualifications do not meet the requirements for the department's M.A. degree are required to complete remedial coursework as recommended by the program committee before proceeding with doctoral work.

Applicants are required to submit, in addition to the regular Graduate Division requirements, (1) a statement of purpose, (2) three letters of recommendation, (3) a research or term paper (the M.A. thesis, if it is available), and (4) proof of musical background or performance ability (a degree in music, official transcripts showing at least two years of music coursework, including music history and theory, or an in-person audition or monitored recording in any musical tradition). No application can be considered until all of the above materials have been received.

Dossiers are reviewed by the faculty to assess each applicant's potential as a graduate student in that field at UCLA.

Admission Timetable

Note: Applicants for fellowships must adhere to the earlier deadlines; all monies are awarded by March 15.

December 30 — Application for admission/fellowship is due.

January 15 — Supplementary application materials are due.

February 28 — Late applications received by February 28 are reviewed only if there is space available in the program.

By March 15 — Notice of acceptance or denial is sent.

Applicants on a waiting list for admission are notified as soon as a decision can be reached. Failure to meet any deadline may result in a delay in action or no action on an application for admission, as well as that for a fellowship or assistantship.

Major Fields or Subdisciplines

The Department of Ethnomusicology offers the Ph.D. degree in the field of ethnomusicology, with an optional specialization in systematic musicology. Degrees in composition, performance, and historical musicology are offered through other departments.

Course Requirements

Students may petition to their area on the advice of their graduate adviser for exemption from specific requirements on the basis of equivalent work done at the M.A. level.

Students may complete the residence requirement by electing courses recommended by their mentor from the 200- or 100-level courses listed under the course requirements for the M.A. degree.

Ethnomusicology. In addition to a five-course core (Ethnomusicology 200, 201A-201B, 281A, and 282), 10 additional courses are required, including one music culture seminar, at least six of which must be at the 200 level or higher and must include three quarters of Ethnomusicology 290, and one course from 271, 273, 275, or 283. Students may count one quarter of Ethnomusicology 292F to satisfy one of their electives. The remainder may be selected from the graduate offerings in the department or selected courses in Western music, a related discipline, or particular area outside the department as guided by students' mentors. No more than two 500-series courses and two courses outside the department may be counted toward the degree. Students must enroll in a minimum of three quarters of ethnomusicology performance organizations (Ethnomusicology 91A-91Z), which may not be applied to their degree. Students are normally expected to conduct field research for one year.

Specialization in Systematic Musicology. In addition to a six-course core (Ethnomusicology 200, 201A, C203, two courses of 279, and one from Ethnomusicology 271, 273, 275, 283, or Musicology 269), nine other courses are required, including one music culture seminar, at least six of which must be at the 200 level or higher and must include three additional quarters of Ethnomusicology 279. The remainder may be selected from the graduate offerings in the department or selected courses in Western music, a related discipline, or particular area outside the department as guided by students' mentors. No more than two 500-series courses

and two courses outside the program may be counted toward the degree.

Students who do not have an M.A. in Ethnomusicology from UCLA may be required, in consultation with their mentor, to take other relevant and necessary courses beyond the 10 specified.

Written and Oral Qualifying Examinations

When the student and the committee feel the student is ready to take the qualifying examinations, the student should submit a schedule to the Student Services Office and the committee members listing the order in which the examinations are to be taken. Staff from the Student Services Office acts as proctor for the tests. Normally, the five written examinations are spread over a two-week period but should be completed within three weeks. Examinations not passed may be repeated once in consultation with the guidance committee and after a stipulated period of time. An oral examination may be scheduled at the discretion of the departmental guidance committee.

Ethnomusicology. The written examinations for ethnomusicology students without a specialization consist of the following:

- (1) General ethnomusicology, history, theory, and method. (Students who took the comprehensive examination option for the M.A. have already done this.)
- (2) Concepts and terminologies in world music.
- (3) Student's principal musical area.
- (4) One from organology, aesthetics of music, psychology of music, sociology of music, acoustics, or comparative music theory.
- (5) A second musical area or related discipline (e.g., anthropology).

Specialization in Systematic Musicology. The written examinations for students with a specialization in systematic musicology consist of the following:

- (1) General systematic musicology, history, theory, and method.
- (2) Concepts and terminologies in world music.
- (3) History and analysis of Western music.
- (4-5) Two areas to be selected from the following: organology, aesthetics of music, psychology of music, sociology of music, acoustics, or comparative music theory.

After completion of the written and oral qualifying examinations, students may submit the dissertation topic and request for a doctoral committee for approval. The dissertation topic and the composition of the doctoral committee are approved by the program committee in the student's area before nomination to the Graduate Division. Following appointment of the doctoral committee, students take the University Oral Qualifying Examination.

Ethnomusicology

Lower Division Courses

1A-1B. Fundamentals of Sound and Music of the World. (2-4) Lecture, two hours; laboratory, one hour. Acoustical makeup of sound (pitch, tone quality); tuning systems; modes and scales; harmony and polyphony; rhythm and meter; notational systems; relationships of music to culture. Laboratory includes ear training and instrumental techniques.

10A-10B-10C. World Music Theory and Musicianship. (4-4-4) Lecture, two hours; discussion, four hours; laboratory, two hours. Limited to Ethnomusicology and World Arts and Cultures majors. Course 10A is requisite to 10B, which is requisite to 10C. Introduction to and participation in musical systems of selected world cultures through aural and written notations, vocal and instrumental skills, melodic and rhythmic dictation, improvisation, and composition.

15. American Life in Music. (4) Lecture, three hours. Impact of ethnicity, race, gender, and other social processes on American music in the late 20th century; use of and creativity in music to respond to and shape contemporary social processes. P/NP or letter grading.

20A-20B-20C. Musical Cultures of the World. (4-4-4) Lecture, four hours; discussion, one hour. Survey of musical cultures of the world (excluding Western art music), role of music in society and its relationship to other arts; consideration also to scale structure, instruments, musical forms, and performance standards. **20A.** Europe and the Americas; **20B.** Near East and Africa; **20C.** South Asia, Southeast Asia, and the Far East.

91A-91Z. World Music Performance Organizations. (2 each) Activity, three hours. Group performance of traditional vocal and instrumental music of world cultures. May be repeated for credit without limitation. P/NP or letter grading. **91A.** Music and Dance of the American Indians; **91B.** Music of Bali; **91C.** Music and Dance of the Balkans; **91D.** Music of China; **91E.** Music and Dance of Ghana; **91F.** Music of India; **91G.** Music of Japan; **91H.** Music of Java; **91I.** Music of Korea; **91K.** Music of Mexico; **91L.** Music of Persia; **91M.** Music of Thailand; **91N.** Music of the Near East; **91P.** Music of African Americans; **91Z.** Open Ensemble.

92. Private Instruction in Music. (2) Studio, one hour. Limited to Ethnomusicology majors. Private or semiprivate music instruction with a distinguished community-based musician, which must be arranged by students and approved by course instructor. May be repeated for credit without limitation.

Upper Division Courses

106A-106B-106C. Music of the American Indians. (4-4-4) American Indian music studied within broader context of styles, cultural values, and sources, including films, recordings, lectures, and limited group singing and dancing. **106A.** Eastern California-Yuman, Great Basin, and Northwest Coast Areas; **106B.** Athabaskan, Pueblo, Plains, and Modern Pan-Indian Trends. Lecture, three hours; discussion, one hour; **106C.** Sociology of American Indian Music.

M108A-108B. Music of Latin America. (4-4) Course M108A is not requisite to 108B. Survey of traditional and contemporary musical culture. **M108A.** Mexico, Central America, and the Caribbean Isles. (Formerly numbered 108A.) (Same as Chicana and Chicano Studies M108A.) Lecture, four hours; discussion, one hour; **108B.** Latin South America. Lecture, three hours.

M109. Women in Jazz. (4) (Same as Afro-American Studies M109 and Women's Studies M109.) Lecture, four hours; discussion, one hour. Sociocultural history of women in jazz and allied musical traditions from the 1880s to the present. Survey of women vocalists, instrumentalists, composers/arrangers, and producers and their impact on development of jazz. P/NP or letter grading.

M110A-M110B. African American Musical Heritage. (4-4) (Same as Afro-American Studies M110A-M110B and Folklore M154A-M154B.) Lecture, four hours; discussion, one hour. Study of African music and its impact on the Americas; survey of development of various African American musical genres from slave era to the present, including traditions in the West Indies and Central and South America.

M111. Ellingtonia. (4) (Same as Afro-American Studies M145.) Music of Duke Ellington, his life, and far-reaching influence of his efforts. Ellington's music, known as "Ellingtonia," is one of the largest and perhaps most important bodies of music ever produced in the U.S. Covers the many contributions of other artists who worked with Ellington, such as composer Billy Strayhorn and musicians Johnny Hodges, Cootie Williams, and Mercer Ellington.

113. Music of Brazil. (4) Lecture, three hours. History of ethnic and art music in Brazil, with some reference to Portuguese antecedents.

M115. Musical Aesthetics in Los Angeles. (4) (Same as Chicana and Chicano Studies M115.) Lecture, three hours. Confronting aesthetics from classical perspective of art as intuition, examination on a cross-cultural basis of diverse musical contexts within the vast multicultural metropolis of Los Angeles, with focus on various musical networks and specific experiences of the Chicano/Latino, African American, American Indian, Asian, rock culture, Western art music tradition, and the commercial music industry.

M116. Chicano/Latino Music in the U.S. (4) (Same as Chicana and Chicano Studies M116.) Lecture, four hours; discussion, one hour. Historical and analytical examination of musical expression of Latino peoples who have inhabited present geographical boundaries of the U.S.

117. American Popular Music. (4) Survey of history and characteristics of American popular music and its relationship to American culture, with emphasis on 20th-century popular music and its major composers, including comparison between traditional pre-1950 popular music and trends in post-1950 popular music.

118. Development of Rock. (4) History of rock from the 1950s to the 1970s. In-depth survey of stylistic trends illustrated by pertinent examples and accompanied by extensive musical analysis.

M119. Cultural History of Rap. (4) (Same as Afro-American Studies M107 and Folklore M110.) Lecture, four hours; discussion, one hour. Introduction to development of rap music and allied forms, with emphasis on musical and verbal qualities, philosophical and political ideologies, gender representation, and influences on cinema and popular culture. P/NP or letter grading.

120A-120B. Development of Jazz. (4-4) Lecture, four hours; discussion, one hour. Introduction to jazz; its historical background and its development in the U.S.

121. Cross-Cultural Perspectives in Jazz. (4) Exploration of assimilation and retention of jazz from the U.S. in various countries, with particular emphasis on cultural and social features which form the basis for new jazz-ethnic music blends.

123. Music of Bebop. (4) Lecture, three hours. Study of jazz bebop tradition, including analysis of compositions and song forms, styles of improvisation, and developments from 1940 to the present.

M124. Anglo-American Folk Song. (4) (Same as English M111B and Folklore CM106.) Survey of Anglo-American balladry and folk song, with attention to historical development, ethnic background, and poetic and musical values.

M126. Folk Music of Western Europe. (4) (Same as Folklore M181.) Introduction to forms and styles of traditional music in Western Europe. Historical and ethnological perspectives on this music combined with numerous recorded examples from major cultural subdivisions of the region.

M127. Jazz Keyboard Harmony. (1) (Same as Music M127.) Laboratory, two hours. Study of jazz harmony through use of piano keyboard. Development of basic keyboard skills in order to manipulate essential chord voicings and harmonic passages in jazz music. Instruction in basic jazz theory.

128. Folk Music of Eastern Europe. (4) Introduction to forms and styles of traditional music in Eastern Europe (including the Balkans). Historical and ethnological aspects of the music illustrated by numerous recorded examples from major cultural subdivisions of the area.

M129A-M129B-M129C. Jazz Theory and Improvisation (2-2-2) (Same as Music M129A-M129B-M129C.) Lecture, four hours. Elements of jazz theory and improvisation. **M129A.** Basic jazz harmonic constructions, as well as melodic, rhythmic, and harmonic concepts, and how to apply those elements to personal efforts in improvisations. **M129B.** Requisite: course M129A with a grade of C or better. Medium-level jazz harmonic constructions. **M129C.** Requisite: course M129B with a grade of C or better. Advanced-level jazz harmonic constructions.

130. Folk Music of the Mediterranean. (4) Lecture, three hours. Introduction to forms and styles of traditional music in the Mediterranean basin, particularly features of contrast, similarity, and cross-cultural interaction. Historical and ethnological aspects of the music illustrated by numerous recorded examples from major cultural subdivisions of the area.

M131. Development of Latin Jazz. (4) (Same as Music M131.) Lecture, four hours; discussion, one hour. Survey of historical and stylistic development of musical style referred to today as "Latin jazz." P/NP or letter grading.

CM132. Celtic Folk Music. (4) (Same as Folklore CM132.) Survey and analysis of indigenous traditional music in lands where a Celtic language is or was spoken into modern times. Instrumental and vocal genres, context and performance, social value and ideology. Concurrently scheduled with course CM232. P/NP or letter grading.

136A-136B. Music of Africa. (4) Lecture, four hours; discussion, one hour. Investigation of historical aspects, social functions, musical instruments, and relationships of music to other art forms in selected areas of Africa.

146. Folk Music of South Asia. (4) Lecture, three hours; laboratory, one hour. Illustrated survey of some regional genres, styles, and musical instruments found in India and Pakistan, with special reference to religious, social, economic, and cultural context of their occurrence.

147. Survey of Classical Music in India. (4) Examination of melodic, metric, and formal structures of Indian classical music in context of religious, sociocultural, and historical background of the country.

C150. Music and Politics in East Asia. (4) Requisite: course 20C. Limited to ethnomusicology majors. Political imperatives have long had a direct and often explicit impact on music sound and context in East Asia. Examination of interaction of ideology and musical practice in medieval Korea and in contemporary Korea, Japan, Taiwan, and China. Concurrently scheduled with course C250.

C156A-156B. Music in China. (4-4) Letter grading. **C156A.** (Formerly numbered 156A.) Lecture, four hours. Requisite: course 20C. Limited to ethnomusicology majors. Survey of traditional, popular, and Western-influenced musics currently widespread in China, including musical analysis of different genres; examination of contexts in which they exist. Investigation of profound effect of Confucian and Communist ideologies on music. Concurrently scheduled with course C256A. **156B.** Lecture, three hours; laboratory, two hours. Requisite: course C156A. Introduction to various notational systems. Analysis of representative styles.

157. History of Chinese Opera. (4) Survey of dramatic elements in Chinese operas, incorporating singing, dance, and acrobatics. Emphasis on traditional and modern Peking opera and its relation to Cantonese and other genres.

158A-158B-158C. Studies in Chinese Instrumental Music. (4) Lecture, three hours; laboratory, one hour. **158A.** Study of literature, major sources, paleography, theory, and philosophy of the Ch'in, including transcription and analysis. **158B.** Study of literature, major sources, paleography, theory, and philosophy of the P'i P'a, including transcription and analysis. **158C.** Comprehensive study of Chinese musical instruments, classification system, specific musical notation, and use in context of Chinese society.

C159. Music on China's Periphery. (4) Lecture, four hours; outside study, eight hours. Designed for undergraduate ethnomusicology, music, music history, and world arts and cultures majors. Survey of musics from China's border regions and neighboring countries: technical musical characteristics and important contextual issues related to traditional and modern styles from Mongolia, Uighurs of Xinjiang, Tibet, Tibeto-Burman peoples, Hmong, and indigenous peoples of Taiwan. Concurrently scheduled with course C259. P/NP or letter grading.

160A. Survey of Music in Japan. (4) Lecture, three hours. Survey of main genres of Japanese traditional music, including Gagaku, Buddhist chant, Biwa music, Koto music, Shamisen music, and music used in various theatrical forms.

160B. Studies in Japanese Court Music. (4) Lecture, two hours; laboratory, one hour. Preparation: minimal musical ability. In-depth study of Japanese court music, including historical background, with emphasis on understanding the instrumental techniques and notation of various instruments of the court orchestra.

170. Acoustics. (4) Lecture, four hours; discussion, one hour. Interrelationship of acoustical and musical phenomena. Tuning systems, consonance and dissonance, tone quality. Lecture, demonstration, and discussion; tours of instrumental collections and acoustical research facilities.

171. Instruction in Advanced Jazz Performance. (2) Laboratory, one hour. Preparation: advanced performance ability as demonstrated by audition. Study of jazz repertoire and techniques for specific instruments and voice. May be repeated for a maximum of 12 units.

172A-172B. Cognitive Psychology of Music. (4-4) **172A.** Lecture, four hours; discussion, one hour. Designed for nonmajors. Introduction to psychology of music; historical background and the broad field of study, including use of music as a stimulus, tests and measurements, and related modes of musical behavior. **172B.** Requisite: course 172A. Study of psychological factors and problems in music from points of view of listener, performer, and composer.

173. Experimental Research in Music. (4) Recommended for Music majors in all specializations. Theories and processes in various modes of musical experimentation: physical, perceptual, psychological, pedagogical, quantificational, statistical procedures.

174. Aesthetics of Music. (4) Lecture, four hours; discussion, one hour. Designed for nonmajors. Historical survey of musical aesthetic thought and practice. Selected readings and musical examples.

175. Sociology of Music. (4) Designed for Ethnomusicology, Music History, and Music majors. Introduction to sociology of music, its principles and basic concepts, and its critical significance for sociomusical inquiry, including study of popular music, ethnomusicology, and cultural politics of music. P/NP or letter grading.

M177. Jazz Combo. (2) (Same as Music M177.) Small group performance of various styles in ensembles of three to 10 musicians. May be repeated for a maximum of 12 units.

C179. Proseminar: Systematic Musicology. (4) Seminar, three hours. Introduction to systematic musicology, including basic readings in aesthetics/philosophy; anthropology, sociology, and ethnomusicology; psychology and acoustics. May be concurrently scheduled with course C203.

M180. Analysis of Traditional Music. (4) (Same as Folklore M180.) Designed for Ethnomusicology, Music History, and Folklore majors. Intensive study of methods and techniques necessary to understand traditional music.

181. Anthropology of Music. (4) Designed for Ethnomusicology, Music History, and Anthropology majors. Cross-cultural examination of music in context of social behavior and how musical patterns reflect patterns exhibited in other cultural systems, including economic, political, religious, and social structure.

M186. Senior Recital or Research Paper. (No credit) (Same as Music M186.) Preparation and performance of one-hour senior recital of jazz repertoire or preparation of a senior paper (topic and length to be approved by assigned adviser). P/NP grading.

190. Study of Ethnomusicology. (4) (Formerly numbered C190A.) Lecture, three hours. Requisites: courses 10A-10B-10C, 20A-20B-20C. Designed for Ethnomusicology majors. Introduction to history of the field, basic fieldwork and analysis methods, and current issues in research.

191A-191Z. Advanced World Music Performance Organizations (2 each) Activity, three hours. Limited to Ethnomusicology majors. Advanced study of traditional vocal and instrumental world music. May be repeated for credit without limitation. **191A.** Music and Dance of the American Indians; **191B.** Music of Bali; **191C.** Music and Dance of the Balkans; **191D.** Music of China; **191E.** Music and Dance of Ghana; **191F.** Music of India; **191G.** Music of Japan; **191H.** Music of Java; **191J.** Music of Korea; **191K.** Music of Mexico; **191L.** Music of Persia; **191M.** Music of Thailand; **191N.** Music of the Near East; **191P.** Music of African Americans; **191Z.** Open Ensemble.

192. Advanced Private Instruction in Music. (2) Studio, one hour. Preparation: two years of courses 91A through 91Z or 92. Limited to Ethnomusicology majors. Advanced private or semiprivate music instruction with a distinguished community-based musician, which must be arranged by students and approved by course instructor. May be repeated for credit without limitation.

197. Special Topics in Ethnomusicology. (4) Lecture/seminar, three hours. Selected topics in ethnomusicology. Consult *Schedule of Classes* for topics and instructors. May be repeated for credit. P/NP or letter grading.

199E. Special Studies in Ethnomusicology. (2 to 4) Hours to be arranged. Preparation: 3.0 grade-point average. Limited to seniors. Individual studies in ethnomusicology resulting in research project. May be repeated for a maximum of eight units.

199S. Special Studies in Systematic Musicology. (2 to 4) Hours to be arranged. Preparation: 3.0 grade-point average. Limited to seniors. Individual studies in systematic musicology resulting in research project. May be repeated for a maximum of eight units.

Graduate Courses

200. Research Methods and Bibliography. (6) Lecture, three hours. Designed for graduate students. Guided writing, utilizing specific bibliography, in ethnomusicology and systematic musicology.

201A-201B. Proseminars: Ethnomusicology. (4-4) (Formerly numbered C201A-C201B.) Lecture, three hours. Designed for graduate students. Basic literature and schools of thought in the field of ethnomusicology from the late 19th century to the present.

C203. Proseminar: Systematic Musicology. (4) Seminar, three hours. Introduction to systematic musicology, including basic readings in aesthetics/philosophy; anthropology, sociology, and ethnomusicology; psychology and acoustics. May be concurrently scheduled with course C179.

207. Seminar: North American Indian Music. (4) Seminar, three hours. Requisite: course 106A or 106B or 106C. Survey of representative musical styles of Native North American Indians, including problems of transcription, methods of analysis, symbolic implications of song texts. Emphasis on interrelationship between music and cultural context. Influence of Western music in acculturative contexts.

208. Seminar: Latin American Music. (4) Seminar, three hours. Review of bibliographic, methodological, and philosophical bases of musical research in Latin America, working from both general and specific perspectives. Exploration of research problems and investigations on specific musical cultures and distinct genres of musical expression.

M211. Seminar: African American Music. (4) (Same as Afro-American Studies M211.) Seminar, three hours. Requisites: courses M110A-M110B. Designed for graduate students. Intensive investigation of problems, theories, and methods of research related to study of African American music. Emphasis on relationship of problems to representative styles of African American music.

228. Seminar: Balkan Music. (4) Seminar, three hours. Requisite: course 128. Major issues in study of Balkan music, including song text analysis, music instruments, dance music, rituals and customs, minorities, and ideology.

CM232. Celtic Folk Music. (4) (Same as Folklore CM232.) Survey and analysis of indigenous traditional music in lands where a Celtic language is or was spoken into modern times. Instrumental and vocal genres, context and performance, social value and ideology. Concurrently scheduled with course CM132. S/U or letter grading.

237. Seminar: African Music. (4) Seminar, three hours. Requisite: course 136A or 136B. Intensive investigation of musical style; historical, social, and cultural aspects of indigenous musical traditions and related art forms.

240. Music of Arabic-Speaking Near East. (4) Lecture, three hours. Requisite: course 282 or course in ear training, analysis, and theory. Investigation of historical and cultural backgrounds, main musical styles, relationship between theory and practice and emphasis on mode and improvisation, and 20th-century trends. Concurrent participation in Near East performance ensemble (course 91N) required.

241. Music of Iran and Other Non-Arabic-Speaking Communities. (4) Lecture, three hours. Requisite: course 282 or course in ear training, analysis, and theory. Comparative study of music of Iran and other related areas, including Turkey, with particular reference to their historical and cultural background, sources on music theory and aesthetics, instruments, style, technique of improvisation, and contemporary practice. Concurrent participation in Near East performance ensemble (course 91N) required.

248A-248B. Classical Music of India. (4) Lecture, three hours. Requisite: course 146 or 147. Study of history, theory, and practice of north and south Indian classical music. During first term, emphasis on music history and traditional theory; second term, analysis of present-day forms, styles, techniques, and musical instruments. Concurrent participation in Indian performance group (course 91F) required.

C250. Music and Politics in East Asia. (4) Requisite: course 20C. Limited to ethnomusicology majors. Political imperatives have long had a direct and often explicit impact on music sound and context in East Asia. Examination of interaction of ideology and musical practice in medieval Korea and in contemporary Korea, Japan, Taiwan, and China. Concurrently scheduled with course C150.

250A-250B. Music of Indonesia. (4-4) Lecture, three hours. Requisite: course 20C. During first term, emphasis on music and related performing arts of Java. Focus on music and performing arts of Bali and other Indonesian islands during second term. Concurrent participation in one Indonesian performance group (course 91B or 91H) required.

252. Seminar: Music of Mainland Southeast Asia. (4) Seminar, three hours. Requisite: course 20C. Presentation of materials concerning musical performance traditions of Laos, Cambodia, Vietnam, Thailand, and Burma, both in mainland Southeast Asia and in the American context, with perspectives from archaeology, history, performance theory, applied anthropology, and ethnomusicology.

C256A. Music in China. (4) Requisite: course 20C. Limited to ethnomusicology majors. Survey of traditional, popular, and Western-influenced musics currently widespread in China, including musical analysis of different genres; examination of contexts in which they exist. Investigation of profound effect of Confucian and Communist ideologies on music. Concurrently scheduled with course C156A.

C259. Music on China's Periphery. (4) Lecture, four hours; outside study, eight hours. Designed for graduate ethnomusicology, music, musicology, and world arts and cultures majors. Survey of musics from China's border regions and neighboring countries: technical musical characteristics and important contextual issues related to traditional and modern styles from Mongolia, Uighurs of Xinjiang, Tibet, Tibeto-Burman peoples, Hmong, and indigenous peoples of Taiwan. Concurrently scheduled with course C159. S/U or letter grading.

263. Perspectives in Popular Music Research. (4) Seminar, three hours. Investigation of theoretical paradigms, issues, and research models of popular music, with emphasis on world music genres, local/global markets, mass mediation, appropriation and aesthetics of style, ethnographic methods, and impact of popular music studies on ethnomusicology. Letter grading.

271. Seminar: Acoustics of Music. (6) Seminar, three hours. Requisite: course 170. Selected topics in acoustics, including laboratory methodologies and practical applications. Topics include Western and non-Western instruments, tuning systems, psychoacoustics, and methods of spectral analysis. May be repeated once for credit.

273. Seminar: Psychology of Music. (6) Seminar, three hours. Requisite: course 173. Selected topics in psychology of music, including recent findings in brain research, musical perception, learning, cognition, memory, therapy, affect, meaning, and measurement. May be repeated once for credit.

275. Seminar: Aesthetics of Music. (6) Seminar, three hours. Requisite: course 176. Specific topics in Western and non-Western aesthetic thought, including value, meaning (semiotics), historical development of theoretical perspectives and critical theory, and interpretation. May be repeated once for credit.

279. Seminar: Systematic Musicology. (4) Seminar, three hours. Requisite: course 170. Exploration of specific topics in general field of systematic musicology covering disciplines such as anthropology, acoustics, aesthetics, music perception, philosophy, organology, sociology, and experimental approaches. May be repeated for credit.

281A-281B. Seminars: Field and Laboratory Methods in Ethnomusicology. (6-6) Seminar, three hours; laboratory, two hours. Requisites: courses 201A-201B. Fieldwork concepts and methods using technical equipment, conducting interviews, dealing with ethical issues, and designing research projects.

282. Seminar: Analysis. (6) Seminar, three hours. Requisite: course M180 or graduate ethnomusicology student. Intensive discussion of techniques used in ethnomusicological analysis, including transcription and notation, with emphasis on analysis of musical performance and music events.

283. Seminar: Study of Musical Instruments (Organology). (6) Seminar, three hours. Requisites: courses 201A-201B. Musical instruments studied in terms of their structures, performance contexts, cultural significance, and patterns of change.

284. Seminar: Anthropology of Music. (4) Requisites: courses 201A-201B. Analysis of current anthropological paradigms and issues that have major impact on ethnomusicology.

285. Seminar: Comparative Music Theory. (6) Seminar, three hours. Comparative study of codified music theories of select cultures — Western and non-Western — considered in themselves and as expressions of their societies. Theory considered as a science of music; its place between cultural values and artistic practice in different civilizations.

M287. Seminar: Folk Music. (4) (Same as Folklore M258.) Seminar, three hours.

290. Seminar: Ethnomusicology. (6) Seminar, three hours. Requisites: courses 20A-20B-20C, 200, 201A-201B. May be repeated for credit.

292A-292Z. Seminars: Special Topics in Ethnomusicology. (4) Designed for graduate students. Utilization of special interests and expertise of regular and visiting faculty; topics of current interest presently offered in ethnomusicology program.

375. Teaching Apprentice Practicum. (1 to 4) Preparation: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

495A. Teaching Apprentice Practicum. (2) (Formerly numbered 495.) Eight weekly two-hour discussion sessions, plus intensive training session during Fall Quarter registration week. Preparation: appointment as teaching apprentice in Ethnomusicology Department. Required of all new teaching apprentices. Special course dealing with problems and practices of teaching ethnomusicology and systematic musicology at college level. May not be applied toward degree requirements. S/U grading.

495B. Teaching with Technology. (2) Seminar, three hours; outside study, three hours. Limited to graduate ethnomusicology students. Training in presentation, spreadsheet, web design, and digitization software, and its application in classroom and in preparation of an electronic teaching portfolio. S/U grading.

596. Directed Individual Studies. (2, 4, or 6) Only four units may be applied toward M.A. minimum course requirements.

597. Preparation for Master's Comprehensive Examination or Ph.D. Qualifying Examinations. (2 or 4) May be repeated for credit. S/U grading.

598. Guidance of M.A. Thesis. (4, 8, or 12) May be repeated for credit. S/U grading.

599. Guidance of Ph.D. Dissertation. (4, 8, or 12) May be repeated for credit. S/U grading.

Scope and Objectives

The European Studies Program provides undergraduates with an opportunity to study Europe from the vantage points of several disciplines in the humanities and social sciences. Its primary goals are twofold: to enable students to cross the existing boundaries between and within the humanities and social sciences and to develop approaches to European society and culture consonant with the dramatic changes taking place in that region. Not only has the Cold War model of distinct eastern and western blocs lost the bulk of its explanatory power, but European culture, economy, and social structure have been transformed by immigration, unification, Americanization, and new developments in the intellectual and political realms.

The events of recent years make it clear that the University and its students require new academic approaches to the region. The demise of the Soviet Bloc, the increased ethnic conflict throughout the region, the migration of peoples within Europe and from other parts of the world, the challenges of a rapidly evolving global economic system, and the uncertainties inherent in the process of unification — all these developments call into question the intellectual configurations that have long dominated our

thinking. Today the regions of Europe provide a laboratory for examining — and finding solutions for — everything from efforts to integrate people of color to changes in the family and the status of women. They challenge us to consider new philosophical, artistic, and literary approaches and require us to come to grips with the collapse of socialist command economies in the East and the exhaustion of once-successful welfare states in the West.

To enable students to consider these questions, the European Studies major offers an interdisciplinary program leading to the Bachelor of Arts degree. Students are required to (1) study a European language other than English, (2) develop a historical perspective on European issues, (3) examine European culture, society, politics, and economy, and (4) acquire basic analytical and theoretical skills. Central to this effort are a series of core seminars and a senior essay to encourage majors to delve into a research topic of their choice.

Undergraduate Study

European Studies B.A.

The curriculum is designed to serve the needs of students who wish to (1) approach the study of Europe from a structured, interdisciplinary perspective, (2) pursue graduate work in disciplines permitting the study of Europe, (3) orient their professional life toward European affairs in fields such as law, business, diplomacy, journalism, and human services, and (4) acquire valuable skills in foreign languages and writing that will assist them in their careers.

Admission

Interested students should meet with the program chair no later than the beginning of the sophomore year to discuss requirements and formulate their course of study. Students are expected to declare the major at the end of their sophomore year, following normal UCLA procedures, and must have a minimum grade-point average of 2.5 in all preparation courses. Transcripts and course plans demonstrating that they will have completed all lower division requirements by the end of their junior year must be presented.

Foreign Language Requirement

Students must prepare for the major by studying a European language other than English. This language — the declared foreign language — helps to focus the major and determine options for the period of study abroad. Students are expected to fulfill the specific requisites of their selected language department (French, Germanic Languages, Italian, Slavic Languages and Literatures, Spanish and Portuguese) for entrance into upper division courses. Students who wish to study Latin or Greek are also required to demonstrate proficiency in a modern language. In most cases, courses 1, 2, 3, 4, 5, 6, or the equivalent fulfill the requirement (Italian and Spanish have slightly different course numbers and require-

ments). Students must complete the lower division foreign language requirement by the end of the sophomore year.

Preparation for the Major

Required: (1) *Geography* — demonstrated competency in geography by passing an examination given annually by the program; (2) *humanities and the arts* — one course from Philosophy 1, 2, 4, 5A, 6, 7, 8, 21, or 22; one lower division introductory language department course in literature or civilization that focuses on the declared foreign language; one course from Art History 54, 57, Music History 2B, or 13; (3) *social sciences* — Economics 1 or 5; two courses from History 1A, 1B, 1C; two courses from Geography 3, 5, Political Science 10, 20, 30, 50, Sociology 1, 2, M18, Women's Studies 10.

By carefully selecting courses for the Preparation for the Major, students can fulfill their general education requirements in the social sciences, foreign language, quantitative reasoning, and humanities.

The Major

Required: (1) At least one upper division course in the literature of the declared foreign language, with instruction and reading assignments in that language (see the list of approved courses below); (2) one course from History 124A, 124B, 125A through 125F, 126A through 126F, 127A, 127B, 128A, 128B, 128C, 129A, 129B, 129C, 131A through 131D, 132A, 132B, 133A, 133B, 134A, 134B, 141A, 141B, or 141C; (3) European Studies 101 and 199; (4) at least eight electives selected from the list of approved courses, with a minimum of three courses from humanities and three from social sciences. Electives must either continue the regional focus, introduce a theoretical and methodological perspective, or introduce a rationally conceived comparative point of view (sample programs are on file in the program office).

During their senior year students must write an extended paper offering original research on a topic of interest to them. Topics must be approved by a faculty adviser selected by the student and endorsed by the program's executive committee.

Students must consult with the program chair to design their upper division coursework.

Study in Europe

The program expects students to spend at least one term — and preferably a full academic year — studying in the European country most relevant to their work. This is normally done under the auspices of the University of California Education Abroad Program; however, alternative arrangements can be made at UCLA if students have financial or personal considerations that may prevent them from going overseas. To obtain UCLA credit after returning to campus, students must have their foreign transcripts evaluated by the program faculty and staff.

European Studies

Upper Division Courses

101. Introduction to European Studies. (4) (Formerly numbered M101.) Discussion, three hours; outside study, nine hours. Limited to and required of European Studies majors. Interdisciplinary seminar that introduces students to central topics, themes, and concepts of European studies, including the individual and the state, cultural life, economic relations, nationalism, and international relations.

102. Special Topics in European Studies. (4) Discussion, three hours; outside study, nine hours. Variable topics. May be repeated for credit.

199. Independent Study for Thesis Writers. (4) Limited to and required of senior European Studies majors. Independent study under supervision of sponsoring professor.

Course List

All courses are not offered every academic year. Students should contact the individual departments or the European Studies staff for information about the availability of specific courses.

Anthropology

- 130. Study of Culture
- 132. Technology and Environment
- 133Q. Symbolic Systems
- 133R. Aesthetic Systems
- M140. Language in Culture
- 150. Study of Social Systems
- M154Q. Gender Systems: Global
- 156. Comparative Religion
- 159. Warfare and Conflict
- 182. History of Anthropology
- 183. History of Archaeology

Art History

- M102A. Minoan Art and Archaeology
- M102B. Mycenaean Art and Architecture
- M102C. Archaic Greek Art and Archaeology
- M102D. Classical Greek Art and Archaeology
- M102E. Hellenistic Greek Art and Archaeology
- M102F. Etruscan Art
- M102G. Roman Art
- M102H. Late Roman Art
- M102I-M102J-M102K. Classical Archaeology
- 105A. Early Christian Art
- 105B. Early Medieval Art
- 105C. Romanesque Art
- 105D. Gothic Art
- 105E. Byzantine Art
- 105F. Late Gothic Art and Architecture
- 106A. Italian Art of the *Trecento*
- 106B. Italian Art of the *Quattrocento*
- 106C. Italian Art of the *Cinquecento*
- 106D. Late Renaissance Art: Counter-Reformation
- 108A-108B. Northern Renaissance Art
- 109A, 109B. Baroque Art
- 109C. European Art of the 18th Century
- 109D. Art and Architecture of Georgian England
- 110A. European Art of the 19th Century
- 110B. European Art of the 19th Century: Realism and Impressionism
- 110C. European Art of the 19th and 20th Centuries: Postimpressionism to Surrealism
- 150D. Selected Topics in Contemporary Art

Bulgarian (Slavic Languages)

- 154. Survey of Bulgarian Literature

Classics

140. Topics in History of Greek Literature
 141. Topics in History of Latin Literature
 142. Ancient Epic
 144. Topical Studies in Ancient Culture
 M145A. Ancient Greek and Roman Philosophy
 M145B. Later Ancient Greek Philosophy

 Denise K.C. Sur, M.D., *Santa Monica-UCLA*
 Richard P. Usatine, M.D., *Predoctoral Program*

Scope and Objectives

The Department of Family Medicine seeks to provide all students with a basic introduction to family-centered care in both the inpatient and ambulatory settings. During the basic clerkship, students develop (1) an appreciation of the breadth and scope of family medicine, (2) a basic knowledge in the broad content areas of family medicine, and (3) fundamental clinical skills appropriate to family medicine. The overall goal is to provide students with the opportunity to gain an understanding and appreciation of the central role of the primary care physician in the health care system, and to offer advanced clinical training for those students interested in pursuing careers in family medicine. Further, the basic curriculum includes an overview of health care issues facing underserved and immigrant populations in urban America, as well as an introduction to health services research in family medicine.

Family medicine faculty members are active both in leadership roles in the doctoring curriculum and in teaching in the preclinical years for all students. All first-year students are as-

signed to work with a family medicine preceptor once a month on a longitudinal basis for the entire year as part of the doctoring program. In the third and fourth (clinical) years, required and elective opportunities exist. All students take a required four-week clerkship in the third year, which is offered at over 10 teaching sites.

For further details on the Department of Family Medicine and a listing of the courses offered, see the *Announcement of the UCLA School of Medicine*.

Scope and Objectives

The purpose of the Film and Television Department is to develop in its students a scholarly, creative, and professional approach to the film and television arts. The aim of the department is to train graduates who will eventually make original contributions in their chosen field.

The department offers graduate programs leading to the Master of Arts, Master of Fine Arts, and Ph.D. degrees in Film and Television.

Undergraduate Study

Film and Television B.A.

The undergraduate Film and Television major encourages development of a personal vision which incorporates creative, practical, intellectual, and aesthetic values. Within the context of a liberal arts education, the program provides a broad background in the field and in the diversity of film and television practice, including courses in history and theory, critical thinking, animation, screenwriting, and the fundamentals of film, video, and television production.

Students are admitted for Fall Quarter only. Admission is highly competitive, and only a limited number of students can be accepted each year. Prior to entry, students are expected to complete at least 90 quarter units (60 semester units) with a 3.0 grade-point average or better and the general education requirements of the School of Theater, Film, and Television. Applicants are also required to submit two letters of recommendation and a portfolio of original written work consisting of (1) a personal essay, (2) a critical essay on a film or major television program, and (3) a creative writing sample. For further information on admission requirements, contact the Student Services Office, School of Theater, Film, and Television, UCLA, 103 East Melnitz Building, Box 951622, Los Angeles, CA 90095-1622.

Preparation for the Major

Required: Film and Television 106A, 106B or 106C, 110A, and one theater course (history, literature, or production).

The Major

Required: Film and Television 115, 130A, 130B, 150, 154, 163, 185, 192; one critical studies elective (not previously taken as preparation for the major) from 106B, 106C, 107, 108, 112, 113, 114; and a senior concentration (at least 20 units) from one of the following areas: (1) *film production* — courses 175A, 175B, 178, (2) *television and video production* — courses 165, 176A, 176B, 186 or 187B, 199, (3) *screenwriting* — courses 130C, 135, 199, (4) *animation* — courses 181A, 181B, 181C, (5) *critical studies* — courses 106A, 106B, 106C, 107, 108, 110C, 112, 113, 114, 116, 127, 199.

Students should be mindful of the exigencies inherent in filmmaking and be prepared to meet the additional demands of time and costs.

Students are required to perform assignments on each other's projects. In addition, the department reserves the right to hold for its own purposes examples of any work done in classes and to retain for distribution such examples as may be selected.

Consult the *Schedule of Classes* for courses limited to majors only.

Graduate Study

The following constitutes introductory information regarding graduate degree programs and is based on the 1998-99 edition of *Program Requirements for UCLA Graduate Degrees*. Complete, annual editions of *Program Requirements* are available (listed under "Publications") on the Graduate Division website at <http://www.gdnet.ucla.edu>. Students are subject to the degree requirements as published in *Program Requirements* for the year in which they matriculate.

Master's Degrees

The Film and Television Department offers the Master of Arts (M.A.) degree in Film and Television and the Master of Fine Arts (M.F.A.) degree and participates in an articulated degree program with African Area Studies.

Master of Arts

Admission

Students are admitted to the M.A. program in Film and Television in the Fall Quarter only. Admission is competitive, and only a limited number of students are accepted each year. The department does not have an application in addition to the one used by Graduate Admissions, and no screening examination prior to admission is required.

Additional admission requirements are noted under each specific degree program description.

Applicants must submit a sample of scholarly or critical writing, a statement of purpose, three letters of recommendation, and other information such as a résumé, Graduate Record Examination (GRE) scores, and proof of competence in English for international students whose native tongue is not English (such as TOEFL scores) that may be required to establish the quality of their work in the specialization.

Areas of Study

The program requires that students be conversant in both film and television, as they are tested on each in the comprehensive examination.

Course Requirements

A minimum of nine courses is required, five of which must be 200-level courses in film and/or television history, theory, and criticism. Of the five courses, Film and Television 206C, 208B, and 217 are required core courses. In addition, Film and Television 200 is required of all students. All five of the graduate-level courses must be completed with grades of B or better.

Only eight units of Film and Television 596A, 596B, 596C, and 598 may be applied toward the total course requirement for the degree, and none of these courses may be applied toward the minimum graduate course requirement.

Students who wish to write a thesis-length paper may petition the critical studies committee to do so; if approved, this would be done through a two-quarter thesis course.

Comprehensive Examination Plan

The written examination is taken at home over two full consecutive days and examines a broad range of knowledge in film and television. After completion, the committee grades students either pass or fail. Students may be reexamined on any failed portions of the examination when it is next regularly scheduled, or within the year following the term in which it was first taken. The examination is required of all M.A. students applying to the Ph.D. program.

Thesis Plan

None.

Master of Fine Arts

Admission

Students are admitted to the M.F.A. program in Film and Television in the Fall Quarter only. Admission is competitive, and only a limited number of students are accepted each year. The department does not have an application in addition to the one used by Graduate Admissions, and no screening examination prior to admission is required. Applicants with diverse backgrounds and undergraduate majors in areas other than film and television are encouraged. Applicants must state clearly the degree objective (M.F.A.) and the area of specialization desired within the program: animation, film/television production, screenwriting, or producer's program. All areas of specialization require three letters of recommendation.

Applicants intending to concentrate in film/television production must submit a description of a film or television project that may possibly be undertaken in graduate study. The description should be in proposal or treatment form, two to three pages in length. This material is nonreturnable.

Applicants intending to concentrate in writing must submit samples of creative writing such as screenplays, short stories, plays, or poems.

Applicants intending to concentrate in animation must submit a description of an animation project that may possibly be undertaken in graduate study, preferably in storyboard form. Other creative work may be submitted.

Applicants intending to concentrate in the producer's program may submit a portfolio of supporting material which shows evidence of creative background, or a substantial statement of purpose and resume.

M.A. African Area Studies/M.F.A. Film and Television

The African Area Studies Program and the Department of Film and Television have an articulated degree program that allows students to combine study for the M.A. in African Area Studies with the M.F.A. in Film and Television,

with a specialization in motion picture/television. Students must be accepted by both the Film and Television Department and the Program in African Area Studies before admission is offered.

Areas of Study

Consult the department.

Course Requirements

A total of 18 courses is required for the degree, five of which must be at the graduate level. At least three departmental courses must be taken outside each student's specific program: two of these must be approved critical studies seminars and the third must be from one of the other M.F.A. areas. Course requirements for each specialization are available in the Student Services Office, Department of Film and Television.

Only 16 units of Film and Television 596 may be applied toward the total course requirement, and only eight of these units may be applied toward the minimum graduate course requirement. Only four units of Film and Television 596A and four units of 596B may be taken prior to advancement to candidacy. Film and Television 596C through 596F may be taken only after advancement to candidacy.

Fieldwork and internships are not required but may be taken as courses which may be applied toward the degree.

Comprehensive Examination Plan

The comprehensive plan is satisfied by fulfilling projects appropriate to the specializations. No later than the beginning of the final quarter of residence, students must file the appropriate documents for advancement to candidacy and receive approval for the advancement from the M.F.A. advisory committee.

Thesis Plan

None.

Doctoral Degree

Admission

Students are admitted to the program leading to the Ph.D. degree in Film and Television in the Fall Quarter only. Admission is competitive, and only a limited number of students are accepted each year. The department does not have an application in addition to the one used by Graduate Admissions, and no screening examination prior to admission is required.

Completion of an M.A. or M.F.A. degree equivalent to that offered by the UCLA Department of Film and Television is required. In exceptional cases, students with an M.A. outside the field are considered for direct admission to the program. The dossier submitted for admission must contain a letter describing reasons for wishing to earn the Ph.D., the master's thesis or writing samples that demonstrate a high level of ability to write criticism or historical narrative, three letters of recommendation, Graduate Record Examination (GRE) scores, and proof of competence in English for interna-

tional students whose native language is not English (such as Test of English as a Foreign Language scores).

Major Fields or Subdisciplines

Students are expected to understand film and television within their social contexts as significant forms of art and communication, and to achieve by disciplined study a mastery of their history, theory, and criticism.

Course Requirements

Each student must take a minimum of 13.5 courses during the first six quarters of residence. Three required Ph.D. core courses must be completed during the first year of residence: Film and Television 211B, 215, and 273. In their second year, students must take Film and Television 274 which is required in both the fourth and sixth quarters, and an independent study in the area of their dissertation in the fifth quarter. In addition to this core sequence, Film and Television 496 which counts as the .5 course, is required (normally in the first quarter of residence). Students also select seven additional graduate seminars, at least five of which must be approved critical studies seminars.

Students must create three areas of concentration. One is in the specific field of their dissertation, including Film and Television 271 and the dissertation-related independent study; students may include a fourth course in this concentration which is a critical studies seminar related to their dissertation. The other two areas are to be composed of three seminars each chosen to indicate focused competence in two areas of expertise. A suggested list of concentrations is as follows: film theory, criticism, narrative studies, film history, American film, European film, non-Western film/television, television studies, media and society, authors, genres, film and the other arts, film and television as a business enterprise, film/television production, and new media.

Written and Oral Qualifying Examinations

After completion of all language and course requirements, students are eligible to take and required to pass the Ph.D. written qualifying examination. This examination, which is given in the Spring Quarter only, is taken at home over four full consecutive days. After students pass the written examination, a doctoral committee is formed to administer the University Oral Qualifying Examination. Students are advanced to candidacy only on successful completion of this examination.

Film and Television

Upper Division Courses

106A. History of the American Motion Picture. (6) Lecture/screenings, eight hours; discussion, one hour. Historical and critical survey, with examples, of the American motion picture both as a developing art form and as a medium of mass communication. May be repeated once for credit with consent of department and topic change.

106B. History of the European Motion Picture. (6) Lecture/screenings, eight hours; discussion, one hour. Historical and critical survey, with examples, of the European motion picture both as a developing art form and as a medium of mass communication. May be repeated once for credit with consent of department and topic change.

106C. History of African, Asian, and Latin American Film. (6) Lecture/screenings, eight hours; discussion, one hour. Critical, historical, aesthetic, and social study — together with exploration of the ethnic significance — of Asian, African, Latin American, and Mexican films.

107. Experimental Film. (6) Lecture/screenings, eight hours; discussion, one hour. Study and analysis of unconventional developments in the motion picture.

108. History of Documentary Film. (6) Lecture/screenings, eight hours; discussion, one hour. Philosophy of documentary approach in the motion picture. Development of critical standards and examination of techniques of teaching and persuasion used in selected documentary, educational, and propaganda films.

110A. History of Broadcasting. (4) Lecture/viewing, six hours; discussion, one hour. Critical survey of broadcasting here and abroad. Consideration of social responsibilities and educational implications of broadcasting.

110C. World Media Systems. (4) Lecture/viewing, four hours; discussion, one hour. Requisite: course 110A. Designed for juniors/seniors. Global analysis of internal and external broadcasting services, with emphasis on their motives, origins, technologies, and programming. Special attention to political, economic, and regulatory constraints and common world media issues.

112. Film and Social Change. (6) Lecture/screenings, eight hours; discussion, one hour. Development of documentary and dramatic films in relation to and as a force in social development.

113. Film Authors. (6) Lecture/screenings, eight hours; discussion, one hour. In-depth study of a specific film author (director or writer). May be repeated once for credit with consent of department and topic change.

114. Film Genres. (6) Lecture/screenings, eight hours; discussion, one hour. Study of a specific film genre (e.g., Western, gangster cycle, musical, silent epic, comedy, social drama). May be repeated once for credit with consent of department and topic change.

115. Stylistic Studies for the Moving Image: Theory and Practice. (4) Lecture, four hours; screenings, four to eight hours. Drawing heavily on a wide array of historical examples and using laser disc technologies, examination of many expressive strategies potentially usable in creation of moving image art forms: iconography, editing, composition, kinesthetics, sound, narrative, discourse, and performance.

116. Film Criticism. (4) Lecture, four hours; laboratory, to be arranged. Study of and practice in film criticism.

M117. Chicanos in Film/Video. (6) (Same as Chicana and Chicano Studies M114.) Lecture/screenings, eight hours; discussion, one hour. Examination of representation of Mexican Americans and Chicanos in four Hollywood genres — silent “greaser” films, social problem films, the Western, and the gang film — which are major genres that account for films “about” or “with” Mexican Americans produced between 1908 and 1980. Examination of recent Chicano-produced films that subvert or “signify” on these Hollywood genres, including *Zoot Suit*, *The Ballad of Gregorio Cortez*, and *Born in East L.A.* Consideration of shorter, more experimental work that critiques the Hollywood image of Chicanos.

126. Acting for Film and Television. (4) Laboratory, six hours. Projects in acting for television, video, and film. May be repeated twice for credit.

127. Problems and Ethical Issues in Film and Telecasting. (4) (Formerly numbered 110B.) Lecture, three hours; laboratory, eight to 10 hours. Relevant and highly interactive lecture/discussion/workshop. Student production teams create multimedia presentations designed to provide meaningful information, raise consciousness, stimulate discussion, and provoke debate about today's powerful media messages (i.e., news, advertising, violence, sex, minority representation).

128. Media and Ethnicity. (4) Utilizing the Asian American experience, exploration of impact and uses of media on contemporary American ethnic communities. Role and techniques of media influence besides community utilization and production.

CM129. Contemporary Topics in Theater, Film, and Television. (2) (Same as Theater CM129.) Lecture, two hours; screenings, two hours. Limited to junior/senior and graduate theater/film and television students. Examination of creative process in theater, film, and television, with consideration of writing, direction, production, and performance. Overview of individual contributions in the collaborative effort; examination of distinctiveness and interrelations among these arts. Individual units include participation of leading members of theater, film, and television professions. May be repeated for a maximum of six units. Concurrently scheduled with course CM229.

130A. Screenwriting Fundamentals. (2) Lecture, one hour. Corequisite for graduate students enrolled in course 431. Examination of screenwriting fundamentals: structure, character and scene development, conflict, locale, theme, history of drama. Review of authors such as Aristotle, Egri.

130B. Screenwriting Fundamentals Workshop. (4) Discussion, three hours. Problems in film and television writing.

130C. Advanced Scene Writing Workshop. (4) Discussion, three hours. Requisites: courses 130A, 130B. Limited to Film and Television majors. Conception and writing of story, script outline, and first act for feature-length screenplay.

131. Nontheatrical Screenwriting for Film and Television. (4 or 8) Discussion, three hours. Research and writing of documentary, technical, educational, industrial, and propaganda scripts. May be repeated for a maximum of 12 units.

135. Advanced Screenwriting Workshop. (8) Workshop, three hours. Requisite: course 130B. Course in film and television writing. Original screenplays to be developed. May be repeated twice for credit.

150. Cinematography. (4) Lecture, three hours; laboratory, three hours. Limited to Film and Television majors. Introduction to image control in motion picture photography through exposure, lighting, and selection of film, camera, and lens. Supervised projects in photography to complement material covered in lecture.

151. Film and Television Image Laboratory. (4) Lecture, three hours; laboratory, to be arranged. Limited to Film and Television majors. Techniques of image manipulation, design, and art direction. May be repeated twice for credit (if repeated, students required to design and complete a short film).

152. Film and Television Sound Recording. (4) Lecture, three hours; laboratory, to be arranged. Limited to Film and Television majors. Introduction to principles and practices of film and television sound recording, including supervised exercises.

153. Motion Picture Lighting. (4) Lecture, three hours; laboratory, three hours. Requisite: course 150. Limited to Film and Television majors. Introduction to principles and tools of lighting used in visual storytelling through lectures, discussions, and screenings. Creative lighting techniques covering topics such as people, environment, spatial relationships, movement, color, special effects, and continuity.

154. Film Editing. (4) Lecture, three hours; laboratory, to be arranged. Limited to Film and Television majors. Introduction to artistic and technical problems of film editing, with practical experience in editing of image and synchronous sound.

163. Directing the Camera. (4) Workshop, eight hours. Limited to Film and Television majors. Investigation of expressive potential of the image within and beyond the narrative from a directorial perspective. Experiments with working methodologies which stimulate visual creativity and positioning the image as the fundamental element of cinematic expression.

164. Directing the Actor. (4) Exercises in analysis of script and character for purpose of directing actors. Emphasis on eliciting best possible performance from the actor. May be repeated twice for credit.

165. Advanced Narrative Television Directing. (4) Laboratory, six hours. Requisites: courses 130B, 185. Limited to Film and Television majors. Supervised exercises in television multicamera direction, with emphasis on creative use of cameras, sound, composition, and communication with those in front of and behind the camera. May be repeated twice for credit.

175A-175B. Undergraduate Film Production. (8-4 to 8) Limited to Film and Television majors. **175A.** Lecture, four hours; laboratory, eight hours. Writing, preproduction, and production for a short 16mm non-synch film. **175B.** Lecture, three hours; laboratory, eight hours. Completion of postproduction (editing, creation of nonsync sound tracks) for short film begun in course 175A.

176A-176B. Advanced Undergraduate Video Production (8-4 to 8). Discussion, three hours; laboratory, to be arranged. Requisite: course 185. Limited to Film and Television majors. Completion of a video production (no more than 20 minutes), including its writing, production, and editing.

177. Film and Television Acting Workshop. (2) Laboratory, four hours. Workshop providing opportunities for students to rehearse, perform, and evaluate their scenes under supervision and criticism of instructor. Three different production styles to which performers may need to adjust are (1) preproduction rehearsals with director, (2) single-camera experience, and (3) multiple-camera experience. May be repeated twice for credit (to accommodate performer's circumstance).

178. Film and Television Production Laboratory. (2 or 4) Laboratory, to be arranged. Supervised laboratory experience in various aspects of film and television production. May be repeated for a maximum of 12 units, but only eight units may be applied toward Film and Television major.

181A. Animation Design in Film and Television. (4) Lecture, three hours; laboratory, three hours. History and use of creative arts used in animation to form effective communication on film.

181B. Writing for Animation. (4 to 8) Lecture, six hours; laboratory, to be arranged. Requisite: course 181A. Research and practice in creative writing and planning for animated film. May be repeated for a maximum of 16 units.

181C. Animation Workshop. (4 or 8) Lecture, six hours; laboratory, to be arranged. Preparation: storyboard at first class meeting. Requisite: course 181A. Organization and integration of various creative arts used in animation to form a complete study of a selected topic. May be repeated for a maximum of 16 units.

185. Undergraduate Television and Video Production. (8) Laboratory, six hours (additional hours to be arranged). Limited to Film and Television majors. Instruction and exercises in basic techniques of television and video production.

186. Introduction to Documentary Video Production. (4) Lecture, three hours; laboratory, three hours; fieldwork, 12 hours. Limited to Film and Television majors. Viewing and discussion of selected documentaries and instruction in various production skills necessary to create video documentaries. Completion of a series of exercises from conceptualization through postproduction, culminating in production of short documentary.

187A-187B-187C. Producing and Directing Remote Multicamera Production. (4-6-6) Lecture/laboratory, three hours (additional hours to be arranged).

187A. Professionally oriented lecture/laboratory/field workshop course designed to provide disciplined planning, responsible leadership, and organizational and problem-solving skills required in deadline remote production. Emphasis on clarity of vision, storytelling, effective execution of pitch, preproduction, shoot, and editorial. **187B-187C.** Instruction and supervised productions of the remote experience, with focus on development and execution of concept. Experience closely patterned after professional experiences in working with talent, production venues, and production logistics of remote on-location video programs.

192. Film and Television Internship. (4 to 8) Field experience, to be arranged. Limited to senior Film and Television majors. Internship at film and television industry organizations. May be taken for a maximum of eight units.

193A. Film Curatorship. (4) Lecture, two hours; discussion, two hours; laboratory, four hours. Study of principles and techniques of film curatorship and research, including but not limited to acquisitions, cataloging, storage, and retrieval systems. Special attention to application of new technology, equipment, and program materials to film archival-library design for research and teaching.

193B. Television Curatorship. (4) Lecture, two hours; discussion, two hours; laboratory, four hours. Study of principles and techniques of television curatorship and research, including but not limited to acquisitions, cataloging, storage, and retrieval systems. Special attention to application of new technology, equipment, and program materials to television archival-library design for research and teaching.

199. Special Studies in Film and Television. (2 to 8) Preparation: 3.0 grade-point average in major. Limited to seniors. May be taken for a maximum of eight units.

Graduate Courses

200. Bibliography and Methods of Research in Film and Television. (6) Discussion, three hours; laboratory, four to six hours (additional screenings and/or video laboratory work as required). Designed for graduate students. Examination and study of research methods, techniques, and resources related to film and television research, including development of computer skills for preparation of bibliographies, on-line database searching and retrieval and, when appropriate, use of computer/videodisc technology for research.

203. Seminar: Film and Other Arts. (6) Discussion, three hours; film screenings, four to six hours. Designed for graduate students. Studies in interrelationships between film and fine arts, or performing arts, or literature, with emphasis on ways these other arts have influenced film. May be repeated twice for credit.

206A. Seminar: European Film History. (6) Discussion, three hours; film screenings, four to six hours. Requisite: course 106B. Designed for graduate students. Studies in selected historical movements such as expressionism, socialist realism, surrealism, neo-realism, New Wave, etc. May be repeated twice for credit.

206C. Seminar: American Film History. (6) Discussion, three hours; film screenings, four to six hours. Requisite: course 106A. Designed for graduate students. Study of central topics in American film history. May be repeated twice for credit.

207. Seminar: Experimental Film. (6) Discussion, three hours; film screenings, four to six hours. Designed for graduate students. Studies of form, style, politics, and history of experimental, innovative, avant-garde, and minority film and video.

208A. Seminar: Film Structure. (6) Discussion, three hours; film screenings, four to six hours. Designed for graduate students. Examination of various film conventions, both fictional and nonfictional, and of role of structure in motion picture.

208B. Seminar: Classical Film Theory. (6) Discussion, three hours; film screenings, four to six hours. Designed for graduate students. Study of principal topics and lines of inquiry that characterize theoretical writings of Arnheim, Eisenstein, Bazin, Mitry, etc.

208C. Seminar: Contemporary Film Theory. (6) Discussion, three hours; film screenings, four to six hours. Requisite: course 208B. Designed for graduate students. Study of redefinition of aims and methods of film theory through contemporary writings.

209A. Seminar: Documentary Film. (6) Discussion, three hours; film screenings, four to six hours. Designed for graduate students. Nonfictional film and its relation to contemporary culture.

209B. Seminar: Fictional Film. (6) Discussion, three hours; film screenings, four to six hours. Designed for graduate students. Film as fiction and its relation to contemporary culture. May be repeated once for credit.

209D. Seminar: Animated Film. (4) Discussion, three hours; laboratory, three hours. Designed for graduate students. Critical study of animated film: its historical development, structure, style, use, and relation to contemporary culture.

210. Seminar: Contemporary Broadcast Media. (4) Discussion, three hours (additional hours as required). Designed for graduate students. Consideration of issues raised by recent developments in television and radio, commercial and public, associated with innovations in satellite, cable, and cartridge systems.

211A. Seminar: Historiography. (4) Discussion, three hours. Limited to Film and Television M.A. candidates. Beginning examination of function and methods of writing film and television history as seen in works of key historians in the U.S. and Europe.

211B. Seminar: Historiography. (4) Discussion, three hours. Limited to Film and Television Ph.D. candidates. Examination of function and methods of writing film and television history as exemplified by key works in this tradition, with attention to central issues of historical thought on the media.

215. Seminar: Theory and Method. (4) Discussion, three hours. Limited to Film and Television Ph.D. candidates. Examination of major modes of theoretical reflection that bear on film and television through study of central texts of such traditions as phenomenology, auteurism, semiology, psychoanalysis, sociology, etc.

217. Seminar: Television History. (4) Discussion, four hours; viewing, to be arranged. Requisite: course 110A. Examination of origins and development of American television. Topics include industry structure, economics, policy and regulation, and programming.

218. Culture, Media, and Society. (4) Lecture, four hours; screenings, to be arranged. Emphasis on "discourse of the other(s)." Thematization of the other is concerned with theories of "difference" rather than similarity or identity — with how other cultures enter into politics of representation and representation of politics through metaphors of (1) difference without opposition, (2) heterogeneity without hierarchy, and/or (3) otherness without ethnocentrism. Examination of how women, national minorities, and Third World peoples have been rendered others; place of the cinematic apparatus in this process and how academization of others is positioned vis-à-vis mainstream critical discourse.

219. Seminar: Film and Society. (6) Discussion, three hours; film screenings, four to six hours. Designed for graduate students. Study of ways film affects and is affected by social behavior, belief, and value systems; considered in relation to role of media in society. May be repeated once for credit.

220. Seminar: Television and Society. (4) Discussion, three hours (additional hours as required). Designed for graduate students. Study of ways television forms affect and are affected by social behavior, belief, and value systems; study of technological and economic aspects of the medium. May be repeated once for credit.

221. Seminar: Film Authors. (6) Discussion, three hours; film screenings, four to six hours. Designed for graduate students. Intensive examination of works of outstanding creators of films. May be repeated twice for credit.

222. Seminar: Film Genres. (6) Discussion, three hours; film screenings, four to six hours. Designed for graduate students. Studies of patterns, styles, and themes of such genres as the Western, gangster, war, science fiction, comedy, etc. May be repeated twice for credit.

223. Seminar: Visual Perception. (4) Discussion, three hours (additional hours as required). Designed for graduate students. Aesthetic, psychological, and physiological principles of vision as they relate to ways in which man "sees" film and television, with emphasis on ways in which these are different from other visual experiences.

224. Computer Applications for Film Study. (4) Survey of computer applications relevant to film study, principally computer-videodisc systems and image capture technology.

CM229. Contemporary Topics in Theater, Film, and Television. (2) (Same as Theater CM229.) Lecture, two hours; screenings, two hours. Limited to junior/senior and graduate theater/film and television students. Examination of creative process in theater, film, and television, with consideration of writing, direction, production, and performance. Overview of individual contributions in the collaborative effort; examination of distinctiveness and interrelations among these arts. Individual units include participation of leading members of theater, film, and television professions. May be repeated for a maximum of six units. Concurrently scheduled with course CM129.

242. Digital Imagery and Visualization. (4) Lecture, three hours; laboratory, three hours. Introductory hands-on investigation of techniques of digital still imaging and aesthetics of digital image, in context of examining dynamics of cultural constructions and visual codes. Students conceive and produce several digital image visualizations.

243. Moving Digital Image. (4) Lecture, three hours; laboratory, three hours. Investigation of different ways of creating and manipulating linear moving images (digital video) on desktop computers, exploring both creative and theoretical aspects of this production environment. Students conceive and produce a number of short projects.

244. Interactive Multimedia Authoring. (4) Lecture, three hours; laboratory, three hours. Introduction to expressive and aesthetic potential of interactive digital media and its theoretical issues. Exploration of methodologies and tools for media integration, interface design, and interactive audiovisual construction. Students conceive, produce, and master individual interactive multimedia projects.

245. Creative Authoring for World Wide Web. (4) Lecture, three hours; laboratory, three hours. Exploration of creative aspects of the World Wide Web as medium for personal/collective expression. Students produce Web works and serve them on line. Contextualization of medium by looking at its history, embedded ideology, and sociopolitical consequences.

246. Issues in Electronic Culture. (6) Discussion, three hours; laboratory, three hours. Critical studies seminar with major hands-on laboratory component that explores impact of new digital technologies on contemporary culture and aesthetics. Students do laboratory projects using visualization, image manipulation tools, and Internet authoring tools.

247. Production Planning in Film and Television. (4) Discussion, three hours. Analysis of procedures and problems in preparing a script for film or television production, with emphasis on role of production manager in breaking down scripts, setting up shooting schedule, planning postproduction, and preparing budgets.

248. Advanced Digital Media Workgroup. (4) Discussion, four hours; laboratory, two hours. Designed for students with previous laboratory course experience, course provides opportunity to create large-scale digital media works with advanced software tools and techniques in a small process-oriented, creative workshop environment.

249. Digital Revolution. (4) Lecture, four hours; discussion, one hour; laboratory, one hour. Comprehensive survey to introduce students to emerging digital technologies, resulting new media, and their artistic, economic, and social implications. Topics include digital editing, digital previsualization, multimedia, World Wide Web, interactive television, and virtual reality.

268. Seminar: Short Film. (4) Seminar, two hours; discussion, two hours. Designed for graduate students. Study of problems presented by conceptualization of form and structure of the short film, with classical and student examples.

270. Seminar: Film Criticism. (6) Discussion, three hours; film screenings, four to six hours. Designed for graduate students. Study of key aesthetic questions of analysis and evaluation in relation to central works of motion picture criticism. May be repeated once for credit.

271. Seminar: Television Criticism. (4) Discussion, three hours (additional hours as required). Designed for graduate students. Analysis of major forms of television production and criticism it has elicited. May be repeated once for credit.

273. Seminar: Contemporary Film and Television Criticism. (6) Discussion, three hours; film and television screenings, four to six hours. Limited to Film and Television Ph.D. candidates. Study and practice of analytic and critical response, with emphasis on contemporary film and television.

274. Seminar: Research Design. (4) Discussion, three hours. Designed for second-year Film and Television Ph.D. students. Examination of general principles that govern formulation of major research projects and preparation of a prospectus for Ph.D. dissertation.

276. Seminar: Non-Western Films. (4) Discussion, three hours (additional hours as required). Designed for graduate students. Study of aesthetic and ideological impulses of selected films from Asia, Africa, and Latin America.

277. Seminar: Narrative Studies. (4) Discussion, three hours (additional hours as required). Designed for graduate students. Study of writings on theory of narrative structure and their significance for analysis of film forms.

289A-289B-289C. Current Business Practices in Film and Television. (4-4-4) Requisite: course 247. Designed for graduate students. Examination of current status of financing/production/distribution agreements, union agreements, music, copyright, etc., necessary to understand the film and television industry. May be taken in any sequence.

291A-291B-291C. Role of Management in Entertainment Industry. (4-4-4) Requisite: course 247. Designed for graduate students. Study of artistic, social, and economic criteria for decision making in production and distribution of motion pictures and entertainment programs. May be taken in any sequence.

292A-292B-292C. Network Television Management and Decision Making. (4-4-4) Lecture, two hours; discussion, two hours. Requisite: course 247. Designed for graduate students. Study of business structure and economic, social, and artistic criteria currently utilized by network television management. Only eight units may be taken for credit.

293. Seminar: Film and Television Curatorship. (4) Discussion, three hours (additional hours as required). Designed for graduate students. Study and practice of issues in archival research and administration.

298A-298B. Special Studies in Film and Television (2 to 4 each) Lecture/discussion. Designed for graduate students. Seminar study of problems in film and television, organized on topic basis. May be repeated once for credit.

375. Teaching Apprentice Practicum. (1 to 4) Preparation: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

400. Film Image Design Laboratory. (4) Lecture, two hours; laboratory, six hours. Limited to graduate film and television students. Conception and design of nonnarrative film imagery. One-minute experiments in the relation of meaning to technique, including manipulation of optics, photochemistry, elements of electronic processes, and display of time and motion. May be repeated once for credit.

402A-402B. Advanced Fiction Workshops. (8-8) Laboratory, 12 hours; fieldwork, to be arranged. Requisites: courses 405, 409, 410A-410B-410C, 433. Limited to 10 graduate film and television students per section. Production of a 10-minute fictional film or video project. Students budget, preplan, and complete photography on location and/or in studio by end of first term. In second term students must complete postproduction of their projects.

403A-403B-403C. Advanced Documentary Workshops. (4 to 8 each) Lecture/discussion/laboratory, 16 to 24 hours; fieldwork, to be arranged. Requisites: courses 405, 409, 410A-410B-410C, 433. Limited to graduate film and television students. Production of advanced individual documentary film or video projects. Students conceptualize, research, write, shoot (on location), and edit projects to completion. May be repeated once for credit.

404A-404B. Advanced Abstract/Experimental Media Workshops. (8-8) Lecture/discussion/laboratory, 12 hours; fieldwork, to be arranged. Requisites: courses 405, 409, 410A-410B-410C, 433. Limited to 10 students per section. Production of a 20-minute abstract or experimental film, video, or multimedia project. Students plan, design, and shoot their projects in first term and work as crew for each other in rotating assignments. In second term students must complete postproduction of their projects.

405. Television Production Workshop. (8) Laboratory, eight hours; other, to be arranged. Limited to graduate film and television students. Basics of television production and direction, focusing on studio multiple camera with minimal use of remote camera. Use of various formats of video production, including scripted and nonscripted projects, culminating in a narrative three-camera project.

406. Experimental Video Workshop. (4) Laboratory, six hours; other, to be arranged. Limited to graduate film and television students. Introduction to independent and experimental video with examination of impact of new video technologies in television, covering concepts of video art, new television, digital video, high-definition TV, and film and tape postproduction.

407. Video Documentary Workshop. (8) Laboratory, 12 hours. Limited to graduate film and television students. Exploration of documentary video, including screening a variety of international works and producing a short documentary project using single-camera field production techniques.

408A-408B. Video Editing. (4-4) Discussion, four hours; laboratory, to be arranged. Limited to graduate film and television students. Individual instruction in electronic editing. **408A.** On-Line Editing; **408B.** Off-Line Editing.

409. Directing the Actor for the Camera Workshop. (4) Workshop, six hours; laboratory, to be arranged; laboratory preparation, two to four hours. Limited to M.F.A. production program students. Team-taught with five weeks designed to give the director actor/camera techniques, and five weeks to offer basic strategies to elicit good performances from actors. Emphasis on problems faced when directing actors for film.

410A-410B-410C. Film Production Workshops (8-12-8) Lecture/discussion/laboratory, 24 hours; fieldwork, to be arranged. Requisites: courses 405, 409. Limited to graduate film and television students. Production workshop spanning three terms, designed to give hands-on experience in all aspects of film production (the tools and a practicum of the medium) as each student writes/directs/edits a 10-minute film.

417. Lighting for Film and Television. (6) Lecture, three hours; discussion, one hour; laboratory, six hours. Limited to graduate film and television students. Lectures, supervised exercises on a stage or in an exterior, screenings of scenes, and discussions aimed at learning to master the lighting to create an appropriate mood or atmosphere of a premeditated scene recorded on a film or through an electronic system. May be repeated twice for credit.

418. Cinematography and Directing. (12) Lecture, six hours; discussion, two hours; laboratory, 16 hours. Requisite: course 417. Limited to graduate film and television students. Supervised filming of short dramatic projects on the sound stage and at exterior locations that explore the complexity of the process, emphasizing balance and collaboration essential to both directing and photography in its varied technical, production, and creative aspects.

419. Advanced Cinematography. (4) Lecture, two hours; discussion, one hour; laboratory, one hour. Requisites: courses 417, 418. Limited to graduate film and television students. Advanced study of principles of cinematography, with emphasis on exposure, lighting, and selection of film, camera, and lenses.

423A. Direction of Actors for Film and Television. (4) Lecture, four hours; workshop. Preparation: first film project. Limited to graduate film and television students. Required of all production majors shooting a fiction thesis. Exercises in analysis of script and character for purpose of directing actors in film and television productions. Emphasis on eliciting best possible performance from the actor. May be repeated twice for credit.

423B. Advanced Direction of Actors for Film and Television. (4) Studio workshop, six hours. Requisite: course 423A. Limited to graduate film and television students. Advanced study and practice of directing actors before a camera. Emphasis on developing techniques to immediately enhance communication between director and actor on the set in order to maintain continuity from shot to shot.

431. Introduction to Film and Television Screenwriting. (4) Lecture, three hours. Limited to graduate film and television students. Introductory course in problems of film and television screenwriting.

433. Writing the Short Screenplay. (4) Lecture, three hours. Limited to graduate film and television students. Conception, development, and writing of a 20-minute film or video script in either fiction, documentary, or experimental medium, to be produced in one of the advanced workshops.

434. Advanced Screenwriting. (8) Discussion, three hours. Requisite: course 135. Advanced problems in writing of original film and television screenplays. May be repeated twice for credit.

435. Advanced Writing for Short Film and Television Screenplays. (4) Discussion, three hours. Requisites: courses 402A-402B or 403A-403B or 404A-404B. Limited to graduate film and television students. Required of students planning fiction projects. Final screenwriting course in which students write their thesis project (no longer than 30 minutes in length).

437. Nontheatrical Writing for Film and Television. (4) Discussion, three hours. Limited to graduate film and television students. Advanced problems in the field of documentary and special feature programs, with emphasis on research and preproduction. May be repeated for a maximum of 16 units.

451. Advanced Design for Film and Television. (4) Laboratory, to be arranged. Limited to graduate film and television students. Advanced study and practice of techniques and methods of design for motion pictures. Art direction for advanced workshop productions. May be repeated for a maximum of 12 units.

452A. Film and Television Sound Recording. (4) Lecture, three hours; laboratory, four hours. Limited to graduate film and television students. Principles and practices of film and television sound recording, including supervised exercises.

452B. Music Recording Workshop. (4) Lecture, four hours; laboratory, eight hours. Supervised exercises in studio music recording techniques, with emphasis on special requirements for motion pictures and television.

452C. Film and Television Sound Rerecording. (4) Lecture, three hours; laboratory, three hours. Limited to graduate film and television students. Recording of sprocketed media: basics of mixing 16mm and 35mm film soundtracks to single stripe or three stripe magnetic film. Overview of prepping tracks for final mix. Fundamentals of Automatic Dialogue Replacement and Foley. Rerecording and video/audio postproduction of unsprocketed media: emphasis on multitrack tape and nonlinear disk-based recording and editing systems. Includes all track building approaches, from production sound electronic editing, Automatic Dialogue Replacement, Foley, backgrounds, hard FX and MX through final mix. Techniques of combining sprocketed and unsprocketed media in postproduction.

454A-454B. Advanced Film Editing. (4-4) Lecture, three hours; laboratory, to be arranged. Preparation: submission of a rough cut and/or copy of screenplay. Limited to film and television thesis and advanced project students in postproduction phase of thesis or advanced project. Organization and operation of postproduction process.

459A-459B. Directing for Film and Television. (4-4) Lecture, three hours. Limited to graduate film and television students. Analysis and exploration, with specific scenes, of differences and many similarities in directorial approach to same literary material in theater, film, and television.

464A-464B. Advanced Film Directing. (8-8) Hours to be arranged. Limited to graduate film and television students. Special problems in direction of fictional and documentary films.

466A-466B. Advanced Professional Video Workshops. (8-8) Lecture, three hours; laboratory, to be arranged. Requisites: courses 405, 410A-410B-410C, 423A. Limited to graduate film and television students. Hands-on problems in working with various interrelated disciplines in a professional production experience, including interaction with students of design and acting from Department of Theater.

468. Creative Location Film Production. (8) Lecture, four hours; discussion, four hours; laboratory, to be arranged. Requisites: courses 247, 405, 410A-410B-410C, 423A, 433. Limited to graduate directing or producer's program students. Problems of location, production, directing, and cinematography in various "real-life" practical locations. Practical application of solving problems and communication within limitations of production experience.

475. Film I. (8) Discussion, three hours; laboratory, to be arranged. Designed for graduate students. Study of basic techniques of film production, including preproduction planning and production of a group short film.

476. Video I. (8) Discussion, three hours; laboratory, to be arranged. Designed for graduate students. Study of basic techniques of television and video production, including completion of one or more projects.

478. Video II. (8) Discussion, three hours; laboratory, to be arranged. Requisites: courses 185, and 405 or 476. Designed for graduate students. Group experience in video production with each member rotating on crew work in production of individual or collective projects.

482A-482B. Advanced Animation Workshops. (4 or 8 each) Lecture, three hours; laboratory, to be arranged. Requisites: courses 181A, 181B, 181C. Advanced organization and integration of various creative arts used in animation, resulting in production of a complete animated film. May be repeated for a maximum of 16 units.

486. Directed Individual Study: Preparation to Advance to Candidacy for M.F.A. in Production. (2 to 4) Preparation for thesis production, four to eight hours. Limited to M.F.A. production program students. Specialized development and organization of proposed thesis project prior to advancement to candidacy. Should be taken term before student plans to advance to candidacy.

487. Directed Individual Study: Postproduction Laboratory. (4) Laboratory, eight hours. Limited to M.F.A. production program students. Completion of projects in final stages of postproduction. May not be repeated.

488A. Interactive Animation. (4 to 8) Lecture, six hours; laboratory, to be arranged. Requisites: courses 181A, 181C, 489A. Organization and integration of various creative arts used in animation and interactive media to form complete study of a selective interactive animation project. May be repeated for a maximum of 16 units.

488B. Advanced Interactive Animation. (4 to 8) Lecture, six hours; laboratory, to be arranged. Requisite: course 488A. Organization and integration of various creative arts used in animation and interactive animation to form completed project of a selected interactive topic. May be repeated for a maximum of 16 units.

489A. Computer Animation in Film and Video. (4 to 8) Lecture, six hours; laboratory, four to eight hours; other, to be arranged. Preparation: a completed animated film. Requisites: courses 181A, 181C. Instruction in and supervised production of computer animation. May be repeated for a maximum of 16 units.

489B. Production in Computer Animation. (4 to 8) Lecture, six hours; laboratory, four to eight hours. Requisite: course 489A. Instruction in creation, preparation, and production of a complete and original computer animation film or tape. May be repeated for a maximum of 16 units.

496. Practice of Teaching Film and Television. (2) Discussion. Required once of all teaching assistants or associates in department. Orientation and preparation of graduate students who have responsibility to assist in teaching undergraduate courses in department; discussion of problems common to the teaching experience. May not be applied toward M.A., M.F.A., or Ph.D. May be repeated. S/U grading.

498. Professional Internship in Film and Television. (4, 8, or 12) Full- or part-time at a studio or on a professional project. Designed for M.F.A. program advanced students. Internship at various film, television, or theater facilities accentuating creative contribution, organization, and work of professionals in their various specialties. Given only when projects can be scheduled.

501. Cooperative Program. (2 to 8) Preparation: consent of graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Used to record enrollment of UCLA students in courses taken under cooperative arrangements with USC. S/U grading.

596A. Directed Individual Studies: Research. (2 to 12) Hours to be arranged. Limited to graduate students. May be repeated with consent of instructor.

596B. Directed Individual Studies: Writing. (2 to 12) Hours to be arranged. Limited to graduate students. May be repeated with consent of instructor.

596C. Directed Individual Studies: Directing. (2 to 12) Hours to be arranged. Limited to graduate students. May be repeated with consent of instructor.

596D. Directed Individual Studies: Design. (2 to 12) Hours to be arranged. Limited to graduate students. May be repeated with consent of instructor.

596E. Directed Individual Studies: Acting. (2 to 12) Hours to be arranged. Limited to graduate students. May be repeated with consent of instructor.

596F. Directed Individual Studies: Production. (2 to 12) Hours to be arranged. Limited to graduate students. May be repeated with consent of instructor.

597. Preparation for Ph.D. Qualifying Examinations in Film and Television. (2 to 12) Hours to be arranged. May be taken for a maximum of 12 units. S/U grading.

598. M.A. Thesis in Film and Television. (2 to 12) Hours to be arranged. Preparation: advancement to M.A. candidacy. Research and writing for M.A. thesis. May be taken for a maximum of 12 units. S/U grading.

599. Ph.D. Dissertation in Film and Television. (2 to 12) Hours to be arranged. Preparation: advancement to Ph.D. candidacy. Research and writing for Ph.D. dissertation. May be repeated. S/U grading.

Scope and Objectives

The interdisciplinary Folklore and Mythology Program, which leads to the Master of Arts and Ph.D. degrees, provides coordinated study of the traditional lifestyles of specific societies and culture areas, on the one hand, and systematic training in the research methods and investigative techniques of cross-cultural study, on the other. Courses focus on the nature, history, and functions of such traditional forms as narrative, music, art, dance, religion, festival, and speech and consider the part they play in human development and cultural existence. The program examines the ways in which human traditions both reflect and contribute to continuity and consistency in thought and life.

Trained folklorists pursue careers in teaching, research, governmental agencies, museum work and administration, performing groups and arts management, social work, the medical and legal professions, and business. Their responsibilities include documenting cultural and ethnic traditions, introducing traditional artists and their works to interested audiences, describing transformations of traditional processes and forms, and preserving on tape and film the customs and mores of social groups and individuals.

A variety of undergraduate courses offered by departments or by faculty participating in the interdepartmental program is also available to all University students. Those with undergraduate preparation in folklore and mythology studies may continue their work on the graduate level. For planning coursework, students should consult departmental counselors and the chair of the committee which administers the interdepartmental program.

Graduate Study

The following constitutes introductory information regarding graduate degree programs and is based on the 1998-99 edition of *Program Requirements for UCLA Graduate Degrees*. Complete, annual editions of *Program Requirements* are available (listed under "Publications") on the Graduate Division website at

<http://www.gdnet.ucla.edu>. Students are subject to the degree requirements as published in *Program Requirements* for the year in which they matriculate.

Master's Degree

The Folklore and Mythology Program offers the Master of Arts (M.A.) degree in Folklore and Mythology.

Admission

Two letters of recommendation from former instructors or other comparable references are required for admission to the M.A. program, as well as a writing sample (such as published work, course paper, or report on research/observations). Information on the verbal Graduate Record Examination (GRE) is desirable.

Areas of Study

Consult the department.

Course Requirements

All degree candidates, whether electing the thesis or comprehensive examination plan, must complete the following courses: Folklore and Mythology 200A, 200B, and at least one course from each of the following groups:

Group 1: One course in folk song, folk music, or folk dance (e.g., Folklore and Mythology C206, M243B, M258, or CM284).

Group 2: One course in the folklore and mythology of a specific culture or culture area.

Group 3: One course in folktale, legend, or myth (e.g., Folklore and Mythology 215 or 216).

Group 4: One additional form/genre-based graduate course in folklore and mythology studies (e.g., Folklore and Mythology 213, 214, 217, 218, or C275).

Group 5: One graduate seminar in an area of folklore and mythology (e.g., Folklore and Mythology 228, M235, or 259).

Only eight units of course 596 may be applied toward the minimum course requirements.

Comprehensive Examination Plan

Students who plan to pursue a Ph.D. degree in Folklore and Mythology must elect this plan and complete a minimum of 10 courses (six in the 200 series; two 596 courses may be included). After completion of the coursework, students are expected to demonstrate competence in a written examination requiring a grasp of (1) theoretical bases, major documents, and research methods and techniques of folklore and mythology studies; (2) two forms of folklore and mythology; and (3) the folklore and mythology of a specific country, continent, or geographical area. If it is requested by the student or by the members of the M.A. committee, the student must also complete a final oral examination following the successful completion of the written comprehensive examination sequence.

Thesis Plan

If this plan is selected, students must complete a minimum of 10 courses (six in the 200 series; two 596 courses may be included) and submit an acceptable thesis, prepared under the direction of a member of the program faculty. Submission of the thesis is followed by an oral examination covering the fields of folklore and mythology studies.

The thesis committee, composed of three or more faculty members chosen with the approval of the chair of the interdepartmental committee, is appointed no later than the quarter before expected completion of the requirements. No outside members are required.

Doctoral Degree

Admission

Requirements for admission to the program leading to the Ph.D. degree in Folklore and Mythology include completing the requirements for the M.A. degree in Folklore and Mythology (or equivalent) and the written and oral comprehensive examinations. A writing sample (such as published work, course paper, or report on research/observations) is required of all applicants. Applicants are admitted to the doctoral program on the recommendation of the interdepartmental committee (provisional admission may be secured in order to complete the admission requirements).

Major Fields or Subdisciplines

Students must develop a competency in (1) a major field of folklore and mythology and (2) an area of concentration within a related discipline. These areas are selected with the approval of the guidance committee.

Course Requirements

Before attempting the qualifying examination, students must complete a minimum of nine courses or seminars in the 200 series (or substitutes recommended by the guidance committee) in a major field of folklore and mythology. At least five of the minimum number of nine courses required for the Ph.D. must be selected from courses carrying folklore prefixes. The number of graded Folklore and Mythology 596 courses that can be counted among the minimum of nine courses required for the Ph.D. is limited to two; of the minimum number of nine courses required for the Ph.D., at least two must be folklore seminars (e.g., Folklore and Mythology 228, M235, M258, 259, M270A, M270B).

Written and Oral Qualifying Examinations

After the required preparation, a written examination and the University Oral Qualifying Examination are completed covering (1) the student's specialization in folklore and mythology and (2) the related area of concentration. The examinations are administered by a committee appointed with the approval of the interdepartmental committee and include one or more members from the student's related discipline.

Folklore and Mythology

Lower Division Courses

15. Introduction to American Folklore Studies. (4) Lecture/discussion. Cultural/historical survey of role of folklore in development of American civilization and of influence of the American experience in shaping folklore in American society; attention also to representative areas of inquiry and analytical procedures.

88. Poetics of Myth. (4) Seminar, three hours; outside study, nine hours. Exploration of categories myth and mythology as they have been formulated, applied, and expanded in both Western and non-Western traditions from time of ancient Sumer to the present.

Upper Division Courses

101. Introduction to Folklore. (4) Survey of various forms of folklore and examination of their historical and social significance.

C105. Perspectives in American Folklore Research. (4) Lecture, three hours. Prerequisite: course 101. Examination of American folklore studies compared and contrasted with investigations in other countries, with emphasis on principal conceptual schemes and research orientations employed in study of folklore in American society. Concurrently scheduled with course CM205.

CM106. Anglo-American Folk Song. (4) (Same as English M111B and Ethnomusicology M124.) Survey of Anglo-American balladry and folk song, with attention to historical development, ethnic background, and poetic and musical values. May be concurrently scheduled with course C206.

C107. Folklore in Urban Environments. (4) Lecture, three hours. Prerequisite: course 15 or 101. Exploration of expressive and symbolic dimensions of complex urban life, focusing on how immigrants, migrants, residents, and workers shape their experiences through dynamic interplay of community, ethnicity, culture, and religion. Concurrently scheduled with course C207.

108. Afro-American Folklore and Culture. (4) Prerequisite: course 101. Study of traditional genres or forms of Afro-American folklore and their cultural functions.

CM109. African Religion in the Diaspora. (4) (Same as World Arts and Cultures CM109.) Lecture, three hours. Designed for juniors/seniors and graduate students. Ethnography of diaspora African religions, including voodoo, Santeria, and Candomble. Lectures, readings, and video material focus on performance of ritual and its expression in religious art. Concurrently scheduled with course CM209.

M111. Literature of Myth and Oral Tradition. (4) (Same as English M111A.) Preparation: satisfaction of Subject A requirement. Study of myth, dramatic origins, oral epic, folktale, and ballad, emphasizing Indo-European and Semitic examples.

M112. Survey of Medieval Celtic Literature. (4) (Same as English M111E.) Preparation: satisfaction of Subject A requirement. Knowledge of Irish or Welsh not required. General course dealing with Celtic literature from earliest times to the 14th century.

113. The Arthurian Tradition. (4) Survey of traditions related to British King Arthur from medieval times to the present day. Coverage includes both oral traditions and written texts; attention also to modern versions of Arthurian material in other mediums (e.g., opera, film).

118. Folk Art, Folklife, and Material Culture. (4) Designed for juniors/seniors. General course concerned with folk art, aesthetics, and material culture and with theoretical concepts and methodologies utilized in their analysis.

M119. Fairy Tales in Literature and Society. (5) (Same as German M122.) Lecture, four hours; outside study, 11 hours. History and reception of folklore collections in Europe, with particular attention to ideology and influence of Grimms' tales. Interpretation of selected tales and their transformations and appropriation in literature, film, advertising, and pedagogy. Letter grading.

M121. British Folklore and Mythology. (4) (Same as English M111C.) Preparation: satisfaction of Subject A requirement. Designed for juniors/seniors. Survey of folklore of the peoples of Britain, with attention to their history, function, and regional differences.

M122. Celtic Mythology. (4) (Same as English M111D.) Lecture, three hours; discussion, one hour. Survey of early materials, chiefly literary, for study of mythic traditions of the Celtic peoples, ranging from ancient Gaul to medieval Ireland and Wales.

124. Finnish Folk Art and Technology. (4) Material manifestations of Finnish folk culture: village layout and architecture, folk technology, arts and crafts, textiles, costumes, and design.

M126. Baltic and Slavic Folklore and Mythology. (4) (Same as Slavic M179.) Lecture, three hours. General course for students interested in folklore and mythology and for those interested in Indo-European mythic antiquities.

M127. Celtic Folklore. (4) (Same as English M111F.) Prerequisite: course 101. Folkloric traditions of modern Ireland, Scotland, and other Celtic countries, with attention to current techniques of folkloristic research.

130. North American Indian Folklore and Mythology Studies. (4) Prerequisite: course 101. Examination of folkloristic and mythological data recorded from various North American Indian peoples within contexts of principal ideological frameworks which have been evolved historically for analysis of such data.

131. Folklore of India. (4) Prerequisite: course 101. Survey of folklore of India, with special reference to content and dissemination of oral epics, ballads, legends, and beliefs.

CM132. Celtic Folk Music. (4) (Same as Ethnomusicology CM132.) Survey and analysis of indigenous traditional music in lands where a Celtic language is or was spoken into modern times. Instrumental and vocal genres, context and performance, social value and ideology. Concurrently scheduled with course CM232. P/NP or letter grading.

C136. Festivals and Festive Events. (4) Lecture, three hours; fieldwork, one hour; outside study, eight hours. Study of traditional calendrical, religious, and local festivals and related events in their cultural and historical contexts, with emphasis on American festival occasions and their Old World antecedents. Topics include carnival and the carnivalesque and politics of celebration. Concurrently scheduled with course C236. P/NP or letter grading.

M140. Italian Novella from Boccaccio to Basile. (4) (Same as Italian M140.) Lecture, three hours; outside study, nine hours. Analysis of development of the Italian novella in its structure, historical context, and folk material. Special emphasis on how the Italian novella influenced other European literatures. P/NP or letter grading.

M142. Introduction to Jewish Folklore. (4) (Same as Jewish Studies M143.) Nature of Jewish folklore; narrative, folk song, folk art, folk religion, and methods and perspectives used in their analysis.

C145. Applied Folkloristics. (4) Designed for juniors/seniors. Introduction to methods and issues in application of folklore studies to such areas as education, health, museums, organization development, tourism, environmental planning, economic and community development, aging, art therapy, and public sector folklife. Concurrently scheduled with course C245.

M149. Folk Literature of the Hispanic World. (4) (Same as Spanish M149.) Lecture, three hours. Study of history and present dissemination of principal forms of folk literature throughout the Hispanic countries.

M150. Russian Folk Literature. (4) (Same as Russian M150.) Lecture, three hours. Lectures and readings in Russian.

M154A-M154B. African American Musical Heritage. (4-4) (Same as Afro-American Studies M110A-M110B and Ethnomusicology M110A-M110B.) Lecture, four hours; discussion, one hour. Study of African music and its impact on the Americas; survey of development of various African American musical genres from slave era to the present, including traditions in the West Indies and Central and South America.

M155. Oral Traditions in Africa. (4) (Same as English M111G.) Designed for juniors/seniors. Survey of African folk traditions: folktale, epic, heroic poetry, and folk song.

161. Beliefs and Tales of the Supernatural. (4) Lecture, five hours. History of beliefs and legends reporting on encounters with creatures of the supernatural world, such as giants, dwarfs, ghosts, wild men, UFOs. Study of firsthand encounters with such beings and analysis of resulting narratives and contexts of their narration. Analysis of social, psychological, and physical states that contribute to such experiences. P/NP or letter grading.

163. Folklore and Oral History. (4) Designed for juniors/seniors. Examination of relationships between folk tradition and oral history; how history may be derived from tradition; how traditions are embedded in historical sources; how the folk traditionalize history to reflect their point of view.

C165. Film and Folklore. (4) Designed for juniors/seniors. Introduction to film criticism and folklore methodology. Topics include early examples of folklore on film, changing conceptions of folklore and uses of films about folklore, and examples of films by, with, and for folklorists. Concurrently scheduled with course C265.

M170. Russian Folklore. (4) (Same as Russian M170.) Lecture, three hours. Lectures and readings in English. General introduction to Russian folklore, including survey of genres and related folkloric phenomena.

172. Folklore in Ethnic Context. (4) Prerequisite: course 15 or 101. Role of folklore in ethnic relations; processes by which ethnic folklore is generated, transmitted, and maintained by immigrant groups and subsequent generations.

C175. Food Customs and Symbolism. (4) Designed for juniors/seniors. Introduction to foodways, with particular attention to customs and symbolism in America. Topics include sensory realm, child rearing practices, foodsharing, food and identity, food and its emotional significance, aversions and taboos, advertising, changing food habits, and the American diet. Concurrently scheduled with course C275.

M180. Analysis of Traditional Music. (4) (Same as Ethnomusicology M180.) Designed for Ethnomusicology, Music History, and Folklore majors. Intensive study of methods and techniques necessary to understand traditional music.

M181. Folk Music of Western Europe. (4) (Same as Ethnomusicology M126.) Introduction to forms and styles of traditional music in Western Europe. Historical and ethnological perspectives on this music combined with numerous recorded examples from major cultural subdivisions of the region.

CM182. Japanese Folklore. (4) (Formerly numbered M182.) (Same as Japanese CM182.) Lecture, three hours; discussion, one hour; outside study, eight hours. Knowledge of Japanese not required. Lectures/discussions on native religious rituals (festivals) and observances of the Japanese, with special emphasis on artistic behavior. Discussion of Shinto, Shinto/Buddhist syncretism, and other non-Buddhist belief systems. Concurrently scheduled with course CM282. Letter grading.

M183. Korean Folklore. (4) (Formerly numbered 183.) (Same as Korean M183.) Lecture, three hours. Survey of Korean folklore and its perspectives and methods — oral literature, performing folk arts, social folk custom, and material culture. P/NP or letter grading.

CM184. Dance and Folklore. (4) (Same as World Arts and Cultures CM184.) Consideration of vernacular tradition as a site for cultural configuration, social construction, representation, and display of national, ethnic, and other affinity identities. Emphasis on various European and European-American dance idioms. Concurrently scheduled with course CM284.

M185. The Hero in the Bible and the Ancient Near East. (4) (Same as Ancient Near East M194.) Lecture, three hours. Investigation of concepts of the hero/heroine in literatures of ancient Mesopotamia, Canaan, and Israel. Texts include epics of Gilgamesh and Aghat, Hebrew Bible, and New Testament. All texts read in translation.

190. Selected Topics in Folklore and Mythology Studies. (4) Requisite: course 15 or 101. Proseminar focusing on selected problems, data, or themes in folklore and mythology studies. May be repeated twice for credit.

199. Special Studies in Folklore. (2 to 4) Limited to seniors.

Graduate Courses

200A. Folklore Bibliography, Theory, and Research Methods. (4) Lecture, three hours; discussion, one hour. Designed for graduate folklore and mythology students. Basic course in theory, current trends, and bibliography for folklore graduate students, including research techniques in contemporary folkloristics.

200B. Fieldwork. (4) Lecture, three hours. Requisite: course 200A. Discussion/demonstration of theoretical concepts and practical techniques of data gathering and field research in folklore.

CM205. Perspectives in American Folklore Research. (4) (Same as English M205.) Lecture, three hours. Requisite: course 101. Examination of American folklore studies compared and contrasted with investigations in other countries, with emphasis on principal conceptual schemes and research orientations employed in study of folklore in American society. Concurrently scheduled with course C105.

C206. Anglo-American Folk Song. (4) Survey of Anglo-American balladry and folk song, with attention to historical development, ethnic background, and poetic and musical values. May be concurrently scheduled with course CM106.

C207. Folklore in Urban Environments. (4) Lecture, three hours. Requisite: course 200A. Exploration of expressive and symbolic dimensions of complex urban life, focusing on how immigrants, migrants, residents, and workers shape their experiences through dynamic interplay of community, ethnicity, culture, and religion. Concurrently scheduled with course C107.

208. Afro-American Folklore and Culture. (4) Designed for graduate students. Theoretical and methodological constructs which have contributed to the body of black cultural expression in the U.S.

CM209. African Religion in the Diaspora. (4) (Same as World Arts and Cultures CM209.) Lecture, three hours. Designed for juniors/seniors and graduate students. Ethnography of diaspora African religions, including voodoo, Santeria, and Candomble. Lectures, readings, and video material focus on performance of ritual and its expression in religious art. Concurrently scheduled with course CM109.

213. Folk Belief and Custom. (4) Preparation: one course from 118, M121, M122, 124, M126, M128, M149, M150, Anthropology 156, German 120. Requisite: course 101. Study of beliefs and customs in the folk community: life cycle, calendrical and agricultural customs, and legal antiquities.

214. Ethnography of Humor. (4) (Formerly numbered M214.) Lecture, three hours. Designed for graduate folklore and mythology students. Examination and analysis of selected humorous expressions and events in cross-cultural perspective, with emphasis on major psychological and sociocultural approaches to their study and interpretation.

215. Popular Legend. (4) Requisite: course 200A. Study of categories of legendary and their relation to myth, custom, ritual, popular beliefs, and ballads.

216. Folktale. (4) Requisite: course 200A.

217. Folk Speech. (4) Lecture, three hours. Study of ethnography of communication and its relevance to study of social and regional dialects, proverbs, riddles, onomastics, folk poetry and verse, and traditional humor.

218. Folk Art, Craft, and Aesthetics. (4) Lecture, three hours. Requisite: course 200A. Examination of research orientations and findings in regard to what has been called folk art, craft, and aesthetics. Major perspectives and areas of inquiry from latter part of the 19th century to the present.

228. Seminar: Topics in Celtic Folklore and Mythology. (4) Seminar, three hours. Preparation: coursework in Celtic studies. Requisite: course 200A. Preparation for advanced study of and research in important areas of Irish oral tradition and folklore/mythology scholarship. Possible topics include pagan Celtic Britain/Ireland; comparative Celtic mythology; Celtic origin legends; literary and oral saints' legends; the Irish Fenian (Ossianic) tradition of ballads (*laoid-he/duain*) and prose tales; "fairy" beliefs; collecting and archiving methods of the Irish Folklore Commission; folklore studies and nationalism.

M230A-M230B. Folk Tradition in Italian Literature. (4-4) (Same as Italian M230A-M230B.) Lecture, two hours.

CM232. Celtic Folk Music. (4) (Same as Ethnomusicology CM232.) Survey and analysis of indigenous traditional music in lands where a Celtic language is or was spoken into modern times. Instrumental and vocal genres, context and performance, social value and ideology. Concurrently scheduled with course CM132. S/U or letter grading.

M235. African Myth and Ritual. (4) (Same as English M235.) Seminar on methods of analyzing African and African Diaspora myth and ritual.

C236. Festivals and Festive Events. (4) Lecture, three hours; fieldwork, one hour; outside study, eight hours. Study of traditional calendrical, religious, and local festivals and related events in their cultural and historical contexts, with emphasis on American festival occasions and their Old World antecedents. Topics include carnival and the carnivalesque and politics of celebration. Concurrently scheduled with course C136. S/U or letter grading.

240. Introduction to Jewish Folk Literature. (4) Designed for juniors/seniors and graduate students. Examination of both historic and generic methods used in study of Jewish folk literature.

M241. Folklore and Mythology of the Near East. (4) (Same as Near Eastern Languages M241.) Requisite: course 101.

M243A. The Ballad. (4) (Same as English M243A.) Study of English and Scottish popular ballads and their American derivatives, with some attention to European analogues. May be repeated for credit.

M243B. Problems in Ballad Scholarship. (4) (Same as English M243B.) Requisite: course M243A. Intensive investigation of a problem or problems in study of the popular ballad. May be repeated for credit.

C245. Applied Folkloristics. (4) Designed for graduate students. Introduction to methods and issues in application of folklore studies to such areas as education, health, museums, organization development, tourism, environmental planning, economic and community development, aging, art therapy, and public sector folklife. Concurrently scheduled with course C145.

248. Theory and Method in Latin American Folklore Studies. (4) Historical survey of folklore scholarship in Latin America, with emphasis on theoretical bases, methods, and techniques employed in study and analysis of traditional tales, songs, music, linguistic expression.

M249. Folk Literature of the Spanish and Portuguese Worlds. (4) (Same as Portuguese M249 and Spanish M249.) Lecture, three hours. Intensive study of folk literature of the Spanish and Portuguese cultures as represented in (1) ballad and poetry, (2) narrative and drama, (3) speech.

251. Seminar: Finno-Ugric Folklore and Mythology. (4) Advanced studies in folk traditions and mythologies of the Finno-Ugric speaking nations.

M258. Seminar: Folk Music. (4) (Same as Ethnomusicology M287.) Seminar, three hours.

259. Seminar: Folklore. (4) Requisite: course 200A. Seminar focusing on selected topics in folklore and mythology. May be repeated for credit.

260. Organizational Folklore, Culture, and Symbolism. (4) Designed for graduate students. Folklore in organizational settings (stories, rituals, rites, metaphors, etc.) and role of folklore in organization development as information source, diagnostic, and intervention to improve personnel practices, climate, and leadership.

M261. Alternative Perspectives in Italian Culture: Studies of Folk Tradition in Italian Literature. (4) (Same as Italian M260A.) Lecture, three hours; outside study, 18 hours. Open to undergraduates with consent of instructor. The conspicuous diversity animating Italian society articulated through class, gender, and ethnolinguistic groups to be studied across a range of texts, some selected from the literary canon, but others purely oral (tales, songs, proverbs, cures and curses, secular and ritual drama).

C265. Film and Folklore. (4) Designed for graduate students. Introduction to film criticism and folklore methodology. Topics include early examples of folklore on film, changing conceptions of folklore and uses of films about folklore, and examples of films by, with, and for folklorists. Concurrently scheduled with course C165.

M270A-M270B. Seminars: Japanese Ritual Arts. (4-4) (Same as Japanese M270A-M270B.) Seminar, three hours. Reading knowledge of Japanese not required. Discussions and readings on ritual (performing) arts of Japan comprising music, dance, storytelling, viewing, purification, divination, disguise, mimicry, and competitive as well as acrobatic arts, with special emphasis on religio-magical purposes and symbolic structure of these arts. In Progress grading.

C275. Food Customs and Symbolism. (4) Designed for graduate students. Introduction to foodways, with particular attention to customs and symbolism in America. Topics include sensory realm, child rearing practices, foodsharing, food and identity, food and its emotional significance, aversions and taboos, advertising, changing food habits, and the American diet. Concurrently scheduled with course C175.

CM282. Japanese Folklore. (4) (Same as Japanese CM282.) Lecture, three hours; discussion, one hour; outside study, eight hours. Knowledge of Japanese not required. Lectures/discussions on native religious rituals (festivals) and observances of the Japanese, with special emphasis on artistic behavior. Discussion of Shinto, Shinto/Buddhist syncretism, and other non-Buddhist belief systems. Concurrently scheduled with course CM182. Letter grading.

CM284. Dance and Folklore. (4) (Same as World Arts and Cultures CM284.) Consideration of vernacular tradition as a site for cultural configuration, social construction, representation, and display of national, ethnic, and other affinity identities. Emphasis on various European and European-American dance idioms. Concurrently scheduled with course CM184.

M286A-M286B. Studies in Hispanic Folk Literature. (4-4) (Same as Spanish M286A-M286B.) Lecture, two hours. Each course may be repeated once with topic change and consent of appropriate guidance committee.

375. Teaching Apprentice Practicum (1 to 4 units). (4) Preparation: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

400A-400B-400C. Directed Professional Activities. (4-4-4) Directed individual projects in professional editing, bibliography, discography, filmography, festival direction, and other professional activities. May not be applied toward M.A. course requirements. May be repeated for credit. S/U grading.

495. Teaching Folklore and Mythology. (4) Seminar, three hours. Prerequisite: course 200A. Analysis and design of alternative organizational schemes, teaching aids and techniques, and evaluation methods for folklore and mythology courses at the college level, with opportunities for observation and apprentice teaching. May not be applied toward M.A. or Ph.D. course requirements. S/U grading.

501. Cooperative Program. (2 to 8) Preparation: consent of UCLA graduate adviser and graduate dean, and host campus instructor, program chair, and graduate dean. Used to record enrollment of UCLA students in courses taken under cooperative arrangements with USC. S/U grading.

596. Directed Studies in Folklore. (2 to 6) S/U or letter grading.

597A. Preparation for M.A. Comprehensive Examination. (2 to 4) Limited to graduate folklore and mythology students. S/U grading.

597B. Preparation for Ph.D. Qualifying Examinations. (4 to 8) Preparation: successful completion of M.A. comprehensive examination. S/U grading.

598. M.A. Thesis Preparation. (2 or 4) S/U grading.

599. Ph.D. Dissertation Research. (4 to 8) Preparation: advancement to Ph.D. candidacy. S/U grading.

Scope and Objectives

The UCLA French Department is a major West Coast center for the study of French. In recent decades French critical thought has maintained a dominant position in the Western world. The department seeks to give its students not only a background in the various fields of French studies, but also opportunity to relate literary, linguistic, and cultural study to examination of the critical intellectual questions of our time.

The lower division program is designed to provide practical competence in French after one year and thorough basic knowledge of the language after two years.

The upper division program is chiefly devoted to perfecting linguistic skills and to the study of

French culture and literature. Courses in linguistics and business French are also offered. Students graduating with a Bachelor of Arts in French should be fully fluent in French and possess a thorough background in French literature and culture. All three plans lead to the Bachelor of Arts degree and subsequently to graduate studies in French.

The graduate program comprises training in the various fields of French literature and thought, as well as in literary criticism, analysis, and theory. A number of courses in linguistics and stylistics are also offered. The department offers both the M.A. and Ph.D. degrees.

Undergraduate Study

Undergraduate Courses

If students have taken French elsewhere, they must take a placement test administered by the department. Depending on the results of the placement test or with recommendation of an instructor, they may be permitted to enroll in a course of study at a more advanced level.

Requisites to all upper division courses taken in partial fulfillment of the French major are French 6, 12, or equivalent. Courses 105 through 109 are not sequential and may be taken in any order, provided the requisites for each course are fulfilled.

No credit is allowed for completing a less advanced course after successful completion of a more advanced course in French grammar and/or composition.

French B.A./French and Linguistics B.A.

Preparation for the Majors

Required: French 1, 2, 3, 4, 5, 6, 12, or equivalent. Students normally take course 6 before undertaking course 12. Students who receive a grade of A in course 5 may enroll in course 12 concurrently with course 6, with consent of instructor. Students in Plan III must also take Linguistics 20.

The Majors

Three plans are offered by the department:

Plan I: French Studies in Literature and Culture

Plan I leads to the Bachelor of Arts in French. *Required:* Thirteen upper division courses, including French 100, 101, 102; two courses from 114A, 114B, 114C; at least six courses in French literature and/or culture selected from upper division offerings in the department in language, civilization, literature, or the arts. Two upper division elective courses from outside the department may be substituted in the major program with consent of the undergraduate adviser.

Candidates for an instructional credential must take 13 upper division French Department courses, including French 105, in order to qualify for a waiver for the single subject instructional credential in French.

Plan II: Interdisciplinary French Studies

Plan II, with emphasis on French culture, leads to the Bachelor of Arts in French and is a core program in French allowing for individual selection of relevant courses in related fields such as humanities, social sciences, women's studies, and linguistics. *Required:* Thirteen upper division courses, including French 100, 101, 102; two courses from 114A, 114B, 114C; at least two courses in French literature; one additional elective course normally selected from upper division offerings in the department in language, civilization, literature, or the arts; five upper division elective courses in fields relevant to French studies to be selected in or outside the department in consultation with the undergraduate adviser.

Plan III: French and Linguistics

Plan III leads to the Bachelor of Arts in French and Linguistics. In addition to the normal preparation for the major, students are required to complete the sixth term of work in one other foreign language or the third term in each of two other foreign languages. Linguistics 20 is required as preparation for the major. *Required:* Twelve upper division courses, including French 100, 101, 102; two courses from 105, 107, 108A, 108B, 109; two courses from 114A, 114B, 114C; Linguistics 103, 110, 120A, 120B, and 165A or 165B.

It is strongly advised that students who intend to pursue advanced degrees begin preparation for the language requirements at the undergraduate level.

If students' knowledge of French exceeds the preparation usually received in courses preparing for the major and if they demonstrate the requisite attainment in French 100, 101, or 102, they may substitute for those courses in grammar and composition an equivalent number of upper division courses in the French Department in consultation with an adviser. All prospective French majors who are native or quasi-native speakers of French must see the undergraduate adviser before beginning upper division work in the major.

All majors must complete a minimum of nine courses of appropriate upper division work in the UCLA French Department. Freshmen and sophomores may take up to two courses taught in English, selected from French 162 through 165, in fulfillment of major requirements (if taken in the junior or senior year, these courses count as electives). A maximum of eight units of course 199 may be applied toward the elective requirements for the major if approved in advance by the undergraduate adviser. Students must maintain a C average in upper division major courses in order to remain in any of the French majors.

Coursework taken on a Passed/Not Passed basis is not acceptable in any area of the major program.

It is recommended that students intending to major in French consult the undergraduate adviser before enrolling in upper division courses.

Honors Program

The department encourages those students in the French majors with initiative and independence of mind who desire an enriched individualized course of study to apply for the honors program.

The honors program is designed for French majors who have fulfilled their lower division requirements and have a 3.5 departmental grade-point average. Students whose GPA falls between 3.3 and 3.5 should submit a composition from an advanced language or literature course to the honors committee. If the work submitted meets with approval, students are admitted to the program.

To graduate with departmental honors, students must complete a minimum of two honors projects in the context of nonhonors upper division courses (French 115A and above) taken for honors credit. They must do an honors project (a research paper of 12 to 15 pages) in addition to the regular course requirements. An honors contract must be signed before the end of the third week of the term. After completing the project, students fill out a completion form.

On the basis of their coursework and field of interest, students are expected to formulate a research topic they wish to pursue in greater depth. They take course 170 where they receive regular personal supervision from a faculty member in the research, methodology, and writing of their approximately 20- to 25-page honors thesis (honors projects and the honors thesis are not to be confused). Course 170 counts toward the requirements for the French majors as outlined above.

Students may begin the honors program toward the end of their junior year or during their senior year. The honors projects and course 170 may be taken over two terms minimum. Students are allowed to enroll in graduate courses with the consent of the instructor but cannot use those courses to replace an honors project. Departmental honors are recorded on the final transcript if students fulfill all requirements for the program. They may submit their final honors thesis for the departmental prize.

Instructional Credential in French

Students interested in obtaining a single subject instructional credential in French should consult a departmental counselor regarding requirements for a waiver from the French subject matter examination required by the California Commission on Teacher Credentialing. For additional information on courses leading to the credential, consult the Department of Education, 1009 Moore Hall, (310) 828-8328.

French Minor

To enter the French minor, students must have an overall grade-point average of 2.0 or better.

Required Lower Division Courses (eight units): French 6 or equivalent and one course from 12, 14, or 15.

Required Upper Division Courses (20 units): French 100 or 101, and four additional departmental courses in language, culture, or literature to be selected in consultation with an undergraduate counselor.

All minor courses must be taken for a letter grade, with an overall grade-point average of 2.0 or better. Successful completion of the minor is indicated on the transcript and diploma.

Graduate Study

The following constitutes introductory information regarding graduate degree programs and is based on the 1998-99 edition of *Program Requirements for UCLA Graduate Degrees*. Complete, annual editions of *Program Requirements* are available (listed under "Publications") on the Graduate Division website at <http://www.gdnet.ucla.edu>. Students are subject to the degree requirements as published in *Program Requirements* for the year in which they matriculate.

Master's Degree

The Department of French offers the Master of Arts (M.A.) degree in French.

Admission

Applicants to the M.A. program must hold a B.A. in French or the equivalent. The Graduate Record Examination (GRE) General Test, a sample of written work in French, and three letters of recommendation are also required and should be sent to the department.

Areas of Study

The corpus of French literature is divided into three chronological periods, each including two centuries: (1) medieval and Renaissance, (2) classical (17th and 18th centuries), and (3) modern (19th and 20th centuries, with franco-phone literature as an option).

Course Requirements

A total of 11 courses in French is required, including French 201 and 203 (which should be taken as early as possible), at least two courses in each of the three periods, and one additional course in the period not covered on the M.A. examination. For Plan I (thesis) candidates, this is the period of specialization which is not covered on the oral qualifying examination. At least eight of these courses must be at the graduate level. Four units of course 596 (or 598 for students in Plan I) may be substituted for one required century course on approval of the graduate adviser or thesis director.

Students are required to consult with the graduate adviser to ensure full historical coverage of French literature.

Comprehensive Examination Plan

Students must pass written examinations, four hours in length, in each of the two periods prepared and an oral examination in French, normally 30 minutes, covering the two periods of the written examination. The examinations are given in the Fall and Spring Quarters.

Each period examination contains at least one question requiring textual analysis.

Three results are possible: fail, pass without admission to the doctoral program (terminal M.A.), or pass with admission to the doctoral program. The decision concerning admission to the doctoral program is made by the M.A. examination committee (Plan II) on the basis of an overall appraisal of the student's record as well as of the results of the M.A. examination.

Students who either fail or pass without admission to the doctoral program are permitted to retake the examination once, at a date no more than a year after the first attempt.

Thesis Plan

Students may apply to the chair of the department for admission into Plan I (thesis plan) after completing at least six graduate-level courses (200 series), four of which must be literature courses in the French Department.

The minimum admission requirements are a 3.5 graduate GPA in French and letters from two graduate professors in the department specifically recommending admission into this plan. A brief statement of the proposed thesis topic is also required.

Final admission into Plan I (i.e., permission to write the thesis) is contingent on passing a one-hour oral examination, administered by the departmental masters' committee, on the two periods other than the proposed period of specialization (in which the thesis is written). The examination is normally taken during the fourth quarter (but no later than the sixth quarter) after admission. The thesis committee (normally consisting of three departmental faculty members) is appointed only after students have passed the examination. If students fail the examination, the examining committee determines whether they may be permitted another attempt or be advised to take the comprehensive examination (Plan II).

For the purpose of course requirements, the period of specialization for the thesis is considered the period not covered on the M.A. examination; course 598 may be counted as one of the four courses required in this period.

The thesis should demonstrate proficiency in the methods and concepts of literary research; a suitable length is normally about 75 pages. A tentative outline of the proposed thesis must be approved in writing by the thesis committee before work on the thesis is begun. Final approval of the thesis by the committee is also required.

Three results are possible: fail, pass without admission to the doctoral program (terminal M.A.), or pass with admission to the doctoral program. The decision concerning admission to the doctoral program is made by the M.A. thesis committee on the basis of an overall appraisal of the student's record as well as of the results of the M.A. thesis.

Students who either fail or pass without admission to the doctoral program are permitted to

resubmit the thesis once, at a date no more than a year after the first attempt.

Doctoral Degree

Admission

For UCLA students applying to the program leading to the Ph.D. degree in French, completion of the M.A. degree in French with recommendation for admission to the doctoral program is required. Outside applicants must hold the M.A. degree in French or equivalent, submit three letters of recommendation and a sample of written work in French, and take the Graduate Record Examination (GRE) General Test.

Major Fields or Subdisciplines

The corpus of French literature is divided into three chronological periods, each including two centuries: (1) medieval and Renaissance, (2) classical (17th and 18th centuries), and (3) modern (19th and 20th centuries, with franco-phone literature as an option).

Course Requirements

The following courses are required: (1) French 201 and 203, if not already covered at the M.A. level; (2) at least five seminars, including at least three taken after obtaining the M.A. (a balance should be sought between theoretical and literary-historical relevance to the proposed period of specialization); (3) at least two graduate courses in other departments related to the area of specialization. Admitted students holding the M.A. or an equivalent degree from another institution must consult the graduate adviser for possible additional course requirements. In addition, students are expected to follow the guidance committee's suggestions in taking courses in preparation for the doctoral qualifying examination. Guidance committees are particularly careful to ensure that students admitted with an M.A. from other institutions cover thoroughly in coursework the period not examined in the *examen de passage*.

Written and Oral Qualifying Examinations

Two written examinations of three hours each, based on individual reading lists of approximately 15 works each, established by the examiner in consultation with the candidate are required: (1) on the historical area related to the proposed dissertation topic and (2) in areas of critical theory relevant to the proposed dissertation topic. These examinations must be taken within a period of one week. At the discretion of the guidance committee, students may be permitted to retake a failed written examination once.

After passing the written examinations, students are admitted to the University Oral Qualifying Examination, which should be taken during the same quarter as the written qualifying examinations. Students must provide the examiners with a 20- to 30-page prospectus of the proposed dissertation, including an outline and a bibliography. The examination, normally of two hours

duration, bears on the written examinations and on the proposed dissertation subject.

French

Lower Division Courses

- 1. Elementary French. (4)** Lecture, five hours.
- 1G. Elementary French for Graduate Students. (3)** Preparation for GSFLT or other language examinations. A passing grade does not imply satisfaction of language requirements. S/U grading.
- 2. Elementary French. (4)** Lecture, five hours. Enforced requisite: course 1 (C– or better).
- 2G. Elementary French for Graduate Students. (3)** Enforced requisite: course 1G. Preparation for GSFLT or other language examinations. A passing grade does not imply satisfaction of language requirements. May be repeated. S/U grading.
- 3. Elementary French. (4)** Lecture, five hours. Enforced requisite: course 2 (C– or better).
- 4. Intermediate French. (4)** Lecture, five hours. Enforced requisite: course 3 (C– or better).
- 5. Intermediate French. (4)** Lecture, five hours. Enforced requisite: course 4 (C– or better).
- 6. Intermediate French. (4)** Enforced requisite: course 5 (C– or better).
- 8. Intensive First-Year French. (12)** Lecture, 15 hours. All-in-French intensive language program equivalent to first year of college French and designed to develop basic language skills. Additional work in language and media laboratory required. Offered in summer only. P/NP or letter grading.
- 9. Intensive Second-Year French. (8)** Lecture, 10 hours; media laboratory, three hours. Enforced requisite: course 3. Intensive course equivalent to first two terms of intermediate French and designed to improve proficiency in reading, writing, and speaking. Offered in summer only. P/NP or letter grading.
- 10A-10D. French Conversation (2 each)** Discussion, three hours. Enforced requisite: course 3 (B or better).
- 12. Introduction to Study of French Literature. (4)** Lecture, two hours; discussion, one hour. Enforced requisite: course 6. Principles of literary analysis as applied to selected texts in poetry, theater, and prose.
- 14. Introduction to French Civilization, in English. (4)** Lecture, two hours; discussion, one hour; outside study, nine hours. Study of contemporary French institutions and issues in political, cultural, and socio-economic realms. Structure of French society and recent developments. P/NP or letter grading.
- 15. Theory and Correction of Diction. (4)** Enforced requisite: course 6. French pronunciation, diction, intonation in theory and practice; phonetic transcription, phonetic evolution of the modern language; remedial exercises; recordings.
- 41. French Cinema and Culture. (4)** Lecture, three hours; film screenings, three hours. Introduction to French culture and literature through study of major films of cultural and literary significance. P/NP or letter grading.
- 63. Contemporary French Theater. (4)** Lecture, three hours. Introduction to contemporary French drama in translation. Topics to be announced each term. P/NP or letter grading.
- 64A-64B-64C. The French Novel in Translation. (4-4-4)** Lecture, three hours. Introduction to French novel masterpieces from variety of perspectives, including literary history, themes, and relations with other arts (film and music). Topics and titles to be announced each term. P/NP or letter grading.

Upper Division Courses

- 100. Written Expression: Techniques of Description. (4)** Lecture, three hours. Requisite: course 6. Writing assignments follow close analysis of relevant texts and study of related grammatical structures. P/NP or letter grading.

101. Written Expression: Techniques of Narration. (4) Lecture, three hours. Requisite: course 6. Writing assignments follow close analysis of relevant texts and study of related grammatical structures. P/NP or letter grading.

102. Advanced Expository Writing: Techniques of Argumentation. (4) Lecture, three hours. Requisites: courses 100, 101. Study of rhetorical devices and revision of related grammatical structures. Writing assignments follow analysis of relevant texts. P/NP or letter grading.

105. Structure of French. (4) Lecture, three hours. Requisite: course 15. Prior background in linguistics not required. Introduction to linguistic analysis of French in areas of phonology, morphology, syntax, and language variation.

107. Advanced Oral Expression. (4) Lecture, three hours. Requisite: course 100. Communicative and rhetorical strategies; techniques of oral exposition, argumentation, and analysis.

108A-108B. Advanced Practical Translation (4-4) (Formerly numbered 108A-108B-108C.) Lecture, three hours. P/NP or letter grading:

108A. Lecture, three hours. Requisite: course 101. Translation of journalistic texts, including biography and interview, formal and informal reporting, advertising and idiomatic language. Work in techniques of translation. P/NP or letter grading.

108B. Lecture, three hours. Requisite: course 102 or 108A. Translation of literary and sociocultural texts, including editorials, polemical issues, film subtitles. Comparative stylistics of translation. P/NP or letter grading.

109. French Business: Its Language and Culture. (4) Lecture, three hours. Requisite: course 6. Study of language of economics and business in France as well as its specific practices and customs.

114A-114B-114C. Survey of French Literature. (4-4-4) Lecture, three hours. Requisite: course 12. Survey of French literature from the medieval period through the 20th century:

114A. Medieval and Renaissance Literature. Masterpieces of medieval and Renaissance literature, including examples of epic (*La Chanson de Roland*), romance (Chrétien de Troyes' *Yvain*), and Renaissance prose and poetry (including Marot, Du Bellay, Ronsard, Rabelais, Marguerite de Navarre, and Montaigne).

114B. 17th and 18th Centuries. Study of selections from major works of classicism and the Enlightenment, including those by Racine, Pascal, La Fayette, La Fontaine, Laclot, Diderot, Voltaire, and Rousseau.

114C. 19th and 20th Centuries. Study of major literary movements and writers of the period, including works by Hugo, Baudelaire, Balzac, Stendhal, Flaubert, Zola, Gide, Proust, Sartre, Robbe-Grillet, and Duras.

115A-115B-115C. Medieval French Literature. (4-4-4) Lecture, three hours:

115A. Invention of Love in the 12th Century. Selections from the broad range of lyric poetry and narrative romance in which is first elaborated "romantic" (sometimes called "courtly") love. Readings include works of the troubadours and *trouvères*, different versions of the Tristan-myth, a romance of Chrétien de Troyes, and first part of *Romance of the Rose*.

115B. Medieval Knight: Heroism and Its Social Problems. Readings in literature and history of medieval warfare and its ideals in relation to social structure of the time. Texts include *La Chanson de Roland*, *Raoul de Cambrai*, *La Mort le roi Artu*, crusade history, and Georges Duby's *Guerriers et paysans*.

115C. Comic Structure and Social Class. Medieval comedy, to be studied in relation to class structures and their evolution in the Middle Ages, takes a number of forms. Often obscene in the *fabliaux*, it can turn parodic in the *Roman de Renart*, simultaneously satirical, fantastic, and religious in the bourgeois drama of Arras, and utterly charming in the unclassifiable *Aucassin et Nicolette*.

116A-116B-116C. Renaissance. (4-4-4) Lecture, three hours:

116A. La Pléiade and 16th-Century Poetry. Study of the linguistic and poetic "revolution" brought about by *Deffence et Illustration* (1549), including texts by Marot, Scève, Labé, Du Bellay, and Ronsard.

116B. The Novel and Other Early 16th-Century Prose. Emphasis on Rabelais, with other texts by Marguerite de Navarre and Jean Calvin.

116C. Late French Humanism. Emphasis on Montaigne's *Essais*, with other texts from the Religious Wars period.

117A-117B-117C. 17th Century. (4-4-4) Lecture, three hours:

117A. Theater. Study of French comedy and/or tragedy through representative works, including those by Corneille, Molière, and Racine.

117B. Prose. Study of 17th-century philosophers, moralists, and/or novelists such as Pascal, La Rochefoucault, La Bruyère, La Fayette, and La Fontaine.

117C. Culture and Society. Study of 17th-century political, social, religious, and courtly aspects, including libertine and *salons milieux*, la Fronde, and Versailles.

118A-118B-118C. 18th Century. (4-4-4) Lecture, three hours:

118A. Satire. Readings include Montesquieu's *Lettres persannes*, Diderot's *Neveu de Mameau* and *Rêve de d'Alembert*, and Voltaire's *Contes*.

118B. The Novel. Readings include Prévost's *Manon Lescaut*, Diderot's *La Religieuse* and *Jacques le fataliste*, excerpts from Rousseau's *Julie*, and Laclos' *Les Liaisons dangereuses*.

118C. Theater. Readings include selected plays of Marivaux and Beaumarchais, as well as selections from theoretical writings of Diderot and Rousseau.

119A-119D. 19th Century. (4-4-4) Lecture, three hours:

119A. Romanticism. Readings of representative poets, novelists, and playwrights of the Romantic era such as Chateaubriand, Lamartine, Hugo, Vigny, Balzac, and Stendhal.

119B. Generation of 1848. Readings of representative writers of the 1840s and the Second Empire such as Baudelaire, Nerval, Balzac, Flaubert, and Mérimée. May also include the *théâtre à thèse* and Parnassian poetry.

119C. Naturalism and Symbolism. Study of naturalism in the novel and drama as represented by Zola, Maupassant, and Becque, and of symbolism in the poetry of Baudelaire, Verlaine, Rimbaud, and Mallarmé.

119D. Turn of the Century. Study of genres and trends from 1885 through World War I, with emphasis on prose writers such as Huysmans, Laforgue, Barrès, Alain-Fournier, Jarry, Roussel, France, and Romain-Roland.

120A-120B-120C. 20th Century. (4-4-4) (Formerly numbered 120A-120D.) Lecture, three hours. P/NP or letter grading:

120A. Early 20th-Century Writers. Lecture, three hours. Readings of works by Claudel, Apollinaire, Valéry, Gide, and Proust. P/NP or letter grading.

120B. Literature from 1918 to 1945. Lecture, three hours. Study of works by surrealists and other major writers such as Céline, Malraux, Giraudoux, and Anouilh. P/NP or letter grading.

120C. Post-World War II Literature. Lecture, three hours. Study of works by existentialists and other major writers such as Robbe-Grillet, Beckett, Genet, Ponge, and Duras. P/NP or letter grading.

121A-C121B. Contemporary Francophone Literature. (4-4-4) Lecture, three hours:

121A. French-African Literature. Survey of literary works of French expression north and south of the Sahara from World War II to the present.

C121B. Quebec Literature. (Formerly numbered 121B.) Survey of modern *Québécois* literary works. Concurrently scheduled with course C222. P/NP or letter grading.

124. The Short Story. (4) Lecture, three hours. Survey of short fiction forms in France and the French-speaking world.

125. Evolution of French Comedy. (4) Lecture, three hours. Study of history and evolution of comedy from the Middle Ages to the theater of the absurd.

130A-130B-130C. History of French Civilization and Institutions. (4-4-4) Requisites: courses 6, 12:

130A. France from Prehistoric Times to the End of the Middle Ages. Lecture, three hours. Fourth hour may be required for viewing films and other laboratory activities.

130B. From the Renaissance to the End of the "Ancien Régime." Lecture, three hours. Fourth hour may be required for viewing films and other laboratory activities.

130C. From the End of the "Ancien Régime" to 1918. Lecture, three hours. Fourth hour may be required for viewing films and other laboratory activities.

132. Contemporary France. (4) Lecture, three hours. Social, cultural, and political institutions and/or movements in 20th-century France.

M140. Women's Studies in French Literature. (4) (Formerly numbered 140.) (Same as Women's Studies M140.) Lecture, three hours. Exploration of a selected aspect of the situation of women in French literature as author, character, symbol, etc. P/NP or letter grading.

141. Cinema and Literature in France. (4) Lecture, three hours (additional hours may be required for viewing films and other laboratory activities). Study of interaction between cinema and literature in its generic, thematic, and sociocultural aspects.

142. Poetry and Music. (4) Lecture, three hours. Interdisciplinary study of relation between music and literature, with emphasis on the setting of poetical texts to music, from the troubadours to modern times.

M143. Rhetoric of Rule. (4) (Same as Communication Studies M117.) Lecture, three hours. Exploration of how and why power is symbolically constructed by comparing Louis XIV's and President Clinton's attempts to manipulate their image in the "media" of their respective cultures.

150. Studies in Medieval Literature. (4) May be repeated once for credit with consent of major adviser.

151. Studies in 16th-Century Literature. (4) May be repeated once for credit with consent of major adviser.

152. Studies in 17th-Century Literature. (4) May be repeated once for credit with consent of major adviser.

153. Studies in 18th-Century Literature. (4) May be repeated once for credit with consent of major adviser.

154. Studies in 19th-Century Literature. (4) May be repeated once for credit with consent of major adviser.

155. Studies in 20th-Century Literature. (4) May be repeated once for credit with consent of major adviser.

156. Studies in Contemporary Literature of French Expression. (4) May be repeated once for credit with consent of major adviser.

157. Studies in French Critical Theory and Philosophy. (4) Lecture, three hours. Advanced study of major concepts in contemporary French thought, with attention to its influence on French literature and culture, and its application to literary and nonliterary texts.

158. Studies in History of Ideas. (4) Lecture, three hours. Specific themes which address a particular problem of French literature, civilization, or ideas. May be repeated for credit with consent of major adviser.

162. Modern French Thought in Translation. (4) Lecture, three hours. Reading and discussion of contemporary works in translation.

164A-164B-164C. The French Novel in Translation. (4) Lecture, three hours. Texts and authors to be studied announced in advance for each offering.

165. Topics in French Literature in Translation. (4) Lecture, three hours. To be announced each term. May not be taken for major or graduate credit but may be considered as an out-of-department elective for purpose of satisfying major requirements.

170. Honors Program in French. (4) Preparation: completion of two honors projects. Limited to junior/senior French majors with 3.5 grade-point average in major. Individual study on a topic leading to an honors thesis of approximately 20 to 25 pages to be written under guidance of a faculty member.

199. Special Studies in French. (2 to 8) Preparation: consultation with undergraduate adviser. Limited to juniors/seniors. May be repeated once.

Graduate Courses

201. Literary Research and Composition. (4) Lecture, three hours. Introduction to graduate-level literary research, including writing scholarly papers, compilation and presentation of bibliography, and practical work in computer use of data bank.

202. Historical and Philosophical Background to French Literary Criticism. (4) Lecture, three hours.

203. Contemporary Theories. (4) Lecture, three hours. Introductory study of representative texts from the works of major modern theoreticians, which may include works by Althusser, Barthes, Derrida, Foucault, Genette, Greimas, Kristeva, and Lacan.

205. Techniques of Literary Analysis. (4) Lecture, three hours. Practice in close analysis of literary texts, including *explication de texte*.

214. Problematics of Medieval Language and Literature. (4) Lecture, three hours. Requisite to courses 215A, 215B, and 250A through 250C. Introduction to Old French and the problematics of medieval literature.

215A-215B. Medieval Literature (4-4) (Formerly numbered 215A-215D.) Lecture, three hours. Requisite: course 214. Development of a vernacular culture in the Middle Ages. Exploration of social functions of texts designated as "literary" by modernity as part of social, economic, and political evolutions in which those texts played key roles. Letter grading. **215A.** Medieval Subject; **215B.** Narrative Types.

216. Renaissance. (4) (Formerly numbered 216A-216B-216C.) Lecture, three hours. French literature of the 16th century studied within historical, intellectual, and cultural contexts. Letter grading.

217. 17th Century. (4) (Formerly numbered 217A-217D.) Lecture, three hours. Readings in 17th-century literature studied within historical, cultural, and literary contexts. Letter grading.

218. Enlightenment. (4) (Formerly numbered 218A-218B-218C.) Lecture, three hours. Readings in 18th-century French literature and thought: novels, satires, plays, and other key Enlightenment *philosophies*. Letter grading.

219. 19th Century. (4) (Formerly numbered 219A-219D.) Lecture, three hours. Readings in 19th-century literature, covering development of the novel, lyric poetry, and theater from Romantic period to *fin-de-siècle*. Letter grading.

220. 20th Century. (4) (Formerly numbered 220A-220D.) Lecture, three hours. Overview, both historical and analytical, of 20th-century French literature set in context of several key critical topics that interrogate canonical interpretation. Letter grading.

221A-221B-221C. French-African Literature. (4-4-4) Lecture, three hours:

221A. Introduction to Study of French-African Literatures. In-depth survey of French-African literatures prior to independence.

221B. French-African Literature of Madagascar and Bantu Africa. Readings and analysis of major works since independence.

221C. French-African Literature of Berbero-Sudanese and Arabo-Islamic Africa. Readings and analysis of major works since independence.

C222. Contemporary Francophone Literature: Quebec Literature. (Formerly numbered 222.) Lecture, three hours. Survey of modern *Québécois* literary works. Concurrently scheduled with course C121B.

241. Introduction to Generative Anthropology. (4) Lecture, three hours. Discussion of principles of generative anthropology and their application to study of literary texts and related cultural phenomena.

242. Introduction to Study of Narrative. (4) Lecture, three hours. First survey of modern French methodology for critical analysis and interpretation of narrative, with examples from all periods of French literature.

250A. Major Medieval Texts. (4) Seminar, three hours. Requisite: course 214. Intensive study of individual texts from multiple perspectives, such as *La Chanson de Roland*, a romance of Chrétien de Troyes, *Le Roman de la rose*, or François Villon's *Grand Testament*. May be repeated for credit.

250B. Structures of Medieval Literature. (4) Seminar, three hours. Requisite: course 214. Advanced study of a variety of texts in terms of textual and historical structures. May be repeated for credit.

250C. Problems in Medieval Literature. (4) Seminar, three hours. Requisite: course 214. Exploratory study of a theoretical problem, such as subjectivity and representation in medieval literature, minor or nonclassified texts, individuality and convention, or opposition of religion and secularism. May be repeated for credit.

251A-251B. Studies in the Renaissance. (4-4) May be repeated for credit.

253A-253B. Studies in the 17th Century. (4-4) May be repeated for credit.

254A-254B. Studies in the 18th Century. (4-4) May be repeated for credit.

255A-255B. Studies in the 19th Century. (4-4) May be repeated for credit.

256A-256B. Studies in Contemporary Literature. (4-4) May be repeated for credit.

257A-257B. Studies in French-African Literature. (4-4) May be repeated for credit.

258A-258B. Studies in Literary Criticism. (4-4) May be repeated for credit.

259A-259B. Studies in Philosophy and Literature. (4-4) May be repeated for credit.

260A-260B. Studies in History of Ideas. (4-4) Particular problems in French literature and ideas. May be repeated for credit.

370. Teaching French in Secondary School. (4) Lecture, three hours; discussion, one hour. Required of all candidates for general secondary instructional credential in French.

375. Teaching Apprentice Practicum. (1 to 4) Preparation: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

495. Teaching French at College Level. (4) Seminar, three hours; discussion, one hour. Designed for graduate students. Theory and practice of language teaching. S/U grading.

596. Directed Individual Studies or Research. (2 to 4) Tutorial, to be arranged.

597. Preparation for M.A. Comprehensive Examination or Ph.D. Qualifying Examinations. (2 to 8) May be repeated for a maximum of 16 units. S/U grading.

598. Research for and Preparation of M.A. Thesis. (2 to 4) Maximum of four units may be applied toward M.A. degree requirements. S/U grading.

599. Research for and Preparation of Ph.D. Dissertation. (2 to 8) S/U grading

GENERAL EDUCATION CLUSTERS

College of Letters and Science

UCLA
A265 Murphy Hall
Box 951571
Los Angeles, CA 90095-1571

(310) 206-1225
<http://www.college.ucla.edu/ge/clusters.htm>

Scope and Objectives

General education clusters, available to entering freshmen only, are an option for satisfying general education requirements. The clusters span three quarters and are interdisciplinary team-taught courses designed to introduce students to multiple areas of knowledge. They focus on a common topic and are organized in such a way that students can explore how different disciplines converge and diverge in their approach to a particular problem.

General education clusters are taught by some of the University's most distinguished faculty and are designed to strengthen the writing, quantitative reasoning, critical thinking, and information literacy skills that students need to excel at UCLA. During Fall and Winter Quarters, instruction in the clusters consists of lecture courses taught in concert with discussion sections. In Spring Quarter students enroll in one of a number of small satellite seminars whose topics are related to the cluster theme.

On completion of the entire yearlong cluster, students satisfy the equivalent of four general education courses.

For the current cluster course offerings and general education credit, refer to <http://www.college.ucla.edu/ge/clusters.htm>.

General Education Clusters

Lower Division Courses

M1A-M1B-M1C. Global Environment. (5-5-5) (Same as Environment M1A-M1B-M1C.) Course M1A is enforced requisite to M1B, which is enforced requisite to M1C. Letter grading. **M1A-M1B.** Multidisciplinary Perspective I, II. Lecture, three hours; discussion, two hours. Human effects on Earth's ecosystem and social and technological solutions to environmental pollution and overpopulation. History and ecology in lectures; laboratory exercises included in discussions. **M1C.** Special Topics. Seminar, three hours. Small groups address environmental topics like smog, deforestation, and recycling. Exercises include field trips and oceanographic cruise.

20A-20B-20C. Interracial Dynamics in American Culture, Society, and Literature. (5-5-5) Course

20A is enforced requisite to 20B, which is enforced requisite to 20C. Letter grading. **20A-20B.** Lecture, three hours; discussion, two hours. Examination of nature and meaning of race in American society through study of history, literature, and the law. Consideration of construction of race as a social and cultural category among two or more groups and exploration of ways in which race has shaped understanding of American citizenship. **20C.** Special Topics. Seminar, three hours. Consideration of how experience, debates, and issues of race are represented and understood in historical, legal, cinematic, and literary contexts.

21A-21B-21C. History of Modern Thought. (5-5-5) Course

21A is enforced requisite to 21B, which is enforced requisite to 21C. Letter grading. **21A-21B.** Lecture, three hours; discussion, two hours. Introduction to key issues in humanities and social sciences through close reading of prominent social theories of past four centuries. Consideration in historical context of writers from Rousseau and Wollstonecraft to Foucault and Beauvoir and from perspectives of academic specialties for which their work is fundamental. **21C.** Special Topics. Seminar, three hours. Examination of cross-section of classical and modern social theories and debates that shape them.

70A-70B-70C. Evolution of Cosmos and Life. (5-5-5) Course

70A is enforced requisite to 70B, which is enforced requisite to 70C. **70A-70B.** Lecture, three hours; discussion, two hours. Use of concept of evolution, as it applies to biological organisms, Earth, solar system, and the universe itself, to introduce students to both the life and physical sciences. Examination of evolution of the universe, galaxy, solar system, and Earth in course 70A; focus on evolution of life in course 70B. **70C.** Special Topics. Seminar, three hours. Examination in depth of various issues of evolution. Topics may range from creation of California's physical landscape to debate between evolution and creationism.

Judith A. Carney, Ph.D.
J. Mark Ellis, Ph.D.
Chi-Fun Cindy Fan, Ph.D.
David L. Rigby, Ph.D.

Assistant Professors

Joshua S.S. Muldavin, Ph.D.
Marilyn N. Raphael, Ph.D.
Laurence C. Smith, Ph.D.

Scope and Objectives

Geography is concerned primarily with interpreting and explaining the occurrence, distribution, and interrelationships of the physical and social elements which can be seen in the landscape. The geographer concentrates on two essential questions: where are things located? and why are they located where they are? The answer to the former is largely descriptive, but the answer to the latter involves theory and analysis. The geographer's challenge is to provide continuing interpretation of the constantly changing physical and human landscapes on the Earth's surface.

The research and teaching interests of the faculty are highly ranked nationally by the Conference Board of the Associated Research Councils, cover major areas of geographical knowledge, and underlie both the undergraduate and graduate instructional programs. These areas of interest may be broadly grouped into urban and regional development studies, spatial demography and social processes in the city, culture and environment in the modern world, physical geography, and biogeography.

Geography is an especially attractive major for liberal arts students. Its body of theory and its methodologies provide ideas and techniques applicable to a wide range of questions about our environment; it also provides both the regional and world perspectives required of responsible citizens.

The department offers two undergraduate majors that lead to the Bachelor of Arts degree: (1) the major in Geography and (2) the major in Geography/Environmental Studies. The majors prepare students for employment opportunities in both the public and private sectors (in environmental analysis, assessment, and management, map making and remote sensing, regional analysis, economic and urban spatial analysis, and teaching) and for graduate study in law, management, urban and regional planning, education, other biophysical and social sciences, and applied programs, as well as in geography.

Producing geographers of high quality is the principal goal of the graduate program, designed primarily for students pursuing the Ph.D. degree. The Master of Arts degree, which involves coursework and a thesis, serves as an essential building-block of the doctoral program. The doctorate is awarded to those students who have achieved the level of geographical

knowledge and training required of a professional geographer. The degree recognizes the ability of students to make scholarly contributions in their fields of specialization and to undertake advanced research in those areas.

Undergraduate Study

Geography B.A.

Geography majors are encouraged to consult with the undergraduate adviser for the planning of a program suitable to their particular and individual objectives.

Preparation for the Major

Required: Geography 1, 2, 3, 4, M40. All courses must be taken for a letter grade.

The Major

Required: Ten upper division geography courses taken for a letter grade, which must include (1) five courses from one of the Concentrations for the Major listed below, (2) three additional courses in at least two different concentrations, (3) one regions course from Geography 122, 135, 136, 137, 152, 156, 180, 181, 182A, 183, 184, 185, 186, 187, 190, 191, and (4) one procedures course (four units) from 100A (two units), 105A (two units), 163, 167 (six units), 168, 169, 170, 171.

Major Concentrations

By the end of the junior year and no later than the beginning of the senior year, students are required to declare their specific concentration by filing a statement with the undergraduate adviser. The purpose of the concentration requirement is to expose students to systematic in-depth work within a specific area of geography. Completion of a concentration requires five upper division geography courses. Students must take a concentration's required course(s), if any, before declaring that concentration. They must select one of the following concentrations and meet its course requirements:

(1) *Urban and Regional Development Studies:* Five courses from M128, 135, 148, 150, 152, 155, 157, 159A.

(2) *Spatial Demography and Social Processes in the City:* Course 142 and four courses from 143, 144, 146, 150, 156, 159B.

(3) *Culture and Environment in the Modern World:* Five courses from 133, 134, 135, 136, 138, 140, 152, 159C.

(4) *Physical Geography:* Courses 100/100A, 104, 105/105A, and two courses from 101, 103, 107, 159D.

(5) *Biogeography:* Five courses from 108, 111, 112, 116, 118, 122, 123, 159E, 163.

Foreign Language/Mathematics Requirement

Every Geography major is required to pass five quarter courses in foreign language (in no more than two languages) or mathematics, in any combination. In foreign language, the de-

partment accepts UCLA foreign language departmental proficiency examination scores as evidence of foreign language competency. In mathematics, only Mathematics 2, 3A, 3B, 3C, 31A, 31B, 32A, 32B, 33A, or equivalent are acceptable. A grade of Passed or C (or better) is required in all courses intended to satisfy this requirement.

Allied Fields

Students must develop some competence in an allied field. This requirement consists of at least two upper division courses selected from at least one of the following disciplines: Afro-American studies, anthropology, art history, Asian American studies, atmospheric sciences, biology, chemistry, Chicana and Chicano studies, communication studies, Earth and space sciences, economics, folklore, history, management, philosophy, physics, political science, psychology, public health, sociology, women's studies. Urban Planning 187 and M190 are also acceptable. Other disciplines require departmental consent.

Honors Program

Honors in the Geography major may be obtained through procedures described under Geography 199HA-199HB.

Geography/Environmental Studies B.A.

The major in Geography/Environmental Studies develops and deepens students' understanding of environmental issues; it explores problem-solving approaches from an interactive people/nature viewpoint and involves analysis of social, physical, and biotic environmental systems. The major's uniqueness lies in its emphasis on its geographical perspective of human impacts on natural systems, as well as of implications of global change on local and regional human systems.

Preparation for the Major

Required: Geography 1, 2, 3, 4, 5, M40. All courses must be taken for a letter grade. *Recommended:* Chemistry and Biochemistry 2 or 20A, Life Sciences 1, Mathematics 3A, 3B, Organismic Biology, Ecology, and Evolution 21, Philosophy 6, Physics 3A or 10. Students considering graduate work are strongly advised to include Chemistry and Biochemistry 20A, 20B, Mathematics 31A, 31B, and 32A in their program.

Students are strongly advised to complete all requisites before beginning upper division work in the major.

The Major

Required: Twelve upper division geography courses taken for a letter grade which must be distributed as follows: (1) *natural systems core* — two courses from 100, 103, 104, 105, 108, 112; (2) *human systems core* — two courses from 118, 133, 134, 140, 142, 148, 150; (3) *environmental studies cluster* — five courses from 107, 110, 116, 120, 121, 122, 123, 124, 125, 126, M128, 129, 131, 135, 136, 137; (4)

procedures — two courses (eight units) from 100A (two units), 105A (two units), 163, 167 (six units), 168, 169, 170, 171; and (5) *regions* — one course from 122, 135, 136, 137, 152, 156, 180, 181, 182A, 183, 184, 185, 186, 187, 190, 191.

Geography/Environmental Studies majors are advised to complete the required courses in the natural and human systems cores before taking courses in the environmental studies cluster.

At least two upper division courses should be taken as electives in other social sciences departments (Anthropology, Economics, History, Political Science, Sociology), the Urban Planning Department (School of Public Policy and Social Research), or the School of Public Health. The courses should be complementary and/or supplementary to the major as students have constructed it.

Foreign Language/Mathematics Requirement

Every Geography/Environmental Studies major is required to pass five quarter courses in foreign language (in no more than two languages) or mathematics, in any combination. In foreign language, the department accepts UCLA foreign language departmental proficiency examination scores as evidence of foreign language competency. In mathematics, only Mathematics 2, 3A, 3B, 3C, 31A, 31B, 32A, 32B, 33A, or equivalent are acceptable. A grade of Passed or C (or better) is required in all courses intended to satisfy this requirement.

Honors Program

Honors in the Geography/Environmental Studies major may be obtained through procedures described under Geography 199HA-199HB.

Computing Specialization

Majors in Geography and Geography/Environmental Studies may select a specialization in Computing by (1) satisfying all the requirements for a bachelor's degree in the specified major, (2) completing Program in Computing 10A, 10B, 30, 60, and Mathematics 61 with a minimum grade of C in each course (Mathematics 32A and 32B are also highly recommended), and (3) completing at least two courses from Geography 104, 167, 168, 171. Students graduate with a bachelor's degree in their major and a specialization in Computing.

Graduate Study

The following constitutes introductory information regarding graduate degree programs and is based on the 1998-99 edition of *Program Requirements for UCLA Graduate Degrees*. Complete, annual editions of *Program Requirements* are available (listed under "Publications") on the Graduate Division website at <http://www.gdnet.ucla.edu>. Students are subject to the degree requirements as published in *Program Requirements* for the year in which they matriculate.

Master's Degree

The Department of Geography offers the Master of Arts (M.A.) degree in Geography.

Admission

Application to the M.A. program may be made for admission to any quarter. An official application, a complete set of transcripts of prior university coursework, the results of the Graduate Record Examination (GRE) General Test, a statement of purpose, and three letters of evaluation must be submitted. Normally applicants should have (1) completed the undergraduate major in geography or in a related field, (2) received a B.A. or B.S. degree, (3) attained at least a 3.3 grade-point average in courses taken in the junior and senior years in the major, (4) attained a high GRE score (normally well above 1,200) in the combined verbal and quantitative sections, and (5) strong letters evaluating past academic and/or professional performance and indicating potential for high achievement in graduate studies. Exceptions to the guidelines may be made for students whose records indicate unusual promise.

In addition, a faculty member must be willing to serve as interim adviser.

The Test of English as a Foreign Language (TOEFL) is normally required of all international applicants whose native language is not English.

Areas of Study

Students commonly specialize in one or more of the following areas of geographical knowledge: environmental studies, geomorphology, climatology, biogeography, cartography, and economic, social, cultural/historical, population, and urban geography. At the M.A. level students emphasize at least one of these specialized areas. However, because geographical knowledge and its associated research questions frequently transcend disciplinary and subdisciplinary boundaries, students, in consultation with knowledgeable faculty members, are expected to refine and deepen their research interests further, within, across, and beyond these organized research and teaching areas.

Course Requirements

Students must complete at least six courses in addition to the three required core courses (Geography 298A, 298B, 298C), for a minimum of 36 units. The core courses must be completed within two years and with a grade of B or better in each. For students entering with a geography major, the courses be completed in the first year. Two 100-level courses and four units of a 500-level course may be applied toward the minimum coursework requirement. The course program must have the approval of the faculty mentor.

Two 500-series courses may be applied toward the minimum course requirement for the M.A. degree but not toward the minimum graduate course requirement.

Individual Study Courses. The following rules pertain to individual study courses (Geography 199, 596, 597, 598, 599):

- (1) Before enrolling in one of these courses, students must consult with the responsible faculty member and work out a program of study and consultation.
- (2) All 500-series courses must be taken on an S/U basis only.
- (3) Students may enroll in Geography 597, 598, or 599 as often as required.

Teaching Courses. Geography 375 and 495 cannot be applied to the minimum of nine courses for the M.A.

Comprehensive Examination Plan None.

Thesis Plan

Students must present a thesis, based in whole or in part on original investigation. Selection of a thesis topic, creation of a scientific design, and conduct of the investigation should proceed under the supervision of the M.A. committee. The thesis proposal should include the exact nature of the problem to be researched, an outline of the subject matter, the proposed methods of research, the degree of originality involved, and the anticipated time of completion of the study. The entire thesis project must be carried out in close consultation with all members of the thesis committee.

Doctoral Degree

Admission

Application to the program leading to the Ph.D. degree in Geography may be made for admission to any quarter. Applicants must submit an official application, a complete set of transcripts of prior university coursework, the results of the Graduate Record Examination (GRE) General Test, a statement of purpose, and three letters of evaluation. Normally applicants should have (1) completed the undergraduate major in geography or in a related field, (2) received a B.A. or B.S. degree, (3) attained at least a 3.3 grade-point average in courses taken in the junior and senior years and in the major, or a 3.5 GPA in graduate courses for students entering with an M.A., (4) attained a high GRE score (normally well above 1,200) in the combined verbal and quantitative sections, and (5) strong letters evaluating past academic and/or professional performance and indicating potential for high achievement in graduate studies. Exceptions to the guidelines may be made for students whose records indicate unusual promise.

Admission to the Ph.D. program usually requires an M.A. or M.S. degree. Applicants must provide clear evidence of ability to conduct substantive research and to articulate ideas clearly in writing. In addition, a faculty member must be willing to serve as interim adviser. Under rare circumstances, students may proceed directly toward the Ph.D. degree without taking a master's degree. Students must

have completed one year in the M.A. program, have three department faculty members review their dossiers and unanimously recommend such a course of action, and pass a four-hour qualifying examination set and evaluated by three faculty members competent in their area of specialization. The pass must be unanimous and receive the approval of at least two thirds of the voting faculty in a formal faculty meeting.

The Test of English as a Foreign Language (TOEFL) is normally required of all international applicants whose native language is not English.

Major Fields or Subdisciplines

Students commonly specialize in one or more of the following areas of geographical knowledge: environmental studies, geomorphology, climatology, biogeography, cartography, and economic, social, cultural/historical, population, and urban geography. The written qualifying examinations for the Ph.D. include one examination in three of these fields selected by the student in consultation with an adviser. However, because geographical knowledge and its associated research questions frequently transcend disciplinary and subdisciplinary boundaries, students are expected to refine and deepen their research interests further, in consultation with knowledgeable faculty members, within, across, and beyond these organized research and teaching areas.

Course Requirements

Students must successfully complete, within two years and with a grade of B or better in each, the required core courses (Geography 298A, 298B, and 298C) if these have not already been taken at the M.A. level. Students entering with a geography degree should complete them in the first year. At least three graduate geography courses in addition to the M.A. coursework (excluding Geography 298A, 298B, 298C, 375, 495, and the 500 series) are required as are three upper division or graduate courses in one or two fields (outside of geography) allied to the student's major research area or subdisciplinary specialization, subject to approval of the guidance committee. The allied field requirement must be met before taking the oral qualifying examination. Each quarter, the program of coursework must be approved by the guidance committee and the graduate adviser.

Individual Study Courses. The following rules pertain to individual study courses (Geography 199, 596, 597, 598, 599):

- (1) Before enrolling in one of these courses, students must consult with the responsible faculty member and work out a program of study and consultation.
- (2) All 500-series courses must be taken on an S/U basis only.
- (3) Students may enroll in Geography 597, 598, or 599 as often as required.

Teaching Courses. Geography 375 and 495 cannot be applied to the minimum course requirements for the Ph.D.

Written and Oral Qualifying Examinations

The written qualifying examination, consisting of five written papers and administered by the guidance committee, must be taken no later than the sixth quarter of the Ph.D. program (exceptions may be made in the case of students entering from disciplines outside of geography). Three papers pertain to three substantive fields of geographical inquiry in which the student is specializing; one general paper addresses the major issues, developments, and debates in the field at large; and one paper involves a field problem. The examination may be taken over a period of no more than two weeks. In case of failure, students may make one more attempt, but no sooner than three months nor longer than one year from the first examination.

Preparation of the dissertation proposal follows successful completion of the written qualifying examination. The dissertation proposal should specify the research question, describing in some detail the problem to be studied, its scientific background, and outline of the subject matter, the proposed methods of research, the degree of originality involved, and a timetable for completion of the degree. It is to be written in consultation with the official doctoral committee. Committee members should receive the dissertation proposal at least one month before the oral examination. The proposal must be approved unanimously by the committee before the oral examination can take place.

The University Oral Qualifying Examination, conducted by the official doctoral committee, focuses on the dissertation proposal. After successfully completing the oral examination, the student is eligible for advancement to candidacy. In instances of failure, the oral examination may be repeated once.

Geography

Lower Division Courses

1. Physical Environment. (4) Lecture, three hours; laboratory, two hours. Study of Earth's physical environment, with particular reference to the nature and distribution of landforms and climate.

2. Biogeography: Spatial Dynamics of Biological Diversity in a Changing World. (4) Lecture, three hours; discussion, 90 minutes; outside study, seven and one-half hours. Study of Earth's biosphere, with particular reference to evolution and disturbance of plants, animals, and soils. P/NP or letter grading.

3. Cultural Geography. (4) Lecture, three hours; discussion, 90 minutes. Broad examination of basic cultural variables in human occupation of Earth's surface. Ecological, spatial, and historical approaches.

4. Globalization: Regional Development and World Economy. (4) Lecture, three hours; laboratory, one hour. Emergence of global economy and examination of its main characteristics, with focus on economic geography in attempting to understand spatial variation in distribution of all forms of human productive activity at different spatial scales. Students to have understanding of basic features of contemporary global space-economy and have a sense of its historical evolution at end of course. P/NP or letter grading.

5. People and the Earth's Ecosystems. (4) Lecture, three hours; laboratory, two hours. Examination of historical and contemporary roles of man as a major agent of biological change in Earth's ecosystems.

M40. Introduction to Statistical Methods. (4) (Formerly numbered 40.) (Same as Statistics M12.) Lecture, three hours; laboratory, 90 minutes; outside study, seven and one-half hours. Satisfies statistics requirement for Geography major. Presentation and interpretation of data, descriptive statistics and measures of spatial patterns, introduction to statistical inference and measures of association. P/NP or letter grading.

88A-88Z. Lower Division Seminars: Geography. (4 each) Discussion, three hours; reading period, one hour. Seminars designed to explore various themes and issues pertinent to environment and people. Seminar topics advertised in department during previous term. P/NP or letter grading.

Upper Division Courses

100. Principles of Geomorphology. (4) Lecture, three hours; reading period, one hour. Requisite: course 1. Recommended: course 100A. Study of processes that shape the world's landforms, with emphasis on weathering, mass movement and fluvial erosion, transport, deposition; energy and material transfers; space and time considerations.

100A. Principles of Geomorphology: Field and Laboratory. (2) Laboratory/fieldwork, six hours. Corequisite: course 100. Field and laboratory investigations of weathering, mass movement, fluvial erosion, transport, deposition; related geomorphic phenomena. P/NP or letter grading.

101. Coastal Geomorphology. (4) Lecture, three hours; reading period, one hour. Requisite: course 1. Recommended: course 101A. Study of origin and development of coastal landforms, emphasizing past and present changes, hydrodynamic processes, sediment transfers, and such features as beaches, estuaries, lagoons, deltas, wetlands, dunes, seacliffs, and coral reefs, together with coastal zone management. P/NP or letter grading.

101A. Coastal Geomorphology: Field and Laboratory. (2) Laboratory/fieldwork, six hours. Corequisite: course 101. Field and laboratory investigations of coastal landforms, emphasizing past and present changes, hydrodynamic processes, sediment transfers, and such features as beaches, estuaries, lagoons, deltas, wetlands, dunes, and seacliffs, together with coastal zone management.

103. Paleoclimatology and Ice-Age Environments. (4) Lecture, three hours; discussion, one hour. Requisite: course 1. Study of past climates and their environmental impact, with emphasis on the last three million years, including evidence for glacial and interglacial oscillations, historic changes, paleogeographic reconstruction, external and internal forcing mechanisms, and human implications. P/NP or letter grading.

104. Climatology. (4) Lecture, three hours; reading period, one hour. Designed for juniors/seniors. Examination of the many relations between climate and the world of man. Application of basic energy budget concepts to the microclimates of relevance to ecosystems of agriculture, animals, man, and urban places. P/NP or letter grading.

105. Hydrology. (4) Lecture, three hours; reading period, one hour. Corequisite: course 105A. Recommended: courses M40, 104. Designed for juniors/seniors. Role of water in geographic systems: hydrologic phenomena in relation to climate, landforms, soils, vegetation, and cultural processes and impacts on the landscape. Field projects required. P/NP or letter grading.

105A. Hydrology: Field and Laboratory. (2) Laboratory/fieldwork, six hours. Corequisite: course 105. Field and laboratory investigations into role of water in geographic systems: hydrologic phenomena in relation to climate, landforms, soils, vegetation, and cultural processes and impacts on the landscape. Students solve applied hydrology problems in laboratory and make hydrologic measurements in the field.

107. Soil and Water Conservation. (4) Lecture, three hours; discussion, one hour. Requisite: course 1. Recommended: course 105 or 106 or Civil Engineering 150. Designed for juniors/seniors. Systematic study of processes of and hazards posed by erosion, sedimentation, and pollution and techniques needed to conserve soil and maintain environmental quality. Scope includes agriculture, forest engineering, mining, and other rural uses of land. P/NP or letter grading.

108. World Vegetation. (4) Lecture, three hours; reading period, one hour. Designed for juniors/seniors. Characteristics, distribution, environmental and cultural relationships of world's principal vegetation patterns. P/NP or letter grading.

110. Population and Natural Resources. (4) Lecture, three hours; reading period, one hour. Designed for juniors/seniors. Examination of debate about environmental change and ability of the planet to maintain a growing population. Introduction and evaluation of basic demographic processes in context of food production, energy use, and environmental degradation. Discussion of major debates about use of resources in context of increasing population in developing countries and decreasing population in Western countries. P/NP or letter grading.

111. Forest Ecosystems. (4) Lecture, three hours; reading period, one hour; field trips. Requisites: course 2, Life Sciences 1. Designed for juniors/seniors. Evaluation of ecological principles as they apply to forests. Emphasis on constraints of physical environment, biotic interactions, succession, disturbances, and long-term environmental change. P/NP or letter grading.

112. Analytical Animal Geography. (4) Lecture, three hours; reading period, one hour. Requisites: courses 1, 2 or Life Sciences 1, 40. Designed for juniors/seniors. Analysis of processes of expanding and contracting distribution areas. Focus on island biogeography and its implications for biodiversity trends in natural and anthropogenic environments. P/NP or letter grading.

M115. Environmentalism: Past, Present, and Future. (4 to 6) (Same as Urban Planning CM189.) Discussion, three hours; optional field study, five to 10 hours. Exploration of history, politics, and theories of environmental movements, dynamics of race, class, and gender in relation to environmental agendas, and potential role of environmentalism in reshaping our society. Readings, discussion, and research papers. Offered annually as a graduate research seminar and biannually as an undergraduate upper division lecture and field studies program. P/NP or letter grading.

116. Biogeography of Plant and Animal Invasions. (4) Lecture, three hours; reading period, one hour. Requisite: course 1 or 2 or 5 or Biology 2. Examination of theories and examples of invasion of new environments by plants and animals introduced through natural processes or by human activity. P/NP or letter grading.

118. Medical Geography. (4) Lecture, three hours; reading period, one hour. Requisite: course 5. Examination of patterns of population/place/disease interactions and some effects of change and development on disease etiology and problems of health care.

120. Conservation of Resources: North America. (4) Requisites: courses 1, 2. Designed for juniors/seniors. Analysis of basic principles and problems associated with conservation of natural resources in the U.S. and Canada.

121. Conservation of Resources: Underdeveloped World. (4) Lecture, three hours; reading period, one hour. Designed for juniors/seniors. Analysis of principles and problems of conservation of natural resources of the underdeveloped world. P/NP or letter grading.

122. Wildlife Conservation in Eastern Africa. (4) Lecture, three hours; reading period, one hour. Requisite: course 5. Designed for juniors/seniors. Analysis of tropical ecosystems of eastern Africa, including wildlife communities, vegetation, climate, and human impact. Discussion of national park systems and their natural and anthropogenic ecological dynamics. P/NP or letter grading.

123. Bioresource Management. (4) Lecture, three hours; discussion, one hour. Requisites: courses 2, 5. Recommended: course 40. Designed for juniors/seniors. Theory and practice of management and conservation of bioresources. Introduction to wildlife management, endangered species conservation, and design and maintenance of National Parks and ecological reserves. P/NP or letter grading.

124. Environmental Impact Analysis. (4) Lecture, three hours; discussion, one hour. Preparation: two environmental studies cluster courses. Requisite: course 40. Introduction to interdisciplinary analysis of local and regional impacts on environmental systems. Evaluation of state and federal concepts for analysis of environmental impact. P/NP or letter grading.

125. Health and the Global Environment. (4) Lecture, three hours; reading period, one hour. Impact of the environment and lifestyle on individual health examined from a geographical perspective, with examples from both developed and developing countries. P/NP or letter grading.

126. Geography of Extinction. (4) Lecture, three hours; reading period, one hour. Requisite: course 5. Designed for juniors/seniors. Geographic and taxonomic survey and analysis of biotic extinctions over the past 15,000 years. Identification of extinction factors and pathways through case studies of extinct and endangered species and communities. P/NP or letter grading.

M127. Soils and Environment. (5) (Same as Environment M127 and Organismic Biology M127.) Lecture, five hours; discussion, one hour; field trips. Requisites: Chemistry 14A and 14B/14BL, or 20A, 20B, 20L, and 30L. General treatment of soils and environmental implications: soil development, morphology, and worldwide distribution of soil orders; physical, chemical, hydrologic, and biological properties; water use, erosion, and pollution; management of soils as related to plant growth and distribution. Letter grading.

M128. Global Environment and Development: Problems and Issues. (4) (Same as Urban Planning CM128.) Lecture, three hours; discussion, one hour. Requisite: course 5. Designed for juniors/seniors. Questions of population, resource use, Third World poverty, and the environment. Analysis of global economic restructuring and its connections to changing organization of production and resulting environmental impacts. Examination of emergent local and regional coalitions for self-reliance and sustainable development. Case studies from Africa, Latin America, Asia, and the U.S. P/NP or letter grading.

129. Seminar: Environmental Studies. (4) Seminar, three hours; reading period, two hours. Preparation: one course each from natural and human systems cores, three environmental studies cluster courses. Limited to seniors. Qualitative/quantitative analysis of problems associated with rational protection and use of selected environmental systems (urban, rural, forest, desert, coastal, water, soil, or others). P/NP or letter grading.

130. Geographical Discovery and Exploration. (4) Lecture, three hours; reading period, one hour. Requisites: courses 1, 3. Designed for juniors/seniors. Survey of history of exploration, from earliest times to modern, with emphasis on period from Marco Polo to the present.

131. Environmental Change. (4) Lecture, three hours; reading period, one hour. Designed for juniors/seniors. Examination of natural forces producing environmental changes over past two million years. How present landscape reflects past conditions. Effects of environmental change on people. Increasing importance of human activity in environmental modification. Focus on impact of natural and anthropogenic changes on forests. P/NP or letter grading.

133. Cultural Geography of the Modern World. (4) Lecture, three hours; reading period, one hour. Designed for juniors/seniors. Evolutionary and structural approach to sociocultural geography of the modern world system, with particular emphasis on structure and functioning of its core, semi-periphery, and periphery. P/NP or letter grading.

134. Space, Place, and Nature in Western Thought. (4) Lecture, three hours. Designed for juniors/seniors. History of development of basic ideas of geography — space, place, and nature — in Western thought. Relationship between those ideas and conceptions of science, knowledge, and inquiry. P/NP or letter grading.

135. African Ecology and Development. (4) Lecture, three hours. Designed for juniors/seniors. Overview of contemporary ecological and development issues in sub-Saharan Africa. P/NP or letter grading.

136. Technology, Nature, and the American Landscape. (4) Lecture, three hours; reading period, one hour. Designed for juniors/seniors. Study of evolution of cultural landscapes of the area that is now the U.S. Examination of past geographies and of geographical change through time. P/NP or letter grading.

137. Historical Geography of American Environment. (4) Lecture, three hours; outside study, nine hours. Requisites: courses 1, 2. Designed for juniors/seniors. Study of systematic changes of natural environment in the U.S. during historical time, with emphasis on interplay between and among natural factors of climate, soils, vegetation, and landforms, and human factors of settlement, economic activity, technology, and cultural traits. P/NP or letter grading.

138. Place, Identity, and Networked World. (4) Lecture, three hours; reading period, one hour. Communications technologies, such as personal computers and Internet, seem to be connected to dramatic changes in identities of people, groups, and places. Exploration of those changes and their implications for social institutions and human values and practices. P/NP or letter grading.

140. Political Geography. (4) Lecture, three hours; reading period, one hour. Designed for juniors/seniors. Spatiality of political activity, spatial constitution of political power, control over space as central component to political struggles. Studies at local, national, state, and global scales. P/NP or letter grading.

142. Population Geography. (4) Lecture, three hours; reading period, one hour. Designed for juniors/seniors. Study of social and behavioral perspectives influencing people in their patterns of demographic change, migration, and mobility, with special emphasis on spatial relationships and selected case studies. P/NP or letter grading.

143. Geography of Health Care. (4) Lecture, three hours. Examination of geography of health care delivery and planning, focusing on factors which influence accessibility and utilization of health services by consumers. Spatial aspects of organization of health care influence who gets care where. P/NP or letter grading.

144. Ethnicity in the American City. (4) Lecture, three hours; reading period, two hours. Recommended preparation: course 142. Designed for juniors/seniors. Designed to encourage and facilitate critical thinking about geographical aspects of ethnicity in contemporary America, with focus specifically on nonwhite ethnic minorities (blacks, Hispanics, Asian Americans, and Native Americans). Use of a comparative perspective to explain changing distribution, social, economic, and political behavior, and adjustment problems these groups face in the contemporary American city. P/NP or letter grading.

146. Gender, Race, and Geography of Employment in American Cities. (4) Lecture, three hours; reading period, two hours. Designed for juniors/seniors. Geography of employment of men and women of different racial and ethnic backgrounds in American cities. Examination of interrelationships between space and division of labor, and spatial restructuring on employment of women and minorities. P/NP or letter grading.

148. Economic Geography. (4) Lecture, three hours; reading period, one hour. Requisite: course 4. Designed for juniors/seniors. Geographical aspects of economic production and growth. General theory of the space-economy. Land-use processes. Location of industry. Regional development. P/NP or letter grading.

M149. Transportation Geography. (4) (Same as Urban Planning M149.) Requisite: course 3 or 4. Designed for juniors/seniors. Study of geographical aspects of transportation, focusing on characteristics and functions of the various modes and on complexities of intra-urban transport.

150. Urban Geography. (4) Lecture, three hours; reading period, one hour. Designed for juniors/seniors. Analysis of development, functions, spatial patterns, and geographic problems of American cities. P/NP or letter grading.

152. Cities of Europe. (4) Lecture, three hours; reading period, one hour. Designed for juniors/seniors. Urbanization of Europe, growth of city systems and internal spatial structure, functions, and geographic problems of contemporary European cities. Particular attention to historical development and landscapes of capital cities such as Rome, Paris, and Berlin. P/NP or letter grading.

155. Industrial Location and Regional Development. (4) Lecture, three hours. Requisite: course 4 or Economics 1 or 2 or 5 or 11. Designed for juniors/seniors. Reexamination of industrial location theory in light of contemporary theories of industrial organization and local labor markets. Consideration of empirical patterns of industrialization and regional growth, with special reference to Frostbelt/Sunbelt shifts and offshore relocation. P/NP or letter grading.

156. Metropolitan Los Angeles. (4) Lecture, three hours; reading period, one hour. Designed for juniors/seniors. Study of origins, growth processes, internal structure and pattern, interactions, environmental and spatial problems of the Los Angeles metropolitan area. P/NP or letter grading.

157. Models of Regional Growth and Change. (4) Lecture, three hours; reading period, one hour. Requisite: course 4. Recommended: course 40. Examination of empirical and theoretical issues of regional growth and change. Introduction to supply and demand-based models of regional development.

159A-159E. Problems in Geography. (4 each) Discussion, three hours; reading period, one hour. Preparation: completion of three courses in a concentration. Limited to seniors. Seminar course in which students carry out intensive research projects developed from courses within a concentration. P/NP or letter grading. **159A.** Urban and Regional Development Studies; **159B.** Spatial Demography and Social Processes in the City; **159C.** Culture and Environment in the Modern World; **159D.** Physical Geography; **159E.** Biogeography.

Procedures

163. Field Analysis in Biogeography. (4) Fieldwork, eight hours. Requisites: courses 2, 5, 108, 112. Examination of field procedures and intellectual concepts used in observation, measurement, analysis, and interpretation of phenomena pertinent to biogeography and interrelated human influences. P/NP or letter grading.

166. Images of Earth: The World from Above. (4) Lecture, three hours. Use of maps, charts, diagrams, and other images to show how Earth has been represented through the ages, how they have been influenced by current ideas and, in turn, how they have themselves influenced the course of events. P/NP or letter grading.

167. Cartography. (6) Lecture, two hours; laboratory, six hours; outside study, three hours. Preparation: three courses from 1 through 5. Designed for juniors/seniors. Survey of the field of cartography. Theory and construction of map projections, compilation procedures, principles of generalization, symbolization, terrain representation, lettering, drafting and scribing, and map reproduction methods. P/NP or letter grading.

168. Introduction to Geographic Information Systems. (4) (Formerly numbered 170.) Lecture, two hours; laboratory, two hours; outside study, two hours. Designed for juniors/seniors. Introduction to basic geographic information systems (GIS) concepts and spatial analysis. Data structures, topology, and attribute information. Laboratory exercises use database query, manipulation, and spatial analysis to address "real world" problems. P/NP or letter grading.

169. Satellite Remote Sensing and Imaging Geographic Information Systems. (4) Lecture, two hours; laboratory, one hour; outside study, one hour. Introduction to fast-growing field of environmental monitoring from space. Application of Landsat, radar, Global Positioning System (GPS), and Earth Observing System satellites to land-use change, oceanography, meteorology, and environmental monitoring. Introduction to digital image-processing and imaging geographic information system (GIS) software. P/NP or letter grading.

170. Advanced Geographic Information Systems. (4) (Not the same as course 170 prior to Spring Quarter 1997.) Lecture, three hours; discussion, one hour. Requisite: course 168. Introduction to full geographic information systems (GIS) functionality, using ARC/INFO on UNIX workstations. Spatial manipulation, query, and computation of datasets carried out in project-oriented approach. P/NP or letter grading.

171. Quantitative Analysis. (4) Lecture, three hours; laboratory, one hour. Requisite: course 40. Introduction to methods of measurement and interpretation of geographic distributions and associations. P/NP or letter grading.

M178. Dating Techniques in Environmental Sciences and Archaeology. (4) (Same as Anthropology M116Q.) Lecture, three hours; reading period, one hour. Introduction to scientific dating methods such as radiocarbon dating, radiation damage methods, biological dating techniques, and magnetic dating, and applications in environmental sciences, archaeology, and physical anthropology.

Regions

180. North America. (4) Lecture, three hours; reading period, one hour. Designed for juniors/seniors. Delimitation and analysis of principal geographic regions of the U.S. and Canada. P/NP or letter grading.

181. Mexico, Central America, Caribbean. (4) Lecture, three hours; reading period, one hour. Designed for juniors/seniors. Study of geographic factors, physical and cultural, that are basic to understanding the historical development of Middle America and the contemporary economic and cultural geography of Mexico and countries of Central America and the West Indies. P/NP or letter grading.

182A. Spanish South America. (4) Lecture, three hours; reading period, one hour. Designed for juniors/seniors. Study of geographic factors, physical and cultural, that are basic to understanding the historical development of Spanish South America and the contemporary economic and cultural geography of the individual Spanish-speaking countries. P/NP or letter grading.

182B. Brazil. (4) Lecture, three hours; reading period, one hour. Designed for juniors/seniors. Study of geographic factors, physical and cultural, that are basic to understanding the historical development of Portuguese South America and the contemporary economic and cultural geography of Brazil. P/NP or letter grading.

183. Europe. (4) Lecture, three hours; reading period, one hour. Designed for juniors/seniors. Study of geographic conditions and their relation to economic, social, and political problems in Europe. P/NP or letter grading.

184. Russia. (4) Lecture, three hours; reading period, one hour. Designed for juniors/seniors. Study of geographic conditions and their relation to economic, social, and political problems in Russia and former Soviet lands. P/NP or letter grading.

185. South and Southeast Asia. (4) Lecture, three hours; reading period, one hour. Designed for juniors/seniors. Regional synthesis with varying emphasis on the people of South or Southeast Asia in their physical, biotic, and cultural environment and its dynamic transformation. P/NP or letter grading.

186. Contemporary China. (4) Lecture, three hours; reading period, one hour. Designed for juniors/seniors. Systematic geographic analysis of elements of landscape, resources, population, and socioeconomic characteristics of the People's Republic of China. Dynamics that have led to China's major role in the East Asian and international scene, with special attention to China-Japan and Sino-American relations and their geographic bases. P/NP or letter grading.

187. Middle East. (4) Lecture, three hours; reading period, one hour. Designed for juniors/seniors. Analysis of economic, social, and political geography of the area extending from Iran to Morocco and from Turkey to Sudan. Emphasis on geographical themes and problems during historical and modern times. P/NP or letter grading.

190. Australasia. (4) Lecture, three hours; discussion, one hour. Designed for juniors/seniors. Regional synthesis of physical and cultural features which characterize Australia, New Zealand, and the islands of the South Pacific. P/NP or letter grading.

191. California. (4) Lecture, three hours; reading period, one hour. Designed for juniors/seniors. Systematic and regional treatment of geography of California, including physical, cultural, and economic aspects and detailed studies of the various regions. P/NP or letter grading.

Special Studies

199. Special Studies. (2 to 8) Hours to be arranged. Limited to juniors with a B average in the major or seniors.

199HA-199HB. Honors in Geography I, II. (4-4) Hours to be arranged. Preparation: 3.25 grade-point average overall, at least five upper division geography courses with a 3.5 grade-point average. **199HA.** Independent study course taught by team of two faculty members who assist student with bibliographic research and/or field research on a topic of mutual interest to student and the faculty members. Successful completion of course 199HA entails preparation of a detailed bibliography and outline (to be evaluated by the two faculty members) for writing of a substantial paper during course 199HB. If that work is determined to be of A quality, student is allowed to continue in honors program. If that work is graded B or below, credit is awarded, but student is not permitted to continue in honors program. **199HB.** Devoted to writing of substantial paper researched and outlined in course 199HA. It also is evaluated by the two faculty members. If paper is determined to be of A quality, student graduates with honors in geography. If paper is graded B or below, credit is awarded, but student does not receive honors.

199I. Independent Studies for Internships. (2 to 4) Independent studies course to be supervised jointly by Field Studies Office and faculty adviser. Further supervision to be provided by placement for which student is doing internship. May not be applied toward major requirements. P/NP grading.

Graduate Courses

Environment

200. History and Paradigms of Geomorphology. (4) Lecture, two hours; discussion, one hour; reading period, eight hours. Preparation: two courses from 101, 103, 105, 107. Requisite: course 100. Analysis of geomorphic theories since the scientific revolution, with emphasis on catastrophism, uniformitarianism, glacial theories, isostasy and eustasy, evolution and cyclicity, thermodynamics and mechanics, quantification, and current paradigms. View of each theme in its contemporary milieu.

201. Coastal Geomorphology Seminar. (4) Discussion, three hours; reading period, five hours; fieldwork. Requisites: courses 100, 101. Discussion of selected topics pertaining to geomorphic processes and responses observable in the coastal zone. May be repeated for credit.

202. Fluvial Geomorphology Seminar. (4) Discussion, three hours; reading period, five hours; fieldwork. Requisites: courses 100 and 105, or Civil Engineering 150. Discussion of selected topics pertaining to action of running water in shaping the physical landscape. May be repeated for credit.

203. Glacial Geomorphology Seminar. (4) Discussion, three hours; reading period, five hours; fieldwork. Requisites: courses 100, 103. Discussion of selected topics pertaining to action of snow and ice in arctic and alpine environments. May be repeated for credit.

204A-204B-204C. Advanced Climatology. (4) Lecture, three hours; laboratory, one hour. Preparation: first year of calculus and acquaintance with FORTRAN IV. Requisite: course 104. Courses must be taken in sequence. Introduction to tools and concepts of environmental physics of relevance to natural and man-made landscapes. Such basic intellectual, mathematical, and computer programming tools are of special concern to physical geographers, ecologists, and architects.

205. Seminar: Climatology. (4) Discussion, three hours; reading period, one hour. Requisites: courses 204A-204B-204C. Selected topics. May be repeated for credit.

208. Advanced Biogeography: Plants. (4) Lecture, two hours; discussion, one hour; reading period, one hour. Requisites: courses 108, and 110 or 116. Intensive review and analysis of physical and cultural factors influencing plant distributions.

212. Advanced Biogeography: Animals. (4) Lecture, two hours; discussion, one hour; reading period, one hour. Requisite: course 112 or 117. Intensive review and analysis of biophysical and cultural factors influencing animal distributions.

213. Seminar: Biogeography. (4) Discussion, three hours; reading period, two hours. Requisite: course 208 or 212. Related research projects growing out of course 208 or 212. May be repeated for credit.

215. Quaternary Studies: Physical Aspects. (4) Discussion, three hours; reading period, two hours; fieldwork, three hours. Preparation: at least one course from 200 through 205 or an appropriate graduate course in atmospheric sciences or Earth and space sciences. Analysis of the changing physical environment of the Quaternary period. May be repeated for credit.

217. Quaternary Studies: Ecological Aspects. (4) Discussion, three hours; reading period, two hours. Requisites: courses 202 or 204A-204B-204C or 208 or 212 or an appropriate graduate course in anthropology, botany, Earth and space sciences, or zoology. Analysis of ecological aspects of environmental change during the Quaternary period. May be repeated for credit.

218. Advanced Medical Geography. (4) Lecture, two hours; discussion, one hour; reading period, one hour. Requisite: course 118. In-depth study of selected topics in medical geography and intense review of recent research.

223. Seminar: Humid Tropics. (4) Seminar, three hours; reading period, two hours. Designed for graduate students. Selected topics. Biophysical and cultural complexes of the humid tropics, with emphasis on problems related to human settlement and livelihood. May be repeated for credit. S/U or letter grading.

M229. Resource-Based Development Issues: First World and Third World — Environmental Issues and Processes. (4) (Formerly numbered 229.) (Same as Urban Planning M267A.) Discussion, three hours. Recommended preparation: Urban Planning 266. Some major issues associated with development of specific natural resources. Topics include nature of particular resource (or region associated with it), its previous management, involvement of the state, corporations, and local groups, and environmental and social impact of its development.

Human Geography

230. Political Ecology. (4) Seminar, three hours; reading period, three hours. Designed for graduate students. Exploration of theoretical constructs and approaches to analyses of development and the environment associated with political ecology. Examination of relations between poverty, ecological degradation, and global restructuring. Case studies of changing production organization and ecology of land-use patterns within different and emergent economic and political contexts. S/U or letter grading.

231. Terminology and Theory in Political Economy: Deconstruction and Reconstruction of Approaches in Research, Writing, and Practice. (4) Discussion, three hours; reading period, three hours. Designed for graduate students. Deconstruction of oft-used terms in intellectual discourse with goal of making assumptions more explicit, analysis more concise, and use of theory to inform practice (and vice versa) more successful. Attempt to reconstruct a more concise and useful terminology to inform theoretical inquiry and research practice. S/U or letter grading.

232. Advanced Cultural Geography. (4) Lecture, two hours; discussion, one hour; reading period, one hour. Requisite: course 133. Lectures and discussions around specific aspects of development of cultural landscape in different geographic environments.

233. Seminar: Cultural Geography. (4) Discussion, three hours; reading period, two hours. Requisite: course 232 or 236. Discussions on particular topics in cultural geography. Content may vary from year to year. May be repeated for credit.

234. Environment and Subsistence in Indigenous Cultures. (4) Seminar, three hours. Discussion on resource management strategies and environmental issues in indigenous cultures. Topics vary from year to year.

237. Seminar: Historical Geography. (4) Discussion, three hours; reading period, two hours. Requisite: course 236. Theory and practice of historical geography in North America and Europe. May be repeated for credit.

240. Advanced Political Geography: Geopolitics. (4) Lecture, two hours; discussion, one hour; reading period, one hour. Intensive study of theories and principles of geopolitics. Selected regions used as examples of differing techniques of study in geopolitics. S/U or letter grading.

241. Seminar: Political Geography. (4) Discussion, three hours; reading period, two hours. Requisite: course 240. Related research projects growing out of course 240. May be repeated for credit.

242. Advanced Population Geography. (4) Lecture, three hours; reading period, one hour. Requisite: course 142. Study of population dynamics and migration, spatial variation in population composition, and population resource problems, diffusion, and epidemiology.

244. Topics in Spatial Demography. (4) Discussion, three hours; reading period, two hours. Selected topics in migration and mobility, especially the nature of housing choice and neighborhood change. May be repeated for credit. S/U or letter grading.

248. Location and Space Economy. (4) Lecture, two hours; discussion, one hour; reading period, one hour. Methods of locational analysis as applied to problems of regional growth and development. S/U or letter grading.

249. Seminar: Economic Geography. (4) Discussion, three hours; reading period, two hours. Requirement: course 248. Related research projects growing out of course 248. May be repeated for credit.

250. Urban Systems. (4) Lecture, two hours; discussion, one hour; reading period, one hour. General study of hierarchy of urban places, including diffusion within urban hierarchy and theories to account for location and size distribution of cities. S/U or letter grading.

251. Seminar: Urban Geography. (4) Discussion, three hours; reading period, two hours. Requirement: course 250. Related research projects growing out of course 250. May be repeated for credit.

254. Migration and Residential Mobility. (4) Lecture, two hours; discussion, one hour; reading period, one hour. Description and modeling of national, regional, and intra-urban migration.

Procedures

260. Advanced Field and Laboratory Analysis in Geomorphology. (4) Laboratory/fieldwork, 10 hours. Preparation: two courses from 200, 201, 202, 203, 215. Designed for graduate students. Examination of advanced field and laboratory procedures used in contemporary geomorphic research, with emphasis on scientific design, instrumentation, and data evaluation.

262. Advanced Field Analysis: Biogeography. (8) Fieldwork, 10 hours. Observation, measurement, and analysis of biogeographic phenomena, including identification and evaluation of biotic populations and communities and their modifications resulting from the impact of human activity.

268. Advanced Projects in Geographic Information Systems (GIS)/Remote Sensing. (4) Discussion, one hour; laboratory, three hours. Recommended prerequisite: course 169 or 170 or Earth and Space Sciences 150. Familiarity with a GIS or image processing package expected. Individualized research projects conducted on UNIX platforms within a structured course environment. All aspects of a modest but original project, including data acquisition, ingestion, and analysis; interpretation of results and presentation in publication-style format.

269. Remote Sensing of Environment. (4) Laboratory, three hours; independent study, two hours. Requirement: course 167. Study of aerial photographs and other remote sensing images as tools for geographical research. Particular attention to analysis of landscapes and interpretation of interrelationships of individual features in their physical and cultural complex.

M270A-M270B-M270C. Seminars: Climate Dynamics. (2 to 4 each) (Same as Atmospheric Sciences M272A-M272B-M272C and Earth and Space Sciences M270A-M270B-M270C.) Seminar, two hours. Archaeological, geochemical, micropaleontological, and stratigraphic evidence for climate change throughout the geological past. Rheology and dynamics of climatic subsystems: atmosphere and oceans, ice sheets and marine ice, lithosphere and mantle. Climate of other planets. Modeling, simulation, and prediction of modern climate on monthly, seasonal, and interannual time scale. May be repeated for credit. S/U or letter grading.

M272. Spatial Statistics. (4) (Same as Urban Planning M215.) Lecture, two hours; discussion, one hour; laboratory, one hour. Specific techniques useful in analysis of spatial data and modeling of spatial distributions.

Regions

283. Europe. (4) Seminar, two hours; discussion, two hours. Requirement: course 183. May be repeated for credit. S/U or letter grading.

286. Geography of Contemporary China. (4) Seminar, three hours; reading period, two hours. Designed for graduate students. May be repeated for credit. S/U or letter grading.

292. Advanced Regional Geography: Selected Regions. (4) Lecture, three hours; discussion, one hour. Preparation: appropriate upper division regional course. Lecture series devoted to a specific region at discretion of instructor. May be repeated for credit.

Seminar

295. Seminar: Geographic Thought. (4) Discussion, three hours; reading period, two hours. Designed for graduate students. Discussion and study of topics significant to growth of modern philosophy of geography.

Core Courses

298A. Philosophical Issues in Geographical Inquiry. (4) Lecture, three hours. Discussion of geographical research within context of philosophical debates concerning the nature of scientific inquiry.

298B. History of Modern Geography. (4) Lecture, three hours; reading period, one hour. Evolution of the field of geography in the 19th and 20th centuries, with emphasis on professionalization of geography and its emergence as a modern academic discipline.

298C. Statistical Methods for Geographic Research. (4) Lecture, three hours; laboratory, two hours. Requirement: course 171. Use of linear models, discriminant functions, and factor analysis to analyze problems in geography.

Special Studies

375. Teaching Apprentice Practicum. (1 to 4) Preparation: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

495. Teaching College Geography. (2) Seminar, one hour; laboratory, three hours. Classroom practice in teaching, with individual and group instruction on related educational methods, materials, and evaluation. May be repeated for credit. S/U grading.

596. Directed Individual Study or Research. (2 to 8) May be repeated for credit. S/U grading.

597. Preparation for Ph.D. Qualifying Examinations. (2 to 8) Independent study. May be repeated for credit. S/U grading.

598. Research for and Preparation of M.A. Thesis. (2 to 8) Independent study. May be repeated for credit. S/U grading.

599. Research for and Preparation of Ph.D. Dissertation. (2 to 8) Independent study.

James Schultz, Ph.D., *Acting Chair*

Professors

Ehrhard Bahr, Ph.D. (*German*)
Jesse L. Byock, Ph.D. (*Old Norse*)
Robert S. Kirsner, Ph.D. (*Dutch, Afrikaans*)
Kathleen L. Komar, Ph.D. (*German*)
Wolfgang Nehring, Ph.D. (*German*)
James Schultz, Ph.D. (*German*)
Hans Wagener, Ph.D. (*German*)

Professors Emeriti

Franz H. Bäuml, Ph.D.
Marianna D. Birnbaum, Ph.D.
Carl W. Hagege, Ph.D.
Victor A. Oswald, Jr., Ph.D.
Donald J. Ward, Ph.D.
Terence H. Wilbur, Ph.D.

Associate Professor

Jill Anne Kowalik, Ph.D. (*German*)

Assistant Professor

Christopher M. Stevens, Ph.D. (*Germanic Linguistics and Philology*)

Lecturer

Jutta Landa, Ph.D. (*German*)

Scope and Objectives

The Department of Germanic Languages offers an extraordinary array of courses in languages, literatures, and cultures. This broad range of studies offers training in specialized fields such as film, linguistics, folklore, and critical theory. Courses prepare students for a variety of careers, including law, business, international relations, academic professions, and publishing.

Undergraduate majors earn a Bachelor of Arts degree. The graduate program offers Master of Arts and Ph.D. degrees. Refer to the Scandinavian Section later in this catalog for information about the degrees in Scandinavian studies.

At all levels of study various specializations are possible. Language, literature, and culture studies are available in Afrikaans, Dutch, Old Norse, and Icelandic, in addition to German. The program also provides opportunity for study, work-study, and internships in a German-speaking country or in a country related to the course of study.

Undergraduate Study

Grammar/Composition Courses

No credit is allowed for completing a less advanced course after successful completion of a more advanced course in Afrikaans, Dutch, German, and Old Norse grammar and/or composition. Students with demonstrated preparation may be permitted to transfer to a more advanced course with consent of the instructor.

German B.A.

Preparation for the Major

Required: German 1, 2, 3, 4, 5, 6, or equivalent. Students who have completed one year of college-level German language courses should enroll in course 4. Students who are in doubt as to their level of language proficiency or who are native speakers should consult the language program supervisor.

The Major

Three plans are offered by the department:

Plan A: Literature and Culture

Plan A is designed for students who are interested in studying German language and thought by selecting courses in literature, film, folklore, and contemporary culture studies.

Required: German 130A-130B and 11 upper division German courses, at least three of which must be at the 150 level or above. Two of the 11 courses may be upper division courses in other departments. Students who enroll in any course taught in English translation in the department must sign a contract with the instructor that all texts authored in German are to be read in the original language. The contract must then be filed with the undergraduate adviser. Students may take up to two courses from the 120 series or below in satisfaction of major requirements. Two additional courses from the 120 series or below may be selected if students elect not to take courses in other departments. All courses must be taken for a letter grade.

Plan B: German Studies

Plan B is designed for students whose interests are primarily interdisciplinary in nature. Departmental majors receive credit not only for upper division courses in German literature, film, folklore, and contemporary culture, but for courses in related fields such as history, political science, philosophy, music, and others.

Required: German 130A-130B, seven upper division German courses (at least two of which must be at the 150 level or above), and four upper division courses in a related field or fields selected in consultation with the undergraduate adviser. Students who enroll in any course taught in English translation in the department must sign a contract with the instructor that all texts authored in German are to be read in the original language. The contract must then be filed with the undergraduate adviser. Only two such contract courses may be applied toward the major. All courses must be taken for a letter grade.

Plan C: Germanic Languages/Linguistics

Plan C is intended for students interested in the study of languages and linguistics and allows students to study more than one Germanic language

Required: German 130A-130B, 150, 170, C172, and eight additional upper division courses as follows: three courses in one other Germanic language (Hungarian taught in the Slavic Languages and Literatures Department or Scandinavian languages taught in the Scandinavian Section may be applied by petition to the undergraduate adviser), three linguistics courses from outside the department (i.e., anthropology, applied linguistics, linguistics, sociology) selected in consultation with the undergraduate adviser, and two electives from department offerings (excluding German 100A, 100B, 100C, and courses taught in English translation). All courses must be taken for a letter grade.

Honors Program

To qualify for graduation with departmental honors, students must earn a cumulative grade-point average of 3.6 or better in upper division German courses and a 3.3 overall

GPA, and complete German 195 with a grade of A. Contact the departmental honors adviser for procedures, special arrangements, possible exceptions, and other information.

Instructional Credential in German

Students desiring the general secondary instructional credential in German should consult the Department of Education, 1009 Moore Hall (310-825-8328), and the Department of Germanic Languages.

German Minor

To enter the German minor, students must have an overall grade-point average of 2.0 or better.

Required Lower Division Courses (eight units): German 5 and 6 or equivalent.

Required Upper Division Courses (20 units): Any five German courses (excluding German literature in translation).

All minor courses must be taken for a letter grade, with an overall grade-point average of 2.0 or better. Successful completion of the minor is indicated on the transcript and diploma.

Germanic Languages Minor

To enter the Germanic Languages minor, students must have an overall grade-point average of 2.0 or better.

Required Upper Division Courses (28 units): Seven courses in any of the following languages and literatures: Afrikaans, Dutch, German (excluding German literature in translation), Hungarian, Old Norse, Scandinavian languages, Yiddish.

All minor courses must be taken for a letter grade, with an overall grade-point average of 2.0 or better. Successful completion of the minor is indicated on the transcript and diploma.

Graduate Study

The following constitutes introductory information regarding graduate degree programs and is based on the 1998-99 edition of *Program Requirements for UCLA Graduate Degrees*. Complete, annual editions of *Program Requirements* are available (listed under "Publications") on the Graduate Division website at <http://www.gdnet.ucla.edu>. Students are subject to the degree requirements as published in *Program Requirements* for the year in which they matriculate.

Master's Degree

The Department of Germanic Languages offers the Master of Arts (M.A.) degree Germanic Languages.

Admission

A bachelor's degree in German, Germanic linguistics, or linguistics with a minor in German and a minimum grade-point average of 3.0

from an accredited U.S. institution or the equivalent is required for admission to the M.A. program. Applicants with deficiencies in undergraduate preparation may be admitted but are required to take remedial courses, as recommended by the graduate adviser. Three letters of recommendation are required. Graduate Record Examination (GRE) scores are required from applicants from the U.S. and other English-speaking countries.

Areas of Study

There are four M.A. plans that differ with respect to course requirements and comprehensive examinations. Plan A is for students who plan to terminate their studies with the M.A. and an instructional credential. Plan B is for students whose main interests are literary and linguistic rather than pedagogical and for students who plan to proceed toward the Ph.D. Plan C is for students with main interests in German studies who plan to terminate their studies with the M.A. Plan D is for students whose main interests are in Germanic linguistics who plan to proceed toward the Ph.D.

Course Requirements

Plan A requires a minimum of nine upper division and graduate courses, of which at least six courses must be graduate level (200 or 500 series). In addition, German 134, 150 (or equivalent) are required. Undergraduate credit for these courses is applicable in satisfaction of these requirements.

Plan B requires a minimum of nine upper division and graduate courses, of which at least six courses must be graduate level (200 or 500 series). One seminar must be included.

Plan C requires a minimum of nine upper division and graduate courses (at least six must be graduate courses), with six in the major field (German) and three in a related field such as history, musicology, philosophy, or political science. All related field courses must be in the 200 series. One major field and one related field seminar must be included.

Plan D requires a minimum of nine upper division and graduate courses beyond the language requirements, of which at least six courses must be graduate level (200 or 500 series) and of which up to four courses may be from other departments in a relevant area (e.g., linguistics, applied linguistics, Indo-European linguistics, Romance linguistics). German 217, C238, and one seminar must be included. Half of the coursework should be in synchronic linguistics and half in diachronic linguistics. All coursework must be approved in advance by the graduate adviser.

German 596, 597, and 598 are graded S/U. Course 596 may be taken only twice during graduate study (M.A. and Ph.D. programs.). Course 597 may be taken once before the M.A. degree; course 598 may be taken once. A maximum of two 500-series courses may be applied to the course requirements. However, if course 596 is taken twice before the M.A., it may not be applied to the eight graduate

courses required after completion of the M.A. Graduate students are expected to attend and participate in departmental lectures and colloquia.

Comprehensive Examination Plan

Examinations are offered each quarter, beginning with the written part during the fifth week of each quarter. Under exceptional circumstances, the chair of the department will receive petitions for M.A. examinations during the summer recess.

One examination committee is appointed for each quarter. The members of the committee administer the written and oral examinations.

For Plans A and B there are three examinations with the following structures:

One four-hour written examination. Three areas of study are required. A two-hour examination is required for the primary area. Two additional areas of study are chosen from those listed below. A one-hour examination is required for each of the two areas.

For Plan A, students must choose history and structure of Germanic languages as one area of study. Students who choose German literature after 1600 are advised to choose the German literature before 1600 and history and structure of Germanic languages area as well. Students who choose only the areas of history and structure of Germanic languages and German literature after 1600 must take German 202A and 202B.

- (1) German literature before 1600
- (2) History and structure of Germanic languages
- (3) German literature after 1600
- (4) Dutch and Afrikaans
- (5) Old Norse studies
- (6) Yiddish
- (7) Folklore
- (8) Hungarian

Bibliography Question. On the Monday following the completion of the written examinations, a bibliography take-home question is given out that is based on the primary concentration. The question is to be completed and returned no later than the following Monday.

One-hour oral examination. A one-hour oral examination follows in the week in which the bibliography question is returned.

For Plan C, students submit two essays of approximately 10,000 words in the major field of German studies and 7,500 words in the extra-departmental related field, written under the guidance of a three-member faculty committee, one of whose members must be from another department. After satisfactorily completing the essays, members of the committee decide whether or not the candidate has passed.

For Plan D, the M.A. examination consists of three written examinations of two hours each, followed by a one-hour oral examination. Stu-

dents are examined in the following areas: one examination on the history of Germanic languages, theory, and historical linguistics; one examination on the structure of Germanic languages, theory, and synchronic linguistics; one examination on languages and dialects. Students may select one modern language, one philological language, and a third language of their choice. The examination includes translation and parsing. To continue toward the Ph.D., students must receive a pass with the recommendation to continue.

After the written examinations have been taken, the M.A. committee decides whether students may proceed to the oral examination. If students fail the oral examination, the M.A. committee decides whether the entire examination must be repeated or only the oral portion. The examination may be repeated only once without petition.

If students apply for the M.A. under Plan B (to proceed toward the Ph.D.) and are awarded a terminal M.A., the examinations may be repeated if they choose not to have the M.A. degree officially awarded before the reexamination.

Thesis Plan

In lieu of the written examination requirement for Plans A, B, and D, students may submit a thesis to the department. Students in Plan B who elect to submit a thesis must, however, complete a two-hour oral examination in the area of their thesis as well as in two other areas of concentration in order to be approved for further doctoral study. Students in Plan D who elect the thesis option are required to take one two-hour written examination in addition to the thesis.

The following additional rules apply to the thesis option:

- (1) The thesis committee must consist of three members, one of whom serves as director. The student selects the director, and the other two members are appointed by the chair in consultation with the student.
- (2) No committee member from outside the department is required, except in the case of Plan C. For this plan, one member must be from the related field.
- (3) The thesis committee should be established no later than the end of the fourth quarter of the candidate's graduate studies. At that time, the thesis committee must approve the plan for the thesis in writing and submit a copy to the graduate adviser.
- (4) No 598 course is required, although students may take one such course in preparation for the degree.
- (5) Candidates who fail the examination may repeat it once without petitioning the department. The examination must be repeated no later than one quarter following the quarter in which the first examination was failed.
- (6) The *Schedule of Classes* specifies the date for filing of the final draft of a thesis with

the student's committee and the date on which revised and completed theses may be filed with the University. The examinations must be taken prior to the date on which revised and completed theses may be filed with the University.

Doctoral Degree

Admission

The department requires an M.A. degree in German or a Germanic language from an accredited U.S. institution for admission to the program leading to the Ph.D. degree in Germanic Languages. Also acceptable are European degrees such as German or Austrian *Staatsexam*, a German or Austrian *Magister*, or a Swiss *Lizenziat*. A German *Zwischenprüfung* is not acceptable. In the case of significant deficiencies in prior training, the graduate advisers make appropriate study or course recommendations. All deficiencies must be removed prior to taking the qualifying examinations. Applicants with an M.A. in fields other than German (for example, in Comparative Literature or in Linguistics) are required to pass the written part of the M.A. comprehensive examination in German or Scandinavian, as applicable, within three quarters after admission to the department. Three letters of recommendation are required.

Major Fields or Subdisciplines

Not applicable.

Course Requirements

Students must have completed eight graduate courses (at least four in the Department of Germanic Languages) beyond the M.A. degree, three of which must be seminars. If students have already taken a seminar in preparation for their M.A. degree, only two of these eight courses must be seminars.

Written and Oral Qualifying Examinations

Students must (1) pass the graduate reading examination in French; (2) pass a departmental reading examination either in a modern Scandinavian language or in Dutch-Flemish, Afrikaans, Latin, or Yiddish (or an approved substitute language); (3) successfully complete three seminars; (4) pass the qualifying examinations. Written examinations may be repeated in case of failure. The faculty must decide whether students who fail the examination twice may be permitted another repeat.

The written examinations may be taken any time after admission to the doctoral program and fulfillment of all requisite requirements. The written qualifying examinations consist of 11 hours of total examination time. Students in literature are expected to cover six different areas: one author, one genre, one period, one theoretical or historical problem, and two special topics of their choosing. Students in linguistics complete a three-hour examination in five target languages and a second three-hour examination in linguistic theory. Students in

Old Norse are examined for two hours in language, two hours in theoretical problems of interpretation, and two hours on issues concerning social and historical context. Students in Scandinavian complete a three-hour examination in their major Scandinavian literature, and a second three-hour examination in the other two Scandinavian literatures.

After the student has completed the written examinations successfully, the chair of the guidance committee schedules the University Oral Qualifying Examination to be administered by the doctoral committee as soon as possible after completion of the written examinations.

German

Lower Division Courses

1. Elementary German. (4) Lecture, five hours; laboratory, one hour; outside study, five hours minimum. P/NP or letter grading.

1G. Elementary German for graduate students. (4) Preparation for Graduate Division foreign language reading requirement. May not be applied toward degree requirements. S/U grading.

2. Elementary German. (4) Lecture, five hours; laboratory, one hour; outside study, five hours minimum. Enforced requisite: course 1. P/NP or letter grading.

2G. Elementary German for Graduate Students. (4) Preparation for Graduate Division foreign language reading requirement. May not be applied toward degree requirements. S/U grading.

3. Elementary German. (4) Lecture, five hours; laboratory, one hour; outside study, five hours minimum. Enforced requisite: course 2. P/NP or letter grading.

3G. German for Graduate Students. (4) Reading and translation, three hours. Requisite: course 2G. Preparation for Graduate Division foreign language reading requirement. Intensive reading and translation of humanities and social sciences texts. May not be applied toward degree requirements. S/U grading.

4. Intermediate German. (4) Lecture, five hours; laboratory, one hour; outside study, five hours minimum. Enforced requisite: course 3. P/NP or letter grading.

5. Intermediate German. (4) Lecture, four hours; laboratory, one hour; outside study, four hours. Enforced requisite: course 4. P/NP or letter grading.

6. Intermediate German. (4) Lecture, four hours; laboratory, one hour; outside study, four hours minimum. Enforced requisite: course 5. P/NP or letter grading.

8. Elementary German: Intensive. (12) Lecture, 15 hours; laboratory, five hours; outside study, 16 hours. Intensive basic course in German equivalent to courses 1, 2, and 3. P/NP or letter grading.

10. Intermediate German: Intensive. (12) Lecture, 20 hours; laboratory, four hours. Enforced requisite: course 3. Intensive intermediate course in German equivalent to courses 4, 5, and 6. P/NP or letter grading.

12. German Conversation. (2) Enforced requisite: course 1. Use of German language teaching films; students have opportunity to practice spoken German in small groups.

14. Intermediate Conversation. (2) Enforced requisite: course 3. Students have opportunity to practice spoken German in small groups.

50A-50B. Masterworks of German Literature in Translation. (4-4) Lecture, three hours. May not be applied toward completion of the major in German:

50A. Medieval Period through Classicism. Study and analysis of selected masterworks in English translation, including works from the earliest period, such as the heroic and courtly epic, to authors such as Grimelshausen, Lessing, Schiller, and Goethe.

50B. Romanticism to the Present. Study and analysis of selected masterworks in English translation, including authors such as E.T.A. Hoffmann, Heine, Fontane, Rilke, Kafka, Brecht, Thomas Mann, Hesse, Grass, Böll, and Christa Wolf.

88. Lower Division Seminar. (4) Discussion, three hours. Course of variable content limited to topics of current interest and offered whenever a staff member is available.

Upper Division Courses

100A. German Civilization and Culture before 1700. (4) Lecture, three hours; discussion, one hour; outside study, five hours minimum. Lectures, discussions, and readings in English; knowledge of German not required. Study of development of German civilization and institutions from earliest times to 1700. Study of German culture as represented in its literature, art, music, and architecture. P/NP or letter grading.

100B. Modern German Civilization and Culture from 1700 to 1919. (4) Lecture, three hours; discussion, one hour; outside study, five hours minimum. Lectures, discussions, and readings in English; knowledge of German not required. Study of development of German civilization and institutions from 1700 to 1919. Study of German culture as represented in its literature, art, music, and architecture. P/NP or letter grading.

100C. German Civilization and Culture in the 20th Century. (4) Lecture, three hours; discussion, one hour; outside study, five hours minimum. Lectures, discussions, and readings in English; knowledge of German not required. Study of development of German culture and institutions from 1919 to the present, emphasizing developments in literature, arts, and architecture. P/NP or letter grading.

102A. German Film in Cultural Context: Early German Film. (4) (Formerly numbered 121B.) Lecture, two hours; discussion, one hour; outside study, nine hours. Lectures and texts in English; additional readings in German for majors. Survey of German film between 1919 and 1945. Analysis of technological and stylistic development of film from silent Expressionist films to Nazi propaganda and entertainment films. Film discussions enhanced by interactive media. Letter grading.

102B. German Film in Cultural Context: New German Film. (4) (Formerly numbered 121C.) Lecture, two hours; discussion, one hour; outside study, nine hours. Lectures and texts in English; additional readings in German for majors. Survey of German film since 1960 in its thematic and stylistic diversity. Films authored by Werner Herzog, Fassbinder, and Margarethe von Trotta are juxtaposed with commercial comedies of the 1990s. Film discussions enhanced by interactive media. Letter grading.

106. The Faust Tradition from the Renaissance to the Modern Age. (4) (Formerly numbered 119C.) Lecture, three hours; outside study, nine hours. Readings and discussions of the Faust theme in European literature and intellectual history, including chapbook of *Doktor Faustus*, Marlowe's and Goethe's dramas, and Thomas Mann's and Bulgakow's novels. Letter grading.

108. Love and Sex in German Literary Tradition. (4) (Formerly numbered 119D.) Lecture, three hours; outside study, nine hours. Study of major literary works that address issues of idealized desire, emotional/sexual boundaries, and development of sexual identity. Letter grading.

110. Nietzsche and Critique of Western Culture. (4) (Formerly numbered 118.) Lecture, two hours; discussion, one hour; outside study, nine hours. Readings that focus on Nietzsche's critique of Christianity, master/slave dynamic, and reciprocal relation between poetry and philosophy. German majors required to complete all readings in German. Letter grading.

112. Jewish Writing and Thought in German Culture from 1755 to the Present. (4) (Formerly numbered 119F.) Lecture, three hours; outside study, nine hours. Analysis of works that represent process of Jewish assimilation, disenfranchisement, and extermination, including authors such as Mendelssohn, Heine, Kafka, Paul Celan, Nelly Sachs, Anne Frank, and others. Letter grading.

116. Special Topics in Modern Literature and Culture. (4) (Formerly numbered 119E.) Lecture, three hours; outside study, nine hours. Content varies with instructor and may include works by authors such as Thomas Mann, Rilke, Kafka, Brecht, Christa Wolf, and others. May be repeated for credit. Letter grading.

118. Feminist Issues in German Literature and Culture. (4) (Formerly numbered 121E.) Lecture, three hours; outside study, nine hours. Analysis of major issues in German feminism today (e.g., status, creative work, and reception of women writers in various periods such as Romanticism, Fascism, and/or divided/unified Germanies). Letter grading.

M119K. Tristan, Isolde, and History of Heterosexuality. (4) (Same as Women's Studies M119.) Lecture, three hours; outside study, nine hours. Tristan and Isolde are among the more famous and enduring of European literary lovers, and following their tradition from Middle Ages to the present provides opportunity to consider a host of issues — from questions of genre to those of kinship, from representation of love to tyranny of gender, and history of heterosexuality. P/NP or letter grading.

120. German Folklore. (4) (Formerly numbered 134.) Lecture, three hours; outside study, nine hours. Survey of various folklore genres in cultural context, including legends, proverbs, and cultural enactments such as carnival. Letter grading.

M122. Fairy Tales in Literature and Society. (5) (Formerly numbered M119I.) (Same as Folklore M119.) Lecture, four hours; outside study, 11 hours. History and reception of folklore collections in Europe, with particular attention to ideology and influence of Grimms' tales. Interpretation of selected tales and their transformations and appropriation in literature, film, advertising, and pedagogy. Letter grading.

130A-130B. Conversation and Composition on Contemporary German Culture and Society I, II (4-4) (Formerly numbered 108A-108B.) Lecture, three hours; outside study, nine hours. Requisite: course 6. Course 130A is requisite to 130B. Structured around themes as they emerge in contemporary German texts ranging from news magazine articles to literature, with emphasis on speaking and writing proficiency. Presentation software featured. Letter grading.

132. Business German. (4) (Formerly numbered 102.) Lecture, three hours; outside study, nine hours. Requisite: course 6. Specialized language course that teaches German business administration, practices, and correspondence, with attention to cultural nuances. Ongoing developments in European Union analyzed via newspaper articles and the Internet. Letter grading.

134. Advanced German Language through Cultural History and Current Affairs. (4) (Formerly numbered 128.) Lecture, three hours; outside study, nine hours. Requisites: courses 130A-130B. Advanced German language course that juxtaposes cultural history with current affairs to teach complex speaking and writing skills of interpretation, analysis, and criticism. Readings may include selections from Luther, Heine, Freud, and current authors. Students create their own interactive media presentations. Letter grading.

136. Theory and Practice of Translation. (4) (Formerly numbered 103.) Lecture, three hours; outside study, nine hours. Requisite: course 130B with a grade of B or better. German/English and English/German translation of literary texts, popular press articles, and business documents, with attention to issues of style. Letter grading.

140A. Introduction to German Poetry. (4) (Formerly numbered 101A.) Lecture, three hours; outside study, nine hours. Close reading of representative examples of German lyric poetry from early as well as recent literary periods, including systematic consideration of poetic conventions and forms, diction, imagery, symbolism, and metrics. Letter grading.

140B. Introduction to German Drama. (4) (Formerly numbered 101B.) Lecture, three hours; outside study, nine hours. Analysis of selected dramatic genres (e.g., tragedy, comedy, one-act play, lyric drama, lyric theater, historical drama, etc.), including systematic review of dramatic forms, techniques, and theories. Texts selected from both contemporary and earlier periods. Letter grading.

140C. Introduction to German Narrative Prose. (4) (Formerly numbered 101C.) Lecture, three hours; outside study, nine hours. Analysis of narrative prose genres (e.g., short story, novella, fairy tales, etc.), including systematic review of narrative forms, techniques, and styles. Texts selected from both contemporary and earlier periods. Letter grading.

142. Introduction to 18th-Century Studies. (4) (Formerly numbered 104.) Lecture, three hours; outside study, nine hours. Topics in Enlightenment literature, social history, and culture. Works by Goethe, Lessing, Schiller, Kant, Mozart, and others. Letter grading.

144. Introduction to 19th-Century Studies. (4) (Formerly numbered 105.) Lecture, three hours; outside study, nine hours. Presentation of major texts from Romanticism to realism. Works by Kleist, Büchner, Heine, Fontane, and others. Letter grading.

146. Introduction to Modern Literature. (4) (Formerly numbered 106.) Lecture, three hours; outside study, nine hours. Analysis of selected modern works written between 1890 and 1945, including texts by authors such as Thomas Mann, Kafka, Rilke, Brecht, and others. Letter grading.

148. Introduction to Contemporary Literature. (4) (Formerly numbered 107.) Lecture, three hours; outside study, nine hours. Analysis and discussion of German, Austrian, Swiss, and ex-GDR literatures from 1945 to the present. Examination of writers such as Heinrich Böll, Günther Grass, Friedrich Dürrenmatt, Elfriede Jelinek, and Christa Wolf with a view to their specific political and cultural context. Letter grading.

150. Language and Linguistics. (4) (Formerly numbered 129.) Lecture, three hours; outside study, nine hours. Prerequisite or corequisite: course 130A. Theories and methods of linguistics, with emphasis on structure of modern standard German, its phonology, morphology, syntax, semantics, and pragmatics. Other topics include diachronic, spatial, and social variation of German (i.e., its historical development, dialectology, and sociolinguistic dimensions). Letter grading.

152. Studies in German Literature before 1750. (4) (Formerly numbered 122.) Lecture, three hours; outside study, nine hours. Prerequisite: course 140A. Readings and analysis of major works from the Middle Ages to the baroque. Letter grading.

154. Goethe. (4) (Formerly numbered 123.) Lecture, three hours; outside study, nine hours. Prerequisite: course 130A. Reading and discussion of representative works (except *Faust*) from Goethe's early period through maturity and old age. Letter grading.

156. Goethe's *Faust*. (4) (Formerly numbered 132.) Lecture, three hours; outside study, nine hours. Prerequisite: course 130A. Detailed interpretation of Goethe's major work, Parts I and II, together with general consideration of other treatments of the *Faust* theme in European literature. Letter grading.

158. Romanticism. (4) (Formerly numbered 124.) Lecture, three hours; outside study, nine hours. Prerequisite: course 130A. Reading and analysis of major works by German Romantics, including Friedrich Schlegel, Novalis, E.T.A. Hoffman, and Eichendorff. Letter grading.

160. Advanced Study of Modern Literature. (4) (Formerly numbered 126.) Lecture, three hours; outside study, nine hours. Prerequisite: course 130A. Naturalism, Expressionism, and other early 20th-century literary movements and works. Letter grading.

162. Advanced Study of Contemporary Literature and Culture. (4) (Formerly numbered 127.) Lecture, three hours; outside study, nine hours. Prerequisite: course 130A. Literature after 1945 in German-speaking countries, including issues such as national borders, ethnic identity, gender relations, and commercialization of culture. Letter grading.

170. Current Topics in Germanic Linguistics. (4) (Formerly numbered 137.) Lecture, three hours; outside study, nine hours. Prerequisite: course 130A. In-depth investigation of one topic in field of Germanic linguistics, such as phonetics and phonology, morphology and syntax, semantics and pragmatics, social and spatial variation (i.e., sociolinguistics and dialectology of German), or history of German. Letter grading.

C172. Linguistic Theory and Grammatical Description. (4) (Formerly numbered C138.) Lecture, three hours; outside study, nine hours. Prerequisite: course 150 or Linguistics 20. Problems in structure of Dutch and German, considered from theoretical frameworks such as sign-oriented linguistics, functional linguistics, discourse grammar, and cognitive linguistics. Discussion of formal linguistic approaches. Concurrently scheduled with course C238. Letter grading.

195. Senior Thesis Course. (4) Extensive reading, research, and writing of senior thesis. May be used for writing honors thesis.

199. Special Studies. (2 to 4) To be arranged with faculty member who directs the study (course section to be identified by two-letter code using initials of sponsoring instructor — see department for I.D. number). Independent studies course for students who desire more intensive or specialized investigation of material covered in a regular course and who present such a course as a requisite.

Graduate Courses

201A. Bibliography, Research Methods, and Scholarly Writing. (4) Lecture, three hours. Introduction to current state of advanced research and analysis of literary and philological materials, with emphasis on bibliographies and such tools of research as reference works, series publications, journals, archives, literary histories, and computer data banks. Practical exercises in analysis of sources, compilation and presentation of bibliographies, and writing of research papers.

201C. Theories of Literary Criticism. (4) Lecture, three hours. Analysis and discussion of foundations of literary criticism and current theories such as hermeneutics, positivism, psychoanalytical criticism, social historical approaches, intellectual history (*Geistesgeschichte*), New Criticism, Marxist Criticism, Russian and Czech Formalism, structuralism, and semiotics.

202A. Middle High German. (4) Introduction to grammar, syntax, and vocabulary of the Middle High German language. Exercises in reading Middle High German literary works, combined with study of sociocultural contexts in which works of the medieval period were produced and performed.

202B. Readings in Middle High German Literature. (4) Extensive reading of literary monuments of the medieval period in Germany. Introduction to cultural and literary history of the Middle Ages.

205. Baroque Literature. (4) Definition of the term baroque; development of modern baroque scholarship; influence of foreign models; analysis of sample theoretical writings (prosodies) and of representative poems, dramas, novels, and prose satires of the 17th century.

206A. Enlightenment and Sentimentalism. (4) Study of representative authors of the earlier part of the 18th century from Gottsched through Lessing, including authors such as Leibniz, Thomasius, Wolff, Bodmer and Breitinger, Johann Elias Schlegel, Haller, Brockes, Anacreontic poets, Gessner, Klopstock, Mendelssohn, and Wieland.

206B. *Sturm und Drang*. (4) Study of representative authors of the *Sturm und Drang* period, such as Herder, Forster, Gerstenberg, Leisewitz, Klingner, Wagner, R.M. Lenz, Moritz, Heine, Schubart, and the young Goethe and Schiller.

207A. Classicism: Goethe. (4) Selected topics from works of Goethe in the period from 1786 to 1832, such as *Iphigenie auf Tauris*, *Torquato Tasso*, *Wilhelm Meisters Lehrjahre*, *Die natürliche Tochter*, *Pandora*, and poetry selections.

207B. Classicism: Schiller. (4) Selected topics from critical and dramatic works of Schiller in the period from 1793 to 1805, such as *Über Anmut und Würde*, *Über das Erhabene*, *Wallenstein*, *Maria Stuart*, *Jungfrau von Orleans*, and *Wilhelm Tell*.

208. Romanticism. (4) Analysis of selected works of the Romantic period by authors such as Wackenroder, Tieck, the brothers Schlegel, Novalis, Hölderlin, Brentano, Arnim, the brothers Grimm, "Bonaventura," E.T.A. Hoffmann, Eichendorff, and others. Course may be genre or topic oriented.

209A. 19th-Century Lyrics. (4) Development of German lyric poetry from the classic/Romantic period to symbolism. Discussion of forms, attitudes, tendencies. Analyses may include poetry by Romantic authors, as well as Heine, Platen, the political poets of *Vormärz*, Droste-Hülshoff, Keller, Storm, C.F. Meyer, Nietzsche, George, and others.

209B. 19th-Century Drama. (4) Reading and analysis of selected dramas by Kleist, Büchner, Hebbel, Grillparzer, and others. Discussion and analyses may include topics such as *Schicksalstragödie*, bourgeois trivial drama, sociopolitical drama, historical drama, *Viennese Volkstheater*.

209C. 19th-Century Narrative Prose. (4) Analysis of German prose works from Romanticism to naturalism. Discussion of the problem of reality and literary realism with respect to narrative techniques. Authors may include Heine, Büchner, Droste-Hülshoff, Stifter, Gotthelf, Keller, C.F. Meyer, Fontane, and the early naturalists.

210A. Naturalism and Symbolism. (4) Sociological background and theoretical writings concerning naturalism and symbolism. Analysis of representative poems, dramas, and shorter narratives by authors such as Holz, G. Hauptmann, George, Hofmannsthal, and Rilke.

210B. Expressionism and Neorealism. (4) Historical and sociological background in the period from 1910 to 1933. Literary magazines, theoretical writings, poetry of expressionism and Dadaism, expressionist dramas, and shorter narratives. Definition and representative works of neorealism.

210C. 20th-Century Novel to 1945. (4) Analysis of selected 20th-century novels written prior to 1945. Authors of different literary and historical eras, such as Broch, Döblin, Hesse, Kafka, Heinrich Mann, Thomas Mann, and Rilke.

211A. Contemporary Novel. (4) Study of selected novels in the period from 1945 to the present. Works by authors from West and East Germany, Austria, and Switzerland, such as Böll, Grass, Handke, Frisch, and Christa Wolf, analyzed and placed in context of literary, cultural, and political trends.

211B. Contemporary Lyrics and Drama. (4) Study of selected dramas and poems in the period from 1945 to the present. Works by authors from West and East Germany, Austria, and Switzerland, such as Dürrenmatt, Frisch, Handke, Celan, and Brecht, analyzed and placed in context of literary, cultural, and political trends.

217. History of the German Language. (4) Historical survey of development of the standard literary German language from the time of Indo-European unity through proto-Germanic, West Germanic, medieval period, Reformation, baroque period, and Enlightenment until its final codification at the end of the 19th century.

230. Survey of Germanic Philology. (4) Systematic survey of major problems in the field of Germanic linguistics: origin and historical diffusion of Germanic dialects and their classification; problems in evolution of nominal and verbal morphology of the various dialects; problems in phonological evolution of the various dialects.

231. Gothic. (4) Systematic study of phonology and grammar of the Gothic language, with readings in Wulfila's translation of the Bible and introduction to history of the Goths and their place in the development of modern Europe.

232. Old High German. (4) Introduction to earliest phases of German literature, with extensive readings in major documents of that period (750 to 1050). Emphasis on grammatical interpretation of these documents and identification of dialects used in their composition.

233. Old Saxon. (4) Introduction to study of earliest documents in Old Low German. Readings in the *Heliand* and study of the *Old Saxon Genesis*.

C238. Linguistic Theory and Grammatical Description. (4) Lecture, three hours; outside study, nine hours. Requisite: course 150 or Linguistics 20. Problems in structure of Dutch and German, considered from theoretical frameworks such as sign-oriented linguistics, functional linguistics, discourse grammar, and cognitive linguistics. Discussion of formal linguistic approaches. Concurrently scheduled with course C172. Graduate students meet as a group one additional hour each week and write research papers of greater length and depth. Letter grading.

251. Seminar: Syntax and Phonology of German. (4) Topics selected from the field of contemporary German syntax and phonology according to needs and preparation of students enrolled (e.g., *Dialektgeographie*, generative phonology, generative syntax, *Val-enztheorie*, *Texttheorie*).

252. Seminar: Historical and Comparative German Linguistics. (4) Topics selected from the field of historical German phonology and syntax according to needs and preparation of students enrolled (e.g., West Germanic problem and classification of the Germanic languages, development of Germanic verbal and nominal morphology, proto-Germanic syntax).

253. Seminar: Medieval Literature. (4) Selected topics in medieval literature, with emphasis on problems in literary analysis and applicability of various types of analysis to medieval texts.

255. Seminar: Baroque Literature. (4) Selected problems of German baroque literature, such as a particular genre, author, or theme. Textual analysis supplemented by critical review of research and application of methods of literary analysis pertinent to literature of this age.

256. Seminar: Enlightenment and *Sturm und Drang*. (4) Selected topics in 18th-century literature, such as utopian literature, love and money as motifs, family structure and family life, image of women and women's literature, Jacobin literature, seduction and betrayal as motifs, nobility and middle class in 18th-century literature. Textual analysis and review of current research.

257. Seminar: Age of Goethe. (4) Selected topics in German literature between 1775 and 1832, such as Schiller's theoretical writings, Goethe's *Faust II*, Goethe's *Wanderjahre* and *West-östlicher Divan*, Goethe's *Faust II* and Hegel's *Phänomenologie des Geistes*, the French Revolution and German classicism. Textual analysis and review of current research.

258. Seminar: Romanticism. (4) Discussion of a specific author or topic from the Romantic period, possibly in close connection with course 208. Critical review of secondary works.

259. Seminar: 19th-Century Literature. (4) Discussion of a specific author or topic of 19th-century literature, possibly in close connection with course 209A, 209B, or 209C. Critical review of secondary works.

260. Seminar: Modern Period. (4) Selected genre, author, or theme of 20th-century German literature prior to 1945.

261. Seminar: Contemporary Literature. (4) Study of selected works, a specific author, genre, period, or topic from 1945 to the present. Texts analyzed and placed in context of literary, cultural, and political trends.

262. Seminar: Germanic Folklore. (4) Detailed research on individual aspects of Germanic folklore. Topic selected generally is from course in the German 240 series that preceded the seminar. Emphasis on problems of theory and method.

263. Seminar: Theories of Literature. (4) Specialization in literary theories, such as *Rezeptionsästhetik*, Neo-Marxist Criticism, New Criticism, psychoanalytic criticism or sociology of literature, structuralism, semiology, and hermeneutics.

375. Teaching Apprentice Practicum. (1 to 4) Preparation: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

495A. Preparation for College Teaching of German. (2) Study of problems and methods in teaching German on college level, with emphasis on teaching and testing the listening, speaking, reading, and writing skills. May not be applied toward M.A. course requirements. S/U grading.

495B. College Teaching of German: Special Problems. (2) Requisite: course 495A. Study of contemporary issues in German language pedagogy, with emphasis on textbook evaluation and proficiency-oriented instruction. May not be applied toward M.A. course requirements. S/U grading.

596. Directed Individual Study or Research. (4) To be arranged with faculty member who directs the study or research (course section to be identified by two-letter code using initials of sponsoring instructor — see department for I.D. number). May be repeated once; however, only one course in the 500 series may be applied toward M.A. graduate course requirement. S/U grading.

597. Preparation for M.A. Comprehensive Examination or Ph.D. Qualifying Examinations. (4) To be arranged with faculty member who directs the study (course section to be identified by two-letter code using initials of sponsoring instructor — see department for I.D. number). May be taken only once before and only once after M.A. degree, except for Ph.D. candidates with a formal minor field of studies who may take course twice after M.A., once in the major and once in the minor. Only one course in the 500 series may be applied toward M.A. graduate course requirement. S/U grading.

598. Research for and Preparation of M.A. Thesis. (4 to 12) To be arranged with faculty member who directs the study (course section to be identified by two-letter code using initials of sponsoring instructor — see department for I.D. number). Only one course in the 500 series may be applied toward M.A. graduate course requirement. S/U grading.

599. Research for and Preparation of Ph.D. Dissertation. (4 to 12) To be arranged with faculty member who directs the study (course section to be identified by two-letter code using initials of sponsoring instructor — see department for I.D. number). May be repeated. S/U grading.

Afrikaans

Upper Division Courses

105A. Elementary Afrikaans. (4) Lecture/language laboratory. Introduction to a sister language of modern Dutch and a national language of South Africa. Grammar, practice in listening, speaking, reading, and writing.

105B. Intermediate Afrikaans. (4) Lecture/language laboratory. Requisite: course 105A. Grammatical exercises; reading and linguistic analysis of texts from both literary and nonliterary sources.

114. Afrikaans Literature in Translation. (4) Lecture, three hours. Readings and analysis of works by selected authors such as Brink, Joubert, Krige, Leroux, Marais, and Rabie and selected poets such as Breytenbach, Eybers, Lion Cachet, W.E.G. Louw, Van Wyk Louw, and Opperman.

135. Introduction to Afrikaans Literature. (4) Discussion, three hours. Requisite: course 105B. Analysis of selected works from founding of the Genootskap van Regte Afrikaners in 1875 to the present time, including novels by recent writers such as Leroux and Brink, as well as work of poets such as Eybers, Opperman, W.E.G. Louw, Van Wyk Louw, and Breytenbach.

199. Special Studies in Afrikaans. (2 to 4) Independent studies course for students who desire more intensive or specialized investigation of material covered in a regular course and who present such a course as a requisite.

Graduate Courses

596. Directed Individual Study or Research in Afrikaans. (4) To be arranged with faculty member who directs the study or research (course section to be identified by two-letter code using initials of sponsoring instructor — see department for I.D. number). May be repeated once. S/U grading.

597. Preparation for Ph.D. Qualifying Examinations. (4) To be arranged with instructor (see department for I.D. number). S/U grading.

Dutch

Upper Division Courses

100. Modern Dutch Culture and Society. (4) Lecture, three hours. Lectures, discussions, and readings in English. Survey of art, architecture, literature, film, Dutch government (including 'Pillarization' — *verzuiling*), the two World Wars, housing policy, mass media, and rise of a multiracial society.

103A-103B. Elementary Dutch. (4) Lecture/language laboratory. Course 103A is requisite to 103B. Introduction to the standard language of the Netherlands and one of the three standard languages of Belgium. Practice in grammar, listening, speaking, reading, and writing.

103C. Intermediate Dutch. (4) Lecture/language laboratory. Requisite: course 103B. Grammatical exercises, conversation, reading and analysis of simple texts.

104A-104B. Accelerated Dutch (6-6) Lecture, four hours; discussion, one hour; laboratory, two hours. Covers material in courses 103A-103B, 103C in two terms rather than three.

113. Modern Dutch and Flemish Literature in Translation. (4) Lecture, three hours. Readings and analysis of works by selected authors of the Netherlands and northern (Flemish) Belgium such as Boon, Claus, Couperus, Hermans, Mulisch, Multatuli, and Reve and selected poets such as Campert, Gezelle, Gorter, Kloos, Lucebert, Nijhoff, Van Ostaijen, and Vroman.

120. Introduction to Dutch Studies. (4) Brief review of Dutch grammar. Reading and discussion of selections from contemporary Dutch literature, contemporary Dutch literary criticism, and modern Dutch linguistics. Emphasis on developing reading skill and on acquiring familiarity with and appreciation of the scope of 20th-century Neerlandistiek.

131. Introduction to Modern Dutch Literature. (4) Discussion, three hours. Requisite: course 103B or 120. Selected works of literature of the Netherlands and northern (Flemish) Belgium from the mid-1850s to the present, including novels by such writers as Multatuli, Couperus, Hermans, Mulisch, and Reve and poetry by such groups as the symbolist *Beweging van Tachtig* and the post-War *Beweging van Vijftig*.

199. Special Studies in Dutch. (2 to 4) Independent studies course for students who desire more intensive or specialized investigation of material covered in a regular course and who present such a course as a requisite.

Graduate Courses

596. Directed Individual Study or Research in Dutch. (4) To be arranged with faculty member who directs the study or research (course section to be identified by two-letter code using initials of sponsoring instructor — see department for I.D. number). May be repeated once. S/U grading.

597. Preparation for Ph.D. Qualifying Examinations. (4) To be arranged with faculty member who directs the study (see department for I.D. number). S/U grading.

Old Norse Studies

Lower Division Course

40. The Heroic Journey in Northern Myth, Legend, and Epic. (4) Comparison of the journeys of heroes. Readings in mythology, legend, folktale, and epic, including *Nibelungenlied*, *Volsunga saga*, *Eddas*, and *Beowulf*. Cultural and historic backgrounds to the texts. All readings in English.

Upper Division Courses

C139. The Saga. (4) Seminar, three hours. The sagas are the largest extant medieval prose literature. Texts in English, with selections from the different types of Icelandic sagas. Consideration of the history and society that produced these narratives. Concurrently scheduled with course C268.

C140. Viking Civilization and Literature. (4) Lecture, three hours. History, society, and culture of early Scandinavians. All texts in English, including readings in Old Norse sagas and *Eddas*. Concurrently scheduled with course C241.

C145. Old Norse Literature and Society. (4) Seminar, three hours. Critical issues in medieval Scandinavian studies. May be repeated for credit. Concurrently scheduled with course C272.

151. Elementary Old Norse. (4) Introduction to grammar and pronunciation of Old Norse. Selected readings from the sagas and *Prose Edda*.

152. Intermediate Old Norse. (4) Requisite: course 151. Continued grammar, pronunciation, and readings from the *Eddas* and sagas of Icelanders, Norwegian kings, and legendary heroes.

153. Modern Icelandic. (4) Requisite: course 152. Grammar, readings, and conversation.

199. Special Studies in Old Norse. (2 or 4) Independent studies course for students who desire more intensive or specialized investigation of material covered in a regular course and who present such a course as a requisite.

Graduate Courses

221. Advanced Old Norse Prose. (4) Requisite: course 152. Readings of major saga texts. Also, secondary sources which bear on specific issues in Old Norse literature and medieval Scandinavian history.

222. Advanced Old Norse Poetry. (4) Requisite: course 152. Readings of mythological and heroic poems from *Poetic Edda*. Secondary sources used where appropriate.

C241. Viking Civilization and Literature. (4) Lecture, three hours. History, society, and culture of early Scandinavians. All texts in English, including readings in Old Norse sagas and *Eddas*. Concurrently scheduled with course C140. Graduate students do additional readings and write more extensive research papers.

245A. Germanic and Scandinavian Mythology. (4) Seminar, three hours. Study of Northern myth and religion through close reading of Eddic texts and secondary sources.

C268. The Saga. (4) Seminar, three hours. The sagas are the largest extant medieval prose literature. Texts in English, with selections from the different types of Icelandic sagas. Consideration of the history and society that produced these narratives. Concurrently scheduled with course C139. Graduate students do additional readings and write more extensive research papers.

C272. Old Norse Literature and Society. (4) Seminar, three hours. Critical issues in medieval Scandinavian studies. May be repeated for credit. Concurrently scheduled with course C145. Graduate students do additional readings and write more extensive research papers.

596. Directed Individual Study or Research. (4) To be arranged with faculty member who directs the study or research (course section to be identified by two-letter code using initials of sponsoring instructor — see department for I.D. number). May be repeated once; however, only one course in the 500 series may be applied toward M.A. graduate course requirement. S/U grading.

597. Preparation for Ph.D. Qualifying Examinations. (4) To be arranged with faculty member who directs the study (see department for I.D. number). S/U grading.

Scope and Objectives

The explosive expansion of the older population in this country and the world — the “Age Revolution” — insures that issues regarding aging will dominate our environmental, economic, social, political, psychological, and medical concerns and endeavors well into the twenty-first century. The undergraduate minor in Gerontology (1) introduces students to the field, (2) prepares them for advanced academic work, (3) lays the groundwork for careers involving a burgeoning aging population, (4) contributes to increased public awareness of issues regarding aging, and (5) helps students plan more effectively for their own futures as they and their families age.

Undergraduate Study

Gerontology Minor

To enter the Gerontology minor, students must have an overall grade-point average of 2.0 or better.

Required Upper Division Courses (28 units): Gerontology M140 and six courses from M104C, M104D, M104E, M119O, M150, Psychology 124G, 193 (only eight units may be applied toward the minor; fieldwork placements must be approved by the chair of the minor), Women’s Studies 185 (only when the special topic is women, health, and aging).

All minor courses must be taken for a letter grade, with an overall grade-point average of 2.0 or better. Successful completion of the minor is indicated on the transcript and diploma.

Gerontology

Upper Division Courses

M104C. Diversity in Aging: Roles of Gender and Ethnicity. (4) (Same as Social Welfare M104C and Women’s Studies M104C.) Lecture, four hours. Exploration of complexity of variables related to diversity of the aging population and variability in aging process. Examination of gender and ethnicity within context of both physical and social aging, in a multidisciplinary perspective utilizing faculty from a variety of fields to address issues of diversity. Letter grading.

M104D. Public Policy and Aging. (4) (Same as Social Welfare M104D.) Examination of theoretical models and concepts of the policy process, with application to aging policy. Analysis of decision-making processes that affect aging policy. Description of history of contemporary aging policy. Exploration of current policy issues affecting the elderly. P/NP or letter grading.

M104E. Social Aspects of Aging. (4) (Same as Social Welfare M104E.) Topics include theories of aging, economic factors, changing roles, social relationships, and special populations. Weekly seminars organized around a key aspect of social gerontology. P/NP or letter grading.

M1190. Psychology of Aging. (4) (Same as Psychology M1190.) Prerequisite: Psychology 115. Designed for juniors/seniors. Aging refers to developmental changes occurring at end stages of life. Some alterations that occur represent improvement, others are detrimental. Examination of impact of aging process on mental phenomena and exploration of ways in which positive changes can be maximally utilized and impact of detrimental alterations minimized. P/NP or letter grading.

M140. Introduction to Study of Aging. (4) (Same as Psychology M140 and Social Welfare M140.) Lecture, three hours. Designed for juniors/seniors. Perspectives on major features of human aging — biological, social, psychological, and humanistic. Introduction to information on the range of influences on aging to prepare students for subsequent specialization. P/NP or letter grading.

M141. Women, Health, and Aging: Policy Issues. (4) (Same as Health Services CM141 and Women's Studies M141.) Lecture, three hours; discussion, one hour. Preparation: two upper division social sciences courses, two upper division biological sciences courses. Social and economic context of older women's aging, major physical and psychological changes older women experience, delivery of health services to this population, and policies that respond to their health needs. Letter grading.

M150. Sociology of Aging. (4) (Same as Sociology M150.) Lecture, three hours; discussion, one hour. Study of sociological processes shaping definition, experience, and response to aging in contemporary society. Topics include race, class, and gender in aging over life course; interpersonal relations and social worlds of the aged; caregiving relations and institutions; professions concerned with the aged and aging.

Ruth J. Roemer, J.D., *Emerita*

Adjunct Associate Professors

Raymond D. Goodman, M.D., M.P.H.
Anthony Schiff, J.D.

Adjunct Assistant Professors

Barbara Berman, Ph.D.
Diana W. Hilberman, Dr.P.H.

Visiting Professors

Stuart P. Bowne, M.D.
Molly J. Coye, M.D., M.P.H.

Visiting Assistant Professors

Jonh Riddle, Ph.D.
Louis Rubino, Ph.D.
Elizabeth Yano, Ph.D.

Scope and Objectives

The field of health services examines the organization and financing of various activities to prevent and treat disease. This includes programs in both the public and private sectors at all levels — local, state, and federal.

Faculty members come from such diverse fields as economics, management, law, statistics, operations research, planning, medicine, history, sociology, and political science. These diverse backgrounds are harmonized by their devotion to the analysis of problems in the financing and delivery of health services, with focus on populations rather than individual patients.

The Department of Health Services offers both practice-oriented and research-oriented graduate programs. The primary professional degree, the Master of Public Health (M.P.H.), includes training in various aspects of health administration such as policy formulation, health planning, organization, and management. For more advanced professional work, the Dr.P.H. degree offers education in the full scope of public health services and prepares candidates for leadership in community health work at all jurisdictional levels. For information on the M.P.H. and Dr.P.H., see Public Health Schoolwide Programs.

For those interested in careers in research and teaching, the department offers M.S. and Ph.D. degrees in Health Services. These programs maintain close ties with related activities in the Schools of Dentistry and Medicine, including

the Robert Wood Johnson Clinical Scholars Program, the Program in Prevention, and the Cancer Control Division. The RAND/UCLA Center for Health Policy Study and the RAND/UCLA Center for Health Care Financing Research afford opportunities for joint activities with the RAND Health Sciences Program. Graduates of the academic degree programs pursue careers in universities, as well as in public and private agencies involved in health services research and health policy analysis.

Graduate Study

The following constitutes introductory information regarding graduate degree programs and is based on the 1998-99 edition of *Program Requirements for UCLA Graduate Degrees*. Complete, annual editions of *Program Requirements* are available (listed under "Publications") on the Graduate Division website at <http://www.gdnet.ucla.edu>. Students are subject to the degree requirements as published in *Program Requirements* for the year in which they matriculate.

Master's Degree

The Department of Health Services offers the Master of Science (M.S.) degree in Health Services. For information on the Master of Public Health (M.P.H.) degree, see Public Health Schoolwide Programs.

Admission

Admission requirements for the M.S. program in Health Services are the same as for the M.P.H. See the M.P.H. admission section under Public Health Schoolwide Programs.

Areas of Study

Consult the graduate adviser.

Course Requirements

Students must complete Health Services 200A-200B, 237A-237B, 237C, and M422, Biostatistics 100A, 100B, and Epidemiology 100. Students must complete 16 full courses (64 units) and at least one year of graduate residence at the University of California. A minimum of five courses must be in the 200 or 500 series. Only four units of either Health Services 596 or 598 may be applied to the degree. Health Services 597 may not be applied toward the degree requirements. Students are strongly encouraged to take the following courses or equivalents: Biostatistics 200A-200B, and Epidemiology 201A-201B. Elective courses should be selected in consultation with an adviser. Electives may be chosen from offerings in the department of Health Services or other departments in the School of Public Health.

Students with a prior doctoral-level degree (M.D., Ph.D., J.D., D.D.S., or equivalent), and relevant experience, must complete 12 full courses (48 units). The four courses (16 units) not required for these students are identified through a waiver petition when the student advances to candidacy.

Only courses in which a grade of C– or better is received may be applied toward the requirements for a master's degree. Students must maintain an average of no less than 3.0 (B) in all courses required or elected during graduate residence at the University of California.

Comprehensive Examination Plan

If the comprehensive examination/report plan is approved, a guidance committee of three faculty members is appointed. The comprehensive examination consists of an extensive written research report in the major area of study. It must be approved by the guidance committee which also must certify successful completion of all degree requirements.

Thesis Plan

If the thesis option is approved, a thesis committee is established. The committee approves the thesis prospectus before students file for advancement to candidacy. The thesis must be acceptable to the thesis committee.

Doctoral Degree

Admission

In addition to the University minimum requirements, the department requires for the Ph.D. degree in Health Services (1) satisfactory performance on the Graduate Record Examination (GRE); (2) at least a 3.0 junior/senior grade-point average, at least a 3.5 GPA in graduate studies or demonstrated superiority in graduate work, and at least a B in each of the mandatory core courses; (3) a positive recommendation by the Health Services Department; (4) approval by the doctoral admissions committee and the department chair; (5) completion of the M.S. in Health Services or an appropriately related field is preferred. Screening examinations may be required by the department.

Major Fields or Subdisciplines

Consult the graduate adviser.

Course Requirements

In addition to the requirements for an M.S. in Health Services, major field course requirements include Health Services 249H and Biostatistics 200A and 200B. A cognate is required with at least 12 units (three courses) from a department that grants a Ph.D. degree. Cognate courses must be at the graduate level and should be core theory and research courses for the discipline chosen. Acceptable cognate areas would be from one of the following disciplinary areas: economics, epidemiology, history, management, political science, psychology, and sociology.

Written and Oral Qualifying Examinations

Before advancement to candidacy, students must pass a written examination in the major field, complete the requirements in a minor field, and pass an oral qualifying examination on the major and minor fields. Normally no more than one reexamination is allowed. When students are ready to take the University Oral

Qualifying Examination, a doctoral committee is nominated.

The doctoral committee consists of at least four faculty members who hold professorial appointments. Two of the faculty must be tenured. Three of the four must hold appointments in the Department of Health Services; at least one must hold an appointment in another department at UCLA.

The doctoral committee administers the oral qualifying examination after students have successfully completed the written examination.

After passing the University Oral Qualifying Examination, students may be advanced to candidacy and commence work on a dissertation in the principal field of study. The doctoral committee guides the student's progress toward completion of the dissertation.

Health Services

Lower Division Course

88. Lower Division Seminar: Special Topics in Health Services. (4) Seminar, three hours; outside study, nine hours. Preparation: satisfaction of Subject A requirement. Variable topics seminar which examines specific issues or problems and ways that professionals in health services approach study of them. Students define, prepare, and present their own research projects with guidance of a professional school faculty member. Letter grading.

Upper Division Courses

100. Health Services Organization. (4) Lecture, four hours; discussion, one hour. Preparation: four units of social sciences. Structure and function of American health care system; issues and forces shaping its future. P/NP or letter grading.

M110. Ethnic, Cultural, and Gender Issues in America's Health Care Systems. (4) (Formerly numbered 110.) (Same as Asian American Studies M110.) Lecture, three hours. Designed for juniors/seniors. Introduction to study of gender, ethnicity, and cultural diversity related to health status and health care delivery in the U.S. Letter grading.

131. Structure and Function of Health Care Facilities. (4) Lecture, two hours; discussion, two hours. Prerequisite or corequisite: course 100. Introduction to structure, organization, and function of health care facilities. P/NP or letter grading.

132. Financial and Managerial Accounting for Health Services Organizations. (4) Lecture, four hours. Prerequisite: course 100. Introduction to financial and managerial accounting and its application to the health services industry. P/NP or letter grading.

133. Introduction to Health Economics. (4) Lecture, four hours. Presentation of tools of economic analysis. Topics include introductory concepts of microeconomics, theory of demand for health insurance and health care, substitution of health personnel, hospital cost functions, and costs and benefits of health programs. P/NP or letter grading.

134. Introduction to Comprehensive Health Planning. (4) Lecture, four hours; fieldwork, four hours. Preparation: one upper division microeconomics, statistics, calculus, or political science course. Concepts underlying health planning, state of the art, and some relevant literature. P/NP or letter grading.

136. Introduction to Health Services Research. (4) Lecture, four hours. Prerequisite: Biostatistics 100A. Review of the field of health services research. Uses of quantitative methods and applications of conceptual/theoretical constructs (as well as methodologies) from social and behavioral sciences and epidemiology to studies of workings of health services. P/NP or letter grading.

CM141. Women, Health, and Aging: Policy Issues. (4) (Same as Gerontology M141 and Women's Studies M141.) Lecture, three hours; discussion, one hour. Preparation: two upper division social sciences courses, two upper division biological sciences courses. Social and economic context of older women's aging, major physical and psychological changes older women experience, delivery of health services to this population, and policies that respond to their health needs. Concurrently scheduled with course CM241. Letter grading.

150. Contemporary Health Issues. (4) Lecture, four hours. Designed for juniors/seniors. Exploration of nation's health challenges, epidemiologic basis of public's health, organization and financing of health services in the U.S. and elsewhere, and current strategies for advancing people's health. Letter grading.

199. Special Studies. (2 to 4) Tutorial, to be arranged. Preparation: submission of written proposal outlining course of study. Limited to seniors. Individual undergraduate guided studies under direct faculty supervision. Study to be structured by instructor and student at time of initial enrollment. Only four units may be taken each term. P/NP or letter grading.

Graduate Courses

200A-200B. Health Systems Organization and Financing (4 units each). (Formerly numbered 200A-200B-200C.) Lecture, four hours; discussion, two hours. Limited to graduate health services students. In-depth analysis of health services systems in the U.S., using relevant theories, concepts, and models. S/U or letter grading.

M204A-M204B-M204C. Seminars: Pharmaceutical Economics and Policy (1 unit, 1 unit, 2 units). (Same as Economics M204L-M204M-M204N.) Seminar, three hours every other week for three terms. Prerequisites: course M236, Economics 201A-201B-201C. Limited to graduate public health and economics students. Various topics in economics of pharmaceutical industry, including rates of innovation, drug regulation, and economic impact of pharmaceuticals. In Progress and S/U or letter grading.

214. Measurements of Effectiveness and Outcomes of Health Care. (4) Lecture, three hours. Prerequisites: courses 200A-200B, M422, Biostatistics 100A. Historical perspective for development of health status measures and their utilization in assessment of outcomes and effectiveness in medical care. Review of current methods in context of current research and practice. Letter grading.

220. Seminar: Cost Containment. (4) Seminar, three hours. Through lectures and discussion of journal articles, analysis of success and failure of alternative methods of controlling U.S. health care costs. Examination of how other countries have controlled their costs. Letter grading.

221. Tobacco: Prevention, Use, and Public Policy. (4) Lecture, three hours; discussion, one hour. Designed for juniors/seniors and graduate students. Study of tobacco use and its health consequences, including interplay of historical, biological, sociocultural, political, and economic forces with knowledge, attitudes, and behavior choices of individuals. Introduction to prevention interventions, cessation interventions, anti-tobacco efforts in the U.S., and international trends in tobacco use. Letter grading.

231. History of Public Health. (4) Discussion, three hours. Designed for doctoral students. Emphasis on topics which illuminate current issues in public health policy. Discussion of historical perspectives on health care providers, health care institutions, health care reform movements, public health activities, childbirth, and AIDS. S/U or letter grading.

232. Governmental Health Services and Trends. (4) Lecture, four hours. Preparation: two upper division social or behavioral sciences courses. Requisite: course 100. Systematic analysis of interface between organized programs of personal health services and governmental agencies at all jurisdictional levels. Study of changing relationships between traditional public health and newer medical care and quality control functions. S/U or letter grading.

M233. Health Policy Analysis. (4) (Same as Community Health Sciences M252.) Lecture, three hours. Requisites: courses 100 or 200A, M236, M287. Conceptual and procedural tools for analysis of health policy, emphasizing role of analysis during various phases of the life cycle of public policy. Letter grading.

234. Health Services Organization and Management Theory. (4) Lecture, four hours. Preparation: two upper division social sciences courses. Requisites: courses 100, 131. Application of contemporary organization and management theory to systems that provide personal health care services. Environmental characteristics, missions/goals, structure and processes of health services organizations. S/U or letter grading.

235. Law, Social Change, and Health Service Policy. (4) Lecture, four hours. Preparation: two upper division political science or sociology courses. Requisite: course 100. Legal issues affecting policy formulation for environmental, preventive, and curative health service programs. S/U or letter grading.

M236. Microeconomic Theory of Health Sector. (4) (Formerly numbered 236.) (Same as Policy Studies M268.) Lecture, four hours; discussion, two hours. Preparation: intermediate microeconomics. Requisite: Biostatistics 100A. Microeconomic aspects of the health care system, including health manpower substitution, choice of efficient modes of treatment, market efficiency, and competition. Letter grading.

237A-237B. Special Topics in Health Services Research Methodology (4 units each). Lecture, one hour; discussion, three hours. Requisites: Biostatistics 100A, 100B. In-depth consideration of problems in application of statistical and other quantitative methods in health services research. Critique of adequacy of study designs, appropriateness of analyses, and degree to which conclusions are supported by data. Letter grading.

237C. Issues in Health Services Methodologies. (4) Lecture, four hours. Requisites: courses 237A-237B. Designed for doctoral students. Intended to assist students in understanding the research process and its application in study of health services in the U.S. Introduction to issues related to reporting, disseminating, and documenting research findings. Letter grading.

238. Politics of Health Care. (4) Lecture, four hours. Requisite: course 100. Concepts and procedures for political analysis; national, state, and local politics in health care; examination of selected case studies. S/U or letter grading.

239. Aging and Long-Term Care. (4) Lecture, four hours. Requisites: courses 100, 238, Community Health Sciences 270A-270B. Long-term care of the chronically ill elderly examined from perspective of political and sociodemographic trends, including populations at risk, policy options, and alternative forms of care such as nursing homes, home care, and care by informal support systems. Letter grading.

240. Health Care Issues in International Perspective. (4) Lecture, four hours. Preparation: two health administration courses, two upper division social sciences courses. Analysis of crucial issues in health care; manpower policy, economic support, health facilities, patterns of health service delivery, regulation, planning, and other aspects of health care systems probed in settings of European welfare states, developing nations, and socialist countries. S/U or letter grading.

CM241. Women, Health, and Aging: Policy Issues. (4) (Formerly numbered M241.) (Same as Social Welfare M290D.) Lecture, three hours; discussion, one hour. Preparation: two upper division social sciences courses, two upper division biological sciences courses. Social and economic context of older women's aging, major physical and psychological changes older women experience, delivery of health services to this population, and policies that respond to their health needs. Concurrently scheduled with course CM141. Letter grading.

M242. Determinants of Health. (4) (Same as Community Health Sciences M232.) Lecture, three hours; discussion, one hour. Designed for graduate students. Critical analysis of models for what determines health and evidence for social, economic, environmental, genetic, health system, and other factors that influence health of populations and defined subgroups. Letter grading.

244. Seminar: Health Services and Policy Evaluation. (4) Seminar, four hours. Preparation: basic courses in program evaluation and health services organization. Requisites: Biostatistics 100A, 100B. Designed for doctoral students. Seminar applying alternative evaluation research theories and methods to health service organizations and systems. Topics include linking evaluation criteria to policy decisions, theories, and previous research; political and organizational context of evaluation; utilization of findings; and meta-evaluation. S/U or letter grading.

245. Society's Response to Aging. (4) Lecture, four hours. Preparation: two health services courses, two upper division social sciences courses. Examination of central issues of health care delivery to the elderly in the U.S. Topics include demographic trends, economic characteristics, health status, demand for care, health care financing, long-term care, and continuum of care for the aged. S/U or letter grading.

246. Seminar: Special Populations — Health Services Policy Issues. (4) Seminar, four hours. Requisites: courses 200A-200B, 232, 238. Limited to doctoral students or M.S. and M.P.H. students with advanced degrees. Doctoral-level seminar which focuses on health services for selected priority population groups, integrating scientific, organizational, economic, ethical, and political evidence as a basis for public policy. Different populations may be selected for attention each year. Letter grading.

247. Research Topics in Health Economics. (4) Lecture, four hours. Requisites: courses 100, M236, 446. Seminar in economic analysis of current health services issues. Critical examination of studies pertaining to health manpower, health care costs and controls, diffusion of technology, and cost-benefit analysis of health programs. S/U or letter grading.

249A-249Z. Special Topics in Health Services. (2 to 4 each) Hours to be arranged. Requisites for each offering announced in advance by department. Advanced seminars covering current issues and special topics in health policy, health financing, and organization and administration of health services. Sections offered on regular basis, with topics announced in preceding term. May be repeated for credit with topic change:

249D. Principles of Organization Leadership: Applications in Public Health and Welfare. (4) Lecture, three hours; discussion, three hours. Designed for graduate students. Examination of principles and models of organization leadership, including presentation by current leaders in the fields of health and welfare. Theories and empirical investigations of leadership qualities. Letter grading.

M249E. Health Care Policy and Finance. (4) (Formerly numbered 249E.) (Same as Policy Studies M269.) Seminar, four hours. Requisites: courses 200A-200B, M236, Biostatistics 100A, 100B. Public policy concerning payment for medical care services and characteristics of the market for those services: demand for care, fee-for-service and prepaid payment systems, regulation of price and capital investment, private sector efforts to control health care costs. Letter grading.

249F. Quality Assessment and Assurance. (4) Seminar, four hours. Preparation: one health services or epidemiology course. Requisites: course 100, Biostatistics 100A, Epidemiology 100. Fundamental issues in quality assessment, quality assurance, and measurement of health status. S/U or letter grading.

249G. Medical Technology — Development, Diffusion, Assessment, and Health Services. (4) Seminar, four hours. Preparation: one upper division policy analysis course. Requisites: courses 200A-200B, 238. Doctoral-level seminar focusing on public policies that pertain to advancement of medical science and development of new technologies and promotion and regulation of their use. Letter grading.

249H. Current Research Issues. (2 to 4) Discussion, two hours. Designed for doctoral students. Review of articles in health services journals nominated as the best published during 1990. Analysis of articles to determine contribution to theory, methods, and/or implications for management or policy in health services organizations or health services as a field. S/U or letter grading.

249I. Research Methodology. (4) Lecture, one hour; discussion, three hours. Requisites: courses 237A-237B. Designed for doctoral students. Theory-driven model building and specification, operationalization, data definition and documentation, data screening and transformation techniques, use of indexes and scales, and data reduction methods. Some hands-on measurement and analysis work. Research project with term-paper analysis required. Course builds on concepts and research methods learned in courses 237A-237B, 237C. Letter grading.

M249J. Mental Health Services. (4) (Formerly numbered 249J.) (Same as Psychiatry M251.) Lecture, three hours. Requisites: courses 200A-200B-200C. Designed for doctoral students. Survey of contemporary American delivery of health services to emotionally and mentally ill and retarded. Analysis of characteristics of such services, with historical background of their evolution and projections of their future prospects. Letter grading.

249K. Health Care Practice Guidelines, Variations in Care, and Patient Outcomes. (4) Lecture, three hours. Requisites: courses 200A-200B, M422, Biostatistics 100A, 100B. Designed for graduate students. Participation of students in critical review and discussion of selected papers dealing with course topics, including small and large area variations in care, and development and implementation of clinical guidelines. Emphasis on implications for health policy. Letter grading.

M249L. Ethical Issues in Public Health. (4) (Formerly numbered 249L.) (Same as Community Health Sciences M249L.) Lecture, four hours. Requisites: courses 200A-200B-200C. Case conferences, based on real-life experience, focus on ethical issues in health services organization and management, including ethical issues related to conflict of interest, quality of care, health insurance selection, choice of drugs, reproductive rights, AIDS, and resource allocation. Letter grading.

250. Evolution of Health Professions in the 20th Century. (4) Lecture, two hours; discussion, two hours. During the 20th century there have been dramatic changes in composition of "helping" professions. Review of forces responsible for these changes and description of processes by which lay persons are educated/socialized into major subgroups of health professions. Review of major social forces external to health care system that affect its composition. Letter grading.

251. Process Improvement and Information Systems in Health Care Organizations. (4) Lecture, four hours. Requisites: course 100, Biostatistics 100A. Introduction to concepts of health care quality measurement, process improvement, and information systems, as well as organizational aspects of implementing them. Letter grading.

M252. Medicare Reform. (4) (Same as Policy Studies M267.) Lecture, three hours; outside study, nine hours. Designed for graduate students. Analytical and managerial skills learned earlier to be used to analyze problems with existing medicare program and to develop specific options for reforming features of program to accommodate coming pressures generated by retirement of baby-boom generation. Letter grading.

M287. Politics of Health Policy. (4) (Same as Community Health Sciences M287.) Lecture, three hours; discussion, one hour. Requisites: courses 200A-200B or Community Health Sciences 210. Examination of politics of health policy process, including effects of political structure and institutions; economic and social factors; interest groups, classes, and social movements; media and public opinion; and other factors. Letter grading.

400. Field Studies in Health Services. (2 or 4) Lecture, three hours. Preparation: summer internship. Required of all graduating M.P.H. students. Continuation of summer placement in organizations for delivery, financing, and evaluation of health services. Preparation of consulting report based on organizational problem or project from summer internship. Exposure to selected professional development issues. Letter grading.

M411. Issues in Cancer Prevention and Control. (4) (Same as Community Health Sciences M411.) Lecture, four hours. Designed for juniors/seniors and graduate students. Introduction to causes and characteristics of the cancer epidemic, cancer control goals for the nation, and interventions designed to encourage smoking cessation/prevention, cancer screening, and other dietary, psychosocial, and lifestyle changes. Letter grading.

M422. Practices of Evaluation in Health Services: Theory and Methodology. (4) (Formerly numbered 422.) (Same as Sociology M402.) Lecture, four hours. Requisites: courses 200A-200B. Introduction to health services evaluation. Examination and performance of specific evaluation procedures. Conducting of health services investigations, reporting results and methodologies. Letter grading.

425. Law and Epidemiology. (4) Lecture, four hours. Requisite: course 235 or Epidemiology 100. Examination, generally, of relationship between law and epidemiology, including use of epidemiology to regulate exposure to risk. Letter grading.

427. Population-Based Health Planning. (4) Lecture, four hours. Requisites: courses 200A-200B, Biostatistics 100A. Introduction to techniques of forecasting health care needs, utilization, and expenditures using population-based planning. Letter grading.

431. Managerial Processes in Health Services Organizations. (4) Lecture, one hour; laboratory, three hours. Requisites: courses 100, 234. Managerial skills and behaviors applied to components of organizations at several levels: individual, interpersonal, group, intergroup, system, and interorganization. Unique features of health services organizations are stressed as applications are presented. Letter grading.

432. Integrative Seminar: Health Services Management. (4) Seminar, four hours. Requisite: course 431. Residents and preceptors are responsible for presenting cases of actual administrative problems for solution by teams of students and faculty. S/U or letter grading.

433. Health Services Organization Policy and Strategy. (4) Lecture, three hours; discussion, one hour. Requisites: courses 200A-200B, 234, M236, Biostatistics 100A, Management 403. Conceptual, analytical, and technical aspects of policy and strategy formulation in health services organizations. Special attention to structure and dynamics of competitive markets, corporate-level strategic planning and marketing, managerial ethics and values, organizational creativity/innovation. Letter grading.

434. Employer/Employee Health Management. (4) Lecture, two hours; discussion, two hours. Preparation: a combination of three graduate courses in health planning, hospital finance, health policy, health insurance, occupational health, health services research, and health information systems. Requisite: course 100. Preview and analysis of how employer and employee groups provide, sponsor, and manage health-related services for others. S/U or letter grading.

435. Management Science for Health Planning and Administration. (4) Lecture, three hours; laboratory, two hours. Requisites: Biostatistics 100A and either Biostatistics 403 or Management 404. Introduction to use of quantitative analyses to support managerial and operational decisions in health services organizations. Topics include mathematical models for structuring decisions, resource allocation, inventory control, task sequencing, scheduling, and forecasting. Use of microcomputers. S/U or letter grading.

436. Financial Management of Health Service Organizations. (4) Lecture, four hours. Requisites: courses 131, 132, 234. Application of financial management and accounting principles to health care facilities, including unique financial characteristics of health care facilities, third-party reimbursement, cost finding and rate setting, operational and capital budgeting, auditing, and risk management. S/U or letter grading.

437. Legal Environment of Health Services Management. (2) Lecture, four hours. Requisite: course 131. General survey of legal aspects of health services management, including governance, agency, informed consent, medical malpractice, contracts, negligence, and case law related to health facility operations. S/U grading.

438. Issues and Problems of Local Health Administration. (4) Lecture, three hours. Preparation: one health services course. Requisites: course 100, Epidemiology 100. Overview of administrative issues currently faced by local health departments, including providing public health programs during fiscal constraint, quality improvement, interagency relationships and partnerships, and political and public interactions. Letter grading.

439. Dental Care Administration. (4) Lecture, three to four hours. Requisites or corequisites: Biostatistics 100A, Epidemiology 100. In-depth examination of several specific dental care policy issues: manpower, relationship of treatment to disease, national health program strategies, and evaluation mechanisms. Letter grading.

440A. Health Information Systems: Organization and Management. (4) Lecture, two hours; laboratory, three hours. Requisites: courses 200A-200B. Principles of and systems related to organization and management of a health facility's health information system. Letter grading.

440B. Health Information Systems: Organization and Management. (4) Lecture, two hours; laboratory, three hours. Requisite: course 440A. Health and administrative research using clinical records. Principles of planning for routine and special studies. Individual investigation in methods of obtaining and processing data to meet needs of programs in institution and agency. Introduction to principles of medical auditing; analysis of medical and health services. S/U or letter grading.

441. Ambulatory Care in the U.S.. (4) Seminar, three hours. Requisites: courses 132, 200A-200B, Management 403. Introduction to organization and management concepts, problems, and issues in ambulatory health services, including financial management and information systems requirements. Letter grading.

442A. Managed Health Care: Quality and Cost. (4) (Formerly numbered 442.) Lecture, three hours. Overview of issues related to growth, management, and planning of managed health care systems. Review of role of HMOs and PPOs, as well as discussion of managed care as a solution. Letter grading.

442B. Managed Care Practices. (4) Lecture, four hours. Requisite: course 442A. Introduction to practices and methodologies required of those participating in managed care sector. Attention to pros and cons and advantages and disadvantages of various aspects of managed care. Topics include revenue maximization and cost control, negotiating and contractual relationships among the parties to deliver care, and quality and performance measurement. Letter grading.

443A. Biological and Social Bases of Prevention. (4) Lecture, two hours; discussion, two hours. Requisites: courses 100 or 200A-200B, Biostatistics 100A, Epidemiology 100. Designed for graduate students. Development, current status, and potential of preventive medicine in public health practice, focusing on risk indicator approach (exercise, alcohol, stress, etc.), with consideration of program settings, delivery problems, and issues. Letter grading.

443D. Advanced Hospital Financial Management Simulation. (4) Lecture, one hour; discussion, one hour; laboratory, two hours. Requisites: courses 100, 132, 436. Practical aspects of hospital management decisions in a changing environment examined through computer simulation, with particular attention to economic projections, demand patterns, investment programs, and health care regulations. S/U or letter grading.

443E. Advanced Hospital Financial Management Seminar. (4) Seminar, four hours. Requisites: courses 100, 131, 132, 436. Hospital financial management, including reimbursement management, capital financing, and capital investment analysis, discussed and analyzed with respect to students' individual residency sites. S/U or letter grading.

444. Applied Methodology in Health Planning. (4) Lecture, three hours; fieldwork, four hours. Requisites: courses 200A-200B. Demonstration of methodology of health planning by involving students in formulation of actual health plan for existing agency in Los Angeles area. Letter grading.

445. Strategic Planning and Marketing in Health Care. (4) Lecture, three hours. Requisites: courses 200A-200B, Biostatistics 100A, 100B. Survey course covering theory and applications of strategic planning and marketing concepts as they apply to health care organizations. Lectures and discussion of case studies for which students must prepare in advance, fieldwork, and microcomputer exercises. Letter grading.

446. Financing Health Care. (4) Lecture, four hours. Requisites: course 100, Economics 1, 2. Patterns of health care financing by consumers, providers, third-party intermediaries; trends in health service use; expenditures, national health insurance, and international comparisons of health financing. S/U or letter grading.

447. State Health Policy Issues. (4) Seminar, three hours. Requisite: course 238. Focus on health policy development and implementation at state government level, with emphasis on financing, direct provision, and regulation of health care services, facilities, equipment technology, and manpower. Exploration of intergovernmental relationships. S/U or letter grading.

447D. Management of Health Maintenance Organizations. (4) Lecture, three hours. Requisites: courses 100, 134. Alternative approaches to fee-for-service for paying, providing, or arranging for delivery of health care services, and relating these approaches to national health policy. S/U or letter grading.

447E. Health Insurance Principles and Programs. (4) Lecture, four hours. Preparation: one health services course. Requisites: courses 100, 232. Examination of social, actuarial, and commercial assumptions underlying private health insurance. Comparison with government-sponsored health insurance. Analysis of diversity of voluntary medical care insurance plans under different sponsorships and with varied scopes of coverage and benefits and their implications for public and private medical care developments. S/U or letter grading.

M448. Health Policy Issues for Dental Professionals. (2) (Same as Dentistry M422.) Lecture, two hours. Requisites: course 100, Biostatistics 100A, Epidemiology 100. Current public health policy issues in dental health, including cost, financing, role of government, and quality assurance. S/U grading.

M448D. Case Studies in Dental Practice. (2) (Same as Dentistry M433A.) Lecture, two hours. Provides students with practice methodology for evaluation of dental care settings. Didactic and field experience, providing foundation for evaluation of programs. S/U grading.

M449A-M449B. Child Health, Programs, and Policies (4-4). (Same as Community Health Sciences M436A-M436B.) Lecture, four hours. Requisite: course 100. Course M449A is requisite to M449B. Examination of history of child health policy trends and determinants of health, structure, and function of health service system; needs, programs, and policies affecting especially at-risk populations. Letter grading.

450. Financial Theory of Health Services Organizations. (4) Lecture, four hours. Requisites: courses 200A-200B. Study of health care financial management, including variables of cost of funds, availability of physicians to provide the necessary patients, efficiency of operations, and legal constraints. Letter grading.

495. Teacher Preparation in Health Services. (2) Seminar, two hours. Preparation: 18 units of cognate courses in area of specialization. May not be applied toward master's degree minimum total course requirement. May be repeated for credit. S/U grading.

501. Cooperative Program. (2 to 8) Tutorial, to be arranged. Preparation: consent of UCLA graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Used to record enrollment of UCLA students in courses taken under cooperative arrangements with USC. No more than eight units may be applied toward master's degree minimum total course requirement; may not be applied toward minimum graduate course requirement. S/U grading.

596. Directed Individual Study or Research. (2 to 8) Tutorial, to be arranged. Limited to graduate students. Individual guided studies under direct faculty supervision. Only four units may be applied toward M.P.H. and M.S. minimum total course requirement. May be repeated for credit. S/U or letter grading.

597. Preparation for Master's Comprehensive or Doctoral Qualifying Examinations. (2 to 8) Tutorial, to be arranged. Limited to graduate students. May not be applied toward any degree course requirements. May be repeated for credit. S/U grading.

598. Master's Thesis Research. (2 to 8) Tutorial, to be arranged. Only four units may be applied toward M.P.H. and M.S. minimum total course requirement; may not be applied toward minimum graduate course requirement. May be repeated for credit. S/U grading.

599. Doctoral Dissertation Research. (2 to 8) Tutorial, to be arranged. May not be applied toward any degree course requirements. May be repeated for credit. S/U grading.

Robert C. Ritchie, Ph.D.

Adjunct Associate Professors

Darryl Holter, Ph.D.
Yuji Ichioka, Ph.D.

Adjunct Assistant Professor

Fredelle Zaiman Spiegel, Ph.D.

Scope and Objectives

History is the study of the past of our own society and how it emerged out of the traditions that produced it. At the same time, self-knowledge for students of history comes not only from self-discovery, but from a comparison of their own tradition and experience with those of others. It is only by studying the history of other civilizations and cultures that we can hope to gain perspective on our own.

The course offerings in history at UCLA are designed to bring about an understanding of the forces that have shaped the many cultures of this country and the world. UCLA has one of the largest, most distinguished, and most diverse history faculties in the country. Its main emphasis is on the many aspects of social history, but intellectual, cultural, and political history are also strongly represented.

Of all undergraduate majors, History is probably the most flexible and far-reaching. Leading to a Bachelor of Arts degree, it is excellent preparation for a wide variety of careers — law, teaching, business, the communications media, public services, and medicine.

The department offers graduate programs leading to the M.A. and Ph.D. and accepts qualified applicants for either or both degrees. There is also a joint master's program with the Graduate School of Education and Information Studies. Traditionally, the M.A. and Ph.D. in History have led to careers in high school, col-

lege, and university teaching. Increasingly, they are also being put to use in government service, international business, museum and archival work, and journalism.

Undergraduate Study

History B.A.

The History Department's undergraduate program consists of 16 courses in history (six lower division — the Preparation for the Major, including the premajor requirements; 10 upper division — the Major).

Preparation for the Premajor and Major

Required for the Premajor: Three courses, including two in Western civilization (History 1A, 1B, 1C) or two in world history (courses 20, 21, 22), and 99.

After completing the three courses with a minimum grade-point average of 2.0, students should petition to enter the major at the undergraduate counselor's office in 6248 Bunche Hall. Transfer credit for the premajor courses is subject to department approval. Transfer students should consult the undergraduate counselor before enrolling in any courses for the major.

Required for the Major: Three additional lower division history courses.

The Major

Required: At least 10 upper division history courses, including (1) two courses in U.S. history, (2) two courses in non-Western history from the same area (i.e., Latin America, Asia, Near East, Africa), (3) two courses in European history or in history of science, and (4) History 197.

The requirements for U.S., non-Western, and European history may be fulfilled with either upper or lower division courses, but majors are required to take a minimum of 10 upper division history courses.

There is no language requirement for the major; however, students wishing to enter the honors program or planning to do graduate work in history are urged to pursue language study early in their undergraduate careers.

Advanced Placement Credit in History

The College of Letters and Science allows eight quarter units toward the B.A. for each Advanced Placement Test in History. The History Department applies this credit to the Preparation for the Major as follows: AP European History fulfills History 1C; AP American History with a score of 4 or 5 allows eight units of History 13A-13B-13C credit on the history preparation. The excess units may be applied only toward the degree.

Honors Program

The honors program is designed for History majors who are interested in carrying out a year-long independent research project that culminates in an honors thesis. A 3.5 depart-

mental grade-point average is normally required for admission, but students with a lower GPA may apply to the honors committee for admission. Application should be made at the beginning of the junior year.

The proposal, research, analysis, and writing of the paper take place over three terms through History 199HA, 199HB, and 199HC. Course 199HA is taken in Spring Quarter of the junior year, followed by courses 199HB and 199HC in Fall and Winter Quarters of the senior year. Contact the undergraduate adviser for more information.

Instructional Credential in History

For information on the single subject instructional credential in history, consult the Department of Education, 1009 Moore Hall, (310) 825-8328).

Graduate Study

The following constitutes introductory information regarding graduate degree programs and is based on the 1998-99 edition of *Program Requirements for UCLA Graduate Degrees*. Complete, annual editions of *Program Requirements* are available (listed under "Publications") on the Graduate Division website at <http://www.gdnet.ucla.edu>. Students are subject to the degree requirements as published in *Program Requirements* for the year in which they matriculate.

Master's Degrees

The Department of History offers the Master of Arts (M.A.) degree in History and participates in a concurrent degree program with the Department of Information Studies.

Admission

For admission to the M.A. program, applicants should normally have completed the undergraduate major or its equivalent, have received a B.A. degree or its equivalent from an accredited college or university, and have maintained at least a B+ average in upper division work. For the European field, demonstrated proficiency in at least one foreign language (usually French or German) is expected. Prospective students are strongly urged to have proficiency in two foreign languages. Three letters of recommendation and the scores on the General Test of the Graduate Record Examination (GRE) must be submitted to the department. For applicants who do not meet the grade-point average requirements, admission is granted in exceptional cases where the letters of recommendation, GRE scores, or other factors indicate unusual promise. Applicants may also be admitted with subject deficiencies but such deficiencies must be removed by completing courses in addition to the requirements for an advanced degree program. Applicants who have had a year or more of graduate study at other institutions should have attained a grade-point average of 3.5 or better (on a 4.0

scale) if they wish to work toward the Ph.D. degree. Admission to the department depends on the number of openings in the field in which the applicant expects to specialize. Applications must be submitted before December 1; notification is made on or before May 1. Students are expected to begin graduate work in the Fall Quarter; deferred admissions are not granted.

The department has no separate application form; it uses the *Application for Graduate Admission* distributed by Graduate Admissions Student and Academic Affairs. In addition, all applicants must submit the UCLA Department of History Applicant Profile Sheet. All materials, including three letters of recommendation, submitted to the history department must be in one envelope. Departmental information may be obtained by writing to the department.

There is no screening examination. Nonhistory majors may be required to take specified courses depending on background and field of specialization. Students are expected to work in the field for which they are admitted. A change of fields after admission requires approval of the relevant admissions committee.

The *Guide to Graduate Study in History*, which explains in detail the requirements and procedures of the history graduate program, is distributed to all new graduate students at the orientation meeting which takes place during registration week. The guide lists all faculty, their major publications, and descriptions of courses offered during the year. Information on the program and the faculty is at <http://www.sscnet.ucla.edu/history/>.

M.L.I.S./M.A. History

The history/library and information science master's degree is a concurrent degree program of the Department of History and the Department of Information Studies (Graduate School of Education and Information Studies). Applicants wishing to receive the M.A. in History and the Master of Library and Information Science (M.L.I.S.) in three years may apply for this program. Applications for admission are reviewed by committees in both departments. Further information may be obtained by writing to the Department of History or the Department of Information Studies, Graduate School of Education and Information Studies.

Areas of Study

The comprehensive examination covers one of the following fields: (1) ancient (includes ancient Near East); (2) medieval (includes Byzantine and medieval Jewish history); (3) Europe, 1450 to present (also includes British, Jewish, and Russian history); (4) Africa; (5) Near East (includes Armenia); (6) India and Southeast Asia; (7) China; (8) Japan; (9) Latin America; (10) U.S.; (11) history of science; (12) special fields (students in the history of religions or history of Christianity are normally examined in one of the above fields but, with the approval of the faculty in these fields, may petition the graduate guidance and curriculum committee for an M.A. examination in their field of specialization).

Course Requirements

The department requires a minimum (and preferably a maximum) of nine upper division and graduate courses in history, at least six of which must be graduate courses. No course in the 300 series may be counted toward this requirement, and only one in the 500 series may be applied. For students in U.S. history, a minimum of seven of the nine courses must be at the 200 level, including at least two two-quarter seminars and History 245. Students in European history must include History 225 and two two-quarter seminars. Africanists must take History 275A-275B-275C.

Only one 500-series course may be included toward both the total course requirement and the minimum six graduate (200 series) course requirement. This could be either four units of course 596 or four units of 597.

Comprehensive Examination Plan

The department follows the comprehensive examination plan. Individual fields specify the fulfillment of the examination requirement by (1) a three-hour written examination designed to assess the candidate's ability to synthesize a broad field of knowledge or (2) the submission of three essays written for at least two different professors as part of the candidate's program of study. At least two of these papers must have been submitted for graduate courses in the 200 series. The U.S. field requires a comprehensive examination in the form of two two-quarter research papers to be submitted at the end of six quarters of full-time study. (This requirement does not apply to students entering the program with an M.A. in U.S. history.) The European field requires a comprehensive examination in the form of two completed two-term research seminars, together with two completed research papers with grades of B or better within the period of six quarters of graduate study, and a satisfactory pass in the doctoral written qualifying examination administered during the sixth quarter. The African field requires a three-hour comprehensive examination which is given in May of each year.

The medieval M.A. examination is given in May of each year. First-year graduate students are encouraged to take it at that time, and second-year graduate students must take it. Students who already hold an M.A. degree from another institution (or have comparable academic experience) are expected to take this examination in May of their first year at UCLA. The amount of preparation needed varies according to the student's background. Normally, the best preparation for the examination is to audit, or preferably to take for credit, several of the lecture courses on Western medieval history offered within the department. The questions are broad and general in character, reflecting the extensive familiarities gained through survey courses far more than the intensive knowledge acquired through seminars. The purpose of this examination is diagnostic: to ascertain that while studying languages and mastering research skills, students are also making

progress in learning the larger outlines of medieval history.

Students in medieval history working with Professor Krekić may satisfy the M.A. examination requirement by the other departmental examination option, namely, the submission of three papers as described in the general regulations.

In order to file for a master's degree, all students must file an Advancement to Candidacy form within the first two weeks of the quarter in which they expect to receive their degree. The comprehensive requirement is graded pass to continue, pass subject to reevaluation, terminal pass, or fail. In cases where the M.A. is awarded with pass subject to reevaluation, the field M.A. committee conducts a special reevaluation of the candidate's progress after no more than three additional quarters of study.

Thesis Plan

None.

Doctoral Degree

Admission

Admission requirements for the program leading to the Ph.D. degree in History are the same as those for the M.A., but applicants for the doctorate are urged to seek an interview or to correspond with a member of the History department faculty in the field in which they intend to work. Applicants may be admitted with subject deficiencies, but such deficiencies must be removed by completing courses in addition to the requirements for an advanced degree.

While no examination is required for admission to the Ph.D. program, the following evaluation procedures determine whether students may continue to the Ph.D. degree.

For students entering the graduate program with a B.A. degree, an evaluation comparable to the M.A. comprehensive examination must occur within the period of six quarters.

For students entering with a master's degree from another department, evaluation must be completed by the end of three quarters of study in the History Department in order to determine whether or not they are permitted to continue toward the Ph.D. This evaluation is conducted in the same manner as described under the M.A. program.

Students must present to the graduate guidance and curriculum committee a field approval form signed by the faculty member who has agreed to support their work for the Ph.D. according to the following schedule: by the end of the seventh quarter or earlier for those entering with only a B.A. and by the end of the third quarter or earlier for those entering with an M.A. from another department. Students who do not meet the time limits for proceeding to the Ph.D. are subject to dismissal.

The *Guide to Graduate Study in History*, which explains the requirements and procedures of the history graduate program in detail, is available in September to all new graduate students who have filed a Statement of Intent to Regis-

ter. The guide lists all faculty with their major publications and descriptions of courses offered during the year.

For academic counseling, students choose a faculty sponsor who chairs the doctoral committee and guides them in their Ph.D. program. A faculty adviser is assigned to all entering graduate students for the first quarter only.

There is a graduate guidance and curriculum committee consisting of five faculty members and one graduate student, appointed by the chair of the department, which reviews and makes recommendations regarding all doctoral programs and any petitions requesting variations from the program as described in this catalog. The vice chair for graduate affairs is an *ex officio* member of this committee and channels all petitions and programs for review to the committee. The student's chair is normally consulted about petitions and variances.

An annual review of all graduate students is made each Spring Quarter by the graduate guidance and curriculum committee. Letters are written to those students with program or grade-point deficiencies or other academic problems.

Students are encouraged to consult the graduate adviser, a full-time staff member, about requirements and procedures for progress toward the Ph.D. degree.

Major Fields or Subdisciplines

Ancient Greece; ancient Rome; medieval constitutional and legal; medieval social and economic; medieval ecclesiastical and religious; medieval intellectual and cultural (specialists in medieval history may offer no more than two of these fields in medieval history); Byzantine; Russia since 800; East Central and Southeast Europe since 1450; England prior to 1485; Britain since 1450; the British Empire; ancient Near East; the Near East, 500 to 1500; the Near East since 1500; Armenian; survey of African history; topics in African history (preferably on a regional basis); history of science since 1450; Europe, Renaissance/Reformation; Europe, Renaissance to the French Revolution; Germany since 1450; France since 1450; Italy since 1450; Spain and Portugal since 1450; Europe since 1740; European socioeconomic history; European intellectual and cultural history; psychohistory; China, 900 to 1800; China since 1800; early modern Japan; modern Japan; South Asia; Southeast Asia; Latin America, 1492 to 1830; Latin America since 1759; history of religions; Jewish history; history of Christianity; comparative history; U.S.: (1) mastery of the general field of U.S. history sufficient to teach a college-level survey course and (2) a specialized field chosen from the following: Afro-American, American diplomatic, American West, American Indian, Asian Americans, California, history of the South, Civil War and Reconstruction, Colonial, cultural, economic, immigration, intellectual, Jeffersonian and Jacksonian American (1800 to 1850), labor, Mexican American, social, the new nation (1763 to 1800), 20th century, ur-

ban, women's history. Both the general and a specialized field must be offered by specialists in U.S. history and only two fields in U.S. history are permitted. Either field 1 or 2 or both may be chosen as minor fields for the Ph.D.

The history of Christianity may be offered as a major or minor field for the doctorate in history. Students may offer this field with emphasis on a particular aspect such as the early church, protestantism, or orthodox Christianity, although by definition they are required to be familiar with the historical New Testament. Where possible, the field is defined as chronologically and geographically coterminous with an existing departmental field. Emphasis in either American Christianity or medieval Latin Christianity counts as an American or medieval field.

To offer a field in the history of Christianity, students must prepare a written statement defining in detail the parameters of the field and must submit the statement to the graduate guidance and curriculum committee for approval. Before submission the statement must be endorsed by and bear the signatures of the examining faculty member and the chair of the Ph.D. committee.

Comparative history Ph.D. students may choose comparative history as one of their four fields. This means choosing one topic across three existing Ph.D. fields. The topic should be chosen with the help of the student's Ph.D. advisers; among possible topics are labor history, women's history, history of religions, economic history, and many others. The geographical/temporal fields covered may correspond to some or all of the student's other three Ph.D. fields. The comparative field is more intensive and involves genuine comparisons. It is highly recommended (and comparative chairs may require) that those majoring in a Western field choose one non-Western field and vice versa. Two or three professors may, if needed, supervise a comparative program, and may help examine the candidate either on the orals or by written examination.

Candidates in the history of science program must select three of the above fields and either the history of medicine or an allied field. They must also demonstrate a detailed knowledge of the substance and historical development of a particular science or a type of engineering or technology as a subfield common to the historical fields.

Course Requirements

Candidates for the Ph.D. must meet the special requirements for admission to the doctoral program listed above and the general requirements set forth under the Graduate Division. Additionally, the following requirements must be fulfilled: (1) a command of good English, spoken and written; (2) the ability to read at least two foreign languages (except in the U.S. field where only one foreign language is required); (3) an acquaintance with general history; and (4) completion of at least one continuing two- or three-quarter seminar which

must include completion of a substantial research paper.

All students must write a dissertation prospectus (written for credit as History 596 or 597) which is expected to contain (1) a full statement of the dissertation topic; (2) a historiographical discussion of the literature bearing on the topic; (3) a statement of the methodology to be employed; and (4) a survey of the sources sufficient to demonstrate the viability of the topic. The prospectus must be submitted in writing to and be approved by the dissertation adviser prior to the oral part of the qualifying examinations. After approval, copies are given to each member of the examining committee.

The following coursework is required in specific fields: (1) U.S. history — History 245 (History 246A-246B-246C are strongly recommended for all first-year students); (2) European history — History 225; (3) African history — History 275A-275B-275C (unless exempted by petition); (4) medieval history — Latin 130 or 131, Latin 243, and History 219A-219B (a graded History 596 in paleography may be substituted for 219A-219B with permission of faculty).

Faculty serving on doctoral committees may require such courses as they deem necessary as preparation for qualifying examinations. Courses taken to fulfill M.A. degree requirements may also be used to satisfy Ph.D. requirements.

Written and Oral Qualifying Examinations

In the written and oral qualifying examinations students are expected to show not only a mastery of their special subject, but also an extensive knowledge covering the wider field of historical knowledge and an ability to correlate historical data and to explain their significance. The examinations are designed to test not merely factual knowledge, but also power of historical analysis and synthesis, critical ability, and capacity for reflective thinking. Knowledge of the history of any area includes a solid understanding of its historiography and bibliography, its geography, and its political, cultural, economic, and other historical aspects.

In the oral examination, students are examined in four fields, one of which may be an approved field in anthropology, economics, geography, language and literature, philosophy, political science, or other allied subjects. The allied field must be comparable in size and scope to the history fields listed above. Students should select the fields in consultation with their adviser and must receive the department's approval of all four fields no less than six months before the written qualifying examination is taken. In the case of the European field, students must choose their four fields by the quarter after they have successfully passed the doctoral written qualifying examination (i.e., normally by the seventh quarter of residency). To obtain approval, students should supply the Graduate Guidance and Curriculum Committee with the name of the faculty member who has agreed to

serve as the sponsor of the doctoral work and with the details of the proposed program. A full-time graduate student must begin the written qualifying examinations no later than the end of the ninth quarter of graduate work.

The written qualifying examination includes the major field only, except in the European field which requires a written examination in three fields. In the case of U.S. and European history, each field administers a written qualifying examination as outlined below. The oral examination covers all four fields (except for the African field) and is normally held after the written examination. In most fields, the oral examination is held shortly after the written examination or, at the discretion of the doctoral committee, as late as six months after the written examination. For the U.S. and European fields, see below. Both the written and oral examinations are to be considered by the committee as a whole in arriving at a judgment of the student's performance, except in the European field. The written qualifying examination is normally prepared and administered by the chair of the committee and read by the entire committee before the oral qualifying examination, except for the U.S. and European fields (see below). All students in the European field take the doctoral written qualifying examination during the sixth quarter in residence.

In the U.S. field students must take the doctoral written qualifying examination after 12 months in residence. Prior to taking the examination, students must have secured the agreement of a qualified member of the department in the U.S. field to serve as chair of the doctoral committee. The written examination (not to exceed eight hours) is administered once a year at the beginning of the Fall Quarter. Those failing the examination may retake it on petition the following Spring Quarter. The examination may be retaken only once. The examination committee consists of three faculty members who in the previous year taught History 246A-246B-246C. If any of these faculty members are unavailable, preference is given, in replacing such members, to faculty members who have taught History 246A-246B-246C in recent years. The written examination is intended to test a comprehensive broad understanding of American history both before and after the independence of the U.S. All facets of history (political, social, diplomatic, etc.) are included. An ability to synthesize factual information, sometimes across long chronological periods, is consequently essential. Knowledge of the scholarly literature and of the principal historiographical controversies arising out of it are tested along with the student's interpretive capabilities. Passing of the examination implies that the student is qualified, in the judgment of the U.S. field, to teach courses in U.S. history at the college level. Questions related to the planning of such courses may appear on the examination.

All students in the European field take the doctoral written qualifying examination during the sixth quarter in residence. The European writ-

ten examination is administered once a year late in the Spring Quarter. Those failing the examination may retake it on petition in the following Spring Quarter. The examination may be retaken only once. The entire European faculty in residence during the Spring Quarter administers the examination. The examination is divided into the following sections: Europe, Renaissance/Reformation; Europe, Reformation to French Revolution; Europe since 1740; European social and economic history since 1450; European intellectual and cultural History since 1450; Russia since 800; Jewish History; East Central and Southeast Europe since 1450; Germany since 1450; Italy since 1450; Spain and Portugal since 1450 (not currently offered); European history of science since 1450. Students choose three sections in which they are examined. The entire examination lasts one and one-half days. Students entering with a B.A. who fail the doctoral examination are allowed to complete the M.A. program as outlined. Prior to taking the written qualifying examination, a student must have secured the agreement of a qualified member of the department in the European field to serve as chair of the doctoral committee. The examination is intended to test a comprehensive broad understanding of European history, both of the modern and early modern periods. Different facets of history (political, social, intellectual, etc.) are included. An ability to synthesize factual information, sometimes across long chronological periods is, consequently, essential. Knowledge of the scholarly literature and of the principal historiographical controversies arising out of it is tested, along with interpretive capabilities. Questions related to the planning of college-level history courses may appear on the examination. Before taking the written examination, students must have passed at least one language examination.

At the oral qualifying examination, students must submit four fields selected to enhance the scope and quality of the dissertation. During the period subsequent to the written examination, students may select a comparative field, or a field outside Europe or the department. The oral examination concerns the dissertation prospectus and the substantive elements of the four fields as they relate to the prospectus. The oral examination normally takes place at the end of nine quarters of residence but must be taken by the end of the twelfth quarter. The second language examination must be passed before taking the oral examination. Should students fail the oral examination, they must retake it at a time set by the committee within six months. Any variance from time limits must be approved by the European field before going to the Graduate Guidance and Curriculum Committee for final approval.

The four fields of the University Oral Qualifying Examination must be related to the dissertation and are selected to enhance the scope and quality of the dissertation. The oral examination concerns the dissertation prospectus and the substantive elements of the four fields

as they relate to the prospectus. The written examination, if failed, must be retaken at the next administration of the examination if students wish to continue; if students fail the oral examination, it must be retaken at a time specified by the doctoral committee, but not to exceed six months. Any variance from these time limits must be approved by the U.S. field before going to the Graduate Guidance and Curriculum Committee for final approval. After passing the oral qualifying examination, students are advanced to candidacy and may begin work on their dissertations.

History

Lower Division Courses

1A-1B-1C. Introduction to Western Civilization. (4-4-4) Lecture, two hours; discussion, two hours. Broad, historical study of major elements in Western heritage from the world of the Greeks to that of the 20th century, designed to further beginning students' general education, introduce them to ideas, attitudes, and institutions basic to Western civilization, and acquaint them, through reading and critical discussion, with representative contemporary documents and writings of enduring interest. **1A.** Ancient Civilizations from Prehistory to Circa A.D. 843; **1B.** Circa A.D. 843 to Circa 1715; **1C.** Circa 1715 to the Present.

1AH-1BH-1CH. Introduction to Western Civilization (Honors). (4-4-4) Lecture, two hours; discussion, two hours. Honors sequence parallel to courses 1A-1B-1C.

2A. Power, Ethics, and Technological Change. (4) (Formerly numbered 98.) Lecture, three hours; discussion, two hours. Examination of historical and theoretical relationships between ethical behavior, corporate power, and technological change. Topics include engineering practice and business profits, gender and engineering cultures, product liability and consumer safety, and engineering and computer ethics. Historical case studies include Three Mile Island, Chernobyl, the DC-10, and Challenger Disaster. P/NP or letter grading.

2B. Social Knowledge and Social Power. (4) Lecture, three hours; discussion, two hours. Historical introduction to social thought and the social sciences since the 18th century. Consideration of the great social thinkers, including Smith, Mill, Comte, Marx, and Freud. Examination of practical and political uses of social science by addressing such topics as psychology and mental testing, anthropology and race, cost-benefit analysis, measurement and creation of norms, definition of sex and gender, and cultural construction of expertise and objectivity. P/NP or letter grading.

3A-3B-3C. Introduction to History of Science. (4-4-4) Lecture, three hours; discussion, two hours. History majors may not apply these courses on science general education requirements:

3A. Scientific Revolution. Survey of the beginnings of physical sciences involving transformation from Aristotelian to Newtonian cosmology, mechanization of the natural world, rise of experimental science, and origin of scientific societies.

3B. Physical Sciences since the Enlightenment. Broad survey of development of ideas in classical and modern physical science since Newton. Theories of matter, but more specifically chemistry, thermodynamics, electromagnetic theory of light, energy conservation, relativity, and quantum mechanics.

3C. Biological Sciences, 1800 to 1955. Survey of development of biological sciences from the period of Bichat and Müller to discovery of the double helix.

3CH. Introduction to History of Science (Honors). (4) Honors course parallel to course 3C. P/NP or letter grading.

3D. Themes in History of Medicine. (4) Lecture, three hours. Not open to freshmen. Limited to 30 students. Examination, through illustrated lectures and focused discussion of primary sources, of five important themes in development of modern medicine: nature of diagnosis, emergence of surgery, epidemics, conception and treatment of insanity, and use of medical technology.

4. Introduction to History of Religions. (4) Lecture, three hours; discussion, two hours. Discussion of various systems, ideas, and fashions of thought that have dominated Western approaches to religions of the world since antiquity. Survey of development from classical Greek and early Christian theories to modern history with its discoveries of the religions of India, China, ancient Near East, etc., and the problem of the encounter of various religions in the 19th and 20th centuries.

8A. Colonial Latin America. (4) Lecture, three hours; discussion, two hours. General introduction to Latin American history from contact period to independence (1490s to 1820s), with emphasis on convergence of Native American, European, and African cultures in Latin America; issues of ethnicity and gender; development of colonial institutions and societies; and emergence of local and national identities. Readings focus on writings of Latin American men and women from the period studied. P/NP or letter grading.

8AH. Colonial Latin America (Honors). (4) Lecture, three hours; discussion, two hours. Honors course parallel to course 8A. P/NP or letter grading.

8B. Political Economy of Latin American Underdevelopment, 1750 to 1930. (4) Lecture, three hours. Interaction of precapitalist and modern modes of social organization in Latin American history, particularly during the "long" 19th century, by focusing on relationship between economic change, social and cultural structures, and politics in the region. P/NP or letter grading.

8BH. Political Economy of Latin American Underdevelopment, 1750 to 1930 (Honors). (4) Lecture, three hours; discussion, three hours. Honors course parallel to course 8B. P/NP or letter grading.

8C. Latin American Social History. (4) Lecture, three hours; discussion, two hours. Historical and contemporary perspective of role of ordinary people in Latin American society. Each lecture/film session centers on a major Latin American movie illustrative of a theme in social history.

8CH. Latin American Social History (Honors). (4) Lecture, three hours; discussion, two hours. Honors course parallel to course 8C.

9A-9D. Introduction to Asian Civilizations. (4-4-4-4) Lecture, three hours; discussion, two hours:

9A. History of India. Introductory survey for beginning students of major cultural, social, and political ideas, traditions, and institutions of Indic civilization.

9C. History of Japan. Survey of Japanese history from earliest recorded time to the present, with emphasis on development of Japan as a cultural daughter of China. Attention to manner in which Chinese culture was Japanized and aspects of Japanese civilization which became unique. Creation of the modern state in the last century and impact of Western civilization on Japanese culture.

9CH. History of Japan (Honors). Honors course parallel to course 9C.

9D. History of the Near and Middle East. Introduction to history of the Muslim world from advent of Islam to the present day.

10A-10B. Introduction to Civilizations of Africa. (4-4) Lecture, three hours; discussion, two hours. Survey of history of Africa from 1800 to the present, with particular attention to 19th-century historical background, era of colonial rule, and regaining of African independence in postcolonial era. P/NP or letter grading.

10BH. Introduction to Civilizations of Africa (Honors). (4) Lecture, three hours; discussion, two hours. Honors course parallel to course 10B.

11A-11B. History of China. (4) Lecture, three hours; discussion, two hours. **11A.** To 1000. Survey of early history of China — genesis of characteristic Chinese institutions and modes of thought from antiquity to 1000. Focus on social, political, intellectual, and economic aspects of early and middle empires. **11B.** 1000 to 1950. Survey of later history of China — evolution of characteristic Chinese institutions and modes of thought from 1000 to 1950. Focus on social, political, intellectual, and economic aspects of late empires and rise of modern China in the contemporary era.

11AH-11BH. History of China (Honors). (4-4) Lecture, three hours; discussion, two hours. Honors sequence parallel to courses 11A-11B.

13A-13B-13C. History of the U.S. and Its Colonial Origins. (4-4-4) Lecture, two hours; discussion, two hours. Strongly recommended for history majors planning to take more advanced courses in U.S. history. Cultural heritages, political institutions, economic developments, and social interactions which created contemporary society. P/NP or letter grading. **13A.** Colonial Origins and First Nation Building Acts; **13B.** 19th Century; **13C.** 20th Century.

20. World History to A.D. 600. (4) Lecture, three hours; discussion, two hours. Examination of earliest civilizations of Asia, North Africa, and Europe — Mesopotamia, Egypt, Israel, India, China, Greece, and Rome — from development of settled agricultural communities until about A.D. 500, with focus on rise of cities, organization of society, nature of kingship, writing and growth of bureaucracy, varieties of religious expression, and linkage between culture and society. P/NP or letter grading.

21. World History, 1200 to 1800. (4) Lecture, three hours; discussion, two hours; outside study, seven hours. Exploration of early modern world through "eyewitness" accounts, with focus on both humanistic and social science aspects of historical change, specifically addressing social, political, economic, and cultural spheres of activity important in world affairs before American and French Revolutions. P/NP or letter grading.

22. Contemporary World History, 1870 to the Present. (4) Lecture, three hours; discussion, two hours. Broad thematic survey of world history since the mid-19th century. Examination, through lecture and discussion, of global implications of imperialism, total war, nationalism, cultural change, decolonization, changes in women's rights and roles, and eclipse of world communism. Designed to introduce students to historical study, help them understand issues and dilemmas facing the world today, and prepare them for more in-depth work in history of specific regions or countries of the world. P/NP or letter grading.

M70. Survey of Medieval Greek Culture. (4) (Same as Classics M70.) Lecture, three to four hours. Classical roots and medieval manifestation of Byzantine civilization: political theory, Roman law, pagan critique of Christianity, literature, theology, and contribution to the Renaissance (including discovery of America).

88A-88U. Lower Division Seminars. (5 each) Seminar, three hours. Limited to 15 freshmen/sophomores. Open to nonhistory majors. Readings, discussions, papers. Sign-ups and descriptions of offerings each term are available in undergraduate counselor's office (6248 Bunche Hall). Ten units may be taken for credit. **88A.** Ancient Greece; **88B.** Ancient Rome; **88C.** Medieval; **88D.** Early Modern Europe; **88E.** Modern Europe; **88F.** Russia/Eastern Europe; **88G.** Britain; **88H.** U.S.; **88I.** Latin America; **88J.** Near East; **88K.** India; **88L.** China; **88M.** Japan; **88N.** Africa; **88O.** Science/Technology; **88P.** History of Religions; **88Q.** Theory of History; **88R.** Jewish History; **88S.** Armenia and the Caucasus; **88T.** Southeast Asia; **88U.** Psychohistory.

97H. Three Trials. (4) Discussion, three hours. Limited to 20 students. Intensive study of three trials, each of which led to the execution of the accused: Socrates, Jesus of Nazareth, and Joan of Arc. View of each trial as a conflict between legitimate but irreconcilable interests and world views. For each, class constitutes itself as a court (prosecution, defense, jury) and reviews the verdict of original trial.

99. Introduction to Historical Practice. (4) Seminar, three hours. Discussion classes of no more than 15 students. Introduction to study of history, with emphasis on historical theory and research methods. P/NP or letter grading.

Upper Division Courses

Upper division lecture courses in the History Department are usually scheduled for three hours. Periodically, additional one-hour discussion sections are offered with the lectures. Consult the quarterly *Schedule of Classes* to determine the offerings for each term.

100. History and Historians. (4) (Formerly numbered 100A.) Lecture. Designed for juniors/seniors. Study of historiography, including intellectual processes by which history is written, results of these processes, and sources and development of history. Attention also to representative historians. P/NP or letter grading.

102. Explorations in Psychoanalysis and History. (4) Designed for juniors/seniors. Art of psychological and historical interpretation; assessment of recent writings in the field of psychohistory.

M103A-M103B. Historical Archaeology. (4-4) (Same as Anthropology M115A-M115B.) Lecture, three hours. Designed for juniors/seniors. P/NP or letter grading. **M103A.** World Perspective. Historical archaeology requires appreciation of historical sources, archaeology, and material culture. Thematic emphasis, with exploration of breadth of the discipline both in the Old World and the Americas. **M103B.** American Perspective. Emphasis on historical archaeology in North America, particularly to some practical applications.

M104A-M104B. Ancient Egyptian Civilization. (4-4) (Same as Ancient Near East M104A-M104B.) Lecture, three hours. Course M104A is not requisite to M104B. Designed for juniors/seniors. Political and cultural institutions of ancient Egypt and ideas on which they were based. **M104A.** Chronological discussion of Prehistory, the Old and Middle Kingdom. **M104B.** The New Kingdom and the Late period until 332 B.C.

M105. History of Ancient Mesopotamia and Syria. (4) (Same as Ancient Near East M105.) Lecture, three hours. Designed for juniors/seniors. Political and cultural development of the "Fertile Crescent," including Palestine, from the Neolithic to the Achae-menid period.

106A-106B-106C. Survey of the Middle East from 500 to the Present. (4-4-4) Designed for juniors/seniors. Background and circumstances of rise of Islam, creation of the Islamic Empire, and its development. Rise of Dynastic Successor States and the Modern Nation States. Social, intellectual, political, and economic development. **106A.** 500 to 1300; **106B.** 1300 to 1700; **106C.** 1700 to the Present.

107A-107B. Islamic Civilization. (4-4) Designed for juniors/seniors. **107A.** Premodern Islam. Origins of Islamic civilization, Muhammad and the Qur'an; development of Islamic doctrine, ritual, piety and law, sectarian Islam, and mysticism. **107B.** Islam in the Modern World. Reform movements, legal issues, sociopolitical trends, movements of opposition.

108A-108B. History of the Arabs. (4-4) Course 108A is requisite to 108B. Designed for juniors/seniors. Political, social, intellectual, and economic history of the Arabs from the 18th century to the present.

109A-109B. History of North Africa from the Moslem Conquest. (4-4) Designed for juniors/seniors. **109A.** To 1578; **109B.** 1578 to the Present.

109C. History of Islamic Iberia. (4) Designed for juniors/seniors. Survey of political, social, economic, religious, artistic, and literary history of an Islamic culture in Western Europe, with special attention to ethnic and religious pluralism in premodern society and transmission of science and philosophy to Christian Europe. P/NP or letter grading.

110A-110B. Iranian History. (4-4) Designed for juniors/seniors. Political, social, and cultural history of Persia. **110A.** Islamic Iran to 1800; **110B.** Iran from 1800 to the Present.

111A-111B. History of the Turks. (4-4) Designed for juniors/seniors. Survey of society, government, and political history of the Turks from earliest times to the present. P/NP or letter grading. **111A.** Origins to 1808. Turkish origins, early Central Asian and Middle Eastern states. Rise and fall of the Ottoman Empire. **111B.** 1808 to the Present. Modernization of the Ottoman Empire, 1808-1923. The Turkish Republic. The Turks in the world.

111C. History of Jews in the Ottoman Empire and the Turkish Republic, 1300 to 1923. (4) Designed for juniors/seniors. Preliminary introduction to the Jews in Byzantium and the Islamic world before the Ottoman conquest, followed by discussion of Jewish communities and Judaism in Southwestern Europe, Anatolia, and the Middle East while they were under Ottoman rule (1300 to 1923) and in the Turkish Republic since 1923. P/NP or letter grading.

112A-112B-112C. Armenian History. (4-4-4) Designed for juniors/seniors. **112A.** Armenia in Ancient and Medieval Times, 2nd Millennium B.C. to A.D. 11th Century; **112B.** Armenia from Cilician Kingdom through Periods of Foreign Domination and National Stirrings, 11th to 19th Centuries; **112C.** Armenia in Modern and Contemporary Times, 19th and 20th Centuries. Armenian question and genocide, national republic, Soviet Armenia, and the dispersion.

C112D. Introduction to Armenian Oral History. (4) Lecture/discussion, three hours. Designed for juniors/seniors. Uses and techniques of Armenian oral history; preinterview, interview, and postinterview procedures; methods of compilation and evaluation. Field assignments and interviews. May be concurrently scheduled with course C212.

113. The Caucasus under Russian and Soviet Rule. (4) Designed for juniors/seniors. Survey of political, economic, social, and cultural history of the Caucasus region since 1801. Georgian, Armenian, and Azerbaijani response to Russian and Soviet rule; the nationality question and the Soviet national republics.

114. Topics in Middle Eastern History. (4) Designed for juniors/seniors. Examination of major issues in history of Middle East. P/NP or letter grading.

115A-115B-115C. History of Ancient Mediterranean World. (4-4-4) Designed for juniors/seniors. **115A.** Survey of history of the ancient East from earliest times to foundation of the Persian Empire. **115B.** History and institutions of the Greeks from their arrival to the death of Alexander. **115C.** History and institutions of Rome from founding of the city to the death of Constantine.

116A-116B. History of Ancient Greece. (4-4) Designed for juniors/seniors. **116A.** Rise of the Greek City-State. Emphasis on archaic period and early classical age through the Persian Wars. **116B.** Classical Period. Clash between Athens and Sparta, consequent rise of Macedonia, and aftermath of Alexander the Great.

117A-117B-117C. History of Rome. (4-4-4) Designed for juniors/seniors. P/NP or letter grading. **117A.** To Death of Caesar. Emphasis on development of imperialism and on constitutional and social struggles of the late republic. **117B.** From Death of Caesar to the Time of Constantine. The early empire treated in more detail, supplemented by survey of social and economic changes in the 3rd century. **117C.** Transformation of the Classical World. Political, cultural, and religious history of the Mediterranean in late antiquity, from crisis of Roman Empire in the 3rd century to barbarian and Arab invasions and beginning of medieval states and societies in the 7th century.

118. Topics in Ancient History. (4) Designed for juniors/seniors. Introduction to topics in Greek and Roman history, including Roman law, ancient Greek and Roman slavery, world of Caesar Augustus, Greek democracy, and Alexander the Great. May be repeated for credit. P/NP or letter grading.

C119C. From Roll to Codex: Manuscripts in Early Middle Ages. (4) Lecture, three hours. Examination of history of medieval manuscripts and circumstances of their production, use, and survival as evidence for study of medieval European society to 1100. Concurrently scheduled with course C219C. P/NP or letter grading.

C119D. From Parchment to Print: Manuscripts in Later Middle Ages. (4) Lecture, three hours. Examination of history of medieval manuscripts and circumstances of their production, use, and survival as evidence for study of medieval European society from 1100 to 1500. Concurrently scheduled with course C219D. P/NP or letter grading.

119M. The Christian Church, 100 to 1517. (4) (Formerly numbered 119.) Lecture. Designed for juniors/seniors. Constitutional, political, and economic history of the Church: Christianization of Roman Empire and Germanic kingdoms; governance and institutions of the Church; relations between Church and monarchy; the high tide of papalism; crises of authority on eve of the Reformation. P/NP or letter grading.

120M. The Christian Religion, 100 to 1350. (4) (Formerly numbered 120.) Lecture. Designed for juniors/seniors. Religious experience of Christians — conversion, doctrine, belief, heresy, spirituality, worship, liturgy, and art. Religious life of lay Christians, as well as that of the Church's institutional, intellectual, and spiritual leaders. P/NP or letter grading.

121A-121B. Medieval Europe. (4-4) Designed for juniors/seniors. Basic introduction to Western Europe from Latin antiquity to the age of discovery, with emphasis on medieval use of Greco-Roman antiquity, history of the manuscript book, and growth of literacy. **121A.** 400 to 1000; **121B.** 1000 to 1500.

121C. Medieval Civilization: Mediterranean Heartlands. (4) Designed for juniors/seniors. Survey of Western Mediterranean Europe, social/economic/cultural within a political framework, including its relation with other cultures.

121D. Medieval People: The 13th Century. (4) Designed for juniors/seniors. Movements and creative contributions to Western culture in this central century of the Middle Ages, as seen in its representative men and works.

M122. Power and Imagination in Byzantium. (4) (Same as Classics M170.) Lecture, three hours. Requisites: courses M70 or 123A-123B. Designed for juniors/seniors. Study of relations of authority and the intelligentsia in the highly centralized Byzantine Empire. Topics include criticism of the emperor, iconoclasm, intellectual freedom, attempts at reform.

123A-123B. Byzantine History. (4) Designed for juniors/seniors. Political, socioeconomic, religious, and cultural continuity in the millennial history of Byzantium. Reforms of Diocletian. Byzantium's relations with Latin Europe, Slavs, Sassanids, Arabs, and Turks.

124A-124B. East-Central Europe. (4-4) Designed for juniors/seniors. **124A.** The Long 19th Century, 1780 to 1914. Analysis of characteristics of peripheral 19th-century capitalism, effort to modernize and catch up, and factors and consequences of its partial failure in the economy, politics, and culture. **124B.** The Short 20th Century, 1918 to 1990. Analysis and interpretation of stormy history of crisis zone of Europe where wars, revolts and revolutions, different types of extremisms led to a historical detour: 70 years of departure from Western values and at last an effort to turn back to them.

124C. East-Central Europe in Transition, 1988 to 1993. (4) Designed for juniors/seniors. State-socialism and Soviet domination collapsed in East-Central Europe in 1989. Analysis of cause and consequence of the collapse, as well as the road of transformation in seven (now 12) countries of the region; international circumstances and domestic political, social, and economic processes. Ideology of transition versus reality of democratization, marketization, and privatization; free choice versus determinant factors. Scenarios for the future. P/NP or letter grading.

124D. Film and History: Central and Eastern Europe, 1945 to 1989. (4) Designed for juniors/seniors. Postwar history of central and eastern Europe (1945 to 1989), using eight Czech, Polish, and Hungarian films to explore life under state socialist "modernization dictatorship." P/NP or letter grading.

125A-125F. History of Modern Europe. (4 each) Designed for juniors/seniors. P/NP or letter grading:

125A. Renaissance and Reformation, 1450 to 1660. Reorganization of power, new forms of representation, and discourses about rule and obedience in Europe from the mid-15th through 16th century; popular culture; peasant society; refashioning of religion and power; localization.

125B. Baroque Culture and Absolutist Politics, 1600 to 1715. Changing nature of state and social domination; redeployment of military violence; strategies of population discipline; absolutism and baroque culture; new forms of bureaucratic intervention; representation of the family, sexuality, and the body; witch persecutions.

125C. Old Regime and Revolutionary Era, 1715 to 1815. Enlightened absolutism and reform, challenge of new political and economic ideas, crisis of the Old Regime, impact of French Revolution and Napoleonic empire.

125D. Bourgeois Century, 1815 to 1914. Restoration politics, Industrial Revolution, uprisings of 1848, unification of Germany and Italy, imperialism, rise of socialism, population growth, changes in social structure, origins of World War I.

125E. Era of Total War, 1914 to 1945. World War I, interwar period, and World War II. Social, cultural, political, and economic aspects, with focus on strain between model of parliamentary democracy and dynamics of mass politics (e.g., Bolshevik Revolution, Italian Fascism, national socialism, and Spanish Civil War).

125F. World War II and Its Aftermath, 1939 to the Present. World War II, origins and persistence of the Cold War, reconstruction in the West, de-Stalinization, decolonization, crisis of the welfare state, background to and course of the 1989 revolutions, current political configuration.

126A-126F. Cultural and Intellectual History of Modern Europe. (4 each) Designed for juniors/seniors. Climates of taste and climates of opinion. Educational, moral, and religious attitudes; art, thought, and manners of the time in historical context. P/NP or letter grading. **126A.** 15th Century. Renaissance cultural and intellectual history of Europe. Central themes include comparative history of ideas, theory and practice of art and architecture, civic and religious humanism, religious experience, and new cultural genres of history and philological scholarship. **126B.** 16th Century. **126C.** 17th Century. **126D.** 18th Century. **126E.** 19th Century. **126F.** 20th Century.

127A-127B-127C. War and Diplomacy in Europe. (4-4-4) (Formerly numbered 127A-127B.) Designed for juniors/seniors. P/NP or letter grading. **127A.** 1650 to 1815. Survey of military and diplomatic history, seen in relation to social and economic developments and growth of the state. **127B.** 1815 to 1945. Balance of power; growth of the nation state; imperial and colonial rivalries; the two World Wars. **127C.** The Cold War. Relations of the West, Soviet Union, and the world from 1945 to 1991. Origins, development, and end of power-political, military, and ideological confrontations between the superpowers and their allies and clients in Europe, Asia, and Latin America.

128A-128B-128C. History of France. (4-4-4) Designed for juniors/seniors. **128A.** France, 1500 to 1715. Social history of 16th- and 17th-century France, including growth of monarchy, wars of religion, peasant uprisings, popular culture, Catholic resurgence, Louis XIV and achievements in arts and literature. **128B.** France, 1715 to 1871. "Ancien Régime" and the time of revolutions. Critical discourse leading to the French Revolution, collapse of the state, Napoleonic era, reconstruction of society through the monarchies and revolutions of the 19th century. **128C.** The Making of Modern France, 1871 to the Present. From oligarchy to democratic bureaucracy in two wars and three republics.

129A. Baroque and Enlightenment Germany. (4) Designed for juniors/seniors. Development of state institutions, culture, and society in Central Europe from end of Thirty Years' War to end of Napoleonic Wars. Consideration of absolutism as a political system, and baroque and Enlightenment cultures as new discourses on power and hierarchy. P/NP or letter grading.

129B. Nationalism and Modernization in 19th-Century Germany. (4) Designed for juniors/seniors. Problems of class society and state formation, emancipation, assimilation, growth of national consciousness, emergence of a "bourgeois public sphere," dynamics of gender in civil society and political life, post-Napoleonic tensions between reform and reaction, 1848, and national unification. P/NP or letter grading.

129C. 20th-Century Germany. (4) Designed for juniors/seniors. Transitions that Germany has faced during this century: two world wars, shift from monarchy to republic to national socialism to a "divided nation," and finally "reunification." Consideration of political, social, economic, and cultural spheres. P/NP or letter grading.

130. Europe in the Age of Revolution, Circa 1775 to 1815. (4) (Formerly numbered 130A-130B-130C.) Lecture. Designed for juniors/seniors. Period from revolt of the Thirteen Colonies to French Revolution of 1789, and Napoleonic regime, viewing social and political changes unleashed by these revolutionary movements in a comparative and transnational perspective. P/NP or letter grading.

131A-131D. History of Russia. (4-4-4-4) Designed for juniors/seniors. P/NP or letter grading:

131A. From the Origins to the Rise of Muscovy. Kievan Russia and its culture, Appanage principalities and towns; the Mongol invasion; unification of the Russian state by Muscovy, Autocracy and its Servitors; serfdom.

131B. Imperial Russia from Peter the Great to Nicholas II. Westernization of state and society; centralization at home and expansion abroad; peasant problem; beginnings of industrialization; movements of political and social protest; non-Russian peoples; political reforms and social changes; Revolution of 1905; Russia in World War I; fall of the old regime.

131C. Revolutionary Russia and the Soviet Union. The Revolutions of 1917, Civil War, consolidation of the Bolshevik Regime; succession crisis and ascendancy of Stalin, collectivization and industrialization; foreign policy and World War II; death of Stalin, de-Stalinization, developments since; stagnation or stability?

131D. Culture and Society in Imperial Russia. Recommended preparation: course 131B or Russian 99A or 119. Thematic examination of culture and society in Russia during era of state-sponsored Westernization (1689 to 1917). Topics include nobility, peasantry, and village life from serfdom to postemancipation era, urban society, working-class life and thought, women, clergy, religion, popular culture, accommodation, and resistance.

132A-132B-132C. History of Italy. (4-4-4) Lecture. Designed for juniors/seniors. P/NP or letter grading. **132A.** 1350 to 1559. Most important social, economic, political, and cultural developments in history of Italy during later Middle Ages and Renaissance. **132B.** 1559 to 1848. (Formerly numbered 132A.) Counter-Reformation and absolutism, Enlightenment reforms, revolutionary era, and first phase of the Risorgimento. **132C.** 1848 to the Present. (Formerly numbered 132B.) Political, economic, social, diplomatic, and ideological developments.

133A-133B. Social History of Spain and Portugal. (4-4) Designed for juniors/seniors. **133A.** Age of Silver in Spain and Portugal, 1479 to 1789. Development of popular history in the Iberian Peninsula. Emphasis on peasants and urban history, gold routes, slave trade, history of women, and development of different types of collective violence. **133B.** Rebellion and Revolution in Modern Spain and Portugal, 1789 to the Present. Spain's position in Europe and its potentialities for social change discussed through investigations of urban history, agrarian social structure, history of women, problems of slow industrial development, imperialism, anarchism, and labor history.

134A. Southeastern Europe, 500 to 1500. (4) Designed for juniors/seniors. Political, economic, and cultural survey of the independent Balkan states in the Middle Ages.

134B. Southeastern Europe, 1500 to 1918. (4) Designed for juniors/seniors. The Balkans under Ottoman rule, movements of national liberation, and formation of nation states.

135A-135B. Marxist Theory and History. (4) Course 135A is generally requisite to 135B. Designed for juniors/seniors. Introduction to Marxist philosophy and method; conception of historical stages; competing Marxist analyses of transition from feudalism to capitalist economy via reading *Capital*; theory of politics and state in relationship to historical interpretation of 19th-century European revolutions; capitalist crises.

136. Topics in European History. (4) Designed for juniors/seniors. Integrated introduction to important aspects of European history, with emphasis on a specific topic within a broad framework. May be repeated for credit. P/NP or letter grading.

137A-137B. History of Women in Europe. (4-4) (Formerly numbered 137A-137B-137C.) Lecture. Designed for juniors/seniors. History of social, political, and cultural roles of women in Western Europe from early Middle Ages to the present. P/NP or letter grading. **137A.** 800 to 1715; **137B.** 1715 to the Present.

138A-138B. Topics in Medieval English History. (4-4) Designed for juniors/seniors. Topics include the village community and economy, family and landholding, Church and society, war, politics, and feudal relations.

139B-139C. Economic History of Europe. (4-4) Designed for juniors/seniors. P/NP or letter grading. **139B.** 1780 to 1914. Analysis of emergence of "European world economy," first Industrial Revolution, revolutionary changes in technology, demographic patterns, education, transportation, and interrelationship between Western core and European peripheries in process of industrialization. **139C.** 20th Century. Changing European economy after World War I and II and in the 1990s; impact of fourth and fifth Industrial Revolutions; Great Depressions of the century during the 1930s, 1970s, and 1980s; and changing modernization strategies; import-substituting industrialization in the peripheries; Soviet "modernization dictatorship" in East Central Europe and its collapse; integration process of second half of the century and rise of European Union; modernization model at end of the century.

140A-140B-140C. Europe and the World. (4-4-4) Lecture. P/NP or letter grading:

140A. Exploration and Conquest, 1400 to 1700. (4) Lecture. First phase of European expansion in the Americas, Africa, and Eurasia. Analysis of motives and methods of expansion, differing patterns of European settlement, including plantation economy, and development of new commercial networks, including Atlantic slave trade. P/NP or letter grading.

140B. Colonialism, Slavery, and Revolution, 1700 to 1870. (4) Lecture. Origins and gradual increase of European dominance of world trade, impact of European colonialism in New World, Africa, and Asia, influence of new revolutionary ideals that took shape in wake of Enlightenment of the 18th century, and beginnings of industrialization. P/NP or letter grading.

140C. Imperialism and Post-Colonialism, 1870 to the Present. (4) Lecture. Survey of major European events and trends and their impact on world in modern period. Interrelationship of European and world history, from partition of Africa to founding of India and Pakistan. Global consequences of Cold War and new place of Europe in the world. P/NP or letter grading.

141A-141B-141C. History of Britain. (4-4-4) Designed for juniors/seniors. Analysis of British economy, society, and polity, focusing on dynamics of both stability and change. P/NP or letter grading. **141A.** Tudor-Stuart Times, 1485 to 1715. Political, socioeconomic, religious, and cultural history of Britain under the Tudors and Stuarts. Topics include Reformation, transformation of the economy, establishment of overseas colonies, 17th-century political upheavals and their impact on political and socioeconomic structures. **141B.** Making of Modern Britain, 1715 to 1867. Social, economic, political, and cultural history of Britain from Hanoverian revolution in politics to advent of mass democracy in mid-Victorian era. Themes include social change under pressure of industrialization, emergence of first British Empire, loss of America, shifts in religious and social position. **141C.** Modern Britain since 1832.

142A-142B. British Empire since 1783. (4-4) Designed for juniors/seniors. Political and economic development of the British Empire, including evolution of colonial nationalism, development of the commonwealth idea, and changes in British colonial policy.

143. History of Canada. (4) Designed for juniors/seniors. Survey of growth of Canada into a modern state from its beginnings under the French and British colonial empires.

144. History of Australasia. (4) Designed for juniors/seniors. History of Australia and New Zealand from the European settlement, with emphasis on interrelationships between settlers and aborigines; comparisons and contrasts between the Australian and New Zealand experience.

145A. Colonial America, 1600 to 1763. (4) Designed for juniors/seniors. Examination of the molding of an American society in English North America from 1600 to 1763. Emphasis on interaction of three converging cultures: Western European, West African, and American Indian.

145B. Revolutionary America, 1760 to 1800. (4) Designed for juniors/seniors. Inquiry into origins and consequences of the American Revolution, nature of the revolutionary process, creation of a constitutional national government, and development of a capitalist economy. P/NP or letter grading.

146. U.S. History, 1800 to 1850. (4) (Formerly numbered 146A.) Designed for juniors/seniors. Discussion of major social, political, economic, and cultural transformations of first half of the 19th century and how these changes helped to drive a wedge between the North and South. P/NP or letter grading.

147A. U.S., Civil War and Reconstruction. (4) Designed for juniors/seniors. Rise of sectionalism, anti-slavery crusade; formation of the Confederate States; war years; political and social reconstruction.

147B. U.S., 1875 to 1900. (4) Designed for juniors/seniors. American political, social, and institutional history in a period of great change. Emphasis on the altering concepts of role of government and responses to that alteration.

147C. American South, 1877 to the Present. (4) Designed for juniors/seniors. Analysis of political, economic, social, intellectual, and cultural history of the South from cotton belt to Sunbelt. Topics include origins of segregation, sharecropping, Southern politics, Southern culture, and civil rights movement.

148A-148B. U.S., 20th Century. (4-4) Designed for juniors/seniors. Political, economic, intellectual, and cultural aspects of American democracy. **148A.** 1900 to 1928; **148B.** 1929 to 1945.

148C. U.S. since 1945. (4) Designed for juniors/seniors. History of political, social, and diplomatic developments that have shaped the U.S. since 1945.

149A-149B. American Economic History. (4-4) Designed for juniors/seniors. **149A.** 1790 to 1910. Roles of economic forces, institutions, individuals, and groups in promoting or impeding effective change in the American economy, 1790 to 1910. During this period the technical skeleton of the modern industrial structure was formed. Why and how American economy evolved into a dual economy, characterized by a center of firms large in size and influence and a periphery of smaller firms. **149B.** 1910 to the Present. Dynamics of change in the dual economy, focusing in greater detail on interrelationships between macro and micro developments in the economy and on the growing interdependency between the U.S. and world economy, 1910 to the present.

150A-150B. Intellectual History of the U.S. (4-4) Designed for juniors/seniors. Principal ideas about humanity and God, nature and society, which have been at work in American history. Sources of these ideas, their connections with one another, their relationship to American life, and their expression in great documents of American thought.

150C. History of Religion in the U.S. (4) Designed for juniors/seniors. Consideration of the religious dimension of people's experience in the U.S. Examination of a number of religious traditions which have been important in this country, with emphasis on relating developments in religion to other aspects of American culture.

151A-151B. Constitutional History of the U.S. (4) Designed for juniors/seniors. **151A.** Origins and Development of Constitutionalism in the U.S. Particular emphasis on framing of the Federal Constitution in 1787 and its subsequent interpretation. Judicial review, significance of the Marshall Court, and effects of slavery and the Civil War on the Constitution. **151B.** Constitutionalism since the Civil War. Particular emphasis on development of the Supreme Court, due process revolution, the Court and political questions, and the fact of judicial supremacy within self-prescribed limits.

152A-152B. American Diplomatic History. (4-4) Designed for juniors/seniors. **152A.** Establishment of an independent foreign policy, territorial expansion of the U.S., and emergence of a world power. **152B.** Role of the U.S. in the 20th-Century World.

152BH. American Diplomatic History (Honors). (4) Lecture, three hours; discussion, one hour. Designed for juniors/seniors. Role of the U.S. in the 20th-century world.

M153. The U.S. and the Philippines. (4) (Same as Asian American Studies M153.) Lecture, three hours. Recommended preparation: courses 190A-190B, 190C. Designed for juniors/seniors. Examination of complex interrelationships between U.S. colonialism, Philippine nationalism, history or Filipino Americans, and Philippine diaspora in the 20th century.

154A-154B. U.S. Urban History. (4-4) Designed for juniors/seniors. **154A.** U.S. Cities: Overview. Demographic, geographic, political, economic, and social development of U.S. cities in relation to broad trends in U.S. history as well as to their own more special histories. Emphasis on mastery of facts and chronology, and awareness of major theoretical issues and fundamental concepts in urban history. **154B.** Topics in U.S. Urban History. Requisite: course 154A. Exploration of one aspect of U.S. urban history in depth without having to attend to basic chronology or geography. Topics include crime and police, urban economics, and urban government. Students do primary research papers based on local materials in addition to written examinations.

154C-154D. History of American Architecture and Urban Planning, 1600 to the Present. (4-4) Designed for juniors/seniors. Aspects of American cultural history as explored through architecture, urban planning, and allied arts, with emphasis on development of an architectural consciousness in America, ways in which the built environment has affected its users and observers, and extent to which it has reflected their values and ways of living. **154C.** 1600 to 1890; **154D.** 1890 to the Present.

155A-155B. American Working Class Movements. (4-4) Designed for juniors/seniors. Major episodes in social, trade union, and cultural history of the American working class from Colonial times to the present, emphasizing both organized and unorganized labor, history of the Knights of Labor, A.F. of L. and C.I.O., and development of labor politics.

156A-156B. American Social History, 1750 to 1960. (4-4) Designed for juniors/seniors. Historical analysis of American society and culture, with emphasis on the family, religious values, Afro-American life, women's work, urbanization and industrialization, immigration and nativism, and movements for social reform. **156A.** 1750 to 1860; **156B.** 1860 to 1960.

156C-156D-156E. Social History of American Women. (4-4-4) Designed for juniors/seniors. Survey of major demographic, economic, social, and intellectual factors shaping the lives of women in families, at work, and in larger social collectivities. Emphasis on class, regional, racial, and ethnic comparisons. **156C.** Colonial and Early National, 1600 to 1820; **156D.** Victorian and Industrial, 1800 to 1920; **156E.** 20th Century, 1900 to 1975.

156F-156G. History of the American Family. (4-4) Designed for juniors/seniors. Perspective on the contemporary American family through study of its development over the course of four centuries. Topics include Western European origins, sex roles, child-rearing, sexuality, work patterns. Emphasis on class, racial, ethnic, and regional variations. **156F.** 1600 to 1870; **156G.** 1870 to 1990.

156H. Medicine and Society in 19th-Century America. (4) Designed for juniors/seniors. Therapeutics, theories of disease, and medical science scrutinized with the understanding that these are never value-neutral, but are shaped by social structures of which they are products. Why have doctors become so powerful and over whom did they wield power in the 19th century?

157A-157B. North American Indian History. (4-4) Designed for juniors/seniors. History of Native Americans from contact to the present, with emphasis on historical dimensions of culture change, Indian political processes, and continuity of Native American cultures. Focus on selected Indian peoples in each period. P/NP or letter grading. **157A.** Precontact to 1830; **157B.** 1830 to the Present.

M158A. Comparative Slavery Systems. (4) (Same as Afro-American Studies M158A.) Designed for juniors/seniors. Examination of the slavery experience in various New World slave societies, with emphasis on outlining similarities and differences among the legal status, treatment, and slave cultures of North American, Caribbean, and Latin American slave societies.

M158B-M158C. Introduction to Afro-American History. (4-4) (Same as Afro-American Studies M158B-M158C.) Designed for juniors/seniors. Survey of the Afro-American experience, with emphasis on the three great transitions of Afro-American life: transition from Africa to New World slavery, transition from slavery to freedom, and transition from rural to urban milieus.

158D. Afro-American Urban History. (4) Designed for juniors/seniors. Examination of Afro-American urban life prior to 1945, with emphasis on transformation from slavery to freedom and shift from Southern to Northern areas. Forces which both propelled Afro-Americans to the cities and which also inhibited their adjustment to them.

M158E. African American Nationalism in First Half of the 20th Century. (4) (Same as Afro-American Studies M158E.) Designed for juniors/seniors. Critical examination of the African American search in first half of the 20th century for national/group cohesion through collectively built institutions, associations, organized protest movements, and ideological self-definition. P/NP or letter grading.

M159A. History of the Chicano Peoples. (4) (Same as Chicana and Chicano Studies M159A.) Designed for juniors/seniors. Survey lecture course on historical development of the Mexican (Chicano) community and people of Mexican descent (Indio-Mestizo-Mulato) north of the Rio through the 17th, 18th, and 19th centuries, with special focus on labor and politics. Provides integrated understanding of change over time in the Mexican community by inquiry into major formative historical forces affecting the community. Social structure, economy, labor, culture, political organization, conflict, and international relations. Emphasis on social forces, class analysis, social, economic, and labor conflict, ideas, domination, and resistance. Developments related to historical events of significance occurring both in the U.S. and Mexico. Lectures, special presentations, reading assignments, written examinations, library and field research, and submission of a paper.

M159B. History of the Chicano Peoples. (4) (Same as Chicana and Chicano Studies M159B.) Designed for juniors/seniors. Survey lecture course on historical development of the Mexican (Chicano) community and people of Mexican descent in the U.S. through the 20th century, with special focus on labor and politics. Provides integrated understanding of change over time in the Mexican community by inquiry into major formative historical and policy issues affecting the community. Within a framework of domination and resistance, discussion deals with social structure, economy, labor, culture, political organization, conflict, and ideology. Developments related to historical events of significance occurring both in the U.S. and Mexico. Lectures, special presentations, reading assignments, written examinations, library and/or field research, and submission of a paper.

160A-160B. U.S. and Comparative Immigration History. (4-4) Designed for juniors/seniors. Use of overlapping diaspora model which integrates North Atlantic (Europe), South Atlantic (Afro-Caribbean), Pacific (China/Japan/Hawaii), and Latin (Mexico to Brazil) worlds to provide chronological and analytic survey of American and comparative immigration from 1750 to the present. Special focus on Southern California in course 160B. P/NP or letter grading.

161. Asians in American History. (4) Designed for juniors/seniors. Study of the politically troubling question of entry into the U.S. of immigrants ineligible for citizenship and their citizen children in American history.

162. American West. (4) Designed for juniors/seniors. Study of the West as frontier and as region, in transit from the Atlantic seaboard to the Pacific, from the 17th century to the present.

163. History of California. (4) Designed for juniors/seniors. Economic, social, intellectual, and political development of California from earliest times to the present. P/NP or letter grading.

164. History of Los Angeles. (4) Designed for juniors/seniors. Social, economic, cultural, and political development of Los Angeles and its environs from time of its founding to the present. Emphasis on the diverse peoples of the area, changing physical environment, various interpretations of the city, and Los Angeles' place among American urban centers.

165A. Early Latin America. (4) Designed for juniors/seniors. Advanced survey of Latin American history from conquest to independence, with emphasis on society, culture, and ethnic aspects.

165C. Indians of Colonial Mexico. (4) Designed for juniors/seniors. Survey of social and cultural history of the Indians of Mexico, especially central Mexico, from time of the European conquest until Mexican independence, emphasizing an internal view of Indian groups and patterns on basis of records produced by the Indians themselves.

166. Latin America in the 19th Century. (4) Designed for juniors/seniors. Intensive analysis of economic, social, and political problems of Latin American nations from their independence to around 1910.

167A-167D. Latin America in the 20th Century. (4-4-4-4) Designed for juniors/seniors. Experiments in national development analyzed to relate the timing of social changes to economic, political, cultural, and geographic context. Successive country case studies each focus on world pressures and interplay of overlapping themes: struggle between centralized and decentralized government agencies (emphasized in course 167A), role of personalist leaders (emphasized in course 167B), definition of the national polity (emphasized in course 167C), and "rightist" and "leftist" models of development (emphasized in course 167D). Mexico is treated in course 171. Within each course, countries are studied according to the chronological contribution to the theme emphasized. **167A.** Haiti, Uruguay, Costa Rica, Cuba, Chile; **167B.** Bolivia, Dominican Republic, Argentina, Paraguay, Venezuela; **167C.** Panama, Colombia, Ecuador, Honduras, El Salvador; **167D.** Brazil, Guatemala, Peru, Nicaragua.

168. History of Latin American International Relations. (4) Designed for juniors/seniors. Emphasis on developing interests of Latin American nations in their relationship with one another and with other areas of the world, beginning with 19th-century independence.

169. Latin American Eliteloire. (4) Requisite: course 167A, 167B, 167C, or 171. Designed for juniors/seniors. Eliteloire (defined as oral or noninstitutionalized knowledge involving leaders' conceptual and perceptual life history views) in contrast to folklore (followers' traditional or popular views). Eliteloire genres include oral history, literature, and cinema.

170A. Latin American Cultural History. (4) Designed for juniors/seniors. Intellectual, artistic, and folk expressions of the Latin American spirit and character examined in readings and lectures, with emphasis on unique contribution of Latin Americans to develop self-interpretation. Music, films, and slides supplement discussions.

170B. Classic Travel Accounts of Latin America since 1735. (4) Designed for juniors/seniors. Recommended for prospective researchers before they select their region of study. Introduction to "enlightened traveler" accounts as they reveal cultural change from wide-ranging spatial and temporal vantage points. Comparison of published works to photographic series to analyze the great variety of geographic regions, peoples, customs, occupations, dress, food, architecture, and transportation in the 20 countries of the area.

170C. Issues in Latin America History. (4) Designed for juniors/seniors. Examination of major issues in history of Latin America. P/NP or letter grading.

171. Mexican Revolution since 1910. (4) Designed for juniors/seniors. Examination of concept of "permanent crisis" to describe and explain the structure of "permanent revolution" under "one-party democracy." Analysis of unresolved colonial and 19th-century problems and crises that have influenced modern-day Mexico, if in modified form.

172. History of Argentina. (4) Designed for juniors/seniors. History of economic, political, social, and cultural developments that have shaped Argentina from colonial time to the present. Emphasis on 19th-century development of an agro-export economy and 20th-century formation of a mass society.

173. Modern Brazil. (4) Designed for juniors/seniors. Selected topics in political, economic, social, and cultural development of Brazil, with emphasis on modernization and the struggle for change, 1850 to the present. Discussions, films, slides, and guest speakers supplement and complement lectures.

174. Brazilian Intellectual History. (4) Designed for juniors/seniors. General intellectual development of Brazil, with emphasis on those introspective movements in which Brazilians attempted to interpret themselves, their nation, and their civilization.

M175A-175Z. Topics in African History. (4 each) Preparation: one prior course in African history at UCLA. Designed for juniors/seniors. Examination of specific topics which have a continental application rather than proceeding on a strictly chronological or regional basis:

M175A. Prehistoric Africa — Technological and Cultural Traditions. (Same as Anthropology M119.) Survey of nondocumentary sources of early African history, with emphasis on archaeological evidence from origins of humanity until A.D. 1600. P/NP or letter grading.

175B. Africa and the Slave Trade. Social, economic, political, and cultural impact of the slave trade on African society, with emphasis on Atlantic trade without neglecting those of ancient Mediterranean, Islamic, and Indian Ocean worlds. Abolition and the African diaspora.

175C. Africa in the Age of Imperialism. Topics include penetration of precapitalist social formations by capital, emergence of classes, nature of the colonial and postcolonial state, and struggle for national liberation in a global context.

175E. Africa from 1945 to the Present. History of Africa south of the Sahara from end of World War II to the present. Last phases of colonial rule in Africa, African nationalism, Pan-Africanism, liberation movements, and achievement of independence. Political, social, and economic change in the colonies and in the independent states of Africa. Neocolonialism, experiments in national development, apartheid in South Africa, ideological conflict in contemporary Africa, and Africa in world affairs since 1957.

176A-176B. History of West Africa. (4-4) Designed for juniors/seniors. **176A.** West Africa from Earliest Times to 1800; **176B.** West Africa since 1800.

176C. Social and Economic History of West Africa since 1600. (4) Designed for juniors/seniors. Analysis of main currents of West African social, cultural, and economic history since the fall of the Songhai Empire, with emphasis on the family, religious values, education, urbanization, migrations, arts, slavery, and the slave trade. Roles of economic forces and institutions in promoting or inhibiting economic change in West Africa; ethnic diversity and sociopolitical integration; colonial economic systems and efforts at economic planning and development since the 1950s.

177. History of Northeast Africa. (4) Lecture. Designed for juniors/seniors. Survey of history of Ethiopia, Sudan, and Somalia in regional context of northeast Africa from earliest times to the present, with emphasis on economy and society, evolution of the state, and significance of Christianity and Islam. P/NP or letter grading.

178A. History of East Africa. (4) (Formerly numbered 178A-178B.) Lecture. Designed for juniors/seniors. Survey of cultural diversity of east Africa from earliest times to growth of complex societies, its place within wider Indian Ocean system, and colonial conquest to gaining of independence and postcolonial challenges. P/NP or letter grading.

178B. History of Central Africa. (4) (Not the same as course 178B prior to Winter Quarter 1999.) Lecture. Designed for juniors/seniors. Survey of history of central Africa from earliest times, with emphasis on establishment of agriculture, growth of trade, rise of states, and incorporation of region into world economy. P/NP or letter grading.

179A-179B. History of Southern Africa. (4-4) Designed for juniors/seniors. Attention to social and economic as well as political aspects. P/NP or letter grading. **179A.** From the Origins to 1870. Origins of the South African peoples and their interactions to 1870. **179B.** Since 1870. Interactions between inhabitants of southern Africa since 1870.

182A-182B. Thought and Society in China. (4) Designed for juniors/seniors. **182A.** To 1000. Recommended preparation: course 11A. Elite and popular expressions of Chinese cultural life examined in readings and lectures. Focus on diversities of thought in the classical legacy and their evolution under the impact of Buddhism to 1000. Emphasis on intersections between intellectual life and social, political, and economic conditions. **182B.** Since 1000. Recommended preparation: course 11B. Elite and popular expressions of Chinese cultural life from 1000 to the 20th century. Emphasis on social, political, and economic conditions within which Chinese orthodox and heterodox values evolved and changed. Evaluation of iconoclasm of Chinese intellectual life in the 20th century in light of earlier currents of thought.

183A. Culture and Power in Late Imperial China. (4) Recommended preparation: courses 11A, 11B. Designed for juniors/seniors. Analysis of relations of power and cultural expressions of dominance and resistance in late imperial China (1000 to 1700), with emphasis on interplay of economic forces, ideas, and social and political institutions. Examination of institutions of state, family, school, and city; idioms of folk religion, death, and the afterlife; political, legal, and medical discourses of body, personhood, and social identity; love, sexuality, and private life. P/NP or letter grading.

183B. Society and Economy in China since 1500. (4) Recommended preparation: course 11B. Designed for juniors/seniors. Social-economic change and involution of the late imperial period in comparative perspective; Western impact and Chinese development and underdevelopment; change and continuity in revolutionary China.

183C. History of Women in China, A.D. 1000 to the Present. (4) Designed for juniors/seniors. Topics include women and the family, women in Confucian ideology, women in literati culture, feminist movement, and women and the communist revolution. P/NP or letter grading.

184. 20th-Century China. (4) Recommended preparation: course 11B. Designed for juniors/seniors. Political events and intellectual developments seen in context of social-economic trends; human agency, structural change, and historical conjunctures in the 20th century.

185. Japanese Popular Culture. (4) Designed for juniors/seniors. Topics in 18th-, 19th-, and 20th-century Japanese history, including legacy of premodern satire in postmodern comic books, American culture in 1930s' Japanese visual culture, gender in photography, and relationship of monster movies to postwar politics.

186. Shinto, Buddhism, and Japanese Folk Religion. (4) Designed for juniors/seniors. Social dimension of various "Ways," great and little: Shinto's connection with cultural nationalism, Buddhism's medieval "Reformation" and Zen's relation to the warrior culture, folk religious aspects such as shamanism, ancestor worship, and millenarianism.

187A-187B-187C. Japanese History. (4-4-4) Designed for juniors/seniors. Political, economic, and cultural development of Japan from prehistory to the present. P/NP or letter grading. **187A.** Ancient, Prehistory to 1600; **187B.** Early Modern, 1600 to 1868; **187C.** Modern, 1868 to the Present.

188A. Early History of India. (4) Designed for juniors/seniors. Introduction to civilization and institutions of India. Survey of history and culture of the South Asian subcontinent from earliest times to founding of the Mughal Empire.

188B-188C. History of British India I, II. (4-4) Designed for juniors/seniors. **188B.** Examination of expansion of British rule, theories and practice of governance, constitution of India as an "oriental despotism," epistemological projects of the state, and other modes by which the British achieved the conquest of knowledge. **188C.** Political economy of imperialism and Britain's "civilizing mission." Encounter, especially in terms of race and gender, between the colonized and colonizers and to questions of resistance and nationalism.

189A. Cultural and Political History of Contemporary South Asia. (4) Designed for juniors/seniors. Problem of modernity; partition of India and emergence of Pakistan; political, social, ecological, and women's movements; struggle for rights and conflicts of identity among Muslims, Hindus, and Sikhs; terrorism in Sri Lanka and Punjab; public culture, popular cinema, and street life. P/NP or letter grading.

M189B. Indian Identity in the U.S. and the Diaspora. (4) (Formerly numbered 189B.) (Same as Asian American Studies M133.) Lecture, three hours. Designed for juniors/seniors. History of overseas Indian communities; transformations of Hinduism in diaspora; emergence of new diasporic art forms such as bhangra rap and chutney music; relations between Indians and other racial and ethnic groups; Indian women as embodiment of Indian culture; diasporic identities. P/NP or letter grading.

189C. Special Topics in Contemporary Indian History. (4) Designed for juniors/seniors. Treatment of major issues in history of contemporary India. P/NP or letter grading.

190A-190B. History of Southeast Asia. (4-4) Designed for juniors/seniors. **190A.** Early History of Southeast Asia. Political and cultural history of the peoples of Southeast Asia from earliest times to about 1815. **190B.** Southeast Asia since 1815. History of modern Southeast Asia, with emphasis on expansion of European influence in political and economic spheres, growth of nationalism, and process of decolonization.

190C. Philippine History. (4) Designed for juniors/seniors. Social, cultural, and political history of Philippine societies from the Spanish conquest through independence. Emphasis on questions of identity under colonialism, understanding the Revolutions of 1896 and 1898, and politics of Philippine nationalist discourse. Readings include introduction to major issues in Philippine historiography and literature. P/NP or letter grading.

190D. Vietnam: Past and Present. (4) Designed for juniors/seniors. Survey of history and culture of Vietnam from about 700 B.C. to the present, including political, social, and economic developments as well as international relations in post-1954 period. P/NP or letter grading.

M191A-M191B. Survey of Jewish History. (4-4) (Same as Jewish Studies M191A-M191B.) Designed for juniors/seniors. Survey of social, political, and religious developments. **M191A.** From Biblical Times to End of the Middle Ages; **M191B.** From End of the Middle Ages to the Present.

M191C-M191D. Focal Themes in Jewish History. (4-4) (Same as Jewish Studies M191C-M191D.) Designed for juniors/seniors. Treatment in depth of one major theme in Jewish history (such as history of Messianic Movements, structure of the Jewish communities) through the ages.

191E-191F. The Third Reich and the Jews. (4-4) Designed for juniors/seniors. **191E.** History of modern anti-Semitic ideologies and movements. Rise of national socialism in Germany. Development and execution of Nazi anti-Jewish policy to outbreak of World War II. **191F.** Second World War. Implementation of Nazi plans for extermination of Jews in Nazi-dominated Europe. Life in Nazi-imposed ghettos. Forms of Jewish resistance. Fate of Jewish populations in the occupied territories.

191G. European Jewry from 1881 to the Present. (4) Designed for juniors/seniors. Survey of major social, economic, and political factors that shaped the lives of Europe's Jews from outbreak of the First World War to the present. Emphasis on the diverse Jewish communities of interwar Europe, fate of Jews under the Nazis, and character of the postwar Jewish community. P/NP or letter grading.

M192A-M192B. Jewish Intellectual History. (4-4) (Same as Jewish Studies M192A-M192B.) Designed for juniors/seniors. **M192A.** Medieval Period. Examination of three intellectual worldviews that competed for hegemony in the medieval Jewish world — rabbinic Judaism, medieval rationalism as embodied in philosophy, and cabala; **M192B.** Modern Period. Exploration of some of most important currents and figures in Jewish intellectual history from the 18th century to the present.

193A. History of Religions: Myth. (4) Designed for juniors/seniors. Nature and function of myth in history of religion and culture. Examples selected from nonliterate as well as from other Asian and European traditions.

193B. Religions of South and Southeast Asia. (4) Requisite: course 4 or 193A. Designed for juniors/seniors. Topics vary from year to year and include religion of the Veda; Brahmanism; (later) Hinduism. Consult *Schedule of Classes* for specifics. May be taken independently for credit.

193C. Religions of South and Southeast Asia. (4) Requisite: course 4 or 193A. Designed for juniors/seniors. Topics vary from year to year and include Buddhism in India; religions of Java and Bali; nonliterate traditions of India and Southeast Asia. Consult *Schedule of Classes* for specifics. May be taken independently for credit.

193D. Religions of the Ancient Near East. (4) Designed for juniors/seniors. Main polytheistic systems of the ancient Near East, with emphasis on Mesopotamia and Syria and with reference to the religion of ancient Israel: varying concepts of divinity, hierarchies of gods, prayer and cult, magics, wisdom, and moral conduct.

193E. Special Topics in History of Religions. (4) Designed for juniors/seniors. Topics announced in *Schedule of Classes* and include ancient Germanic cults; Renaissance mysticism; mystics of the low countries; goddesses; religion in a secular age.

194A. History of Early Christians. (4) Designed for juniors/seniors. Christian movement from its origins to circa 160 C.E., stressing its continuity/discontinuity with Judaism, various responses to Jesus of Nazareth, writings produced during this period, movement's encounters with its religious, social, and political world, and methods of research.

194B. Religious Environment of Early Christians. (4) Designed for juniors/seniors. Rich variety in religious practice and thought in the Mediterranean world of the 1st century C.E. as in context of the developing Christian movement. Topics include the Pharisees, Qumran, Philo, Stoics, Epicureans, traditional Greek and Roman religions, "mysteries," astrology, magic, gnosticism, and emperor-worship.

194C. Jesus of Nazareth in Historical Research. (4) Recommended preparation: course 194A. Designed for juniors/seniors. Stimulated by significant post-Enlightenment historical evaluations, students are led into firsthand knowledge (in translation) of various multilayered sources for reconstruction of the life, teaching, and initial impact of Jesus of Nazareth in his social, economic, political, and religious contexts.

195A. History of Technology. (4) (Not the same as course 195A prior to Spring Quarter 1999.) Lecture. Designed for juniors/seniors. Development of technology from global perspective. Role of technology in Western Europe's interactions with Asia and the Americas, interaction of military and industrial technologies, social and political contexts for technology. P/NP or letter grading.

195B. History of Medicine. (4) (Not the same as course 195B prior to Spring Quarter 1999.) Lecture. Designed for juniors/seniors. Exploration of themes in history of medicine: education of physicians and their relationships to patients, identification and classification of diseases, contagion and epidemics, hospitals and asylums, medical technology and specialties, evolution of health care professions. P/NP or letter grading.

195C. Historical Perspectives on Gender and Science. (4) (Not the same as course 195C prior to Spring Quarter 1999.) Lecture. Designed for juniors/seniors. Historical cases illustrating how gender enters practices and concepts of science. Topics include gendered conceptions of nature, persona of "man of science," role of women in scientific revolution, scientific investigations of women and the feminine. P/NP or letter grading.

195D. Science and Technology in the 20th Century. (4) Lecture. Designed for juniors/seniors. Development of science and technology and their impact on society. Industrialization, global scientific community, social Darwinism, atomic bomb and nuclear proliferation, Cold War and American science, environmentalism, molecular biology and genetic engineering. P/NP or letter grading.

195E. Topics in History of Science. (4) Lecture.

Designed for juniors/seniors. Topics may include science and colonialism, science and religion, environmental history, science in Enlightenment, development of theory of evolution, science and public policy, public nature of science. P/NP or letter grading.

M195F-M195G. History of Biological Sciences. (4-4) (Same as Neurobiology/Medical History M108A-M108B.) Lecture, three hours. Designed for juniors/seniors. **M195F.** Biological Sciences from Ancient Times to the Early 19th Century; **M195G.** Biological Sciences from the Early 19th Century to the Mid-20th Century.

196. Field Research Methods. (4) Lecture, three hours. Designed for juniors/seniors. Provides opportunity for students to learn and practice field research, with particular emphasis on relationship between theory, field methodology, and research findings. P/NP or letter grading.

197A-197Z. Undergraduate Seminars. (4 each) Seminar, three hours. Designed for juniors/seniors. Limited to 15 students meeting with a faculty member. Organized on a topics basis with readings, discussions, papers. Signups and descriptions of offerings each term are available in undergraduate counselor's office (6248 Bunche Hall). May be repeated once for credit. When concurrently scheduled with courses 201A-201U or M203A-M203B, undergraduates must obtain consent of instructor to enroll.

199. Special Studies in History. (4) Designed for juniors/seniors. Intensive directed research program. Eight units may be applied toward major requirements.

199HA. Directed Study for Honors. (4) Discussion, three hours. Limited to history honors program students. Must be taken in Spring Quarter of junior year. Seminar on historical research and writing; student meetings with honors adviser to define research and preparation for the project. Extensive reading and research in field of proposed honors thesis.

199HB. Directed Study for Honors. (4) Requisite: course 199HA. Must be taken in Fall Quarter of senior year. Independent study and research on honors project under supervision of honors adviser, with presentation of research report and thesis outline to the thesis adviser and second reader at end of quarter. Both must approve continuation of honors thesis project. In Progress grading (credit to be given only on completion of course 199HC). Only students approved for course 199HC receive credit for this course.

199HC. Directed Study for Honors. (4) Discussion, three hours. Requisite: course 199HB. Must be taken in Winter Quarter of senior year. Preparation of final version of honors thesis and presentation of portions of work-in-progress to other students engaged in honors projects. Completed thesis must be submitted to thesis committee by last day of class in Winter Quarter.

199I. Independent Studies for Internships. (4) Preparation: maintenance of 3.0 grade-point average in major. Independent studies course to be supervised jointly by Field Studies Office and faculty adviser. Further supervision to be provided by business for which student is doing internship. May not be used to satisfy requirement for course 197 or 199. Normally, only four units of internship with History Department are allowed. P/NP grading.

Graduate Courses

200A-200U. Advanced Historiography. (4 each) Seminar, three hours. May be repeated for credit.

200A. Ancient Greece; **200B.** Ancient Rome; **200C.** Medieval; **200D.** Europe; **200H.** U.S.; **200I.** Latin America; **200J.** Near East; **200K.** India; **200L.** China; **200M.** Japan; **200N.** Africa; **200O.** Science/Technology; **200P.** History of Religions; **200Q.** Theory of History; **200R.** Jewish History; **200S.** Armenia and the Caucasus; **200T.** Southeast Asia; **200U.** Psychohistory.

M200V. Advanced Historiography: Afro-American. (4) (Same as Afro-American Studies M200A.) Seminar, three hours. May be repeated for credit.

M200W. Advanced Historiography: American Indian Peoples. (4) (Same as American Indian Studies M200A.) Seminar, three hours. Designed to familiarize students with major genres of literature related to American Indian history. Subjects include theories of Indian origins, historical demography, Euro-American attitudes toward Indian peoples, studies of U.S. Indian policy, and tribal histories. Standard theoretical approaches, including cultural ecology and dependency theory.

200X. Advanced Historiography: Oral History. (4) Seminar, three hours. Introduction to practice, method, and theory of oral history.

200Y. Advanced Historiography: Application of Economics to History. (4) Discussion, three hours.

200Z. Advanced Historiography: Chicano. (4) Discussion, three hours. Graduate survey of leading literature in Chicano history, with emphasis on new methodological and theoretical approaches in the field.

201A-201U. Topics in History. (4 each) Seminar, three hours. Topic titles are same as for courses 200A-200U. Graduate courses involving reading, lecturing, and discussion of selected topics. Does not fulfill seminar requirements for Ph.D. degree. May be repeated for credit. When concurrently scheduled with course 197, undergraduates must obtain consent of instructor to enroll.

202A-202B. Seminars: Comparative Modern Economic History. (4-4) Discussion, three hours. Designed for graduate students. Study of problems of modern economics in the 19th and 20th centuries, including such topics as industrialization, growth, demography, development, and economic change. In Progress and S/U or letter grading.

M203A-M203B. Social Theory and Comparative History. (4-4) (Same as Political Science M291A-M291B and Sociology M296A-M296B.) Colloquium, three and one-half hours every other week. Introduction to historically rooted social theory and theoretically sensitive history, following the program of the Center for Social Theory and Comparative History. Each course may be taken independently for credit.

M203C. Theories in Cultural History. (4) (Same as Sociology M296C.) Discussion, three hours. Introduction to social, linguistic, semiotic, or other new interpretive theories and practices developed in other fields and applied to historical material.

204A-204B. Seminars: Near and Middle Eastern History. (4-4) Seminar, three hours. Methodology, socioeconomic and political change in the Arab world. In Progress and S/U or letter grading.

205A-205B. Seminars: Medieval Middle Eastern History. (4-4) Seminar, three hours. In Progress and S/U or letter grading.

206A-206B. Seminars: Social History of the Middle East. (4-4) Seminar, three hours. Interrelationship of city, tribe, and village in the Middle East; role of such definable social groups as women, religious classes, middle classes, landlords, tribesmen, and peasants; social change. In Progress and S/U or letter grading.

M207. Seminar: Ancient Mesopotamia. (4) (Same as Ancient Near East M250.) Seminar, three hours. Selected topics on political, social, and intellectual history of ancient Mesopotamia. May be repeated for credit.

209A-209B. Seminars: Ottoman and Modern Turkish History. (4-4) Seminar, three hours. In Progress and S/U or letter grading.

211A-211B. Seminars: Armenian History. (4-4) Seminar, three hours. In Progress and S/U or letter grading.

C212. Methods in Armenian Oral History. (4) Seminar, three hours. Preparation: proficiency in Armenian language. Lectures and laboratory in methods of taking, processing, and utilizing depositions and other oral sources for Armenian history, including project assignment in the field. May be concurrently scheduled with course C112D.

214. Problems in World History, 800 to 1800. (4) Seminar, three hours. Training course for graduate students to develop a field of world history and to prepare department teaching assistants to teach sections for the general education sequence in world history by helping them to grasp diverse cultures and daily workings of world societies to date.

215A-215B. Seminars: Ancient History. (4-4) Seminar, three hours. In Progress and S/U or letter grading.

216A-216B. Seminars: Byzantine History. (4-4) Seminar, three hours. In Progress and S/U or letter grading.

217. Sources and Handbooks of Medieval History. (4) Seminar, three hours. Preparation: reading knowledge of German or French. Introduction to types of medieval source materials and the handbooks needed to use them.

218. Medieval Latin Literary History. (4) Seminar, three hours. Recommended preparation: reading knowledge of Latin and German or French. Examination of aspects of medieval history through study of paleography, medieval libraries, and transmission of ancient medieval authors.

219A-219B. Paleography I, II. (4-4) Seminar, three hours. Preparation: reading knowledge of Latin and German or French. S/U or letter grading. **219A.** History of the manuscript book from antiquity through the Carolingian renaissance, with emphasis on dating and localization as well as on proficiency in reading. **219B.** History of the manuscript book from the Carolingian renaissance through the invention of printing, with emphasis on dating and localization as well as on proficiency in reading.

C219C. From Roll to Codex: Manuscripts in Early Middle Ages. (4) Lecture, three hours. Examination of history of medieval manuscripts and circumstances of their production, use, and survival as evidence for study of medieval European society to 1100. Concurrently scheduled with course C119C. S/U or letter grading.

C219D. From Parchment to Print: Manuscripts in Later Middle Ages. (4) Lecture, three hours. Examination of history of medieval manuscripts and circumstances of their production, use, and survival as evidence for study of medieval European society from 1100 to 1500. Concurrently scheduled with course C119D. S/U or letter grading.

221A-221B. Seminars: Medieval History. (4-4) Seminar, three hours. In Progress and S/U or letter grading.

222A-222B. Seminars: Medieval Intellectual History and History of Science. (4-4) Seminar, three hours. Selected problems from medieval and early modern philosophy, science, political theory, theology. In Progress and S/U or letter grading.

M223. Introduction to Transmission of Ancient Latin Literature. (4) (Same as Classics M223.) Discussion, three hours. Designed for graduate students. Examination of role of Latin classical authors in history of Middle Ages and Renaissance to understand processes by which Latin literature has been preserved.

225. Colloquium for Entering Graduate Students in Modern European History. (4) Seminar, three hours. Normally limited to and required of all modern European history graduate students. Introduction to topics, methods, and historiography of modern European history.

226A-226B. Seminars: Italian Renaissance. (4-4) Seminar, three hours. In Progress and S/U or letter grading.

227A-227B. Seminars: Reformation. (4-4) Seminar, three hours. In Progress and S/U or letter grading.

229A-229B. Seminars: Early Modern European History. (4-4) Seminar, three hours. In Progress and S/U or letter grading.

M230A-M230B. Seminars: Modern European History. (4-4) (Same as Art History M241A-M241B.) Seminar, three hours. May be repeated for credit with consent of adviser. In Progress and S/U or letter grading.

231A-231B. Seminars: Modern European Intellectual and Cultural History. (4-4) Seminar, three hours. In Progress and S/U or letter grading.

232A-232B. Seminars: French History of the 19th and 20th Centuries. (4-4) Seminar, three hours. In Progress and S/U or letter grading.

233A-233B. Seminars: Russian/Soviet History. (4-4) Seminar, three hours. In Progress and S/U or letter grading.

234A-234B. Seminars: Modern History of Spain, Portugal, and Italy. (4-4) Seminar, three hours. In Progress and S/U or letter grading.

235A-235B. Economic History of Europe, 1780 to 1939. (4-4) Lecture, three hours. Analysis of internationalization of European world economy, emergence of Western core and its relation with European peripheries. Comparative analysis on different regions, stressing main characteristics of postwar European economy. In Progress and S/U or letter grading.

M236A. Proseminar: Political Psychology. (4) (Same as Political Science M261A and Psychology M228A.) Discussion, three hours. Introduction to political psychology: psychobiography, personality and politics, mass attitudes, group conflict, political communication, and elite decision making.

236B-236C. Seminars: Psychohistory. (4-4) Seminar, three hours. Exploration of individual and group psychological processes and their uses in historical research. In Progress and S/U or letter grading.

239A-239B. Seminars: English History — Middle Ages. (4-4) Seminar, three hours. In Progress and S/U or letter grading.

240A-240B. Seminars: English History — Modern History. (4-4) Seminar, three hours. In Progress and S/U or letter grading.

241A-241B. Seminars: German History. (4-4) Seminar, three to four hours. Designed for graduate students. In Progress and S/U or letter grading.

242. Colloquium: European History. (2) Designed for graduate students. Forum for critical discussion of work of students and invited scholars. Presentation of student dissertation prospectuses during their third or fourth year in residence. S/U grading for students presenting papers.

244A-244B. Seminars: British Empire History. (4-4) Seminar, three hours. In Progress and S/U or letter grading.

245. Colloquium: U.S. History. (4) Seminar, three hours. Normally limited to and required of all entering graduate students in U.S. history. Critical introduction to historical method, with emphasis on new methodological and conceptual approaches, use of source materials, and current state of U.S. historiography.

246A-246B-246C. Introduction to U.S. History. (4-4-4) Seminar, three hours. Graduate survey of significant literature dealing with U.S. history from the Colonial period to the present. Each course may be taken independently for credit. **246A.** Colonial Period; **246B.** 1790 to 1900; **246C.** 20th Century.

247A-247B. Seminars: Early American History. (4-4) Seminar, three hours. In Progress and S/U or letter grading.

249A-249B. Seminars: Jacksonian America. (4-4) Seminar, three hours. In Progress and S/U or letter grading.

250A-250B. Seminars: U.S. History of the Middle 19th Century. (4-4) Seminar, three hours. In Progress and S/U or letter grading.

252A-252B. Seminars: Recent U.S. History to 1930. (4-4) Seminar, three hours. In Progress and S/U or letter grading.

253A-253B. Seminars: Recent U.S. History since 1930. (4-4) Seminar, three hours. In Progress and S/U or letter grading.

254A-254B. Seminars: U.S. Social and/or Intellectual History. (4-4) Seminar, three hours. In Progress and S/U or letter grading.

255A-255B. Seminars: History of Business and Government in the American Economy. (4-4) Seminar, three hours. In Progress and S/U or letter grading.

256A-256B. Seminars: American Diplomatic History. (4-4) Seminar, three hours. In Progress and S/U or letter grading.

257A-257B. Seminars: U.S. Urban History. (4-4) Seminar, three hours. In Progress and S/U or letter grading.

258A-258B. Seminars: Working Class History. (4-4) Seminar, three hours. In Progress and S/U or letter grading.

259A-259B. Seminars: Social History of Women in the U.S. (4-4) Seminar, three hours. In Progress and S/U or letter grading.

260A-260B. Seminars: Native American History. (4-4) Seminar, three hours. In Progress and S/U or letter grading.

M260C. Native American Revitalization Movements. (4) (Same as Anthropology M238.) Lecture, two hours; discussion, one hour. Examination of revitalization movements among native peoples of North America (north of Mexico). Specific revitalization includes Handsome Lake, 1870 and 1890 Ghost Dances, and Peyote Religion.

M260D. Native American Historical Demography. (4) (Same as Anthropology M287Q.) Lecture, two hours; discussion, one hour. Examination of population history of Native Americans north of Mexico prior to and following contacts with Europeans, Africans, and others, circa 1492. Emphasis on number of American Indians and other Native Americans, their decline following European contact, and their recent resurgence.

261A-261B. Seminars: Afro-American History. (4-4) Seminar, three hours. Social and political history of the Afro-American, including emphasis on development and structure of race relations in America; racial concepts and dilemmas, black and white. In Progress and S/U or letter grading.

262A-262B. Seminars: Chicano History. (4-4) Seminar, three hours. In Progress and S/U or letter grading.

263A-263B. Seminars: History of the American West. (4-4) Seminar, three hours. In Progress and S/U or letter grading.

M264. History of American Education. (4-4) (Same as Education M201C.) History of educational thought and of social forces impinging on American education from the 1880s to the present. Analysis of relation between these ideas and forces, and aims and practices of American education today.

M265. Latin American Research Resources. (4-4) (Same as Latin American Studies M200 and Library and Information Science M225.) Seminar, three hours. General and specialized materials in fields concerned with Latin American studies. Library research techniques provide experience and competency required for future bibliographic and research sophistication as basis for enhanced research results.

266A-266B. Seminars: Colonial Latin American History. (4-4) Seminar, three hours. In Progress and S/U or letter grading.

267A-267B. Seminars: Latin American History, 19th and 20th Centuries. (4-4) Seminar, three hours. In Progress and S/U or letter grading.

M268A-M268B. Seminars: Recent Latin American History. (4-4) (Same as Latin American Studies M268A-M268B.) Seminar, three hours. Reading knowledge of Spanish and Portuguese normally required. Seminar devoted to selected topics of an interdisciplinary nature. In Progress and S/U or letter grading.

275A-275B-275C. First-Year Colloquia: African History. (4-4-4) (Formerly numbered 275.) Seminar, three hours. Required of all entering graduate students in African history. Source identification, research methodologies, historiographical traditions, historical interpretation, approaches to teaching, and research design. Each course may be taken independently for credit. S/U or letter grading.

278A-278B-278C. Research Seminars and Dissertation: African History. (4-4-4) (Formerly numbered 278A-278B.) Seminar, three hours. Multiple-term seminars/workshops designed to bring together pre-dissertation candidates and dissertation writers for regular presentations and critical assessment of their work in progress. Each course may be taken independently for credit. S/U or letter grading.

M281. China — Seminar: Classical Historiography and Readings in Classical Studies. (4) (Same as Chinese M201.) Discussion, three hours. Preparation: two years of classical Chinese or working knowledge of classical Chinese. Readings in historiography and selected genres of historical documents.

282A-282B. Seminars: Chinese History. (4-4) Seminar, three hours. In Progress and S/U or letter grading.

285A-285B. Seminars: Japanese History. (4-4) Seminar, three hours. In Progress and S/U or letter grading.

288A-288B. Seminars: South Asia. (4-4) Seminar, three hours. In Progress and S/U or letter grading.

289A-289B. Seminars: Southeast Asia. (4-4) Seminar, three hours. In Progress and S/U or letter grading.

291A-291B. Seminars: Jewish History. (4-4) Seminar, three hours. Studies in intellectual and social history of Jewish people from ancient times to the modern period. In Progress and S/U or letter grading.

293A-293B. Seminars: History of Religions. (4-4) Seminar, three hours. In Progress and S/U or letter grading.

295. Theories of Scientific Change. (4) Seminar, three hours. Historical and philosophical perspectives on science, focusing on rationality of scientific change and logic and psychology of scientific discovery. Readings and seminar-style discussions of such authors as Popper, Kuhn, Toulmin, Lakatos, Holton, Buchdahl, Feyerabend, and others.

297A-297B. Seminars: History of Science. (4-4) Seminar, three hours. In Progress and S/U or letter grading.

M298. Interdisciplinary Studies in the 17th and 18th Centuries. (4) (Same as English M298.) Topics vary according to participating faculty. May be repeated for credit.

M299. Interdisciplinary American Studies. (6) (Same as English M299.) Discussion, four hours. Readings, discussion, and papers on a common theme, team-taught by faculty from different departments. Topics vary according to participating faculty. May be repeated for credit with consent of instructors.

375. Teaching Apprentice Practicum. (1 to 4) Preparation: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

490. Writing Workshop for Graduate Students. (4) Tutorial, three hours. Writing workshop on students' papers-in-progress. Analysis and group discussion of rhetorical and stylistic principles, illustrated in students' own and in professional historians' work, help students improve their own writing. May be repeated once. S/U grading.

495. Teaching History. (4) Designed for graduate students. Required of all new teaching assistants. Lectures, readings, discussions, and practice teaching sessions within the structure of a seminar. Students receive unit credit toward full-time equivalence but not toward the nine-course requirement for M.A. degree. S/U grading.

501. Cooperative Program. (2 to 8) Preparation: consent of UCLA graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Used to record enrollment of UCLA students in courses taken under cooperative arrangements with USC. S/U grading.

596. Directed Studies. (1 to 8) Limited to graduate students. Individual directed reading arranged with professor. M.A. candidates may take this course only once. Number of times Ph.D. candidates may take this course is subject to consent of graduate studies committee. S/U or letter grading.

597. Directed Studies for Graduate Examinations. (1 to 8) Preparation for M.A. comprehensive examination or Ph.D. qualifying examinations. S/U grading.

599. Ph.D. Research and Writing. (1 to 8) Preparation: advancement to Ph.D. candidacy. S/U grading.

Donald A. Preziosi, Ph.D., *Chair*

Professors

Robert L. Brown, Ph.D. (*Art History*)
Donald A. Preziosi, Ph.D. (*Art History*)
Ronald J. Mellor, Ph.D. (*History*)
Debora L. Silverman, Ph.D. (*History*)

Associate Professor

Irene A. Bierman, Ph.D. (*Art History*)

Scope and Objectives

The interdisciplinary major in History/Art History allows students to study the relationship between art history and the history of society, politics, and culture.

Undergraduate Study

History/Art History B.A.

Lower division history and art history courses may be applied toward the general education requirements; a course taken to satisfy the American History and Institutions requirement may be applied toward the history section of the interdepartmental major.

No course for the major may be taken on a P/NP grading basis.

Students wanting to confer with a counselor regarding program planning and major requirements should contact the history/art history counselor at (310) 825-3480.

Preparation for the Major

Required: History 1A-1B-1C; two courses from Art History 50, 51, 54, 57; one course from Art History 55A, 55B, 56A, 56B.

The Major

Required: History 99, 100A, or 100B; 197 or 199; and courses as indicated in the following groups:

Group A: Two non-Western history courses from History M104A, M104B, M105, 106A, 106B, 106C, 107A, 107B, 108A, 108B, 109A, 109B, 110A, 110B, 111A, 111B, 111C, 112A through C112D, 115A, M122, 123A, 123B, 165A, 165C, 166, 167A through 167D, 168, 169, 170A, 170B, 171, 172, 173, 174, M175A, 175B, 175C, 175E, 176A, 176B, 176C, 177, 178A, 178B, 179A, 179B, 182A, 182B, 183A, 183B, 184, 185, 186, 187A, 187B, 187C, 188A, 188B, 188C, 190A, 190B, 193C, 193D.

Group B: Two U.S. history courses from History 145A, 145B, 146, 147A, 147B, 147C, 148A, 148B, 148C, 149A, 149B, 150A, 150B, 150C, 151A, 151B, 152A, 152B, M153, 154A through 154D, 155A, 155B, 156A through 156H, 157A, 157B, M158A through M158E, M159A, M159B, 160A, 160B, 161, 162, 163, 164.

Group C: Two European history courses from History 116A, 116B, 117A, 117B, 121A through 121D, 125A through 125F, 126A through 126F, 127A, 127B, 128A, 128B, 128C, 129A, 129B, 129C, 130, 131A through 131D, 132A, 132B, 133A, 133B, 134A, 134B, 135A, 135B, 137A, 137B, 138A, 138B, 141A, 141B, 141C, 142A, 142B, 143, 144.

Group D: Three Western art history courses from Art History 101A, 101B, M102A through M102K, 106A through 106D, 108A, 108B, 109A through 109D, 110A, 110B, 110C, 110E, 110F, C112A, C112B, C112C.

Group E: Three non-Western art history courses from Art History 104A, 104B, C104C, 110G, 114A, 114C through 114F, C115A through C115F, C117A, C117B, C117C, 118A, 118C, 118D, C119A, C119B.

Group F: Two art history elective courses selected from the above lists. Students may also take Art History 127, 197, 199 to meet this requirement.

Honors Program

The honors program is designed for History/Art History majors who are interested in carrying out an independent research project that culminates in an honors thesis of approximately 30 pages. The program gives qualified students the opportunity to work closely with individual professors on an in-depth supervised research and writing project.

All junior and senior History/Art History majors who have completed a minimum of four upper division art history courses with a grade-point average of 3.5 or better and an overall GPA of 3.0 or better are eligible to apply. Consult the art history undergraduate counselor one term prior to beginning the honors program.

To qualify for graduation with honors, students must (1) complete all requirements for the major, (2) have a cumulative grade-point average

of 3.5 or better in upper division courses in the major and an overall GPA of 3.0 or better, and (3) complete Art History 195A-195B with a grade of A– or better.

To qualify for graduation with highest honors, students must (1) complete all requirements for the major, (2) have a cumulative GPA of 3.85 or better in upper division courses in the major and an overall GPA of 3.65 or better, and (3) complete Art History 195A-195B with a grade of A.

HONORS COLLEGIUM

College of Letters and Science

UCLA
A311 Murphy Hall

Faculty Advisory Committee

Joyce Appleby, Ph.D. (*History*)
Rogers Brubaker, Ph.D. (*Sociology*)
Christine A. Dunkel-Schetter, Ph.D. (*Psychology*)
Teshome H. Gabriel (*Film, and Television*)
Sara Melzer, Ph.D. (*French*)
Jeffery H. Miller, Ph.D. (*Microbiology and Molecular Genetics*)
Claudio Pellegrini, Ph.D. (*Physics and Astronomy*)
Theodore Porter, Ph.D. (*History*)
David C. Rapoport, Ph.D. (*Political Science*), Emeritus
Anna Simons, Ph.D. (*Anthropology*)
Min Zhou, Ph.D. (*Sociology*)

Scope and Objectives

The Honors Collegium is an unusual educational alternative, with an interdisciplinary emphasis, designed primarily for students in their freshman and sophomore years. Some upper division courses are also offered. The collegium encourages animated discussion among students, as well as between students and professors. It seeks to promote scholarly exchange across the major disciplines in the University. And it offers small classes and individual attention.

Undergraduate Study

Each Honors Collegium course is staffed by a director who is distinguished in teaching and scholarship and may include a variable number of guest lecturers and additional specialists in their fields. Many courses satisfy general education requirements and serve as preparation for numerous majors in the College of Letters and Science. Counselors are available in the Honors Programs Office, A311 Murphy Hall, to advise and help students plan an integrated academic program.

Courses in the Honors Collegium are mainly interdisciplinary seminars, and the courses vary each year. Refer to the *Schedule of*

Classes for current course listings. An Honors Collegium brochure, which gives detailed course descriptions, is available from the program office or see <http://www.college.ucla.edu/up/whoweare/honors>.

Honors Collegium

Lower Division Courses

1. Transformations of the West in the 20th Century. (4) Seminar, three hours; outside study, nine hours. Critical examination of Jackson Turner's claim that the U.S. frontier closed in 1890, ending a period of Western migration, conquest, and settlement. Particularly, assessment of how 20th-century writers confirm or deny Turner's claim in their literature. P/NP or letter grading.

2. Comparative Genocide. (4) Lecture, four hours; discussion, one hour. Social comparative study of genocide, combining theoretical concepts with case studies (such as Armenia, the Holocaust, American Indians, Uganda under Amin and Obote, etc.). P/NP or letter grading.

3. Historical and Sociological Perspectives on Women and Work. (6) Lecture, three hours; writing seminar, two hours. Exploration of paradox of postwar increase in women's employment and comparative stasis in their range of occupations through investigation of historical development of women's work in the U.S. P/NP or letter grading.

4. Surrealist Challenge. (4) Examination of revolutionary cultural movement of surrealism in France and Spain in the 1920s and 1930s, including films of Buñuel and Dalí, paintings of Ernst and Magritte, and writings of Breton, Crevel, and Péret. P/NP or letter grading.

5. Science and the Human Condition. (4) (Not the same as course 5 prior to Winter Quarter 1999.) Seminar, three hours; outside study, nine hours. Examination of impact that scientific method has on the human condition and on our concept of humankind through two case studies: processes by which Darwin formulated theory of evolution by natural selection and replacement of Newtonian physics by quantum theory. P/NP or letter grading.

6. Historical Construction of Reality. (4) (Not the same as course 6 prior to Fall Quarter 1999.) Seminar, three hours; outside study, nine hours. Examination, through comparative analysis of various societies at various times, of phenomena that are taken for granted as natural but which are actually historically constructed, including perception (time and space) and hierarchy (race and gender). P/NP or letter grading.

7A. Urban Poverty and Public Policy in the U.S. (4) Lecture, four hours; discussion, one hour. Focus on social welfare in the U.S., providing historical overview of poverty and the social programs that have attempted to deal with it and addressing current debate on the subject. P/NP or letter grading.

7B. Urban Poverty and Public Policy in the U.S. (4) Optional fieldwork and tutorial. Enforced corequisite: course 7A. Field studies in social policy. P/NP or letter grading.

8. Communication among Organisms. (4) Lecture, three hours; discussion, two hours. Study of communication among a variety of taxonomic groups ranging from single-celled organisms to plants, whales, and nonhuman primates. P/NP or letter grading.

9. Greeks and Barbarians: Multiculturalism in the Ancient World. (4) Seminar, three hours; outside study, nine hours. Through examination of art and literature from prehistoric period (Homer and Bronze Age) through the Hellenistic Age (4th through 2nd century B.C.), exploration of why and how diverse groups and cultures of classical antiquity defined themselves as different and what these expressions of difference have to do with modern perceptions of race and ethnicity. P/NP or letter grading.

10. Social Classification and Categorization. (4) Seminar, three hours; outside study, nine hours. Examination of way in which schemes of classification powerfully shape systems of social counting and accounting. Use of recent works from many disciplines to examine how classification constitutes both principles of vision and principles of division. P/NP or letter grading.

11. Galileo and the Scientific Revolution from the 17th to 21st Century. (4) Lecture, three hours; discussion, one hour; outside study, nine hours. Assuming the thesis that it is science and technology which have effected social and economic structures of modern life, examination of development of scientific and industrial revolutions from time of Galileo to modernity. P/NP or letter grading.

12. Thinking about Rights. (4) Seminar, three hours; outside study, nine hours. Examination of character of rights, who is capable of exercising or should exercise rights, and scope and content of rights as they have been debated and fought over in theoretical writings and political arenas for three centuries. P/NP or letter grading.

13. Realism in Times of Crisis: French and Italian Cinema of the 1930s and 1940s. (4) (Not the same as course 13 prior to Fall Quarter 1997.) Lecture, four hours; discussion, one hour; outside study, seven hours. Examination of French and Italian cinema in period around World War II, time marked by social tensions and political unrest. Investigation of French realism, Italian neorealism, and French abstract cinema as they reveal two different European cultures during a critical historical era. P/NP or letter grading.

14. History, Science, and Society. (4) (Not the same as course 14 prior to Winter Quarter 1998.) Seminar, three hours; outside study, nine hours. Examination of interaction of science and society and effects of this interaction on history, development of societies, evolution of revolutionary ideas as modeled in Galileo, Darwin, and others, and selected contemporary issues such as genetic engineering and war against infectious diseases. P/NP or letter grading.

15. America, 1963 to 1973: Culture and Counter-culture. (4) Seminar, three hours; outside study, nine hours. Through literature, film, and documentary, examination of period between assassination of President Kennedy to resignation of President Nixon, with aim of defining both the visionary appeal and costly illusions of the 1960's revolution and of suggesting connections with contemporary culture. P/NP or letter grading.

16. Contemporary Fiction and Psychology of the Self. (4) Seminar, three hours. Examination of relationship between personal and interpersonal dynamics in literature as they are illuminated by Heinz Kohut's theories of self-psychology. P/NP or letter grading.

17. Archetypal Heroines. (4) Seminar, three hours. Examination of archetypal women in classical/traditional literature of several cultures and their revised reincarnations in contemporary ones. P/NP or letter grading.

18. Culture, Conquest, and Communication: Fatal Attractions. (4) Seminar, three hours; outside study, nine hours. Examination of cross-cultural implications of manifest destiny as it pertains to four "American" entanglements — Cortes and Montezuma, Cook and Hawaii, Custer and the Sioux, and the U.S. and Vietnam, concluding with discussion of current issues of "development" and cultural assumptions of "the other." P/NP or letter grading.

19. Interdisciplinary Perspectives on Production and Consumption of Popular Music. (4) (Not the same as course 19 prior to Fall Quarter 1997.) Seminar, four hours; discussion, one hour; outside study, seven hours. Examination of popular music as a major cultural space for personal, social, and political expression. Production of popular music, including its relationship to economics, politics, and technology, and its consumption in relationship to society and the self. P/NP or letter grading.

- 20. Artificial Intelligence: Machines as People, People as Machines. (4)** (Not the same as course 20 prior to Fall Quarter 1999.) Seminar, three hours; laboratory, one hour; outside study, eight hours. Programming knowledge not required. Examination of human cognitive abilities and study of different historical approaches to programming human cognitive abilities and behaviors into computers, with focus on problem solving. P/NP or letter grading.
- 21. Rise and Fall of Modernism. (6)** Seminar, three hours; writing seminar, two hours. Study of early and middle 20th-century's attempt to construct significance in a general climate of disillusionment by way of literature, literary criticism, and other intellectual movements. P/NP or letter grading.
- 22. Work, Inequality, and Changing American Political Economy. (4)** Seminar, three hours. Contemporary debate about changing character of work and social inequality in the U.S. P/NP or letter grading.
- 23. Globalization. (4)** Seminar, three hours; outside study, nine hours. The making of one world from the 15th century on through exploration, trade, and colonization; revolutions in transportation and communication; regional and global networks of migration; transnational business and finance organizations; and (qualified) emergence of a global culture. P/NP or letter grading.
- 24. 21st Century: Technology, Society, and Ethics. (4)** (Not the same as course 24 prior to Fall Quarter 1997.) Lecture, two hours; discussion, one hour; outside study, nine hours. Technology, society, and ethics in three major areas: environment and environmental engineering, or large-scale changes in biosphere; effects of technology on people; and effects of technology on nonhuman creatures. P/NP or letter grading.
- 25. Human Genome: Prospects for a Super Race? (4)** Lecture, four hours; discussion, one hour. Influence of genetics on human biology, addressing the controversial issue of using genetic engineering to alter genes on human chromosomes. P/NP or letter grading.
- 26. The Bible as Political Theory. (4)** (Not the same as course 26 prior to Fall Quarter 1997.) Seminar, four hours; outside study, eight hours. The Bible treated as a political text, addressing the prepolitical condition, formation of a political community, the state, survival without a state, and messianism, with focus both on institutions and on intellectual history. P/NP or letter grading.
- 27. Theories of Exchange: Social Life of Gifts and Commodities. (4)** (Not the same as course 27 prior to Fall Quarter 1999.) Seminar, three hours; outside study, nine hours. Study of how creation, maintenance, and dissolution of social and political relations are modulated through exchange of gifts and/or commodities in different contexts and different societies. P/NP or letter grading.
- 28. Misleading Mirror: Self-Portraits in Word and Image. (4)** Self-portraiture as it is represented in the novel, poetry, painting, essay, and film, both from point of view of the artist/representor and from perspective of the reader/viewer. P/NP or letter grading.
- 29. Critical Vision: History of Art as a Social and Political Commentary. (4)** Seminar, three and one-half hours. Study of tradition of visual arts (painting, graphic art, photography, sculpture) as vehicles for social and political commentary. P/NP or letter grading.
- 30. Vietnam War and American Culture. (4)** Seminar, three hours; outside study, nine hours. Cultural, social, and political implications of the Vietnam War on American society through examination of photography, journalism, personal narrative, political commentary, drama, and fiction. P/NP or letter grading.
- 31. Making Citizens/Making Societies: Political Cultivation in Cross-Cultural Perspective. (4)** (Not the same as course 31 prior to Fall Quarter 1999.) Seminar, three hours; outside study, nine hours. Examination of how a society takes active concern in making sure that certain politically relevant dispositions, sensitivities, capacities, and skills are nourished in population at large, including models of both aristocratic and democratic cultivation and their political implications. P/NP or letter grading.
- 32. Creativity and Culture: Making Things New in the Arts, Humanities, Social Sciences, and Sciences. (6)** Seminar, three hours; writing laboratory, two hours. Study of creative acts of artists, writers, social scientists, and scientists in relation to their societies, cultures, disciplines, conventions, and art forms. P/NP or letter grading.
- 33. Art of Engagement. (6)** Seminar, three hours; writing laboratory, two hours; outside study, 12 hours. Cross-curricular, cross-cultural examination of literature, art, and film as a way of discovering how writers and artists treat conflict between art as something inward and psychological and personal, and art as a vehicle of social and political import. P/NP or letter grading.
- 34. Film and Society: The Hollywood Myth of Ancient Rome. (4)** Exploration of popular influence of ancient Rome on filmmakers of the 20th century, with eye to separating objective examination of Roman political and social institutions and the myth they have become. P/NP or letter grading.
- 35. Scientific Method: Critical Inquiry into Question of Extraterrestrial Life. (4)** Lecture, three hours; discussion, one hour; outside study, nine hours. Course does not presume to answer question of whether or not there is intelligent life in the universe but rather uses this question as a pedagogic tool to introduce central ideas, techniques, and limitations of the scientific method — what questions would need to be asked, what scientific knowledge would be needed, and what obstacles would have to be overcome just to address this question. P/NP or letter grading.
- 36. Ethnicity and Social Class in America. (4)** Introduction to data analysis, quantitative method, and use of statistics in social sciences, using General Social Survey (GSS) and concentrating particularly on ethnicity and social class. Students conduct statistical research of their own. P/NP or letter grading.
- 37A. Ethnicity, Social Class, and Social Mobility in the U.S. and Other Societies. (4)** Seminar, three hours; outside study, nine hours. Study of the U.S. and other nations in terms of social class, social mobility, ethnicity, and absorption of immigrants, with emphasis on manipulation and analysis of data sets from census and survey data provided through instructional software. P/NP or letter grading.
- 37B. Ethnicity, Social Class, and Social Mobility in Los Angeles. (4)** Seminar, three hours; outside study, nine hours. Course 37A is not requisite to 37B. Study of Los Angeles in terms of social class, social mobility, ethnicity, and absorption of immigrants, with emphasis on manipulation and analysis of data sets from census and survey data provided through instructional software. P/NP or letter grading.
- 38. Frida Khalo: Multidisciplinary Construction of an Artist's Life. (4)** (Not the same as course 38 prior to Fall Quarter 1999.) Seminar, four hours; outside study, eight hours. Comprehensive contextual and interpretive study of artist Frida Khalo's life, art, and character as a way of examining seminal political/historical events and cultural movements. P/NP or letter grading.
- 39. Cross-Cultural Currents in Theater. (4)** (Not the same as course 39 prior to Fall Quarter 1999.) Seminar, four hours; outside study, eight hours. With primary focus on response of 20th-century Western theater artists to Asia, examination of complex world of ethical concepts raised by artistic creation, including postcoloniality, representation, and ethnicity. P/NP or letter grading.
- 40. Transformations of Cultural Stories across Disciplines and Texts. (5)** (Not the same as course 40 prior to Fall Quarter 1999.) Seminar, four hours; outside study, 11 hours. Preparation: satisfaction of English Composition Writing I requirement. Tracing of writing and rewriting of traditional story types, specifically the adventure story as represented by Defoe's *Robinson Crusoe* and its remanifestations in Coatzee's *Foe* and the fairy tale as represented by *Cinderella* and its various cross-cultural remanifestations. P/NP or letter grading.
- 41. Mathematical Concepts: Origins and Development. (4)** (Not the same as course 41 prior to Fall Quarter 1999.) Seminar, three hours; outside study, nine hours. Exploration of various concepts in mathematics, especially in algebra, from historical point of view from ancient Babylonian quadratic triples to contemporary game theory and including study of some of the more remarkable applications. P/NP or letter grading.
- 42. European Expansion in Age of Columbus. (4)** Seminar, three hours. Examination of European (mainly Iberian) exploration and colonization during the period from circa 1400 to 1650. P/NP or letter grading.
- 43. Male Identity and Sexuality in Ancient Rome. (4)** Seminar, three hours; outside study, nine hours. Investigation of Roman cultural constructions of male identity and sexuality in context of political and social change in an emergent imperial ideology in the 1st century C.E.; examination of male "virtus," sexual stereotypes, and dynamics of sex and power in imperial politics. P/NP or letter grading.
- 44. Trail of Light. (4)** (Not the same as course 44 prior to Fall Quarter 1997.) Lecture, three hours; discussion, two hours; outside study, seven hours. Study of our understanding of light, colors, and vision; physics of light from Newton to Einstein; physics, chemistry, and biology of vision in relation to color; and appearance of light in art. P/NP or letter grading.
- 45. State, Nation, and Nationalism in Modern and Contemporary Europe. (4)** (Formerly numbered M115.) Seminar, four hours; outside study, eight hours. Examination of state, nation, and nationalism in Europe in theoretical, comparative, and historical perspective. P/NP or letter grading.
- 46. Masculinity, Sexuality, and Patriarchy. (4)** Seminar, three hours. Examination of patriarchal aspects of male gender role in American society, including perspectives of biological determinism and social constructionism, cultural icons of masculinity, heritage of traditional and nontraditional male roles in Western culture, and alternative notions of masculinity in non-Western societies. P/NP or letter grading.
- 47. Literature of Colonization and Colonization of Literature. (4)** Seminar, three hours; outside study, nine hours. Examination of various facets of interaction between Western and non-Western cultures since period of high imperialism beginning in the mid-19th century, with focus on the novel as prism through which to observe cultural meeting and interchange and their consequences. P/NP or letter grading.
- 48. Politics of Reproduction. (4)** Seminar, three hours; outside study, nine hours. Examination of complex relations between individual, local, and global interests as they shape and reflect reproductive practices, public policy, and exercise of power. P/NP or letter grading.
- 49. Evidence in Law, Science, History, and Journalism. (4)** Seminar, four hours; outside study, eight hours. Rigorous study of ways in which lawyers, scientists, historians, and journalists handle evidence, with aim of advancing cross-disciplinary inquiry to produce a common vocabulary and set of concepts that allow for discussion of evidentiary issues in differing fields of inquiry. P/NP or letter grading.
- 50A. Greek Views of Humanity. (4)** Lecture, three hours; discussion, one hour. Greek views of human experience as expressed in literary forms invented or developed by the Greeks: epic, history, tragedy, comedy, and philosophy; study of way in which Greek texts provide foundation for subsequent Western literature and thought. P/NP or letter grading.

50B. Gender and Race: Constructions of Greek Political Thought. (4) Lecture, three hours; discussion, one hour. Course 50A is not requisite to 50B. Comprehensive introduction to Greek views of humanity with concentration on gender and race, especially as these issues are manifested in Plato and Aristotle. P/NP or letter grading.

51. Childhood in Historical and Sociological Perspective. (4) Seminar, three hours; outside study, nine hours. Examination of ways in which experience and social expectations of childhood have been transformed over time and of ways in which these experiences and expectations vary according to class, race, and gender. P/NP or letter grading.

52. Good, Better, Best Western: Approaches to the 19th-Century American Frontier. (4) Seminar, three hours. Study of the 19th-century American West as a geographical, economic, historical, and cultural region, expanding traditional discourse to include histories and stories of Mexicans, Native Americans, Mormons, and black Westerners. P/NP or letter grading.

53. Sociology of Food and Eating. (4) Seminar, three hours; outside study, nine hours. Exploration of social forces that have shaped the human diet; significance of food and manners of consumption in personal experience and social relationships; role of food as a cultural emblem and ideological symbol. P/NP or letter grading.

54. Human Lives: Psychocultural Perspective. (4) Seminar, three hours; outside study, nine hours. Examination of human life course in psychocultural perspective, following observations of Kluckhohn and Murray, including investigations of (1) psychobiological underpinnings of human life, (2) human life as shaped by social and cultural processes, and (3) humanistic perspective defining uniqueness. P/NP or letter grading.

55. Culture and History of Utopias. (4) (Not the same as course 55 prior to Fall Quarter 1999.) Seminar, three hours; outside study, nine hours. Study of major utopian writings from Thomas More's classical text to recent ecological and feminist utopian texts, with purpose of uncovering social, intellectual, and cultural landscapes underlying quest for a more perfect society. P/NP or letter grading.

56. Language as a Window to the Mind. (4) Lecture, four hours; discussion, one hour; outside study, seven hours. Study of topics in language and the mind, including language acquisition in the child, language representation in the brain, relationship between language and other mental abilities, and autonomous nature of language as a system of knowledge. P/NP or letter grading.

57. Life and Sciences of Complexity. (4) (Not the same as course 57 prior to Fall Quarter 1997.) Seminar, four hours; outside study, eight hours. Study of motion and change in systems, including general systems theory, cybernetics, catastrophe theory, and dissipative structure theory, moving toward a view of senselessness of complex systems, or an answer to question of why we grow old and die. P/NP or letter grading.

58. Apartheid and Social Stratification in South Africa: Theory and Data. (4) Seminar, three hours. Examination as an empirical question of structure and consequences of apartheid in South Africa, including analyses both of history and of social stratification. P/NP or letter grading.

59. Literature and Culture of the American South. (6) Lecture/discussion, four hours; writing seminar, two hours. Examination of historical imagination as it is expressed in such writers as William Faulkner, Allen Tate, Flannery O'Connor, Richard Wright, and Zora Neale Hurston; in Civil War and WPA/FSA photography; and in Southern rhetoric and political documentary. P/NP or letter grading.

60. Immigration and New Second Generation. (4) (Not the same as course 60 prior to Fall Quarter 1998.) Seminar, three hours; outside study, nine hours. Immigrant children and children of immigrants have become fastest growing and most ethnically diverse segment of the U.S. child population, raising issues of migration processes, contexts of reception, biculturalism, adaptation, and assimilation and impact of these on socioeconomic circumstances and future success. P/NP or letter grading.

61. Social Theory in the 20th Century. (6) Lecture, four hours; discussion, one hour; writing seminar, two hours. Examination of strikingly subjective thrust of 20th-century social thought which has emphasized cultural and emotional structures rather than the material, objective world. Focus on psychoanalysis, structuralism, functionalism, existentialism, and phenomenology in readings from Durkheim to Jean-Paul Sartre. P/NP or letter grading.

62. Community and Self-Interest in History of American Culture. (6) Lecture, four hours; discussion, one hour. Exploration of historical origins of the frequently contradictory values which inform American thought and culture: hierarchy and equality, institutional constraints and voluntarism, collective sense of mission and belief in the autonomous individual. P/NP or letter grading.

63. Emerging Infections and Their Effects on Society: Past, Present, and Future. (4) Seminar, four hours; outside study, eight hours. Examination of how people have responded to plagues and infections through early history and "golden age of microbiology" of last 200 years; study of contemporary responses, including genetic engineering, and prophecies regarding what future may hold regarding infectious diseases. P/NP or letter grading.

64. Encounters with the Other: European Colonialism and Representation. (4) Seminar, three hours. Exploration of broad range of representations — drama, fiction, film, paintings, ethnography, and cultural anthropology — to understand role played by such cultural products in encounter between European sensibility and colonized "other." P/NP or letter grading.

65. Carnival and Festivity. (4) Seminar, four hours; outside study, eight hours. Examination of Carnival and related customs occurring from Christmas to Ash Wednesday in Europe and the Americas. Exploration of perspectives from ethnography, folklore, theories of dance, history, religion, anthropology, and literary studies. P/NP or letter grading.

66. Substance Abuse and the Brain. (4) Seminar, three hours; outside study, nine hours. Study of a broad range of information about substance abuse, including molecular mechanisms of addiction, brain reinforcement for drug use, genetic predisposition, and mechanisms of tolerance and withdrawal, as well as study of associated clinical, psychosocial, and political issues. P/NP or letter grading.

67. Structure of Physical Reality. (4) (Not the same as course 67 prior to Fall Quarter 1998.) Lecture, three hours; discussion, one hour; outside study, eight hours. No special mathematical knowledge required. Course in modern physics, including videos and practical demonstrations, Zen stories, and discussions of what Eastern and Western religions and philosophy in general have to say about forces of nature. Topics include quantum mechanics, microcosm of atoms, and elementary particle physics and philosophical implications. P/NP or letter grading.

68. History of Social Thought. (4) Lecture, three hours; discussion, one hour. Study of significant forms of social theory and social change from the English Revolution to beginning of the 20th century, including readings from Hobbes, Rousseau, Smith, Tocqueville, Marx, and Freud. P/NP or letter grading.

69. American Writing, American Photography. (4) Seminar, three hours. Exploration of interrelationship of American writing and American photography, including social documentary, American naturalism, war, and contemporary social conflict and change. P/NP or letter grading.

70. Genetic Engineering in Medicine and Agriculture. (4) Overview of principles of cell and molecular biology and of technical details of genetic engineering. Discussion of benefits and detriments of new biotechnology in relation to medicine, agriculture, and general social issues. P/NP or letter grading.

71. History through Clothes. (4) (Not the same as course 71 prior to Fall Quarter 1998.) Seminar, three hours; outside study, nine hours. Exploration of what clothes mean and what they tell us about life in the past, including historical constructions of sexual, social, and political identity. Focus on clothes of Western Europe, especially those of France, with study of clothes in other parts of the world included. P/NP or letter grading.

73. Elementary Particles in the Universe. (4) Lecture, two hours; discussion, 90 minutes. No special mathematical knowledge required. Examination of elementary particle physics, including status of its current study in laboratories around the world and its role in assessing the early evolution of the universe. P/NP or letter grading.

74. Life Crises in Literature. (4) Seminar, three hours. Examination of typical life upheavals (child abuse, coming of age, death, etc.) as they are portrayed in modern literature and, by comparative analyses of diverse literatures, focus on ways in which universal events are filtered through the prism of distinct cultural perspectives. P/NP or letter grading.

75. On Nature of Things: Comparative Reading of Poem by Lucretius and Modern Science. (4) Seminar, three hours; outside study, nine hours. Most important and influential concepts of modern science, including atoms, their movements and nature, origin of the world, evolution of life; comparison with theories of Lucretius as defined in *De Rerum Naturae*. P/NP or letter grading.

76. Race, Class, and Gender. (4) Seminar, three hours; outside study, nine hours. Analysis of interrelationship of race, class, and gender and of ways in which these social means of classification shape experience in American society. Research project on this topic into a hobby, sport, or occupation required. P/NP or letter grading.

77. Intellectual Life in Japan: Classics, Moderns, and Postmoderns. (6) Lecture, two hours; discussion, two hours; writing seminar, two hours. Examination of current modernity/postmodernity debate about contemporary Japanese art and culture in context of Japan's intellectual tradition since the 16th century. Comparison of modern Western and Eastern cultural assumptions and beliefs. P/NP or letter grading.

78. Writing in Age of Revolution. (4) Lecture, four hours; discussion, one hour. Part of UCLA French Revolution Bicentennial Program. Examination of major debates of 1780 to 1820 in America and Europe through historical, rhetorical, and literary study. P/NP or letter grading.

79. Rhetoric of Rule: Spectacle and Image Making in Reign of the Sun King and Presidents Reagan and Clinton. (4) Lecture/discussion, four hours; outside study, eight hours. Use of Louis XIV and Presidents Clinton and Reagan as case studies to explore why and how political power is symbolically constructed and to understand power as rhetoric mediated through symbolic forms. P/NP or letter grading.

80. Literature of Diversity: Cultural Experience in America. (4) Seminar, three hours. Examination of richness and variety of American culture as revealed in literary works generally neglected in traditional surveys. Theories of ethnicity and nationalism presented in such works as *Black Elk Speaks*, *Their Eyes Were Watching God*, Mexican Corridos on immigration, and *China Men*. P/NP or letter grading.

82. Community and Labor Development from Ground Up. (4) Lecture, three hours; discussion, one hour; outside study, eight hours. Introduction to practical applications of community development and outreach efforts in Los Angeles area, with projects from Community Outreach Partnership Center within School of Public Policy and Social Research. P/NP or letter grading.

83. Politics and Rhetoric of Literature. (6) Seminar, four hours; writing laboratory, two hours. Examination of relationship among politics, rhetoric, and literature in study of literature from classical times to the present, broadening into general discussions of development of political discourse in Western thought, particularly conflict between self and state, between ideology and the practical business of living. P/NP or letter grading.

84. Los Angeles, 1900 to 2000: History of a 20th-Century City. (4) Seminar, three hours; outside study, nine hours. Interdisciplinary approach to study of Los Angeles, with attention to political and economic issues and emphasis on social and cultural history as reflected in literature, art, film, and architecture. P/NP or letter grading.

85. Science and Art: Concepts and Connections. (4) Seminar, four hours; outside study, eight hours. Study of relationships between intellectual problem solving in science and aesthetics, with particular attention to holographs and liquid light displays. P/NP or letter grading.

86. Federico Garcia Lorca and Literature of New York. (4) Lecture/discussion, three hours. Designed to place Lorca in the international current of urban literature. Examination of Lorca's poems (in translation) and drawings as representations of New York in art, cinema, and literature. P/NP or letter grading.

87. Humans and Other Animals. (4) (Not the same as course 87 prior to Fall Quarter 1998.) Seminar, three hours; outside study, nine hours. Examination of ongoing and historic relations between human beings and animals cross-culturally, including animals perceived as predators, renewable and nonrenewable resources, pets, trophies, collectibles, and objects of study. P/NP or letter grading.

89. Freud, Fairy Tales, and Feminism. (4) Lecture/discussion. Demonstration of both the power of Freud's ideas and vision and vitality of criticisms of Freud that emanate from self-psychology and feminist thinking in contemporary social science. P/NP or letter grading.

90. French Revolution: Ideologies and Images. (6) Lecture, two and one-half hours; discussion, one hour; writing seminar, two hours. Examination of history of French Revolution as series of world historical events and as source of dominant ideologies and images that have influenced culture of France, Western Europe, and North and South America. P/NP or letter grading.

92. Genes, Genomics, and Internet. (4) (Not the same as course 92 prior to Fall Quarter 1998.) Lecture, two hours; computer laboratory, three hours; outside study, seven hours. New science of genomics (computer analysis of genetic information), dealing with issues related to basic genetics, medicine, biotechnology, evolution, information technology, and their societal impact. P/NP or letter grading.

94. Historic Roots of Healing Arts. (4) (Not the same as course 94 prior to Fall Quarter 1998.) Not open to students with credit for Psychiatry 98H. Introduction to traditions, practices, goals, and myths of healing professions in Western medicine. P/NP or letter grading.

95. Art, Politics, and Social Change in 19th-Century England and France. (4) Seminar, three hours. Exploration, through analysis of artists and intellectuals in 19th-century England and France, of social factors in cultural expression and way that national traditions and political and social conditions shape each set of literary and artistic innovations. P/NP or letter grading.

96. Cultural Dimensions of Apartheid and Post-Apartheid South Africa. (4) Exploration of culture and society of contemporary South Africa through literature of both black and white South African authors and popular cultural forms such as people's theater and workers' poetry. P/NP or letter grading.

97. Issues in American Foreign Policy: Methodology of Assessment. (4) Lecture/debate, three hours; discussion, one hour. Exploration in debate format of wide range of views on contemporary foreign policy issues to train students how to discern the ideological origins of policy arguments. Examination of material in major foreign policy journals. P/NP or letter grading.

99. Case-Based Astrophysics with Computer Visualization. (4) Seminar, three hours; outside study, nine hours. Not open for credit to students with credit for Astronomy 2A, 2B, 3, or 3H. Use of images, especially animations showing temporal development of three-dimensional phenomena, to convey scientific principles behind the phenomena. Exploration of topics in astrophysics such as stellar evolution, binaries, cepheids, and redshifts, centered around astronomy software. P/NP or letter grading.

Upper Division Courses

M102. Culture, Media, and Los Angeles. (6) (Same as Afro-American Studies M102 and Asian American Studies M197H.) Lecture, four hours; screenings, two hours. Designed for juniors/seniors. Role of media in society and its influence on contemporary cultural environment, specifically in Los Angeles; issues of representation as they pertain to race, ethnicity, gender, and sexuality. P/NP or letter grading.

104. Eurocentrism Debate: Viability of Western Tradition. (4) Seminar, three hours. Designed for juniors/seniors. Assessment, both historically and critically, of "Western tradition" as a cultural, social, and ideological construct and delineation for discussion of current debates over Eurocentrism, particularism, and multiculturalism. P/NP or letter grading.

105. Chinese and Greek Heroes, Past and Present. (4) Seminar, three hours. Designed for juniors/seniors. Comparison of Greek and Chinese notions of the heroic in ancient epics and redefinitions of the heroic in their modern permutations, allowing students to interrogate cultural constructions of manhood. P/NP or letter grading.

M106. Imaginary Women. (4) (Same as Women's Studies M106.) Designed for juniors/seniors. Study of four female cultural archetypes — absconding wife/mother, infanticide mother, intellectual woman, and warrior woman — as they appear in their classical and modern manifestations in European and American cultures. P/NP or letter grading.

107. Painful Birth: Rise of Modern Capitalism in Late Medieval Italy. (4) Seminar, three hours; outside study, nine hours. Through medieval texts and representations of the human figure in art, examination of rise of merchant and banking class in late medieval Italy, focusing on ideological and economic issues rooted in contempt for commerce, prohibition of usury, ideal of the nobility, and choice between Earth and sky. P/NP or letter grading.

108. History of the Devil in Scripture and Literature. (4) Seminar, three hours; outside study, nine hours. Following study of supernatural figure "Satan" in Old Testament and its correspondent figure in New Testament, course looks at historical research, literary analysis, and theological thinking to trace evolution of concept of "the devil" in the Bible, 15th-century drama, and poetry of John Milton. P/NP or letter grading.

109. Language, Meaning, and the Making of Poetry. (4) Seminar, three hours; workshop, one hour; outside study, eight hours. In words of the august professor, "Semiological warfare against the purveyors of semantic entropy." In context of and comparison with contemporary speech, study of history of philosophic and poetic discourse on language and its potentials, including social and political implications. P/NP or letter grading.

110. Marxist and Post-Marxist Approaches to Cultural Studies. (4) Seminar, four hours; outside study, eight hours. Examination of Marxist and post-Marxist approaches to study of culture, including classic texts, theoretical and empirical works, and the Marxist roots of postmodernism. P/NP or letter grading.

111. Stress and Coping. (4) (Formerly numbered 93.) Seminar, four hours; outside study, eight hours. Examination of research and theory on stress and coping, with emphasis on physical and mental consequences of stress and moderators of both social support and personality in coping strategies. P/NP or letter grading.

112. Inner and Outer Worlds of Children: Perspectives on Social Policies toward Children and Schooling. (4) Seminar, three hours; outside study, nine hours. Study of two important components of schooling and parenting: (1) preparation of students for outer world of work, academic attainment, and placement in society and (2) their preparation for relationship they have with themselves. Critique of social policies in light of these observations. P/NP or letter grading.

113. Geographical Encounter and Exploration. (4) Seminar, four hours; outside study, eight hours. Examination of coming together of various societies, whether preliterate or literate: the encounter. Exploration of both European and non-European travels, with emphasis on new thinking in fields of history and geography. P/NP or letter grading.

114. Darwin and *The Origin of Species*. (4) Lecture, three hours; discussion, one hour; outside study, eight hours. Reading of Darwin's *The Origin of Species* in original text, then using it as springboard to investigate history of his period, what influenced him, and how future scientists have used him. P/NP or letter grading.

M116. Art Alive: Art and Performance in the Museum. (4) (Same as Theater M193.) Offered in collaboration with the Los Angeles County Museum of Art (LACMA). Interpretation of art in the collection through acting, dialogues, movement, and music. Research into history and art history and production of a creative performance piece required. P/NP or letter grading.

117. Resistance to Evil: Organized Resistance to Nazis in Occupied Europe. (4) Seminar, three hours; outside study, nine hours. Resistance is not a moral or philosophical issue, but a sociohistorical one. What makes resistance possible are specific historical circumstances and social relations that enable ordinary men and women to oppose their oppressors. Examination of this premise through analysis of organized resistance to Nazi occupation in Europe. P/NP or letter grading.

M118. Roots of Patriarchy: Ancient Goddesses and Heroines. (4) (Same as Women's Studies M128.) Lecture, three hours; outside study, nine hours. Examination of ancient goddesses and heroines — European, Neolithic, Near Eastern, Celtic, Scandinavian, Balto-Slavic, Indo-Iranian, and Greco-Roman — using translations of ancient texts, archaeological evidence, and feminist methodology in order to discover implications of ancient patriarchy on modern society. P/NP or letter grading.

M119. Nuclear Weapons: Critical Decisions. (4) (Same as Policy Studies M116.) Lecture, three hours; outside study, nine hours. Examination of critical decisions regarding nuclear weapons, starting with President Roosevelt's decision to build atomic bomb and ending with current policies on containing nuclear proliferation and on avoiding nuclear catastrophe. Letter grading.

122. Violence against Women in Cross-Cultural Perspectives. (4) Seminar, three hours; outside study, nine hours. Exploration of sources of violent acts against women in different societies. Topics include wife beating, female sexual slavery, female infanticide, dowry deaths, female genital "circumcision," rape, and emerging global human rights responses to these issues. P/NP or letter grading.

123. War and Peace in Africa. (4) Seminar, four hours; outside study, eight hours. Investigation into main causes and forms of warfare on African continent, including relationship between internal war and transborder conflict, historic ethnic antagonism, competition for control of natural resources, and hostilities precipitated by militarism. P/NP or letter grading.

124. Midwives, Mothers, and Medicine: Perspectives on History of Childbirth. (4) Seminar, three hours; outside study, nine hours. Using examples from history and anthropology, examination of variety of practices associated with childbirth over time and across cultures, addressing such themes as shifting relations among birthing women, midwives, and medical men and cultural meanings of birth. P/NP or letter grading.

M135. Narrative in Mass Communication. (6) (Same as Communication Studies M135.) Seminar, four hours; outside study, 10 hours. Examination of narrative as a primary function of mass media, beginning with social, psychological, cultural, and rhetorical functions of storytelling and basic elements of narrative, then applying these to study of film, television, and print media. P/NP or letter grading.

191. Writing and Editing of Books. (4) Preparation: submission of approved manuscript. Theory and method in design, organization, writing, and editing of books.

199. Directed Honors Studies. (4) Preparation: minimum of four units completed in Honors Collegium with a grade of B or better, overall UCLA grade-point average of 3.0 or better. Special research/writing tutorial with a director of one of the Honors Collegium courses in order to pursue in greater depth a significant topic from one of the collegium courses. May not be repeated for credit.

Scope and Objectives

The graduate Human Genetics Program prepares students for careers as independent laboratory researchers with a firm grasp of the developments in biological and medical research. The rapidly evolving field of human genetics now incorporates genetic, biochemical, cell biological, and developmental studies of both humans and model organisms to tackle biomedical problems important for human health and disease. Areas of study include both Mendelian and non-Mendelian hereditary diseases, genomics and mapping, bioinformatics, developmental biology, neurogenetics, sex determination, cytogenetics, human malformation, and chromatin structure and function. Laboratory research is emphasized. Conceptual ap-

proaches to medically related biological problems are employed, frequently with the aid of automation and advanced imaging techniques, toward the goal of disease prevention, control, and eradication methods such as gene therapies. Coursework acquaints students with the most current literature and trains students in critical thinking, experimental design, and the ability to anticipate future developments.

Graduate study leading to a doctoral degree is emphasized. Under special circumstances, master's candidates are considered after consultation with faculty members and the chair.

Graduate Study

The following constitutes introductory information regarding graduate degree programs and is based on the 1998-99 edition of *Program Requirements for UCLA Graduate Degrees*. Complete, annual editions of *Program Requirements* are available (listed under "Publications") on the Graduate Division website at <http://www.gdnet.ucla.edu>. Students are subject to the degree requirements as published in *Program Requirements* for the year in which they matriculate.

Master's Degree

The Department of Human Genetics offers the Master of Science (M.S.) degree in Human Genetics.

Admission

The department accepts students into the M.S. program only rarely and under special circumstances.

Areas of Study

Human genetics plus related areas (for example, molecular genetics, mathematical modeling). Consult the department for more information.

Course Requirements

Master's students take the same core courses in the first year as doctoral students (see below). In addition, they must take one course in human genetics (Microbiology and Molecular Genetics CM256) or the more advanced course (in planning stage). Elective courses must be taken to complete the requirement of 36 units for the master's degree. No more than two courses (eight units) in the 500 series may be applied toward the minimum course requirement, and only one of these (four units) may be applied toward the minimum graduate course requirement for the degree (20 units).

Comprehensive Examination Plan

Candidates must pass a comprehensive written examination to be administered by a committee of three faculty members appointed by the chair.

Thesis Plan

A new thesis plan is under consideration.

Doctoral Degree

Admission

Undergraduate requirements for the Ph.D. program are similar to those of UCLA ACCESS to Programs in Molecular, Cellular, and Integrative Life Sciences, the more common route of admission to the Ph.D. program in Human Genetics. The requirements include a bachelor's degree, with preparation in physics, biology, and chemistry, and exposure through upper division courses in specific areas that may include genetics, biochemistry, molecular biology, cell biology, developmental biology, microbiology, virology, physiology, and immunology. Because of the high mathematical content of some areas of human genetics, advanced courses in mathematics may be substituted for biologically oriented courses. More advanced degrees (M.S., M.D., or equivalent) are also acceptable. Scores on the Graduate Record Examination (GRE) General Test and three letters of recommendation are required.

Major Fields or Subdisciplines

The field of human genetics is a well-defined discipline which includes subfields such as genomics, cytogenetics, biochemical and molecular genetics, medical genetics, immunogenetics, cancer genetics, and population genetics. The closely related field of mammalian genetics is also under the purview of this program.

Course Requirements

Students recruited through UCLA ACCESS follow ACCESS requirements in the first year. In the fall, students take Biological Chemistry CM253, which provides grounding in the chemical and biological properties of nucleic acids and proteins. In the Winter Quarter, they have the choice of several courses that emphasize cellular function and organization (e.g., Biological Chemistry CM267 or Neurobiology M209A). Knowledge of nucleic acid and protein structure and function as well as of cell biology is essential for genetics. In the Spring Quarter, students may take any of several specialty courses, but the one recommended for students who have already decided to specialize in human genetics is Biological Chemistry CM248. As part of the ACCESS program during the first year, the students also take three two-unit seminar courses on current research topics, a course on ethics in research, and a course on computers in biology (students may test out of the computer course if they have adequate preparation). The faculty offers at least one seminar course in the field of human genetics.

A six-unit course on advanced human genetics is required of predoctoral students in the second year. Six additional units of coursework are required for the doctoral degree, preferably in seminar format.

Similar requirements apply to students that enter the department directly; however, a biomathematics course may be substituted for a biological course in the Winter or Spring Quarters.

Written and Oral Qualifying Examinations

Students are allowed to nominate a doctoral committee after satisfactory performance in courses and laboratory rotations, as judged by faculty or a designated faculty committee. They are required to take the examinations for advancement to candidacy at the end of their second year or the beginning of the third. The written qualifying examination consists of the preparation of two short research proposals in the field of human genetics. One of these addresses the student's proposed dissertation research and the second addresses a research problem unrelated to the dissertation research. The proposals must include the scientific rationale, experimental methods, anticipated results and interpretations, and bibliography. Students are evaluated on their understanding of the research that they are undertaking for their doctoral dissertation, their ability to identify an important scientific problem independently of their mentor, their ability to devise appropriate and original experimental strategies, and their ability to write clearly and concisely. The oral examination, taken a week or two after submission of the written proposals, consists of a discussion of the proposals and of additional questions to probe the student's general knowledge and understanding of human genetics.

Human Genetics

Upper Division Courses

CM153G. Macromolecular Structure. (6) (Same as Biological Chemistry CM153G and Chemistry CM153G.) Lecture, five hours. Requisites: Chemistry 110A, 153A, 153B, 153C, 156. Chemical and physical properties of proteins and nucleic acids. Structure, cloning, and analysis of DNA; biosynthesis and processing of RNA; biosynthesis, purification, structure, and analysis of proteins; correlation of structure and biological properties. Concurrently scheduled with course CM253. Letter grading.

CM156. Human Genetics. (4) (Same as Microbiology CM156 and Molecular, Cell, and Developmental Biology CM156.) Lecture, three hours; discussion, two hours. Requisites: Life Sciences 3, 4. Strongly recommended: Molecular, Cell, and Developmental Biology 100 or C139 or M140. Application of genetic principles in human populations, with emphasis on cytogenetics, biochemical genetics, population genetics, and family studies. Lectures and readings in the literature, with focus on current questions in the fields of medical and human genetics and methodologies appropriate to answer such questions. Concurrently scheduled with course CM256. Letter grading.

CM169. Cell Structure, Signaling, and Differentiation. (6) (Same as Biological Chemistry CM169 and Molecular, Cell, and Developmental Biology CM169.) Lecture, five hours. Requisites: Chemistry 153A, 153B, 153C. Recommended: course CM153G. Cell cycle regulation; chromosomes and DNA repair; protein trafficking and endocytosis; extracellular matrix, cell to cell communication and signal transduction; cell transformation and apoptosis; molecular aspects of development, differentiation, and cancer. Concurrently scheduled with course CM267. Letter grading.

CM178. Molecular Genetics. (6) (Same as Biological Chemistry CM178 and Molecular, Cell, and Developmental Biology CM178.) Lecture, five hours. Requisites: Chemistry 153A, 153B, Life Sciences 3, 4, Molecular, Cell, and Developmental Biology 100 or C139 or M140. Basic concepts in modern genetics, with examples from both eukaryotic and prokaryotic systems. Emphasis on use of genetic techniques for addressing fundamental questions in cellular biochemistry. Topics include mutagenesis, repair, recombination, transposition, genetic regulation, developmental genetics, neurogenetics, and immunogenetics. Concurrently scheduled with course CM248. Letter grading.

Graduate Courses

M201. Use of the Computer in Biology. (2) (Same as Microbiology and Immunology M241 and Molecular, Cell, and Developmental Biology M201.) Lecture, two hours; laboratory, one hour. Introduction to use of IBM PC microcomputer and VAX minicomputer in biological research. S/U grading.

M203. Stochastic Models in Biology. (4) (Same as Biomathematics M203.) Lecture, four hours. Requisite: Mathematics M170A or equivalent experience in probability. Mathematical description of biological relationships, with particular attention to areas where conditions for deterministic models are inadequate. Examples of stochastic models from genetics, physiology, ecology, and a variety of other biological and medical disciplines. S/U or letter grading.

M207A. Theoretical Genetic Modeling. (4) (Same as Biomathematics M207A and Biostatistics M237A.) Lecture, three hours; discussion, one hour. Preparation: coursework equivalent to Mathematics 115A, 131A. Mathematical models in statistical genetics. Topics include population genetics, genetic epidemiology, gene mapping, design of genetics experiments, DNA sequence analysis, and molecular phylogeny. S/U or letter grading.

M207B. Applied Genetic Modeling. (4) (Same as Biomathematics M207B and Biostatistics M237B.) Lecture, two hours; laboratory, two hours. Preparation: coursework equivalent to Biostatistics 110A, 110B. Methods of computer-oriented genetic analysis. Topics may include segregation analysis, parametric and nonparametric linkage analysis, quantitative methods, and phylogenetics. Laboratory for hands-on computer analysis of genetic data; laboratory reports required. Course complements M207A; students may take either and are encouraged to take both. S/U or letter grading.

236. Advanced Human Genetics. (6) Lecture, five hours. In-depth overview of human genetics that forms basis for firm grasp of linkage mapping, genomics, development of animal models to study human disease, and current status of gene therapy. S/U grading.

CM248. Molecular Genetics. (6) (Same as Biological Chemistry CM248, Microbiology M248, and Molecular, Cell, and Developmental Biology CM248.) Lecture, five hours. Requisite: course CM153G or Chemistry CM153G. Basic concepts in modern genetics, with examples from both eukaryotic and prokaryotic systems. Emphasis on use of genetic techniques for addressing fundamental questions in cellular biochemistry. Topics include mutagenesis, repair, recombination, transposition, genetic regulation, developmental genetics, neurogenetics, and immunogenetics. Concurrently scheduled with course CM178. Letter grading.

CM253. Macromolecular Structure. (6) (Same as Biological Chemistry CM253 and Chemistry CM253.) Lecture, five hours. Requisites: Chemistry 110A, 153A, 153B, 153C, 156. Chemical and physical properties of proteins and nucleic acids. Structure, cloning, and analysis of DNA; biosynthesis and processing of RNA; biosynthesis, purification, structure, and analysis of proteins; correlation of structure and biological properties. Concurrently scheduled with course CM153G. Letter grading.

CM256. Human Genetics. (4) (Same as Microbiology CM256 and Molecular, Cell, and Developmental Biology CM256.) Lecture, three hours; discussion, two hours. Requisites: Life Sciences 3, 4. Strongly recommended: Molecular, Cell, and Developmental Biology 100 or C139 or M140. Application of genetic principles in human populations, with emphasis on cytogenetics, biochemical genetics, population genetics, and family studies. Lectures and readings in the literature, with focus on current questions in the fields of medical and human genetics and methodologies appropriate to answer such questions. Concurrently scheduled with course CM156. Independent research project required of graduate students. Letter grading.

CM267. Cell Structure, Signaling, and Differentiation. (6) (Same as Biological Chemistry CM267, Chemistry M267, and Molecular, Cell, and Developmental Biology CM223.) Lecture, five hours. Requisites: Chemistry 153A, 153B, 153C. Recommended: course CM153G. Cell cycle regulation; chromosomes and DNA repair; protein trafficking and endocytosis; extracellular matrix, cell to cell communication and signal transduction; cell transformation and apoptosis; molecular aspects of development, differentiation, and cancer. Concurrently scheduled with course CM169. Letter grading.

Scope and Objectives

The prime aim of the interdisciplinary Indo-European Studies Program is the integral study of Indo-European culture, based on comparative linguistics, archaeology, social structure, and religion. The Ph.D. in Indo-European Studies is offered with two alternative major emphases: Indo-European linguistics and Indo-Iranian or other specialized language area studies.

Graduate Study

The following constitutes introductory information regarding graduate degree programs and is based on the 1998-99 edition of *Program Requirements for UCLA Graduate Degrees*. Complete, annual editions of *Program Requirements* are available (listed under "Publications") on the Graduate Division website at <http://www.gdnet.ucla.edu>. Students are subject to the degree requirements as published in *Program Requirements* for the year in which they matriculate.

Doctoral Degree

Admission

To be admitted to the program leading to the Ph.D. degree in Indo-European Studies, applicants must have a B.A. degree with a major in an Indo-European language field (for example, German, Slavic, Celtic, Romance languages, Latin, Greek), linguistics (with concentration in historical and comparative linguistics), anthropology, or archaeology. Letters of recommendation (at least two, preferably three or four) are required; Graduate Record Examination (GRE) scores are not required. Applicants should also submit a writing sample, normally consisting of a recent term paper (preferably on a linguistic topic). Potential applicants may request a brochure by writing to the Indo-European Studies Program.

Admission to the program itself constitutes admission to the doctoral program; there is no master's degree offered. Should deficiencies exist in requisites to specific work at the graduate level, applicants may be granted provisional admission and directed to remove those deficiencies in the initial period of enrollment.

Major Fields or Subdisciplines

The Ph.D. in Indo-European Studies is offered with three alternative major emphases: (1) Indo-European linguistics; (2) Indo-Iranian or other specialized language area studies; (3) European and related archaeology. At present, the archaeology specialization is not available.

Course Requirements

The course requirements vary among the three major fields of specialization. General requirements for all students regardless of specialization include knowledge of Vedic Sanskrit and Homeric Greek, basic competence in Indo-European linguistics (including Indo-European Studies M150 and 210), mythology (for example, Classics 168), and archaeology (in-

cluding Indo-European Studies 131, 132). Additional requirements by field are as follows:

Linguistics. An advanced seminar in comparative grammar, a minimum of four ancient Indo-European languages from different sub-branches, and additional units in courses offered by the Linguistics Department (for example, phonetics, structural linguistics) and related departments. These additional units should be chosen in consultation with the adviser.

Indo-Iranian or Other Specialized Language Area. An advanced seminar in comparative grammar, a minimum of two ancient Indo-European languages from different sub-branches, and additional units in the area of specialization, to be chosen in consultation with the adviser.

European and Related Archaeology. A minimum of one ancient Indo-European language, an advanced seminar in European archaeology, a course in analytical methods in archaeology, and additional units in archaeology, anthropology, and related fields, to be chosen in consultation with your adviser.

Written and Oral Qualifying Examinations

When the required coursework is completed and prior to advancement to candidacy, a series of written examinations covering the major and minor fields are administered. These consist of translation and analysis of set texts from the ancient Indo-European languages and diagnostic examinations in the other fields. Following successful completion of the written examinations, the University Oral Qualifying Examination, based on the written examinations and the dissertation prospectus, is administered by the doctoral committee. It is intended to probe the student's grasp of the entire field. Should students fail either the written or oral examinations, the interdepartmental degree committee may allow reexamination.

Indo-European Studies

Upper Division Courses

131. European Archaeology: Proto-Civilizations of Europe. (4) Survey of European cultures from beginning of the food-producing economy in the 7th millennium B.C. to beginning of the Bronze Age in the 3rd millennium B.C.

132. European Archaeology: Bronze Age. (4) Requisite: course 131. Survey of European cultures from around 3000 B.C. to the period of destruction of the Mycenaean culture about 1200 B.C. Aegean area and rest of Europe.

M150. Introduction to Indo-European Linguistics. (4) (Same as Linguistics M150.) Preparation: one year of college-level study (course 3 or better, eight units minimum) of either Greek or Latin and either German or Russian. Survey of Indo-European languages from ancient to modern times; their relationships and chief characteristics.

199. Special Studies. (2 to 8) Tutorial, to be arranged.

Graduate Courses

210. Indo-European Linguistics: Advanced Course. (4) Requisite: course M150. Comparative study of phonology, morphology, syntax, and lexicon. Problems in analysis and reconstruction.

250A-250B. European Archaeology. (4-4) Studies in ancient European archaeological materials and their relationship to the Near East, Western Siberia, and Central Asia. May be repeated for credit. In Progress grading.

280A-280B. Seminars: Indo-European Linguistics. (4-4) Seminar, three hours. Requisite: course 210. Selected topics in Indo-European comparative grammar for advanced graduate students. S/U or letter grading.

596. Directed Individual Studies. (2 to 8) Tutorial, to be arranged.

597. Preparation for Ph.D. Qualifying Examinations. (2 to 8) Tutorial, to be arranged.

599. Research for Ph.D. Dissertation. (2 to 8) Tutorial, to be arranged.

Scope and Objectives

The Department of Information Studies has one of the top-ranked programs of its kind in the country and has developed an international reputation in the areas of information policy, information-seeking behavior, user interface development, and cataloging. Whether students choose to pursue a master's degree or a Ph.D., they graduate with a broad understanding of both theory and practice.

Applicants may write to the Department of Information Studies, 1009 Moore Hall, UCLA, Box 951521, Los Angeles, CA 90095-1521, for the department's announcement and application materials.

Note: Information Studies 110 may not be applied toward the M.L.I.S. degree; courses in the 111 series may be applied toward the M.L.I.S. degree with approval of faculty advisers.

Upper division undergraduate students must obtain consent of instructor to enroll in 200-series courses and consent of the chair to enroll in 400-series courses.

Graduate students from other schools or departments who wish to take courses in the De-

partment of Information Studies must obtain consent of instructor prior to enrolling.

Graduate Study

The following constitutes introductory information regarding graduate degree programs and is based on the 1998-99 edition of *Program Requirements for UCLA Graduate Degrees*. Complete, annual editions of *Program Requirements* are available (listed under "Publications") on the Graduate Division website at <http://www.gdnet.ucla.edu>. Students are subject to the degree requirements as published in *Program Requirements* for the year in which they matriculate.

Master's Degrees

The Department of Information Studies offers the Master of Library and Information Science (M.L.I.S.) degree and participates in concurrent or articulated degree programs with the Department of History, the Latin American Studies Program, and the John E. Anderson School of Management.

Admission

Students are admitted to the M.L.I.S. program in Fall Quarter only. In addition to Graduate Division requirements and application procedures, the department requires

- (1) A statement of purpose.
- (2) An official report of a score on the Graduate Record Examination (GRE) taken within the past five years. Applicants to the M.L.I.S. degree program who hold graduate degrees from accredited institutions in the U.S. may request a waiver of the GRE. Waivers are considered only after the committee on M.L.I.S. and certificate admissions has reviewed applicants' official transcripts. An official report of a score on the Test of Written English (TWE) and the Test of English as a Foreign Language (TOEFL) is required for students whose native language is not English.
- (3) Three letters of recommendation.
- (4) Satisfaction of the following entrance requirements: (a) a college-level course in statistics (three semester units or four quarter units) within the last five years with a minimum grade of C. The course must have covered descriptive and inferential statistics. In exceptional circumstances it is possible to meet this requirement by passing a competency examination in statistics administered by the department; (b) a college-level course in computer programming (three semester units or four quarter units) within the last five years with a minimum grade of C. Most standard languages such as BASIC, C, COBOL, FORTRAN, or PASCAL are acceptable, as is a college-level course in the use of data management systems such as INMAGIC, dBASE, or PARADOX. At least one third of the course grade should be based on programming assignments. In exceptional circumstances it is possible to meet this requirement by passing a competency examination in

computer programming administered by the department.

Entrance requirements should be completed before beginning the M.L.I.S. program. However, one requirement may be satisfied in the Fall Quarter of the student's first year.

While work experience is not a requirement for admission, consideration is given to such experience in reviewing the total application.

The admissions committee may request a report of an interview by the chair of the department or by a person designated by the chair as qualified to conduct an interview. Interviews are rarely conducted, and only for the purpose of clarifying a candidate's academic background and career objectives.

To participate in a concurrent or articulated degree program, students must make application to and be admitted by both the department and the other UCLA school or department. Fulfilling the combined set of program requirements normally takes three years.

M.A. History/M.L.I.S.

The M.A. History/M.L.I.S. is a concurrent degree program within the Department of Information Studies and the Department of History. Students can obtain two degrees: the M.L.I.S. and the M.A. in History. The best sequence of coursework should be discussed with the advisers from both this department and the History Department.

M.A. Latin American Studies/M.L.I.S.

The M.A. Latin American Studies/M.L.I.S. is an articulated degree program within the Department of Information Studies and the Latin American Studies Program. Students can obtain two degrees: the M.L.I.S. and the M.A. in Latin American Studies.

M.B.A./M.L.I.S.

The M.B.A./M.L.I.S. is a concurrent degree program jointly sponsored by the Department of Information Studies and the John E. Anderson Graduate School of Management. The program is designed to provide an integrated set of courses for students who seek careers that draw on general and specialized skills in the two professional fields.

Areas of Study

Consult the department.

Course Requirements

Full-time students are normally required to enroll in three courses per quarter in order to complete the program in six quarters. Part-time enrollment may be permitted.

Eighteen courses (72 units) are required for graduation from the M.L.I.S. program. Students take 20 units of core courses, four units of coursework in research methods, and 48 units of electives. Coursework must provide evidence both of basic professional competencies and of knowledge in a field of specialized competence.

Basic Professional Competence. The requirement is met by completing five core courses (Information Studies 200, 201, 203, 220, 441) and at least one graduate-level research methodology course (such as Information Studies 205, 240, 241, 260, 261, or 290). Only in unusual cases does librarianship coursework taken elsewhere satisfy the basic competency requirements.

Specialized Competence. Completion of a course of study is required as evidence of knowledge of a field of specialization in information policy and management, information access, information systems, or information organization. The field of specialization and the specialized course program must be approved by a faculty adviser. The requirement is ordinarily met by the completion of 12 additional courses, which may include internships. Relevant coursework in other departments or schools is encouraged. Students may petition to have prior coursework applied to their specializations.

During the second year, students may apply for an internship of one to three quarters either on campus or off campus at an approved library or information center. The internship is a regularly scheduled course and may be applied toward the 18 required courses.

No more than eight units of course 596 may be applied toward the total course requirement for students under the comprehensive examination plan; only four units may be applied toward the minimum graduate course requirements. In order to enroll in any S/U graded course, including 500-series courses, students must be in good academic standing.

Students who choose the thesis option are allowed to apply 12 units of 500-series coursework series course work toward the requirements for the degree.

Comprehensive Examination Plan

The comprehensive examination consists of two components: a basic component and a specialization component.

Basic Component. A formal written examination covering basic professional competencies is required. The purpose of the comprehensive examination is to demonstrate understanding of library and information science as a totality. The examination does not cover the basic professional competencies individually but deals with the field in a unified form. Students may sit for the written examination after completion of three quarters of academic residency provided that (1) all outstanding entrance requirements are satisfied, (2) they have completed the five core courses and the required research methods course at the end of the quarter in which the examination is taken, (3) nine courses toward the degree (not including entrance requirements) have been completed by the end of the quarter in which the examination is taken, and (4) they are in good academic standing.

Specialization Component. A major paper produced in an elective course, normally in the area of specialization, is required. A grade of B or better must be earned in the course. The same course may not be used to satisfy both the paper and the research methods requirement.

Thesis Plan

Students under the thesis plan must submit a thesis reporting on results of their original investigation of a problem. While the problem may be one of only limited scope, the thesis must show a significant style, organization, and depth of understanding of the subject.

Students indicate their interest in this plan by the end of Spring Quarter of the first year. If the thesis option (Plan I) is approved, a thesis committee of at least three faculty members is established. Most students complete 12 units of related coursework under the direction of the committee. The committee approves the subject and plan of the thesis, provides guidance in research, and approves the completed manuscript. Approval must be unanimous among committee members. After acceptance of the thesis, there is an oral examination on the thesis.

There is no written examination under the thesis plan.

Post-M.L.I.S. Certificate of Specialization

Admission

The Post-M.L.I.S. Certificate of Specialization is designed for holders of the M.L.S. or M.L.I.S. degree who either (1) want to redirect their careers and need the structure of a nine-course program and specialization paper to accomplish that, (2) want to update knowledge and skills across the discipline and require the structure of a nine-course program and specialization paper to accomplish those goals, or (3) recently graduated from a less comprehensive M.L.I.S. or M.L.S. degree program than that offered by UCLA and did not have the opportunity to specialize.

Applicants should hold a master's degree from a program accredited by the American Library Association. The committee may offer admission to (1) applicants holding the master's degree in library and information science from foreign countries when the degree has been evaluated by the Graduate Division as a bona fide master's degree and (2) applicants who attended unaccredited programs if documentation supports admission despite the lack of a degree from an accredited program.

Meeting the specified requirements for a field of specialization does not automatically assure admission to the program. Part-time enrollment is encouraged to provide flexibility for the working information professional. Opportunities for relevant coursework outside the department and internships, both on and off campus, are available.

Areas of Study

The program meets the need for specialized training in various areas of information policy, information access, information systems, libraries and other information institutions, and information organization, as well as research competence. Further specialization within these fields is possible.

Course Requirements

The course program may begin in any quarter of the academic year. If students are admitted for a preliminary quarter to complete prerequisite courses, that quarter is not counted in the minimum residence requirements.

A minimum of nine courses (100, 200, 400, and 500 series) must be completed in the Department of Information Studies and other departments of the University. A research paper, bibliographical study, or literature survey appropriate for publication in a professional or scholarly journal or as a separate paper must be completed by the final quarter of study, usually in connection with enrollment in Information Studies 596. The specialization paper or project is required even if students have an advanced academic degree in which a thesis or dissertation was required, and the paper or project must be approved by the faculty adviser.

Comprehensive Examination Plan

Consult the department.

Thesis Plan

None.

Doctoral Degree

Admission

Students are admitted to the program leading to the Ph.D. degree in Library and Information Studies in Fall Quarter only. They may enter with the M.L.S. or M.L.I.S. degree, other advanced degree, or directly from the bachelor's degree. If the prior graduate degree does not include coursework equivalent to the core identified for the M.L.I.S. program, applicants must complete the core after admission.

In addition to Graduate Division requirements and application procedures, the department requires satisfaction of the following entrance requirements:

- (1) A statistics requirement, satisfied by completing a college-level course with a minimum grade of C.
- (2) A computer programming requirement, met either by completing a college-level course with a minimum grade of C or by passing a proficiency examination administered by the department (most standard languages such as BASIC, C, COBOL, FORTRAN, or PASCAL are acceptable, as is a college-level course in the use of data management systems such as dBASE, INMAGIC, or PARADOX).
- (3) A statement of purpose which identifies the applicant's proposed area of specialization,

accompanied by appropriate evidence of qualifications for pursuing a doctoral program.

(4) Graduate Record Examination (GRE) scores taken within the last five years. There is no minimum score for the GRE, but high scores are regarded favorably. Admitted students typically score over 1,100.

(5) In cases where the Test of English as a Foreign Language (TOEFL) and the Test of Written English (TWE) are required, the department expects a minimum score of 550 on the TOEFL and 4.0 on the TWE. Only in exceptional cases are applicants recommended for provisional admission who do not meet the minimum scores; in such cases, strong evidence of competency in English (such as a high verbal GRE score) must be provided.

(6) Evidence of research and writing such as published work, master's thesis, or two research papers written in English.

(7) Three letters of recommendation.

(8) Favorable consideration may be given to applicants who have made distinguished contributions to the profession while working as a practicing professional, for instance in publications and/or work with professional societies.

(9) A personal interview is required. The committee seeks evidence of an appreciation of research and knowledge of potential research topics. The committee is particularly interested in the applicant's commitment to a career in library and information science education and research, signs of originality and inquisitiveness, and good communication skills.

Major Fields or Subdisciplines

Students are expected to specialize in a subfield in one of three major areas of the curriculum: information storage and retrieval systems; information seeking and use; policies and issues in library and information science.

Course Requirements

A minimum of 18 to 21 courses, depending on the student's previous experience and coursework, is required in the Ph.D. program.

Core Courses. The four required core courses are Information Studies 213, 214, 215, 291.

Specialization Courses. Students are required to take at least three courses in their chosen area of specialization. Courses should be chosen with theoretical/research content appropriate to the doctoral level.

Methods Courses. Three graduate-level methods courses are required beyond Information Studies 291. Courses should be chosen that are coherent and fit the student's research interests (e.g., a series of quantitative, qualitative/ethnographic, or historical methods courses). Methods courses may be taken within the Graduate School of Education and Information Studies or in another department or unit as appropriate.

Doctoral Seminars. Three advanced doctoral seminars are required, one in each area of the

curriculum as listed above under Major Fields (Information Studies 273, 274, and 275).

Cognate Courses. Three graduate-level courses are required to be taken as a cognate outside the department. Not all courses must be taken in a single discipline; however, together the courses should directly address the student's area of research. The student must prepare a proposal for the cognate early in the program, to be approved by the adviser and the Department Doctoral Program Committee.

Additional Requirements. In addition to the course requirements listed above, doctoral students are required to participate in the doctoral research colloquium and a research apprenticeship, and to be reviewed annually by the Doctoral Program committee, each quarter, until advancement to candidacy.

Written and Oral Qualifying Examinations

Students are required to pass written qualifying examinations in each of the three areas of study listed above. One of the areas is designated by the student as the major examination area or specialization, for which an examination is prepared for the individual student; the other two are minor areas for which students take standardized examinations. The standardized (minor) written qualifying examinations are scheduled twice a year, in January and April; students must take the major examination in the same quarter as the minor examinations. Students who fail one of the three area examinations may repeat that area examination; if two area examinations are failed, students must repeat the entire examination. Students may not take the examinations more than twice.

After passing the written qualifying examinations, students are required to pass the University Oral Qualifying Examination, which is based on the oral defense of the dissertation proposal. The dissertation proposal and oral defense should be completed within one year after passing the written examinations.

The oral examination covers the significance of the chosen topic of research, the methodology and feasibility of the research, and the depth of the student's knowledge in the specific field of the dissertation research.

Information Studies

Upper Division Courses

100. Perspectives on Literacy. (4) Lecture, two hours; discussion, two hours. Designed for sophomores/juniors/seniors. Open to M.L.I.S. students and to graduate students from other schools/departments. Interdisciplinary introduction to literacy as a historical, social, and political issue. Topics include culture and literacy, historical development of literate societies, social definitions of illiteracy, literacy campaigns, literacy as a national and local policy issue. Letter grading.

110. Information Resources and Libraries. (4) Lecture, one hour; discussion, two hours; laboratory, one hour. Designed for sophomores/juniors/seniors. Not open for credit to M.L.I.S. students. Introduction to bibliographic and information resources and relevant research methodology, covering both general and specialized materials. Designed to facilitate knowledgeable use of libraries and efficient retrieval of information. Some sections focus on specific subject areas (such as science and technology). P/NP or letter grading.

111A-M111E. Ethnic Groups and Their Bibliographies. (4 each) Lecture, four hours. Introduction to bibliographical and research tools and methods for students with interests in ethnic groups. Sections on other ethnic groups may be added. Offered in collaboration with the several centers for ethnic studies. May not be repeated for credit. P/NP or letter grading. **111A.** American Indian History and Culture; **111B.** African American History and Culture; **111C.** Latino History and Culture; **111D.** Asian American History and Culture; **M111E.** Jewish History and Culture. (Same as Jewish Studies M111E.)

182. Records and Information Resources Management. (4) Lecture, three hours. Introduction to records and information resources management in corporate, government, and other organizational settings, including analysis of organizational information flow, classification and filing systems, records retention scheduling, records protection and security, reprographics and image management technology, and litigation support. Letter grading.

Graduate Courses

200. Information in Society. (4) Lecture, two hours; discussion, two hours. Examination of processes by which information and knowledge are created, integrated, disseminated, organized, used, and preserved. Topics include history of communication technologies, evolution of literacy, development of information professions, and social issues related to information access. Letter grading.

201. Information Structures. (4) Lecture, three hours; discussion, one hour. Required core course. Introduction to various systems and tools used to organize materials and provide access to them, with emphasis on generic concepts of organization, classification, hierarchy, arrangement, and display of records. Provides background for further studies in cataloging, reference, information retrieval, and database management. Letter grading.

203. Design of Library and Information Services. (4) Lecture, two hours; discussion, two hours. Principles and methods for planning and designing user-driven library and information services. Principles and methods for assessing information needs of designated populations and for designing services that meet those needs. Letter grading.

204. Introduction to Information Technology. (4) Lecture, four hours. Requisite: course 201. Introduction to theories and principles of information technologies. Topics include social issues of information technologies and design and development of information systems. Background for further studies in information retrieval and design and maintenance of information systems. S/U or letter grading.

205. Historical Methodology of Library and Information Science. (4) Lecture, four hours. Requisite: course 200. Introduction to historical research as it relates to library and information science. Identification of key primary and secondary source material for writing history in the field. Critical analysis of selected histories of various areas in the profession. Problem-oriented approach. Letter grading.

207. International Issues and Comparative Research in Library and Information Science. (4) Lecture, four hours. History and development of international organizations and programs in library and information science. Identification of key issues in international exchange of information. Introduction to comparative method as procedure for study and research. Letter grading.

208. Development of Cultural Information Sources Using Digital Multimedia. (4) Lecture, two hours; laboratory, two hours. Overview of technologies, techniques, and principles underlying development and packaging of cultural information resources into digital multimedia such as digital libraries, World Wide Web homepages, and CD-ROMs, as well as user, policy, presentation, motivation, and evaluation considerations. Letter grading.

210. Seminar: Descriptive and Bibliographical Cataloging. (4) Seminar, four hours. Requisites: courses 410, 411. Specialized studies in selected areas of descriptive and bibliographical cataloging (e.g., purposes, principles, instructional development, potentialities of automation). May be repeated once. S/U or letter grading.

211. Seminar: Subject Control of Library Materials. (4) Seminar, four hours. Requisites: courses 410, 411. Study of selected problems in design and use of verbal subject headings and classification systems. Manual and mechanized systems. May be repeated once. S/U or letter grading.

213. Proseminar: Information Storage and Retrieval. (4) Seminar, three hours. Designed for Ph.D. students. Introduction to principles of information organization, theoretical models for organization and retrieval, and current research in information system design and evaluation, including experimental systems. Letter grading.

214. Proseminar: Information Policy and Issues. (4) Seminar, three hours. Designed for Ph.D. students. Introduction to political, economic, legal, and social issues affecting information and institutions, including relevant social theory, historical scholarship, and analytical methods. Introduction to policy-making and players/stakes involved in information creation and use. Letter grading.

215. Proseminar: Information Seeking and Use. (4) Seminar, three hours. Designed for Ph.D. students. Introduction to cognitive, affective, and behavioral factors affecting information seeking at individual and social levels; current theory and research on searching, navigation, and information system use; research literature on information seeking and use. Letter grading.

220. Information Access. (4) Lecture, four hours. Requisites: courses 200, 201. Provides fundamental knowledge and skills enabling information professionals to link users with information. Overview of structure of literature in different fields; information-seeking behavior of user groups; communication with users; development of search strategies using print and electronic sources. Letter grading.

221. Bibliography of Science and Engineering. (4) Lecture, four hours. Requisite: course 220. Patterns of communication and flow of information among scientists and engineers. Scientific and technical literature, with emphasis on on-line sources, special types of publications, research material, reference and bibliographical aids to the natural sciences and engineering. Letter grading.

222. Bibliography of the Health and Life Sciences. (4) Lecture, four hours. Requisite: course 220. Literature of the medical and life sciences. Information needs of health professionals. Emphasis on on-line sources, special types of publications, reference and bibliographic aids to the health sciences. Letter grading.

223. Literature of the Social Sciences. (4) Seminar, four hours. Requisite: course 220. Seminar on literature of the social sciences, including review of classics in the various fields, monumental source collections, periodicals, bibliographies, catalogs, indexes, abstracts, bibliographic and nonbibliographic databases, etc. Trends in scholarly and popular writing. Interdisciplinary nature of the literature. Letter grading.

224. Literature of the Humanities and Fine Arts. (4) Seminar, four hours. Requisite: course 220. Seminar on literature of the humanities and fine arts, including review of classics in the various fields, comparisons of editions, periodicals, bibliographical apparatus, and reviewing media. Trends in scholarly and popular writing. Letter grading.

M225. Latin American Research Resources. (4) (Same as History M265 and Latin American Studies M200.) Discussion, three hours. General and specialized materials in fields concerned with Latin American studies. Library research techniques provide experience and competency required for future bibliographic and research sophistication as basis for enhanced research results. S/U or letter grading.

226. General Reference Work. (4) Lecture, four hours. Requisite: course 220. General reference materials (not specific to subject access), with advanced work in reference process and in cognitive and behavioral aspects of inquirers and expert reference librarians. Letter grading.

M229B. African Bibliography and Research Methods. (4) (Same as African Area Studies M229B.) Discussion, four hours. Problems and techniques of research methodologies related to African studies. Emphasis on relevant basic and specialized reference materials, using full range of available information resources, including library collections of books, serials, and computerized databases. S/U or letter grading.

M229C. Introduction to Slavic Bibliography. (2) (Same as Slavic M229.) Lecture, two hours. Introduction to Slavic and East European bibliography for the humanities and social sciences. Emphasis to be determined by requirements and background of enrolled students. Topics include relevant library terminology and concepts; survey of languages and transliteration systems; acquisition of Slavic and East European library materials; Slavic and East European scholarship in the West; relevant reference sources, archival resources, and research methods; survey of on-line databases; compilation of bibliographies. S/U grading.

230. History of Publishing and the Book Trade. (4) Lecture, four hours. Requisite: course 200. Publishing and book trade history, with particular reference to libraries and book collecting, changing aspects of book production and distribution within the setting of cultural history. Letter grading.

240. Principles of Information Systems Analysis and Design. (4) Discussion, four hours. Theories and principles of special systems development, including determination of requirements, technical design and evaluation, and internal organization. S/U or letter grading.

241. Measurement and Evaluation of Information Systems and Services. (4) Lecture, two hours; discussion, two hours. Preparation: one research methods course. Recommended: one library automation course. Information systems and services from points of view of their cost and effectiveness in meeting desired objectives. Review of principles of costing. Study of literature in which measures have been developed to evaluate effectiveness of document collections, reference and information retrieval services, document delivery systems, networking, and technical services, including circulation, acquisitions, and document description. S/U or letter grading.

242. Information Retrieval Systems. (4) Lecture, four hours. Requisites: courses 201, 220. Survey of methods of file organization, retrieval techniques, and search strategies in control of information in computerized form. Letter grading.

243. Human/Computer Interaction. (4) Lecture, four hours. Preparation: one programming course, one inferential statistics course. Survey of social, behavioral, design, and evaluation issues in human/computer interaction, with readings from several disciplines. Extensive use of technology demonstrations and class discussions. Recommended for students in any discipline involved in design or implementation of information technologies. Letter grading.

245. Database Management Systems. (4) Lecture, three hours; laboratory, two hours. Theories, principles, and practicalities of database systems, including data models, retrieval mechanisms, evaluation methods, and storage, efficiency, and security considerations. S/U or letter grading.

- 246. Social Aspects of Information-Oriented Society. (4)** Lecture, four hours. Analysis of social evolution of information-oriented societies. Historical factors and current trends explored through discussion of selected international and domestic issues. Implications for information policy. S/U or letter grading.
- 247. User-Centered Design of Information Retrieval Systems. (4)** Lecture, two hours; discussion, two hours. Requisites: courses 201, 220. Design implications of interaction between users and the features of automated information systems and interfaces that are specific to the information-seeking process. Emphasis on search strategy and subject access through use of thesauri and other vocabularies. Letter grading.
- 249. Seminar: Special Topics in Information Science. (4)** Seminar, four hours. Preparation: at least one course from 242, 243, 247, 280, 405. Requisites: courses 200, 201. Content varies from term to term to allow emphasis on specialized topics such as vocabulary control, file design, indexing, classification, text processing, measurement of relevance, evaluation of information systems, and social and policy issues related to information technology and services. Letter grading.
- 253. Contemporary Children's Literature. (4)** Lecture, four hours. Reading interests and correlative types of literature surveyed with reference to growth and development of children. Emphasis on role of the librarian in responding to needs and abilities of children through individualized reading guidance. S/U or letter grading.
- 260. Historical Bibliography. (4)** Lecture, four hours. Requisites: courses 200, 402. History of letterpress formats (books, broadsides, magazines, newspapers, some music, etc.) as well as materials and methods of production, distribution, and readership in their social, political, and economic context. Emphasis varies but is usually on developments prior to 1800. Attention to historiography of the field, including antiquarian, Anglo-American, and *histoire du livre* approaches. Letter grading.
- 261. Analytical Bibliography. (4)** Lecture, four hours. The book as a physical object and its relationship to transmission of the text. History and methods of analytical bibliography, with particular emphasis on hand-press books. Printing processes as related to bibliography and librarianship. Discussions, demonstrations, and experiments in design, composition, and press-work. Letter grading.
- 271. Seminar: Intellectual Freedom and Information Policy Issues. (4)** Seminar, four hours. Investigation of concept of intellectual freedom, information policy issues, civil liberties and civil rights, censorship, and other restraints on access to information. Letter grading.
- 272. Research Seminar: Library and Information Science. (1 to 2)** Seminar, one to two hours. Designed for Ph.D. students. Emphasis on recent contributions to theory, research, and methodology. May be repeated for credit. S/U grading.
- 273. Doctoral Seminar: Information Storage and Retrieval Systems. (4)** Seminar, four hours. Designed for Ph.D. students. Intellectual principles for organization of information, including principles for design of systems for acquiring, organizing, and retrieving information. Also includes system-specific user studies to extent that design of information systems is predicated on their evaluation and use. S/U or letter grading.
- 274. Doctoral Seminar: Policies and Issues in Library and Information Science. (4)** Seminar, four hours. Designed for Ph.D. students. Examination of social, political, and economic influences in development of library and information science and management of information organizations and resources. S/U or letter grading.
- 275. Doctoral Seminar: Information Seeking and Use. (4)** Seminar, four hours. Designed for Ph.D. students. Examination of behavioral and cognitive aspects of inquirer's information needs and uses, including inquirer's characteristics, information problems, psychological needs, and uses of information and information technologies, and aspects of question negotiation. S/U or letter grading.
- 280. Information-Seeking Behavior. (4)** Lecture, three hours; discussion, one hour. Study of factors and influences, both individual and social, associated with human beings needing, using, and acting on information. Topics include information theory, human information processing, information flow among social and occupational groups, and research on information needs and uses. S/U or letter grading.
- 281. Information Resources for Business. (4)** Lecture, four hours. Requisite: course 220. Introduction to information needs of the business world. Business guides, encyclopedias, directories, yearbooks, indexes, loose-leaf services, government publications, databases, and other sources of business literature. Letter grading.
- 282. Management of Digital Records. (4)** Lecture, three hours. Introduction to long-term management of digital administrative, information, communications, imaging, or research systems and records. Topics include electronic recordkeeping, enterprise and risk management, systems analysis and design, metadata development, data preservation, and technological standards and policy development. Letter grading.
- 283. Legal Research and Bibliography. (4)** Lecture, four hours. Introduction to source materials of the law, with emphasis on primary authority, but covering as well secondary authority, and indexes and finding aids used to gain access to legal information. Letter grading.
- 284. Seminar: Legal Informatics. (4)** Seminar, four hours. Information problems of legal profession, including history of legal information systems, relationship between cognitive authority and legal authority, bibliometrics of law, value-added processes for legal information, and techniques and impact of new legal research technology. Letter grading.
- 285. Scholarly Communication and Bibliometrics. (4)** Lecture, four hours. Preparation: one inferential statistics course. Survey of current theory, method, and empirical studies at intersection of scholarly communication and bibliometrics, seeking to understand flow of ideas through published record, whether in print, electronic form, or other media. Letter grading.
- 286. Seminar: Information Access. (4)** Seminar, four hours. Preparation: one course from 221, 223, 224, 226, 281, 283, 425, 473. Requisite: course 220. Discussion of policies and issues related to basic and advanced reference materials, reference process, and psychological aspects of inquirers and expert reference librarians. Letter grading.
- 287. Seminar: Special Issues in Library and Information Science. (2 to 4)** Seminar, two to four hours. Identification, analysis, and discussion of critical intellectual, social, and technological issues facing the profession. Topics may include (but not limited to) expert systems, literacy, electronic networks, youth at risk, information literacy, historical bibliography, preservation of electronic media, etc. May be repeated with topic change. Letter grading.
- 288. Cyberspace Law and Policy. (4)** Lecture, four hours. Legal and policy concerns of networked technologies from international perspective. Emphasis on jurisdictional issues, freedom of expression, intellectual property, privacy, security, equity, and electronic commerce in online environment. S/U or letter grading.
- 289. Information Services in Culturally Diverse Communities. (4)** Lecture, four hours. Issues in provision of information services in a multiethnic and multilingual society. Understanding role of information institutions in promoting cultural diversity and preserving ethnic heritage. Letter grading.
- 290. Research Methodology. (4)** Lecture, four hours. Role of research in bibliography, librarianship, and information science. Identification and design of research problems. Historical, statistical, analytical, and descriptive techniques. S/U or letter grading.
- 291. Introduction to Research Design and Methodology. (4)** Seminar, three hours. Designed for Ph.D. students. Introduction to research traditions in library and information science: quantitative/qualitative social science methods, ethnographic/field approaches, and historiography/critical approaches. Epistemological foundations of research, formulating research questions, and designing appropriate research studies. Letter grading.
- 375. Teaching Apprentice Practicum. (1 to 4)** Tutorial, to be arranged. Preparation: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.
- 400. Professional Development and Portfolio Design. (2 to 4)** Lecture, two hours; discussion, two hours. Preparation: completion of library and information science core courses. Drawing on literature from many fields, exploration of issues related to professional development, such as career planning, continuing education, mentoring, and reflective practice; students also engage in process of guided portfolio design for M.L.I.S. degree. S/U grading.
- 402. Fundamentals of Bibliography. (4)** Lecture, four hours. Requisite: course 200. Organization, control, and elements of bibliographical apparatus, new techniques and tools, theory, methods, and trends in bibliographical research in relationship to librarianship. Development and fundamentals of several branches of bibliography: enumerative (or systematic), physical (analytical or critical, descriptive). Letter grading.
- 405. Automation of Library Processes. (4)** Lecture, four hours. Overview of major components of library automation: circulation control, acquisitions and serials, public access information systems, and data conversion. Relationships among various automation entities, including internal library automation, networks and vendors (such as bibliographic utilities, regional networks, and on-line services), and automation of parent organizations (universities, municipalities, corporations, and government agencies). Developments in standards for information processing and new information technologies. Letter grading.
- 410. Descriptive Cataloging. (4)** Lecture, four hours. Entry and description of library materials. Constitution, structure, and form of the library catalog. Cataloging services, tools, and procedures. Cataloging rules and their application. S/U or letter grading.
- 411. Introduction to Subject Access: Alphabetic-Subject and Systematic Indexing. (4)** Lecture/discussion, four hours. Requisite: course 410. Overview of major alphabetic-subject and systematic indexing languages and their use in manual and on-line environments, including theory and application of Library of Congress subject headings and of Dewey decimal and Library of Congress classifications. S/U or letter grading.
- 412. Cataloging and Classification of Nonbook Materials. (4)** Lecture, four hours. Requisites: courses 410, 411. Problems in cataloging and classification of selected nonbook materials (e.g., films, maps, pictorial works, sound recordings) as separate collections and integrated collections. S/U or letter grading.
- 414. Indexing and Thesaurus Construction. (4)** Lecture, four hours. Principles of design and methods of construction of thesauri. Evaluation and overview of thesauri used in manual and on-line environments. Basic professional techniques for indexing a variety of types of materials and for preparing informative and indicative abstracts. Letter grading.

425. Computer-Based Information Resources (On-Line Searching). (4) Lecture, four hours. Requisite: course 220. Emphasis on use of reference and resource databases and different vendor systems. File structure and hardware requirements. Analyses of information needs and investigation of databases addressing those needs. Letter grading.

426. User Education/Bibliographic Instruction: Theory and Technique. (4) Lecture, four hours. History, theory, methods, and materials of user education/bibliographic instruction in libraries and other information retrieval environments. Examination of a variety of user education/bibliographic instruction theories and methodologies, including overview of planning and administration. Identification of problems in user education/bibliographic instruction. Applications of methods of teaching use of libraries and information resources. S/U or letter grading.

430. Collection Development and Acquisition of Library Materials. (4) Lecture, four hours. Background of publishing and the book trade (new and antiquarian) pertinent to collection development in public, school, academic, and special libraries. Theory and practice of collection development and management. Organization and administration of acquisitions departments. S/U or letter grading.

441. Management Theory and Practice for Information Professionals. (4) Lecture, two hours; discussion, two hours. Principles and practice of management in all types of organizations where information professionals work. Letter grading.

442. Library Personnel Administration. (4) Lecture, four hours. Basic principles of personnel management. Survey of current personnel practices in libraries; how basic principles apply or need to be modified to fit the library setting. S/U or letter grading.

446. Library Services and Literature for Youth. (4) Lecture, four hours. Overview of literature and programs which are of interest to young adults (seventh grade and above). Discussion of special problems in working with young people and psychology of the teenager. S/U or letter grading.

461. College, University, and Research Libraries. (4) Lecture, four hours. Organization, administration, collections, facilities, finances, and problems of college and university libraries and their relationships within institutions of which they are a part. Functions of research libraries and work of their staffs in serving scholars. S/U or letter grading.

463. Public Libraries. (4) Lecture, four hours. Government, organization, and administration of municipal, county, and regional public libraries; developments in changing patterns of public library service. S/U or letter grading.

465. Library Services and Programs for Children. (4) Lecture, two hours; discussion, two hours. Theory and practice of service to children in public libraries. Overview of professional library service to children aged 14 and under; provides opportunities for students to gain experience in particular skills needed to provide that service. Letter grading.

466. Storytelling. (4) Lecture, two hours; demonstration, two hours. Theory and practice of telling stories to children and adults in public and school libraries. S/U or letter grading.

470. Special Libraries and Information Centers. (4) Lecture, four hours. Organization, administration, collections, facilities, finances, and problems of special libraries and of special collections within general libraries. Methods of handling nonbook materials. Current trends in documentation and mechanization. S/U or letter grading.

471. Health and Life Sciences Libraries. (4) Lecture, four hours. Requisite or corequisite: course 441. Organization, administration, services, and problems of health and life sciences libraries; relationships with institutions of which they are a part and with the community. Letter grading.

473. Government Information. (4) Lecture, four hours. Introduction to nature and scope of government information promulgated by the federal government, as well as by state, municipal, international, and foreign governments. Problem-oriented approach. S/U or letter grading.

485. American Archives and Manuscripts. (4) Lecture, four hours. Identification, description, subject analysis, and organization of records contained in archives and manuscript collections. Administration. User requirements. Problems of acquisition, legal title, literary property, preservation, accessibility, and use. S/U or letter grading.

486. Issues and Problems in Preservation of Library Materials. (4) Lecture, four hours. Introduction to fields of library conservation and preservation, with emphasis on preservation administration. Letter grading.

488. Seminar: Advanced Issues in Archival Science. (4) Seminar, three hours. Requisite: course 485. In-depth examination of theoretical issues and contemporary problems facing the archival profession. Topics revolve each term and include development and role of archival appraisal, management of audiovisual materials, and management of medical, scientific, and technological documentation. Letter grading.

491. Interpersonal Communication Issues in Library Systems. (4) Lecture, four hours. Examination of interpersonal communication patterns in library management and staff relations, in resource sharing, and in providing information services. Emphasis on relationships within an organizational environment and on effective communication styles in decision making, managing conflict, and implementing change. S/U or letter grading.

497. Fieldwork in Libraries or Information Organizations (4 or 8 units). Fieldwork, to be arranged. Supervised field experience in approved library or information organization. Concentration must be on managerial or other professional problems of the site. Students spend full time in the field for most of the period. S/U or letter grading.

498. Internship. (4) Discussion, to be arranged. Supervised professional training in a library or information center approved by internship coordinator. Minimum of 120 hours per term. May be repeated twice. S/U or letter grading.

596. Directed Individual Study or Research. (2 to 8) Tutorial, to be arranged. Directed special studies in fields of bibliography, librarianship, and information science. Variable conference time depending on nature of study or complexity of research. S/U or letter grading.

597. Directed Studies for Ph.D. Qualifying Examinations. (2 to 12) Tutorial, to be arranged. S/U or letter grading.

598. M.L.I.S. Thesis Research and Writing. (2 to 8) Tutorial, to be arranged. Designed for graduate library and information science students. Supervised independent research for candidates in M.L.I.S. thesis option. S/U or letter grading.

599. Ph.D. Research and Writing. (2 to 12) Tutorial, to be arranged. S/U or letter grading.

Scope and Objectives

The UCLA Institute of the Environment (IoE) offers multidisciplinary academic programs that address the full complexity of today's environmental problems. The IoE seeks to enhance the educational experience of students by introducing them to virtually every aspect of the environment. The mission is to explore the full complexity of today's environmental problems on a local, regional, and global scale

INSTITUTE OF THE ENVIRONMENT

College of Letters and Science

UCLA
1652 Hershey Hall
Box 951496
Los Angeles, CA 90095-1496
(310) 825-5008
fax: (310) 825-9663
<http://www.ioe.ucla.edu>

through innovative, integrative, multidisciplinary research and outreach programs.

Los Angeles is often described as “the world in microcosm.” As such, it provides an unparalleled laboratory in which to carry out detailed investigations of a host of complex socioenvironmental issues. UCLA is ideally situated to develop and implement new solutions to vexing problems related to the quality of life. To this end, the Institute of the Environment has been established as a new and unique academic unit devoted to interdisciplinary research and teaching related to environmental issues. The IoE is composed of faculty from a broad range of disciplines — the sciences, public policy, engineering, law, business, public health — working together to provide answers to complex environmental problems. As one of the world’s foremost research universities, UCLA is already participating in a wide range of research focusing on the environment. The Institute of the Environment seeks to coordinate and expand these studies by bringing new knowledge to the classroom and by reaching out to the community.

Students are able to augment their classroom experience with participation in the institute’s diverse research programs, including fieldwork at facilities such as the UCLA Stunt Ranch Santa Monica Mountains Reserve and the UCLA Marine Science Center. These opportunities offer students valuable hands-on experience in land, air, and water research.

General Education Cluster

The Institute of the Environment sponsors Environment/General Education Clusters M1A-M1B-M1C on the global environment. The cluster format is a series of three integrated courses taught over the Fall, Winter, and Spring Quarters. The Fall and Winter Quarter courses consist of lectures and discussions. The Spring Quarter consists of seminars and field trips in which students explore specialized environmental topics such as the history of environmental thought, environmental policy, and feeding the Earth’s human population. Each course carries five units of academic credit and satisfies general education credit for four courses.

Environment

Lower Division Courses

M1A-M1B-M1C. Global Environment. (5-5-5) (Formerly numbered 1A-1B-1C.) (Same as GE Clusters M1A-M1B-M1C.) Course M1A is enforced requisite to M1B, which is enforced requisite to M1C. Letter grading. **M1A-M1B.** Multidisciplinary Perspective I, II. Lecture, three hours; discussion, two hours. Human effects on Earth’s ecosystem and social and technological solutions to environmental pollution and overpopulation. History and ecology in lectures; laboratory exercises included in discussions. **M1C.** Special Topics. Seminar, three hours. Small groups address environmental topics like smog, deforestation, and recycling. Exercises include field trips and oceanographic cruise.

Upper Division Course

M127. Soils and Environment. (5) (Same as Geography M127 and Organismic Biology M127.) Lecture, five hours; discussion, one hour; field trips. Requisites: Chemistry 14A and 14B/14BL, or 20A, 20B, 20L, and 30L. General treatment of soils and environmental implications: soil development, morphology, and worldwide distribution of soil orders; physical, chemical, hydrologic, and biological properties; water use, erosion, and pollution; management of soils as related to plant growth and distribution. Letter grading.

Scope and Objectives

The Integrated Manufacturing Engineering (IME) Program is an interdepartmental program based in the Mechanical and Aerospace Engineering Department. The main purpose is to educate future manufacturing engineers.

The curriculum is centered around an integrated approach to product development, while clean environment, agility, and cost-effective-

ness are emphasized. Instruction is computer-aided, and teaching/learning laboratories are used to provide students with hands-on experience in advanced manufacturing technologies such as rapid prototyping, robotics, automated material handling, new manufacturing processes, and production planning and scheduling. Team teaching is employed to offer a balanced understanding of principles and methods required.

Graduate Study

The following constitutes introductory information regarding graduate degree programs and is based on the 1998-99 edition of *Program Requirements for UCLA Graduate Degrees*. Complete, annual editions of *Program Requirements* are available (listed under "Publications") on the Graduate Division website at <http://www.gdnet.ucla.edu>. Students are subject to the degree requirements as published in *Program Requirements* for the year in which they matriculate.

Master's Degree

The Integrated Manufacturing and Engineering Program offers the Master of Engineering (M.Engr.) degree in Integrated Manufacturing Engineering.

Admission

The M.Engr. degree program is an interdepartmental program within the Departments of Electrical Engineering, Materials Science and Engineering, and Mechanical and Aerospace Engineering.

In addition to meeting the requirements of the Graduate Division, applicants to the M.Engr. program are required to take the General Test of the Graduate Record Examination (GRE). Applicants may be admitted to the program through any one of the three departments listed above.

More information may be obtained at <http://ime.ucla.edu> or by contacting the program coordinator, Integrated Manufacturing and Engineering, UCLA, 48-121 Engineering IV, BOX 951597, Los Angeles, 90095-1597.

Areas of Study

Consult the department.

Course Requirements

A total of 12 courses is required, including six 400-level core courses (Electrical Engineering 475C, Materials Science and Engineering 474A, 475A, Mechanical and Aerospace Engineering 474B, 474C, 475B), three electives (to be chosen in consultation with the faculty adviser), and three seminar courses (three quarters of Mechanical and Aerospace Engineering 476), which total 39 units.

Comprehensive Examination Plan

Group Project. Students must participate in a group project through enrollment in Mechanical and Aerospace Engineering 478 for a total

of 11 units. The group size is approximately three students.

Thesis Plan

None.

Scope and Objectives

The undergraduate International Development Studies major aims to provide a liberal education in relation to the critical issues, experiences, and problems common to developing countries from a global or theme-oriented perspective. It is designed for students who are interested in careers related to international development in academia, public or private agencies, or nonprofit organizations.

Undergraduate Study

International Development Studies B.A.

Preparation for the Major

No specific courses are required as preparation for the major, but students should have some beginning experience in the social sciences at the college level and be in good academic standing.

The Major

Required: Fifty-six units of upper division courses (including International Development Studies 100A-M100B and Economics 110 or 111 or 112), taken for a letter grade, and the foreign language requirement. (For the social statistics and methodology requirement, some lower division courses are accepted in place of upper division courses.) Courses applied toward the major may be selected from the list in item 5 below. Substitutions may be made only with consent of the faculty adviser.

The major consists of six parts (courses marked with an asterisk have requisites):

- (1) International Development Studies 100A-M100B.
- (2) Economics *110 or *111 or *112.
- (3) Four core courses (two must be from the same discipline) from Anthropology *130, *150, *161, Economics *112, *191, Geography *M128, 133, Political Science *124, *167A, Sociology 173, *183, 184.
- (4) One course in social statistics and methodology from Anthropology 139, *180, 186, Biostatistics *100A, Economics M40, Geography M40, *171, Political Science 6, *102, Sociology *M18, 104, *112, *113, 211A, *211B, Statistics 10.
- (5) Twenty-four units of elective courses, including at least 16 units to be divided equally between two of the world's developing areas (e.g., sub-Saharan Africa, Middle East/North Africa, East Asia/East-Central Asia, South and Southeast Asia/Pacific Islands, Eastern Europe/West-Central Asia, Latin America/Caribbean Basin), selected from Anthropology *130, *150, *151, 152, 153, *153P, *M154Q, M155Q, *161, *165, 167, M168, 171, 173Q, 174P, 175R, 175T, *175U, 175V, *175W, 176, 177, Berber 130, Community Health Sciences 132, 200, M236, *280, *434A, Economics *103A through *103Z, *110, *111, *112, *120, *130, *150, *151, *M158, *171, *180, *191,

*192, *286A, *286B, 287A, 287B, Education *M108, C191E, 204B through 204F, 234, 238, *252B, M252C, 253B, 253C, 253D, Epidemiology *415, Film and Television 106C, 112, Geography 110, 121, *122, *124, *M128, 133, 135, 140, 142, *148, *155, 181, 182A, 182B, 184, 185, 186, 187, 190, 230, 234, Health Services *240, History 106A, 106B, 106C, 107A, 107B, 109A, 109B, 110A, 110B, 111A, 111B, 111C, 112A, 112B, 112C, 113, 124A, 124B, 124C, 131A through 131D, 134A, 134B, 144, 165A, 165C, 166, 167A through 167D, 168, *169, 170A, 170C, 171, 172, 173, 174, *175B, *175C, *175E, 176A, 176B, 176C, 177, 178A, 178B, 179A, 179B, 182A, 182B, 183A, 183B, 183C, 184, 188A, 188B, 188C, 189A, 189C, 190A, 190B, 190C, 197 (with counselor approval), International Development Studies *195A, *197, Iranian 169, Jewish Studies 142, Korean *180A, *180B, *180C, Latin American Studies 197, *199, Political Science *124, 130, 151A, 151B, 151C, 154A, 154B, 156A through 156D, 157, 159A, 159B, *167A, *168, *C197A through *C197D, 197W, Sociology 101, *105, 116, 156, 157, 160, *M175, 184, 186, 187, 188, 190, 191, 192, 193, Turkic Languages 170, Urban Planning *CM128, M232A, 232B, *235A, *235B, M236A, 246, 266, M267A, *267B, 269, Women's Studies *M123, *M154Q. Consult the program counselor regarding other possible electives that may be applied toward the major.

(6) Twenty-four quarter units in one modern foreign language or the equivalent in transfer units. Students may also take a proficiency examination administered and evaluated by members of the program faculty (or by outside faculty for languages not familiar to program faculty).

Honors Program

Majors who have completed International Development Studies 100A-M100B and who have a 3.5 grade-point average in all courses offered for the major are eligible to formally apply for the honors program. In addition to completing all courses required for the major, students must take courses 195A-195B-195C, in which they research, write, and present an honors thesis. To receive honors at graduation, students must have at least a 3.5 GPA in courses applied toward the major (including 195A-195B-195C) and an overall GPA of 3.0.

Highest honors are awarded to students who complete the major (including courses 195A-195B-195C) with a 3.75 GPA and who produce an exceptional thesis.

International Development Studies

Upper Division Courses

100A-M100B. Introduction to Development Studies. (4-4) (Formerly numbered Development Studies 100A-M100B.) Seminar, three hours. Two-term seminar for undergraduates designed to examine concepts and issues arising from economic, social, and political change in the Third World. **100A.** Economic Development and Culture Change. Preparation: some beginning experience in social sciences at college level. Requisite: Anthropology 9. **M100B.** Political Economy of Development. (Same as Political Science M197G and Sociology M180.) Designed for juniors/seniors. Analysis of determinants of underdevelopment, with focus on impact of colonialism, foreign investment, and trade, and on political economy.

195A-195B-195C. Directed Studies for Honors. (4-4-4) (Formerly numbered Development Studies 195A-195B-195C.) Preparation: 3.5 grade-point average in courses offered for the major, formal application to honors program. Requisites: courses 100A-M100B. **195A.** Research, discussion, and planning of honors thesis. **195B-195C.** Research, preliminary drafting, and final writing of honors thesis. In Progress grading for course 195B (credit to be given only on completion of course 195C).

197. Special Topics in International Development. (4) Seminar, three hours. Preparation: some beginning experience in social sciences at college level. Lecture/seminar format on selected topics in international development. Course either features visiting instructors in field of development studies or allows program's affiliated faculty to engage specific contemporary issues. May be repeated for credit with topic change.

INTERNATIONAL RELATIONS

College of Letters and Science

UCLA
4256 Bunche Hall
Box 951472
Los Angeles, CA 90095-1472
(310) 825-3862
<http://www.sscnet.ucla.edu/polisci/>

Scope and Objectives

The undergraduate specialization in International Relations can only be taken jointly with a major in Political Science, and all requirements for the Political Science major must be met by or in addition to meeting the requirements of this program. Students completing the program receive a degree with a major in Political Science and specialization in International Relations. The program is designed to serve the needs of (1) students desiring a general education focused on international affairs and (2) students preparing for graduate work in international affairs, whether in a social science or area study.

The program is also beneficial for (1) students planning careers (in business, law, journalism, or library service) with an international empha-

sis and (2) those preparing to teach social sciences in the secondary schools. These students should structure their programs primarily to meet the preparation requirements of the professional school or instructional credential of their choice.

Courses in management and administration, and in oral and written communications, ordinarily increase the career options of students in this program.

International Relations Specialization

Preparation for the Specialization

Required: Political Science 20, 50, and two courses from 10, 30, 40; Anthropology 9 or 60; Economics 1 and 2, 5, or 100; Geography 3 or 5; History 1A-1B-1C or any three courses from 8A, 8B, 8C, 9A, 9C, 9D, 10A, 10B, 11A, 11B; Sociology 1 or 31.

Upper Division Requirements

The Political Science major should be completed as follows: any four upper division political science courses in each of Fields II and IV and two additional courses both in Field I or III.

Other required social sciences courses include one course from Anthropology 161, 165, 167, 171, 173Q, 174P, 175R, 175T, 175U, 177, Sociology 182, 183, 186, 187, 188, 189, 190; two courses from Economics 110, 111, 112, 180, 181A, 181B, 182, 190, 191, 192; one course from Geography 110, 121, 125, M128, 133, 140, 181, 182A, 182B, 183, 184, 185, 186, 187, 190; two courses from History 116A, 116B, 117A, 127A, 127B, 142A, 142B, 148C, 152A, 152B, 168.

Completion of the sixth quarter course (or equivalent as prescribed by the language department), with a grade of C or better, of any modern foreign language is also required. French 6, German 6, Spanish 25, and Russian 6 are most frequently offered in fulfillment of this requirement, but also refer to the offerings listed under African Languages, East Asian Languages and Cultures, Germanic Languages, Italian, Near Eastern Languages and Cultures, and Portuguese. Arabic, Chinese, French, German, Japanese, Russian, and Spanish are the languages of widest career utility in international affairs.

All courses must be taken for a letter grade.

Area Focus

Students are advised but not required to concentrate their political science, geography, history, and language courses so as to achieve broad familiarity with one area, such as Africa, East Asia, Europe, Latin America, the Middle East, South Asia, or Southeast Asia.

For further information, contact the political science undergraduate counselor in the program office.

Scope and Objectives

The undergraduate major in this discipline is called Near Eastern Studies. For details, see the program by that name later in this section.

The designation of the interdepartmental degree program in Islamic Studies is meant to convey the broadest cultural concern with peoples and places influenced by Islam, rather than a narrow approach to Islam as religion alone. Islam as a culture-forming force in history may be studied and understood through the literate sources of Islamic civilization and/

or through systematic observation and examination of behavioral patterns and social relations of Muslim peoples. The commonality of an "idealized" and a "functional" or "practical" Islam does not preclude a multiple number of valid and varied approaches to Islamic studies. The program, with its core emphasis on the major languages of the Islamic Middle East, is intended to provide an internal view of the dynamics of Islamic culture.

The interdepartmental program for the Master of Arts and Ph.D. degrees in Islamic Studies is designed primarily for students desiring to prepare for an academic career. It may, however, be found useful for students seeking a general education and desiring a special emphasis in this particular area or for those who plan to live and work in this area, whose career will be aided by a knowledge of the people, languages, and institutions. (Such a career might be centered on teaching, research, business, engineering, journalism, librarianship, or government service.) Subject to the limitations of the program, the special course of studies is formulated for candidates according to their experience and requirements.

Graduate Study

The following constitutes introductory information regarding graduate degree programs and is based on the 1998-99 edition of *Program Requirements for UCLA Graduate Degrees*. Complete, annual editions of *Program Requirements* are available (listed under "Publications") on the Graduate Division website at <http://www.gdnet.ucla.edu>. Students are subject to the degree requirements as published in *Program Requirements* for the year in which they matriculate.

Master's Degree

The Islamic Studies Program offers the Master of Arts (M.A.) degree in Islamic Studies and participates in a concurrent degree program with the School of Public Health.

Admission

In addition to the general University requirements, a B.A. degree in Near Eastern Studies or in a related field with an emphasis on the Near East is required for admission to the M.A. program. The application deadline is March 1. Applicants are normally expected to have completed the equivalent of Arabic 102A-102B-102C, Iranian 102A-102B-102C, or Turkic Languages 101A-101B-101C at the time of application. In addition, applicants should have completed the equivalent of two years of Near Eastern history (classical and modern); some coursework in Islamic culture and institutions may be applied toward the history requirement. Should there be any deficiencies in these requisites, the requirements must be satisfied by taking the appropriate courses without credit toward the advanced degree.

The Graduate Record Examination (GRE) is required of graduates of American universities

and recommended for overseas applicants. No screening examination is necessary.

A score of 560 on the Test of English as a Foreign Language (TOEFL) is required of all applicants whose native language is not English and who have not attended English-speaking universities.

No special application form is required in addition to the UCLA *Application for Graduate Admission*.

M.P.H./M.A. Islamic Studies

The School of Public Health and the Islamic Studies Program have a concurrent degree program whereby students can work for the M.A. in Islamic Studies and the Master of Public Health. Applicants interested in this concurrent program should write to the Islamic Studies Program and the Student Affairs Office, UCLA School of Public Health.

Areas of Study

Anthropology, Arabic, economics, geography, history, Islamic art history and architecture, music, Persian, political science, sociology, and Turkish.

Course Requirements

A minimum of nine courses is required, five of which must be at the graduate level. Students must take no fewer than four courses on the appropriate level in one Near Eastern language of their choice. Additionally, students must take no fewer than five relevant upper division and graduate-level courses selected from two of the major fields and subdisciplines listed above. The omission of history as one of the fields is approved only in exceptional cases. Eight units of 500-series courses may be applied toward the minimum graduate course requirement and toward the total course requirement, provided the courses are not in the same discipline.

Comprehensive Examination Plan

Four written examinations in the following areas must be passed: (1) any Near Eastern language; (2) the literature of the chosen language; (3) the history of the Near East; and (4) one of the other nonlanguage major fields or subdisciplines listed above. The examinations are constructed by the instructor responsible for each discipline. Reexamination in exceptional cases is determined by the interdepartmental degree committee. The examiner or examiners are appointed by the chair of the interdepartmental degree program.

Thesis Plan

None.

Doctoral Degree

Admission

Students intending to work for the Ph.D. degree in Islamic Studies are normally expected first to fulfill all requirements for the M.A. degree. Students entering the program with an M.A. from another university should have attained a level of preparation in languages, his-

tory, and social sciences equivalent to that required for the M.A. at UCLA. In addition, students are expected to show proficiency in a second Near Eastern language, one of which must be Arabic. Students who have not done so should make up any deficiencies by taking the appropriate courses without credit toward the degree.

The Graduate Record Examination (GRE) is required of graduates of American universities and recommended for overseas applications.

No special application form is required in addition to the *UCLA Application for Graduate Admission*.

Major Fields or Subdisciplines

Anthropology, Arabic, art history, economics, geography, history, music, Persian, political science, Turkish.

Course Requirements

For students entering directly into the Ph.D. program, course requirements are the same for the M.A. Beyond this, advanced courses in two Near Eastern languages, in Near Eastern history, and in one of the social sciences, on specific advisement of the interdepartmental degree program, are taken.

Written and Oral Qualifying Examinations

Written qualifying examinations in four fields are required: two Near Eastern languages and literatures as approved by the advisory committee, the whole range of Near Eastern history, and one of the other nonlanguage major fields or subdisciplines listed above. Reexamination in any field is at the discretion of the doctoral committee in consultation with the chair of the program.

Research proposals, dossiers, research papers, and propositions are not permitted as alternatives to the written qualifying examinations.

Islamic Studies

Course List

Anthropology

- 130. Study of Culture
- 150. Study of Social Systems
- M154P. Gender Systems: North American
- M154Q. Gender Systems: Global
- 156. Comparative Religion
- 161. Development Anthropology
- 167. Urban Anthropology
- 215. Field Training in Archaeology
- 230Q. Theories of Culture
- 273. Cultures of the Middle East

Arabic (Near Eastern Languages)

- 102A-102B-102C. Intermediate Literary Arabic
- 111A-111B-111C. Elementary Spoken Egyptian Arabic
- 112A-112B-112C. Advanced Spoken Egyptian Arabic
- 113A-113B-113C. Elementary Spoken Levantine Arabic
- 114A-114B-114C. Spoken Moroccan Arabic
- 120. Islamic Texts

- 130. Classical Arabic Texts
- 132. Philosophical and Kalam Texts
- 141. Modern Arabic Literature
- 150. Introduction to Arabic Literature and Culture
- 199. Special Studies in Arabic
- 220. Seminar: Islamic Texts
- 230. Medieval Literary Texts
- 240. Seminar: Arab Historians and Geographers
- 250. Seminar: Arabic Literature
- 596. Directed Individual Study
- 597. Examination Preparation
- 599. Ph.D. Dissertation Research and Preparation

Archaeology

- 259. Fieldwork in Archaeology
- 596. Individual Studies for Graduate Students
- 597. Preparation for Ph.D. Qualifying Examinations

Armenian (Near Eastern Languages)

- 210. History of the Armenian Language
- 220. Armenian Literature of the Golden Age (A.D. 5th Century)
- 230A-230B-230C. Elementary Classical Armenian
- 231A-231B-231C. Intermediate Classical Armenian
- 232A-232B-232C. Advanced Classical Armenian

Art History

- 104A. Western Islamic Art
- 104B. Eastern Islamic Art
- C104C. Problems in Islamic Art
- 105E. Byzantine Art
- 213. Advanced Studies in Islamic Art
- C214. Problems in Islamic Art

Berber (Near Eastern Languages)

- 101A-101B-101C. Elementary Berber
- 102A-102B-102C. Advanced Berber
- 130. The Berbers
- 199. Special Studies in Berber Languages

Classics

- M170. Power and Imagination in Byzantium

Ethnomusicology

- 147. Survey of Classical Music in India
- 240. Music of Arabic-Speaking Near East
- 241. Music of Iran and Other Non-Arabic-Speaking Communities
- 248A-248B. Classical Music of India

French

- 121A. Contemporary Francophone Literature: French-African Literature
- 221A. French-African Literature: Introduction to Study of French-African Literatures
- 221C. French-African Literature: French-African Literature of Berbero-Sudanese and Arabo-Islamic Africa
- 257A-257B. Studies in French-African Literature

Geography

- 187. Middle East

Greek (Classics)

- 231A-231B-231C. Seminars: Later Greek and Byzantine Literature

Hebrew (Near Eastern Languages)

- 230. Seminar: Medieval Hebrew Literature
- 231. Texts in Judeo-Arabic

History

- 106A-106B-106C. Survey of the Middle East from 500 to the Present
- 107A-107B. Islamic Civilization
- 108A-108B. History of the Arabs
- 109A-109B. History of North Africa from the Moslem Conquest
- 110A-110B. Iranian History
- 111A-111B. History of the Turks
- 114. Topics in Middle Eastern History

- 123A-123B. Byzantine History
- 188B-188C. History of British India I, II
- 190A-190B. History of Southeast Asia
- 204A-204B. Seminars: Near and Middle Eastern History
- 205A-205B. Seminars: Medieval Middle Eastern History
- 206A-206B. Seminars: Social History of the Middle East
- 209A-209B. Seminars: Ottoman and Modern Turkish History
- 216A-216B. Seminars: Byzantine History
- 596. Directed Studies
- 597. Directed Studies for Graduate Examinations
- 599. Ph.D. Research and Writing

Iranian (Near Eastern Languages)

- 102A-102B-102C. Intermediate Persian
- 103A-103B-103C. Advanced Persian
- 140. Persian Belles Lettres (Adabiyât)
- 141. Persian Analytical Prose
- 150A-150B. Survey of Persian Literature in English
- 169. Civilization of Pre-Islamic Iran
- 170. Religion in Ancient Iran
- 190A-190B. Introduction to Modern Iranian Studies
- 199. Special Studies in Iranian
- 220A-220B. Classical Persian Texts
- 221. Rumi, Mystic Poet of Islam
- 250. Seminar: Classical Persian Literature
- 251. Seminar: Contemporary Persian Literature
- 596. Directed Individual Study
- 597. Examination Preparation
- 599. Ph.D. Dissertation Research and Preparation

Islamic (Near Eastern Languages)

- 110. Introduction to Islam
- 596. Directed Individual Study
- 597. Examination Preparation
- 599. Ph.D. Dissertation Research and Preparation

Linguistics

- 220. Linguistic Areas
- 225. Linguistic Structures

Near Eastern Languages

- 200. Bibliography and Method of Near Eastern Languages and Literatures
- 210. Survey of Afro-Asiatic Languages
- M241. Folklore and Mythology of the Near East
- 290. Seminar: Paleography
- 596. Directed Individual Study
- 597. Examination Preparation
- 599. Ph.D. Dissertation Research and Preparation

Philosophy

- 104. Topics in Islamic Philosophy

Political Science

- 132A-132B. International Relations of the Middle East
- 157. Government and Politics in the Middle East
- C245. Middle Eastern Politics

Semitics (Near Eastern Languages)

- 215B. Syriac

Sociology

- 134. Culture and Personality
- 187. Population and Society in the Middle East

Turkic Languages (Near Eastern Languages)

- 101A-101B-101C. Elementary Turkish
- 102A-102B-102C. Advanced Turkish
- 111A-111B-111C. Elementary Uzbek
- 112A-112B-112C. Advanced Uzbek
- 114A-114B-114C. Bashkir
- 160. Turkish Tradition
- 180. Modern Turkic Languages and Peoples
- 199. Special Studies in Turkic Languages

210A-210B-210C. Introduction to Ottoman
 211. Ottoman Diplomacy
 220A-220B-220C. Classical Uzbek (Chagatay)
 230A-230B-230C. Historical and Comparative Survey
 of Turkic Languages
 235A-235B. Middle Turkic
 240A-240B-240C. Advanced Ottoman
 250A-250B-250C. Islamic Texts in Chagatay
 280A-280B. Seminars: Modern Turkish Literature
 290A-290B. Seminars: Classical Turkic Literature
 596. Directed Individual Study
 597. Examination Preparation
 599. Ph.D. Dissertation Research and Preparation

 Maria Grazia Pellegrini, Dottore in Lettere
 Elissa Tognozzi, Ph.D.

Scope and Objectives

Italian art and letters provide an invaluable key to understanding many facets of European civilization. Examined in its own right or studied comparatively, Italian culture offers unmatched rewards. The UCLA faculty views transmitting the Italian language as inseparable from transmission of the culture, so students consider in depth virtually all aspects of Italian civilization. After their linguistic initiation, ideally including a year abroad, students may pursue advanced studies in the department exclusively and through a wide range of interdisciplinary programs.

Bachelor of Arts degrees are offered in Italian and in Italian and Special Fields. Graduate study leads to the Master of Arts degree in Italian (with specializations in literature and language) and to the Ph.D. (literature specializa-

tion). In addition, the department participates extensively in the interdepartmental graduate programs in Romance Linguistics and Literature, Comparative Literature, and Folklore and Mythology.

Undergraduate Study

Italian B.A.

The program of studies leading to the Bachelor of Arts in Italian consists of two distinct phases: preparation in the language and study of the literature and culture. While literature courses constitute the bulk of the program, good knowledge of the language is requisite to all upper division literature courses credited toward the major in Italian. The use of Italian is stressed at all levels of study. Detailed information on programs and specific degree requirements is available from the department.

Preparation for the Major

Required: Italian 1, 2, 3, 4, 5, 25, and one course from 42A, 42B, 46.

The Major

Required: Thirteen upper division Italian courses, including 100, 103A-103B, 113, 114A or 114B, 116A or 116B; one course from 118 or 119; one course from 120 or 121; four courses from 114A through 197; 190. One upper division elective course in a field relevant to Italian studies from outside the department may be substituted with consent of the undergraduate adviser.

Sixteen quarter units in Italian or equivalent are required for admission to any upper division course. Upper division courses for the majors are conducted in Italian.

Majors who select courses taught in English must do additional work from the original Italian texts in consultation with the course instructor, who will meet with them on a regular basis.

Study in Italy

Students are encouraged to spend up to one year in Italy either to (1) study with an education abroad program or (2) study in an Italian university. They are also urged to take advantage of summer language workshops and study programs, either at American campuses or in Italy. The Department of Italian offers an intensive, eight-week summer Italian studies program. For information on *Casa Italiana*, contact the department or the Summer Sessions Office, 1147 Murphy Hall.

Honors Program

Majors with an overall grade-point average of 3.25 and a 3.5 GPA or better in Italian are eligible to participate in the honors program. Requirements: Italian 102A-102B-102C.

Candidates select three upper division literature courses in which additional readings are required. In the last term of the senior year, they are required to write a thesis on a subject related to one of the three above-mentioned

courses. The average for the three courses should not fall below A-. Applications should be made during the last term of the junior year.

Italian and Special Fields B.A.

Students with particular interests or professional goals may select this major, with coursework divided between Italian and a collateral field. Study programs fulfilling requirements for the major have been developed with the departments and programs listed below.

Sixteen quarter units in Italian or equivalent are required for admission to any upper division course. Upper division courses for the majors are conducted in Italian.

Majors who select courses taught in English must do additional work from the original Italian texts in consultation with the course instructor, who will meet with them on a regular basis.

Anthropology Field

Preparation for the Major

Required: Italian 1, 2, 3, 4, 5, 25, and one course from 42A, 42B, 46, 50A, 50B; Anthropology 8 or 9, and one elective from 33, 34.

The Major

Required: Italian 100, 103A or 103B, 190, 195, and three courses from 113 through 197 selected in consultation with the undergraduate adviser; five courses from Anthropology 110, 111, 112, M115A, M115B, C115R, 118A, 118B, 130, 132, 133Q, 135A, 135B, 135C, 135S, 135T, 138, 139, M140, 141, 143, 150 through M154Q, 161, 182, 183 selected in consultation with the undergraduate adviser.

Art History Field

Preparation for the Major

Required: Italian 1, 2, 3, 4, 5, 25, and one course from 42A, 42B, 46; Art History 50 or 51, 54, 57.

The Major

Required: Italian 100, 103A or 103B, 195, and four courses from 113 through 197 selected in consultation with the undergraduate adviser; six courses from Art History M102F, M102G, M102H, 105A through 105D, 105F, 106A through 106D, 109A, 109C, 110A, 110B, 110F, 127, 150D selected in consultation with the undergraduate adviser.

Classics Field

Preparation for the Major

Required: Italian 1, 2, 3, 4, 5, 25, and one course from 42A, 42B, 46, 50A, 50B; Classics 10 or 20, 40 or 41, and Greek 1, 2, 3 or Latin 1, 2, 3, or equivalent.

The Major

Required: Italian 100, 103A or 103B, 190, 195, and two courses from 113 through 197 selected in consultation with the undergraduate adviser; Greek 100 or Latin 100, one course from Classics 141 through 197 (except 195),

and one course from Greek 101A through 133 or Latin 101 through 133 (graduate seminars may be substituted for upper division author courses) selected in consultation with the undergraduate adviser.

Design Field

Preparation for the Major

Required: Italian 1, 2, 3, 4, 5, 25, and one course from 42A, 42B, 46; Design 21, 22, 23, 32B, and one course from 32C, 35A, 35B.

The Major

Required: Italian 100, 103A or 103B, 195, and three courses from 113 through 197 selected in consultation with the undergraduate adviser; three courses from Design 101 through 197 selected in consultation with the undergraduate adviser.

English Field

Preparation for the Major

Required: Italian 1, 2, 3, 4, 5, 25, and one course from 42A, 42B, 46, 50A, 50B; English Composition 3, English 4, 10A, 10B, 10C.

The Major

Required: Italian 100, 103A or 103B, 195, and four courses from 113 through 197 selected in consultation with the undergraduate adviser; four courses from English 100, M101A through 119, 121, 140A through M197A selected in consultation with the undergraduate adviser.

Film and Television Field

Preparation for the Major

Required: Italian 1, 2, 3, 4, 5, 25, 46.

The Major

Required: Italian 100, 103A or 103B, 121, 195, and three courses from 113 through 197 selected in consultation with the undergraduate adviser; six courses from Film and Television 106A, 106B, 106C, 107, 108, 110A, 110C, 112 through 116, 127, 193A selected in consultation with the undergraduate adviser.

French Field

Preparation for the Major

Required: Italian 1, 2, 3, 4, 5, 25, and one course from 42A, 42B, 46; French 1, 2, 3, 4, 5, 6, 12 or 14.

The Major

Required: Italian 100, 103A or 103B, 195, and four courses from 113 through 197 selected in consultation with the undergraduate adviser; one course from French 114A, 114B, 114C, and three courses from 115A through 142 selected in consultation with the undergraduate adviser.

History Field

Preparation for the Major

Required: Italian 1, 2, 3, 4, 5, 25, and one course from 42A, 42B, 46; one course from History 1A, 1B, 1C, 88B through 88E, 88Q, 88U.

The Major

Required: Italian 100, 103A or 103B, 190, 195, and three courses from 113 through 197 selected in consultation with the undergraduate adviser; six courses from History 100, 102, 119M through 121D, 125A through 127B, 132A, 132B, 135A through 137B selected in consultation with the undergraduate adviser.

Linguistics Field

Preparation for the Major

Required: Italian 1, 2, 3, 4, 5, 25, Linguistics 20, and six terms of a second Romance language or Latin or equivalent.

The Major

Required: Italian 100, 103A or 103B, 190 or 222A, 195, 222B, and two courses from 113 through 197 selected in consultation with the undergraduate adviser; Linguistics 103, 110, 120A, 120B, and one course from M146, M150, 165A, 165B, 170 selected in consultation with the undergraduate adviser.

Music History Field

Preparation for the Major

Required: Italian 1, 2, 3, 4, 5, 25, Music History 1A-1B or 2A-2B, 26A-26B-26C. *Recommended:* Music 20A, 20B, 20C.

The Major

Required: Italian 100, 103A or 103B, 195, and four courses from 113 through 197 selected in consultation with the undergraduate adviser; five courses from Music History 126A through 127G, 135A, 135B, 135C, 156 selected in consultation with the undergraduate adviser.

Philosophy Field

Preparation for the Major

Required: Italian 1, 2, 3, 4, 5, 25, and one course from 42A, 42B, 46, 50A, 50B; one course from Philosophy 1 through 31.

The Major

Required: Italian 100, 103A or 103B, 195, and four courses from 113 through 197 selected in consultation with the undergraduate adviser; Philosophy 100A, 100B, 100C, and three courses from M101A through 189 selected in consultation with the undergraduate adviser.

Political Science Field

Preparation for the Major

Required: Italian 1, 2, 3, 4, 5, 25, and one course from 42A, 42B, 46, 50A, 50B; Political Science 10, 20.

The Major

Required: Italian 100, 103A or 103B, 195, and four courses from 113 through 197 selected in consultation with the undergraduate adviser; six courses from Political Science 111A through 113, 116 through 119Z, 137A, 137B, 139A through 139Z, 153A, 155, 167A selected in consultation with the undergraduate adviser.

Portuguese Field

Preparation for the Major

Required: Italian 1, 2, 3, 4, 5, 25, and one course from 42A, 42B, 46, 50A, 50B; Portuguese 1, 2, 3, 25, M42 or M44 or 46.

The Major

Required: Italian 100, 103A or 103B, 190, 195, and three courses from 113 through 197 selected in consultation with the undergraduate adviser; three courses from Portuguese 120A through 197 selected in consultation with the undergraduate adviser.

Spanish Field

Preparation for the Major

Required: Italian 1, 2, 3, 4, 5, 25, and one course from 42A, 42B, 46, 50A, 50B; Spanish 1, 2, 3, 4, 5, 25 (or equivalent as determined by placement test), M42 or M44.

The Major

Required: Italian 100, 103A or 103B, 190, 195, and three courses from 113 through 197 selected in consultation with the undergraduate adviser; one course from Spanish 120A, 120B and three courses from 122 through M161 selected in consultation with the undergraduate adviser.

Theater Field

Preparation for the Major

Required: Italian 1, 2, 3, 4, 5, 25, and one course from 42A, 42B, 46, 50A, 50B.

The Major

Required: Italian 100, 103A or 103B, 122, 195, and three courses from 113 through 197 selected in consultation with the undergraduate adviser; one course from Theater 101A, 101B, 101C and five courses from 105, 111A, 111B, 111C, Classics 143, English 142A, 142B, 142C, 168 selected in consultation with the undergraduate adviser.

Women's Studies Field

Preparation for the Major

Required: Italian 1, 2, 3, 4, 5, 25, and one course from 42A, 42B, 46; Women's Studies 10.

The Major

Required: Italian 100, 103A or 103B, M158, 195, and three courses from 113 through 197 selected in consultation with the undergraduate adviser; Women's Studies 110A or 110B, and five additional upper division courses from any of the women's studies course lists selected in consultation with the undergraduate adviser.

Italian Minor

To enter the Italian minor, students must have an overall grade-point average of 2.0 or better.

Required Lower Division Courses (12 units): Italian 5, 25, and one course from 42A, 42B, 46, 50A, 50B.

Required Upper Division Courses (20 units): Italian 100 and four additional Italian courses.

All minor courses must be taken for a letter grade, with an overall grade-point average of 2.0 or better. Successful completion of the minor is indicated on the transcript and diploma.

Graduate Study

The following constitutes introductory information regarding graduate degree programs and is based on the 1998-99 edition of *Program Requirements for UCLA Graduate Degrees*. Complete, annual editions of *Program Requirements* are available (listed under "Publications") on the Graduate Division website at <http://www.gdnet.ucla.edu>. Students are subject to the degree requirements as published in *Program Requirements* for the year in which they matriculate.

Master's Degree

The Department of Italian offers the Master of Arts (M.A.) degree in Italian.

Admission

Applicants to the M.A. program, should send three letters of recommendation to the Graduate Adviser, Department of Italian.

Files of prospective graduate students meeting the University minimum requirements are screened by the departmental committee on admissions. Admission on a provisional basis may be recommended in case of deficiencies in preparation.

Areas of Study

The M.A. degree is available with specializations in Italian literature and Italian language.

Course Requirements

Italian Literature Specialization. For both the comprehensive examination plan and the thesis plan, 12 courses are required, including Italian 205A-205B, and 222A. The other nine courses must be distributed in three main literary periods: Middle Ages, Renaissance, modern (at least two courses in each period). Three of these may be upper division undergraduate courses if approved by the graduate adviser. Related courses in other departments, such as History 205A-205B and Art History 230, are strongly recommended.

Italian Language Specialization. Requisites: a general grasp of linguistics equivalent to Linguistics 20 and 110, and a broad familiarity with Italian literary and cultural history. For both the comprehensive examination plan and the thesis plan, 12 courses are required, including Italian 222A-222B-222C and Linguistics 202 or equivalent. At least nine courses must be in the 200 series.

No 500-series courses may be applied toward the M.A. course requirements.

Comprehensive Examination Plan

In general, the department favors the comprehensive examination plan, which consists of a

minimum five-hour written examination to be given before the final examination period in the Fall and Spring Quarters. Alternatively, students may petition to substitute a master's thesis in lieu of the examination, although this option is not encouraged. The examination tests the student's general competency and does not have major and minor fields of emphasis. After the written examination, an oral examination must be taken. In case of failure, students may be reexamined once, subject to approval by the examination committee and the chair of the department.

Thesis Plan

This plan is recommended for research-oriented students of exceptional merit. Students who have completed the first year of graduate work with at least a 3.7 grade-point average may be nominated by one of the faculty members of the department for application to the thesis plan. If the nomination is accepted by the faculty, a three-member thesis committee is submitted to the Graduate Division for appointment.

At this point students must have completed Italian 205A-205B and at least two other graduate courses in Italian. On acceptance, the guidance committee helps students choose six more graduate courses in preparation for the thesis.

The thesis must be at least 50 pages long and follow the rules and style of the UCLA Ph.D. dissertation regulations. It must be submitted in the sixth quarter of graduate work. After completion of the thesis, an oral examination must be passed testing knowledge in the field of the thesis and general competence in Italian literature.

Doctoral Degree

Admission

Applicants to the program leading to the Ph.D. degree in Italian should send three letters of recommendation from professionals in the field of Italian studies to the Graduate Adviser, Department of Italian.

Requisite for entering the department's doctoral program is an M.A. in Italian literature from UCLA or its equivalent from another university in the U.S. Students who have a master's degree in Italian literature or its equivalent from another institution are required to pass Part I of the Ph.D. qualifying examinations by the end of the third quarter in residence. Students should expect to take Part II of the examinations after approximately six quarters.

Students holding the M.A. from UCLA normally take Part II of the qualifying examinations at the end of the sixth quarter in residence.

Major Fields or Subdisciplines

Two centuries of Italian literature in the medieval, Renaissance and baroque, or modern areas comprise the major fields, while two centuries of Italian literature from any of the areas mentioned above make up the minor fields.

A major in a literary genre or a minor outside the department may be chosen, provided that it relates to the student's major field of specialization. This field must have the approval of the entire department.

Course Requirements

In addition to those required for the master's degree, at least 10 other quarter courses, of which no more than two 596 courses may apply, are required. Students also must take such courses as their guidance committee prescribes for the qualifying examinations (such as Italian 596 or 597). All courses from Italian 201 on, except for 205A and 205B, may be applied toward the Ph.D. degree.

Written and Oral Qualifying Examinations

The comprehensive examination for the M.A. in Italian at UCLA corresponds to Part I of the Ph.D. qualifying examinations.

The department also requires both written and oral qualifying examinations (Part II), which must be taken during the same academic year, although not necessarily during the same quarter. Normally taken six quarters after the M.A. degree, the written examination consists of two parts: an eight-hour examination in the student's major field and a six-hour examination in the minor field. Additionally, a two-hour University Oral Qualifying Examination is required. A summary of requirements entitled *Regulations for the Ph.D. Examination* is available in the department. In case of failure, students may be reexamined on unanimous approval of the guidance committee, after at least one academic quarter of additional residence.

Italian

Lower Division Courses

1. Elementary Italian — Beginning. (4) Lecture, five hours; live laboratory, one hour.

1A. Elementary Italian — Accelerated. (8) Lecture, 10 hours; laboratory, two hours. Designed for those students having capacity and desire to learn the language at a much faster pace than normal. Encompasses material ordinarily intended for courses 1 and 2.

1G. Special Reading Course. (4) Readings, three hours. Open to graduate students in other fields. Preparation for Graduate Division foreign language reading requirement. S/U grading.

2. Elementary Italian — Continued. (4) Lecture, five hours; live laboratory, one hour. Enforced requisite: course 1.

2A. Elementary Italian — Accelerated (Continued). (8) Lecture, 10 hours; laboratory, two hours. Enforced requisite: course 1A or 2. Designed for those students having capacity and desire to learn the language at a much faster pace than normal. Encompasses material ordinarily intended for courses 3 and 4.

2G. Special Reading Course. (4) Readings, three hours. Open to graduate students in other fields. Preparation for Graduate Division foreign language reading requirement.

3. Elementary Italian — Continued. (4) Lecture, five hours; live laboratory, one hour. Enforced requisite: course 2.

3A. Intermediate Italian — Accelerated. (8) Lecture, six hours; laboratory, two hours. Enforced requisite: course 2A or 3. Designed for those students having capacity and desire to learn the language at a much faster pace than normal. Encompasses material ordinarily intended for courses 4 and 5.

4. Intermediate Italian. (4) Lecture, five hours. Enforced requisite: course 3. P/NP or letter grading.

5. Intermediate Italian. (4) Lecture, five hours. Enforced requisite: course 4. P/NP or letter grading.

6. Intermediate Italian. (4) (Formerly numbered 25.) Lecture, five hours. Enforced requisite: course 5. Advanced grammar and composition course with readings from select literary works. P/NP or letter grading.

7. Elementary Italian Conversation. (4) Lecture, five hours (first six-week summer session). Encompasses conversational material included in course 1, with emphasis on traveler's vocabulary.

8A-8B-8C. Italian Conversation. (2-2-2) Discussion, three hours. Each course may be repeated once for credit. P/NP or letter grading.

42A-42B. Italy through the Ages, in English. (4) Lecture, three hours; discussion, one hour; outside study, eight hours. P/NP or letter grading. **42A.** Holy Roman Empire to Sack of Rome. Survey of Italy's unique contribution to Western civilization in history, literature, painting, and politics from time of Charlemagne to High Renaissance. **42B.** Late Renaissance to Postmodern Period. Baroque sculpture and architecture, Galileo, Enlightenment, unification of Italy, Fascism, Communism, terrorism, neorealistic cinema, and "moral revolution" of the 1980s and 1990s.

46. Italian Cinema and Culture. (4) Lecture, two hours; discussion, one hour; film screenings, two to three hours. Survey of development of Italian cinema and culture from the 1900s to the present through analysis of principal aesthetic, literary, artistic, and philosophical movements in Italy as reflected in works of the nation's filmmakers and writers.

50A-50B. Masterpieces of Italian Literature in English. (4-4) Lecture, three hours; outside study, nine hours. P/NP or letter grading. **50A.** Middle Ages and Renaissance. Philosophical, religious, and sociopolitical issues examined in authors such as St. Francis, Guinizelli, Cavalcanti, Dante, Boccaccio, Petrarca, Poliziano, Lorenzo de' Medici, Machiavelli, Castiglione, and Ariosto. **50B.** Baroque Period to the Present. Close reading of major works selected from such writers as Tasso, Bruno, Campanella, Vico, Parini, Alfieri, Foscolo, Leopardi, Manzoni, Verga, and Pirandello.

Upper Division Courses

100. Composition and Style. (4) (Formerly numbered 130.) Lecture, three hours; outside study, nine hours. Requisite: course 25. Development of writing techniques and proficiency in composition and style, with emphasis on editing for grammar and style. P/NP or letter grading.

102A-102B-102C. Italian Cultural Experience, in English. (4-4-4) Lecture, three hours; outside study, nine hours. Study of cultural development of Italy. P/NP or letter grading. **102A.** Roots of Western civilization; social and artistic achievements of communal society; Marco Polo, Dante, Boccaccio, Giotto, rise of Italian merchant class. **102B.** Renaissance discovery of human genius; crucial period between Machiavelli and Galileo, leading Italy and Europe to scientific revolution. **102C.** Birth of Italian nation from wars of independence to foundation of modern republic, delineated through narrative and cinema in historical context.

103A-103B-103C. Introduction to Italian Literature and Literary Analysis. (4-4-4) (Formerly numbered 200A-200B-200C.) Lecture, three hours; outside study, nine hours. Requisite: course 100. Italian literature from 1150 to the present, with emphasis on methods of interpreting literary form and meaning in poetry, drama, epic, and novel. P/NP or letter grading:

103A. Knights, Saints, and Lovers. Beginning with generation dominated by St. Francis, love poets of court of Frederick II to three classic writers of Italian literature: Dante, Petrarca, and Boccaccio. Renaissance rediscovery of human individuality, dignity, and creativity in works of Pico della Mirandola and Castiglione.

103B. Power and Beauty. Classics of High Renaissance in theater, epic, and lyric poetry, followed by surprising developments of baroque period, Counter-Reformation, and Enlightenment. Artists and writers include Leonardo da Vinci, Michelangelo, Machiavelli, Ariosto, Tasso, Bruno, and Vico.

103C. Romanticism, Politics, and Disillusionment. Great poetry and dialogues of Giacomo Leopardi; patriotic literature accompanying rise of modern Italian state; futurism, surrealism, neorealism, and postmodernism. Authors may include Foscolo, Manzoni, Verga, Pirandello, Calvino, and Dario Fo.

110. Dante, in English. (4) (Formerly numbered 110A-110B.) Lecture, three hours; outside study, nine hours. Close study of one of world's greatest literary geniuses, particularly of his masterpiece, *Divine Comedy*, the archetypal medieval journey through the afterworld. P/NP or letter grading.

113. Dante's *La Divina Commedia*. (4) (Formerly numbered 113A-113B.) Lecture, three hours; outside study, nine hours. Requisite: course 100. Study of medieval philosophy, religion, and politics in *La Divina Commedia*, greatest literary achievement of the age. P/NP or letter grading.

114A-114B. Middle Ages. (4-4) Lecture, three hours; outside study, nine hours. Requisite: course 100. P/NP or letter grading. **114A.** Tradition of Love from Sacred to Profane. Study of major love poets of all time (Dante, *Dolce Stil Novo* poets, and Petrarca) caught between courtly and religious codes. **114B.** Medieval Humor, Moralism, and Society. Novelty of Boccaccio's witty and comic masterpiece, *Decameron*, analyzed within context of moral and social codes of culture of the time.

116A-116B. Italian Renaissance. (4-4) Lecture, three hours; outside study, nine hours. Requisite: course 100. P/NP or letter grading. **116A.** Renewal of Art and Thought. Study of the *Quattrocento* and its representatives in the arts and humanistic thought (i.e., Mantegna, Botticelli, Pico, Valla, and Ficino). **116B.** Power and Imagination in the Renaissance. Study of artistic world of Leonardo, Raffaello, Michelangelo, Titian, and literary masterpieces of Machiavelli, Castiglione, Ariosto, Tasso, in world molded by powerful political forces, such as the Roman Papacy and Medici, Gonzaga, and D'Este courts.

118. Age of Enlightenment. (4) Lecture, three hours; outside study, nine hours. Requisite: course 100. Study of philosophical and political prose, satiric poetry, and drama, unveiling birth of modern spirit through writings of Vico, Metastasio, Parini, and Alfieri. P/NP or letter grading.

119. Italian *Ottocento*. (4) Lecture, three hours; outside study, nine hours. Requisite: course 100. Study of the *Ottocento*, the rich period of Italian history and culture from Romanticism to decadentism when philosophical and political issues affected not only the mind but also the heart. Emergence of unique brand of individualism through poetry and prose writings of Foscolo, Leopardi, Manzoni, Nievo, and Verga. P/NP or letter grading.

120. Literature in the 20th Century. (4) Lecture, three hours; outside study, nine hours. Requisite: course 100. Analysis of novel, poetry, and drama of the 20th century in connection with modern thought and culture. Authors may include D'Annunzio, Pirandello, Montale, Pasolini, and Calvino. P/NP or letter grading.

121. Literature and Film. (4) Lecture, three hours; discussion, one hour; outside study, eight hours. Comparative study of specific literary works and their translation into film and of different techniques in the two forms of expression. Texts include literary works, screenplays, and works on literary and film theory. P/NP or letter grading.

122. Italian Theater. (4) Lecture, three hours; discussion, one hour; outside study, eight hours. Study of dramatic works from the Renaissance to the present and their theatrical presentation. P/NP or letter grading.

131. Reading and Reciting. (4) Lecture, three hours. Preparation: sufficient knowledge of Italian. Emphasis on diction, interpretation, and performance of one-act plays as vehicles for perfection of pronunciation, comprehension, and fluency. May be repeated twice for credit.

M140. Italian Novella from Boccaccio to Basile. (4) (Same as Folklore M140.) Lecture, three hours; outside study, nine hours. Analysis of development of the Italian novella in its structure, historical context, and folk material. Special emphasis on how the Italian novella influenced other European literatures. P/NP or letter grading.

150. Modern Fiction in Translation. (4) Lecture, three hours; outside study, nine hours. Select issues in 20th-century thought traced in writers of international fame, with focus on concerns and styles of several prose works such as Umberto Eco's *The Name of the Rose*, Pasolini's *The Ragazzi*, Pirandello's *The Late Mattia Pascal*, and Calvino's *The Cosmicomics*. P/NP or letter grading.

M158. Women in Italian Culture. (4) (Same as Women's Studies M158.) Lecture, three hours; discussion, one hour; outside study, eight hours. Examination of role of women in Italian society through history, politics, literature, film, and art. Italian majors required to read texts in Italian. P/NP or letter grading.

190. History of the Italian Language. (4) Lecture, three hours. Main forces which have shaped literary or standard Italian and specific ways in which the language has evolved. Tracing of its changing relations with other European languages and survey of effects wrought by historical events, changes in taste, and altered social functions.

195. Special Fields Research. (4) Limited to senior Italian and Special Fields majors. Unscheduled tutorial in which paper (20 to 25 pages) is to be written in either Italian or English which requires students to unify and synthesize their experience of combining two disciplines of study. Paper graded by ad hoc committee of faculty from department, with the chair in charge. P/NP or letter grading.

197. Variable Topics in Italian Studies. (4) Discussion, three hours; outside study, nine hours. Seminar focusing on themes and issues outside the uniquely Italian literature topics covered in regular departmental undergraduate courses.

199. Special Studies. (2 to 4) Course of independent studies for advanced undergraduates who wish to pursue a special research project under direction and close supervision of a faculty member.

Graduate Courses

201. Bibliography and Methods of Research. (4) Lecture, three hours.

205A-205B. Studies in Criticism. (4-4) Lecture, three hours; outside study, 18 hours. History, theory, and practice of criticism. S/U or letter grading. **205A.** Brief History of Literary Criticism. Presentation, discussion, and application of basic currents of criticism from stylistics to structuralism. **205B.** Discussion of Modern Critical Approaches. Presentation, discussion, and application of contemporary approaches from structuralism to deconstruction, new historicism, and feminist criticism.

210. Studies in Early Italian Literature. (4) Lecture, three hours; outside study, 18 hours. Topics include origins of Italian language and study of early texts, *Scuola Siciliana* and early poetry of Central and Northern Italy, and *Dolce Stil Novo*. S/U or letter grading.

214A-214F. Studies in Medieval Literature. (4 each) Lecture, three hours; outside study, 18 hours. S/U or letter grading:

214A. *La Divina Commedia*.

214B. Dante's Other Works.

214C. Petrarca's *Canzoniere*.

214D. Boccaccio's *Decameron*.

214E. Boccaccio's Other Works.

214F. Variable Topics. Variable-content seminar on themes and issues of medieval literature, with coverage of authors such as St. Francis of Assisi or Jacopone de Todi.

215A-215B. Studies in 15th-Century Literature. (4-4) Lecture, three hours; outside study, 18 hours. S/U or letter grading. **215A.** Variable Topics. Variable-content seminar on themes and issues of 15th-century literature, with coverage of authors such as Pulci or Poliziano. **215B.** Age of Lorenzo de' Medici and Poliziano.

216A-216E. Studies in the Renaissance. (4 each) Lecture, three hours; outside study, 18 hours. S/U or letter grading:

216A. Machiavelli and Renaissance Political Thought.

216B. Ariosto and Renaissance Epic.

216C. Tasso.

216D. Renaissance Theater.

216E. Variable Topics. Variable-content seminar on themes and issues of Renaissance literature, with coverage of authors such as Vasari, Leonardo, or Benvenuto.

217. Studies in 17th-Century Literature. (4) Lecture, three hours; outside study, 18 hours. Topics include Galileo and birth of scientific prose, Giordano Bruno, Gian Battista Marino, and baroque poetry. S/U or letter grading.

218A-218D. Studies in 18th-Century Literature. (4 each) Lecture, three hours; outside study, 18 hours. S/U or letter grading:

218A. Vico.

218B. Alfieri.

218C. Goldoni.

218D. Variable Topics. Variable-content seminar on themes and issues of 18th-century literature, with coverage of authors such as Vico or Ludovico.

219A-219D. Studies in 19th-Century Literature. (4 each) Lecture, three hours; outside study, 18 hours. S/U or letter grading:

219A. Foscolo.

219B. Leopardi.

219C. Manzoni.

219D. Variable Topics. Variable-content seminar on themes and issues of 19th-century literature, with coverage of authors such as Carducci, Tommaseo, or Nievo.

220. Studies in Turn-of-the-Century Literature. (4) Lecture, three hours; outside study, 18 hours. Topics include Verga and *Verismo*, poetry, prose, and theater of D'Annunzio, and poetry of Carducci and Pascoli. S/U or letter grading.

221A-221E. Studies in 20th-Century Literature. (4 each) Lecture, three hours; outside study, 18 hours. S/U or letter grading:

221A. Variable Topics. Variable-content seminar on themes and issues of 20th-century literature, with coverage of authors such as D'Annunzio, Verga, Marinetti, and Pirandello.

221B. Contemporary Poetry. Analysis of legacy of two major figures in Italian poetry from World War II — Ungaretti and Montale. Thorough examination of movements and individual poets active in the 1960s and 1970s.

221C. 20th-Century Narrative to World War II. Assessment of turn-of-the-century narrative pattern (Gabriele D'Annunzio) and analysis of radical innovations brought about by such towering figures as Pirandello, Svevo, Bernari, Marinetti, etc.

221D. 20th-Century Narrative since World War II. In-depth exploration of some major works that have made contemporary Italian literature famous throughout the world, with special emphasis on study of formalistic modes adopted by the neo-avant-garde.

221E. Pirandello and Contemporary Theater. Thorough reading of theatrical texts, accompanied by analysis of how the plays have been realized on stage by important directors such as Strehler, Ronconi, and the playwrights/actors themselves. Emphasis on ritualistic implications of the theatrical performance.

222A-222B-222C. Studies in History of Italian Language. (4-4-4) Lecture, three hours; outside study, 18 hours. Designed for graduate students. S/U or letter grading:

222A. History of the Italian Language. Historical survey of development of the language from medieval times to unification of the country (1861). *Questione della lingua*, general acceptance of Florentine speech, and its evolution into the national language.

222B. Structure of Modern Italian. Various tendencies in modern and contemporary Italian. Foreign influences in today's Italian language. Relationship between national language and the various dialects.

222C. Italian Dialectology. Historical differentiation of Italian dialects considered in its areal dimension. Specific geolinguistic problems and solutions illustrating growth of the discipline up to its present merging with sociolinguistics as Italian dialects become more vertically defined.

M230A-M230B. Folk Tradition in Italian Literature. (4-4) (Same as Folklore M230A-M230B.) Lecture, two hours.

250A-250D. Seminars: Dante. (4 each) Seminar, three hours.

251. Seminar: Petrarch. (4) Seminar, three hours.

252. Seminar: Boccaccio. (4) Seminar, three hours.

253A-253B-253C. Seminars: Chivalric Poetry in Italy. (4-4-4) Seminar, three hours. Relationship between the genre and its French medieval sources, with study of its evolution in Italy through Pulci, Boiardo, Ariosto, and Tasso.

254. Seminar: Machiavelli. (4) Seminar, three hours.

255A-255B. Seminars: Baroque. (4-4) Seminar, three hours.

256A-256B. Seminars: 18th Century. (4-4) Seminar, three hours.

257A-257B. Seminars: Romanticism. (4-4) Seminar, three hours.

258A-258B. Seminars: Contemporary Italian Literature. (4-4) Seminar, three hours.

M260A. Alternative Perspectives in Italian Culture: Studies of Folk Tradition in Italian Literature. (4) (Same as Folklore M261.) Lecture, three hours; outside study, 18 hours. Open to undergraduates with consent of instructor. The conspicuous diversity animating Italian society articulated through class, gender, and ethnolinguistic groups to be studied across a range of texts, some selected from the literary canon, but others purely oral (tales, songs, proverbs, cures and curses, secular and ritual drama).

260B. Women in Italian Culture. (4) Lecture, three hours; outside study, 18 hours. Designed for graduate students. Conditions of women within Italian society, with concentration on specific works produced by women and/or representing women's conditions in either medieval/Renaissance or contemporary time. S/U or letter grading.

260C. Studies in Italian Cinema. (4) Lecture, three hours; outside study, 18 hours. Designed for graduate students. Italian cinema compared with other European countries' and Hollywood's cinema, with focus on its development from its origins through Fascist times to neorealism, its legacy, different genres, and contemporary scene. S/U or letter grading.

298. Variable Topics in Italian Studies. (4) Lecture, three hours; discussion, one hour. Designed for graduate students. Seminar focusing on themes and issues outside the uniquely Italian literature topics covered in regular departmental graduate courses.

370. Problems and Methods in Teaching Italian. (4) Lecture, two hours.

375. Teaching Apprentice Practicum. (1 to 4) Preparation: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

495A-495D. Teaching Italian at College Level (2 to 4 units each). Tutorial, to be arranged. **495A.** Techniques in Teaching Italian Literature; **495B.** Techniques in Teaching Italian Culture; **495C.** Techniques in Teaching Italian Conversation; **495D.** Techniques in Teaching Italian Film.

501. Cooperative Program. (2 to 8) Preparation: consent of UCLA graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Used to record enrollment of UCLA students in courses taken under cooperative arrangements with USC. S/U grading.

596. Directed Individual Studies. (2 to 12) May be repeated twice for credit. S/U grading.

597. Preparation for M.A. Comprehensive Examination or Ph.D. Qualifying Examinations. (2 to 12) S/U grading.

599. Ph.D. Research and Writing. (2 to 12) May be repeated. S/U grading.

Scope and Objectives

The Labor and Workplace Studies undergraduate specialization is intended to coordinate and enrich offerings on the workplace's connections to the social, political, and economic forces that surround it. Students become acquainted with institutions of the labor market such as public policies, employment practices, and unions. Faculty members from various disciplines are actively engaged in research on some aspect of employee relations, employee organizations, or workplace concerns in the U.S. or other countries. Administration of the program is coordinated through the Institute of Industrial Relations.

Undergraduate Study

Labor and Workplace Studies Specialization

The Labor and Workplace Studies specialization must be taken in conjunction with a major in the social sciences or in Psychology. Students with other majors may be admitted by petition.

Upper Division Requirements

Required: Management 150; Political Science 142C or History 155B; three other courses selected from Chicana and Chicano Studies 120, Economics 150, 151, 152, 181B, 183, Geography 155, History 155A, 155B, Political Science 142C, 169, Psychology M137E, Sociology M163, 171, 173, Women's Studies M163, 171. All students take a one-term specialization seminar designed for the exchange of disciplinary perspectives and directed research toward the end of the program.

Courses in the specialization may also be applied toward the requirements of the major where appropriate.

For further information, contact the Institute of Industrial Relations (310-794-5983) or Professor Daniel J.B. Mitchell (310-825-1504).

Scope and Objectives

UCLA has been in the forefront of U.S. universities with significant teaching and research interests in Latin American studies for more than 50 years. More than 100 faculty members from 22 departments and professional schools regularly offer a broad range of courses with an emphasis on Latin America. These courses offerings in the humanities, social sciences, fine arts, and professional fields provide students a unique opportunity to focus on Latin America, a region of growing importance.

The Latin American Studies Program, coordinated through UCLA's Latin American Center, offers the Bachelor of Arts and Master of Arts degrees. In the undergraduate major students develop a program combining language and methodological training with interdisciplinary studies in one of three areas: arts and humanities, social sciences, or ecology and environment. At the graduate level, students pursue more specialized coursework and interests, culminating in an interdisciplinary research study. Cooperative degree programs with the UCLA Schools of Education and Information Studies, Management, Public Health, and Public Policy and Social Research provide the opportunity to combine the M.A. in Latin American Studies with a master's degree in a professional field.

Undergraduate Study

Latin American Studies B.A.

Undergraduate studies of the Latin American region are designed to serve the needs of students (1) desiring a general education focused on the Latin American cultural region, (2) planning to enter business, government, or international agency service, (3) preparing to teach social sciences or language, and (4) preparing for advanced academic study of Latin America.

Students must complete all preparation courses with a C (2.0) in each course; the courses are applicable toward the Letters and Science lower division general education requirements.

Foreign Language Requirement

Language requirements are uniform for all students in the major regardless of core area. Proficiency in two languages equivalent to (1) Spanish 25 and Portuguese 3 or (2) Portuguese 25 and Spanish 5 is required. In lieu of Portuguese 1, 2, and 3, students may take Portuguese 102A-102B which are designed for those with a background in Spanish. An indigenous language of Latin America (i.e., Quechua) may be substituted for the minor language.

Course Limitations

Students may not take more than eight units of Latin American Studies 199 for letter-grade credit nor more than eight units in any single term. No course taken on a Passed/Not Passed basis may be applied toward the B.A. degree requirements. In order to register in a 199 course, students must have advanced junior standing and an overall grade-point average of 3.0, or senior standing.

Double Majors

Through judicious use of electives, students may find it possible to obtain the B.A. degree with two majors (e.g., Latin American Studies and History). Interested students who have achieved junior standing should consult the undergraduate advisers of both departments involved, initiating the appropriate petition with

the undergraduate adviser in Latin American Studies.

Study in Latin America

Students are encouraged to spend up to one year in Latin America either (1) to study with an education abroad program, (2) to study in Latin American universities, (3) to conduct research, or (4) to complete an internship in an international or development agency. Full credit is granted according to the individual programs arranged in consultation with the undergraduate adviser. For information on studying in Mexico, Costa Rica, Chile, or Brazil, contact the Education Abroad Program, 1105 Hershey Hall, (310) 794-9820.

Core Areas for the Major

Students select one of three core areas as the focus of their major: arts and humanities, social sciences, or ecology and environment. Requirements for each core area are listed below.

Core I: Arts and Humanities

Preparation

Required: Two courses from History 8A, 8B, 8C; Latin American Studies 99 (or 197 with department consent); Spanish and Portuguese M44; Art History 55A or 55B or Ethnomusicology 91K and World Arts and Cultures 73B.

Core Area

Required: Ten upper division courses from the approved list of Latin American courses distributed as follows:

(1) *Core Concentration:* Five courses as listed below in either the literature and folklore field or the linguistics field selected from Portuguese or Spanish, or in the fine arts field selected from art history or ethnomusicology. Only one course from the electives list may be applied toward the core concentration.

(2) *Theory and Methods:* One course from theory and methods.

(3) *Internal Breadth:* Four additional courses from the arts and humanities core area but outside the core concentration. No more than two of these may be electives.

External Breadth

Required: From the approved list, six upper division courses outside the arts and humanities core area distributed as follows: at least two courses in social sciences (e.g., history) and two courses in ecology and environment (e.g., geography). The two additional courses required may be from either social sciences or ecology and environment. No more than three external breadth courses may be electives.

Approved Undergraduate Courses

Special courses which may be applied toward the M.A. degree requirements with advanced departmental approval are indicated with asterisks. These courses do not have any exclusive focus on Latin America but provide an opportunity for students to relate a particular perspective or phenomenon to Latin America.

Latin American Studies Minor

The interdisciplinary program leading to the Latin American Studies minor allows students to choose from a broad range of course offerings in various departments to develop professional and methodological skills with area expertise.

To enter the minor, students must have an overall grade-point average of 2.0 or better and have completed 45 units. For further information, contact Carolyn Ramirez-La Faso at (310) 206-6571.

Required Lower Division Courses (eight units): History 8A or 8B or 8C or Latin American Studies 99, Spanish 25 or Portuguese 25.

Required Upper Division Courses (20 units): Five courses selected from the approved list of Latin American studies courses in at least two of the following fields: (1) arts and humanities (art history, ethnomusicology, folklore, Spanish and Portuguese), (2) ecology and environment (geography, public health), (3) social sciences (anthropology, economics, history, political science, sociology). No more than four units of course 199 may be applied toward the minor, and at least three upper division courses (12 units) must be taken in residence at UCLA.

All minor courses must be taken for a letter grade, with an overall grade-point average of 2.0 or better. Successful completion of the minor is indicated on the transcript and diploma.

Graduate Study

The following constitutes introductory information regarding graduate degree programs and is based on the 1998-99 edition of *Program Requirements for UCLA Graduate Degrees*. Complete, annual editions of *Program Requirements* are available (listed under "Publications") on the Graduate Division website at <http://www.gdnet.ucla.edu>. Students are subject to the degree requirements as published in *Program Requirements* for the year in which they matriculate.

Master's Degree

The Latin American Studies Program offers the Master of Arts (M.A.) degree in Latin American Studies and participates in articulated or concurrent degree programs with the Department of Education, the Department of Information Studies, the School of Public Health, the Department of Urban Planning, and the John E. Anderson Graduate School of Management.

Admission

In addition to University minimum requirements, the B.A. degree in Latin American Studies

ies constitutes the normal basis for admission to the M.A. program. Applicants with a degree in another field can be admitted but must complete certain undergraduate requisites subsequent to admission. Applicants with Latin American field experience or special methodological studies are given special consideration. All applicants should meet minimum requirements in at least one language of Latin America. The following items are required:

- (1) Three academic letters of recommendation, unless the applicant has been away from school for some time, in which case one of the letters may be from an employer
- (2) A minimum of a 3.0 or B average in the junior/senior years of college
- (3) A statement of purpose discussing the applicant's background in Latin American studies, proposed program of study, and future career plans
- (4) A minimum score of 1,000 on the General Test (combined verbal and quantitative sections) of the Graduate Record Examination (GRE)

Optional: a résumé or curriculum vitae describing both academic and Latin American experience.

Students are admitted each quarter. Application deadlines are November 1 for Winter Quarter, December 31 for Spring Quarter, and December 15 (to be considered for financial assistance) or May 1 for Fall Quarter.

Several options are available to combine the M.A. in Latin American Studies with a professional degree. After acceptance by both the Latin American Studies Program and the respective professional school, students may pursue both degrees simultaneously.

Articulated Degree Programs

Articulated degree programs are currently available with the (1) Department of Education in the Graduate School of Education and Information Studies (Master of Education in Curriculum); (2) Department of Information Studies in the Graduate School of Education and Information Studies (Master of Library and Information Science); (3) School of Public Health (Master of Public Health).

Concurrent Degree Programs

Concurrent degree programs are available with the (1) Department of Urban Planning in the School of Public Policy and Social Research (Master of Arts in Urban Planning) and (2) John E. Anderson Graduate School of Management (Master of Business Administration).

Fellowship applications for the academic year are due on January 8 prior to the Fall Quarter for which application is made. Prospective students may write to the department for departmental brochures.

Areas of Study

Students are expected to develop and integrate two or three fields in Latin American studies, to be selected from the following: an-

thropology, art, economics, education, engineering, folklore, geography, history, law, library science, linguistics, management, music, political science, Portuguese, public health, sociology, Spanish, theater arts, and urban planning. At least one of the chosen fields must be a social science.

Course Requirements

Latin American Studies 205 is a core course required of all M.A. students, to be taken during the first Fall Quarter in residence.

All courses must be selected from the department-approved list of courses. Other courses must be petitioned in advance. Courses numbered in the 300- and 400-series are not applicable toward the M.A. degree. Graduate courses may be repeated unless they are of the lecture type.

No more than eight units of 500-series courses may be applied toward the total course requirement for the M.A. degree; no more than four units may be applied toward the minimum five graduate courses required for the M.A. degree.

Comprehensive Examination Plan

A minimum of nine courses is required, to be distributed among three fields or disciplines on a 3-3-2 basis or among two fields on a 4-4 basis. Of the nine courses, five must be at the graduate level, with at least one in each of the three fields.

The examination requirement is fulfilled by the submission of three research papers written for at least two of the three fields included as part of the program of study. At least two of these papers must have been submitted for graduate courses in the 200 series. The papers are evaluated by a three-member faculty committee representing the degree candidate's three fields or both fields if the candidate is doing only two fields. Two positive votes among the three-member faculty examination committee constitutes a pass on the results. The committee evaluates the papers in the following terms: honor pass (a unanimous vote), pass, pass subject to revision of one or more of the research papers, or fail (majority vote). If two of the three members of the committee so request, an oral examination based on the papers may be required. When papers are passed subject to revision, one member of the committee is assigned the responsibility of working with the student on the revision and determining when the paper has been satisfactorily revised. No reexaminations are permitted. The degree is awarded on recommendation of the faculty committee. Copies of the papers are filed in the Academic Programs Office of the Latin American Center.

Thesis Plan

Although students are generally expected to follow the M.A. comprehensive examination plan, in special cases they may be allowed to follow the M.A. thesis plan. Students must develop a carefully prepared proposal to be approved by the academic coordinator in consultation with the faculty committee chair. To be

approved, the proposal must provide sound justification for the thesis plan, including provisions for funding any field research.

A minimum of 10 courses is required, consisting of a one-term core course and nine additional courses to be distributed on a 4-3-2 basis among three fields. Three graduate-level courses are required in the first field, with one each in the two minor fields.

Once the thesis plan option has been approved, students choose a three-member faculty thesis committee consisting of one professor from each of three disciplines, one of whom has already agreed to serve as chair. The thesis committee works closely with students in the development, writing, and revision of the thesis and is responsible for reading, evaluating, and approving the drafts and final version of the thesis, ensuring thereby that it meets the University standards of scholarship. Once the final version is approved, the thesis committee recommends the award of the M.A. degree. By the end of the quarter before graduation, students must file for advancement to candidacy with the Graduate Division.

Latin American Studies

Lower Division Course

99. Introduction to Latin American Problems. (4) Limited to 15 students. Interdisciplinary seminar for lower division students. May be repeated for credit with topic change.

Upper Division Courses

197. Interdisciplinary Topics in Latin American Studies. (4) Advanced interdisciplinary course for juniors/seniors. May be repeated for credit with topic change:

M197A. Introduction to Caribbean Literature. (Same as Spanish M197A.) Lecture, two hours; discussion, two hours. Interdisciplinary introduction to literature of French, Spanish, and English Caribbean.

199. Special Studies in Latin American Studies (4 or 8). Limited to juniors/seniors. Intensive directed research program in which students conduct interdisciplinary research or complete internship with an international agency or program dealing with Latin America. Faculty sponsorship and written reports required.

Graduate Courses

M200. Latin American Research Resources. (4) (Same as History M265 and Library and Information Science M225.) Seminar, three hours. General and specialized materials in fields concerned with Latin American studies. Library research techniques provide experience and competency required for future bibliographic and research sophistication as basis for enhanced research results.

205. Latin Americanist Scholarship. (4) Lecture, three hours. Panoramic introduction to methods and issues in various disciplines that study Latin America, with guest lecturers from various fields. (Latin American Studies core course.)

M250A. Indians of South America. (4) (Same as Anthropology M272.) Lecture, three hours. Survey of literature and research topics related to Indian cultures of South America. May be repeated for credit.

250B. Interdisciplinary Seminar: Latin American Studies. (4) Seminar, three hours. Problem-oriented seminar on critical areas stressed in University's cooperative programs in Latin America.

250C. Interdisciplinary Topics in Latin American Studies. (4) Reading knowledge of Spanish or Portuguese normally required. Seminar devoted to selected topics of an interdisciplinary nature.

M268A-M268B. Seminars: Recent Latin American History. (4) (Same as History M268A-M268B.) Seminar, three hours. Reading knowledge of Spanish and Portuguese normally required. Seminar devoted to selected topics of an interdisciplinary nature. In Progress grading.

501. Cooperative Program. (2 to 8) Preparation: consent of UCLA graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Used to record enrollment of UCLA students in courses taken under cooperative arrangements with USC. S/U grading.

596. Directed Individual Study or Research. (2 to 8) May be repeated, but only four units may be applied toward the minimum graduate course requirement. S/U or letter grading.

597. Preparation for M.A. Comprehensive Examination. (4) Ordinarily taken only during term in which student is being examined. S/U grading.

598. Research for and Preparation of M.A. Thesis. (4) Only four units may be applied toward the minimum graduate course requirement. S/U grading.

Course List

Approved Graduate Courses

Special courses which may be applied toward the M.A. degree requirements with advanced departmental approval are indicated with asterisks. These courses do not have any exclusive focus on Latin America but provide an opportunity for students to relate a particular perspective or phenomenon to Latin America.

Refer to the Latin American Studies undergraduate section for the lists of approved undergraduate courses.

Fine Arts

Art History

*201. Topics in Historiography of Art History

C218A. Pre-Columbian Art of Mexico

C218B. Pre-Columbian Art of the Maya

C218C. Pre-Columbian Art of the Andes

C218D. Aztec Art

219B. Pre-Columbian Art

220. Oceanic, Pre-Columbian, African, and Native North American Art

C254. Latin American Art of the 20th Century

596. Directed Individual Study or Research

Ethnomusicology

201A. Proseminar: Ethnomusicology

208. Seminar: Latin American Music

*290. Seminar: Ethnomusicology

596. Directed Individual Studies

Film and Television

276. Seminar: Non-Western Films — Mexican Cinema

*298A-298B. Special Studies in Film and Television

Theater

Scope and Objectives

The School of Law, one of two academic units at UCLA which operate on a semester (rather than quarter) system, offers a three-year curriculum leading to the J.D. degree. The school is accredited by the California Committee of Bar Examiners, is a member of the Association of American Law Schools, and is on the approved list of the American Bar Association. Graduates of the school are qualified to apply for admission to practice in any state in the U.S.

The school is designed to produce lawyers who are well-prepared for the various private and public roles that are assigned to members of the legal profession. Students do not undertake a specific major but have the opportunity to enroll in a wide variety of courses dealing with various legal fields

Professional Study

Juris Doctor Degree

Admission

Students beginning their professional work are admitted only for the Fall Semester. They must have received a bachelor's degree from a university or college of approved standing before beginning work in the school and are required to take the Law School Admission Test (LSAT).

The school seeks to admit students of outstanding intellectual ability who bring a wide range of backgrounds, experiences, and perspectives to the classroom and the legal profession. The faculty has concluded that the quality of the education of students is affected in significant ways by the presence of vital diverse viewpoints; students of all backgrounds select UCLA in significant part because of the school's outstanding achievement in creating a highly diverse educational environment.

In evaluating applicants the school places substantial weight on traditional measures of academic ability, namely grades and LSAT scores, and recognizes that other factors and attributes contribute greatly to people's ability to succeed as law students and lawyers. When assessing academic promise and achievement, an applicant's entire file is considered, including letters of recommendation, whether economic, physical, or other challenges have been overcome, scholarly achievements such as graduate study, awards, or publications, and the rigor of the undergraduate educational program.

In addition, the school considers attributes that may contribute to assembling a diverse class, placing special emphasis on socioeconomic disadvantage. Also evaluated are work experience and career achievement, community or public service, career goals (with particular attention to the likelihood of applicants representing underrepresented communities), evidence of and potential for leadership, language ability, unusual life experiences, and any other factors (except those deemed inadmissible by The Regents or by other applicable law) that indicate applicants may significantly diversify the student body or make a distinctive contribution to the school or the legal profession.

UCLA has as one of its central purposes the training of attorneys who attain high levels of professional excellence and integrity and who exercise civic responsibility in myriad ways over long careers.

Detailed information about the academic programs offered by the School of Law, course titles and descriptions, fees, and the semester-system calendar by which it operates are available in the *Bulletin of the UCLA School of Law* or from the School of Law website given at the beginning of this listing.

For information on the proficiency in English requirements for international graduate students, refer to Graduate Admission in the Graduate Study section of this catalog.

Residence and Unit Requirements

Candidates for the degree of Juris Doctor must pursue resident law school study for six semesters and successfully complete 87 units. The residence requirements may be satisfied as follows: (1) six semesters in regular session in this school or (2) two semesters in regular session (or equivalent) in a school which is accredited by the American Bar Association, coupled with four semesters in regular session (or equivalent) in this school.

Every first-year student is required to take the full schedule of required courses; second- and third-year students are required to take a minimum of 12 hours and may not take more than 16 hours each semester. The second- and third-year curriculum is elective, except for a required course in professional responsibility. In addition to the courses in the regular law school curriculum, students may take two courses for credit in other disciplines within the University. Graduate students may enroll in upper division law courses on a limited basis. Law courses are not open to non-UCLA students. Auditing of courses is not permitted.

Attendance and Grades

The right to take examinations and the privilege of continuing as a student in the school are conditioned on regular classroom attendance. Information on the grading system, which is based on a letter-grade scale of A+ to F, may be obtained from the Office of the Assistant Dean for Students. Standards for satisfactory performance and for graduation are prescribed by the faculty and are published separately. They may also be obtained from the above office.

Curriculum

The school offers courses of instruction within the school and supervised educational experiences outside it in an effort to enable its students to think intelligently and to prepare them for careers of practice and public service. To this end the school employs several instructional techniques in a variety of subject areas.

In the first year of their legal education students are exposed to an intensive study of legal reasoning in a series of fields which have historically dominated legal thought. Additionally, the first-year required course in lawyering skills provides students the opportunity to explore the relationship between legal analysis and lawyering tasks such as legal writing, oral advocacy, research, and client interviewing and counseling.

In the second and third years students have an opportunity to engage in a number of different fields of law and law-related study. All of the courses in the second- and third-year curriculum are elective, with the exception of the legal profession requirement which is a requisite for graduation.

Concurrent Degree Programs

The School of Law offers five concurrent degree programs that allow students to fulfill the requirements of the J.D. and another graduate degree simultaneously. Students may also design a tailored program from other disciplines in UCLA's curriculum or from another high-quality institution, but must arrange this in consultation with the School of Law and the other program selected. Students interested in pursuing a joint degree must apply simultaneously to both schools.

M.B.A./J.D.

The School of Law and the John E. Anderson Graduate School of Management offer a concurrent program which enables students to prepare for careers where law and management overlap and where understanding of both fields is desired. Examples of such areas include public service, international trade, industrial relations, corporate law, and specialized areas of management consulting. The program makes it possible to earn the J.D. and M.B.A. in four academic years.

M.A. Urban Planning/J.D.

The School of Law and the Department of Urban Planning in the School of Public Policy and Social Research offer a concurrent plan of study providing an integrated curriculum for students planning to specialize in the legal aspects of urban problems. Education in planning offers an overview of theories and methods that permit identification and treatment of urban problems; education in law offers insight into the institutional causes and possibilities for treatment of these problems. Students pursue studies in both areas and receive both the J.D. and M.A. degrees at the end of four years.

M.A. American Indian Studies/J.D.

The School of Law and the American Indian Studies Interdepartmental Program offer a concurrent plan of study over four years leading to both a J.D. and an M.A. This integrated program is designed to produce law graduates with a rich understanding of tribal cultures that expands their knowledge, facilitates their practice in the field of Indian law, and enhances their service to Indian nations. Legal study includes relevant tribal, U.S., and international law. Courses in American Indian studies address the diverse histories, world views, values, languages, and practices of North American tribes.

M.S.W./J.D.

The School of Law and the Department of Social Welfare in the School of Public Policy and Social Research offer a concurrent plan of study over four years leading to both a J.D. and an M.S.W. This integrated plan provides preparation for lawyers who want to focus on social welfare law and programs. Social workers interested in legal issues related to social welfare policy would also benefit from this preparation.

Education Program/J.D.

The School of Law and the Department of Education offer a concurrent plan which allows students to design a program of study leading to the J.D. and any advanced degree in education (M.Ed., M.A., Ed.D., or Ph.D.). If the program meets the degree requirements in both areas, students are awarded both degrees on its completion. This program currently is not accepting applicants.

Master of Laws Degree

The school offers a graduate law program leading to the Master of Laws (LL.M.) degree to outstanding international students interested in pursuing graduate studies. Law school graduates with outstanding records who may be interested in this program should contact Professor Joel Handler, LL.M. Program, School of Law, 1242 Law, UCLA, Box 951476, Los Angeles, CA 90095-1476, for further information.

Law

Lower Division Course

88. Lower Division Seminar: Special Topics in Law. (4) Seminar, three hours; outside study, nine hours. Preparation: satisfaction of Subject A requirement. Variable topics seminar which examines specific issues or problems and ways that professionals in law approach study of them. Students define, prepare, and present their own research projects with guidance of a professional school faculty member.

Linda Garnets, Ph.D. (*Psychology*)
Vernon Rosario, M.D., Ph.D.

Adjunct Assistant Professor

Carol Hodgson, Ph.D. (*Medicine*)

Scope and Objectives

Although lesbian, gay, bisexual, and transgender studies has only recently found a place in university curricula, the field actually represents the intersection of two traditions that have existed for thousands of years. The better known is the learned tradition, which, at least since the end of the ancient world, has been overwhelmingly hostile. Medieval theology condemned the sodomite, nineteenth-century medicine pathologized the invert, and until very recently psychiatry felt called on to "cure" the homosexual. For at least as long, however, women and men attracted to others of their own sex have kept alive another affirmative tradition, a knowledge of their past that sustained them, often in the face of overwhelming official hostility. The guests at Plato's *Symposium* looked back to Achilles and Patroclus; women-loving-women of the nineteenth century remembered Sappho; an inmate of a New York prison interviewed in the early 1920s was able to recite a long list of famous lesbians and gay men.

After the birth of the modern gay liberation movement in 1969, this underground knowledge came out of the closet and found a public voice sufficiently strong to mount a sustained challenge to the official teachings concerning minority sexualities. This challenge led to a dramatic increase in research on same-sex desire, most of it the work of scholars without academic affiliations. Inspired by these accomplishments, students and faculty at colleges and universities eventually mustered the courage to address similar topics, thereby transforming — partly by assimilation, partly by contestation — the previously hostile learned tradition. This originally rather disparate work gradually coalesced into lesbian, gay, bisexual, and transgender studies, which, over the last decade, has developed into an academic discipline of remarkable breadth and vitality. The field embraces work in genetics and cultural studies, literature and anthropology, the health sciences, history, and the visual arts. It ranges from archival research to the elaboration of queer theory, from the analysis of constitutional law to questions of public health, from the study of identical twins to the study of popular culture.

Although the initial focus in lesbian, gay, bisexual, and transgender studies is usually on minority sexualities and genders, it is impossible

to study them in any meaningful way without raising questions about sexuality and gender in general. And those questions cannot be responsibly answered without considering class, race, ethnicity, history, political economy, and the construction of scientific knowledge. Thus lesbian, gay, bisexual, and transgender studies, which may at first seem to concern the private practices of a small number of people, inevitably leads to the much larger study of sexuality, gender, and culture. It represents an important vantage point from which to investigate the social construction of gender and sexual identity, social control of behavior, changing definitions of the family, and the place of sexual expression in the public and private spheres. Because of the kinds of questions asked, lesbian, gay, bisexual, and transgender studies is the site of some of the most exciting work being done today on the relation of culture and sexuality.

First offered in Fall Quarter 1997, UCLA's minor in Lesbian, Gay, Bisexual, and Transgender Studies provides the opportunity to study sexuality from a variety of interdisciplinary perspectives. Interdisciplinarity is assured by requiring students to take at least one course each in the life sciences, social sciences, and humanities. In addition, seniors in the minor are expected to do an internship in a community organization, thereby acquiring a kind of knowledge not usually available in the classroom. After completing the minor, students should be familiar with the theoretical tools that different disciplines employ to study sexuality and gender. They should be acquainted with some of the many different ways sexuality and gender have been organized in the past and are organized in different cultures in the present and should have an enhanced understanding and appreciation both of the sexual and gender diversity of the world in which they live and of the complex ways in which sexuality and gender intersect with other categories of identity and practice.

Undergraduate Study

Lesbian, Gay, Bisexual, and Transgender Studies Minor

To enter the Lesbian, Gay, Bisexual, and Transgender Studies minor, students must have an overall grade-point average of 2.0 or better.

Required Upper Division Courses (32 units): Lesbian, Gay, Bisexual, and Transgender Studies M114, 196, and six additional courses, including at least one each in the humanities, life sciences, and social sciences, to be selected from the approved list of courses available in the program office each term. Students may petition to apply a related course not on the list toward the six-course requirement if they can show that lesbian, gay, bisexual, or transgender issues represent a significant part of the course content. Students are strongly urged to keep in close contact with advisers in the pro-

gram office who can help them plan their course of study.

All minor courses must be taken for a letter grade, with an overall grade-point average of 2.0 or better. Successful completion of the minor is indicated on the transcript and diploma.

Lesbian, Gay, Bisexual, and Transgender Studies

Upper Division Courses

M101A. Lesbian and Gay Literature before Stonewall. (4) (Same as English M101A and Women's Studies M101A.) Lecture, four hours. Preparation: satisfaction of English Composition requirement. Survey of lesbian and gay literature in English from earlier periods through the 1960s. Works by such authors as Walt Whitman, Oscar Wilde, Radclyffe Hall, E.M. Forster, Willa Cather, Virginia Woolf, James Baldwin, Christopher Isherwood, William S. Burroughs, John Rechy, Audre Lorde, and Edward Albee. P/NP or letter grading.

M101B. Lesbian and Gay Literature after Stonewall. (4) (Same as English M101B and Women's Studies M101B.) Lecture, four hours. Preparation: satisfaction of English Composition requirement. Survey of lesbian and gay literature in English since 1969, year of Stonewall Riots in New York City, commonly recognized as beginning of modern lesbian and gay culture. Works by such authors as Adrienne Rich, Jane Rule, Maureen Duffy, Brigid Brophy, Larry Kramer, Bertha Harris, Edmund White, Rita Mae Brown, Alan Hollinghurst, and Emma Donahue. P/NP or letter grading.

M114. Introduction to Lesbian, Gay, Bisexual, and Transgender Studies. (4) (Formerly numbered M14.) (Same as Women's Studies M114.) Lecture, three hours; discussion, one hour. Introduction to history, politics, culture, and scientific study of lesbians, gay men, bisexuals, and transgendered people; examination of sexuality and gender as categories for investigation; interdisciplinary theories and research on minority sexualities and genders. P/NP or letter grading.

M115. Topics in Study of Sexual and Gender Orientation. (4) (Same as Women's Studies M115.) Lecture/discussion, three hours. Requisite: course M114 or Women's Studies 10. Studies in arts, humanities, social sciences, and/or life sciences on aspects of sexual orientation, gender identity, and lesbian, gay, and/or bisexual issues; variable topics may include cultural representations, historical and political change, life and health experiences, and queer or transgender theories; multiethnic and cross-cultural emphases. May be repeated for credit.

M116. Sexuality and the City: Queer Los Angeles. (4) (Same as Women's Studies M116.) Lecture, three hours. Requisite: course M114. Investigation of history, culture, and political economy of lesbian, gay, bisexual, and transgender Los Angeles.

M133. Chicana Lesbian Literature. (4) (Same as Chicana and Chicano Studies M133 and Women's Studies M133.) Lecture, three hours. Exploration of intersection of radical First and Third World feminist politics, lesbian sexuality and its relationship to Chicana identity, representation of lesbianism in Chicana literature, meaning of *familia* in Chicana lesbian lives, and impact of Chicana lesbian theory on Chicana/Chicano studies.

M134. Cultural Construction of Gender and Sexuality: Homosexualities. (4) (Same as Anthropology M134.) Comparative analysis of role of environment, history, and culture in structuring of patterns of same-sex erotic behavior in Asia, Africa, Middle East, Pacific, Caribbean, and aboriginal America. P/NP or letter grading.

M137. Gay and Lesbian Perspectives in Pop Music. (4) (Same as Music History M137.) Lecture, four hours. Survey of English-language popular music in the 20th century, with focus on lesbians, gay men, and members of other sexual minorities as creators, performers, and audience members. Letter grading.

M167. Contested Sexualities. (4) (Same as Sociology M167 and Women's Studies M167.) Lecture, three hours; discussion, one hour. Sociological perspectives on formation, control, and resistance of lesbian, gay, bisexual, and transgendered people. Variable topics include identity and community; age, class, gender, and racial diversity; and analysis of contemporary issues affecting contested sexualities. Letter grading.

196. Senior Internship Seminar: Lesbian, Gay, Bisexual, and Transgender Studies. (4) Seminar, three hours. Preparation: completion of four courses toward the minor. Requisite: course M114. Limited to seniors. Internship in a lesbian, gay, bisexual, or transgender community organization coupled with a weekly seminar. Consideration of theoretical and political issues involved in such work and relation of those issues to ideas explored in minor courses already taken.

197. Selected Topics in Lesbian, Gay, Bisexual, and Transgender Studies. (4) Study of selected topics in lesbian, gay, bisexual, and transgender studies. Consult *Schedule of Classes* for topics and instructors. May be repeated for credit with consent of instructor.

M197D. Special Topics in Lesbian and Gay Literature. (4) (Same as English M197D.) Preparation: satisfaction of English Composition requirement. Variable specialized studies course in lesbian and gay literature. Topics focus on a particular problem or issue in terms of its relationship to lesbian and gay culture and writing. May be repeated for credit. P/NP or letter grading.

199. Special Studies in Lesbian, Gay, Bisexual, and Transgender Studies. (2 to 4) Requisite: course M114. Directed program of independent study or research on a specific topic within lesbian, gay, bisexual, and transgender studies.

LIFE SCIENCES

College of Letters and Science

UCLA
2305 Life Sciences
Box 951606
Los Angeles, CA 90095-1606

(310) 825-6614
<http://www.lifesci.ucla.edu/lscore>

Scope and Objectives

Students who wish to study life sciences have a choice of nine majors, all of which lead to a Bachelor of Science degree: Biology, Ecology, Behavior, and Evolution, Marine Biology, and Plant Biology (Organismic Biology, Ecology, and Evolution Department), Microbiology and Molecular Genetics (Microbiology and Molecular Genetics Department), Molecular, Cell, and Developmental Biology (Molecular, Cell, and Developmental Biology Department), Neuroscience (Neuroscience Interdepartmental Program), Physiological Science (Physiological Science Department), and Psychobiology (Psychology Department). This choice reflects the diversity of undergraduate instruction in life sciences at UCLA. Despite this diversity, all of

these majors require a common core of introductory courses which forms the foundation for any study of life sciences and which is required for more advanced courses in each major. The common core includes courses in chemistry, physics, and mathematics, as well as introductory courses in evolution and biodiversity, cellular and organismal biology, molecular biology, and genetics. During the first two years, students may also gain experience in a research laboratory through the Student Research Program. For more information on each major, see the individual departmental listings in this section of the catalog. For additional information on the life sciences core curriculum, see the website at <http://www.lifesci.ucla.edu/lscore/index.html>.

Students considering one of the life sciences majors are encouraged to declare a major as early as possible, even in their first year. In this way, they are identified by the life sciences advising offices and receive important curricular and other information. Because the core curriculum prepares them for any of the nine majors, they have the flexibility to switch to another life sciences major at any time during their progression through the core curriculum. Note: The Marine Biology and Psychobiology majors may require some courses in addition to the life sciences core curriculum as part of the preparation. Consult the course requirements for both majors.

Life Sciences Core Curriculum

Required: Life Sciences 1, 2, 3, 4; Chemistry and Biochemistry 14A, 14B/14BL, 14C/14CL, and 14D, or 20A, 20B, 20L, 30, 30L, and 130A/130AL; Mathematics 3A, 3B, and 3C, or 31A, 31B, and 32A; Physics 1A, 1B, 1C, 4AL, and 4BL, or 6A, 6B, and 6C.

All core curriculum courses must be passed with a grade of C– or better and must be completed with an overall grade-point average of 2.0 or better. Students receiving a grade of D or F in two core curriculum courses, either in separate courses or repetitions of the same course, are subject to dismissal from the major.

Transfer students with 80 or more units must complete the following courses prior to admission to UCLA: one year of general biology with laboratory for majors, preferably equivalent to Life Sciences 1 and 2, one year of calculus, one year of general chemistry with laboratory, and one semester of organic chemistry with laboratory. A second semester of organic chemistry or one year of calculus-based physics is strongly recommended but not required for admission.

Life Sciences

Lower Division Courses

1. Evolution, Ecology, and Biodiversity. (4) Lecture, three hours; demonstration, two hours; outside study, seven hours. Not open for credit to students with credit for former Biology 5 or 6. Introduction to principles and mechanisms of evolution by natural selection; population, behavioral, and community ecology; and biodiversity, including major taxa and their evolutionary, ecological, and physiological relationships. Letter grading.

2. Cells, Tissues, and Organs. (5) Lecture, three hours; discussion/laboratory, three hours (alternate weeks). Requisite: Chemistry 14A or 20A or former course 10A. Introduction to basic principles of cell structure, organization of cells into tissues and organs, and principles of organ systems. Letter grading.

3. Introduction to Molecular Biology. (5) Lecture, three hours; discussion/laboratory, three hours (alternate weeks). Enforced requisites: course 2, Chemistry 14C or 30 or former course 10D. Introduction to basic principles of biochemistry and molecular biology. Letter grading.

3H. Introduction to Molecular Biology (Honors). (5) Lecture, two and one-half hours; discussion, 90 minutes; movie section, two and one-half hours. Enforced requisites: course 2, Chemistry 14C or 30 or former course 10D. Honors course parallel to course 3, but at a more advanced level. Letter grading.

4. Genetics. (4) Lecture, three hours; discussion, 90 minutes; outside study, seven and one-half hours. Enforced requisite: course 3. Principles of Mendelian inheritance and chromosomal basis of heredity in prokaryotes and eukaryotes, recombination, biochemical genetics, mutation, DNA, genetic code, gene regulation, genes in populations. Letter grading.

15. Life, Concepts, and Issues. (5) Lecture, three hours; discussion, two hours. Introduction to important concepts and issues in the field for non-life sciences majors. Topics include chemistry of life, genetics, physiology, evolution, and ecology — all explored in lecture and debates, with a writing component. P/NP or letter grading.

Upper Division Course

194. Teaching Practicum in Life Sciences. (2 or 4) Discussion, two hours; laboratory, three hours. Training and supervised practicum for undergraduates in teaching life sciences courses. Students serve as apprentice teaching assistants and assist in teaching laboratories and/or sections, in preparation, set up, and breaking down of materials for laboratory component, and in continued development of course material. Letter grading.

Carson T. Schütze, Ph.D.

Adjunct Professor

Ian Maddieson, Ph.D.

Scope and Objectives

The goal of linguistics is the enrichment of knowledge about the nature, grammar, and history of human language. Linguistics is a theoretical discipline, akin to philosophy, anthropology, and cognitive psychology. It is important for prospective students to understand that studying linguistics is not a matter of learning to speak many languages. Linguistics courses draw examples from the grammars of a wide variety of languages, and the more languages linguists know about in depth (as distinct from possessing fluency in the use of them), the more likely they are to discover universal properties. It is also possible to pursue these universal aspects of human language through the intensive in-depth study of a single language. This accounts for the high proportion of examples from English and familiar European languages found in linguistics courses and research publications.

The core areas of linguistic theory are phonology (with its roots in phonetics), morphology, syntax, and semantics. A grammar is a system of rules which characterize the phonology, morphology, syntax, and semantics of a natural language. The properties of grammars are the central focus of linguistic theory.

Because language is central to all humanistic disciplines, as well as to several social science areas, it is studied from many points of view. Linguistics itself cannot be said to recognize a single optimal approach to the subject. Hence, the courses provide a variety of approaches which reflect the diversity of the field.

The Linguistics Department has consistently been ranked among the very best linguistics departments in the country. It offers programs

leading to the Bachelor of Arts, Master of Arts, and Ph.D. degrees.

Undergraduate Study

The majors described below are of three types: (1) a major which concentrates entirely on general linguistics, (2) several majors which combine the basic courses of the general program with a language concentration or other related fields, and (3) a major which concentrates entirely on an African language area. The combined majors in conjunction with instructional certification programs are especially appropriate for students who have nonuniversity teaching careers as goals, and the African major is for students with specific African interests.

A 2.0 grade-point average in linguistics courses is required for all Linguistics Department majors.

Linguistics B.A.

The B.A. degree program is designed for students with an exceptional interest in and aptitude for the study of languages and linguistics. It enables undergraduates to gain substantial familiarity with several languages and types of linguistic structure and to become conversant with the historical study of language and formal theories of linguistics.

Preparation for the Major

Required: Linguistics 20; two of the following: Philosophy 31, Psychology 10, 100A, one cultural anthropology course; completion of the equivalent of the sixth term in each of two foreign languages or the sixth term in one foreign language and the third term in each of two other foreign languages.

Students who complete an advanced language course are considered to have completed the equivalent of whatever courses are requisite to that one (e.g., if students complete French 100, they have automatically satisfied the requirement of the sixth term of work in one language). Students are required to complete at least the equivalent of the third term in a language other than those in the Romance, Slavic, or Germanic families. This requirement may be satisfied either as part of or in addition to the language requirement described in the preceding paragraph.

The Major

Required: A minimum of 13 upper division or graduate courses, including Linguistics 103, 110, 120A, 120B, and two courses from 125, 165A, 165B (students may substitute courses 200A and 200B for 165A and 165B respectively if they receive grades of A in 120A and 120B respectively and have consent of instructor). Both courses 165A and 165B, or 200A and 200B, are recommended for students planning linguistics graduate work. The remaining seven courses are electives, three of which must be linguistics courses. The other four may be in linguistics or in certain other fields as follows: Anthropology 143, English 121, 122, Philosophy 127A, 127B, 172, Psy-

chology 120, 124E, 133C, or upper division courses in a foreign language beyond the sixth term. Nonlinguistics courses not on the list may be used as electives only in consultation with an adviser.

Linguistics 195 or 196A/196B are recommended for students planning to pursue graduate work in linguistics, since they provide an opportunity to engage in independent research and to write a paper which can be submitted to graduate admissions committees. To enroll in the courses, students must consult with the department's senior essay and honors counselor.

Linguistics and Anthropology B.A.

Preparation for the Major

Required: Linguistics 20, completion of the sixth term in each of two foreign languages or the sixth term in one foreign language and the third term in each of two other foreign languages (at least three terms must be in a language other than those in the Romance, Slavic, and Germanic families). Anthropology 33 is strongly recommended, when offered.

The Major

Required: Thirteen upper division courses as follows: Linguistics 103, 110, 120A, 120B or 127, 125, 170, one other upper division linguistics course (recommended: 114), Anthropology M140, either 144 or M145, one course from Anthropology 141, 142A, 143, or Sociology CM124A, and three upper division electives from Anthropology 141, 142A, 143, 144, M145, the 130 series (one course only), the 170 series (one course only), Sociology CM124A, CM124B. Linguistics 165A and 165B (or 200A and 200B with grades of A in 120A and 120B respectively and consent of instructor) are recommended for students planning to pursue graduate work in linguistics.

Linguistics and Computer Science B.A.

Preparation for the Major

Required: Linguistics 20, Mathematics 31A, 31B, Philosophy 31, Program in Computing 10A, 10B, 10C, 30, completion of the sixth term in one foreign language or the third term in each of two foreign languages. Admission to the major is contingent on passing the following courses with grades of C or better and a grade-point average of 3.3 or better: Linguistics 20, Philosophy 31, Program in Computing 10A, 10B, 10C. Mathematics 31A and 31B must also be passed with grades of C or better. Mathematics 61 is recommended.

The Major

Required: Twelve upper division courses as follows: Linguistics 103, 120A, 120B, 125, 165A or 165B, C180, C185A, Computer Science 131, 132, 161 or 163, 181, and one upper division elective in linguistics or computer science. Linguistics 104 and C185B are strongly recommended.

Linguistics and East Asian Languages and Cultures B.A.

Preparation for the Major

Required: Completion of the sixth term in either Chinese, Japanese, or Korean; Linguistics 20, Philosophy 31; one cultural anthropology course; either Chinese 50, Japanese 50, or Korean 50, as appropriate; completion of the sixth term in one other foreign language or the third term in each of two other foreign languages.

The Major

Required: Linguistics 103, 110, 120A, 120B, 165A or 165B (or 200A or 200B with a grade of A in 120A or 120B respectively and consent of instructor), one upper division elective in linguistics; for the classical Japanese track: Japanese 100A-100B, CM122, 140A-140B-140C, C149; for the modern Japanese track: Japanese 100A-100B-100C, 120, CM122, CM123 or CM127, 130B; for the classical Chinese track: Chinese 110A-110B-110C, four courses from 140A, 140B, 140C, 165, 170, 195; for the modern Chinese track: Chinese 100A-100B-100C, 101A, 101B, 130A, 130B; for the Korean track: Korean 100A-100B-100C, CM120, three courses from 101A, 101B, 101C, CM127, 130A, 130B.

Linguistics and English B.A.

Preparation for the Major

Required: Linguistics 20, English Composition 3, English 10A, 10B, 10C, Philosophy 31, completion of the sixth term in each of two foreign languages or the sixth term in one foreign language and the third term in each of two other foreign languages.

The Major

Required: Fourteen upper division courses as follows: Linguistics 103, 110, 120A, 120B, 165A or 165B (or 200A or 200B with a grade of A in 120A or 120B respectively and consent of instructor), two upper division electives in linguistics, English 121, 122 or Applied Linguistics and Teaching English as a Second Language C116, 140A, and four electives from 141A, 141B, 142A, 142B, 143, the 150 series (one course only), the 160 series (one course only), the 170 series (one course only).

Linguistics and French B.A.

Preparation for the Major

Required: Linguistics 20, French 1, 2, 3, 4, 5, 6, 12, 15, completion of the sixth term in one other foreign language or the third term in each of two other foreign languages.

The Major

Required: Fifteen upper division courses as follows: Linguistics 103, 110, 120A, 120B, 165A or 165B (or 200A or 200B with a grade of A in 120A or 120B respectively and consent of instructor), two upper division electives in linguistics, French 100, 101, 102, 103, 105, 107,

and two elective upper division French literature courses.

Linguistics and Italian B.A.

Preparation for the Major

Required: Linguistics 20, Italian 1, 2, 3, 4, 5, 25, Latin 1, 2, 3, completion of the third term in one other foreign language or the sixth term in Latin, Philosophy 31, one cultural anthropology course.

The Major

Required: Twelve upper division courses as follows: Linguistics 103, 110, 120A, 120B, 165A or 165B (or 200A or 200B with a grade of A in 120A or 120B respectively and consent of instructor), two upper division electives in linguistics, Italian 102A, 190, and three upper division electives in Italian.

Linguistics and Philosophy B.A.

Preparation for the Major

Required: Linguistics 20, Philosophy 31, 32, and two courses from 1, 6, 7, 21; completion of the sixth term in each of two foreign languages or the sixth term in one foreign language and the third term in each of two other foreign languages.

The Major

Required: Thirteen upper division courses as follows: Linguistics 103, 120A, 120B, 165B (or 200B with a grade of A in 120B and consent of instructor), three upper division electives in linguistics; six upper division courses in philosophy, including at least five from Philosophy 124 through 135B, 170, 172, 184, 186, 187, 188, of which at least two must be from 127A, 127B, 172.

Linguistics and Psychology B.A.

Preparation for the Major

Required: Linguistics 20, Psychology 10, 85, 100A, 100B, completion of the sixth term in one foreign language and the third term in a second foreign language. Program in Computing 10A is strongly recommended.

The Major

Required: Thirteen upper division courses as follows: Linguistics 103, 120A, 120B, C130, C132, two upper division electives in linguistics, Psychology 120, 121, 133B, 133E, and two electives to be selected from 115, 116, M117C, 118, M119L, 124A, 124B, 124C, 124E, 130, 133C, 133E, 133F, 133G, M137J, 186A, 186B. Linguistics C135 and 165A or 165B (or 200A or 200B with a grade of A in 120A or 120B respectively and consent of instructor) are strongly recommended.

Linguistics and Scandinavian Languages B.A.

Preparation for the Major

Required: Linguistics 20, Scandinavian 1, 2, 3, 4, and 5, or 11, 12, 13, 14, and 15, or 21, 22, 23, 24, and 25, completion of the sixth term in one other foreign language or the third term in each of two other foreign languages.

The Major

Required: Thirteen upper division courses as follows: Linguistics 103, 110, 120A, 120B, 165A or 165B (or 200A or 200B with a grade of A in 120A or 120B respectively and consent of instructor), two upper division electives in linguistics, two courses from Scandinavian 105, 110, 115 (or one of these courses twice), 199 (in a topic related to Scandinavian linguistics, under the direction of a Scandinavian or Linguistics faculty member), and three upper division electives in Scandinavian.

Linguistics and Spanish B.A.

Preparation for the Major

Required: Linguistics 20, Spanish 1, 2, 3, 4, 5, 25, M42, M44, completion of the sixth term in one other foreign language or the third term in each of two other foreign languages.

The Major

Required: Fourteen upper division courses as follows: Linguistics 103, 110, 120A, 120B, 165A or 165B (or 200A or 200B with a grade of A in 120A or 120B respectively and consent of instructor), two additional upper division courses in linguistics (preferably C130 and 170), Spanish 100A-100B, 115 or M118A, 119A, 119B, and two additional upper division Spanish courses.

African Languages B.A.

Preparation for the Major

Required: Linguistics 20, nine courses from African Languages 1A through 42C and 199 (six in one language and three in another).

The Major

Required: A minimum of 13 upper division courses, including three courses in an African language; African Languages M190, Linguistics 103; two courses from Film and Television 106C, Folklore M155, French 121A, Theater 102E, or one or more special four-unit African Languages 199 tutorials focusing on literature in an African language; three courses from English 114, Ethnomusicology 136A, 136B, History 125A, 125B, 125C, 126A, 126B, 127A, 127B, 128A, 128B, Linguistics 110, 120A, 120B or 127, 140, M146, 170, Political Science 151A, 151B, 151C. Linguistics 165A or 165B (or 200A or 200B with a grade of A in 120A or 120B respectively and consent of instructor) and completion of the sixth term in one of the following non-African languages are strongly

recommended: Afrikaans, Arabic, Dutch, French, German, Portuguese.

Honors Program

Honors in linguistics are awarded at graduation to those students who have a grade-point average of 3.6 or better in their junior and senior years and who have received a grade of A in Linguistics 195 or 196A/196B. Qualified students may be proposed by any member of the faculty to the faculty as a whole for the award of highest honors on the basis of a piece of research in linguistics completed at UCLA.

Computing Specialization

Students in any of the linguistics majors (except Linguistics and Computer Science) may select a specialization in Computing by (1) satisfying all the requirements for a bachelor's degree in the specified major and (2) completing Program in Computing 10A, 10B, 10C, 60, Linguistics C180, C185A. Students graduate with a bachelor's degree in their major and a specialization in Computing.

Linguistics Minor

The Linguistics minor is designed for students where training in linguistic analysis could be an enhancement to their major programs and to students who are interested in language(s) but do not have time in their undergraduate programs to pursue multiquarter language sequences. In addition, the minor provides students with a way to design "custom" joint degrees with linguistics where the Linguistics Department does not have an existing joint degree program combining linguistics and another field.

To enter the minor, students must have an overall grade-point average of 2.0 or better.

Required Lower Division Course (four units): Linguistics 20.

Required Upper Division Courses (24 to 26 units): Linguistics 103, 120A, 120B, and three elective courses, of which at least two must be selected from 104 through C185B.

All minor courses must be taken for a letter grade, with an overall grade-point average of 2.0 or better. Successful completion of the minor is indicated on the transcript and diploma.

Graduate Study

The following constitutes introductory information regarding graduate degree programs and is based on the 1998-99 edition of *Program Requirements for UCLA Graduate Degrees*. Complete, annual editions of *Program Requirements* are available (listed under "Publications") on the Graduate Division website at <http://www.gdnet.ucla.edu>. Students are subject to the degree requirements as published in *Program Requirements* for the year in which they matriculate.

Master's Degree

The Department of Linguistics offers the Master of Arts (M.A.) degree in Linguistics.

Admission

Students are normally admitted to begin residence for the M.A. program in the Fall Quarter only (exceptions may be made by the chair). The deadline for submission of applications for the Fall Quarter is December 31 of the previous year.

Applicants are asked to submit a statement of purpose, which should include their background for graduate study in linguistics and immediate and long-range goals in the field. Three scholars under whom the applicants have studied should submit letters to the department about the applicants's qualifications. Scores on the verbal, quantitative, and analytical sections of the Graduate Record Examination (GRE) must be submitted. There is no minimum score requirement. A copy of some research paper or other piece of writing in linguistics or a closely related field should also be submitted.

While not required for admission, Linguistics 103, 110, 120A, 120B, 165A, 165B are requisite to graduate courses in the corresponding areas. At the time of admission, applicants are notified which, if any, of the above courses must be taken or audited. However, any question of whether courses taken elsewhere are equivalent to the above courses must be discussed with the adviser.

Prospective students may request an information brochure from the administrative assistant in the department.

Areas of Study

Consult the department.

Course Requirements

The Master of Arts degree requires the completion, with a B average or better, of nine graduate courses in linguistics. All students are required to take Linguistics 200A, 200B, 201, 202, and 206. The remaining four courses must be chosen from Linguistics 203 through 218 or C232 through C235. All first-year graduate students must take courses 411A-411B, and all second-year students must take course 444.

The following undergraduate courses or the equivalent are requisite to graduate courses in the corresponding areas: Linguistics 103, 110, 120A, 120B, 165A, 165B. Course 103, or an examination in practical phonetics, must be passed with a grade of B or better as a requisite to Linguistics 210A, a required course for the Ph.D. that may be taken at the pre-M.A. level. A proficiency examination in elementary logic, which may be waived on the basis of appropriate coursework, is requisite to course 206.

No more than two courses (with grades of B or better) from institutions outside the University of California may be applied toward the M.A.

Comprehensive Examination Plan

After completing the required courses and the foreign language examination, students must pass a comprehensive examination administered by a committee of the faculty. The committee, consisting of four members, is appointed by the chair. This is normally an oral examination, general in scope, and results in a terminal M.A. degree.

Thesis Plan

After completing the required courses and the foreign language examination, if this plan is selected, students submit a thesis based on original research to a thesis committee for approval. If students intend to proceed to the Ph.D., this plan must be adopted.

For students wishing to be considered for advancement into the doctoral program, a copy of the thesis, complete and clearly legible, but not necessarily in final typed form, must be in the hands of the committee at least two weeks before the last day of classes in the quarter.

Requirements for receiving an M.A. include the filing of a Petition for Advancement to Candidacy form early in the quarter during which students expect to take the degree. The thesis must be typed according to regulations set by the University. Information on these regulations and procedures is available from the Graduate Division.

Doctoral Degree

Admission

General admission requirements for the program leading to the Ph.D. degree in Linguistics are the same as those listed for the M.A. If earlier graduate work was done at UCLA, admission into the Ph.D. program is considered on the basis of the following: (1) completion of all requirements for the M.A. and (2) the faculty's evaluation of the quality of the M.A. thesis and of overall work and promise.

If applicants have already received an M.A. in Linguistics from another department or institution, all the requirements expected of an M.A. candidate, including the coursework, must be fulfilled unless work elsewhere is equivalent and satisfies the course requirements. Then there are two possible procedures: (1) a master's thesis written at another institution or department may be submitted or (2) if a thesis was not written elsewhere, a paper equal in depth and scope to a thesis may be submitted. In either case an evaluation committee is appointed. This committee makes a recommendation to the entire faculty, which then accesses the applicant's qualifications for admission into the Ph.D. program

Major Fields or Subdisciplines

Students may specialize in syntax, semantics, phonology, phonetics, language change, typology, neurolinguistics, psycholinguistics, computational linguistics, and many language areas, notably African languages and American Indian languages. Other specializations may

be possible, depending on the availability of faculty expertise.

Course Requirements

Candidates for the Ph.D. are required to have taken 36 units of graduate coursework beyond the M.A. requirements. These units must include Linguistics 210A, 210B, and eight units in an area distinct from that of the student's major area of concentration. The 36 units may not include course 275 (colloquium), any 300- or 400-level course, 597, or 599. Of the 36 units, no more than 12 units may be in course 596A. A maximum of four two-unit seminars may be included in the 36 units. At some time, some of the results of the student's research must be presented at a meeting of the Linguistics Department Colloquium. This is a requirement for the degree.

Written and Oral Qualifying Examinations

In order to be advanced to candidacy, students are required to prepare two substantive research papers in different areas or fields of linguistics. These papers are to be submitted to and approved by the guidance committee. A written prospectus of the dissertation must be submitted to the guidance committee, with a copy to the department file, one month prior to the oral examination. At this time, provided the language requirement has been met, an official doctoral committee must be established.

The University Oral Qualifying Examination is administered by the doctoral committee, based primarily on the topic of the dissertation research. The examination includes all the background necessary to pursue research on the specific topic. Reexamination is possible on recommendation of the committee. Students are expected to take the examination and be advanced to candidacy no later than six quarters after being admitted to the doctoral program.

Linguistics

Lower Division Courses

1. Introduction to Study of Language. (4) Summary, for general undergraduates, of what is known about human language; unique nature of human language, its structure, its universality, and its diversity; language in its social and cultural setting; language in relation to other aspects of human inquiry and knowledge.

2. Language in the U.S. (4) Lecture, four hours; discussion, one hour. Survey of languages of the U.S. (American Indian languages, oldest immigrant languages, ethnic and regional varieties of English, and newest arrival languages) and social and political aspects of American language use.

10. Structure of English Words. (4) Lecture, three to four hours. Introduction to structure of English words of classical origin, including most common base forms and rules by which alternate forms are derived. Students may expect to achieve substantial enrichment of their vocabulary while learning about etymology, semantic change, and abstract rules of English word formation.

20. Introduction to Linguistics. (4) Lecture, four hours; discussion, one hour. Introduction to theory and methods of linguistics: universal properties of human language; phonetic, phonological, morphological, syntactic, and semantic structures and analysis; nature and form of grammar.

88. Lower Division Seminar. (4) Seminar, three hours. Limited to freshmen. Variable topics; consult *Schedule of Classes*, College of Letters and Science, or department for topics to be offered in a specific term. May be repeated for credit.

99. Special Studies in Linguistics. (2 to 4) Supervised research or training. May be repeated for credit. P/NP or letter grading.

Upper Division Courses

103. Introduction to General Phonetics. (4) Lecture, four hours; discussion, one hour. Preparation: one prior linguistics course or course 20 concurrently. Phonetics of a variety of languages and phonetic phenomena that occur in languages of the world. Extensive practice in perception and production of such phenomena.

104. Experimental Phonetics. (4) Lecture, four hours; discussion, one hour. Requisite: course 103. Survey of principal techniques of experimental phonetics. Use of laboratory equipment for recording and measuring phonetic phenomena.

110. Introduction to Historical Linguistics. (4) Requisites: courses 20, 103, 120A. Methods and theories appropriate to historical study of language, such as comparative method and method of internal reconstruction. Sound change, grammatical change, semantic change.

C111. Intonation. (4) Lecture, two hours; laboratory, two hours. Requisites: courses 20, 103, 120A or 120B. Recommended: course 104/204. Survey of intonational theory for English and other languages, with particular emphasis on phonological models of intonation. Laboratory equipment used for recording and analyzing intonation, and students learn to transcribe intonational elements. Concurrently scheduled with course C211.

114. American Indian Linguistics. (4) Strongly recommended preparation: course 20. Survey of genetic, areal, and typological classifications of American Indian languages; writing systems for American Indian languages; American Indian languages in social and historical context. One or more languages may be investigated in detail.

M115. Survey of African Languages. (4) (Same as African Languages M190.) Requisite: course 20. Introduction to languages of Africa, their distribution and classification, and their phonological and grammatical structures; elementary practice in several languages.

120A. Phonology I. (4) Requisites: courses 20, 103. Introduction to phonological theory and analysis. Rules, representations, underlying forms, derivations. Justification of phonological analyses. Emphasis on practical skills with problem sets.

120B. Syntax I. (4) Requisite: course 20. Course 120A is not requisite to 120B. Descriptive analysis of morphological and syntactic structures in natural languages; emphasis on insight into nature of such structures rather than linguistics formalization.

125. Semantics. (4) Lecture, four hours; discussion, one hour. Requisite: course 120B. Survey of most important theoretical and descriptive claims about the nature of meaning.

127. Syntactic Typology and Universals. (4) Requisite: course 20. Study of essential similarities and differences among languages in grammatical devices they use to signal the following kinds of concepts: relations between nouns and verbs (case and word order), negation, comparison, existence/location/possession, causation, interrogation, reflexivization, relativization, attribution (adjectives), time (tense and aspect), and backgrounding (subordination). Data from a range of languages presented and analyzed.

C130. Language Development. (4) Lecture, four hours; discussion, one hour. Requisites: courses 20, 120A, 120B. Survey of research and theoretical perspectives in language development in children. Discussion and examination of child language data from English and other languages. Emphasis on universals of language development. Topics include infant speech perception and production, development of phonology, morphology, syntax, and word meaning. Concurrently scheduled with course C233.

C132. Language Processing. (4) (Formerly numbered 132.) Lecture, four hours; discussion/laboratory, one hour. Requisites: courses 20, 120A, 120B. Central issues in language comprehension and production, with emphasis on how theories in linguistics inform processing models. Topics include word understanding (with emphasis on spoken language), parsing, anaphora and inferencing, speech error models of sentence production, and computation of syntactic structure during production. Concurrently scheduled with course C232.

C135. Neurolinguistics. (4) Lecture, four hours; discussion, one hour. Requisites: courses 1 or 20, and C130. Examination of relationship between brain, language, and linguistic theory, with evidence presented from atypical language development and language disorders in the mature brain. Topics include methodologies to investigate normal and atypical hemispheric specialization for language and children and adults with acquired and/or congenital language disorders. Concurrently scheduled with course C235.

140. Linguistics in Relation to Language Teaching. (4) Requisites: courses 120A, 120B. Aspects of linguistics in relation to teaching of language, with particular focus on special problems entailed in teaching non-European languages.

M146. Language in Culture. (4) (Same as Anthropology M140.) Lecture, three hours; discussion, one hour. Requisite: course 20 or Anthropology 33. Study of language as an aspect of culture; relation of habitual thought and behavior to language; and language and the classification of experience. Holistic approach to study of language, with emphasis on relationship of linguistic anthropology to fields of biological, cultural, and social anthropology, as well as archaeology. P/NP or letter grading.

M150. Introduction to Indo-European Linguistics. (4) (Same as Indo-European Studies M150.) Preparation: one year of college-level study (course 3 or better, eight units minimum) of either Greek or Latin and either German or Russian. Survey of Indo-European languages from ancient to modern times; their relationships and chief characteristics.

160. Field Methods. (6) Discussion, four hours; individual or group sessions, one to two hours. Requisites: courses 103, 120A, 120B. Analysis of a language unknown to members of class from data elicited from a native speaker of the language.

165A. Phonology II. (4) Lecture, four hours; discussion, one hour. Requisite: course 120A (undergraduates with grade of A in course 120A may replace course 165A with 200A, with consent of instructor). Further study in phonological theory and analysis: autosegmental theory, syllable structure, metrical theory, interface of phonology and grammar.

165B. Syntax II. (4) Lecture, four hours; discussion, one hour. Requisite: course 120B. Recommended for students who plan to do graduate work in linguistics. Form of grammars, word formation, formal and substantive universals in syntax, relation between syntax and semantics.

170. Language and Society: Introduction to Sociolinguistics. (4) Requisite: course 20. Study of patterned covariation of language and society; social dialects and social styles in language; problems of multilingual societies.

175. Linguistic Change in English. (4) Requisites: courses 110, 120A, 120B. Principles of linguistic change as exemplified through detailed study of history of English pronunciation, lexicon, and syntax.

M176A. Structure of Japanese I. (4) (Same as Japanese CM122.) Lecture, three hours. Preparation: two years of Japanese. Requisite: Japanese 120. Discussion of many seemingly idiosyncratic characteristics of Japanese syntax and semantics in light of word-order typology and universal grammar, often in form of a contrastive analysis of Japanese and English.

M176B. Structure of Japanese II. (4) (Same as Japanese CM123.) Lecture, three hours. Preparation: two or more years of Japanese language study. Survey of Japanese language at three different levels of organization: (1) word level — word class, verbal morphology and semantics; (2) clause/sentence level — tense, aspect, modality; (3) discourse level — point of view, ellipsis, topicalization.

M177. Structure of Korean. (4) (Same as Korean CM120.) Lecture, three hours. Preparation: two years of Korean, or one year of Korean and some knowledge of linguistics. Discussion of major syntactic, semantic, and pragmatic characteristics of Korean in light of linguistic universals, with brief introduction to formation, typological features, and phonological structure of Korean.

M178. Contrastive Analysis of Japanese and Korean. (4) (Same as Japanese CM127 and Korean CM127.) Lecture, three hours. Preparation: two years of Japanese or Korean, one introductory linguistics course. Critical reading and discussion of selected current research papers in syntax, pragmatics, discourse, and sociolinguistics from perspective of contrastive study of Japanese and Korean. May be repeated for credit with consent of instructor.

C180. Mathematical Linguistics I. (4) Lecture, four hours. Requisite: course 120B. Recommended: Philosophy 31. Prior mathematics knowledge not assumed. Mathematical introduction to phonology, syntax, and semantics. Elementary material on logic, sets, functions, relations, and trees. Concurrently scheduled with course C208. P/NP or letter grading.

C185A. Computational Linguistics I. (4) Requisites: courses 120B, C180, Program in Computing 10B. Recommended: course 165B or 200B, Program in Computing 60. Survey of recent work on natural language processing, including basic syntactic parsing strategies, with brief glimpses of semantic representation, reasoning, and response generation. Concurrently scheduled with course C209A.

C185B. Computational Linguistics II. (4) Requisite: course C185A/C209A. Extensions of basic language processing techniques to natural language processing. Recent models of syntactic, semantic, and discourse analysis, with particular attention to their linguistic sophistication and psychological plausibility. Concurrently scheduled with course C209B.

195. Senior Essay. (4) Limited to senior linguistics majors. Extended piece of writing is undertaken on a linguistic topic selected by the student to be completed under supervision of a faculty member. Consult professor in charge to enroll.

196A. Honors Essay. (4) Preparation: 3.5 grade-point average. Requisite: course 165A/200A or 165B/200B (may be taken concurrently). Recommended: completion of both courses 165A and 165B (or 200A and 200B) before or during term in which course 196A is taken. Draft of extended piece of writing on a linguistic topic selected by the student is prepared under supervision of a faculty member. Consult professor in charge to enroll. In Progress grading (credit to be given only on completion of course 196B).

196B. Honors Essay. (2) Requisite: course 196A. Piece of writing drafted in course 196A is presented in a seminar, revised, and put into final form under supervision of a faculty member. Consult professor in charge to enroll.

197. Special Topics in Linguistics. (4) Requisite: course 1 or 20. Variable topics selected from any undergraduate linguistics course area in which students desire greater in-depth knowledge. May be repeated for credit with topic change.

199. Special Studies in Linguistics. (2 to 4) Requisites: courses 120A, 120B. May be repeated for credit.

Graduate Courses

200A. Phonological Theory I. (4) Preparation: graduate linguistics student or grade of A in course 120A or equivalent course in phonology. Courses 200A and 201 form two-course survey of current research in phonological theory. Interaction of phonology with morphology and syntax, syllable structure, stress.

200B. Syntactic Theory I. (4) Preparation: graduate linguistics student or grade of A in course 120B or equivalent course in syntax. In-depth introduction to selected topics in theory of constituent structure and syntax of predicates, arguments, and grammatical relations. Topics include levels of representation, X-bar theory, case theory, thematic roles, the lexicon, grammatical function-changing rules, head-complement relations.

201. Phonological Theory II. (4) Requisite: course 200A. Continuation of course 200A. Second course in two-course survey of current research in phonological theory. Topics include autosegmentalism (tone, tiers, segment structure), feature theory, underspecification, prosodic morphology.

202. Language Change. (4) Requisites: courses 110, 200A, 200B. Survey of current theories and research problems in language change.

203. Phonetic Theory. (4) Requisite: course 120A. Preliminaries to speech analysis. Functional anatomy of vocal organs; fundamental principles of acoustics and of acoustic theory of speech production; issues in perception of speech; nature and design of feature systems for phonetic and phonological analysis.

204. Experimental Phonetics. (4) Requisite: course 103. Use of laboratory equipment to investigate articulatory, acoustic, and perceptual properties of speech. Topics include experimental design and statistics; theoretical basis of acoustic structure of speech sounds; computer-based speech processing, analysis, and modeling; perceptual and acoustic evaluation of synthetic speech.

205. Morphological Theory. (4) Requisites: courses 200A, 200B. Survey of current theories and research problems in morphology. Nature of morphological structure; derivational and inflectional morphology; relation of morphology to phonology, syntax, and the lexicon.

206. Syntactic Theory II. (4) Requisite: course 200B. In-depth introduction to selected topics in theory of movement processes and topics selected from following areas: WH-movement and related rules, subadjacency and other constraints on movement; ECP and related conditions on distribution of empty categories; resumptive pronoun constructions; parametric variation in movement constructions; LF WH-movement; filters; reconstruction; parasitic gaps; barriers theory; control theory; null subject parameter.

207. Formal Semantics. (4) Requisite: course C180/C208. Survey of current approaches to model-theoretic semantics and its relation to current linguistic theory. Approaches include generalized categorial grammars, Montague grammar, Boolean-based systems, generalized quantifier theory, logical form.

C208. Mathematical Linguistics I. (4) Lecture, four hours. Requisite: course 120B. Recommended: Philosophy 31. Prior mathematics knowledge not assumed. Mathematical introduction to phonology, syntax, and semantics. Elementary material on logic, sets, functions, relations, and trees. Concurrently scheduled with course C180. Graduate students expected to complete additional problem sets. S/U or letter grading.

C209A. Computational Linguistics I. (4) Requisites: courses 120B, C180, Program in Computing 10B. Recommended: course 165B or 200B, Program in Computing 60. Survey of recent work on natural language processing, including basic syntactic parsing strategies, with brief glimpses of semantic representation, reasoning, and response generation. Concurrently scheduled with course C185A.

C209B. Computational Linguistics II. (4) Requisite: course C185A/C209A. Extensions of basic language processing techniques to natural language processing. Recent models of syntactic, semantic, and discourse analysis, with particular attention to their linguistic sophistication and psychological plausibility. Concurrently scheduled with course C185B.

210A. Field Methods I. (6) Preparation: grade of B or better in course 103 or in examination on practical phonetics. Requisites: courses 200A, 200B. Analysis of a language unknown to members of class from data elicited from a native speaker of the language. Term papers to be relatively full descriptive sketches of the language. May be repeated for credit with topic change.

210B. Field Methods II. (6) Requisite: course 210A in preceding term. Because different languages are investigated in different years, course 210B can only be taken as direct continuation of 210A in same year. When there are multiple sections, continuation must be in same section. May be repeated for credit with topic change.

C211. Intonation. (4) Lecture, two hours; laboratory, two hours. Requisites: courses 20, 103, 120A or 120B. Recommended: course 104/204. Survey of intonational theory for English and other languages, with particular emphasis on phonological models of intonation. Laboratory equipment used for recording and analyzing intonation, and students learn to transcribe intonational elements. Concurrently scheduled with course C111.

212. Learnability Theory. (4) Requisite: course C180/C208. Survey of some of most significant results on capabilities of learners, given precise assumptions about their memory, time, and computational power, and precise assumptions about information provided by the environment.

213A. Grammatical Development. (4) Requisites: courses 200A, 200B. Recommended: course C130/C233. Survey of theoretical perspectives and contemporary empirical research in development of syntax and other components of grammar, with particular emphasis on acquisition theory, linguistic theory, and issues of learnability.

213B. Brain Bases for Language. (4) Requisites: courses 200A, 200B. Recommended: course C135/C235. Survey of theoretical perspectives and contemporary empirical research in neurological and cognitive bases for language, language development, and language breakdown.

213C. Linguistic Processing. (4) Requisites: courses 165B and/or 200B. Recommended: courses C132/C232, 206. Survey of theoretical perspectives and contemporary empirical research in human processing of language (comprehension and/or production), with emphasis on syntactic processing, ambiguity resolution, effects of memory load, and relationship between grammar and processor.

214. Survey of Current Syntactic Theories. (4) Requisite: course 206. Survey of several current syntactic theories, compared with one another and with theory discussed in course 206, from point of view of theories' relative descriptive and explanatory power.

215. Syntactic Typology. (4) Requisite: course 200B. Current results in word-order universals; genetic classification of the world's languages; cross-language properties of specific construction types, including relative clauses, passives, positive and negative conference systems, agreement systems, deixis systems, and types of sentence complements.

216. Syntactic Theory III. (4) Requisite: course 206. Selected topics on syntactic theories of anaphora and quantification from the following areas: typology of binding categories (pronouns, anaphors, etc.); theory of locality conditions in binding theory; parametric variation in binding; quantifier movement; existential quantification and unselective binding; strong and weak crossover; superiority; scope interactions; complex quantifier structures.

218. Mathematical Linguistics II. (4) Lecture, four hours. Requisite: course C180/C208. In-depth study of generalized quantifier theory; selected topics from distinctive feature theory, formal syntax, partial orders and lattices, formal language theory, variable binding operators. May be repeated for credit with consent of instructor. S/U or letter grading.

220. Linguistic Areas. (4) Requisites: courses 120A, and 120B or 127. Recommended: courses 165A/200A, 165B/200B. Analysis and classification of languages spoken in a particular area (e.g., Africa, the Balkans, South Asia, Southeast Asia, Australia, Aboriginal North America, Aboriginal South America, Far East, etc.). May be repeated for credit with topic change.

225. Linguistic Structures. (4) Requisites: courses 120A, and 120B or 127. Recommended: courses 165A/200A, 165B/200B. Phonological and grammatical structure of a selected language and its genetic relationships to others of its family. May be repeated for credit with topic change.

230. History of Linguistics. (4) Requisites: courses 200A, 200B. Aspects of history of linguistics. Different course offerings may deal with different areas of linguistics (e.g., phonology, syntax) or with different historical periods. May be repeated for credit with topic change.

C232. Language Processing. (4) Lecture, four hours; discussion/laboratory, one hour. Requisites: courses 20, 120A, 120B. Central issues in language comprehension and production, with emphasis on how theories in linguistics inform processing models. Topics include word understanding (with emphasis on spoken language), parsing, anaphora and inferencing, speech error models of sentence production, and computation of syntactic structure during production. Concurrently scheduled with course C132.

C233. Language Development. (4) Lecture, four hours; discussion, one hour. Requisites: courses 20, 120A, 120B. Survey of research and theoretical perspectives in language development in children. Discussion and examination of child language data from English and other languages. Emphasis on universals of language development. Topics include infant speech perception and production, development of phonology, morphology, syntax, and word meaning. Concurrently scheduled with course C130. Graduate students expected to apply more sophisticated knowledge and produce research paper of greater depth.

C235. Neurolinguistics. (4) Requisites: courses 1 or 20, and C130. Examination of relationship between brain, language, and linguistic theory, with evidence presented from atypical language development and language disorders in the mature brain. Topics include methodologies to investigate normal and atypical hemispheric specialization for language and children and adults with acquired and/or congenital language disorders. Concurrently scheduled with course C135. Graduate students expected to read more advanced neurolinguistic literature and produce research papers of greater depth.

236. Computational Phonology. (4) Lecture, four hours. Introduction to computational models of phonology and phonological acquisition. Topics include finite state machines, probabilistic automata, over-constrained models, dynamic programming methods. Letter grading.

237. Linguistic Methods Laboratory. (4) Laboratory, four hours. Variable content, with topics such as computer implementation of linguistic models, corpus studies, experimental methods for linguistic data collection, statistical analysis of results. May be repeated for credit. Letter grading.

M246C. Topics in Linguistic Anthropology. (4) (Same as Anthropology M241.) Problems in relations of language, culture, and society. May be repeated for credit.

251A. Topics in Phonetics and Phonology. (4) (Formerly numbered 251.) Lecture, four hours. Requisite: course 200A. Course 201, 203, or 204 may be required. Specialized topics in phonetics and phonology. Meets with course 251B. May be repeated for credit.

251B. Topics in Phonetics and Phonology. (2) (Formerly numbered 251.) Lecture, four hours. Requisite: course 200A. Course 201, 203, or 204 may be required. Specialized topics in phonetics and phonology. May not be applied toward M.A. or Ph.D. degree requirements. Meets with course 251A. May be repeated for credit. S/U grading.

252A. Topics in Syntax and Semantics. (4) (Formerly numbered 252.) Lecture, four hours. Requisite: course 200B. Course 206, 207, 214, 215, or 216 may be required. Specialized topics in syntax and semantics. Meets with course 252B. May be repeated for credit.

252B. Topics in Syntax and Semantics. (2) (Formerly numbered 252.) Lecture, four hours. Requisite: course 200B. Course 206, 207, 214, 215, or 216 may be required. Specialized topics in syntax and semantics. May not be applied toward M.A. or Ph.D. degree requirements. Meets with course 252A. May be repeated for credit. S/U grading.

253A. Topics in Language Variation. (4) (Formerly numbered 253.) Requisite: course 110. Course 202 may be required. Specialized topics in language variation. Meets with course 253B. May be repeated for credit.

253B. Topics in Language Variation. (2) (Formerly numbered 253.) Requisite: course 110. Course 202 may be required. Specialized topics in language variation. May not be applied toward M.A. or Ph.D. degree requirements. Meets with course 253A. May be repeated for credit. S/U grading.

254A. Topics in Linguistics. (4) (Formerly numbered 254.) Lecture, four hours. Requisites: courses 200A, 200B. Course 201, 202, 203, 204, 205, 206, 207, C208, C209A, C209B, 212, 213A, 213C, 214, 215, 216, or 218 may be required. Individual proseminars on topics such as child language, sociolinguistics, neurolinguistics, computational linguistics, psycholinguistics, etc. Meets with course 254B. May be repeated for credit.

254B. Topics in Linguistics. (2) (Formerly numbered 254.) Lecture, four hours. Requisites: courses 200A, 200B. Course 201, 202, 203, 204, 205, 206, 207, C208, C209A, C209B, 212, 213A, 213C, 214, 215, 216, or 218 may be required. Individual proseminars on topics such as child language, sociolinguistics, neurolinguistics, computational linguistics, psycholinguistics, etc. May not be applied toward M.A. or Ph.D. degree requirements. Meets with course 254A. May be repeated for credit. S/U grading.

256A. Topics in Phonetics and Phonology II: Proseminar. (4) Requisite: course 200A. Course 201, 203, or 204 may be required. Specialized topics in phonetics and phonology. May be repeated for credit. Meets with course 251. In Progress grading (credit to be given only on completion of course 256B).

256B. Topics in Phonetics and Phonology II: Proseminar. (2) Requisite: course 256A. Specialized topics in phonetics and phonology. May be repeated for credit.

257A. Topics in Syntax and Semantics II: Proseminar. (4) Requisite: course 200B. Course 206, 207, 214, 215, or 216 may be required. Specialized topics in syntax and semantics. May be repeated for credit. Meets with course 252. In Progress grading (credit to be given only on completion of course 257B).

257B. Topics in Syntax and Semantics II: Proseminar. (2) Requisite: course 257A. Specialized topics in syntax and semantics. May be repeated for credit.

258A. Topics in Language Variation II: Proseminar. (4) Requisite: course 110. Course 202 may be required. Specialized topics in language variation. May be repeated for credit. Meets with course 253. In Progress grading (credit to be given only on completion of course 258B).

258B. Topics in Language Variation II: Proseminar. (2) Requisite: course 258A. Specialized topics in language variation. May be repeated for credit.

259A. Topics in Linguistics II: Proseminar. (4) Requisites: courses 200A, 200B. Course 201, 202, 203, 204, 205, 206, 207, C208, C209A, C209B, 212, 213A, 214, 215, 216, or 218 may be required. Individual proseminars on topics such as child language, sociolinguistics, neurolinguistics, computational linguistics, psycholinguistics, etc. May be repeated for credit. Meets with course 254. In Progress grading (credit to be given only on completion of course 259B).

259B. Topics in Linguistics II: Proseminar. (2) Requisite: course 259A. Individual proseminars on topics such as child language, sociolinguistics, history of linguistic theory, neurolinguistics, languages of the world, psycholinguistics, etc. May be repeated for credit.

260A-260B-260C. Seminars: Phonetics. (2 or 4 each) Discussion, three hours. Each course may be taken independently for credit. May not be applied toward M.A. or Ph.D. degree requirements when taken for two units. May be repeated for credit. S/U grading.

261A-261B-261C. Seminars: Phonology. (2 or 4 each) Discussion, three hours. Each course may be taken independently for credit. May not be applied toward M.A. or Ph.D. degree requirements when taken for two units. May be repeated for credit. S/U grading.

262A-262B-262C. Seminars: Syntax and Semantics. (2 or 4 each) Discussion, three hours. Each course may be taken independently for credit. May not be applied toward M.A. or Ph.D. degree requirements when taken for two units. May be repeated for credit. S/U grading.

263A-263B-263C. Seminars: Language Variation. (2 or 4 each) Discussion, three hours. Each course may be taken independently for credit. May not be applied toward M.A. or Ph.D. degree requirements when taken for two units. May be repeated for credit. S/U grading.

264A-264B-264C. Seminars: Special Topics in Linguistic Theory. (2 or 4 each) Discussion, three hours. Each course may be taken independently for credit. Special topics may include child language, neurolinguistics, psycholinguistics, sociolinguistics, etc. May not be applied toward M.A. or Ph.D. degree requirements when taken for two units. May be repeated for credit. S/U grading.

275. Linguistics Colloquium. (4) Preparation: completion of M.A. requirements. Varied linguistic topics, generally presentations of new research by students, faculty, and visiting scholars. S/U grading.

276. Linguistics Colloquium. (No credit) Designed for graduate students. Same as course 275, but taken without credit by students not presenting a colloquium. S/U grading.

375. Teaching Apprentice Practicum. (1 to 4) Preparation: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

403. Practical Phonetics Training. (1) Extensive practice in production, perception, and transcription of sounds from a wide range of languages. Concurrently scheduled with practical sections of course 103. S/U grading.

411A-411B. Research Orientation. (2-2) Designed for graduate students. Sequence of lectures by department faculty to acquaint new graduate students with research directions and resources of department and elsewhere on campus. May not be applied toward M.A. or Ph.D. degree requirements. S/U grading.

422. Practicum: Phonetic Data Analysis. (2) Designed for graduate students. Workshop in examination of phonetic data, such as sound spectrograms, oscillographic records, and computer output. May not be applied toward M.A. or Ph.D. degree requirements. S/U grading.

444. M.A. Thesis Preparation Seminar. (4) Student presentations, two hours. Student presentations of proposed topics for M.A. theses, with discussion and criticism by other students and faculty. May not be applied toward M.A. or Ph.D. degree requirements. S/U grading.

495. College Teaching of Linguistics. (2) Designed for graduate students. Required of all new teaching assistants. Seminars, workshops, and apprentice teaching. Selected topics, including curriculum development, various teaching strategies and their effects, teaching evaluation, and other topics on college teaching. Students receive unit credit toward full-time equivalence but not toward any degree requirements. S/U grading.

501. Cooperative Program. (2 to 8) Preparation: consent of UCLA graduate adviser and graduate dean, and host campus instructor, department chair, and graduate dean. Used to record enrollment of UCLA students in courses taken under cooperative arrangements with USC. S/U grading.

596A. Directed Studies. (1 to 8) Preparation: completion of all undergraduate deficiency courses. Directed individual study or research. May be applied toward M.A. course requirements. May be repeated for credit. S/U grading.

596B. Directed Linguistic Analysis. (1 to 8) Preparation: completion of M.A. degree requirements. Intensive work with native speakers by students individually. May be repeated for credit. S/U grading.

597. Preparation for M.A. Comprehensive and Ph.D. Qualifying Examinations. (1 to 8) Preparation: at least six graduate linguistics courses. May be taken *only* in terms in which students expect to take comprehensive or qualifying examinations. May not be applied toward M.A. course requirements. May be repeated for credit. S/U grading.

598. Research for M.A. Thesis. (1 to 8) Research and preparation of M.A. thesis. May not be applied toward M.A. course requirements. May be repeated for a maximum of eight units. S/U grading.

599. Research for Ph.D. Dissertation. (1 to 16) Preparation: advancement to Ph.D. candidacy. May not be applied toward Ph.D. course requirements. May be repeated for credit. S/U grading.

African Languages

Lower Division Courses

1A-1B-1C. Elementary Swahili. (4-4-4) Lecture, five hours. Course 1A is enforced requisite to 1B, which is enforced requisite to 1C. Major language of East Africa, particularly Tanzania.

2A-2B-2C. Intermediate Swahili. (4-4-4) Enforced requisite: course 1C. Course 2A is enforced requisite to 2B, which is enforced requisite to 2C.

7A-7B-7C. Elementary Zulu. (4-4-4) Lecture, five hours. Course 7A is enforced requisite to 7B, which is enforced requisite to 7C. Most widely spoken of the Nguni languages of South Africa, mutually intelligible with other members of this group.

8A-8B-8C. Intermediate Zulu. (4-4-4) Enforced requisite: course 7C. Course 8A is enforced requisite to 8B, which is enforced requisite to 8C.

11A-11B-11C. Elementary Yoruba. (4-4-4) Lecture, five hours. Course 11A is enforced requisite to 11B, which is enforced requisite to 11C. Major language of western Nigeria.

12A-12B-12C. Intermediate Yoruba. (4-4-4) Enforced requisite: course 11C. Course 12A is enforced requisite to 12B, which is enforced requisite to 12C.

15. Intensive Elementary Swahili. (12) Lecture, 20 hours (eight weeks). Intensive instruction (equivalent to courses 1A-1B-1C) in Swahili, major language of East Africa, particularly Tanzania.

16. Intensive Intermediate Swahili. (12) Lecture, 20 hours (eight weeks). Enforced requisite: course 1C or 15. Intensive instruction (equivalent to courses 2A-2B-2C) in Swahili, major language of East Africa, particularly Tanzania.

17. Intensive Elementary Zulu. (12) Lecture, 20 hours (eight weeks). Intensive instruction (equivalent to courses 7A-7B-7C) in Zulu, most widely spoken of the Nguni languages of South Africa, mutually intelligible with other members of this group.

18. Intensive Intermediate Zulu. (12) Lecture, 20 hours (eight weeks). Enforced requisite: course 7C or 17. Intensive instruction (equivalent to courses 8A-8B-8C) in Zulu, most widely spoken of the Nguni languages of South Africa, mutually intelligible with other members of this group.

25. Intensive Elementary Yoruba. (12) Lecture, 20 hours (eight weeks). Intensive instruction (equivalent to courses 11A-11B-11C) in Yoruba, major language of western Nigeria.

26. Intensive Intermediate Yoruba. (12) Lecture, 20 hours (eight weeks). Enforced requisite: course 11C or 25. Intensive instruction (equivalent to courses 12A-12B-12C) in Yoruba, major language of western Nigeria.

31A-31B-31C. Elementary Bambara. (4-4-4) Lecture, five hours. Course 31A is enforced requisite to 31B, which is enforced requisite to 31C. Major language of Mali, also widely spoken in adjacent parts of West Africa; includes Maninka (Malinke), Dyula, and other mutually intelligible dialects.

32A-32B-32C. Intermediate Bambara. (4-4-4) Enforced requisite: course 31C. Course 32A is enforced requisite to 32B, which is enforced requisite to 32C.

35. Intensive Elementary Bambara. (12) Lecture, 20 hours (eight weeks). Intensive instruction (equivalent to courses 31A-31B-31C) in Bambara, major language of Mali and contiguous areas.

36. Intensive Intermediate Bambara. (12) Lecture, 20 hours (eight weeks). Enforced requisite: course 31C or 35. Intensive instruction (equivalent to courses 32A-32B-32C) in Bambara, major language of Mali and contiguous areas.

41A-41B-41C. Elementary Hausa. (4-4-4) Lecture, five hours. Course 41A is enforced requisite to 41B, which is enforced requisite to 41C. Major language of northern Nigeria and adjacent areas.

42A-42B-42C. Intermediate Hausa. (4-4-4) Enforced requisite: course 41C. Course 42A is enforced requisite to 42B, which is enforced requisite to 42C.

45. Intensive Elementary Hausa. (12) Lecture, 20 hours (eight weeks). Intensive instruction (equivalent to courses 41A-41B-41C) in Hausa, major language of northern Nigeria and adjacent areas.

46. Intensive Intermediate Hausa. (12) Lecture, 20 hours (eight weeks). Enforced requisite: course 41C or 45. Intensive instruction (equivalent to courses 42A-42B-42C) in Hausa, major language of northern Nigeria and adjacent areas.

51A-51B-51C. Elementary Amharic. (4-4-4) Lecture, five hours (15 hours for intensive course). Course 51A is enforced requisite to 51B, which is enforced requisite to 51C. Major language of Ethiopia. P/NP (undergraduates), S/U (graduates), or letter grading.

52A-52B-52C. Intermediate Amharic. (4-4-4) Lecture, five hours (15 hours for intensive course). Enforced requisite: course 51C. Course 52A is enforced requisite to 52B, which is enforced requisite to 52C. P/NP (undergraduates), S/U (graduates), or letter grading.

55. Intensive Elementary Tigrinya. (12) Lecture, 20 hours. Intensive instruction in Tigrinya, major language of Eritrea and Tigray, province of Ethiopia.

61A-61B-61C. Elementary Wolof. (4-4-4) Lecture, five hours. Course 61A is enforced requisite to 61B, which is enforced requisite to 61C. Major language of Senegambia.

62A-62B-62C. Intermediate Wolof. (4-4-4) Enforced requisite: course 61C. Course 62A is enforced requisite to 62B, which is enforced requisite to 62C. P/NP or letter grading.

75. Intensive Elementary Chichewa. (12) Lecture, 20 hours. Intensive instruction in Chichewa (ChiNyanja), major language of Malawi and adjacent areas of Zimbabwe, Mozambique, Zambia, and Tanzania.

85. Intensive Elementary Setswana. (12) Lecture, 20 hours. Intensive instruction in Setswana, primary language of Botswana and adjacent areas of South Africa.

97. Elementary and Intermediate Studies in African Languages. (1 to 6) Instruction at elementary or intermediate level, based on needs of students, in any language for which appropriate facilities are available. Those taught in past included Akan, Efik, Ewe, Fula, Igbo, Lingala, Luganda, and Xhosa.

Upper Division Courses

103A-103B-103C. Advanced Swahili. (4-4-4) Requisite: course 2C. Course 103A is requisite to 103B, which is requisite to 103C. Readings in Swahili literature and the contemporary press. Discussions mainly in Swahili.

109A-109B-109C. Advanced Zulu. (4-4-4) Lecture, five hours; outside study, seven hours. Requisite: course 8C. Course 109A is requisite to 109B, which is requisite to 109C. Readings in Zulu literature and the contemporary press. Discussions mainly in Zulu.

123A-123B-123C. Advanced Yoruba. (4-4-4) Requisite: course 12C. Course 123A is requisite to 123B, which is requisite to 123C. Readings in Yoruba literature and the contemporary press. Discussions mainly in Yoruba.

133A-133B-133C. Advanced Bambara. (4-4-4) Requisite: course 32C. Course 133A is requisite to 133B, which is requisite to 133C. Readings in Bambara literature and the contemporary press. Discussions mainly in Bambara.

143A-143B-143C. Advanced Hausa. (4-4-4) Requisite: course 42C. Course 143A is requisite to 143B, which is requisite to 143C. Readings in Hausa literature and the contemporary press. Discussions mainly in Hausa.

153A-153B-153C. Advanced Amharic. (4-4-4) Lecture, five hours (15 hours for intensive course). Requisite: course 52C. Course 153A is requisite to 153B, which is requisite to 153C. Readings in Amharic literature and the contemporary press. Discussions mainly in Amharic. P/NP (undergraduates), S/U (graduates), or letter grading.

M190. Survey of African Languages. (4) (Same as Linguistics M115.) Requisite: Linguistics 20. Introduction to languages of Africa, their distribution and classification, and their phonological and grammatical structures; elementary practice in several languages.

199. Special Studies in African Languages. (1 to 6) Instruction at advanced level or supervised research, based on needs of individual students, in any language or group of languages for which appropriate facilities are available.

Graduate Courses

202A-202B-202C. Comparative Bantu. (4-4-4) Requisites: Linguistics 110, 165A, 165B. Recommended: three quarter courses in one Bantu language selected from 1A through 8C, 199. Investigation of relationships among the Bantu languages; extent and external relationships of Bantu.

596. Directed Studies. (1 to 8) Directed individual study or research. Four units may be applied toward M.A. course requirements. May be repeated for credit. S/U grading.

Indigenous Languages of the Americas

Lower Division Courses

17. Intensive Elementary Quechua. (12) Lecture, 15 hours; laboratory, five hours. Intensive course equivalent to courses 18A-18B-18C. Language of the Incas and its present-day dialects, as spoken in Andean South America. Offered in summer only. Letter grading.

18A-18B-18C. Elementary Quechua. (4-4-4) Lecture, five hours. Course 18A is enforced requisite to 18B, which is enforced requisite to 18C. Language of the Incas and its present-day dialects, as spoken in Andean South America.

Upper Division Courses

119A-119B-119C. Advanced Quechua. (4-4-4) Requisite: course 18C. Course 119A is requisite to 119B, which is requisite to 119C. Readings in Quechua. Dialectal and stylistic variation. Discussions mainly in Quechua.

Graduate Course

596. Directed Studies in Quechua. (1 to 8) Requisites: courses 119A-119B-119C. Directed individual study or research in Quechua. Four units may be applied toward M.A. course requirements. May be repeated for credit. S/U grading.

Scope and Objectives

The John E. Anderson Graduate School of Management at UCLA offers a variety of programs leading to graduate degrees at the master's and doctoral levels. These include both an academic (M.S.) and professional (M.B.A.) master's, as well as a 21-month Executive M.B.A. Program designed for working managers who are moving from specialized areas into general management and a three-year Fully Employed M.B.A. Program for emerging managers. A Ph.D. in Management is also offered, as are a certificate Executive Program and research conferences and seminars for experienced managers.

The school offers an undergraduate minor in Accounting and several undergraduate courses in management. Enrollment in these courses, although open to all University students who have completed the requisites, is limited. The school limits the number of courses taken by undergraduate students to 11.

Undergraduate Study

Accounting Minor

Admission to the Accounting minor is competitive and based on a 3.0 grade-point average in the lower division preparation courses. Repetition of more than one preparation course or of any preparation course more than once results in automatic denial of admission to the minor.

Transfer credit for any of the courses is subject to department approval and is considered only for requisite coursework. Decisions on admission to the minor are made by the Anderson School. The requisite grade-point average and completion of the preparation courses do not guarantee admission to the program.

Required Lower Division Courses (28 units): Economics 1, 2, M40 (or Statistics 10 as a substitute for course M40); Management 1A-1B; Mathematics 3A, 3B (higher-level courses and/or Advanced Placement Test credit may be substituted).

Required Upper Division Courses (28 units): Management 120A, 120B, 122, 127A, and three courses from 108, 123, 124, 127B, 128.

All minor courses must be taken for a letter grade, with an overall grade-point average of 2.0 or better. Successful completion of the minor is indicated on the transcript and diploma.

Graduate Study

The following constitutes introductory information regarding graduate degree programs and is based on the 1998-99 edition of *Program Requirements for UCLA Graduate Degrees*. Complete, annual editions of *Program Requirements* are available (listed under "Publications") on the Graduate Division website at <http://www.gdnet.ucla.edu>. Students are subject to the degree requirements as published in *Program Requirements* for the year in which they matriculate.

Master's Degrees

The John E. Anderson Graduate School of Management offers the Master of Science (M.S.) degree in Management and the Master of Business Administration (M.B.A.) degree, as well as concurrent M.B.A. degrees with other programs. In addition, the school offers the Executive M.B.A. Program and the M.B.A. for the Fully Employed (FEMBA).

Master of Business Administration

Admission

Although no specific undergraduate major is required for entrance, applicants should complete elementary algebra and differential calculus before entering the M.B.A. program. Applicants are required to take the Graduate Management Admission Test (GMAT). Any questions about the GMAT should be addressed to Educational Testing Service, Box 966-R, Princeton, NJ 08541, (609) 771-7590.

International applicants who do not hold degrees from universities or colleges where English is the primary language are required to take the Test of English as a Foreign Language (TOEFL). Inquiries can be addressed to (609) 951-1100.

The M.B.A. program application, which includes the application for admission to graduate status, is required. Admission is for the Fall

Quarter only. Completed applications, with full documentation, must be filed directly with the John E. Anderson Graduate School of Management Office of Admissions by April 4. Early application is strongly advised.

Consideration is given to the academic record, score on the GMAT and, for applicants whose native language is not English, score on the TOEFL; potential for management as evidenced by work experience and community, extracurricular, or other experience; and several written essays and letters of recommendation. Preference is given to those who have had full-time management-related work experience since completing the bachelor's degree. Those few applicants admitted directly from a baccalaureate program may choose to work for up to three years before entering graduate school. No other admission deferrals are granted.

Applications and information about the M.B.A. program are available from the M.B.A. Program Admissions Office, John E. Anderson Graduate School of Management, UCLA B201 Anderson Complex, Box 951481, Los Angeles, CA 90095-1481.

J.D./M.B.A.

The School of Law and the John E. Anderson Graduate School of Management offer a concurrent degree program which enables students to prepare for a career where law and management overlap and where understanding of both fields is necessary. Examples of such areas would include public service, international trade, industrial relations, corporate law, and specialized areas of management consulting. The program makes it possible to earn the J.D. and M.B.A. in four academic years. Application should be made to both schools simultaneously.

M.D./M.B.A.

The John E. Anderson Graduate School of Management and the School of Medicine offer a concurrent degree program which enables students to prepare for a career where medicine and management overlap and where understanding of both fields is necessary. Examples of such areas include medical management at a hospital center and management of health care delivery. The program makes it possible to earn the M.D. and the M.B.A. in five academic years. Applications should be made to the M.B.A. program in the third year of medical school.

M.S. Computer Science/M.B.A.

The John E. Anderson Graduate School of Management and the Department of Computer Science in the School of Engineering and Applied Science offer a concurrent degree program which enables students to complete requirements for the M.S. in Computer Science and the M.B.A. in three academic years. Application materials should be requested separately from both schools.

M.L.I.S./M.B.A.

Jointly sponsored by the Department of Information Studies (Graduate School of Education and Information Studies) and the John E. Anderson Graduate School of Management, this three-year concurrent degree program is designed to provide an integrated set of courses for students who seek careers that draw on general and specialized skills in the two professional fields. Application materials should be requested separately from both schools.

M.P.H./M.B.A.

The John E. Anderson Graduate School of Management and the School of Public Health offer a three-year concurrent degree program designed for students who desire a management career in health care and related fields and who wish in-depth professional preparation for such a career. The program reflects the combined interest of employers, faculty, and students who recognize the increasing challenges facing managers in the health care industry and the need for individuals who are skilled in dealing with these challenges. Application materials should be requested separately from both schools.

M.A. Latin American Studies/M.B.A.

The John E. Anderson Graduate School of Management and the Latin American Studies Program jointly sponsor a three-year concurrent degree program designed for individuals preparing for careers in international management with a special focus on the Latin American region. Establishment of the program was predicated on the belief that individuals employed in the area of international business and management are better equipped to meet the challenges of their employment with complementary preparation in language and regional studies. Application materials should be requested separately from both schools.

M.A. Urban Planning/M.B.A.

The John E. Anderson Graduate School of Management and the Department of Urban Planning (School of Public Policy and Social Research) offer a three-year concurrent degree program designed for students who seek careers which draw on general and specialized skills in urban planning and management. By providing knowledge of the workings of both the private and public sectors, the program enables individuals who have acquired these skills to move easily between careers in private industry and public service. Application materials should be requested separately from both schools.

M.S.N./M.B.A.

The John E. Anderson Graduate School of Management and the School of Nursing offer a three-year concurrent degree program designed for students who seek careers in hospital and nursing administration. By providing knowledge of both management and clinical care issues, the program prepares individuals for management positions in an increasingly

complex environment. Application materials should be requested separately from both schools.

Areas of Study

Accounting; business economics; decision sciences; entertainment management; entrepreneurial studies; finance; human resources and organizational behavior; information systems; international business and comparative management; marketing; operations and technology management; strategy and organization; real estate.

Course Requirements

The three required elements of the M.B.A. program are the management core, the advanced electives, and the management field study. The management core courses teach the fundamental techniques and disciplines which underlie the practice of management. Advanced electives provide specialized knowledge and skills for one or more fields (typically two) of management work. The management field study allows an opportunity to apply knowledge gained in the program to strategic issues in real organizations.

Management Core. The management core consists of eight courses on subjects basic to the practice of management. These courses include one course on the management of human resources in organizations (Management 409) and seven courses in technical and functional fields (Management 402, 403, 405, 408, 410, 411, and 420).

Management Field Study. The two-term management field study project (Management 444A-444B) consists of teams of three to five students who serve as management consultants to business firms or other organizations. Conclusions are summarized in a report which serves in lieu of a comprehensive examination for members of the team. The field study is judged by standards applicable to professional management consulting.

Advanced Electives. These courses are chosen by students to focus on one or more fields of specialization within the broad realm of management. Eleven of these electives must be selected from management curriculum area or interdisciplinary studies courses. Management 404, 406, 407, and 412, formerly part of the management core, may be taken as advanced electives. Three electives may be selected from any University department, subject only to general University regulations. These free electives normally must be taken while enrolled in the program. They may support or complement the remainder of the program of study. A maximum of two four-unit Management 596 courses (independent studies) and one four-unit Management 454 course (internship) may be applied toward the 96-unit requirement. These courses count as free electives.

Comprehensive Examination Plan

The comprehensive examination requirement is fulfilled by completing the two-quarter core course in field studies.

Thesis Plan

None.

Executive M.B.A. Program**Admission**

Designed for mid-career managers with strong records of achievement, the Executive M.B.A. Program enables executives to study advanced management in a high quality educational environment while continuing to work full time in their professional roles. The program is limited to 60 participants with superior academic records and a minimum of eight to 10 years of work experience with five years at the management level.

Areas of Study

The emphasis is on general management training; increased competence in management specialties; management of international businesses; organizational and interpersonal skills; and sophisticated understanding of the integration of businesses and their environments.

Course Requirements

A total of 66 units of coursework toward the degree must be completed in residence in the Executive M.B.A. program at UCLA. Completion of the intensive 24-month course of study leads to a regular M.B.A. degree. First year required courses for Fall Quarter: Management 461, 463, 473A, and 474; Winter Quarter: Management 462, 464, and 468; Spring Quarter: Management 465, 467, 472 and 478. In the second year, the following courses are required: Fall Quarter: Management 466A, and 477; Winter Quarter: Management 466B, 470A, 470B, 476, or 478; Spring Quarter: Management 469, 470C, 470D, and 475. Four units of 596 coursework is applicable toward the degree course requirements.

Classes are held at the John E. Anderson Graduate School of Management on alternating weekends, all day Friday and Saturday, with three five-day, off-campus residential sessions at the beginning of the first year and at the middle and end of the second year. The final residential session is the culmination of an international field study and is held abroad. Further information and application materials may be obtained by writing to the Assistant Dean, Executive M.B.A. Program, UCLA, A101F Anderson Complex, Box 951481, Los Angeles, CA 90095-1481.

Comprehensive Examination Plan

Consult the department.

Thesis Plan

None.

Fully Employed M.B.A. Program

Admission

The M.B.A. for the Fully Employed (FEMBA) is designed for emerging managers with strong records of academic and professional achievement who wish to pursue an M.B.A. degree without leaving full-time employment. The program is limited to 125 participants with superior academic records and a minimum of four to six years of work and/or managerial experience. For further information and application, write to the Assistant Dean, Fully Employed M.B.A. Program, UCLA, A101 Anderson Complex, Box 951481, Los Angeles, CA 90095-1481.

Areas of Study

Consult the department.

Course Requirements

Students in the program choose one of two possible formats, with classes meeting either one afternoon per week (from 1:30 to 5 p.m.) and Saturday mornings (from 8:30 a.m. to noon) or all day Saturday (8:30 a.m. to noon and 1:30 to 5 p.m.). A regular M.B.A. degree is awarded on completion of 84 units which are typically completed in three years. The required units are a combination of specified core courses and advanced electives in finance, marketing, or general management.

Comprehensive Examination Plan

Consult the department.

Thesis Plan

None.

Master of Science

Admission

All applicants to the program leading to the Master of Science degree in Management are required to take the Graduate Management Admission Test (GMAT) or the Graduate Record Examination (GRE). International applicants who do not hold a degree from an English-speaking university are required to take the Test of English as a Foreign Language (TOEFL). Three letters of recommendation must be submitted with the completed application. Program information and application materials may be obtained from the M.S./Ph.D. Programs Office, UCLA, C524 Anderson Complex, Box 951481, Los Angeles, CA 90095-1481.

Applications are accepted for Fall Quarter admission only; the deadline for submission of applications and complete documentation is January 10.

Areas of Study

Decision sciences.

Course Requirements

Students entering the M.S. program are assumed to have taken calculus through differentiation and integration of several variables, two courses in probability and statistics, two quar-

ters of computer programming, and a managerial core of courses in managerial accounting, managerial economics, and managerial finance (Management 403, 405, 408). These courses can be waived on the basis of previous coursework.

The specialization consists of the following five-course methodological core: Management 203A, 210A, 210B, 210C, 216A. The specialization also includes three elective courses that typically are supportive of the thesis, along with four units of Management 598. The elective courses may be methodological in nature or may relate to management science aspects of a functional field such as operations management, information systems, or finance. Courses from other departments may also be selected.

Comprehensive Examination Plan

None.

Thesis Plan

The thesis must be finished within one year after all required coursework is completed. A student lacking a strong prerequisite background nominates a thesis committee by the fifth quarter of study and presents a proposal for committee approval at the beginning of the sixth quarter.

Doctoral Degree

Admission

Information regarding admission to the program leading to the Ph.D. degree in Management is the same as that listed under the M.S. degree.

Major Fields or Subdisciplines

Accounting; business economics; decision sciences; finance; human resources and organization behavior; information systems; international business and comparative management studies; marketing; operations and technology management; policy and organization.

Course Requirements

Research Preparation Requirement. The research preparation requirement consists of two parts: (1) a course requirement and (2) a research paper. Students are required to take five research courses which are not part of the major field area classes taught in the John E. Anderson Graduate School of Management. These courses must be completed before taking the oral qualifying examination and may not be waived by prior graduate work. The research paper must be submitted to and accepted by the research paper committee no later than the Spring Quarter of the third year of study.

Breadth Requirement. The breadth requirement consists of eight courses which are clearly outside the major field area. Students should use these courses to become more knowledgeable about the basic elements of several other management disciplines and functional areas or to define a minor field of re-

search and teaching proficiency. Three of these courses may be waived by prior coursework from a previously earned master's degree. They must be completed before taking the oral qualifying examination.

There is no formal major field course requirement. In consultation with a major field adviser, a course of study is designed which prepares students to pass the major field examination.

Written and Oral Qualifying Examinations

Proficiency in the major field area is determined by a written examination, supplemented in some areas by an oral examination. The major field examination must be passed by the end of the Spring Quarter of the third year of study.

Students are required to present the substance of their dissertation proposal in a formal seminar to which all Ph.D. students and faculty are invited.

When all the preliminary requirements have been fulfilled (coursework, research paper, major field examination, seminar), the University Oral Qualifying Examination can be held; if passed, students are advanced to candidacy. The oral qualifying examination must be passed within four and one-half years of the date of entrance into the program.

Management

Lower Division Courses

1A-1B. Elementary Accounting. (4-4) Lecture, three hours. Not open to freshmen. P/NP or letter grading. **1A.** Introduction to accounting theory and practice. Recording, analyzing, and summarizing procedures used in preparing financial statements, asset side of balance sheet, current liabilities, payroll accounting. **1B.** Requisite: course 1A. Partnership and corporation accounting, statement of cash flows, financial statement analysis, cost and managerial accounting.

88. Lower Division Seminar: Special Topics in Management. (4) Seminar, three hours; outside study, nine hours. Preparation: satisfaction of Subject A requirement. Variable topics seminar which examines specific issues or problems and ways that professionals in management approach study of them. Students define, prepare, and present their own research projects with guidance of a professional school faculty member.

Upper Division Courses

107. Business Communications. (4) Process and discipline of effective spoken presentations. Examination and application of classical and contemporary thinking on substance, structure, and delivery of messages. Elements of graphic presentation of data and presentation technology. Students design and deliver informative and persuasive presentations on key management issues. Critique of all efforts; certain efforts to be videotaped for review. P/NP or letter grading.

108. Business Law. (4) Lecture, three hours. Not open to freshmen. Essentials of contracts, agency, partnerships, corporations, and other select areas of law in a business environment. P/NP or letter grading.

120A. Intermediate Financial Accounting I. (4) Requisite: course 1B. Intermediate-level course in theory and practice of financial accounting. Underlying concepts of asset valuation and income measurement. Measurement and reporting of current and long-term assets, including cash and marketable securities, inventories, plant assets and depreciation, and intangibles.

120B. Intermediate Financial Accounting II. (4) Requisite: course 120A. Intermediate-level course in theory and practice of financial accounting. Underlying concepts of liability recognition and expense, including leases, bonds, and pensions. Shareholder's equity, including earnings per share. Accounting for changing prices.

122. Management Accounting. (4) Requisites: course 1B, Economics M40. Nature, objectives, and procedures of cost accounting and control; job costing and process costing; accounting for manufacturing overhead; cost budgeting; cost reports; joint-product costing; distribution cost; standard costs; differential cost analysis; profit-volume relationships and break-even analysis.

123. Auditing. (4) Lecture, three hours. Requisite: course 120B. Comprehensive study of procedures used in verification of financial statements and related information, including ethical, legal, and other professional issues. Auditing of a complete set of financial statements. P/NP or letter grading.

124. Advanced Accounting. (4) Lecture, three hours. Requisite: course 120B. Specialized accounting topics in business combinations, consolidated financial statements, branch accounting, leveraged buyouts, Securities and Exchange Commission, foreign currency transactions, translation of foreign financial statements, partnership ownership changes and liquidations, governmental accounting, and bankruptcy. P/NP or letter grading.

125. Special Applications in Accounting. (4) Requisite: course 120B. Recommended: course 122. Designed for seniors. Use of "Strategic Management," a computer program that simulates experience on a senior management team. Under real and sometimes adverse economic conditions, teams must make strategic and tactical decisions, evaluate performance results, and compete for key resources, market share, and business opportunities. Emphasis on theories of return on equity, product life cycles, product line margin analysis, issuing debt versus equity, and other topics that allow students to apply accounting principles learned in previous courses. P/NP or letter grading.

127A. Tax Principles and Policy. (4) (Formerly numbered 127.) Requisite: course 1B. Study of fundamental income tax problems encountered by individuals and other entities in analyzing business, investment, employment, and personal decisions. Special emphasis on role of tax rules in capital transactions and decision making. P/NP or letter grading.

127B. Corporate and Partnership Taxation. (4) Lecture, three hours. Requisite: course 1B. Recommended: course 127A. Study of tax issues arising in formation, operation, and termination of corporations and partnerships. Special emphasis on closely held enterprises, including S corporations. P/NP or letter grading.

128. Special Topics in Accounting. (4) Selected topics in public accounting, including mergers and acquisitions, public-company status and the going-public process, role of the partner, serving an entrepreneurial client, and fund accounting. Discussion of a case study of current interest in the accounting profession. Business plan preparation. P/NP or letter grading.

130A. Basic Managerial Finance. (4) Lecture, three hours. Requisites: course 120A or 120B, Economics M40. Study of financial decision making by business firms, with emphasis on applications of economic and accounting principles in financial analysis, planning, and control. Extensive use of problems and cases to illustrate varied analytical techniques employed in decision making. P/NP or letter grading.

130B. Advanced Managerial Finance. (4) Lecture, three hours. Requisite: course 130A. Analysis of capital budgeting and working capital management. Review of long-term financing through security markets and lease contracts. Management of financial risk using options, futures, and forward contracts. Study of merger and acquisition processes and reorganization under bankruptcy laws. P/NP or letter grading.

133. Investment Principles and Policies. (4) Lecture, three hours. Requisite: course 130A. Principles underlying investment analysis and policy; salient characteristics of governmental and corporate securities; policies of investment companies and investing institutions; relation of investment policy to money markets and business fluctuations; security price-making forces; construction of personal investment programs.

140. Elements of Production and Operations Research. (4) Requisites: Mathematics 3A, 3B, 3C, 31E, Economics M40. Principles and decision analysis related to effective utilization of factors of production in manufacturing and nonmanufacturing activities. Analytical models and methods for allocation, transportation, inventories, replacement, scheduling, and facilities design.

150. Elements of Industrial Relations. (4) Principles and methods of effectively utilizing human resources in organizations. Relationship between social, economic, and other environmental factors and current problems in industrial relations.

175. Elements of Real Estate and Urban Land Economics. (4) Examination of business decision making as related to logical forces shaping cities and influencing real estate market functions and land uses. Emphasis on decision making as it relates to appraising, building, financing, managing, marketing, and using urban property.

182. Leadership Principles and Practice. (4) Knowledge and skills leading to effectiveness in interpersonal relations. Understanding oneself as a leader and others as individuals and as members of working groups. Understanding of group process, including group leadership. Lectures and "sensitivity training" laboratory.

190. Management Theory and Policy. (4) Lecture, three hours. Requisite: course 130A. Study of basic concepts and theory of management. Emphasis on operational analysis of manager's role in all types of organizations. Management issues in areas of planning, organizing, staffing, directing, and controlling. P/NP or letter grading.

197. Special Topics in Management. (4) Topics of special interest to undergraduate students. Specific subjects may vary each term depending on particular interest of instructors or students. May be repeated for credit.

199. Special Studies in Management. (2 to 8) Discussion: three hours. Designed for juniors/seniors. Undergraduate individual investigation of selected research topic to be arranged with a faculty member. P/NP or letter grading.

Graduate Courses

200. Advanced Microeconomics. (4) Seminar, three hours. Requisite: course 405. Economist's approach to organization and competitive interaction. Topics include game theory, threat credibility, incentive contracts, information advantages, and entry deterrence.

201A. Business Forecasting. (4) Seminar, three hours. Requisites: courses 402, 406. Role of business forecasting in managerial planning. Principles and methods of forecasting. Evaluation of reliability of existing forecasting techniques. Coverage of both short- and long-term forecasting of industry, regional, and national business trends.

201B. Econometrics and Business Forecasting. (4) Lecture, three hours. Development of standard topics in applied econometric modeling. Emphasis on assumptions underlying classical normal linear regression model, special problems in application, and interpretation of results. Practical applications extensively developed in student projects.

202A. Regulation. (4) Lecture, three hours. Requisite: course 405. Reasons for government intervention in theory and practice. Effect of regulation on business. How regulation and deregulation occur. Areas include public utilities, banking, pollution, and the political process.

202B. Analytics of Competitive Strategy. (4) Discussion, three hours. Requisites: courses 402, 405. Development and analysis of strategies to maximize value in competitive and cooperative situations. Problems include competitive bidding, tacit collusion, and strategies in repeated settings.

M202C. Growth, Science, and Technology. (4) (Formerly numbered 202C.) (Same as Policy Studies M281.) Lecture, three hours. Economic growth and change. Role of advances in science and technology, and actions of maximizing innovators and factors impinging on their behavior. How technological breakthroughs (or discontinuities) can form new industries or transform nature of and population of firms in existing industries. S/U or letter grading.

203A. Economics of Decision. (4) Preparation: rudiments of economic theory, calculus, probability, and statistics. Basics of single-person decision theory from a normative viewpoint. Expected utility theory with objective and subjective probability. Departures from expected utility behavior. Introduction to multi-person decision theory.

203B. Economics of Information. (4) Discussion, three hours. Preparation: rudiments of economic theory of the firm, calculus, probability, and statistics. Requisite: course 203A. Optimal decision and information rules. Amount, cost, and value of information. Risk aversion, stochastic dominance, and their impact on economic decisions in a stochastic environment.

205A. International Business Economics. (4) Requisite: course 405. International business environment, international economic institutions, national and regional trade policies and developments, trends in foreign markets, and international monetary problems, studied for their influence on organization and operation of the international corporation.

205B. Comparative Market Structure and Competition. (4) Requisite: course 205A. Comparative study of public policies toward competition, market structures, and competitive practices in key industries in selected countries.

205C. Business Forecasting for Foreign Economies. (4) Requisite: course 201A. Forecasting changes in business activity, population, industrial structure, productivity, Gross Domestic Product and its components for selected countries. S/U or letter grading.

207. Resource Administration of Nonmarket Activities. (4) Seminar, three hours. Requisite: course 405. Examination of behavior of managers in profit vs. not-for-profit sectors to determine critical variables that explain observed differences in behavior. Use of methodology of microeconomics, particularly utility maximization.

208. Public Services and Private Functions. (4) Requisites: courses 405, 406. Sources and uses of federal, state, and local revenues and their impact on public and private resource allocation. Examination of proper roles of government and private sector in financing and provision of public goods and services.

209. Selected Topics in Business Economics. (4) Special topics in business economics. Current developments in theory or practice in business economics. May be repeated for credit.

210A. Mathematical Programming. (4) Discussion, three hours. Preparation: linear algebra. Comprehensive development of theory and computational methods of linear programming, with applications to a variety of areas.

210B. Applied Stochastic Processes. (4) Discussion, three hours. Requisite: Mathematics M170A or Electrical Engineering 131A. Fundamentals of stochastic processes, including Poisson processes, renewal theory, and Markov chains. Sequential stochastic (usually Markovian) decision processes in discrete and continuous time. Emphasis on problem formulation and characterization and computations of optimal policies, often via dynamic programming; applications to inventory, queueing, maintenance, reliability, and replacement problems. S/U or letter grading.

210C. Network Flows and Integer Programming. (4) Preparation: linear programming. Theory and techniques of discrete and network-related mathematical programming models in management science. Applications to various allocation, coordination, operating, and planning problems. Emphasis on fundamentals, efficient computational methods, and keys to successful practical applications.

211A. Nonlinear Mathematical Programming. (4) Requisites: course 210A, Mathematics 32A. Theory, methods, and application of optimization of nonlinear systems. Review of classical optimization methods; optimality and duality theory for convex programs; main computational approaches to convex programming; survey of current computer codes and computational experience.

211B. Large-Scale Mathematical Programming. (4) Requisite: course 210A. Theory and computational methods for optimizing large-scale linear and nonlinear programs. Exploitation of special structures with combinatorial, dynamic, multidivisional, and stochastic aspects to obtain practical solution procedures in spite of large numbers of variables and/or constraints.

212A. Decision Sciences Models I. (4) Requisites: course 407, Mathematics 31B. Broad survey of deterministic models of decision sciences, including solution methods and applications management. Solution methods include linear programming, network optimization, integer programming, nonlinear programming, and dynamic programming. Application areas include corporate planning, finance, marketing, production and operations management, distribution, and project management. S/U or letter grading.

212B. Decision Sciences Models II. (4) Requisites: course 212A, Mathematics 32A. Broad survey of nonlinear, time-staged, and probabilistic models for managerial decision making. Application areas include finance, marketing, facilities design, production, and energy systems. S/U or letter grading.

212C. Decision Sciences Models III. (4) Requisites: courses 212A, 212B. In-depth reviews of actual decision sciences applications. Emphasis on professional skills needed for successful practical applications. S/U or letter grading.

213A. Intermediate Probability and Statistics. (4) Requisite: course 402. Introduction to probability theory and hypothesis testing as applied to management. SAS programs used in this course and its sequels.

213B. Statistical Methods in Management. (4) Requisite: course 213A. Introduction to parameter and interval estimation, simple and multiple linear regression and correlation, fixed, random, and mixed effects analysis of variance models and nonparametric statistics, all as they apply to management studies.

213C. Introduction to Multivariate Analysis. (4) Requisite: course 213B. Introduction to use of multivariate models in management research to organize and represent information; interpretation of coefficients from multivariate exploratory models (e.g., principal axes and factor analysis models); survey of multivariate statistical procedures (e.g., multiple discriminant analysis, multivariate analysis of variance, canonical correlation, and confirmatory factor models).

214B. Behavioral Science Models. (4) Formulation, analysis, and interpretation of mathematical models in behavioral sciences. Emphasis on stochastic process models for aspects of individual and group behavior such as learning, problem solving, classification, communication, bargaining, and social exchange systems.

215. Negotiations Analysis. (4) Discussion, three hours. Series of negotiation exercises to foster development of students' negotiation skills and experience. Use of economic and game-theoretic concepts in debrief to gain insight and develop framework for finding the broad negotiation principles applicable. S/U or letter grading.

215D. Time-Series Analysis. (4) Requisite: course 213B. Univariate Box/Jenkins analysis, transfer functions, and intervention analysis. Relationship between econometric and time-series models. Granger causality, multiple time-series analysis. Numerous computer applications in modeling and forecasting.

216A. Simulation of Operational Systems. (4) Discussion, three hours. Preparation: background in FORTRAN, PL/1, PL/C, or other batch computing language available on campus and in basic statistics (course 402) and modeling (course 407). Computer simulation methodology, including design, validation, operating procedures, and analysis of results of simulation experiments. Applications of simulation to management problems.

217A. Decision Analysis. (4) Lecture, three hours. Requisite: course 402. Framework provided for structuring and analyzing decision making under uncertainty. Topics include decision trees, value of information, subjective probability, attitude toward risk, sensitivity analysis, and multicriteria decision making. Applications to a number of business problems, including new product development, litigation, treasure hunting, and bidding. S/U or letter grading.

217B. Game Theory. (4) Requisite: course 213A. Nature of models for rational behavior in presence of conflicts of interests, zero-sum and nonzero-sum games, two-person and many-person games, state of the art, philosophical and computational limitations, relations with individual and group decision making.

218A. Selected Topics in Decision Sciences. (1 to 4) Newly developing topics and viewpoints. Topics have included reliability and optimal maintenance theory, large-scale distribution/inventory systems, and Markovian decision processes under uncertainty. May be repeated for credit. S/U or letter grading.

218C. Selected Topics in Business Statistics. (1 to 4) Special topics in statistical methods. Current developments in statistical theory and practice. Analysis of recent literature. Topics and instructors announced in advance. May be repeated for credit.

218X-218Y-218Z. Current Issues in Decision Sciences. (1 to 4 each) Lecture, one hour; discussion, three hours. Current issues and research on a variety of topics in general area of decision sciences. May be repeated for credit. In Progress and S/U grading.

220A. Intermediate Financial Accounting I. (4) Requisite: course 403. Concepts and principles of financial accounting. Intended to enhance students' understanding of published corporate financial statements. Emphasis on assets and revenue recognition.

220B. Intermediate Financial Accounting II. (4) Requisite: course 220A. Concepts and principles of financial accounting. Intended to enhance students' understanding of published corporate financial statements. Emphasis on liabilities and owners' equity.

220C. Advanced Financial Accounting. (4) Requisites: courses 220A, 220B. Continuation of courses 220A and 220B, with emphasis on a range of topics, including accounting for partnerships, mergers, combinations, and parent/subsidiary relationships. Review of litigation procedures, including reorganizations, receiverships, and bankruptcy.

222. Management Accounting. (4) Lecture, three hours. Requisite: course 403. Nature, objectives, and procedure of cost accounting and control; job costing and process costing; joint product costing, standard costs; theories of cost allocation and absorption. S/U or letter grading.

223. Auditing. (4) Requisite: course 403. Theory and practice underlying auditors' examination and reporting on financial statements, including professional ethics, internal control, and selection and application of auditing procedures, with emphasis on generally accepted auditing standards.

224. Law for Entrepreneurs. (4) Lecture, three hours. Examination of various legal issues encountered by entrepreneurs in operating business ventures, including contract negotiation, protecting goodwill, legal issues in marketing, employment law, bankruptcy, enterprise formation, and creditor rights. S/U or letter grading.

226. International Accounting. (4) Requisite: course 403. Comparative analysis of accounting concepts and practices in other countries; study of contrasts between various systems; problems of accounting for international corporations, including transfers of funds and income measurement; accounting influences on economic development.

227A. Taxation Principles and Policy. (4) Discussion, three hours. Requisite: course 403. Study of fundamental income tax problems encountered in business, investment, employment, and personal decisions. Special emphasis on structuring real estate and securities transactions. Current trends in law and policy.

227B. Taxation and Business Planning. (4) Discussion, three hours. Requisite: course 403. Study of tax issues arising in formation, operation, and termination of a corporation. Specific emphasis on structuring shareholders' transactions involving dividends, redemptions, liquidations, acquisitions, and capital structure.

228. Financial Statement Analysis. (4) Lecture, three hours. Requisite: course 403. Issues of accounting information evaluation, with special emphasis on uses of financial statements by decision makers external to the firm (e.g., investors, creditors). Topics include load decisions, bankruptcy prediction, and interpreting earnings.

229A. Special Topics in Accounting. (4) Lecture, three hours. Designed for Ph.D. students. Examination in depth of problems or issues of current concern in accounting, such as application of information economics and principal-agent model to accounting.

229B. Empirical Research in Accounting. (4) Lecture, three hours. Preparation: training in econometrics. Designed for Ph.D. students. Introduction to empirical accounting literature, focusing on role that accounting information plays in formation of capital market prices.

229X-229Y-229Z. Accounting Workshops. (1-1-2) Discussion, two hours. Designed for Ph.D. students. Intended to develop ability to critically evaluate research in fields relevant to study of accounting. Papers presented in colloquium format by leading scholars in accounting. Active participation and intellectual interchange encouraged through discussion of papers during colloquium. May be repeated for credit. S/U grading.

230. Theory of Finance. (4) Lecture, three hours. Requisite: course 408. Primary focus on valuation of corporate liabilities and other securities under uncertainty. Capital asset pricing model presented rigorously and compared with more recent theories of asset pricing such as arbitrage pricing theory and option pricing model, using empirical evidence. Secondary focus on analysis of problems in corporate finance such as optimal financing of the corporation and the market for corporate control. S/U or letter grading.

231A. Topics in Corporate Finance. (4) Discussion, three hours. Requisite: course 230. Identifying and solving financial problems through use of cases. Application of financial theory and financial techniques to business problems, using written reports and classroom discussion. S/U or letter grading.

231B. Nonprofit Sector Financial Policy. (4) Discussion, three hours. Requisite: course 408. Identifying and solving financial problems for all types of nonprofit organizations, with attention to funds accounting, budgeting and control, investment decision making when market valuation cannot be used as a criterion, and sources of funds for nonprofit organizations. Use of cases.

231D. Takeovers, Restructuring, and Corporate Governance. (4) Lecture, three hours. Requisite: course 230. Process by which corporate control transactions take place; role of market for corporate control in leading to economic restructuring and shifts in resource allocation by corporations. Empirical evidence on economic and capital market reactions to control transactions and to defensive measures by management. Focus on interaction of strategic planning, firm value maximization, and investment decisions in life cycle of growth of the firm. S/U or letter grading.

231E. Managing Finance and Financing the Emerging Enterprise. (4) Requisites: courses 230, 403, 408. Designed for second-year graduate students. Emphasis on financial, control, and investment issues confronting rapidly growing companies in entrepreneurial settings. Consideration and selection of financing vehicles which may be appropriate to securing organizations' money requirements.

232A. Security Analysis and Investment Management. (4) Lecture, three hours. Requisite: course 230. Topics include security valuation, application of portfolio theory to investment decisions, performance evaluation, and basics of fixed income portfolio management strategies. S/U or letter grading.

232B. Fixed-Income Markets. (4) Lecture, three hours. Preparation: demonstrable training in statistics. Requisites: courses 230, 233A. Introduction to fixed-income markets: institutional arrangements in primary and secondary markets; description and analysis of various types of fixed-income instruments; valuation; fixed-income portfolio management; use of derivative instruments and dynamic investment strategies; asset securitization. S/U or letter grading.

232D. Option Markets. (4) Requisite: course 230. Organization and role of organized derivative markets, including listed and OTC options and futures: arbitrage and hedging relationships, valuation of derivative trading strategies, and innovations in derivative markets. Students learn fundamentals of hedging and spreading by playing an option trading game and writing a term paper analyzing their strategies. S/U or letter grading.

233A. Money and Capital Markets. (4) Requisite: course 230. Application of interest theory and flow funds analysis to price determination process in markets for bonds, mortgages, stocks, and other financial instruments. Study of funds flow from credit markets. Analysis of costs of capital in individual industries.

233B. Financial Institutions. (4) Lecture, three hours. Requisite: course 230. Theory and practice of financial institutions and stock exchanges. Main topics include deposit insurance and regulation, international banking, market microstructure, and investment banking. S/U or letter grading.

234A. International Financial Markets. (4) Lecture, three hours. Requisites: courses 205A, 230. Conceptual understanding of foreign exchange market, Eurocurrency market, international bond market, and equity markets in various countries. Emphasis on underlying economic principles, although where relevant, institutional features helpful in understanding structure and operations of the markets to be dealt with in detail. S/U or letter grading.

234B. Financial Management of Multinational Corporations. (4) Lecture, three hours. Requisite: course 230. Financial management of multinational firms from perspective of a financial vice president or other financial officer within the company. Topics include measuring foreign exchange risk, managing that risk with both contractual and operating strategies, foreign investment decisions, capital budgeting and cost of capital in an international perspective, political risk, working capital management, and performance evaluation and control.

238. Special Topics in Finance. (4) Requisite: course 230. Selected topics in finance theory, empirical studies, and financial policy. May be repeated for credit with instructor change. S/U or letter grading.

239A. Theory of Exchanges under Uncertainty. (4) Requisite: course 230. Primarily designed for Ph.D. students, but well-prepared master's students may find course useful in their career preparation. Foundations of theory of exchange developed as introduction to theoretical literature on pricing of capital assets.

239B. Theory of Investment under Uncertainty. (4) Requisites: courses 230, 239A. Primarily designed for Ph.D. students, but well-prepared master's students may find course useful in their career preparation. Foundations of theory of firm capitalization and investment decisions, with special attention to questions of exchange and allocative efficiency.

239C. Empirical Research in Finance. (4) Discussion, three hours. Preparation: training in econometrics. Requisite: course 230. Primarily designed for Ph.D. students, but well-prepared master's students may find course useful in their career preparation. In-depth study of empirical research in the field of finance, statistical methodologies applied to test market efficiency, and asset pricing theory. S/U or letter grading.

239D. Ph.D. Seminar: Corporate Finance. (4) Preparation: courses in 239 series. Requisite: course 230. Designed for Ph.D. students. Advanced topics in corporate finance theory and empirical research. May be repeated for credit with instructor change. S/U or letter grading.

239X-239Y-239Z. Finance Workshops. (1-1-2) Discussion, 90 minutes. Designed for Ph.D. students. Intended to develop ability to critically evaluate finance research. Papers presented in colloquium format by leading scholars in finance. Active participation and intellectual interchange encouraged through discussion of papers in sessions prior to workshop, as well as during colloquium. May be repeated for credit. S/U grading.

240A. The Operating Manager. (4) Definition and analysis of problems of production planning, inventory management, quality control, system design, and implementation from operating manager's perspective, primarily through case studies. Course is integrative in nature, rather than one of developing new methodologies and techniques.

240B. Operations Planning, Scheduling, and Control. (4) Requisite: course 407. Forecasting, inventory planning, aggregate planning, job-shop scheduling models, and automated manufacturing systems, with emphasis on managerial relevance and usefulness of models in solving or providing insights into real-world problems.

240C. Design of Operational Systems. (4) Requisite: course 407. Issues, concepts, objectives, and criteria in determination of capabilities, characteristics, and configurations of manufacturing and service systems. Examination of analytic and synthesizing methodologies for selection of capacity, location, technology, processes, material movement and storage systems, facilities, work group structures, and jobs.

240D. Operations Strategy and Policy. (4) Discussion, three hours. Definition and scope of operations strategy and its relation to corporate strategy, importance of productivity and its amplification in global competition, positioning the system to match market requirements, capacity decisions, product and process technology, work force and job design, strategic implications of operating decisions, suppliers and vertical integration. Case analyses involving strategic issues in manufacturing and nonmanufacturing situations.

240E. Managing Entrepreneurial Operations. (4) Lecture, three hours. Designed for second-year graduate students. Exploration of operating issues involved in managing entrepreneurial enterprises. Integrative course, building on methodologies, principles, and concepts provided in requisite functional and strategic core courses. Use of extensive readings and case studies to develop skills and philosophical basis for applying managerial concepts to entrepreneurial operations.

240F. Supply Chain Management. (4) Lecture, three hours. Requisite: course 410. Business environment today is characterized by globalized operations, intense competition, rapid turnover in technology, and short product life cycles. Consequently, firms can no longer afford to operate in isolation. In many industries competition has moved from the firm level to the supply chain level. Provides understanding of strategic, tactical, and operational issues in supply chain management. S/U or letter grading.

241A. Managing Technology for Competitive Advantage. (4) Advanced technologies such as robotics, computer-integrated manufacturing, computer-aided design and manufacturing (CAD/CAM), and flexible manufacturing systems. Effects of technological innovation on operations managers at both strategic and operational levels. Course is integrative in nature.

241B. Project Management. (4) Requisite: course 407. Management of development projects. Decision-making environment, economic analysis, network analysis, scheduling, and control of development projects. Sequential and aggregate development decisions.

242A. Models for Operations Planning, Scheduling, and Control. (4) Designed for Ph.D. students. Survey of research studies and recent literature in operations planning, scheduling, and control. Emphasis throughout on formal models and their applications. Aggregate planning, work force scheduling, inventory management, and detailed operations scheduling and control.

242B. Models for Operations Systems Design. (4) Designed for Ph.D. students. Survey of research literature on models for design of manufacturing and service systems, including long-range forecasting, operational economics, capacity, location, facilities, processes/technology, work, and work structures.

243A. Planning for Facilities Systems. (4) Requisite: course 212A. Planning of location, expansion, and replacement for interdependent systems of facilities. Examination of spatial and dynamic economic considerations. Applications in selected industries and public systems.

243B. Inventory Theory. (4) Requisite: course 210B. General discussion of inventory models, with emphasis on characterizing the form of optimal policies and efficient computational methods. Consideration of deterministic, stochastic, discrete-time, and continuous-time models.

243C. Scheduling Models for Intermittent Systems. (4) Requisite: course 407. Scheduling models and results for single machine, flow shop, job shop, and resource-constrained project networks. Approaches include classical models, recent heuristic approaches, current research in coordinated interaction of computer models, and man/machine interaction.

243X-243Y-243Z. Operations and Technology Management Seminars. (1-1-2) Discussion, 90 minutes to three hours. Designed for Ph.D. students. Required of all students in operations and technology management concentration during first two years of their Ph.D. work. Student and faculty presentations of ongoing research. May be repeated for credit.

244X-244Y-244Z. Research in Operations and Technology Management. (1-1-2) Designed for Ph.D. students. Normally taken in first and second years of Ph.D. study. Survey of research literature in operations and technology management. Seminar reports dealing with special topics. May be repeated for credit with topic change.

245. Special Topics in Operations and Technology Management. (4) Lecture, three hours. Studies of advanced subjects of current interest in operational management. Emphasis on recent developments and application of specialized knowledge to operational problems. Topics vary each term. May be repeated for credit with topic change.

246C. Management in Public and Private Nonprofit Sectors. (4) Designed for graduate students. Examination of roles and management systems of the three sectors of U.S. society; unique aspects and managerial issues of public and private nonprofit organizations and of their political, social, and technical environments. Financial, marketing, and operational considerations and evaluation, control, and ethical issues of service delivery systems.

247A. Environment of the Art World. (4) Consideration and analysis of political, social, economic, and environmental forces in American society as they affect existence and development of arts institutions in the U.S. Exploration of present policies and trends and potential future developments.

247B. Role of Management in Artistic Decision Making. (4) Descriptive study of criteria for decision making in artistic institutions, including role of the institution in society, economic environment of the arts, and artistic value systems of arts organizations.

248A. Strategic Management in the Entertainment Industry. (4) Discussion, three hours. Requisites: courses 403, 405, 406, 408, 420. Examination of financial and strategic aspects of transactions and company management in the entertainment industry. Cases and topics include organizational behavior and decision making in creative companies; trends in industry structure and competitive economics; accounting issues; institutional and private investment in motion pictures; theatrical distribution, international and ancillary markets (pay TV, videocassettes, syndication).

249A. Special Topics in Public and Private Nonprofit Management. (4) Studies of advanced subjects of current interest in public/not-for-profit management. Emphasis on recent developments and application of specialized knowledge to public/not-for-profit problems. Topics vary each term. May be repeated for credit with topic change.

249B. Special Topics in Arts Management. (4) Examination of current issues in management of artistic organizations. Relevant combinations of lectures, discussions, case studies, and team research projects.

M250A. Labor Relations: Process and Law. (4) (Formerly numbered 250A.) (Same as Policy Studies M232.) Lecture, three hours. Designed for graduate students. Consideration, at advanced level, of collective bargaining process, labor/management agreement, administration of the contract, law of labor/management relations, union structure and goals, and influence of external labor markets on labor relations. S/U or letter grading.

250B. Human Resource Management: Process and Law. (4) Requisite: course M250A. Systematic exposure to theoretical and empirical literature concerning administrative and legal aspects of human resource management. Topics include processes of managing human resources and impact of governmental policies on employer/employee relations.

250C. Behavioral Foundations of Human Resource Management. (4) Requisite: course 250B. Topics include development and training; human resource accounting; behavioral foundations of participating management; motivation, productivity, and satisfaction; designing reward systems; and evaluation of organization effectiveness. Emphasis on understanding, predicting, and influencing human behavior in organizations.

251. Managing Human Resources. (4) Management of people in organizations, designed for managers as well as personnel specialists. Organized at three related but distinct levels of analysis: (1) day-to-day utilization of people as organizational resources to achieve optimal productivity, satisfaction, retention, and development; (2) personnel management function or system that performs specialized human resource functions; and (3) issues facing top management which involve management of human resources, including strategic planning for human resources, union/management relations, and design of corporate culture.

252. Systems of Employee/Management Participation. (4) Designed to provide understanding of systems of employee/management participation around the world (apart from traditional collective bargaining systems). Specific concepts such as worker participation in decision making, industrial democracy, joint consultation, workers' councils, profit sharing.

253. Employee Discipline, Discharge, and Grievance/Appeal Settlement. (4) Designed for graduate students. Analysis of conflict in the employment relationship; theoretical and empirical findings. Principles and philosophies that underlie resolution of labor/management impasses, with emphasis on grievance procedures, arbitration, mediation, and fact-finding.

M255. Comparative Industrial Relations. (4) (Formerly numbered 255.) (Same as Policy Studies CM231.) Lecture, three hours; outside study, nine hours. Requisite: course 409 or elementary knowledge of labor economics. At national and international levels, historical and contemporary analytical comparison of political, social, and economic contexts influencing human resource systems of selected developed countries. In addition to discussing possible frameworks for analyzing human resource systems, examination of institutions and ideologies of labor, management, and government, and interaction of their power relationships; substance and manner of determination of "web of rules" governing rights and obligations of the parties; and resolution of conflicts. S/U or letter grading.

257. Human Resource Management in Creative and Nonprofit Sectors. (4) Designed for graduate students. Analysis of human resource management theory and practices in industries where primary product is creative or intellectual (e.g., arts, entertainment, education, high technology, and journalism). Consideration of incorporation of work design, employee influences, systems, and business strategies in human resource management. Interpersonal and group process for managing human behavior. S/U or letter grading.

258. Selected Topics in Industrial Relations. (1 to 4) Designed for Ph.D. students. Examination in depth of problems or issues of current concern in industrial relations. Emphasis on recent contributions to theory, research, and methodology. Of special interest to advanced Ph.D. candidates, academic staff, or distinguished visiting faculty. May be repeated for credit.

259A. Individuals and Groups in Human Systems. (4) Lecture, three hours. Designed for graduate students. Doctoral-level survey of research literature dealing with interpersonal dynamics, groups, and aspects of culture in work organizations, with emphasis on theory and research. Current research in psychology, anthropology, and small group studies. Variety of methods represented, including clinical and cross-cultural approaches. S/U or letter grading.

259B. Advanced Studies in Human Resource Management. (4) Lecture, three hours. Designed for graduate students. Doctoral-level survey of research literature assessing how organizations utilize human resources to enhance individual, group, and organizational effectiveness. Current theory and research in psychology, anthropology, organization behavior, and economics, including topics such as careers, participation, negotiations, and technology/work systems. S/U or letter grading.

M259C. Labor Markets and Public Policy. (4) (Formerly numbered 259C.) (Same as Policy Studies CM230.) Lecture, three hours; outside study, nine hours. Designed for graduate students. Survey of major topics in economic analysis of labor markets and public policies toward the labor market. Topics include labor force trends and measurement, compensation determination, productivity, internal labor markets, human capital, union wage effects, unemployment, and minority and female labor-market experience. S/U or letter grading.

260A. Advanced Marketing Management. (4) Requisite: course 411. Decision-oriented course concerned with solution of product, price, promotion, and distribution channel problems. Extensive use of case studies.

260B. Marketing Strategy and Planning. (4) Lecture, three hours. Requisite: course 411. Development of a framework for strategic marketing planning based on customer behavior, market segmentation, product positioning, product life cycle, market responsiveness, and competitive reaction. Within this framework, development of key elements in annual marketing process.

261A. Management in the Distribution Channel. (4) Lecture, three hours. Requisite: course 411. Examination of decisions in the distribution channel. Issues of power in the distribution channel and trade-offs between alternative channel systems.

261B. Global Marketing Management. (4) Lecture, three hours. Requisite: course 411. Analysis of opportunities, distinctive characteristics, and emerging trends in foreign markets, including exploration of alternative methods and strategies for entering foreign markets; organizational planning and control; impact of social, cultural, economic, and political differences; and problems of adapting American marketing concepts and methods.

262. Price Policies. (4) Lecture, three hours. Requisites: courses 405, 411. Consideration of environment of pricing decision — costs, customer, channels, competition, and regulation. Analysis of when and how to apply specific pricing strategies, including two-part tariffs, quantity discounts, product differentiation, bundling, and auctions.

263A. Consumer Behavior. (4) Requisite: course 411. Study of nature and determinants of consumer behavior. Emphasis on influence of sociopsychological factors such as personality, small groups, demographic variables, social class, and culture on formation of consumers' attitudes, consumption, and purchasing behavior.

264A. Marketing Research: Design and Evaluation. (4) Lecture, three hours. Requisite: course 411. Designed for prospective users of research results rather than for specialists in research. Marketing research is an aid to management decision making. Development of problem-analysis skills, providing knowledge of concepts and methods of marketing research, with increased sensitivity to limitations of marketing data.

264B. Advanced Marketing Research. (4) Discussion, three hours. Requisite: course 264A. Advanced topics in marketing research, with emphasis on quantitative tools to aid marketing decision making. Topics include demand and market share forecasting, conjoint analysis, market segmentation and cluster analysis, brand positioning and competitive market structures, and assessing market response to price, advertising, promotion, distribution, and sales force.

265A. Marketing and the Law. (4) Lecture, three hours. Requisite: course 411. Detailed study of legislative enactments (federal, state, or local) which influence operation of institutions engaged in marketing activities, together with analysis of judicial decisions which have interpreted these laws.

265B. Social Issues in Marketing. (4) Lecture, three hours. Requisite: course 411. Environmental impact of marketing in society; study of theories, methods, and relationships for evaluating transaction behavior in a scientific and humanistic context; macroanalytic perspectives in marketing.

266A. Product Management. (4) Lecture, three hours. Requisite: course 411. Investigation of process of developing new products and management of mature brands in existing markets. Regarding new product development, focus on concept screening, designing new products, and test marketing. Tactical management of marketing mix with currently available data emphasized in managing mature brands.

266B. Advertising and Marketing Communications. (4) Lecture, three hours. Requisite: course 411. Detailed review of use of communication tools in marketing. Critical review of advertising and promotional policies from developmental and executional perspectives. Discussion of other forms of marketing communications, with goal of helping students develop integrated communication strategies.

268. Selected Topics in Marketing. (4) Lecture, three hours. Requisite: course 411. Study of selected areas of marketing knowledge and thought. Specific subjects vary each term depending on particular interests of instructor and students. Individual projects and reports. May be repeated for credit.

269A. Theory in Marketing. (4) Serves as mechanism to introduce students to development of marketing thought. Issues pertaining to general topic of theory development and testing. Prepares students for conducting theoretically grounded research in marketing.

269B. Research in Marketing Management. (4) Discussion, three hours. Designed for Ph.D. students. Study of research issues associated with marketing management decisions. Recent research in areas of strategic marketing, market segmentation, new product development and introduction, pricing strategies, channel policy, promotion decisions, and sales force management examined critically. Review of both quantitative and behavioral approaches to studying these issues.

269C. Quantitative Research in Marketing. (4) Designed for Ph.D. students in management and related fields. Students are assumed to have good background in marketing principles and to be familiar with probability, statistics, mathematical programming, and econometrics. Review of a range of quantitative models as applied in marketing research.

269D. Behavioral Research in Marketing. (4) Designed for Ph.D. students who are conducting research in consumer behavior or related areas. Empirical research in consumer behavior surveyed and critically evaluated from theoretical as well as practical perspectives.

269E. Special Research Topics in Marketing. (4) Designed for Ph.D. students. Advanced selected topics in marketing, with emphasis on thorough examination of one or two topics in current research and theory. May be repeated for credit.

269X-269Y-269Z. Workshops: Marketing. (1-1-2) Designed for Ph.D. students. Required of all students during first two years of their Ph.D. work. Series consists of a number of leading scholars in marketing and related disciplines who make presentations to marketing faculty and Ph.D. students. Active participation and intellectual interchange, which helps students gain a richer perspective on the field of marketing. In Progress grading.

270A. Information Systems Applications. (4) Lecture, three hours. Requisite: course 404. Fundamental concepts and uses of information systems in organizations. Systems for intraorganizational and interorganizational transaction, coordination, and control. Information technology for reengineering of business processes. Analysis and evaluation of systems and their impacts. S/U or letter grading.

270B. Decision Support Systems. (4) Lecture, three hours. Requisite: course 404. Systems for support of individual and group decision making and collaborative work. Expert and other knowledge-based systems and their applications. Fundamentals of human/computer interaction. S/U or letter grading.

270C. Application Frontiers in Information Systems. (4) Lecture, three hours. Requisite: course 404. Exploration of new state-of-the-art applications in information systems, such as in electronic commerce. Assessment of industrial opportunities and impacts. Topics vary from term to term. May be repeated for credit. S/U or letter grading.

271A. Information Systems Technology. (4) Lecture, three hours. Requisite: course 404. Computing and communication platform specification, configuration, sizing, and selection for business applications — from hand-helds to workstations to mainframes. Open and proprietary architectures. Client/server. Comparative performance and cost analyses. Industry trends. S/U or letter grading.

271B. Networks for Information Systems. (4) Lecture, three hours. Requisite: course 404. Telecommunications technology. Design, implementation, and management of local and wide area networks for the firm. Security; protocols and standards; commercial value-added and public-access networks; Internet. Industry trends. S/U or letter grading.

271C. Emergent Technologies in Information Systems. (4) Discussion, three hours. Requisite: course 404. Special topics in new and emergent technologies such as multimedia, digital imaging, object-oriented software, heterogeneous databases, and parallel processing. Assessment of industrial opportunities and impacts. Topics vary from term to term. May be repeated for credit. S/U or letter grading.

272A. Information Systems Development. (4) Discussion, three hours. Methods and tools for information systems design, development, implementation, and maintenance. User requirements analysis. Design and specification of application software and databases. Classic and alternative approaches, such as rapid prototyping. System integration. Automated support. S/U or letter grading.

273A. Information Systems Management. (4) Discussion, three hours. Requisite: course 404. Managing information systems function within the enterprise. Role of chief information officer. Centralized and decentralized organizational designs. Outsourcing and other vendor relationships. Costing and pricing of services. Strategic planning. Management of information systems professionals. S/U or letter grading.

274A. Special Topics in Information Systems. (4) Discussion, three hours. Designed primarily for Ph.D. students. Examination in depth of problems or issues of current concern in information systems theory and practice. Topics vary from term to term. May be repeated for credit. S/U or letter grading.

274B. Workshop: Information Systems Research. (4) Discussion, three hours. Designed for Ph.D. students. New developments in information systems theory, practice, and empirical research. In-depth consideration of research designs and methods. Presentation of student work-in-progress. May be repeated for credit. S/U or letter grading.

274X-274Y-274Z. Current Research in Information Systems. (1-1-2) Discussion, two hours. Designed for Ph.D. students. Year-long sequence associated with Information Systems Colloquium Series. Regularly scheduled presentations of current research and state-of-the-art developments in information systems field. Study and discussion of research presented. May be repeated for credit. S/U grading.

278A. Urban Real Estate Financing and Investing. (4) Discussion, three hours. Investor-oriented course in which real estate and business trends are evaluated to determine alternative real estate investment opportunities. Use of current financial, economic, and investment theories and techniques to real estate investment opportunities in case studies and short case problems to illustrate development of investment strategies.

278B. Sources, Uses, and Flows of Real Estate Capital. (4) Discussion, three hours. Analysis of money, capital, and mortgage markets to determine potential availability and costs of mortgage money from alternative sources. Evaluation of various sources of funds to determine factors influencing decisions to make mortgage loans. Examination of all types of lending instruments, particularly mortgage instruments, and mortgage-based securities for their impacts on real estate investment decisions.

279A. Special Studies in Urban Land Economics. (4) Limited to master's or Ph.D. candidates working on thesis- or dissertation-related research. May be repeated for credit.

279B. Selected Topics in Urban Land Economics. (4) Discussion, laboratory, and fieldwork. Designed for second-year graduate students. Intended for students who wish to pursue a particular topic in housing, real estate, or urban land economics in depth on individual or cooperative basis. All work is computer-based; however, students are provided introduction to use of computers (preferably PCs) in various kinds of real estate analysis. May be repeated for credit.

280A. Studies, Research Philosophies, and Methodology in Human Systems. (4) Discussion, three hours. Designed for Ph.D. students. Survey of seminal studies of human systems, including individual, group, and intergroup behavior, and organization behavior. Consideration of objectivist and subjectivist philosophies of science and their implications for related methodologies, including experimentation, field studies, case approaches, and a range of analytic and descriptive procedures in data collection. Emphasis on existing literature, philosophy of science, and concepts. May be repeated for credit. S/U or letter grading.

280B. Personal and Professional Development. (4) Discussion, three hours. Designed for Ph.D. students. Provides setting where students may explore their own professional values and approaches in process of testing and learning values and standards in applied behavioral sciences and human systems development. S/U or letter grading.

280C. Research Design in Human Systems Studies. (4) Discussion, three hours. Designed for Ph.D. students. Process of designing studies of human systems, including choice of research topics. Actively involves students in preparation of research proposals for research papers and Ph.D. dissertations. May be repeated for credit. S/U or letter grading.

281A. Sociotechnical Systems. (4) Designed for graduate students. Introduction to systems concepts and view of work organizations as interacting social and technical systems open to forces from the surrounding environment. Focus on developing sociotechnical systems analytic approach and understanding advantages of this approach for designing and managing organizations.

281B. People in Organizations. (4) Designed for graduate students. Introduction to different philosophical perspectives for understanding human behavior. Theories and concepts important for understanding human behavior in organizations, as well as managerial implications of individual, group, and social behavior. Special attention to knowledge about satisfaction, motivation, and productivity in organizations.

282. Task Group Processes. (4) Lecture, three hours. Requisite: course 281A or 281B. Structures, processes, and interrelations of work groups in sociotechnical systems. Emphasis on understanding how group activities interrelate with physical/technical environment. Imparts practical knowledge of task group functioning through class exercises and field observations. Consideration of team concepts and project group design. S/U or letter grading.

284A. Organization Design. (4) Lecture, three hours. Requisite: course 281A or 281B. Survey of organizational design theories and methods, including bureaucratic, participative, and cognitive models. Development of specific methods ranging from microdesign of jobs to macrodesign of total organizational systems. Special emphasis on sociotechnical and differentiation/integration models. S/U or letter grading.

284B. Organization Development. (4) Discussion, three hours. Designed for graduate students. Analysis of effects of organizational and managerial practices on individual self-fulfillment and systems effectiveness. Theories of organization change and action/research methods in organization development. Theory merged with practice through seminar discussions of field observations. S/U or letter grading.

285A. Leadership, Motivation, and Power. (4) Discussion, three hours. Designed for graduate students. Theoretical and practical approaches to influencing and motivating people. Relative effectiveness of various leadership styles, different motivation theories, and power tactics from managerial point of view. Use of experience-based learning methods to aid diagnosis and understanding of one's own influence styles. S/U or letter grading.

285B. Managerial Interpersonal Communication. (4) Discussion, three hours. Designed for graduate students. Interpersonal and personality factors affecting managerial communications. Styles and modes of communication in one-to-one, group, and large-systems settings. Opportunities offered to deepen understanding of one's own communication styles and skills, considering verbal, nonverbal perceptual, and cross-cultural aspects. S/U or letter grading.

286. Negotiations Behavior. (4) Discussion, three hours. Presentation of theoretical principles and concepts from psychology, sociology, and economics through lectures and readings, with focus primarily on improving practical negotiating skills through experiential learning (i.e., negotiations simulations). Participants learn not only to enhance their individual abilities in dyadic and group situations, but also to analyze contexts for most effective application of these skills. S/U or letter grading.

287. Groups and Their Facilitation. (4) Discussion, three hours. Development of cognitive and experiential understanding of dynamics of small group training and its facilitation, including "sensitivity"/basic groups, group counseling, self-help groups, small groups, and committees in managerial decision making. Analysis of relevant theory, research findings, and case studies. S/U or letter grading.

288A. Selected Topics in Behavioral Science. (4) Discussion, three hours. Designed for graduate students. Theories of human behavior fundamental to study of individual, group, organizational, and cultural behavior. Exploration in depth of selected theoretic positions, extending and consolidating behavioral science knowledge and application. May be repeated for credit. S/U or letter grading.

288B. Current Issues in Sociotechnical Systems and Organization Design. (4) Discussion, three hours. Designed for graduate students. Current topics in analysis and design of organizations as sociotechnical systems engaged with various technologies and environments, emphasizing design approaches emanating primarily from Europe, the Orient, and the U.S. In-depth comparisons of selected job and organizational design cases. May be repeated for credit. S/U or letter grading.

288C. Selected Topics in Human Systems Studies and Organizational Behavior. (4) Discussion, three hours. Designed for graduate students. Psychological and social psychological aspects of human behavior and performance in organizations. Theoretical models, empirical findings, and applications of such topics as attitudes and values, cognitive and perceptual processes, behavioral conflict, and individual change processes. May be repeated for credit. S/U or letter grading.

288D. Current Issues in Human Systems Change and Development through Consulting. (4) Discussion, three hours. Current topics in philosophy, art, and technology of improving organizations and increasing managerial effectiveness through consulting interventions. In-depth treatment of consultant entry and exit, diagnosing, process consultation, consciousness raising, team building, and values. Relevant to development of effective M.B.A. field-study teams. S/U or letter grading.

288E. Proseminar: Behavioral and Organizational Sciences Colloquium. (4) Discussion, three hours. Designed for graduate students. Series of presentations by scholars and practitioners in behavioral and organizational sciences, with focus on integrative themes or major issues in the field, designed to provide dialogue among students and faculty on significant topics, controversies, and leading-edge ideas. May be offered in one or successive terms and may be repeated for credit. S/U or letter grading.

290. Organization Theory. (4) Lecture, three hours. Analysis of theory and practice of managerial function of planning and control. Implementation of objectives through policy formulation, decision making, and control. Individual projects and reports. S/U or letter grading.

292A. Research and Development Policy. (4) Examination of research and development as a process and as an element of a goal-oriented organization. Factors affecting invention and innovation; transfer of technology; organizational and behavioral considerations; coupling of science, technology, and organizational goals; assessing of forecasting technological futures.

292C. Comprehensive Planning in Public Sector. (4) Evolving modes of planning under complexity, with particular emphasis on public sector. Development of policy through standard setting, bargaining, and regulating governing relationships; reality and value judgments; social and technical dimensions of alternatives; and social and technological forecasting.

293A. Political Environment of American Business. (4) Lecture, three hours. Evaluation of certain criticisms made by business of the American political system. Designed to provide clearer understanding of principal features of American politics, especially as they influence business enterprise.

M293B. Morality of Capitalism. (4) (Same as Political Science M211.) Lecture, three hours. Examination of major philosophical writings that defend or criticize capitalism on basis of principles of right conduct and just social arrangements (i.e., on moral grounds).

293C. Ethical Considerations in Business. (4) Lecture, three hours. Examination of a range of ethical considerations in business decisions involving the individual, corporation, society, and international business. Analysis of cases for classroom presentation and discussion.

295A. Entrepreneurship and Venture Initiation. (4) Exploration in entrepreneurship particularly concerned with formation and operation of new business ventures. Significant and crucial aspects of exploring new business opportunities and starting a business.

295B. Small Business Management. (4) Exploration of crucial aspects in managing small business enterprises. Emphasis on identification and analysis of characteristic operating problems of small firms and application of appropriate methods or techniques for their solution.

295C. Corporate Entrepreneurship. (4) Inquiry into nature of entrepreneurship and effective implementation of entrepreneurial strategies in large industrial enterprises. Emphasis primarily on managerial effects aimed at identification, development, and exploitation of technical and organizational innovations, management of new product or process developments, and effective new venture management in a corporate context.

296A. International Business Management. (4) Discussion, three hours. Identification, analysis, and resolution of managerial issues of policy and action within context of a multinational corporation, with emphasis on problems of adaptation to different sociological, cultural, legal, political, and economic environmental characteristics on planning, structuring of organizational relationships, and coordination and control in multinational firms. S/U or letter grading.

296B. International Comparative Management Research. (4) Designed for Ph.D. students. In-depth study of theory and research pertaining to international business and comparative management. Emphasis on recent research developments and methodological issues. Imparts knowledge on design and conduct of international comparative management research.

297A. Comparative and International Management. (4) Comparative study of practice of management in selected foreign countries, as affected by their social environments and development of management theory. S/U or letter grading.

297B. International Business Policy. (4) Requisite: course 205A. Analysis of key managerial problems encountered in a multinational corporation. Concepts and theories acquired in other courses in international business and comparative management, applied to a series of complex cases and simulations of international business operation.

297C. International Business Law. (4) Requisites: courses 205A, 296A. Legal environments in which international business operates; overseas business relationships and organizations; antitrust, taxation, transfer of capital, and technology regulations; patent, trademark, and copyright safeguards; arbitration of international business disputes; expropriation of foreign investments; international business and government relations.

297D. International Business Negotiations. (4) Requisite: course 296A. Exploration of international business negotiations of multinational enterprises with governmental agencies and foreign-based firms on a wide range of issues, such as establishment/dissolution of joint ventures, extent of foreign ownership/management control, terms/conditions for technology transfer, investment incentives.

297E. Business and Economics in Emerging Markets. (4) Lecture, three hours. Requisite: course 205A or 405. Analysis of changing economic, political, demographic, and sociocultural conditions in developing countries as they affect the business environment. Process of economic growth, market-oriented reforms, and creation of domestic capital markets. Inflation and stabilization programs, identification of business risks and opportunities, as well as tools needed to manage firms under these conditions. S/U or letter grading.

298A. Special Topics in Management Theory. (4) Designed for Ph.D. students. Examination in depth of problems or issues of current concern in management theory. Emphasis on recent contributions to theory, research, and methodology. Of special interest to advanced Ph.D. candidates, academic staff, or distinguished visiting faculty. May be repeated for credit.

298B. Special Topics in International and Comparative Management. (4) Designed for Ph.D. students. Examination in depth of problems or issues of current concern in international and comparative management. Emphasis on recent contributions to theory, research, and methodology. Of special interest to advanced Ph.D. candidates, academic staff, or distinguished visiting faculty. May be repeated for credit.

298C. Special Topics in Sociotechnical Systems. (4) Designed for Ph.D. students. Examination in depth of problems or issues of current concern in sociotechnical systems. Emphasis on recent contributions to theory, research, and methodology. Of special interest to advanced Ph.D. candidates, academic staff, or distinguished visiting faculty. May be repeated for credit.

298D. Special Topics in Management. (1 to 4) Lecture, three hours. Designed for graduate students. In-depth examination of problems or issues of current concern in management, with numerous topics offered each year. May be repeated for credit. S/U or letter grading.

298X-298Y-298Z. Management Strategy and Policy Workshops. (1-1-2) Discussion, three hours. Designed for Ph.D. students. Intended to develop ability to critically evaluate research in fields relevant to study of management strategy and policy. Papers presented in colloquium format by leading scholars in management strategy and policy. Active participation and intellectual interchange encouraged through discussion of papers in sessions prior to workshop, as well as during colloquium. May be repeated for credit. S/U grading.

299M. Ph.D. Seminar: Research Methodology. (4) Discussion, three hours. Designed for Ph.D. students. Methodological issues in management research. Emphasis on identification of research opportunities and formulation and evaluation of a research proposal. Alternative goals, settings, and designs. Hypothesis development and testing. Measurement. Implementation considerations.

299R. Research Methods in Management. (4) Designed for Ph.D. students. Provides feedback and evaluation of papers prepared for research requirement. Quarterly meetings to discuss expectations of research committee and Doctoral Office. Students must enroll the term in which they are submitting their research paper. May be repeated for credit. S/U grading.

375. Teaching Apprentice Practicum. (1 to 4) Preparation: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

400. Mathematics for Management. (4) Designed for graduate students. Fundamental mathematics for business, including topics from matrix algebra, probability, and calculus, with applications to model building and decision making in business firms. S/U grading.

401A-401B. Managerial Problem Solving. (2-2) Discussion, three hours. Use of international business simulation and series of complex multifaceted cases to learn to apply M.B.A. core disciplines in real-world globally focused business problems. In Progress and letter grading.

402. Data Analysis, Statistics, and Decision Making. (4) Designed for graduate students. In-depth introduction to probability, decision theory, and statistical inference, with emphasis on solution to actual business problems.

403. Financial Accounting. (4) Designed for graduate students. Introduction to fundamental financial accounting methods and procedures, with emphasis on financial statements. Provides basis for firm understanding of "the language of business" — accounting. S/U or letter grading.

404. Information Systems. (4) Lecture, three hours. Designed for graduate students. Introduction to information systems in organizations from perspective of general manager. Managerial and strategic uses of information systems, information technology that underlies these systems, and ways such systems are developed and managed. S/U or letter grading.

405. Managerial Economics. (4) Lecture, four hours; discussion, one hour (optional). Designed for graduate students. Analysis of consumer, producer, and market behavior. Market structure, pricing, and resource allocation. Applications to managerial strategy and public policy, with emphasis on competition, market power, and externalities.

406. Global Economy. (4) Requisites: courses 402, 403, 405. Provides analytical framework required for understanding the way changing macroeconomic conditions in world economy affect economic growth, inflation, interest rates behavior, exchange rate determination, global competitiveness, unemployment, and the trade account. Provides skills to enable students to assess critically how developments in world economy affect particular industry environments.

407. Managerial Model Building. (4) Lecture, three hours. Requisites: courses 402, 403, 405. Survey of uses of formal modeling approaches in managerial decision making. Emphasis on model types and formulations, and use of solutions obtained from computer routines. Application areas include finance, marketing, production, and public systems.

408. Managerial Finance. (4) Requisites: courses 402, 403, 405. Analysis of main decision areas of managerial financial management, aimed at principles generally applicable to all types of organizations. Emphasis on financial planning and control, sources of funds, developing objectives and standards which lead to effective allocation and use of organization's resources.

409. Managing Human Resources in Organizations. (4) Introduction to human resource management function and management of human behavior in organizations. Emphasis on relationships among individuals, groups, and organizational units as they influence the managerial process and development of prospective general managers.

410. Operations and Technology Management. (4) Requisites: courses 402, 403, 405. Principles and decision analysis related to effective utilization of factors of production in manufacturing and nonmanufacturing activities for both intermittent and continuous systems. Production organizations, analytical models and methods, facilities design, and design of control systems for production operations. S/U or letter grading.

411. Elements of Marketing. (4) Requisites: courses 402, 403, 405. Principles of market-driven managerial decision making: consumer, competitor, and company analysis, market segmentation, definition of target markets, and product positioning. Management of marketing function: product and pricing decisions, channels of distribution, marketing communications. S/U or letter grading.

412. Management of Organizations. (4) Lecture, three hours. Preparation: completion of first-year core program. Integrative approach to theory and practice of management in complex organizations, emphasizing managerial roles in designing organizational structures, creating/maintaining planning, control, information, incentive systems, different patterns of human interaction such structures and systems tend to produce.

413A. Personal Computing for Managers. (4) Lecture, three hours. Designed for graduate students. Personal computing in support of strategic analysis, decision making, and management communication. Use of personal productivity tools and network resources. Accessing publicly available information. Emphasis on hands-on exercises. S/U or letter grading.

413B. Advanced Topics in Managerial Computing. (4) Lecture, three hours. Designed for graduate students. New information technology for personal computing by managers. In-depth study of a specific new technology. Extensive hands-on assignments. S/U or letter grading.

420. Business Strategy. (4) Requisites: courses 402, 403, 408, 411. Evaluation and formulation of organization's overall policies and strategies. Economic, heuristic, and social process approaches to policy formulation, environmental analysis, and organizational appraisal. Senior management's role in managing the policy process. S/U or letter grading.

421A. Management Communications I (1) Lecture, 30 minutes; laboratory, one hour. Strategies and techniques for more effective individually written managerial communications such as memos, reports, decision recommendations, etc. Emphasis on analytically based persuasive writing. S/U grading.

421B. Management Communications II. (1) Lecture, 30 minutes; laboratory, one hour. Strategies and techniques for more effective preparation of group writing assignments in managerial contexts where multiple audiences are important. Issues include achieving a single voice, establishing appropriate tone, incorporation of multiple points of view, etc. S/U grading.

422. Analysis and Communications. (4) Discussion, three hours. Designed for graduate students. Study and practice of oral and written management communications, including audience analysis, persuasion, revising and editing, presentation of technical information, and uses of computer technology. Organized around writing and speaking exercises. Personal attention to students' written communications and oral presentations.

444A-444B. Management Field Study: Two-Quarter Plan. (4-4) Fieldwork, three hours. Must be taken in second year (or its equivalent for part-time students). Supervised study of an organization, including establishment of client/consultant relationships, identification of problems or strategic questions, design of study, collection and analysis of data, development and reporting of implementable recommendations. S/U or letter grading.

445. Management Field Study: One-Quarter Plan. (8) Fieldwork, six hours. Must be taken in second year (or its equivalent for part-time students) and be based on client need and adviser approval. Supervised study of an organization, including establishment of client/consultant relationships, identification of problems or strategic questions, design of study, collection and analysis of data, development and reporting of implementable recommendations. S/U or letter grading.

451. Fieldwork in Organizational Development. (2 to 12) Requisite: course 284B or 450. Supervised practical fieldwork in organizational development consultation in interpersonal, group, intergroup, total organization, and interorganizational settings.

452. Fieldwork in Technical Assistance for Minority Business Enterprise. (1 to 4) Preparation: completion of first year of master's program. Supervised field experience in business consulting and other forms of technical assistance for business firms and management in ethnic communities; seminars and other shared learning experiences in transmitting business administration technology to the urban ghetto.

453. Fieldwork in Arts Management. (4 to 12) Supervised field experience and practical work in all phases of an arts organization (pictorial, performing, or community), concentrating on its managerial problems and its relationship to the community and society in general.

454. Fieldwork in Organizations. (4) Preparation: completion of two terms of M.B.A. program. Supervised, nonpaid practical experience or fieldwork in an organization as an intern or fellow. Execution of predetermined assignment(s) pursuant to a defined program of study which may include formal classwork. May not be repeated for credit.

457. Fieldwork in Investment Management. (4) Discussion, three hours. Use of academic theories learned in a practical experience by managing a portfolio started with donated funds. Mirrors situations experienced by typical money management firms and includes investment strategy, asset allocation, security analysis, and organizational issues. S/U or letter grading.

501. Cooperative Program. (2 to 8) Preparation: consent of UCLA AGSM graduate adviser and assistant dean, and host campus instructor, department chair, and graduate dean. Used to record enrollment of UCLA students in courses taken under cooperative arrangements with USC. S/U grading.

596. Research in Management. (1 to 8) (Formerly numbered 596N.) Directed individual study or research. May be repeated. S/U or letter grading.

597. Preparation for Qualifying Examinations. (4 or 12) Preparation for master's comprehensive examination or Ph.D. qualifying examinations.

598. Thesis Research in Management. (4 or 12) Research for and preparation of master's thesis. May be repeated. S/U grading.

599. Ph.D. Dissertation Research in Management. (4 or 12) Research for and preparation of Ph.D. dissertation.

Executive M.B.A. Program

461. Managerial Problem Solving. (2) Limited to Executive M.B.A. Program students. Focus on individual problem-solving and decision-making skills. Alternative conceptual frameworks presented for augmenting individual's diagnostic and decision-making skills. Use of readings, cases, decision simulations, and discussions to explore areas of charting job and career progress, working with others, and shaping the work culture.

462. Economic Analysis for Managers. (4) Limited to Executive M.B.A. Program students. Policy-oriented problems in antitrust, tax securities, and environmental regulation. Concepts of microeconomic theory illustrated. Topics include traditional antitrust regulations, new trends in antitrust, private versus government antitrust, securities regulation, environmental regulations, and a business firm's optimal response to regulation.

463. Data Analysis and Management Decisions under Uncertainty. (4) Limited to Executive M.B.A. Program students. Survey of statistical model building, with emphasis on managerial interpretation of statistical summary of data. Classical statistics covered through multiple regression to support courses in finance and marketing that follow. Fundamental approaches to decision making under uncertainty.

464. Managerial Accounting. (4) Limited to Executive M.B.A. Program students. Familiarizes the manager with functions of accounting by focusing on use of external financial reports for evaluating corporate performance and use of accounting information for internal planning and control.

465. Quantitative Methods for Managers. (4) Limited to Executive M.B.A. Program students. Survey of modeling approaches to managerial planning and decisions. Emphasis on ability to recognize situations where models can be used advantageously, to work effectively with model building specialists, and to make good use of models once they have been developed.

466A-466B. Financial Policy for Managers. (4-2) Limited to Executive M.B.A. Program students. Modern financial management deals with decision making under uncertainty for corporate financial management, for portfolio investment decisions, for financial institutions, and for international financial management. Focus on learning sound theoretical tools and applying them in casework.

467. Management Issues in Information Systems. (2) Limited to Executive M.B.A. Program students. Growing role of information systems in the corporation and how they change ways of doing business. Examples from airlines, health, computer, communications, distribution, and publishing industries. Strategic, organizational, and societal implications.

468. Economic Forecasting. (2) Limited to Executive M.B.A. Program students. Macroeconomic theory and its application to business forecasting. Major economic indicators and their historical description of the U.S. economy; theoretical tools that business economists use to analyze impacts of monetary and fiscal policy; macroeconomic techniques applicable to business decisions.

469. Management of Human Resources. (4) Limited to Executive M.B.A. Program students. Introduction to major areas of human resource management — personnel management, labor economics, labor law, and labor relations — accomplished by examining some major concepts, theories, and research related to each of these topic areas, as well as some practical problems for managers posed by each.

470A. Introduction to Action Research and Policy Analysis. (2) Lecture, two hours. Limited to Executive M.B.A. Program students. Provides methods of organizational and strategic analysis to determine relationship of the organization with its environment. In Progress grading (credit to be given only on completion of course 470D).

470B. Strategic Overview. (2) Lecture, two hours. Limited to Executive M.B.A. Program students. Preparation of a strategic overview of a selected international company entailing collection and analysis of primary and secondary data, including (but not limited to) interviews of corporate executives, corporate financial and marketing data, industry reports, and customer and competitor interviews and/or surveys. In Progress grading (credit to be given only on completion of course 470D).

470C. Action Research Project. (2) Lecture, two hours. Limited to Executive M.B.A. Program students. Further research and analysis of one of the strategic issues facing the selected company and identified in the strategic overview (course 470B). In Progress grading (credit to be given only on completion of course 470D).

470D. Seminar: Policy Analysis. (2) Lecture, two hours. Limited to Executive M.B.A. Program students. Site visit to selected company, presentation of final reports, and evaluation of student efforts by corporate personnel. S/U or letter grading.

472. Marketing Strategy and Policy. (4) Limited to Executive M.B.A. Program students. Strategic marketing decisions, including development of marketing objectives and strategies and implementation of these strategies through pricing, channel, promotion, and new product decisions.

473A. Managerial and Organizational Processes. (2) (Formerly numbered 473.) Lecture, four hours every other week for 13 weeks. Limited to Executive M.B.A. Program students. Macroanalytic issues, including intergroup relations, design and functioning of organizations, and relationships of organizations to their environment. S/U or letter grading.

473B. Customer Information Strategy. (2) Lecture, four hours every other week for 13 weeks. Limited to Executive M.B.A. Program students. Development of a customer orientation as a necessity for success in the highly competitive global marketplace, including principles of customer orientation, information as a strategic asset, customer equity, market forecasting, measuring effects of marketing investments, and customer response-based strategy. S/U or letter grading.

474. Operations and Technology Management: Systems, Strategies, and Policies. (4) Lecture, three hours. Limited to Executive M.B.A. Program students. Analysis of strategic and operating policies and decisions for systems that produce goods and services. Examination of role of comprehensive planning, inventories, scheduling of resources, distribution systems, and system location. Comprehensive operating problems.

475. International Managerial Policies and Strategies. (4) Limited to Executive M.B.A. Program students. Study of economic and business decisions in an international context, with emphasis on formulation and implementation of management strategies in multinational enterprises. Application of concepts of international economic analysis and exploration of international corporate strategies.

476. Competitive Strategy and Business Policy. (4) Limited to Executive M.B.A. Program students. Study of general management task of forging a corporate competitive strategy. Emphasis on economics of business rivalry within a variety of industrial settings and implications of changing environments on business strategy.

477. The Manager and Business/Society Relationships. (4) Limited to Executive M.B.A. Program students. While organizations may, to some extent, choose their immediate environments, there are broad environmental factors and trends that affect most, if not all, organizations. Examination of emerging trends in key areas of government regulation, labor relations, international trade, basic economic structure, and social responsibility.

478. Selected Topics in Management. (2 to 4) Seminar, 90 minutes to three hours. Limited to Executive M.B.A. Program students. Examination of selected problems and issues in an area of current concern in management. S/U or letter grading.

Associate Professor

Mark S. Goorsky, Ph.D.
Yang Yang, Ph.D.

Adjunct Professor

John J. Gilman, Ph.D.

Adjunct Associate Professor

Marek A. Przystupa, Ph.D.

Scope and Objectives

At the heart of materials science is an understanding of the microstructure of solids. "Microstructure" is used broadly in reference to solids viewed at the subatomic (electronic) and atomic levels, and the nature of the defects at these levels. The microstructure of solids at various levels profoundly influences the mechanical, electronic, chemical, and biological properties of solids. The phenomenological and mechanistic relationships between microstructure and the macroscopic properties of solids are, in essence, what materials science is all about.

Materials engineering builds on the foundation of materials science and is concerned with the design, fabrication, and optimal selection of engineering materials. Such materials must fulfill simultaneously dimensional, property, quality control, and economic requirements.

The department also has a program in electronic materials which provides a broad-based background in materials science, with opportunity to specialize in the study of those materials used for electronic and optoelectronic applications. The program incorporates several courses in electrical engineering in addition to those in the materials science curriculum.

The undergraduate program leads to the Bachelor of Science degree in Materials Engineering. Students are introduced to the basic principles of metallurgy and ceramic and polymer science as part of the department's Materials Engineering major. A joint major field, Chemistry/Materials Science, is offered to students enrolled in the Department of Chemistry and Biochemistry (College of Letters and Science).

The graduate program allows for specialization in one of the following fields: ceramics and ceramic processing, electronic and optical materials, and structural materials.

Undergraduate Study

Materials Engineering B.S.

The ABET-accredited materials engineering program is designed for students who wish to pursue a professional career in the materials field and desire a broad understanding of the relationship between microstructure and properties of materials. Metals, ceramics, and polymers, as well as the design, fabrication, and testing of metallic and other materials such as oxides, glasses, and fiber-reinforced composites, are included in the course contents.

The Major

Course requirements are as follows (180 minimum units required):

(1) Six core courses: Chemical Engineering M105A (or Mechanical and Aerospace Engineering M105A), Civil and Environmental Engineering 108, Electrical Engineering 100, Materials Science and Engineering 14, Mechanical and Aerospace Engineering 102, 105D.

(2) Materials Science and Engineering 88, 110, 110L, 120, 130, 131, 131L, 132, 150, 160, 161L, 190, 191L; Mechanical and Aerospace Engineering 191A or 192A.

(3) Three elective courses from Chemical Engineering C114, Civil and Environmental Engineering 130, 130F, 135A, Electrical Engineering 121A, 123A, 123B, 124, Materials Science and Engineering 111, 121, 122, 123 (two units), 143A, 151, 161, 162, Mechanical and Aerospace Engineering 156A, 166C.

(4) One course from Electrical Engineering 131A or Mathematics M170A or Mechanical and Aerospace Engineering 193 or Statistics M100A, plus 12 additional units from Chemistry and Biochemistry 30, 30L, Materials Science and Engineering 197, Physics 1C, or by petition, upper division courses from engineering, intermediate or advanced foreign language, mathematics, or physical or life sciences. Intermediate foreign language courses may be lower division.

(5) Chemistry and Biochemistry 20A, 20B, 20L; Civil and Environmental Engineering 15 or Electrical Engineering 5C or Mechanical and Aerospace Engineering 20; Materials Science and Engineering 90L; Mathematics 31A, 31B, 32A, 32B, 33A, 33B; Physics 1A, 1B.

(6) SEAS general education (GE) course requirements. See Curricular Requirements in the College and Schools section of this catalog for details.

Electronic Materials Option

Course requirements are as follows (193 minimum units required):

(1) Six core courses: Chemical Engineering M105A (or Mechanical and Aerospace Engineering M105A), Electrical Engineering 10, 101, Materials Science and Engineering 14, Mechanical and Aerospace Engineering 102, and Civil and Environmental Engineering 108

or Mechanical and Aerospace Engineering 105D.

(2) Materials Science and Engineering 88, 110, 110L, 121, 122, 130, 131, 131L, 190; Electrical Engineering 121A, 121B, 122AL, 123A, 123B, and two courses from Materials Science and Engineering 132, 150, 160; Mechanical and Aerospace Engineering 191A or 192A.

(3) Four elective courses from Materials Science and Engineering 111, 143A, 162, Electrical Engineering 110, 124, 131A, 172; two laboratory courses from Materials Science and Engineering 161L, 191L, 199, Electrical Engineering 172L.

(4) Chemistry and Biochemistry 20A, 20B, 20L; Electrical Engineering 5C; Materials Science and Engineering 90L; Mathematics 31A, 31B, 32A, 32B, 33A, 33B; Physics 1A, 1B, 1C.

(5) SEAS general education (GE) course requirements. See Curricular Requirements in the College and Schools section of this catalog for details.

Graduate Study

The following constitutes introductory information regarding graduate degree programs and is based on the 1998-99 edition of *Program Requirements for UCLA Graduate Degrees*. Complete, annual editions of *Program Requirements* are available (listed under "Publications") on the Graduate Division website at <http://www.gdnet.ucla.edu>. Students are subject to the degree requirements as published in *Program Requirements* for the year in which they matriculate.

Master's Degree

The department of Materials Science and Engineering offers the Master of Science (M.S.) degree in Materials Science and Engineering.

Admission

In addition to meeting the requirements of the Graduate Division, applicants to the M.S. program are required to take the General Test of the Graduate Record Examination (GRE). A bachelor's degree in materials science, metallurgy, or ceramics is required. Students having a bachelor's degree in chemistry, physics, or other engineering disciplines are admitted if an introductory materials course has been taken or remedial work comparable to an introductory course is performed.

Students not having adequate preparation may be admitted provisionally and may be required to undertake certain remedial coursework which cannot be applied toward the degree. On arrival at UCLA, an adviser helps the student plan a program which can remedy any such deficiencies.

For requirements for the Graduate Certificate of Specialization, see Engineering Schoolwide Programs.

Application forms, including a departmental supplement to the application, may be obtained at <http://www.seas.ucla.edu/ms/>. Forms are also available by writing to the Materials Science and Engineering Department, UCLA, 6532 Boelter Hall, Box 951595, Los Angeles, CA 90095-1595 or to the Office of the Associate Dean for Academic and Student Affairs, School of Engineering and Applied Science, UCLA, 6426 Boelter Hall, Box 951601, Los Angeles, CA 90095-1601. Students are encouraged to apply online.

Areas of Study

There are three main areas in the M.S. program: ceramics and ceramic processing; electronic and optical materials; and structural materials. Students may specialize in any one of the three areas, although most students are more interested in a broader education and select a variety of courses. Basically, students select courses which serve their interests best in regard to thesis research and job prospects.

Course Requirements

Thesis Plan. Nine courses are required, of which six must be graduate courses. The courses are to be selected from the following lists, although suitable substitutions can be made from other engineering disciplines or from chemistry and physics with the approval of the departmental graduate adviser. Two of the six graduate courses may be Materials Science and Engineering 598 (thesis research). The remaining three courses in the total course requirement may be upper division courses.

Comprehensive Examination Plan. Nine courses are required, six of which must be graduate courses, selected from the following lists with the same provisions listed under the thesis plan. Three of the nine courses may be upper division courses.

Electronic and optical materials: Materials Science and Engineering 111, 121, 122, 143A, 151, 161, 162, 200, 201, 221, 222, 223, 244, 298.

Ceramics and ceramic processing: Materials Science and Engineering 111, 121, 122, 143A, 151, 161, 162, 200, 201, 244, 246A, 246D, 298.

Structural materials: Materials Science and Engineering 111, 121, 122, 143A, 151, 161, 162, 200, 201, 243A, 243C, 244, 250A, 250B, 298.

As long as a majority of the courses taken are offered by the department, substitutions may be made with the consent of the departmental graduate adviser.

Undergraduate Courses. No lower division courses may be applied toward graduate degrees. In addition, the following upper division courses are not applicable toward graduate degrees: Chemical Engineering M105A, 199; Civil Engineering 106A, 108, 199; Computer Science 1M52A, M152B, 171L, 199; Electrical Engineering 100, 101, 102, 103, 110L, M116D,

M116L, 199; Materials Science and Engineering 110, 120, 130, 131, 131L, 132, 150, 160, 161L, 190, 191L, 199; Mechanical and Aerospace Engineering 102, 103, M105A, 105D, 199.

Comprehensive Examination Plan

Consult the graduate adviser for details. If the comprehensive examination is failed, students may be reexamined once with the consent of the graduate adviser.

Thesis Plan

In addition to fulfilling the course requirements, under the thesis plan, students are required to write a thesis on a research topic in materials science and engineering supervised by the thesis adviser. A M.S. thesis committee reviews and approves the thesis.

Doctoral Degree

Admission

In addition to meeting the requirements of the Graduate Division, applicants to the program leading to the Ph.D. degree in Materials Science and Engineering are required to take the General Test of the Graduate Record Examination (GRE).

Applicants to the Ph.D. program normally should have completed the requirements for the master's degree with at least a 3.25 grade-point average and have demonstrated creative ability. Normally the M.S. degree is required for admission to the Ph.D. program. Exceptional students, however, can be admitted to the Ph.D. program without having the M.S. degree.

Students not having adequate preparation may be admitted provisionally and may be required to undertake certain remedial coursework which cannot be applied toward the degree. On arrival at UCLA, an adviser helps the student plan a program which can remedy any such deficiencies.

Application forms, including a departmental supplement to the application, may be obtained at <http://www.seas.ucla.edu/ms/>. Forms are also available by writing to the Materials Science and Engineering Department, UCLA, 6532 Boelter Hall, Box 951595, Los Angeles, CA 90095-1595 or to the Office of the Associate Dean for Academic and Student Affairs, School of Engineering and Applied Science, UCLA, 6426 Boelter Hall, Box 951601, Los Angeles, CA 90095-1601. Students are encouraged to apply online.

Major Fields or Subdisciplines

Ceramics and ceramic processing; electronic and optical materials; structural materials.

Course Requirements

There is no formal course requirement for the Ph.D. degree, and students may substitute coursework by examinations. Normally, however, students take courses to acquire the knowledge needed for the written and oral preliminary examinations. The basic program of study for the Ph.D. degree is built around one

major field and one minor field. The major field has a scope corresponding to a body of knowledge contained in nine courses, at least six of which must be graduate courses, plus the current literature in the area of specialization. The major fields named above are described in a Ph.D. major field syllabus, each of which can be obtained in the department office. The minor field normally embraces a body of knowledge equivalent to three courses, at least two of which are graduate courses. Grades of B- or better, with a grade-point average of at least 3.33 in all courses included in the minor field, are required. If students fail to satisfy the minor field requirements through coursework, a minor field examination may be taken (once only). The minor field is chosen to support the major field and is usually a subset of the major field.

For information on completing the Engineer degree, see Engineering Schoolwide Programs.

Written and Oral Qualifying Examinations

During the first year of full-time enrollment in the Ph.D. program, students need to take the oral preliminary examination, which encompasses the body of knowledge in materials science. After all coursework is completed in the major and minor fields, students take a written preliminary examination in the major field. Students may not take an examination more than twice.

After passing both preliminary examinations, students are ready to take the University Oral Qualifying Examination. The nature and content of the examination are at the discretion of the doctoral committee but ordinarily include a broad inquiry into the student's preparation for research. The doctoral committee also reviews the prospectus of the dissertation at the oral qualifying examination.

Note: Doctoral Committees. A doctoral committee consists of a minimum of four members. Three members, including the chair, are "inside" members and must hold appointments at UCLA in the student's major department in the School of Engineering and Applied Science. The "outside" member must be a UCLA faculty member outside the student's major department.

Materials Science and Engineering

Lower Division Courses

14. Science of Engineering Materials. (4) Lecture, three hours; recitation, one hour; outside study, eight hours. Requisites: Chemistry 20A, 20B, 20L, Physics 1A, 1B. General introduction to different types of materials used in engineering designs: metals, ceramics, plastics, and composites, relationship between structure (crystals and microstructure) and properties of technological materials. Illustration of their fundamental differences and their applications in engineering. Letter grading.

88. Freshman Seminar: New Materials. (2) Seminar, two hours; outside study, four hours. Preparation: high school chemistry and physics. Not open to students with credit for course 14. Introduction to basic concepts of materials science and new materials vital to advanced technology. Microstructural analysis and various material properties discussed in conjunction with such applications as biomedical sensors, pollution control, and microelectronics. Letter grading.

90L. Physical Measurement in Materials Engineering. (2) Laboratory, four hours; outside study, two hours. Requisite: course 14. Various physical measurement methods used in materials science and engineering. Mechanical, thermal, electrical, magnetic, and optical techniques. Letter grading.

Upper Division Courses

110. Introduction to Materials Characterization A (Crystal Structure and X-Ray Diffraction of Material). (4) Lecture, three hours; laboratory, two hours. Requisite: course 14. Modern methods of materials characterization; fundamentals of crystallography, properties of X rays, X-ray diffraction; powder method, Laue method; determination of crystal structures; phase diagram determination; X-ray stress measurements; X-ray spectroscopy; design of materials characterization procedures. Letter grading.

110L. Introduction to Materials Characterization A Laboratory. (2) Laboratory, two hours; outside study, four hours. Requisite: course 14. Experimental techniques and analysis of materials through X-ray scattering techniques; powder method, lane method, crystal structure determination, and special projects. Letter grading.

111. Introduction to Materials Characterization B (Electron Microscopy). (4) Lecture, three hours; laboratory, two hours. Requisites: courses 14, 110. Characterization of microstructure and microchemistry of materials; transmission electron microscopy; reciprocal lattice, electron diffraction, stereographic projection, direct observation of defects in crystals, replicas; scanning electron microscopy: emissive and reflective modes; chemical analysis; electron optics of both instruments. Letter grading.

120. Physics of Materials. (4) Lecture, four hours; outside study, eight hours. Requisites: courses 14, 110. Introduction to electrical, optical, and magnetic properties of solids. Free electron model, introduction to band theory and Schrödinger wave equation. Crystal bonding and lattice vibrations. Mechanisms and characterization of electrical conductivity, optical absorption, magnetic behavior, and dielectrical properties. Letter grading.

121. Materials Science of Semiconductors. (4) Lecture, four hours; outside study, eight hours. Requisite: course 120. Structure and properties of elemental and compound semiconductors. Electrical and optical properties, defect chemistry, and doping. Electronic materials analysis and characterization, including electrical, optical, and ion-beam techniques. Heterostructures, band-gap engineering, development of new materials for optoelectronic applications. Letter grading.

122. Principles of Electronic Materials Processing. (4) Lecture, four hours; outside study, eight hours. Requisite: course 14. Description of basic semiconductor materials for device processing; preparation and characterization of silicon, III-V compounds, and films. Discussion of principles of CVD, MOCVD, LPE, and MBE; metals and dielectrics. Letter grading.

123. Electronic Packaging and Interconnection. (2) Lecture, two hours; outside study, six hours. Various electronic packaging methods and interconnection technologies. Design, fabrication, and testing of complex microelectronic components, interconnections, and assemblies. Letter grading.

130. Phase Relations in Solids. (4) Lecture, four hours; outside study, eight hours. Requisites: course 14, and Chemical Engineering M105A or Mechanical and Aerospace Engineering M105A. Summary of thermodynamic laws, equilibrium criteria, solution thermodynamics, mass-action law, binary and ternary phase diagrams, glass transitions. Letter grading.

131. Diffusion and Diffusion-Controlled Reactions. (4) Lecture, four hours; outside study, eight hours. Requisite: course 130. Diffusion in metals and ionic solids, nucleation and growth theory; precipitation from solid solution, eutectoid decomposition, design of heat treatment processes of alloys, growth of intermediate phases, gas-solid reactions, design of oxidation-resistant alloys, recrystallization, and grain growth. Letter grading.

131L. Diffusion and Diffusion-Controlled Reactions Laboratory. (2) Laboratory, two hours; outside study, four hours. Corequisite: course 131. Design of heat-treating cycles and performing experiments to study interdiffusion, growth of intermediate phases, recrystallization, and grain growth in metals. Analysis of data. Comparison of results with theory. Letter grading.

132. Structure and Properties of Metallic Alloys. (4) Lecture, four hours; outside study, eight hours. Requisite: course 131. Physical metallurgy of steels, lightweight alloys (Al and Ti), and superalloys. Strengthening mechanisms, microstructural control methods for strength and toughness improvement. Grain boundary segregation. Letter grading.

143A. Mechanical Behavior of Materials. (4) Lecture, four hours; outside study, eight hours. Requisite: course 14. Recommended: Civil Engineering 108. Plastic flow of metals under simple and combined loading, strain rate and temperature effects, dislocations, fracture, microstructural effects, mechanical and thermal treatment of steel for engineering applications. Letter grading.

150. Introduction to Polymers. (4) Lecture, three hours; laboratory, two hours. Polymerization mechanisms, molecular weight and distribution, chemical structure and bonding, structure crystallinity, and morphology and their effects on physical properties. Glassy polymers, springy polymers, elastomers, adhesives. Fiber forming polymers, polymer processing technology, plastication. Letter grading.

151. Structure and Properties of Composite Materials. (4) Lecture, four hours; outside study, eight hours. Preparation: at least two courses from 132, 143A, 150, 160. Requisite: course 14. Relationship between structure and mechanical properties of composite materials with fiber and particulate reinforcement. Properties of fiber, matrix, and interfaces. Selection of macrostructures and material systems. Letter grading.

160. Introduction to Ceramics and Glasses. (4) Lecture, four hours; outside study, eight hours. Requisites: courses 14, 130. Introduction to ceramics and glasses being used as important materials of engineering, processing techniques, and unique properties. Examples of design and control of properties for certain specific applications in engineering. Letter grading.

161. Processing of Ceramics and Glasses. (4) Lecture, four hours; discussion, one hour. Requisite: course 160. Study of processes used in fabrication of ceramics and glasses for structural applications, optics, and electronics. Processing operations, including modern techniques of powder synthesis, greenware forming, sintering, glass melting. Microstructure properties relations in ceramics. Fracture analysis and design with ceramics. Letter grading.

161L. Laboratory in Ceramics. (2) Laboratory, four hours. Requisite: course 160. Recommended corequisite: course 161. Processing of common ceramics and glasses. Attainment of specific properties through process control for engineering applications. Quantitative characterization and selection of raw materials. Slip casting and extrusion of clay bodies. Sintering of powders. Glass melting and fabrication. Determination of chemical and physical properties. Letter grading.

162. Electronic Ceramics. (4) Lecture, four hours; outside study, eight hours. Requisites: course 14, Electrical Engineering 100. Utilization of ceramics in microelectronics; thick film and thin film resistors, capacitors, and substrates; design and processing of electronic ceramics and packaging; magnetic ceramics; ferroelectric ceramics and electro-optic devices; optical wave guide applications and designs. Letter grading.

M180. Introduction to Biomaterials. (4) (Same as Biomedical Engineering M180.) Lecture, three hours; laboratory, two hours; outside study, seven hours. Requisite: course 14. Engineering materials used in medicine and dentistry for repair and/or restoration of damaged natural tissues. Topics include relationships between material properties, suitability to task, surface chemistry, processing and treatment methods, and biocompatibility. Letter grading.

190. Materials Selection and Engineering Design. (4) Lecture, four hours; outside study, eight hours. Requisites: courses 132, 150, 160. Explicit guidance among the myriad materials available for design in engineering. Properties and applications of steels, nonferrous alloys, polymeric, ceramic, and composite materials, coatings. Materials selection, treatment, and serviceability emphasized as part of successful design. Design projects. Letter grading.

191L. Computer Methods and Instrumentation in Materials Science. (2) Lecture, two hours; outside study, four hours. Preparation: knowledge of BASIC or C or assembly language. Limited to junior/senior materials science and engineering majors. Interface and control techniques, real-time data acquisition and processing, computer-aided testing. Letter grading.

197. Seminar: Technical Writing for Materials Engineers. (2) Seminar, two hours; outside study, four hours. Corequisite: course 132 or 190 or 598 or 599. Types of technical documents and basic document patterns. Document planning, paragraph and sentence structures. Illustration and references. Reports, theses, and proposals. Oral presentation. Letter grading.

199. Special Studies. (2 to 8) Tutorial, to be arranged. Limited to seniors. Individual investigation of selected topic to be arranged with a faculty member. Enrollment request forms available in department office. Occasional field trips may be arranged. May be repeated for credit. Letter grading.

Graduate Courses

200. Principles of Materials Science I. (4) Lecture, four hours; outside study, eight hours. Requisite: course 120. Lattice dynamics and thermal properties of solids, classical and quantized free electron theory, electrons in a periodic potential, transport in semiconductors, dielectric and magnetic properties of solids. Letter grading.

201. Principles of Materials Science II. (4) Lecture, three hours; outside study, nine hours. Requisite: course 131. Kinetics of diffusional transformations in solids. Precipitation in solids. Nucleation theory. Theory of precipitate growth. Ostwald ripening. Spinodal decomposition. Cellular reactions. Letter grading.

221. Science of Electronic Materials. (4) Lecture, four hours; outside study, eight hours. Requisite: course 120. Study of major physical and chemical principles affecting properties and performance of semiconductor materials. Topics include bonding, carrier statistics, band-gap engineering, optical and transport properties, novel materials systems, and characterization. Letter grading.

222. Growth and Processing of Electronic Materials. (4) Lecture, four hours; outside study, eight hours. Requisites: courses 120, 130, 131. Thermodynamics and kinetics that affect semiconductor growth and device processing. Particular emphasis on fundamentals of growth (bulk and epitaxial), heteroepitaxy, implantation, oxidation. Letter grading.

223. Materials Science of Thin Films. (4) Lecture, four hours; outside study, eight hours. Requisites: courses 120, 131. Fabrication, structure, and property correlations of thin films used in microelectronics for data and information processing. Topics include film deposition, interfacial properties, stress and strain, electromigration, phase changes and kinetics, reliability. Letter grading.

224. Deposition Technologies and Their Applications. (4) (Formerly numbered 248B.) Lecture, three hours; outside study, nine hours. Designed for graduate engineering students. Deposition methods used in high-technology applications. Theory and experimental details of physical vapor deposition (PVD), chemical vapor deposition (CVD), plasma-assisted vapor deposition processes, plasma spray, electrodeposition. Applications in semiconductor, chemical, optical, mechanical, and metallurgical industries. Letter grading.

243A. Fracture of Structural Materials. (4) Lecture, four hours; laboratory, two hours; outside study, four hours. Requisite: course 143A. Engineering and scientific aspects of crack nucleation, slow crack growth, and unstable fracture. Fracture mechanics, dislocation models, fatigue, fracture in reactive environments, alloy development, fracture-safe design. Letter grading.

243C. Dislocations and Strengthening Mechanisms in Solids. (4) Lecture, four hours; outside study, eight hours. Requisite: course 143A or Mechanical and Aerospace Engineering 156B. Elastic and plastic behavior of crystals, geometry, mechanics, and interaction of dislocations, mechanisms of yielding, work hardening, and other strengthening. Letter grading.

244. Electron Microscopy. (4) Lecture, four hours; outside study, eight hours. Requisite: course 111. Essential features of electron microscopy, geometry of electron diffraction, kinematical and dynamical theories of electron diffraction, including anomalous absorption, applications of theory to defects in crystals. Moiré fringes, direct lattice resolutions, Lorentz microscopy, laboratory applications of contrast theory. S/U or letter grading.

245C. Diffraction Methods in Science of Materials. (4) Lecture, four hours; outside study, eight hours. Requisite: course 110. Theory of diffraction of waves (X rays, electrons, and neutrons) in crystalline and noncrystalline materials. Long- and short-range order in crystals, structural effects of plastic deformation, solid-state transformations, arrangements of atoms in liquids and amorphous solids. S/U or letter grading.

246A. Mechanical Properties of Nonmetallic Crystalline Solids. (4) Lecture, four hours; outside study, eight hours. Requisite: course 160. Material and environmental factors affecting mechanical properties of nonmetallic crystalline solids, including atomic bonding and structure, atomic-scale defects, microstructural features, residual stresses, temperature, stress state, strain rate, size, and surface conditions. Methods for evaluating mechanical properties. S/U or letter grading.

246B. Structure and Properties of Glass. (4) Lecture, four hours; outside study, eight hours. Requisite: course 160. Structure of amorphous solids and glasses. Conditions of glass formation and theories of glass structure. Mechanical, electrical, and optical properties of glass and relationship to structure. S/U or letter grading.

246D. Electronic and Optical Properties of Ceramics. (4) Lecture, four hours; outside study, eight hours. Requisite: course 160. Principles governing electronic properties of ceramic single crystals and glasses and effects of processing and microstructure on these properties. Electronic conduction, ferroelectricity, and photochromism. Magnetic ceramics. Infrared, visible, and ultraviolet transmission. Unique application of ceramics. S/U or letter grading.

250A. Analysis and Design of Composite Materials. (4) Lecture, four hours; outside study, eight hours. Preparation: one course from 143A, Electrical Engineering 175, Mechanical and Aerospace Engineering 156A, or 156B. Requisite: course 151. Mechanics of laminated composites, textile structural composites, strength and failure theory, fracture, fatigue and damage tolerance, environmental effects, microcomputer software for composite analysis and design. Letter grading.

250B. Advanced Composite Materials. (4) Lecture, four hours; outside study, eight hours. Preparation: B.S. in Materials Science and Engineering. Requisite: course 151. Fabrication methods, structure and properties of advanced composite materials. Fibers; resin-, metal-, and ceramic-matrix composites. Physical, mechanical, and nondestructive characterization techniques. S/U or letter grading.

296. Seminar: Advanced Topics in Materials Science and Engineering. (2) Seminar, two hours; outside study, four hours. Advanced study and analysis of current topics in materials science and engineering. Discussion of current research and literature in research specialty of faculty members teaching course. May be repeated for credit. S/U grading.

298. Seminar: Engineering. (2 to 4) Seminar, to be arranged. Limited to graduate materials science and engineering students. Seminars may be organized in advanced technical fields. If appropriate, field trips may be arranged. May be repeated with topic change. S/U or letter grading.

375. Teaching Apprentice Practicum. (1 to 4) Tutorial, to be arranged. Preparation: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

474A. Advanced Transportation Systems. (4) Lecture, four hours; outside study, eight hours. Survey of aerospace and advanced ground transportation systems, materials, structures, propulsion systems, control systems, communication systems, and infrastructure support. Letter grading.

475A. Manufacturing Processes. (4) Lecture, four hours; outside study, eight hours. Manufacturing properties of materials, thermomechanical processes, chemical and physical processes, material removal processes, packaging, fastening, joining and assembly, tooling and fixtures. Letter grading.

596. Directed Individual or Tutorial Studies. (2 to 8) Tutorial, to be arranged. Limited to graduate materials science and engineering students. Petition forms to request enrollment may be obtained from assistant dean, Graduate Studies. Supervised investigation of advanced technical problems. S/U grading.

597A. Preparation for M.S. Comprehensive Examination. (2 to 12) Tutorial, to be arranged. Limited to graduate materials science and engineering students. Reading and preparation for M.S. comprehensive examination. S/U grading.

597B. Preparation for Ph.D. Preliminary Examinations. (2 to 16) Tutorial, to be arranged. Limited to graduate materials science and engineering students. S/U grading.

597C. Preparation for Ph.D. Oral Qualifying Examination. (2 to 16) Tutorial, to be arranged. Limited to graduate materials science and engineering students. Preparation for oral qualifying examination, including preliminary research on dissertation. S/U grading.

598. Research for and Preparation of M.S. Thesis. (2 to 12) Tutorial, to be arranged. Limited to graduate materials science and engineering students. Supervised independent research for M.S. candidates, including thesis prospectus. S/U grading.

599. Research for and Preparation of Ph.D. Dissertation. (2 to 16) Tutorial, to be arranged. Limited to graduate materials science and engineering students. Usually taken after students have been advanced to candidacy. S/U grading.

Scope and Objectives

Gauss has called mathematics the “Queen of the Sciences.” It has provided powerful intellectual tools that have made possible tremendous advances in modern science and technology. The Department of Mathematics provides courses of study that introduce students to the fundamentals of mathematics and allow them to master the most important parts of the subject, both pure and applied. It leads doctoral students to the frontiers of mathematical research, where they can begin to push back those frontiers.

Undergraduate Study

Admission

Students entering UCLA directly from high school who declare one of the five mathematics majors offered by the department at the time they apply for admission are automatically admitted to that major.

UCLA students who wish to enter one of the mathematics majors must have a minimum grade of C– in each preparation for the major course completed and a combined grade-point average of at least 2.0 in those courses. Grades in any completed major courses must also average at least 2.0. Students with 60 or more units of credit must have completed at least 12 units of calculus to enter any of the mathematics majors.

Transfer students must have a minimum grade of C in the equivalent of each preparation for the major course completed. Those transferring with 60 or more quarter units of credit must have completed at least 12 quarter units of calculus to enter any of the mathematics majors.

Preliminary Examination in Mathematics

If students wish to enroll in Mathematics 1, 3A, or 31A, they must pass the Mathematics Diagnostic Test.

The examination may be taken at any one of several times, including all sessions of the summer Orientation Program. It is also given several times during the academic year. For specific dates and test locations, refer to the *Schedule of Classes* or the departmental website at <http://www.math.ucla.edu/undergrad/diagnostic.html>, or contact the Mathematics Student Services Office, 6356 Math Sciences.

Advanced Placement in Calculus

Students who have taken the Advanced Placement (AP) Calculus AB Test and obtained a score of 4 or 5 receive four units of credit and Mathematics 31A equivalency; those with a score of 3 receive four units of calculus and analytic geometry credit. They may petition for 31A equivalency, or they may take course 31A at UCLA, although they must still satisfy the course requisites (Mathematics Diagnostic Test). Students who take the BC Test and obtain a score of 4 or 5 receive eight units of credit and Mathematics 31A, 31B equivalency;

those with a score of 3 receive eight units of calculus and analytic geometry credit. They may petition for 31A, 31B equivalency, or they may take courses 31A, 31B at UCLA, although they must still satisfy the course requisites (Mathematics Diagnostic Test). Students receiving a score of 3 on the AB or BC examination should consult the undergraduate mathematics counselor prior to enrolling in a calculus course at UCLA.

Credit Limitations

Credit is given for at most one course in each of the following groups: (1) 3A, 31A; (2) 3B, 31B, 31E; (3) 3C, 32A; (4) 110A, 117; (5) M170A, Statistics M100A, 110A.

Mathematics 2, 38A, 38B, and Statistics 10 are not open for credit to students with credit for any course from Mathematics 110A through 199.

Mathematics 132 is not open for credit to students with credit for Physics 132.

Mathematics 151A-151B are not open for credit to students with credit for Electrical Engineering 103.

Mathematics M170A and Statistics M100A are not open for credit to students with credit for Electrical Engineering 131A.

Students may not take or repeat a mathematics course for credit if it is a requisite for a more advanced course for which they already have credit. This applies in particular to the repetition of courses (e.g., if students wish to repeat Mathematics 31B, they must do so before completing course 32A).

Students may not receive credit for both a course and the honors version of that course (e.g., they may not receive credit for both Mathematics 32A and 32AH).

Upper Division Courses

Mathematics 113, 115A, 117, 131A, 132, 142, 151A, 164, and 167 are offered each term. The remaining upper division courses are usually offered once or twice each year. The tentative class schedule for the forthcoming academic year is posted in the Student Services Office in February.

Undergraduate Majors

The department offers five majors: Mathematics, Applied Mathematics, Mathematics of Computation, Mathematics/Applied Science, and General Mathematics. The department also participates with the Economics Department in the Mathematics/Economics Interdepartmental Program, which offers a Mathematics/Economics major.

The Mathematics major is designed for students whose basic interest is mathematics; the Applied Mathematics major for those interested in the classical relationship between mathematics, the physical sciences, and engineering; the Mathematics of Computation major for individuals interested in the mathematical theory and the applications of computing; the Mathematics/Applied Science major for

those with substantial interest in the applications of mathematics to a particular outside field of interest; and the General Mathematics major for students planning to teach mathematics at the high school level. As part of the Mathematics/Applied Science major, the department offers programs for students interested in the fields of actuarial science, management/accounting, medical and life sciences, and operations research.

Courses taken to fulfill any of the requirements for any of the mathematics majors must be taken for a letter grade.

Students planning to pursue graduate study in mathematics are strongly encouraged to take a three-term sequence of graduate-level courses during their senior year.

Mathematics B.S.

Preparation for the Major

Required: Mathematics 31A, 31B, 32A, 32B, 33A, 33B, Program in Computing 10A, Physics 1A, and two courses from Chemistry and Biochemistry 20A, 20B, Economics 11, Life Sciences 1, Philosophy 31, 32, Physics 1B, 1C, 6B, 6C. Each course must be passed with a minimum grade of C–, and students must have a minimum overall grade-point average of 2.0 for the courses.

The Major

Required: Mathematics 110A-110B, 115A, 131A-131B, 132, one course from 120A, 121, 123, and at least five courses from 106 through 199 and Statistics M100A through M120B. The 12 courses must be passed with a minimum overall grade-point average of 2.0.

Applied Mathematics B.S.

Preparation for the Major

Required: Mathematics 31A, 31B, 32A, 32B, 33A, 33B, Program in Computing 10A, Physics 1A, 1B, and one course from Chemistry and Biochemistry 20A, 20B, Physics 1C. Each course must be passed with a minimum grade of C–, and students must have a minimum overall grade-point average of 2.0 for the courses.

The Major

Required: Mathematics 115A, 131A, either 131B or 132, 142; two two-term sequences from two of the following categories: *numerical analysis* — courses 151A-151B, *probability and statistics* — courses M170A and 170B or Statistics M100A and 100B or 110A-110B, *differential equations* — courses 135A-135B; four courses from 110A through 199 and Statistics M100A through M120B (appropriate courses from other departments may be substituted for some of the additional courses provided departmental consent is given before such courses are taken). The 12 courses must be passed with a minimum overall grade-point average of 2.0.

Mathematics of Computation B.S.

Preparation for the Major

Required: Mathematics 31A, 31B, 32A, 32B, 33A, 33B, 61, Program in Computing 10A, 10B, 10C, Physics 1A, 1B, and one course from Chemistry and Biochemistry 20A, 20B, Physics 1C. Each course must be passed with a minimum grade of C–, and students must have a minimum overall grade-point average of 2.0 for the courses.

The Major

Required: Eleven Mathematics Department courses, including Mathematics 115A, 131A, 131B or 132, 151A-151B, and six courses from 110A through 199 and Statistics M100A through M120B; three upper division computer science courses (12 units). The 14 courses must be passed with a minimum overall grade-point average of 2.0.

Mathematics/Applied Science B.S.

The major is designed for students with a substantial interest in mathematics and its applications to a particular field. It is an individual major in that students, in consultation with a faculty adviser, design their own program. They may also select one of the established programs: actuarial plan, management/accounting plan, medical and life sciences plan, or operations research plan. In the past, Mathematics/Applied Science majors have combined the study of mathematics with fields such as biochemistry, biology, chemistry, economics, geography, and physics.

Students interested in designing an individual program should meet with the undergraduate adviser, 6356 Math Sciences, during their sophomore year. A proposed program is drawn up, then forwarded to the mathematics/applied science curriculum committee for approval. All programs must include the following preparation for the major and major courses.

Preparation for the Major

Required: Mathematics 31A, 31B, 32A, 32B, 33A, 33B, Program in Computing 10A. Each course must be passed with a minimum grade of C–, and students must have a minimum overall grade-point average of 2.0 for the courses. Additional preparation, varying with the individual program, may be required.

The Major

Required: Fourteen courses, seven in the Mathematics Department selected from Mathematics 110A through 199 and Statistics M100A through M120B and seven upper division courses in a related field selected from one or two other departments. The seven Mathematics Department courses must be passed with an overall grade-point average of 2.0, as must the seven courses outside mathematics.

At least five of the courses from the related discipline must be taken after the program has been

approved. Students are not admitted to the major if they have 135 or more units by the end of the term in which they plan to enter the program.

Actuarial Plan

Preparation for the Major

Required: Mathematics 31A, 31B, 32A, 32B, 33A, 33B, Program in Computing 10A, Economics 11, 100. Economics 100 may not be applied as one of the upper division courses for the major.

The Major

Required: Seven Mathematics Department courses, including Mathematics 115A, 151A, 164, M170A and 170B or Statistics M100A and 100B or 110A-110B, and two courses from Mathematics 113, 151B, 171, Statistics 100C, M120A; six outside courses, including Economics 101, 102, 147A, 160, and two courses from Economics 145 through 199, English Composition 131A through 131D, Management 130A, 130B, 190.

Management/Accounting Plan

Preparation for the Major

Required: Mathematics 31A, 31B, 32A, 32B, 33A, 33B, Program in Computing 10A, Management 1A-1B.

The Major

Required: Seven Mathematics Department courses, including Mathematics 115A, 131A, 164, M170A or Statistics M100A or 110A, Mathematics 170B or Statistics 100B or 110B, and two courses from Mathematics 110A through 199 and Statistics 100C; seven management courses, including Management 120A, 120B, 122, 140, 212A, 212B, and one additional course from 108 through 190.

Medical and Life Sciences Plan

Preparation for the Major

Required: Mathematics 31A, 31B, 32A, 32B, 33A, 33B, Program in Computing 10A, Chemistry and Biochemistry 20A, 20B, 20L, 30, 30L, Life Sciences 1, 2, 3, 4, Physics 1A, 1B.

The Major

Required: Seven Mathematics Department courses, including Mathematics 115A, 135A, 151A, M170A, 170B, and two courses from 110A through 199 and Statistics 100B through M120B; six outside courses, including Physiological Science 111A-111B-111C or M180A-M180B-M180C, and three courses from Biomathematics 110, Computer Science M196B, Physiological Science C100, and C135 or Neuroscience 103 (appropriate courses from other departments may be substituted for some of the courses provided departmental consent is given before such courses are taken).

Operations Research Plan

Preparation for the Major

Required: Mathematics 31A, 31B, 32A, 32B, 33A, 33B, Economics 11, 100, Management 1A, Program in Computing 10A.

The Major

Required: Seven Mathematics Department courses, including Mathematics 115A, 131A, 151A-151B, M170A or Statistics M100A or 110A, Statistics 100B or 110B, and one course from Mathematics 110A, 113, 117, 164, 167, 170B, 171, Statistics 100C; six outside courses, including Economics 101, Management 140, 212A, 212B, and two courses from Management 201A, 203A, 210A, 210B, 210C, 211A, 213A, 213C, 217A, 217B, 240B, 240C.

General Mathematics B.S.

The major is designed primarily for students planning to teach mathematics at the high school level. It provides exposure to a broad range of mathematical topics, especially those appropriate for the prospective teacher. Students planning to pursue graduate studies in mathematics or related fields are encouraged to enter the Mathematics, Applied Mathematics, or Mathematics of Computation major.

Preparation for the Major

Required: Mathematics 31A, 31B, 32A, 32B, 33A, 33B, 61, Program in Computing 10A, and three courses from the Physics 1 or 6 sequence, Chemistry and Biochemistry 20A, 20B, or Program in Computing 10B, 10C, 30, 60. Each course must be passed with a minimum grade of C–, and students must have a minimum overall grade-point average of 2.0 for the courses.

The Major

Required: Mathematics 110A or 117, 115A, 123, M170A or Statistics M100A or 110A, one course from 131A through 136, one course from 142 through 167, and six courses from 106 through 199, 370A, 370B, and Statistics 100B through M120B.

Honors

Honors Courses

The department offers a lower division honors sequence in calculus and upper division honors sequences in algebra and analysis. The sequences are intended for students (not necessarily mathematics majors) who desire a broad, comprehensive introduction to these topics.

Honors Program

Students majoring in Mathematics, Applied Mathematics, and Mathematics of Computation who wish to graduate with departmental honors should apply for admission to the honors program in the Student Services Office. They may apply any time after completing four courses from the calculus sequence or from upper division mathematics courses with an overall grade-point average of 3.6 or better. The program entails taking a specified sequence of courses as part of the major requirements, completing an approved seminar offered by the Mathematics Department or submitting an original research project, and earning an overall GPA of at least 3.6 in approved upper division and graduate mathematics courses.

Students completing the program are awarded honors at graduation; if they demonstrate exceptional achievement (i.e., at least a 3.8 GPA in upper division mathematics courses taken for the major), they are awarded highest honors. Consult the department for further information.

Computing Specialization

Majors in Mathematics, Applied Mathematics, Mathematics/Applied Science, or General Mathematics may select a specialization in Computing by (1) satisfying all the requirements for a bachelor's degree in the specified major, (2) completing Mathematics 61 or 113, Program in Computing 10A, 10B, and two courses from 10C, 15, 20, 30, 60, with a minimum grade of C– in each course and a combined grade-point average of at least 2.0, and (3) completing at least two courses from Mathematics 149 through 159. Students must petition for admission to this program and are advised to do so after they complete Program in Computing 10B (petitions should be filed in the Student Services Office). Students graduate with a bachelor's degree in their major and a specialization in Computing.

Mathematics Minor

The Mathematics minor is designed to provide students with the opportunity to widen their background and general comprehension of the role of mathematics in various disciplines.

To enter the minor, students must have an overall grade-point average of 2.0 or better and meet with the undergraduate mathematics adviser in the Student Services Office, 6356 Math Sciences.

Required Lower Division Courses (12 units): Mathematics 32A, 33A, 33B.

Required Upper Division Courses (20 units): At least five courses (20 units) selected from Mathematics 106 through 199 and Statistics M100A through M120B.

All minor courses must be taken for a letter grade, with an overall grade-point average of 2.0 or better. Successful completion of the minor is indicated on the transcript and diploma.

Graduate Study

The following constitutes introductory information regarding graduate degree programs and is based on the 1998-99 edition of *Program Requirements for UCLA Graduate Degrees*. Complete, annual editions of *Program Requirements* are available (listed under "Publications") on the Graduate Division website at <http://www.gdnet.ucla.edu>. Students are subject to the degree requirements as published in *Program Requirements* for the year in which they matriculate.

Master's Degrees

The department of Mathematics offers the Master of Arts (M.A.) degree in Mathematics and the Master of Arts in Teaching (M.A.T.).

Master of Arts

Admission

Prospective graduate students in mathematics need not have an undergraduate mathematics major but must have completed at least 12 quarter courses (or eight semester courses) in substantial upper division mathematics, particularly advanced calculus, algebra, differential equations, and differential or projective geometry. For admission to the program leading to the Master of Arts degree in Mathematics, applicants must have earned in these upper division mathematics courses a cumulative grade-point average of at least 3.2.

Applicants must take the Graduate Record Examination (GRE) General Test and the Subject Test in Mathematics and must submit at least three letters of recommendation from mathematicians who know their recent work.

Areas of Study

The Master of Arts degree in Mathematics may be earned under the comprehensive examination plan in the basic (pure mathematics) program, in an interdisciplinary program in applied mathematics, or in statistics.

Course Requirements

Eleven courses are required for the M.A. degree, of which at least eight must be graduate courses, while the remaining three may be approved upper division courses. With consent of the graduate vice chair, students in the applied mathematics and statistics programs may take up to five of the required 11 courses in other departments, provided that these courses are in professional or scientific fields closely related to research in applied mathematics or statistics, respectively. All courses must be passed with the grades of B– or better.

Students may enroll in Mathematics 596 any number of times and may apply up to two 596 courses toward the 11-course requirement for the M.A., provided a B– or better is received in these courses (not the grade of S).

Comprehensive Examination Plan

Students must pass two written qualifying examinations at the M.A. level within seven quarters of full-time study. By option, the following examinations are required.

Pure Option: One examination in algebra and one examination in either real analysis or complex analysis.

Applied Option: One examination in real analysis or complex analysis and one examination in numerical analysis or applied differential equations.

Statistics Option: Two examinations in probability, theoretical statistics, or applied statistics.

These examinations are offered during the Fall Quarter and toward the end of the Spring Quarter and are three-hour tests. Students may retake them any number of times until the examinations have been passed.

Thesis Plan

None.

Master of Arts in Teaching

Admission

The Master of Arts in Teaching (M.A.T.) program serves the needs of present and prospective mathematics teachers in high school and junior college. Consult the department for admission requirements.

Areas of Study

Consult the department.

Course Requirements

Eleven courses are required as follows:

Core Courses. Students must take Mathematics 201A-201B-201C and 202A-202B. Normally students also take one quarter of Mathematics 596 while fulfilling the essay requirement described below.

Credential Requirements. Students planning to teach in secondary schools who do not already have valid credentials for such teaching should enroll in the single subject instructional credential program in the Department of Education (Graduate School of Education and Information Studies). Of the courses required by this program, students receive M.A.T. credit only for the following courses: Education 312, 330A, and 330B, 406A-406B-406C, 407A-407B. Actual receipt of the credential is not a degree requirement. Interested students should check with the Department of Education for a full and up-to-date description of credential requirements and should submit a Department of Education application for admission to the credential program.

Additional Courses. Besides the six core courses described above, a seventh upper division or graduate course in mathematics is required. Particularly recommended are Mathematics 106, 110B, 110C, 111, 131B, 135A, and Statistics 100B. Candidates on the junior college track normally take five 100- or 200-level courses in mathematics in addition to the six core courses. However, with prior approval of the graduate vice chair, one course of a predominantly mathematical nature taken in another department may be presented for degree credit.

Students may not receive degree credit for Mathematics 104, 370A, or 370B. In addition, students may not receive degree credit for more than two quarters of Mathematics 596 or for more than two quarters of any 300-series courses.

Essay Requirement. A master's essay on some subject in mathematics related to the student's prospective teaching is required. This is written by the student, under the direction of a faculty member, while enrolled in Mathematics 596.

Comprehensive Examination Plan

In the M.A.T. program, one examination in mathematical subject matter is taken, as is one in content and philosophy of secondary school

mathematics. Ordinarily, these are administered in conjunction with Mathematics 201A-201B-201C and 202A-202B. Reexamination after failure is allowed.

Thesis Plan

None.

Doctoral Degree

Admission

Prospective graduate students in mathematics need not have an undergraduate mathematics major but must have completed at least 12 quarter courses (or eight semester courses) in substantial upper division mathematics, particularly advanced calculus, algebra, differential equations, and differential or projective geometry. For direct admission to the program leading to the Ph.D. degree in Mathematics, a grade-point average of at least 3.5 must be presented. Applicants who have already obtained a master's degree must have maintained an average of better than 3.5 in graduate study.

Applicants must take the Graduate Record Examination (GRE) General Test and Subject Test in Mathematics and must submit at least three letters of recommendation from mathematicians who know their recent work.

Major Fields or Subdisciplines

The Ph.D. degree in Mathematics may be earned under the pure, applied, or statistics option. Many possible choices of fields exist within these programs, and students are urged to read the booklet, *Graduate Studies in Mathematics at UCLA*, where the specialties of the faculty and the active research areas in the department are described in some detail.

Course Requirements

Under the pure mathematics and statistics options, students must pass (with a grade of A or B) at least 12 courses from Mathematics 205A through 285N, but excluding the basic courses 210A-210B, 245A-245B, and 246A-246B. At most, three of these courses may be in the 285 series. Each student must actively participate (and lecture 90 minutes, normally two lectures) in at least two advanced seminars. Credit for one of the seminars must be obtained within three registered quarters after passing the written qualifying examinations, the other within five quarters after passing the written qualifying examinations.

Under the applied mathematics option, students must pass (with a grade of A or B) at least 18 approved graduate courses, including at least 12 courses from Mathematics 205A through 285N. At most, three of these may be in the 285 series.

Written and Oral Qualifying Examinations

Students must pass four written qualifying examinations, at least two of which must be passed at the Ph.D. level. One examination (any level) must be passed within three quarters of full-time study. Three examinations must

be passed within six quarters of full-time study with one examination at the Ph.D. level. Students in the applied option have the opportunity to substitute an outside examination (at the M.A. level) for one of the regular departmental examinations. By option, the following examinations are required.

Pure Option: One examination in algebra and one examination in real analysis. Either one or both of these required examinations may be passed at the M.A. level, subject to the above restriction on the number of M.A. passes.

Applied Option: One examination in real analysis and one examination in either numerical analysis or applied differential equations.

Statistics Option: One examination in real analysis and probability at the M.A. level and one examination in theoretical and applied statistics at the Ph.D. level.

Students should consult an adviser in the area in which they plan to do research for advice on which qualifying examinations should be taken to work in that area.

After passing the four written qualifying examinations, the student may set up the doctoral committee which administers the University Oral Qualifying Examination for advancement to candidacy.

Mathematics

Lower Division Courses

1. Precalculus. (4) Lecture, three hours; discussion, one hour. Preparation: three years of high school mathematics. Requisite: successful completion of Mathematics Diagnostic Test. Function concept. Linear and polynomial functions and their graphs, applications to optimization. Inverse, exponential, and logarithmic functions. Trigonometric functions. P/NP or letter grading.

2. Finite Mathematics. (4) Lecture, three hours; discussion, one hour. Preparation: three years of high school mathematics. Finite mathematics consisting of matrices, Gauss/Jordan method, combinatorics, probability, Bayes theorem, and Markov chains. P/NP or letter grading.

3A. Calculus for Life Sciences Students. (4) Lecture, three hours; discussion, one hour. Preparation: three and one-half years of high school mathematics (including trigonometry). Requisite: successful completion of Mathematics Diagnostic Test or course 1 (C– or better). Not open for credit to students with credit in another calculus sequence. Techniques and applications of differential calculus. Introduction to the integral. P/NP or letter grading.

3B. Calculus for Life Sciences Students. (4) Lecture, three hours; discussion, one hour. Requisite: course 3A (C– or better). Techniques and applications of integral calculus, logarithmic and exponential functions, introduction to differential equations. P/NP or letter grading.

3C. Calculus for Life Sciences Students. (4) Lecture, three hours; discussion, one hour. Requisite: course 3B (C– or better). Functions of several variables, vectors, partial differentiation, and vector-valued functions. P/NP or letter grading.

31A. Calculus and Analytic Geometry. (4) Lecture, three hours; discussion, one hour. Preparation: at least three and one-half years of high school mathematics (including some coordinate geometry and trigonometry). Requisite: successful completion of Mathematics Diagnostic Test or course 1 (C– or better). Differential calculus and applications; introduction to integration.

31B. Calculus and Analytic Geometry. (4) Lecture, three hours; discussion, one hour. Requisite: course 31A (C– or better). Transcendental functions; methods and applications of integration.

31BH. Calculus and Analytic Geometry (Honors). (4) Lecture, three hours; discussion, one hour. Honors course parallel to course 31B.

31E. Calculus for Economics Students. (4) Lecture, three hours; discussion, one hour. Requisite: course 31A (C– or better). Not open for credit to students with credit for course 3B, 3C, or 31B. Calculus with applications to economics. Partial differentiation, differentials, implicit functions, exponential and logarithmic functions, extrema, optimization, constrained extrema, first-order linear differential equations with constant coefficients. P/NP or letter grading.

32A. Calculus of Several Variables. (4) Lecture, three hours; discussion, one hour. Requisite: course 31B (C– or better). Introduction to differential calculus of several variables.

32AH-32BH. Calculus of Several Variables (Honors). (4) Lecture, three hours; discussion, one hour. Requisite: course 31B (B or better). Honors sequence parallel to courses 32A, 32B.

32AL. Calculus Computer Laboratory. (1) Corequisite: course 32A. Prior knowledge of computers not required. Application of mathematical software to calculus of curves and surfaces. P/NP or letter grading.

32B. Calculus of Several Variables. (4) Lecture, three hours; discussion, one hour. Requisite: course 32A (C– or better). Introduction to integral calculus of several variables, vector field theory, line and surface integrals. P/NP or letter grading.

32BL. Calculus Computer Laboratory. (1) Corequisite: course 32B. Application of mathematical software to calculus of curves and surfaces. P/NP or letter grading.

33A. Matrices and Differential Equations. (4) Lecture, three hours; discussion, one hour. Requisite: course 32A (C– or better). Introduction to matrix theory, differential equations, and systems of differential equations.

33AH. Matrices and Differential Equations (Honors). (4) Lecture, three hours; discussion, one hour. Honors course parallel to course 33A. P/NP or letter grading.

33AL. Linear Algebra and Differential Equations Computer Laboratory. (1) Corequisite: course 33A. Application of mathematical software to solve problems in linear algebra and differential equations.

33B. Infinite Series. (4) (Formerly numbered 31C.) Lecture, three hours; discussion, one hour. Requisite: course 33A (C– or better). Infinite sequences and series; applications.

33BH. Infinite Series (Honors). (4) (Formerly numbered 31CH.) Lecture, three hours; discussion, one hour. Honors course parallel to course 33B. P/NP or letter grading.

38A-38B. Fundamentals of Mathematics for Elementary Teachers. (4-4) Not open to freshmen or for credit to students with credit for any course from Mathematics 110A through 199. May not be applied toward Letters and Science general education requirements. Courses 38A, 38B, and 104 form one-year sequence for prospective elementary teachers in Diversified Liberal Arts Program. P/NP or letter grading. **38A.** Lecture, three hours; discussion, one hour. Counting numbers and other subsystems of real numbers; sets; operations, relations, algorithms; applications and problem solving. Emphasis on understanding arithmetic procedures. **38B.** Lecture, three hours; discussion, one hour; laboratory, one hour. Requisite: course 38A. Continuation of course 38A. Elementary number theory; probability and statistics; the microcomputer and simple instructional programs; measurement and approximation; coordinate geometry. Other topics appropriate for elementary classroom.

61. Introduction to Discrete Structures. (4) Lecture, three hours; discussion, one hour. Requisites: courses 31A, 31B, Program in Computing 10A or 3. Not open for credit to students with credit for course 113. Discrete structures commonly used in computer science and mathematics, including sets and relations, permutations and combinations, graphs and trees, induction, Boolean algebras.

Upper Division Courses

General and Teacher Training

104. Fundamental Concepts of Geometry. (4) Lecture, three hours; discussion, one hour. Requisites: courses 38A, 38B. Designed for prospective elementary teachers. Informal geometry and topology, motion geometry, measurement of geometric figures, LOGO computer language, models and constructions appropriate for elementary classrooms.

106. History of Mathematics. (4) Requisite: course 3A or 31A. Roots of modern mathematics in ancient Babylonia and Greece, development of algebra through Middle Ages to Fermat and Abel, invention of analytic geometry and calculus, selected topics in modern mathematics. P/NP or letter grading.

Algebra, Number Theory, and Logic

110A-110B. Algebra. (4-4) Lecture, three hours; discussion, one hour. Requisite: course 115A. **110A.** Not open for credit to students with credit for course 117. Ring of integers, integral domains, fields, polynomial domains, unique factorization. **110B.** Groups, structure of finite groups.

110AH-110BH. Algebra (Honors). (4-4) (Formerly numbered 110AH-110BH-110CH.) Lecture, three hours; discussion, one hour. Honors sequence parallel to courses 110A-110B.

110C. Algebra. (4) Lecture, three hours; discussion, one hour. Requisites: courses 110A-110B. Field extensions, Galois theory, applications to geometric constructions, and solvability by radicals.

111. Theory of Numbers. (4) (Formerly numbered 111A-111B-111C.) Lecture, three hours; discussion, one hour. Requisites: courses 110A or 117, 115A. Divisibility, congruences, Diophantine analysis, selected topics in theory of primes, algebraic number theory, Diophantine equations.

M112. Introduction to Set Theory. (4) (Formerly numbered M112A.) (Same as Philosophy M134.) Lecture, three hours; discussion, one hour. Requisite: course 31B or Philosophy 32. Axiomatic set theory as framework for mathematical concepts; relations and functions, numbers, cardinality, axiom of choice, transfinite numbers. P/NP or letter grading.

113. Combinatorics. (4) Lecture, three hours; discussion, one hour. Requisites: courses 32B, 33B. Permutations and combinations, counting principles, recurrence relations and generating functions, combinatorial designs, graphs and trees, with applications including games of complete information. Combinatorial existence theorems, Ramsey theorem.

114A-114B. Logic and Computability. (4-4) (Formerly numbered 114A-114B-114C.) Lecture, three hours; discussion, one hour. Requisite: course 115A. Propositional and predicate logic; syntax and semantics; formal deductions; completeness and compactness; Herbrand expansions. Effectively computable, Turing computable, and recursive functions; thesis of Church. Universal functions; unsolvability results. Recursive and recursively enumerable sets; recursive enumerability of valid sentences. Formal number theory; definability of recursive functions; incompleteness and undecidability; theorems of Gödel, Tarski, Church. P/NP or letter grading.

115A-115B. Linear Algebra. (4-4) Lecture, three hours; discussion, one hour. P/NP or letter grading. **115A.** Requisite: course 33A. Abstract vector spaces, linear transformations, and matrices; determinants; inner product spaces; eigenvector theory. **115B.** Requisite: course 115A. Linear transformations, conjugate spaces, duality; theory of a single linear transformation, Jordan normal form; bilinear forms, quadratic forms; Euclidean and unitary spaces, symmetric skew and orthogonal linear transformations, polar decomposition.

115AH. Linear Algebra (Honors). (4) Lecture, three hours; discussion, one hour. Honors course parallel to course 115A.

117. Algebra for Applications. (4) Lecture, three hours; discussion, one hour. Requisite: course 115A. Not open for credit to students with credit for course 110A. Integers, congruences; fields, applications of finite fields; polynomials; permutations, introduction to groups.

Geometry and Topology

120A-120B. Differential Geometry. (4-4) Lecture, three hours; discussion, one hour. Requisites: courses 32B, 33B, 115A, 131A. Curves in 3-space, Frenet formulas, surfaces in 3-space, normal curvature, Gaussian curvature, congruence of curves and surfaces, intrinsic geometry of surfaces, isometries, geodesics, Gauss/Bonnet theorem. P/NP or letter grading.

121. Introduction to Topology. Requisite: course 131A. Metric and topological spaces, completeness, compactness, connectedness, functions, continuity, homeomorphisms, topological properties.

123. Foundations of Geometry. (4) Lecture, three hours; discussion, one hour. Requisite: course 115A. Axioms and models, Euclidean geometry, Hilbert axioms, neutral (absolute) geometry, hyperbolic geometry, Poincaré model, independence of parallel postulate.

Analysis

131A-131B. Analysis. (4-4) Lecture, three hours; discussion, one hour. **131A.** Requisites: courses 32B, 33B. Rigorous introduction to foundations of real analysis; real numbers, point set topology in Euclidean space, functions, continuity. **131B.** Requisites: courses 33B, 115A, 131A. Derivatives, Riemann integral, sequences and series of functions, power series, Fourier series.

131AH-131BH. Analysis (Honors). (4-4) Lecture, three hours; discussion, one hour. Honors sequence parallel to courses 131A-131B.

131C. Topics in Analysis. (4) Lecture, three hours; discussion, one hour. Requisites: courses 131A-131B. Advanced topics in analysis, such as Lebesgue integral, integration on manifolds, harmonic analysis. Content varies from year to year. May be repeated for credit by petition.

132. Complex Analysis for Applications. (4) Lecture, three hours; discussion, one hour. Requisites: courses 32B, 33B. Introduction to basic formulas and calculation procedures of complex analysis of one variable relevant to applications. Topics include Cauchy/Riemann equations, Cauchy integral formula, power series expansion, contour integrals, residue calculus.

135A-135B. Ordinary Differential Equations. (4-4) Lecture, three hours; discussion, one hour. Requisites: courses 33A, 33B. **135A.** Basic procedures and techniques for solving differential equations; linearity, basis of solutions, variation of parameters, Green's function; systems of equations; constant coefficient equations, matrix differential equations, method of eigenvalues and eigenvectors. **135B.** Laplace transform method; existence and uniqueness results; series solutions at regular singular points; Sturm/Liouville problems, orthogonal series, eigenfunction expansions; two-dimensional autonomous systems, phase-plane analysis; stability and asymptotic behavior of solutions; selected applications.

136. Partial Differential Equations. (4) Lecture, three hours; discussion, one hour. Requisites: courses 33A, 33B. Linear partial differential equations, boundary and initial value problems; wave equation, heat equation, and Laplace equation; separation of variables, eigenfunction expansions; selected topics, as method of characteristics for nonlinear equations.

Applied Mathematics

142. Mathematical Modeling. (4) Lecture, three hours; discussion, one hour. Requisites: courses 32B, 33B. Introduction to fundamental principles and spirit of applied mathematics. Emphasis on manner in which mathematical models are constructed for physical problems. Illustrations from many fields of endeavor, such as physical sciences, biology, economics, and traffic dynamics.

143. Analytic Mechanics. (4) Lecture, three hours; discussion, one hour. Requisites: courses 32B, 33B. Foundations of Newtonian mechanics, kinematics and dynamics of a rigid body, variational principles and Lagrange equations; calculus of variations, variable mass; related topics in applied mathematics.

146. Methods of Applied Mathematics. (4) Lecture, three hours; discussion, one hour. Requisites: courses 32B, 33B. Integral equations, Green's function, and calculus of variations. Selected applications from control theory, optics, dynamical systems, and other engineering problems.

149. Mathematics of Computer Graphics. (4) Lecture, three hours; discussion, one hour. Requisites: course 115A, and Program in Computing 10A or equivalent knowledge of programming in either Pascal or C language. Study of homogeneous coordinates, projective transformations, interpolating and approximating curves, representation of surfaces, and other mathematical topics useful for computer graphics.

151A-151B. Applied Numerical Methods. (4-4) (Formerly numbered 141A-141B.) Lecture, three hours; discussion, one hour. Requisites: courses 32B, 33B, 115A, Program in Computing 3 or 10A. Introduction to numerical methods with emphasis on algorithms, analysis of algorithms, and computer implementation issues. Letter grading. **151A.** Solution of nonlinear equations. Numerical differentiation, integration, and interpolation. Direct methods for solving linear systems. **151B.** Numerical solution of differential equations. Approximation theory, iterative solutions of linear equations, solution of nonlinear systems, two-point boundary value problems, optimization.

153. Numerical Methods for Partial Differential Equations. (4) (Formerly numbered 148A.) Lecture, three hours; discussion, one hour. Requisites: courses 151A-151B. Introduction to first- and second-order linear partial differential equations. Finite difference and finite element solution of elliptic, hyperbolic, and parabolic equations. Method of lines and Rayleigh/Ritz procedures. Concepts of stability and accuracy.

157. Software Techniques for Scientific Computation. (4) Lecture, three hours; discussion, one hour. Requisites: course 151A, Program in Computing 10C. Software structures, concepts, and conventions that support object-oriented programming. Identification of class structure, problem partitioning, and abstraction. Design and implementation of computer applications requiring scientific computation, visualization, and GUI components. Interlanguage interfacing. P/NP or letter grading.

164. Linear Programming. (4) (Formerly numbered 144.) Lecture, three hours; discussion, one hour. Requisite: course 115A. Not open for credit to students with credit for Electrical Engineering 136. Principles of linear programming, duality theorem, simplex methods; applications to industrial and business problems. Additional topics such as sensitivity analysis, integer programming, distribution and transportation algorithms, and applications to game theory.

167. Game Theory. (4) (Formerly numbered 147.) Lecture, three hours; discussion, one hour. Requisite: course 115A. Games in extensive form, strategic equilibrium, matrix games and minimax theorem, cooperative and noncooperative solutions of bimatrix games and Lemke/Howson algorithm. Possible additional topics include combinatorial games, stochastic games, coalitional games and the core, marriage problem, and cost allocation. P/NP or letter grading.

Probability

M170A. Probability Theory. (4) (Formerly numbered M150A.) (Same as Statistics M100A.) Lecture, three hours; discussion, one hour. Requisites: courses 32B, 33B. Not open to students with credit for Statistics M100A, 110A, or Electrical Engineering 131A. Probability distributions, random variables and vectors, expectation, normal approximations. P/NP or letter grading.

170B. Probability Theory. (4) (Formerly numbered 150B.) Lecture, three hours; discussion, one hour. Requisite: course M170A or Statistics M100A. Convergence in distribution, normal approximation, laws of large numbers, Poisson processes, random walks.

171. Stochastic Processes. (4) (Formerly numbered 151.) Lecture, three hours; discussion, one hour. Requisite: course M170A or Statistics M100A. Discrete Markov chains, continuous-time Markov chains, renewal theory.

172A-172B. Actuarial Mathematics. (4) Lecture, three hours; discussion, one hour. **172A.** Requisite: course 70. Survival distributions and life tables, life insurance, life annuities, net premiums, net premium reserves. **172B.** Requisites: course 172A, Statistics 110A-110B. Multiple life functions, multiple decrement models, valuation theory for pension plans, insurance models, nonforfeiture benefits and dividends.

181. Mathematics of Finance. (4) Lecture, three hours; discussion, one hour. Requisites: course 33A, Economics 11, and Statistics 110A or equivalent background in calculus-based probability. Modeling, mathematics, and computation for financial securities. Price of risk. Random walk models for stocks and interest rates. No-arbitrage theory for pricing derivative securities; Black/Scholes theory. European and American options. Monte Carlo, trees, finite difference methods. P/NP or letter grading.

Special Studies

190. Honors Mathematics Seminar. (4) Seminar, three hours. Participating seminar on advanced topics in mathematics. Content varies from year to year. May be repeated for credit by petition.

199. Special Studies in Mathematics. (1 to 4) At discretion of chair and subject to availability of staff, individuals or groups may study topics suitable for undergraduate course credit but not specifically offered as separate courses. May be repeated for credit, but no more than one 199 course may be applied toward upper division courses required for a major offered by Mathematics Department.

Graduate Courses

Teacher Preparation

201A-201B-201C. Topics in Algebra and Analysis. (4-4-4) Preparation: bachelor's degree in mathematics. Designed for mathematics/education program students. Important ideas of algebra, geometry, and calculus leading effectively from elementary to modern mathematics. Approaches to number system, point sets, geometric interpretations of algebra and analysis, integration, differentiation, series and analytic functions. May not be applied toward M.A. degree requirements.

202A-202B. Mathematical Models and Applications. (4-4) Preparation: bachelor's degree in mathematics. Designed for mathematics/education program students. Development of mathematical theories describing various empirical situations. Basic characterizing postulates; development of a logical structure of theorems. Modern topics such as operations research, linear programming, game theory, learning models, models in social and life sciences. May not be applied toward M.A. degree requirements.

Number Theory

205A-205B-205C. Number Theory. (4-4-4) Requisites: courses 210A, 246A. Topics from analytic algebraic and geometric number theory, including distribution of primes and factorization in algebraic number fields. Selected topics from additive number theory, Diophantine approximation, partitions, class-field theory, lattice point problems, valuation theory, etc.

206A-206B. Combinatorial Theory. (4-4) Generating functions. Probabilistic methods. Polya theorem. Enumerative graph theory. Partition theory. Number theoretical applications. Structure of graphs, matching theory, duality theorems. Packings, pavings, coverings, statistical designs, difference sets, triple systems, finite planes. Configurations, polyhedra. Ramsey theory, finite and transfinite, and applications.

Algebra

210A-210B-210C. Algebra. (4-4-4) Requisites: courses 110A-110B, 110C. Students with credit for courses 110B and/or 110C cannot receive M.A. degree credit for courses 210B and/or 210C. Group theory, including theorems of Sylow and Jordan/Holder/Schreier; rings and ideals, factorization theory in integral domains, modules over principal ideal rings, Galois theory of fields, multilinear algebra, structure of algebras.

211. Structure of Rings. (4) Requisite: course 210A. Radical, irreducible modules and primitive rings, rings and algebras with minimum condition.

212. Homological Algebra. (4) Requisite: course 210A. Modules over a ring, homomorphisms and tensor products of modules, functors and derived functors, homological dimension of rings and modules.

213A-213B. Theory of Groups. (4) Requisite: course 210A. Topics include representation theory, transfer theory, infinite Abelian groups, free products and presentations of groups, solvable and nilpotent groups, classical groups, algebraic groups.

214A-214B. Introduction to Algebraic Geometry. (4) Requisite: course 210A. Basic definitions and first properties of algebraic varieties in affine and projective space: irreducibility, dimension, singular and smooth points. More advanced topics, such as sheaves and their cohomology, or introduction to theory of Riemann surfaces, as time permits.

215A-215B. Commutative Algebra. (4-4) Requisite: course 210A. Topics from commutative ring theory, including techniques of localization, prime ideal structure in commutative Noetherian rings, principal ideal theorem, Dedekind rings, modules, projective modules, Serre conjecture, regular local rings.

216. Further Topics in Algebraic Geometry. (4) Requisites: courses 214A-214B. Closer examination of areas of current research in algebraic geometry. Variable content may include algebraic surfaces, Abelian varieties, invariant theory, Hodge theory, or geometry over finite fields. May be repeated for credit by petition.

M217. Geometry and Physics. (4) (Same as Physics M236.) Lecture, three hours. Interdisciplinary course on topics at interface between physics quantum fields and superstrings and mathematics of differential and algebraic geometry. Topics include supersymmetry, Seiberg/Witten theory, conformal field theory, Calabi/Yau manifolds, mirror symmetry and duality, integrable systems. S/U grading.

Logic and Foundations

220A-220B-220C. Mathematical Logic and Set Theory. (4-4-4) Lecture, three hours. Requisite: course M112. Model theory: compactness theorem; Lowenheim/Skolem theorems; definability; ultraproducts; preservation theorems; interpolation theorems. Recursion function theory: thesis of Church; recursively enumerable sets; hierarchies; degrees. Formal proofs: completeness and incompleteness theorems; decidable and undecidable theories; quantifier elimination. Set theory: Zermelo/Fraenkel and von Neumann/Gödel axioms; cardinal and ordinal numbers; continuum hypothesis; constructible sets; independence results and forcing. S/U or letter grading.

222A-222B. Lattice Theory and Algebraic Systems. (4-4) Lecture, three hours. Requisite: course 210A. Partially ordered sets, lattices, distributivity, modularity; completeness, interaction with combinatorics, topology, and logic; algebraic systems, congruence lattices, subdirect decomposition, congruence laws, equational bases, applications to lattices.

223A. Model Theory. (4) Requisites: courses 220A-220B-220C. Topics include ultraproducts, preservation theorems, interpolation theorems, saturated models, omitting types, categoricity, two cardinal theorems, enriched languages, soft model theory, and applied model theory.

223B. Set Theory. (4) Requisites: courses 220A-220B-220C. Topics include constructibility theory, Cohen extensions, large cardinals, and combinatorial set theory.

223C. Recursion Theory. (4) Requisites: courses 220A-220B-220C. Topics include degrees of unsolvability, recursively enumerable sets, undecidable theories, inductive definitions, admissible sets and ordinals, and recursion in higher types.

223D. Descriptive Set Theory. (4) Requisites: courses 220A-220B-220C. Classical descriptive set theory: Borel and projective sets. Effective descriptive set theory. Consequences of strong set-theoretic hypotheses.

Geometry and Topology

225A. Differentiable Manifolds. (4) Lecture, three hours. Requisites: courses 121, 131A-131B. Smooth manifolds and maps, basic examples and properties, orientability, tangent and cotangent spaces, embeddings and immersions, Sard theorem and transversality, vector fields and integral curves, Lie brackets and Frobenius theorem, Lie derivative, tensors, differential forms and exterior derivative, Stokes theorem on manifolds.

225B. Introduction to Algebraic Topology. (4) Lecture, three hours. Requisite: course 225A. Elementary concepts of homotopy theory; covering spaces and fundamental group. Singular homology theory, axioms of homology, Mayer/Vietoris sequence, calculation of homology of standard spaces, applications, Betti numbers and Euler characteristic, cell complexes and cellular homology.

225C. Further Topics in Geometry and Topology. (4) Lecture, three hours. Requisites: courses 225A, 225B. Topics may include cohomology (singular, cellular, de Rham), duality theorems, de Rham theorem, degree theory, cup products, higher homotopy groups, transversality theory, Morse theory, Riemannian metric.

226A-226B-226C. Differential Geometry. (4-4-4) Lecture, three hours. Requisite: course 225A. Manifold theory; connections, curvature, torsion, and parallelism. Riemannian manifolds; completeness, submanifolds, constant curvature. Geodesics; conjugate points, variational methods, Myers theorem, nonpositive curvature. Further topics such as pinched manifolds, integral geometry, Kahler manifolds, symmetric spaces.

227A-227B. Algebraic Topology. (4-4) Lecture, three hours. Requisite: course 225B. CW complexes, fiber bundles, homotopy theory, cohomology theory, spectral sequences.

229A-229B-229C. Lie Groups and Lie Algebras. (4-4-4) Preparation: knowledge of basic theory of topological groups and differentiable manifolds. Lie groups, Lie algebras, subgroups, subalgebras. Exponential map. Universal enveloping algebra. Campbell/Hausdorff formula. Nilpotent and solvable Lie algebras. Cohomology of Lie algebras. Theorems of Weyl, Levi-Mal'cev. Semi-simple Lie algebras. Classification of simple Lie algebras. Representations. Compact groups. Weyl character formula.

233. Partial Differential Equations on Manifolds. (4) Lecture, three hours. Requisites: courses 226A, 251A. Topics may include Laplacian operator on a Riemannian manifold, eigenvalues, Atiyah/Singer index theorem, isoperimetric inequalities, elliptic estimates, harmonic functions, function theory on manifolds, Green's function, heat equation, minimal hypersurfaces, prescribed curvature equations, harmonic maps, Yang/Mills equation, Monge/Ampere equations.

234. Topics in Differential Geometry. (4) Lecture, three hours. Requisites: courses 226A-226B. Complex and Kahler geometry, Hodge theory, homogeneous manifolds and symmetric spaces, finiteness and convergence theorems for Riemannian manifolds, almost flat manifolds, closed geodesics, manifolds of positive scalar curvature, manifolds of constant curvature. Topics vary from year to year. May be repeated for credit by petition.

235. Topics in Manifold Theory. (4) Lecture, three hours. Requisites: courses 225A, 225B. Emphasis on low-dimensional manifolds. Structure and classification of manifolds, automorphisms of manifolds, submanifolds (e.g., knots and links). Topics vary from year to year. May be repeated for credit by petition.

236. Topics in Geometric Topology. (4) Lecture, three hours. Requisites: courses 225A, 225B. Decomposition spaces, surgery theory, group actions, dimension theory, infinite dimensional topology. Topics vary from year to year. May be repeated for credit by petition.

237. Topics in Algebraic Topology. (4) Lecture, three hours. Requisites: courses 227A-227B. Fixed-point theory, fiber spaces and classifying spaces, characteristic classes, generalized homology and cohomology theories. Topics vary from year to year. May be repeated for credit by petition.

238A-238B. Dynamical Systems. (4-4) Lecture, three hours. Recommended preparation: first-year analysis courses. Topics include qualitative theory of differential equations, bifurcation theory, and Hamiltonian systems; differential dynamics, including hyperbolic theory and quasiperiodic dynamics; ergodic theory; low-dimensional dynamics. S/U or letter grading.

Analysis and Differential Equations

240. Methods of Set Theory. (4) Lecture, three hours. Requisites: courses 110A-110B, 121, 131A-131B. Naive, axiomatic set theory, axiom of choice and its equivalents, well-orderings, transfinite induction, ordinal and cardinal arithmetic. Applications to algebra: Hamel bases, Stone representation theorem. Applications to analysis and topology: Cantor/Bendixson theorem, counterexamples in measure theory, Borel and analytic sets, Choquet theorem.

245A-245B-245C. Real Analysis. (4-4-4) Lecture, three hours. Requisites: courses 121, 131A-131B. Students with credit for former course 134 cannot receive M.A. degree credit for course 245A. Basic measure theory. Measure theory on locally compact spaces. Fubini theorem. Elementary aspects of Banach and Hilbert spaces and linear operators. Function spaces. Radon/Nikodym theorem. Fourier transform and Plancherel on \mathbb{R}^n and \mathbb{T}^n .

246A-246B-246C. Complex Analysis. (4-4-4) Requisites: courses 131A-131B. Students with credit for course 132 cannot receive M.A. degree credit for course 246A. Cauchy/Riemann equations. Cauchy theorem. Cauchy integral formula and residue calculus. Power series. Normal families. Harmonic functions. Linear fractional transformations. Conformal mappings. Analytic continuation. Examples of Riemann surfaces. Infinite products. Partial fractions. Classical transcendental functions. Elliptic functions.

247A-247B. Classical Fourier Analysis. (4-4) Lecture, three hours. Requisites: courses 245A-245B, 246A. Distribution on \mathbb{R}^n and \mathbb{T}^n . Principal values; other examples. Distributions with submanifolds as supports. Kernel theorem. Convolution; examples of singular integrals. Tempered distributions and Fourier transform theory on \mathbb{R}^n . Distributions with compact or one-sided supports and their complex Fourier transforms.

250A. Ordinary Differential Equations. (4) Requisite: course 246A. Basic theory of ordinary differential equations. Existence and uniqueness of solutions. Continuity with respect to initial conditions and parameters. Linear systems and n th order equations. Analytic systems with isolated singularities. Self-adjoint boundary value problems on finite intervals.

250B. Nonlinear Ordinary Differential Equations. (4) Requisite: course 250A. Asymptotic behavior of nonlinear systems. Stability. Existence of periodic solutions. Perturbation theory of two-dimensional real autonomous systems. Poincaré/Bendixson theory.

250C. Advanced Topics in Ordinary Differential Equations. (4) Requisites: courses 250A, 250B. Selected topics, such as spectral theory or ordinary differential operators, nonlinear boundary value problems, celestial mechanics, approximation of solutions, and Volterra equations.

251A. Introductory Partial Differential Equations. (4) Classical theory of heat, wave, and potential equations; fundamental solutions, characteristics and Huygens principle, properties of harmonic functions. Classification of second-order differential operators. Maximum principles, energy methods, uniqueness theorems. Additional topics as time permits.

251B-251C. Topics in Partial Differential Equations. (4-4) In-depth introduction to topics of current interest in partial differential equations or their applications.

252A-252B. Topics in Complex Analysis. (4-4) (Formerly numbered 252A-252B-252C.) Lecture, three hours. Requisites: courses 245A-245B-245C, 246A-246B-246C. Potential theory, subharmonic functions, harmonic measure; Hardy spaces; entire functions; univalent functions; Riemann surfaces; extremal length, variational methods, quasi-conformal mappings. Topics vary from year to year. S/U or letter grading.

253A-253B. Several Complex Variables. (4-4) Requisites: courses 245A-245B-245C, 246A-246B-246C. Introduction to analytic functions of several complex variables. The $\bar{\partial}$ -problem, Cousin problems, domains of holomorphy, complex manifolds.

254A-254B. Topics in Real Analysis. (4-4) Requisites: courses 245A-245B-245C, 246A-246B-246C. Selected topics in analysis and its applications to geometry and differential equations. Topics may vary from year to year. May be repeated for credit by petition.

Functional Analysis

255A. Functional Analysis. (4) Requisites: courses 245A-245B or 265A-265B, and 246A. Banach spaces, basic principles. Weak topologies. Compact operators. Fredholm operators. Special spaces including Hilbert spaces and $C(X)$.

255B-255C. Topics in Functional Analysis. (4-4) Requisite: course 255A. Topics include Banach algebras, operators on Banach spaces and Hilbert space, semigroups of operators, linear topological vector spaces, and other related areas.

256A-256B. Topological Groups and Their Representations. (4-4) (Formerly numbered 256A-256B-256C.) Lecture, three hours. Requisite: course 255A. Topological groups and their basic properties. Haar measure. Compact groups and their representations. Duality and Fourier analysis on locally compact abelian groups. Induced representations, Frobenius reciprocity. Representations of special groups (Lorentz, Galilean, etc.). Projective representations. Representations of totally disconnected groups. S/U or letter grading.

259A-259B. Operator Algebras in Hilbert Space. (4-4) Requisites: courses 255A, 255B-255C. Selected topics from theories of C^* and von Neumann algebras. Applications.

Applied Mathematics

260. Introduction to Applied Mathematics. (4) Requisite: course 142. Construction, analysis, and interpretation of mathematical models of problems which arise outside of mathematics.

M261. Game Theory. (4) (Same as Economics M214B and Political Science M208A.) Lecture, three hours. Designed for graduate economics, mathematics, and political science students. Bargaining theory, the core, the value, other solution concepts. Applications to oligopoly, general exchange and production economies, and allocation of joint costs. S/U or letter grading.

264. Applied Complex Analysis. (4) Requisite: course 246A. Topics include contour integration conformal mapping, differential equations in complex plane, special functions, asymptotic series, Fourier and Laplace transforms, singular integral equations.

265A-265B. Real Analysis for Applications. (4-4) Requisites: courses 131A-131B. Not open for credit to students with credit for courses 245A-245B-245C. Lebesgue measure and integration on real line, absolutely continuous functions, functions of bounded variation, L^2 - and L^p -spaces. Fourier series. General measure and integrations, Fubini and Radon/Nikodym theorems, representation of functionals, Fourier integrals.

266A. Applied Ordinary Differential Equations. (4) Lecture, three hours. Requisites: courses 131A-131B, 132, and 135A-135B or 146. Spectral theory of regular boundary value problems and examples of singular Sturm/Liouville problems, related integral equations, phase/plane analysis of nonlinear equations. S/U or letter grading.

266B-266C. Applied Partial Differential Equations. (4-4) Requisite: course 266A. Classification of equations, classical potential theory, Dirichlet and Neumann problems. Green's functions, spectral theory of Laplace equation in bounded domains, first-order equations, wave equations. Cauchy problem, energy conservation, heat equation, fundamental solution, equations of fluid mechanics and magnetohydrodynamics.

266D-266E. Applied Differential Equations. (4-4) Requisites: courses 266A, 266B-266C. Advanced topics in linear and nonlinear partial differential equations, with emphasis on energy estimates, numerical methods, and applications to fluid mechanics. Additional topics include dispersive waves, systems with multiple time scales, and applications to fluid mechanics.

268A. Applied Functional Analysis. (4) Lecture, three hours. Requisites: courses 115A-115B, 131A-131B, 132. Topics may include Hilbert spaces, distributions, Fourier transforms, L^2 -space, the Laplacian, linear operators, spectrum and resolvent, self-adjoint and unitary operators, problems of evolution in Banach spaces, well-posed initial value problems, semigroups, applications to applied problems.

268B-268C. Topics in Applied Functional Analysis. (4-4) Requisite: course 255A. Topics include spectral theory with applications to ordinary differential operators, eigenvalue problems for differential equations, generalized functions, and partial differential equations.

269A-269B-269C. Advanced Numerical Analysis. (4-4-4) Lecture, three hours. Requisites: courses 115A, 135A, 151A-151B. Numerical solution for systems of ordinary differential equations; initial and boundary value problems. Numerical solution for elliptic, parabolic, and hyperbolic partial differential equations. Topics in computational linear algebra. S/U or letter grading.

270A-270F. Mathematical Aspects of Scientific Computing. (4 each) Lecture, three hours. Requisites: courses 115A, 151A-151B, Program in Computing 10A. S/U or letter grading:

270A. Techniques of Scientific Computing. Mathematical modeling for computer applications, scientific programming languages, software development, graphics, implementation of numerical algorithms on different architectures, case studies.

270B-270C. Computational Linear Algebra. Direct, fast, and iterative algorithms, overdetermined systems; singular value decomposition, regularization, sparse systems, algebraic eigenvalue problem.

270D-270E. Computational Fluid Dynamics. Basic equations, finite difference, finite element, pseudospectral, and vortex methods; stability, accuracy, shock capturing, and boundary approximations.

270F. Parallel Numerical Algorithms. Requisites: courses 270B-270C. Recommended: courses 270A, 270D-270E. Design, analysis, and implementation of numerical algorithms on modern vector and parallel computers. Discussion of classical numerical algorithms and novel parallel algorithms. Emphasis on applications to PDEs.

271A. Tensor Analysis. (4) Requisite: course 131A. Algebra and calculus of tensors on n -dimensional manifolds. Curvilinear coordinates and coordinate-free methods. Covariant differentiation. Green/Stokes theorem for differential forms. Applications to topics such as continuum and particle mechanics.

271B. Analytical Mechanics. (4) Preparation: prior knowledge of mechanics. Requisite: course 271A. Newtonian and Lagrangian equations. Hamilton principle. Principle of least action. Holonomic and non-holonomic systems. Hamilton canonical equations, contact transformations, applications.

271C. Introduction to Relativity. (4) Preparation: prior knowledge of mechanics. Requisite: course 271A. Restricted theory of relativity. Extensions to general theory. Relativistic theory of gravitation.

271D. Wave Mechanics. (4) General concepts of mechanical systems (states, space-time, "logics," etc.). Classical and quantum examples. Correspondence principle. Spinors.

272A. Foundations of Continuum Mechanics. (4) Lecture, three hours. Kinematic preliminaries, conservation laws for mass, momentum and energy, entropy production, constitutive laws. Linear elasticity, inviscid fluid, viscous fluid. Basic theorems of fluid mechanics. Simple solutions. Low Reynolds number flow, Stokes drag. High Reynolds number flow, boundary layers. Two-dimensional potential flow, simple aerofoil. Compressible flow, shocks.

272B. Mathematical Aspects of Fluid Mechanics. (4) Lecture, three hours. Requisite: course 272A. Review of basic theory of moving continua, fluid equations, integral theorems. Simple solutions, flow created by slowly moving bodies, flows where viscosity is negligible, vortices, boundary layers and their separation, water waves, ship waves, compressional waves, shock waves, turbulence theory (overview).

272C. Magnetohydrodynamics. (4) Lecture, three hours. Requisite: course 272A. Basic electromagnetism. Steady flows, Hartmann layers. Alfvén theorem and waves. Compressible media. Magnetostatic equilibria and stability.

272D. Rotating Fluids and Geophysical Fluid Dynamics. (4) Lecture, three hours. Effects of Coriolis forces on fluid behavior. Inviscid flows, Taylor/Proudman theorem, Taylor columns, motions of bodies, inertial waves in spheres and spherical shells, Rossby waves. Ekman layers, spin-up. Shallow-water theory, wind-driven ocean circulation. Effects of stratification, Benard convection. Baroclinic instability, Eady model. S/U or letter grading.

273. Optimization, Calculus of Variations, and Control Theory. (4) Application of abstract mathematical theory to optimization problems of calculus of variations and control theory. Abstract nonlinear programming and applications to control systems described by ordinary differential equations, partial differential equations, and functional differential equations. Dynamic programming.

274A. Asymptotic Methods. (4) Lecture, three hours. Requisite: course 132. Fundamental mathematics of asymptotic analysis, asymptotic expansions of Fourier integrals, method of stationary phase. Watson lemma, method of steepest descent, uniform asymptotic expansions, elementary perturbation problems. S/U or letter grading.

274B-274C. Perturbation Methods. (4-4) Lecture, three hours. Requisite: course 266A. Boundary layer theory, matched asymptotic expansions, WKB theory. Problems with several time scales: Poincaré method, averaging techniques, multiple-scale analysis. Application to eigenvalue problems, nonlinear oscillations, wave propagation, and bifurcation problems. Examples from various fields of science and engineering.

Probability and Statistics

275A-275B. Probability Theory. (4-4) Requisite: course 245A or 265A. Connection between probability theory and real analysis. Weak and strong laws of large numbers, central limit theorem, conditioning, ergodic theory, martingale theory.

275C. Stochastic Processes. (4) Lecture, three hours. Requisite: course 275B. Brownian motion, continuous-time martingales, Markov processes, potential theory. S/U or letter grading.

275D. Stochastic Calculus. (4) Lecture, three hours. Requisite: course 275C. Stochastic integration, stochastic differential equations, Itô formula and its applications. S/U or letter grading.

275E. Stochastic Particle Systems. (4) Lecture, three hours. Requisite: course 275C. Interacting particle systems, including contact process, stochastic Ising model, and exclusion processes; percolation theory. S/U or letter grading.

278F. Structural Equation and Graphical Models. (4) Lecture, three hours. Preparation: two quarters of graduate-level statistics, such as courses 276A-276B or equivalent sequence in another department. Statistical and causal dependencies. Linear structural equations, latent variables, categorical variable models, multilevel structures, hierarchical sampling plans. Conditional, unconditional statistical theory. Causal diagrams, directed acyclic graphs, conditional-independence models for continuous, categorical, mixed data. Parameter estimation, identification, model testing, policy analysis.

M282A-M282B. Applied Probability. (4-4) (Formerly numbered 282A-282B.) (Same as Statistics M220A-M220B.) Lecture, three hours. Requisite: course M170A or Statistics M100A. S/U or letter grading. **M282A.** Conditioning, Markov chains, Poisson process, Brownian motion, stationary processes, applications. **M282B.** Simulation, renewal theory, martingale, and selected topics from queuing, reliability, speech recognition, computational biology, mathematical finance, epidemiology.

Special Studies

285A-285N. Seminars. (4 each) (Formerly numbered 285A-285L.) Seminar, three hours. No more than two 285 courses may be applied toward M.A. degree requirements except by prior consent of graduate vice chair. Topics in various branches of mathematics and their applications by means of lectures and informal conferences with staff members. S/U or letter grading:

285A. History and Development of Mathematics.

285B. Number Theory.

285C. Algebra.

285D. Logic.

285E. Geometry.

285F. Topology.

285G. Analysis.

285H. Differential Equations.

285I. Functional Analysis.

285J. Applied Mathematics.

285K. Probability.

285N. Dynamical Systems.

290. Seminar: Current Literature. (4) Designed for Ph.D. students. Readings and presentations of papers in mathematical literature under supervision of a staff member.

296A-296N. Participating Seminars. (1 to 4 each) (Formerly numbered 296A-296M.) Seminars and discussion by staff and students. S/U grading:

296A. History and Development of Mathematics.

296B. Number Theory.

296C. Algebra.

296D. Logic.

296E. Geometry.

296F. Topology.

296G. Analysis.

296H. Differential Equations.

296I. Functional Analysis.

296J. Applied Mathematics.

296K. Probability.

296M. Mathematics.

296N. Dynamical Systems.

330. Observation and Participation: Mathematics and Science Instruction. (1 to 2). Seminar, one hour; classroom observation and participation, two hours. Observation, participation, or tutoring in mathematics and science classes at middle school and secondary levels. May be repeated for credit. P/NP (undergraduates) or S/U (graduates) grading.

370A-370B. Teaching of Mathematics. (4-4) Lecture, three hours; discussion, one hour. Requisite: course 33B. Limited to senior Mathematics Department majors. Course 370A is requisite to 370B. Topics in geometry, algebra, number theory, discrete mathematics, and functions presented from a problem-solving and student participation point of view, with emphasis on historical context and appropriate role of proof. S/U or letter grading.

375. Teaching Apprentice Practicum. (1 to 4) Tutorial, to be arranged. Preparation: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

495. Teaching College Mathematics. (2) Seminar, one hour; two-day intensive training at beginning of Fall Quarter. Required of all new teaching assistants and new Ph.D. students. Special course for teaching assistants designed to deal with problems and techniques of teaching college mathematics. S/U grading.

501. Cooperative Program. (2 to 8) Preparation: consent of UCLA department chair and graduate dean, and host campus instructor, department chair, and graduate dean. Used to record enrollment of UCLA students in courses taken under cooperative arrangements with USC. S/U grading.

596. Directed Individual Study or Research. (2 to 8) Tutorial, to be arranged. Supervised individual reading and study on project approved by a faculty member, which may be preparation for M.A. examination. May be repeated for credit, but only two 596 courses (eight units) may be applied toward M.A. degree unless departmental consent is obtained. S/U or letter grading.

599. Research in Mathematics. (2 to 12) Tutorial, to be arranged. Preparation: advancement to Ph.D. candidacy. Study and research for Ph.D. dissertation. May be repeated for credit. S/U grading.

Program in Computing

Program in Computing 1 is designed for students who wish a broad, general introduction to the topic of computers and computation. It is

strongly recommended for those who wish to take course 3 or 10A, but who have no prior experience in computing.

Students who would like one course in programming should take either course 3 (uses FORTRAN) or 10A (uses C++), depending on the advice of their major department.

The sequence (courses 10A, 10B, 10C, 15, 30, 60) provides an extensive education in basic computer science. It is intended for Letters and Science majors who are completing a specialization in Computing and for those planning to take upper division coursework in computer science. These students should take all or part of the sequence, depending on the advice of their major department.

Lower Division Courses

1. Introduction to Computers and Computing. (4) Lecture, three hours; laboratory, one hour. Not open for credit to students with credit for course 1S or 10A; may not be taken concurrently with course 1S or 10A. Fundamentals of computers and computing; editors, spreadsheets, file manager; machine organization and computer hardware; Internet; software applications. P/NP or letter grading.

1S. Software Tools for Information Management. (1) Lecture, one hour; laboratory, two hours. Preparation: some familiarity with computers. Not open for credit to students with credit for course 1; may not be taken concurrently with course 1. May be taken by students with credit for more advanced courses. Introduction to spreadsheets and databases in a laboratory setting. P/NP grading.

3. Introductory FORTRAN Programming. (5) Lecture, three hours; discussion, two hours; laboratory, eight hours. Students with credit for course 10A receive only two units of credit for this course. Basic principles of programming, using FORTRAN as example language. Terminal course intended for physical sciences and engineering majors who need to use the extensive library of existing FORTRAN programs. Students who wish to take more advanced program in computing courses should take course 10A rather than this course.

10A. Introduction to Programming. (5) Lecture, three hours; discussion, two hours; laboratory, eight hours. Recommended requisite for students with no prior computing experience: course 1. Students with credit for course 3 receive only two units of credit for this course. No prior programming experience assumed. Basic principles of programming, using C++; algorithmic, procedural problem solving; program design and development; basic data types, control structures and functions; functional arrays and pointers; introduction to classes for programmer-defined data types. P/NP or letter grading.

10B. Intermediate Programming. (5) Lecture, three hours; discussion, two hours; laboratory, eight hours. Enforced requisite: course 10A. Abstract data types and their implementation using the C++ class mechanism; dynamic data structures, including linked lists, stacks, queues, trees, and hash tables; applications; object-oriented programming and software reuse; recursion; algorithms for sorting and searching.

10C. Advanced Programming. (5) Lecture, three hours; discussion, two hours; laboratory, eight hours. Enforced requisite: course 10B. More advanced algorithms and data structuring techniques; additional emphasis on algorithmic efficiency; advanced features of C++, such as inheritance and virtual functions; graph algorithms.

15. Introduction to LISP and Symbolic Computation. (5) Lecture, three hours; discussion, two hours; laboratory, eight hours. Enforced requisite: course 10A. Introduction to symbolic computation using LISP programming language. Basics: list structures, recursion, function abstraction. Advanced topics: knowledge representation, higher-order functions, problem-solving algorithms and heuristics. P/NP or letter grading.

20. Programming for Internet in Java Language. (5) Lecture, three hours; discussion, two hours; laboratory, eight hours. Enforced requisite: course 10B. Introduction to Java computer language. Class and interface hierarchies; graphics components and graphical user interfaces; streams; multithreading; event and exception handling. Issues in class design and design of interactive Web pages. P/NP or letter grading.

30. Machine Organization and Assembly Language Programming. (5) Lecture, three hours; discussion, two hours; laboratory, eight hours. Enforced requisite: course 10B. Description of machine organization and operation. Representation of information, instruction sets and formats, addressing modes, memory organization and management, input/output (I/O) processing and interrupts.

40. Programming for Internet and Multimedia. (5) Lecture, three hours; discussion, two hours; laboratory, eight hours. Enforced requisite: course 10B. HTML, Perl language, programming for Common Gateway Interface (CGI), other scripting languages, XML and its derivatives, programming for multimedia. P/NP or letter grading.

60. Data Structures and Algorithms. (4) Lecture, three hours; discussion, one hour; laboratory, five hours. Enforced requisites: course 10B, Mathematics 31A, 31B, 61. Review of basic data structures: arrays, stacks, queues, lists, trees. Advanced data structures: priority queues, heaps, balanced trees. Sorting, searching techniques. Corresponding algorithms.

97. Special Topics in Programming. (1 to 4) Lecture, one to three hours; discussion, zero to one hour. Enforced requisite: course 10A. Variable topics in programming not covered in regular program in computing courses. May be repeated for credit with topic change. P/NP or letter grading.

Upper Division Courses

110. Parallel and Distributed Computing. (5) Lecture, three hours; discussion, two hours; laboratory, eight hours. Requisite: course 10B or equivalent familiarity with programming in C or C++ language. Introduction to programming of parallel computers. Shared and distributed memory parallel architectures; currently available parallel machines; parallel algorithms and program development; estimation of algorithmic performance; distributed computing; selected advanced topics.

197. Advanced Topics in Programming. (2 to 4) Lecture, one to three hours; discussion, one to two hours. Variable topics in programming and the mathematics of programming not covered in regular program in computing courses. May be repeated for credit with topic change. P/NP or letter grading.

Graduate Courses

285C-285L. Seminars. (4 each) Considered equivalent to Mathematics 285A-285L for purposes of degree requirements. Topics in various computational fields by means of lectures and informal conferences with staff members. S/U or letter grading.

285C. Computational Algebra.

285D. Logic and Theory of Computation.

285J. Scientific Computation.

285K. Randomness and Computation.

285L. Computational Statistics.

296. Participating Seminar: Logic and Theory of Computation. (1 to 4) Seminar and discussion by staff and students. S/U grading.

375. Teaching Apprentice Practicum. (1 to 4) Preparation: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

Robert F. Brown, Ph.D. (*Mathematics*)
Bryan C. Ellickson, Ph.D. (*Economics*)
Jonathan D. Rogawski, Ph.D. (*Mathematics*)
William R. Zame, Ph.D. (*Economics*)

Scope and Objectives

In recent years economics has become increasingly dependent on mathematical methods, and the mathematical tools it employs have become more sophisticated. Mathematically competent economists, with bachelor's degrees and with advanced degrees, are needed in industry and government. Graduate programs in economics and finance programs in graduate schools of management require strong undergraduate preparation in mathematics for admission.

The B.S. degree program is designed to give students a solid foundation in both mathematics and economics, stressing those areas of mathematics and statistics that are most relevant to economics and the parts of economics that emphasize the use of mathematics and statistics.

Undergraduate Study

Mathematics/Economics B.S.

Preparation for the Major

Required: Mathematics 31A, 31B, 32A, 32B, 33A, 33B, Economics 1, 2, 11, Program in Computing 10A. Each course must be passed with a minimum grade of C-, and students must have a minimum overall grade-point average of 2.0 for the courses.

The Major

Required: Seven Mathematics Department courses, including Mathematics 110A or 117,

115A, 131A, 164, M170A or Statistics M100A or 110A, Statistics 100B or 110B, and one course from Mathematics 110A through 199 and Statistics M120A, M120B; six economics courses, including Economics 101, 102, and four additional upper division courses, with at least three from 105AH, 105BH, and 142 through 148. The seven Mathematics Department courses must be passed with an overall grade-point average of 2.0, as must the six courses from the Economics Department.

Honors Program

Students who wish to graduate with departmental honors should apply for admission to the honors program in the Mathematics Department Student Services Office. They may apply any time after completing the preparation for the major courses with an overall grade-point average of 3.5 or better.

To qualify for honors at graduation, students must (1) complete Mathematics 110B or 131B, (2) prepare a senior thesis acceptable to the departmental honors committee, (3) present the thesis in Economics 195H, and (4) complete the major requirements with at least a 3.5 GPA in the mathematics and economics courses. Highest honors are awarded at the discretion of the departmental honors committee based on grade-point average and quality of the senior thesis.

Computing Specialization

Students may select a specialization in Computing by (1) satisfying all the requirements for a bachelor's degree in the major, (2) completing Mathematics 61 or 113, Program in Computing 10A, 10B, and two courses from 10C, 15, 30, 60, with a minimum grade of C- in each course and a combined grade-point average of at least 2.0, and (3) completing at least two courses from Mathematics 149 through 159. Students must petition for admission to the program and are advised to do so after they complete Program in Computing 10B (petitions should be filed in the Mathematics Department Student Services Office). Students graduate with a bachelor's degree in mathematics/economics and a specialization in Computing.

Frank E. Marble, Ph.D.
Rudolph X. Meyer, Ph.D., *Emeritus*

Adjunct Associate Professor

Sukumar Chakravarthy, Ph.D.

Because of the scope of the department, faculty research and teaching cover a wide range of technical disciplines. Research in thermal engineering emphasizes basic heat and mass transfer processes as well as thermal hydraulics. Topics in the area of design, dynamics, and control include robotics, mechanism design, control and guidance of aircraft and spacecraft, helicopter dynamics and aeromechanics, and dynamics and control of large space structures. Studies in structural mechanics range from fracture mechanics and wave propagation, structural dynamics and aeroelasticity of helicopters and jet engine blades, computational transonic aeroelasticity to structural optimization and synthesis, and mechanics of composite structures. In the area of fluid mechanics and acoustics, investigations are under way on combustion, flow instabilities, turbulence and thermal convection, aeroacoustics, and unsteady aerodynamics of turbomachines, helicopter rotors, and fixed-wing aircraft. Other areas of research include applied plasma physics, surface modification by plasma, fusion reactor design, experimental tokamak confinement physics; light water reactor safety; reliability and risk assessment methodology; societal risk management; and nuclear materials. The department also has research activity in computer-aided design and manufacturing.

At the undergraduate level, the department offers accredited programs leading to Bachelor of Science degrees in Aerospace Engineering and in Mechanical Engineering. The former includes opportunity to emphasize propulsion, aerodynamics, preliminary design, dynamics and control, or structures and space technology, while the latter includes opportunity to emphasize design and manufacturing, dynamics and control, or fluids and thermal engineering.

At the graduate level, the department offers programs leading to M.S. and Ph.D. degrees in Mechanical Engineering and in Aerospace Engineering. An M.S. in Manufacturing Engineering is also offered.

Undergraduate Study

Aerospace Engineering B.S.

The ABET-accredited aerospace engineering program is concerned with the design and construction of various types of fixed-wing and rotary-wing (helicopters) aircraft used for air transportation and national defense. It is also concerned with the design and construction of spacecraft, the exploration and utilization of space, and related technological fields.

Aerospace engineering is characterized by a very high level of technology. The aerospace engineer is likely to operate at the forefront of scientific discoveries, often stimulating these discoveries and providing the inspiration for the creation of new scientific concepts. Meeting these demands requires the imaginative use of many disciplines, including fluid mechanics and aerodynamics, structural mechanics, ma-

MECHANICAL AND AEROSPACE ENGINEERING

School of Engineering and Applied Science

UCLA
48-121 Engineering IV
Box 951597
Los Angeles, CA 90095-1597

(310) 825-2281
<http://www.mae.ucla.edu/>

Scope and Objectives

The Mechanical and Aerospace Engineering Department encompasses professional disciplines that are often divided into separate departments at other engineering schools. Curricula in aerospace engineering and mechanical engineering are offered on both the undergraduate and graduate levels. The Gorman Report ranked UCLA's mechanical engineering program tenth in the nation for undergraduate programs. The aerospace program is the only accredited aerospace program in the University of California system.

materials and aeroelasticity, dynamics, control and guidance, propulsion, and energy conversion.

The Major

Course requirements are as follows (189 minimum units required):

(1) Ten department core courses: Civil and Environmental Engineering 108, Electrical Engineering 100, Materials Science and Engineering 14, Mechanical and Aerospace Engineering 20, 102, 103, M105A, 105D, 157, 192A.

(2) Twelve aerospace engineering core courses: Electrical Engineering 102; Mechanical and Aerospace Engineering 150A, 150B, 150P, 154A, 154B, 154S, 157A, 161A or 169A, 166A, 171A; one mathematics elective from Mechanical and Aerospace Engineering 191A, 192B, 192C, Electrical Engineering 103, 131A.

(3) Sixteen technical elective units (which should contain enough design units to satisfy the overall program requirement of at least 24 design units) selected from Mechanical and Aerospace Engineering 131A/131AL, 132A, 133A/133AL, 150C, 150R (heat and mass transfer, thermodynamics, combustion/propulsion); 153A (acoustics); 155, 163A, 164, 169A (unless taken as part of the core), Civil and Environmental Engineering 137L, Electrical Engineering 142 (dynamics and control); Mechanical and Aerospace Engineering 156B, 166C, 168, 193, Civil and Environmental Engineering 130F (structural and solid mechanics); Mechanical and Aerospace Engineering 161A (unless taken as part of the core), 161B, 161C, 161D (space technology); 162A, 162C, M192F (design and mechanisms); Materials Science and Engineering 143A.

(4) Chemistry and Biochemistry 20A, 20B, 20L; Mathematics 31A, 31B, 32A, 32B, 33A, 33B; Physics 1A, 1B, 1C, 4AL, 4BL.

(5) SEAS general education (GE) course requirements. See Curricular Requirements in the College and Schools section of this catalog for details.

Mechanical Engineering B.S.

The ABET-accredited mechanical engineering program is designed to provide a basic knowledge in thermodynamics, fluid mechanics, heat transfer, solid mechanics, mechanical design, dynamics, control, mechanical systems, manufacturing, and materials. The program includes fundamental subjects important to all mechanical engineers, with options in design and manufacturing, dynamics and control, and fluids and thermal engineering.

The Major

Course requirements are as follows (191 minimum units required):

(1) Ten department core courses: Civil and Environmental Engineering 108, Electrical Engineering 100 (also 110L — see item 2 below),

Materials Science and Engineering 14, Mechanical and Aerospace Engineering 20, 102, 103, M105A, 105D, 157, 192A.

(2) Ten mechanical engineering core courses: Electrical Engineering 110L (may be taken concurrently with 100), Mechanical and Aerospace Engineering 131A, 133A, 156A, 162A, 162B, 162M, 169A, 171A, 193.

(3) Twenty technical elective units, to be selected from the three subject areas listed below, of which at least 12 units (including at least four laboratory units) should be from a single subject area:

(a) *Design and Manufacturing*: Materials Science and Engineering 143A, Mathematics 120A, Mechanical and Aerospace Engineering 155, 162C, 163A, 163C, 164, 168, 172, 174, 180, 194, 195.

(b) *Dynamics and Control*: Civil and Environmental Engineering 130F, 137L, Electrical Engineering 102, 103, 131A, 131B, Materials Science and Engineering 143A, Mathematics 115A, 115B, 131A, 131B, Mechanical and Aerospace Engineering 155, 156B, 163A, 163C, 164, 168, 172, 174, 191A.

(c) *Fluids and Thermal Engineering*: Electrical Engineering 103, Mechanical and Aerospace Engineering 131AL, 132A, 133AL, 134, 135, 136, 150A, 150B, 150C, 150P, 150R, 153A, 157A, 161A, 161B, 174, 192B, 192C.

(4) Chemistry and Biochemistry 20A, 20B, 20L; Mathematics 31A, 31B, 32A, 32B, 33A, 33B; Mechanical and Aerospace Engineering 94; Physics 1A, 1B, 1C, 4AL, 4BL.

(5) SEAS general education (GE) course requirements. See Curricular Requirements in the College and Schools section of this catalog for details.

(6) Four free technical elective units selected from upper division courses offered by the department; students are strongly encouraged to consult their adviser.

Graduate Study

The following constitutes introductory information regarding graduate degree programs and is based on the 1998-99 edition of *Program Requirements for UCLA Graduate Degrees*. Complete, annual editions of *Program Requirements* are available (listed under "Publications") on the Graduate Division website at <http://www.gdnet.ucla.edu>. Students are subject to the degree requirements as published in *Program Requirements* for the year in which they matriculate.

Master's Degrees

The Mechanical and Aerospace Engineering Department offers Master of Science (M.S.) degrees in Aerospace Engineering, Mechanical Engineering, and Manufacturing Engineering.

Aerospace Engineering and Mechanical Engineering

Admission

In addition to meeting the requirements of the Graduate Division, applicants to the M.S. program in Aerospace Engineering or in Mechanical Engineering are required to take the General Test of the Graduate Record Examination (GRE). Applicants who expect to hold F1 or J1 visas are also required to take the GRE Subject Test in Engineering, Mathematics, or a related area.

For requirements for the Graduate Certificate of Specialization, see Engineering Schoolwide Programs.

Application forms, including a departmental supplement to the application, may be obtained at <http://www.mae.ucla.edu/>. Forms are also available by writing to the Mechanical and Aerospace Engineering Department, UCLA, 48-121 Engineering IV, Box 951597, Los Angeles, CA 90095-1597, or to the Office of the Associate Dean for Academic and Student Affairs, School of Engineering and Applied Science, UCLA, 6426 Boelter Hall, Box 951601, Los Angeles, CA 90095-1601.

Areas of Study

Dynamics; fluid mechanics; heat and mass transfer; microelectromechanical systems; structural and solid mechanics; systems and control.

Course Requirements

At least nine courses are required, of which at least five must be graduate courses. In the thesis plan, seven of the nine must be formal courses, including at least four from the 200 series. The remaining two may be 598 courses involving work on the thesis. In the comprehensive examination plan, no units of 500-series courses may be applied toward the minimum course requirement. The courses should be chosen so that the breadth requirements and the requirements at the graduate level are met. The breadth requirements are only applicable to students who do not have a B.S. degree from an ABET-accredited aerospace or mechanical engineering program.

Undergraduate Courses. No lower division courses may be applied toward graduate degrees. In addition, the following upper division courses are not applicable toward graduate degrees: Chemical Engineering M105A, 199; Civil Engineering 106A, 108, 199; Computer Science M152A, M152B, 171L, 199; Electrical Engineering 100, 101, 102, 103, 110L, M116D, M116L, 199; Materials Science and Engineering 110, 120, 130, 131, 131L, 132, 150, 160, 161L, 190, 191L, 199; Mechanical and Aerospace Engineering 102, 103, M105A, 105D, 199.

Aerospace Engineering

Breadth Requirements. Students are required to take at least three courses from the following four categories: (1) Mechanical and Aerospace Engineering 154A or 154B or 154S; (2) 150B

or 150P; (3) 155A or 166A or 169A; (4) 161A or 171A.

Graduate-Level Requirement. Students are required to take at least one course from the following: Mechanical and Aerospace Engineering 250D, 253B, 254A, 254B, 255B, 256F, 263B, 269D, or 271B. The remaining courses can be taken to gain depth in one or more of the several specialty areas covering the existing major fields in the department.

Mechanical Engineering

Breadth Requirements. Students are required to take at least three courses from the following four categories: (1) Mechanical and Aerospace Engineering 162A or 169A or 171A; (2) 150A or 150B; (3) 131A or 133A; (4) 156A or 156B.

Graduate-Level Requirement. Students are required to take at least one course from the following: Mechanical and Aerospace Engineering 231A, 231B, 231C, 250A, 255A, 256A, M256B, M269A, or 271A. The remaining courses can be taken to gain depth in one or more of the several specialty areas covering the existing major fields in the department.

Comprehensive Examination Plan

The comprehensive examination, which is offered every quarter, must be in written form. The comprehensive examining committee may conduct an oral examination after review of the written examination. Students may, in consultation with the adviser and the major field chair, choose to take the first part of the Ph.D. written qualifying examination (formerly referred to as the preliminary examination) as the comprehensive examination. In case of failure, students may be reexamined once with the consent of the graduate adviser.

Thesis Plan

The thesis must describe some original piece of research that has been done under the supervision of the thesis committee. Students would normally start to plan the thesis at least one year before the award of the M.S. degree is expected. There is no examination under the thesis plan.

Manufacturing Engineering

Admission

In addition to meeting the requirements of the Graduate Division, applicants to the Master of Science degree in Manufacturing Engineering are required to take the General Test of the Graduate Record Examination (GRE). Applicants who expect to hold F1 or J1 visas are also required to take the GRE Subject Test in Engineering, Mathematics, or a related area.

Applicants not having adequate preparation may be admitted provisionally and may be required to undertake certain remedial coursework which would not be applicable toward the degree. On arrival at UCLA, an adviser helps the student plan a program which can remedy any such deficiencies.

For requirements for the Graduate Certificate of Specialization, see Engineering Schoolwide Programs.

Admission forms, including a departmental supplement to the application, may be obtained at <http://www.mae.ucla.edu>. Forms are also available by writing to the Mechanical and Aerospace Engineering Department, UCLA, 48-121 Engineering IV, Box 951597, Los Angeles, CA 90095-1597 or to the Office of the Associate Dean for Academic and Student Affairs, School of Engineering and Applied Science, UCLA, 6426 Boelter Hall, Box 951601, Los Angeles, CA 90095-1601. Students are encouraged to apply online.

Areas of Study

Consult the department.

Course Requirements

At least nine courses are required, of which at least five must be graduate courses. In the thesis plan, seven of the nine must be formal courses, including at least four from the 200 series. The remaining two may be 598 courses involving work on the thesis. In the comprehensive examination plan, no units of 500-series courses may be applied toward the minimum course requirement. Choices may be made from the following major areas:

Undergraduate Courses. No lower division courses may be applied toward graduate degrees. In addition, the following upper division courses are not applicable toward graduate degrees: Chemical Engineering M105A, 199; Civil Engineering 106A, 108, 199; Computer Science M152A, M152B, 171L, 199; Electrical Engineering 100, 101, 102, 103, 110L, M116D, M116L, 199; Materials Science and Engineering 110, 120, 130, 131, 131L, 132, 150, 160, 161L, 190, 191L, 199; Mechanical and Aerospace Engineering 102, 103, M105A, 105D, 199.

Upper Division Courses. Students are required to take at least three courses from the following: Mechanical and Aerospace Engineering 163A, 163C, 168, 174, 193, 194, 195.

Graduate Courses. Students are required to take at least three courses from the following: Mechanical and Aerospace Engineering 263A, 263C, 263D, 280, 293, 294, 295, 296A, 296B, 297.

Additional Courses. The remaining courses may be taken from other major fields of study in the department or from the following: Architecture and Urban Design 226B, M227B, 227D; Computer Science 241A, 241B; Management 240A, 240B, 240C, 240D, 241A, 241B, 242A, 242B, 243A, 243B, 243C; Mathematics 120A, 120B.

Comprehensive Examination Plan

The comprehensive examination, which is offered every quarter must be in written form. The comprehensive examining committee may conduct an oral examination after review of the written examination. In case of failure, students

may be reexamined once with the consent of the graduate adviser.

Thesis Plan

The thesis must describe some original piece of research that has been done under the supervision of the thesis committee. Students would normally start to plan the thesis at least one year before the award of the M.S. degree is expected. There is no examination under the thesis plan.

Doctoral Degrees

Admission

In addition to meeting the requirements of the Graduate Division, applicants to the Ph.D. degrees in Aerospace Engineering and in Mechanical Engineering are required to take the General Test of the Graduate Record Examination (GRE). Applicants who expect to hold F1 or J1 visas are also required to take the GRE Subject Test in Engineering, Mathematics, or a related area.

Applicants to the Ph.D. program normally should have completed the requirements for the master's degree with at least a 3.25 grade-point average and have demonstrated creative ability. Normally the M.S. degree is required for admission to the Ph.D. program. Exceptional students, however, can be admitted to the Ph.D. program without having the M.S. degree.

Applicants not having adequate preparation may be admitted provisionally and may be required to undertake certain remedial coursework which cannot be applied toward the degree. On arrival at UCLA, an adviser helps the student plan a program which can remedy any such deficiencies.

For information on completing the Engineer degree, see Engineering Schoolwide Programs.

Admission forms, including a departmental supplement to the application, may be obtained at <http://www.mae.ucla.edu>. Forms are also available by writing to the Mechanical and Aerospace Engineering Department, UCLA, 48-121 Engineering IV, Box 951597, Los Angeles, CA 90095, or to the Office of the Associate Dean for Academic and Student Affairs, School of Engineering and Applied Science, UCLA, 6426 Boelter Hall, Box 951601, Los Angeles, CA 90095-1601. Students are encouraged to apply online.

Major Fields or Subdisciplines

Dynamics; fluid mechanics; heat and mass transfer; manufacturing and design (mechanical engineering only); microelectromechanical and solid mechanics; systems and control.

Ph.D. students may propose ad hoc major fields, which must differ substantially from established major fields and satisfy one of the following two conditions: (1) the field is interdisciplinary in nature; (2) the field represents an important research area for which there is no established major field in the department (condition 2 most often applies to recently evolving

research areas or to areas for which there are too few faculty to maintain an established major field).

Students in an ad hoc major field must be sponsored by at least three faculty members, at least two of whom must be from the department.

Course Requirements

The basic program of study for the Ph.D. degree is built around major and minor fields. The established major fields are listed above, and a detailed syllabus describing each Ph.D. major field can be obtained from the Student Affairs Office.

The program of study for the Ph.D. requires students to perform original research leading to a doctoral dissertation and to master a body of knowledge that encompasses material from the student's major field and breadth material from outside the major field. The body of knowledge should include (1) six major field courses, at least four of which must be graduate courses; (2) one minor field; (3) any three additional courses, at least two of which must be graduate courses that enhance the study of the major or minor field.

The major field syllabus advises students as to which courses contain the required knowledge, and students usually prepare for the written qualifying examination (formerly referred to as the preliminary examination) by taking these courses. However, students can acquire such knowledge by taking similar courses at other universities or even by self-study.

The minor field embraces a body of knowledge equivalent to three courses, at least two of which must be graduate courses. Minor fields are often subsets of major fields, and minor field requirements are then described in the syllabus of the appropriate major field. Established minor fields with no corresponding major field can also be used such as applied mathematics, and applied plasma physics and fusion engineering. Also, an ad hoc field can be used in exceptional circumstances, such as when certain knowledge is desirable for a program of study that is not available in established minor fields.

Grades of B– or better, with a grade-point average of at least 3.33 in all courses included in the minor field, and the three additional courses mentioned above are required. If the student fails to satisfy the minor field requirements through coursework, a minor field examination may be taken (once only).

Written and Oral Qualifying Examinations

After mastering the body of knowledge defined in the major field, students take a written qualifying (preliminary) examination covering this knowledge. Students must have been formally admitted to the Ph.D. program or admitted subject to completion of the M.S. degree by the end of the quarter following the quarter in which the examination is given. The examina-

tion must be taken within the first two calendar years from the time of admission to the Ph.D. program. Students must be registered during the quarter in which the examination is given and be in good academic standing (minimum GPA of 3.25). The student's major field proposal must be completed prior to taking the examination. Students may not take an examination more than twice. Students in an ad hoc major field must pass a written qualifying examination that is approximately equivalent in scope, length, and level to the written qualifying examination for an established major field.

After passing the written qualifying examination, students must take the University Oral Qualifying Examination within four calendar years from the time of admission to the Ph.D. program. The nature and content of the University Oral Qualifying Examination are at the discretion of the doctoral committee but include a review of the dissertation prospectus. The examination may include a broad inquiry into the student's preparation for research.

Note: Doctoral Committees. A doctoral committee consists of a minimum of four members. Three members, including the chair, are "inside" members and must hold appointments at UCLA in the student's major department in the School of Engineering and Applied Science. The "outside" member must be a UCLA faculty member who does not hold an appointment in the student's department.

Mechanical and Aerospace Engineering

Lower Division Courses

20. FORTRAN Programming with Numerical Methods Applications. (4) Lecture, three hours; laboratory, two hours; outside study, seven hours. Requisites: Mathematics 31A, 31B. Introduction to programming with FORTRAN. Applications to numerical methods used in engineering. Letter grading.

94. Introduction to Computer-Aided Design and Drafting. (4) Lecture, two hours; laboratory, four hours. Fundamentals of computer graphics and two- and three-dimensional modeling on computer-aided design and drafting systems. Students use one or more on-line computer systems to design and display various objects. Letter grading.

Upper Division Courses

102. Mechanics of Particles and Rigid Bodies. (4) Lecture, three hours; recitation, two hours; outside study, seven hours. Requisites: Mathematics 33A, Physics 1A. Newtonian mechanics (statics and dynamics) of particles and rigid bodies. Fundamental concepts of mechanics. Statics, kinematics, and kinetics of particles and rigid bodies. Impulse/momentum and work/energy relationships. Applications. Letter grading.

103. Elementary Fluid Mechanics. (4) Lecture, three hours; recitation, two hours; outside study, seven hours. Requisites: Mathematics 32B, 33A, Physics 1B. Introductory course dealing with application of principles of mechanics to flow of compressible and incompressible fluids. Letter grading.

M105A. Introduction to Engineering Thermodynamics. (4) (Same as Chemical Engineering M105A.) Lecture, four hours; recitation, one hour; outside study, seven hours. Requisites: Mathematics 32B, Physics 1B. Phenomenological thermodynamics. Concepts of equilibrium, temperature, and reversibility. First law and concept of energy; second law and concept of entropy. Equations of state and thermodynamic properties. Engineering applications of these principles in analysis and design of closed and open systems. Letter grading.

105D. Transport Phenomena. (4) Lecture, four hours; recitation, one hour; outside study, seven hours. Requisites: course 103, Mathematics 32B, 33A, Physics 8B. Transport phenomena; heat conduction, mass species diffusion, convective heat and mass transfer, and radiation. Engineering applications in thermal and environmental control. Letter grading.

131A. Intermediate Heat Transfer. (4) Lecture, four hours; outside study, eight hours. Requisites: courses 20, 105D, 192A. Steady conduction: two-sided, two-ended, tapered, and circular fins; buried cylinders, thick fins. Transient conduction: slabs, cylinders, products. Convection: transpiration, laminar pipe flow, film condensation, boundary layers, dimensional analysis, working correlation, surface radiation. Two-stream heat exchangers. Elements of thermal design. Letter grading.

131AL. Thermodynamics and Heat Transfer Laboratory. (4) Laboratory, eight hours; outside study, four hours. Requisites: courses 131A, 157. Experimental study of physical phenomenon and engineering systems using modern data acquisition and processing techniques. Experiments include studies of heat transfer phenomena and testing of a cooling tower, heat exchanger, and internal combustion engine. Students take and analyze data and discuss physical phenomena. Letter grading.

132A. Mass Transfer. (4) Lecture, four hours; outside study, eight hours. Requisite: course 131A. Principles of mass transfer by diffusion and convection. Simultaneous heat and mass transfer. Analysis of evaporative and transpiration cooling, combustion, and catalysis. Mass exchangers, including automobile catalytic converters, precipitators, filters, scrubbers, humidifiers, and cooling towers. Letter grading.

133A. Engineering Thermodynamics. (4) Lecture, four hours; outside study, eight hours. Requisites: courses 103, M105A, 105D. Applications of thermodynamic principles to engineering processes. Energy conversion systems. Rankine cycle and other cycles, refrigeration, psychrometry, reactive and nonreactive fluid flow systems. Letter grading.

133AL. Power Conversion Thermodynamics Laboratory. (4) Laboratory, eight hours; outside study, four hours. Requisites: courses 133A, 157. Experimental study of power conversion and heat transfer systems using state-of-the-art plant process instrumentation and equipment. Experiments include studies of thermodynamic operating characteristics of an actual Brayton cycle, Rankine cycle, compressive refrigeration unit, and absorption refrigeration unit. Letter grading.

134. Design and Operation of Thermal Hydraulic Power Systems. (4) Lecture, three hours; laboratory, three hours; outside study, six hours. Requisites: courses 133A, 133AL. Thermal hydraulic design, maintenance and operation of power systems, gas turbines, steam turbines, centrifugal refrigeration units, absorption refrigeration units, compressors, valves and piping systems, and instrumentation and control systems. Letter grading.

135. Fundamentals of Nuclear Power. (4) Lecture, four hours; outside study, eight hours. Designed for juniors/seniors. Introduction to nuclear engineering; nuclear physics, neutron cross sections, nuclear fission and fusion; elementary analysis and design of reactors. Criticality, one-group neutron diffusion theory, heat removal, and heterogeneous effects. Letter grading.

136. Thermal Hydraulic Design of Nuclear and Other Power Systems. (4) Lecture, four hours; recitation, two hours; outside study, six hours. Designed for seniors. Thermal hydraulic design of nuclear and other power systems, power generation and heat removal, power cycle, thermal hydraulic component design, overall plant design, steady state and transient operation. Letter grading.

M140. Introduction to Biomechanics. (4) (Same as Biomedical Engineering M140.) Lecture, four hours; outside study, eight hours. Requisites: courses 131A, 156A. Introduction to mechanical functions of human body; skeletal adaptations to optimize load transfer, mobility, and function. Dynamics and kinematics. Fluid mechanics applications. Heat and mass transfer. Power generation. Laboratory simulations and tests. Letter grading.

150A. Intermediate Fluid Mechanics. (4) Lecture, four hours; outside study, eight hours. Requisites: courses 20, 103, 192A. Basic equations governing fluid motion. Fundamental solutions of Navier/Stokes equations. Lubrication theory. Elementary potential flow theory. Boundary layers. Turbulent flow in pipes and boundary layers. Compressible flow: normal shocks, channel flow with friction or heat addition. Letter grading.

150B. Aerodynamics. (4) Lecture, four hours; outside study, eight hours. Requisites: courses 103, 150A. Advanced aspects of potential flow theory. Incompressible flow around thin airfoils (C_l , C_m) and wings (lift, induced drag). Gas dynamics: oblique shocks, Prandtl/Meyer expansion. Linearized subsonic and supersonic flow around thin airfoils and wings. Wave drag. Transonic flow. Letter grading.

150C. Combustion Systems. (4) Lecture, four hours; outside study, eight hours. Requisites: courses 103, M105A, 105D. Chemical thermodynamics of ideal gas mixtures, premixed and diffusion flames, explosions and detonations, combustion chemistry, high explosives. Combustion processes in rocket, turbine, and internal combustion engines; heating applications. Letter grading.

150P. Aircraft Propulsion Systems. (4) Lecture, four hours; recitation, two hours; outside study, six hours. Requisites: courses M105A, 150A. Thermodynamic properties of gases, aircraft jet engine cycle analysis and component performance, component matching, advanced aircraft engine topics. Letter grading.

150R. Rocket Propulsion Systems. (4) Lecture, four hours; recitation, one hour; outside study, seven hours. Requisites: courses M105A, 150A. Recommended: course 150P. Rocket propulsion concepts, including chemical rockets (liquid, gas, and solid propellants), hybrid airbreathing-rocket engines, electric (ion plasma) rockets, nuclear rockets, and solar-powered vehicles. Current issues in launch vehicle technologies. Letter grading.

153A. Engineering Acoustics. (4) Lecture, four hours; outside study, eight hours. Designed for junior/senior engineering majors. Fundamental course in acoustics; propagation of sound; sources of sound. Design of field measurements. Estimation of jet and blade noise with design aspects. Letter grading.

154A. Preliminary Design of Aircraft. (4) Lecture, four hours; outside study, eight hours. Requisite: course 154S. Classical preliminary design of an aircraft, including weight estimation, performance and stability, and control consideration. Term assignment consists of preliminary design of a low-speed aircraft. Letter grading.

154B. Design of Aerospace Structures. (4) Lecture, four hours; outside study, eight hours. Requisites: courses 154A, 166A. Design of aircraft, helicopter, spacecraft, and related structures. External loads, internal stresses. Applied theory of thin-walled structures. Material selection, design using composite materials. Design for fatigue prevention and structural optimization. Field trips to aerospace companies. Letter grading.

154S. Flight Mechanics, Stability, and Control of Aircraft. (4) Lecture, four hours; outside study, eight hours. Requisites: courses 150A, 150B. Aircraft performance, flight mechanics, stability, and control; some basic ingredients needed for design of an aircraft. Effects of airplane flexibility on stability derivatives. Letter grading.

155. Intermediate Dynamics. (4) Lecture, four hours; outside study, eight hours. Requisite: course 102. Axioms of Newtonian mechanics, generalized coordinates, Lagrange equation, variational principles; central force motion; kinematics and dynamics of a rigid body. Euler equations, motion of rotating bodies, oscillatory motion, normal coordinates, orthogonality relations. Letter grading.

156A. Strength of Materials. (4) Lecture, four hours; recitation, one hour; outside study, seven hours. Requisites: course 192A, Civil Engineering 108. Concepts of stress, strain, and material behavior. Stresses in loaded beams with symmetric and asymmetric cross sections. Torsion of cylinders and thin-walled structures, shear flow. Stresses in pressure vessels, press-fit and shrink-fit problems, rotating shafts. Curved beams. Contact stresses. Strength and failure, plastic deformation, fatigue, elastic instability. Letter grading.

156B. Introduction to Elasticity. (4) Lecture, four hours; outside study, eight hours. Requisites: courses 156A, 192A. Kinematics of deformation, strain displacement relations. Balance laws, stress tensor, principal stresses, equilibrium equations. Conservation of energy, strain energy function. Generalized Hook's law, thermoplasticity and viscoelasticity. Stress calculation in cylinders and spheres. Plane elasticity, Airy's stress function. Stress concentration problems at holes, corners, and crack tips. Letter grading.

157. Basic Mechanical Engineering Laboratory. (4) Laboratory, eight hours; outside study, four hours. Requisites: courses 103, M105A, 105D, Civil Engineering 108, Electrical Engineering 100. Methods of measurement of basic quantities and performance of basic experiments in heat transfer, fluid mechanics, structures, and thermodynamics. Primary sensors, transducers, recording equipment, signal processing, and data analysis. Letter grading.

157A. Fluid Mechanics and Aerodynamics Laboratory. (4) Laboratory, eight hours. Requisites: courses 150A, 150B, 157. Experimental illustration of important physical phenomena in area of fluid mechanics/aerodynamics, as well as hands-on experience with design of experimental programs and use of modern experimental tools and techniques in the field. Letter grading.

161A. Introduction to Astronautics. (4) Lecture, four hours; outside study, eight hours. Requisite: course 102. Recommended: course 192A. Space environment of Earth, trajectories and orbits, step rockets and staging, two-body problem, orbital transfer and rendezvous, problem of three bodies, elementary perturbation theory, influence of Earth's oblateness. Letter grading.

161B. Introduction to Space Technology. (4) Lecture, four hours; outside study, eight hours. Recommended preparation: courses 102, 105D, 150P, 161A. Propulsion requirements for typical space missions, thermochemistry of propellants, internal ballistics, regenerative cooling, liquid propellant feed systems, POGO instability. Electric propulsion. Multistage rockets, separation dynamics. Satellite structures and materials, loads and vibrations. Thermal control of spacecraft. Letter grading.

161C. Spacecraft Design. (4) Lecture, four hours; outside study, eight hours. Requisite: course 161B. Coverage of preliminary design, by students, of a small spacecraft carrying a lightweight scientific payload with modest requirements for electric power, lifetime, and attitude stability. Students work in groups of three or four, with each student responsible primarily for a subsystem and for integration with the whole. Letter grading.

161D. Space Technology Hardware Design. (4) Lecture, two hours; laboratory, three hours; outside study, seven hours. Recommended requisite or corequisite: course 161B. Design, by students, of hardware with applications to space technology. Designs are then built by SEAS professional machine shop and tested by the students. New project carried out each year. Letter grading.

162A. Introduction to Mechanisms and Mechanical Systems. (4) Lecture, four hours; recitation, two hours; outside study, six hours. Requisites: courses 20, 102. Analysis and synthesis of mechanisms and mechanical systems. Kinematics, dynamics, and mechanical advantages of machinery. Displacement velocity and acceleration analyses of linkages. Fundamental law of gearing and various gear trains. Computer-aided mechanism design and analysis. Letter grading.

162B. Mechanical Product Design. (4) Lecture, two hours; laboratory, four hours; outside study, six hours. Requisites: courses 94, 156A, 162A, 193, Electrical Engineering 110L. Lecture and laboratory (design) course involving modern design theory and methodology for development of mechanical products. Economics, marketing, manufacturability, quality, and patentability. Design considerations taught and applied to hands-on design project. Letter grading.

162C. Electromechanical System Design Laboratory. (4) Lecture, one hour; laboratory, eight hours; outside study, three hours. Requisite: course 162B. Laboratory and design course consisting of design, development, construction, and testing of complex mechanical and electromechanical systems. Assembled machine is instrumented and monitored for operational characteristics. Letter grading.

162M. Senior Mechanical Engineering Design. (4) Lecture, one hour; laboratory, six hours; outside study, five hours. Requisites: courses 131A, 133A, 162B, 169A, 171A. Must be taken in last two academic terms of students' programs. Analytical design course of a large engineering system culminating in its computer simulation. Design factors include efficiency, economy, safety, reliability, and social impact. Final report of engineering specifications and drawings to be presented by design teams. Letter grading.

163A. Introduction to Computer-Controlled Machines. (4) Lecture, four hours; outside study, eight hours. Requisite: course 171A (may be taken concurrently). Modeling of computer-controlled machines, including electrical and electronic elements, mechanical elements, actuators, sensors, and overall electromechanical systems. Motion and command generation, servo-controller design, and computer/machine interfacing. Letter grading.

163C. Robotics and Motion Control Laboratory. (4) Laboratory, eight hours; outside study, four hours. Requisite: course 171A. Hands-on experience with robotic devices and articulated machines, with emphasis on motion planning and control. Design and implementation of servo control of DC motors, gear trains, multi-axis coordination, programming of industrial robots. Final project required. Letter grading.

164. Digital Control of Physical Systems. (4) Lecture, four hours; outside study, eight hours. Requisite: course 171A or Electrical Engineering 141. Analysis and design of digital control systems. Discrete-time transfer functions for physical systems. Design using classical methods: performance specifications, frequency response, root locus; compensation. Design using state-space methods: control laws, estimators. Practical considerations: roundoff, sample rate selection, computer implementation. Letter grading.

166A. Analysis of Flight Structures. (4) Lecture, four hours; outside study, eight hours. Requisite: Civil Engineering 108. Introduction to two-dimensional elasticity, stress-strain laws, yield and fatigue; bending of beams; torsion of beams; warping; torsion of thin-walled cross sections: shear flow, shear-lag; combined bending torsion of thin-walled, stiffened structures used in aerospace vehicles; elements of plate theory; buckling of columns. Letter grading.

166C. Design of Composite Structures. (4) Lecture, four hours; outside study, eight hours. Requisite: course 156A or 166A. History of composites, stress-strain relations for composite materials, bending and extension of symmetric laminates, failure analysis, design examples and design studies, buckling of composite components, nonsymmetric laminates, micromechanics of composites. Letter grading.

168. Introduction to Finite Element Technology. (4) Lecture, four hours; laboratory, four hours; outside study, four hours. Requisites: course 20, Civil Engineering 108, Mathematics 33A. Recommended: courses 94 or 194, 166A. Introduction to finite element method (FEM) and its matrix formulation of computer implementation of FEM concepts; practical use of FEM codes. Preprocessing and postprocessing techniques; graphics display capabilities; geometric and analysis modeling; interactive engineering systems; links with computer-aided design. Recent trends in FEM technology; design optimization. Term projects using FEM computer codes. Letter grading.

169A. Introduction to Mechanical Vibrations. (4) Lecture, four hours; outside study, eight hours. Requisites: courses 102, 192A, Civil Engineering 108. Recommended: Electrical Engineering 102. Fundamentals of vibration theory and applications. Free, forced, and transient vibration of one and two degrees of freedom systems, including damping. Normal modes, coupling, and normal coordinates. Vibration isolation devices, vibrations of continuous systems. Letter grading.

171A. Introduction to Feedback and Control Systems: Dynamic Systems Control I. (4) Lecture, four hours; outside study, eight hours. Requisite: course 191A or 192A or Electrical Engineering 102. Introduction to feedback principles, control systems design, and system stability. Modeling of physical systems in engineering and other fields; transform methods; controller design using Nyquist, Bode, and root locus methods; compensation; computer-aided analysis and design. Letter grading.

172. Control System Design Laboratory. (4) Laboratory, eight hours; outside study, four hours. Requisite: course 171A. Application of frequency domain design techniques for control of mechanical systems. Successful controller design requires students to formulate performance measures for control problem, experimentally identify mechanical systems, and develop uncertainty descriptions for design models. Exploration of issues concerning model uncertainty and sensor/actuator placement. Students implement control designs on flexible structures, rate gyroscope, and inverted pendulum. Detailed reports required. Letter grading.

174. Probability and Its Applications to Risk, Reliability, and Quality Control. (4) Lecture, four hours; outside study, eight hours. Introduction to probability theory; random variables, distributions, functions of random variables, models of failure of components, reliability, redundancy, complex systems, stress-strength models, fault tree analysis, statistical quality control by variables and by attributes, acceptance sampling. Letter grading.

180. Introduction to Micromachining. (4) Lecture, four hours; outside study, eight hours. Physical phenomena in microscale. Photolithography and etching. Basics of silicon processing. Fundamentals of bulk micromachining and examples. Thin film formation. Surface micromachining and examples. Microplating, including LIGA. Nonlithographic micromachining. Letter grading.

191A. Complex Analysis and Integral Transforms. (4) Lecture, four hours; outside study, eight hours. Requisite: course 192A. Complex variables, analytic functions, conformal mapping, contour integrals, singularities, residues, Cauchy integrals; Laplace transform: properties, convolution, inversion; Fourier transform: properties, convolution, FFT, applications in dynamics, vibrations, structures, and heat conduction. Letter grading.

192A. Mathematics of Engineering. (4) Lecture, four hours; recitation, two hours; outside study, six hours. Requisites: Mathematics 33A, 33B. Methods of solving ordinary differential equations in engineering. Review of matrix algebra. Solutions of systems of first- and second-order ordinary differential equations. Introduction to Laplace transforms and their application to ordinary differential equations. Introduction to boundary value problems. Letter grading.

192B. Mathematics of Engineering. (4) Lecture, four hours; outside study, eight hours. Requisite: course 192A. Analytical methods for solving partial differential equations arising in engineering. Separation of variables, eigenvalue problems, Sturm/Liouville theory. Development and use of special functions. Representation by means of orthonormal functions; Galerkin method. Use of Green's function and transform methods. Letter grading.

192C. Numerical Methods for Engineering Applications. (4) Lecture, four hours; outside study, eight hours. Requisites: courses 20, 192A. Recommended: Electrical Engineering 103. Basic topics from numerical analysis having wide application in solution of practical engineering problems, computer arithmetic, and errors. Solution of linear and nonlinear systems. Algebraic eigenvalue problem. Least-square methods, numerical quadrature, and finite difference approximations. Numerical solution of initial and boundary value problems for ordinary and partial differential equations. Letter grading.

M192F. Numerical Optimization Methods for Engineering Design. (4) (Same as Civil Engineering M140.) Lecture, four hours; outside study, eight hours. Requisites: course 20 or Civil Engineering 15, Mathematics 32A, 33A. Recommended: Mathematics 115A. Systematic presentation of numerical optimization methods for engineering design; one-dimensional minimization, unconstrained minimization, linearly constrained minimization, general nonlinear problems, approximation concepts, duality. Optimization problem statements. Advantages and limitations of numerical optimization. Applications. Letter grading.

193. Introduction to Manufacturing Processes. (4) (Formerly numbered Materials Science 147B.) Lecture, four hours; outside study, eight hours. Requisite: Materials Science 14. Mechanical behavior of materials. Manufacturing properties of metals. Surfaces of materials. Metal cutting, deformation processes, and casting. Joining and fastening. Nonconventional material-removal processes. Polymers, ceramics, and composites. Letter grading.

194. Introduction to CAD/CAM Systems: Design and Implementation. (4) Laboratory, eight hours; outside study, four hours. Requisites: courses 20, 94. Hands-on experience with CAD/CAM systems design and implementation, with special emphasis on theory of parametric curves and surfaces and their computer interactive graphics implementation. Letter grading.

195. Computer Numerical Control and Applications. (4) Laboratory, eight hours; outside study, four hours. Designed for juniors/seniors. Fundamentals of numerical control (NC) technology. Programming of computer numerical control (CNC) machines in NC codes and APT language and with CAD/CAM systems. NC postprocessors and distributed numerical control. Operation of CNC lathe and milling machines. Programming and machining of complex engineering parts. Letter grading.

199. Special Studies. (2 to 8) Tutorial, to be arranged. Limited to seniors. Individual investigation of selected topic to be arranged with a faculty member. Enrollment request forms available in department office. Occasional field trips may be arranged. May be repeated for credit. Letter grading.

Graduate Courses

231A. Convective Heat Transfer Theory. (4) Lecture, four hours; outside study, eight hours. Requisites: courses 131A, 192B. Recommended: course 250A. Conservation equations for flow of real fluids. Analysis of heat transfer in laminar and turbulent, incompressible and compressible flows. Internal and external flows; free convection. Variable wall temperature; effects of variable fluid properties. Analogies among convective transfer processes. S/U or letter grading.

231B. Radiation Heat Transfer. (4) Lecture, four hours; outside study, eight hours. Requisite: course 131A. Radiant intensity and flux. Radiation properties of walls, gases, and particulates. Heat transfer by combined conduction, convection, and radiation in nonabsorbing and absorbing media. Applications to industrial, aerospace, energy conversion, and environmental problems. S/U or letter grading.

231C. Boiling and Condensation. (4) Lecture, four hours; outside study, eight hours. Requisites: courses 131A, 150A. Phenomenological theories of boiling. Hydrodynamic instability of liquid-vapor interfaces and their application to predict maximum and minimum heat fluxes. Forced flow boiling and boiling crisis in pipes. Pool and forced flow boiling of liquid metals. Film and dropwise condensation. S/U or letter grading.

231D. Application of Numerical Methods to Transport Phenomena. (4) Lecture, four hours; outside study, eight hours. Requisite: course 132A. Numerical techniques for solving selected problems in heat and mass transfer. Applications include free convection, boundary layer flow, two-phase flow, separated flow, flow in porous media. Effects of concentration and temperature gradients, chemical reactions, radiation, electric and magnetic fields. S/U or letter grading.

231E. Two-Phase Flow Heat Transfer. (4) Lecture, four hours; outside study, eight hours. Requisites: courses 131A, 150A. Generalized constitutive equations for various two-phase flow regimes. Interfacial heat and mass transfer. Equilibrium and nonequilibrium flow models. Two-phase flow instability. One-dimensional wave propagation. Two-phase heat transfer applications: convective boiling, pressure drop, critical and oscillatory flows. S/U or letter grading.

231F. Advanced Heat Transfer. (4) Lecture, four hours; outside study, eight hours. Requisite: course 231A. Advanced topics in heat transfer from current literature. Linear and nonlinear theories of thermal and hydrodynamic instability; variational methods in transport phenomena; phenomenological theories of turbulent heat and mass transport. S/U or letter grading.

232B. Advanced Mass Transfer. (4) Lecture, four hours; outside study, eight hours. Requisites: courses 131A, 132A. Formulation of general convective heat and mass transfer problem, including equilibrium and nonequilibrium chemistry. Similar and nonsimilar solutions for laminar flows; solution procedures for turbulent flows. Multicomponent diffusion. Application to hypersonic boundary layer, ablation and transpiration, cooling combustion. S/U or letter grading.

235A. Nuclear Reactor Theory. (4) Lecture, four hours; outside study, eight hours. Requisites: courses 135, 192A. Underlying physics and mathematics of nuclear reactor (fission) core design. Diffusion theory, reactor kinetics, slowing down and thermalization, multigroup methods, introduction to transport theory. S/U or letter grading.

236A. Nuclear Materials Engineering. (4) Lecture, four hours; outside study, eight hours. Requisites: course 135, Materials Science 143A. Materials requirements for nuclear technologies; radiation effects on mechanical properties, void swelling and creep, fuel and solid breeder swelling and restructuring, gas release, computer codes for swelling and gas release, structural analysis of fission and fusion materials including radiation effects. S/U or letter grading.

M237B. Fusion Plasma Physics and Analysis. (4) (Same as Electrical Engineering M287.) Lecture, four hours; outside study, eight hours. Requisite: Electrical Engineering M185. Fundamentals of plasmas at thermonuclear burning conditions. Fokker/Planck equation and applications to heating by neutral beams, RF, and fusion reaction products. Bremsstrahlung, synchrotron, and atomic radiation processes. Plasma surface interactions. Fluid description of burning plasma. Dynamics, stability, and control. Applications in tokamaks, tandem mirrors, and alternate concepts. S/U or letter grading.

237D. Fusion Engineering and Design. (4) Lecture, four hours; outside study, eight hours. Fusion reactions and fuel cycles. Principles of inertial and magnetic fusion. Plasma requirements for controlled fusion. Plasma-surface interactions. Fusion reactor concepts and technological components. Analysis and design of high heat flux components, energy conversion and tritium breeding components, radiation shielding, magnets, and heating. Letter grading.

239B. Seminar: Current Topics in Transport Phenomena. (2 to 4) (Formerly numbered 239BA-239BZ.) Seminar, two to four hours; outside study, four to eight hours. Designed for graduate mechanical and aerospace engineering students. Lectures, discussions, student presentations, and projects in areas of current interest in transport phenomena. May be repeated for credit. S/U grading.

239D. Seminar: Current Topics in Nuclear Engineering. (2 to 4) (Formerly numbered 239DA-239DZ.) Seminar, two to four hours; outside study, four to eight hours. Designed for graduate mechanical and aerospace engineering students. Lectures, discussions, student presentations, and projects in areas of current interest in nuclear engineering. May be repeated for credit. S/U grading.

239F. Special Topics in Transport Phenomena. (2 to 4) (Formerly numbered 239FA-239FZ.) Lecture, two to four hours; outside study, four to eight hours. Designed for graduate mechanical and aerospace engineering students. Advanced and current study of one or more aspects of heat and mass transfer, such as turbulence, stability and transition, buoyancy effects, variational methods, and measurement techniques. May be repeated for credit with topic change. S/U grading.

239G. Special Topics in Nuclear Engineering. (2 to 4) (Formerly numbered 239GA-239GZ.) Lecture, two to four hours; outside study, four to eight hours. Designed for graduate mechanical and aerospace engineering students. Advanced study in areas of current interest in nuclear engineering, such as reactor safety, risk-benefit trade-offs, nuclear materials, and reactor design. May be repeated for credit with topic change. S/U grading.

239H. Special Topics in Fusion Physics, Engineering, and Technology. (2 to 4) (Formerly numbered 239HA-239HZ.) Seminar, two to four hours; outside study, four to eight hours. Designed for graduate mechanical and aerospace engineering students. Advanced treatment of subjects selected from research areas in fusion science and engineering, such as instabilities in burning plasmas, alternate fusion confinement concepts, inertial confinement fusion, fission-fusion hybrid systems, and fusion reactor safety. May be repeated for credit with topic change. S/U grading.

250A. Foundations of Fluid Dynamics. (4) Lecture, four hours; outside study, eight hours. Requisite: course 150A. Corequisite: course 192B. Development and application of fundamental principles of fluid mechanics at graduate level, with emphasis on incompressible flow. Flow kinematics, basic equations, constitutive relations, exact solutions on the Navier/Stokes equations, vorticity dynamics, decomposition of flow fields, potential flow. Letter grading.

250B. Viscous and Turbulent Flows. (4) Lecture, four hours; outside study, eight hours. Requisite: course 150A. Fundamental principles of fluid dynamics applied to study of fluid resistance. States of fluid motion discussed in order of advancing Reynolds number; wakes, boundary layers, instability, transition, and turbulent shear flows. S/U or letter grading.

250C. Compressible Flows. (4) Lecture, four hours; outside study, eight hours. Requisites: courses 150A, 150B. Effects of compressibility in viscous and inviscid flows. Steady and unsteady inviscid subsonic and supersonic flows; method of characteristics; small disturbance theories (linearized and hypersonic); shock dynamics. S/U or letter grading.

250D. Computational Aerodynamics. (4) Lecture, eight hours. Requisites: courses 150A, 150B, 192C. Introduction to useful methods for computation of aerodynamic flow fields. Coverage of potential, Euler, and Navier/Stokes equations for subsonic to hypersonic speeds. S/U or letter grading.

250E. Spectral Methods in Fluid Dynamics. (4) Lecture, four hours; outside study, eight hours. Requisites: courses 192A, 192B, 192C, 250A, 250B. Introduction to basic concepts and techniques of various spectral methods applied to solving partial differential equations. Particular emphasis on techniques of solving unsteady three-dimensional Navier/Stokes equations. Topics include spectral representation of functions, discrete Fourier transform, etc. Letter grading.

250F. Hypersonic and High-Temperature Gas Dynamics. (4) Lecture, four hours; outside study, eight hours. Recommended requisite: course 250C. Molecular and chemical description of equilibrium and nonequilibrium hypersonic and high-temperature gas flows, chemical thermodynamics and statistical thermodynamics for calculation gas properties, equilibrium flows of real gases, vibrational and chemical rate processes, nonequilibrium flows of real gases, and computational fluid dynamics methods for nonequilibrium hypersonic flows. Letter grading.

251A. Stratified and Rotating Fluids. (4) Lecture, four hours; outside study, eight hours. Requisite: course 150A. Fundamentals of fluid flows with density variations or rotation, illustrated by examples with environmental, geophysical, or technical importance. Linear and finite amplitude wave motion. Flow past bodies; blocking phenomena. Viscous effects. Instabilities. Turbulent shear flows, wakes, plumes, and gravity currents. S/U or letter grading.

252A. Stability of Fluid Motion. (4) Lecture, four hours; outside study, eight hours. Requisite: course 150A. Mechanisms by which laminar flows can become unstable and lead to turbulence of secondary motions. Linear stability theory; thermal, centrifugal, and shear instabilities; boundary layer instability. Nonlinear aspects: sufficient criteria for stability, subcritical instabilities, supercritical states, transition to turbulence. S/U or letter grading.

252B. Statistical Theory of Turbulence. (4) Lecture, four hours; outside study, eight hours. Requisite: course 150A. Development of statistical methods of wide utility in engineering applied to turbulent flows. Topics include stochastic processes, kinematics of turbulence, energy decay. Kolmogorov similarity, analytical theories, and origins of Reynolds stress. S/U or letter grading.

252C. Fluid Mechanics of Combustion Systems. (4) Lecture, four hours; outside study, eight hours. Requisites: courses 150A, 150B. Recommended: course 250C. Review of fluid mechanics and chemical thermodynamics applied to reactive systems, laminar diffusion flames, premixed laminar flames, stability, ignition, turbulent combustion, supersonic combustion. S/U or letter grading.

252D. Combustion Rate Processes. (4) Lecture, four hours; outside study, eight hours. Requisite: course 252C. Basic concepts in chemical kinetics: molecular collisions, distribution functions and averaging, semiempirical and ab initio potential surfaces, trajectory calculations, statistical reaction rate theories. Practical examples of large-scale chain mechanisms from combustion chemistry of several elements, etc. Letter grading.

253A. Advanced Engineering Acoustics. (4) Lecture, four hours; outside study, eight hours. Advanced studies in engineering acoustics, including three-dimensional wave propagation; propagation in bounded media; Ray acoustics; attenuation mechanisms in fluids. S/U or letter grading.

253B. Fundamentals of Aeroacoustics. (4) Lecture, four hours; outside study, eight hours. Requisite: course 150A. Detailed discussion of plane waves, point sources. Nonlinearity, layered and moving media, multiple reflections. Inhomogeneous wave equation. Monopole, dipole, quadrupole source fields from scattering inhomogeneities and turbulence; Lighthill theory; moving sources. Similarity methods. Selected detailed applications. S/U or letter grading.

254A. Special Topics in Aerodynamics. (4) Lecture, four hours; outside study, eight hours. Requisites: courses 150A, 150B, 192A, 192B, 192C. Special topics of current interest in advanced aerodynamics. Examples include transonic flow, hypersonic flow, sonic booms, and unsteady aerodynamics. S/U or letter grading.

254B. Helicopter Dynamics and Aeromechanics. (4) Lecture, four hours; outside study, eight hours. Requisites: courses 150A, 166A, 169A. Recommended: course 150B. Overview of helicopter dynamics and aeromechanics. Topics include rotor configurations and control systems, rotor aerodynamics and performance, blade flapping dynamics, helicopter rotor aeroelasticity, coupled rotor/fuselage dynamics, and control of aeromechanical problems. Letter grading.

255A. Advanced Dynamics. (4) Lecture, four hours; outside study, eight hours. Requisites: courses 155, 169A. Variational principles and Lagrange equations. Kinematics and dynamics of rigid bodies; precession and nutation of spinning bodies. S/U or letter grading.

255B. Mathematical Methods in Dynamics. (4) Lecture, four hours; outside study, eight hours. Requisite: course 255A. Concepts of stability; state-space interpretation; stability determination by simulation, linearization, and Liapunov direct method; the Hamiltonian as a Liapunov function; nonautonomous systems; averaging and perturbation methods of nonlinear analysis; parametric excitation and nonlinear resonance. Application to mechanical systems. S/U or letter grading.

256A. Mechanics of Deformable Solids. (4) Lecture, four hours; outside study, eight hours. Requisites: courses 156B, 166A. Kinematics of deformation, strain, tensors, invariance, compatibility; conservation laws; stress tensors; equations of motion; boundary conditions; constitutive equations: general theory, linearization, anisotropy; reciprocity linear isotropic elastic problems, plane and generalized plane problems; dynamic problems. S/U or letter grading.

M256B. Elasticity. (4) (Same as Civil Engineering M230.) Lecture, four hours; outside study, eight hours. Requisite: course 256A. Equations of linear elasticity; uniqueness of solution; Betti/Rayleigh reciprocity; Saint-Venant's principle; simple problems involving spheres and cylinders; special techniques for plane problems. Airy's stress function, complex variable method, transform method; three-dimensional problems, torsion, entire space and half-space problems; boundary integral equations. Letter grading.

M256C. Plasticity. (4) (Formerly numbered 256C.) (Same as Civil Engineering M239.) Lecture, four hours; outside study, eight hours. Requisites: courses 256A, M256B. Classical rate-independent plasticity theory, yield functions, flow rules and thermodynamics. Classical rate-dependent viscoplasticity, Perzyna and Duvant/Lions types of viscoplasticity. Thermoplasticity and creep. Return mapping algorithms for plasticity and viscoplasticity. Finite element implementations. Letter grading.

256F. Analytical Fracture Mechanics. (4) Lecture, four hours; outside study, eight hours. Requisites: course 156A, 156B, or 166A, and Materials Science 243A. Review of modern fracture mechanics, elementary stress analyses; analytical and numerical methods for calculation of crack tip stress intensity factors; engineering applications in stiffened structures, pressure vessels, plates, and shells. S/U or letter grading.

M257A. Elastodynamics. (4) (Same as Earth and Space Sciences M224A.) Lecture, four hours; outside study, eight hours. Requisites: courses 256A, M256B. Equations of linear elasticity, Cauchy equation of motion, constitutive relations, boundary and initial conditions, principle of energy. Sources and waves in unbounded isotropic, anisotropic, and dissipative solids. Half-space problems. Guided waves in layered media. Applications to dynamic fracture, nondestructive evaluation (NDE), and mechanics of earthquakes. Letter grading.

258. Experimental Techniques in Fluid Mechanics and Thermal Science. (4) Lecture, four hours; outside study, eight hours. Survey of wind tunnels and other facilities for research in fluid mechanics, aerodynamics, and heat transfer; analysis of their critical design features. Modern sensors, instruments, and measurement techniques. Signal processing and storage by analog and digital methods. S/U or letter grading.

259A. Seminar: Advanced Topics in Fluid Mechanics. (4) Seminar, four hours; outside study, eight hours. Advanced study of topics in fluid mechanics, with intensive student participation involving assignments in research problems leading to term paper or oral presentation (possible help from guest lecturers). S/U or letter grading.

259B. Seminar: Advanced Topics in Solid Mechanics. (4) Seminar, four hours; outside study, eight hours. Advanced study in various fields of solid mechanics on topics which may vary from term to term. Topics include dynamics, elasticity, plasticity, and stability of solids. S/U or letter grading.

260. Current Topics in Mechanical Engineering. (2 to 4) (Formerly numbered 260AA-260ZZ.) Seminar, two to four hours; outside study, four to eight hours. Designed for graduate mechanical and aerospace engineering students. Lectures, discussions, and student presentations and projects in areas of current interest in mechanical engineering. May be repeated for credit. S/U or letter grading.

261A. Energy and Variational Principles in Structural Mechanics. (4) Lecture, four hours; outside study, eight hours. Requisite: course 156A or 156B or 166A. Theory of linear elasticity. Calculus of variations. Principles of minimum potential energy and complementary energy. Stationary variational principles. Energy theorems. Matrix methods of structural analysis, with application to truss and frame problems. Variational principles as basis of finite element methods. S/U or letter grading.

261B. Methods of Computational Mechanics I. (4) Lecture, four hours; outside study, eight hours. Requisites: courses 168, 261A. Weighted residual methods, weak forms, local trial and test functions, primal finite element method, multifield finite elements, high-performance elements and avoidance of locking, integral equation and field boundary element methods, finite volume methods, meshless methods, term projects using digital computers. Applications to aerospace and mechanical engineering structural and solid mechanics, incompressible fluid flow, and heat transfer. Letter grading.

262. Mechanics of Intelligent Material Systems. (4) Lecture, four hours; outside study, eight hours. Requisite: course 156B. Recommended: course 166C. Constitutive relations for electro-magneto-mechanical materials. Fiber-optic sensor technology. Micro/macro analysis, including classical lamination theory, shear lag theory, concentric cylinder analysis, hexagonal models, and homogenization techniques as they apply to active materials. Active systems design, inch-worm, and bimorph. Letter grading.

263A. Electromechanics of Computer-Controlled Machines. (4) Lecture, four hours; outside study, eight hours. Requisite: course 171A. Recommended: courses 163A, 163B, 163C. Mechanics and control problems of computer-controlled electromechanical systems, with special emphasis on analysis of energy flow between mechanical, electrical, and control components when applied to electromagnetic and piezoelectric actuators and control systems with mechanical flexibilities. S/U or letter grading.

263B. Spacecraft Dynamics. (4) Lecture, four hours; outside study, eight hours. Requisite: course 255A. Recommended: course 255B. Modeling, dynamics, and stability of spacecraft; spinning and dual-spin spacecraft dynamics; spinup through resonance, spinning rocket dynamics; environmental torques in space, modeling and model reduction of flexible space structures. Letter grading.

263C. Mechanics and Trajectory Planning of Industrial Robots. (4) Lecture, four hours; outside study, eight hours. Requisite: course 163A. Theory and implementation of industrial robots. Design considerations. Kinematic structure modeling, trajectory planning, and system dynamics. Differential motion and static forces. Individual student study projects. S/U or letter grading.

263D. Advanced Robotics. (4) Lecture, four hours; outside study, eight hours. Recommended preparation: courses 155, 163C, 171A, 263C. Motion planning and control of articulated dynamic systems: nonlinear joint control, experiments in joint control and multi-axes coordination, multibody dynamics, trajectory planning, motion optimization, dynamic performance and manipulator design, kinematic redundancies, motion planning of manipulators in space, obstacle avoidance. Letter grading.

M267A. Optimum Structural Design. (4) (Same as Civil Engineering M240.) Lecture, four hours; outside study, eight hours. Requisite: course 261A or Civil Engineering 235A. Synthesis of structural systems; analysis and design as optimization problems; techniques for synthesis and optimization; application to aerospace and civil structures. S/U or letter grading.

268B. Failure of Structural Systems. (4) Lecture, four hours; outside study, eight hours. Requisite: Civil Engineering 135B. Exploration of a current area of research in depth. S/U or letter grading.

M269A. Dynamics of Structures. (4) (Same as Civil Engineering M237A.) Lecture, four hours; outside study, eight hours. Requisite: course 169A. Principles of dynamics. Determination of normal modes and frequencies by differential and integral equation solutions. Transient and steady state response. Emphasis on derivation and solution of governing equations using matrix formulation. S/U or letter grading.

269B. Advanced Dynamics of Structures. (4) Lecture, four hours; outside study, eight hours. Requisite: course M269A. Analysis of linear and nonlinear response of structures to dynamic loadings. Stresses and deflections in structures. Structural damping and self-induced vibrations. S/U or letter grading.

269D. Aeroelastic Effects in Structures. (4) Lecture, four hours; outside study, eight hours. Requisite: course M269A. Presentation of field of aeroelasticity from unified viewpoint applicable to flight structures, suspension bridges, buildings, and other structures. Derivation of aeroelastic operators and unsteady airloads from governing variational principles. Flow induced instability and response of structural systems. S/U or letter grading.

M270A. Linear Dynamic Systems. (4) (Formerly numbered 270A.) (Same as Chemical Engineering M280A and Electrical Engineering M240A.) Lecture, four hours; outside study, eight hours. Requisite: course 171A or Electrical Engineering 141. State-space description of linear time-invariant (LTI) and time-varying (LTV) systems in continuous and discrete time. Linear algebra concepts such as eigenvalues and eigenvectors, singular values, Cayley/Hamilton theorem, Jordan form; solution of state equations; stability, controllability, observability, realizability, and minimality. Stabilization design via state feedback and observers; separation principle. Connections with transfer function techniques. Letter grading.

270B. Linear Optimal Control. (4) Lecture, four hours; outside study, eight hours. Requisite: course M270A or Electrical Engineering M240A. Existence and uniqueness of solutions to linear quadratic (LQ) optimal control problems for continuous-time and discrete-time systems, finite-time and infinite-time problems; Hamiltonian systems and optimal control; algebraic and differential Riccati equations; implications of controllability, stabilizability, observability, and detectability solutions. Letter grading.

M270C. Optimal Control. (4) (Formerly numbered 270C.) (Same as Chemical Engineering M280C and Electrical Engineering M240C.) Lecture, four hours; outside study, eight hours. Requisite: course 270B. Applications of variational methods, Pontryagin maximum principle, Hamilton/Jacobi/Bellman equation (dynamic programming) to optimal control of dynamic systems modeled by nonlinear ordinary differential equations. Letter grading.

271A. Stochastic Processes in Dynamical Systems. (4) Lecture, four hours; outside study, eight hours. Requisites: courses 171A, 174. Probability space, random variables, stochastic processes, Brownian motion, Markov processes, stochastic integrals and differential equations, power spectral density, and Kolmogorov equations. Letter grading.

271B. Stochastic Estimation. (4) Lecture, four hours; outside study, eight hours. Requisite: course 271A. Linear and nonlinear estimation theory, orthogonal projection lemma, Bayesian filtering theory, conditional mean and risk estimators. Letter grading.

271C. Stochastic Optimal Control. (4) Lecture, four hours; outside study, eight hours. Requisite: course 271B. Stochastic dynamic programming, certainty equivalence principle, separation theorem, information statistics; linear-quadratic-Gaussian problem, linear-exponential-Gaussian problem. Relationship between stochastic control and robust control. Letter grading.

271D. Seminar: Special Topics in Dynamic Systems Control. (4) Seminar, four hours; outside study, eight hours. Seminar on current research topics in dynamic systems modeling, control, and applications. Topics selected from process control, differential games, nonlinear estimation, adaptive filtering, industrial and aerospace applications, etc. S/U or letter grading.

M272A. Nonlinear Dynamic Systems. (4) (Same as Chemical Engineering M282A and Electrical Engineering M242A.) Lecture, four hours; outside study, eight hours. Requisite: course M270A or Chemical Engineering M280A or Electrical Engineering M240A. State-space techniques for studying solutions of time-invariant and time-varying nonlinear dynamic systems with emphasis on stability. Liapunov theory (including converse theorems), invariance, center manifold theorem, input-to-state stability and small-gain theorem. Letter grading.

273A. Robust Control System Analysis and Design. (4) Lecture, four hours; outside study, eight hours. Requisites: courses 171A, M270A. Graduate-level introduction to analysis and design of multivariable control systems. Multivariable loop-shaping, performance requirements, model uncertainty representations, and robustness covered in detail from frequency domain perspective. Structured singular value and its application to controller synthesis. Letter grading.

274. Methods of Probabilistic Safety Assessment. (4) Lecture, four hours; outside study, eight hours. Requisite: course 174. Methods for evaluation of risk from large technological systems; advanced statistical methods for data analysis; models of dependent failures; elicitation and use of expert opinions; human reliability models; propagation of uncertainties in physical models; applications to nuclear power plants, waste repositories, and space systems. Letter grading.

280. Microelectromechanical Systems (MEMS). (4) Lecture, four hours; outside study, eight hours. Requisite: Materials Science 14. Introduction to microscopical world and MEMS; basics of integrated circuit (IC) manufacturing; bulk micromachining; directional etching and etch-stops; surface micromachining: deposition, selective wet etching, and dry etching; mechanical behavior of thin film-based structures; applied micromachining: polymer film, electroplating, and nonlithography machining; transducing fundamentals. Letter grading.

280L. Microelectromechanical Systems (MEMS) Laboratory. (4) Lecture, one hour; laboratory, six hours; outside study, five hours. Requisite: course 180. Hands-on micromachining. Mask layout, clean room procedure, lithography, oxidation, LPCVD coatings, evaporation, wet etchings (both isotropic and anisotropic), dry etchings, process monitoring. Students fabricate simple micromechanical devices by both surface and bulk micromachining and test and characterize them. Letter grading.

281. Microsciences. (4) Lecture, four hours; outside study, eight hours. Requisites: courses 131A, 150A. Basic science issues in micro domain. Topics include micro fluid science, microscale heat transfer, mechanical behavior of microstructures, as well as dynamics and control of micro devices. Letter grading.

283. Experimental Mechanics for Microelectromechanical Systems (MEMS). (4) Lecture, four hours; outside study, eight hours. Methods, techniques, and philosophies being used to characterize microelectromechanical systems for engineering applications. Material characterization, mechanical/material properties, mechanical characterization. Topics include fundamentals of crystallography, anisotropic material properties, and mechanical behavior (e.g., strength/fracture/fatigue) as they relate to microscale. Considerable emphasis on emerging experimental approaches to assess design-relevant mechanical properties. Letter grading.

284. Sensors, Actuators, and Signal Processing. (4) Lecture, four hours; outside study, eight hours. Principles and performance of micro transducers. Applications of using unique properties of micro transducers for distributed and real-time control of engineering problems. Associated signal processing requirements for these applications. Letter grading.

287. Advanced Microelectromechanical Systems (MEMS). (4) Lecture, four hours; outside study, eight hours. Requisite: course 280 or Electrical Engineering 250A. Silicon micromachining, nonsilicon micromachining, nonlithographic processes. Mechanical issues of MEMS structures. Driving mechanisms for microactuators, including electrostatic, electromagnetic, thermal, and fluidic actuation. Applications to mechanical and aerospace areas. Studies of MEMS products and state-of-the-art research. Letter grading.

290A. Structural Integrity and Durability. (4) Lecture, four hours; outside study, eight hours. Fundamental concepts of structural integrity, damage tolerance, and longevity; linear elastic and elastic-plastic fracture mechanics; interfacial fracture mechanics; computational methods in fracture; damage tolerance, integrity, and durability of built-up metallic structures; aging aircraft problems; widespread fatigue damage thresholds; life enhancement; integrity of built-up composite structures. Letter grading.

M291A. Analytical Methods of Engineering I. (4) (Same as Electrical Engineering M208A.) Lecture, four hours; outside study, eight hours. Requisites: Mathematics 131A, 132. Application of abstract mathematical methods to engineering problems. Review of elements of measure and integration, L_2 theory — linear spaces and operators. Eigenvalue problems. Introduction to spectral theory — elementary distribution theory. Applications to problems in engineering. S/U or letter grading.

M291B. Analytical Methods of Engineering II. (4) (Same as Electrical Engineering M208B.) Lecture, four hours; outside study, eight hours. Requisite: course M291A or Electrical Engineering M208A. Application of modern mathematical methods to engineering problems. Review of spectral theory. Green's functions and eigenvalue problems for second-order ordinary differential equations and their adjoints. Discrete and continuous spectra for ordinary and partial differential equations. Initial and boundary value problems. S/U or letter grading.

291C. Integral Equations in Engineering. (4) Lecture, four hours; outside study, eight hours. Requisite: Mathematics 250B. Introduction to generalized function theory and Green's functions. Conversion of partial equations to integral equations and classification of integral equations. Solution to integral equations with degenerate kernels; discussions of successive approximations and Fredholm and Hilbert/Schmidt theory. S/U or letter grading.

293. Quality Engineering in Design and Manufacturing. (4) Lecture, four hours; outside study, eight hours. Requisite: course 174. Quality engineering concepts and approaches. Taguchi methods of robust technology development and off-line control. Quality loss function, signal-to-noise ratio, and orthogonal arrays. Parametric design of products and production processes. Tolerance design. On-line quality control systems. Decision making in quality engineering. Letter grading.

294. Advanced CAD/CAM Systems. (4) Lecture, four hours; outside study, eight hours. Requisite: course 194. CAD/CAM systems design, with special emphasis on computational geometry, path to trajectory conversion, command generation, controller and interpolator design, and current research topics in CAD/CAM systems. Letter grading.

295. Computer-Aided Manufacturing. (4) (Formerly numbered 295A, 295B.) Lecture, four hours; outside study, eight hours. Preparation: one course from 163A, 163C, 195. Requisite: course 94. Concepts, methods, and elements of computer-aided manufacturing. Planning and control of manufacturing systems. Group technology and computer-aided process planning. Design and modeling of flexible manufacturing systems. Computer-aided manufacturing. Letter grading.

296A. Damage and Failure of Materials in Mechanical Design. (4) Lecture, four hours; outside study, eight hours. Requisites: course 156A, Materials Science 143A. Role of failure prevention in mechanical design and case studies. Mechanics and physics of material imperfections: voids, dislocations, cracks, and inclusions. Statistical and deterministic design methods. Plastic, fatigue, and creep damage. Letter grading.

296B. Thermochemical Processing of Materials. (4) Lecture, four hours; outside study, eight hours. Requisites: courses 132A, 193. Thermodynamics, heat and mass transfer, principles of material processing: phase equilibria and transitions, transport mechanisms of heat and mass, moving interfaces and heat sources, natural convection, nucleation and growth of microstructure, etc. Applications with chemical vapor deposition, infiltration, etc. Letter grading.

297. Composites Manufacturing. (4) Lecture, four hours; outside study, eight hours. Requisites: course 166C, Materials Science 151. Matrix materials, fibers, fiber preforms, elements of processing, autoclave/compression molding, filament winding, pultrusion, resin transfer molding, automation, material removal and assembly, metal and ceramic matrix composites, quality assurance. Letter grading.

298. Seminar: Engineering. (2 to 4) Seminar, to be arranged. Limited to graduate mechanical and aerospace engineering students. Seminars may be organized in advanced technical fields. If appropriate, field trips may be arranged. May be repeated with topic change. S/U or letter grading.

375. Teaching Apprentice Practicum. (1 to 4) Tutorial, to be arranged. Preparation: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

474B. Concurrent Engineering. (4) Lecture, four hours; outside study, eight hours. Requisite: Materials Science 474A. Product design, CAD/CAM, engineering analysis integration, project management. Letter grading.

474C. Total Quality Engineering. (4) Lecture, four hours; outside study, eight hours. Requisite: course 474B. Total quality management, statistics, probability, off-line quality control, on-line quality control, quality inspection. Letter grading.

475B. Automation. (4) Lecture, four hours; outside study, eight hours. Requisite: Materials Science 475A. Automatic control of single devices and processes for manufacturing automation. Integrated automation design. Introduction to control, digital control, and rule-based systems. Sensors and actuators used in manufacturing processes. Robotics and multi-axis machine tools. Integration of computer-controlled systems and control hardware. Letter grading.

476. Integrated Manufacturing Engineering (IME) Seminar Series. (1) Lecture, one hour. Lectures by engineers in executive positions to provide management perspectives in manufacturing enterprises. Current manufacturing techniques and integrated product development efforts by industry experts. S/U grading.

478. Integrated Manufacturing Engineering (IME) Group Project Studies. (1 to 12) Lecture, one hour; group projects, one to 12 hours. Teams of students perform detailed analyses to address problems presented and implement manufacturing solutions within industrial settings. S/U grading.

497A-497B. Field Project in Manufacturing Engineering. (4-4) Lecture, two hours. Teams of students perform detailed system analysis and plan design of manufacturing engineering systems at various manufacturing plants. In Progress and S/U or letter grading.

596. Directed Individual or Tutorial Studies. (2 to 8) Tutorial, to be arranged. Limited to graduate mechanical and aerospace engineering students. Petition forms to request enrollment may be obtained from assistant dean, Graduate Studies. Supervised investigation of advanced technical problems. S/U grading.

597A. Preparation for M.S. Comprehensive Examination. (2 to 12) Tutorial, to be arranged. Limited to graduate mechanical and aerospace engineering students. Reading and preparation for M.S. comprehensive examination. S/U grading.

597B. Preparation for Ph.D. Preliminary Examinations. (2 to 16) Tutorial, to be arranged. Limited to graduate mechanical and aerospace engineering students. S/U grading.

597C. Preparation for Ph.D. Oral Qualifying Examination. (2 to 16) Tutorial, to be arranged. Limited to graduate mechanical and aerospace engineering students. Preparation for oral qualifying examination, including preliminary research on dissertation. S/U grading.

598. Research for and Preparation of M.S. Thesis. (2 to 12) Tutorial, to be arranged. Limited to graduate mechanical and aerospace engineering students. Supervised independent research for M.S. candidates, including thesis prospectus. S/U grading.

599. Research for and Preparation of Ph.D. Dissertation. (2 to 16) Tutorial, to be arranged. Limited to graduate mechanical and aerospace engineering students. Usually taken after students have been advanced to candidacy. S/U grading.

Alan M. Fogelman, M.D. (*Castera Professor*),

Executive Chair

Jan H. Tillisch, M.D., *Executive Vice Chair*

Mary C. Territo, M.D., *Executive Vice Chair, Academic Affairs*

Robert K. Oye, M.D., *Executive Vice Chair, Clinical Services*

Dennis J. Slamon, M.D., *Executive Vice Chair, Research*

Scope and Objectives

The principal goal of the Department of Medicine is to educate students in the expert diagnosis and compassionate management of human illness. Building on the biochemical, physiological, and behavioral foundations of the preclinical experience, students are taught *information acquisition* through history taking, physical examination, and laboratory evaluation; *information synthesis* through achieving a differential diagnosis and evaluative plan; and *medical decision making* for continued evaluation and therapy. Students are encouraged and guided in developing a caring physician/patient relationship.

Instruction in the department is provided in the second, third, and fourth years of medical school, with the third and fourth years constituting a continuum of clinical experience. Students become integrated into a ward team and have significant ambulatory care experiences. They apply and extend their clinical skills, medical knowledge, and judgment in the care of patients assigned to them under the immediate supervision of house officers and attending staff.

The department offers a broad range of advanced clinical clerkships in general and subspecialty ambulatory and hospital-based internal medicine at all the major affiliated centers.

For further details on the Department of Medicine and a listing of the courses offered, see the *Announcement of the UCLA School of Medicine*.

Medicine

Upper Division Courses

M190A. Health Outreach Issues and Interventions for At-Risk Populations: Prefield Course. (4) (Same as Psychiatry M192A.) Lecture, two hours; discussion, two hours; possible field observations. Preparation: application and interview. First in series of courses to explore prevention of disease in at-risk populations, clinical services for disadvantaged, medical and psychological issues of homelessness, and effects of low socioeconomic status on parenting. Lectures from expert faculty and practitioners in the field, with visits to shelters and facilities where homeless are provided with health care. P/NP or letter grading.

M190B. Field Studies Seminar: Health Outreach Issues and Interventions. (2 or 4) (Same as Psychiatry M192B.) Discussion, two hours; fieldwork, three to four hours (two-unit course) or six to eight hours (four-unit course). Requisite: course M190A. Dynamics of multidisciplinary approaches to preventive health education for at-risk populations by student delivery of needed services to homeless families, under supervision of professional staff. P/NP or letter grading.

M196B. Modeling and Simulation of Biological Systems. (5) (Same as Computer Science M196B.) Lecture, four hours; discussion, one hour; laboratory, two hours; outside study, eight hours. Requisite: Electrical Engineering 102 or Mathematics 115A. Introduction to dynamic system modeling, compartmental modeling, and computer simulation methods for studying biomedical systems. Basics of numerical simulation algorithms, translating biomodeling goals and data into mathematic models and implementing them for simulation and analysis. Modeling software exploited for class assignments in PC laboratory. Letter grading.

199. Special Studies. (2 to 8) Individual projects carried out under direction of a faculty member. Special studies in medicine with appropriate objectives, readings, laboratory work, or other assignments designed for proper training of students. P/NP or letter grading.

Graduate Courses

M215. Interdepartmental Course: Tropical Medicine. (2) (Same as Microbiology and Immunology M215, Pathology M215, and Pediatrics M215.) Lecture, two and one-half hours. Preparation: basic courses in microbiology and parasitology of infectious diseases in School of Medicine or Public Health. Study of current knowledge about diseases prevalent in tropical areas of the world. Major emphasis on infectious diseases, with coverage of problems in nutrition and exotic noninfectious diseases. Syllabus supplements topics covered in classroom. S/U grading.

M235. Neuroactive Peptides: Molecular Biology to Function. (2) (Same as Neurobiology M235 and Neuroscience M246.) Presentation of current knowledge of gut and brain peptides by surveying their chemistry, anatomy, and physiology. Experimental approaches used to study biologically active peptides. Review of current information about each of the major gut and brain peptides. S/U or letter grading.

M260A-M260B. Methodology in Clinical Research I, II. (6-6) (Same as Biomathematics M260A-M260B.) Lecture, three hours; discussion, two hours. Recommended preparation: M.D., Ph.D., or dental degree. Presentation of principles and practices of major disciplines underlying clinical research methodology, such as biostatistics, epidemiology, pharmacokinetics. S/U or letter grading.

M270C. Modeling Methodology for Biomedical Systems. (4) (Same as Computer Science M296A.) Lecture, four hours; outside study, eight hours. Recommended preparation: course M196B, some intermediate knowledge of linear systems analysis or linear algebra (e.g., Mathematics 115A, Electrical Engineering 141, 142, Mechanical and Aerospace Engineering 171A). Development of dynamic systems modeling methodology for physiological, biomedical, pharmacological, chemical, and related systems, including dynamic system experiment/model development, multicompartmental, noncompartmental, and input/output models, linear and nonlinear. Emphasis on model applications, limitations, and relevance in biomedical sciences and other limited data environments. Problem solving in PC laboratory. S/U or letter grading.

M270D. Optimal Parameter Estimation and Experiment Design for Biomedical Systems. (4) (Same as Biomathematics M270 and Computer Science M296B.) Lecture, four hours; outside study, eight hours. Requisite: course M270C. Estimation methodology and model parameter estimation algorithms for quantifying (fitting) dynamic system models to real-world data. Theory and algorithms for designing optimal experiments for developing and quantifying models, with special focus on data sampling schedule design. Exploration in PC laboratory of applications software for model building and optimal experiment design. S/U or letter grading.

M270E. Advanced Topics and Research in Biomedical Systems Modeling and Computing. (4) (Same as Computer Science M296C.) Lecture, four hours; outside study, eight hours. Requisite: course M270C. Research techniques and experience on special topics involving models, modeling methods, and model/computing in biological and medical sciences. Review and critique of the literature. Research problem searching and formulation. Approaches to solutions. Individual M.S.- and Ph.D.-level project training. S/U or letter grading.

M290A-M290B. Child Abuse and Neglect. (2-2) (Same as Community Health Sciences M245A-M245B, Dentistry M300.5A-M300.5B-M300.5C, Education M217G-M217H-M217I, Law M281A-M281B, Nursing M290A-M290B-M290C, and Social Welfare M290E-M290F-M290G.) Lecture, two hours. Course M290A is requisite to M290B. Intensive interdisciplinary study of child physical and sexual abuse and neglect, with lectures by faculty members of the Schools of Dentistry, Law, Medicine, Nursing, and Public Health and the Departments of Education and Psychology, as well as by the relevant public agencies. S/U or letter grading.

Scope and Objectives

The desire to explain natural phenomena, including disease, is the basis for most students' interest in biological sciences. The Microbiology and Immunology Department in the UCLA School of Medicine is disease oriented. The emphasis is on pathogenesis of infection, malignancy, and immunological response of the host to these changes of immunological dysfunction. All tools available from molecular biology to morphological methods are applied to these problems.

Microbiology and immunology are interwoven disciplines. Microbiology has played a central role in all aspects of biological sciences, including morphogenesis, genetics, developmental biology, physiology, biochemistry, and cell biology. An understanding of microbiology is thus fundamental to biological research. Immunology, once a branch of microbiology, is now a major biological discipline and a basic component of disease-oriented microbiology.

The graduate program in microbiology and immunology is closely associated with advanced (postdoctoral) training in research, clinical and public health diagnostic work, and industrial applications. Careers in microbiology and immunology include industrial appointments and clinical laboratory supervision in both government agencies and private enterprises, and academic positions.

Graduate Study

The following constitutes introductory information regarding graduate degree programs and is based on the 1998-99 edition of *Program Requirements for UCLA Graduate Degrees*. Complete, annual editions of *Program Requirements* are available (listed under "Publications") on the Graduate Division website at <http://www.gdnet.ucla.edu>. Students are sub-

ject to the degree requirements as published in *Program Requirements* for the year in which they matriculate.

Master's Degree

Admission

The department does not accept students whose sole objective is the Master of Science degree in Microbiology and Immunology.

Areas of Study

See Doctoral Degree.

Course Requirements

The department does not have specific requirements for the master's degree, as it rarely confers the degree. However, nine courses, at least five of which must be graduate-level courses, and the successful completion of both the written and oral qualifying examinations are necessary to be considered for a terminal master's degree by the Graduate Affairs Committee. Eight units of 500-series courses may be applied toward the total course requirement of which four units may be applied to the graduate-level course requirement.

Comprehensive Examination Plan

Students must pass both the doctoral written and oral qualifying examinations.

Thesis Plan

None.

Doctoral Degree

Admission

Students are admitted to the program leading to the Ph.D. degree in Microbiology and Immunology through UCLA ACCESS to Programs in Molecular, Cellular, and Integrative Life Sciences, 172 MBI, UCLA, Box 951570, Los Angeles, CA 90095-1570, (310) 206-6051. For information and applications contact the ACCESS Program Office directly.

Under very special circumstances, prospective students may obtain permission to apply directly to the department. Information is available from the graduate adviser.

Major Fields or Subdisciplines

Students are expected to be competent in both microbiology and immunology. However, thesis work must be done in one of the following divisions: immunology, medical microbiology, or virology.

Course Requirements

- (1) Biological Chemistry CM253
- (2) One of the following three courses: Neurobiology M209A, Microbiology and Immunology M229, and Biological Chemistry CM267.
- (3) Two seminar courses related to cell and molecular biology.

To be completed by the end of the second year:

(1) One of the following three courses is also required: Microbiology and Immunology M208, M227, M261.

(2) One additional lecture course in the field of molecular life sciences.

Written and Oral Qualifying Examinations

Written Qualifying Examination. The departmental written examination is to be taken at the end of the first year of study and no later than the Fall Quarter of the second year. The examination is in the form of a "mini" grant proposal and focuses on one or a few specific questions asked by the student's current research project. The examination is graded on a pass/fail/revise and resubmit basis. Students who do not pass the examination on the first attempt must pass it within three months of the original submission date.

Oral Qualifying Examination. The University Oral Qualifying Examination is to be taken within three years (nine quarters) of entrance into the program. Advancement to candidacy is awarded on successful completion of this examination. If inadequacies are encountered, students may be required to repeat the examination. The examination consists of three parts.

Research Proposal. Students must prepare a written research proposal and present the proposal orally to their dissertation committee. The topic of the proposal must be in an area different from that of the thesis project. The topic should be within the fields of interest in the department (i.e., immunology, bacteriology, virology, molecular biology, mycology, and parasitology). The proposal must utilize an approach different from that employed in the student's own research. That is, students should not apply their own methodology to another system. The proposal should follow a standard grant format but not necessarily a National Institutes of Health (NIH) grant format. This is decided between the student and the student's preceptor.

Student Research. Students should be able to discuss their own research plans and results to date.

General Scientific Background. Students are also examined on general knowledge of microbiology and immunology.

Dissertation Seminar. Once students have completed the dissertation, they are required to present an overview of their dissertation work in an open seminar at which their committee is present.

Microbiology and Immunology

Upper Division Courses

CM133. Principles, Practices, and Policies in Biotechnology. (2) (Same as Biological Chemistry CM133, Biomedical Physics CM133, Chemical Engineering CM133, Chemistry CM133, Microbiology CM133, and Molecular, Cell, and Developmental Biology CM133.) Lecture, three hours. Designed for juniors/seniors. Life and physical sciences majors and students in the School of Law and Anderson Graduate School of Management may find course useful in career preparation. Presentation of technologies, regulatory practices, and policies required for product development and review of current opportunities for new technology development. Topics include fermentation processes, pilot and large-scale bioprocess technologies, scaleup strategies, industrial recombinant DNA processes, hybridomas, protein engineering, peptide mimetics and rational drug design, medical and microscopic imaging, and intellectual property issues. Concurrently scheduled with course CM233. P/NP or letter grading.

M185A. Immunology. (5) (Same as Microbiology M185A and Molecular, Cell, and Developmental Biology M185A.) Lecture, three hours; discussion, 90 minutes; outside study, 11.5 hours. Requisites: Life Sciences 3, 4. Recommended requisites or corequisites: Chemistry 153A, 153L, Molecular, Cell, and Developmental Biology 100 or C139 or M140. Not open for credit to students with credit for course M261 or Molecular, Cell, and Developmental Biology C180. Introduction to experimental immunobiology and immunochemistry; cellular and molecular aspects of humoral and cellular immune reactions.

199. Directed Individual Research Studies in Microbiology and Immunology. (2 to 8) Preparation: submission of written research proposal. Limited to seniors. Individual research projects carried out under direction of a professor.

199H. Honors Thesis (4 or 8 units). Tutorial, to be arranged. Limited to microbiology and molecular genetics honors program students. Directed individual research for departmental honors; students must have a faculty sponsor. Three sequential 199H terms required. Progress report must be submitted to faculty sponsor at end of each of the first two terms, with honors thesis submitted at end of final term. Maximum of four units may be applied toward the microbiology and molecular genetics major. P/NP or letter grading.

Graduate Courses

201. Microbiology and Immunology. (8) Lecture/laboratory. Limited to medical students. Study of infectious agents of human disease, with emphasis on host/parasite relationships and immunologic phenomena in immunity and disease, including identification of bacteria, fungi, animal parasites, and viruses, and principles of prevention, treatment, and laboratory diagnosis.

202A. Fundamentals of Immunology. (2) Introduction to experimental immunobiology and immunochemistry; cellular and molecular aspects of humoral and cell-mediated immune functions.

202B. Medical Bacteriology. (2) Characteristics of bacteria rickettsiae and chlamydiae associated with diseases of humans; host/parasite interactions and immunity; identification and laboratory diagnosis; principles of prevention and treatment; introduction to microbial genetics as it pertains to pathogenicity.

202C. Medical Virology. (2) Biological properties of animal viruses; replication; methods of detection; interactions with host cells and multicellular hosts, introduction to tumor viruses.

202D. Medical Mycology and Parasitology. (2) Morphology, physiology, and pathogenicity of fungi which cause human and animal diseases. Study of morphology, biology, host/parasite relationship, public health problems, and control of protozoa, helminths, and arthropods parasitic in and on humans and animals.

M208. Molecular Biology of Animal Viruses. (Formerly numbered 208.) (Same as Molecular, Cell, and Developmental Biology CM279.) Lecture, three hours. Preparation: courses in general biochemistry and general microbiology, including virology. Recommended for advanced undergraduate students with a major in public health, biology, or microbiology and for graduate students with interest in any field of biology or chemistry. Overview of animal viruses, including viral structure, virus cell interaction, virus replication, and viral oncogenesis. Special emphasis on understanding the molecular mechanism involved in control and regulation of replication, transcription, and translation of viral genome and its complex interaction with host.

M215. Interdepartmental Course: Tropical Medicine. (2) (Same as Medicine M215, Pathology M215, and Pediatrics M215.) Lecture, two and one-half hours. Preparation: basic courses in microbiology and parasitology of infectious diseases in School of Medicine or Public Health. Study of current knowledge about diseases prevalent in tropical areas of the world. Major emphasis on infectious diseases, with coverage of problems in nutrition and exotic noninfectious diseases. Syllabus supplements topics covered in classroom. S/U grading.

M217. Basic Science and Strategies of Gene Therapy. (2) (Same as Microbiology M217 and Molecular, Cell, and Developmental Biology M217.) Preparation: basic knowledge of virology. Basic science and viral vector systems utilized for gene therapy. S/U grading.

M223. Membrane Research Seminar. (2) (Same as Microbiology M223.) Critical discussions of current literature in membrane research, with emphasis on relationship between structure and function in lipid bilayers. May be repeated for credit.

M226A-M226B. Principles of Microbial Pathogenesis. (4-4) (Same as Microbiology M226A-M226B and Molecular, Cell, and Developmental Biology M226A-M226B.) Lecture, one hour; discussion, three hours. Requisites: courses 202A, 202B, 202C, 202D. Lecture/discussion format designed to analyze basic pathogenesis of infections. Emphasis on molecular and cellular approaches to understand host-microbial interaction. **M226A.** Bacterial and Mycotic Infections; **M226B.** Parasitic and Viral Infections.

M227. Molecular Genetics of Bacteria and Phage. (4) (Same as Chemistry M227, Microbiology M227, and Molecular, Cell, and Developmental Biology CM207.) Lecture, three hours; discussion, one hour. Requisite: Biological Chemistry CM253 or Chemistry CM253. Molecular and cellular biology of bacteria and bacteriophages.

M229. Cellular Biology of Host/Pathogen Interactions. (6) (Same as Microbiology M229 and Molecular, Cell, and Developmental Biology M226A-M226B.) Lecture, four hours; discussion, 90 minutes. Requisite: Biological Chemistry CM253. Molecular and cellular biology of pathogens, eukaryotic host cells, and interaction between pathogens and hosts.

CM233. Principles, Practices, and Policies in Biotechnology. (2) (Formerly numbered M233.) (Same as Biological Chemistry CM233, Biomedical Physics CM233, Chemical Engineering CM233, Chemistry CM233, Microbiology CM233, and Molecular, Cell, and Developmental Biology CM233.) Lecture, three hours. Designed for graduate students. Life and physical sciences majors and students in the School of Law and Anderson Graduate School of Management may find course useful in career preparation. Presentation of technologies, regulatory practices, and policies required for product development and review of current opportunities for new technology development. Topics include fermentation processes, pilot and large-scale bioprocess technologies, scaleup strategies, industrial recombinant DNA processes, hybridomas, protein engineering, peptide mimetics and rational drug design, medical and microscopic imaging, and intellectual property issues. Concurrently scheduled with course CM133. S/U or letter grading.

M234. Ethics and Accountability in Biomedical Research. (2) (Same as Microbiology CM234.) Designed for graduate students and undergraduates who have credit for a life sciences or biomedical individual studies 199 course. Responsibilities and ethical conduct of investigators in research, data management, mentorship, grant applications, and publications. Responsibilities to peers, sponsoring institutions, and society. Conflicts of interest, disclosure, animal subject welfare, human subject protection, and areas in which investigational goals and certain societal values may conflict. S/U grading.

M240. Cytokines and Reproductive Biology. (2) (Same as Microbiology M240 and Molecular, Cell, and Developmental Biology M240.) Lecture, 90 minutes; discussion, one hour. Overview of current progress on research in cytokines and other immune system molecules in reproductive biology. S/U or letter grading.

M241. Use of the Computer in Biology. (2) (Same as Human Genetics M201 and Molecular, Cell, and Developmental Biology M201.) Lecture, two hours; laboratory, one hour. Introduction to use of IBM PC microcomputer and VAX minicomputer in biological research. S/U grading.

M246. Computer Analysis of Genetic Organization. (4) (Same as Microbiology M246 and Molecular, Cell, and Developmental Biology M246.) Lecture, two hours; laboratory, six hours. Requisite: Life Sciences 4 or Microbiology C159. Lectures and laboratory instruction in contemporary procedures for analysis of nucleic acid and protein sequence data with the computer. No prior computer experience necessary; students gain both general and specialized facility with IBM PC and Digital VAX computers.

250. Cell and Molecular Biology. (4) Lectures and student seminar presentations. Review of selected current topics in molecular and cellular biology. Topics include recent experimental results on organization, expression, and regulation of genes in eukaryotic cells. S/U or letter grading.

M252. Seminar: Microbial Pathogenesis. (2) (Same as Microbiology M252.) Limited to 10 students. Student presentations and critical discussion of current literature on various aspects of microbial pathogenesis. May be repeated for credit. S/U or letter grading.

M256. Seminar: Viral Oncology. (2) (Same as Pathology M256.) Advanced research seminar designed to consider current developments in the field. Selection of current subjects and publications dealing with tumor viruses, oncogenesis, development, and cellular regulation.

M260. Immunology Forum. (2) (Same as Microbiology M260.) Requisite: course M185A. Broad range of current topics in immunology presented and discussed at advanced frontier level. Continuing UCLA-wide, general graduate-level seminar involving faculty, postdoctoral immunologists, and graduate students from diverse departments. S/U grading.

M261. Molecular and Cellular Immunology. (6) (Same as Microbiology M261 and Molecular, Cell, and Developmental Biology CM261.) Lecture, four and one-half hours; discussion, 90 minutes. Requisite: Biological Chemistry CM253. Comprehensive course for graduate students and selected undergraduates covering fundamentals and recent advances in molecular and cellular immunology. Lectures supplemented with discussion section focusing on reading and analysis of primary research articles. Oral presentation required. S/U or letter grading.

M262A. Seminar: Current Topics in Immunobiology of Cancer. (2) (Same as Microbiology M262A.) Review of recent literature in immunology, biology, and biochemistry of cancer, with emphasis on fundamental studies involving cell-mediated immunity, humoral response, tumor specific antigens, and new techniques. Discussion of reports on scientific meetings. May be repeated for credit. S/U or letter grading.

M262D. Selected Topics in Immunology. (2) (Same as Microbiology M262D.) Student participation in discussions related to various topics in immunology. May be repeated for credit. S/U or letter grading.

M263. Molecular and Cellular Immunology Seminar. (2) (Same as Microbiology M263.) Critical discussions of current literature in T and B cell immunology, with emphasis on molecular mechanisms.

M268. Molecular Parasitology. (4) (Same as Microbiology CM268 and Molecular, Cell, and Developmental Biology CM268.) Lecture, three hours; discussion, one hour. Requisites: Life Sciences 3, 4. Survey of parasitic protozoa not only as parasites which interact with a host, but also as model systems for analysis of basic biological phenomena such as gene regulation, molecular development, cell-cell interactions, molecular evolution, and novel biochemical pathways. Letter grading.

271. Immunology Overview. (2) Lecture, two hours; discussion, one hour. Designed for graduate students. Identification of major components of immune system, their modes of active maturation and regulation, cytokine signaling systems, principal effector mechanisms, and immune contributions to autoimmunity and hypersensitivity.

274. Interactions of Immune System and Nervous System. (2) Lecture, one hour; discussion, one hour. Designed for 10 graduate and postdoctoral immunology, behavioral sciences, and neurosciences students. Study of existing knowledge of interrelationships between central and peripheral nervous system and immune system. Review of research on central nervous system effects on immune function and vice versa, as well as human and animal studies linking stress to immune changes.

M275. Biology of HIV. (4) (Same as Epidemiology M228.) Lecture, three hours. Preparation: two biology courses. Requisites: Biostatistics 100A, Epidemiology 100. Overview of virologic and immunologic aspects of HIV disease for epidemiology or other health disciplines. Brief discussion of clinical manifestations and biosafety in the laboratory. Letter grading.

M285. Intermediate Immunology. (4) (Same as Microbiology CM285 and Molecular, Cell, and Developmental Biology CM285.) Lecture, three hours; discussion, one hour. Requisite: course M185A or Molecular, Cell, and Developmental Biology C180. Recommended corequisite: Chemistry 153B. In-depth exploration of topics introduced in course M185A.

M293. Major Concepts in Oncology. (4) (Same as Oral Biology M293 and Pathology M293.) Lecture, three hours. Designed for graduate students contemplating research in oncology. Topics include cancer pathophysiology, genetics, membranes, macromolecular synthesis and control, cell cycle, growth control; physical, chemical, and viral oncogenesis, epidemiology of cancer; tumor immunology; principles of cancer surgery, radiation therapy, and chemotherapy. S/U or letter grading.

M294. Molecular Basis of Cancer. (4) (Same as Pathology M294.) Lecture, three hours. Requisites: course M229, Biological Chemistry CM253, CM267, Neurobiology M209A. Fundamental biological, genetic, and molecular process involved in genesis and growth of cancer cells and diagnosis, characterization, and treatment of cancer.

M294L. Cancer Histopathology Laboratory. (2) (Same as Microbiology M294L and Pathology M294L.) Lecture, one hour; laboratory, two hours. Requisites: courses M229 or Neurobiology M209A, M294 (preferred) or M293, Biological Chemistry CM253, CM267. Histopathological approaches to cellular or tissue alterations commonly observed in tumor progression. Introduction to characteristics that clearly distinguish between benign and malignant neoplasia, precancerous stages, carcinoma in situ, and frankly invasive and metastatic neoplasia.

375. Teaching Apprentice Practicum. (1 to 4) Preparation: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

596. Directed Individual Study or Research. (2 to 8) Laboratory, to be arranged. S/U grading.

597. Preparation for Ph.D. Qualifying Examinations. (2 to 6) Tutorial, to be arranged.

599. Research for and Preparation of Ph.D. Dissertation. (2 to 12) Research on an original problem in the field of microbiology and immunology to be selected by graduate student with advice of adviser. Fields of study may be in bacteriology, immunology, mycology, parasitology, virology, tumor biology, or cell biology.

Douglas L. Black, Ph.D.
David A. Campbell, Ph.D.
Lawrence T. Feldman, Ph.D.
Otoniel Martinez-Maza, Ph.D.
Olaf Schneewind, M.D., Ph.D.
Robert W. Simons, Ph.D.
Jerome Zack, Ph.D.

Assistant Professors

David D. Chang, M.D. Ph.D.
Genhong Cheng, Ph.D.
M. Carrie Miceli, Ph.D.
Dominique M. Missiakis, Ph.D.
Kohnosuke Mitani, Ph.D.

Adjunct Associate Professor

David Blanco, Ph.D.

Adjunct Assistant Professors

Peggy Cotter, Ph.D.
Ralph Robinson, Ph.D.
Imke Schroder, Ph.D.

Scope and Objectives

Microbiology at UCLA is a diverse science that includes bacteriology, virology, genetics, molecular biology, and the study of single cells. The science has its roots in the fundamental human needs of health, nutrition, and environmental control, and it provides opportunities for study in the basic biological fields of genetics and cellular and molecular biology.

Undergraduate students majoring in Microbiology and Molecular Genetics prepare for careers in biomedical research, medicine or dentistry, biotechnology and genetic engineering, industrial microbiology, and agricultural or environmental sciences, among others. The courses presented by the department lead to a Bachelor of Science degree and depend heavily on preparation in the biological sciences, chemistry, physics, and mathematics. They provide preparation for careers in microbiology or for further advanced study leading to the doctorate.

The graduate program emphasizes the areas of molecular genetics, cell biology, immunology, cell and virus structure and morphogenesis, animal virology, general bacteriology and physiology, host/parasite relationships, medical microbiology, microbial genetics, and recombinant DNA research. Students are prepared for creative research careers in all of these fields. The objective of the department is to provide breadth in microbiology at the undergraduate level and depth and training in independent study and research for graduate students.

Note: Several upper division and graduate courses in this department are multiple-listed with those in the Microbiology and Immunology Department in the UCLA School of Medicine.

Students interested in a fundamentally disease-oriented approach to microbiology should see the Microbiology and Immunology Department description.

Undergraduate Study

Microbiology and Molecular Genetics B.S.

Preparation for the Major

Life Sciences Core Curriculum

Required: Life Sciences 1, 2, 3, 4; Chemistry and Biochemistry 14A, 14B/14BL, 14C/14CL, and 140, or 20A, 20B, 20L, 30, 30L, and 130A/130AL; Mathematics 3A, 3B, and 3C, or 31A, 31B, and 32A; Physics 1A, 1B, 1C, 4AL, and 4BL, or 6A, 6B, and 6C.

All core curriculum courses must be passed with a grade of C– or better and must be completed with an overall grade-point average of 2.0 or better. Students receiving a grade of D or F in two core curriculum courses, either in separate courses or repetitions of the same course, are subject to dismissal from the major.

Transfer Students

To be admitted as Microbiology and Molecular Genetics majors, transfer students with 80 or more units must complete the following courses prior to admission to UCLA: one year of general biology with laboratory for majors, preferably equivalent to Life Sciences 1 and 2, one year of calculus, one year of general chemistry with laboratory, and one semester of organic chemistry with laboratory. A second semester of organic chemistry or one year of calculus-based physics is strongly recommended but not required for admission.

Students intending to major in Microbiology and Molecular Genetics may seek counseling and petition to enter the major in the Student Affairs Office, 1602B Molecular Sciences.

The Major

Required: Microbiology and Molecular Genetics 101, 101L, 102, 102L, C106, C159, M185A; Chemistry and Biochemistry 153A, 153C, 153L; four additional upper division courses from the departmental list or from related departments selected with approval of the faculty adviser. All major courses must be taken for a letter grade, with a minimum overall 2.0 grade-point average in the major. A maximum of four units of Microbiology and Molecular Genetics 199 or Microbiology and Immunology 199, taken for a letter grade, may be applied toward the major. Credit for 199 courses from other departments may not be applied.

Honors Program

Overall grade-point averages of 3.2 and 3.5 in the preparation for the major and major respectively are required to apply for departmental honors. In addition students must have junior standing and the sponsorship of a faculty adviser from the Department of Microbiology

and Molecular Genetics or the Department of Microbiology and Immunology. The core of the program consists of three terms (minimum) of Microbiology and Molecular Genetics 199H research, culminating in a thesis. If the thesis is accepted by the honors committee, students are awarded the bachelor's degree with departmental honors. The department also offers an honors seminar course each Spring Quarter for the elective program. For further information, contact the Student Affairs Office, 1602B Molecular Sciences.

Graduate Study

The following constitutes introductory information regarding graduate degree programs and is based on the 1998-99 edition of *Program Requirements for UCLA Graduate Degrees*. Complete, annual editions of *Program Requirements* are available (listed under "Publications") on the Graduate Division website at <http://www.gdnet.ucla.edu>. Students are subject to the degree requirements as published in *Program Requirements* for the year in which they matriculate.

Master's Degree

Admission

Applicants for the program leading to the Master of Arts degree in Microbiology and Molecular Genetics must obtain faculty sponsorship before submitting an application and, in addition to the other application materials (see Ph.D. application procedures), must submit a five-page research proposal describing the thesis problem. Information and the proposal format are available from the graduate adviser's office.

The department accepts relatively few students whose objective is a master's degree and does not encourage application.

Areas of Study

Consult the department.

Course Requirements

A total of nine courses is required for the M.A. degree, and five courses must be at the graduate level. Required courses are specified on an individual basis by the initial advisory committee (three faculty members) which generally becomes the thesis committee.

There is no limit to the number of times Microbiology and Molecular Genetics 598 may be repeated. It is graded S/U only and can be taken for two to 12 units per quarter. A maximum of two courses (eight units) in the 500 series may apply to the nine-course (36 units) M.A. degree requirements, with only one course (four units) applying toward the five-course (20 units) graduate course requirement.

Comprehensive Examination Plan

None.

Thesis Plan

The thesis committee is established shortly after admission to the program. A committee member outside the department is not required but highly recommended. The department offers only a thesis plan for the master's degree.

Doctoral Degree

Admission

Admission to the program leading to the Ph.D. degree in Microbiology and Molecular Genetics is through UCLA ACCESS to Programs in Molecular, Cellular, and Integrative Life Sciences, 172 MBI, UCLA, Box 951570, Los Angeles, CA 90095-1570, (310) 206-6051.

Under special circumstances, new Ph.D. students may be admitted directly. The following criteria apply for new Ph.D. students admitted directly to the program

Applicants must have completed an undergraduate major in microbiology or a related field with superior scholastic achievement and should have preparation in calculus, physics, biology, genetics, physical, organic and biochemistry, and microbiology. In certain cases, on recommendation of the graduate adviser and the departmental admissions committee, background deficiencies may be remedied concurrently with graduate studies. The Graduate Record Examination (GRE) General Test is required for admission, and the Subject Test in Biochemistry, Cell and Molecular Biology, Chemistry, or Biology is recommended. Three letters of recommendation from individuals who can provide direct knowledge of both the applicant's academic record and potential for superior achievement in independent research are required. The GRE scores and letters should be submitted directly to the department. The department generally accepts students in Fall Quarter only. Under exceptional circumstances the Graduate Admissions Committee may agree to admit a student in Winter or Spring Quarter. Completion of a master's degree is not normally required.

Major Fields and Subdisciplines

The graduate program emphasizes the areas of molecular genetics, cell biology, immunology, cell and virus structure and morphogenesis, animal virology, general bacteriology and physiology, host/parasite relationships, medical microbiology, microbial genetics, and recombinant DNA research. Students are prepared for creative research in all of these fields. The objective of the department is to provide depth and training in independent study and research for graduate students.

Course Requirements

Formal Lecture/Laboratory Courses. (1) Biochemistry: Chemistry and Biochemistry CM253 (six units; offered only in Fall Quarter; to be completed during the first year); (2) Cell Biology: Chemistry and Biochemistry M267 or Neurobiology M209A or Microbiology and Molecular Genetics M229.

A total of eight additional units of 200-level coursework to be selected from at least two of the following four subject areas is required. These courses may be selected to remedy background deficiencies or to deepen knowledge of a particular subject area. Acceptable courses include the following:

- (1) General microbiology: Microbiology and Molecular Genetics C211, C212.
- (2) Host/parasite interactions and virology: Microbiology and Molecular Genetics C206, Microbiology and Immunology M208.
- (3) Immunology: Microbiology and Molecular Genetics M185A, M261, or CM285.
- (4) Genetics and regulation: courses from current listings maintained in the department office.

Other courses may be accepted with written consent of the departmental graduate adviser and the student's advisory committee.

Student-Participation Seminar Courses. Each quarter, seminar courses in which students read and report on current scientific research literature are organized. Students must enroll in five such courses (10 units) during their first five years in residence.

Laboratories. During the first 12 months in residence, students rotate for one quarter each through three laboratories. Students normally enroll in Microbiology and Molecular Genetics 596 for a minimum of four units of credit for each rotation.

First-Year Proposal. By August 15 of the first year of study students must submit an original research proposal of approximately six double-spaced pages. Students should choose a current paper in an area of interest in which the next experiment is fairly obvious, possibly even suggested in the discussion. The experiment should be designed with appropriate controls and succinctly presented along with the interpretation of possible results. The proposal should be focused on one or a very few specific questions. It is unacceptable to submit a duplicate or revised version of a previous class assignment (for example, Biological Chemistry CM253). Suggestions and evaluations are returned to the student and used by the faculty to evaluate continuation into the second year.

Written and Oral Qualifying Examinations

The oral examination must be taken within 24 months of entry into graduate school and must be passed, if reexamination is required, no later than 27 months from the date of entry. These periods may be extended with the written consent of the departmental graduate adviser and the student's mentor.

The examination is administered by the doctoral committee which normally serves as the dissertation committee as well. As a major part of the examination, students prepare and defend a written research proposal. Before presentation to the doctoral committee, the stu-

dents are encouraged to present the proposal before a student seminar group.

The University Oral Qualifying Examination covers both the student's proposal and general scientific background. It is not restricted to the topics of the proposal. The committee may arrange alternate ways to assess the student's preparation and qualifications.

Microbiology and Molecular Genetics

Lower Division Courses

6. Introduction to Microbiology. (4) Lecture, three hours. Not open for credit to students with credit for course 101, Life Sciences 2, or former Biology 5. Designed for nontechnical students; introduction to biology of microorganisms (bacteria, viruses, protozoa, algae, fungi), their significance as model systems for understanding fundamental cellular processes, and their role in human affairs. P/NP or letter grading.

7. Developments in Biotechnology. (4) Lecture, three hours; demonstration, one hour; outside study, eight hours. Recommended preparation: course 6 or Biology 2 or Life Sciences 2. Not open for credit to students with credit for course 101 or Life Sciences 3. Survey of recent developments in biotechnology, with emphasis on use of single-celled organisms. Review of basic principles of microbiology as they apply to biotechnology and examination of wide variety of topics, including alternate energy sources, pollution, cleanup, genetic fingerprinting, genetic engineering, and agricultural and food microbiology. P/NP or letter grading.

10. Applied Medical Microbiology. (5) Lecture, three hours; laboratory, five hours; outside study, eight hours. Enforced prerequisite: Life Sciences 2. Designed for students interested in medical microbiology and those going into allied health professions. Not open for credit to students with credit for course 101; does not substitute for course 101 in the major. Introduction to biology of bacteria and their role in diseases of humans. Letter grading.

Upper Division Courses

101. Fundamentals of Bacteriology. (5) Lecture, three hours; discussion, one hour; computer/multimedia laboratory, one hour. Requisites: Chemistry 153A, Life Sciences 3. Recommended: Life Sciences 4. Recommended corequisite: course 101L. Historical foundations of the science; introduction to bacterial structure, physiology, biochemistry, genetics, and ecology.

101L. Bacteriology Laboratory. (3) Discussion, one hour; laboratory, six hours. Requisites: Chemistry 153A, Life Sciences 3. Recommended: Life Sciences 4. Recommended corequisite: course 101 (or 101 with a grade of C or better if previously taken). General laboratory techniques and theory in microbiology and molecular genetics, including isolation and identification of bacterial species from nature, transformation of *Escherichia coli*, Ames test, analysis of auxotrophic mutants.

102. Introductory Virology. (4) Lecture, three hours; discussion, one hour. Requisites: Life Sciences 1, 2, 3, 4, with grades of C or better. Recommended: Chemistry 153A. Recommended corequisite: course 102L. Biological properties of bacterial and animal viruses, replication, methods of detection, interactions with host cells and multicellular hosts.

102L. Virology Laboratory. (2) Discussion, one hour; laboratory, four hours. Requisites: Life Sciences 1, 2, 3, 4, with grades of C or better. Recommended corequisite: course 102 (or 102 with a grade of C or better if previously taken). General laboratory techniques and theory in virology, including complementation, recombination, transduction, experiments in animal virology using tissue culture.

C106. Molecular and Genetic Basis of Bacterial Infections. (4) Lecture, three hours; discussion, one hour. Requisites: course 101, Life Sciences 4. Biochemical and genetic properties of bacteria which afford potential for pathogenicity. Epidemiology and transmission of disease; chemotherapy and drug resistance. Regulation of virulence factors. Concurrently scheduled with course C206.

C111. Biology of Prokaryotic Cell. (4) Lecture, three hours; discussion, one hour. Requisites: course 101, Chemistry 153C. Review of current knowledge of structural organization of prokaryotic cells. Emphasis on isolation methods, chemical composition, structure and assembly of subcellular components, including membranes, walls, flagella, ribosomes, and viruses. Concurrently scheduled with course C211.

C112. Molecular Biology of Bacterial Growth. (4) Lecture, three hours; discussion, one hour. Requisites: course 101, Chemistry 153A, 153L, Life Sciences 4. Analysis of growth, development, and physiological adaptations of bacteria, with emphasis on their molecular and genetic basis. Analysis of complex regulatory mechanisms that underlie cell cycle and other multicomponent cellular systems from perspective of contemporary research techniques. Concurrently scheduled with course C212.

120. Advanced Techniques in Microbiology. (4) Lecture, one hour; laboratory, six hours. Requisites: courses 101 and 101L, with grades of B or better. Techniques used in research laboratories in microbiology/biotechnology field. Introduction to current techniques. Practical and theoretical background of these techniques. Interested qualifying students to be given opportunity to participate in summer internships.

CM133. Principles, Practices, and Policies in Biotechnology. (2) (Same as Biological Chemistry CM133, Biomedical Physics CM133, Chemical Engineering CM133, Chemistry CM133, Microbiology and Immunology CM133, and Molecular, Cell, and Developmental Biology CM133.) Lecture, three hours. Designed for juniors/seniors. Life and physical sciences majors and students in the School of Law and Anderson Graduate School of Management may find course useful in career preparation. Presentation of technologies, regulatory practices, and policies required for product development and review of current opportunities for new technology development. Topics include fermentation processes, pilot and large-scale bioprocess technologies, scaleup strategies, industrial recombinant DNA processes, hybridomas, protein engineering, peptide mimetics and rational drug design, medical and microscopic imaging, and intellectual property issues. Concurrently scheduled with course CM233. P/NP or letter grading.

C134. Ethics and Accountability in Biomedical Research. (2) Designed for graduate students and undergraduates who have credit for a life sciences or biomedical individual studies 199 course. Responsibilities and ethical conduct of investigators in research, data management, mentorship, grant applications, and publications. Responsibilities to peers, sponsoring institutions, and society. Conflicts of interest, disclosure, animal subject welfare, human subject protection, and areas in which investigational goals and certain societal values may conflict. Concurrently scheduled with course CM234. P/NP grading.

CM156. Human Genetics. (4) (Same as Human Genetics CM156 and Molecular, Cell, and Developmental Biology CM156.) Lecture, three hours; discussion, two hours. Requisites: Life Sciences 3, 4. Strongly recommended: Molecular, Cell, and Developmental Biology 100 or C139 or M140. Application of genetic principles in human populations, with emphasis on cytogenetics, biochemical genetics, population genetics, and family studies. Lectures and readings in the literature, with focus on current questions in the fields of medical and human genetics and methodologies appropriate to answer such questions. Concurrently scheduled with course CM256. Letter grading.

C159. Advanced Molecular Genetics. (5) Lecture, three hours; discussion, two hours. Requisites: Chemistry 153A, Life Sciences 4. Integrated conceptual analysis of classical and modern molecular genetics of microbes, with coverage of key papers from elucidation of genetics code to the present. Essential elements of experimental design, analysis of results, and scientific logic. Concurrently scheduled with course C259.

CM165. Bioprocess Technology. (4) (Same as Chemical Engineering CM165.) Lecture, two hours; laboratory, eight hours; outside study, two hours. Requisites: course 101, Chemical Engineering C115, Chemistry 156. Current bioprocess technologies involving microorganisms, especially extremophiles and animal cells, as vehicles for macromolecular and biomaterial production. Applications to processes including mineral leaching, remediation, and bioconversion. Emphasis on exploiting properties of diverse microorganisms. Exercises may vary yearly. Concurrently scheduled with course CM265.

CM168. Molecular Parasitology. (4) (Same as Molecular, Cell, and Developmental Biology CM168.) Lecture, three hours; discussion, one hour. Requisites: Life Sciences 3, 4. Survey of parasitic protozoa not only as parasites which interact with a host, but also as model systems for analysis of basic biological phenomena such as gene regulation, molecular development, cell-cell interactions, molecular evolution, and novel biochemical pathways. Concurrently scheduled with course CM268. Letter grading.

M176. Advanced Topics in Animal Virus/Host Interaction. (4) (Same as Molecular, Cell, and Developmental Biology M176.) Lecture, four hours; discussion, one hour; outside study, seven hours. Requisites: Life Sciences 3, 4. Recommended: course 102 or Chemistry 153B or Molecular, Cell, and Developmental Biology 144. Recent developments in fields of interaction of hosts with animal viruses. Emphasis on molecular and cellular approaches to understand host/virus interaction at level of entry, replication, assembly, and morphogenesis, as well as host defense and viral pathogenesis. P/NP or letter grading.

M185A. Immunology. (5) (Same as Microbiology and Immunology M185A and Molecular, Cell, and Developmental Biology M185A.) Lecture, three hours; discussion, 90 minutes; outside study, 11.5 hours. Requisites: Life Sciences 3, 4. Recommended requisites or corequisites: Chemistry 153A, 153L, Molecular, Cell, and Developmental Biology 100 or C139 or M140. Not open for credit to students with credit for course M261 or Molecular, Cell, and Developmental Biology C180. Introduction to experimental immunology and immunochemistry; cellular and molecular aspects of humoral and cellular immune reactions.

CM185B. Intermediate Immunology. (4) (Same as Molecular, Cell, and Developmental Biology CM185B.) Lecture, three hours; discussion, one hour. Requisite: course M185A or Molecular, Cell, and Developmental Biology C180. Recommended corequisite: Chemistry 153B. In-depth exploration of topics introduced in course M185A. Concurrently scheduled with course CM285.

195. Proseminar. (2) Designed for seniors. Discussion by small groups of students and instructor on current research literature. Topics vary each year. May be taken only once for credit in the major but may be repeated for University credit.

199. Special Studies in Microbiology and Molecular Genetics. (2 to 8) Preparation: minimum 3.0 grade-point average in premajor and major. Requisites: Chemistry 153A, 153L. Limited to junior/senior Microbiology and Molecular Genetics majors. Individual research project under direct supervision of departmental faculty member. Copy of report describing the research must be filed with Student Affairs Office by end of term. First four units must be taken P/NP; 12 additional units, four of which may be applied toward the major, may be taken for a letter grade.

199H. Honors Thesis. (4 or 8) Limited to microbiology and molecular genetics honors program students. Directed individual research for departmental honors; students must have a faculty sponsor. Three sequential 199H terms required. Progress report must be submitted to faculty sponsor at end of each of the first two terms, with honors thesis submitted at end of final term. Maximum of four units may be applied toward the major, with balance applied toward B.S. degree requirements.

Graduate Courses

C206. Molecular and Genetic Basis of Bacterial Infections. (4) Lecture, three hours; discussion, one hour. Requisites: course 101, Life Sciences 4. Biochemical and genetic properties of bacteria which afford potential for pathogenicity. Epidemiology and transmission of disease; chemotherapy and drug resistance. Regulation of virulence factors. Concurrently scheduled with course C106.

C211. Biology of Prokaryotic Cell. (4) Lecture, three hours; discussion, one hour. Requisites: course 101, Chemistry 153C. Review of current knowledge of structural organization of prokaryotic cells. Emphasis on isolation methods, chemical composition, structure and assembly of subcellular components, including membranes, walls, flagella, ribosomes, and viruses. Concurrently scheduled with course C111. Term paper on research topic selected by each graduate student required.

C212. Molecular Biology of Bacterial Growth. (4) Lecture, three hours; discussion, one hour. Requisites: course 101, Chemistry 153A, 153L, Life Sciences 4. Analysis of growth, development, and physiological adaptations of bacteria, with emphasis on their molecular and genetic basis. Analysis of complex regulatory mechanisms that underlie cell cycle and other multicomponent cellular systems from perspective of contemporary research techniques. Concurrently scheduled with course C112.

213. Seminar: Unicellular Development. (2) Seminar, 30 minutes; discussion, 90 minutes. Requisite: course 101. Designed for graduate students. Background on each of developmental systems in bacillus, myxobacteria, dictyostelium, and streptococcus. Student analysis and discussion of recent publications in each of these areas. S/U or letter grading.

M217. Basic Science and Strategies of Gene Therapy. (2) (Same as Microbiology and Immunology M217 and Molecular, Cell, and Developmental Biology M217.) Preparation: basic knowledge of virology. Basic science and viral vector systems utilized for gene therapy. S/U grading.

M223. Membrane Research Seminar. (2) (Same as Microbiology and Immunology M223.) Critical discussions of current literature in membrane research, with emphasis on relationship between structure and function in lipid bilayers. May be repeated for credit.

M226A-M226B. Principles of Microbial Pathogenesis. (4-4) (Same as Microbiology and Immunology M226A-M226B and Molecular, Cell, and Developmental Biology M226A-M226B.) Lecture, one hour; discussion, three hours. Requisites: Microbiology and Immunology 202A, 202B, 202C, 202D. Lecture/discussion format designed to analyze basic pathogenesis of infections. Emphasis on molecular and cellular approaches to understand host-microbial interaction. **M226A.** Bacterial and Mycotic Infections; **M226B.** Parasitic and Viral Infections.

M227. Molecular Genetics of Bacteria and Phage. (4) (Same as Chemistry M227, Microbiology and Immunology M227, and Molecular, Cell, and Developmental Biology CM207.) Lecture, three hours; discussion, one hour. Requisite: Biological Chemistry CM253 or Chemistry CM253. Molecular and cellular biology of bacteria and bacteriophages.

M229. Cellular Biology of Host/Pathogen Interactions. (6) (Same as Microbiology and Immunology M229 and Molecular, Cell, and Developmental Biology M229.) Lecture, four hours; discussion, 90 minutes. Requisite: Biological Chemistry CM253. Molecular and cellular biology of pathogens, eukaryotic host cells, and interaction between pathogens and host.

CM233. Principles, Practices, and Policies in Biotechnology. (2) (Formerly numbered M233.) (Same as Biological Chemistry CM233, Biomedical Physics CM233, Chemical Engineering CM233, Chemistry CM233, Microbiology and Immunology CM233, and Molecular, Cell, and Developmental Biology CM233.) Lecture, three hours. Designed for graduate students. Life and physical sciences majors and students in the School of Law and Anderson Graduate School of Management may find course useful in career preparation. Presentation of technologies, regulatory practices, and policies required for product development and review of current opportunities for new technology development. Topics include fermentation processes, pilot and large-scale bioprocess technologies, scaleup strategies, industrial recombinant DNA processes, hybridomas, protein engineering, peptide mimetics and rational drug design, medical and microscopic imaging, and intellectual property issues. Concurrently scheduled with course CM133. S/U or letter grading.

CM234. Ethics and Accountability in Biomedical Research. (2) (Formerly numbered M234.) (Same as Microbiology and Immunology M234.) Designed for graduate students and undergraduates who have credit for a life sciences or biomedical individual studies 199 course. Responsibilities and ethical conduct of investigators in research, data management, mentorship, grant applications, and publications. Responsibilities to peers, sponsoring institutions, and society. Conflicts of interest, disclosure, animal subject welfare, human subject protection, and areas in which investigational goals and certain societal values may conflict. Concurrently scheduled with course C134. S/U grading.

M240. Cytokines and Reproductive Biology. (2) (Same as Microbiology and Immunology M240 and Molecular, Cell, and Developmental Biology M240.) Lecture, 90 minutes; discussion, one hour. Overview of current progress on research in cytokines and other immune system molecules in reproductive biology. S/U or letter grading.

242. Seminar: Microbial Molecular Genetics. (2) Student and instructor presentations and critical discussion of newly emerging concepts in prokaryotic and/or eukaryotic molecular genetics. Emphasis on nature of the gene and control of gene expression. May be repeated for credit. S/U or letter grading.

M246. Computer Analysis of Genetic Organization. (4) (Same as Microbiology and Immunology M246 and Molecular, Cell, and Developmental Biology M246.) Lecture, two hours; laboratory, six hours. Requisite: course C159 or Life Sciences 4. Lectures and laboratory instruction in contemporary procedures for analysis of nucleic acid and protein sequence data with the computer. No prior computer experience necessary; students gain both general and specialized facility with IBM PC and Digital VAX computers.

M248. Molecular Genetics. (6) (Same as Biological Chemistry CM248, Human Genetics CM248, and Molecular, Cell, and Developmental Biology CM248.) Lecture, five hours. Requisite: Biological Chemistry CM153G or Chemistry CM153G. Basic concepts in modern genetics, with examples from both eukaryotic and prokaryotic systems. Emphasis on use of genetic techniques for addressing fundamental questions in cellular biochemistry. Topics include mutagenesis, repair, recombination, transposition, genetic regulation, developmental genetics, neurogenetics, and immunogenetics. Letter grading.

250. Seminar: Microbial Metabolism. (2) Discussion and student presentations of recent work in areas of genetic regulation and physiology of bacterial metabolism.

251. Seminar: Regulation and Differentiation. (2) S/U grading.

M252. Seminar: Microbial Pathogenesis. (2) (Same as Microbiology and Immunology M252.) Limited to 10 students. Student presentations and critical discussion of current literature on various aspects of microbial pathogenesis. May be repeated for credit. S/U or letter grading.

254. Pre-mRNA Processing in Cellular Metabolism and Differentiation. (2) Seminar, three hours. Designed for graduate students. Reading and discussion of papers dealing with mRNA metabolism and posttranscriptional control of gene expression. From detailed RNA chemistry and autocatalytic reactions to more recently described and less understood systems, topics include RNA catalysis, general splicing and spliceosome assembly, splicing regulation, polyadenylation and three prime end formation, mRNA stability, mRNA transport, RNA editing and modification, and RNA localization. S/U or letter grading.

255. Seminar: Microbial Cell Biology. (2) Student presentations and critical discussion of current literature on various aspects of prokaryotic and eukaryotic cell biology and morphogenesis. May be repeated for credit.

CM256. Human Genetics. (4) (Same as Human Genetics CM256 and Molecular, Cell, and Developmental Biology CM256.) Lecture, three hours; discussion, two hours. Requisites: Life Sciences 3, 4. Strongly recommended: Molecular, Cell, and Developmental Biology 100 or C139 or M140. Application of genetic principles in human populations, with emphasis on cytogenetics, biochemical genetics, population genetics, and family studies. Lectures and readings in the literature, with focus on current questions in the fields of medical and human genetics and methodologies appropriate to answer such questions. Concurrently scheduled with course CM156. Independent research project required of graduate students. Letter grading.

C259. Advanced Molecular Genetics. (5) Lecture, three hours; discussion, two hours. Requisites: Chemistry 153A, Life Sciences 4. Integrated conceptual analysis of classical and modern molecular genetics of microbes, with coverage of key papers from elucidation of genetics code to the present. Essential elements of experimental design, analysis of results, and scientific logic. Concurrently scheduled with course C159.

M260. Immunology Forum. (2) (Same as Microbiology and Immunology M260.) Requisite: course M185A. Broad range of current topics in immunology presented and discussed at advanced frontier level. Continuing UCLA-wide, general graduate-level seminar involving faculty, postdoctoral immunologists, and graduate students from diverse departments. S/U grading.

M261. Molecular and Cellular Immunology. (6) (Same as Microbiology and Immunology M261 and Molecular, Cell, and Developmental Biology CM261.) Lecture, four and one-half hours; discussion, 90 minutes. Requisite: Biological Chemistry CM253. Comprehensive course for graduate students and selected undergraduates covering fundamentals and recent advances in molecular and cellular immunology. Lectures supplemented with discussion section focusing on reading and analysis of primary research articles. Oral presentation required. S/U or letter grading.

M262A. Seminar: Current Topics in Immunobiology of Cancer. (2) (Same as Microbiology and Immunology M262A.) Review of recent literature in immunology, biology, and biochemistry of cancer, with emphasis on fundamental studies involving cell-mediated immunity, humoral response, tumor specific antigens, and new techniques. Discussion of reports on scientific meetings. May be repeated for credit. S/U or letter grading.

M262D. Selected Topics in Immunology. (2) (Same as Microbiology and Immunology M262D.) Student participation in discussions related to various topics in immunology. May be repeated for credit. S/U or letter grading.

M263. Molecular and Cellular Immunology Seminar. (2) (Same as Microbiology and Immunology M263.) Critical discussions of current literature in T and B cell immunology, with emphasis on molecular mechanisms.

M264A-M264B-M264C. Molecular Basis of Atherosclerosis: Selected Topics. (2-2-2) (Same as Biological Chemistry M264A-M264B-M264C and Chemistry M264A-M264B-M264C.) Biochemistry, morphology, and physiology of atherosclerosis. Emphasis on chemistry of lipoproteins and role of plasma lipoproteins in regulation of tissue lipid metabolism and development of atherosclerosis. Each course may be taken independently for credit.

CM265. Bioprocess Technology. (4) (Same as Chemical Engineering CM265.) Lecture, two hours; laboratory, eight hours; outside study two hours. Requisites: course 101, Chemical Engineering C115, Chemistry 156. Current bioprocess technologies involving microorganisms, especially extremophiles and animal cells, as vehicles for macromolecular and biomaterial production. Applications to processes including mineral leaching, remediation, and bioconversion. Emphasis on exploiting properties of diverse microorganisms. Exercises may vary yearly. Concurrently scheduled with course CM165.

266. Genetic Mechanisms Seminar. (2) Seminar, three hours; outside study, three hours. Designed for students in Predoctoral Training Program in Genetic Mechanisms. Current research topics in genetics. May be repeated for credit. S/U grading.

CM268. Molecular Parasitology. (4) (Same as Microbiology and Immunology M268 and Molecular, Cell, and Developmental Biology CM268.) Lecture, three hours; discussion, one hour. Requisites: Life Sciences 3, 4. Survey of parasitic protozoa not only as parasites which interact with a host, but also as model systems for analysis of basic biological phenomena such as gene regulation, molecular development, cell-cell interactions, molecular evolution, and novel biochemical pathways. Concurrently scheduled with course CM168. Letter grading.

270. Seminar: Molecular Virology. (2) Designed for graduate students. Discussion and student presentations of recent work in molecular virology, including viral gene expression and function. S/U grading.

280. Seminar: Molecular and Cellular Endocrinology. (2) Designed for graduate students. Discussion and student presentations of recent work in molecular and cellular endocrinology. S/U grading.

CM285. Intermediate Immunology. (4) (Same as Microbiology and Immunology M285 and Molecular, Cell, and Developmental Biology CM285.) Lecture, three hours; discussion, one hour. Requisite: course M185A or Molecular, Cell, and Developmental Biology C180. Recommended corequisite: Chemistry 153B. In-depth exploration of topics introduced in course M185A. Concurrently scheduled with course CM185B.

290. Seminar: Molecular Genetics. (2) Seminar, one hour; discussion, one hour. Designed for graduate students. Discussion and student presentations of recent work in molecular and genetic analysis of cellular gene regulation. S/U grading.

M294L. Cancer Histopathology Laboratory. (2) (Same as Microbiology and Immunology M294L and Pathology M294L.) Lecture, one hour; laboratory, two hours. Requisites: course M229 or Neurobiology M209A, Biological Chemistry CM253, CM267, and Pathology M294 (preferred) or M293. Histopathological approaches to cellular or tissue alterations commonly observed in tumor progression. Introduction to characteristics that clearly distinguish between benign and malignant neoplasia, precancerous stages, carcinoma in situ, and frankly invasive and metastatic neoplasia.

296A-296Z. Seminars: Research Topics in Microbiology and Molecular Genetics. (1 to 4 each) Discussion, three hours. Advanced study and analysis of current topics in microbiology and molecular genetics. Discussion of current research and literature in research specialty of faculty member teaching course. S/U grading:

296A. Eukaryotic Transcription Control.

296B. Regulation of Pre-mRNA Splicing.

296D. *Escherichia coli* Physiological Research.

296E. Archaeobacterial Research.

296F. Molecular Biology of Microbial Diversity.

296G. Structure and Function of Membrane Transport Proteins.

296H. Genetics of Common Diseases.

296J. Microbial Pathogenesis.

296K. Advanced Topics in Immunology.

296L. Molecular Biology of Bacterial Growth.

296M. Immune Regulation and Autoimmune Disease.

296N. RNA and Protein Structure and Function.

296O. Cell Growth and Signal Transduction.

296P. Bacterial Toxins and Human Cytokines.

296Q. Mechanisms of Hematopoietic Development.

375. Teaching Apprentice Practicum. (1 to 4) Preparation: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

495. Preparation for Teaching Microbiology in Higher Education. (2) Seminar/laboratory. Designed for graduate students. Study of problems and methodologies in teaching microbiology, including workshops, seminars, apprentice teaching, and peer observation. S/U or letter grading.

596. Directed Individual Research. (2 to 12) Tutorial, to be arranged.

598. Research for M.A. Thesis. (2 to 12) Tutorial, to be arranged.

599. Research for Ph.D. Dissertation. (2 to 12) Tutorial, to be arranged.

Scope and Objectives

The Department of Molecular and Medical Pharmacology has basic and clinical components in which students have opportunities to develop intellectually and experimentally in basic biological sciences placed in the context of human disease. The department conducts teaching and research programs that begin with molecular interactions and extend to studies of diseases and their treatment in humans. Starting with the biochemistry and pharmacology of drugs, departmental investigators study gene expression and its regulation, signal transduction processes, cell-to-cell communication, viral replication and pathogenesis, autoimmune disease, neuronal development and plasticity, and integrated organ functions using techniques of structural chemistry and biology, molecular and cell biology, transgenic and chimeric mice, and cellular and organ imaging. Organic synthesis, genetic engineering, and imaging techniques such as confocal fluorescent and cryoelectron microscopy, autoradiography, and positron emission tomography (PET) are extensively employed. The imaging techniques are available in the Crump Institute for Biological Imaging and the UCLA-DOE Laboratory of Structural Biology and Molecular Medicine, which are affiliated with the department. The goal of the education program is to provide faculty members and students the opportunity to examine the molecular and clinical basis of disease and the mechanisms of drugs in their treatment, as well as to visualize the changes in the disease state with procedures that monitor the molecular basis of cellular and organ function.

The graduate program seeks to prepare students for these interdisciplinary activities with a

basic foundation in genetics, molecular and cellular biology, and pharmacology during their first year in residence. The second year is spent in the laboratory and in elective courses selected to reflect each student's interest, background, and requirements for the research undertaken. Numerous opportunities for interaction with other departments, institutes, and programs are provided through interdisciplinary coursework and many collaborative research activities.

Although the department offers only graduate degrees, upper division undergraduate courses are offered with enrollment restrictions as indicated in the course descriptions.

Graduate Study

The following constitutes introductory information regarding graduate degree programs and is based on the 1998-99 edition of *Program Requirements for UCLA Graduate Degrees*. Complete, annual editions of *Program Requirements* are available (listed under "Publications") on the Graduate Division website at <http://www.gdnet.ucla.edu>. Students are subject to the degree requirements as published in *Program Requirements* for the year in which they matriculate.

Note: There is no degree program in pharmacy at UCLA.

Master's Degree**Admission**

The Master of Science (M.S.) degree in Pharmacology is offered only under special circumstances: for example, to candidates who already have a doctoral degree in another field and wish to obtain additional training in pharmacology or to those doctoral students who are already in the program and who for some reason cannot continue for the Ph.D. To obtain the M.S. degree, students must formally request approval by the graduate training committee. If approved, a guidance committee, proposed by students and approved by the graduate training committee, reviews the thesis. None of the research conducted for the M.S. thesis may be applied to a Ph.D. degree later.

Areas of Study

Consult the department.

Course Requirements

The M.S. degree requires satisfactory completion of the required courses as listed under doctoral course requirements below, excluding three quarters of Molecular and Medical Pharmacology 200.

Comprehensive Examination Plan

None.

Thesis Plan

The M.S. degree requires satisfactory completion of a thesis.

Doctoral Degree**Admission**

In addition to meeting University requirements for graduate admission, applicants to the program leading to the Ph.D. degree in Pharmacology must have received a bachelor's degree in a biological or physical science or in the pre-medical curriculum. Requisite courses include basic biology, basic chemistry, organic chemistry, and biochemistry, including laboratory. Quantitative analysis and physical chemistry are recommended.

In suitable cases, students who have course deficiencies may be admitted to graduate status, but any deficiencies have to be removed within a specified time. Graduate Record Examination (GRE) scores and three letters of recommendation are required.

Applicants may write to the department for a departmental brochure and/or application form.

Students may also enter the program through UCLA ACCESS to Programs in Molecular, Cellular, and Integrative Life Sciences, 172 MBI, UCLA, Box 951570, Los Angeles, CA 90095-1570, (310) 206-6051.

The Department of Molecular and Medical Pharmacology offers two M.D./Ph.D. programs concurrently with the UCLA School of Medicine. One is the Medical Scientist Training Program (MSTP) in which candidates are medical students that have been accepted into MSTP by the School of Medicine in order to qualify. The second is the Speciality Training and Advanced Research (STAR) Program in which candidates are post-M.D. housestaff (interns, residents, or fellows) who have been accepted into the STAR Program by its selection committee in order to qualify.

Major Fields or Subdisciplines

Cardiovascular pharmacology; chemical pharmacology; medical pharmacology; immunopharmacology; neuroendocrine pharmacology; neuropharmacology; psychopharmacology; nuclear medicine (positron emission tomography); pharmacokinetics.

Course Requirements

Required: Molecular and Medical Pharmacology 200 (three quarters), 211A-211B, 212A-212B, 234A-234B, 237A-237B, 241, 251 (must be taken every quarter), and two electives chosen from Molecular and Medical Pharmacology M255, Biological Chemistry CM253, CM267 or Neurobiology M209A, Physiology 201A-201B/M203A-M203B, or a course in biostatistics.

These requirements are waived for students who have passed equivalent courses with grades of B or better within the past 36 months. Students are required to maintain a grade-point average of 3.0 in all coursework and to achieve grades of B or better in all molecular and medical pharmacology courses. One grade of less than B in a required molecular and medical

pharmacology course results in probationary status; the course must be repeated with a grade of B or better; two grades of less than B result in recommendation to the graduate dean for dismissal. A single grade below B in any of the other required courses results in probationary status as well. Any student with two grades less than B in any of the nonmolecular and medical pharmacology courses is considered by the graduate training committee for dismissal. A total of three grades below B in any of the required courses results in recommendation to the graduate dean for dismissal.

All required coursework should be completed by the end of the sixth quarter.

The department provides a system of laboratory rotations (Molecular and Medical Pharmacology 200) in order to familiarize students with a variety of pharmacological research areas and techniques. During the first year in the department, students participate in projects of the laboratories of their choosing. Students also become familiar with the literature relevant to the various research projects and thus establish a basis for the selection of their own research areas.

Students must submit a report on their activities at the end of each quarter of Molecular and Medical Pharmacology 200 to research advisers. The report should include the nature of the project, how the student participated, the results obtained, and a critical evaluation of the project. A copy of this report and an evaluation form by the research adviser is submitted to the graduate training committee. A report on the student and the final grade is also submitted to the committee by the research adviser.

For students entering through UCLA ACCESS, required courses include Molecular and Medical Pharmacology 237A, 241, 251 (each term after entering a pharmacology laboratory for dissertation research), Biological Chemistry CM253, and CM267 or Neurobiology M209A. Recommended electives include Molecular and Medical Pharmacology 211A, 211B, 212A, 212B, 234A, 234B, 237B, M255, Physiology 201A-201B/M203A-M203B, and one biostatistics course. Students may use course 200 or courses in other departments for the three required laboratory research rotations.

Examinations are given in all courses except seminars and research. These are in the form of written examinations, oral examinations, term papers, and/or laboratory practicals.

Written and Oral Qualifying Examinations

After completing all required courses, students take a departmental comprehensive examination consisting of a written part and an oral part. The examination panel then recommends continuation toward the Ph.D. degree, further remedial study, or termination. The examination tests for a rational analytical approach to problem solving and for ability to integrate material learned in different courses. Students are required to know basic principles of pharma-

cology and the status of topics of current interest in pharmacology.

After passing the departmental comprehensive examination, students must take the University Oral Qualifying Examination within 24 months. The examination is administered by the doctoral guidance committee. The examination concentrates on the background literature, experimental methods, and implications of the field of interest and dissertation project.

If any one of the above required examinations is failed, students may be reexamined at a later date determined by the guidance committee.

Molecular and Medical Pharmacology

Upper Division Courses

110A-110B. Drugs: Mechanisms, Uses, and Misuse. (4-4) (Formerly numbered 110.) Lecture, four hours (seven weeks); discussion, four hours (three weeks). Requisites: Chemistry 15, Life Sciences 2, 3. Course 110A is requisite to 110B. Introduction to pharmacology for undergraduate students, emphasizing principles underlying mechanism of action of drugs, their development, control, rational use, and misuse.

199. Special Studies. (2 to 8) Special studies in pharmacology, including either reading assignments or laboratory work or both, designed for proper training of students.

Graduate Courses

200. Introduction to Laboratory Research. (2 to 4) Individual projects in laboratory research for beginning graduate students. At end of each term students submit to their supervisor a report covering research performed. Pharmacology graduate students must take this course three times during their first two years in residence. S/U or letter grading.

203. Medical Pharmacology. (2) Lecture, zero to two hours; discussion, zero to two hours. Requisites: courses 211A-211B. Series of lectures and case presentations designed to illustrate principles of pharmacology in a clinical context, and solution of practical therapeutics by reference to pharmacokinetics, mechanisms of action, and disposition of drugs.

211A-211B. Principles of Pharmacology. (4-2) Lecture, three to eight hours; discussion, zero to nine hours. Preparation: mammalian physiology, biochemistry. Systematic consideration of principles governing interaction between drugs and biological systems and of principal groups of drugs used in therapeutics. Particular attention on modes of action, pharmacokinetics, and disposition to provide a scientific basis for their rational use in medicine.

212A-212B. Graduate Commentary: Medical Pharmacology. (2-2) Preparation: mammalian physiology, biochemistry. Supplementation of topics covered in course 203. Primarily for graduate students.

M221. Cellular and Molecular Neurochemistry. (4) (Same as Biological Chemistry M221, Neurobiology M221, Neuroscience M240, and Psychiatry M221.) Lecture, three hours; discussion, one hour. Preparation: biochemistry. Contemporary neurochemistry topics — metabolic specialization and compartments, metabolism and function of ion channels, structure and function of neurotransmitters. Inborn errors and molecular genetics, molecular imaging, aging, and regeneration. Receptor/effector coupling. S/U or letter grading.

234A-234B-234C. Experimental Methods in Pharmacology. (2-2-2) Survey of experimental methods and instrumentation used in analysis, identification, and study of mechanisms of action of pharmacologically active compounds.

237A-237B-237C. Research Frontiers in Cellular and Molecular Pharmacology. (4) Requisite: course 241. Detailed examination of mechanisms of drug action at organismal, tissue, cellular, and molecular levels, emphasizing receptors, receptor/effector coupling, neurotransmitters, autonomic and central nervous system pharmacology.

241. Introduction to Chemical Pharmacology. (6) Preparation: organic and biological chemistry. Designed for molecular and medical pharmacology students. Introduction to general principles of pharmacology. Role of chemical properties of drugs in their distribution, metabolism, excretion, and modes of action.

M248. Introduction to Biological Imaging. (4) (Same as Biomedical Physics M248.) Lecture, three hours; laboratory, one hour. Exploration of role of biological imaging in modern biology and medicine, including imaging physics, instrumentation, image processing, and applications of imaging for a range of modalities. Practical experience provided through a series of imaging laboratories.

251. Seminar: Pharmacology. (2) Seminar presented by students, faculty, and guest lecturers on a variety of topics. S/U grading.

M255. Biological Catalysis. (4) (Same as Biological Chemistry M255, Chemistry CM255, and Molecular, Cell, and Developmental Biology CM252.) Requisites: Chemistry 110A, 153A, 153B, Life Sciences 3, Molecular, Cell, and Developmental Biology 100 or C139 or M140. Reaction mechanisms in molecular biology; experimental approaches for study of enzymes, including kinetics, isotopic labeling, stereochemistry, chemical modification, and spectroscopy; design of pharmacologically active agents and artificial enzymes. Drug metabolism and interactions addressed on a mechanistic level.

M257. Introduction to Toxicology. (4) (Same as Pathology M257.) Requisite: course 241. Biochemical and systemic toxicology, basic mechanisms of toxicology, and interaction of toxic agents with specific organ systems.

M258. Pathologic Changes in Toxicology. (4) (Same as Pathology M258.) Designed to give students experience in learning normal histology of tissues which are major targets of toxin and the range of pathologic changes that occur in these tissues (liver, bladder, lung, kidney, nervous system, and vascular system).

288. Gene Therapy. (4) Lecture, three hours; discussion, one hour. Introduction to basic concepts of gene therapy, wherein treatment of human disease is based on transfer of genetic material into an individual. Molecular basis of disease, gene delivery vectors, and animal models. Letter grading.

291. Special Topics in Pharmacology. (2 to 4) Examination in depth of topics of current importance in pharmacology. Emphasis on recent contributions of special interest to advanced Ph.D. candidates and faculty.

298. Seminar: Current Topics in Molecular and Medical Pharmacology. (2) Limited to pharmacology, ACCESS program, and interdepartmental Molecular Biology Ph.D. program students. Students conduct or participate in discussions on assigned topics. S/U or letter grading.

375. Teaching Apprentice Practicum. (1 to 4) Preparation: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

596. Directed Individual Research in Pharmacology. (4 to 12) Tutorial, to be arranged.

599. Research for and Preparation of Ph.D. Dissertation. (4 to 12) Tutorial, to be arranged.

Scope and Objectives

The Ph.D. in Molecular Biology is offered under the supervision of an interdepartmental committee. The Molecular Biology Institute serves this committee and the various departments concerned in support of faculty research and teaching associated with the Ph.D. program. Staff members are from participating departments and from the Molecular Biology Institute. Areas for study include cell biology; developmental biology and neurobiology; DNA replication, repair, and recombination; gene regulation; immunobiology; microbiology/virology; molecular evolution and paleobiology; oncogenes and signal transduction; plant molecular biology; protein structure and function; and structural biology.

Graduate Study

The following constitutes introductory information regarding graduate degree programs and is based on the 1998-99 edition of *Program Requirements for UCLA Graduate Degrees*. Complete, annual editions of *Program Requirements* are available (listed under "Publications") on the Graduate Division website at <http://www.gdnet.ucla.edu>. Students are sub-

ject to the degree requirements as published in *Program Requirements* for the year in which they matriculate.

Doctoral Degree

Admission

The Molecular Biology Interdepartmental Program admits graduate students to the Ph.D. program in Molecular Biology through UCLA ACCESS to Programs in the Molecular, Cellular, and Integrative Life Sciences, 172 MBI, UCLA, Box 951570, Los Angeles, CA 90095-1570, (310) 206-6051.

At the completion of the first-year UCLA ACCESS curriculum, including three laboratory rotations, students choose a permanent research and thesis adviser. Students interested in entering the program for their research work must choose a research adviser who is a member of the Molecular Biology Institute (MBI) faculty. Entrance to the program is determined by an evaluation of the student's undergraduate and first-year graduate performance and the proposed area of thesis research. Undergraduate coursework should include calculus, general chemistry and/or biochemistry, organic chemistry, physics, biology, and genetics. Any course deficiencies should be addressed in the first year in the UCLA ACCESS program.

Major Fields or Subdisciplines

Consult the department.

Course Requirements

A minimum of 12 units per quarter must be maintained during graduate study. Grades of B or better must be received in all courses. Any grade less than a B requires a repeat of the course, or its equivalent, as per the approval of the graduate adviser.

First Year. Successful completion of the UCLA ACCESS curriculum, including any of the core courses, student seminar courses, and the ethics course is required. Recommended C-level elective: Biological Chemistry CM248.

Second Year. Two to three sections of Molecular Biology 298 (see NOTE under Written and Oral Qualifying Examinations). These may be taken one per quarter, or students may choose to take two in one quarter. Three different topics are offered each quarter taught by various MBI faculty members. Students have the choice of grading basis, either letter grade or S/U.

Second through Sixth Years. Independent research: one 596 course prior to advancement to candidacy and one 599 course after advancement to candidacy.

Written and Oral Qualifying Examinations

The written examination is coupled to the Molecular Biology 298 student seminar courses. One examination must be submitted for each of the three required 298 sections. (NOTE: Alternatively, one of three papers may be submitted for a student seminar during the first year

of study in the UCLA ACCESS program, and the third 298 section may then be waived.) Examinations take the form of a single-spaced, three page (or equivalent) research proposal based on the topic and required reading for each section. Papers are graded separately from the course grade, on a pass, rewrite, or no pass basis. A constructive critique is provided by the instructor to give students the opportunity to improve their skills in critical analysis and experimental design. All three papers must be passed before presenting the oral qualifying examination and advancing to candidacy.

Research Proposition. The University Oral Qualifying Examination is held at the end of the second year of graduate study, after the required three written qualifying examinations (298 papers) have been passed. The examination includes preparation of a written research proposition, which gives the doctoral committee the opportunity to judge the student's ability to think creatively and formulate significant ideas for research. The subject of the proposal should not be immediately connected with the student's own thesis research, although it may be in the same very broad, general area (i.e., molecular genetics). The topic selected must be approved by the student's research adviser and by the graduate adviser. The oral examination covers the student's proposition as well as general scientific background. More detailed instructions on the written proposal and oral examination are available in the Molecular Biology Graduate Office.

Midstream Seminar. Students meet with their doctoral committee every year during their graduate study. In year two for their University Oral Qualifying Examination, in year six (or earlier) for their final oral examination (dissertation defense), and in years three, four, and five on a more informal basis to evaluate progress, define specific goals, and solicit advice on the direction of further research. The doctoral committee meeting in year three takes the form of a "midstream seminar," where the student presents to the committee a summary of the background, objectives, present accomplishments, and future plans for the dissertation research. The student may present the history and significance of the area and discuss the merits and pitfalls of the particular experimental approach being taken.

Molecular Biology

Graduate Courses

297. Seminar: Molecular and Cellular Life Sciences. (2) In-depth surveys of recent developments in specific fields of life sciences research. By reading and presenting primary research articles, students learn to critically evaluate research papers and organize and present a seminar on a specific research topic. S/U or letter grading.

298. Seminar: Current Topics in Molecular Biology. (2) (Formerly numbered M298.) Students conduct and participate in discussions on assigned topics. May be repeated for credit. S/U or letter grading.

Related Courses

The following courses offered by the departments listed are particularly appropriate to the research areas mentioned above. With the approval of the guidance committee or research supervisor, other related courses may be included in the program.

Biological Chemistry

M221. Cellular and Molecular Neurochemistry
CM248. Molecular Genetics
CM253. Macromolecular Structure
M255. Biological Catalysis
M263. Metabolism and Its Regulation
M264A-M264B-M264C. Molecular Basis of Atherosclerosis: Selected Topics
M266A-M266B-M266C. Seminars: Molecular Embryology
CM267. Cell Structure, Signaling, and Differentiation

Chemistry and Biochemistry

M230B. Structural Molecular Biology
M230D. Structural Molecular Biology Laboratory
CM253. Macromolecular Structure
M263. Metabolism and Its Regulation
M264A-M264B-M264C. Molecular Basis of Atherosclerosis
M267. Cell Structure, Signaling, and Differentiation

Microbiology and Immunology

250. Cell and Molecular Biology
M256. Seminar: Viral Oncology
M260. Immunology Forum
M262A. Seminar: Current Topics in Immunobiology of Cancer
M263. Molecular and Cellular Immunology Seminar

Microbiology and Molecular Genetics

242. Seminar: Microbial Molecular Genetics
M248. Molecular Genetics
250. Seminar: Microbial Metabolism
251. Seminar: Regulation and Differentiation
M260. Immunology Forum
M263. Molecular and Cellular Immunology Seminar
290. Seminar: Molecular Genetics

Molecular, Cell, and Developmental Biology

228. Prokaryotic and Eukaryotic Gene Systems
M230B. Structural Molecular Biology
M230D. Structural Molecular Biology Laboratory
M234. Genetic Control of Development
CM248. Molecular Genetics
257A. Gene Manipulation: Genetic Engineering

Scope and Objectives

The revolution in modern biology that began with the elucidation of the structure of DNA by Watson and Crick in the 1950s has had a profound effect not only on biological research, but on the way biology is taught as a subject. The field of biology spawned by this discovery, generally called molecular biology, has provided an entirely new framework within which to approach questions in cell and developmental biology. The specializations, both technical and conceptual, demanded by this field have led to the growth of molecular biology and its related disciplines into an essentially separate branch of scientific inquiry.

Students who complete the requirements for the Bachelor of Science degree in Molecular, Cell, and Developmental Biology are exceptionally well prepared to pursue careers in cellular and subcellular biological research, biomedical research, or medicine or allied health fields. The degree combines essential background studies in mathematics, chemistry, and physics with a general introduction to all of the biological subjects, as well as in-depth exposure to key topics in molecular, cell, and developmental biology. The M.A. and Ph.D. degrees provide opportunities for advanced concentrated study and require independent and innovative research that ultimately results in publishable thesis and dissertation materials.

Undergraduate Study**Molecular, Cell, and Developmental Biology B.S.**

The Bachelor of Science degree in Molecular, Cell, and Developmental Biology (MCDB) is designed especially for students who intend to

go on to postgraduate work in biology or medicine and for students aiming for entry-level positions in biotechnology-related fields. Students are exposed to basic biological and molecular concepts underlying recent technical advances in molecular, cell, and developmental biology of animals and plants. Areas of emphasis include cell biology, immunology, molecular biology, plant biology, developmental biology, and neurobiology, among others.

Preparation for the Major**Life Sciences Core Curriculum**

Required: Life Sciences 1, 2, 3, 4; Chemistry and Biochemistry 14A, 14B/14BL, 14C/14CL, and 14O, or 20A, 20B, 20L, 30, 30L, and 130A/130AL; Mathematics 3A, 3B, and 3C, or 31A, 31B, and 32A; Physics 1A, 1B, 1C, 4AL, and 4BL, or 6A, 6B, and 6C.

All core curriculum courses must be passed with a grade of C– or better and must be completed with an overall grade-point average of 2.0 or better. Students receiving a grade of D or F in two core curriculum courses, either in separate courses or repetitions of the same course, are subject to dismissal from the major.

Transfer Students

To be admitted as Molecular, Cell, and Developmental Biology majors, transfer students with 80 or more units must complete the following courses prior to admission to UCLA: one year of general biology with laboratory for majors, preferably equivalent to Life Sciences 1 and 2, one year of calculus, one year of general chemistry with laboratory, and one semester of organic chemistry with laboratory. A second semester of organic chemistry or one year of calculus-based physics is strongly recommended but not required for admission.

The Major

(1) *Required Courses:* Chemistry and Biochemistry 153A, 153L, Molecular, Cell, and Developmental Biology 100 or C139 or M140, 104, 138 or C141, 144.

(2) *Electives:* At least 24 upper division elective units, of which at least 12 must be in courses offered by the department. Any upper division departmental course, except Molecular, Cell, and Developmental Biology 193 or 199, is acceptable. The following courses outside the department may be taken to satisfy a maximum of 12 units in this category: Chemistry and Biochemistry 153C, 156, CM159A, CM159B, Microbiology and Molecular Genetics 101, 102, C106, C112, C159, Organismic Biology, Ecology, and Evolution 110, 146, 162, M166.

(3) *Laboratory:* At least four units of upper division laboratory experience selected from Chemistry and Biochemistry 154, Microbiology and Molecular Genetics 101/101L (both courses must be taken), 102/102L (both courses must be taken), Molecular, Cell, and Developmental Biology 155, 190A through 190D, 199, Organismic Biology, Ecology, and Evolution M158, 162, M166.

Additional Requirements

(1) A maximum of eight units of Molecular, Cell, and Developmental Biology 190 may be applied toward the major. Credit for 199 courses from other departments may not be applied except by petition.

(2) Any single course may be applied toward only one category within the major (e.g., only course C141 may be applied toward the required or elective category but not toward both).

(3) Courses applied toward requirements for preparation for the major and the major must be taken for a letter grade. MCDB majors must earn a C– or better in each preparation for the major course, and at least a 2.0 (C) overall average in all courses applied toward the major.

Graduate Study

The following constitutes introductory information regarding graduate degree programs and is based on the 1998-99 edition of *Program Requirements for UCLA Graduate Degrees*. Complete, annual editions of *Program Requirements* are available (listed under “Publications”) on the Graduate Division website at <http://www.gdnet.ucla.edu>. Students are subject to the degree requirements as published in *Program Requirements* for the year in which they matriculate.

Master's Degree**Admission**

The department does not accept students whose sole objective is the Master of Arts degree in Molecular, Cell, and Developmental Biology. The department rarely awards the master's degree except in instances where the student is unable to complete the requirements for the doctorate.

Areas of Study

See under Doctoral Degree.

Course Requirements

The program consists of at least nine courses in graduate standing, of which at least five must be graduate-level (200 series) courses. The remainder may be courses in the 100, 200, or 500 series. No more than two 596 courses (eight units) may be applied toward the nine courses required for the degree; only one 596 course (four units) may be applied toward the minimum graduate course requirement. Courses graded S/U may be not be applied toward the minimum requirement unless these courses are not offered for a letter grade.

Specific course requirements are established for each student by the guidance committee.

Comprehensive Examination Plan

The departmental written qualifying examination, or its equivalent as determined by the graduate adviser, serves as the comprehensive examination for the M.A. degree.

Thesis Plan

A thesis reporting the results of an original investigation, written to conform to the requirements of the Graduate Division, is presented to and approved by the master's thesis committee of three faculty members. Before beginning work on the thesis, students must obtain approval of the subject and general plan from the faculty members concerned and from the thesis committee.

Doctoral Degree

Admission

The Department of Molecular, Cell, and Developmental Biology admits students directly into the program leading to the Ph.D. degree in Molecular, Cell, and Developmental Biology and also through UCLA ACCESS to Programs in the Molecular, Cellular, and Integrative Life Sciences, 172 MBI, UCLA, Box 951570, Los Angeles, CA 90095-1570, (310) 206-6051.

The department expects graduate students to have or to acquire a background comparable to the requirements for the B.S. degree in Molecular, Cell, and Developmental Biology at UCLA. A background in chemistry, physics, and mathematics is essential. Deficiencies in these or other subjects must be made up at the earliest opportunity, preferably during the first year of the Ph.D. program.

Applications and additional information may be obtained from Student Affairs Office, 2316 Life Sciences, UCLA, Box 951606, Los Angeles, CA 90095-1606, or from UCLA ACCESS.

Major Fields or Subdisciplines

Fields of emphasis in molecular, cell, and developmental biology naturally reflect the research foci of the faculty. These include cell biology, molecular biology, genetics and developmental biology, in both plants and animals; and immunology, neurobiology, parasitology and molecular evolution.

Course Requirements

In addition to any remedial coursework specified by the graduate adviser, all Ph.D. students are required to take (and pass with grades of B or better) a minimum of four graduate-level courses and three graduate seminars approved by the department. Students may elect, in consultation with their thesis adviser, to take additional graduate courses or seminars in a particular area of specialization. Consult the department for course requirements.

All molecular, cell, and developmental biology graduate students are required to take the teaching assistant training course (Molecular, Cell, and Developmental Biology 495) and are expected to teach a minimum of three quarters during their graduate careers. Students indicate to the Graduate Office which quarter they are available to be a teaching assistant. If they fail to volunteer and fall behind in the normal schedule of a teaching assistant, the graduate adviser may assign them to a course arbitrarily.

Written and Oral Qualifying Examinations

Written Qualifying Examination. The written qualifying examination must be passed before taking the University Oral Qualifying Examination. The written qualifying examination requirement is satisfied through written papers generated in connection with selected courses, including seminar courses. Such papers are separate from the formal course requirements for these courses and do not form part of the course grade. It is the responsibility of the student to arrange with the instructor at the beginning of a course to submit such a paper at the end of the course. (The department's version of the written qualifying examination is used by most Ph.D. programs in the molecular life sciences, and the graduate courses taken by molecular life sciences students all offer the written qualifying examination paper option.) The papers are in the form of a mini research proposal and are graded as pass, rewrite, or fail. If a rewrite is required, specific criticism is supplied by those grading the paper. A minimum of three such papers, with a grade of pass, is required. A copy of each paper, with graders' comments, becomes part of the student's file.

Oral Qualifying Examination. The University Oral Qualifying Examination, ordinarily taken by the end of the second year in residence, is composed of two sections: presentation of an independent research proposal, and testing of general knowledge of advanced biology. The examinations are administered by the doctoral committee and conform to the standard requirements of the Graduate Division. Detailed instructions and suggestions are given in the *Graduate Student Handbook*.

Molecular, Cell, and Developmental Biology

Lower Division Courses

30. Biology of Cancer. (4) Introduction to molecular, cellular, and clinical aspects of cancer and consideration of sociological and psychological impacts of cancer on the individual and society. P/NP or letter grading.

40. AIDS and Other Sexually Transmitted Diseases. (4) Introduction to interdisciplinary debate surrounding the personal and societal response to AIDS and other sexually transmitted diseases. P/NP or letter grading.

70. Genetic Engineering and Society. (4) Lecture, three hours; discussion, two hours. Designed for nonmajors. Not open to students with credit for Life Sciences 3 or 4. Basic principles of genetic engineering. Overview of genetic engineering techniques and relationship of genetic engineering to medicine, agriculture, and society. Emphasis on specific genetic engineering applications to generate discussion on its use in society.

80. The Green World: Plant Biology for Now and the Future. (4) Lecture, three hours; laboratory, two hours. Designed for nonmajors. Basic principles of plant biology and introduction to techniques for manipulating plants for improved agriculture, sources of renewable "clean" energy, reclamation of deforested and nutritionally depleted soils, and "biological factories" to produce biodegradable plastics, antibodies, and other commodities. Underexploited agriculture crops also featured. P/NP or letter grading.

88C. Lower Division Seminar: Frontiers of Molecular Biology — Historical Perspective. (4) Seminar, three hours. Limited to freshmen who have not completed Life Sciences 3. Designed for nonmajors. Study of biology at molecular level has unlocked secrets of the gene, started the biotechnology revolution, and promises a new scientific age that uses gene therapy to cure human disease, produce superplants that grow in the desert, and uncover the mysteries of the mind. Exploration of origins and history of molecular biology by analyzing papers written by Mendel, Watson, Crick, and others who played a major role in changing society with their discoveries of new biological principles. P/NP or letter grading.

88D. Lower Division Seminar: Genetics and Society. (4) Discussion, three hours. Some ways genetics affects us now and what changes are possible for our children. Examination of biological basis of inheritance in order to understand scientific methods and science teaching.

88E. Lower Division Seminar: Genetics and Society — Current Status and Future Applications. (4) Seminar, three hours; outside study, nine hours. Recent advances in genetics have opened up new possibilities in fields of forensics, medicine, agriculture, and industry, with corresponding legal, social, and economic ramifications. Examination of scientific/genetic basis underlying genetic engineering, genetic screening, gene therapy, eugenics, DNA fingerprinting, cloning, etc., and discussion of current and future applications. P/NP or letter grading.

88F. Lower Division Seminar: Science and Scientists — Expectations and Realities. (2) Examination of change from when science was done by individuals as an avocation without societal goals to contemporary science which is done by professionals and is driven by societal needs and pressures. P/NP or letter grading.

M88H. Lower Division Seminar: Limits of Biological Design through Physical Principles. (4) (Same as Physics M88.) Seminar, three hours. Enforced requisites: Chemistry 20A and 20B (or former courses 10A and 10B), Life Sciences 1, 3, Mathematics 3A, 3B, and 3C, or 31A, 31B, and 32A, Physics 1A, 1B, and 1C, or 2AH, 2BH, and 17, or 6A, 6B, and 6C. Specific examples of diverse biological design such as scaling of metabolic activity, bone and muscle mass, cell size, cell membranes and pumps, heart and blood circulation, swim bladders, insect vision, magnetic bacteria, etc., studied quantitatively using elementary mathematics and physical principles. Letter grading.

Upper Division Courses

100. Introduction to Cell Biology. (4) (Formerly numbered Biology 100B.) Lecture, three hours; discussion, one hour. Requisites: Chemistry 20 series or former courses 10A, 10B, and 10BL (may be taken concurrently), Life Sciences 3, 4. Not open for credit to students with credit for course C139 or M140 or former Biology 100B. Analysis of cell organization, structure, and function at molecular level. Cell membranes and organelles, membrane transport, cellular signaling, cytoskeleton and cell movement, intracellular trafficking, cell energetics.

104. Cell and Molecular Biology Laboratory. (6) Lecture, 90 minutes; discussion, one hour; laboratory, eight hours; outside study, seven and one-half hours. Requisites: Life Sciences 3, 4. Introduction to methods in molecular biology. Topics include purification, manipulation and analysis of DNA, RNA, and protein. Emphasis on computer sequence analysis and use of current literature.

CM133. Principles, Practices, and Policies in Biotechnology. (2) (Same as Biological Chemistry CM133, Biomedical Physics CM133, Chemical Engineering CM133, Chemistry CM133, Microbiology CM133, and Microbiology and Immunology CM133.) Lecture, three hours. Designed for juniors/seniors. Life and physical sciences majors and students in the School of Law and Anderson Graduate School of Management may find course useful in career preparation. Presentation of technologies, regulatory practices, and policies required for product development and review of current opportunities for new technology development. Topics include fermentation processes, pilot and large-scale bioprocess technologies, scaleup strategies, industrial recombinant DNA processes, hybridomas, protein engineering, peptide mimetics and rational drug design, medical and microscopic imaging, and intellectual property issues. Concurrently scheduled with course CM233. P/NP or letter grading.

138. Developmental Biology. (4) Lecture, three hours; discussion, one hour. Requisites: Life Sciences 3, 4. Cellular and molecular basis of animal embryology. Letter grading.

C139. Molecular Cell Biology. (6) Requisites: Chemistry 153A, Life Sciences 3. Not open for credit to students with credit for course 100 or M140. Introduction to cell biology for graduate students in basic medical sciences and selected undergraduates. Topics include membrane structure, assembly, and function; biogenesis of organelles, intercellular and intracellular signaling, immunity and gene structure, function and replication. Concurrently scheduled with course CM220.

M140. Cell Biology: Cell Cycle. (5) (Same as Biological Chemistry M140.) Lecture, three hours; discussion, one hour. Requisites: Chemistry 14A and 14B/14BL, or 20 series, Life Sciences 3, 4. Not open for credit to students with credit for course 100 or C139. Satisfies premedical requirements. Eukaryotic cellular structures and biogenesis at a molecular level. Biochemical and genetic analysis of cell cycle, signal transduction, and their involvement in development and cancer. Protein sorting and transport across cell membranes. Cytoskeletal components and cell-adhesion.

C141. Molecular Basis of Plant Differentiation and Development. (4) (Formerly numbered Biology C141.) Lecture, three hours; discussion, one hour. Requisites: Life Sciences 1, 3, 4. In-depth study of basic processes of growth differentiation and development in plants and molecular mechanisms underlying these processes. Discussion of a variety of plant systems, with focus on developing critical understanding of current experimental basis of research in this field. Concurrently scheduled with course C239.

142. Seminar: Topics in Developmental Biology. (2) Requisite: course 138. Undergraduate seminar on topics in developmental biology. Reading and group discussions on current research. P/NP or letter grading.

144. Molecular Biology. (4) Lecture, three hours; discussion, one hour. Requisites: Life Sciences 3, 4. Not open for credit to students with credit for former Biology 100A, Chemistry 153B, or Organismic Biology 121. Structure of genes and chromosomes; prokaryotic and eukaryotic replication and transcription; repair and recombination; RNA processing.

C150. Plant Chemical and Molecular Communication. (4) (Formerly numbered 150.) Lecture, three hours; discussion, one hour. Preparation: completion of life sciences core curriculum. Introductory course in chemical ecology and how natural compounds affect gene expression. Emphasis on role of natural compounds in plant/microbe, plant/plant, and plant/herbivore. Interactions; synopsis of principles of plant defense mechanisms and responses to microbial infections. Concurrently scheduled with course C250.

155. Molecular Genetic Methods. (4) Lecture, two hours; discussion, one hour; laboratory, six hours; outside study, three hours. Recommended preparation: course 104. Designed for and limited to Molecular, Cell, and Developmental Biology majors for priority pass and first pass. Gene mapping and detection and analysis of gene variants by means of inheritance patterns. Letter grading.

CM156. Human Genetics. (4) (Same as Human Genetics CM156 and Microbiology CM156.) Lecture, three hours; discussion, two hours. Requisites: Life Sciences 3, 4. Strongly recommended: course 100 or C139 or M140. Application of genetic principles in human populations, with emphasis on cytogenetics, biochemical genetics, population genetics, and family studies. Lectures and readings in the literature, with focus on current questions in the fields of medical and human genetics and methodologies appropriate to answer such questions. Concurrently scheduled with course CM256. Letter grading.

CM160. Biological Catalysis. (4) (Same as Chemistry CM155.) Requisites: course 100 or C139 or M140, Chemistry 110A, 153A, 153B, Life Sciences 3. Reaction mechanisms in molecular biology; experimental approaches for study of enzymes, including kinetics, isotopic labeling, stereochemistry, chemical modification, and spectroscopy; design of pharmacologically active agents and artificial enzymes. Drug metabolism and interactions addressed on a mechanistic level. Concurrently scheduled with course CM252.

CM168. Molecular Parasitology. (4) (Same as Microbiology CM168.) Lecture, three hours; discussion, one hour. Requisites: Life Sciences 3, 4. Survey of parasitic protozoa not only as parasites which interact with a host, but also as model systems for analysis of basic biological phenomena such as gene regulation, molecular development, cell-cell interactions, molecular evolution, and novel biochemical pathways. Concurrently scheduled with course CM268. Letter grading.

CM169. Cell Structure, Signaling, and Differentiation. (6) (Same as Biological Chemistry CM169 and Human Genetics CM169.) Lecture, five hours. Requisites: Chemistry 153A, 153B, 153C. Recommended: Chemistry CM153G. Cell cycle regulation; chromosomes and DNA repair; protein trafficking and endocytosis; extracellular matrix, cell to cell communication and signal transduction; cell transformation and apoptosis; molecular aspects of development, differentiation, and cancer. Concurrently scheduled with course CM223. Letter grading.

M170. Biochemistry and Molecular Biology of Photosynthetic Apparatus. (2 to 4) (Same as Chemistry CM170.) Lecture, two to three hours; discussion, zero to two hours; outside study, four to seven hours. Requisites: Chemistry 153A and 153B, or Life Sciences 3, and Chemistry 153L. Recommended: Chemistry 153C, 154, Life Sciences 4. Light harvesting, photochemistry, electron transfer, carbon fixation, carbohydrate metabolism, pigment synthesis in chloroplasts and bacteria. Assembly of photosynthetic membranes and regulation of genes encoding those components. Emphasis on understanding of experimental approaches. P/NP or letter grading.

171. Principles of Neurobiology. (4) Lecture, three hours; discussion, one hour. Requisites: Life Sciences 3, Organismic Biology M166. Strongly recommended: course 100 or C139 or M140. Introduction to basic principles of neurobiology, including description of structure of neurons and nervous systems; ionic mechanisms responsible for generating membrane potentials, action potentials, and synaptic potentials; properties of synaptic transmission, information transduction and coding in sensory pathways, and neural control of movement; development of and trophic interactions between cells of nervous system.

C172. Molecular Genetics of Bacteria and Phage. (4) Lecture, three hours; discussion, one hour. Molecular and cellular biology of bacteria and bacteriophages. Concurrently scheduled with course CM207.

C174A-C174G. Advanced Topics in Cell and Molecular Biology. (2 each) (Formerly numbered C174A-C174F.) Lecture. Recent developments in fields of molecular, cell, and developmental biology. Concurrently scheduled with courses C222A-C222G. Letter grading:

C174A. Molecular Evolution. (2) Lecture, two hours. Requisites: courses 100 or C139 or M140, 144, Life Sciences 4. Current developments in the field of molecular evolution. Constructing evolutionary trees at molecular level; formal testing of evolutionary hypotheses using sequencing data. Letter grading.

C174B. Molecular Biology of Cell Nucleus. (2) Lecture, two hours. Requisites: courses 100 or C139 or M140, 144, Life Sciences 4. Animal cell nucleus regulation of cell metabolism. Structure/function relationships, nuclear-cytoplasmic exchange, DNA replication and gene expression. Letter grading.

C174D. Molecular Biology of Extracellular Matrix. (2) Lecture, two hours. Requisites: courses 100 or C139 or M140, 144, Life Sciences 4. Recommended: course 138. Synthesis of key extracellular matrix proteins and their assembly into supramolecular structures. Interactions of matrix proteins with cells and their influence on tissue formation. Letter grading.

C174F. Molecular Parasitology. (2) Lecture, two hours. Examination of recent advances in molecular biology of parasites and host/parasite relationship. Specific topics include parasite development, antigenic variation in trypanosomes, RNA editing, prospects for parasitic vaccines. Letter grading.

C174G. Signal Transduction by G-Protein Coupled Receptors. (2) Lecture, one hour; discussion, one hour. Requisites: course 100 or C139 or M140, Life Sciences 3, 4. Introduction to G-protein mediated signal transduction as used by sensory neurotransmitter, and many hormones receptors that alter intracellular second messengers. Structure and functions of molecules that participate in signal transduction via G proteins (receptors, G proteins, effectors), with emphasis on original experiments leading to present concepts. Letter grading.

M175A-M175B-M175C. Neuroscience: From Molecules to Mind. (5-5-5) (Same as Neuroscience M101A-M101B-M101C, Physiological Science M180A-M180B-M180C, and Psychology M117A-M117B-M117C.) Lecture, four hours; discussion, one hour. P/NP or letter grading:

M175A. Cellular and Systems Neuroscience. (5) Lecture, four hours; discussion, one hour. Requisites: Chemistry 14C or 30 or former course 10D (14C may be taken concurrently), Life Sciences 2, Physics 1B or 6C. Not open for credit to students with credit for Physiological Science 111A. Cellular neurophysiology, membrane potential, action potentials, and synaptic transmission. Sensory systems and motor system; how assemblies of neurons process complex information and control movement. P/NP or letter grading.

M175B. Molecular and Developmental Neuroscience. (5) Lecture, four hours; discussion, one hour. Requisites: course M175A (or Neuroscience M101A or Physiological Science M180A or Psychology M117A) or Physiological Science 111A or Psychology 115, Life Sciences 3, 4. Molecular biology of channels and receptors: focus on voltage dependent channels and neurotransmitter receptors. Molecular biology of supramolecular mechanisms: synaptic transmission, axonal transport, cytoskeleton, and muscle. Classical experiments and modern molecular approaches in developmental neurobiology. P/NP or letter grading.

M175C. Behavioral and Cognitive Neuroscience. (5) Lecture, four hours; discussion, one hour. Requisite: course M175B (or Neuroscience M101B or Physiological Science M180B or Psychology M117B) or Physiological Science 111A or Psychology 115. Neural mechanisms underlying motivation, learning, and cognition. P/NP or letter grading.

M176. Advanced Topics in Animal Virus/Host Interaction. (4) (Formerly numbered 176.) (Same as Microbiology M176.) Lecture, four hours; discussion, one hour; outside study, seven hours. Requisites: Life Sciences 3, 4. Recommended: course 144 or Chemistry 153B or Microbiology 102. Recent developments in fields of interaction of hosts with animal viruses. Emphasis on molecular and cellular approaches to understand host/virus interaction at level of entry, replication, assembly, and morphogenesis, as well as host defense and viral pathogenesis. P/NP or letter grading.

C177. Molecular Biology of Animal Viruses. (4) Lecture, three hours. Requisites: Chemistry 153B, Life Sciences 3. Recommended for advanced undergraduate students with a major in public health, biology, or microbiology and for graduate students with interest in any field of biology or chemistry. Overview of animal viruses, including viral structure, virus cell interaction, virus replication, and viral oncogenesis. Special emphasis on understanding the molecular mechanism involved in control and regulation of replication, transcription, and translation of viral genome and its complex interaction with host. Concurrently scheduled with course CM279.

CM178. Molecular Genetics. (6) (Same as Biological Chemistry CM178 and Human Genetics CM178.) Lecture, five hours. Requisites: course 100 or C139 or M140, Chemistry 153A, 153B, Life Sciences 3, 4. Basic concepts in modern genetics, with examples from both eukaryotic and prokaryotic systems. Emphasis on use of genetic techniques for addressing fundamental questions in cellular biochemistry. Topics include mutagenesis, repair, recombination, transposition, genetic regulation, developmental genetics, neurogenetics, and immunogenetics. Concurrently scheduled with course CM248. Letter grading.

C180. Molecular and Cellular Immunology. (6) Lecture, four and one-half hours; discussion, 90 minutes. Requisites: course 100 or C139 or M140, Chemistry 153A, Life Sciences 3. Not open for credit to students with credit for course M185A. Comprehensive course for graduate students and selected undergraduates covering fundamentals and recent advances in molecular and cellular immunology. Lectures supplemented with discussion section focusing on reading and analysis of primary research articles. Concurrently scheduled with course CM261.

M185A. Immunology. (5) (Same as Microbiology M185A and Microbiology and Immunology M185A.) Lecture, three hours; discussion, 90 minutes; outside study, 11.5 hours. Requisites: Life Sciences 3, 4. Recommended requisites or corequisites: course 100 or C139 or M140, Chemistry 153A, 153L. Not open for credit to students with credit for course C180/CM261. Introduction to experimental immunobiology and immunochemistry; cellular and molecular aspects of humoral and cellular immune reactions.

CM185B. Intermediate Immunology. (4) (Same as Microbiology CM185B.) Lecture, three hours; discussion, one hour. Requisite: course C180 or M185A. Recommended corequisite: Chemistry 153B. In-depth exploration of topics introduced in course M185A. Concurrently scheduled with course CM285.

189. Seminar: Social Implications of Current Biological Research. (2) Seminar, two hours; outside study, four hours. Discussions about how current research in biology, particularly in areas of molecular, cell, and developmental biology, affects social issues and policy. May be repeated once for credit; however, only two units of this course or Organismic Biology 188 may be applied toward either the Biology or Molecular, Cell, and Developmental Biology major.

190A-190D. Honors Research in Molecular, Cell, and Developmental Biology. (2 to 4 each) Limited to seniors. Individual research designed to broaden and deepen students' knowledge of some phase of molecular, cell, and developmental biology. Must be taken with Molecular, Cell, and Developmental Biology Department faculty for at least two terms and for a total of at least eight units. In Progress grading (credit to be given only on completion of course 190B). Students may elect to enroll in additional research through courses 190C-190D (letter grading). A report on progress must be presented to undergraduate adviser each term a 190 course is taken. Eight units may be applied toward Molecular, Cell, and Developmental Biology major.

M191. Biological Bases of Psychiatric Disorders. (4) (Same as Neuroscience M130, Physiological Science M181, Psychiatry M191, and Psychology M117J.) Lecture, three hours. Requisite: course M175A (or Neuroscience M101A or Physiological Science M180A or Psychology M117A) or Physiological Science 111A or Psychology 115. Underlying brain systems involved in psychiatric syndromes and neurological disorders, including schizophrenia, depression, bipolar disorders, obsessive/compulsive disorder, eating disorders. Provides basic understanding of brain dysfunctions that contribute to disorders and rationales for pharmacological treatments.

193. Teaching Practicum in Molecular, Cell, and Developmental Biology. (4) Limited to junior/senior Molecular, Cell, and Developmental Biology majors. Training and supervised practicum for advanced undergraduates in teaching cell and molecular biology. Students serve as junior teaching assistants and assist in preparation of materials and development of innovative programs. Consult Undergraduate Office for further information. May not be applied toward course requirements for Biology or Molecular, Cell, and Developmental Biology majors. May be repeated once for credit. P/NP or letter grading.

199. Special Studies. (2 to 16) Preparation: submission of written proposal outlining the study or research to be undertaken. Studies to involve laboratory or field-related research, not literature surveys or library research. Proposal should be worked out in consultation with instructor and submitted for approval to undergraduate adviser before the day instruction begins in that term. At end of term a report describing progress of the study or research and signed by the student and instructor must be presented to undergraduate adviser. Students who wish to take more than eight units of course 199 in any one term must obtain authorization from department chair and appropriate dean.

Graduate Courses

M201. Use of the Computer in Biology. (2) (Formerly numbered 201.) (Same as Human Genetics M201 and Microbiology and Immunology M241.) Lecture, two hours; laboratory, one hour. Introduction to use of IBM PC microcomputer and VAX minicomputer in biological research. S/U grading.

CM207. Molecular Genetics of Bacteria and Phage. (4) (Same as Chemistry M227, Microbiology M227, and Microbiology and Immunology M227.) Lecture, three hours; discussion, one hour. Requisite: Biological Chemistry CM253 or Chemistry CM253. Molecular and cellular biology of bacteria and bacteriophages. Concurrently scheduled with course C172.

M217. Basic Science and Strategies of Gene Therapy. (2) (Same as Microbiology and Immunology M217 and Microbiology M217.) Preparation: basic knowledge of virology. Basic science and viral vector systems utilized for gene therapy. S/U grading.

CM220. Molecular Cell Biology. (6) (Same as Neurobiology M209A and Physiology M209A.) Not open for credit to students with credit for course 100 or M140. Introduction to cell biology for graduate students in basic medical sciences and selected undergraduates. Topics include membrane structure, assembly, and function; biogenesis of organelles, intercellular and intracellular signaling, immunity and gene structure, function and replication. Concurrently scheduled with course C139.

C222A-C222G. Advanced Topics in Cell and Molecular Biology. (2 each) (Formerly numbered C222A-C222F.) Lecture. Recent developments in fields of molecular, cell, and developmental biology. Concurrently scheduled with courses C174A-C174G. Letter grading:

C222A. Molecular Evolution. (2) Lecture, two hours. Requisites: courses 100 or C139 or M140, 144, Life Sciences 4. Current developments in the field of molecular evolution. Constructing evolutionary trees at molecular level; formal testing of evolutionary hypotheses using sequencing data. Original research proposal required. Letter grading.

C222B. Molecular Biology of Cell Nucleus. (2) Lecture, two hours. Requisites: courses 100 or C139 or M140, 144, Life Sciences 4. Animal cell nucleus regulation of cell metabolism. Structure/function relationships, nuclear-cytoplasmic exchange, DNA replication and gene expression. Original research proposal required. Letter grading.

C222D. Molecular Biology of Extracellular Matrix. (2) Lecture, two hours. Requisites: courses 100 or C139 or M140, 144, Life Sciences 4. Recommended: course 138. Synthesis of key extracellular matrix proteins and their assembly into supramolecular structures. Interactions of matrix proteins with cells and their influence on tissue formation. Original research proposal required. Letter grading.

C222F. Molecular Parasitology. (2) Lecture, two hours. Examination of recent advances in molecular biology of parasites and host/parasite relationship. Specific topics include parasite development, antigenic variation in trypanosomes, RNA editing, prospects for parasitic vaccines. Original research proposal required. Letter grading.

C222G. Signal Transduction by G-Protein Coupled Receptors. (2) Lecture, one hour; discussion, one hour. Requisites: course 100 or C139 or M140, Life Sciences 3, 4. Introduction to G-protein mediated signal transduction as used by sensory, neurotransmitter, and many hormones receptors that alter intracellular second messengers. Structure and functions of molecules that participate in signal transduction via G proteins (receptors, G proteins, effectors), with emphasis on original experiments leading to present concepts. Letter grading.

CM223. Cell Structure, Signaling, and Differentiation. (6) (Same as Biological Chemistry CM267, Chemistry M267, and Human Genetics CM267.) Lecture, five hours. Requisites: Chemistry 153A, 153B, 153C. Recommended: Chemistry CM153G. Cell cycle regulation; chromosomes and DNA repair; protein trafficking and endocytosis; extracellular matrix, cell to cell communication and signal transduction; cell transformation and apoptosis; molecular aspects of development, differentiation, and cancer. Concurrently scheduled with course CM169. Letter grading.

M226A-M226B. Principles of Microbial Pathogenesis. (4-4) (Same as Microbiology M226A-M226B and Microbiology and Immunology M226A-M226B.) Lecture, one hour; discussion, three hours. Requisites: Microbiology and Immunology 202A, 202B, 202C, 202D. Lecture/discussion format designed to analyze basic pathogenesis of infections. Emphasis on molecular and cellular approaches to understand host-microbial interaction. **M226A.** Bacterial and Mycotic Infections; **M226B.** Parasitic and Viral Infections.

228. Prokaryotic and Eukaryotic Gene Systems. (2) Presentations concerning current experimental approaches in study of DNA replication, organization, transcription, and translation.

M229. Cellular Biology of Host/Pathogen Interactions. (6) (Same as Microbiology M229 and Microbiology and Immunology M229.) Lecture, four hours; discussion, 90 minutes. Requisite: Biological Chemistry CM253. Molecular and cellular biology of pathogens, eukaryotic host cells, and interaction between pathogens and hosts.

M230B. Structural Molecular Biology. (4) (Same as Chemistry M230B.) Lecture, three hours; discussion, one hour. Requisites: Mathematics 3C, Physics 6C. Selected topics from principles of biological structure; structures of globular proteins and RNAs; structures of fibrous proteins, nucleic acids, and polysaccharides; harmonic analysis and Fourier transforms; principles of electron, neutron, and X-ray diffraction; optical and computer filtering; three-dimensional reconstruction. S/U or letter grading.

M230D. Structural Molecular Biology Laboratory. (2) (Same as Chemistry M230D.) Laboratory, 10 hours. Corequisite: course M230B. Methods in structural molecular biology, including experiments utilizing single crystal X-ray diffraction, low angle X-ray diffraction, electron diffraction, optical diffraction, optical filtering, three-dimensional reconstruction from electron micrographs, and model building. S/U or letter grading.

CM233. Principles, Practices, and Policies in Biotechnology. (2) (Formerly numbered M233.) (Same as Biological Chemistry CM233, Biomedical Physics CM233, Chemical Engineering CM233, Chemistry CM233, Microbiology CM233, and Microbiology and Immunology CM233.) Lecture, three hours. Designed for graduate students. Life and physical sciences majors and students in the School of Law and Anderson Graduate School of Management may find course useful in career preparation. Presentation of technologies, regulatory practices, and policies required for product development and review of current opportunities for new technology development. Topics include fermentation processes, pilot and large-scale bioprocess technologies, scaleup strategies, industrial recombinant DNA processes, hybridomas, protein engineering, peptide mimetics and rational drug design, medical and microscopic imaging, and intellectual property issues. Concurrently scheduled with course CM133. S/U or letter grading.

M234. Genetic Control of Development. (4) (Formerly numbered Biology 234.) (Same as Biological Chemistry M234.) Topics at forefront of molecular developmental biology, including problems in oogenesis and early embryogenesis, pattern formation, axis determination, nervous system development, cellular morphogenesis, and cell-cell and cell-matrix interactions. S/U or letter grading.

M237. Introduction to Cellular Physiology and Biophysics. (6) (Same as Physiological Science M212 and Physiology M212.) Lecture, five hours. Requisite: Physiological Science 111A or Physiology M209A. Development of fundamental physiological and biophysical concepts associated with all membranes, membrane channels and transporters, membrane potential, membrane excitability, electrical signal transmission and transduction, and muscle contraction and their application to study of basic cellular processes. Emphasis in laboratory on development of skills using computer programming languages, spreadsheets, and graphics for modeling and analysis of cellular processes.

C239. Molecular Basis of Plant Differentiation and Development. (4) Lecture, three hours; discussion, one hour. Requisites: Life Sciences 1, 3, 4. In-depth study of basic processes of growth differentiation and development in plants and molecular mechanisms underlying these processes. Discussion of a variety of plant systems, with focus on developing critical understanding of current experimental basis of research in this field. Concurrently scheduled with course C141. Preparation and presentation of term paper, in addition to other coursework, required of graduate students.

M240. Cytokines and Reproductive Biology. (2) (Same as Microbiology M240 and Microbiology and Immunology M240.) Lecture, 90 minutes; discussion, one hour. Overview of current progress on research in cytokines and other immune system molecules in reproductive biology. S/U or letter grading.

242. Topics in Neurobiology. (4) Lecture, three hours. Requisite: course 171. Selected current problems in neurobiology discussed in depth, with emphasis on analysis of original papers. May be repeated for credit.

M246. Computer Analysis of Genetic Organization. (4) (Same as Microbiology M246 and Microbiology and Immunology M246.) Lecture, two hours; laboratory, six hours. Requisite: Life Sciences 4 or Microbiology C159. Lectures and laboratory instruction in contemporary procedures for analysis of nucleic acid and protein sequence data with the computer. No prior computer experience necessary; students gain both general and specialized facility with IBM PC and Digital VAX computers.

CM248. Molecular Genetics. (6) (Formerly numbered Biology CM248.) (Same as Biological Chemistry CM248, Human Genetics CM248, and Microbiology M248.) Lecture, five hours. Requisite: Biological Chemistry CM153G or Chemistry CM153G. Basic concepts in modern genetics, with examples from both eukaryotic and prokaryotic systems. Emphasis on use of genetic techniques for addressing fundamental questions in cellular biochemistry. Topics include mutagenesis, repair, recombination, transposition, genetic regulation, developmental genetics, neurogenetics, and immunogenetics. Concurrently scheduled with course CM178. Letter grading.

C250. Plant Chemical and Molecular Communication. (4) Lecture, three hours; discussion, one hour. Designed for graduate students. Introductory course in chemical ecology and how natural compounds affect gene expression. Emphasis on role of natural compounds in plant/microbe, plant/plant, and plant/herbivore. Interactions; synopsis of principles of plant defense mechanisms and responses to microbial infections. Concurrently scheduled with course C150.

CM252. Biological Catalysis. (4) (Same as Biological Chemistry M255, Chemistry CM255, and Pharmacology M255.) Requisites: course 100 or C139 or M140, Chemistry 110A, 153A, 153B, Life Sciences 3. Reaction mechanisms in molecular biology; experimental approaches for study of enzymes, including kinetics, isotopic labeling, stereochemistry, chemical modification, and spectroscopy; design of pharmacologically active agents and artificial enzymes. Drug metabolism and interactions addressed on a mechanistic level. Concurrently scheduled with course CM160. Graduate students required to write research paper and present oral report on it.

254. Seminar: Plant Morphogenesis. (2) Seminar, two hours. S/U or letter grading.

255. RNA Editing. (4) Lecture, two hours; discussion, one hour. Preparation: knowledge of molecular biology and molecular genetics. Discussion of diverse set of novel RNA modification phenomena known as RNA editing. Topics include U insertion/deletion type of editing in trypanosome mitochondria, C to U substitution editing in apo B mRNA and plant mitochondria, C insertion editing in Physarum mitochondria, etc. Discussion of mechanism, function, and evolution of these phenomena.

CM256. Human Genetics. (4) (Same as Human Genetics CM256 and Microbiology CM256.) Lecture, three hours; discussion, two hours. Requisites: Life Sciences 3, 4. Strongly recommended: course 100 or C139 or M140. Application of genetic principles in human populations, with emphasis on cytogenetics, biochemical genetics, population genetics, and family studies. Lectures and readings in the literature, with focus on current questions in the fields of medical and human genetics and methodologies appropriate to answer such questions. Concurrently scheduled with course CM156. Independent research project required of graduate students. Letter grading.

257A. Gene Manipulation: Genetic Engineering. (4) (Formerly numbered Biology 257A.) Lecture, three hours; discussion, two hours. Requisite: course 138. Survey of methods and applications of recombinant DNA research as applied to both basic scientific research and the biotechnology industry.

257B. Gene Manipulation: Advanced Course. (2) Lecture, 90 minutes; discussion, one hour. Requisite: course 157 or 257A. Additional topics in methods and applications of recombinant DNA research as applied to both basic scientific research and the biotechnology industry. S/U or letter grading.

CM261. Molecular and Cellular Immunology. (6) (Formerly numbered Biology CM261.) (Same as Microbiology M261 and Microbiology and Immunology M261.) Lecture, four and one-half hours; discussion, 90 minutes. Requisite: Biological Chemistry CM253. Comprehensive course for graduate students and selected undergraduates covering fundamentals and recent advances in molecular and cellular immunology. Lectures supplemented with discussion section focusing on reading and analysis of primary research articles. Concurrently scheduled with course C180. Oral presentation required of graduate students. S/U or letter grading.

M266A-M266B-M266C. Seminars: Molecular Embryology. (2-2-2) (Same as Biological Chemistry M266A-M266B-M266C.) Advanced course in developmental genetics and biochemistry, with emphasis on early development. Intended mostly for students actively working or highly interested in embryology. S/U grading.

CM268. Molecular Parasitology. (4) (Same as Microbiology CM268 and Microbiology and Immunology M268.) Lecture, three hours; discussion, one hour. Requisites: Life Sciences 3, 4. Survey of parasitic protozoa not only as parasites which interact with a host, but also as model systems for analysis of basic biological phenomena such as gene regulation, molecular development, cell-cell interactions, molecular evolution, and novel biochemical pathways. Concurrently scheduled with course CM168. Letter grading.

276. Seminar: Molecular Genetics. (2) Topics vary each term.

277. Seminar: Genetics. (2) Seminar, two hours. S/U or letter grading.

278. Seminar: Molecular Genetics of Development. (2) Designed for graduate students. Topics vary from year to year, with focus on establishment of position and pattern during embryogenesis by interaction of signal transduction systems and transcription factors. S/U or letter grading.

CM279. Molecular Biology of Animal Viruses. (4) (Same as Microbiology and Immunology M208.) Lecture, three hours. Preparation: courses in general biochemistry and general microbiology, including virology. Recommended for advanced undergraduate students with a major in public health, biology, or microbiology and for graduate students with interest in any field of biology or chemistry. Overview of animal viruses, including viral structure, virus cell interaction, virus replication, and viral oncogenesis. Special emphasis on understanding the molecular mechanism involved in control and regulation of replication, transcription, and translation of viral genome and its complex interaction with host. Concurrently scheduled with course C177.

281. Seminar: Molecular Biology. (2) Seminar, two hours. S/U or letter grading.

283. Seminar: Topics in Cell Biology. (2) Discussion of various topics on biology of eukaryotic cells. Topics vary from year to year and include bioenergetics, motility, organelle DNA, membrane structure and function, oncogenic transformation, nuclear organization and function.

284. Seminar: Structural Macromolecules. (2) Seminar, one hour; discussion, three hours. Presentation and discussion of current topics in extracellular active structural macromolecules — their synthesis, structure, and roles in cell and developmental biology.

CM285. Intermediate Immunology. (4) (Formerly numbered Biology CM285.) (Same as Microbiology CM285 and Microbiology and Immunology M285.) Lecture, three hours; discussion, one hour. Prerequisite: course C180 or M185A. Recommended corequisite: Chemistry 153B. In-depth exploration of topics introduced in course M185A. Concurrently scheduled with course CM185B.

286. Seminar: Plant Development. (2) Seminar, one hour; discussion, two hours. Preparation: one plant physiology course and at least one advanced undergraduate or graduate plant development or biochemistry course. Seminar on specific topics in plant development. Content varies each term. S/U grading.

289. Current Topics in Plant Molecular Biology. (2) (Formerly numbered Biology 289.) Discussion, one hour. Recent research developments in the field of plant molecular biology. Opportunities for graduate students to discuss individual research work. S/U grading.

292. Seminar: Molecular Evolution. (2) Discussion, three hours. Detailed analysis of current understanding of evolution of molecular sequences and structures.

296. Advanced Topics in Molecular, Cellular, and Developmental Biology. (2) (Formerly numbered Biology 296A.) Discussion, three hours. Advanced study and analysis of current topics in cell, molecular, and developmental biology. Discussion of current research and literature in research specialty of faculty member teaching course. S/U grading.

297. Advances in Molecular Analysis of Plant Development and Plant/Microbe Interactions. (2) Recent advances in plant molecular biology, with emphasis on control of gene expression both during plant development and in plant/microbe interactions. S/U grading.

375. Teaching Apprentice Practicum. (1 to 4) Preparation: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

495. Preparation for Teaching Molecular, Cell, and Developmental Biology in Higher Education. (2) Designed for graduate students. Study of problems and methodologies in teaching molecular, cell, and developmental biology, including workshops, seminars, apprentice teaching, and peer observation. S/U grading.

596. Directed Individual (or Tutorial) Studies. (2 to 12) S/U grading.

597. Preparation for M.A. Comprehensive Examination or Ph.D. Qualifying Examinations. (2 to 12) May not be applied toward M.A. or Ph.D. course requirements. S/U grading.

598. M.A. Thesis Research and Writing. (2 to 12) S/U grading.

599. Ph.D. Dissertation Research and Writing. (2 to 12) S/U grading.

based on a core curriculum of theory, history, analysis, and individual and group performance. Given in the context of a liberal education, this provides a foundation for an academic or professional career and affords valuable cultural background.

At the graduate level, specialized studies leading to the degrees of Master of Arts and Doctor of Philosophy are offered in composition; specialized studies leading to the degrees of Master of Music and Doctor of Musical Arts are offered in all classical solo instruments, voice, and conducting.

Undergraduate Study

Music B.A.

Admission

All applicants for admission and change of major are required to pass an audition in their principal performing medium.

Preparation for the Major

Required: Music 20A, 20B, 20C, 12 units from courses 60A through 65, two years (12 units) of performance organizations (courses C90A through 90N) for a letter grade, Music History 26A-26B-26C. Students taking string, woodwind, brass, or percussion lessons must select from Music C90E, 90F, C90G, 90M (Fall Quarter only), or 90N; students taking vocal lessons must select from C90A, 90D, 90J, 90K, or 90L; students taking keyboard or guitar lessons may choose from C90A through 90N. Students must participate in a minimum of two different organizations over the course of their stay at UCLA. In addition, they are required to take one college year — or at least one course at level three — of French, German, Italian, or Spanish, which may be used to fulfill the school language requirement.

The Major

Required (for all concentrations except composition and jazz studies): A minimum of 48 upper division units, including Music 120A, 120B, 120C, Music History 126A-126B-126C, and six courses selected from one of the concentrations listed below.

Composition: A minimum of 65 upper division units, including Music 104A or 104B, 106A, 106B, 116, 120A, 120B, 120C (accelerated sections), 123A-123B-123C, 124A or 124B or 124C, C176, and at least eight elective units selected from courses 101, 104A or 104B (if not already taken), 117, 118A, 118B, additional terms of 123A-123B-123C, 124A or 124B or 124C (if not already taken), 156, 199, Ethnomusicology 117, 128, 130, 136A, 136B, 146, C156A, 156B, 157, 158A, 158B, 158C, 160A, 160B, 170, 181. A senior recital, to include at least 30 minutes of original music, is also required (exceptions by petition only).

Music Education: Music 100A-100B-100C, 116, 117, eight units from courses 115A through 115E. Students are encouraged to take additional coursework from 112A, 112B, 118A,

Scope and Objectives

Students interested in a concentration in music history and literature should consider the majors in Music History and Musicology offered through the College of Letters and Science; those interested in a concentration in world music should consider the major in Ethnomusicology offered through the School of the Arts and Architecture.

The four-year Bachelor of Arts curriculum in Music is a classically oriented, balanced program of practical, theoretical, and historical studies, with related performance and academic studies in non-Western music. The major, designed for students who want to combine fine musicianship with academic excellence, is

MUSIC

School of the Arts and Architecture

UCLA

Jon Robertson, D.M.A., *Chair*

Professors

Roger Bourland, Ph.D.
Kenneth Burrell, B.A.

118B, 199, Ethnomusicology 170, 172B, 174 as their schedules allow. They are required to enroll in the type of performance organizations (courses C90A through 90N; 90M may be used in Fall Quarter only) that they plan to teach. In addition, if they intend to teach instrumental music, they are encouraged to select three terms of choral organizations (courses C90A, 90B, 90C, 90J, or 90K); if they intend to teach general music, they are encouraged to elect three terms of ethnomusicology performance organizations (Ethnomusicology 91A-91Z).

Performance: Twelve units in performance instruction from Music 160A through 165 (including junior and senior recital requirements), four units of chamber ensembles (Music C175), four units of elective courses from 101, 106B, 112A, 112B, 116, 117, 118A, 118B, 151A, 151B, 199, Music History 127A through 127G, 130, 133, 134, 135A, 135B, 135C, 139, Ethnomusicology M108A, 108B, 120A, 120B, 121, 170, and one upper division elective course in music. During each term in which students take private lessons, they must participate in a performance organization for a letter grade. Students taking string, woodwind, brass, or percussion lessons must select from Music C90E, 90F, C90G, 90M (Fall Quarter only), or 90N; students taking vocal lessons must select from C90A, 90D, 90J, 90K, or 90L; students taking keyboard or guitar lessons may choose from C90A through 90N.

Theory: Music 120C and six courses selected in consultation with a faculty adviser.

Jazz Studies Concentration

Preparation for the Major

Required: Music 20A, 20B, 20C, 12 units from courses 60A through 65 or 12 units of course 71, two years (12 units) of performance organizations (courses C90A through 90N) for a letter grade, Music History 26A-26B-26C.

The Major

Required: Music 120A, 120B, 120C, M127, M129A-M129B-M129C, M186, 12 units of course M177, Ethnomusicology M110A, Music History 126A-126B-126C, 150.

Graduate Study

The following constitutes introductory information regarding graduate degree programs and is based on the 1998-99 edition of *Program Requirements for UCLA Graduate Degrees*. Complete, annual editions of *Program Requirements* are available (listed under "Publications") on the Graduate Division website at <http://www.gdnet.ucla.edu>. Students are subject to the degree requirements as published in *Program Requirements* for the year in which they matriculate.

Master's Degrees

The Department of Music offers the Master of Arts (M.A.) degree in Music and the Master of Music (M.M.) degree.

Admission

Applicants to the M.A. program or to the M.M. program must have completed a B.A. degree, or its equivalent, in Music. Other fields of study are accepted if applicants have the musical training and musicianship necessary to pursue graduate work. Transcripts must show at least 52 quarter units of work outside music, including one college year (or its high school equivalent) of French, German, Italian, or Spanish and an average grade of at least B in the basic areas that normally constitute the undergraduate core curriculum in music (harmony, counterpoint, music history, analysis, and musicianship).

Applicants to the M.A. program in Music are required to (1) take a departmental assessment examination; (2) submit a letter describing background of study and stating reasons for wishing to pursue graduate studies in music; (3) submit three letters of recommendation from former instructors and/or professionals with whom applicants have worked; and (4) submit written examples of work. For composition, musical scores of at least three compositions must be submitted.

No application can be considered until the assessment examination has been taken and all of the above materials have been received.

Applicants to the M.M. program are required to (1) submit a statement of purpose which also includes a description of their background of study and (2) submit three letters of recommendation from former instructors and or/professionals with whom the applicants have worked and perform an audition. A repertoire list, summary of recent performances, and sample recital programs are also required.

No new applicants are being accepted into the M.F.A. program. Those currently active in the program will be allowed to finish within a reasonable amount of time.

Admission Timetable

Note: Applicants for fellowships must take the early examination; all monies are awarded at that time.

December 30 — Application for admission/fellowship is due.

January 30 — Supplementary application materials are due.

End of January — Assessment examination/audition is administered.

March 1 — Late applications are accepted until March 1 for the M.A. and Ph.D. only.

By March 15 — Notice of acceptance or denial is sent.

April 1 — Supplementary application materials are due for late applications.

Early April — Assessment examination is administered.

By May 15 — Notice of acceptance or denial is sent.

Failure to meet any deadline may result in a delay in action or no action on an application for admission, as well as that for a fellowship or assistantship.

Assessment Examination. The assessment examination for the M.A. is administered at Schoenberg Hall on the UCLA campus twice a year. Students who are applying from outside the Southern California area and find it impossible to take the examination on campus can make arrangements with the Student Services Office to take the examination in absentia before the dates listed above. Information is included in the applicant's packet.

The assessment examination is approximately five hours long and covers music theory, history and analysis, and musicianship skills.

The dossier and assessment examination are reviewed, along with those of other applicants, by each area to assess the applicant's potential as a graduate student in that field at UCLA.

Placement Examination. The placement examination, which is administered during the week before classes start in Fall Quarter, is required of all new M.M. students and covers theory, musicianship skills, and music history. Those who do not pass any portion are required to do remedial work which must be completed by the end of the first year.

Areas of Study

The Music Department offers the Master of Arts degree in the field of composition and the Master of Music degree in all classical solo instruments, voice, and conducting. Degrees in historical musicology, ethnomusicology, and systematic musicology are offered through other departments. As noted above, the Master of Fine Arts degree in performance practices is being phased out.

Course Requirements

Master of Arts

Students are required to complete a minimum of nine courses, five of which must be at the 200 level. Only four units of Music 596A, 596C, or 596D and four units of 597 or 598 may be applied toward the total course requirement. No more than four units of all types of 500-series courses may be applied toward the minimum graduate course requirement. Upper division courses that may be applied toward the minimum of nine courses include Music 109A, 109B, 109C, 112A, 112B, 116, 117, 118A, 118B, 151A, 151B, 156, C175 (four units only), Ethnomusicology 106A, 106B, 106C, 113, M126, 128, 130, 136A, 136B, 146, 147, C156A, 156B, 157, 158A, 158B, 158C, 160A, 160B, 170, 173, M180, 181. Course 598 serves to guide the preparation of the thesis and should normally be taken during the last quarters of residence.

Required courses are Music 251A, 266A-266B; one course from Music 251B, 251C, 251D; Music 252A-252B-252C in sequence, with the option of substituting 596A for 252C; and two electives with the recommendation of

the graduate adviser. In addition to the thesis, students are expected to produce other works involving both instrumental and vocal music for both solo and ensemble forces. Furthermore, students are responsible for the campus presentation of one original work during each year of residency.

Master of Music

Students are required to complete a minimum of 68 units, 16 of which must be at the 200 level, 40 units at the 400 level, and six units at the 500 level. Sixty-four of these units are specified below. The remaining elective must be from 200-, 400-, or 500-series courses. Music 595A serves to guide the preparation of the master's recital and should normally be taken during the last quarter of residence. The department provides a maximum of six quarters of enrolled private instruction in performance. If students do not complete the degree within that period and wish to continue instruction, they must do so at their own expense on a noncredit basis.

Course requirements are as follows:

Instrumental/Vocal Performance. A core of Music 202, 203, 204; one course from Music 261A through 261F; five quarters of 400-level performance instruction; three quarters of 400-level performance organizations; two quarters of Music C485; one quarter of Music 401 and of 595A; and one additional course (selected with advisement) from Music 261A through 261F, C267, 270E, 270F, 271, 401, 596D, courses in pedagogy, Musicology 250A, 250B, 269, Ethnomusicology 271, 273, 275, 279. Keyboard specialists may substitute three additional quarters of Music C485 for the performance organization requirement.

Conducting. A core of Music 202, 203, 204; one course from Music 261A through 261F; five quarters of 400-level conducting instruction; three quarters of 400-level performance organizations; two quarters of Music C485; one quarter of Music 401 and of 595A; and one additional course (selected with advisement) from Music 261A through 261F, C267, 270E, 270F, 271, 401, 596D, courses in pedagogy, Musicology 250A, 250B, 269, Ethnomusicology 271, 273, 275, 279. Conducting students may substitute two additional quarters of 400-level performance organizations for the Music C485 requirement.

Master of Fine Arts

Students are required to complete a minimum of 18 courses, including at least six at the 200 level and six or more in the 400 series. Only four units of Music 596A, 596C, or 596D and eight units of Music 598 may be applied toward the total course requirement. No more than four units of all types of 500-series courses may be applied toward the minimum graduate course requirement. The minimum residence requirement for the M.F.A. is two years. The degree is normally completed in three years.

Course requirements are as follows: Musicology 200A; two quarters of Music 261A through

261F; six quarters of 400-level performance instruction; two quarters (eight units) of Music 598; and seven electives. If students are in the conducting specialty, they declare either a choral or instrumental specialization. Six quarters of Music 475 are required in the area of specialization and at least two in the other area. (On a two-year program, the ratio would be four to one.) Recommended electives include Music C175 (four units only) 596A, 596C, 596D, Ethnomusicology 170, and additional courses from the 200 and 400 series. Music 598 serves to guide the preparation of the final project and should normally be taken during the last two terms of residence.

Performance Requirements. Each year students must complete a solo recital on campus (preferably a noon concert) with a faculty committee in attendance to evaluate the performance. Except for the first-year recital, students are to write the program notes for the annual performance project. These must be submitted with the program to the graduate adviser in performance practices at least one month before the concert date. If students are in the conducting specialty, they present a program, or a substantial portion thereof, approved by the conducting faculty, either on or off campus.

Comprehensive Examination Plan

Master of Arts

None.

Master of Music

After students have completed the core seminars and three quarters of performance/conducting instruction, and after verification from the graduate adviser that the requirements have been met, a master's committee for the final year is formed. The committee consists of the student's master teacher and two other Music Department faculty in related areas of instruction. Two of the three committee members must be full-time Academic Senate faculty. The committee oversees the preparation of the recital and adjudicates the recital itself.

Master's Recital. Students present a final master's recital. During the final year of residence and after completion of the major coursework, students perform for their committee for its approval. The committee decides whether the student qualifies for the presentation of the master's recital. No recital takes place until it has been approved by the committee. An audio tape of the recital is archived in the Music Library.

Master of Fine Arts

Final Project. A final project is to be completed during the last year of residence. A solo recital and appropriate scholarly paper are required in all areas. In addition, a major operatic performance is required in the area of opera. Students in conducting present an on-campus program, or a substantial portion thereof, with one of the department's performance organizations. The scholarly paper should be equivalent to a graduate seminar paper (15 to 25

pages in length) and should be concerned with performance problems which can be elucidated through research and analysis. Students decide the topic for the final project in consultation with their committee chair, who is responsible for supervising the work. Pieces from or related to the study are to be included in the final recital. Both the paper and the recital are evaluated by the committee.

A completed draft of the scholarly paper must be submitted to the committee members by the first day of classes of the quarter in which the final recital has been scheduled. If this requirement is not met, the recital is postponed until the next regular academic quarter in which this requirement can be met.

Students must provide concise, well-written program notes and include a brief biography. These should be submitted to the graduate adviser in performance practices for approval at least one month prior to the final recital. Publicity information for the final recital must be submitted to the graduate adviser at the beginning of the previous quarter.

The final version of the scholarly paper, with the accompanying recital program, must be submitted in the format of a thesis. (Students should contact the theses and dissertations adviser, 390 Powell Library, for information and the Student Services Office for information specific to the M.F.A. program.) The final paper, signed by all M.F.A. committee members, must be submitted in duplicate (two thesis-quality photocopies or the original and one photocopy) to the Student Services Office by the last day of classes in the quarter in which the student is to graduate.

The language requirement and a majority of the coursework must be completed before submitting the final project proposal and request for an M.F.A. committee. The proposal, which is to include the complete recital program and an abstract of the scholarly paper, should be submitted at the beginning of the Fall Quarter of the last year of residence. It is approved by the graduate committee for performance.

Thesis Plan

Master of Arts

The thesis is a work proposed by the student and approved by the composition and theory faculty. The thesis topic and composition of the committee are approved by the faculty before nomination to the Graduate Division.

Master of Music

None.

Master of Fine Arts

None.

Doctoral Degrees

Admission

Applicants to the program leading to the Doctor or Philosophy (Ph.D.) degree in Music must have completed a Master of Arts degree in Music (or the equivalent degree). The degree nor-

mally will have been taken in the same field of concentration as the proposed doctorate. If applicants wish to obtain a doctorate in a field other than that of the M.A., additional coursework, as prescribed by the area, must be completed. Applicants are required to (1) take a departmental assessment examination; (2) submit a letter describing background of study and stating reasons for wishing to pursue graduate studies in music; (3) submit three letters of recommendation from former instructors and/or professionals with whom the applicant has worked; and (4) submit written examples of work. For composition, musical scores of at least three compositions are required. Applicants should submit their M.A. thesis or composition, if possible.

Applicants to the program leading to the Doctor of Musical Arts (D.M.A.) degree are required to (1) submit a statement of purpose which also includes a description of their background of study; (2) submit three letters of recommendation from former instructors and/or professionals with whom the applicants have worked (for the D.M.A. the Music Department is especially interested to hear from persons who can speak to the applicant's academic potential); (3) submit a sample seminar or research paper; and (4) perform an audition. A repertoire list, summary of recent performances, and sample recital programs are also required.

No application can be considered until the assessment examination or audition has been taken and all of the required materials have been received.

Admission Timetable

Note: Applicants for fellowships must take the early examination; all monies are awarded at that time.

December 30 — Application for admission/fellowship is due.

January 30 — Supplementary application materials are due.

End of January — Assessment examination/audition is administered.

March 1 — Late applications are accepted until March 1 for the M.A. and Ph.D. only.

By March 15 — Notice of acceptance or denial is sent.

April 1 — Supplementary application materials are due for late applications.

Early April — Assessment examination is administered.

By May 15 — Notice of acceptance or denial is sent.

Failure to meet any deadline may result in a delay in action or no action on an application for admission, as well as that for a fellowship or assistantship.

Assessment Examination. The assessment examination for the Ph.D. is administered at Schoenberg Hall on the UCLA campus twice a

year. Students who are applying from outside the Southern California area and find it impossible to take the examination on campus can make arrangements with the Student Services Office to take the examination in absentia before the dates listed above. Information is included in the applicant's packet.

The assessment examination is approximately five hours long and covers music theory, history and analysis, and musicianship skills.

The dossier and assessment examination are reviewed, along with those of other applicants, by area to assess the applicant's potential as a graduate student in that field at UCLA.

Placement Examination. The placement examination, which is administered during the week before classes start in Fall Quarter, is required of all new D.M.A. students and covers theory, musicianship skills, and music history. Those who do not pass any portion are required to do remedial work which must be completed by the end of the first year.

Major Fields or Subdisciplines

The Music Department offers the degrees of Doctor of Philosophy in the field of composition; Doctor of Philosophy in the field of composition with a cognate in ethnomusicology; and Doctor of Musical Arts in all classical solo instruments, voice, and conducting. Degrees in historical musicology, ethnomusicology, and systematic musicology are offered through other departments.

Course Requirements

Doctor of Philosophy

Students may petition to their area on the advice of their graduate adviser for exemption from specific requirements on the basis of equivalent work done at the M.A. level. If students are in the program in composition with the cognate in ethnomusicology and have had no prior coursework in ethnomusicology, they are required to take Ethnomusicology 20A-20B-20C. They are also encouraged to participate in the ethnomusicology performance organizations (Ethnomusicology 91A through 91Z).

Students may complete the residence requirement by electing courses recommended by the graduate adviser from the 200- or 100-level courses listed under the course requirements for the M.A. degree.

Required courses for the Ph.D. are Musicology 200A; Music 251A, 266A-266B; one course from 251B, 251C, 251D; and six quarters of Music 252A-252B-252C in sequence, with the option of substituting Music 596A for 252C. Students who have received the M.A. in composition from UCLA normally take a minimum of three quarters of Music 252 in the Ph.D. program.

Students who have received the M.A. in composition elsewhere normally take two full cycles of Music 252A-252B-252C in sequence, with the option of substituting Music 596A for either or both 252Cs. In addition to the dissertation, students are expected to produce other

works involving both instrumental and vocal music for both solo and ensemble forces. Furthermore, students are responsible for the campus presentation of one original work during each year of residency.

Cognate in Ethnomusicology. Students may substitute Ethnomusicology C201A for Musicology 200A and Ethnomusicology 282 or 283 for Music 251B through 251D. Students are required to take two courses from Ethnomusicology 207, M211, 237, 240, 241, 248A, 248B, 250A, 250B.

Doctor of Musical Arts

Students are required to complete a minimum of 102 units, 28 of which must be at the 200 level, 60 units at the 400 level, and 10 units at the 500 level. Ninety-eight of these units are specified below. The elective must be from 200-, 400-, or 500-series courses. Music 599 serves to guide the preparation of the dissertation and should normally be taken during the final year of residence. Students who received the M.M. at UCLA are expected to complete at least 32 additional units and two recitals beyond the M.M. requirements, subject to the specific requirements of their area of specialization. The department provides a maximum of nine quarters of enrolled private instruction in performance. Students who were admitted to the program with a master's degree from another institution may petition for up to a year of private lessons (18 units) and 12 units of academic courses to be applied to D.M.A. requirements.

The requirements for the D.M.A. are below.

Instrumental/Vocal Performance. A core of Music 202, 203, 204; three courses from Music 261A through 261F, 271; eight quarters of 400-level performance instruction; three quarters of Music C485; one quarter of Music 401, 595B, and 599; the appropriate course from Music 469, 471, 473, 474, 476, 477; one additional course from Music 261A through 261F, C267, 270E, 270F, 271, 596D, additional courses in pedagogy, Musicology 250A, 250B, 269, Ethnomusicology 271, 273, 275, 279.

Conducting. A core of Music 202, 203, 204; three courses from Music 261A through 261F, 271; eight quarters of 400-level conducting instruction; three quarters of 400-level chamber ensembles; one quarter of Music 401, 595B, and 599; one course from Music 469, 471, 473, 474, 476, 477; one additional course from Music 261A through 261F, C267, 270E, 270F, 271, 596D, courses in pedagogy, Musicology 250A, 250B, 269, Ethnomusicology 271, 273, 275, 279. Conducting students may substitute three quarters of 400-level performance organizations for the Music C485 requirement.

Written and Oral Qualifying Examinations

Doctor of Philosophy

When the student and the committee feel the student is ready to take the qualifying examinations, the student should submit a schedule to the Student Services Office and the committee

members listing the order in which the examinations are to be taken. The Student Services Office staff acts as proctor for the tests. Normally the six written examinations are spread over a two-week period but should be completed within three weeks. Repeat examinations may be scheduled in consultation with the guidance committee and after a stipulated period of time. On successful completion of the written examinations, a departmental oral qualifying examination is scheduled.

The written examinations consist of the following:

- (1) Style composition: composition of a short piece in the style of a particular period, genre, or composer as posed by the examiner (within a 24-hour period, optionally either on or off campus).
- (2) General history of music (three hours).
- (3) Analysis of form and style (three hours).
- (4) Two or more from the following (four hours total): acoustics, aesthetics, psychology of music, ethnomusicology, or music theory from the medieval period to the present, with an optional emphasis on theoretical writings before or after 1700.
- (5) Twentieth-century music (three hours).

Students with a cognate in ethnomusicology may substitute an ethnomusicology area for item 2 and in lieu of items 3 and 4, may choose any three of the following (two hours each): acoustics, aesthetics, music theory, form and analysis, general history of music, or organology.

On completion of the written and oral qualifying examinations and the second language, students may submit the dissertation topic and request for a doctoral committee, for approval. The dissertation topic and the composition of the doctoral committee are approved by the faculty before nomination to the Graduate Division.

For students with a cognate in ethnomusicology, the composition (item 1) should reflect the ethnomusicological area interests of the student and draw from a variety of traditional, classical, Western, and/or non-Western sources; a public reading of this composition is required. The monograph should deal with a cross-cultural 20th-century work.

Doctor of Musical Arts

Two preliminary recitals are required to be adjudicated by the Music Department M.M./D.M.A. Committee.

Two sets of qualifying examinations are required. The written examinations cover material in the three-quarter core sequence of Music 202, 203, 204, one of the performance practice seminars, and the appropriate pedagogy course. The second examination is the defense of the final recital repertoire dissertation topic with the doctoral committee (University Oral Qualifying Examination—see below).

The second-year entrepreneurial recital is an individual project in public performance outside

the UCLA campus. All scheduling, publicity, program notes, and ticketing must be arranged by the student without assistance from the supervising instructor. After that recital and the written qualifying examinations have been passed and the foreign language requirement has been met, students may submit the request for a doctoral committee.

A minimum of three months before the final doctoral recital (which is a full professional recital of approximately 90 minutes duration), students take the second examination, the University Oral Qualifying Examination. This consists of the student's performance of a major portion of the works on the program (including the new music forum premiere work) and includes a defense of the recital repertoire, the dissertation topic, and its relationship to the final recital.

Music

Lower Division Courses

1A-1B. Fundamentals of Music. (4-4) Lecture, three hours; discussion, two hours. Designed for non-music majors. **1A.** Introduction to elements of music: pitch and rhythm symbols, meter and time signatures, notation, scales, intervals, and chord structure. **1B.** Requisite: course 1A. Diatonic harmony; four-part writing, including inversions, sevenths, secondary dominants, and modulation; organization of melody and accompaniment; simple analysis; sight-singing and ear training.

3A-3B. Preparatory Theory for Music Majors. (2-2) Lecture, two hours; discussion, one hour. Limited to Music majors. Course 3A is not open for credit to students with credit for course 1A; course 3B is not open for credit to students with credit for course 1B. Course for Music majors in music fundamentals, including musicianship, theory, and terminology.

4A-4B-4C. Basic Musicianship. (2-2-2) Laboratory, three hours. Class instruction in elementary ear training and keyboard skills.

8G. Graduate Piano Sight-Reading. (2) Limited to graduate students. Designed to help entering graduate students remedy entrance deficiencies, to be cleared by examination. May be repeated. S/U grading.

10. Computer-Assisted Sight-Singing Laboratory. (2) Lecture, two hours; laboratory, one hour. Requisite: course 1A. Individualized, self-instructional approach for development of sight-singing skills through use of a music computer, keyboard instrument, and linear program learning.

12A-12B. Counterpoint. (2-2) Lecture, four hours. **12A.** Preparation: music theory placement examinations. 16th-century modal counterpoint in two parts, including writing of motets. **12B.** Requisites: courses 20A, 20B, 20C. 18th-century tonal counterpoint in two parts, including writing of inventions.

15. Art of Listening. (4) Lecture, three hours; laboratory, one hour. Acquisition of listening skills through direct interaction with live performance, performers, and composers. Relationship of listening to theoretical, analytical, historical, and cultural frameworks. Music as aesthetic experience and cultural practice.

20A. Music Theory I. (4) Lecture, two hours; discussion, six hours. Preparation: passing score on departmental examination. Theory: species counterpoint through fifth species; description of triads and inversions. Musicianship: interval recognition; fixed-do solfège of diatonic melodies; one-part dictation of diatonic melodies; two-part dictation of small-compass, note-against-note melodies; simple rhythmic dictation; use of treble, alto, and bass clefs.

20B. Music Theory II. (4) Lecture, four hours; discussion, four hours. Requisite: course 20A (C or better). Theory: diatonic harmony through secondary dominants and diminished sevenths; modulations to dominant and relative keys; writing of four-part chorales; style composition in baroque dance forms; introduction to figured bass notation. Musicianship: harmonic dictation, including secondary dominants and diminished sevenths, but not modulations; more advanced two-part dictation; chromatic one-part dictation; more advanced sight-singing; keyboard (three-part open score in homophonic textures, introduction to tenor clef).

20C. Music Theory III. (4) Lecture, four hours; discussion, four hours. Requisite: course 20B (C or better). Theory: chromatic harmony including development of tonality, 1800 to 1850; appropriate analysis and style composition. Musicianship: advanced sight-singing; two-part contrapuntal dictation; keyboard harmony (harmonic sequences in major and minor keys); reading in open score of four homophonic parts in four clefs.

23. Composition Workshop. (2) Requisites: courses 20A, 20B, 20C. Introductory composition course which provides compositional experiences at a basic level. May be repeated once for credit.

60A-65. Undergraduate Instruction in Performance. (2 each) Limited to Music majors (all freshman/sophomore majors, and junior/senior majors not in performance specialization). Individual instruction of one hour per week. Students must perform in a practicum once during academic year. Grades are assigned by applied instructor in Fall and Winter Quarters and by jury examination in Spring Quarter. May be repeated for credit. **60A.** Violin; **60B.** Viola; **60C.** Cello; **60D.** String Bass; **60E.** Harp; **60F.** Classical Guitar; **60G.** Viola da gamba; **60K.** Lute; **61A.** Flute; **61B.** Oboe; **61C.** Clarinet; **61D.** Bassoon; **61E.** Saxophone; **62A.** Trumpet; **62B.** French Horn; **62C.** Trombone; **62D.** Tuba; **63.** Percussion. **64A.** Piano; **64B.** Organ; **64C.** Harpsichord; **65.** Voice.

71. Instruction in Jazz Performance. (2) Laboratory, one hour. Study of jazz repertoire and techniques for specific instruments and voice. May be repeated for a maximum of 12 units.

C90A. UCLA Chorale. (2) Activity, four hours. Preparation: audition. Select mixed ensemble of 50 to 60 voices performing choral music appropriate for a concert choral ensemble, with emphasis on music after 1700. May be repeated for credit without limitation. May be concurrently scheduled with course C480. P/NP or letter grading.

90B. Collegiate Chorus. (2) Nonaudition mixed chorus of 50 to 150 voices performing medium- and concert-length choral works from baroque to the present. Collegiate Chorus performs only as part of "Choral Union," a large chorus made up of all of the choral ensembles. May be repeated for credit without limitation. P/NP or letter grading.

90C. Chamber Singers. (2) Activity, three hours. Preparation: audition. Select mixed ensemble of 16 to 20 voices performing chamber choral music of all periods, with emphasis on Renaissance and baroque music. May be repeated for credit without limitation. P/NP or letter grading.

90D. Opera Workshop. (2) Activity, six hours. Preparation: audition. Rehearsal and performance of scenes and complete operas, as well as repertoire, stage movement, and foreign language diction coaching. May be repeated for credit without limitation. P/NP or letter grading.

C90E. Symphony Orchestra. (2) Activity, four hours. Preparation: audition. Group performance of symphonic literature, as well as orchestral accompaniment for operatic and major choral works. May be repeated for credit without limitation. May be concurrently scheduled with course C481. P/NP or letter grading.

90F. Symphonic Band. (2) Preparation: audition. Group performance of instrumental music scored for band. May be repeated for credit without limitation. P/NP or letter grading.

C90G. Wind Ensemble. (2) Activity, four hours. Preparation: audition. Group performance of concert literature for wind ensemble. May be repeated for credit without limitation. May be concurrently scheduled with course C482. P/NP or letter grading.

90H. Collegium Musicum. (2) Activity, three hours. Preparation: audition. Group performance of vocal and instrumental music of medieval, Renaissance, and baroque eras on period instruments. May be repeated for credit without limitation. P/NP or letter grading.

90J. Men's Glee Club. (2) Activity, three hours. Preparation: audition. Select male chorus of 40 to 45 voices performing male choral music of all periods, with emphasis on popular and folk arrangements. May be repeated for credit without limitation. P/NP or letter grading.

90K. Women's Chorus. (2) Activity, three hours. Preparation: audition. Select female chorus of 45 to 55 voices performing treble choral music of all periods, with emphasis on music after 1750. May be repeated for credit without limitation. P/NP or letter grading.

90L. Music Theater Workshop. (2) Activity, six hours. Preparation: audition. Rehearsal and performance of scenes and complete musical theater productions, including repertoire and stage movement coaching. May be repeated for credit without limitation. P/NP or letter grading.

90M. Marching and Varsity Bands. (2) Activity, four hours. Preparation: audition. Group performance of special band arrangements for football and basketball games as well as special events. May be repeated for credit without limitation. P/NP or letter grading.

90N. Jazz Ensemble. (2) Activity, three hours. Preparation: audition. Group performance of jazz and popular music in ensembles of 20 to 30 instruments. May be repeated for credit without limitation. P/NP or letter grading.

Upper Division Courses

100A-100B-100C. Music in American Education. (4-4-4) Lecture, four hours; laboratory, one hour. Requisites: courses 20A, 20B, 20C, 116, 120A, 120B, 120C, Music History 26A-26B-26C. Critical study and analysis of philosophy, history, organization, curriculum, and literature of music programs for elementary and secondary schools in American education. Each course may be taken independently for credit. **100A.** General Music; **100B.** Choral Music; **100C.** Instrumental Music.

101. Advanced Keyboard Harmony and Score Reading. (4) Requisite: course 120B. Intensive individual work in keyboard harmony and reading of chamber and orchestral scores. May be repeated once for credit.

102. Instrumentation. (4) Lecture, three hours. Requisite: course 120B with a grade of C (2.0) or better. Not open for credit to students with credit for course 106A. Designed for music majors in specializations other than composition. Ranges and characteristics of instruments, exercises in scoring.

104A. Modal Counterpoint. (3) Lecture, three hours. Requisite: course 120C (accelerated section). In-depth exploration of styles and techniques of counterpoint of 15th and 16th centuries through writing and analysis of important forms of the period, including species, canon, free counterpoint, cantus, firmus, point of imitation, motet, ricercare, etc. Letter grading.

104B. Special Topics in Counterpoint. (3) Lecture, three hours. Requisite: course 120C (accelerated section). In-depth exploration of polyphonic styles and textures since 1750, with emphasis on late-19th and 20th-century modes of expression, through writing and analysis. Letter grading.

105. Introduction to Composition. (4) Lecture, three hours. Requisites: courses 20A, 20B, 20C, 120A, 120B, 120C. Designed for Music majors in specializations other than composition. Nature of compositional process, with selected exercises in specific techniques and styles.

106A. Orchestration I. (4) Discussion, three hours. Requisites: courses 120C (accelerated section), 123C. Ranges and characteristics of instruments, with exercises in scoring. P/NP or letter grading.

106B. Orchestration II. (4) Discussion, three hours. Requisites: courses 106A, 120C (accelerated section), 123C. Scoring and analysis for ensembles and full orchestra. P/NP or letter grading.

109A-109B-109C. Composition for Motion Pictures and Television. (2-2-2) Requisites: courses 20A, 20B, 20C, 120A, 120B, 120C. Course 109A is requisite to 109B, which is requisite to 109C. Composition of music for dramatic and documentary film in cinema and television. Techniques used in recording and editing.

112A-112B. Practical Scoring. (4-4) Lecture, two hours; laboratory, two hours. Requisites: courses 20A, 20B, 20C, 120A, 120B, 120C, Music History 26A-26B-26C. Emphasis on practical problems in scoring for small and large ensembles at various educational levels. **112A.** Band Scoring; **112B.** Choral Scoring.

113A-113B. Music Literature for Children. (4-4) Lecture, three hours; laboratory, one hour. Requisites: course 1A, Music History 2A. Course 113A is not requisite to 113B. Designed for nonmusic majors, particularly elementary education students. Study of music literature applicable to elementary school programs. **113A.** Emphasis on listening analysis, movement, and improvisation. **113B.** Emphasis on class performance — music reading, singing, and folk instruments.

115A-115E. Study of Instrumental and Vocal Techniques (1 each) Laboratory, three hours. Requisite or corequisite: course 20A. Applied studies in basic performance techniques and tutorial materials. Each of courses 115A-115D may be repeated once for credit. **115A.** Strings; **115B.** Woodwinds; **115C.** Brass; **115D.** Percussion; **115E.** Voice.

116. Introduction to Conducting. (2) Lecture, three hours. Requisites: courses 20A, 20B, 20C, 120A. Fundamentals of conducting, including basic skills, techniques, analysis, and repertoire.

117. Study and Conducting of Instrumental and Choral Literature. (2) Lecture, three hours. Requisite: course 116. Study and practice of conducting both instrumental and choral repertoire. In addition to further development of conducting gestures, focus on score study techniques, rehearsal techniques, style, and interpretation as applied to choral and instrumental repertoire.

118A-118B. Advanced Study and Conducting of Choral and Instrumental Literature. (2-2) Lecture, one hour; laboratory, two hours. Requisites: courses 116, 117. Detailed investigation of musical styles, performance practices, and rehearsal techniques. Each course may be repeated once for credit. **118A.** Choral; **118B.** Instrumental.

120A. Music Theory IV. (4) Lecture, four hours; discussion, four hours. Preparation: passing score on departmental first-year examination. Requisite: course 20C with a grade of C (2.0) or better. Theory: baroque counterpoint including chorale prelude; two-part invention; exposition and first modulation of a three-part invention; canonic principles; analysis of inventions, canons, and fugues. Musicianship: sight-singing of extended chromatic melodies; advanced harmonic dictation (diatonic and chromatic); keyboard harmonization of modulating melodies; elementary score reading.

120B. Music Theory V. (4) Lecture, four hours; discussion, four hours. Requisite: course 120A with a grade of C (2.0) or better. Theory: advanced chromatic harmony including development of harmony from 1850; analytical projects; style composition. Musicianship: advanced score reading; advanced harmonic dictation; preparation for departmental examination.

120C. Music Theory VI. (4) Lecture, four hours; discussion, two hours; listening, two hours. Requisite: course 120B with a grade of C (2.0) or better. 20th-century harmonic language, including nonfunctional harmony, polytonality, free atonality, serialism, and minimalism.

121. Special Topics in 20th-Century Music. (4) Lecture, three hours. Requisites: courses 20A, 20B, 20C, 120A, 120B, 120C. In-depth study of certain aspects of 20th-century music ranging from individual composers and schools to ideological or stylistic concerns. May be repeated once for credit.

C122. Speculative Music Theory. (4) Discussion, three hours. Requisites: courses 20A, 20B, 20C, 120A, 120B, 120C. Techniques of tonal coherence studied through analysis and compositional exercises in styles of given periods. May be repeated once for credit. May be concurrently scheduled with course C222.

123A-123B-123C. Composition. (4-4-4) Lecture, three hours. Requisites: courses 20A, 20B, 20C, 120A, 120B, 120C. Course 123A is requisite to 123B, which is requisite to 123C. Designed for composition students. Vocal and instrumental composition in the smaller forms, including style composition and 20th-century techniques. Each course may be repeated once for credit, but first year must be taken in sequence.

124A. Scoring for Symphony Orchestra. (4) Discussion, three hours. Requisites: courses 106B, 120C (accelerated section), 123C. Practical applications in scoring for symphony orchestra. Preparation and production of parts and full scores. At least one reading by UCLA Philharmonia Orchestra scheduled. Letter grading.

124B. Scoring for Wind Ensemble. (4) Discussion, three hours. Requisites: courses 106B, 120C (accelerated section), 123C. Practical applications in scoring for large wind ensembles. Preparation and production of score and parts. May include percussion. At least one reading by UCLA Wind Ensemble scheduled. Letter grading.

124C. Scoring and Arranging for Choral Ensemble. (4) Discussion, three hours. Requisites: 106B, 120C (accelerated section), 123C. Practical applications in scoring and arranging for choral ensembles, including a capella as well as chorus with instruments. Preparation and production of score and parts. At least one reading by UCLA Chorale or other choral group scheduled. Letter grading.

M127. Jazz Keyboard Harmony. (1) (Same as Ethnomusicology M127.) Laboratory, two hours. Study of jazz harmony through use of piano keyboard. Development of basic keyboard skills in order to manipulate essential chord voicings and harmonic passages in jazz music. Instruction in basic jazz theory.

M129A-M129B-M129C. Jazz Theory and Improvisation. (2-2-2) (Same as Ethnomusicology M129A-M129B-M129C.) Lecture, four hours. Elements of jazz theory and improvisation. **M129A.** Basic jazz harmonic constructions, as well as melodic, rhythmic, and harmonic concepts, and how to apply those elements to personal efforts in improvisations. **M129B.** Requisite: course M129A with a grade of C or better. Medium-level jazz harmonic constructions. **M129C.** Requisite: course M129B with a grade of C or better. Advanced-level jazz harmonic constructions.

M131. Development of Latin Jazz. (4) (Same as Ethnomusicology M131.) Lecture, four hours; discussion, one hour. Survey of historical and stylistic development of musical style referred to today as "Latin jazz." P/NP or letter grading.

136A-136B-136C. Historical Survey of Music Theater. (4-4-4) Lecture, four hours; discussion, one hour. Historical survey of major works from music theater, tracing development of the art form from its European beginning to the American music theater of today. P/NP or letter grading. **136A.** Early Forms to 1900; **136B.** 1900 to 1945; **136C.** 1945 to 1975.

150. Introduction to Music Criticism. (4) Lecture, three hours. Designed for Music majors. Readings and discussion of music criticism past and current, and exercise in the writing of criticism of live concert events and recordings. Designed to aid students (performers, critics, or listeners) in verbalizing the experience of listening to music.

151A-151B. History of Musical Performance Practices. (4-4) Requisites: courses 20A, 20B, 20C, 120A, 120B, Music History 26A-26B-26C. General survey of musical interpretation and re-creation from viewpoint of stylistic authenticity. **151A.** Medieval through Baroque; **151B.** Classic through 20th Century.

155. Audio Technology for Musicians. (4) Lecture, two hours; laboratory, three hours. Requisites: courses 20A, 20B, 20C. Theory and practice of sound engineering in relation to concert and studio recording techniques.

156. Electronic Music: Theory and Techniques. (4) Lecture, three hours; laboratory, three hours. Requisites: courses 123A-123B-123C. Designed for composition students. Applicable acoustical and electronic theory, history of technological and compositional development of classical electronic music. Analysis, manipulation of analog and digital synthesizers and ancillary equipment, invention and realization of materials.

158. New Orleans Jazz. (4) Lecture, three hours; discussion, two hours. Major black and Creole figures in origin and development of jazz in New Orleans from turn of the 20th century through the 1960s, with emphasis on polycultural roots, local municipal traditions, and stylistic analysis.

160A-165. Undergraduate Instruction in Performance for the Performance Specialist. (2 each) Limited to junior/senior Music majors who have been accepted by audition into performance specialization. Individual instruction of one hour per week. Students must perform in a noon concert once during their junior year and must present a full recital in their senior year. Grades are assigned by applied instructor in Fall and Winter Quarters and by jury examination in Spring Quarter. May be repeated for credit. **160A.** Violin; **160B.** Viola; **160C.** Cello; **160D.** String Bass; **160E.** Harp; **160F.** Classical Guitar; **160G.** Viola da gamba; **160K.** Lute; **161A.** Flute; **161B.** Oboe; **161C.** Clarinet; **161D.** Bassoon; **161E.** Saxophone; **162A.** Trumpet; **162B.** French Horn; **162C.** Trombone; **162D.** Tuba; **163.** Percussion; **164A.** Piano; **164B.** Organ; **164C.** Harpsichord; **165.** Voice.

C167. Selected Topics in Keyboard Literature. (4) Lecture, three hours. Corequisite: course 164A or 164B or 164C. In-depth study of selected topics in keyboard literature, concentrating on problems of performance through analysis, historical and comparative studies, and actual performances by participants. May be concurrently scheduled with course C267.

174A-174B-174C. Language of Song. (2-2-2) Designed for Music majors. Sounds of the language as applied to singing, including use of International Phonetic Alphabet, translation of art song texts, and application to student's current vocal repertoire. Background in the language is encouraged. **174A.** German; **174B.** French; **174C.** Italian.

C175. Chamber Ensembles. (2) Preparation: audition. Students must be at advanced level of their instrument to participate. Applied study of performance practices of literature appropriate to the ensemble. Students may enroll in two sections per term; total of 12 units may be applied toward degree requirements. May be concurrently scheduled with course C485. P/NP or letter grading.

C176. Electronic Music Composition. (4) Lecture, three hours; studio, three hours. Preparation: advanced experience and accomplishment in serious composition (art music). Requisite: course 156. Limited enrollment. Analog and digital realizations of original compositional materials culminating in a composition at least five minutes in duration. May be concurrently scheduled with course C226.

M177. Jazz Combo. (2) (Same as Ethnomusicology M177.) Small group performance of various styles in ensembles of three to 10 musicians. May be repeated for a maximum of 12 units.

C185. Historical and Philosophical Foundations of Music Education. (4) Lecture, three hours. Preparation: completion of undergraduate music education specialization. Development of music education in the U.S. according to established schools of thought. May be concurrently scheduled with course C225.

M186. Senior Recital or Research Paper. (No credit) (Same as Ethnomusicology M186.) Preparation and performance of one-hour senior recital of jazz repertoire or preparation of a senior paper (topic and length to be approved by assigned adviser). P/NP grading.

199. Special Studies in Music. (2 or 4) Hours to be arranged. Preparation: 3.0 grade-point average. Limited to seniors. Individual studies in music resulting in research project. May be repeated for a maximum of eight units.

Graduate Courses

202. Analysis for Performers. (4) Lecture, three hours. Designed for graduate students. Survey of analytical techniques and approaches required for professional performers, including phrase structure, harmonic rhythm and prolongation, small and large forms, theories of musical coherence, and understanding of styles.

203. Musical Terminology. (4) Lecture, three hours. Designed for graduate music students. Survey of musical terminology intended to clarify the performance and interpretation of vocal and instrumental music in the European tradition. Coverage of terms in Italian, French, and German.

204. Music Bibliography for Performers. (4) Lecture, three hours. Designed for graduate music performance students. Survey of general bibliographic techniques in music, with emphasis on materials for the performing musician.

C222. Speculative Music Theory. (4) Discussion, three hours. Designed for graduate music students. Techniques of tonal coherence studied through analysis and compositional exercises in styles of given periods. May be repeated once for credit. May be concurrently scheduled with course C122.

C225. Historical and Philosophical Foundations of Music Education. (4) Lecture, three hours. Designed for graduate students. Development of music education in the U.S. according to established schools of thought. May be concurrently scheduled with course C185. Additional assignments, as well as evidence of greater depth of study, required of graduate students.

C226. Electronic Music Composition. (4) Lecture, three hours; studio, three hours. Preparation: advanced experience and accomplishment in serious composition (art music). Requisite: course 156. Designed for graduate students. Limited enrollment. Analog and digital realizations of original compositional materials culminating in a composition of major proportions at least seven minutes in duration. May be concurrently scheduled with course C176.

251A-251D. Seminars: Special Topics in Composition and Theory. (4 each) Seminar, three hours. Intensive exploration of specialized aspects of composition. May be repeated for credit. **251A.** Orchestration; **251B.** Specific Media; **251C.** Specific Styles; **251D.** Compositional Analysis.

252A-252B-252C. Seminars: Composition. (6-6-6) Seminar, three hours. Requisites: courses 106B, 123C. Course 252A is requisite to 252B, which is requisite to 252C. Courses may be taken out of sequence only with consent of instructor. May be repeated for credit.

261A-261F. Problems in Performance Practices. (4 each) Seminar, three hours; outside study, nine hours. Limited to graduate performance students. Investigation of primary source readings in performance practices as related to the period; analytical reports and practical applications in class demonstrations. May be repeated for credit. S/U or letter grading. **261A.** Medieval; **261B.** Renaissance; **261C.** Baroque; **261D.** Classical; **261E.** Romantic; **261F.** Contemporary.

266A-266B. Seminars: Music of the 20th Century. (4-4) Seminar, three hours. Designed for graduate music students. Discussion and analysis of major works of the 20th century, with emphasis on study of groups of works written at the same time in history. **266A.** 1900 to 1949; **266B.** 1950 to the Present.

C267. Selected Topics in Keyboard Literature. (4) Lecture, three hours. Corequisite: course 464A or 464B or 464C. In-depth study of selected topics in keyboard literature, concentrating on problems of performance through analysis, historical and comparative studies, and actual performances by participants. May be concurrently scheduled with course C167.

270A-270G. Seminars: Music Education. (6-6) Seminar, three hours. May be repeated for credit. **270A.** History; **270B.** Non-Western Musics; **270C.** Curriculum Innovations; **270D.** Tests and Measurements; **270E.** Choral Literature; **270F.** Instrumental Literature; **270G.** General Topics.

271. Music and Electronic Technology. (4) Lecture, four hours; media laboratory, one hour. Designed for graduate music performance students. Survey of music and its place in emerging digital world of the arts, including training in arranging and multimedia production.

330. Introduction to Orff Schulwerk. (2) Lecture, 10 hours; discussion, five hours; laboratory, 15 hours. Intended for teachers of music, church musicians, and music therapists who have had little or no previous experience with Orff Schulwerk. Introduction to Orff Schulwerk, including history, philosophy, and teaching processes of this approach to music instruction for children. Offered in summer only. S/U or letter grading.

S331A-S331B-S331C. Orff Schulwerk Training Courses. (4-4-4) Lecture, 10 hours; discussion, five hours; laboratory, 15 hours. Requisite: course 330. Course S331A is requisite to S331B, which is requisite to S331C. In-depth courses in teaching of Orff Schulwerk approach to music instruction for children. Students who successfully complete each course are eligible for certification at that level through the American Orff Schulwerk Association. Offered in summer only. S/U or letter grading. **S331A.** Level I (Beginning); **S331B.** Level II (Intermediate); **S331C.** Level III (Advanced).

S341. Conducting for High School and College Band/Wind Ensemble Teachers. (2) Lecture, 25 hours. Comprehensive view of current trends in band/wind ensemble programs, including nonverbal communication, conducting, and rehearsal techniques. Study of new and recently published literature and discussions of administration of a band/wind ensemble program. May be repeated for credit without limitation. Offered in summer only. S/U or letter grading.

S342. Contemporary Marching Band. (1) Lecture, 12 hours. Innovative approaches to marching band programs for high school and college teachers, including creative approaches to charging and drill design and use of microcomputers. May be repeated for credit without limitation. Offered in summer only. S/U or letter grading.

343. Effective and Creative String Teaching. (2) Lecture, 24 hours. Comprehensive course for teachers of string classes and string orchestras at elementary, junior high, and high school levels. Topics include development of instructional techniques for violin, viola, cello, and bass; critical examination of current pedagogical materials; and reading sessions of recently published music for string orchestra. May be repeated for credit without limitation. Offered in summer only. S/U or letter grading.

343L. Effective and Creative String Teaching Laboratory. (1) Laboratory, 12 hours. Exploration of string orchestra, ensemble, and chamber music literature appropriate for elementary, junior high, and high schools. Examination of this literature in reading and discussion sessions. May be repeated for credit without limitation. Offered in summer only. S/U or letter grading.

S345. Symposium on Art of Choral Music. (2) Lecture, 25 hours. Symposium for college, high school, and junior high school choral directors on development of practical techniques for solving real challenges in choral conducting and teaching. Topics include innovative choral methods, choral conducting, vocal pedagogy, voice classification, and survey of standard and current choral literature. Offered in summer only. S/U or letter grading.

350A. Introduction to Computer-Assisted Instruction of Music. (2) Lecture, three hours; laboratory, two hours. Introduction to instructional uses of computers in music classroom, with emphasis on practical information necessary to intelligently purchase and implement microcomputers in schools. Courseware to be experienced and reviewed, jargon defined and illustrated, and practical hands-on experience obtained. May be repeated for credit without limitation. Offered in summer only. S/U or letter grading.

350B. Exploration of MIDI Computer Resources: Keyboards and Synthesizers. (2) Lecture, two hours; laboratory, three hours. Creative use of MIDI-based synthesizers under computer control. Exploration of available hardware resources allied with various software sequencing packages. Use of software for computer-based music printing. Hands-on experience. May be repeated for credit without limitation. Offered in summer only. S/U or letter grading.

351. World Music in the Classroom: Implementation through Orff Schulwerk. (3) Lecture, 36 hours. From Orff Schulwerk perspective, presentation of current visual and aural materials from various world cultures and methods for teaching world musics in the classroom. Discussions of problems — practical and philosophical — of incorporating world musics into curriculum. May be repeated for credit without limitation. Offered in summer only. S/U or letter grading.

370. Music in General Education. (2) Designed for Graduate School of Education and Information Studies teacher training program students (all music students must take course 370 concurrently with Education 100A, 100B, 112, 312, 315A, 315B, and supervised teaching). Critical discussions related to supervised teaching in progress. May be repeated twice for credit.

371. The Marching Band in Secondary Education. (2) Study of contemporary marching band as a component of the music curriculum in secondary education, including current approaches, practices, and problems associated with the marching band, as well as historical perspective. S/U or letter grading.

375. Teaching Apprentice Practicum. (1 to 4) Preparation: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

401. New Music Forum. (2) Tutorial/laboratory. Preparation: one year of graduate study in music at UCLA. Interactive course in preparation and performance of a premiere work especially composed for a graduate performer or performers by a graduate composer at UCLA.

460A-465. Graduate Instruction in Performance. (6 each) Studio, one hour; performance laboratory/outside study, 17 hours. Limited to graduate performance students. Individual instruction. Intensive study and preparation of musical literature in area of specialization. May be repeated for credit. Letter grading. **460A.** Violin; **460B.** Viola; **460C.** Cello; **460D.** String Bass; **460E.** Harp; **460F.** Classical Guitar; **460G.** Viola da gamba; **460K.** Lute; **461A.** Flute; **461B.** Oboe; **461C.** Clarinet; **461D.** Bassoon; **461E.** Saxophone; **462A.** Trumpet; **462B.** French Horn; **462C.** Trombone; **462D.** Tuba; **463.** Percussion; **464A.** Piano; **464B.** Organ; **464C.** Harpsichord; **464D.** Fortepiano; **465.** Voice.

469. Piano Pedagogy. (4) Lecture, three hours; discussion, one hour. Preparation: advanced proficiency on piano. Designed for graduate music students. Study of teaching techniques for individual and group instruction, including discussions of how to teach physical skills, musicianship, and interpretation, plus study of ideas and teachings of noted pedagogues of the past and present. Further emphasis on practical teaching experience in class.

470. Opera Studio for Graduate Students. (4) Laboratory, six hours. Designed for graduate students. Performance techniques and repertoire for graduate students in opera.

471. Vocal Pedagogy. (4) Lecture, three hours; discussion, one hour. Preparation: advanced proficiency in voice. Designed for graduate music students. Study of teaching techniques for voice, including thorough investigation of the vocal mechanism and its use, plus study of noted teachers of the past and present. Further emphasis on practical teaching experience in class.

472. Master Class in Opera. (6) Studio, three hours; outside study, 15 hours. Limited to graduate performance students. Intensive study and preparation of opera literature. May be repeated for credit. S/U or letter grading.

473. String Pedagogy. (4) Lecture, three hours; discussion, one hour. Preparation: advanced proficiency on a string instrument. Designed for graduate music students. Study of teaching techniques for string instruments, with main emphasis on instruments represented in class, including how to teach physical and musical aspects of playing. Study of various methods and theories of teaching, with emphasis on practical teaching experience in class.

474. Woodwind Pedagogy. (4) Lecture, three hours; discussion, one hour. Preparation: advanced proficiency on a woodwind instrument. Designed for graduate music students. Study of teaching techniques for woodwind instruments, with main emphasis on instruments represented in class, including development of tone quality, facility, and musicianship. Study of important teachers of the past and present, with emphasis on practical teaching experience in class.

475. Master Class in Conducting. (6) Studio, three hours; outside study, 15 hours. Limited to graduate performance students. Intensive study and preparation of musical literature in specialized field of conducting. May be repeated for credit. S/U or letter grading.

476. Brass Pedagogy. (4) Lecture, three hours; discussion, one hour. Preparation: advanced proficiency on a brass instrument. Designed for graduate music students. Study of teaching techniques for brass instruments, with main emphasis on instruments represented in class, including teaching of physical and musical aspects of playing. Study of successful brass performers and teachers, with emphasis on practical teaching experience in class.

477. Percussion Pedagogy. (4) Lecture, three hours; discussion, one hour. Preparation: advanced proficiency in percussion. Designed for graduate music students. Study of various methods of teaching the vast array of standard percussion instruments, including both classical and "popular" techniques. Study of successful percussion performers/teachers, with emphasis on practical teaching experience in class.

C480. UCLA Chorale. (2) Activity, four hours. Preparation: audition. Designed for M.M. and D.M.A. students. Select mixed ensemble of 50 to 60 voices performing choral music appropriate for a concert choral ensemble, with emphasis on music after 1700. May be repeated for credit without limitation. May be concurrently scheduled with course C90A.

C481. Symphony Orchestra. (2) Activity, four hours. Preparation: audition. Group performance of symphonic literature, as well as orchestral accompaniment for operatic and major choral works. May be repeated for credit without limitation. May be concurrently scheduled with course C90E. S/U or letter grading.

C482. Wind Ensemble. (2) Activity, four hours. Preparation: audition. Designed for M.M. and D.M.A. students. Group performance of concert literature for wind ensemble. May be repeated for credit without limitation. May be concurrently scheduled with course C90G.

C485. Chamber Ensembles. (2) Preparation: audition. Students must be at advanced level of their instrument to participate. Applied study of performance practices of literature appropriate to the ensemble. Students may enroll in two sections per term; total of 12 units may be applied toward degree requirements. May be concurrently scheduled with course C175. S/U or letter grading.

495. Introductory Practicum for Teaching Apprentices in Music. (2) Eight weekly two-hour sessions, plus intensive training session during Fall Quarter registration week. Preparation: appointment as teaching apprentice in Music Department. Required of all new teaching apprentices. Special course dealing with problems and practices of teaching music at college level. May not be applied toward degree requirements. S/U grading.

595A. Preparation of Master's Recital. (6) Tutorial, three hours. Limited to graduate master's program in performance students. Intensive study and preparation of final master's recital, normally taken in lieu of 400-level lessons during final recital term. S/U grading.

595B. Preparation of Final Doctoral Recital. (6) Tutorial, three hours. Preparation: advancement to candidacy for D.M.A. degree. Intensive study and preparation of final D.M.A. recital, normally taken in lieu of 400-level lessons during final recital term. S/U grading.

596A. Directed Individual Studies in Orchestration and Composition. (2, 4, or 6) Tutorial, to be arranged. Only four units may be applied toward M.A. or M.M. degree requirements. May be repeated for credit. S/U or letter grading.

596C. Directed Individual Studies in Music Education. (2, 4, or 6) Tutorial, to be arranged. Only four units may be applied toward M.A. or M.M. degree requirements. May be repeated for credit. S/U or letter grading.

596D. Directed Individual Studies in Performance Practices. (2 to 12) Tutorial, to be arranged. Only four units may be applied toward M.A. or M.M. degree requirements. May be repeated for credit. S/U or letter grading.

597. Preparation for Master's Comprehensive Examination or Ph.D. Qualifying Examinations. (2 or 4) S/U grading.

598. Guidance of M.A. Thesis. (4, 8, or 12) Tutorial, to be arranged. Only four units may be applied toward degree requirements. May be repeated for credit. S/U grading.

599. Guidance of Ph.D. Dissertation. (4, 8, or 12) May be repeated for credit. S/U grading.

Elisabeth C. LeGuin, Ph.D.
Mitchell B. Morris, Ph.D.

Scope and Objectives

The Department of Musicology provides students with a broad understanding of the history and literature of the music of Europe and the Americas and of its place in the development of Western culture. Courses cover virtually every period, style, and genre as well as particular areas of popular music and jazz which have influenced or been influenced by Western art music. Music history appeals to undergraduate students with musical backgrounds whose interests and principal career goals lie in areas other than professional performance. The graduate program provides students with a strong foundation that enables them to pursue careers in teaching and research.

The undergraduate program prepares students for graduate programs in music and related fields and provides them with sufficient background to teach in secondary schools after obtaining the necessary credentials in education. With its focused requirement of study in an area outside music, the program also offers training within the broader context of the humanities. Depending on their particular interests and career goals, students may select courses in the arts, literature, history and society, philosophy, and religion; these may be concentrated within such fields as Afro-American, American Indian, Asian American, Chicana and Chicano, and women's studies. If students wish to participate in performance at UCLA, they are encouraged to do so.

The graduate program offers courses leading to the M.A. and Ph.D. degrees. It is designed to equip students to pursue careers not only in teaching but also in other areas that require bibliographical skills and training in research methodologies. The department provides teaching and research assistantships each year for all qualified students.

Undergraduate Study

Music History B.A.

Admission

The Music History program assumes that students have some musical background before entering UCLA. Although auditions are not required, prospective majors should be sufficiently competent on an instrument or in voice to participate in a performance group, as required by the program.

Preparation for the Major

Required: Music 20A, 20B, 20C, Music History 26A-26B-26C, and six units (three terms) of performance organizations selected from Ethnomusicology 91A-91Z or Music C90A through 90M. Enrollment in Music 20A requires either a minimum score on the Music Theory Placement Examination administered by the Music Department or successful completion of Music 3A-3B (or a comparable year-long college-level music theory sequence). Students with limited musicianship skills may find it useful to enroll in Music 4A-4B-4C concurrently with Music 20A, 20B, 20C. Transfer applicants may petition to waive courses 20A, 20B, 20C if they have completed equivalent work prior to enrolling at UCLA.

The Major

Required: Music 120A, 120B, 120C, Music History 101, 126A-126B-126C; three courses from Music History 127A through 127G; two additional upper division music history courses (eight units) or, via petition, lower division courses with additional work as specified by the instructor; and three upper division ethnomusicology courses (12 units), each from a different geographical or cultural area. Students may petition to substitute ethnomusicology or music history theory courses for one or more of Music 120A, 120B, 120C, as appropriate. Students may enroll in lessons from the Music Department, if instructors are available.

Music History Minor

The Music History minor provides undergraduates with an overview of music history, starting with required courses that offer beginning students a general historical survey from antiquity through the 20th century. Upper division courses have been selected to provide study of more specific areas of interest, with various electives that offer a variety of perspectives on music history.

To enter the minor, students must have an overall grade-point average of 2.0 or better and file a petition at the Student Services Office,

2443 Schoenberg Hall. The ability to read music, although helpful, is not required for admission. For further information, contact Cora Gamulo at (310) 206-5187.

Required Lower Division Courses (12 units): Music History 1A and two courses from 2A, 2B, 5, 7, 13.

Required Upper Division Courses (20 units): Five courses, including (1) one from Music History 127A, 127B, 127C, (2) one from 127D, 127E, 127F, and (3) three from 130 through 189. A recommended course plan for item 3 is one course from 130, 131, M136, 139, 150, 156, 189, one course from 133, 134, 188, and one course from 135A, 135B, 135C.

All minor courses must be taken for a letter grade, with an overall grade-point average of 2.0 or better. Successful completion of the minor is indicated on the transcript and diploma.

Graduate Study

The following constitutes introductory information regarding graduate degree programs and is based on the 1998-99 edition of *Program Requirements for UCLA Graduate Degrees*. Complete, annual editions of *Program Requirements* are available (listed under "Publications") on the Graduate Division website at <http://www.gdnet.ucla.edu>. Students are subject to the degree requirements as published in *Program Requirements* for the year in which they matriculate.

Master's Degree

Admission

The Department of Musicology does not admit candidates for the Master of Arts degree in Musicology only, although students may be awarded the M.A. enroute to the Ph.D.

Applicants for the M.A. are required to (1) take the Graduate Record Examination (GRE) Subject Test in Music; (2) submit a letter describing their background study and stating reasons for wishing to pursue graduate studies in musicology; (3) submit three letters of recommendation from former instructors and/or professionals with whom they have worked; (4) submit two official transcripts from each college attended; and (5) submit written examples of their work such as a paper on an appropriate subject.

Admission Timetable

December 30 — Application for admission/fellowship is due.

January 30 — Supplementary application materials are due.

By March 15 — Notice of acceptance or denial is sent.

Failure to meet any deadline may result in a delay in action on an application for admission, as well as that for a fellowship or assistantship.

Areas of Study

The Musicology Department offers the Master of Arts degree in the field of historical musicology. Degrees in composition, performance, and ethnomusicology are offered through other departments.

Course Requirements

Students are required to complete a minimum of nine courses at the 200 level.

The requirements are Musicology 200A, 200B, 200C; three seminars chosen from 260A through 260F and 262; and a choice of three electives (up to two outside the department). The musicology electives include Musicology 201A through 201F, 210, 211, 250A, 250B, and other 200-level courses.

Comprehensive Examination

Students take the comprehensive examination after completing their course requirements, which is normally by the end of their fifth quarter. All other degree requirements, including language proficiencies, must be satisfied before the examination can be taken. The examination is scheduled by the faculty during the Spring Quarter; all second-year students take it together. However, transfer students entering with a master's degree are expected to take the examination at the end of their first year, before proceeding on to their Ph.D. coursework. In anticipation of the examination, students are asked to designate three fields in which they are to be examined. Two of these fields must be historical: one before 1700 (medieval, Renaissance, or 17th century) and one after 1700 (18th century, 19th century, or 20th century). The third field may be a genre, methodology, or other topic that is recognized as a scholarly specialization among musicologists, e.g., Latin American music, opera, popular music, feminist musicology, ethnomusicology, criticism, African American music. The examinations are designed to test factual knowledge, power of historical analysis and synthesis, and capacity for critical and reflective thinking.

The faculty, after taking into account the fields designated by the student and the suggestions of the student and the adviser, approve the appointment of three of its members to serve as the examining committee. Two weeks before the examination, students submit three samples of their best written work which demonstrate their research, writing, thinking, and analytical skills (typically three seminar papers) prepared for at least two musicology faculty members. The samples do not need to match up with the designated areas of examination. The committee's review of these papers constitutes the first stage of the examination. The second stage is the written examination which is taken together by the cohort of students but is designed differently for each. The members of the examining committee (in consultation with each other to avoid duplication) formulate three essay topics related to the designated fields. Each student receives these topics at the time of the examination and is given up to

four hours to address them. The comprehensive examination is concluded by a two-hour oral examination covering the three designated fields and the written work that has been submitted. On the basis of the student's overall performance, the committee awards a grade of high pass (pass to continue in the Ph.D. program), pass (terminal pass), fail, or pass subject to reevaluation. In this last instance, the student is permitted to repeat the deficient portions of the examination in the following Winter Quarter, after additional coursework or study is completed. More than one such attempt may be granted at the discretion of the faculty.

Thesis Plan

None.

Doctoral Degree

Admission

Applicants to the program leading to the Ph.D. degree in Musicology must have completed a Master of Arts degree (or the equivalent) in Music. The degree normally is in musicology or music history. Otherwise additional coursework, as prescribed by the department, must be completed.

Applicants for the Ph.D. are required to (1) take the Graduate Record Examination (GRE) Subject Test in Music; (2) submit a letter describing their background of study and stating reasons for wishing to pursue graduate studies in musicology; (3) submit three letters of recommendation from former instructors and/or professionals with whom they have worked; (4) submit two official transcripts from each college attended; and (5) submit written examples of their work such as a paper on an appropriate subject. Applicants should also submit their M.A. thesis, if possible.

Major Fields or Subdisciplines

The Musicology Department offers the Doctor of Philosophy degree in the field of historical musicology. Degrees in composition, performance, and ethnomusicology are offered through other departments.

Course Requirements

Students are required to take a minimum of six courses beyond the M.A., including three seminars from Musicology 260A through 260F and 262, and three electives in areas they wish to pursue. Students whose M.A. is not from UCLA may be required, in consultation with the graduate adviser, to take other relevant and necessary courses beyond the six specified.

Written and Oral Qualifying Examinations

Guidance Committee. A guidance committee assists students in the preparation of the written and oral qualifying examinations. The committee is made up of five members, all in the professorial ranks. Students suggest the membership, including the person who guides their dissertation and other faculty, according to the examinations to be taken; the department appoints the chair, who should *not* be the chair of

the student's doctoral committee. A list of questions and repertoire is available to students to help them prepare for this examination.

Soon after completion of the doctoral coursework, normally at the end of the third year, students take the special field examination, which includes both written and oral components. By this time, students must have decided on an area of specialization and secured the agreement of a qualified faculty member to serve as the dissertation adviser. Taking into account the field designated and the suggestions of students and the adviser, the faculty approves the appointment of three of its members to serve as the examining committee. Three months before the examination, students submit to the committee members a reading and repertoire list related to the area of specialization. Typically, this consists of a bibliography in the general area of the dissertation research and a list of relevant musical works, together totaling no more than 50 items. The members of the examining committee (in consultation with one another to avoid duplication) each formulate one or more questions related to the topic, repertoire, and methods thus staked out by the students. Students are allowed one week to address these topics in writing, using any desired research materials. After the completed written examination has been distributed to the examiners, a two-hour oral examination is scheduled. At this time, the committee may discuss the results of the written examination with students and ask further questions related to the area of the dissertation research. If a majority of the committee determines that the written and oral examinations have been passed, students begin preparation for the second stage, the University Oral Qualifying Examination. If the committee determines that the written and oral examinations have not been passed, students may retake the special field examination after six months of further preparation. More than one such attempt may be granted at the discretion of the faculty.

The University Oral Qualifying Examination is a defense of the dissertation prospectus. All other requirements, including language proficiencies, must be satisfied before the examination can be scheduled. At least two weeks before the examination, students must submit the prospectus to the members of the examination committee, who may be but need not be the same as those on the first committee. The prospectus must be a substantially researched overview of the proposed dissertation that demonstrates that students are fully prepared to undertake the dissertation project. Students are encouraged to consult with the members of their committee before the examination, which concentrates on the feasibility and significance of the project and their preparation for it. If the defense is unsatisfactory, the candidate may repeat the examination once, at the discretion of the faculty. After passing the examination, students are advanced to candidacy and begin

to write the dissertation. Candidates are encouraged to enroll in or audit seminars in their field whenever they are offered. If enrolled, candidates may satisfy all course requirements through work connected with the dissertation.

Music History

Lower Division Courses

1A. Introduction to Music History. (4) Lecture, four hours. Designed for Music History minors. Survey of issues and methods of music history and criticism for nonmajors. Letter grading.

2A-2B. Introduction to Literature of Music. (4-4) Lecture, four hours; laboratory, one hour. Course 2A is not requisite to 2B. Limited to undergraduate students. Designed for nonmusic majors. P/NP or letter grading. **2A.** Technical and formal principles of music literature through the mid-18th century. **2B.** Music literature from the mid-18th century to the present.

5. History of Rock and Roll. (4) Lecture, four hours. Analysis of forms, practices, and meanings of rock and roll music, broadly conceived, from its origin to the present. Emphasis on how this music has reflected and influenced changes in sexual, racial, and class identities and attitudes. Letter grading.

7. Film and Music. (4) Lecture, four hours. History of music and cinema, particularly ways music is used to produce meanings in conjunction with the visual image. P/NP or letter grading.

10. Music Now. (4) Lecture, four hours. Guided interactive tour of contemporary musical landscape. Current events in historical perspective, with special attention to questions of culture, taste, and value hierarchies. Discussion and evaluation of representative works and practices from avant-garde, mainstream, world, and popular spheres. Letter grading.

13. 20th-Century Music of the Western World. (4) Lecture, four hours. Survey of main trends in 20th-century music, with emphasis on representative works from avant-garde, mainstream, and popular traditions. P/NP or letter grading.

26A-26B-26C. History and Analysis of Music I. (4-4-4) Lecture, four hours; laboratory, one hour. Enforced requisite: Music 20C. Course 26A is enforced requisite to 26B, which is enforced requisite to 26C. Students must receive a C– or better to proceed to next course in sequence. History and literature of music from ancient world to 1815, with emphasis on analysis of representative works of each style period. Materials selected illustrate history of style and changing techniques of composition. Letter grading.

28A-28B-28C. Early Music Laboratory. (2-2-2) Laboratory, three hours. Enforced corequisite: course 26A or 26B or 26C. Practical laboratory in which students perform music of various periods, as correlated with courses 26A-26B-26C. P/NP or letter grading.

Upper Division Courses

101. Issues and Methods in Music History. (4) (Formerly numbered 1A.) Lecture, four hours. Requisite: course 26C. Introduction to principles, problems, and methods of music history and criticism through examination of selected issues. Letter grading.

110. Writing about Music. (4) Lecture, two hours; laboratory, two hours. Designed for music and music history/musicology majors. Emphasis on learning specific skills, incorporating technical description, historical contextualization, subjective reaction, and certain stylistic conventions necessary in writing about music. P/NP or letter grading.

126A-126B-126C. History and Analysis of Music II. (4-4-4) Lecture, four hours; laboratory, one hour. Requisites: course 26C, Music 20A, 20B, 20C. Course 126A is requisite to 126B, which is requisite to 126C. Students must receive a C– or better to proceed to next course in sequence. History and literature of music from 1815 to the present, with emphasis on analysis of representative works of each style period. Materials selected illustrate history of style and changing techniques of composition. Letter grading.

127A-127G. Selected Topics in History of Music. (4 each) (Formerly numbered C127A-C127F.) Discussion, three hours. Requisites: courses 26A-26B-26C. Designed as proseminars for undergraduates in preparation for graduate work. Special aspects of music of each period studied in depth. P/NP or letter grading. **127A.** Middle Ages; **127B.** Renaissance; **127C.** Baroque; **127D.** Classic; **127E.** Romantic; **127F.** 20th Century; **127G.** Other Topics.

130. Music of the U.S. (4) Lecture, four hours. Survey of art music in the U.S. from Colonial times to the present. P/NP or letter grading.

131. American Popular Song. (4) Lecture, four hours. Survey of American popular song from the 18th century to the present, with emphasis on relationship of popular song to important currents in American life and culture. P/NP or letter grading.

132. Mozart. (4) Lecture, four hours. Designed for students who do not read music. Life, works, and mythology of Wolfgang Amadeus Mozart, in context of both his age and our own. P/NP or letter grading.

133. Bach. (4) Lecture, two hours; laboratory, two hours. Designed for undergraduate students. Life and works of Johann Sebastian Bach. P/NP or letter grading.

134. Beethoven. (4) Lecture, two hours; laboratory, two hours. Designed for undergraduate students. Life and works of Ludwig van Beethoven. P/NP or letter grading.

135A-135B-135C. History of Opera. (4-4-4) Lecture, four hours; laboratory, one hour. Designed for undergraduate students. P/NP or letter grading. **135A.** Opera of Baroque and Classical Periods; **135B.** Opera of Romantic Period; **135C.** Opera of the 20th Century.

M136. Music and Gender. (4) (Formerly numbered 136.) (Same as Women's Studies M136.) Lecture, four hours. Analysis of gender ideologies in several musical cultures; representations of gender, the body, and sexuality by both male and female musicians; contributions of women to Western art and popular musics; methods in feminist and gay/lesbian theory and criticism. Letter grading.

M137. Gay and Lesbian Perspectives in Pop Music. (4) (Same as Lesbian, Gay, Bisexual, and Transgender Studies M137.) Lecture, four hours. Survey of English-language popular music in the 20th century, with focus on lesbians, gay men, and members of other sexual minorities as creators, performers, and audience members. Letter grading.

138. History of Electronic Dance Music. (4) Lecture, four hours. Survey of groove-based electrified dance music from its origins in 1960s' pop and soul to the present, covering disco, house, techno, ambient, rave, and jungle. Emphasis on interaction of technology, musical structures, psychoactive drugs, and club cultures to induce "altered states" of musical consciousness; promise (versus reality of) political and spiritual transformation; electronic dance music as a new "art" music. Letter grading.

139. History and Literature of Church Music. (4) Lecture, four hours. Study of forms and liturgies of Western church music. P/NP or letter grading.

140. Music, Media, and Consumer Society. (4) Lecture, four hours. Consideration of impact of recording technologies (gramophone, tape recorder, Walkman, sampler), broadcast media (radio, television, MTV, Internet), and global capitalism (record labels, advertising, Muzak) on way we consume and are consumed by music. How music functions and malfunctions on records, under movies, behind ads, and in semiotic fabric of everyday life. Letter grading.

145. American Musical. (4) Lecture, four hours. Survey of American musical in the 20th century, beginning with its roots in operetta, vaudeville, and Gilbert and Sullivan, and focusing on its connections to politics, technology, film, opera, and a variety of popular musical styles, including Tin Pan Alley, jazz, and rock. Letter grading.

150. History of Jazz. (4) Lecture, four hours. Designed for music history, music, and ethnomusicology majors, and other students with some background in musical performance and theory. History and analysis of variety of jazz styles, from late 19th-century fore-runners to the present, with emphasis on social meanings of musical practices. Letter grading.

156. Studies in Musical Genres. (4) Lecture, four hours. Survey of musical genres, with emphasis on analysis of structural organization. P/NP or letter grading.

188. Topics in Music History. (4) (Formerly numbered 188A-188F.) Lecture, three hours; laboratory, one hour. Variable topics selected from several outstanding composers in Western art music. Consult *Schedule of Classes* for topics to be offered. Letter grading.

189A-189B. The Symphony. (4-4) (Formerly numbered 189.) Lecture, four hours. Designed for undergraduate students. Survey of symphonic literature from Haydn through the 20th century. Letter grading.

195. Honors Course. (4) Tutorial, two hours. Preparation: completion of minimum of four upper division music history courses with departmental grade-point average of 3.5 or better and an overall GPA of 3.0. Limited to junior/senior Music History majors. One- to two-term independent research study project under supervision of an appropriate faculty member, culminating in department honors thesis of approximately 25 pages. P/NP or letter grading.

199. Special Studies in Musicology. (2 or 4) Tutorial, to be arranged. Preparation: 3.0 grade-point average. Limited to seniors. Individual studies in musicology resulting in a research project. May be repeated for a maximum of eight units. P/NP or letter grading.

Musicology

Lower Division Courses

6GA-6GB. Musicianship for Musicology Graduate Students. (2-2) Seminar/laboratory, three hours. Designed to help entering graduate students remedy entrance deficiencies. S/U grading.

Graduate Courses

200A. Research Methods and Bibliography. (6) Lecture, three hours. Designed for graduate musicology students. Survey of general bibliographic material in music.

200B. Historiography. (6) Seminar, three hours. Designed for graduate musicology, ethnomusicology, and music students. Critical examination of principles and procedures which inform historical study of music, with emphasis on impact of recent cultural theory.

200C. Contemporary Music Criticism. (6) Seminar, three hours. Designed for graduate musicology, ethnomusicology, and music students. Introduction to recent developments in the field of musicology, focusing on problems of how music operates as a cultural practice and how musical meanings can most effectively be analyzed and written about.

210. Medieval Notation. (6) Lecture, three hours. Vocal and instrumental notation; paleography of the period.

211. Renaissance Notation. (6) Lecture, three hours. Vocal and instrumental notation; paleography of the period.

250A-250B. Seminars: History of Music Theory. (6-6) Seminar, three hours. Requisite: course 200A. Course 250A is not requisite to 250B. **250A.** Investigation of principal theoretical writings concerning music from antiquity through Zarlino. **250B.** Investigation of principal theoretical writings concerning music from Rameau to the present.

254. Structure and Interpretation of Music. (4) Seminar, three hours. Requisite: course 200C. Critical survey of recent music theory and its analytical methods for musicologists. Questions of analysis and value judgment, formalism and autonomy, popular and vernacular musics, cultural versus musical theory, hermeneutic risks and (im)proprieties. Individual students work practically and in depth on specific analytical problems most relevant to their interests. Letter grading.

256. Seminar: Musical Form. (6) Seminar, three hours. Requisites: courses 126A-126B-126C. Analysis of structural organizations in music. Specific topics vary from year to year.

257. Music of the U.S. (6) Discussion, three hours. Designed for graduate students. Examination of principal figures and trends in music of the U.S. since the 18th century.

260A-260F. Seminars: Historical Musicology. (6 each) Seminar, three hours. Requisites: courses 200A, 201A-201B-201C, and 210 or 211 (either may be taken concurrently). Specific topics vary from year to year. May be repeated for credit. **260A.** Medieval; **260B.** Renaissance; **260C.** Baroque; **260D.** Classical; **260E.** Romantic; **260F.** 20th Century.

261A-261F. Problems in Performance Practices. (4 each) Lecture, three hours. Designed for graduate students. Investigation of primary source readings in performance practices as related to the period; analytical reports and practical applications in class demonstrations. May be repeated for credit. **261A.** Medieval; **261B.** Renaissance; **261C.** Baroque; **261D.** Classical; **261E.** Romantic; **261F.** Contemporary.

262. Contemporary Popular Music Studies. (4) Seminar, three hours. Designed for graduate students. Critical exploration of methodologies of interdisciplinary field of popular music studies. Analysis of how music, lyrics, and visual images produce meanings within contexts shaped by mass mediation, capitalism, and political realities of gender, class, and race.

263. History of Performance. (4) Seminar, three hours. Designed for graduate students. Survey of role of performers and performance in Western music history. Critical understanding of (and set of tools for addressing) frequent invisibility or "transparency" of performance and performers in histories of music. Letter grading.

264. Seminar: Topics in Musicology. (6) Seminar, three hours. Designed for graduate students. Specific topics vary from term to term. May be repeated for credit.

265. Ideal of Authenticity in Performance: 1827 to the Present. (4) Seminar, three hours. Preparation: ability to read musical notation and knowledge of musical history equivalent to successful completion of courses 126A-126B-126C. Not a course in performance, but intellectual history of performance and interpretation from solidification of classical canon to disintegration. How have performers mediated between claims of imaginative sympathy, performing tradition, and textual evidence? Use of historical texts and recordings to reconstruct interpretive strategies and justifications of the past and consideration of such major 20th-century trends as idea of Werktreue, Toscani versus Furtwängler debates, impact of recording and mass media, and rise of historical performance movement. Letter grading.

375. Teaching Apprentice Practicum. (1 to 4) Preparation: apprentice personnel employment as a teaching assistant, associate, or fellow. Teaching apprenticeship under active guidance and supervision of a regular faculty member responsible for curriculum and instruction at the University. May be repeated for credit. S/U grading.

495. Introductory Practicum for Teaching Apprentices in Musicology. (2) Eight weekly two-hour sessions, plus intensive training session during Fall Quarter registration week. Preparation: appointment as teaching apprentice in Music or Musicology Department. Required of all new teaching apprentices. Special course dealing with problems and practices of teaching music at college level. May not be applied toward degree requirements. S/U grading.

596. Directed Individual Studies in Musicology. (2, 4, or 6) Tutorial, to be arranged. Limited to graduate students. S/U or letter grading.

597. Preparation for M.A. Comprehensive Examination or Ph.D. Qualifying Examinations. (2 or 4) Preparation: completion of all M.A. or Ph.D. course and language requirements. Limited to graduate students. S/U grading.

598. Guidance of M.A. Thesis. (4, 8, or 12) Preparation: completion of all M.A. degree requirements (except thesis). Limited to graduate students. S/U grading.

599. Guidance of Ph.D. Dissertation. (4, 8, or 12) Preparation: advancement to Ph.D. candidacy. Limited to graduate students. May be repeated for credit. S/U grading.

Nancy Ezer, Ph.D. (*Hebrew*)
Michael Fishbein, Ph.D. (*Arabic*)
Latifeh Hagigi, M.A. (*Iranian*)
Ralph Jaeckel, Ph.D. (*Turkic*)

Scope and Objectives

The mission of the department is the discovery, interpretation, dissemination, and preservation of human values created over a period of five or more thousand years in an area which was the cradle of all civilization.

The department offers instruction in the major modern and ancient languages of the Near East: Akkadian, ancient Egyptian, Arabic, Armenian, Berber, Coptic, Hebrew, Persian, and Turkic. To meet increasing demands for a knowledge of this area and its past and present, it treats each language in a wide perspective — as a means of communication, as a vehicle of a cultural heritage, as a research tool for the area, and as an object of research itself.

Undergraduate majors may be taken in Ancient Near Eastern Civilizations, Arabic, Hebrew, Iranian Studies, and Jewish Studies. Master's and Ph.D. programs are offered in ancient Near Eastern civilizations, Arabic, Armenian, Hebrew, Iranian, Semitics, and Turkic.

Courses in the department prepare students for careers in government, foreign trade, teaching abroad, journalism abroad, archaeology, and further academic work involving the area.

Undergraduate Study

The department offers the Bachelor of Arts degree in five fields: (1) Ancient Near Eastern Civilizations, (2) Arabic, (3) Hebrew, (4) Iranian Studies, and (5) Jewish Studies. In each of these fields students must meet the requisites and take the courses prescribed. Their adviser assists in selecting a plan of study developed around their interests.

Students may combine their major with one in another department (double major) to enhance their educational opportunities. Due to the number of additional courses required, they are advised to consider this option early in their academic career and in consultation with program advisers in both majors.

Ancient Near Eastern Civilizations B.A.

There are four options for a major in Ancient Near Eastern Civilizations: (1) Mesopotamia, (2) Egypt, (3) Syria/Palestine, and (4) biblical studies.

Preparation for the Major

Requisites for options 1 and 2 are German 1 and 2; requisites for options 3 and 4 are Greek 1, 2, Hebrew 1A-1B-1C, 102A-102B-102C. Majors in all four fields are expected to continue their study of German or Greek beyond the requisite levels.

The Major

Majors in all four options are required to take 14 courses selected in consultation with the program adviser.

Majors selecting options 1, 2, and 3 are required to take four language courses as fol-

lows: *option 1* — Semitics 140A-140B, 141, 142; *option 2* — Ancient Near East 120A-120B-120C, 121A; *option 3* — Semitics 130 and three terms of Hebrew 120. The remaining 10 courses for all three options are to be selected from the following: three literature courses from Ancient Near East 150A, 150B, 150C, Jewish Studies M150A; three courses in history and religion from Ancient Near East M104A, M104B, M105, 130, 170, History M191A, 193D, M203A, Iranian 169, 170; three courses in archaeology and art from Ancient Near East 160A, 160B, 161A, 161B, 161C, 162, Art History 101A, 101B; one course in research methodology (such as Anthropology C115R, M116Q, or Linguistics 120A, 120B, or English 140A) taken preferably in another department with the consent of the adviser.

Majors selecting option 4 are required to take 14 courses as follows: three terms of Hebrew 120; Ancient Near East 150C, 162, 170; English 108B or History 194A; Greek 130; Jewish Studies M150A; History M191A; Semitics 130. The remaining three courses may be selected from Ancient Near East M104A, M104B, M105, 130, 150A, 150B, 160A, 160B, Art History 101A, 101B, 105A, Classics 168, Greek 131, History 193D, 194B, Iranian 169, 170, Latin 120.

Arabic B.A.

Preparation for the Major

Required: Arabic 1A-1B-1C, 102A-102B-102C, 150.

The Major

Required: Fifteen courses, including Arabic 103A-103B-103C and History 107A or Islamics 110; five courses from Arabic 120, 130, 132, 141; three courses from Arabic 111A, 111B, 111C, 112A, 112B, 112C, 114A, 114B, 114C; three courses from Art History 104A, Geography 187, History 106A, 106B, 106C, 107B, 108A, 108B, Political Science 132A, 132B, 157.

Hebrew B.A.

Preparation for the Major

Required: Hebrew 1A-1B-1C, 102A-102B-102C, Jewish Studies M150A-150B, or equivalent.

The Major

Required: Sixteen courses, including Hebrew 103A-103B-103C; three terms of Hebrew 120 and/or 125; two courses from Hebrew 130, 135; two courses from Hebrew 140, 160; Hebrew 190A-190B; two additional courses in Hebrew or Aramaic to be approved by the adviser; two courses from History M191A, M191B, M192A, M192B.

Iranian Studies B.A.

Students majoring in Iranian Studies may combine the major with specialization in other fields to enhance their career opportunities. Due to the number of additional courses required, they are advised to consider this option early in their academic career.

Preparation for the Major

Required: Iranian 1A-1B-1C or equivalent, 150A-150B.

The Major

Required: Sixteen courses, including Iranian 102A-102B-102C, 103A-103B-103C, 140, 141, 142, 180A-180B; five courses from Ancient Near East 163A, 163B, Arabic 1A, 1B, 1C, Art History 104A, 104B, C104C, Ethnomusicology 20B, History 106A, 106B, 106C, 110B, Iranian 120, 169, 170, 190A, 190B, Political Science 157.

Jewish Studies B.A.

Preparation for the Major

Required: Hebrew 1A-1B-1C, History M191A-M191B, or equivalent.

The Major

Required: Sixteen courses, including Hebrew 102A-102B-102C, 103A-103B-103C, 120 or 125, Jewish Studies M150A-150B, 151A-151B, 199, and four other upper division courses. At least two of the four must be courses in the areas of Hebrew, Jewish history, or Yiddish. The remaining two may be selected either from those areas or from courses with Jewish content given in other departments and approved by the adviser.

Arabic and Islamic Studies Minor

The Arabic and Islamic Studies minor is designed for students who wish to augment their major program with a group of related courses that provide a systematic introduction to the study of Arabic language and literature and Islam.

To enter the minor, students must have an overall grade-point average of 2.0 or better, have completed Arabic 1A-1B-1C or the equivalent as determined by the department, and file a petition in 376 Kinsey Hall, (310) 825-4165.

Required Upper Division Courses (28 units): Seven courses in Arabic or Islamics; 199 courses may not be applied. With approval of the undergraduate adviser, two of the seven courses may be taken outside the department. Courses recommended as electives for the major in Arabic (Art History 104A, Geography 187, History 106A, 106B, 106C, 107A, 107B, 108A, 108B, Political Science 132A, 132B, 157) may be applied. Other courses may be applied as extra-departmental courses with approval of the adviser.

All minor courses must be taken for a letter grade, with an overall grade-point average of 2.0 or better. Successful completion of the minor is indicated on the transcript and diploma.

Armenian Studies Minor

The Armenian Studies minor is designed for students who wish to augment their major program with a group of courses that provide a

systematic introduction to the study of Armenian culture.

To enter the minor, students must have an overall grade-point average of 2.0 or better, have completed Armenian 101A-101B-101C or the equivalent as determined by the department, and file a petition in 376 Kinsey Hall, (310) 825-4165.

Required Upper Division Courses (28 units): Seven courses from the Armenian section of the department; 199 courses may not be applied. At least one course from each of the three disciplines of language, literature, and history must be selected. Eligible language courses begin in the fourth quarter of study (i.e., course 102A for Western Armenian, course 105A for Eastern Armenian). With approval of the undergraduate adviser, two of the seven courses may be taken outside the department. Ordinarily, courses listed as Related Courses under the Armenian section in the *UCLA General Catalog* may be applied.

All minor courses must be taken for a letter grade, with an overall grade-point average of 2.0 or better. Successful completion of the minor is indicated on the transcript and diploma.

Hebrew and Jewish Studies Minor

To enter the Hebrew and Jewish Studies minor, students must have an overall grade-point average of 2.0 or better, have completed Hebrew 1A-1B-1C or the equivalent as determined by the department, and file a petition in 376 Kinsey Hall, (310) 825-4165.

Required Upper Division Courses (28 units): Seven courses from the Hebrew or Jewish studies section of the department; 199 courses may not be applied. With approval of the undergraduate adviser and based on course content, two of the seven courses may be taken outside the department.

All minor courses must be taken for a letter grade, with an overall grade-point average of 2.0 or better. Successful completion of the minor is indicated on the transcript and diploma.

Near Eastern Languages and Cultures Minor

The Near Eastern Languages and Cultures minor is designed for students who wish to augment their major program in the College of Letters and Science with a group of related courses from various linguistic, literary, archaeological, and historical disciplines of the Near East, from ancient Egypt, Mesopotamia, and biblical studies to the modern Arabic, Armenian, Iranian, Jewish, and Turkish world.

To enter the minor, students must have an overall grade-point average of 2.0 or better and file a petition in 376 Kinsey Hall, (310) 825-4165.

Required Upper Division Courses (28 units): Seven courses selected in consultation with an

academic adviser from any of the courses offered by the department; 199 courses may not be applied. With approval of the undergraduate adviser, two of the seven courses may be taken outside the department, provided the content of the courses bears a direct relation to the culture of the Near East.

All minor courses must be taken for a letter grade, with an overall grade-point average of 2.0 or better. Successful completion of the minor is indicated on the transcript and diploma.

Graduate Study

The following constitutes introductory information regarding graduate degree programs and is based on the 1998-99 edition of *Program Requirements for UCLA Graduate Degrees*. Complete, annual editions of *Program Requirements* are available (listed under "Publications") on the Graduate Division website at <http://www.gdnet.ucla.edu>. Students are subject to the degree requirements as published in *Program Requirements* for the year in which they matriculate.

Master's Degree

The Department of Near Eastern Languages and Cultures offers the Master of Arts (M.A.) degree in Near Eastern Languages and Cultures.

Admission

In addition to the regular University requirements, a bachelor's degree or its equivalent in the language area chosen for the degree, the Graduate Record Examination (GRE) General Test, and three letters of recommendation are required of applicants to the M.A. program. As a rule, students are not admitted with a grade-point average of less than 3.25 or a GRE score of less than 1,600. The GRE must be taken within 24 months prior to the date of the application.

Areas of Study

Major fields of specialization are ancient Near Eastern civilizations, Arabic, Armenian, Hebrew, Iranian, Semitics, Turkic.

Students may concentrate on either language or literature in their selected field but are required to do work in both. In the field of ancient Near Eastern civilizations, the department also offers an archaeology emphasis.

Course Requirements

A minimum of nine upper division and graduate courses is required, of which at least six must be at the graduate level. Students are required to take one quarter of Near Eastern Languages 200.

In general, students choosing either the language, literature, or archaeology option are required to study two Near Eastern languages, one of which is considered the major language. Students in Semitics or in Old Iranian study three languages.

In ancient Near Eastern civilizations, students may choose as their major language any of the following: ancient Egyptian (including Coptic), Akkadian, Aramaic (including Syriac), Hebrew (with Ugaritic and Phoenician), or Old Persian. For the second language, any of the above or Hittite or Sumerian may be chosen.

Students in Hebrew choose Hebrew and another Semitic language. In Turkic, either two Turkic languages or Turkish and a second culturally related language may be chosen. In Arabic, Armenian, and Iranian (modern), a major language and a second culturally related language are chosen.

Students in Semitics are required to study three Near Eastern languages, at least two of which should be Semitic (the third may be Hittite or Sumerian). In Old Iranian, Persian, Sanskrit, and Old and Middle Iranian are studied.

Twelve units of course 596 may be applied toward the total course requirement; eight units may be applied toward the minimum graduate course requirement.

Comprehensive Examination Plan

In general, students are required to take written final comprehensive examinations in their major and minor languages, as well as the history and literature of their major field. Further details can be found in the departmental *Guide to Graduate Studies*, available in the department.

Thesis Plan

None.

Doctoral Degree

Admission

In addition to the regular University requirements, an M.A. or equivalent in the applicant's field, the Graduate Record Examination (GRE) General Test, and three letters of recommendation are required for admission to the program leading to the Ph.D. degree in Near Eastern Languages and Cultures. As a rule, students are not admitted with a grade-point average of less than 3.25 or a GRE score of less than 1,600. The GRE must be taken within 24 months prior to the date of the application.

The M.A. program need not have been completed at UCLA.

Major Fields or Subdisciplines

Major fields of specialization are ancient Near Eastern civilizations, Arabic, Armenian, Hebrew, Iranian, Semitics, Turkic.

Students may concentrate on either language or literature in their selected field but are required to do work in both. In the field of ancient Near Eastern civilizations, the department also offers an archaeology emphasis.

Course Requirements

Students who choose a language emphasis for the Ph.D. are required to add a third Near Eastern language to the two that are required for the M.A.

Students are required to achieve high competence in two of their languages and to familiarize themselves with the cultural backgrounds of each of the languages chosen. For language options, see the M.A. requirements section. Students are also expected to take the equivalent of one year of general linguistics. Those studying Semitics or Old Iranian study three languages.

If the literature option is chosen, students are required to achieve high competence in two Near Eastern languages and their literatures. For language options, see the M.A. requirements section. Students are required to familiarize themselves, through appropriate coursework, with the history of the cultural area, and the methods of literary research and the history of literary criticism.

If the archaeology emphasis in the ancient Near Eastern civilizations specialization is chosen, students are required to achieve high competence in two ancient Near Eastern languages and must be well-versed both in the history of the cultural area and in archaeological methodologies. For language options, see the M.A. requirements section.

Further details about the choice of languages and examination requirements may be found in the departmental *Guide to Graduate Study*, available in the department.

Written and Oral Qualifying Examinations

Qualifying examinations must be passed before the formation of a doctoral committee.

Candidates in languages are examined in three Near Eastern languages and the literary and historical background of at least two of them. Candidates in literature are examined in the literatures written in two languages within the cultural area of concentration and the historical and cultural background of these languages, with emphasis on one of them. Candidates in ancient Near Eastern civilizations are examined in two ancient languages and in the history and archaeology of the major areas of the ancient Near East.

When students pass the written examinations, their doctoral committee administers the University Oral Qualifying Examination. Passing this examination allows students to advance to candidacy and begin work on the dissertation.

Ancient Near East

(Akkadian, Aramaic, Phoenician, and Ugaritic are listed under Semitics.)

Lower Division Course

10. Jerusalem: The Holy City. (4) Lecture, three hours. Survey of history of Jerusalem over 3,000 years as a symbolic focus for three faiths: Judaism, Christianity, and Islam.

Upper Division Courses

M104A-M104B. Ancient Egyptian Civilization. (4-4) (Same as History M104A-M104B.) Lecture, three hours. Course M104A is not requisite to M104B. Designed for juniors/seniors. Political and cultural institutions of ancient Egypt and ideas on which they were based. **M104A.** Chronological discussion of Prehistory, the Old and Middle Kingdom. **M104B.** The New Kingdom and the Late period until 332 B.C.

M105. History of Ancient Mesopotamia and Syria. (4) (Same as History M105.) Lecture, three hours. Designed for juniors/seniors. Political and cultural development of the "Fertile Crescent," including Palestine, from the Neolithic to the Achaemenid period.

120A-120B-120C. Elementary Ancient Egyptian. (4-4-4) Lecture, three hours; laboratory, two hours. Grammar and texts.

121A-121B-121C. Intermediate Ancient Egyptian. (4-4-4) Lecture, three hours. Requisites: courses 120A-120B-120C. Readings in ancient Egyptian literature.

123A-123B. Coptic. (4-4) Lecture, three hours. Introduction to Coptic grammar and reading of Coptic texts.

124. Middle Egyptian Technical Literature. (4) Requisite: course 121C. Reading of Middle Egyptian technical literature in hieroglyphic transcription. Medical, veterinary, mathematical, and astronomical texts included.

130. Ancient Egyptian Religion. (4) Lecture, three hours. Introductory survey of various ancient Egyptian religious beliefs and practices, their origin, and development. Discussions of religiopolitical institutions such as divine kingship and pious foundations.

140A-140B-140C. Elementary Sumerian. (4) Lecture, three hours; outside study, nine hours. Requisites: Semitics 140A-140B. Elementary grammar and reading of royal inscriptions, letters, and administrative texts from the Ur III period.

145. Sumerian Literary Texts. (4) Lecture, three hours. Requisites: courses 140A-140B. Reading and interpretation of selected Sumerian literary texts.

150A-150B-150C. Survey of Ancient Near Eastern Literatures in English. (4-4-4) Lecture, three hours. Each course may be taken independently for credit.

150A. Mesopotamia; **150B.** Egypt; **150C.** Syria and Palestine.

160A-160B. Introduction to Near Eastern Archaeology. (4-4) Lecture, three hours. Terminology, geography, principles, strategy of research, bibliography, and general survey of Near Eastern archaeology.

161A-161B-161C. Archaeology of Mesopotamia. (4-4-4) Survey of main archaeological periods in Mesopotamia, with special emphasis on late prehistoric and early historical periods and with reference to neighboring cultural areas. Each course may be taken independently for credit.

162. Archaeology and Religion of the Holy Land. (4) Lecture, three hours. Survey of archaeology of Palestine from the Bronze Age to destruction of Jerusalem in A.D. 70, with emphasis on religious development of ancient Israel.

163A-163B. Archaeology of Iran. (4-4) Lecture, three hours. Designed to introduce students to Iranian archaeology from prehistoric through Achaemenid times. **163A.** Prehistoric and protohistoric phases of Iranian archaeology. **163B.** Archaeology of Elam, Iron Age, and Achaemenid Empire.

164A-164B-164C. Archaeology of Historic Periods in Mesopotamia. (4-4-4) Requisites: courses M105, 161A-161B-161C. Survey of main archaeological periods in Mesopotamia, with special emphasis on historic periods and with reference to neighboring cultural areas. Each course may be taken independently for credit.

165. Archaeology of Pharaonic Egypt. (4) Lecture, three hours. Requisites: courses M104A-M104B. Selected topics on archaeology of Pharaonic Egypt, with emphasis on material culture as source for political, social, and economic history of ancient Egypt.

170. Introduction to Biblical Studies. (4) Lecture, two hours. Knowledge of original languages not required. The Bible (Old and New Testaments) as a book. Canon, text, and versions. Linguistic, literary, historical, and religious approaches to Bible study. Survey of history of interpretation from antiquity to the present.

M194. The Hero in the Bible and the Ancient Near East. (4) (Same as Folklore M185.) Lecture, three hours. Investigation of concepts of the hero/heroine in literatures of ancient Mesopotamia, Canaan, and Israel. Texts include epics of Gilgamesh and Aghat, Hebrew Bible, and New Testament. All texts read in translation.

199. Special Studies in the Ancient Near East. (2 to 8) Tutorial, to be arranged.

Graduate Courses

210. Late Egyptian. (4) Lecture, three hours. Requisites: courses 121A-121B-121C. Late Egyptian grammar and reading of both hieroglyphic and hieratic texts. May be repeated for credit.

211A-211B. Egyptian Texts of the Greco-Roman Period. (4-4) Lecture, three hours. Requisite: course 121C. Introduction to grammar and orthography of hieroglyphic texts from Greco-Roman temples. Text readings and translation of various textual types.

220. Seminar: Ancient Egypt. (4) Seminar, three hours. May be repeated for credit.

221A-221B. Demotic. (4-4) Requisite: course 121C. Introduction to Demotic grammar and orthography. Reading of texts from various genres.

240A-240B-240C. Seminars: Sumerian Language and Literature. (4-4-4) Seminar, two hours. Readings of texts from various Sumerian periods and literary genres; selected problems in linguistic or stylistic analysis and literary history.

M250. Seminar: Ancient Mesopotamia. (4) (Same as History M207.) Seminar, three hours. Selected topics on political, social, and intellectual history of ancient Mesopotamia. May be repeated for credit.

250X. Seminar: Ancient Mesopotamia. (1) Selected topics on political, social, and intellectual history of ancient Mesopotamia. Course for students who participate regularly in class meetings but without the homework required in course M250. May be repeated for credit. S/U grading.

260. Seminar: Ancient Near Eastern Archaeology. (4) Seminar, two hours. May be repeated for credit.

261. Practical Field Archaeology. (2 to 8) Fieldwork, two hours. Participation in archaeological excavations or other archaeological research in the Near East under staff supervision. May be repeated.

262. Seminar: Object Archaeology. (4) Discussion, two hours; laboratory, one hour. Selected topics in analysis and interpretation of Near Eastern archaeological finds in museum collections. Students work with objects in Heeramanek Collection of Los Angeles County Museum of Art.

263. Seminar: Egyptian Monuments. (4) Selected monuments and sites in area of Luxor (Ancient Thebes). Architecture and decoration of temples and tombs; structure and occupation of settlements. May be repeated.

M265. Depositional History and Stratigraphic Analysis. (4) (Same as Archaeology M265.) Lecture, two hours. Theoretical understanding of depositional processes ("laws") which lead to site formation and of stratigraphic procedures to be used in recovery of embedded cultural materials. Study of issues covered in the literature, with specific test cases from actual excavations and site reports. Coverage of theoretical implications of such disciplines as surveying and pedology with the help of specialists. S/U or letter grading.

272. Semitic Background of the New Testament. (4) Lecture, two hours. Requisites: Hebrew 102A-102B-102C, Semitics 130, Greek 1, 2. Study of Semitic elements in the Greek New Testament: traditions transmitted in Aramaic, relations to the Old Testament and to post-Biblical literature, and Palestinian Judaism.

596. Directed Individual Study. (2 to 8) Tutorial, to be arranged. May be repeated for credit.

597. Examination Preparation. (2 to 8) Tutorial, to be arranged. S/U grading.

599. Ph.D. Dissertation Research and Preparation. (2 to 8) S/U grading.

Lower Division Courses

1A-1B-1C. Elementary Literary Arabic. (4-4-4) Lecture, six hours. Basic grammar and syntax.

Upper Division Courses

102A-102B-102C. Intermediate Literary Arabic. (4-4-4) Lecture, four hours; discussion, one hour. Requisites: courses 1A-1B-1C. Grammar and syntax; readings of excerpts from literary texts; composition.

103A-103B-103C. Advanced Arabic. (4-4-4) Requisites: courses 102A-102B-102C. Review of grammar, composition, conversation, and readings from classical and modern literary texts.

111A-111B-111C. Elementary Spoken Egyptian Arabic. (4-4-4) Lecture, three hours. Requisites: courses 1A-1B-1C. Basic grammar and syntax of Egyptian colloquial Arabic.

112A-112B-112C. Advanced Spoken Egyptian Arabic. (4-4-4) Lecture, three hours. Requisites: courses 111A-111B-111C. Grammar and syntax; excerpts from literary texts using colloquial Arabic.

113A-113B-113C. Elementary Spoken Levantine Arabic. (4-4-4) Lecture, three hours. Requisites: courses 1A-1B-1C. General introduction to spoken Arabic of Syria, Lebanon, and Palestine. Grammar and syntax, with emphasis on language of everyday conversation.

114A-114B-114C. Spoken Moroccan Arabic. (4-4-4) Lecture, three hours; laboratory, one hour. Introduction to spoken Arabic dialect of Morocco. Phonology, morphology, and syntax. Emphasis on developing oral skills.

120. Islamic Texts. (4) Requisite: course 103C. Readings from Qur'an, Tafsir, Hadith, Fiqh. May be repeated for credit.

130. Classical Arabic Texts. (4) Requisite: course 103C. Readings from medieval literary texts, with grammatical and syntactical analysis. May be repeated for credit.

132. Philosophical and Kalam Texts. (4) Lecture, three hours. Requisite: course 120. Readings in medieval and Kalam texts. May be repeated for credit.

141. Modern Arabic Literature. (4) Requisite: course 103C. Conducted in Arabic. Readings in selected texts representing important trends in Arabic literature of the 19th and 20th centuries. May be repeated for credit.

150. Introduction to Arabic Literature and Culture. (4) (Formerly numbered 150A-150B.) Lecture, three hours. Readings in English; knowledge of Arabic not required. Culture of Arabic-speaking peoples through their literature. Texts range from pre-Islamic poetry to contemporary novels, along with works in history and anthropology, to place these writings in their social context. P/NP or letter grading.

151. Survey of Modern Arabic Literature in English. (4) Lecture, three hours. Readings of selected texts covering basic literary trends from middle of the last century to the present.

180. Linguistic Analysis of Arabic. (4) Requisite: course 102C. Linguistic description of Arabic in both its modern standard and dialect forms. Introduction to linguistic analysis of Arabic phonology, morphology, and syntax and to linguists' approaches to specific problems posed by Arabic grammar and dialectology.

199. Special Studies in Arabic. (2 to 8) Tutorial, to be arranged.

Graduate Courses

220. Seminar: Islamic Texts. (4) Seminar, three hours. Doctrines and hermeneutics of various schools of thought in Islam, with selected readings from major works. May be repeated for a maximum of 24 units.

230. Medieval Literary Texts. (4) Lecture, two hours. Readings in Arabic prose and poetry, survey of prosody. May be repeated for a maximum of 24 units.

240. Seminar: Arab Historians and Geographers. (4) Seminar, three hours. Selected readings from works of major historians, geographers, and travelers. May be repeated for a maximum of 24 units.

250. Seminar: Arabic Literature. (4) Seminar, two hours. Selected topics from Arabic literature. Readings of texts from manuscript. May be repeated for a maximum of 24 units.

251. Seminar: Modern Arabic Literature. (4) Seminar, three hours. Requisite: course 141. Studies of specific problems and trends in Arabic prose and/or poetry in the 20th century. May be repeated for credit.

596. Directed Individual Study. (2 to 8) Tutorial, to be arranged. May be repeated for credit.

597. Examination Preparation. (2 to 8) Tutorial, to be arranged. S/U grading.

599. Ph.D. Dissertation Research and Preparation. (2 to 8) S/U grading.

Armenian

Upper Division Courses

101A-101B-101C. Elementary Modern Western Armenian. (4-4-4) Course 101A is requisite to 101B, which is requisite to 101C. Armenian grammar, conversation, and exercises. P/NP or letter grading.

102A-102B-102C. Intermediate Modern Western Armenian. (4-4-4) Requisite: course 101C. Course 102A is requisite to 102B, which is requisite to 102C. Reading of selected texts, composition, and conversation. P/NP or letter grading.

103. Advanced Modern Armenian. (4) Lecture, three hours. Requisites: courses 102A-102B-102C. Readings in advanced modern Armenian texts. May be repeated twice for credit.

104A-104B-104C. Elementary Modern Eastern Armenian. (4-4-4) Course 104A is requisite to 104B, which is requisite to 104C. Designed for students with little or no previous knowledge of Eastern Armenian, official idiom of Republic of Armenia. Introduction to basics of grammar and conversation.

105A-105B-105C. Intermediate Modern Eastern Armenian. (4-4-4) Requisite: course 104C. Course 105A is requisite to 105B, which is requisite to 105C. Continuing introduction to Armenian grammar, with greater attention to readings from short stories and simple newspaper articles and film viewing on video. Emphasis on improving students' self expression in the idiom, both orally and in written form.

106A-106B-106C. Advanced Modern Eastern Armenian. (4-4-4) Requisite: course 105C. Course 106A is requisite to 106B, which is requisite to 106C. Discussion of contemporary Armenian social and cultural issues through readings from critical essays, editorials, short stories, and poems written since World War II and film showings. Emphasis on enhancing students' self expression orally and in written form.

130. Armenian Civilization under Bagratid Dynasty, 884 to 1064. (4) Lecture, four hours. Interdisciplinary investigation of interface between sociopolitical and economic factors in creation of works of art (literature, art, architecture, etc.) and social function these works performed in this important period of Armenian history. Letter grading.

131. Armenian Civilization in Cilician Period, 1080 to 1375. (4) Lecture, four hours. Interdisciplinary investigation of rise and fall of unique form of Armenian polity established outside the homeland and examination of degree to which its social structure and cultural and aesthetic norms were impacted by those of the West (Byzantium, Western Europe) and East (Crusader states, Seljuqs, Mamluks, Mongols). Letter grading.

150A-150B. Survey of Armenian Literature in English. (4-4) Lecture, three hours. Knowledge of Armenian not required. Each course may be taken independently for credit.

151. Canon Formation and Encounter with Modernity: Case Studies in Armenian Literature. (4) Discussion of fundamental themes and genres around which Armenian literary tradition evolved and modalities by which this has been transformed in course of last two centuries as a result of exposure to European thought and expressive forms, as well as its response to sociopolitical, demographic, and economic changes in Armenian life.

152. Modern Armenian Drama as Vehicle for Social Critique. (4) Readings of selected plays from 1668 to 1992 in English translation, with particular reference to comedy. Focus on their role as commentators on contemporary mores and as agents for social reform. Discussion supplemented by video recordings of staged performances.

153. Art, Politics, and Nationalism in Modern Armenian Literature. (4) Readings in English. Examination of role of literature in modern Armenian society in service to a cause or causes, as propaganda for various ideologies, as art for art's sake, etc. Exploration of contrasting aesthetics implicit in these differing interpretations. Students may work on texts in original language for extra credit.

155. Armenian American Literature and Culture. (4) Theoretically informed exploration of some of most salient questions related to Armenian American community as reflected in its literature and other cultural artifacts in interaction with its pluralistic American ambience. P/NP or letter grading.

160A-160B. Armenian Literature of the 19th and 20th Centuries. (4-4) Lecture, three hours. Requisites: courses 102A-102B-102C. Reading of texts and discussion of various genres of modern Armenian literature within context of the Armenian cultural renaissance.

199. Special Studies in Armenian Language and Literature. (2 to 8) Tutorial, to be arranged.

Graduate Courses

207. Armenian Intellectual History. (4) Lecture, three hours. Intellectual and cultural trends reflected in Armenian literature, historiography, religious and philosophical thought.

210. History of the Armenian Language. (4) Lecture, three hours. Development of the Armenian language in its various stages: classical, middle, and modern.

220. Armenian Literature of the Golden Age (A.D. 5th Century). (4) Lecture, three hours. Requisites: courses 131A-131B. Readings of texts and discussion of literary genres; original works and those translated from Greek and Syriac.

230A-230B-230C. Elementary Classical Armenian. (4-4-4) (Formerly numbered 130A-130B.) Lecture, three hours. Course 230A is requisite to 230B, which is requisite to 230C. Introduction to grammar of the classical literary language (5th to mid-19th century) and guided readings in narrative prose texts.

231A-231B-231C. Intermediate Classical Armenian. (4-4-4) (Formerly numbered 131A-131B.) Lecture, three hours. Requisite: course 230C. Course 231A is not requisite to 231B, which is not requisite to 231C. Intensive review of grammar and reading of select prose and poetic texts.

232A-232B-232C. Advanced Classical Armenian. (4-4-4) (Formerly numbered 132A-132B.) Lecture, three hours. Requisite: course 231A or 231B or 231C. Course 232A is not requisite to 232B, which is not requisite to 232C. In-depth reading and linguistic analysis of texts related to the Philhellene School of the 6th to 8th century and related works up to the 19th century.

250A-250B. Seminars: Armenian Literature. (4-4) Seminar, three hours. Selected topics from various periods of Armenian literature. May be repeated for credit.

290. Seminar: Armenian Paleography. (4) Seminar, three hours. Discussion of a variety of Armenian scripts and training in use of manuscripts.

596. Directed Individual Study. (2 to 8) Tutorial, to be arranged. May be repeated for credit.

597. Examination Preparation. (2 to 8) Tutorial, to be arranged. S/U grading.

599. Ph.D. Dissertation Research and Preparation. (2 to 8) S/U grading.
